THE UNIVERSAL JEWISH ENCYCLOPEDIA

IN TEN VOLUMES

An Authoritative and Popular Presentation of Jews and Judaism Since the Earliest Times

EDITED BY

ISAAC LANDMAN

Rabbi of Congregation Beth Elohim, Brooklyn, New York
Founder and Director of the Academy for Adult Jewish Education

In Collaboration with the Following

BOARD OF EDITORS:

EXECUTIVE AND LITERARY EDITOR
LOUIS RITTENBERG, American Editor, *London Jewish Chronicle;* formerly Editor, *The American Hebrew*

AMERICANA: A. S. W. ROSENBACH, President, American Jewish Historical Society

ANGLO-JUDAICA: PAUL GOODMAN, Historian and Author, London

ARCHAEOLOGY: WILLIAM F. ALBRIGHT, Professor, Semitic Languages, Johns Hopkins

ART: CLIFTON HARBY LEVY, Rabbi, Author and Journalist

BIBLE: JULIAN MORGENSTERN, President and Professor of Bible and Semitic Languages, Hebrew Union College

ETHICS: LOUIS L. MANN, Rabbi of Temple Sinai, Chicago; Lecturer, Oriental Languages and Literature, University of Chicago

HISTORY: ISMAR ELBOGEN, Research Professor, Jewish Theological Seminary, Hebrew Union College, Jewish Institute of Religion, and Dropsie College

ABRAHAM A. NEUMAN, President and Professor of History, Dropsie College

JEWISH LITERATURE: JOSHUA BLOCH, Chief, Jewish Division, N. Y. Public Library

LITURGY: SOLOMON B. FREEHOF, Rabbi of Congregation Rodef Shalom, Pittsburgh; formerly Professor of Liturgy, Hebrew Union College

PHILOSOPHY: LEO STRAUSS, Associate Professor, Political Science, Graduate Faculty of Political and Social Science, New School for Social Research

RABBINICS: LOUIS FINKELSTEIN, President and Professor of Theology, Jewish Theological Seminary of America

SOCIAL INSTITUTIONS: MAURICE J. KARPF, Formerly President, Faculty, and Professor, Social Technology, Graduate School for Social Work, New York; Executive Director, Federation of Jewish Welfare Organizations and Jewish Community Council, Los Angeles

THEOLOGY: SAMUEL S. COHON, Professor of Theology, Hebrew Union College

REVISION EDITOR: ABRAHAM SHINEDLING, Rabbi, Linguist and Reviewer

DIRECTOR OF RESEARCH
SIMON COHEN, D.D., Former Instructor at the Hebrew Union College School for Teachers

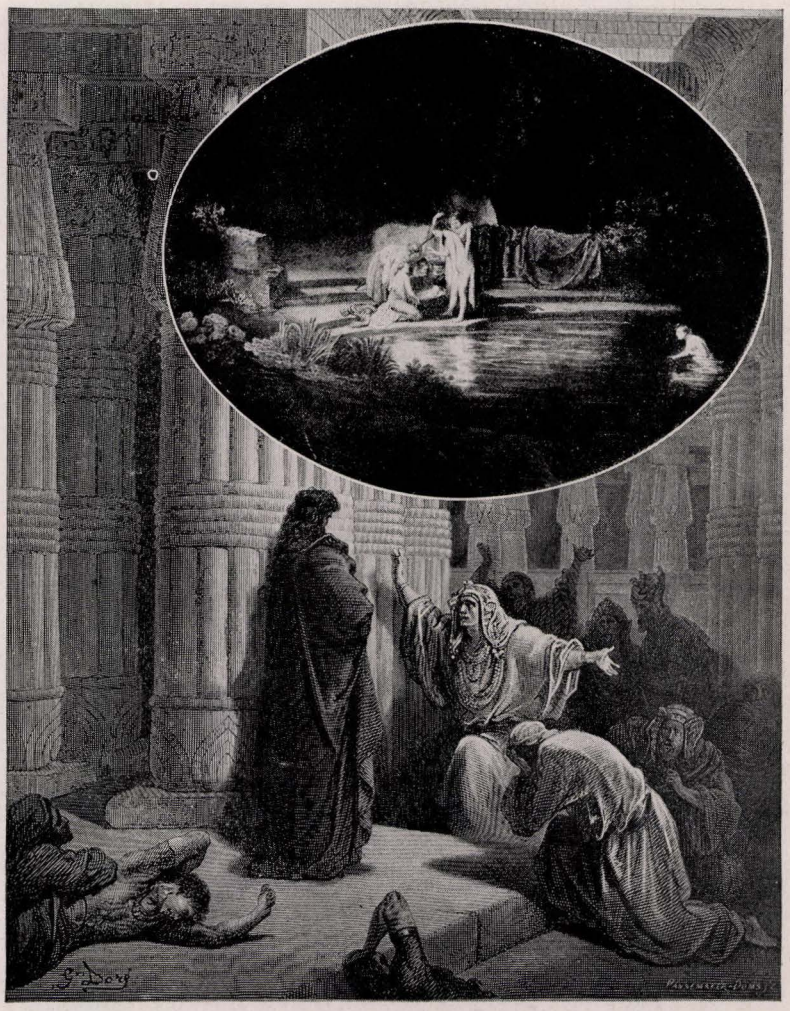
Statue found (1923) at Mount Sinai, and held by Grimme to be that of Moses in his youth. Other scholars have rejected the identification. The line enlarged below is the dedication to a goddess

MOSES, liberator of Israel from Egyptian oppression, founder of the Israelite religion, leader of the people of Israel through the wilderness. The name Moses is probably derived from the Egyptian *mesu,* meaning child, which usually is combined with the name of one of the gods (such as Thotmose = Thutmosis; Ra-mose = Ramses) to form personal names. The Biblical explanation of the name (*Ex.* 2:10), i.e. that he was drawn out of the water, is popular etymology which can not be reconciled with the active Hebrew verb (*mosheh* can at best mean "he who draws out").

1. In the Bible. Moses was born in the period of greatest Egyptian oppression, and was the son of Amram and Jochebed, both of the tribe of Levi. As an infant he was set adrift upon the Nile because of the edict of Pharaoh to slay all Hebrew male children. The daughter of Pharaoh found him and raised him at the royal court. Despite his position as the adopted child of the princess, he had a deep compassion for his oppressed brethren.

On the occasion of a visit among his brethren (*Ex.* 2:11), he witnessed a brutal attack upon a Hebrew by an Egyptian overseer. He was so enraged by this deed that he killed the evil doer, but when the affair became bruited about he was compelled to flee from Egypt.

He found shelter with Jethro (*Ex.* 2:18-21; called also Reuel and probably identical with Hobab, *Num.* 10:29), a priest of the nomadic tribes of Midianites who appeared at various times in the Syrian Arabian desert; in this case they were roaming about with their cattle in the southeasterly part of the Sinai peninsula. Moses married Jethro's daughter Zipporah, and then began to tend the herd of his father-in-law. In a revelation of God, which came to him upon the ancient sacred mount of Horeb through the miraculous appearance of a bush that burned but was not consumed, it was revealed to him that he had been chosen to be the liberator of his people. Since he expressed doubt concerning his ability to undertake this task, he was assured of the assistance of his more fluent brother Aaron, who was to be his "mouth" and his "prophet"



(Oval) The finding of Moses. From a painting by Rembrandt van Rijn; (below) Pharaoh begs Moses to lead the Israelites out of Egypt

to the people and to Pharaoh. He received from God a miraculous staff which was to serve him as a sign of authority and an instrument for the deeds which he was to perform.

Moses left the land of Midian and returned to Egypt, where he appeared with Aaron, who had met him while journeying toward Horeb in accordance with the word of God. They announced to Pharaoh the command of the Lord, the God of the Hebrews, to free His people. Pharaoh at once refused to obey the command. Even the nine terrible plagues which Moses called down upon Egypt through his wonderful staff did not break Pharaoh's resistance. Only the tenth plague, the killing of the first-born, which included the heir to the throne, forced Pharaoh to grant the Hebrews permission to leave the land. The Egyptians urged the Hebrews to move as quickly as possible, because they feared the intensification of the plague, and thus, about midnight, on the 14th of Abib (Nisan), the hasty Exodus from Egypt took place.

At first Moses led the people down the caravan highway toward Canaan, but then he turned off toward the southeast so that between the Hebrews and the peninsula of Sinai, their next objective, lay a body of water, probably the Gulf of Suez. By a miracle the waters divided to let the people cross, but returned in flood to engulf the pursuing enemy, "horse and rider." In triumphant song the Israelites celebrated the long awaited liberation from the "house of bondage." After several weeks they reached the sacred mountain of Sinai, upon which, through the intermediation of Moses, a covenant was made between God and Israel, and the law (Torah) was given to the people.

Next the Israelites began their wandering through the wilderness, led by Moses and guided by the fire and cloud of God. They met with innumerable dangers, such as lack of water and nourishment, and snakes. Despite the fact that Moses always was able to overcome them, he was constantly beset by petty murmurings. This lack of faith became especially apparent when the spies sent out to Canaan reported to Moses and the people concerning what they had seen in the land. The people hesitated to move northward, whereupon God told Moses of His decision to let that generation die out in the wilderness and to permit only the coming generation to enter the promised land.

Moses used the forty years of wandering to educate the people in his new religious teachings, as well as to prepare them for the coming campaign. In Kadesh-barnea, where most of the forty years were spent, Moses laid the foundation for a community based on religion and justice. Under his guidance the country east of the Jordan was conquered and given to the tribes of Reuben, Gad and half of the tribe of Manasseh. The conquest

(Right) Moses becomes slow of speech by burning his mouth on a glowing coal. From a painting by Giorgione in the Uffizi Galleries, Florence; (below) Moses depicted driving off the shepherds in a painting by Frederic Schopin

of the region west of the Jordan was not to fall to the leader who had in the meantime reached the age of 120. After he had turned over his office to Joshua, he was permitted to view the land of promise by himself from the summit of Mount Nebo. There he died; "no man knows his sepulchre."

The historicity of the Biblical narrative of Moses is closely associated with the validity of the story of the Exodus from Egypt. The immigration of semi-nomadic Canaanites into Egypt as well as their use as slave labor have been repeatedly proved by Egyptian monuments and fragments. There is no reason, therefore, for doubting the possibility of a more or less peaceful exodus of certain of these peoples. If there were no historical memories behind the story of Egyptian slavery, references which occur even in the oldest portions of the Scriptures, it is incomprehensible how a motif so inimical to the ego of the proud Israelites could have become the core of the entire folk epic. It is equally obvious from the whole religious tradition of Israel that there must have been a founding of the religion in a single occurrence which created the religious condition. The entire character of the Israelite religion is infused with the idea of a voluntary covenant between God and the people, presupposing such a founding of the religion in the making of a covenant. If a historical liberation and a religious creation existed at the beginning of Israelite history, both of these are not conceivable without some central figure who personified the will for freedom of the developing nation and who, by powerful spiritual leadership, fused the numerous tribes into an ideal unity. The period during which Moses apparently lived was the third or fourth quarter of the 13th cent. B.C.E.; accordingly, Ramses II or Merneptah was the Pharaoh of the Exodus.

Naturally, the historical figure of Moses has been surrounded by popular tradition and manifold legend. The content and form of these have greater value in estimating the spiritual culture of the time of their origin than in forming a judgment on the historical Moses. Three categories of legends may be distinguished, according to the way in which they are associated with the person of Moses. The first are elaborations of very general and primitive legendary themes which occur especially in Near Eastern literature and which are very loosely connected with Moses; for example, the legend of his exposure on the water and of his rescue. The second are legends concerning the origin of the people, and, insofar as they deal with the wilderness, they are associated with the hero of the period in the wilderness. To this group belong especially the innumerable local legends concerning the creation of the oases in the wilderness, the battles in the conquest of the East Jordan, and the so-called etiological legends explaining ancient festival customs, such as the Passover ritual. A third group of legends consists of those which are not to be conceived as associated with Moses by chance or as an afterthought, but rather those which are essential portions of the tale and which can not be omitted from the continuity, for example, the legends of Sinai, or of the circumcision (*Ex.* 4:24-26), where apparently ancient legendary sources glimmer through the version which is now no longer clear.

In general the Moses legends may be grouped into

Moses and the Burning Bush. From a panel in the Dura Europos synagogue

three great cycles. In the first cycle, the popular one, Moses is above all the leader, the conqueror and the law-giver. In the second, the prophetic, he is the intermediary of the covenant with God, the zealot, the iconoclast, the announcer of God's words, the prototype of the prophet. In the third, the priestly, he is the founder of the most ancient sanctities of Israel (the covenant, the Tabernacle, the symbol of the Temple), the first of the Levitic priesthood, the founder of the oracle, of the cult and of the priestly organization.

Of the many characteristics of Moses, that of law-giver is of particular significance for the entire development of Jewish spiritual life. Moses was regarded as *the* law-giver, and until the completion of the canon and in an ideal sense even beyond, every religious codification was traced back to him. This has given continuity and strength to tradition, and has influenced the basic form of Jewish religious life. For that reason the Oral Law is called Halachah Lemosheh Misinai. The most pregnant expression of this conception is found in the Talmudic saying: "Whatever a keen pupil will want to tell his teacher as something new, even that has already been told to Moses on Sinai" (*Yer. Peah* 2:6).

As the leading figure in Biblical tradition, Moses is also the center of post-Biblical writings, including the Apocryphal and Talmudic writings. According to these, his personality is interwoven with legend. The tragic tale of the death of this man of God, especially, has again and again given stimulus to the building of legends and edifying sentiments. The apocalyptic *Ascension of Moses* and the Midrash on Moses' death (*Petirath Mosheh*) contain only fragments of the great poetry of this kind. Medieval synagogal poetry, religious philosophy, early Christian and Islamic legend, as well as the creative arts from the early Middle Ages

Moses receives the Tablets of the Law. From a 16th cent. tapestry in the Gobelin Collection, Vienna

Moses and the Tablets of the Law. From a study by Murillo; engraved by David Roberts

until modern times, were influenced again and again by the mighty figure of Moses. In modern Jewish folklore, Moses (Mosheh Rabbenu, "Moses, our teacher"), next to Elijah, is the most beloved figure. He is the friend of the people, the wise counselor, and the aid in need. MAX SOLOWEITSCHIK.

2. In Rabbinic Tradition. The life of Moses, from birth to death, is even more richly bedecked with rabbinic legend than are the lives of the Patriarchs. Philo devoted an entire work to the life of Moses (*De vita Mosis*). Many legends about Moses, found in Josephus, coincide largely with Haggadic tradition. In addition to the more or less scattered references in the Midrash, there is a series of narratives about Moses, as, for example, in the *Sefer Hayashar,* the chronicle of Moses (*Dibre Hayamim Shel Mosheh*), the death of Moses (*Midrash Petirath Mosheh*), and the like. Many of these tales have been fused with ancient legends.

According to tradition, Moses' birth was revealed to Pharaoh in a dream, whereupon Pharaoh issued the command that all Israelite boys were to be cast into the Nile (*Pirḳe de Rabbi Eliezer* 43). According to tradition, Moses was born on the 7th of Adar (*Meg.*

Moses drawing water from the rock. After a 16th cent. painting by Raffaelo and Giulio Romano

13b); at his birth the room was filled with light (*Midrash Ex.* 1:20). He came into the world circumcised. His rescue from the water was accompanied by many miracles. As the daughter of Pharaoh touched the child she was cured of her infection (*Sotah* 12b). She named him Moses; but in reality he had many other names, which, however, finally obscured the name which his parents had given him. The Torah itself accepts the name Moses which the daughter of Pharaoh gave him as a reward for her good deed (*Meg.* 13a).

The years of his childhood at the court of Pharaoh are elaborately described by Philo and in the later Midrashim. These as well as other legends were taken up into Arabic literature; they were much altered and expanded. According to the legends, the three-year-old Moses plucked the crown from the head of Pharaoh. In order to discover whether he had done this premeditatively or as an act of childish playfulness, red-hot coals and gems were placed before him. As Moses reached to grasp the gems, the angel Gabriel saved him by guiding the hand of the child to the coals, which he then took into his mouth. In this way Moses was saved from the wrath of Pharaoh but acquired his speech defect (*Midrash Ex.* 1:26). The Midrash praises Moses for having compassion on his hard pressed brethren, even though he was raised in the court of the king. He wanted to help every one of them, and succeeded in obtaining for the Hebrews one day of rest in each week, the Sabbath.

When Moses had to flee from Egypt he was saved by a miracle. According to the report in the Bible, he fled directly to Midian; according to later Midrashim, he arrived first in Ethiopia. Here he achieved great honor because of his bravery and courage, and became king. He spent forty years there, but then had to leave the land because he was a foreigner. This widespread legend is linked with the Biblical tale of Moses' Cushite wife. An allusion to this legend is found in *Targum Pseudo-Jonathan* to *Num.* 12:1. Moses had to suffer much discomfort in Jethro's house. There he came into possession of the wonderful staff, which was planted in Jethro's garden. This staff had been in the possession of Adam and could be seized by no one before Moses (*Pirke de Rabbi Eliezer 40; Sefer Hayoshar*).

When Moses served Jethro as shepherd, he watched over the sheep with such loving care that God later made him the shepherd of Israel (*Midrash Ex.* 1; *Suk.* 52a). When Moses was sent by God to Pharaoh, he hesitated somewhat and was therefore punished. The miracles before Pharaoh, especially the first three, were executed together with Aaron, as in the Bible story. The dependence of Moses upon Aaron was brought about by Moses himself. Moses was placed on an equal footing with Aaron (*Mechilta,* edit. Friedmann, 1a); the activities of Moses, however, came to the fore later. At the sea he had to combat the elements; he did not have the power to split the sea until the Eternal had placed His right hand upon the hand of Moses (*Midrash Ex.* 21:6). The miracles which Moses performed at the sea are especially emphasized. Yet Moses was hesitant here, too, and he was warned that he was spending too much time in praying, and that his strength lay more in prayer than in action.

During the Exodus from Egypt, the legends continue, Moses sought the earthly remains of Joseph, while the others desired gold and treasures (*Sotah* 13a; *Pesikta de Rab Kahana,* edit. Buber, 85b). As a reward for this, Moses was later enriched by the two tablets of the Commandments. In the battle against Amalek Moses

Reputed grave of Moses in Palestine

did not enter the combat himself, but sent his disciple Joshua. The reason for this, according to the Midrash, was that the descendants of Esau were chosen to be delivered to the descendants of Joseph. He did not participate in the later war against Midian because of his gratitude for the protection which this land had given him against his persecutors (*Midrash Ex.* 24).

The honor shown Moses in giving the Law to the people was the high point of his life. It was in reward for his piety that he was privileged to stand in the presence of God during the revelation on Sinai. When he arrived in heaven he had to combat the angels, who looked upon the Torah as belonging to them alone. He was given great power in heaven, and even the Eternal had to reckon with Moses' influence (*Midrash Ex.* 28:2). He was privileged in this world to receive and to learn and teach the Law, and in the future world he is to continue his activities as teacher and the Patriarchs will send their disciples to him. Moses spent many days on Mt. Sinai, but not until the fortieth day did the Law remain fixed in his memory. Since he returned six hours later than he had promised, Satan took advantage of the fickleness of the people to mislead them. He showed them Moses hovering between heaven and earth. Since all honor was shown Moses only because of Israel, he had to withdraw because now Israel had sinned (*Ber.* 32a). After the divine forgiveness, when the covenant between God and Israel had been renewed, he was commanded to hew new tablets. A store of sapphires to be used for the tablets was revealed in his tent. The story of his shining face (*Ex.* 34) is explained as being due to the fact that he wiped his pen upon his brow.

Fifty gates of wisdom were created in the world, the legends assert. Moses was entrusted with knowledge of all but one of them (*R.H.* 21b); he was the father of wisdom and prophesy (*Meg.* 13a). It was only for his sake that the world was created (*Sanh.* 98b). Despite his great services and just because of them Moses had to do great penance for his loss of temper (*Num.* 20), and died in the wilderness. His death and the greatness of Joshua had been foretold already by Eldad and Medad. As the day of his death drew near, God showed him not only the promised land but also its future fate (*Sifre,* at the end). As the Angel of Death came to take his soul, Moses grasped the staff upon which the Name of God was written and wanted to drive him away. God then promised not to deliver him unto the Angel of Death (*Pesikta de Rab Kahana* 32). Moses died as God kissed his soul, and for twelve miles there resounded the call of the angels, "Moses is dead" (*Sifre Deut.,* section 317).

Moses was one of the six persons over whom the Angel of Death had no power: Abraham, Isaac, Jacob, Moses, Aaron, Miriam (*B.B.* 16a). His grave was situated in the wilderness, but it is connected by a subterranean tunnel with the cave of Machpelah. According to tradition, Moses stands higher than Adam, Abraham and Jacob, but there is a close parallel between the tales concerning him and those about Adam. Moses was not only the one who led the people out of Egypt, he is also its future leader. He died on the Sabbath, the 7th of Adar, the day on which he finished his 120th year (*Sotah* 13b). Neither of his sons was worthy of succeeding him, yet legend is filled with tales of his descendants; they hold a privileged position and live to this very day as a separate race on the other side of the Sambation river. This legend, which is widespread, especially in Arabia, is alluded to in the *Targum Pseudo-Jonathan* to *Ex.* 34:10.

ALEXANDER KRISTIANPOLLER.

3. In Art. The figure of Moses is often depicted in the creative arts. The most famous representation of Moses is by Michelangelo, at the tomb of Pope Julius II in the Church of St. Peter in the Vincoli of Rome. Theodor Ehrenstein published in his book twenty-nine reproductions of Moses as a child (including those of Raphael, Giorgioni and Rembrandt), and fifty-one reproductions of Moses before Pharaoh, and Moses before the Burning Bush, among which were four by Botticelli and one by Rembrandt. Other themes related to Moses that are often depicted by artists are Moses and the Egyptian plagues, the crossing of the Red Sea, the journey through the wilderness, bringing forth water from the rock (Raphael's fresco), the bearer of the tablets of the Law (Rembrandt's painting of Moses shattering the tablets), the Golden Calf (Rembrandt), with the serpent (Tintoretto). A short survey of Moses in art with illustrations is given by Kutna in *Ost und West,* 1909, No. 5 and following. Of the modern artists, Lesser Ury depicted Moses with the commandments, Moses on Sinai, and Moses looking into the Promised Land. Of the literary works on Moses, mention should be made of dramas by Karl Hauptmann and Werner Jensen, and a novel by George Ebers.

Lit.: The Bible dictionaries and encyclopedias; Fleg, E., *Moses;* Ginzberg, L., *Legends of the Jews;* Lazaron, M. S., *Seed of Abraham* (1930); Volz, P., *Mose* (1907); Gressmann, Hugo, *Moses und seine Zeit* (1913); Halevy, M. A., *Moïse dans l'histoire et dans la légende* (1927); Albright, W. F., *From the Stone Age to Christianity* (1940) 189-207; Rosmarin, A., *Moses im Lichte der Agada* (1932).

MOSES, ASCENSION OF, a pseudepigraphic work consisting of twelve chapters; it consists of an address made by Moses to Joshua shortly before the former's death, and is a sort of expansion of *Deut.* 31:23. It gives an apocalyptic survey of the history of Israel up to the time of Herod and predicts the speedy arrival of the Kingdom of God that is to make Israel happy. The work breaks off in the middle of a dialogue between Joshua and Moses.

The work exists only in a Latin translation made

from the Greek, so that it is uncertain if there is an underlying Hebrew original or not; this Latin translation is extant only in a Milan palimpsest. It was written probably in the 1st cent. C.E., shortly after the death of Herod the Great, in southern Palestine and by a Pharisee. The author energetically attacks hypocrisy, which, he holds, is characteristic of the age, and which he regards as holding back the redemption. He expects the deliverance of Israel to come miraculously, not, as the Zealots felt, by fighting. The book apparently regards the rule of the Roman procurators as a temporary evil, and is similar in its views to much other contemporary pseudepigraphic literature.

Lit.: Charles, R. H., *The Assumption of Moses* (1897).

MOSES, BLESSING OF (*birkath Mosheh*), a poem given in *Deut.* 33, with the statement that it was the final blessing given by Moses to the tribes before his death. It begins with four introductory verses (2 to 5) describing the appearance of God to Israel and His choice of them as a people, resulting in the giving to them of the Law. Then follows the section giving individual blessings to the tribes (verses 6 to 25). The concluding verses (26 to 29) praise the uniqueness of God, Who protects Israel, and proclaim the happiness of Israel, who are blessed with prosperity and victory.

The poem has both resemblances to and differences from the Blessing of Jacob (*Gen.* 49). In both cases each of the tribes receives a special word of blessing and the form of the strophes is very similar. The closest relationship in language is in the blessings given to Joseph. On the other hand, the Blessing of Moses entirely omits the name of Simeon, indicating that this tribe had lost its identity; Judah is comparatively neglected, and the tribe of Levi, which is rather contemptuously treated in the Blessing of Jacob, is lauded in the Blessing of Moses. In contrast to the Blessing of Jacob, which contains condemnation as well as praise, the Blessing of Moses is almost completely blessings. It also has much more of a religious note, and refers to the blessings of peaceful agriculture rather than to triumphs in war.

Bible critics conclude from the prominence given to Levi that the author of the poem was probably a Levite. The omission of Simeon, the praise of Joseph, the general note of prosperity, and the minor role allotted to Judah cause them to believe that it was written during the reign of Jeroboam II (8th cent. B.C.E.), when the Northern Kingdom of Israel was at the height of its prosperity and the Southern Kingdom of Judah was its vassal. This dating would place the Blessing of Moses about two centuries later than the Blessing of Jacob.

Lit.: The commentaries on *Deuteronomy*.

MOSES BEN ABRAHAM ABINU, Christian convert to Judaism, author and printer, b. Nikolsburg, Moravia; d. Amsterdam, Holland, 1733. He went to Prague, where he accepted the Jewish faith, and then to Amsterdam, where from 1686 to 1687 he worked in the printing establishments of Uri Phoebus and Cosman Emrich. From 1689 to 1694 he had his own printing-office. In 1700 he went to Berlin, and then to Frankfort on Oder. In order to work undisturbed in Frankfort, he placed himself, as well as his son Israel, under the jurisdiction of the university. During 1709 to 1714 he conducted a printing-office at Halle, where again he was registered as university printer. Here in 1712 he printed *Telaoth Mosheh* (The Labors of Moses), a Judeo-German work on the lost ten tribes. He translated into Judeo-German Nathan ben Moses Hannover's *Yeven Metzulah,* translated the New Testament into Hebrew, and printed responsa, prayer-books and sermons, with the help of all his ten children. In 1714 he was condemned by the theological faculty of the university for printing the anti-Christian passages in the *Alenu* prayer and in the sermons of Rabbi Berachiah Berak. His printing-establishment was suppressed, and both he and the innocent Berak were imprisoned. He escaped to Amsterdam, where he printed several tractates of the Talmud.

MOSES BEN ISAAC ALASHKAR, *see* ALASHKAR, MOSES.

MOSES BEN ISAAC DI RIETI, rabbi, physician and poet, b. Rieti, Italy, 1388; d. Rome, about 1460. After living for some time in various cities in the Papal States, he became chief rabbi at Rome, where he was also the personal physician of Pope Pius II. He was well-versed in secular literature, philosophy and natural science, which he called his second home. His fame rests upon his *Mikdash Meat* (Little Sanctuary), a poem about Paradise composed in the terzina stanzas used by Dante. Only a fragment of the work has been preserved. The first part, called *Ulam* (Antechamber), deals with Maimonides' thirteen articles of faith, and discusses the philosophic views of Averroes, Gersonides and others. The second, known as *Hechal* (Shrine), enumerates a long list of the men who abide in Paradise. It depicts the kingdom of the Torah as the city of God, the Mishnah and the Talmud as the ships of the soul. Parts of the work were several times translated into Italian, and one of its prayers was incorporated into the Orthodox Jewish liturgy. Moses di Rieti wrote also a treatise on the cult of the Temple in Jerusalem, ethical and philosophical notes, and an apologetic work in Italian.

Lit.: Waxman, M., *A History of Jewish Literature,* vol. 2 (1933) 75-77.

MOSES BEN JACOB BEN MOSES, known as Moses the second of Kiev and Moses Ish Hagolah ("the exile"), rabbinic scholar, b. Shadov, near Shavli, Lithuania, 1449; d. in the Crimea, probably in Kaffa, 1520. He is not to be mistaken for the Karaite scholar Moses Ish Hagolah (b. 1100). Moses is the first Roumanian Jewish scholar of whom any mention is extant.

Lithuania had no centers of rabbinic training in his time, and Moses therefore went to study the Law at Constantinople (1480). Here he studied also astronomy under the Karaite scholar Elijah ben Moses Bashyazi, author of *Sefer Hamitzvoth;* from there he went to Adrianople, Turkey, and later he returned to Kiev to live. During the Tatar invasion of Kiev (1483) Moses lost all his possessions and his books. His commentaries on Aaron ben Elijah of Nicomedia's book of precepts *Gan Eden* were also lost. The book, however, later

A page from Moses ben Jacob of Coucy's "Sefer Mitzvoth Gadol"

turned up in Theodosia (Kaffa), and a copy of the notes in Constantinople.

Moses' two sons were kidnapped and sold as slaves, in Theodosia, the Crimea, but Moses himself escaped to Lutzk (Luck). Later he wandered from city to city in an effort to raise a ransom for his sons. He visited the Karaites, with whom he held a scholastic debate, then he returned to his native city Shadov. In 1495 he began work on his book *Shushan Sodoth,* following in the footsteps of the RaMBaN, on the road of the Cabala.

When the Tatars, under Prince Alexander, invaded Lithuania in 1506 and captured Lido, the fifty-seven-year-old Moses was living there. He was seized and, together with other captives, taken to Solchat, Crimea. The rabbinate and Karaite community of that place ransomed him. Finding more books than in his own birthplace, he remained in Solchat, where he wrote his book *Otzar Nehmad* (1515) and various other works.

Moses compiled a *Mahzor Minhag Kaffa,* which was adapted to the rites of various Jewish religious groups. He also evolved a statute containing eighteen rules of conduct. Among the Crimeans he is known as Moses Ashkenazi, or Moses of Russia.

Lit.: Harkavy, Abraham, *Hadashim Gam Yeshanim;* Zunz, L., *Zur Geschichte und Literatur,* 33, 388; *Russische Revue,* vol. 23, p. 154.

MOSES BEN JACOB OF COUCY, 13th cent. French Talmudist. The religious needs of the times and the growing philosophical rationalism prompted him to go to Spain in order to counteract the desertions from the rigid practices of the Jewish faith. He was able to influence thousands of families, dissuading them from mixed marriages and from the misuse and rejection of Jewish precepts. Moses was renowned as a preacher in French, Spanish and Arabic. In 1240, with three other rabbis, he defended the Talmud against defamation in a public disputation in Paris. In response to much urging, Moses wrote the *Sefer Mitzvoth Gadol* (known as *SeMaG*), a compilation of laws, which was finished in 1250. He wrote also *Tosafoth Yeshanim,* a commentary on the Talmudic tractate *Yoma;* the commentary was distinguished for its clarity and compactness, and was included in modern printings of the Talmud.

MOSES BEN JACOB IBN EZRA, *see* IBN EZRA, MOSES BEN JACOB.

MOSES BEN JUDAH METSHORODI, Karaite scholar of Constantinople, b. 1560. He studied under both Rabbinite and Karaite teachers. At the age of fourteen he entered upon what was to be a prolific literary career by copying the *Sefer Hilchoth Shehitah* of Abraham ben Jacob for his teacher Aaron ben Moses. He became a preacher at the age of twenty-one, and eleven years later, in 1592, produced the first of his exegetical works, *Ene Mosheh,* a commentary on *Proverbs.* Then followed commentaries on *Ruth, Song of Songs, Ecclesiastes, Esther* and *Lamentations.* Moses wrote, among other books, a work on the calendar and a discussion of the precepts. In 1618 he made a compilation of thirty of his sermons, *Darosh Darash Mosheh,* assigning the manuscript to the Karaite synagogue of Constantinople, with the condition that it be kept there perpetually. His most important work was his commentary on the Pentateuch, the *Yemin Mosheh* (1620). In this ambitious work which, as the preface states, has a broad scope, and in which he drew upon old Karaite authorities, it was his purpose to establish the superiority of the free interpretation of the Karaites to that of the rabbinical writers. The fertility of Moses' literary efforts throughout almost half a century becomes increasingly impressive in view of the fact that he found it necessary to occupy himself with commerce in order to earn a living. It appears to have been his purpose to revive Karaite intellectual activity to a point rivaling the Rabbinite standards of the time. His activities after 1620 are unknown. He had no children.

MOSES CORDOVERO, *see* CORDOVERO, MOSES.

MOSES HADARSHAN, Bible exegete who flourished in Narbonne, France, in the 11th cent. He succeeded his father, grandfather and great-grandfather as head of a Yeshiva there. He was regarded as a great Talmudical authority, and his pupils included Nathan ben Jehiel of Rome. Even more important was his work in the field of Biblical exegesis, for he used to give frequent Haggadic interpretations of the Scriptures, hence his title Hadarshan ("the preacher"). His commentary on the Bible is cited by later writers, notably by Rashi, and by Raimund Martin in *Pugio Fidei;* it was called either *Yesod* or *Bereshith Rabbathi.* Epstein called attention to the similarity in ideas between the known works of Moses Hadarshan and *Midrash Numbers* and *Midrash Tadshe;* he believes that Moses Hadarshan was the compiler of the latter. A Midrash on the Ten Commandments is also ascribed to him.

MOSES KIMHI, *see* KIMHI, MOSES.

MOSES LÖB OF SASSOW, one of the most popular of the Hasidic leaders and a pupil of Levi Isaac of Berdichev, d. 1807. The legends told about him and the sayings of his which are recorded testify to his ardent love for all creatures. He always looked for something good in every sinner, thus seeking to exonerate him ("It is not the man who is active in the sin, but the evil inclination"). He even verged on atheism when he taught that man must help the afflicted as though there were no God to assist them. A beautiful story by Perez, "If Not Higher" (translated by Helena Frank, *Stories and Pictures*), in which the Zaddik, at the time of the midnight prayer, spent the time in the home of a sick widow for whom he used to heat the room all night long, is based on an incident in the life of Moses Löb. He had a true insight into the state of mind of those at prayer, and recognized the ecstasy attainable through pure service.

MOSES SEPHARDI, *see* ALFONSI, PETRUS.

MOSES, ADOLPH, lawyer, b. Speyer, Germany, 1837; d. Asheville, N. C., 1905. He emigrated to New Orleans in 1852, and there, trained under several eminent lawyers of the day, was admitted to the Louisiana bar in 1861. But at the outbreak of the Civil War he joined the 21st Louisiana regiment, where he rose to captain's rank. As a paroled Confederate prisoner of war he settled in Quincy, Illinois, and finally moved to Chicago in 1869.

Moses became one of Chicago's leading citizens and lawyers, a member of Moses, Rosenthal and Kennedy, and was onetime vice-president of the State Bar Association. His courtroom fights against the so-called Chicago "gas trust" were particularly notable. In 1879 he received the Democratic nomination for judge of the Superior Court. In 1890 Moses founded the National Corporation Reporter, publishing and editing numerous volumes; he also re-edited the voluminous Illinois law reports.

Moses played a prominent role in Chicago civic and cultural life, as well as in Jewish communal affairs. He served as a director of the Chicago Public Library for six years, and was interested in the Historical Society. It was he who initiated John Marshall Centennial Day, celebrated throughout the country on February 4, 1901.

Active in the B'nai B'rith, he was president of its first national convention, held in 1868 in New York city.

Lit.: *Publications of the American Jewish Historical Society,* No. 16 (1907) 200-3.

MOSES, ADOLPH S., rabbi, b. Kletchevo, Poland, 1840; d. Louisville, Ky., 1902. He began his studies under his father Rabbi Israel Baruch Moses, and continued them first in the Yeshivas, then in the University of Breslau, and in the rabbinical seminary of that city. But in 1859 he left school to enlist in Garibaldi's fight for Italian freedom. On his return to Breslau the following year, considerably matured and sophisticated, he came under the Reform influence of Abraham Geiger.

Once more he deserted his studies, this time in 1863 to join the Polish insurrection against Russia. He was taken prisoner, but released at the intervention of the Prussian consul, and went back to Germany and to his teacher Geiger. His unhappy prison experience he retailed in his novel *Luser the Watchmaker: An Episode of the Polish Revolution* (1883; originally published in German).

After two years at the University of Vienna, studying philosophy, philology, history, and the like, and a period as a teacher in a Bavarian academy, he was called to the United States in 1870, to occupy a pulpit in Montgomery, Ala. The following year found him with a congregation in Mobile, Ala. He remained here for ten years until he left for a pulpit in Louisville, Ky., where he served for two decades, until his death.

An exceptionally talented writer and scholar, and a man of marked idealism, Moses became a force in Reform Judaism, and in the cultural life of Louisville as well. He had been co-editor with his brother Isaac and with Emil G. Hirsch of the German weekly *Zeitgeist* from 1880 to 1882; and he was throughout his life a frequent contributor of scientific and literary pieces to the Jewish and non-Jewish press alike. In 1890 he published *Nadab and Abihu;* and in 1894 he issued *The Religion of Moses,* a booklet propounding the universality of Mosaic teachings. In 1903 appeared a memorial volume of his selected writings, which Hyman G. Enelow edited and introduced with a biographical sketch.

With characteristic intellectual energy, Moses undertook the study of medicine in the later years of his life and received his degree from the University of Louisville. He served for many years as commissioner of the Kentucky institution for the blind.

Lit.: Moses, Adolph, *Yahvism and Other Discourses,* edit. Hyman G. Enelow (1903) ix-xlviii; *Publications of the American Jewish Historical Society,* No. 11 (1903) 201-3.

MOSES, ALEXANDER, the first Jewish shipbuilder and ship-owner in Prussia, in the latter part of the 18th cent. A Schutzjude (protected Jew), Moses was a merchant of repute in Königsberg. In 1781 he petitioned King Frederick II to be allowed to build a merchant ship and to navigate on the Baltic. The king summoned the Prussian admiralty for advice on Moses' petition. Although the Prussian "General Judenprivileg" (1750) did not mention shipping as a profession accessible to Jews, the admiralty decided that the maritime law of Prussia did not exclude the Jews from shipping, and approved Moses' request. The admiralty even obtained Moses' exemption from all import duties on the materials which he needed to build his ship.

But the Christian ship-owners of Königsberg, alarmed at competition by Jews, submitted a presentation to the king, asking for revocation of the permit granted to Moses. The king then asked his attorney general for an opinion; this verdict approved Moses' petition anew, and branded the non-Jewish ship-owners as pretending to

"a privilege of laziness." The king decided, after a second petition by Moses, that the Jew was definitely to be allowed to build his ship, but under strict supervision, and that permission should be withdrawn if Moses offended against any rule. Neither the controlling dock officers nor the Christian ship-owners, eager to denounce Moses, were able to discover any violation by Moses. Nevertheless the king, in 1782, refused Moses' petition to build a second ship. Thus the first Jewish shipping business in Prussia was kept within narrow bounds until the end of Frederick's reign.

Lit.: Baasch, Ernst, *Geschichte des deutschen Seechiffbaus* (1903).

MOSES, ALTAMONT, state legislator, b. Sumter, S. C., 1846; d. Sumter, 1905. During the Civil War he served as telegrapher in the Confederate Army. Grandson of the legislator Myer Moses, and nephew of South Carolina's Chief Justice Franklin J. Moses, he was himself one of the most active members of the General Assembly of South Carolina, to which he was first elected in 1886, for two decades. Moses was an expert in the finances of the state, serving as chairman of the legislature's ways and means committee, and a member of the sinking fund commission; he was also commissary-general with the rank of colonel on Governor D. Clinch Hayward's staff (1903). In 1888, and again in 1904, he was a member of the National Democratic Convention.

His educational interests were diverse: he helped organize the public school system of Sumter and was a founder of the Jewish Sunday School, where he taught for several years. He likewise was an organizer and secretary of the Hebrew Benevolent Society of the city.

Lit.: Elzas, Barnett A., *The Jews of South Carolina* (1905) 252-53.

MOSES, ARTHUR, scientist. He received his medical degree from the University of Rio de Janeiro, in Brazil, in 1908. In 1906 he was appointed professor at the Colegio Pedro II; later he was associated with other higher institutions of learning in Brazil, and in 1933 he became assistant head of the Institute of Animal Biology. He was made professor of bacteriology at the medical school of the University of Rio de Janeiro. Moses was for a time president of the Brazilian Academy of Sciences and of the Brazilian Educational Association; he was also vice-president of the Pan-American Medical Association. He was decorated by the German government.

MOSES, ELIJAH, physician, civic leader, and public official, b. Bombay, 1873. He received his education at the Wilson School and at Bombay University, receiving his M.D. degree in 1909. Moses engaged in the general practice of medicine in Bombay, taught in the Grant Medical College, and in 1906 wrote *Students' Manual of Materia Medica.* He also maintained a private hospital.

Moses was named a justice of the peace in 1912, and was made a councillor of the Bombay Municipal Corporation (1913). The same year he was elected a Fellow of Bombay University. He was likewise a member of the Society for the Promotion of Education among the Masses from 1898 on, and served as its president in 1911. His activities in Bombay civic affairs have been numerous, culminating in his election as mayor of the city in 1937. Prior to that he was chosen a member of the Municipal Corporation in 1925, represented the city on the City Improvement Trust, was a member of the Medical Relief and Public Health Committee, and its chairman for the year 1931-32, serving likewise on other municipal committees.

A member of the Bene Israel community of Bombay, Moses was likewise active in religious life, and in 1918 was elected president of the Bene Israel Conference.

MOSES, FELIX, Kentucky character, b. 1827; d. near Ghent, Ky., 1886. He came to America, and embarking on a Mississippi steamboat at New Orleans, without particular destination, he got off near Florence, Ky. He became a peddler, first on foot and then by wagon. The only Jew in Boone county, by his kindly nature he endeared himself to the frontier farmers, their wives and children. He served in the Confederate Army for three years with Morgan's Raiders, a noted company. Drowned, perhaps accidentally, in the Ohio River, while on a steamboat trip, he was given a public funeral, with eulogies by Christian and Jew, and by Northern and Southern veterans, in the Jewish cemetery of Walnut Hills, Cincinnati. Elaborate ceremonies in Florence, Ky., were also conducted in his memory. He was depicted as one of the characters in the historical novel, *Stringtown-on-the-Pike,* by John Uri Lloyd, who afterward devoted a volume to this picturesque but homely character.

Lit.: Lloyd, John Uri, *Moses, Felix: The Beloved Jew* (1930); Blumenthal, in *American Hebrew* (May 15, 1931), p. 685 et seq.

MOSES, FRANKLIN J., jurist and legislator, b. Charleston, S. C., 1804; d. Columbia, S. C., 1877. He was the son of Myer Moses, and one of the early Jewish settlers in Sumter, where he began practicing law after admission to the bar in 1825. His practice and repute grew rapidly and he was soon elected to the state legislature. There he served as senator from 1842 to 1862, and as chairman of the judiciary committee for almost as long. Noted for his integrity, as well as for his brilliant grasp of state politics and political history, he was appointed a circuit judge in 1865. Under Republican Reconstruction, Moses was elected chief justice of the new Supreme court of the state (1868) together with two associate justices. At the expiration of his six-year term, he was re-elected and served until his death in 1877. Although he alienated many friends by accepting this judgeship at the hands of the first Reconstruction legislature, it was widely acknowledged that Moses felt himself to be serving the best interests of the people. He was professor of law at South Carolina College, as well as trustee of the school from 1851 until his death.

Franklin J. Moses, Jr., governor, b. Sumter, S. C., 1838; d. Winthrop, Mass., 1906. Moses was not raised a Jew and had no Jewish affiliations. He began his political career in 1860 when he was appointed private secretary to Gov. Francis W. Pickens of South Carolina. He quickly gained influence through his forceful and ingratiating personality, and it was he who raised the Confederate flag over Fort Sumter when the Federals surrendered that important stronghold. Then in 1866 he was admitted to the bar, and that year he edited the *Sumter News.* With the coming of Reconstruction, he allied himself with the Republicans, and rose to be un-

disputed leader of the new forces in the state. He became speaker of the House and was made adjutant and inspector-general of the armed forces. He was also an associate judge of the Sumter district. In all these offices he abused his powers, and continued his malpractices when elected governor in 1872, an office he held until 1874; in that year he retired, a financial, social, and political bankrupt. Several members of his family changed their surname to Harby.

Lit.: Elzas, Barnett A., *The Jews of South Carolina* (1905) 197-199; Markens, Isaac, *The Hebrews in America* (1888) 179-80; *Dictionary of American Biography* (1934) vol. 13, pp. 275-76.

MOSES, HERBERT, lawyer and journalist, b. 1884. He studied law at the University of Rio de Janeiro, in Brazil. In addition to occupying several executive posts in commercial firms, Moses was a member of the advisory council of the Federal District and of the Providencia Institute. Among his journalistic affiliations were his positions as director-treasurer of *O Globo* and as director of the *Revista Souza Cruz*. He served as secretary to the Brazilian delegations to the Fifth Pan-American Conference and to the Conference of Jurisconsults. He was president of the Brazilian Press Association, treasurer of the Institute of the Order of Brazilian Lawyers and secretary of the International Chamber of Commerce of Brazil. Moses received honors from the Norwegian and Swedish governments.

MOSES, ISAAC, colonial merchant and patriot of the American Revolution, b. 1742; d. New York city, 1818. At the age of two he lost his father, whereupon his widowed mother married Solomon Hertz of Hamburg. The earliest reference to Isaac Moses appears in the Boston records. Under date of May 18, 1762, it states that "the selectmen are informed that one Isaac Moses, a Jew, has lately come to town." Another reference, dated June 1st, tells of a warrant issued as a warning to Isaac Moses to depart in fourteen days, or else furnish security. And a third reference, dated June 21st, describes Isaac Moses as a single man who had come from New York by land and been in town for three months. Isaac Moses was a resident of New York for some time prior to the American Revolution, and may have been a native New Yorker. He was president of the synagogue in 1775.

Upon the occupation of New York by the British, Isaac Moses joined the Reverend Gershom Seixas and other patriot Jews in an exodus from the city. He thereupon took up his residence in Philadelphia, where he remained throughout the war. He was active in privateering during the Revolution. At the most critical period of the American Revolution, 1780, when funds were badly needed, Isaac Moses gave his personal bond for £3,000 as his contribution to a proposed fund of £260,000 to support the credit of a bank for furnishing a supply of provisions for the armies of the United States. He also purchased a number of bills for large amounts to raise money for the French Army.

While staying in Philadelphia, Moses became the chief organizer and first president of the Congregation Mikve Israel; and, as president, it was he who invited the governor of the state to the consecration of the synagogue in 1782.

After the close of the war, Isaac Moses returned to New York, where he took a leading part in Jewish activities in behalf of the Congregation Shearith Israel, of which he was a trustee for many years and several times president. He soon became known as one of the most respectable and intelligent among the merchants of the metropolis. He was among the number who first established the Bank of New York. Isaac Moses married his cousin Reyna Levy, daughter of Hayman Levy, the well known merchant and Indian trader. She bore him ten children. To judge by a list of his property holdings, made out about the year 1816, Moses appears to have been a man of considerable wealth, for his holdings included stores, dwellings, lots and other possessions to the estimated value of $134,850.

Isaac Moses. From a contemporary painting by John Wesley Jarvis presented by the Moses family to the Museum of the City of New York

His son, Solomon Moses (1774-1857), was also a leading New York merchant, who married Rachel Gratz, sister of the renowned Rebecca, in 1806. They had many children, whose care devolved upon their aunt, Rebecca Gratz, after their mother's death in 1823. A daughter of Solomon Moses, named Sarah Gratz Moses, was the mother of Henry Joseph of Montreal, Canada, present owner of a valuable collection of portraits, including many of the most distinguished Jews of colonial times painted by Sully, Stuart and other famous American artists. MOSES, ISAAC S., rabbi, b. Santomichel, Posen, 1847; d. New York city, 1926. He was the son of the rabbi Israel Baruch Moses, and younger brother of Adolph Moses. After some studying in Gleiwitz and Breslau, he left for the United States in the 1870's. He was a religious teacher for a time; then at twenty-six, entered the rabbinate, occupying his first pulpit at

Quincy, Ill. By 1888 he was in Chicago, at Kehilath Anshe Maariv, and in 1895 he organized Temple Israel. In 1901 he was called to New York city's Central Synagogue (Congregation Ahavath Chesed Shaar Hashomayim), and from there he retired as rabbi emeritus in 1919.

In the period when the outlines of Reform Judaism in America were not yet firmly established, Moses was one of the country's most energetic and influential rabbis, leaning first to the radicalism of David Einhorn and later to the conservatism of Isaac M. Wise. From 1880 to 1882 he personally published in Milwaukee, Wis., the German weekly *Zeitgeist,* edited in conjunction with his brother Adolph and with Emil G. Hirsch; in this organ appeared the writings of distinguished rabbinical and secular scholars of America and Europe.

Moses was a charter and active member of the Central Conference of American Rabbis; and it was his manuscript which was accepted as the basis for the Conference's *Union Prayer Book,* issued in time for the holidays of 1894. That year the Conference also published *Sermons by American Rabbis,* which Moses collected and edited. His own sermons were noted for their intensive Judaism, their poetry of style and perfection of form. Of them he published the collections *Man and Humanity* (1886); *The Message of the Age* (1890); *On the Heights* (1892).

His contributions to religious text-book literature include: *Pentateuch* (1881); *Historical Books of the Bible* (1884); *Ethics of Hebrew Scriptures* (1889); and *Sabbath School Hymnal* (1904).

Lit.: Central Conference of American Rabbis Year Book, vol. 37 (1927) 250-57.

MOSES, ISRAEL, American soldier, b. New York; d. 1870. In 1846 he accompanied General Loring on his overland march to Oregon, and in 1847 fought in Mexico, serving as assistant surgeon of the United States Army until his resignation in 1855. During the Civil War he was in charge of camp hospitals in the Army of the Potomac. He was mustered out of service in 1865 with the rank of lieutenant-colonel, received for faithful and meritorious service. His father, Joshua Moses (d. 1837), was a prominent New York merchant engaged in the China trade. His brother, Isaac Moses, was adjutant-general of the Third Army of the Potomac. Before the war Isaac had been engaged in the East India trade, and after the war he settled in Galveston, Tex.

Lit.: Markens, Isaac, *The Hebrews in America* (1888) 128; Wolf, *The American Jew as Patriot, Soldier and Citizen* (1895).

MOSES, JACOB M., lawyer, b. Baltimore, Maryland, 1873. He was interested in economic and social law from the beginning, and at graduation from the University of Maryland (1905) he published the prize thesis, "The Law Applicable to Strikes." He was member of the Maryland state senate for four years from 1900 to 1904; and in 1908 became judge of the Juvenile court in Baltimore.

In 1902 he was on the Maryland-Virginia Oyster Commission; and from 1916 to 1921 impartial chairman of the Men's Clothing Industry in the state. He contributed articles on legal and economic subjects to various periodicals.

At one time he was a member of the national executive committee of the Zionist Organization of America and honorary vice-president of the American Jewish Congress.

MOSES, MYER, soldier and legislator, d. New York city, 1833. He was the father of Franklin J. Moses, chief justice of South Carolina. Moses was a prominent citizen of Charleston, and records show that he was a member of the state legislature from that city in 1810. In 1809, he was active in the South Carolina Society for the Promotion of Domestic Arts and Manufactories; in 1811 he is listed as a commissioner of free schools, and a director of the Planters' and Mechanics' Bank. He was recorded a commissioner of public schools in 1823.

In the first battalion of the South Carolina volunteers Moses was a captain (1809) and later a major. He was active in the War of 1812 with England and was one of a committee of twenty-one for "adding to the defences of the city."

It was about 1825 that he moved to New York city. He wrote: *Oration Delivered at Tammany Hall on the 12th May, 1831,* and *Full Annals of the Revolution in France.*

His father, Myer or Meyer Moses, (d. 1787) was one of the earliest Jewish settlers of Charleston, and a thriving merchant there. During the Revolution he gave valuable material aid to the colonial cause; this was testified to in a letter written by General Thomas Sumter to Moses' grandson Franklin J. Moses. The document mentions the "extremely friendly and humane" treatment given by Moses to the wounded and prisoners brought in after the fall of Charleston.

Lit.: Elzas, Barnett, *Jews of South Carolina* (1905).

MOSES, OTTO A., scientist and engineer, b. Charleston, 1846; d. New York city, 1906. He was educated at the University of Leipzig, and as an electrical expert it was he who introduced into Europe many of Thomas A. Edison's inventions. In his native state of South Carolina he served as a geologist and as general supervisor of phosphate works.

In New York city he was known for his Jewish philanthropies; he founded the Hebrew Technical Institute for the free education of boys, and served as its director. He was also connected with the Montefiore Home and the Hebrew Orphan Asylum.

MOSES, RAPHAEL J., lawyer, legislator and army officer, b. Charleston, S. C., 1812; d. Brussels, 1893. He was the son of Israel Moses, and a descendant of the Luria and Nunez families. In his day he ranked with the leading statesmen and political orators of the South. After winning a reputation as a lawyer in Florida, he moved to Columbus, Georgia, in 1849, and at once entered actively into Georgia politics. At the outbreak of the Civil War he enlisted, and rising to rank of major, was finally appointed chief commissary of Georgia, attached to Gen. James Longstreet's staff; he was known as the "honest commissary," and it was he who received the last rationing order issued by the Confederate Government His three sons, Israel M. Nunez, Albert M. Luria, and Raphael J. Moses Jr., also volunteered for service; the second was killed in heroic action.

Resuming practice of law after the war, Major Moses

was elected to the Georgia legislature in 1866; here, as chairman of the judiciary committee and acknowledged leader of the House, he won fame by his oratory and his ardent patriotism. When a certain political candidate taunted him with being a Jew, Moses replied in a letter which became famous, first reproduced from the Columbus *Daily Times* in the *American Israelite* of Sept. 6, 1878, and later reprinted hundreds of times.

Lit.: Elzas, Barnett, *Jews of South Carolina* (1905) 199-202; Markens, Isaac, *The Hebrews in America* (1888) 180-82.

MOSES, ROBERT, public official, b. New Haven, Conn., 1888. His father, Emanuel Moses, wealthy merchant and philanthropist, was descended from Spanish Jews; his mother (Bella), of Bavarian Jewish stock, was active in the Ethical Culture Society and several New York philanthropies. Robert Moses himself was never affiliated with any Jewish religious organization.

He trained for public service at Yale, Oxford and Columbia universities, and in 1913 obtained his first job with New York city as municipal investigator, becoming the brilliant youthful adviser of reform mayor John Purroy Mitchel. Twenty-five years later his name was a byword in civic accomplishment: he had built for the people of New York city and its environs an unique network of parks and parkways, great arterial highways, bridges, beaches, and playgrounds for young and old. By 1942 more than 1,800 projects were begun or finished, and more than a half billion dollars of Federal, state, and city funds, expended constructively through the initiative of Robert Moses. He became the country's foremost engineer of municipal beautification for public welfare.

An unswerving, though critical Republican, Moses was the protegé of Democratic Governor Alfred E. Smith, who in 1919 appointed him secretary of the State Reconstruction Committee. He performed brilliantly in helping revamp New York state's antiquated government apparatus. His reports and recommendations for the merger of scores of cumbersome bureaus were hailed as model state papers. Walter Lippmann acclaimed his survey on banking abuses as the finest government report of its kind ever penned. Moses remained an intimate Smith adviser, and in 1927-28 he served as Smith's secretary of state. He was eased out by the succeeding Governor Franklin D. Roosevelt; Moses' relations with Roosevelt and, later, with the whole New Deal were not cordial.

In 1924, as chairman of the newly created and centralized State Council of Parks and president of its Long Island Commission, Moses began to put into execution his cherished plan of making Long Island the playground of crowded New York citizens. By 1931 Jones Beach ("Riviera" of New Yorkers) was ready, reclaimed from seventeen miles of waste reef lying south of Long Island. Under Moses' budgeting and management, the resort became self-supporting, and a model of public cleanliness and good manners. To link Long Island's playgrounds with Manhattan Island and the mainland, extensive and beautiful highways were laid out, notably the Southern and the Northern State Parkways. In 1936 the unique Triborough Bridge, vital traffic link over the East River, was completed. For the World's Fair (1939-40) Flushing Meadow was reclaimed from more than a thousand acres of dump and swamp land, and after the Fair, planned for a park. The LaGuardia Airport, in Queens, grew from a privately owned small field into the busiest commercial port in the world.

In 1933 Moses, logical candidate for Fusion mayor of New York city, declined, and campaigned instead for Fiorello H. LaGuardia; when the latter took office, he appointed Moses municipal park commissioner, the one salaried post among Moses' more than half dozen public offices. LaGuardia named Moses to the City Planning Commission in 1941. The park commissioner multiplied the children's playgrounds, improved park areas, including Central Park, laid out tennis courts, beaches, swimming pools, golf courses. Outstanding were the Sara Delano Roosevelt Playground and the Split Rock golf course. Historic monuments and buildings were restored. The spectacular Henry Hudson speedway was built as part of the West Side improvement project. The Gowanus elevated parkway was opened to ease traffic in crowded Brooklyn, in 1941. By that time Moses had begun to spend a second half billion dollars for projected tunnels, bridges, elevated highways, grade separations.

In 1942 Governor Herbert H. Lehman reappointed Moses president of the Long Island State Park Commission for a six-year term without salary.

Moses took time out from park-planning in 1934 to run unsuccessfully against Herbert Lehman for governor of New York. The curious paradox of his "Old Guard" speech together with his progressive action was noted, and in his campaign his famous fighting temper was in evidence, deplored by enemies as a sign of a dogmatic and dictatorial temperament, admired by friends as the instrument for "getting things done." Moses' career was marked from the first by much-publicized quarrels with opposing officials, wealthy landowners, labor unions, legislatures and politicians; but his scrupulous honesty and devotion to public interest were never challenged.

Among the great number of honors awarded him for his work, as a "public servant de luxe" was the Kimbrough gold medal of the American Institute of Steel Construction, in 1941; and in the same year the specially created order of merit by the National Institute of Arts and Letters. SHERRY ABEL.

Lit.: *Fortune,* June, 1938, pp. 71-78 et seq.; *PM,* Aug. 3, 1941, pp. 51-53; *Reader's Digest,* July, 1942, pp. 63-66 (reprinted from the *Washington Post*).

MOSESCO, LILLIAN DORIS, author and editor, b. New York city, 1899. She received her B.C.S. degree cum laude from New York University. After completing a three years' course in the Department of Finance of that university, she joined the publishing firm of Prentice-Hall, Inc., as editor. She travelled extensively in the United States and abroad and did considerable research work in corporate law.

She was author of *Corporate Meetings, Minutes and Resolutions* (1929); collaborated with E. J. Brown in *Corporate Secretary's Manual and Guide* (1936) and edited (in collaboration with Stanley M. Brown) *Business Executive's Handbook* (1937), also *Encyclopedia of Corporate Terms* (1939).

FILIPPUS MOSESCO, editor (b. Dorohoi, Roumania, 1895), was her husband. He was brought to the United States as a child and had been supporting himself long

before he began to educate himself, at the age of seventeen. Upon entrance of the United States into the first World War, he volunteered for the Army and, thrice disabled, spent many years in hospitals. Having traveled extensively in France and Spain, he lectured, on his return to the United States, on the Spanish revolution. He acquired a consummate command of Spanish. In 1937 he married Lillian Doris with whom he edited jointly *The Conscientious Objector* (1939), official publication of several pacifist groups.

MOSESSOHN, DAVID NEHEMIAH, lawyer and editor, b. Ekaterinoslav, Russia, 1883; d. New York city, 1930. His father, Nehemiah Mosessohn, brought him to the United States in 1887. The family settled in Portland, Ore., in that year. Mosessohn was educated at the high school and University of Oregon, receiving his degree in law in 1902. He was admitted to the bar of the Supreme Court of Oregon, 1902, California, 1909 and New York, 1923. In Oregon he served as deputy district attorney of Multnomah county. In New York he was executive chairman and, from 1918 on, supreme arbiter of the Associated Dress Industries of America; arbitrator of the Arbitration Society of America, and of the American Silk Association. From 1926 on he was editor of *The Jewish Tribune* following the death of his father. Mosessohn was active in a number of Jewish and non-Jewish movements. He was chancellor of the council of American Jewish Student Affairs. In 1929 he was appointed to President Hoover's national business survey conference. He published articles on economic subjects in various periodicals.

MOSESSOHN, MOSES DAYYAN, lawyer and editor, b. Odessa, Russia, 1884. The second son of Nehemiah Mosessohn, he came to the United States in 1887, and was educated at the University of Oregon, there receiving his law degree (1905). From 1903 to 1915 he served as secretary of the Portland Chamber of Commerce. He removed to New York city where he became publisher of the *Jewish Tribune* (1918-31) and counselor to various trade organizations. He was executive chairman and general counsel of United Women's Wear League of America (1923-33) and of the Associated Dress Industries of America (1930-33); chairman and counsel of Trade Organization Associates, and of other trade organizations, as also of various Code authorities under the National Industrial Recovery Act. In 1942 Mosessohn was living in New York city.

He was a speaker and writer on economic subjects, the author of *Guide to American Citizenship; Trade Organization as Effected under the NRA* (National Recovery Act); *The Employer and the New Labor movement; An Analysis and Explanation of the Robinson-Patman Anti-Discrimination Law.* He was editor of the *League Review.*

MOSESSOHN, NEHEMIAH, rabbi and editor, b. Crimea, Russia, 1853; d. New York city, 1926. His father had been chief rabbi of Odessa. Educated at the rabbinical school of Zhitomir, at the University of Odessa, from which he received the LL.D. degree (1875), and at the University of St. Petersburg which bestowed upon him the degree of doctor of Semitic languages (1876), Nehemiah Mosessohn served as procuror and as government rabbi in Russia. In 1887 he migrated to the United States, ministering to orthodox congregations at Philadelphia, Dallas, Texas and Portland (Oregon). He received the degree of LL.D. from the University of Oregon (1902) in the same year that his son, David Nehemiah, obtained the identical degree.

Mosessohn edited *The Jewish Tribune* in Oregon from 1902 to 1908, and in New York city from 1908 until his death. As a publicist, he was eloquent in his attacks on apostates from Judaism, being anxious to defend the Jews against missionary rancor no less than against other maligners or Jew-baiters. The Kishinev massacres provoked his wrath against the Russian ambassador to the United States.

He contributed many scholarly articles on Bible and Talmud to various American periodicals. His rabbinical decisions attested his profound knowledge of Talmudic and secular law and his staunch belief in Judaism as a living force. He was persuasive in his demand that every Jew know the teachings and literature of his own people.

Lit.: Jewish Tribune, Dec. 17, 1926, pp. 1-7.

MOSHAB OBEDIM, *see* COLONIES, AGRICULTURAL.

MOSHAB ZEKENIM (home for the aged), *see* AGED, CARE OF; PHILANTHROPY.

MOSHEH RABBENU, *i.e.* "Moses our Teacher," popular designation for Moses.

MOSHEIM, GRETE, actress, b. Berlin, 1905. The daughter of a physician, she made her debut in 1925 at Max Reinhardt's Deutsches Theater, Berlin, and remained with that theater as its leading ingénue until Reinhardt's retirement in 1932. She gained pre-eminence among German actresses by her appearance in Noel Coward's *This Was a Man* (1927) and distinguished herself in George Bernard Shaw creations, notably as Eliza in *Pygmalion.* Other plays in which she acted were Edouard Bourdet's *The Captive,* Shaw's *Widowers' Houses,* Elmer Rice's *Street Scene,* and Shakespeare's *Much Ado About Nothing.* At the Lessing Theater she played Gretchen in Goethe's *Faust.*

Before going into exile, she toured Germany with her own company, appearing, among others, in *Pygmalion* and Ibsen's *A Doll's House.* One of the most popular actresses of pre-Hitler Germany (also noted for her movie roles), she emigrated to England in 1934 and devoted herself to the study of English. In October, 1935, she made a brilliant debut (St. James Theater, London), in a sort of Jekyll-Hyde role in Alice Campbell's drama of dual personality, *Two Share a Dwelling.* During a sojourn in Austria in 1937 she married Howard Gould, son of the late Jay Gould, American railroad financier. She made her Broadway debut in *Letters to Lucerne* (December, 1941), playing the role of a troubled German girl in a Swiss pension.

MOSHKOVITCH, AVROHOM (ABRAHAM), Argentine Yiddish poet, b. Jassy, Roumania, 1894. After receiving a Jewish education and attending Roumanian schools, Moshkovitch emigrated to the Argentine in 1911. For a short period he lived in the colonies, then moved to Buenos Aires. His literary work began to be published in 1914, and appeared in various Yiddish periodicals in Buenos Aires: *Yiddishe Zeitung, Die Press, Neie Zeit, Der Kolonist, Avangard, Argentina* and others. Moshkovitch belonged to the group of

younger Yiddish poets in Argentina, known as *Zeglen,* and a group of his poems were included in an anthology published by the group in 1925. That same year a volume of his poems, *Argentina,* appeared. A frequently-found theme in his work is the peasant life lived by Jews in the colonies of Argentina.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930), cols. 355-56.

MOSKOVITZ, HARRY SHOLOM, painter and etcher, b. Philadelphia, 1894. His cousin Boris Braslavsky was court painter to the late Czar of Russia. Beginning as a newspaper and commercial artist, he has done creative work in etching and painting since 1929. He is a portrait specialist, and has been acclaimed for his many portraits of famous people. These include likenesses of George Arliss, Ellis Gimbel, Cardinal Dougherty, David Sarnoff, Leopold Stokowski, and a well-known etching of President Franklin D. Roosevelt which the Academy of Fine Arts selected for honor in its catalog of 1933.

Moskovitz served as private with the American Expeditionary Forces in the first World War and taught at the educational center of the Third Army Corps in Coblenz, Germany.

MOSKOWITZ, BELLE L. (née Belle Lindner), social service executive and civic worker, b. New York city, 1877; d. New York city, 1933. She attended Teachers College, Columbia University, and began her career in communal work as director for amusements and exhibitions at the Educational Alliance in New York city, a position she held from 1900 to 1903. Her marriage to Charles Henry Israels and the rearing of her two children kept her away from professional work until 1908, when she joined the staff of *The Survey,* where she remained for two years. After Israels' death in 1911, she became field secretary of the Playground and Recreation Association of America. From then on the scope of her activities increased; she was affiliated with labor relations work, then with civic activities. Her marriage to Henry Moskowitz (1914) increased the range of her interests. After establishing herself as a public relations counsellor (1917), Mrs. Moskowitz was associated with political work. She was secretary of the New York State Reconstruction Committee (1919 to 1921), secretary of the Governor's Labor Board (1920 and 1921), and, from 1921 until her death, secretary of the Educational Council of the Port of New York Authority.

Belle L. Moskowitz was a valuable worker for the common good. Throughout her career she had an inconspicuous but often very important part in the formation of the social civic policies which later became so integral a part of community life that they were hardly noticed. In the days when she fought for workmen's compensation, decent housing for girls, the cleaning up of New York's dance halls, pure milk for babies and similar objectives, such reforms were neither popular nor acceptable even to the higher elements in the community.

Belle Moskowitz combined to a rare degree the qualities of statesmanship, executive ability and clear social thinking which made her an extremely valuable adviser and friend through many of my years of public life, particularly during the time in which I served as governor of New York. She was with me in much of the legislation affecting the social program of my administration and in the years after my retirement from public life she continued to be an invaluable helper and guide through the years of rapidly changing political development.

Belle L. Moskowitz

With all of this it is noteworthy that Belle Moskowitz always shone as a wife and mother whose home was the center of a fine group of intellectual friends and neighbors.

ALFRED E. SMITH.

MOSKOWITZ, HENRY, social welfare worker, b. Husse, Roumania, 1879; d. New York city, 1936. He was educated at the College of the City of New York, at Columbia University, and at the Universities of Berlin and Erlangen, receiving his Ph.D. degree from the latter in 1906. He organized the Madison House Social Settlement and was active in the Henry Street Settlement. From 1910 on he was secretary of the Joint Board of Sanitary Control. He helped found and was associate leader of the Ethical Culture Society (1907-13). Under Mayor John Purroy Mitchel (1913-17) he served as chairman of the Civil Service Commission and as the first commissioner of Public Markets of New York city. In 1914 he married Belle Lindner Israels.

He was an active leader of the Progressive Party under Theodore Roosevelt. Associated for many years with Governor Alfred E. Smith, he wrote (with Norman Hapgood) *Up from the City Streets* (1927), a biography of Alfred E. Smith. He also edited *Progressive Democracy: Speeches and State Papers of Alfred E. Smith.*

Moskowitz was also vitally active in Jewish communal work, notably as an executive member of the Joint Distribution Committee, and as executive chairman of the American Ort. In 1936 he was elected to the executive committee of the World Ort Union.

MOSLER, HENRY, artist, b. New York city, 1841; d. there, 1920. He was ten years old when his family removed to Cincinnati. He had had no teacher in drawing but himself when, in 1855, he became a draughtsman for the publication *Omnibus* of Cincinnati. He then was directed in the pursuit of his art by James H. Beard. A patriotic sketch submitted to *Harper's Weekly* at the outset of the Civil War won him a commission as war art correspondent for that

Henry Mosler

magazine. While with General Johnson's army in that capacity, he was given the rank of a lieutenant. One of his paintings, *The Lost Cause,* reflects the artist's war experience.

In 1863 Mosler crossed over to Europe to study at the Academy of Düsseldorf, for a short while under Ernest Hébert in Paris, and for some time also in Munich. He returned once more to Europe in 1874, after he had been painting in New York city, in his own studio. He lived for some time in Brittany, enchanted by the picturesque old ways of life which had been conserved intact in that part of France. Many of his paintings deal with scenes from the life of Breton peasants. Among them, one of dramatic beauty, *The Return of the Prodigal Son,* was purchased for the Luxembourg Gallery of Paris, the first honor of this kind bestowed on an American work of art.

Other paintings by Mosler won him, in addition to seventy-nine honorable mentions from the Paris Salon, gold medals in Paris (1888), Vienna (1893), Munich and Nice, and a silver medal in Paris (1889). He was made a knight of the French Legion of Honor and an officer of the French Academy (1892), and an Associate of the National Academy of Design of the United States (1894). He won the prize of that Academy in New York city (1896), after having carried off the Thomas B. Clark prize and that of the Atlanta Exposition of 1895.

Mosler's canvas, *The Wedding Morning,* is at the museum of Sydney, Australia. *Three Children Under an Umbrella* is in the possession of the Philadelphia museum. A large number of his paintings may be found in European museums. In the United States art collections at Cincinnati, Ohio, New York city, Louisville, Ky., and Springfield, Mass., have preserved representative specimens of his works. *Saying Grace* is in the Corcoran Art Gallery, Washington, D. C.

Lit.: Collmann, Sophie M., *Jews in Art* (1909); Sollers, Edna S., "The Lost Masterpiece," *American Hebrew,* Oct. 5, 1934, p. 392.

GUSTAV HENRY MOSLER, artist (b. Munich, Germany, 1875; d. New York city, 1906), was the son of Henry Mosler. He studied painting with his father and with Leon Bonnat, and exhibited at the Salon of Paris. He was awarded a gold medal for his painting *De Profundis* (1891) and another at the Paris Salon (1901). He executed the portrait of Governor J. W. Stewart for the State House, Montpelier, Vermont.

MOSS, JOHN, merchant, b. London, England, 1771; d. Philadelphia, 1847. He migrated to America in his boyhood and supported himself as an engraver on glass; later he opened a small drygoods store in Philadelphia. There he prospered and, engaging in activities connected with the shipping industry, he eventually came to own four large vessels which were employed chiefly for the Liverpool trade but also had accommodations for passengers. For nearly twenty-five years he was a director of the Pennsylvania Company for Insurance on Lives and Granting Annuities; he was also a railroad director and a member of the managerial board of the Lehigh Coal and Navigation Company. He is said to have been the first to put to domestic use the coal from Lykens Valley, as well as to ship abroad a cargo of Pennsylvania anthracite.

After his retirement from business (1823) he devoted himself in civic and communal affairs. He served in the Philadelphia City Council, belonged to the Masons, and was an ardent supporter of Andrew Jackson. Among his gifts to the city of Philadelphia is a piece of statuary which still adorns Fairmount Park.

Moss was also active on behalf of his coreligionists. He was a trustee of Congregation Mikve Israel and presided at a gathering which assembled in Philadelphia, on August 27, 1840, to protest against the persecution of the Jews in Damascus.

LUCIEN Moss, philanthropist (b. Philadelphia, 1831; d. Philadelphia, 1895), was a grandson of John Moss. He founded the firm of Wiler and Moss, brass workers. Upon his retirement from business (1878), he devoted himself to philanthropic endeavor. In 1882 he was active in relief work on behalf of Russian Jewish refugees arriving at Philadelphia. He bequeathed the bulk of his fortune to the Jewish Hospital Association of Philadelphia for the establishment of the Lucien Moss Home for Incurables of Jewish faith.

Lit.: *Publications of the American Jewish Historical Society,* No. 2, pp. 171-4; No. 5, p. 205; Morais, Henry S., *The Jews of Philadelphia,* pp. 51-2, 254, 285, 286-7, 366, 474, 485; Moss, Sanford A., *Genealogy of John Moss and his wife Rebecca (Lyons) Moss* (1937).

MOSS, MARY, authoress, b. Philadelphia, 1864; d. Taormina, Sicily, 1914. She was a daughter of William Moss, who served as a surgeon of volunteers with the rank of major in the Civil War. A prolific contributor of essays, criticism and fiction to some of the best-known American magazines (including the *Atlantic Monthly, McClure's Magazine, Scribner's, Everybody's Magazine* and *The Nation*), she published the novelette *Fruit out of Season* (1902) and the novels *A Sequence in Hearts* (1903) and *The Poet and the Parish* (1906). Of Jewish interest were her novel "Julian Meldohla" in *Lippincott's* (March, 1903) and the story "Judith Liebestraum" in *Scribner's* (Aug., 1904).

MOSS, MATTHEW LEWIS, government official, b. Dunedin, New Zealand, 1863. He was educated at

Dunedin and was admitted as a barrister and solicitor to the bar in New Zealand (1886) and in West Australia (1892). He was a member of the Legislative Assembly of West Australia (1895-96) and represented the West Province in the Legislative Council of West Australia from 1900 to 1914. Moss held several important government offices: he served as Colonial Secretary in 1901, was named honorary minister in 1902, and attorney-general in 1905. From 1913 on he lived in London, England, and served as legal adviser to the government of Western Australia. Moss was still in office in 1942. On two occasions he acted as agent general for Western Australia.

MOSSE, a family known in the Prussian town of Märkisch-Friedland from about 1700 on. At that time Isaac Moses became a Schutzjude (protected Jew), with the privilege of trading. His son, Moses Isaac, was born in the same village about thirty years later. He was followed by Salomon Moses (1767-1811) and his son Marcus Moses (1807-65), who changed the family's name to Mosse.

Marcus Mosse became a physician in Grätz, a small town in the former German province of Posen. During his married life fourteen children were born, eight sons and six daughters. Salomon (b. Grätz, 1837; d. Kissingen, Germany, 1903) founded the linen house of Mosse in the Jägerstrasse in Berlin. Theodor (b. Grätz, 1842; d. Berlin, 1916) and Paul (b. Grätz, 1849; d. Berlin, 1920) later entered this firm. Rudolf (b. Grätz, 1843; d. Schenkendorf, Germany, 1920) founded the famous publishing house in Berlin. Emil (b. Grätz, 1854; d. Berlin, 1911) entered his firm. Albert (b. Grätz, 1846; d. Berlin, 1925) became well-known as a lawyer. Maximus (b. Grätz, 1857; d. Berlin, 1920) was a lawyer. One son died in early youth.

More detailed biographies of important members of the Mosse family follow:

Albert Mosse, attorney and public official (b. Grätz, 1846; d. Berlin, 1925), studied at the University of Berlin (1865-68), where he received his doctor's degree. During the Franco-Prussian War (1870-71) he served as a volunteer in the Prussian army, and thereafter as a public official with the Prussian government. He became, successively, district judge in Spandau, near Berlin (1876), municipal judge (1879) and state judge in Berlin (1888), state supreme court judge in Königsberg, East Prussia (1890), and privy councillor of justice in the same city (1903). The Albertus University in Königsberg bestowed upon him an honorary doctorate (1903), and appointed him professor (1904).

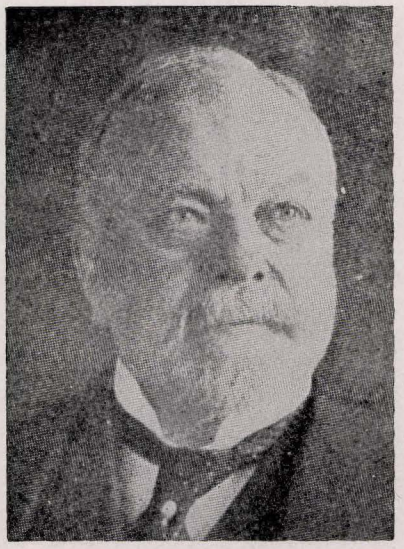
Mosse was an expert in the field of administrative law. In this capacity he taught Japanese diplomats in Berlin, and eventually served as adviser to the Japanese government in Tokyo (1886-90). He was the creator of Japan's political constitution, and also created the Japanese municipal by-laws. He rendered great assistance to the Japanese government in the concluding of international treaties. When his expected promotion as president of the senate failed to take place because of his Jewish faith, he resigned from all offices (1906) and returned to Berlin, where he lived for ten years as an honorary member of the city council. In this post he was the principal adviser to the municipal authorities in their disputes with the Prussian state ministers, who favored the surrounding communities. He wrote a well-known commentary on the German commercial code, became a member of the board of the Jewish community in Berlin, as well as a member and vice-president of the Verband der Deutschen Juden, and president of the board of trustees of the Hochschule für die Wissenschaft des Judentums.

The home for indigent children established by Emilie and Rudolf Mosse in Berlin

Emil Mosse, publisher (b. Grätz, 1854; d. Berlin, 1911), joined the firm of Rudolf Mosse in 1870, and three years later became director of the Cologne branch of the Rudolf Mosse publishing house. In 1878 he went to Munich to become director of the firm's branch there. His influence increased to such an extent that he finally controlled all the Rudolf Mosse branches in southern and western Germany and in Switzerland. He entered the firm as a partner in 1884, and later moved from Munich to Frankfort and then to Berlin.

Emilie Mosse (née Löwenstein; b. Aix-la-Chapelle, Germany, 1851; d. Berlin, 1924), wife of Rudolf Mosse, was noted as a philanthropist. Among the numerous philanthropic institutions which she founded were the Verein Mädchenhort in Berlin, where thousands of needy children were given food and shelter during the afternoons under the supervision of nurses and teachers, and the Emilie und Rudolf-Mosse Stiftung, in 1942 still in existence under the Nazi government, but under a different name. One hundred children of impoverished families of the better class—half of them Jews, half non-Jews—found refuge in this modern institution, which gave them a good education and prepared them for various professions. She was active in the management of organizations or institutions founded by her or of which she was a member.

Erich Mosse (pseudonym, Peter Flamm), writer, physician and psychologist (b. Berlin, 1891), was a nephew of Rudolf Mosse. Under the pen-name of Peter Flamm he wrote many articles for the publications of the Mosse firm. His dramas *Zugvögel* (1920) and *Der Tod und die Maske* (1920), his comedy *Himmel auf Erden* (1921), and his novel *Du* (1929), widely discussed in public, combined expressionism with psychological analysis. For a time he was dramaturge at the Lessing Theater in Berlin. Mosse emigrated to France in 1933, and arrived in the United States in 1934. Besides his activity as a physician—in this capacity he was clinical assistant of the New York State Psychiatric Institute and of the psychiatric division of Mount Sinai Hospital in New York—he published several essays, including "Painting Analysis in the Treatment of the Neuroses" in *Psychoanalytic Review* (1939) and "Color-Therapy" in *Occupational Therapy and Rehabilitation* (1942).



Rudolf Mosse

HANS LACHMANN-MOSSE, publisher (b. Berlin, 1885), was the son-in-law of Rudolf Mosse. He entered the publishing house in 1910, after several years in the banking business. He was especially well known for his art collection, which was open to the public in the old Mosse Palais at the Pariser Platz in Berlin. (This building was sold by the Nazi government to the French Embassy.) In 1933 Mosse resigned as head of the firm of Rudolf Mosse with the provision that for the next fifteen years all his earnings be paid into a fund for war victims. He was a member of the board of the Jüdische Reformgemeinde in Berlin. In 1935 he emigrated to Paris, where he lived until 1940. After the collapse of France he removed to Los Angeles.

RUDOLF MOSSE, publisher and philanthropist (b. Grätz, 1843; d. Schenkendorf, Germany, 1920), was the founder of the famous Rudolf Mosse publishing house in Berlin. He attended the Hochschule in Lissa, and entered as an apprentice the printing firm of Merzbacher in Posen, which at that time published the *Ostdeutsche Zeitung*. He studied later on in Posen, Berlin and Leipzig, and showed special interest in technique. He widened his knowledge of the newspaper business in the firms of R. Wagner and A. H. Payne in Leipzig, the latter of which sold him the newly founded newspaper *Der Telegraph*. However, he changed his position soon again, and in 1865 secured employment with the publishing house of Apitsch in Leipzig, where the periodical *Die Gartenlaube* was printed.

Mosse added to this widely read family magazine an advertising section, a new experiment in the German newspaper business. The history of the world press reports a similar attempt in London about 1800. Hasenstein and Vogler opened a kind of advertising firm in Altona (1856) which was still in existence in 1942. Hübner's firm in Leipzig was started in 1860 and dissolved in 1862. It was followed by G. L. Daube (1864), which firm was sold to Scherl's publishing house in Berlin a few years later. In 1867 Mosse opened his own advertising agency in Berlin, and laid the foundation of one of the largest enterprises of this kind in the world. "Rudolf Mosses Annoncenexpedition" became famous all over the world, as well as the "Rudolf Mosse code" and the "Rudolf Mosses Adressbücher." When his firm celebrated its fiftieth anniversary the *Festschrift* published on that occasion mentioned fifty branch offices in Berlin and in addition more than 200 in Germany proper and about twenty main branches in foreign countries. About 100 papers published their advertisements exclusively through the Rudolf Mosse agency.

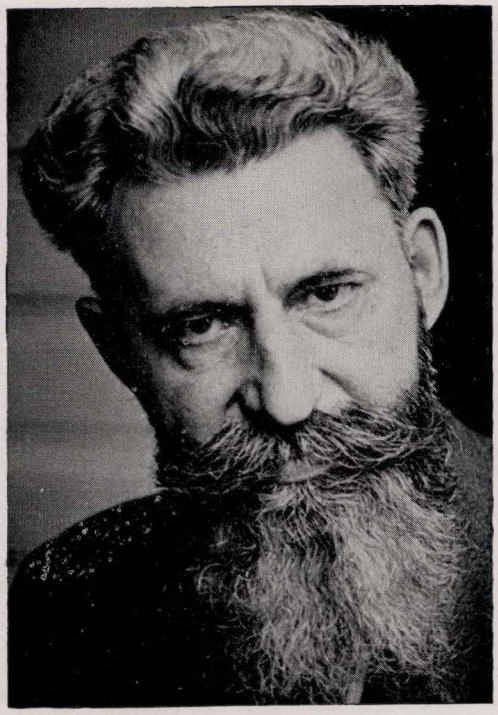
Shortly after his brother-in-law, Emil Cohn (who married Leonore Mosse), entered the firm as partner, the famous democratic and liberal paper *Berliner Tageblatt* was promoted (1872) under the editorship of Arthur Levysohn, who was followed by Theodor Wolff (1906-33). Cohn directed the internal organization of the firm until his retirement in 1884, and was followed in this capacity by Rudolf's brother Emil. Rudolf himself organized many branches, assisted by Emil. The first paper which Rudolf provided with advertisements through his own firm was *Der Kladderadatsch,* beginning with January 1, 1867; it was followed by *Die fliegenden Blätter* shortly thereafter. Within the range of this branch of the steadily growing firm came the publication of address books for towns and of classified directories and telephone books.

In 1880 the firm took over the *Allgemeine Zeitung des Judentums,* founded by Ludwig Philippson, and later its successor (1922 to 1938), the *Central-Verein-Zeitung,* founded by Ludwig Holländer. The popular *Berliner Volkszeitung* appeared in 1889, and later the *Berliner Morgenzeitung* and the *Berliner Abendzeitung.* For several years the *8 Uhr Abendblatt* and the *Welt am Montag* were printed by Mosse, too. The firm published also a great number of trade papers, even in foreign languages.

Mosse was no less successful when he began to publish popular-priced scientific books. Among the most successful authors were Henrik Willem van Loon (with his *Rembrandt*) and the art historian Fritz Stahl (with his *Paris* and *Weg zur Kunst*). Moreover, the firm owned the Snanje publishing house for books in Russian, and the Esperanto publishing firm.

Mosse established a hospital in his native town of Grätz and, together with his wife Emilie, the Emilie und Rudolf-Mosse Stiftung in Berlin-Wilmersdorf. He was a member of the board of directors of the Jüdische Reformgemeinde in Berlin, and in 1892 founded the Unterstützungskasse der kaufmännischen Angestellten and in 1911 a special pension fund for his employees, the reserve of which amounted to several million marks. Shortly before his death on his farm at Schenkendorf a pamphlet against communism was printed in Zurich, edited by Professor Herzog, Mosse, and Walther Rathenau under the title of *Protest der deutschen Juden gegen den Kommunismus.* The liberal, democratic and fighting tradition of this old German Jewish family was maintained until his death. Thirteen years later the fruits of his lifework were seized by the Nazis. The impressive edifice on the Jerusalemerstrasse, for which Erich Mendelsohn made one of the most modern and interesting façades during its alteration and modernization in 1925, was still in existence in 1942, printing newspapers, books and magazines of Nazi origin.

RUDOLF S. MOSSE, lord of a manor (b. Berlin, 1890; d. Berlin, 1933), nephew of Rudolf Mosse, was a farmer who evidenced special interest in the problem of the re-



Benzion Mossinson

settlement of the Jews. During the first World War he served in the German army as a lieutenant, receiving the Iron Cross first and second class. He was murdered by the Nazis on a highway near Berlin on March 26, 1933. JOHN F. OPPENHEIMER.

Lit.: Neumann, Otto, "Rudolf Mosses Ahnen," *Jüdische Familienforschung,* vol. 11, pp. 665-69, 685-87; *Festschrift zum 50-jährigen Jubiläum des Verlagshauses Rudolf Mosse* (1917); Hamburger, Richard, *Zeitungsverlag und Annoncenexpedition Rudolf Mosse* (1928); *C. V. Zeitung,* July 3, 1925; *Deutsche Juristenzeitung,* July, 1925.

MOSSINSON, BENZION, educator and civic official, b. Andreevka, Russia, 1878. He received his Ph.D. degree from the University of Berne, and from 1900 to 1907 taught in Russia. In 1907 Mossinson went to Palestine, where he joined the faculty of the Herzliah Gymnasium in Tel Aviv. He was made director of the school in 1912.

Alexander Moszkowski

Mossinson served as a member of the Zionist Actions Committee, of the Vaad Leumi and the Vaad Hahinnuch. He was until 1935 chairman of the Confederation of General Zionists in Palestine, and editor of its weekly, *Hatziyyoni Hakelali.* As delegate to the Zionist Congresses, from the fifth to the nineteenth, Mossinson was several times chairman of the committee on education. In addition to having written for various magazines in Russian, English and Hebrew, he was the author of *Hanebiim,* a book on the prophets.

MOSSNER, WALTHER VON, German general, b. Berlin, 1846; d. Heidelberg, Germany, 1932. Son of the Jewish banker Jacob Mossner and of Henriette Riese Mossner, who was also Jewish, Mossner joined (1864) the Prussian army, excelled in the war of 1866, and was made a lieutenant by King William I who, by a special order, compelled the officers of the regiment of hussars at Bonn to cease their resistance to the admission of a Jewish fellow officer.

Mossner's was an extraordinarily brilliant military career. Because of his feats in the Franco-Prussian War (1870) he became senior lieutenant in 1871. In 1873 he was appointed aide-de-camp to the command of the twenty-second cavalry brigade. In 1875 he became captain, and in 1877 commander of a squad. In 1882 he was commissioned aide-de-camp to the fifth cavalry division, and in 1884 was promoted major and aide-de-camp to the third army corps command.

Emperor William II esteemed Mossner as highly as his grandfather did. In 1890 he knighted Mossner and promoted him to lieutenant-colonel. In 1892 he was appointed the emperor's personal aide-de-camp, and in 1893 became colonel. In 1895 he was charged with the command of the third division of imperial horse guards.

In 1903 Mossner became governor of Strasbourg, and in 1904 general in command of the cavalry. In 1910 he retired from active service, but remained subject to service at the call of the high command. During the first World War he assumed vicarious command of an army corps.

Immediately after he had been promoted lieutenant, Mossner challenged an anti-Semitic officer to a duel with swords, and wounded him dangerously. Thereafter he was highly respected by fellow officers. He was one of the most brilliant cavalrymen in the Prussian army, and was even more greatly admired for administrative skill shown in commanding the flower of that army.

Mossner spent his final years at Baden-Baden in complete obscurity.

Lit.: Bülow, Bernhard, *Denkwürdigkeiten,* vol. 4 (1931).

MOSZKOWSKI, ALEXANDER, author, b. Pilica, 1851; d. Berlin, 1934. He was the brother of Moritz Moszkowski, and distinguished himself as music critic of the *Deutsches Montagsblatt.* He won popularity through his contributions to newspapers and magazines, and through his collections of humorous stories, such as *Die Jüdische Kiste* (1911). In his advanced years, he published disquisitions on philosophical questions such

as *Sokrates der Idiot; das Geheimnis der Sprache* (1917), which together with a book on Albert Einstein denote the autodidact. He wrote a popular scientific work, *Buch der 1,000 Wunder* (1916, in collaboration with A. Furst); *Der Jüdische Witz und seine Philosophie* (1923); and an autobiography, *Panorama meines Lebens* (1925). Moszkowski, who united an extraordinary fund of knowledge with spiritual sublimity and serenity of mind, played a vital role in Berlin society until the very end of his life.

MOSZKOWSKI, MAX, biologist and explorer, b. Breslau, Germany, 1873; d. Rio de Janeiro, 1939. He studied in Berlin, Strasbourg and Breslau, where he won his doctor's degree, practised at the Urban hospital in Berlin and at the anatomical institute of the University of Freiburg, Germany, and finally became physician and editor in Berlin. Moszkowski specialized in the research of tropical diseases and won recognition through the discovery of the cause, and possibility of cure, of the so-called beriberi disease, the symptoms of which manifest themselves mainly in limp nerves and atrophied muscles. He demonstrated that this malady is caused by certain vitamin deficiencies, by eating polished rice, and can be overcome by a diet consisting mainly of fresh fruits and vegetables, lemon and tomato juices.

Moszkowski began his studies on this subject by traveling through Sumatra and New Guinea (1910-11), the focal centers of beriberi, which also appears in the tropical districts of China, India, Central and South America, the West Indies, Africa and Australia. Upon returning to Berlin, he undertook experiments on his own body (1912-13). He lived for 236 days on peeled rice only and became seriously ill of beriberi. He never recovered completely from this experiment. But he had vindicated his theory.

Two popular books on his travels were published: *Auf neuen Wegen durch Sumatra* (Berlin, 1911) and *Ins unerforschte Neu Guinea* (Berlin, 1925). In addition he wrote many articles for the four editions of the *Philo-Lexikon, Handbuch des jüdischen Wissens* (Berlin, 1935-37) and for the newspapers and magazines printed by the publishing house of Ullstein and Co. in Berlin.

After the Nazis' rise to power, Moszkowski became an adviser on questions of overseas emigration and was in close contact with the respective Jewish organizations in Germany. He left Berlin for South America in 1938. After a short stay at the colony Rolandia (Parana), he returned, a sick man, to Rio de Janeiro, where he died shortly thereafter.

MOSZKOWSKI, MORITZ, teacher and composer, b. Breslau, 1854; d. Paris, 1925. He began his musical career as teacher of the piano, after having studied in Dresden and Berlin. In 1873 he made his debut as concert pianist, following this with an extensive tour of Europe which culminated in successful appearances in Paris, later to become his residence. In 1899 he was elected a member of the Berlin Akademie. He composed many works, including the opera *Boabdil,* performed in Berlin (1892), the ballet *Laurin,* and the symphonic poem *Jeanne d'Arc,* as well as concertos for violin and piano. But he is best remembered for his smaller pieces for piano, the concert etudes, concert waltzes, and particularly his spirited Spanish dances.

Moritz Moszkowski

MOTION PICTURES, *see* THEATRE.

MOTKE CHABAD, jester, b. Ashmiane, province of Vilna, Lithuania, toward the end of the 18th cent., d. Vilna, after 1875. The word *Chabad* is the equivalent of the Hebrew *Habad,* made up of the beginnings of the words Hochmah (Wisdom), Binah (Understanding), and Daath (Knowledge). Motke's parents were poor and he became an apprentice to a caterer at weddings.

Like Hershel Ostropoler and other jesters, Motke became famous and popular among the Jewish masses everywhere for his jokes and anecdotes. Nevertheless he died in poverty, after a long siege of paralysis, embittered by neglect and the squalor of his existence. Many jokes attributed to Motke were really not his.

Lit.: *Motke Chabad,* a collection of stories; Cooper, G., *Forward,* Feb. 9, 1930; Cahan, Abraham, *Bletter fun mein Leben.*

MOTOT, SAMUEL BEN SAADIA IBN, commentator, Cabalist and translator who lived in the second half of the 14th cent. at Guadalajara, Spain. Otherwise nothing definite is known about his life. He is best known for his supercommentary on Ibn Ezra's commentary on the Pentateuch entitled *Megillath Setharim* (Venice, 1554; later published in abridged form in the collection *Margalith Tobah* by Jekuthiel Lazi). Motot, an eminent Talmudist, Cabalist, and philosopher, in this work quotes Aristotle and various other savants. He defended Ibn Ezra against the accusation that he thought lightly of the rabbinical authorities, although he himself evidences a poor opinion of Ibn Ezra's orthodoxy and of his knowledge of the Talmud. He accuses him of not having penetrated deeply into the Cabalistic spirit of the rabbinical sayings.

Other works by Motot, preserved in part or in full and mostly in manuscript, are: a Cabalistic commentary on the Pentateuch; a commentary on the daily prayers and the Passover Haggadah; a commentary on the *Sefer*

Yetzirah; a translation of Abraham ibn Daud's *Al-'Akidah Al-Rafi'ah* into Hebrew under the title of *Emunah Nissaah* which he made for Isaac ben Sheshet (Ribash) in 1392.

Lit.: Schiller-Szinessy, *Catalogue of the Hebrew Manuscripts Preserved in the University Library, Cambridge,* pp. 136-44; Steinschneider, *Gesammelte Schriften,* p. 448.

MOTOT, SIMEON, 15th cent. mathematician. He is known to history only through the existence of two Hebrew manuscripts. One is a book of algebra, *Sefer Haalzibra,* in which can be found all that was known of the science of algebra at that time, and the other treats problems of the asymptotes, or certain conical curves. Both manuscripts came to light through their translation into French by Gustave Sacerdote, and their publication in the *Revue des Études Juives.* Very little else is known of Motot, and it is only by assumption that the time and place of his life are set at the middle of the 15th cent., in Lombardy or Venice.

Lit.: Sacerdote, G., "Le livre de l'Algebre de Simon Motot," *Revue des Études Juives,* vol. 27, pp. 191-205; vol. 28, pp. 228-246; vol. 29, pp. 111-126; Steinschneider, *Verzeichnis der hebräischen Handschriften der Königlichen Bibliothek zu Berlin.*

MOTTA, EMANUEL DE LA, merchant, early resident in South Carolina, b. Santa Croix, West Indies, 1760; d. 1821. Emanuel grew up in Charleston and became one of its leading citizens. On reaching maturity he entered business as a commission merchant and an auctioneer. He is said to have served both in the Revolutionary War and in the War of 1812, though this statement lacks confirmation.

Following his residence in Charleston (1770-1782), Emanuel removed to Savannah, Ga., where he aided in reorganizing the Jewish congregation of that city. His name appears, in 1790, as one of the incorporators of the Savannah Congregation Mickva Israel. In addition to his activities in Jewish affairs, he was prominently connected with the early history of freemasonry in America. He held high offices and degrees in various Masonic orders. As special representative of the Charleston Masonic Council, he went to New York, in 1813, and helped to establish a New York chapter, of which he became the head. While engaged in a controversy with a rival Masonic lodge, Emanuel De La Motta put up a strong defense in maintaining his right to hold high office despite the fact that he was a Jew. Upon his death, May 17, 1821, he was survived by his widow and eight children.

Lit.: Publications of the American Jewish Historical Society, No. 19, pp. 37-8, 80-3; Daly, *Settlement of the Jews in North America,* p. 72; Pike, *Historical Inquiry,* p. 201.

MOTTA, JACOB DE LA, American physician and surgeon, son of Emanuel De La Motta, b. Savannah, Ga., 1789; d. Charleston, S. C., 1845. He began the practice of his profession in Charleston, after serving as an attendant physician at the Charleston Dispensary. He was an army surgeon in the War of 1812, returning to Charleston later to continue his medical career. In 1824 he was elected secretary of the Charleston Medical Society, retaining that position for many years.

Although a resident of Charleston for the greater part of his life, he also took an interest in the Jewish communal activities of Savannah, his native city. This interest manifested itself in the aid he extended toward the reorganization of the Savannah congregation and the building of a synagogue. For several years De La Motta served as the minister of the Savannah congregation, and similarly at Charleston. When the synagogue at Savannah was consecrated in 1820, he was chosen to deliver a discourse; this was later published by the author and elicited appreciative letters both from Jefferson and Madison. At the funeral services held in honor of the Rev. Gershom Mendes Seixas, 1816, in New York, De La Motta delivered a eulogy which was published in pamphlet form.

De La Motta stood high in his profession. He was elected, in 1836, a corresponding member of the Royal Academy of Medicine at Paris. A year later he was made assistant commissioner of health. He delivered numerous lectures on medical and scientific subjects, several of which found their way into public print. In 1831 he was elected commissioner of the Poor House. And in 1841, when Harrison became president, he appointed De La Motta receiver-general for his district.

Besides his interest in medical science, economics and Jewish affairs, Jacob De La Motta was devoted to literature and philosophy. He acted as secretary of the Literary and Philosophical Society (1832-1840), delivering learned discourses before the members of that organization.

Jacob De La Motta must not be confused with another member of the family who bore the same name and lived about the same time in the same places. The two were cousins. The latter was a lawyer who practised his profession both in Charleston and Savannah. While a native of Charleston, he was a resident of Savannah for many years.

There is still another Jacob De La Motta whom it is more difficult to place. A story is frequently told to the effect that when Gen. DeKalb was mortally wounded at the battle of Camden, 1780, he was carried off the field by Capt. Jacob De Leon, assisted by Maj. Benjamin Nones and Capt. Jacob De La Motta. This tale appears to be a legend. The identity of Capt. Jacob De La Motta, who is supposed to have served under Gen. Pulaski, has not been definitely determined. He cannot be identified with Jacob De La Motta, the physician, as the latter was not yet born when the battle of Camden took place. Nor does he appear to be identical with Jacob De La Motta, the lawyer. The whole story is of doubtful authenticity. CLARENCE I. FREED.

MOTZA ILITH, *see* COLONIES, AGRICULTURAL.

MOTZKIN, LEO, Zionist leader, b. near Kiev, Russia, 1867; d. Paris, 1933. In Berlin, where he studied mathematics, Motzkin founded (together with Victor Jacobson, Nahum Syrkin and other Russian students) the *Russisch-Jüdisch-Wissenschaftlicher Verein,* the first national Jewish students' club in Berlin (1889). Having joined the Zionist movement at its start, he protested at the first Zionist Congress (1897) against compromises in the formulation of the Basel program. Commissioned by the Congress to visit the colonies in Palestine, he made public his observations in 1898. He

also directed attention to the Halukkah Jews, in Palestine, who were living on alms.

Motzkin was one of the leading spirits of Weizmann's oppositional group, the short-lived Democratic-Zionist faction, founded in 1901, which demanded a program of "Gegenwartsarbeit"—immediate cultural activity in the Diaspora—against Herzl's policy which insisted that Palestine be the exclusive center. Motzkin also investigated the causes and effects of the pogroms in Russia, and published, under his pen-name A. Linden (1910), his findings in two volumes, *Die Judenpogrome in Russland.*

During the first World War Motzkin headed, until 1916, the Copenhagen bureau of the Zionist Organization, which gave relief to the needy Jews of war-ridden countries, and then went to the United States to work there for the attainment of Jewish rights in Russia. In 1919 he became general secretary and later executive president of the Comité des Délégations Juives, which obtained the inclusion in the Versailles treaty of clauses for the protection of the minorities in Eastern European countries; during the ensuing years he strove to safeguard observance of these clauses. On Motzkin's initiative the first world-wide Jewish relief conference was held, which coordinated Jewish relief organizations (1920). In 1925 Motzkin was elected chairman of the Zionist General Council, which post he held until his death. He frequently represented Jewish organizations at international conferences, such as those dealing with the minority problems, and at sessions of the League of Nations. A week before his death he attended a conference convened in London to deal with the problems of German Jewry.

He was active also as a publicist, and from 1908 to 1914 edited the *Russische Korrespondenz,* a journal devoted to the emancipation of the Russian Jews. He wrote *La campagne antisémite en Pologne* (1932), and was co-editor of *Das Schwarzbuch,* dealing with the persecutions of the Jews in Germany, published after Motzkin's death by the Comité des Délégations Juives (1934).

Lit.: Sefer Motzkin, edit. Alex Bein (1939); *New York Times,* Nov. 7, 1933.

MOUNT VERNON, a city in Westchester county, New York, thirteen miles from New York city, having a population of 67,120 (census of 1940), including about 10,000 Jews. The first Jew to settle in Mount Vernon was Moritz Lowenstein, who arrived in 1869. He was in the Union Army during the Civil War, and was subsequently appointed to the United States customs service. Between 1869 and 1892 about sixty East European Jewish families settled here. They were mainly peddlers, needle trades workers, and house painters. Most of Mount Vernon's population came from metropolitan New York.

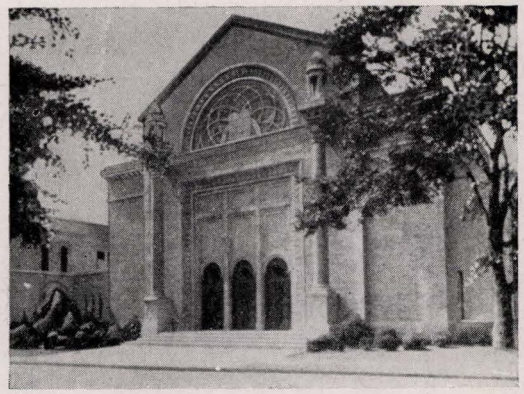
In 1892 a group which included Joseph Cohen, Abraham and Harry Levy, Charles Subitzky and Max Yavelow founded the Brothers of Israel Congregation (Orthodox), the oldest synagogue in Westchester. Its first building was dedicated in 1903, and the new building of the Brothers of Israel Congregation was completed in 1928. The rabbi in 1942 was Joshua Mereminsky, who began his service in 1931.

Sinai Temple, the oldest Reform congregation in Westchester county, was founded by a group which included Max Liebhold, Alonzo C. Lowenstein, Leon Mann, Louis Mayer and Abraham Schaffner. The temple in use in 1942 was dedicated in 1929, and the Sinai Memorial Library was completed and opened to the public in 1941. The first rabbi of the congregation was George Alexander Kohut; in 1936 Henry E. Kagan succeeded Solomon A. Fineberg to this position, which he still held in 1942.

Leo Motzkin who was chairman of the Zionist General Council from 1925 until his death. Photo, Keren Hayesod, Jerusalem

Congregation Emanu-El (Conservative) was founded in 1916 by Michael Dann, Joseph Durst, Max Fertig, Max Goldstein, Jacob Palestine and Max Schaffer. The congregation met in the Masonic Temple until its building was dedicated. Elias Margolis served the congregation from the time it was founded, and still held the position in 1942.

The Jewish Center of Mount Vernon (Conservative) was founded in 1923 by a group including Harry Charnas, Edward Drimmer, Charles Katinsky, Moe Mayer, Jacob Levine, David Workman and Meyer S. Workman. The organization was known at first as the Mount Vernon Heights Talmud Torah, but in 1928, when its building was dedicated, the congregation



Sinai Temple at Mount Vernon, N. Y.

The Free Synagogue at Mount Vernon, N. Y.

adopted its new name. Nathan Blechman was the congregation's first rabbi (1929-34). Lewis B. Grossman served as rabbi from 1934 on, and still held the position in 1942.

The Free Synagogue of Westchester (Reform) was founded in 1927 in Pelham Manor by a group which included Barnett Evans, Isaac Evans, Percy Hopp, Arthur C. Jaros, Jesse Kaliski, Emanuel Schwartz, Robert Szold and Isadore Zadek. It was then known as the Free Synagogue of Pelham. In 1939 the congregation purchased a three-acre estate on North Columbus Avenue. Abram V. Goodman served the congregation from 1927 to 1928; in that year he was succeeded by Max Maccoby, who was still serving in 1942.

The Ladies Hebrew Aid Society, a family aid society, was organized in 1904. This organization operated a Free Loan Society which was still in existence in 1942. The Bikur Cholim Convalescent Home on West Fourth street was established in 1919. The Young Men's Hebrew Association was organized in the home of Alonzo C. Lowenstein in 1909. The Young Women's Hebrew Association was founded in 1914. The Mount Vernon Zionist District first met in 1922. A branch of Hadassah was organized in 1924. In 1939 The Jewish Community Council, with representation from twenty-three local Jewish organizations of all types, was formed. The Mount Vernon Synagogue Council, with delegates from the five synagogues, was formed in 1938.

Prominent Jewish citizens of Mount Vernon included: Jacob A. Bernstein, who served continuously as justice of the peace and city court judge from 1924; David Cohn, who was elected to the board of aldermen in 1933 and was still serving in 1942, including a term as president of the Common Council during 1941; Arthur H. Ellis, corporation counsel from 1940; Alonzo C. Lowenstein, assistant corporation counsel from 1907, with two brief interruptions; Leon Mann, civic worker and philanthropist, known as "Father of the Community Chest," and awarded the title of "first citizen of Mount Vernon" in 1932; Michael I. Silverstein, chief inspector of police from 1933 and a member of the force from 1904; Harry P. Fierst, Zionist leader and civic worker; Mrs. Anne Tow, prominent in the industrial and religious life of the community; Charles Rees, chairman of the board of directors of the Palestine Foundation Fund. MAX MACCOBY.

MOUNTAIN JEWS (known also as Daghestan Jews; locally known as Dag Chufut, which means Mountain Jews in their language). The Mountain Jews form an ethnic unit of about 30,000. In 1942 they were living in small groups, mainly in the northern and eastern sections of the Caucasus, on the shores of the Caspian Sea, and in the villages and towns of the Soviet republics of Daghestan and Azerbaijan. In that year they could be found, for the most part, in Derbent, Makhach-Kala (formerly Tarki), Kuba, and also in Baku, in which latter city, the capital of Azerbaijan, their number was steadily increasing. There were also Mountain Jews further to the northwest, in Ossetia, and in the Kabardinian area, mainly in the settlement of Nalchik.

The origin of these Mountain Jews has not been definitely established as yet, no more than the origin of the other group of Caucasian Jews, the Georgian Jews, about equal in number to the Mountain Jews. These Georgian (Transcaucasian) Jews lived in a compact mass in the western part of the republic of Georgia, closer to the Black Sea, and called themselves "Hebraeli" or "Israeli."

Literature on these two groups of Caucasian Jews is scant. Apart from two treatises—one by Cherny (1870), another by Anissimov, a Mountain Jew himself (1888) —and a number of articles in early Russian newspapers

and periodicals, no comprehensive work has been written about either the Mountain Jews or the Georgian Jews.

The first immigration of Jews into the Transcaucasus (supposed by legend to have taken place in the 7th cent. B.C.E., during the reign of the Assyrian kings) is recorded in ancient Armenian and Georgian chronicles. According to these chronicles, they arrived in these regions as early as the beginning of the 6th cent. B.C.E. The first arrivals were probably free merchants, while the later partly came as captives, presented to friendly Caucasian princes by Nebuchadrezzar of Babylonia.

Vakhushti's *History of Georgia,* the oldest history extant, informs us that permission was granted to a Jewish legation which had appealed to the prince of Mtskhet, after the destruction of the First Temple at Jerusalem (586 B.C.E.), to settle on the outskirts of the city of Mtskhet. For their part they took it upon themselves to pay a double tax. In 1942, however, there were no Jews in the ancient city of Mtskhet. But the site of the one-time Jewish colony was in that still called "Kerki," which means "tax" in Georgian. And on the same site tombstones were discovered, dating from the 4th to 5th cent., one of them bearing an inscription in Aramaic, the language of the Jews after their Babylonian captivity.

Another influx of Jewish refugees into various Transcaucasian regions took place after the destruction of the Second Temple at Jerusalem (70 C.E.). The height of the influx during the first centuries of Christianity is confirmed by the chronicler Faustus of Byzantium (4th cent. C.E.), who reports that the Persians, under King Sapor II (360 C.E.), invaded Armenia, and took with them to South Persia more than 75,000 Jewish captives, the progeny of those who had previously come to the Transcaucasus from Palestine.

In earlier times the Jews probably first immigrated to the Transcaucasus by way of Mesopotamia (Iraq) and Persia (Iran). There they settled chiefly along the western shores of the Caspian Sea, in the eastern section of the Caucasus. Part of them, however, moved west, to Georgia, where they became the founders of the group of Jews, later to be known as Georgian Jews. Subsequently they were joined by other Jews from more westerly regions: from Asia Minor, the Crimean peninsula, and especially from Byzantium (to escape from the severe persecutions which they had been suffering at the hands of Emperor Justinian in the 6th cent. C.E.). It is evident, therefore, that Jewish immigration into the Caucasus took place not only at different times but also from different directions.

It may be stated here that the Jews of Mtskhet were in all likelihood the first to spread Christianity through Georgia. In the *Lives* of St. Nino, the patroness saint of Georgia, we can read that she found many of her countrymen from the city of Jerusalem in Mtskhet, as well as in the city of Urbnis (which means Jewish fortress in Georgian), when she came there to preach Christianity in 314. In the course of disputations carried on in Hebrew, she is reported to have succeeded in converting the Jewish priest Aviathar to the Christian faith. He is credited, in great part, with the Christianizing of Georgia. The famed Armeno-Georgian dynasty of the Bagratides, in the 6th cent., was presumably of Jewish origin, since its progenitor, Shambat Bagarat, is said to have come to the Caucasus in the 5th cent. B.C.E. as a captive, and to have been a descendant of King David.

The various ethnic, political, economic, religious and geographical factors under which the historical vicissitudes of the West Caucasian (Georgian) and the Southeast Caucasian (Daghestan) Jews have developed, each in its own way, is the cause of the complete dissemblance between these two groups. It is, however, agreed, that at one time they formed a homogeneous mass.

This dissemblance is evidenced first and foremost in their languages. The Georgian Jews speak the Georgian tongue. The Mountain Jews speak the Tat language, which is one more proof of the fact that they early settled on the south coast of the Caspian Sea, in that part of Persia which in antiquity was called Media, and is now known as Azerbaijan. For centuries the Persians, the Arabs and the Turks fought among themselves for the possession of that region, until the latter, under Tamerlane, temporarily became its masters in the 14th cent. The Mountain Jews, who, it seems, had associated themselves with the Tats, an Iranian (Persian) people, from earliest times (part of the Mountain Jews were still living among them in 1942), adopted their language. According to Vsevolod Miller, the only Iranist to have investigated that idiom, it is a mixture of Iranic, Semitic and Turkish elements. It contains a number of Hebrew and Aramaic words as well as terms derived from the Talmud, in the compilation of which some Mountain Jewish scholars—among them Nahum Hamadai (the name testifies to his Median origin) and Simon Saphro from Derbent—collaborated.

In their writings the Mountain Jews used Hebrew characters up to recent times. From 1928 on they used a latinized alphabet of their own, as did the other peoples of the Soviet East.

No written or other records of the past of the Mountain Jews have survived the numerous persecutions and wanderings of this people. From Arabic and other sources, primarily the Old Persian chronicle *Derbend-Nameh,* however, we may conclude that many Jews migrated from North Persia and Mesopotamia to the Northeast Caucasus during the 5th and 6th centuries (under the Sassanids). Other groups of immigrants followed, in consequence of the religious persecutions from the 6th cent. on. When, in the 8th cent., the Arabs conquered part of Daghestan, they found a large Jewish population there. The cultural center of these Jews was, and remained up to recent times, the city of Derbent, to which Greek writers refer as Ura-Parakh, which means "Jewish fortress" in Armenian.

Due to the lack of written records among the Mountain Jews, their oral tradition, which has been handed down from generation to generation for centuries, is the more vivid and intensified. According to this tradition, the Mountain Jews claim to be the descendants of the Ten Lost Tribes of Israel, who were brought over as captives by the Assyrian kings. This legend is confirmed also by the Haggadah, which tells us that they were taken to Africa (which name always stands for the Caucasus in the Talmud). This legend, later repeated by various travelers of the 18th and 19th centuries (such as Garber, Reinegg and Cherny), was recorded before that by Eldad Hadani, a Jewish traveler of the 9th cent. Eldad Hadani concerned himself in detail with the

A wedding among Mountain Jews (Dag Chufut) of Daghestan

tribe of Issachar. From him we learn that this people dwelt in the Caucasian Mountains, along the seashore, on the borders of Persia and Media (Azerbaijan), devoting their days and nights to the study of the holy Torah, fighting no battles save in its honor (disputations), speaking Hebrew, Persian and Turkish. Hadani mentions also two other tribes, that of Simeon and that of Manasseh, in the land of the Khazars (Daghestan).

In this connection Cherny's observation that there are no Kohanites (descendants of the Kohanim, or priests) or Levites among the Mountain Jews is significant. He interprets this circumstance as proof of their belonging to the ten tribes. Cherny points out also that the names of men and women in use among the Mountain Jews are hardly those common among any other Jewish groups. Most of their names date back to the epoch of the wanderings of Israel in the Arabian desert, or to the time of the Judges and Kings. The names of their men are: Nakhshon, Aminodav, Mamre, Zephonia, Moneakh and others; the names of their women are: Avishag, Bilgo, Serakh, Yemina and others.

Just as in Georgia, the Jews in Daghestan were disseminators of monotheism, here, however, based upon the spirit of the Old Testament, and not of the New Testament. From the 7th and 8th centuries on Judaism was so widespread throughout this area that traces of it may still be found over the entire northeastern section of the Caucasus, and even beyond. This is evidenced by the ruins of many villages, formerly doubtless Jewish settlements, especially numerous in Daghestan, and the very ancient Jewish cemeteries and tombstones, bearing Hebrew inscriptions. Thus it may be assumed that it was chiefly due to the cultural superiority of the Daghestan Jews that the "Kahan" (king) of the mighty state of the Khazars was converted to Judaism together with his court and part of the Khazar population between the 8th and 9th centuries.

The successful advance of Judaism was interrupted, however, in the 8th cent. by the horrible religious persecutions perpetrated by the Mussulmen. The adherents of the Jewish faith put up valiant resistance, and it was because of this resistance that it took many centuries for the fanatical Persian and Arabic sheiks, who alternated in rule, to attain their goal by fire and sword. The Jews fled wherever they could from persecution. Many hid deep in the mountains, which gave them their name, others lost their lives during that struggle, and the rest finally gave up their religion for the Islamic faith, mingling with the native population.

In 1942 there were a number of villages and settlements in Daghestan (some also in the neighboring Azerbaijan) where members of the Islamic inhabitants proudly related that their forefathers, sometimes even their fathers, were Jews. To prove this they produced in evidence ancient Hebrew Bibles inherited from their Jewish ancestors. Many of them still bore the Jewish names of their "elder brothers." In addition, there were entire native tribes of Jewish admixture: the Tats, Kumyks, Avars, Tabassarans and others, a fact corroborated also by anthropological investigations.

On the other hand, the Mountain Jews after the first World War did not retain their ethnic purity either. They intermarried with women of the surrounding tribes, who always embraced Judaism. The greatest admixture of foreign blood, however, undoubtedly came from their union with the Asiatic-Turkish people of the Khazars, with whom the Mountain Jews remained in close contact even after the beginning of the decline of that powerful state as a result of victorious Russian campaigns in the 10th cent. The Mongolian invasion (1223)

abolished the independence of the state of the Khazars. The Jews, however, retained many fortresses (as reported by Plano-Carpini and Rubriquis, in the middle of the 13th cent.), and small Jewish Khazar principalities continued to exist along the Caspian Sea. Even as late as 1346 they are mentioned as "Zhidy" (Jews' land) in the old Russian chronicles. In a certain sense the Mountain Jews may be considered the Jewish remnants of the Khazars, just as the Kumyks dwelling to their north are considered the Islamic descendants of that people.

From the time of the Mongolian invasion and the downfall of the Khazar state on, through the ensuing ceaseless battles between the mountain peoples and the new invaders—Persians and Osmans—until the 18th cent., the historical fate of the Mountain Jews forms an incoherent and depressing record. The Jews, who in the villages had partly become the serfs of the mountain chiefs, were constantly decimated by oppression and ever renewed religious persecutions.

During the war of conquest waged by the Russians throughout one and a half centuries (until 1864), their situation was aggravated by the incessant attacks of their neighbors, provoked by the fanatical Mussulmen. As early as toward the end of the 16th cent., at the time of the Osman conquest, they had begun retreating from the mountains to the valleys and the coast. This trend continued increasingly, and thus there came into existence many a new Jewish settlement (Nalchik, Grozny and others), while the old cities, Derbent and Kuba above all others, received a strong influx.

In the cities the Mountain Jews were mainly employed in the handicrafts. They were especially adept in preparing Russian leather and in the weaving of rugs; some few engaged in petty trade and peddling. Their intellectual activities were rather meager. The majority, however, were employed in agriculture, excelling as gardeners and as fruit-, tobacco- and wine-growers. They were pioneers in growing corn, rice, wheat and vegetables in spots in the Daghestan Mountains which had formerly been considered inaccessible. Eventually their neighbors and the foreign conquerors robbed them of the land, and at the beginning of the 20th cent. the number of their villages was very small.

During the civil war in Daghestan (1918-22) the Mountain Jews, persecuted and mistreated by the White Guardists, formed their own divisions to fight against them.

Like most Caucasian Mountain tribes, the Mountain Jews are good marksmen and horsemen, and had even adopted the vendetta. They adopted also many other customs from their Islamic neighbors: dwelling, garb, attitude toward women, and their purchase in marriage (sale of women, marriage of children, marriage by capture); superstition and black magic, talismans, amulets; also some religious beliefs—in demons and various spirits—; even some festivals, dating back to heathen times: agricultural festivals, and festivals in honor of the gods of spring and autumn, as well as other rites.

The Mountain Jews are for the greater part a virile and good-looking people, graceful and supple in their movements. There are beautiful women among them. Anthropological statistics have proved that in the average the width of chest of the Mountain Jews exceeds that of any other group of Jews, and that the number of tall men among them is twice as great as that of medium-sized people. Remarkable is their great longevity: many reach the age of 100 to 120 years, retaining their sound teeth, their hair and "eagle eyes." These hoary men are highly revered by the younger generation. Some of them still have, in accordance with Biblical custom, two or three wives. Several among their rabbis were former students in Lithuanian Yeshivas.

In family and social life the Mountain Jews show great solidarity (one for all, all for one). Hospitality is one of their first principles. Furthermore, they are great nature-lovers, wonderful story-tellers and amazingly talented dancers and musicians.

In 1942 most of the Mountain Jews were collective farmers. Many of them worked in the oil city of Baku. Some of their very numerous synagogues were converted into schools and children's homes. Young men and women studied together in high schools and colleges. They produced many physicians, mining engineers, naphtha-engineers, agriculturists, scientists and mathematicians. They had their own clubs, especially in Baku, their own theaters, dancing groups, reading rooms, music circles, their own writers and poets, and their own new literature, newspapers and folklore. Various books of world renown were translated into the Tat language: Pushkin, Gorky, Maupassant and others.

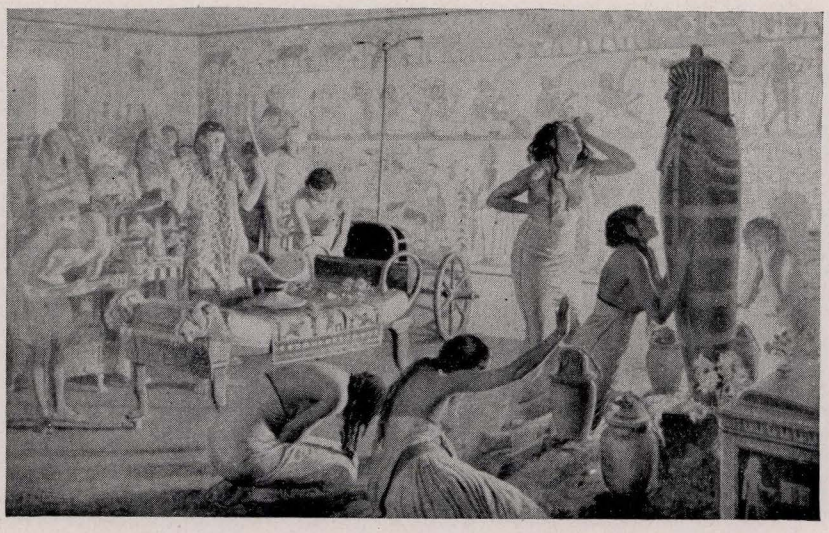
MOURNERS' PRAYER, *see* KADDISH.

MOURNERS OF ZION, *see* ABELE ZION.

MOURNING AND MOURNING CUSTOMS (*'abeluth*). **1. In Bible Times.** The origin of mourning and mourning customs goes back to prehistoric times. The practices and rites of mourning have two primary sources: the natural emotional response of an individual to the loss of a relative or a friend; and the fear of the return of the spirits of the dead to reclaim their homes and possessions, leading to efforts on the part of the survivors to disguise themselves. The Biblical period, which covers over a thousand years of history, marks the transition of the Israelites from primitive to civilized customs. The mourning and mourning customs mentioned by the Bible are not uniform and betray diverse origins.

The Bible mentions mourning for deceased relatives, such as wives, parents and children. Close friends



Mourning custom in ancient Egypt

might be mourned, as in the case of David for Jonathan; great individuals, such as Jacob, Moses and Josiah, were mourned by the entire community or nation. No definite period for mourning is given, though it is likely that the period of seven days was established as early as Bible times (*Sirach* 22:12). Jacob mourned for Joseph, whom he believed to be dead, for "many days" (*Gen.* 37:34); the people of Israel mourned for Moses thirty days (*Deut.* 34:8). The non-Jews are recorded as having longer mourning periods than the Israelites; the Egyptians mourned seventy days for Jacob (*Gen.* 50:3), and the captive non-Jewess was permitted to mourn thirty days for her lost kin (*Deut.* 21:13).

The most common form of mourning was weeping, so that the terms "weeping" and "mourning" were practically synonymous. David's refusal to weep for his dead child was regarded as so unusual as to call for a special explanation (*II Sam.* 12:15-23). It was apparently a custom among the Israelites, as among other nations of antiquity, to save the tears shed for the dead in a special bottle (cf. *Ps.* 56:9).

On hearing the news of a death, men would generally rend their garments, that is, tear them off as far as the waist. In cases of extreme grief they would put on a garment of rough sackcloth and strew ashes upon their heads. Ezekiel mentions the mourning customs of going with bare feet and disheveled head, and covering the upper lip (*Ezek.* 24:17), while Jeremiah refers to "cuttings," shaving of the head or the like, and the giving of a funeral meal and a cup of consolation to the mourning relatives (*Jer.* 16:6). The exact nature of the "cuttings" is uncertain; they may possibly have been some form of memorial tattooings. The Torah prohibits such cuttings or the shaving of the hair between the eyes (*Deut.* 14:1); evidently these were customs practised by some Israelites, but came to be regarded as heathen. The custom of leaving food for the dead, likewise prohibited (*Deut.* 26:14), appears not to be so much a mourning custom as a form of ancestor worship.

Women would mourn by wailing and by beating their breasts. The captive non-Jewess was required to shave her head and pare her nails (*Deut.* 21:12), but this is not definitely stated as a mourning custom, though it resembles one. There are references to professional wailing women who would be summoned to add their lamentations on the occasion of mourning (*Jer.* 9:16). The "garments of widowhood" to which references are made (*Gen.* 38:14, 19; *Judith* 10:3) are apparently not mourning garments, but the customary sober apparel of a widow.

2. In Talmudic and Medieval Times. The Talmud distinguishes four separate periods of mourning: *'aninuth* ("secluded mourning"), between death and burial; *'abeluth* ("mourning"), known also as *shib'ah* ("seven days"), the seven days following the funeral; *sheloshim,* the time until the thirtieth day after death; and the first year. The first period is regarded as one of intense grief; accordingly, the mourners are exempted from most religious duties, including the reading of daily prayers. During the third period garments of mourning were worn and the mourners were to refrain from adornment in dress; in the fourth period those who mourned for parents were to refrain from music and recreation. There are references to mourning garments of black and to the meal furnished the mourners on their return from the funeral; this meal consisted of bread and either eggs or lentils, which were regarded as symbols of life and death. The custom of the mourners reciting the Kaddish is not mentioned in the Talmud, and so probably arose in post-Talmudic times.

During the Middle Ages the Jewish rites of mourning became established in the following sequence which was generally observed:

Immediately after death one of the sons, if present, was called upon to close the eyes of the corpse. All those present rent their garments; if they were not near relatives, the rent needed be only small and on the outer garment; but for parents it had to be in each and every garment, though not in the same place, in order that the flesh should not be exposed. The rending (*keri'ah*) for a near relative was to be at least a handbreadth in length; the first cut was made with a knife and the rest by hand. In the case of parents the slit was made on the left side and on all the garments worn except the shirt and the cloak; in the case of other near relatives the slit was on the right and only in the outer garment. The clothes so rent were loosely stitched together after seven days and properly mended after

A woodcut representation of an 18th cent. funeral

thirty days. A relative who was not present at the time of death would perform the *ḳeri'ah* as soon as he received the news.

The relatives would then retire from the deathroom and leave the preparation of the body for burial to the Hebrah Kaddisha or to friends. All the water in the house would be poured out. The reason for this is uncertain; it may be as a sort of purification, or fear of impurity, or a feeling that the soul may have bathed in it, or else merely an indirect way of notifying neighbors of the death. The mirrors in the house would be covered; one reason given for this practice is that the mourners should not be able to see their faces in their bereavement, while another is that it was thought that one might see the soul in the mirror. During this period the mourners lived in comparative seclusion; they did not say the daily prayers or perform any work, and they prepared their own meals and ate them in a room apart from the dead. They put off all adornments and donned black wedding garments. However, they were required to perform the ceremonies for the Sabbath or the festivals if these occurred during that time.

The funeral took place within twenty-four hours after death. The mourners followed the coffin or the bier as it was borne to the cemetery, passing through the lines of those who attended the ceremony. At the conclusion of the funeral service at the grave, the mourners recited the Kaddish for the first time. On their return home they removed their shoes and put on foot-coverings made of some other substance than leather. Relatives or friendly neighbors would bring them the funeral meal (*se'udath habra'ah*), which sometimes included a "cup of consolation." It was generally customary to provide a meal for those who had attended the funeral; in some localities a special kind of cake (*Pattsche*) was a feature of the repast.

The week following the funeral was known as *shib'ah* (Shivah in the Ashkenazic pronunciation). During this period the mourners were forbidden to do any work, to bathe, to change their garments, or to wear any adornments. However, domestic duties were not included in the prohibited work, and the prohibition was relaxed if a man's livelihood depended upon it. The mourners "sat low" during this period; this was done either by sitting on the floor or on boxes, or by removing the cushions from chairs and sofas. For this reason the week of mourning was called "sitting Shivah." Men were not allowed to trim their hair or beards, or to study the Torah. Sexual intercourse, and even kissing and embracing, were forbidden to husband and wife, though minor acts of attention were permitted.

During this week services were held at the home every morning and evening. In order to make up the number of ten men (Minyan) required for the service, friends and neighbors would come to the house at that time, and the service itself was given the name Minyan. Friends would visit the mourners as an act of consolation (*menahem 'abelim*); the customary formula of greetings on such occasions was: *hamaḳom yenahem 'ethechem bethoch she'ar 'abele tziyyon virushalayim* ("May God comfort you as well as all those who mourn for Zion and Jerusalem"). These condolences were repeated by members of the congregation when the mourners attended the synagogue on the first Sabbath after the week of mourning. If a holiday occurred within the week, however, the Minyan and the other rites of mourning observed in it were not performed as soon as the holiday began. During this week of mourning men could study only such books as *Job, Lamentations,* certain chapters of *Jeremiah,* and the regulations for mourners.

During the period up to the thirtieth day after death, known as *sheloshim,* the mourners still observed some of the customs of the preceding period. They did not participate in any joyous observances nor did they marry; men did not trim their hair or beards. The onset of a festival, however, annulled the mourning customs of the period. After *sheloshim* the chief mourning customs were the recitation of the Kaddish for parents up to the end of the eleventh month and the refraining from listening to music or similar pleasures. On the first anniversary of the death, mourners for parents recited the Kaddish and lit the Yahrzeit candle; this was repeated at each anniversary. Mourning garments were usually worn for a year for parents, but only for thirty days for other near relatives, although an individual might wear them longer if he chose.

Pious Jews were accustomed to "sit Shivah" for a son who had become a convert to another religion. This custom arose out of a misunderstanding of an act of Gershom ben Judah of Mayence. The latter's son had been forcibly converted to Christianity, and remained a Christian until his death, whereupon Gershom mourned for him just as if he had been a Jew. This was later misinterpreted to mean that Gershom's mourning had been for his son's baptism.

3. In Modern Times. The customs mentioned above as prevailing during the Middle Ages are still observed all over the world by strictly pious Jews. However, in many countries, particularly in the West, there have been considerable modifications in the extent of these practices. Thus, among Jews who are only partially Orthodox, the rending of the garments is much reduced or omitted, while Reform Jews dispense with it entirely. The week of mourning is often shortened, a period of three days being of frequent occurrence; many Jews do not observe the customs of "sitting low" or of not wearing shoes during the mourning week, or of

not listening to music during the entire first year. Mourning is still generally worn, though to a lesser degree that conforms to the customs of the general population. The meal of consolation is generally not observed by liberal Jews, though relatives and friends frequently send presents of fruit or other edibles to the mourners. Some Jews have Minyan service only for three days, while others have a service only on first returning home, or at the cemetery after the funeral. On the other hand, the custom has arisen of having the mourners cast flowers into the grave before it is closed, and the recitation of the Kaddish has been extended to include not only parents, but all near relatives.

MOUTET, MARIUS, French socialist leader and barrister, b. Carpentras, 1876. He studied law at Lyons, and was admitted to practice at the court of appeals at Paris. He joined the French Socialist Party (SFIO), and was chosen its general councillor at Lyons in 1905. In 1914 Moutet was elected to the Chamber of Deputies, representing the Rhône department from 1914 to 1928, and the Drôme department until 1940.

In 1920 Moutet defended former prime minister Caillaux before the supreme court of France. As a deputy he was especially active in the defense of aliens in France and of natives in the colonies. He combatted anti-Semitism on every occasion. During the first World War Moutet induced the president of the French republic to order the French high command to accord Jewish soldiers every possible opportunity to attend divine service on Jewish holy days. When Léon Blum became head of the French government in 1936, he appointed Moutet minister for the colonies. Moutet endeavored to apply the program of the Front populaire to the French colonies. He protected the native workers, granted rural credits to French Indo-China, and admitted natives of Algeria to competitive examination for posts in the French army.

To allay the deep unrest of the population of Algeria, Moutet applied to that country the French laws controlling wheat prices and the wheat trade. When after the outbreak of the second World War (1939), German refugees, mostly Jews, were interned in concentration camps, Moutet was the first French deputy to protest against that measure, and he condemned the unsanitary conditions prevailing in the camps. Although Moutet was a firm socialist, he refrained from demagoguery, and was esteemed even by most of his political adversaries.

MOZA, *see* COLONIES, AGRICULTURAL.

MUHAMMAD, *see* MOHAMMED.

MUHLFELD, LUCIEN, author, b. Paris, 1870; d. Paris, 1902. He was educated at the Lycée Condorcet, Paris, studied at the Sorbonne, and won his degrees in law and literature at the same university. From 1890 to 1895 Muhlfeld was assistant librarian at the Sainte-Geneviève, library of the university of Paris, and he devoted all of his time to literature. He contributed to the *Revue d'art dramatique* and the *Revue blanche.*

In 1898 Muhlfeld published the novel *Le mauvais désir,* showing a paradoxical sentimentalism, in 1900 *La carrière d'André Tourette,* an interesting picture of manners of the *fin du siècle,* and in 1902 *L'Associée,* a penetrating study of character. Muhlfeld impressed his contemporaries by his spiritual and urbane manner of writing, by his conscientious observations and gentle irony. Many of his critical essays are collected in *La fin d'une art* (1890) and *Le monde où l'on imprime* (1897). He was highly esteemed as a dramatic critic. He considered his critical activity as preparation to a dramatic career which, however, was thwarted by his premature death. Together with Pierre Veber, Muhlfeld wrote *Dix ans après,* a play which was successfully presented at the Odéon Theatre, Paris.

Lit.: Régnier, Henri de, *Portraits et souvenirs,* 1913.

MÜHLHAUSEN, YOMTOB LIPMANN, *see* LIPMANN-MÜHLHAUSEN, YOMTOB.

MÜHLMANN, ADOLF, singer and music teacher, b. Schiriwa, Russia, 1866. The son of pious Orthodox parents, he studied theology as well as music. He made his musical debut at Rotterdam in 1890; thereafter he sang in opera and concert in Germany, Austria, Russia, England and the United States. In St. Petersburg he gave a recital for the Czar's family; and in London, where he was engaged at Covent Garden for eight seasons, he sang for Queen Victoria on her eightieth birthday anniversary, in 1899.

For thirteen years (1898 to 1901), he was leading baritone of the Metropolitan Opera Company of New York, most famous for his Wagnerian interpretations. In 1912 he settled in Chicago as voice instructor and director of a music school of the opera. His autobiography, *A Grobber Koll,* was published in 1932.

Lit.: Mühlmann, A., *A Grobber Koll* (1932).

MUHR, ABRAHAM, educator, b. Berlin, 1781; d. Breslau, 1847. An advocate of Jewish rights in Prussia and particularly in Upper Silesia, where he had settled permanently in 1805, he was often referred to as "the Jewish king of Upper Silesia." In his *Jerubaal, oder über die religiöse Reform der Juden in preussischen Staaten* (1812), he opposed the radical reform ideas of David Friedländer and urged adoption of a consistorial system of administration and the establishment of seminaries for rabbis and Jewish teachers. Originally a conservative, Muhr turned more radical under the influence of Abraham Geiger. He advocated that religious services be held primarily in the German language, though he wished to retain certain portions in Hebrew. Noteworthy is his plan to establish a Jewish agricultural colony in Upper Silesia. His brother Joseph, for many years a leader of the Jewish community, was one of the founders of the Jewish reform congregation in Berlin.

MUHR, JULIUS, painter (son of Abraham), b. Pless, Silesia, 1819; d. Munich, 1865. He studied at the academies of Berlin and Munich. His painting *The Finding of Moses* attracted the attention of Wilhelm von Kaulbach, who entrusted him with the painting of the murals of the New Museum in Berlin, on which he labored from 1847-53; he painted also the outside frescoes of the New Pinakothek (Pinacotheca). Afterwards he went to Italy, where he remained, mostly in Rome, until 1858, when he returned to Munich. His

work includes also the paintings *Job and His Friends, Benedictine Monks, Siesta of Italian Monks, A Gipsy Family, A Struggle with Gipsies, Mass in the Sistine Chapel,* his father's portrait, and those of Overbeck, Schlick, Lichnowsky and Ludwig II of Bavaria. Some of his paintings were exhibited in the National Gallery of Berlin.

Lit.: *Allgemeine Deutsche Biographie,* vol. 22, p. 484; *Bryan's Dictionary of Painters and Engravers,* vol. 3, p. 378.

MUHR, SIMON, merchant and philanthropist, b. Hürben, Bavaria, 1845; d. Philadelphia, 1895. He was brought to Philadelphia at the age of eight, and after an education in the public schools of the city, he joined his father in the jewelry trade. Subsequently the Muhr firm became one of the outstanding establishments of its kind in Philadelphia.

Muhr was active in general as well as Jewish philanthropies. When the heavy immigration of Russian Jews began in the 1880's, he was among the first to foresee the necessity of systematic settlement. For this purpose he founded and was first president (1891) of the Jewish Alliance of America, which was intended to aid in settling Jewish immigrants throughout the United States. Although this organization did not survive long, Muhr was later treasurer of the Association of Jewish Immigrants. He was also vice-president of the Jewish Hospital Association and a manager of the Jewish Foster Home and Orphan Asylum. Among his general activities was his representation of Pennsylvania at the Chicago World's Fair of 1891. Muhr left a large share of his estate to Jewish and non-Jewish charities, for scholarships to deserving high-school graduates and for the improvement of the Philadelphia public school system.

Lit.: Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen* (1895); Morais, H. S., *The Jews of Philadelphia* (1894).

MÜHSAM, ERICH, German poet, dramatist, and political writer, b. Berlin 1878; d. in a concentration camp at Oranienburg, 1934. He spent his youth in Lübeck, began as a pharmacist, but from 1901 on he was a free lance writer. Early in life he was an active anarchist of the non-violent brand, editing periodicals such as *Der Arme Teufel* (Berlin, 1902) and *Weckruf* (Zurich, 1905). In the initial stage of his career he presented the literary Bohemian type and published striking poems which denounced the state and the bourgeoisie: "Die Wüste" (1904); "Krater" (1908); and "Wüste, Krater, Wolken" (1914). After 1909 he lived in Munich, read his poems in cabarets, wrote drama criticism and edited (1911 to 1914) the periodical *Kain, Zeitschrift für Menschlichkeit.*

Mühsam joined the Socialistischer Bund that rallied around Gustav Landauer, whom he called his teacher and with whom he participated in the Bavarian revolution (1918), and became a member of the Zentralrat der Bayerischen Räterepublik. When the army reconquered Munich he was condemned to fifteen years imprisonment in a fortress where he wrote the poem "Brennende Erde" (1920), but was pardoned in 1924. He depicted this period in "Standrecht in Bayern" (1924) and "Von Eisner bis Levine" (1928). In 1925 he published *Revolution, Kampf-, Marsch- und Spottlieder.*

Mühsam returned to Berlin and at the same time to the ideals of his youth. Here he published an anarchistic periodical, *Fanal* (1926); but also contributed to bourgeois publications. In 1931 his autobiography, *Unpolitische Erinnerungen,* appeared. When Nazism came to power, he was among the first to be put into the concentration camp Oranienburg where he was officially reported to have hanged himself on July 12, 1934. His wife charged that he was tortured to death and people who were in the same camp have stated that he was either killed by the Nazis or forced to commit suicide.

A kindly man, with wild red hair and beard, Mühsam was a dreamer and idealist more than an active revolutionary fighter. His political views were never quite clear; he called himself a disciple of Kropotkin and "a pilgrim who doesn't know his goal." He always wrote, however, against every form of state, against the bourgeoisie and social democracy, against capitalism and imperialism, fighting for universal freedom, mutual aid and justice, not only in his periodicals and political writings but in his poems and plays as well. Following the comedy *Die Hochstapler* (1906), he wrote *Die Freivermählten* ("polemisches Schauspiel," 1914), the working class tragedy *Judas* (1921), and finally a play on Sacco and Vanzetti, *Staatsräson* (1928). He collected his minor political writings in *Alarm, Manifeste aus 20 Jahren* (1925), and his poetry, spanning three decades, in *Sammlung* (1898-1928).

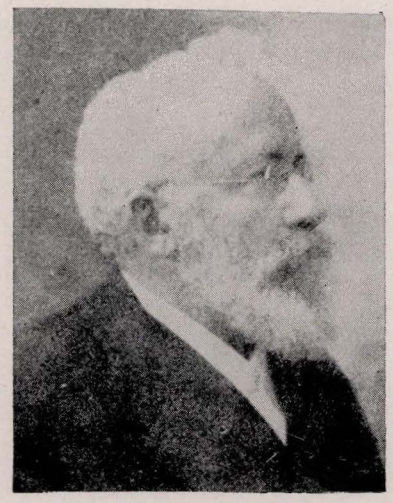
KURT PINTHUS.

MUKDONI, A. (Alexander Kappel), Yiddish author and critic, b. Lechevitch, province of Minsk, 1878. After an early Hebrew education and a period of study in the Yeshiva, he received his Ph.D. degree in law from the University of Bern, Switzerland. His literary debut was made with short stories and sketches published in *Yud, Veg, Unser Leben* and other periodicals (1907-08).

In 1909 Mukdoni was a collaborator on M. Spector's *Die Neie Velt* (Warsaw), for which he wrote journalistic articles and literary criticism, and began his work in theatrical criticism, which was to become his specialty. The following year Mukdoni became one of the most important contributors to the *Freind,* where he published many political and literary articles, as well as feuilletons and provincial sketches. Mukdoni was also editor of an anthology *Die Yiddishe Yugend.* Between 1909 and 1914 he was one of the leaders in the establishment of a Yiddish art theatre in Warsaw.

During the first World War, Mukdoni was engaged in practical welfare work among refugees, and spent several years along the Volga and in Siberia. His reminiscences of the Russian Civil War, particularly the relations of General Kolchak with the Jews, were published in *In der Tkufe fun Revolutzie* (Berlin). After leaving Russia, Mukdoni spent two years in Kovno, Lithuania, where he edited the newspaper, *Neies,* then came to the United States. He joined the staff of the *Morning Journal* in 1922, and in 1942 was still a regular collaborator on that paper.

Mukdoni's work on the *Morning Journal* included literary, political and other journalistic articles. He also wrote for the *Zukunft* and other periodicals. His most important contributions, however, have been in the field of theatre criticism and history of the theatre:



David Heinrich von Müller

these appeared in collected forms as *Dr. Mukdoni's Theater* (1927). His reminiscences as a theatre critic were published by the *Archiv fun Yiddishen Theater* (Vilna, 1930). In 1932, following a visit to Palestine, Mukdoni published a series of studies of the Hebrew theatre, and in the *Allgemeine Enzyklopedie in Yiddish* he wrote the article on the Yiddish theatre (Paris, 1939). Mukdoni also translated into Yiddish plays by Tolstoi and Ossip Dymov.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930), cols. 360-364; *Yubel Zamelbuch Lekoved 50 Yor fun Dr. Mukdoni* (1927).

MULDER, SAMUEL ISRAEL, Dutch educator and author, b. Amsterdam, 1792; d. Amsterdam, 1862. Mulder's early education was thoroughly Jewish, and in his twentieth year he entered the services of the Jewish community of Amsterdam as a Sabbath-school teacher. Later his functions in the community increased in importance and he combined civic posts with his primary interests, becoming, for instance, inspector of religious schools (1835). Mulder was made director of the Jewish theological seminary in Amsterdam, Saadat Bahurim, in 1826, and eventually was made regent-secretary of the institution for life.

In 1824 Mulder's translation into Dutch of the Pentateuch, Psalms and the Proverbs appeared; this constituted the first translation from Hebrew into Dutch and became a classic. Among his works was a Dutch-Hebrew dictionary, various other books on the study of Hebrew and the *Bijbel voor de Israelietische Jeugd,* in 17 volumes (1854). The last-named work was translated into English. Mulder received various honors and decorations, and was awarded the Order of the Netherlands Lion in 1860.

MÜLLER, DAVID HEINRICH VON, Orientalist, b. Buczacz, Galicia, 1846; d. Vienna, 1912. He studied at the Jewish schools of his native city and in 1867 went to Breslau to prepare himself for the rabbinate at Zacharias Frankel's seminary. Believing himself unfit for the rabbinate, he pursued historical and Germanic studies at Vienna University (1869), and later devoted himself exclusively to Oriental languages. He also attended the universities of Leipzig and Strasbourg. After earning his Ph.D. degree in Vienna (1875) he was appointed instructor (1876) and associate professor of Semitic languages (1885), which post he retained until his death. In 1889 he was made a member of the Imperial and Royal Academy of Sciences and headed the philosophical faculty of the University of Vienna in 1900-1901. Müller was a director of the Oriental Institute, received the title of court counselor and many honorary orders, Austrian and foreign. Shortly before his death he was ennobled. He once remarked caustically that he, the Bahur of a Galician Beth Hamidrash, had been fortunate enough, since his abilities rather than his creed had been taken into consideration on the occasion of his appointments.

Müller, who had been familiar with Hebrew and Aramaic from infancy, was the leading Semitic scholar of his time. He began his scholarly work with a critical review of Salomon Buber's *Pesikta* (1871) and other Hebrew articles that appeared in Perez Smolenskin's periodical, *Hashahar.* In 1878 he entered his major field by publishing the findings of a journey to Constantinople, *Bericht über die Ergebnisse einer Reise nach Konstantinopel,* where he had copied old South Arabian inscriptions at the museum. Other works of Müller, dealing with ancient Arabian culture and epigraphs, are: *Die Burgen und Schlösser Südarabiens* (2 vol., 1879-1881); *Sabäische Denkmäler* (1882); *Palmyrenische Grabinschriften* (1886); *Rezensionen und Versionen des Eldad had-Dani* (a study of texts, 1892) and *Die altsemitischen Inschriften von Sendschirli* (1893).

In 1898 and 1899 Müller headed the archeological expedition of the Vienna academy of sciences to Southern Arabia and the island of Socotra, the scholarly fruits of which were his three volumes on *Die Mehri- und Socotrisprache* (1902-1907), the first exhaustive study of virtually unknown languages. They contain also a collection of folklore, of tales, fables and songs of these primitive Arab tribes, and a study of the wandering of saga motives. Müller also edited the posthumous writings of Siegfried Langer (assassinated 1882) and Eduard Glaser (d. 1908), two Jewish explorers of Arabia.

In addition to his Arabic studies Müller devoted himself to the explanation of certain problems in the Scriptures. In 1896 he published *Die Propheten in ihrer ursprünglichen Form* in which he intended to show the original meter of the Prophets, establishing the theory that the same metrical laws are essential for all Semitic poetry, including the post-Biblical writings and the Gospels, thus attempting to reconstruct the original texts of Jesus as well. Moreover, he demonstrated that the influence of Semitic poetry is noticeable even in the choruses of the Greek tragedy. Of equally revolutionary character is Müller's study, *Die Gesetze Hammurabis und die mosaische Gesetzgebung* (1903). Therein he shows that, contrary to prevalent opinion, Mosaic legislation is not borrowed from the Babylonian code of Hammurabi, but that both of them are derived from much older Semitic law. The Mosaic law, however, Müller emphasized, is much more humane than the Hammurabi code, as may be gathered from the latter's cruel legislation on slavery. The study of this code also helped Müller to prove the historicity of certain facts of the Bible which previously had been declared fables. He sought to show the influence exerted by Semitic law upon Greek law and the Roman XII tables law.

From 1893 on Müller was professor of Hebrew and religious philosophy at the Vienna Israelitisch-Theologische Lehranstalt. In collaboration with Julius von Schlosser he published the famous illustrated Haggadah of Sarajevo (1898). He was editor of the *Wiener Zeitschrift für die Kunde des Morgenlandes.*

ALFRED WERNER.

Lit.: Rosemann, G., *Jahrbuch für jüdische Geschichte und Literatur,* vol. 17, 1914.

MÜLLER, ERNST, scholar, b. Misslitz, Moravia, 1880. He studied mathematics and philosophy at the University of Vienna. In 1907 he went to Jaffa, Palestine, where he taught at the agricultural school Kirjath Sepher. In 1909 he returned to Vienna, and in 1911 entered the service of the library of the Vienna Jewish community, where he was active until the destruction of the library by the Nazis in 1938. Müller was living in London in 1942.

He wrote articles on mathematical and philosophical problems, but devoted his main interest to the study of the Cabala. His chief works in this field are *Der Sohar und seine Lehre* (1920) and *Der Sohar, Das heilige Buch der Kabbala* (1932). He also translated Abraham ibn Ezra's *Sefer Haehad* (1920). Other translations of his are *Bialik's Gedichte, Übertragung aus dem Neuhebräischen* (3rd ed., 1932) and Ahad Haam's *Am Scheidewege* (with Hugo Knopfmacher; 1924). In 1932 he translated and adapted for the stage Plato's *Symposion.*

MÜLLER, ERNST LOTHAR, *see* LOTHAR, ERNST.

MULLER, HANS, novelist and playwright, b. Brünn, Czechoslovakia, 1882. Originally a writer of verse (*Der Garten des Lebens,* a Biblical poem, 1904), he later wrote novels, including *Träume und Schäume* (1911) and finally successful plays, such as *Gesinnung* (1912); *Könige* (1916), *Die Flamme* (1920); and *Die goldene Galeere* (1926), the hero of which is a young Zionist. In recent years he wrote comedies (*Kleiner Walzer in A Moll,* 1935) and the librettos for several musical plays. He also produced many scenarios for motion pictures. In 1942 he was living in Switzerland.

MULLER, HERMANN JOSEPH, geneticist, b. New York, 1890. Since 1911 he has been engaged in original research in genetics, carrying out and publishing studies on mutations and evolution, theory of the gene, artificial transmutation of the gene by X-rays, and the like. After teaching at various institutions he was appointed professor of zoology at the University of Texas in 1925. From 1933 to 1937 he was senior geneticist at the Institute of Genetics in Moscow, U.S.S.R., as well as staff member of the Medicobiological Institute there. Then he went to Scotland to continue his work at the Institute of Animal Genetics at the University of Edinburgh.

He was co-author of *Mechanism of Mendelian Heredity* (1915; 1922) and he published *Out of the Night: Biologist's View of the Future* (1935), in which he asserts that for the continuance of biological progress in man, economic and social reconstruction on a cooperative basis of society must first take place.

Lit.: Muller, H. J., *Out of the Night,* 1935.

MÜLLER, JOEL, rabbi and Talmudist, b. Mährisch-Ostrau, Moravia, 1827; d. Berlin, 1895. He studied Talmud, then completed his education in Vienna, and became rabbi of Mährisch-Ostrau after his father's death. Then he went to Leipa, Bohemia, and next to Vienna, where he wrote his most important work, the critical edition of the tractate *Soferim* (Leipzig, 1878). Some of his other publications are *Hilluf Minhagim* (Vienna, 1878), *Teshuboth,* responsa of the French rabbis of the 11th and 12th centuries (Vienna, 1881), *Responsen der Lehrer des Ostens und Westens* (Pressburg, 1888), *Mafteah,* an introduction to the responsa of Babylonian Geonim—a field in which Müller achieved most notably (1891), *Teshuboth Geone Mizrah Umarab* (1888) and *Halachoth Pesukoth Min Hageonim* (Cracow, 1893).

From Vienna Müller went (1884) as instructor to the Hochschule für die Wissenschaft des Judentums in Berlin, where he became professor of Talmud. He published many other studies in the scientific supplements of the yearly reports of the school. His edition of Saadia's Halachic writings appeared posthumously as volume 9 of the *Oeuvres complètes de R. Saadia ben Josef al Fayyoumi.*

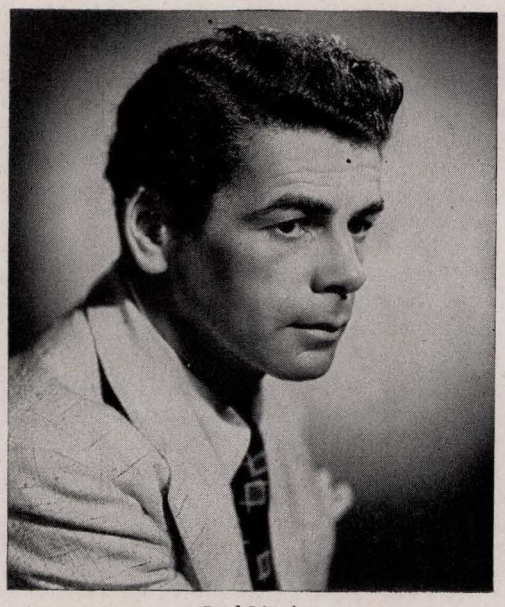
Lit.: Schreiner, M., "Gedächtnisrede," *Seminar-Bericht des Akademischen Vereins für Jüdische Geschichte und Literatur* (1896); Die Lehranstalt für die Wissenschaft des Judentums in Berlin, *Rückblick* (1897) pp. 32 ff.; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 4, p. 467.

MÜLLER-COHEN, ANITA, communal worker, b. Vienna, 1890. She was the daughter of a well-to-do merchant. In her early youth she showed more than a casual interest in child welfare. When war broke out in 1914, she was already married and mother of a daughter. Nevertheless, she went immediately to the front lines to help Jewish war victims in the districts of Galicia and Bukovina. She raised the necessary money from private sources to found maternity hospitals, day nurseries, child hospitals, homes for the aged and the like. In 1918 she directed the great relief committee in Austria which sought to readjust returning soldiers to normal life.

In the years of inflation and starvation, Frau Müller-Cohen founded hundreds of milk stations all over Austria and transferred undernourished children from the East to Holland, Switzerland, Denmark, France, Yugoslavia and Italy. She was only thirty when she became a member of Vienna's City Council. In 1920 she initiated—in the United States, Canada, Argentina and other American countries—a great movement for adoption of victims of the Russian pogroms. The Jewish Congress in Chicago was opened by her in 1925.

Throughout her career she has been active in the Zionist movement. Shortly before the Nazis came to power she went to Luxembourg and thence to Palestine (1936-37) which she had visited twice before. She settled with her children in Tel Aviv and engaged actively in many fields of social service, especially in child welfare.

MULT ÉS JÖVŐ (Past and Future), a monthly magazine in the Hungarian language devoted to Jewish literature and the arts. It was founded at Budapest in 1911 by József Patai, and it was still being published late in 1941. One of the first journals of its kind in Hungary, it sought to counteract strong tendencies of isolation among Hungarian Jewry by conveying the message of Jews abroad through their finest achievements in creative art. It also extended encouragement and publicity to those authors inside Hungary who had



Paul Muni

retained their Jewish consciousness as regards art.

As an effective exponent of the Zionist ideal in Hungary, Mult és Jövő also gave impetus to the physical and cultural rehabilitation of Palestine.

From 1919 to 1923, in a period of severe curtailment of the rights of the Jews in Hungary, it also published a political weekly. Special editions for Hungarian Jews living in the succession states were published at Pressburg (Pozsony-Bratislava), Czechoslovakia, and Kolozsvár (Cluj), Roumania.

MUMAR, *see* APOSTATES.

MUNACH, MUNAH, *see* CANTILLATION.

MUNDLAK, REGINA, painter and etcher, b. Koleskach, government of Lomza, Poland, 1887. She went to Berlin, where she attracted the attention of Max Liebermann, who financed her artistic studies. Her drawings, exhibited at Berlin in 1906, were noted for their originality. She drew exceptionally true likenesses of heads, figures, and genre scenes, notable for sureness and strength of line; pen and ink was her favorite medium. Her subjects, chosen mainly from Jewish life in Poland, found their way into the art collection of Berlin's pre-Nazi Jewish community, notably: *Talmud Study, Jew at Prayer, Polish Jewish Youth, Melamed,* and *Aged Jew.*

During the twenty years preceding Poland's conquest by the Nazis, Regina Mundlak became the outstanding Jewish woman painter in Poland. She specialized in Jewish folklore types. Her paintings were exhibited at Munich, Paris, Berlin and, in 1938, by the association of the friends of Jewish arts (Jacob Apensflak, president), Warsaw. In 1942 she was known to be living in the Warsaw ghetto, where she continued painting, especially incidents in the life of Jews in the Polish ghettos under occupation.

MUNI, PAUL (real name **Muni Weisenfreund**), stage and cinema actor, b. Lemberg, Austria, 1895.

Muni's parents brought him to New York in 1902, and with them he played in Yiddish vaudeville from 1908 to 1913. From 1918 to 1925 he was a distinguished member of the Yiddish Art Theatre, touring the United States and England, in plays by Andreyev, Gogal, Sholom Aleichem, Rolland, and other classics. In 1926 came his first chance on Broadway as old Morris Levine in the play *We Americans,* produced at the Eltinge Theatre. His success was immediate and the following year he played the role of young Benny Horowitz in *Four Walls.* He then was lured into motion pictures, and was hailed as a new star for his performance in *The Valiants* (1929). He returned to New York in 1931 to appear in the leading role of Elmer Rice's *Counsellor-at-Law* (1931-33). From then on his reputation was firmly established.

In 1932 Muni enhanced his renown by appearing as the principal in the great success, *Scarface,* one of the first of the classic gangster pictures. He followed with the leading role in *I am a Fugitive From a Chain Gang* (1932). Further notable successes were *Black Fury* (1935); *The Good Earth* (1937); *The Story of Louis Pasteur* (1935); *The Life of Émile Zola* (1937); *Juarez* (1939), and *We Are Not Alone* (1939). His characterizations of Zola and Pasteur won him universal acclaim; for the latter he received the annual award of the Motion Picture Academy of Arts and Sciences in 1936.

In the forefront among figures on the American stage and screen, Muni has been known as "the man of a thousand faces," and is especially famed for his minutely studied interpretations of an absorbing variety of characters in history and fiction.

Muni severed his long-term contract with Warner Brothers, under whom he did much of his notable work, and became a free-lance. In Hollywood Muni was one of the few actors with the privilege of a decisive voice in his own vehicles. At various times he has expressed opposition to the "star system."

Retiring temporarily to travel abroad, Muni visited Palestine in 1938 to investigate the accomplishments of the Jewish homeland. He was widely feted and appeared in a benefit performance there, re-enacting a scene from *The Life of Émile Zola.*

In 1940, after an absence of seven years, he returned to the New York stage in Maxwell Anderson's *Key Largo.* He was back in New York again in 1942, appearing in the character role of an old actor in the Theatre Guild's production of *Yesterday's Magic.* Several months later he returned to Hollywood, after a screen absence of two years, to star in an anti-Nazi screen drama *The Commandos Come at Dawn* (1942).

Lit.: Smith, F. J., "How To Be a Hollywood Tradition," *American Theatre Magazine,* March, 1940, pp. 18-20.

MUNICH, capital of Bavaria. There is evidence to prove that it was in 1229, after the founding of the city in the year 1158, that Jews for the first time resided at Munich, in which year a certain Abraham of Munich appeared as witness in a legal transaction at Regensburg. Contrary to data left by older historians, there is no evidence that prior to this period any Jews were living in Munich. According to the *Nürnberg Memorbuch,* a blood accusation in 1285 resulted in the death of 180 Jews who were burned in their synagogue; the number indicates that the Jewish community had con-

siderably increased during the 13th cent. The community, apparently wholly destroyed in that tragic year, was rebuilt and obtained permission from Duke Louis the Stern (1287) to erect a new synagogue. But the legal status of the Jews of Munich remained unsafe and unfavorable in the 14th cent., their rights being restricted in 1315 and again in 1347.

At the time of the Black Death, the community was again destroyed, though only for a short period. Already in 1375 Jews were again in Munich; they were included in the privilege granted by Duke Frederick to the Jews of Upper Bavaria to pay taxes similar to those imposed upon non-Jews. Towards the end of the 14th cent. they planned the establishment of a synagogue, a home for the poor and a hospital, but lacked means to do so, which shows that the community was not very large. In 1413 a new persecution of the Jews of Munich took place for alleged host desecration.

The cancellations of debts due the Jews under King Wenzel (1383 and 1390) affected also the Jews of Munich and deprived them of their means, so that when Duke Albrecht III, in 1432, approached them for a contribution of special revenues in order to free himself from the debts of the Hussite war, the yield was very small. The clergy, however, continued its agitation against the impoverished Jews with the result that, in 1442, they were driven from Upper Bavaria and from Munich. The Munich synagogue on that occasion was converted into a church.

The Jews found temporary shelter in the lower part of Bavaria, but were expelled from there in 1450. After that, for almost three centuries, the Jews stayed away from Bavaria. In the latter half of the 18th cent., changed economic conditions as well as the influence of the friendly policy of the neighboring Austria toward the Jews made it possible for Jews to settle at Munich again, even though subject to many cumbersome rules and regulations. Their situation improved only slowly; not before the end of the 18th cent. did they obtain permission for the celebration of the Feast of Tabernacles or for the confinement of their wives in the city itself, for which they had to go, previously, to Kriegshaber, near Augsburg, where the Jews of Munich, until 1816, also had to bury their dead.

The Jews of Munich participated in the struggle for civil rights for the Jews of Bavaria which in that country was unusually protracted (1800 to 1872). A conference of Jewish notables held at Munich (1819) decided upon a petition for the granting of full equality to the Jews. The community was still very small at the beginning of the 19th cent., yet soon grew quickly and in 1818 was extended the privilege of plotting a cemetery. A new synagogue was built in 1824. The 19th cent. was propitious to a considerable development and increase in numbers of the community, chiefly by immigration of smaller congregations from Swabia and Franconia until, with the development of the German Reich (1871), it became a large community with model establishments and took an active part in nation-wide Jewish movements. The rapid increase in population is shown in these figures: twenty Jews in the year 1750; 220 in 1798; 592 in 1824; 2067 in 1867; 8739 in 1900 and 10,068 in 1925.

Rabbis of the Munich congregation were: Hesekiel Hessel (1802-24); Hirsch Aub (1825-71); Joseph Perles (1871-94); Cossmann Werner (1895-1918); Leo Baerwald (1918-40) and Bruno Finkelscherer (from 1940 on). Cantor Emanuel Kirschner (1881-1931) was a distinguished composer of synagogue music; Alfred Neumeyer, president of the congregation (1920-41), organized the Union of Bavarian Jewish Congregations. Other noted men in this congregation were the scholars Leo Graetz and Richard Willstätter; the author Lion Feuchtwanger and the conductor Hermann Levi; the latter subsequently disassociated himself from the Jewish faith. Outstanding positions in business life were held by such Munich families as Bernheimer, Drey and Heinemann (art dealers), Aufhäuser (bankers) and Schülein (brewers).

Exterior of the synagogue at Munich, destroyed by the Nazis

Political and economic developments after the first World War seriously affected the congregation. The Jews were repeatedly exposed to grave dangers, especially after the fall of Kurt Eisner, for whose administration they were held partly responsible. Anti-Semitic agitation arose also in consequence of inflation and political unrest. National Socialism (Nazism), which grew to maturity between 1920 and 1933, directed the main impact of its attack upon the Jewish community of the "capital of the movement" (Hauptstadt der Bewegung) and seriously imperilled the lives, property and honor of its members. In June, 1938, the large and magnificent synagogue, erected on Herzog Max Strasse in 1887, was demolished by special order of the Nazi rulers while the synagogues of the Orthodox and Polish congregations were set on fire during the general destruction of synagogues in Germany in November, 1938.

From 1933 on the Jewish population of Munich rapidly decreased through emigration. In 1941 the community numbered only about 3,000 persons, approximately half of whom were deported to Poland in November, 1941. The attendance of the Jewish public school at that time declined to about fifty pupils. The Jews remaining at Munich were for the greater part relegated to special "Jewish houses" in the city, as well as to barracks and a monastery in the suburbs.

MUNK, ADOLF (Abraham Meir), Hebrew author, b. Nyitra, Hungary, 1830; d. 1907. A great-grandson of Rabbi Josef Lerner of Lichtenstadt, he studied at the rabbinical schools of Lakompak, Nyitra and Galgóc. He served as principal of the Jewish school of Nagyszombat for two years and followed (1853) his former master, Rabbi Isaac Aaron Landsberger of Galgóc, to Nagyvárad (Grosswardein). There he became one of a small but enthusiastic group of Maskilim. Munk was noted for the beauty and purity of the Hebrew language which he employed in letters written to his uncle, Adolf Felsenburg. Engaged successively in tutoring and in business, he went on studying and writing Hebrew.

Among Munk's literary remains, comprising material for five volumes, there are Hebrew poems, short stories (some of which were published in Magyar translations), articles on social problems and important events, necrologies and letters of public interest. The story of his life is valuable as a source of Jewish life and education in north-eastern Hungary in the first half of the 19th cent. He published: *Matzebath Rahel Hayethomah* (1895), a poetical presentation of *sippurim,* folk tales, as they were told among the Jews of Bohemia.

The philologist BERNÁT MUNKÁCSI was his son; ERNÖ MUNKÁCSI, jurist, his grandson.

MUNK, EZRA, rabbi, b. Altona, Germany, 1867; d. Jerusalem, 1941. He was a nephew and pupil of Israel Hildesheimer, became his successor as rabbi of the Orthodox Congregation Adass Jisroel in Berlin in 1900, and remained in that position until he emigrated to Palestine after the Nazis' rise to power.

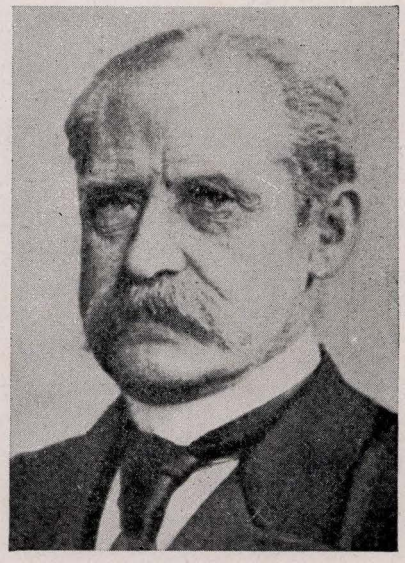
Munk was, during all this time, one of the leading figures of Orthodox Jewry in Germany. As governmental adviser on religious questions in the Prussian ministry of culture and public education he exercised great influence, especially during the years 1930 to 1933, when the problem of Shehitah (ritual slaughtering of animals) became very pressing. At that time he published numerous articles dealing with this problem. He was a member of the executive committee of the Vereinigung Gesetzestreuer Rabbiner in Deutschland, also of the Agudath Israel.

Munk's works include: *Welche Stellung soll der jüdische Religionsunterricht zu den jüngsten Ereignissen der Wissenschaft nehmen?* (Berlin, 1895); *Die Erscheinungszeiten des Palolowurmes und der jüdische Schaltzyklus* (Königsberg, 1899); *Die Entwicklung der Verhältnisse der preussischen Religionsgemeinden* (Berlin, 1931); *Gefälschte Talmudzitate* (Berlin, 1924).

Three of Munk's sons were rabbis, two in London and one in Palestine.

MUNK, HERMANN, physiologist, b. Posen, 1839; d. Berlin, 1912. He became instructor at the University of Berlin (1862), assistant professor (1869), and professor of physiology at the veterinary academy in Berlin (1876). In 1880 he was made a member of the Prussian academy of sciences. After the death of Du Bois-Reymonds in 1897, by whom he was greatly influenced, he was the first choice of the Berlin faculty for the professorship in physiology, but did not obtain the sanction of the government because of his Jewish faith.

Munk was one of the pioneers and investigators successful in the field of cerebral physiology, and conducted important researches in general and special nervous physiology, of motion, on the thyroid gland and the mechanism of its function, and on ovulation, spermatization, and fertilization of the nematode worms. His most important works are: *Über die Funktionen der Grosshirnrinde* (1881; 2nd ed., 1890) and *Untersuchungen über das Wesen der Nervenerregung* (1868).



Hermann Munk

MUNK, IMMANUEL, physiologist, b. Posen, 1852; d. Berlin, 1903. He was the brother of the physiologist Hermann Munk. In 1883 he became instructor and in 1895 departmental superintendent at the physiological institute of the University of Berlin, and assistant professor in 1899. His main field was the physiology of nutrition and metabolism, in which he conducted numerous experiments.

Munk did important research on the function of the kidneys and on irritability of the peripheral nerves. His textbook, *Physiologie der Menschen und der Säugetiere* (1882), became popular, and was reprinted many times. Other works of his were *Die Ernährung des gesunden und kranken Menschen* (1887) and *Einzelernährung und Massenernährung* (1893). He was editor of the *Zentralblatt für Physiologie.*

MUNK, SALOMON, orientalist, b. Glogau, Germany, 1803; d. Paris, 1867. He studied Bible and Talmud under Rabbi Jacob Joseph Öttinger at Glogau, and received his secular education at a Gymnasium in Berlin and at the Universities of Berlin and Bonn. There he studied classical philology and specialized in oriental subjects under Freytag, Lassen and Schlegel; he also continued the study of Talmud and the Hebrew literature of the Middle Ages. As a Jew he could not expect a teaching appointment in Prussia; therefore, without taking his degree, he left Germany for Paris (1828). Passing through Weimar, he called on Goethe, who recorded this visit in his diary. In Paris he was assisted by Michael Beer, brother of Giacomo Meyerbeer, and was a tutor, among others, to Alphonse and Gustave de Rothschild, while assiduously studying Arabic, Sanscrit and Persian.

Munk contributed to the fourth volume to S. Cahen's

French Bible (1831-51) an article under the title of "Réflexions sur le culte des anciens Hébreux." In 1840 he was made custodian of oriental manuscripts at the national library, Paris. While cataloguing and describing Hebrew, Aramaic, Syrian and Arabic manuscripts, he discovered, among the latter, valuable sources for the history of the Jews in Moorish Spain. From a trip to Egypt, taken in the company of Moses Montefiore and Adolphe Crémieux, he brought back a number of Arabic manuscripts, principally from the older literature of the Karaites. Having lost his eyesight through continuous application to these exacting pursuits, he resigned his post at the national library in 1852.

Thus handicapped, he published his main work, *Guide des Égarés,* the first printed edition of the original Arabic text of Maimonides' *Guide to the Perplexed* (in Hebrew, *Moreh Nebuchim*), with a translation and commentaries in French (vol. 1, 1856; vol. 2, 1861; vol. 3, 1866). For this work Munk had compared texts which he had found at the national library with others at Oxford; he had also studied the works of Aristotle in order to interpret the Maimonidean philosophy which he intended to present as a system, together with the life of Maimonides, in a fourth volume of his work; however, his death prevented this.

Upon publication of the first volume he was elected to the Académie des Inscriptions et Belles-Lettres and, in 1865, he was named professor of Hebrew and Syrian literature as successor to Ernest Renan at the Collège de France, in Paris. He was also secretary of the Consistoire Central des Israélites de France.

Munk's most important scientific works include: *Notice sur Rabbi Saadia Gaon . . .* (1838); *Notice sur Joseph ben Jehouda* (1842); *Commentaire de Rabbi Tan'houm de Jérusalem sur le livre de Habakkouk* (1843); *"L'Inscription phénicienne de "Marseille"* (in *Journal asiatique,* 1847); "Notice sur Abou'l-Walid Merwan Ibn-Djanah" (in *Journal asiatique,* 1850); *Palestine* (2nd ed., 1856; German version, 2 vols., 1871-72); "Essai sur l'inscription phénicienne du sarcophage d'Echmound-Ezer, roi de Sidon" (in *Revue de l'Orient,* 1856, p. 156); *Mélanges de philosophie juive et arabe* (2 vols., 1857-59; new edition, Paris, 1927).

A Hebrew version of his edition of the *Moreh Nebuchim* was published in London (1851-79). Another edition, with a preface and notes by Issachar Joel, and with the Arabic text in Hebrew characters, was published in Jerusalem under the Arabic title of *Dalalat Alhairin* (1930). Edmond Fleg edited an abbreviated French version, *Le Guide des égarés par Maimonide. Pages traduites de l'Arabe par Salomon Munk* (1930).

Salomon Munk

MUNKÁCS (MUKAČEVO), city in Bereg county, Hungary, with 13,000 Jewish inhabitants in a total population of 27,200 (1938). The great Hungarian lords, for whom Munkács served as a strategic center of resistance in their fight against the Hapsburg rulers, probably employed the services of Jewish bankers and suppliers from the 16th cent. on. The oldest record extant of such a business transaction is that by which Ilona Zrinyi, mother of Ferenc Rákóczi II, who defended the citadel of Munkács against the Austrians, leased the tavern of Szentmiklós and the toll of Podhering to Efraim, a Jew of Munkács. Mention is made, in 1687, of one Abraham, who supplied imported cloth for the troops at Munkács.

The Jewish community of Munkács originated in the early 18th cent. when the local landlords, the counts of Schönborn-Buchheim, encouraged the settling of the Jews in the city. The first synagogue was built in 1741 by a community of eighty families; in 1794 some members of the prosperous community—the Jews were allowed to own houses—were admitted to the city administration.

The first rabbis of Munkács were Leibish (d. 1789), Abraham Gottesman (d. 1815), and Avigdor Ashkenazi. Hasidic influence, from the neighboring Poland, has been present at Munkács since the late 18th cent. The *Tzettel Koton,* religious will of the famous Zaddik, Rabbi Elimelech ben Eleazar Lipmann of Lezaisk, was printed at Munkács (in *Derech Emeth,* by Rabbi Feibush of Zbaraz). His nephew, Zebi Elimelech Spira, served as rabbi at Munkács from 1825 to 1828. After an interval of fifty years, during which Rabbi Ezriel Grün introduced the Sephardic rite of worship, a nephew of Zebi Elimelech, Salomon Spira (1882-93), founded the Spira Zaddik dynasty which was still directing the religious life of Munkács in 1942. Hasidism became even more prevalent under Rabbi Zebi Hirsch Spira, son of Salomon (1893-1913), who did not tolerate any men in modern garb about him. He and his son, Rabbi Lazar Spira (1913-37), were the living embodiments of an ideal for hundreds of thousands of their faithful. Beyond the confines of their own community, in Sub-Carpathia and in the adjacent regions, they influenced the election of rabbis and ways of living and

thinking, more than once resorting to the weapon of excommunication against those who dared to challenge their authority. It was largely due to the influence of the Munkácser Rav that Hungarian Orthodoxy rejected the Derech Eretz, "the ways of the world," which the Agudath Israel World Organization of Orthodox Jews endeavored to combine with Torah. Rabbi Lazar Spira also found himself at odds with the Zaddik of Belz, and some members of his community, who sided with the latter, seceded in 1927. The two parties combatted one another with much violence in their respective journals, printed in Yiddish.

The rabbinate of Lazar Spira covered the years of the first World War, during which Munkács suffered from the Russian invasion, and at the end of which, under the name of Mukačevo, it was incorporated into Czechoslovakia, enjoying a twenty-year period of factual civic equality and comparative prosperity. In the absence of outside pressure, Hasidism and Zionism felt free to muster their respective forces.

Under Czech rule, the city electric light system, by agreement with the Jews and in order to permit to them the use of electric light on the Jewish Sabbath, stopped its generators before the Sabbath and supplied the current from accumulators, for otherwise the Jews would have been unwilling to use electric power produced even by non-Jewish labor on their Sabbath day.

In the fall of 1938 Munkács was returned to Hungary, Dr. Sándor Fried, erstwhile Jewish mayor of Munkács and candidate of the Magyar Party, being reelected mayor; he presented the keys of the city to the occupying Magyar troops. For some time thereafter the Magyar authorities continued to give the Jews of Munkács credit for maintaining Hungarian patriotism and Magyar minority rights in that city; but when more stringent anti-Jewish measures were adopted by Hungary (1939), the Jews of Munkács were accused of Czech loyalties.

The rabbinical collegium of Munkács, headed by a Rosh Beth Din, a person distinct from the chief rabbi, at all times consisted of eminent Talmudic scholars. Three synagogues and thirty houses of worship, nine Talmud Torahs and two Talmudic schools for adults attested the religious spirit of Munkács. The Yeshiva, founded by Rabbi Lazar Spira in 1921, was recognized by the state as an academy for the training of rabbis, and had an average attendance of 180. Scholarships, foundations and legacies for the maintenance of Beth Hamidrashim and for the support of eminent Talmudists were many. The community had a Hebrew Gymnasium (secondary school) whose graduates were admissible to the Hebrew University, Jerusalem. In addition to an illustrated theatrical magazine, four newspapers were published at Munkács in Yiddish. Charitable activities at Munkács were widespread, although only ten per cent of the community paid taxes, the rest being poor tradespeople, laborers and Talmudists. The Palestine association of Munkács aided members of the community and its district who had settled in the Holy Land.

ANNA BETTELHEIM.

MUNKÁCSI, BERNÁT, philologist and ethnologist, b. Nagyvárad (Grosswardein), Hungary, 1860; d. Budapest, 1937. He was a son of the Hebrew author Adolf Munk (Abraham Meir) and studied Ural-Altaic

Bernát Munkácsi

languages at the University of Budapest. He received his Ph.D. degree in 1885, after having published his first articles in journals of linguistics (1879) and having travelled to Moldavia (1880), where he had studied the language of the Changos. In 1885 he travelled, under the auspices of the Magyar Tudományos Akadémia (Hungarian Academy of Arts and Sciences), to the Middle Volga and Kama regions among the Votyaks and Chuvashes and from 1888 to 1889 he lived among the Voguls in their squalid huts in Western Siberia, collecting not only ample linguistic and ethnographical material but also a wealth of Votyak and Vogul folk poetry. During the first World War, from 1915 to 1918, he conducted studies among Russian prisoners of war of the Ossete tribe.

Munkácsi was editor of *Ethnographia* (1894-1910) and co-editor of *Keleti Szemle: Revue orientale des études oural-altaïques,* (1900-32). In these periodicals appeared his many essays on the etymology of the Magyar language, on the ancient history of the Magyars in Asia and on the origins of Hungarian folk customs. He was president (1893-1910) of the Magyar Néprajzi Társaság (Hungarian Ethnographical Society), a member of the Hungarian Academy from 1910 on, and an honorary member of the Finno-Ugric Society of Helsinki.

Munkácsi, who was appointed supervisor of instruction by the Jewish community of Pest in 1890, prepared a national curriculum for Jewish religious instruction (1906) and edited a series of sixteen textbooks published by the Jewish community of Pest.

His most important works include: *Votják népköltészeti hagyományok* (Traditions of Votyak Folklore, 1887); *Lexicon linguae votjacorum* (4 vols. 1888-96; winner of award of the Hungarian Academy); *A vogul nyelvjárások* (Dialects of Vogul, 1899); *Árja és kaukázusi elemek a finn-magyar nyelvekben* (Aryan and Caucasian Elements in the Finno-Magyar Languages, vol. 1, 1901); *Vogul népköltési gyüjtemény* (Collection of Vogul Folk Poetry, six vols. from 1902 on; winner of grand prize of the Hungarian academy); *Vogul-osztják hősköltészet és hösélet* (Heroic Life and Epic Poetry Among Voguls and Ostyaks, 1921).

In German he published (in addition to numerous

essays in *Keleti Szemle*) *Blüten der Ossetischen Volksdichtung* (1932). He also translated into German Votyak folk songs for Lach, *Gesänge russischer Kriegsgefangener* (published by the Austrian Academy, 1926-33). Of special Jewish interest is his "Karäisch-Tatarische Hymnen aus Polen" (Karaitic-Tatar Hymns from Poland, 1912).

ERNŐ MUNKÁCSI, jurist and scholar, b. Páncélcseh, Hungary, 1896. He was a son of Bernát Munkácsi. He studied law at the University of Budapest and, upon admission to the bar, served as secretary, from 1923 on as counselor, then chief counselor of the Jewish community of Pest. He was author of articles and books dealing with the legal status and usages of the Jewish community of Hungary. He undertook several research trips to Italy and published *Avicenna kanonjának miniatürjei* (The Miniatures of Avicenna's Canon; 1935); *Livornói régiségek* (Antiquities of Livorno; 1935); *Miniatürmüvészet Itália Könyvtaraiban, Héber kódexet* (The Art of the Miniature in the Libraries of Italy; Hebrew Codices, 1937); *Der Jude von Neapel* (1940), as well as a volume (in Hungarian, 1941) on Jean Baptiste Frey's *Corpus Inscriptionum Judaicarum*. He was a member of the national board of the congressional Jewish communities of Hungary (1941).

ANNA BETTELHEIM.

MÜNSTER, SEBASTIAN, non-Jewish Hebraist, b. Ingelheim, The Palatinate, Germany, 1489; d. Basel, Switzerland, 1552. An outstanding geographer and mathematician, he was also one of the great German humanists who paved the way for the study of Hebrew among Christians. Inspired by Johann Reuchlin, the pioneer of Hebrew studies in Germany, he studied Hebrew with the grammarian Elijah Levita, most of whose works he translated into Latin, thus carrying the knowledge of Hebrew from the synagogue into the sphere of the German universities. Münster was also the first Christian to publish a complete edition of the Hebrew Bible, accompanying it with a literal Latin translation (which strongly deviates from the Vulgate translation) and annotations (2 vols., 1534-35). For this Bible version he was praised as "the German Esdras." Besides, he translated Elijah Mizrahi's *Melecheth Hamispar* (arithmetic) into Latin. So great was his mastery of the Hebrew language—which was even acknowledged by Johann Eck, the anti-Lutheran theologian—that he could translate the gospel of *Matthew* into Hebrew. Münster was the author of several Hebrew grammars, a Chaldean grammar, a Chaldean dictionary and a *Dictionarium trilingue* (Latin, Greek and Hebrew).

Lit.: Hantzsch, Victor, *Sebastian Münster. Leben, Werk, wissenschaftliche Bedeutung* (1898); Peritz, Moritz, *Ein hebräischer Brief Elijah Levitas an Sebastian Münster* (1894); Geiger, L., *Das Studium der hebräischen Sprache in Deutschland* (1870); Perles, J., *Beiträge zur Geschichte der hebräischen und armäischen Studien* (1884).

MÜNSTERBERG, HUGO, psychologist, b. Danzig, Germany, 1863; d. Cambridge, Mass., 1916. He was the son of a wealthy lumber merchant and studied at the universities of Leipzig (Ph.D., 1885) and Heidelberg (M.D., 1887). Münsterberg, who was baptized, started as an instructor in philosophy at the University of Freiburg, Baden (1887), and was there appointed assistant professor in 1891. Meanwhile he had met in Paris at the first International Congress of Psychology (1889) the Harvard psychologist William James who, three years later, invited Münsterberg to join the staff of his faculty. Münsterberg taught at Harvard from 1892 to 1895, returned to Freiburg for two years, then returned to Cambridge where, as a professor of experimental psychology and director of the psychological laboratory, he remained until his death, except for the years 1910 and 1911 which he spent as a Harvard exchange professor in Berlin.

Münsterberg was president of the Psychological Association (1898) and of the Philosophical Association (1908), and a member of the American Academy of Arts and Sciences. He was also organizer and vice-president of the International Congress of Arts and Sciences at the St. Louis Fair (1904).

Having devoted himself first to the purely experimental field of physiological psychology, he gave special attention after 1900 to the new field of applied psychology, in particular to the application of psychology to education, medicine, law, commerce and industry. A pioneer in this field, he attempted particularly to utilize the methods of modern psychology for the development of industrial efficiency. As a theoretical thinker, he endeavored to combine Fichte's idealism with the teachings of contemporary psychology.

Highly successful as a teacher and as an administrator, he exerted influence to improve the relations between the United States and Germany. Even during the first World War he was the most eminent supporter of German policies in the United States; but he

Title page of the Sebastian Münster edition of the Bible, published at Basel in 1536

Hugo Münsterberg

also denounced many of the activities of his fellow German-Americans. He condemned the formation of an alien party within the United States as "a crime against the spirit of true Americanism" and said that its results would reach far beyond the period of the war.

He wrote a great number of scholarly and semi-popular works, including *Psychology of Life* (1899); *Basis of Psychology* (1900); *Principles of Art Education* (1905); *Science and Idealism* (1906); *Psychology of Crime* (1908); *Psychology and Industrial Efficiency* (1913); and *Psychology, General and Applied* (a systematic treatment of applied psychology, 1914). Among his political writings are *Aus Deutsch-America* (1908); *The Americans* (1904); and *The War and America* (1914). ALFRED WERNER.

Lit.: Münsterberg, Margaret, *Hugo Münsterberg, His Life and Work* (1922); Moore, G. F., "Hugo Münsterberg," *The Harvard Graduates Magazine,* vol. 15 (1916-17).

MÜNZ, BERNHARD, historian of philosophy and librarian, b. Leipnik, Moravia, 1856; d. Vienna, 1919. He studied philosophy at the Universities of Vienna and Munich, and was graduated with the Ph.D. degree in 1877. He became amanuensis in the library of the Jewish community of Vienna (1889), and three years later was appointed its director. He was author of *Die Keime der Erkenntnistheorie in der vorsocratischen Periode der griechischen Philosophie* (1880); *Die Erkenntnis- und Sensationstheorie des Protagoras* (1881); *Die vorsocratische Ethik* (1882); *Protagoras und Kein Ende* (1883).

Subsequently Münz became interested mainly in modern philosophy and literature. He wrote *Jacob Frohschammer,* a biography of the philosopher (1894), and edited his correspondence (1897); *Lebens und Weltfragen* (1894). He wrote also studies on several Austrian poets, among them *Adolf Pichler* (1899) and *Hieronymus Lorm* (1901). He was likewise author of *Moritz Lazarus* (1900); *Literarische Physiognomien* (1903); *Goethe als Erzieher* (1904); *Ibsen als Erzieher* and *Heine als Denker* (1908); *Björnstjerne Björnson* (1909); *Robert Hamerling als Philosoph* (1911); *Friedrich Hebbel als Denker* (1906 and 1913).

MÜNZ, JUDAH BEN ELIEZER, one of the most distinguished rabbis of Italy in the 15th cent., d. Padua, 1509. After the expulsion of the Jews from Mayence in 1461 he went to Italy, and settled in Padua, where he served as rabbi for forty-seven years and was head of the Yeshiva. Münz was a Talmudic scholar of the old school, and it was inevitable that he should come into conflict with Elijah Delmedigo, famous philosopher, exponent of scientific progress and of a spirit of freedom in religious matters. The result of the controversy was that Delmedigo had to leave Italy.

Primarily because of Münz's presence, Padua became the chief seat of rabbinical learning and his seminary a center for scholars from all over Europe. Almost all his writings were destroyed during the siege of Padua soon after his death (1509). Only a small part of his responsa was later found and published by Meir Katzenellenbogen (Venice, 1553). These responsa, later edited by Preschel (Munkács, 1898), are of great value for the study of the history of the Jews of Italy at that time.

ABRAHAM MÜNZ (d. Padua, about 1540) was Judah ben Eliezer Münz's son and successor. He was an opponent of the noted Polish Talmudist Jacob Polak, whom he combatted bitterly, although some sources attribute this conflict also to the elder Münz. Responsa by Abraham Münz were published in Venice in 1515 to 1519.

Lit.: Literaturblatt des Orients, vol. 7, p. 520; Nepi, G., and Ghirondi, M., *Toledoth Gedole Yisrael* (1853) 122-23; Fünn, S. J., *Keneseth Yisrael,* 412.

MÜNZ (MINZ), MOSES, rabbi, b. province of Podolia, Poland, about 1750; d. Óbuda (Altofen), Hungary, 1831. He was rabbi at Brody, Galicia, where he headed a famous Yeshiva. In 1790 he was called to Óbuda, Hungary, where he restored ancient traditions of austere morality in the community. His reputation reached far beyond the borders of Hungary; Rabbis Ezekiel Landau and Moses Sofer mentioned him in their responsa. He entered into controversy with Mordecai Benét, chief rabbi of Bohemia, on the permissibility of phylacteries with double leather straps, and his decision appeared to be in consonance with that rendered earlier by Elijah Vilna.

Münz also disagreed with Mordecai Benét in the latter's condemnation of the *Emek Hashaveh* (1803) by Aaron Chorin, chief rabbi of Arad. Called upon by the Arad community to give his opinion on the work, Münz was content with censuring certain statements without agreeing with Benét in his charges of heresy. Eventually he had to yield to the wishes of the Orthodox majority in summoning Chorin before a rabbinical tribunal, but demonstrated against the sentence rendered by his colleagues by not taking part in the sessions. However, he strongly opposed reform, and when Chorin, in his *Kinath Haemeth* (1818), identified himself with the Hamburg Reform Temple, he caused him to retract his statements by threatening the rabbi of Arad with deposition.

Münz' *Responsa* were printed at Prague (1827). He published and wrote commentaries on the notes of Jacob ben Moses, *Peri Yaakob* (1930). His *Derashah,* a sermon delivered on the occasion when peace was declared by Emperor Francis I (1814) was published with the German translation of Mordecai Rechnitz.

MÜNZ, MOSES BEN ISAAC HALEVI, rabbi, d. presumably about 1482. During the sack of Mayence (1455) he lost his property, most of his books and part of his collection of responsa. Later on he carefully revised and prepared these for publication; they were printed finally in Cracow, 1617. Münz was rabbi in Mayence, Bamberg (1469), Posen (from 1474 on), and presumably also in Landau, Würzburg, Frankfort, Nuremberg and Ulm. His manuscripts of matrimonial codes were still extant in the 20th cent. It is uncertain whether he carried out his plan to emigrate to Palestine since, according to some sources, he is said to have died in Posen, "the last prominent representative of the Talmudic learning of the German rabbis in the Middle Ages."

Lit.: Brüll, N., *Jahrbücher für jüdische Geschichte und Literatur,* vol. 7, pp. 31, 188; Güdemann, M., *Geschichte des Erziehungswesens,* vol. 3 (1888) 21-22.

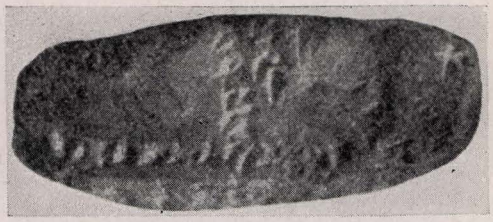
MÜNZ, SIGMUND, author and journalist, brother of Bernhard, b. Leipnik, Moravia, 1859; d. Budapest, 1934. He lived for many years in Italy as a correspondent of German and Austrian newspapers, and wrote many books on Italy, such as *Studien aus dem modernen Italien* (1889) and *Italienische Reminiscencen und Profile* (1900). He translated into German Marco Minghetti's biography of Raphael Sanzio. From 1892 until his death he was a regular contributor to the *Neue Freie Presse,* Vienna, writing chiefly on foreign affairs. Other books of his are pen-sketches of contemporary statesmen, such as *Modern Staatsmänner* (1901); *Balkanherrscher* (1912) and *Fürst Bülow* (1930); as well as *Appell an den Präsidenten Masaryk in zwölfter Stunde* and *Weltkongress und Weltgericht,* both published in 1919.

MÜNZ, WILHELM, rabbi and philosopher, b. Tarnów, Poland, 1856; d. 1917. He was rabbi of Gleiwitz, Silesia, and active in Jewish welfare work. In 1890 he founded the sanitorium for Jewish children in Königsdorff-Jastrzemb, and was its chairman until his death. Münz wrote: *Die Grundlagen der Kant'schen Erkenntnistheorie* (2nd ed., 1885); *Einsames Land* (2nd ed., 1911), a collection of stories and scenes; *Ritualmord und Eid* (4th ed., 1902), an open letter to the Reichstag deputy Liebermann von Sonnenberg; *Es werde Licht* (1903); *Die Judenmetzelei in Russland* (1906).

MURALS, *see* FRESCOES AND MURALS.

MURASHU TEXTS. The excavations at Nippur in central Babylonia in 1893, conducted by the University of Pennsylvania, brought to light about 730 cuneiform tablets, which proved to be the archives of a prominent mercantile house. This firm, known as Murashu and Sons, continued for several generations during the reigns of the Persian kings, Artaxerxes I (464-424) and Darius II (424-405 B.C.E.). The texts deal with transactions in real estate and in provisions, and include leases and other types of contracts.

The Murashu tablets are of especial interest because they mention numerous names of Jewish patrons of the house. These Jews are evidently the descendants of the Palestinian exiles of 586 B.C.E. The Murashu texts give almost the only information as to the financial status of the Jews in Babylonia in the 5th cent. C.E.; they show that some Jews, at least, had by then attained



One of the tablets bearing Murashu text, excavated (1893) in Nippur, Central Babylonia

wealth and position, enabling them to take an active part in the commercial life of the empire.

Lit.: Clay, Albert T., "Business Documents of Murashu Sons of Nippur, Dated in the Reign of Darius II," *University of Pennsylvania, Museum Publications of the Babylonia Section,* vol. 2, No. 1; Ebeling, *Aus dem Leben der jüdischen Exulanten in Babylonien* (with the texts that refer to Jews); files of the *Journal of the American Oriental Society.*

MURDER (*retzihah*). The deliberate slaying of a human being is a capital crime in Jewish law, as it is in secular law. Murder is one of the three deadly sins (the others being idolatry and incest). It is not permitted even in an emergency, though slaying in self-defense, as for instance in a case of burglary, is not considered a crime. Nor is there any suggestion in the Bible or later Jewish legal literature that the slaying of armed enemies in time of war is regarded as murder.

The Sixth Commandment of the Decalogue (*Ex.* 20:13; *Deut.* 5:17) lays down the basic principle, "Thou shalt not murder." However, the commandment against murder is found before that in the laws given to Noah, where to the original permission to kill and use animals for food, are added the words (*Gen.* 9:6), "Whoso sheddeth man's blood, by man shall his blood be shed." Since man is created in the image of God, the passage continues, he is higher than the animal; this becomes the basis for the law against murder, which applies equally to all human beings, both natives and strangers.

Biblical legislation makes a careful distinction between intentional and unintentional homicide. Thus in *Ex.* 21:12-13, the contrast is drawn between deliberate murder and the slaying that occurs by the will of God, that is, by chance. The same distinction is drawn in *Deut.* 19, which gives a typical example of unpremeditated homicide on the part of a woodchopper whose axe slips from his hand and kills his neighbor. The decisive criteria for a deliberate murder are enumerated: previous hatred and enmity, treacherous lying in wait, and the use of a weapon.

Not only murder itself, but everything that endangers human life and hence may lead to a homicide is regarded as bloodguiltiness. Accordingly laws are devised to prevent such guilt, such as those about the goring ox (*Ex.* 21:28-32), the requirement to make a parapet for the roof of a house (*Deut.* 22:8) and the ordinance requiring dogs to be chained (*B.K.* 79b). Maimonides, accordingly, treats of such laws together with those forbidding murder, and includes them under the category of preserving human life (*shemirath nefesh*), since they all derive from the principle, "Neither shalt thou stand idly by the blood of thy neighbor" (*Lev.* 19:16).

The punishment for murder is death, in accordance

with the Biblical concept of the sanctity of human life. The only atonement for murder is the death penalty; unlike any other crime, a murder can not be wiped out by a payment of money, for the land is polluted by the blood of the innocent person who is slain and can only be cleansed by the blood of the guilty (*Num.* 35:33). The usual form of capital punishment for murder was decapitation (*hereg; Sanh.* 11:1). The Bible still recognizes the right of the blood relations to try and to execute the murderer; this is a remnant of the older custom of blood revenge.

Under Talmudic law, the commission of a murder must be established by the testimony of two competent witnesses and it must be clear that the murderer knew the nature of his act. If there is only one witness, there can be no capital punishment by the law of the Bible (*Num.* 35:30; *Deut.* 19:15); in such cases the murderer was condemned to imprisonment (*Sanh.* 9:5).

The Talmudic law is very careful to define murder in the narrowest possible limits. The act of murder must have been such that death must inevitably ensue from it. If the weapon or instrument used would not ordinarily inflict death, or if the person killed were of such feeble strength that it is not certain that the blow would have killed him if he had been robust, the crime is not one of murder, but of assault.

In order to avoid blood revenge in cases where the killing was purely accidental, Biblical law provided for cities of refuge (*Num.* 35:19; *Deut.* 19:4) which protected the accidental homicide from blood relations, but did not shield the deliberate murderer. Talmudic law deals at length with the difference between premeditated homicide and cases which were due to negligence or accident. It defines negligence as cases where the slayer or the one responsible for the homicide did not take ordinary precautions, and even deals with cases where negligence borders on premeditation. The tendency on the whole is to term a homicide murder only when it is clearly an act of premeditation, planned and deliberately carried out with suitable weapons—what modern law practice would call murder in the first degree. MARCUS COHN.

MUSAF, *see* ADDITIONAL SERVICE.

MUSAR MOVEMENT (from Hebrew *musar,* "morals"). The Musar, or Moralist Movement in Judaism, in the narrower sense, is the movement created in the middle of the 19th cent. by Israel Lipkin, who preached the doctrine of ethical studies and a certain asceticism to his followers. The Musarnikes, as they were called, spent hours in meditation in the evening in order to purify their souls. The chief center was the Slobodka Yeshiva, and its chief proponent, after Lipkin, was Isaac Blaser, head of the Yeshiva. Except at Kovno, the movement disappeared by the 20th cent.

The tendency back of the movement, however, is one that has long been present in Judaism. The ethical and moral element has always been strong in the Jewish religion; at all times there have been teachers who have stressed the importance of right conduct in contrast to mere ritual observance. Again and again there arose, particularly in times of persecution, when a sense of sin increased, groups of a more or less ascetic character who preached asceticism, study of morality and acts of penitence. In this sense there is a Musar movement all through the post-Biblical period, creating a type of literature that generally goes under the name of Musar literature.

The literature produced by the moralist writers is generally written in simple, homely style, intended for the masses. It deals with such subjects as education, family life, purity, relations with Jews and non-Jews, treatment of animals and care of health. Although derived for the most part from Jewish sources, it borrows freely from the sayings of Greek philosophers, the fables of the Hindus, and the literature of the Arabs.

Such late Talmudic writings as *Derech Eretz Rabbah, Derech Eretz Zuta* and *Margenitha de Rabbi Meir* fall into this category. Later, three definite periods of Musar literature can be clearly distinguished; beginning in the 11th cent., perhaps under the influence of similar Christian movements, and greatly stimulated by the misfortunes of the period of the Crusades and immediately after; the 16th to 18th centuries, times of great persecution and Messianic movements; the 19th cent., stimulated by Israel Lipkin.

The independent works of the first period include: the *Orehoth Hayim* of Eliezer ben Isaac the Great (middle of the 11th cent.; Lublin, 1572); the *Sefer Hasidim* (13th cent.), ascribed to Judah Hehasid of Regensburg, but also coming from his father Samuel ben Kalonymus and amplified by his pupil Eleazar ben Judah of Worms; the *Sefer Harokeah* of Eleazar ben Judah; the *Hanhagah* of Asher ben Jehiel (d. 1327); his son Judah's *Iggereth Hatochahah* (published by Schechter in *Beth Talmud,* vol. 4, p. 327); the wills of Eleazar ben Samuel Halevi, Maimonides and Judah ibn Tibbon, which furnished the patterns for the ethical wills of later centuries.

Other Musar literature of this period is in the form of commentaries on *Aboth,* or has been preserved in manuscript, such as the *Inyane Hateshubah* of Eleazar ben Jacob of Speyer and the *Beer Mayim Hayim* of Meir of Rothenburg. Bahya's *Hoboth Halebaboth* was translated into Hebrew as early as 1161 and became very popular, as was the *Sefer Hayirah* of Jonah Gerondi.

In Italy the *Sefer Hasidim* appeared frequently in the form of revisions. The ethical book of Jehiel ben Jekuthiel ben Benjamin Anav of Rome (1278; published as *Beth Middoth,* Constantinople, 1511, and as *Beth Maaloth Hamiddoth,* Cremona, 1556) was directed against the immorality of the Roman Jews.

The *Matzref* of Berechiah ben Natronai Hanakdan, who lived in Burgundy in the 13th cent., has been preserved in manuscript, but his *Mishle Shualim,* which falls under the heading of Musar literature, has been frequently printed (1st ed., Mantua, 1557; Latin trans., 1661). Other works in this class are: *Sefer Hamusar* of Moses Galatz; *Menorath Hamaor* of Isaac Aboab, written about 1300 (1st ed., Constantinople, 1514); *Sefer Hayashar* of Zerahiah Hayevani (Constantinople, 1520); *Eben Bohan,* completed in 1323 in Catalonia by Kalonymus; *Iggereth Tochahah Vehaemunah,* written by Solomon Alami of Portugal in 1415 (Venice, 1712).

Toward the end of the Middle Ages there appeared a rhymed ethical work, the *Hadrachah* of Johanan Lu-

ria, which was often printed (1st ed., Prague, 1597) with the Hebrew translation of the *Sefer Hagan* of Isaac ben Eliezer (about 1460-80); 1st Yiddish ed., Cracow, 1571). Another work of the same time which comes from Germany in the 15th cent. is the anonymous *Sefer Hamiddoth,* which appeared first in Yiddish (Isny, 1542) and later in Hebrew, under the title *Orehoth Tzaddikim* (Prague, 1581). It makes considerable use of Bahya's *Hoboth Halebaboth.*

This use of translations into Yiddish marks the transition to the second period of Musar literature. It was felt necessary to make the literature accessible to the Jewish people as a whole. Hence works were either written in Yiddish or translated from Hebrew into Yiddish soon after their appearance. This was especially noticeable in the 17th cent., when the older ethical literature, such as *Hoboth Halebaboth, Sefer Hasidim, Sefer Hayirah, Menorath Hamaor* and others, appeared either with or in the form of a Yiddish translation.

The steady deterioration in the political and economic status of the Jews, the increased taxation, resulting in a multiplying of disputes within the communities, the decline in scholarship, as well as the ever-growing influence of the outer world, resulting in a laxity of morals on the one hand and an increase in asceticism and Messianic delusions on the other, produced a flood of small books, some extracts from larger works, some independent compositions. In these productions of the period can be found interesting facts about the state of culture and social and economic life of the Jews, especially in those originally written in Yiddish.

The larger writings of this epoch include: *Sam Hayim* of Abraham Ashkenazi of Ludomir (Hebrew and Yiddish, Prague, 1590); the *Brantspiegel* of Moses Henochs, a book for women and dealing mainly with the life and the ritual purifications of women (Basel, 1602); the *Zuchtspiegel* of Ulma Seligman (*Marah Hamusar,* Prague, 1610); *Leb Tob,* by Isaac ben Eliakim of Posen (Prague, 1620); *Simhath Hanefesh,* by Elhanan Henneli Kirchhan (part 1, Frankfort, 1707; part 2, Fürth, 1727); *Kab Hayosher,* compiled by Zebi Hirsch Kaidanover (1st Hebrew ed., Frankfort, 1705; 1st ed. with Yiddish, Frankfort, 1709; in Yiddish alone, Sulzbach, 1724), but borrowed for the most part from the *Yesod Yosef* of Joseph of Dubno (published posthumously, Shklov, 1785).

With the rise of the Musar movement of the middle of the 19th cent. editions were made of the older ethical writings such as the *Mesillath Yesharim* of Moses Hayim Luzzatto, the *Tikkun Middoth Hanefesh* of Solomon ibn Gabirol, and the *Heshbon Hanefesh* of Mendel Levin Satanower. In addition, there appeared works which contained the doctrines of the new movement, and which differed from the previous Musar literature in containing entire sermons and discussions. The chief of these are: the writings of Israel Lipkin Salanter, the founder of the movement (*Imre Binah,* 1878; to some extent, *Etz Peri,* 1880, and *Eben Yisrael,* 1883); the *Or Yisrael* of Isaac Blaser (1900); the writings of Hafetz Hayim (Israel Meir Kahan of Radin), such as *Shemirath Halashon, Mahaneh Yisrael* and *Mishnah Berurah;* the published dialogues of Josel Hurwitz of Novarodok, such as *Madregath Haadam Bithekufath Haolam* (Poltava, 1916).

Friedberg assembled a list of Musar literature up to 1900 in his *Beth Eked Hasefarim,* pp. 718-19, 729, but this contains inaccuracies and omissions.

MUSCH (MOSHE) and CHATSCHIM (CHAYIM), 14th cent. financiers. They were the sons of Scheblein (Shabtai) and were money lenders to the high clergy, nobility and burghers of the county of Cilli, Styria. Business partners at first, they parted later, Musch living at Marburg on the Drau, and Chatschim at Cilli. According to a document dated Pozsony (Pressburg), July 3, 1362, Prince Rudolf of Austria renounced sovereignty over these Jews in favor of Ulrich I and Hermann I, counts of Cilli, which implied also the right of taxing them. Evidently they were desirable subjects for taxation. However, according to a document dated Vienna, June 16, 1367, Princes Albert III and Leopold III, joint rulers of Austria, claimed 2,000 gulden (24,000 gulden in 20th cent. value) from these Jews and made Baruch, the Judenmeister (rabbi) of Vienna, and other Jews of standing guarantee for them, with permission that the guarantors satisfy themselves from the brothers' possessions in Styria. The latter preferred to escape to Hungary where (in Pozsony) on November 2, 1368, they bought for 120 pound hellers from Paul, son of Jakob, the mayor of Pozsony, a house referred to as "Judenhof," probably a former Jewish possession which had passed into the hands of the mayor's son when the Jews were expelled from Hungary in 1360.

On June 24, 1370, Musch and Chatschim were back in Styria again, and appeared before a tribunal consisting of two Jewish judges, with Count Hermann I of Cilli as president, to settle a dispute which had arisen between the two of them. Decision on the matter was rendered on June 6, 1372, by Count Hermann and by Isserl, the Jew of Klosterneuburg.

MUSEUMS. The collecting and exhibiting of objects of Jewish art and archeology started about 1863, when Félicien de Saulcy brought over to the Louvre sarcophagi discovered in Jerusalem. Since the excavations in Palestine and on other sites of archeological interest were conducted by expeditions from many countries, Jewish excavation finds found their way into various museums all over the world, such as the British Museum, the Museum in Constantinople, the Staatliche Museen in Berlin, the Asiatic Museum in Leningrad, the Museo delle Terme in Rome, the collections of the Oriental Institute of the University of Chicago, Harvard University, the Pennsylvania Museum, the Gallery of Fine Arts in New Haven, the Museum at Damascus, and, in Jerusalem, the Palestine Museum, the Museum of Jewish Antiquities, the collections of the Jewish Palestine Exploration Society and various other institutions.

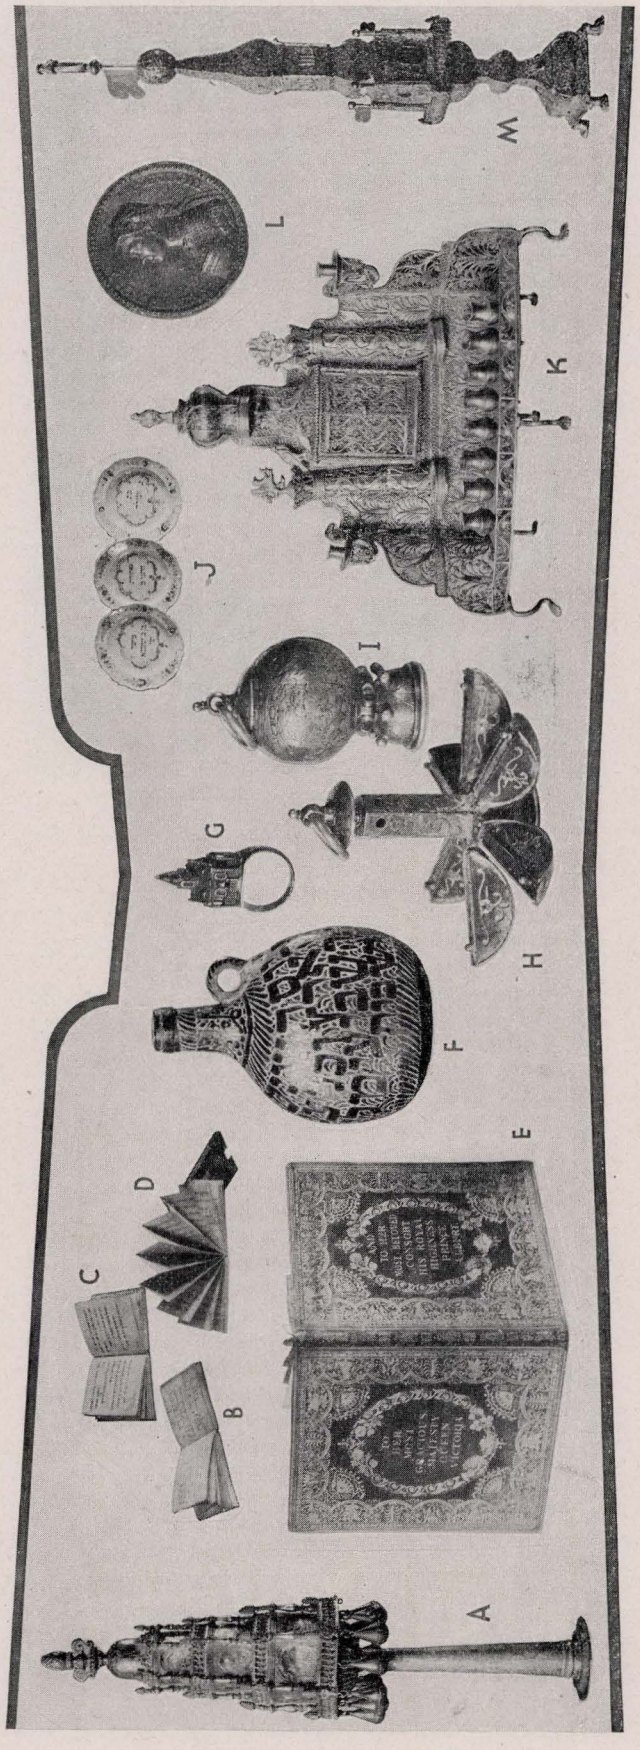
Collections of Jewish ceremonial objects in public museums owe their origin to private collecting. Thus the exhibits in room 18 of the Musée de Cluny, in Paris, are for the most part pieces of the collection of J. Strauss shown in 1878 at the Exposition Universelle. The ceremonial objects in the section of Historic Religious Ceremonials in the United States National Museum in Washington (Smithsonian Institution), described in the catalogue *Biblical Antiquities,* was but a small selection substantially enlarged by the loan of the H. E. Benguiat collection exhibited in 1892 to 1893 at

the World Columbia Exposition in Chicago. The murals of the synagogue at Kirchheim were moved in 1912 to the Luitpold Museum in Würzburg with the aid of Reiss, and the wall paintings of the synagogue at Horb were transferred to the Städtische Gemäldegalerie in Bamberg in 1914 owing to the initiative and generosity of Max Gutmann. The Jewish section in the Hessisches Landesmuseum in Cassel, founded in 1928, consisted mostly of loans which, when the Nazis assumed control, were turned back to the owners. This fine collection was of a regional type. Most of the pieces were published and described by Rudolf Hallo. Occasional ceremonial articles are to be found in the Metropolitan Museum in New York city, and in many other museums.

The Jewish museums run by the Jewish communities originated through private initiative, and were frequently supported by local committees of friends of the venture. The Jewish Museum of the Warsaw community was a bequest of M. Berson (d. 1908). The Museum of the Danzig community was a foundation established in 1903 by Lesser Gieldzinski (later transferred to the Jewish Theological Seminary of America, in New York). The nucleus of the Jewish Museum in Berlin was a bequest of Albert Wolf (d. 1907) to the community. This museum had an ancient and modern section, and a photograph and a lantern slide collection. The museum opened in 1917 was confiscated in November, 1938. The numerous exhibitions arranged by the museum were described in catalogues by M. Stern, Karl Schwarz, Rachel Wischnitzer, Franz Landsberger and others. The Museum of Mayence, founded in 1926, was of regional interest. Its special feature was shrine curtains of the 18th and early 19th centuries. The museum was supported by the Verein zur Pflege Jüdischer Altertümer in Mayence and by the community. The Jewish Museum in Frankfort was established by the Gesellschaft zur Erforschung Jüdischer Kunstdenkmäler about 1901, and was systematically built up from the outset. A large part of its exhibits was dealt with in the publications of the society by H. Frauberger, E. Toeplitz, Ida Posen, H. Gundersheimer and G. Schönberger. The museum was destroyed in 1938. The Jewish Museum in Breslau, started by the Verein Jüdisches Museum Breslau, was founded in 1929. The pieces of the museum at one time on exhibition in the Silesian Museum for Arts and Crafts were described in the exhibition catalogue. In Munich there was a center for collecting Jewish art documents in the Bavarian region, conducted by T. Harburger under the auspices of the Verband Bayerischer Israelitischer Gemeinden.

The Jewish Museum in Vienna was founded by the Gesellschaft für Sammlung und Conservierung von Kunst- und historischen Denkmälern des Judentums in 1897. The Jewish Museum of the community in Budapest is the only European Jewish museum (besides the Berlin community museum, which was closed) with a modern art section. The Jewish Museum in Prague, founded on the initiative of S. H. Lieben in 1912, is particularly rich in Bohemian glass ceremonial objects and synagogue furnishings.

The Joodsch Historisch Museum in Amsterdam, located in the old Waagebouw since 1931, owns, in addition to many interesting documents, historic dresses



Museum objects at the Hebrew Union College, Cincinnati

Three shelf cases from the Museum of Jewish Ceremonial Objects at the Jewish Theological Seminary of America

of Sephardic provenance. The Jewish Museum in London, founded in 1933, made a hopeful start with its publication on Anglo-Jewish portraits by Rubens. An interesting venture was the Jewish Museum in Eisenstadt, initiated by Sandor Wolff. In Nikolsburg there was started, in 1936, a Jewish museum intended to centralize the collecting activities in Moravia and Silesia.

The collection of Jewish ceremonial objects gathered by Anski on his expedition to the Russian Pale of Settlement and to eastern Galicia during the first World War was on exhibition at Leningrad in 1920. There was another collection established under the Soviets in Kiev. In Vilna there was a museum attached to the Jewish Scientific Institute.

The Museum of Jewish Antiquities in Jerusalem was, in 1942, connected with the Hebrew University, and the Bezalel Museum in Jerusalem, founded by Boris Schatz, was attached to the Bezalel School of Arts and Crafts. The Museum in Tel-Aviv, founded by Meir Dizengoff in 1932 was the first Jewish museum devoted to Jewish and non-Jewish art. It specialized in the art of the modern period.

In the United States there was, in 1942, a Jewish museum connected with the Hebrew Union College, in Cincinnati, which owns the collection of Sally Kirschstein, purchased in 1926. The Museum of Ceremonial Objects of the Jewish Theological Seminary of America, in New York city, installed in its present (1942) premises in 1931, was formed by the Benguiat collection, formerly in Washington, and by various gifts and loans, among others that of H. G. Friedmann, loaned in 1939. It owned some fine pieces of old synagogue furnishings, a notable collection of Hanukah lamps, and many other objects.

A convention of Jewish art historians, collectors and museum curators was held at Mayence in January, 1931, with the object of unifying the methods of presentation of exhibits, cataloguing and photographing.

MUSIC, BIBLE IN, *see* BIBLE IN MUSIC.

MUSIC IN THE BIBLE. The Biblical passages that deal with music, scarce as they are, allow of tracing the rough outlines of a history of Jewish music.

The first period, approximately between 2000 and 1000 B.C.E., is "primitive." There were no professional musicians; the people themselves sang, played, and danced whenever enthusiastic joy needed an outlet. When Moses had led his people through the Red Sea, he and the men of Israel "sang unto the Lord," and "Miriam the prophetess, the sister of Aaron, took a timbrel in her hand; and all the women went out after her with timbrels and with dances" (*Ex.* 15:1-20). When Jephthah returned home, "his daughter came out to meet him with timbrels and with dances" (*Judges* 11:34). And after David's victory over the Philistines, "the women sang one to another" (*I Sam.* 18:7). From two of these three examples it can be seen that from the earliest times the Jews used the characteristic musical forms of the Semitic Orient: *antiphonal* singing of two choruses (of men, or of women, or of men and women) against one another, and *responsorial* singing of a chorus answering the leader's solo, which is still alive in our synagogues.

Jewish music had acquired a few new traits in the

period about the year 1000 B.C.E. The sound of instruments both stirs and soothes the human mind. Saul is told that when he hears the harp, the drum, the pipe, and the lyre "the spirit of the Lord will come mightily upon thee, and thou shalt prophesy" (*I Sam.* 10:5-6). The prophet Elisha sent for a minstrel, "and it came to pass, when the minstrel played, that the hand of the Lord came upon him" (*II Kings* 3:15). Music, on the other hand, calmed the mind: "When the evil spirit from God was upon Saul, David took the lyre and played with his hand; so Saul found relief, and it was well with him, and the evil spirit departed from him" (*I Sam.* 16:23).

The musical scene was completely altered in the days of David and Solomon. Foreign instruments appeared all of a sudden, such as the harp, zither, oboe, cymbals, and sistrum, and Pharaoh's daughter whom King Solomon took for wife is said, in the Talmudic tractate *Sabbath,* to have had "a thousand kinds" of musical instruments in her dowry.

At that time, Israel began to develop professional musicians and a musical organization. David bade the head of the Levites to train musicians who were to sing and play when the Ark of the Covenant was carried up to Jerusalem. But when he made preparations for the Temple, no less than two hundred and eighty-eight Levites became students of an actual academy of ritual music and, divided into twenty-four groups, were taught by "their fathers for song in the house of the Lord, with cymbals, harps, and lyres (*I Chron.* 25:6).

These and the other instruments used in ancient Israel both in the days of the Patriarchs and the Judges and in the time of the kings, may be described in a few words.

Ugab seems to have at first denoted a vertical flute like the one used by the Arabs today, but later it might have become a general name for pipes, including shawms.

The *ḳinnor,* King David's erroneously so-called harp, was actually a lyre, similar to the *ḳithara* of the Greeks: a solidly joined box set on its side with a yoke in place of a neck, that is, two arms projecting upward, the upper ends of which were connected by a crossbar. According to a late commentary on *Daniel,* it had the shape of a Jewish candelabrum, that is, it was semicircular in outline. The strings, made of catgut, were played with a plectron when the instrument accompanied a singer; as a solo instrument, on the contrary, it was plucked with the bare fingers, as in the case of David performing before Saul.

The *tof,* exclusively struck by the bare hands of women, was a frame drum like the modern tambourine, but without tinkling disks in its hoop.

The *shofar* or *ḳeren,* the only instrument preserved in the Jewish ritual today, is a plain goat's or ram's horn without a special mouthpiece. It generally is softened in steam and then flattened. The four kinds of blasts performed on the horn are not the same throughout Jewry. In the Ashkenazic ritual, they are *teḳi'ah,* "blast," an appoggiatura on the tonic prefixed to a long blow on the fifth; *shebarim,* "breaks," a rapid alternation between tonic and fifth; *teru'ah,* "din," a quavering blow on the tonic, ending on the fifth; *teḳi'ah gedolah,* "great blast," with a longer sostenuto on the fifth, always played at the end.

An ancient Hebrew coin, showing a lyre with six strings used in Old Testament days

The *ḥatzotzerah* was a straight silver trumpet, about two feet long and ending in a bell. With its few high notes, it served both for military signals and for the ritual in the Temple. The triumphal arch of Titus in Rome depicts one among the trophies taken from the Temple.

The *nebel* was a so-called "angular harp" (like the Assyrian and the Egyptian harp) with the body rising close to the player's chest and a horizontal stick to hold the gut strings piercing the lower end of the body.

The *'asor,* meaning 'ten,' was a small ten-stringed rectangular zither (an instrument without a neck or a yoke), apparently of Phoenician origin. Two such instruments are depicted on a Phoenician ivory box in the British Museum.

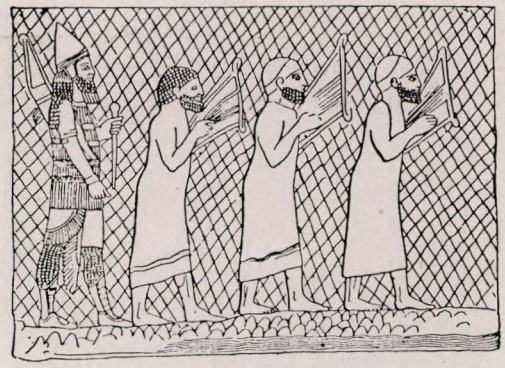
The *ḥalil* was a pair of slender oboes (not flutes), loosely held together in the mouth and blown simultaneously, one sounding a drone to accompany the melody produced by the other one. The timbre is described as "sweet."

The *menaanim,* "shaken" instruments, were evidently sistra similar to those used in Egypt to worship Isis: small bent frames in a spur of horseshoe form with three or four jingling crossbars and a handle, the whole made of metal.

Tzeltzelim and *metziltayim* were cymbals. The two kinds of "clear" and "noisy" cymbals (*Ps.* 150:5) refer to a distinction maintained throughout Asia, the first being held in a horizontal position and softly struck, the second being held in a vertical position and vigorously struck.

Shalishim, connected with the word *sheloshah,* "three," probably denotes no instrument at all.

The same is true of the terms that occur in the headings of the *Psalms:* "A Song of David's to be performed on (or in) . . ." The following word, either Neginoth, or Gittith, or Jeduthun, or whatever it is, almost certainly describes the appropriate melody, though not exactly in our modern sense; no ready-made tune invited the poet to compose some poem fitting it in meter and length—for the simple reason that the psalms were very different in length and had no meter at all. The actual meaning must be inferred from the Oriental way to compose, which consists in faithfully following



Representation of Israelite captives in Assyria, playing the lyre

one of those patterns that the Arabs call *maqamat* and the Hindu, *ragas,* in submitting its characteristic intervals and melodic turns, and even to its general mood, but in keeping the full personal freedom for its elaboration.

It would be hard to end a section on Biblical instruments without mentioning King Nebuchadnezzar's Babylonian orchestra four times described in *Daniel,* though it is Babylonian, not Jewish. The curious passages read: "And the herald cried aloud: 'To you it is commanded, O peoples, nations, and languages, that at what time ye hear the sound of the horn, pipe, harp, trigon, psaltery, bagpipe, and all kinds of music, ye fall down and worship the golden image that Nebuchadnezzar the king hath set up; and whoso falleth not down and worshippeth shall the same hour be cast into the midst of a burning fiery furnace' " (*Dan.* 3:4-6). To be exact, the first five terms should be translated: horn, pipes, lyre, (vertical and horizontal) harp. But the essential point is the sixth term: bagpipe. There was no such instrument at that time; the Aramaic word *sumponia,* that the writer of *Daniel* used, came from Greek *symphonia,* which never in antiquity meant an instrument at all, but rather the playing together of instruments. The actual meaning then would be: "As soon as you hear the individual instruments and the full orchestra with all kinds of instruments." And this is exactly how orchestras in the Middle East have played to this day: at first the leading instruments improvise in solo cadenzas after each other, and only in a second part the ensemble with drums joins in.

We do not know what the Jews or the Babylonians played on all these instruments nor what they sang. But we get a fairly accurate idea of their music from the folksongs of the present day inhabitants of the Middle East and from the melodies performed in Syrian, Coptic, Ethiopian, and even Roman Catholic churches. Their styles do not much differ, and the features that they have in common must be the heritage of the ancient Orient of which Palestine was a part and had to share the essential traits. CURT SACHS.

MUSIC, SYNAGOGAL. The music of the synagogue may be regarded as a commentary to the history of the Jew. In it are recorded the religious and aesthetic impulses modified by their environment in the changing scenes of the ages. Musical traditions of the synagogue have been preserved in the Oriental, Sephardic (Spanish) and Ashkenazic communities, with archaic elements held in common and with variations in melody and theoretical forms in keeping with the standards prevalent in the respective groups.

The origin of the synagogue has been placed in the Babylonian exile (i.e. after 586 B.C.E.) and the Second Commonwealth established by Ezra and Nehemiah (444 B.C.E.) continued this unique institution with its prayers and songs as a parallel to the ritual of the Temple. From Talmudic sources we learn that there was a close bond between the music of the Temple and that of the synagogue (*Sukkah* 53a). Historical researches of Ackermann, Saalschütz, Francis L. Cohen and A. Z. Idelsohn reveal that the cantillations and prayer motives are of ancient origin. The melodic phrases and their underlying tonalities (i.e. scale formations) have had a profound influence on the later development of Ḥazanuth (cantor's singing), out of which have come the improvisations of cantors based upon fixed chants, traditional modes, known as "Steiger," "Skarbova," or the like.

1. Temple Origins. The reading of the Scriptures in the synagogue is intoned in a system known as the Neginoth or cantillation. The Hebrew accents invented by the Masorites, or the scribes, served a double purpose; they marked the syntactical relations of words in the text, like punctuation marks, and they served as mnemonic signs to aid the reader in remembering the melodic phrases in which the text is to be chanted. While the cantillations indicated by the Neginoth (similar to the "neumes" of the Greeks in many respects) remain an oral tradition, the "signs" over the vocalized Hebrew text serve an indispensable purpose. These phrases must be memorized from the vocalized Hebrew text since the Torah scroll is without such markings.

Books of the Hebrew scriptures used in the synagogue for public reading are intoned in a given cantillation. The Pentateuch, the Prophets, the books of *Esther* and *Lamentations* have each a distinct melody with a given mode and tonality, varying according to the musical theory preserved in the respective communities. The Oriental tradition, for instance, uses a scale in which the intervals are divided into quarter tones while the European communities have adapted the Greek modes or have modified their older non-diatonic scales to the octave with its twelve instead of twenty-four steps or intervals. From its Palestinian origin, synagogal music has retained certain characteristics which belong to Semitic-Oriental music.

2. Modality. (a) A mode (in Arabic and Persian: *maḳam* or *naghana*) consists of several motives (i.e. short musical phrases) within a certain scale. (b) Ornament is the free embelishment of a given phrase. (c) Unrhythmical character (Arabic *tartil*) resembles somewhat the recitative in opera or oratorio. The rhythmical song (Arabic, *aŭshada*) is used for dancing and is regarded as inferior to the recitative. (d) The tonality depends upon the intervals in the scale. The Oriental scale consists of quarter-tone intervals.

The Modes and scales used in Synagogal Music are the following:

I. D 3/4-E 3/4-F 4/4-G 4/4-A 3/4-B 3/4-C

4/4–D (Greek Phrygian and the Medieval Dorian, with intervals modified by the half and whole tone intervals).
II. E 3/4–F 3/4–G 4/4–A 3/4–B 3/4–C 4/4–D 3/4–E (Greek Dorian, Medieval Phrygian).
III. F 4/4–G 4/4–A 2/4–E♭ 4/4–C 4/4–D 3/4–E 3/4–F
IV. D 2/4–E♭ 6/4–F♯ 2/4–G 4/4–A 3/4–B 3/4–C 4/4–D

These "modes" changed to one starting note, with half tone and whole tone intervals may be represented by the following:

1. d-e-f-g-a-b-c-d (Greek Phrygian, Medieval Dorian)
2. d-e♭-f-g-a-b♭-c-d (Greek Dorian, Medieval Phrygian)
3. d-e-f♯-g-a-b-c♯-d (Greek Lydian)
4. d-e♭-f♯-g-a-b-c-d (*Ahabah Rabbah;* retains the augmented second between the second and third steps of the scale as in the Aulos tetrachord). These cantillations stem from the Palestinian Jewish folk song, representing the Jewish branch of the Semitic-Oriental song.

Two systems were used; one for twenty one books and the second for *Psalms, Proverbs,* and *Job.* The first has thirty accents, the second twelve. Aaron ben Asher of Tiberias (10th cent.) completed the accents. Ben Naphtali (9th cent.) prepared another code. The Tiberian system has much in common with Greek *prosodia* originating in the 2nd cent. C.E., later developing into the "neumes" of the Byzantines and Armenians in the 9th cent. Both systems are divided into conjunctive and disjunctive accents. The church took over the Byzantine system, which was later perfected into a notation of intervals by Guido of Arezzo (995-1050). The Hebrew system remained in the 9th cent. form.
(A. B. C. D. illustration insert.)

3. Prayer Modes. Jewish prayers are designated by terms implying laudation, adoration and supplication. From the Temple days there is the "Hear O Israel" (*Shema; Deut.* 6), the Song of the Sea (*Ex.* 15) and the priestly benediction (*Num.* 6:24-27). Other benedictions were based on the Hagiographa and *Psalms.* Special prayers for feasts and fasts were composed by notables in the academies. These were classified as *Tefillah* (prayer), *Hallel* (laudation), *Teḥinnah* or *Taḥanun* (petition), *Seliḥah* (intercession for pardon), *Viddui* (confession), *Kinah* (lamentation) and *Zemiroth* (hymns). Biblical modes were utilized for various prayer motives in the Synagogue.
(E insert illustration.)

4. Ḥazanim (Precentors). The banning of instrumental music after the destruction of the Temple by the Romans in 70 C.E. was necessitated by the puritanical restrictions of the religious authorities who desired to prohibit what was reminiscent of the former Temple glory. As in the Babylonian Exile, the harps and trumpets and cymbals were muted and religious music was reduced to a vocal minimum. Political misfortunes favored such ascetic regulations. Vocal music remained and this sacred art was encouraged. Indeed, some held that to read the Scriptures without melody is to show ingratitude for God's word (*Meg.* 32a). Still the artistic impulse expressed in poetry and music was always strong and whenever a favorable occasion arose, this innate quest came into its own in Jewish life. Under the influence of Arabic poetry and music a group of religious bards arose under the name of Payetanim, who wrote new poems and often composed their own melodies for them as well. To cope with the more exacting requirements of a difficult art, the Hazanim assume leadership in public worship by the eighth century. The *Sheliaḥ Tzibbur* ("messenger of the congregation") was a title bestowed upon the reader for his musical and moral qualifications. Originally the Hazan was an "overseer" or beadle, but later

he assumed the musical functions of the cantor. Utilizing ancient modes and tonalities largely of Biblical origin, the cantor intoned the prayers with a highly embellished chant, out of which have come such classical fixed melodies as the *Kol Nidre,* the *Abodah,* the *Geshem* and *Tal* prayers, and the several settings of the *Kaddish.*

5. Rhythmical Song. The Northern peoples, in contrast with the Mediterraneans, have a tendency to stress rhythm even in the Gregorian elements taken over from the Jews and the Levantines. Idelsohn is of the opinion that rhythmical song hampers the spontaneity of improvisation of the modal forms. "Therefore the recitative is the beginning and the end of all genuine song, from the Psalmody of the Hebrew to the Gregorian chant, and from the Greeks to Richard Wagner." While this may be true in a song reserved to the specialist or virtuoso, the popular tune designed for group rendition calls for rhythmic forms. By the 10th cent. Arabic meter with Arabic melodies were utilized in the poetry of the synagogue, notably in Babylonia, in Syria, in Morocco and in Spain. The more isolated group of Yemenite Jews shows slight traces of this practice. Eleazar Kalir of Palestine introduced meter into Hebrew poetry in the 8th or 9th centuries, and this was imitated in Italy and in Germany. With the help of these borrowed melodies both for the set prayers and for the newer hymn texts, the general appeal of the liturgy grew apace. Especially were the prayers for the Sabbath and the festivals enhanced by new musical settings. We must not overlook the influence of the Arabic singers, the French Troubadors and the German Minnesingers who flourished at this time. By the 13th cent. the musical renderings were so prominent as to arouse protests from the rabbis, who felt the rivalry of sacred song to piety and devotion. Religious poetry reached a high level of excellence in the works of Solomon ibn Gabirol, Judah Halevi, Moses and Abraham ibn Ezra (in the 11th and 12th centuries in Spain) and in the mystics of Palestine during the 16th century in Isaac Luria, Solomon Alkabetz and Israel Nadjara. The religious ecstasy of the mystics has ever favored the creative work of both poet and musician. Nadjara borrowed Arabic, Turkish and Spanish tunes for his poems. Among the hymn-tunes of this period there are several examples of troubador and other medieval minstrelsy.

The great bulk of synagogal music is a medieval

product with many archaic elements originating in Palestinian music. A study of Oriental (particularly the Perso-Arab song), and European folk-songs reveals striking parallels. We find traces of the old tetrachordal phrases and the pentatonic scale. The Oriental traditions reveal the non-diatonic modes which were rejected by the Western Church. Parallels between the readings of the Koran as well as the Gregorian Modes and the Neginoth (cantillations) and prayer motives of the synagogue indicate a common source or a similar Semitic-Oriental origin. The approximate age of each can be determined by a theoretical analysis of each form and by comparative studies in church music and the folk song of Europe and the Near East. Melodic and modal elements of Palestinian origin are found in the *Ashirah* and the *Shema;* in the cantillation systems paralleled by the plain song (cantus planus) in the Catholic, the Byzantine and the Armenian churches. Other phrases are reminiscent of the Perso-Arab system.

From western Asia this style spread to Moorish Spain and Dravidian India. Because of choral participation the song of the Church lost its florid character. In the Ghetto isolation of northern Europe the Hazan (cantor) and the Meshorerim (singers) endeavored to satisfy the esthetic needs of the Jewish congregation by simulating the higher range of the women's voices in the cantor's falsetto and, in some cases, the singers would imitate the clarinet, trumpet and other instruments. Rabbinical authorities often protested against these sacred concerts in the synagogue (*Shulḥan Aruch, Oraḥ Ḥayim* 53:11). The "Zopf" or rococo style of European music found its echo in this decadent art of the ghetto.

In the Sephardic (Spanish) communities the plain song of the Mozarabian Christians, who flourished until the 13th cent., had its influence on Jewish song. Again short melodic phrases of the Sephardim (Morisco) resemble motives found in the Perso-Arab system. We find these examples in the tunes for *Adonai Beḳol Shofar, Eth Shaare Ratzon* and in the *Lechah Dodi.* In modality the cantillation has much in common with the Western European system which flourished between the 8th to the 13th centuries. Atonement service, we find parallels to the metrical sequence *Missus Gabriel de Coelis* by Adam of St. Victor (about 1150) as it appears in the *Graduale Romanum* of Sarum. The service for the penitential days contains a tune similar to the second mode *Vesperale Ratisbon.* The Selihoth or penitential prayers offer similar comparisons. The joyous note of the festivals of Passover, Pentecost and Tabernacles is found in the third tone, the third ending of the Gregorian psalmody in the Hallel and is reminiscent of the *Tonus Peregrinus.* The noted Rabbi Jacob ben Moses Mölln (1365-1427) of Mayence indicates the musical traditions in his *Sefer Hamaḥaril* or *Minhagim* and frowns upon departures from traditional melodies. He is said to have composed most of the synagogal hymns and his *Minhagim* actually contain references to the use of certain melodies.

6. Fixed Melodies and Chants. Out of the inspiration of the Hazanim (cantors) have come melodies based upon ancient modes which were incorporated in the traditional songs of the Synagogue. These traditions were handed down orally and each Minhag ("custom") was preserved in the respective communities. Some of the noted tunes are in the setting for the *Alenu* (Adoration) for the High Holidays, the *Hamelech* ("The King"), the *Aboth,* the first benediction of the Amidah, relating to the merit of the fathers, the *Kaddish* (Sanctification), *Vehaḳohanim* in the *Abodah* (service of the High Priest at the Temple in Jerusalem) in the afternoon service of Yom Kippur to commemorate the ancient Temple Service in Jerusalem, and the *Kol Nidre,* recited as early as the 11th cent. While the main outline and modality of these chants was fixed, their elaboration was left to the fancy and vocal skill of the individual cantor who was permitted latitude in the embellishment of these tunes.

More rigid were the hymn tunes written for the metrical verses of the liturgical poets. The *Addir Hu* ("Glorious is He") for the Passover Seder, *Maoz Tzur,* the Hanukah hymn, the elegy *Eli Tziyon* and several forms of the *En Kelohenu* ("None is like our God") are borrowed from German folk songs with similar adaptations in the music of the church. The same practice is to be found in the use of the popular tune, for instance *L'homme armé,* used by the Sephardim for the *Mizmor Shir*—a psalm tune. The *cantus firmus* is based on this melody. Occasionally the adaptations are quite arbitrary and often in poor taste. Isaak's *Innsbruck, I must Leave Thee* (1440) became *O World,*

I soon must Leave Thee. For the Sabbath Hymn *Lechah Dodi* ("Come, my beloved") we find a Moorish (10th cent.), a Polish (16th cent.) and a German (17th cent.) melody. This practice was more common for the "Zemiroth," or songs used in the home. One of the Psalms of Ascent or Pilgrim Psalms (*Ps.* 121 to 134) is sung to a melody from *Fra Diavolo.* The German, and especially the south German tradition abounds in such borrowed airs. On the other hand the church in England and in the United States makes use of the *Yigdal* melody, which is set to the hymn-text: *The God of Abraham, Praise,* marked "Leoni," after Meir Leon, the singer in the Duke's Place Synagogue in London. This hymn tune was published by Thomas Olivers, a Welshman (1725-1799). The "tune" however is found in Slavic, Spanish and Polish folk-songs. It is used by Smetana in the symphony *Moravia,* and the *Hatikvah* ("hope"), the Zionist hymn, and the (German) *Dort wo die Zeder* likewise employ this melody.

7. **Decadence.** With the beginning of the 16th cent. there was a gradual shifting of the Jews to Slavic lands. This change of habitat also influenced the character of their music. It is at this period that the Polish Hazanuth begins to develop and grow supreme. The decline in artistic form is due to the general cultural status of their neighbors. The earlier song was overlaid with inartistic flourishes and runs. Still, one must remember that the norms derived from non-Jewish music may not altogether have suited the taste and the emotions of the Ghetto dwellers. Jewish studies likewise suffered from cultural isolation, so that the Yeshivas (academies) of Eastern Europe could no longer produce the great luminaries of the Arabic-Spanish period. Nevertheless, such isolation drove the creative spirit inward, so that the intensity of Jewish song made up for its universal appeal.

Under the influence of the Hasidim, beginning with the latter part of the 18th cent. in Eastern Europe, there was a revival of the mystic inwardness which brought new faith and hope to a saddened people. With this movement a new impetus was given to song which inspired many noted compositions, such as Engel's music for the *Dybbuk* and Bloch's *Baal Shem Suite.* The artistic potentialities of these chants come to light when exploited by gifted composers. Bruch's setting of the *Kol Nidre,* Bloch's arrangement of the *Vehakohanim* chant, and Ravel's notable adaptation of the *Kaddish* for the High Holidays are examples of

great compositions based on traditional Jewish music.

8. Reform; Harmony and Polyphony. With the dawn of a new era, a change in the song of the synagogue became imperative. Under the influence of the Renaissance in Italy the need for a more artistic form in synagogal music made itself felt. Progress in polyphony had advanced sufficiently to make the love for the new art acceptable in Jewish circles that enjoyed cultural contacts with their neighbors. Solomon de Rossi published a collection bearing the title *Hashirim Asher Lishelomo* (The Songs of Solomon) in 1622. This work received the moral support of Leon de Modena and of other rabbis. Owing to political conditions these innovations had but a local significance. This work was re-edited by S. Naumbourg and the secular music of this composer was published by Vincent d'Indy. That Jews were actively engaged in the musical progress of their day has been demonstrated by E. Birnbaum's study *Jüdische Musiker am Hofe von Mantua, 1542-1628*. Part song in synagogal music was an innovation of great promise thwarted by the expulsion of the Jews in 1800 by Emperor Ferdinand II and Rossi's music was forgotten. The traditions of Italian Jewry were perpetuated in the works of Bendetto Marcello and Federigo Consolo (1841-1906) in Ancona and in Florence.

In Germany and adjacent lands musical reforms were introduced in the beginning of the 19th cent. In the large centers such as Vienna, Berlin, Paris and London the changed outlook brought about by the emancipation made musical reforms in the service imperative, even in Orthodox congregations where changes in the ritual were denied. Vienna, the home of Haydn, Beethoven, Mozart and Schubert, was the logical community for the innovations of Salomon Sulzer, the noted cantor and composer. While instrumental music was not permitted by religious law to be used on the Sabbath and the holidays, nevertheless we hear of a portable organ in the Altneuschul in Prague, in Fürth, Offenbach and elsewhere, and of other musical instruments used for weddings, for sacred concerts, similar to the "cantata" of the Protestant Church, and for other non-liturgical occasions. The organ was introduced in the Reform Temple in Berlin by Israel Jacobson in 1815. Reform congregations are still differentiated from the orthodox and conservative synagogues by the use of the organ and the mixed quartet.

Solomon Sulzer (Vienna, 1804-1890) is regarded as the leading exponent of musical reforms in the Synagogue. In his magnum opus, *Schir Zion* (Song of Zion) he had the aid of Schubert, Seyfried, Fishof and other non-Jewish musicians. He enhanced the liturgy with his brief responses, dignified melody, harmony and style, and established the four-part song (male) in the service. Samuel Naumbourg (Paris, 1815-1880) wrote his *Zemiroth Yisroel* (Hymns of Israel) and the *Agudoth Schirim* (Collection of Songs). Maier Kohn (1802-1875) and Hirsch Weintraub (1811-1882) deserve special mention. The most prominent composer of this period is Louis Lewandowski (Berlin, 1821-1894). He had been awarded a prize at the Sing-Akademie in Berlin for composition at the age of sixteen. As a choir master and composer, not a cantor, he occupies a unique position in the synagogue. It was Cantor Lichtenstein who interested Max Bruch in Jewish music with the result of the *Kol Nidre* setting for violin, cello and viola soli. Lewandowski's *Kol Rinnah* (1871) was epoch-making. This was followed by his *Todah W'simrah* (2 vols., Berlin, 1876-82). Lewandowski's musical ability was recognized by the German government and by musical organizations.

The cantors of Eastern Europe were less favored in educational opportunities but they were not lacking in native talent or zeal. Names of cantors were preserved as marks of tribute to their talents by their contemporaries. Dovid Brod Strelishov (1783-1848), Shulsinger (Odessa), Sender Palatschik (Minsk), Joseph Altschul (Slonim, 1840-1890), Joel David Levinsohn and "Nisi Belzer" are some of these notables. Among the cantors who were equipped with a modern musical education are to be found such names as Nissen Blumenthal (Odessa, 1840), David Nowakowsky (Kiev, 1848), Wolf Shestapol (Odessa, 1832), Elieser Gerovitsch (a master of counterpoint) and Boruch Leib Rosowsky (Riga, 1841) who studied in the Conservatory in St. Petersburg. In England synagogal music was promoted by the works of Samuel Alman, Israel L. Mombach (1840-1870) and Marcus Hart (1841-1920), all of London.

The advanced forms of synagogal music were introduced into the United States by men who had been trained abroad and who enriched our liturgical collections with their own work. The prominent cantors are Alois Kaiser (1840-1908) of Baltimore, Samuel Welsh (1835-1865) of New York, Moritz Goldstein (1835-1906) of Mobile and Edward Stark (1863-1918) of San Francisco. Wald, Grauman, Spicker and Sparger of New York are worthy composers for the synagogue. In the 20th cent. a number of musicians have undertaken the task of promoting synagogal music with the aim of maintaining its uniqueness and meeting the esthetic needs of the times. JACOB SINGER.

Baer, Abraham, *Baal Tefillah* (Gothenburg, 1877). All the traditional melodies for the entire annual cycle.

Baum, S., *Rinnah Vehatefillah* (C, New York, 1905). For the Sabbath.

Berkowitch, A., *Tzelatha Deabraham* (O, Kishinev). Recitatives for Sabbath and festivals.

Birnbaum, A. B., *Hallel Vezimrah* (C, Czestochowa, 1897). For Friday eve. *Omanuth Hahazanuth* (C, 2 vols., Czestochowa, 1908). For Sabbath, festivals and high holy days.

Bloch, Ernest, *Abodath Hakodesh* (*Sacred Service;* R, Boston, 1934). For Sabbath morning.

Deutch, M., *Vorbeterschule* (Breslau, 1871). *Breslauer Synagogengesänge* (1880). *Anhang* (1890; an appendix to the *Vorbeterschule*). All these three contain the traditional melodies for the annual cycle.

Dunajewsky, A., *25 israelitische Tempel-Compositionen für den Sabbath* (C, Moscow, 1893).

Ephros, G., *Cantorial Anthology* (2 vols., New York, 1929 and 1940). For New Year and the Day of Atonement.

Friedmann, Aaron, *Schir Lischlaumau* (C, Berlin, 1901). Recitatives and traditional melodies for the annual cycle.

Gerowitch, E., *Shire Tefillah* (3 parts, Rostov, 1897). *Shire Zimrah* (1904). For Sabbath, festivals and high holy days.

Goldfarb, I. and S. E., *Friday Evening Melodies* (C, New York, 1918). *Songs and Praise for Sabbath Eve* (Brooklyn, 1920). *The Jewish Songster* (vol. 1, New York, 1925). *Synagogue Melodies for the High Holy Days Responses and Congregational Singing* (Brooklyn, 1926).

Goldstein, J., *Shire Yeshurun* (C, Vienna, 1862). For Sabbath, festivals and high holy days.

Goldstein, M., *Shirei Nimos* (C, Szombathely, Hungary, 1913). Twenty compositions for Sabbath, festivals and high holy days.

Grauman, M., *Shire Tefillah for Sabbath Eve* (C, 2nd, enlarged ed., New York, 1922). *Musical Service for New Year and the Day of Atonement* (New York, 1937).

Halpern, M., *Zemiroth Uthefilloth Yisrael* (C, Boston, 1915). For Sabbath, festivals and high holy days, and including hymns.

Hast, M., *Abodath Hakodesh* (C, 4 vols., London, 1879). For the annual cycle.

Idelsohn, A. Z., *The Jewish Song Book* (C, Cincinnati, 1928). For the annual cycle. *Friday Evening Service for Reform or Conservative Rituals* (New York, 1933). For one voice with accompaniment.

Japhet, J. M., *Schire Jeschurun* (C, Frankfort, 1856). For Sabbath, festivals and high holy days.

Kaiser, Alois, and Sparger, William, *Principal Melodies of the Synagogue* (Chicago, 1893). For Sabbath, festivals and high holy days.

Kaiser, Alois, *Zimrat Yah* (4 vols., 1871-86, in collaboration with three others). Music for Sabbath and festivals.

Katchko, A., *Abodath Aharon* (C, New York, 1938). For Sabbath eve.

Kirschner, E., *Synagogengesänge* (C, 4 vols., Leipzig, 1897, 1898, 1911 and 1926). For Sabbath eve and morning, for the festivals and for the high holy days.

Kohn, Maier, *Münchener Synagogengesänge* (C, 3 vols., Munich, 1839). For the annual cycle.

Kornitzer, L., *Ramoth El* (C, Frankfort, 1928). For weekdays, Sabbath, festivals and high holy days. *Jüdische Klänge* (C, Hamburg, 1933). Contains some liturgical compositions for Sabbath, festivals and high holy days.

Kwartin, Z., *Zemiroth Zebulun* (O, 2 vols., New York, 1928 and 1938). Recitatives for the annual cycle.

Lampel, S., *Kol Shemuel* (C, Leipzig, 1927). For the entire year.

Lewandowski, Louis, *Kol Rinah Ut'fillah* (Berlin, 1871). For one and two voices. *Todah W'simrah* (2 vols., Berlin, 1876 and 1882). For cantor and choir.

Mombach, I. S., *Neim Zemiroth Yisrael* (London, 1881). Traditional melodies and compositions for the entire year.

Naumbourg, Samuel, *Semirot Jisrael* (3 vols., Paris, 1847-57). *Shire Kodesh* (Paris, 1864). *Agudath Shirim* (Paris, 1874). Music for the entire year.

Nowakowsky, D., *Shire David* (C, Leipzig, 1887). For Sabbath eve.

Ogutsch, F., *Der Frankfurter Kantor* (C, Frankfort, 1903). Traditional melodies for the entire year.

Razumni, S., *Shire Razumni* (O, edit. S. Alman, London, 1930). Recitatives for the Sabbath.

Rose, A., *Shire Yaakob* (C, Hannover, 1914). For Sabbath, Purim, Hanukah, and the like.

Order of Service According to the Custom of the Spanish and Portuguese Jews of London (London, 1904). For the annual cycle.

Rosenblatt, J., *Zemiroth Yosef* (O, 2 vols., Hamburg). *Tefilloth Yosef* (O, New York, 1927). Recitatives.

Rozowsky, B. L., *Shire Tefillah* (C, Berlin, 1924; 1 vol.; this was called vol. 2, but no vol. 1 was ever published). For the high holy days.

Saminsky, Lazare, *Sabbath Eve Service; Sabbath Morning Service; Holiday Service* (R, New York, 1930 et seq.).

Schaposchnik, G., *Rinnah Uthefillah* (O, Istanbul, 1934). Recitatives for Sabbath, festivals and high holy days.

Schlesinger, S., *Synagogue Music for Sabbath Eve; Sabbath Morning; Festivals; New Year and Day of Atonement* (R, 5 vols., New York).

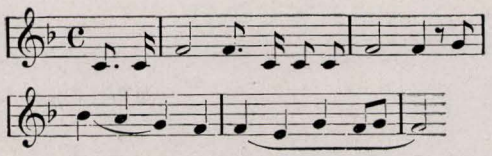
Schorr, B., *Neginoth Boruch Schorr* (C, New York, 1906). For the high holy days.

Spicker, M., and Sparger, William, *The Synagogal Service* (R, 2 parts, New York, 1901). For Sabbath eve and Sabbath morning.

Stark, E. J., *Sefer Anim Zemiroth* (R, 4 vols.): Sabbath Eve (1911); Sabbath Morning (1909); New Year (1910); Day of Atonement (1913).

Sulzer, Salomon, *Schir Zion* (Vienna, 1838-65). For Sabbath, festivals and high holy days. *Dudaim* (1860). Responses and anthems. *Zikoron* (1890). Twenty compositions published by Joseph Sulzer in memoriam.

Voice of Prayer and Praise (3rd ed., London, 1933, edit. Francis L. Cohen, David M. Davis, and Samuel Alman). Traditional melodies, compositions, and responses. For the annual cycle.



Traditional music for the prayer Haadereth Vehaemunah

Wasserzug, Chaim, *Sefer Shire Mikdash* (C, London, 1878). For the annual cycle.

Weinberg, J., *Sabbath Eve Service* (R, New York). *Sabbath Morning Service* (New York, 1939).

Weintraub, H., *Shire Beth Adonai* (3 vols., Leipzig, 1859; the third volume is by the composer's father, the world-famous cantor, Kashtan).

Weisser, S., *Rinnath Yehoshua* (3 vols., New York, 1927-29). For Sabbath, festivals and high holy days. *Baal Tefillah* (2 vols., New York, 1936 and 1940). For Sabbath, festivals and high holy days.

Wodak, M., *Hamenatzeah* (Vienna, 1898). Traditional melodies and recitatives for the annual cycle.

Zemachsohn, S., *Shire Tefillah* (O, 2 vols., 2nd ed., 1924). Recitatives for Sabbath and festivals.

Zilberts, Z., *Neginoth Yisrael* (R, New York).

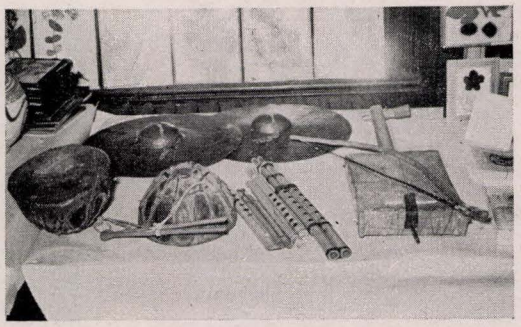
Zivi, H., *Abend Gottesdienst für Scholosch Regolim* (Frankfort, 1909). Evening service for the festivals. *Freitag Abend Gottesdienst* (C, Leipzig, 1925). For Sabbath eve.

MAX WOHLBERG.

MUSICAL INSTRUMENTS. During their history the Jews have for the most part employed the same musical instruments as were favorites with other peoples. The simpler forms of the harp and pipe and drum, prevalent in the period before David, were gradually supplemented by more elaborate and complicated forms borrowed from Egyptians, Phoenicians, Babylonians and Persians. In course of time the rites at the Temple were accompanied by elaborate Levitical orchestras which formed a feature of the worship. The feasts of the wealthy were made melodious by the "harp and the psaltery, the tabret and the pipe" (*Isa.* 5:12); while the dancing at weddings and agricultural festivals was undoubtedly to the sound of musical instruments. The pilgrims who bore the first fruits to the Temple marched to the sound of the flute (*Bik.* 3:3-4).

With the destruction of the Temple in 70 C.E. and the subsequent misfortunes that befell the Jews, the use of musical instruments in worship almost completely disappeared. The playing of the organ was forbidden in the synagogue as a sign of mourning. No Talmudic rabbi is mentioned as a musician, but musical instruments were still in use; the tractate *Kelim* makes mention of metal double flutes, pipes and horns (11:5-6), harps and drums (15:6) and the like. The Jews were fond of dancing, and this must evidently have been carried on to the sound of musical instruments. There were incessant musical performances during wedding feasts in the Middle Ages, and even Christian musicians were welcomed. In the 16th cent. and after Jews soon learned to play the new musical instruments that were developed and the profession of musicians became widespread among the Jews of Central Europe.

Toward the end of the Middle Ages a special form of instrumental music developed among the Jews of Eastern Europe, known as Klezmer (a corruption of the Hebrew *kelē zemir,* "instruments of song"). This consisted of a sort of ensemble that played at family festivals, and even in the synagogue on Hanukah or Hoshana Rabbah when a new scroll of the Torah was



Musical instruments used in Palestine, as they have been for centuries. From the collection of Frank Henry and Barbara M. Bowen

dedicated and used for the first time in the worship. The players were always Jews and some were true artists, some of whom came from dynasties of Klezmer players. The ensemble consisted at least of a violin, flute, bass-viol and cymbal; in more elaborate organizations there would be as many as eight players. In addition to playing for Jewish festal occasions, the Klezmer, who enjoyed a fine reputation as musicians, often played for the feasts of non-Jews, especially the Polish nobility.

In modern times, the Reform Movement restored the use of the organ in the synagogue services; a violin or violoncello sometimes plays on such occasions as a memorial service or a congregational celebration. The violin is today the most popular instrument among Jewish musicians; the piano is far less in vogue, and there are almost no Jewish organists. Nearly all other musical instruments have a fair proportion of Jewish performers.

SIMON COHEN.

MUSICAL ORGANIZATIONS AND JEWS.

The history of music-making is the history of world-famous musical organizations. In this history the Jew has played an all-important role.

1. Chamber Music. It was only after chamber music had graduated from the private home, the salon, and the palace into the concert hall (19th cent.) that Jewish influences became felt. While there is on record some excellent Jewish salon quartets (such as the one led by Ferdinand David for Baron von Liphardt at Dorpat, in 1829), it was not until chamber music developed into an important branch of professional music-making that there were major Jewish influences.

GERMANY. Ferdinand David was responsible for one of the earliest successful string quartets; it performed regularly in Leipzig after 1836. Twenty years later, Ferdinand Laub organized his own quartet, which gave concerts of historic importance in Berlin: the first public hearings of the much-neglected last quartets of Beethoven. W. W. Cobbett speaks of the Laub Quartet as the most important pioneer group to pave the way for the golden age of quartet-playing in Germany. This golden age was achieved with the Joseph Joachim Quartet, unquestionably one of the great chamber ensembles of all time. Organized by the great violinist in 1869, it performed extensively not only in Germany but throughout all of Europe, setting a standard for ensemble playing which every chamber music group has since striven to equal. It should be mentioned that, beside Joachim, the quartet included another Jewish representative, Eduard Rappoldi, its violinist from 1871 to 1877.

The golden age of quartet playing in Germany boasted of other reputable ensembles besides that of Joachim. Principal among these were the Cologne and Professorien quartets, both of which were organized and led by Gustav Holländer. Gustav Holländer was responsible also for remarkable trio performances in an ensemble that included Heinrich Grünfeld (who was Jewish) and Xavier Scharwenka (who was not). In Leipzig, Adolf Brodsky, later to become a leading chamber music figure in England, organized a string quartet in 1885, which toured the country successfully for several years. Other notable ensembles of Jewish importance in Germany included the Hekking Trio (Artur Schnabel and, subsequently, Clarence Adler, pianists); the Hugo Becker Trio (Carl Flesch and Artur Schnabel); and the Henri Marteau Quartet.

AUSTRIA. There was in Vienna the great Hellmesberger Quartet, of which Adolf Brodsky was a violinist in 1863. Its successor was the Arnold Rosé Quartet, founded in 1882 by Arnold Rosé. For more than fifty years it gave concerts of major importance, serving the cause of music nobly by drawing attention to the music of younger, radical composers in Europe. In 1927 another quartet of Jewish composition was created in Austria, the Kolisch Quartet, which was later to tour the United States with great success.

ENGLAND. Chamber music concerts by the Brodsky String Quartet (organized in Manchester, 1895) dominated the musical scene in England for two decades. After 1909 the Hambourg Trio, composed of three brothers, performed extensively in England, giving in one season often as many as a hundred performances. Significant sonata recitals were contributed by such Jewish artists as Joseph Szigeti and Harriet Cohen, while a great Jewish artist like Myra Hess was a collaborator in many trio and sonata concerts.

FRANCE. One of the great pioneers of chamber music in France was Edouard Colonne, who inaugurated a series of concerts in Paris in 1867 which created a genuine vogue for this type of music. This vogue can be said to have created the great Capet Quartet, of which Louis Hasselmans was an important member from 1893 to 1909. Chamber music in France was enriched from 1930 to 1938 by trio concerts given by the world-famous violinist Yehudi Menuhin together with his sister, Hephzibah, and the Jewish cellist, Maurice Eisenberg (all three French residents at the time).

RUSSIA. Chamber music in Russia received considerable impetus with the founding of the Imperial Russian Society in Moscow and St. Petersburg by Anton and Nikolai Rubinstein. The labors of the Rubinstein brothers gave force and direction to chamber music performances in both cities. An admirable string quartet was founded in Russia by Ferdinand Laub (1866). Soon afterwards, Henri Wieniawski founded and directed the St. Petersburg Quartet which achieved international fame. In 1892 the Moscow Trio was organized by David Schor; in the thirty years of its existence it included such Jewish members as Alexander Krein, Julius Ehrlich and Modest Altschuler. Mention should

be made also of distinguished sonata recitals by Leopold Auer (with Mme. Essipov, who was not Jewish). Other distinguished chamber music ensembles of Jewish interest included the Moscow Quintet, formed by Simeon Bellison in 1902, and the Cherniavsky Trio, composed of three brothers, organized in 1903.

HUNGARY. The major string quartet in Hungary was the one organized by Jenö Hubay. His ensemble included two eminent Jewish musicians, Victor von Herzfeld, violinist, and David Popper, cellist. Another great Hungarian ensemble was the Budapest String Quartet, organized in 1921 by the Hungarian-Jewish musician, Emil Hauser, who subsequently did much for music in Palestine. Under Hauser's direction (for ten years) the Quartet became one of the great ensembles of the world.

In the UNITED STATES Jewish participation in chamber music performances has been particularly rich. One of the earliest chamber music ensembles to tour America and to create a consciousness for good music was the Mendelssohn Quintet, of which Sam Franko was a moving spirit. Leopold Lichtenberg formed the celebrated Margulies Trio in 1890, for twenty years a major organization of its kind; Adele Margulies, the pianist of this group, also was Jewish. In 1893 Sam Franko founded a series of chamber music concerts at the Aschenbrödel Club in New York city, which was the leading musical activity in the city over a period of a decade. The first two great string quartets of American origin were the Kneisel and Flonzaley quartets. Jewish influence was felt in both these ensembles: Samuel Gardner was a violinist in the Kneisel Quartet for a period; Clarence Adler officiated in all performances requiring the services of a pianist by the Flonzaleys.

Other early chamber music ensembles in America with Jews included the following: the David Mannes Quartet, formed by David Mannes in 1902; the Alexander Saslavsky Quartet, organized by Saslavsky in 1907; the Malkin Trio, composed of three brothers, originating in 1914; the Eluscho Trio (1916), of which Richard Epstein was pianist, and Samuel Gardner violinist; the Letz Quartet (also 1916), which included Sándor Harmati and Edward Kreiner; the New York Trio (1919), created by Clarence Adler; the Cleveland String Quartet, formed in 1919 by Nikolai Sokoloff, with Hermann Kolodkin and Louis Edlin as its other Jewish members (in 1926 Sokoloff was succeeded by another Jewish violinist, Joseph Fuchs).

After the first World War, chamber music assumed a position of major importance in the concert activity of the United States. It can be said that this position was acquired largely as a result of Jewish contributions. Principal ensembles in 1942 included the following: the Compinsky Trio, composed of three brothers (1920); the Gordon String Quartet, organized by Jacques Gordon in 1921, and including such Jewish artists as David Sackson and Naôum Benditzky (in 1938 Jacques Gordon won the Elizabeth Sprague Coolidge medal for distinguished services to chamber music); the Mischa Elman Quartet (1924); the Lenox String Quartet, with Sándor Harmati as first violinist (1922); the Stringwood Ensemble, organized by Simeon Bellison in 1925; the Musical Art Quartet, created by Sascha Jacobsen in 1926; the Stradivarius Quartet

The Roth quartet

(1929), of which Felix M. Warburg was the sponsor; the Perolé Quartet (1930), with its exclusively Jewish membership of Joseph Coleman, David Mankovitz, Lillian Fuchs, and Ernst Silberstein; the Coolidge String Quartet (1936), the first violinist of which was William Kroll; the Philharmonic Symphony String Quartet (1939), with Mishel Piastro and Joseph Schuster; the reorganized Roth Quartet (1939), which now included R. Weinstock, Julius Shaier and Oliver Edel.

It is essential to call attention to a number of organizations created by Jews for the purpose of spreading the gospel of chamber music. In 1916 Louis Persinger formed the Chamber Music Society of San Francisco, which existed for twelve years, bringing chamber music to the West Coast. In 1918 Harold Bauer formed the famous Beethoven Society of New York, which for twenty years gave annual series of distinctive chamber music concerts by the world's foremost artists. Eddy Brown was founder and director of the Chamber Music Society of America (1932), which over a period of several years organized more than 500 chamber music concerts throughout the country. In 1939 I. A. Hirschmann created the New Friends of Music in New York, a non-profit-making organization presenting distinguished concerts of chamber music on late Sunday afternoons; one of the artistic directors of this venture in 1942 was Hortense Monath, the pianist, in private life Mrs. I. A. Hirschmann.

2. Choruses. GERMANY. One of the pioneer figures in the early history of choral performances in Germany was Felix Mendelssohn. In 1829 he was responsible for the first performance of Bach's *Passion According to St. Matthew,* which restored the great work of art to the world after its long lapse into obscurity. In 1833 Mendelssohn became conductor of the Berlin Singakademie (the first important secular chorus in Europe). It was because of his admirable work with this organization that Frederick William II invited Mendelssohn to Berlin to organize the Cathedral Choir (1841), soon to achieve a place of unique importance among the choral organizations of Europe.

Jews were responsible for the formation and development of other celebrated German choral organizations. In 1836 Ferdinand Hiller conducted the Cäcilien Verein in Frankfort, helping to establish it on a permanent basis. In 1843 Julius Stern was called to Berlin to direct the Deutscher Gesangverein, which he did for three years. In 1847 Stern founded his own choral

group, the Sterns Gesangverein, which he conducted until 1874. In 1897 another Jew, Gernsheim, became the conductor of the Stern chorus and held this post until 1904; from 1904 to 1910 Oskar Fried was its director. Thus Jewish genius played a decisive role in the history of one of the great choral bodies of the world.

Meanwhile Jews were responsible for organizing other distinguished choral institutions. In 1891 Robert Kahn created the Ladies' Choral Union in Leipzig, which played a role of no small significance in the musical activity of that city. Shortly after this Siegfried Ochs organized the Philharmonic Choir in Berlin, which, under his scrupulous direction, achieved world fame. In 1920 Ochs' choir was merged with that of the Hochschule, but Ochs continued as conductor of this combined group until 1928. His successor was another famous Jewish musician, Alexander Zemlinsky. In 1917 Margarete Dessoff created an admirable woman's choral group in Frankfort, which she directed for several years.

AUSTRIA. The two great choral institutions of Austria knew Jewish leadership. The historic chorus of the Gesellschaft der Musikfreunde was, at one period of its long and rich career, under the direction of Anton Rubinstein. The equally famous Singakademie had for its conductors Felix Otto Dessoff, Bruno Walter and Siegfried Ochs.

HOLLAND. A distinguished Dutch choral group was created in 1914 by Sem Dresden in Amsterdam. It was called the Haarlemsche Moteten Madrigaal Vereeigning, and was for many years the leading choral organization in Holland.

ENGLAND. The world-famous Bach Choir of London owed its origin to Otto Goldschmidt, who, after organizing it in 1875, directed it with outstanding success for ten years.

UNITED STATES. With choral music playing so major a part of the musical activity for many years, the Damrosch family was a significant force. Leopold Damrosch came to the United States in 1871 to become director of the Men's Arion Chorus in New York. In 1873 Leopold Damrosch organized his own chorus, the famous Oratorio Society of New York, which was subsequently led by his sons, Frank and Walter. Frank Damrosch also originated a chorus of his own, the Musical Art Society, which he directed in New York from 1893 to 1920. Besides this, Frank Damrosch created the Peoples' Choral Union (1894), which helped to popularize choral singing among amateurs, and he directed the splendid Mendelssohn Glee Club from 1904 to 1909.

Another great American choral organization owes its origin to a Jew. In 1909 Kurt Schindler founded the Macdowell Chorus in New York, which one year later changed its name to the Schola Cantorum. Until 1927 Schindler was the conductor of this famous organization, bringing it to a position of first importance among the choral groups of the world. The Dessoff Choir, which in 1942 was functioning successfully in New York, was created twenty years earlier by Margarete Dessoff, and was directed by her for more than a decade.

Other choral organizations in the United States profiting from Jewish direction included the Friends of Music, which Artur Bodanzky created in New York in 1916 and directed in unusual choral music until 1931; the Madrigal Singers, organized by Lehman Engel in 1936 and conducted by him until its dissolution in 1939; and the Cantata Society of New York, organized by Arthur Mendel in 1939.

3. Conservatories. GERMANY. Several leading conservatories owed their origin to Jews. Principal among these were the Leipzig Conservatory, founded by Felix Mendelssohn in 1843; the Stern Conservatory of Berlin, founded in 1850 by Julius Stern and A. B. Marx, both Jews; the Cologne Conservatory, organized by Ferdinand Hiller in 1850; the Stuttgart Conservatory, created by Siegmund Lebert in 1856; and the Hochschule für Musik, the creation of Joseph Joachim (1869).

Jews were of major importance in bringing the Leipzig Conservatory to its well-deserved fame. Besides its founder, who served also as head of the piano department, Jews played many vital roles in its history. Mendelssohn brought Ferdinand David to Leipzig to head the violin department. It was because of David that the Leipzig Conservatory became the world center for violin instruction, the finishing school to which every violinist aspired. When Mendelssohn resigned from his post as head of the piano department in 1846, he was succeeded by another Jew, Ignaz Moscheles, one of the truly great piano pedagogues of all time. In 1871 Solomon Jadassohn became professor of harmony and theory, a post which he held for many years with almost unparalleled distinction. From 1883 to 1891 Adolf Brodsky was professor of the violin at the Conservatory.

Besides its founder Julius Stern, the Stern Conservatory profited by the directorial hand of another Jew, Gustav Holländer, who guided this famous school from 1895 to 1915. Famous Jewish members of the Stern Conservatory faculty included Ferdinand Laub, Sam Franko, and Alexander Schmüller (violin), Friedrich Gernsheim (composition), Felix Robert Mendelssohn (cello), Bruno Eisner (piano), Arnold Schönberg (harmony), Leo Portnoff (free composition). In the Cologne Conservatory, Gernsheim was a teacher of composition beginning with 1865, receiving the title of professor in 1872. Gustav Holländer taught the violin there, and Arnold Mendelssohn, composition from 1885 to 1890. More recently, Carl Friedberg was head of the piano department for a ten-year period, and Emanuel Feuermann professor of the cello.

Joseph Joachim, of course, dominated the musical activity of the Berlin Hochschule in its early years. He was head of the string department, and after 1895 became full director of the institution. The importance of the violin department under Joachim was such that the center of importance for violin instruction shifted from Leipzig to Berlin because of the Hochschule. In 1908 Henri Marteau succeeded Joachim, retaining his position until 1914. Meanwhile, Joachim had been ably assisted by another Jew, Eduard Rappoldi. In 1893 Robert Kahn taught the piano there, receiving his professorship in 1903. For a brief period, shortly before the first World War, Wanda Landowska held a professorial chair in harpsichord playing (a post which had been created expressly for her). Siegfried Ochs was professor of the oratorio classes for eight years; Carl Flesch was professor of the violin for two different

periods, the latter culminating in 1933; Artur Schnabel was professor of the piano from 1925 to 1933; Georg Szell taught conducting there up to 1933. Other famous Jewish musicians who brought prestige to the Hochschule included Emanuel Feuermann, Oskar Bie and Stefan Frenkel. It should be pointed out also that a reorganization of the system of music education at the Hochschule, which took place in the early part of the 20th cent., was effected through a Jew, Leo Kestenberg, in his capacity as chairman of the music department of the Prussian ministry of art.

Other important German music schools owing a debt to Jewish musicians include the Munich Conservatory, the Hoch Conservatory of Frankfort, and the Klindworth-Scharwenka Conservatory of Berlin. At the Hoch Conservatory, Bernhard Sekles (first the professor of theory, then from 1924 to 1933 its director), Karl Heymann, Carl Friedberg, Arnold Mendelssohn, and Edwin Lendvai were particularly prominent. Franz Hauser was the director of the Munich Conservatory from 1846 to 1865, and was to a large degree responsible for its early prestige. Hugo Goldschmidt was director of the Klindworth-Scharwenka Conservatory, and was succeeded in 1899 by another Jew, Gustav Lazarus. The distinguished faculty of the Klindworth-Scharwenka Conservatory included Edwin Lendvai, Max Julius Loewengard, Stefan Frenkel and Hugo Leichtentritt.

Austria. The historic Vienna Conservatory also enjoyed important Jewish collaboration, beginning with 1813, when Jacob Fischof became professor of the piano. Julius and Richard Epstein (father and son) carried on the traditions of the piano department up to 1904. From 1877 to 1909 Jacob Grün was professor of the violin; he was succeeded by another Jew, Arnold Rosé, who remained in the Conservatory until 1924. After 1884, for several years, Robert Hirschfeld was a lecturer on esthetics.

At the Vienna State Academy, Erich Wolfgang Korngold was professor of theory and conducting in 1927; Bronislaw Huberman held a master class in violin playing from 1934 to 1936; and Max Graf lectured on the history of music until 1937.

France. The world-famous Paris Conservatory owed not a little of its lustrous fame to Jews. Jacques Halévy played an important role there, first as professor of harmony (1827), then as professor of counterpoint and fugue (1833), finally as professor of advanced composition (1840). Other Jewish professors at the Paris Conservatory included Jules Émile David Cohen, distinguished instructor of ensemble singing; Jean Lasalle, the world-famous professor of solo singing; Émile Jonas, professor of solfeggio for more than two decades; the great composer, Paul Dukas, in charge of the orchestration classes from 1910 to 1912, and after 1927 until his death professor of composition; finally, André Gédalge, the leading French professor of counterpoint and fugue for twenty-one years.

At the École Normale, Dukas was professor of composition for several years. Maurice Eisenberg succeeded Pablo Casals (not Jewish) as head of the cello department. At the Schola Cantorum, Wanda Landowska was head of the departments of harpsichord and piano playing for many years. The Conservatory at Fontainebleau, for American music students, owed its origin to a Jew. In 1918 Walter Damrosch organized a school for bandmasters which became the basis and nucleus for the later Fontainebleau Conservatory.

England. The two major conservatories in London, the Royal College of Music and the Royal Academy of Music, also experienced important Jewish participation. Adolph Pollitzer was professor of the violin at the R. A. M. in 1861, and in 1890 he became principal. He was preceded by Otto Goldschmidt, vice-principal from 1863 on. Famous instructors at the R. A. M. included Fritz Hartvigson, Sydney Rosenbloom and Harold Samuel. At the R. C. M., George Henschel was professor of singing, and Arthur Friedheim, Fritz Hartvigson, and Harold Samuel members of the piano department.

Sir Landon Ronald was principal of the Guildhall School of Music from 1910 to 1937 (London). Adolf Brodsky was principal of the Royal College of Music in Manchester until 1929.

Russia. The two great conservatories of Russia were created by Jews. In 1862 Anton Rubinstein organized the St. Petersburg Conservatory. Four years after this his brother, Nikolai, founded the Moscow Conservatory. From 1862 to 1867 and again from 1887 to 1890 Anton Rubinstein was director of the St. Petersburg Conservatory. Among the great Jewish musicians who brought prestige to this splendid institution was Henri Wieniawski, the world-famous violinist, who was professor of his instrument from 1862 to 1867. Henri Wieniawski was succeeded by Leopold Auer, whose fifty years of service in St. Petersburg now made this city the Mecca for all young violinists, in succession to Berlin. It is now history that such prodigies at Heifetz, Elman, Zimbalist and Piastro studied with Auer at the Conservatory. In recent years, such Jewish musicians as Simeon Ginsburg and Maximilian Steinberg were important members of the Conservatory faculty.

Nikolai Rubinstein headed the Moscow Conservatory from 1866 to 1881. He brought to the Conservatory such famous Jewish artists as Ferdinand Laub, Joseph Wieniawski, Adolf Brodsky and Michael Hambourg, who helped to make its faculty one of the most progressive in the world. More recently, the Moscow Conservatory enjoyed the presence of such famous teachers as Samuel Feinberg, Michael Gniessen, Nikolai Orloff, Issai Dobrowen and Joseph Yasser.

Other European conservatories also were influenced by Jews: Switzerland. The Geneva Conservatory owed at least a part of its prestige to the presence of Henri Marteau, head of its violin department from 1900 to 1908. Joseph Szigeti assumed direction of this department in 1917, and served until 1924. Ernest Bloch was also a faculty member of this conservatory. Italy. In Florence, Alberto Franchetti was director of the Royal Conservatory Luigi Cherubini from 1926 to 1928. Holland. Sem Dresden became director of the Amsterdam Conservatory in 1929, after teaching there for more than a decade; the eight years of his direction were among the most brilliant in this organization's history. The Rotterdam Conservatory was directed by Gernsheim for a few years, while the Royal Conservatory at The Hague was directed by Sam Dresden from 1924 to 1929. Hungary. At the Budapest Conservatory Jewish musicians like Victor von Herzfeld, Leo Weiner and David Popper were major figures, while

at the Prague Academy Henri Marteau was director until 1924. Albert Rubenson was the able director of the Stockholm Conservatory from 1888 to 1901. At the Brussels Conservatory the Wieniawski brothers played major parts, Henri as professor of the violin, and Josef as professor of the piano.

PALESTINE. The Palestine Conservatory in Jerusalem was founded by Emil Hauser. Together with its branch in Tel-Aviv, it numbered in 1940 about 400 pupils and a faculty of forty teachers.

CANADA. An excellent conservatory was organized in 1911 by Michael Hambourg, and his sons Boris and Jan. After 1922 Boris Hambourg became director.

UNITED STATES. One of the most venerable music schools in America is the Chicago Musical College, founded in 1867. Maurice Rosenfeld taught piano there for more than twenty years; upon his retirement as teacher in 1911 he was appointed a member of the board of directors. In 1897 Arthur Friedheim joined the piano department as its head. Upon Friedheim's resignation in 1900, his position fell to Rudolph Ganz, who thereafter played a major role in the school's development. In 1934 Ganz became director of the College, a post which he still held in 1942. The College faculty included such Jewish musicians as Maurice Goldblatt, Leopold Auer and Louis Gruenberg, and one other Jewish director, Arnold Volpe (1925).

The National Conservatory of Music, founded in New York in 1885, was one of the progressive music schools in the United States in the 19th cent. Its faculty was preponderantly Jewish. Oscar Saenger taught voice there from 1889 to 1897. Rubin Goldmark was professor of harmony from 1891 to 1893. Adele Margulies and Rafael Joseffy were important members of the piano department for a decade. Leopold Lichtenberg was head of the violin department.

The Institute of Musical Art of New York was founded by a Jew, Frank Damrosch, in 1905. Damrosch retained his post as dean of this school until 1933, and could therefore be said to have exerted the greatest single influence upon the destiny of this institution. From 1905 to 1910 Bertha Tapper taught piano there. George Henschel, professor of singing, was also a member of the faculty when the school opened. Thereafter Jewish professors at the Institute included Leopold Auer, Samuel Gardner and Sascha Jacobsen (violin); Clarence Adler, Carl Friedberg and Harold Morris (piano); Platon G. Brounoff (opera); Georg Szell (conducting); Marion Bauer (theory).

The year 1924 was a momentous one for music education in the United States. In that year two great music schools came into being: the Juilliard Graduate School in New York, and the Curtis Institute in Philadelphia. In that year, too, the Eastman School of Music in Rochester joined the ranks of great musical conservatories.

At the Juilliard, Leopold Auer was head of the violin department, succeeded in 1930 by another Jew, Louis Persinger. Josef and Rosina Lhevinne were important members of the piano department from the opening of the school, and they were later joined by Carl Friedberg and Sascha Gorodnitzki. Rubin Goldmark was head of the composition department from 1924 to 1936, succeeded by Frederick Jacobi.

At the Curtis Institute, where a Jew (Efrem Zimbalist) was director in 1942, Jewish influence was significant. When the Curtis Institute was founded the following Jews constituted a part of its remarkable faculty: Carl Flesch (head of the violin department); Harry Kaufman (accompaniment); Lea Luboschutz (violin); David Saperton (piano). After its founding, great Jewish teachers were prominent in Curtis history, principal among them being Artur Rodzinski and Fritz Reiner (conducting); Efrem Zimbalist (violin); Abram Chasins (composition); Moritz Rosenthal, Jeanne Behrend, and Rudolf Serkin (piano); Isadore Freed (theory); and Samuel Chotzinoff (music criticism).

At the Eastman School of Music, Jewish instructors included Nicolas Slonimsky, Bernard Rogers and Emanuel Balaban.

The career of the Cleveland Institute of Music was greatly influenced by Beryl Rubinstein, who in 1921 became head of its piano department, in 1929 dean of its faculty, and in 1932 director of the school, a post which he still held in 1942. Ernest Bloch and Louis Persinger taught at the Institute.

In New York, an important music school was founded in 1916 by David Mannes, bearing his name. It was, from that time on, directed by its founder and his wife. Manfred Malkin founded another admirable music school in 1914 in New York (also bearing his name), directing it for sixteen years. In this school his brothers Jacques and Joseph were heads of the violin and cello departments, respectively. The Chatham Music School, also in New York, was, in 1942, directed by Samuel Chotzinoff.

Other music schools in the United States in which Jews were prominent included the Kansas City Conservatory, of which Arnold Volpe was director from 1922 to 1925; the Pacific Institute of Music and Fine Arts in Los Angeles, directed by Alec Compinsky from 1934; the Malkin Conservatory of Boston, founded by Joseph Malkin in 1933, and after that time directed by him; the Berkshire Music Center, created by Serge Koussevitzky in 1940 for advanced music students; finally, the San Francisco Conservatory, of which Ernest Bloch was director from 1925 to 1930.

4. Festivals. AUSTRIA. The most famous festival in Europe was that at Salzburg. Up to 1920 there had been scattered Mozart festivals at Salzburg, directed by such Jewish musicians as Felix Otto Dessoff and Gustav Mahler. But a permanent yearly artistic event at Salzburg was not realized until after the first World War. In 1920 a charity performance for the poor of the town was held at the Domplatz, in which Max Reinhardt directed Hugo von Hofmannsthal's *Everyman*. The success of this performance led a few energetic spirits to contemplate the formation of a permanent festival in which the theatre and music would play principal roles; one of the most energetic of these spirits was a Jewess, Mme. Bertha Zuckerkandel, daughter of Moritz Schepps, the famous radical editor of the *Neues Wiener Tageblatt*.

Two Jews, Max Reinhardt and Hugo von Hofmannsthal, were the nucleus for the first of the Salzburg festivals. Actually they remained the nucleus for all subsequent Salzburg festivals, since the performance of *Everyman* was a major attraction up to 1938. But other Jews were prominent in Salzburg. Among them were Bruno Walter (who became one of the artistic corner-

stones of the festival), Artur Rodzinski, Erich Leinsdorf, Alexander Kipnis, Emanuel List, Rose Pauly, Erna Sack, and Herbert Graf.

GERMANY. At the Bayreuth Festival, Hermann Levi conducted the world première of *Parsifal* in 1882. Arnold Rosé became concertmaster and assistant conductor of the Bayreuth festival orchestra in 1888. Jewish singers prominent in Bayreuth included Mme. Julius Laban, Friedrich Schorr, Emanuel List and Alexander Kipnis. At the historic Lower Rhine festivals at Cologne, Felix Mendelssohn, Ferdinand Hiller, and Otto Goldschmidt were prominent as conductors.

At the May Music Festivals in Florence, ITALY, Bruno Walter was artistic head.

The Bruckner festivals at Linz (AUSTRIA) profited by performances directed by Bruno Walter and Eugene Ormandy.

In ENGLAND, festivals at Birmingham, Cardiff and London (Handel Triennial Festival) featured outstanding performances by such conductors as Michael Costa and Frederick H. Cowen.

UNITED STATES. The major music festival in the United States in 1942 was at Tanglewood (Lenox, Mass.), the Berkshire Symphonic Festival, which many believe may well develop into the Salzburg of America. This festival was dominated by the personality of its artistic director, Serge Koussevitzky.

5. Opera. The emergence of opera from the palace of nobility into the public theatre also saw the rise of Jewish influences.

AUSTRIA. As early as 1828 a Jew enjoyed the spotlight at the Vienna Royal Opera—Franz Hauser, a baritone. But the significance of Jews at the Vienna Opera is not perceptible until the closing decades of the 19th cent. Between 1860 and 1900 many great Jewish artists enjoyed great favor in Vienna, including the lyric tenor, Angelo Neumann, and the sopranos, Paulina Lucca and Selma Kurz. This period was particularly notable for the work of Jewish conductors. Arnold Rosé became concertmaster and assistant conductor of the Vienna Opera orchestra, and his influence was strongly felt for many decades. In 1897 Gustav Mahler became the conductor and music director of the Vienna Opera. He was responsible for one of the truly great epochs in the history of opera-making in Vienna. Mahler was assisted by such Jewish conductors as Bruno Walter, Artur Bodanzky and Alexander Zemlinsky. After 1900 Jewish artists enjoying great prestige on the stage of the Vienna opera included Jadlowker, Friedrich Schorr, Emanuel List, Rose Pauly, Erich Kleiber and Bruno Walter. Bruno Walter served as "artistic advisor" of the Vienna Opera in 1936, his regime coming to an end with the entrance of the Nazis into Austria.

GERMANY. Jewish participation in operatic performances in Berlin achieved significant measure in 1842, when Meyerbeer was called to that city to become its general music director. In 1847 Meyerbeer gave the world première of Wagner's *Rienzi*.

In subsequent years Jews often enjoyed places of great honor at the Berlin Opera. Paul Kalisch was principal tenor there from 1884 to 1887; Paulina Lucca was first soprano for a few years beginning with 1860; Hermann Jadlowker was one of its most adulated figures from 1901 to 1919. But it was in the field of conducting that the Jew particularly distinguished himself in Berlin. Leo Blech was Kapellmeister in 1906, became general music director in 1913, and from 1926 to 1936 was again first conductor. Fritz Stiedry conducted from 1914 to 1923, Kleiber from 1923 to 1933, Eugen Szenkar in 1923, Georg Szell from 1924 to 1930, Paul Dessau from 1925 to 1933, Selmar Meyrowitz from 1924 to 1927, Hans Steinbach from 1926 to 1933, Otto Klemperer from 1927 to 1933. If it is true that an opera house is as important as its conductors, then it can truly be said without fear of exaggeration that the Berlin Opera owed its luminous fame to Jewish genius. Jewish singers who were notable up to 1933 included Richard Tauber, Emanuel List, Alexander Kipnis, Friedrich Schorr and Erna Sack.

In addition to those of the Berlin Opera, Jews were prominent in other German opera houses as well. Angelo Neumann was manager of the Leipzig Opera from 1876 to 1882 and was largely responsible for its early fame. Paul Bekker was director of the Cassel Opera from 1925 to 1927. In Cologne the destinies of opera were guided by Otto Klemperer (music director in 1923, after serving a six-year period as conductor), Paul Dessau, Hans Steinbach and Eugen Szenkar. At Dresden Fritz Reiner, Issai Dobrowen and Emanuel Balaban were of importance on the conductor's platform; Richard Tauber and Erna Sack enjoyed particular fame as singers. To the Frankfort Opera Eugen Szenkar, Herbert Graf and Hans Steinbach made particularly noteworthy contributions. The director of the Hamburg Opera from 1874 to 1897 was a Jew, Bernhard Pollini; Gustav Mahler, Henry Rothwell, Bruno Walter, Josef Stransky, Otto Klemperer, Erich Wolfgang Korngold, Paul Dessau and Selmar Meyrowitz added historic chapters to opera history in Hamburg. At the Mannheim Opera Artur Bodanzky, Alexander Zemlinsky and Josef Rosenstock were of importance. The influence of Jewish genius was felt at the Munich Opera as early as 1861, when Hermann Levi became its conductor; Levi assumed the all-important post of Generalmusikdirektor in Munich in 1894, a post which Bruno Walter also held from 1914 to 1922. At Wiesbaden Paul Bekker was general manager from 1927 to 1933, and Otto Klemperer was music director from 1924 to 1933. At the Berlin Charlottenburg Opera Kurt Singer was intendant for a few years, while Ignaz Waghalter and Bruno Walter were major conductors. At the Berlin Volksoper Dobrowen, Leo Blech and Fritz Stiedry held important conductorial posts. At the Paris Opéra Comique Albert Wolff was a major artistic force beginning with 1908; Louis Hasselmans was also a major conductor there.

FRANCE. Jews at the world-celebrated Paris Opéra became prominent in the middle of the 19th cent., when Ferdinand Hiller became a principal conductor there. In 1871 Jean Lasalle made his debut at the Opéra, and for twenty years he was the most famous baritone at that institution. He was succeeded by another Jew, Maurice Renaud. Jules Cohen was chorusmaster beginning with 1877. Eduard Colonne was first conductor in 1892. In the 20th cent., Jews of significance at the Paris Opéra included Paul Kalisch (who participated in the first Paris performance of *Tristan* in 1904), Rose Pauly, Pierre Monteux and Eugene Plotnikoff.

ENGLAND. As early as 1787 a Jew held a prominent post at Covent Garden. He was John Braham, one of

the most celebrated tenors of his time. Braham created the role of Huön in the world première of Weber's *Oberon* at Covent Garden. In 1832 Franz Hauser joined the Covent Garden personnel, and became one of its most popular baritones. Michael Costa was a major conductor there, and Adolph Pollitzer a prominent concertmaster. Subsequent to Costa, Jewish conductors at Covent Garden included Sir Landon Ronald, who became first conductor in 1895, and Bruno Walter; Jewish singers numbered Paulina Lucca, Selma Kurz, Rosa Raïsa, Friedrich Schorr, Emanuel List and Rose Pauly. In 1903 Henry Russell, a Jew, was the leading impresario at Covent Garden.

CZECHIA. At the famous Landestheater of Prague, Angelo Neumann was manager of German opera from 1885 to 1910. He enjoyed the artistic cooperation of such Jewish artists as Leo Blech, Josef Stransky, Artur Bodanzky and Otto Klemperer (all conductors). From 1911 to 1927 Zemlinsky was principal conductor at the Landestheater. Other Jewish conductors included Eugen Szenkar, Hans Steinbach, Georg Szell and Erich Kleiber.

RUSSIA. Opera houses in Moscow and St. Petersburg drew upon vital Jewish contributions. In St. Petersburg Nápravnik was a distinguished conductor for many years, beginning with 1869; he completely revitalized the operatic repertory. Oskar Fried and Leo Blech were significant at a later period. At Moscow Emil Cooper, Serge Koussevitzky, Vladimir Shavitch, Fritz Stiedry and Eugene Plotnikoff held important conductorial posts at the Opera at different periods of its history.

HOLLAND. Traveling swiftly through other European opera houses, one observes that Walter Rothwell was principal conductor of German opera at the Amsterdam Opera, while Hermann Levi held the first conductor's post at the Rotterdam Opera for several years.

HUNGARY. Gustav Mahler, who thoroughly reorganized the Budapest Opera in 1888, had such able successors as Fritz Reiner and Eugen Szenkar.

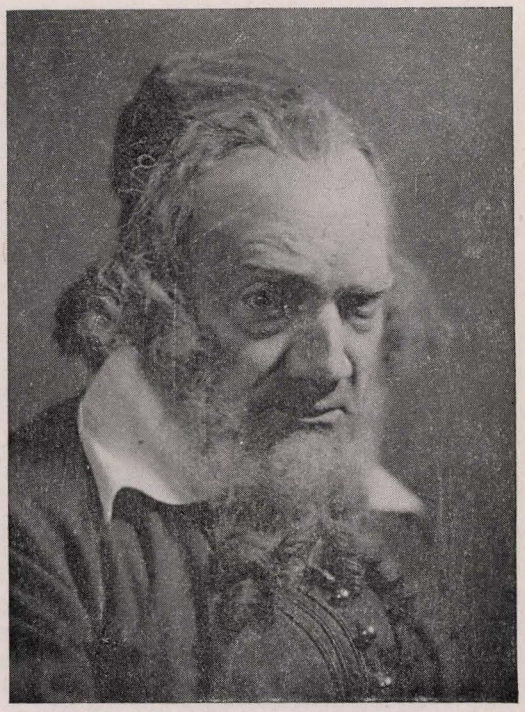
POLAND. At the Warsaw Opera, Artur Rodzinski was principal conductor for five years.

ITALY. At La Scala, in Milan, Giorgio Polacco conducted all French and Italian novelties for several decades; Erich Kleiber was also prominent at La Scala. La Scala played host to many Jewish singers, including Alexander Kipnis, Marie Rappold and Rosa Raïsa.

BULGARIA. Issai Dobrowen was head of the Bulgarian State Opera beginning with 1927.

SOUTH AMERICA. While Jews were not particularly important in the operatic history of South America, its leading opera house, the Teatro Colon in Buenos Aires, enjoyed the presence of outstanding Jews, notably Rosa Raïsa, Erich Kleiber, Giorgio Polacco, Alexander Smallens and Alexander Kipnis.

UNITED STATES. Jewish influence on American opera has been so extensive that it is possible here to touch only on the more significant aspects. The first Italian opera company to visit the United States with the first performances of Italian opera (1825) had the assistance of Lorenzo da Ponte, who was responsible for the American première of Mozart's *Don Giovanni*. In 1833 Da Ponte was responsible for the erection and direction of the first major Italian opera house in America. Da Ponte was succeeded by other pioneering Jewish impresarios. These included Moritz and Max Strakosch and Max Maretzchek. The two significant predecessors of the Metropolitan Opera House—the Astor Place Opera and the Academy of Music—were both directed by Max Maretzchek, who was of inestimable importance in the history of these institutions. Maretzchek's importance as an opera impresario can be gauged by the fact that he was responsible for the American premières of such masterpieces as *Rigoletto, Il Trovatore, La Traviata, Le Prophète, Don Pasquale, Romeo and Juliet* and *L'Africaine*. Jacques Halévy's operatic masterpiece, *La Juive,* was produced for the first time at the Paris Opéra in 1834, and was a recurrent feature of the repertory of the Metropolitan Opera.



Enrico Caruso as the father in the opera "La Juive" presented by the Metropolitan Opera company, New York

The Metropolitan Opera House knew the lavish contributions of Jewish genius. Its artistic direction was, at different eras, in the hands of such far-sighted impresarios as Leopold Damrosch (who launched its first German repertory), Maurice Grau and Heinrich Conried. Grau and Conried were largely responsible for the "golden age of opera" in the United States. The list of great Jewish conductors who brought the Metropolitan a major share of its fame included Gustav Mahler, Frederick Jacobi, Kurt Schindler, Albert Wolff, Selmar Meyrowitz, Giorgio Polacco, Pierre Monteux, Alfred Hertz, Artur Bodanzky, Frank Damrosch, Walter Damrosch, Nahan Franko, Louis Hasselmans, Max Bendix, Paul Eisler, Bruno Walter and Erich Leinsdorf. Jewish singers at the Metropolitan included: Paul Kalisch, Sophie Braslau, Paulina Lucca, Hermann Jadlowker, Alma Gluck, Maurice Renaud, Marie Rappold, Emanuel List, Friedrich Schorr, Alexander Kipnis, Rose Pauly, Max Altglass, Armand Tokatyan and Jan Peerce. Mention should be made also of the contributions of the stage director Herbert Graf.

Other opera companies in New York resulting from Jewish initiative included the Walter Damrosch Opera Company, which helped to spread the gospel of Richard Wagner; the Manhattan Opera Company (a formidable rival of the Metropolitan), created by Oscar Hammerstein; the Century Opera Company, of which Josef Pasternak was principal conductor; and the Henry Savage Opera Company, of which Max Bendix was leading conductor.

In Chicago a company organized by Max Strakosch in 1859 was the principal predecessor of the famous Chicago Opera Company. Of the latter group, Giorgio Polacco was general music director from 1918 to 1930. Jews prominent on the Chicago opera stage included Rosa Raïsa, Alexander Smallens, Louis Hasselmans, Alexander Kipnis and Emil Cooper.

A Jew first brought a permanent opera company to Boston. He was Henry Russell, founder of the Boston Opera Company in 1909—for five years one of the leading opera houses in the country. Alexander Smallens was for a period one of the conductors of this company.

6. Orchestras. Gustav Mahler once said that there were no great orchestras, only great conductors. To a lesser degree, concertmasters are also important in the artistic functions of an orchestra. In surveying the influence of the Jew on the great orchestral organizations of the world we will, therefore, frequently point out significant concertmasters as well as the important conductors.

GERMANY. The oldest orchestra in Europe is that of the Leipzig Gewandhaus. But the Gewandhaus Orchestra did not become a great orchestra until 1835, when Felix Mendelssohn became its conductor. His eleven years as director brought this orchestra to an unapproachable level of artistic importance. In this he was admirably assisted by his concertmaster and right-hand man, Ferdinand David. Ferdinand David was succeeded in his concertmaster's chair by Joseph Joachim; Mendelssohn, on the conductor's platform, by Ferdinand Hiller. A new epoch for the Leipzig Gewandhaus unfolded in 1929, when Bruno Walter became its director.

The Weimar Orchestra was also of historic importance, which it owed in large measure to such concertmasters as Joseph Joachim, Ferdinand Laub, Leopold Damrosch and Isidor Lotto. Franz Liszt, director of the Weimar Orchestra, was responsible for making it famous throughout Europe. Liszt was not Jewish. But his successor was: Eduard Lassen, conductor of the orchestra for thirty-five years.

The Berlin Philharmonic owed its origin (1882) to a Jew, Joseph Joachim, who not only founded it but was also its first conductor. Many Jewish conductors led this orchestra, including Jascha Horenstein, Frieder Weissmann and Bruno Walter. Louis Persinger and Simon Goldberg were among its concertmasters.

Other Berlin orchestras included the Berlin Symphony, which was conducted by such Jewish artists as Julius Stern, Oskar Fried and Frieder Weissmann. The Blüthner Orchestra was founded by a Jew in 1908, Oskar Fried; it was subsequently led by Josef Stransky and Selmar Meyrowitz.

Jewish contributions to other German orchestras included the following: Leopold Damrosch was a significant figure with the Breslau Philharmonic and the Breslau Orchestral Society (the latter of which he founded in 1862); Ferdinand Hiller was conductor of the famous Gürzenich concerts in Cologne; Issai Dobrowen was conductor, and Stefan Frenkel and Simon Goldberg were concertmasters, of the Dresden Philharmonic; Hans Steinbach officiated over the Museum Concerts in Frankfort.

AUSTRIA. The Vienna Philharmonic, founded in the middle of the 19th cent., was first conducted by a Jew in 1860, when Felix Otto Dessoff began his fifteen-year regime. Gustav Mahler directed it beginning with 1897, and Bruno Walter after 1900. Jews prominent in its history included David Popper (solo cellist for ten years) and Arnold Rosé, concertmaster for more than forty years.

ENGLAND. The Royal Philharmonic of London was organized in 1813. Felix Mendelssohn conducted it in 1844, Michael Costa from 1846 to 1854, and Frederick H. Cowen from 1882 to 1892, and again from 1900 to 1907. The Philharmonic was conducted for a period also by Sir Landon Ronald. In England, the world-famous Hallé Orchestra of Manchester was directed by Adolf Brodsky, successor to Hallé himself. Frederick H. Cowen, in turn, followed Brodsky. The Liverpool Philharmonic was magnificently led by Cowen for almost twenty years. The London Symphony Orchestra was organized by a Jew (Sir George Henschel) in 1885; so was the New Symphony Orchestra in London (Sir Landon Ronald). The famous Scottish Orchestra of Glasgow was founded and first directed by George Henschel in 1891. It was subsequently led by other Jewish musicians, including Sir Frederick Cowen, Georg Szell and Vladimir Golschmann.

FRANCE. One of the oldest of French orchestras was the Pasdeloup, which in recent years knew the brilliant direction of Albert Wolff. The Colonne Concerts were organized by the Jewish conductor, Eduard Colonne, in 1873. The Lamoureux Orchestra was conducted by Albert Wolff and Louis Hasselmans. Other French orchestras founded by Jews included the Paris Symphony (Pierre Monteux), the *Société des Concerts Populaires* (Monteux), the Concerts Golschmann (Vladimir Golschmann) and the Concerts Koussevitzky (Serge Koussevitzky).

RUSSIA. The early history of orchestral music in Russia is intimately associated with the Rubinstein brothers. Anton Rubinstein founded and directed the Russian Musical Society in St. Petersburg in 1859; his brother, Nikolai, organized the Imperial Music Society in Moscow in 1860. Nápravnik conducted the Society in St. Petersburg for twelve years, and one of his successors (for a brief period) was Leopold Auer.

One of the greatest of Russian orchestras was that founded by Koussevitzky in 1910 and conducted by him until 1918. It is now a part of Russian musical history how Koussevitzky traveled with his orchestra to small villages and hamlets along the Volga, bringing symphonic music to regions never before touched by any musical culture. With the rise of the Soviet state, Koussevitzky's musical importance was recognized with his appointment as director of the State Symphony Orchestra. Emil Cooper founded the Leningrad Philharmonic in 1918. From 1933 to 1937 this great organization was conducted by Fritz Stiedry.

PALESTINE. The Palestine Symphony Orchestra was the creation of Bronislaw Huberman, who wished to find a symphonic haven for German musicians escaping the Nazi terror. With Toscanini conducting its first concerts, the orchestra immediately assumed a dominant position. The orchestra was led by such conductors as Hans Steinbach, Huberman and Leo Kestenberg.

SOUTH AMERICA. The most important contribution by a Jew, Burle Marx, was the founding of the Rio de Janeiro Philharmonic, in 1931.

UNITED STATES. The oldest existing orchestra in America is the New York Philharmonic, which celebrated its centenary in 1942. Many Jewish conductors were associated with this historic organization. Leopold Damrosch conducted it in 1876, Eduard Colonne in 1904. Gustav Mahler brought it to a high artistic level from 1909 to 1911. From 1911 to 1923 Josef Stransky was its only conductor. After 1923 the Philharmonic was conducted by numerous Jewish directors, including Bruno Walter, Otto Klemperer, Erich Kleiber, Artur Rodzinski, Fritz Reiner and Issai Dobrowen. After 1938 its children's concerts were in the hands of Rudolph Ganz. Mention should be made also of such extraordinarily gifted concertmasters as Maximilian Pilzer and Mishel Piastro, who served long periods with the orchestra.

The New York Symphony Society, competitor of the Philharmonic for fifty years, was founded by Leopold Damrosch, and for more than forty years was directed by Walter Damrosch. Other Jewish conductors included Bruno Walter, Otto Klemperer, Vladimir Golschmann and Oskar Fried.

Other orchestras prominent in New York at one period or another included the Theodore Thomas Orchestra, of which Sam Franko was concertmaster from 1884 to 1891; the Russian Symphony, founded by two Jews, Modest Altschuler and Alexander Saslavsky; the Stadium Concerts Orchestra, founded by Arnold Volpe in 1918 and supported by Adolph Lewisohn, and thereafter conducted by numerous Jewish conductors, such as Fritz Reiner, Pierre Monteux, Eugene Ormandy and Artur Rodzinski; the Sam Franko Orchestra (founded by Sam Franko), which from 1900 to 1909 gave unusual concerts of old music; and the Nahan Franko Orchestra, giving public concerts in the city parks from 1907 to 1927. In recent years there were the State Symphony Orchestra, founded by Josef Stransky; the Beethoven Symphony, founded by George Zaslavsky; the Radio City Music Hall Orchestra, directed by Erno Rapee; the New Friends of Music, conducted by Fritz Stiedry and Georg Szell; and the N. B. C. Orchestra, whipped into shape by Artur Rodzinski, and led by Rodzinski, Monteux, Reiner, Szell, Steinbach and Bruno Walter.

The great Boston Symphony had a Jew for its first conductor: Sir George Henschel. Jews were prominent in this orchestra's history thereafter: Pierre Monteux conducted it from 1919 to 1924, and Serge Koussevitzky from 1924 on. Arthur Fiedler was conductor of popular concerts during the spring and summer.

While the Chicago Symphony Orchestra had not, up to 1942, known Jewish leadership, it profited greatly by its association with Jewish concertmasters, including Max Bendix, Jacques Gordon and Mischa Mischakoff.

How vital a role Jews played in the development of the American orchestra can best be gauged by the numerous directorial posts of importance which they have held. From 1922 to 1931 the Cincinnati Orchestra was under Fritz Reiner. The Cleveland Symphony was organized by Nikolai Sokoloff in 1918, and was conducted by him until 1932; he was succeeded by Artur Rodzinski. The Detroit Symphony was founded by Ossip Gabrilowitsch in 1918, and was directed by him until 1936; Victor Kolar succeeded him. The Hartford Symphony was organized by Jacques Gordon in 1936. The Indianapolis Symphony was created by Fabien Sevitzky in 1937. The Minneapolis Symphony was under the baton of Eugene Ormandy from 1931 to 1935. The Philadelphia Orchestra was conducted by Artur Rodzinski and Alexander Smallens before it was permanently taken over by Ormandy. Otto Klemperer helped to reorganize the Pittsburgh Symphony which, in 1938, came into the hands of Fritz Reiner. The Omaha Symphony was conducted by Sandor Harmati from 1925 to 1930. Nikolai Sokoloff became conductor of the Seattle Symphony in 1938. The St. Louis Symphony was organized by Rudolph Ganz in 1921, and after being directed by him until 1927 was taken over by Vladimir Golschmann. The San Francisco Symphony was conducted by Alfred Hertz from 1915 to 1930, and was reorganized in 1935, when it passed into the hands of Pierre Monteux. The Hollywood Bowl Orchestra was organized by Hertz, who directed it from 1922 to 1925. Walter H. Rothwell organized the Los Angeles Philharmonic in 1921, and directed it for six years. From 1929 to 1933 it was guided by Artur Rodzinski, and from 1933 to 1939 by Otto Klemperer.

7. Critics. AUSTRIA. Jews exerted an influence as music critics on leading newspapers and journals. In Vienna Karl Goldmark was for a period the trenchant critic of the *Österreichisch-konstitutionelle Zeitung,* where he was a force working for Wagner. The greatest of the Viennese music critics was Eduard Hanslick, who served on the *Wiener Zeitung* in 1848 and on the *Presse* from 1855 to 1864. Julius Korngold was later to become Hanslick's successor on the *Presse.* Max Graf was critic on the *Wiener Allgemeine Zeitung,* Paul Stefan on *Die Stunde,* Paul Pisk on the *Wiener Arbeitszeitung,* and Ernest Decsey on the *Neues Wiener Tageblatt.*

GERMANY. Most of the leading music critics of Germany were Jews, principal among them being Paul Bekker, Hugo Leichtentritt, Alfred Einstein, Adolf Weissman and Oskar Bie. Besides these there was Kurt Singer on the *Vorwärts,* Arno Nadel on the *Vossische Zeitung,* and Alexander Moszkowski on the *Deutsches Montagsblatt.* Elsewhere in Germany Paul Bekker was music critic on the *Frankfurter Zeitung* from 1911 to 1925, and Heinrich Porges and Alfred Einstein both served in Munich, the former with the *Neueste Nachrichten* from 1880 to 1900, and the latter on the *Münchner Post* until 1927.

SCANDINAVIA. There were two important Jewish music critics, Robert Henriques on the *Dannebrog* in Denmark, and Albert Rubenson on the *Ny Tidning für Musik* in Stockholm.

UNITED STATES. Maurice Rosenfeld was one of the venerable music critics in the United States, serving on the *Chicago Daily Examiner* from 1913 to 1917 and again from 1919 to 1921; he was also the principal

music critic of the *Chicago Daily News* until 1931. In New York city, Jewish music critics during the early part of the 20th cent. included Samuel Chotzinoff (first on the *World,* then on the *Post*), Howard Taubman (*Times*), Robert Lawrence (*Herald Tribune*), Robert A. Simon (*New Yorker*), Charles D. Isaacson (*Globe, Mail,* then *Telegraph*), and Henry Simon (*PM*).

8. Editors. Jews edited important music journals.

AUSTRIA. Max Graf was editor of the *Musikalischer Kurier,* and Paul Stefan and Paul Pisk were co-editors of the *Musikblätter des Anbruch,* both in Vienna.

GERMANY. The *Zeitschrift für Musik* was edited by Heinrich Porges; the *Berliner allgemeine musikalische Zeitung* (one of the oldest music journals in the world) was founded by A. B. Marx in 1824 and edited by him, in collaboration with Schlesinger, until 1830; *Musik für alle* (Berlin) was edited by Bogumil Zepler; the *Zeitschrift für Musikwissenschaft* was under the guidance of Alfred Einstein from 1918 to 1933.

One of the great music editions was inaugurated by a Jew: the world-famous Peters Edition, created by Dr. Max Abraham in Leipzig in 1867. Abraham became a partner in the Peters music firm in 1863, and sole proprietor in 1884. He was succeeded by his nephew, Heinrich Hinrichson, who launched the equally famous Peters Music Library in 1893.

UNITED STATES. The *Metronome* and *Musical Observer* were both edited by Gustav Saenger. Marion Bauer was New York editor of the Chicago *Musical Leader.* David Ewen was editor of *Musical Facts.*

9. Radio and Phonograph. GERMANY. Selmar Meyrowitz was the musical director of the Berlin Radio until 1933, while from 1929 to 1932 Fritz Mahler conducted important radio concerts there.

CZECHOSLOVAKIA. In Prague, Paul Nettl was music director of the radio station up to 1937.

FRANCE. In Paris Darius Milhaud was member of the Superior Council for Radio Broadcasts.

UNITED STATES. David Sarnoff was, in 1942, president of the Radio Corporation of America, which had control over the National Broadcasting Company. Walter Damrosch served as music counsel for the N. B. C. from 1927 on, and Samuel Chotzinoff as music consultant from 1939 on. Eddy Brown was music director of Station WQXR (New York) from 1936 on, one of America's leading independent stations. Donald Flamm was president of Station WMCA and was responsible for its rapid growth and influence.

In phonographic music, Nathaniel Shilkret was music director of the Victor Talking Machine Company for sixteen years. He was succeeded by Josef Pasternak, who served from 1916 to 1927.

10. Universities. Music departments of leading institutions of higher learning have been directed by Jewish scholars.

GERMANY. At the University of Berlin, A. B. Marx was appointed professor of music in 1830, and music director in 1832. Max Friedländer was Academic Music Director of the university in 1903, after serving as instructor. Erich von Hornbostel was professor of music from 1917 to 1933, and Curt Sachs professor of musicology. At the University of Bonn, Arnold Mendelssohn was instructor of music history from 1880 to 1883. Edgar Istel was instructor of music esthetics at the Humboldt Academy in Munich.

AUSTRIA. Eduard Hanslick was assistant professor of music history and esthetics at the University of Vienna in 1861. He received a full professorship in 1870, holding his post until 1895. He was succeeded at the university by another great Jewish music scholar, Guido Adler. Egon Wellesz lectured on musicology at the university from 1913 to 1930, at which time he was appointed professor, holding this chair until 1938.

CZECHOSLOVAKIA. In Prague, Paul Nettl was instructor of musicology at the German University from 1920 to 1938.

ENGLAND. Jacob Gordon was lecturer on music at the London University from 1934 on, and Manuel Compinsky taught violin at Trinity College. Egon Wellesz became professor of music of Oxford University in 1938, and Curt Sachs was appointed visiting professor of music at the Sorbonne University in Paris.

UNITED STATES. At Harvard University, Max Friedländer served as professor of music in 1911, and Hugo Leichtentritt was professor from 1933 to 1940. Harold Samuel taught a special session at Yale University in 1930. At the University of Southern California, the music faculty included Manuel Compinsky, Alex Compinsky, Ernst Toch and Arnold Schönberg. Schönberg was also professor of music at the University of Southern California at Los Angeles. Paul A. Pisk was head of the music department at Redlands University in 1942, and Darius Milhaud at Mills College, both in California.

In New York city, at New York University, the music department consisted of such scholars as Marion Bauer, Hans T. David, Curt Sachs and Felix Robert Mendelssohn. Marc Blitzstein, Aaron Copland, Hanns Eisler and Georg Szell were on the music faculty of the New School for Social Research. Karol Rathaus was head of the music department of Queens College. Nikolai Nabokov was, in 1942, head of the music department at Wells College, Aurora, N. Y.; William Schuman, at Sarah Lawrence College in Bronxville, N. Y.; Leo Ornstein, at Temple University in Philadelphia; Alfred Einstein at Smith College in Northampton, Mass. Kurt Schindler was for a long period head of the music department at Bennington College in Vermont, and at Louisiana State University Louis Hasselmans was a member of the music department from 1936 on.

11. Miscellaneous Organizations. Jews were responsible for the founding and directing of many major organizations devoted to the sponsorship of modern music. The world famous International Society of Contemporary Music (first festival in Salzburg, 1922) was founded by a group of far-sighted musicians, including Paul Stefan. The board of directors of the American section included (1942) Marion Bauer, Aaron Copland, Frederick Jacobi, Harold Morris and Alexander Smallens.

In Vienna, the Society for Private Musical Performances—furthering the cause of new music in Austria—was created by Arnold Schönberg.

The League of Composers in New York was formed in 1923 by a group including Lazare Saminsky, Mrs. Maurice Wertheim and Leo Ornstein. It included among its directors Lazare Saminsky, Frederick Jacobi, Marion Bauer and Aaron Copland.

In South America (Buenos Aires), Jacopo Ficher

organized the Grupo Renovacion for the advancement of modern music, while in Palestine a similar organization was created by Mordecai Sandberg.

Jewish musicians helped to found American organizations for the purpose of protecting and advancing the financial interests of artists. In 1925 Fanny Bloomfield-Zeisler organized the Musicians Relief Fund to help needy artists. Aaron Copland was one of the founders of the American Composers Alliance, and Jascha Heifetz one of the organizers of the American Guild of Musical Artists, which serve to protect the interests of composers and performers respectively. DAVID EWEN.

MUSICAL TERMS, *see* MUSIC IN THE BIBLE.

MUSICIANS, JEWISH. While it is true that Jews have distinguished themselves more as interpreters than as creators, their contributions as composers have too often been minimized. It is, for example, a long accepted erroneous assumption that Jews were not productive creatively before Felix Mendelssohn-Bartholdy. Historic research does not substantiate this.

Composers. It is known that in the court of the Gonzagas in Mantua in the 16th and 17th centuries there was an entire school of Jewish musicians who frequently produced music of great historic significance. Of these composers, the most important was Salamone Rossi, a colleague of the great Monteverde, one of the truly great creative figures of his time. Rossi's contrapuntal music, of which he wrote abundantly, played a historic role in the ultimate development of the madrigal as an artistic form. But Rossi was even more important in the development of chamber music; as Paul Henry Lang points out, he was "one of the first to realize the significance of a true instrumental style, creating little masterpieces in his three-part sonatas which ushered in the new form of instrumental ensemble, the trio sonata."

There were Jewish composers, besides Rossi, at Mantua, and while their music has not survived, it has had its historic importance. Principal among these was Allegro Porto, composer of madrigals, operas and chamber music, whose versatility of style seems to have exerted a great influence in the 17th cent. There was also Abrama della Arpo Ebreo, a gifted harpist, whose instrumental writing set a standard.

Jewish composers were employed in the court of Pope Leo X and were among his most favored musicians. Principal among these were Jacopo Sansecondo and Giovanni Maria, both exceptionally gifted choral composers.

While Jews were not prominent as composers in Germany and France during the 16th and 17th centuries, there seems to have been a major role occupied by them in Prague, as discovered by the musicologist Paul Nettl. Jewish bands were prominent in that city in those centuries, and were of major musical importance. In his *Alte jüdische Musiker and Spielleute* (Prague, 1923) Nettl quotes some documents of the time which spoke of these Jewish bands as follows: "We would be glad to become acquainted with the fame of the Jews. Under whom and where and on what basic principles have they learned their music? Can they, with their grand art, pass a test in the fundamentals of music?" The fame of these bands penetrated out of Bohemia. According to a Saxonian record, "six Jewish musicians from Prague" were engaged for the Dresden carnival of 1695. For the coronation of Leopold II a "company of musicians was ordered from the city of the Jews." These bands played the music of unnamed Jewish composers, and from the records of the times it appears that this music had extraordinary inventiveness and originality.

In the classical period of music there is no indication of Jewish contributions. The first important Jewish composer after the Renaissance is Felix Mendelssohn. But from this moment on Jews appear prominently. The music of such composers as Stephen Heller, Karl Goldmark, Jacques Halévy, Gustav Mahler, Giacomo Meyerbeer, Moritz Moszkowski, Nachez, Nápravnik, Isaac Nathan, Jacques Offenbach, Anton Rubinstein and Henri Wieniawski has immeasurably enriched the existing repertoire of operatic, symphonic, instrumental and vocal music.

In the music of the 20th cent. the role of Jews assumes Gargantuan proportions. There is not a style or a trend in contemporary musical writing which has not been influenced by Jewish genius. The father of the twelve-tone system (Schönberg) is a Jew; the leader of the famous French six (Milhaud) is also Jewish. In France, besides Milhaud, there was Paul Dukas, one of the truly great creative spirits of the 20th cent. In Germany: Paul Dessau, Karol Rathaus, and Kurt Weill. In Austria: Ernst Toch, Egon Wellesz, Alexander Zemlinsky, and Korngold. In Poland: Alexander Tansman. In Italy: Mario Castelnuovo-Tedesco. In Hungary: Leo Weiner. In Czechoslovakia: Jaromir Weinberger. In England: Frederic H. Cowen, Arthur Benjamin, Sydney Rosenbloom. In the Soviet Union: Alexander Weprik, Michael Gniessen, Alexander Kreyn. In the United States: Marion Bauer, Marc Blitzstein, Ernest Bloch, Abram Chasins, Aaron Copland, David Leo Diamond, George Gershwin, Rubin Goldmark, Louis Gruenberg, Frederick Jacobi, Harold Morris, Lazare Saminsky, and William Schuman.

In studying the music of Jewish composers from Salamone Rossi to George Gershwin, a musicologist is at a loss to find definite identifying racial traits. Polemics have been written against Jewish composers, attempting to ascribe definite (and destructive) artistic traits to them. Most famous of these is Richard Wagner's *Das Judentum im Musik*, consisting of a series of syllogisms in which the premise is false, and the arguments illogical. We need quote only one of these to show the absurdity of Wagner's reasoning. The Jew, he argues, presents an absurd spectacle when he is in the heat of speech—with his exaggerated gestures and vocal mannerisms. Music, after all, is intensified speech. If the Jew is ridiculous in speech, how much more ridiculous is he, then, in music? It should be added that, although, in this volume, Wagner violently denounced such Jewish composers as Mendelssohn and Meyerbeer, he went to the other extreme, in other writings, to express his admiration for them. At one time he went so far as to confess that only Beethoven influenced him more than Meyerbeer.

Richard Eichenauer, a Nazi propagandist, attempted

to prove in *Musik und Rasse* that all Jewish composers are destructive forces because they are the arch-radicals of music. Schönberg falls into this category. But what of Meyerbeer or Karl Goldmark or Mahler or most of the modern composers who make no effort to establish a new order for music, but are satisfied with the old?

Daniel Gregory Mason ascribed certain compositorial qualities to Jewish composers, among them "speciousness, the superficial charm and persuasiveness of Hebrew art . . . violently juxtaposed extremes of passion, poignant eroticism and pessimism . . . exaggeration . . . the constant running to extremes . . . eastern expression . . . the stripping of the soul." To be sure, certain composers, such as Karl Goldmark and Gustav Mahler, may be described in these phrases and adjectives. But these same descriptive terms can apply for such non-Jewish composers as Tchaikovsky, Moussorgsky, Wagner, and even Brahms in his more sensual pages. Beyond this, it is easily possible to point out numerous Jewish composers who are cerebral rather than emotional, classical rather than romantic, tight-lipped in their reserve rather than expansive in their feelings.

The more one subjects the works of Jews to critical and unbiased analysis, the more one realizes that no single classification applies. Jews have written in every vein and in every style with equal success. They have been reactionaries; and they have been revolutionary. Any generality which might be arrived at might apply to any one group of Jewish composers, but not to all.

Violinists. In the field of musical interpretation, the fabulous position of Jews has long been commented upon. The entire history of violin playing is virtually a Jewish art, beginning with artists like Heinrich Ernst and Ferdinand David, and continuing with Joseph Joachim and Henri Wieniawski until we arrive at the 20th cent., with Fritz Kreisler, Jascha Heifetz, Joseph Szigeti, Nathan Milstein, and Yehudi Menuhin. Violin pedagogy was also a Jewish contribution: Ferdinand David created the modern school of violin teaching in Leipzig; he was succeeded by Joachim in Berlin, who in turn was succeeded by Leopold Auer in Russia. The great teachers of the violin in the 20th cent., Efrem Zimbalist, Louis Persinger, Carl Flesch, were all Jews.

Conductors. While Jews as violinists have always been accorded the fame they deserve, their role in the other interpretive fields of music is sometimes slighted. Yet it has not been less important. The history of modern orchestral conducting virtually began with Michael Costa and Felix Mendelssohn, and was given a powerful impetus by Felix Otto Dessoff, Hermann Levi and Gustav Mahler. In the 20th cent., Jews virtually dominated the field of orchestral and operatic conducting: principal among them were Issai Dobrowen, Oskar Fried, Vladimir Golschmann, Serge Koussevitzky, Erich Kleiber, Otto Klemperer, Erich Leinsdorf, Pierre Monteux, Eugene Ormandy, Giorgio Polacco, Fritz Reiner, Artur Rodzinski, and Bruno Walter.

Pianists. Great Jewish pianists included such consummate artists as Felix Mendelssohn, Stephen Heller, Anton Rubinstein, Karl Tausig and Rafael Joseffy in the past; and, in the 20th cent., Carl Friedberg, Ignaz Friedman, Ossip Gabrilowitsch, Leopold Godowsky, Myra Hess, Vladimir Horowitz, Wanda Landowska, Artur Schnabel and Rudolph Serkin.

Vocalists. Great Jewish singers dominated the stages of opera houses and concert halls from the days of Franz Hauser, John Braham, Jean La Salle, Maurice Renaud, Paulina Lucca, Selma Kurz and Hermann Jadlowker. In the 20th cent. there have been Alexander Kipnis, Friedrich Schorr, Emanuel List, Rose Pauly, Erna Sack, Rosa Raïsa, Alma Gluck, Sophie Braslau, Marie Rappold, Armand Tokatyan, Max Altglass and Jan Peerce.

Musicologists. Every aspect of musicology was enriched by the prolific researches into the past by such scholars as Guido Adler, Max Friedländer, Eduard Hanslick, Hugo Leichtentritt, Paul Nettl, Curt Sachs, Heinrich Schenker, Paul Stefan, Joseph Schillinger and Adolph Weissmann.

How Jews have helped to create and build up the leading musical organizations of the world—its chamber music ensembles, conservatories, choruses, orchestras, opera houses, publications, etc.—is discussed exhaustively in the article MUSICAL ORGANIZATIONS AND JEWS.

Influence Upon Non-Jews. There remains, in conclusion, to speak of one additional role served by Jewish musicians, never before touched upon, but which has been of decisive importance to the history of music. Jewish musicians have been of inestimable importance in furthering the careers and fame of the masters of music.

We know, for example, how important such Jews as Lorenzo da Ponte and Baron Wetzlar were in the life of Mozart. Da Ponte was Mozart's librettist for his major operas (*Don Giovanni, The Marriage of Figaro,* and *Cosi fan tutte*), and in this role played a major part in Mozart's fabulous career. Baron Wetzlar was Mozart's patron, offering him lodgings and money whenever they were needed, and at another time actually financing the writing of *The Marriage of Figaro.* Still another Jew, Wenzel Tobias Epstein, was responsible for Mozart's cantata, *Maurerfreunde,* which he sponsored for the Masonic order.

Jews in Beethoven's career include Ignaz Moscheles, who wrote the piano version of *Fidelio,* Meyerbeer and Hiller (both of whom befriended him in Vienna), and Dr. Alois Jeitteles, who wrote the words for Beethoven's superb song-cycle, *An die ferne Geliebte.* Ferdinand Laub brought the last quartets out of their obscurity, and Joseph Joachim helped to bring them to their present-day fame.

In the same manner it is possible to uncover Jewish influences in the life work of the other music masters:

JOHANN SEBASTIAN BACH: It was a Jew (Felix Mendelssohn) who restored Bach to the world and brought him out of the neglect of a full century by performing the *St. Matthew Passion.* Joachim brought Bach's solo sonatas to fame after a long period of discard. Karl Tausig brought still greater popularity to Bach through his very tasteful arrangements of his organ music.

FRANZ SCHUBERT: Max Friedländer, the musicologist, discovered more than a hundred of Schubert's songs which otherwise would have been lost. Joachim helped to popularize the last quartets of Schubert through repeated performances.

ROBERT SCHUMANN: It was for two great Jewish artists that Schumann wrote his violin and piano concertos: the violin concerto for Joachim, and the piano concerto for Ferdinand Hiller.

JOHANNES BRAHMS: It was a Jew, Julius Epstein, who first helped to bring Brahms to fame, and it was another Jew, Remenyi, who inspired him to write his *Hungarian Dances.* It is well known how influential Joachim was in the development of the Brahms *Violin Concerto.* Less known, perhaps, is the fact that the Jewish pianist, Rafael Joseffy, first helped to publicize Brahms's piano music in the United States.

RICHARD WAGNER: Wagner himself confessed that Meyerbeer was one of the great inspirations of his career. Beyond this, there have been critics like Karl Goldmark, and conductors like Leopold Damrosch and Hermann Levi, to fight the battle of Wagner at a time when antagonism to Wagner's art was severe.

PETER TCHAIKOVSKY: It was for Leopold Auer that Tchaikovsky wrote the *Romance* for violin and orchestra, and it was to Auer that the famous violin concerto was dedicated (actually it was another Jew, Adolf Brodsky, who gave the concerto its world première). Nikolai Rubinstein was responsible for bringing Tchaikovsky to the attention of his lifelong patron, Mme. von Meck, and was the inspiration for the great Tchaikovsky piano concerto.

HECTOR BERLIOZ: It was Eduard Colonne whose passionate missionary work helped to bring this composer to the fame he deserved.

JOHANN STRAUSS: Jacques Offenbach was responsible for bringing Johann Strauss to the writing of operettas, and can therefore be said to have been the spiritual godfather of such masterpieces as the *Fledermaus* and the *Gypsy Baron.* DAVID EWEN.

MUSSAFIA, ADOLFO, philologist, b. Spalato, Austria, 1834; d. Florence, Italy, 1905. The son of a rabbi, he went to Vienna in 1853 to study medicine, but in 1855 became lecturer on the Italian language at the University of Vienna. In 1860 Mussafia, baptized, was appointed professor of Romance languages and literatures at Vienna, and remained active in this post until a few months before he died. He was a member of the Upper House, and received many honorary titles and decorations. He published more than 300 studies on Romance languages and literatures. Except for the Rhaeto-Romance and the Sardinian languages, he dealt with all branches of Romance philology.

Although entirely self-taught, Mussafia manifested a rigid scientific discipline beginning with his first publication. Proceeding from literary texts, he arrived at linguistic discoveries of great importance, but left to others the task of formulating them. He only prepared the material by observation, selection and by grouping the details, because he was a radical adversary of speculation and hypothesis. Mussafia was excellently versed not only in the languages and literatures but also about the dialects of Italy, France and Spain. He possessed a unique knowledge of medieval manuscripts, and contributed considerably to the philological interpretation of Dante, Tasso, and Metastasio. His statements on the formation of Romance tenses were epoch-making.

Lit.: Meyer-Lübcke, in *Biographische Jahrbuch* (1905); *Bausteine zur romanischen Philologie. Festgabe zu Adolfo Mussafias 70. Geburtstag* (1904).

MUSSAFIA, BENJAMIN BEN IMMANUEL, physician and philologist, b. Spain, about 1606; d. Amsterdam, Holland, 1675. He practised medicine in Hamburg, where his wife died in 1634. In memory of her he wrote his first and most popular book, the *Zecher Rab* (1635), a philologically interesting account of the Creation. His work on medicine in the Bible, *Sacro-Medicae Sententiae ex Bibliis,* appeared in 1640 under the Latin pen-name of Dionysius. Three years later he was appointed court physician to King Christian IV of Denmark, to whom he had dedicated a work on the ebb and flow of the tide. After the king's death (1648) Mussafia went to Amsterdam, where he became a member of the rabbinical collegium. An enthusiastic supporter of Sabbatai Zevi, he was the first to sign a eulogy to be sent by the Portuguese community of Amsterdam to the pseudo-Messiah, who by that time had already turned Mohammedan (1666). Mussafia's main work is his supplements to the *Aruch* of Nathan ben Jehiel, under the name of *Musaf Hearuch;* it explains particularly the Greek and Latin derivates in this work.

MUSSOLINI, BENITO, Duce and dictator of Italy, b. Predappio, Italy, 1883. Son of a blacksmith who had been a disciple of Bakunin, Mussolini from his childhood inclined to revolutionary socialism. He was forced to leave Italy for Switzerland (1902) because of his violent antagonism to monarchy and Catholicism. During his Swiss exile, Mussolini was supported by socialists of various countries who were likewise refugees. Many of them, including Angelica Balabanoff, were Jews, and Mussolini formed intimate friendships with them.

Returning to Italy, Mussolini became editor-in-chief of *Avanti,* the leading newspaper of the Italian Socialist Party. He continued to represent the extreme left wing of the party, and was violently opposed to Italy's conquest of Libya in 1912. After the outbreak of the first World War (1914), Mussolini thundered against all belligerent governments. Suddenly, however, he shifted ground and advocated Italy's intervention on the side of Great Britain and France just as vehemently as he had combatted it before. He was therefore excluded from the Socialist Party, whose members were completely surprised by his change and reproached him for having betrayed those who redeemed him from moral and physical misery. Mussolini, however, had in his pocket a contract enabling him to found his own newspaper, the interventionist *Popolo d'Italia,* which thereafter remained his property. At the end of the War, Mussolini founded the Fascist Party to combat socialism and democracy, and in 1922 he became dictator of Italy.

In the early stages of his career as Fascist leader Mussolini had the assistance of several Jews. His trusted lieutenant was Aldo Finzi, a gallant airman who cooperated with Gabriele d'Annunzio in conducting the Fiume campaign advocated by Mussolini. Finzi was appointed assistant minister of the interior when Mussolini came to power. Thus Mussolini entrusted a Jew with one of the important posts in his government. Finzi was the real leader of the ministry of the interior. His office was charged with the direction of the police and the maintenance of the Fascist regime, which was not yet established definitely, while Mussolini held the ministry nominally, at the same time holding the presi-

dency of the cabinet and the ministry of foreign affairs.

Margherita Sarfatti, a Jewess of Milan, for many years Mussolini's intimate friend, edited the official paper of the Fascist Party and wrote Mussolini's official biography.

When Mussolini set up a commission of leading Italian jurists to amend the constitution of Italy according to the principles of Fascism, three Jews, Gino Arias, Barone, and Levi, were among its selected members, and Levi was entrusted with a particularly delicate part of the important task.

Thus Mussolini not only tolerated the participation of Jews in Italy's public life for many years, but also exploited their assistance for the establishment of his regime. Subsequently he appointed the Jew Guido Jung minister of finance. For reasons of collaboration with Britain Mussolini was even sympathetic with Zionism. He received Dr. Chaim Weizmann and encouraged Zionist organizations in Italy in the hope that Italian Jews would promote Italian expansion in the Mediterranean basin and in North Africa.

Meanwhile there was a radical wing of the Fascist Party (represented by Roberto Farinacci and Achille Starace) which professed anti-Semitism. Many Italian Jews began to fear that fascism, which was opposed to democracy and humanitarian ideas, would finally swing to the anti-Semitic attitude of Farinacci and Starace. Mussolini therefore, receiving Professor Angelo Sacerdoti, chief rabbi of Italy, stated publicly (1924): "Anti-Semitism is a plant which cannot strike root in Italy where the Jews are citizens with full equality of rights with other citizens." After the Concordat with the Vatican in 1929, Mussolini again said that the Jews "shall remain undisturbed, as shall remain undisturbed those of other faiths."

In 1932, he declared to the Jewish author Emil Ludwig: "Nothing will ever make me believe that biologically pure races can be shown to exist today," and after having jeered at such apostles of Teutonic racism as Joseph Arthur Gobineau and Houston Stewart Chamberlain, he continued: "No such doctrine will ever find wide acceptance here in Italy." Even after Hitler came to power, Mussolini said to Theodor Wolff, former editor of the *Berliner Tageblatt,* who had taken refuge in Italy: "Italian Fascism knows nothing of anti-Semitism which is the shibboleth and the chief sound and fury of the German organization."

Mussolini was interested in the maintenance of the Nazi regime, but personally he detested Hitler. While patronizing the Nazi Führer, he intended to maintain a balance which would allow Mussolini himself to remain the leader, with Hitler as his second.

Three months after Hitler's assumption of power in 1933, Mussolini received from Sacerdoti a petition adopted by the Union of Jewish Communities of Italy, demanding the restoration of moral relationships between the Jews of Germany and the rest of the country. It was said that Mussolini's intervention with Hitler, at this point, reduced to one day the planned three-day boycott of the Jews throughout Germany (April, 1933).

The scheme of independence was beyond Mussolini's ability. His last attempt to restrain Hitler and publicly to deprecate Teutonism was his speech at Bari (Sept., 1934). After exalting the Mediterranean coasts as the native countries of the great religions, philosophers and poets, and of the Roman Empire, he added: "Thirty centuries enable us to face with sovereign pity some of these theories professed beyond the Alps and supported by men whose ancestors ignored the art of writing which would have enabled them to give information about their very existence at the time when Caesar, Augustus and Virgil lived at Rome."

In 1936, however, Mussolini surrendered to Hitler, at the same time that German-Italian collaboration grew closer. He repeatedly denied the existence of preponderant German influence, and took pains to declare that his policy concerning the Jews would not change. But he was forced to tolerate anti-Semitic agitation in Italy, and in the fall of 1938 the Fascist Grand Council, dominated by Mussolini, inaugurated racist legislation concerning the Jews, which copied the Nuremberg laws. The slogans of Nazism were aped by official statements of the Fascist government and parroted by the Italian press in order to justify the legislation before the public, which was as much surprised by the change as were the Jews of Italy who had given credence to the previous statement of their government.

In answer to a reproach from Pope Pius XI on Italy's behavior, Mussolini now announced that "also in racial questions, Fascism will go ahead." After the outbreak of war in September, 1939, Mussolini further denounced the Jews as friends of foreign lands.

See also ITALY. HUGO BIEBER.

Lit.: Ludwig, Emil, *Talks with Mussolini* (1932); Balabanoff, Angelica, *My Life as a Rebel* (1938); *Contemporary Review* (Dec., 1938).

MYER, MORRIS, Yiddish writer and editor, b. Dermanetschi, Roumania, 1879. At the age of fourteen he went to Bucharest, where he worked as tinsmith and was honorary secretary of the local tinsmiths' organization. Myer began to write at the age of 16, in Roumanian, and contributed to several anarchist papers as well as to the Zionist *Viitozul.*

Myer's first appearance as a Yiddish writer was in 1899. His initial work was in verse, then he became editor of a Zionist weekly in Yiddish. In 1902 he went to London, where he edited, for a short period, a Yiddish anarchist weekly. The following year, in Manchester, Myer edited the anarchist *Arbeiter Freind,* meanwhile working at various trades. Even after his return to London in 1906, to become editor of *Die Neie Zeit,* he continued for a time to work as a laborer and to participate in labor movements. Before 1913, when Myer was made editor of the daily, *Die Zeit,*—a post he still held in 1942—he edited other London Yiddish papers and acted as correspondent for several New York publications. His political orientation became entirely Zionist, though *Die Zeit* itself is impartial. Myer was vice-president of the Federation of English Zionists, a member of the Board of Deputies Law and Parliamentary Committee, and a leader in various other communal activities. He was the author of *A Jewish Utopia* and *George Eliot,* both in Yiddish.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930), cols. 388-94.

MYERS, AARON HOWARD, labor economist, b. Albany, 1904. After a period spent in business, he became research associate of the New York State department of labor, from 1932 to 1933. He then went to Washington as executive director of the NRA labor

advisory board, and stayed until 1936, when he was appointed regional director of the New England National Labor Relations Board in Boston, Mass. In 1938 he was nominated a member of the faculty of Boston College School of Social Work. He still occupied this position in 1942.

Myers, a member of the American Academy of Political and Social Science, was author of *Administration of Municipal Sinking Funds* (1933). In 1935 he served as co-ordinator of a group of labor studies.

MYERS, ALFRED DE CORDOVA, solicitor, b. Kingston, Jamaica, 1879. He was a brother of Horace V. Myers. He studied at Jamaica College and was admitted as solicitor to the Jamaica Supreme Court in 1901. He was active as solicitor in the firm of Myers & de Cordova, and from 1935 on, in that of Myers & Myers. He also acted as Jamaica agent for several British insurance companies and was chairman of the Jamaica Fire Insurance Association and of the Jamaica Motor Insurance Association. He served from 1931 on as regional counsel in Jamaica for the American Trade Council of the United States.

Myers was active in many civic movements and was a prominent member of Kingston society. He was vice-president of the Jamaica College Old Boys Association, a member on the committee of the Old Kingston Citizens Association, a member of the West India Committee of London and fellow of the Royal Empire Society of London. He held several offices, including that of vice-president in the Free and Accepted Masons Society, and served on the executive committee of the Jamaica Masonic Benevolence Association. He published *Some Thoughts on Masonry* (1922).

MYERS, SIR ARTHUR, mayor and cabinet minister, b. Auckland, New Zealand, 1867; d. 1926. He was educated at Wellington College, New Zealand. He was chairman director of the Campbell and Ehrenfried Co. at Auckland and mayor of Auckland from 1905 to 1908. From 1910 to 1921 he represented Auckland City East in the New Zealand Parliament and held portfolios in two ministries, serving as minister of finance, defence and railways in the Mackenzie Ministry (1912) and as minister of customs, pensions and munitions in the National Ministry (1915-19). He was also a member of the Royal Commission on Local Government in England. He retired from the New Zealand military forces in the rank of lieutenant colonel.

He bestowed many benefactions on his native city of Auckland, among others the Myers Park and Kindergarten, and the Town Hall clock. He was knighted in recognition of distinguished public service.

MYERS, ASHER ISAAC, editor, b. London, 1848; d. London, 1902. Originally in the clothing business, he joined the staff of London's *Jewish Chronicle* in 1869, working with Michael Henry. By 1878 he was in control, and under his guidance the paper became one of the foremost Jewish publications in the world, representing various opinions and tendencies in the Jewish community of England. Myers was noted for his business ability and sound, conservative judgment.

He was active on the committee of Jews' College and interested in the Anglo-Jewish and American

Asher Isaac Myers

Jewish Historical Societies; in 1872 he founded the Jewish Workingmen's Club.

As leader of London Jewish intellectuals, he played an influential role in thought and opinion, often acting as host and advisor to Americans as well as English Jews. The group that gathered around him in London eventually became the "Maccabeans."

Lit.: *Publications of the American Jewish Historical Society,* No. 11, pp. 204-206.

MYERS, BERNARD, physician, b. 1872. He was educated at Wellington College in New Zealand, at Edinburgh (Scotland) University, and at St. Bartholomew's Hospital. He occupied many consultative posts in hospital and government work. Myers was for a time acting director of the medical services of the New Zealand Expeditionary Force and represented the New Zealand Red Cross on the Board of Governors. He was also consulting physician to the New Zealand Government in London. Myers was author of *Practical Handbook on the Diseases of Children; The Letters of A Professional Man* and *Modern Infant Feeding.* He was a lieutenant-colonel in the New Zealand Medical Corps Reserve, and for a time president of the clinical section of the Royal Society of Medicine.

MYERS, CHARLES SAMUEL, psychologist, b. London, 1873. He received his degrees (M.A., M.D., and Sc.D.) from the University of Cambridge. He was director of the Psychological Laboratory and reader in experimental psychology in the University of Cambridge, professor of psychology at King's College (1906-09), first president of the British Psychological Society and editor of the *British Journal of Psychology* (1911-24). During the first World War he served as consulting psychologist to the British armies in France and was made Commander in the Order of the British Empire (1919). He presided at the International Congress of Psychology in 1923, was Herbert Spencer lecturer at Oxford (1929) and Bradshaw lecturer at the Royal College of Physicians (1933).

In 1942 Myers was honorary scientific adviser (formerly principal) of the National Institute of Industrial

Psychology and a member of the advisory committee at the British War Office on personnel selection.

His published books, dealing mainly with industrial psychology, include *Business Rationalisation* (1932); *In the Realm of Mind* (1927); *Shell Shock in France, 1914-18* (1940; with Henry J. Welch); *Ten Years of Industrial Psychology.*

He was a fellow of the Royal Society and the recipient of many honorary degrees, including that of D.Sc. from the University of Pennsylvania.

Myers was actively interested in Jewish affairs, having been chairman of the Visitation Committee of the United Synagogue in London.

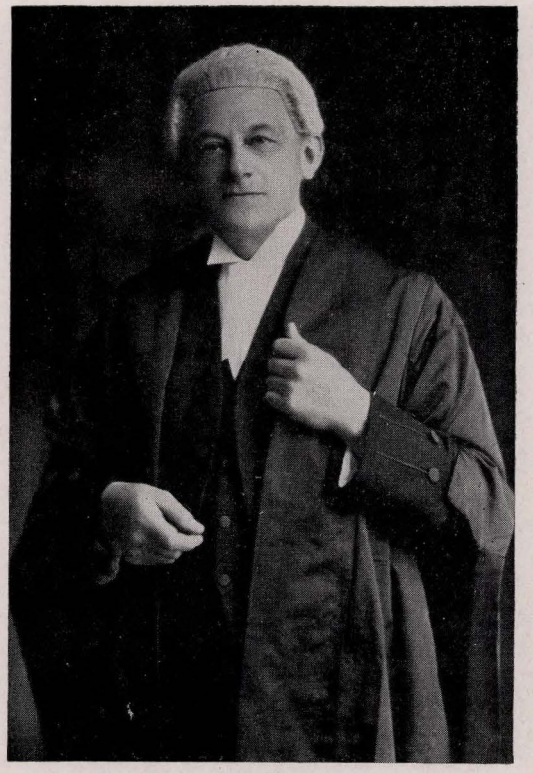
MYERS, GUSTAVUS, sociologist and historian, b. Trenton, 1872. Specializing from the start of his career in original historical research, he became famous for his thorough, impartial and brilliant analysis of certain institutions, tendencies and social movements in the United States. Thus *The History of the Great American Fortunes,* first published in three volumes in 1910, came to be recognized as a classic in that field, and has been extensively used as source material by other students. This is likewise true of *The History of Tammany Hall* (1901, 1917).

Other important studies by Myers include *History of the Supreme Court of the United States* (1912); *The History of Canadian Wealth* (1914); *The German Myth* (1918); *Ye Olden Blue Laws* (1921); *The History of American Idealism* (1925); *America Strikes Back* (1935); *The Ending of American Hereditary Fortunes* (1939). In 1910 he published *The Borderline of Life,* an investigation of the spiritualist experiments of the time. In 1941, at the age of 69, Myers was awarded a John Simon Guggenheim Memorial Foundation fellowship for his projected study on the sources of bigotry in the United States. The fellowship was renewed in 1942.

MYERS, HENRY COFFINBERRY, chemist, b. Cleveland, 1864. He went abroad to finish his studies at Göttingen and Strasbourg. In 1896 he was appointed professor of chemistry and dean of the school of pharmacy at Washington University, where he stayed until 1899. Later he worked on soil reclamation through beet sugar culture in the states of Utah and Colorado, and then, in 1904, became chief chemist for the Honolulu Plantation Company. Myers was the first to ship white sugar from the Hawaiian Islands; up to 1905 only the raw had been exported.

After leaving Hawaii, Myers was for many years engaged in mining in the states of Oregon, California and Idaho. Finally in 1925 he accepted the post of professor of chemistry at Pacific University in Oregon; here he remained until 1936. At the same time he was manager of the Argus Mining company, until 1937.

MYERS, HORACE V., philanthropist, b. Kingston, Jamaica, British West Indies, 1876. The eldest son of Frederick Louis Myers, J.P., and Fleurette Myers, he was educated at Kingston Collegiate School. After graduation he entered his father's business, Fred L. Myers and Son, and became partner of the firm at twenty-one. The firm was known throughout the world for its famous brand of Jamaica rum (Myers' Rum). He was a director of many of the island's leading companies, magistrate for Kingston and for several years president of the Jamaica Chamber of Commerce and Merchants Exchange.



Michael Myers (article on page 72)

In the first World War Myers placed his fleet of sailing vessels free of charge at the disposal of the government to bring over the Bahamas contingent to Jamaica. He was honored by the king, who appointed him a member of the Most Excellent Order of the British Empire for meritorious services rendered during the War. In 1919 the governor appointed him a nominated member of the Legislative Council, which he served until he resigned in 1927. He was one of the commissioners in 1924 to the Wembley Exhibition in London, and gave a garden party which was attended by the Prince of Wales.

For many years Myers was president of the Jamaica Jewish community, and in 1942 was senior director of the congregation. He was instrumental, together with Lewis Ashenheim, in 1910, in placing an organ in the synagogue and in having minor reforms introduced into the services. He gave large sums to Jewish and non-Jewish charities, and to the war funds, including £5,000 for a bombing plane (1940).

Lit.: Files of *The Gleaner* (1896 et seq.); *Who's Who and Why* (1934-35).

MYERS, ISIDORE, rabbi, b. Russia, 1856; d. Los Angeles, California, 1922. He was educated in Australia and occupied pulpits on that continent, subsequently in England and in the United States, where he was rabbi of Congregation Ohabei Shalome of San Francisco, until 1904, and of Congregation Beth Israel, Los Angeles, from 1905 on.

Myers was active in campaigns for woman suffrage, abolition of capital punishment, and, from its incep-

tion, in Zionism. He was also well known as a lecturer; his most famous lecture, "Who Crucified Jesus?" sought to prove to the satisfaction of Christians that the Jews had no part in the death of Jesus.

He published *Gems from the Talmud* and *Acrostic Dictionary*. His *Proverbs of Solomon or the Words of the Wise* (in verse) was published in New York, in 1912.

MYERS, SIR MICHAEL, Chief Justice of New Zealand, b. Motucka, N. Z., 1873. He was educated at Wellington College and Canterbury College, where he took his law degree in 1879. Myers was made a King's Counsel in 1922 and became Chief Justice of New Zealand in 1929. The following year he was knighted. In addition to his post as Chief Justice, which Myers still held in 1942, he was twice (in February and March, 1930 and in March and April, 1935) administrator of government in New Zealand. He was also made a member of the privy council in 1931. *(See illustration on page 71.)*

MYERS, MORDECAI, army officer and civic official, b. Newport, 1776; d. Schenectady, N.Y., 1871. Although he seems to have lived for a short time (1804) in Charleston, S.C., Myers spent most of his life in New York State. During the war of 1812 he was a captain in the 30th United States Infantry and was wounded at the battle of Chrysler's Field.

From 1831 to 1834 Myers was a representative from New York city to the New York State Assembly. Later he moved to Schenectady, and from 1851 to 1854 was mayor of that city. Myers was also active in the Masonic Order in New York State, and occupied several high posts, from 1829 to 1834; he rejected, however, his election to the post as Grand Master for the state.

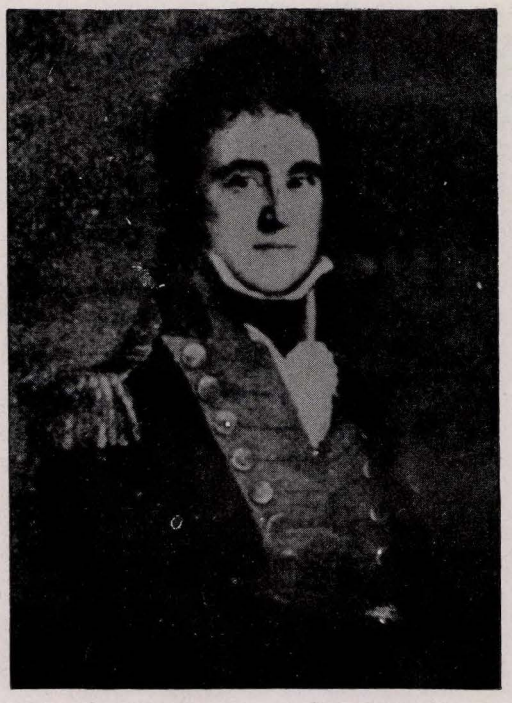
Lit.: Markens, Isaac, *The Hebrews in America (1888)* 123; Publications of the *American Jewish Historical Society,* No. 12, No. 19.

MYERS, THEODORE WALTER, banker and city official, b. New York, 1844; d. New York, 1918. He was educated in Germany and France, and entered Wall street as a clerk in 1864; he organized the banking business of Theodore W. Myers & Company (1884). In the same year, becoming interested in politics for the first time, he supported Cleveland for president. Then in 1887 he was appointed park commissioner of New York, and soon elected city comptroller. In 1891 he was re-elected to that office by both Republicans and Democrats. During his incumbency, he negotiated a $14,000,000 loan for the city at the unprecedentedly low interest rate of two and one-half percent.

Myers served as captain of the Third Regiment of Sickles' Brigade in the Civil War, and was for many years in the city guard. He was, besides, active in many Jewish benevolent and charitable societies.

Lit.: Markens, *The Hebrews in America,* pp. 194-95.

MYERSON, ABRAHAM, neurologist and psychiatrist, b. Yanova, Russia, 1881. He was brought to the United States in 1886 and was educated in Boston, receiving his medical degree from Tufts College in 1908. Myerson began the practice of medicine in Boston, but for a short time (1912-13) he was instructor in neuropathology at the St. Louis University School of Medicine and also resident neurologist at the Alexian Bros. Hospital in that city.



Mordecai Myers. From a contemporary painting by John Wesley Jarvis

Returning to Boston in 1913, Myerson became assistant physician at the Boston Psychopathic Hospital. Subsequently he held many directive and consultative posts in hospitals throughout the State of Massachusetts, among them that of director of research for the Boston State Hospital. He was made professor of neurology at the Tufts College Medical School in 1922; in 1942 he was professor emeritus at Tufts and also clinical professor of psychiatry at the Harvard University Medical School. Myerson's experimental work stressed the chemical factors in nervous and mental diseases; he disagreed with theories that made heredity an inevitable factor in almost all types of mental illness and was disposed, instead, to credit environment as a causative and preventative element.

Myerson served as consultant in mental hygiene for the United States Public Health Service and as a member of the advisory council for research and nervous and mental diseases for the Service. Among his published works are: *The Nervous Housewife* (1920); *Foundations of Personality* (1921); *Inheritance of Mental Diseases* (1926); *Psychology of Mental Disorders* (1927); *The German Jew—His Share in Modern Culture,* written with Isaac Goldberg (1933); *Social Psychology* (1934) and *Eugenical Sterilization* (1936). He was president, in 1927, of the Massachusetts Society of Psychiatry and Neurology and was also active in state research on problems of mental disease. Among Myerson's posts in Jewish communal life was his trusteeship of the Associate Jewish Philanthropies.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 183-4; 638.

MYNONA, *see* FRIEDLÄNDER, SOLOMON.

MYRRH, 1. (Hebrew *mor*), a gum resin derived from a small tree flourishing in southern Arabia and Abyssinia. It was used for the purification of women (*Esther* 2:12), for embalming (*John* 19:39), for perfumery (*Ps.* 45:9), and for incense or for anointing oil in the Temple (*Ex.* 30:23-33). Its modern use is mostly commercial, in medicine and the manufacture of incense.

2. ladanum (Hebrew *lot*), a resinous substance of various kinds of rock roses growing profusely along the coast and in the mountains of Syria and Palestine. *Lot* is mentioned twice in the Bible (*Gen.* 37:25; 43:11). It was mistakenly believed to be effective in remedying sexual disorders.

Lit.: *Encyclopaedia Britannica,* vol. 19, pp. 114-15; Cheyne, in *Encyclopedia Biblica,* vol. 3, pp. 32-46; Hastings, James, edit., *Dictionary of the Bible,* vol. 3, pp. 464-65.

MYRTLE, an evergreen shrub (Hebrew, *hadas* or *hadassah*). Although the Talmudic rabbis interpreted "boughs of thick trees" (*Lev.* 23:40) as referring to myrtle boughs, the word *hadas* does not occur in the Pentateuch, and the word *hadassah* appears only in the book of *Esther* (2:7), as the queen's Jewish name. According to old Jewish tradition, the myrtle is one of the "four species" essential for the observance of the Feast of Tabernacles. It was used also in the construction of booths for that holiday. Later it was employed as incense for the service on the conclusion of the Sabbath (Habdalah), because in the view of the rabbis it dispels the malodorous fumes escaping from Purgatory.

In ancient times the myrtle was sacred to Astarte and emblematic of love. Perhaps it is more than coincidence that it was borne by Jews while dancing during the wedding ceremony; it adorned the groom as well as the home (*Sab.* 110a; *Sotah* 5b, 49b). It was employed in ancient times also at circumcisions, in the redemption of the first-born (*Shaare Tzedek* 3:2 et seq.), and in covering a coffin (*Rashi* to *Betz.* 6a).

Some of the mystical interpretations of the myrtle are that it symbolizes God (*Pesikta* 184a), that it joins soul and spirit (*Zohar* 3; 55a), that souls grow upon it (*Shene Luhoth Haberith,* p. 139b), that it represents Jacob and Leah surrounded by their offspring as the myrtle is surrounded by its leaves, and that its three whorls symbolize might, power and glory, while the triple verticils represent the three Patriarchs or the three rows of pupils customary in the ancient academies.

B., *Natural History of the Bible,* 8th ed. (1889) 365; Hastings, James, edit., *Dictionary of the Bible,* vol. 3, p. 465; *Encyclopedia Biblica,* vol. 3, p. 3246.

MYSLBEK, JOSEF VACLAV, sculptor, b. Prague, 1848; d. Prague, 1922. Regarded as the greatest Czech sculptor of recent times, Myslbek was of Jewish descent on his mother's side. He studied at the Academy of Art in Prague, Vienna (1867) and Dresden (1872-73). After a brief visit in Paris, he returned to Prague, where he was influenced by French romanticism. The works of his youth were executed under the influence of classic antiquity; these include *Hygeia* (1873) and *Devotion* (showing Thorwaldsen's influence). He finally acquired his own individual style, i.e. neo-classicism.

Myslbek's principal works are: *Sandstone Group on the Palacky Bridge in Prague; Tombstone on Sladkovsky's Grave at the Prague Cemetery; Volšany; Žižka* (in Tabor); *Libuša and Přemysl;* busts of Palacky and Kolar (1885-94), *Bedřich Smetana* (1893-94); *Music* (four variations, 1892-95). His world-famous monuments include the bronze tombstone of Cardinal Friedrich, Prince of Schwarzenberg (1892-95), in the Cathedral of St. Veit, Prague, and the bronze equestrian statue of St. Wenceslaus at the Václavské Náměsti in Prague. The latter statue became a symbol and a national shrine for the Czech people. Myslbek worked on it and on the smaller figures in it for more than twenty years, and completed it in 1912.

Myslbek's work was recognized not only during his lifetime, but even more so after his death. In 1930 an organization, with its seat in Prague, was formed to do him honor: Myslbek-unification on Czech creative art.

Lit.: *Josef Vaclav Myslbek* (1936).

MYSTICISM. Mysticism derives from man's sense of inadequacy in dealing with life's problems. This lack of self-sufficiency leads man to look to external sources for strength. The eternal cry of weary man has been: "I lift up mine eyes unto the mountains, from whence shall my help come?"; and the eternal answer has been: "My help cometh from the Lord, Who made heaven and earth." For the mystic, all doubts are resolved, all difficulties wiped away in the fusion of self with divinity, in the ecstasy of the love of God pouring over the devotee in response to the love of the devotee for his God. The mystic experience is one of direct, intimate touching of the Godhead itself; the votary loses himself and achieves a sense of union with the Infinite, the En Sof; he loses individuality and gains immortality here and now.

Insofar as all religion seeks to provide the practitioner with the techniques for living, and especially insofar as these techniques relate to man's place in the world, all religion is mystical in the first instance. The Bible is permeated with the awareness of the immediacy of God; persons converse with Him, and He reveals Himself to them. The prophets are driven by the divine voice within; the Psalmist cries unto the Lord. Religion, like other human institutions, arises in answer to specific human needs; it creates complexes of behavior for its adherents, in the observance of which man may find the way to constructive and happy living. But, as in the case of other human institutions, it happens not infrequently that religion builds a structure of such intricacy that, while succeeding in solving the original problem, it creates others unforeseen. Mysticism, when confined to its proper realm of finding God, of enhancing life with the poetry of the quest for Him, achieves positive values for the believer. In his quest for God, however, man has often developed devious means for the attainment of his goal. Many mystics found the anxieties of daily life a formidable obstacle to union with God and they therefore withdrew from the tumult of the market place, turning anchorite.

The prophets and the rabbis of Israel did not permit themselves to lose touch with humanity in vague and misguided efforts at achieving closeness with divinity.

RABBI ISIDORE WOLF

It is a cardinal teaching of Judaism that the path to holiness or achieving God is the path of social justice; it is only by loving one's fellow men that one may discover the love of God. Concomitantly, Judaism has also taught that it is sinful to despise His gifts, and it has therefore, as a rule, frowned upon asceticism. On the other hand, Judaism has its fasts, its prohibitions against undue luxury; and there were many saints who, while not escaping from the hurly-burly of life, have yet found the practice of austerities helpful to the religious life.

Another vagary of which mysticism has sometimes been guilty is the not uncommon belief that one can attain divinity by the physical absorption of the Deity. There are obviously two ways of attaining unity with another: either by losing oneself in him or by making him part of oneself. The losing of self in the vast Endless has not satisfied many human minds. An occasional recluse or Hindu Buddhist may find total happiness in wishing himself into Nirvana; but the will to live, to be, to do, is by far stronger in most people than the idea of bliss attained by absorption in the Deity or His creation. A compromise was worked out in the mystery religions between union with God and the simultaneous retention of one's own personality, namely, in the rite of theophagy, whereby the worshipper absorbed the Deity rather than the reverse, a practice no doubt dating to the time when the eating of the lion's liver gave strength to the warrior. One of the motifs of the Reformation was the Protestant opposition to the doctrine of transubstantiation. Judaism, of course, was never a theophagous religion; it took its monotheism too seriously for such extravagances.

The mystical mind, ever unsatisfied in its hunger for union with the Infinite, drawing its nourishment from immediate feeling and rejecting the mediacy of reason, unrestrained by the deliverances of experience and free from the discipline imposed by the reality of the world of common sense, revels in the fantastic, in the impossible, in the illusionary and the miraculous. It creates worlds of angels and spheres, of halls and chariots, cosmogonies and theosophies. It delights in making worlds out of letter combinations and geometrical figures, out of fanciful elements and syzygies. Mysticism, in the first place a reaching out for a Friend in the universe, develops theories about this Friend and His universe; we find in mystical literature not merely the lyric of yearning and the song of longing, but also, and even overlaying and hiding such yearning, fantastic imagery weaving creation out of the spider web of sex, weaving divinity with the shuttle of space and time.

The simple and grand pronouncements of the opening words of *Genesis* become for the mystic a complex and often incomprehensible *Ma'aseh Bereshith,* a system of mystic lore which it was permissible to teach only to specially selected students; the picture of Deity departing from Jerusalem on its destruction depicted by Ezekiel under the influence of Babylonian temple art became, at the hands of the mystic, *Ma'aseh Merkabah,* a description of the throne of God, the teaching of which was even more restricted than *Ma'aseh Bereshith.*

The mystic sought short cuts in his yearning after God; and mysticism frequently deteriorated into magical rites and incantations which for many a mystic were the effective means of bringing divinity down to man. Longing for the nearness of God, for comfort and assurance that the world was not unfriendly and disinterested, the mystic wove his mystic web uniting heaven and earth; and it happened that he not infrequently found it easier to bring down the Godhead to him than to take the difficult climb upward. Theoretical mysticism (theosophy and cosmogony) gave way to practical mysticism (theurgy), the hope that by proper words and acts God would be brought to earth and one's heart's desire magically effectuated. Jewish mysticism is most intimately connected with Jewish learning and Jewish tradition. In the era of the Second Temple the Palestinian Essenes and the Egyptian Therapeutics and Philo dealt with ideas and developed doctrines which are properly designated as mystical.

II Esdras 14 tells of seventy mystical works whose mystic doctrine may not be revealed. The pseudepigraphic works are replete with allusions to mystic lore, such as stones of fire and the glassy sea, a complex system of angelology and demonology, antediluvian biography, the preexistence of souls, the efficacy of the letters of the alphabet in the creation of the world, the magical powers of numbers, the possibilities inherent in a correct knowledge of the use of the Tetragrammaton and the concept of the exorcism of demons.

Just how much of Jewish mysticism is original and how much is borrowed it is impossible to say. That it has Chaldee and Zoroastrian elements, that it was influenced by Gnosticism and in turn had a great influence on it, seems to be certain. Thus for example, such a typically medieval mystical notion of *ḳelifoth* (husks or layers of demonic impurity) is found in ancient Babylonian incantations; exorcism is both Egyptian and Babylonian. Anthropomorphism, a common and constant danger in mystical thought, is also an aspect of the Gnostic notions of the Godhead. Mysticism was an important undercurrent in Mishnaic and Talmudic times, and the danger of dabbling in its secrets is emphasized. Of four rabbis who entered Pardes or the paradise of mystical speculation, only Akiba succeeded in departing whole (*Hag.* 14b). There are many other allusions to the mystical experience in the Talmud and to the danger of entering upon it unprepared (cf. the young man whom fire consumed, *Hag.* 13a; also *Hag.* 2:1, on disclosing mystical secrets; *Meg.* 29a, on the awe of the mystical experience).

But while there is ample indication in the Hellenistic and Talmudic literature of the antiquity of mystical speculation in Jewry, its greatest growth and influence took place in the dark ages after the close of the Talmud and during medieval persecution. Mystical works are generally reported as coming from the hand of some well-known saint or hero in order to lend them the authority of hoary age; the very name for mystical literature in Hebrew, Cabala, means tradition. Thus a book on the twenty-two letters of the Hebrew alphabet is ascribed to Akiba; *Hechaloth,* a book on the prayers necessary for entrance into the celestial palace and for a vision of the divine throne, is attributed to Ishmael. The most significant of the early medieval mystical works is the Book of Formation (*Sefer Yetzirah*), composed probably in the 9th cent., but which in its last paragraph associates itself with "father

Abraham." It is at once a mystical and philosophic work. It seeks to answer the question of the how of creation; its interest is cosmological, and as such it was used by the later theologians and philosophers; however, its answer to the problem of creation is distinctly mystical and has thus become the basis for all later speculative Cabala. The *Sefer Yetzirah* represents God as having created His universe by means of the three forms of expression, Numbers, Letters and Words.

In this book, too, one finds the typical and common mystical list of seven properties and their opposites: life and death, peace and misfortune, wisdom and folly, wealth and poverty, beauty and ugliness, fruitfulness and devastation, and dominion and slavery. Other sevens (derived from the seven double letters) are the six extensions mentioned above and the Holy Palace in the middle; seven planets in the universe, seven days in the year, and seven gateways in man—two eyes, two ears, two nostrils and the mouth. By means of each of the double letters God formed a property, and from them He made a planet, a day and a "gateway" of man.

The foundations of the twelve simple letters are sight, hearing, smell, speech, taste, coition, work, movement, wrath, mirth, meditation and sleep. Each letter reigns over one of these human activities, and by means of each pair God has produced the twelve zodiacal signs in the universe, the twelve months of the year, and the twelve organs of the human body (a pair each of hands, feet and kidneys, as well as the liver, spleen, gall, stomach, colon and the bowels). Here we have a complete system of correspondence between universe, year and man; and this correspondence is metaphysical and basic rather than merely accidental. Furthermore, not only are the numbers 3, 7, 10 and 12 significant, but also the number 22 (which is the number of the letters of the Hebrew alphabet), whose significance is mystically deduced from the fact that it is the sum of 10 and 12.

There is much that is enigmatic in this book; the tendencies which derive from it are many and contradictory. Philosophers like Saadia were interested in it; anti-rationalists like Solomon ibn Adret looked upon it as sublime knowledge, revealing the very essence of true religion; and, finally and most importantly, it became for the speculative mystic another holy scripture. Commentaries were written on it by Isaac the Blind (end of the 12th cent.) and a contemporary of his, Azriel.

Later, another book which proved influential in the development of speculative mysticism appeared, *Bahir* (Brilliance). In the 13th cent. there was a quickening of practical Cabala in Abraham Abulafia, whose hunger for reality neither Talmud nor philosophy nor even Cabala, so far as it was purely theoretical, could satisfy; he employed the ineffable Tetragrammaton for magical purposes to cause the spirit of God to descend on him; he manipulated the letters of the Torah and (since the letters of the Hebrew alphabet also have numerical values) derived from their manipulation an unfolding of the secret of the date of the end of days.

All these mystical tendencies and practices were finally given definite form in a work completed in the 14th cent. and called *Zohar* (Splendor). The *Zohar* is the magnum opus of the Cabala, and the bible of mystics. Tradition ascribes it to Simeon ben Yohai of the 2nd cent. It is a compilation of many hands, the different sources often being easily discernible; the product of many centuries of feeling and thinking, in its final form it is the work of Moses de Leon. Because of the pseudepigraphical claims made for it, but more especially because of the antiquity of its ideas and method and the familiarity of its style, it quickly took its place in mystic literature; despite a natural hesitancy in accepting a work one had never heard of which purports to be ancient and which taught secret doctrine, it was widely received as authentic before a century passed. In form it is a commentary on the Pentateuch; but the text is but the key by which are opened the doors to a world neither Biblical nor current, a world of angels and saints, of divine emanations, sublime prayers and millennial calculations. It uses the Midrashic method and tells the Midrashic tale; its language is Aramaic. Its ideas are a fusion of Chaldee, Zoroastrian, and other mysticisms.

The *Zohar* inherits the ethical dualism of Parseeism; the world is an everlasting theatre of war between good and evil, light and darkness, holiness and defilement. It accepts a thought already found in Talmudic literature, that of the fifty gates of holiness and of the fifty gates of defilement; holy angels residing in the one, satanic demons in the other. It teaches also the doctrine of the *ḳelifoth* and their danger to human welfare. Souls migrate from one existence to another; when they are finally purified they will again be clothed in the garment of the light of purity. The *Zohar,* with all its vagaries, was essentially concerned with the ethical problem; every act of man here on earth affects all the higher spheres. It is man's duty to achieve perfection of self and thereby make possible the correction of other worlds (*tiḳḳun*). At the end of days, the Messiah will come to deliver all the worlds from the imperfections of evil spirits. Mingled with highly ethical aspirations, poetry of remarkable beauty and prayers which achieved the most profound expression of yearning for the Divine, the *Zohar* includes fantastic calculations for the date of the coming of the Messiah, a belief in the efficacy of charms and descriptions of the divine nature which can be represented only as curious.

In the Middle Ages both Christians and Jews conjured devils, wrote amulets and practised "magic." The great among the mystics (Isaac Luria, Hayim Vital, Moses Vital, Samuel ben Hayim Vital, and others), however, taught that the only way to achieve the efficacy of the mystical technique was to lead a pure and holy life, to practise philanthropy, to do penance for sins, and to concentrate on holy thoughts (Kavvanah). Their exercises included midnight vigils (Hatzoth) and frequent ritual bathing (Tebilah). For the Jews of that period, who had fallen on evil days, what with persecutions and misunderstandings by their neighbors, the yoke of Galuth (exile) was much lightened by the hopes and aspirations which these mystical doctrines and practices gave them. When the study of Talmud seemed arid amidst endless poverty and suffering, mysticism with its white light of nearness to God strengthened and consoled sorrowing Israel. The Hasidic movement was just such an expression

of yearning for direct communion with the Source of all things; that branch of Hasidism known as Habad emphasized the intellectual aspect, while other forms quickly fell into the so-called practical Cabala of charms and wonder-working.

The story of mysticism in Jewry is a compound of the loftiest aspirations, the highest ethical principles and the profoundest longing of the human breast for God Himself on the one hand, and a senseless manipulating with letters and numbers, strange beliefs as to the nature of the Godhead and mystifying formulas for exorcising demons, on the other. Mysticism has been the mainspring of prophetic idealism, as well as of rabbinic legalism and philosophic systematization. In a very real sense it is true that one can not achieve the highest spirituality unless he be a mystic. It is the glory of Judaism that the keenest Halachist as well as the philosophic rationalist could at the same time be a mystic devotee. Whether one be theoretician, poet, or legalist, the path to Jewish mysticism lies through the service of one's fellow men; it can not be overemphasized that to the Jew mysticism did not mean eschewing this world in the selfish concern with personal salvation. Jewish mysticism, like all other phases of Jewish tradition, is primarily oriented toward a more just world.

MYTHOLOGY. All persons are concerned with the problems of life and the mystery of death, the origin of the world and the end of man. Mythology is the answer which primitive man gave to the eternal questions of how, what and why. Mythology for early man is science, philosophy, religion and ethics; it explains the universe, interprets the seasons, expounds the relations of gods and men, and illumines social custom and religious practice. Not only, however, is mythology expository and didactic, formulating the thought and mores of its day, but significantly, it is also the literature of primitive man, whose great poetic creations were the very epics of man, nature and the gods. And even as today, so in ancient times was it true that some peoples appear more gifted than others. Thus among the peoples who lived in Semitic countries, the southerners, in Arabia, showed far less insight into human nature, or imagination as to the divine nature, than did the great Sumerian and Babylonian cultures of the east and north. When one speaks of Semitic mythology one thinks of such poems as the Gilgamesh epic of the Babylonians or the poem of Tagtug and Dilmun of the non-Semitic Sumerians.

The most striking fact in the science of folklore is the universality not only of its motifs, which by the very definition of the mythos, is to be expected, but the constant recurrence of similar themes; we are not surprised to find astral and nature myths told by all men, but it is perhaps remarkable that so many of them should tell of the weeping and dying god, of man losing immortality by the eating of a certain plant or food, of the serpent intimately connected with vegetation and rejuvenation, of a flood bringing havoc and destruction, and of the jealousy which the gods bear toward men.

The question of the amount of mythology in the teaching of ancient Israel is one that has concerned many students of the Bible. Jewish tradition frankly admits that "in the beginning our fathers were votaries of a strange worship," that is, they were idolators. The first Hebrew patriarch, Abraham, left Ur of the Chaldees and traveled west. Israel was in almost continuous contact with the great northeastern civilizations of the Fertile Crescent from the days of Abraham in 2000 B.C.E. to the Persian conquest in the 6th cent. If therefore one were to seek out tales parallel to the stories of Israel one would go to the cuneiform tablets of Sumer and Accad. And one does find many cultural parallels between the Hebrews and the Babylonians; but to say that Israel told tales like the Babylonians is to gloss over the signal circumstance that the story of Israel is more unlike the Sumerian and Babylonian than alike. Although there is a clear influence of Babylonian mythology on the story of the Hebrews, the Hebrews took that mythology, analyzed its true purposes, delved into the problems which it sought to solve, purified it of its crude elements so objectionable to the advanced prophetic concept of God, and in a sublime style converted the merely intelligent Babylonian myth into the profound Hebraic tradition, permeated with an ethical monotheism.

We shall now indicate a few Biblical stories which have their counterpart in the mythologies of other peoples; the process of spiritual purification and ethicization which they underwent in the course of their adaptation into the Hebrew tradition will become quite apparent. All the mythologies (the Sumerian, the Accadian, as well as the 15th cent. classical Phoenician as discovered in the tablets found at Ras Shamra) concern themselves with the problem of creation. The Babylonian story is a solar myth, dealing with the triumph of the vernal sun and the spring equinox. The Sumerian version places emphasis on grain and floods. The Hebrew story is in two parts; the first presents a majestic description of how God by His mere word created the world and all that is therein; the second is more nearly like the Sumerian, telling how God sent rain to water the soil in order that plants might grow; these two versions are also similar in that man is here apparently made before the plants, even as in the Sumerian tale. The story of the Garden of Eden seems to be purely Hebraic; the Babylonian poems of creation do not mention it at all; the Tigris and Euphrates may probably have been taken from a Sumerian source; but the other two of the four Biblical rivers (*Gen.* 2:10-14), Pishon and Gihon, appear in no other known creation story. It is curious that the name of god in the Ras Shamra myth is Alion, comparable to the Biblical Elyon of *Gen.* 14:19.

The probable counterpart of the Biblical Adam is the Canaanitish-Babylonian Adapa of Eridu (m and p are interchangeable linguistically; it is also not impossible that "Adam" was a deliberate attempt to relate the word for "man" to *'adamah,* earth). This Adapa is famed as a sage; the god Ea gave him great understanding so that he might make all the nouns of language, naming all the concepts in the earth. The Biblical Adam gives names only to the animals and fowl (*Gen.* 2:20). Adapa is deprived of eternal life when he refrains from eating certain food set before him; it is the food of eternal life, but Ea had warned him that to eat it would mean death. In comparing this story with that in *Gen.* 3 one is struck by the moral neutrality of the Babylonian story, whereas the Biblical tale is suffused with ethical motive. The serpent is a symbol of the earth goddess, is associated with fire, connected also with trees and woman, and is symbolic of gods of vegetation in the Sumerian tale; in the Gilgamesh Epic the serpent seizes the plant of rejuvenation.

In discussing the tremendous modifications which the genius of Israel made in the myths and cults of neighboring peoples before it granted them acceptance into its own thought and practice, we cannot omit the Sabbath, even though this is not the place to treat of the Sabbath at any length. The day of the full moon was Shapattu or Shabattu for the Babylonians. A remnant of this is probably to be found in the Biblical expression "new moon or sabbath" (*II Kings* 4:23) apparently implying that sabbath was full moon. On the Shabbatu, the "shepherd of great peoples" was prohibited from eating flesh cooked on coals, from making sacrifices, or changing into clean garments. The physician was not permitted to "lay his hand on" a sick person. It was an evil day, a day uncertain for the doing of anything. If this really was the origin of the Jewish Sabbath (and scholars have not yet reached any agreement on the matter) it is most momentous and indicative of the spiritual power of Israel that it transformed a day of bad luck on which it was dangerous to attempt anything into one of the great institutions of civilized society.

Since it is one function of the myth to account for the origins of the techniques of the culture of the group, it is interesting to note that the Sumerian story has Lumha, title of Enki, as patron of singers; the Biblical Lemech has a son who invented the harp (*Gen.* 4:19 et seq.). Even as the Sumerians had ten kings in the beginning of time, so too does the Bible list ten patriarchs between Adam and Noah. The Sumerian Adam is Alulim, its Noah counterpart is Ziûsudra. As for Noah himself, many scholars hold that the name is derived from the Ethiopic *noha,* "to be of long duration," *eneha,* "cause to be far off"; Noah thus means either "he of long life" (which is the Babylonian equivalent of Zi-ud-sud-ra, "he who bears (?) life of eternal days") or "the far away" (the Babylonian equivalent of Utnapishtim of the Gilgamesh Epic). Critical writers are agreed that the Babylonian deluge story is the Biblical deluge counterpart. Some hold that the flood story represents the yearly devastation wrought by the late winter rains; others look upon it as an imaginative version of an actual flood which took place at some very early date. In either event, the flood story is connected in Semitic mythology with creation.

Granted that a tale is branded a myth, does it necessarily follow that it is entirely untrue? Thus we have a possible happening of an actual flood; and yet the so-called flood story is held by some to be mythical. In general folklorists will agree that a myth might carry within it historical elements. How much of it is legendary is frequently difficult to determine. On the other hand, when a story is repeated in various cultures, the likelihood is that it is mythical; though the mere fact of its being wide-spread, in and of itself, will of course not be a priori proof of its mythical character, though it will subject it to suspicion. To call a story myth is not necessarily to imply that it is entirely fiction, however. The essence of the myth is that it attempts to explain a natural phenomenon, the sun, the moon, the seasons, generation and decay. Because the motif of myth and its etiology lie deep in human nature it is not surprising to discover the same myth in many different cultural groups. To find a presumably historical tale duplicated even if only in a few broad strokes is enough to lead the scholar to investigate the probability of its being myth explaining some natural phenomenon. The fact that Samson's strength lies in his hair and that he undertakes twelve labors leads many writers to consider Samson a sun myth; the hair are the sunrays, the twelve labors are the twelve hours of the day, and his defeat, blindness and death caused by the cutting of the hair are the end of the sunrays and the oncoming of the dark of night. Thus Samson becomes the Jewish counterpart of Hercules; and yet this does not exclude the possibility that there may actually have been a man Samson who did free his countrymen from the oppression of the Philistines.

In other passages in the Bible, some of the details of the biographies of the characters show influences of mythological narratives. Thus the preference for the younger son over the elder (as with Jacob, Joseph and David), the frequent instances of the birth of the hero after a long period of childlessness (Isaac, Samuel), or the rescue of the hero as child from threatening peril (Isaac, Moses), all have parallels in ancient mythology. Such stories as Jacob's wrestling (*Gen.* 32:25-33), Korah's rebellion (*Num.* 16) or Jephthah's daughter (*Judges* 11) may contain mythological accretions to actual history.

Summing up, one may say that even if some of the Biblical narration be shown to retain parallels with the legend of other peoples, the Hebrew story is so far more meaningful that it can no longer be characterized as mere myth; the Hebrew narration is more preachment than tale—though the preaching has been done so well that its moral appears only indirectly, and he who reads while running does not realize that he is learning something, for all that which he reads is in truth an interesting tale. N

NAAMAN ("pleasantness"), successful Syrian general of Ben-hadad II, wondrously cured of leprosy in the miracle story of the prophet Elisha, told in *II Kings* 5:1-27. Learning of the prophet's healing powers from an Israelite slave girl attached to his household, Naaman was sent by his master with a letter to the king of Israel, commanding the monarch to cure the officer of his affliction. The king (probably Jehoram, the son of Ahab), fearing the strange demand was a plot, tore his clothes in grief. Elisha intervened, asking that Naaman be sent to him to show "that there is a prophet in Israel." The prophet told Naaman to bathe seven times in the Jordan. The officer at first haughtily resented the advice and rejected it, but was finally persuaded by his servants to obey, and as a result was cured. His grateful offer of large gifts to the God of Elisha was refused; he then requested and was granted permission to take home enough of Canaan's soil to enable him to erect thereon an altar to worship the Lord. He admitted that he had to serve Him privately, as in public he had to worship Rimmon, the god of his master. Gehazi, who accepted gifts from Naaman against the wishes of Elisha, was himself stricken with leprosy. The purpose of the Naaman story is clearly to demonstrate the miraculous powers of Elisha.

Tradition explains the sentence that through Naaman God had given victory to Syria (*II Kings* 5:1) by identifying him with the archer whose arrow had mortally wounded Ahab (*I Kings* 22:34; see Josephus, *Antiquities,* book 8, chap. 15, section 5 and *Midrash Ps.* 61). His being smitten with leprosy is ascribed to the fact that he was haughty (*Midrash Num.* 7:5) or that he captured a girl and gave her to his wife as a slave (*Tanhuma, Tazria,* end). Naaman was regarded as a semi-proselyte (*ger toshab; Git.* 57b; *Midrash Deut.* 2), yet his conversion was superior to that of Jethro (*Mechilta, Yithro*). The New Testament declares that Naaman was the only leper cured by Elisha (*Luke* 4:27).

NAANE, *see* COLONIES, AGRICULTURAL (under HANOAR HA'OVED).

NAAR, DAVID, newspaper publisher and politician, b. St. Thomas, West Indies, 1800; d. Trenton, New Jersey, 1880. He traced his descent from an old family of Portuguese Jews whose historical record goes back to the Spanish expulsion of 1492. He started as a commission merchant in New York city but, wiped out by the fire of 1835, removed to take up farming in New Jersey.

In 1844 he was a member of the state's constitutional convention and fought for the articles on religious liberty. The same year he accompanied Buchanan on his election tour, and when the latter was secretary of state under President Polk, Naar was appointed consul to his native St. Thomas (1845-48), then an important commercial center. In 1849 he served as mayor of Elizabeth; he was clerk of the state assembly from 1851 to 1852, and in 1865 he was state treasurer.

He assumed control of the newspaper *True American,* in Trenton (in 1853), and increasingly extended its influence until his retirement in 1866.

Lit.: Appleton's Cyclopedia of American Biography, vol. 4, p. 475; Markens, Isaac, *Hebrews in America,* pp. 265-66.

NAAR, JOSEPH L., editor, b. Elizabethtown, New Jersey, 1843; d. Trenton, New Jersey, 1905. He was the son of David Naar, and began work with his father's paper, *True American,* in 1867; by 1869 he was part owner. On the death of his partners the business passed into his hands, and subsequently became a leading New Jersey organ, incorporated in 1902, and continuing as a family institution under Naar's son Henry.

Naar was active in public life. In 1873 he was secretary of the commission that revised and amended the state constitution. Several years later he served Governor Ludlow as private secretary, and in 1894 he was on the commission to revise the state's judiciary system. He was a trustee of the Trenton public library.

Lit.: National Cyclopedia of American Biography, vol. 13, p. 93.

NABAL ("fool"), a rich farmer in the neighborhood of Maon in the hills of Judah; he seems to have been a Calebite (reading *kelabi* for *kalibo* in *I Sam.* 25:3). The period was one of considerable lawlessness, and David and his group of followers had constituted themselves a sort of frontier guard against bandits. When Nabal had a sheep-shearing at Carmel, David sent an embassy to request a contribution for the support of his followers. Nabal, however, made a churlish answer to the request and repelled the followers of David, which made the latter so angry that he set out to exterminate Nabal and his family and only was dissuaded by the words of Abigail, the clever wife of Nabal. When Nabal heard what had happened, he died of fright and David married Abigail, thus strengthening his position in the tribe.

As it seems hardly likely that a family would call a child "fool" as a name, the word Nabal is probably an epithet. The verdict of Abigail upon her husband should therefore be rendered: "They call him the fool, and he is full of folly" (*I Sam.* 25:25).

NABARRO, DAVID NUNES, bacteriologist and pathologist, b. London, 1874. He received his medical degree from the University College and Hospital in London. From 1899 to 1910 Nabarro was assistant professor of pathology and bacteriology at University College and from 1912 to 1938 he was director of the pathological and bacteriological departments of the Great Ormond Street Children's Hospital, and he held many other directive and consultative posts in hospitals. Much of Nabarro's investigations had to do with sleeping sickness; he was a member of the Royal Society's Sleeping Sickness Commission to the Uganda (1903) and subsequently, with Surgeon-General Sir David Bruce and Professor A. Castellani, he was the discoverer of the cause and mode of transmission of sleeping sickness. Among Nabarro's activities in the Jewish communal life of England were his service as consulting pathologist for the London Jewish Hospital

(1912-39) and his membership on the committee of the Jewish Health Organization of Great Britain. He was the author of *The Laws of Health* (1905); the translator and editor of *Trypanosomes et Trypanosomiases,* by Laveran and Mesnil (1907) and author of the *Sleeping Sickness Commission Reports of the Royal Society* (1903-5).

NABATEANS, an Arabian tribe of unknown origin, which appeared on the outskirts of Palestine in the Persian period (6th to 4th centuries B.C.E.) and seized Mount Seir (Edom). They occupied the strong fortress of Sela (Petra) and afterwards took Rabbath Ammon (Philadelphia) in Transjordan. Their greatest power was in the years after 200 B.C.E. They at first supported the Hasmoneans in their struggle for independence from the Syrians, but when the Jewish kingdom became free and strong, the Nabateans opposed them, battling with Alexander Jannaeus (103-76 B.C.E.) for the control of the Transjordan. They ruled over Damascus for a short period (about 85 B.C.E.). In the war between the brothers Hyrcanus II and Aristobulus II (67-63 B.C.E.) King Aretas III of the Nabateans attempted to restore the former to the throne, but was persuaded by the Romans to withdraw his troops. Later, Malchus I and Obedas II fought against Herod the Great (37 to 4 B.C.E.) and Aretas IV was victorious over Herod Antipas (4 B.C.E.-39 C.E.).

The Nabateans became tributaries to Rome in 63 B.C.E., and they supported the Romans in their wars with the Jews, becoming notorious for their hatred and vandalism. In 106 C.E. the entire Nabatean kingdom was made a Roman province by Trajan. The Nabateans used Aramaic for their inscriptions and coins.

Lit.: The standard Jewish histories for the period.

NABLUS, city in central Palestine, in a pass between Mount Ebal and Gerizim, about a mile and a half northwest of Khirbet Balata, the site of ancient Shechem. After the destruction of Shechem by John Hyrcanus in 128 B.C.E. the latter sank to the level of an unimportant village. In 72 C.E. Vespasian founded a new city, Flavia Neapolis, that is, "The Flavian New City" (Flavius being his own name). Under the name Neapolis, corrupted by the Arabs to Nablus, the city has continued to flourish in a modest way ever since. The present population of the town is about 20,000, practically all Moslems. There are a few Christians and about 150 Samaritans. Its proximity to Shechem, where the Samaritan sect was first developed, and to the Samaritan holy mountain of Gerizim explain why the Samaritans remained attached to Nablus, even after their numbers had dwindled to the vanishing point.

NABOKOV, NICOLAS, composer, b. St. Petersburg, 1903. After preliminary studies in Russia, he became a pupil of Busoni. He came to the United States (1933) on a scholarship of the Barnes Foundation of Merion, Pennsylvania, settling here permanently. He first attracted attention as composer in 1928 when a "ballet oratorio" was introduced by the Diaghilev Ballet Russe. In 1930 his *Symphonie Lyrique* was performed in America by such conductors as Koussevitzky and Monteux. Other performances of his works, including the oratorio *Job,* the orchestral tone poem, *Le Fiancé,* and his Concerto for Piano and Orchestra

Relief of Tyche, discovered at the Nabatean Temple

added to his rapidly growing fame. In 1934 the Monte Carlo Ballet introduced his *Union Pacific,* written upon a commission (text by Archibald MacLeish). Nabokov is a member of the faculty of Wells College in Aurora, New York.

NABOTH ("sprouts" or "height"), a Jezreelite, who owned a vineyard on an ancestral estate in Samaria, contiguous to the palace of King Ahab of Israel. The king attempted unsuccessfully to obtain the paternal estate for a vegetable garden by purchase or exchange (*I Kings* 21). "Vexed and sullen," the king refused food. But Jezebel, his unscrupulous queen, had Naboth stoned to death on trumped-up charges of blasphemy and treason. Upon announcement of Naboth's death, Ahab proceeded to the vineyard to take possession. There he met the prophet Elijah who denounced his vile act, and pronounced a fate on Ahab and all his house similar to that meted out to Naboth and apparently also to his sons (*II Kings* 9:26). Because of Ahab's repentant mood, however, the blow did not come "until his son's days," when the king fell in battle with Syria (*I Kings* 22:34-40), and his son Jehoram and Jezebel were slain through Jehu's conspiracy (*II Kings* 9).

A later tradition held that the execution of Naboth took place at Jezreel, rather than outside the city, where the dogs licked up his blood. A rabbinic legend states that Naboth had a beautiful voice that charmed the crowds in Jerusalem whenever he visited the city. Once when he failed to appear, some disappointed and unscrupulous people brought against him the false charges that resulted in his execution.

NACHAS, NACHES, *see* PHRASES, POPULAR.

NACHEZ, TIVADAR (originally Theodor Naschitz), violinist and composer, b. Pest, Hungary, 1855; d. Lausanne, Switzerland, 1930. He studied with Joachim in Berlin and Léonard in Paris, and established himself in the French capital, from which he embarked on extensive European tours. He scored particular success in London where his phenomenal technique and magnetic personality found large and responsive audiences. In 1916 he came to the United States, settling temporarily in California. His farewell

concert performance took place in London in 1926. Although he composed two violin concertos, songs, masses, and numerous pieces for the piano, he is best known for his excellent and authoritative editions of two violin concertos by Vivaldi, which are in the repertory of most concert violinists.

NACHIMSON (NAKHIMSON-SPECTATOR), MIRON ISAAKOVICH, economist, b. 1880, Russia. He went to Germany in his early years, studied economics there and in Switzerland. He was graduated in 1913 and became an active member of the Social Democratic Party, publishing articles in the official party weekly, *Die neue Zeit,* under the pseudonym Spectator. In 1913 Nachimson published *Die Staatswirtschaft,* a study on administration, especially on fiscal matters; for many years it was the only Marxist treatment of public administration in the German language which kept in touch with the advancement of science.

During the war of 1914-18, Nachimson resided in Switzerland. In 1917 the directorate of the Swiss Trade Unions published Nachimson's study *Die Wirtschaftslage der Schweiz im Weltkriege.* In the same year Nachimson published also his inquiry on *Imperialismus und Handelskriege,* which was written at the same time and place as Lenin dealt with the same problem. After the outbreak of the Russian revolution Nachimson left Switzerland for Russia in order to fight for Bolshevism. He published *Das Sozialisierungsproblem in Deutschland* (1920); *Die Weltwirtschaft vor und nach dem Kriege* and *Wirtschafts-statistisches Handbuch für Sowjetrussland* (1922). From 1930 on Nachimson, who assumed the name of M. I. Spectator, edited in Moscow the *Annuaire statistique de l'agriculture mondiale.*

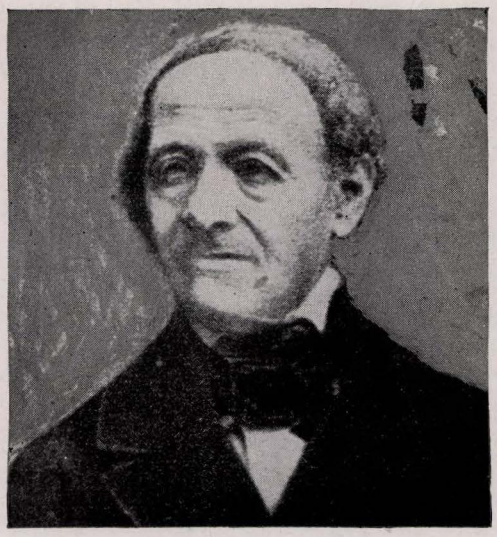
NACHLATH YEHUDAH, see COLONIES, AGRICULTURAL.

NACHMANIDES, *see* NAHMANIDES.

NACHMANSON, ERNST, philologist, b. Stockholm, Sweden, 1877. He was appointed lecturer in Greek language and literature at the University of Upsala in 1904, and became professor at the high school of Gothenburg in 1919. Nachmanson's studies on the popular language of ancient Greece were widely esteemed when he published the first collection of his contributions to that difficult problem in 1910. From 1913 on he was generally regarded as an outstanding specialist on ancient Greek inscriptions. In 1921 he wrote an important book dealing with Hippocrates and his time. In 1938 he edited a study on the German historian Theodor Mommsen.

On several occasions Nachmanson published the results of his inquiries into the history of the formation and transformations of the text of the New Testament; on each he stood the test of his exact philological methods. He was elected member of the Swedish Academy of Sciences and of learned societies abroad.

NACHOD, JACOB, banker and communal worker, b. Dresden, Germany, 1814; d. Leipzig, Germany, 1882. After his father's death, Jacob Nachod was educated at the Samson school in Wolfenbüttel (1826 to 1829). Nachod learned modern languages in



Jacob Nachod

the house of his brother who later became professor at Edinburgh. In 1830 Nachod entered the banking house of Meyer & Co. where he remained until 1839. That year Nachod became partner in the banking house of Knauth at Leipzig which subsequently was named Knauth, Nachod & Kühne and, under Nachod's direction, extended its influence to New York.

In 1844 Nachod founded the Gesellschaft der Freunde at Leipzig, a social club which, however, rendered it possible to unite the Jews of Leipzig before they were allowed to found a Jewish community. Not until 1846 were the Jews of Leipzig enabled to found a community and to erect a synagogue. They elected Nachod a trustee. In 1877 Nachod became president of the Jewish community of Leipzig. He was interested mainly in Jewish education and in relief for the poor. While Nachod found time to study commercial law and modern languages, he supported Jewish literary associations, especially the Mendelssohn-Vereine. He remained true to the tithe, and gave ten percent of his income to the poor. Nachod was elected city-councillor of Leipzig in 1852. He took an active part in the founding of the Deutsch-Israelitische Gemeindebund and conducted delicate negotiations with the government of Saxony, which was opposed to any organization that would affiliate the Jews of Saxony with the Jews of the rest of Germany. From 1877 on Nachod was president of the Gemeindebund, after having collaborated steadfastly with his predecessor Moritz Kohner and their mutual friend Emil Lehmann. Nachod provided for the Jewish communal workers, especially the officers of the Jewish communities of Germany. He also supported devotedly the Alliance Israélite Universelle. The Jews of Germany lamented Nachod's death as "the loss of their father."

Lit.: Deutsch-Israelitischer Gemeindbund, *Blätter der Erinnerung an Jacob Nachod* (1882).

NACHOD, OSKAR, Japanologist, b. Leipzig, Germany, 1858; d. Dresden, Germany, 1933. He was educated at the commercial school of Leipzig, then entered the important textile house of C. G. Reisig (Leipzig), founded and owned by his father. After a long stay in France, England and the United States, Nachod re-

turned to Leipzig, and became junior partner in his father's firm. In 1894 Nachod retired from business and studied history. His Ph.D. thesis (1897) dealt with the relations of the Dutch East India Company with Japan during the 17th cent.

From 1898 to 1900 Nachod circumnavigated the world, following which he began to write his great work *Geschichte von Japan.* The first volume came out in 1906, the third in 1930. Soon he realized that he would never live to see the completion of his work unless he abandoned the thoroughness of his inquiry. Nachod, however, continued his very scientific researches, and his work remained a fragment, reaching only the year 850 C.E. Nevertheless, Nachod's studies were epochal in the development of knowledge of Japan in Europe. Nachod was the first German scholar, and one of the first Europeans, who penetrated the very soul and mind of Japan. In 1928 he published *Bibliography of Japan.* He sacrificed his fortune to the pursuit of his studies, and received no reward other than the esteem of specialists.

NACHTLICHT, LEO, architect, b. Bielitz, Moravia, 1872. He came to Berlin during the early part of his career, and was one of the pioneers in modern architecture. He was best known for his Gurmenia Haus, at the Zoologischer Garten railroad station in Berlin (1929), and for his design for the projected building of the Berlin independent artists ("Secessionists") at Savigny-Platz, Charlottenburg, which won a first prize at the Berlin architectural exhibition of 1931. Nachtlicht's designs, from the very beginning, were distinguished by their conformability to purpose and the clarity of the spatial division, but matter-of-factness did not sink into insipidity. He belonged to the school of architects that sought, with the aid of variegated forms, to apply the modern principles of logic and simplicity in an individualized and vivid manner. Nachtlicht was living in the United States in 1942.

Lit.: Deutsche Kunst und Dekoration, vol. 52 (1923) 341; *Kunst und Künstler,* vol. 26 (1927-28) 280; *Kunstblatt,* vol. 10 (1926) 26.

NADAB, *see* ABIHU.

NÁDAI, PÁL, historian of art, educator, b. Cegléd, Hungary, 1881; was living in Budapest in 1942.

He taught history of art at the Hungarian School of Arts and Crafts in Budapest. Inspired by the arts and crafts movement in England, he attempted the awakening of a similar taste and outlook on life in the Hungarian public. His books include: *Az angol szociális művészetről* (On English Social Art; 1910); *Könyv a gyermekről* (A Book on Children, 2 vols.; 1911); *Iparművészeti törekvések a XX. században* (Tendencies of Arts and Crafts in the 20th cent., 1912); *Az élet művészete* (The Art of Life, 2 vols.; 1914); *Izlés, kultúra és szülőföldszeretet* (Taste, Culture and Love of the Homeland; 1917); *Asszonyi pompa* (Woman's Pageantry; 1925). He also published a volume of short stories. In 1941 he was contributing to the magazine *Libanon.*

NADEL, ARNO, poet, composer, musicologist and painter, b. Vilna, Lithuania, 1878. He came to Germany in 1890 and lived in Berlin from 1895, where he studied at the Jewish seminary. After 1933 he emigrated to Palestine. In Berlin he was a music critic for several newspapers, and director of the choir in one of the synagogues of the Jewish community. Nadel, an expert in the field of Jewish liturgical music as well as on folk-songs of Eastern European Jews, adapted old synagogal music for modern use, and planned to compile a comprehensive edition, parts of which had been published by 1942. In many essays he interpreted the character of Jewish music and the necessity for adapting it to modern needs. In 1919 Nadel published *Jonteff Lieder* in ten parts, and in 1920 and 1923 *Jüdische Volkslieder.*

The main feature of his poetical works is a kind of religious mysticism which makes him an exponent of the literary movement of expressionism. Most of his poetical works were lyrical poems, many of them definitely Jewish in character. They were published in the following collections: *Um dieses alles* (1914); *Das Jahr des Juden* (1920); *Der Tom* (1921); *Das gotische Alphabet* (1923); *Heiliges Proletariat* (1924); *Der weissagende Dionysos* (1925). Nadel wrote the cycle of poems *Rot und glühend ist das Auge des Juden* (1920) which accompany and illustrate eight etchings by Jacob Steinhardt. Besides his lyrical works, he wrote dramas: *Adam* (1917); *Der Sündenfall* (1920); *Die Pest* (1928), based on fragments by An-ski; *Cagliostro und die Halsbandgeschichte* (1928); and the mystery *Orpheus* (1929). In the field of painting and drawing Nadel's outstanding works were portraits.

NADELMAN, ELI, sculptor, b. Warsaw, 1885. He came to the United States as a young man in his twenties. Alfred Stieglitz gave him his first American exhibition in December, 1915, at "291," the famous gallery in lower Fifth Avenue, New York. The previous year André Salmon, in an article in *L'Art Décoratif,* had discussed Nadelman as an investigator in the field of traditional sculpture, and certainly in his earlier work Greek classical influence is obvious. Of his earlier sculptures *La Mystérieuse* is one of the finest. Thorough in his workmanship, Nadelman has been even more noted for the wit and satire of his figures, especially that in tinted sculpture, entitled *Host, Hostess, Dancer, Pianist, Tango* and *Chef d'Orchestre.* The modern spirit enters other sculptures in bronze or marble, some of his nudes, with their small heads, and large breasts and enormous thighs, markedly departing from the Greek tradition. Nadelman made the figures over the Fuller Building in New York city, and he is represented in the Brooklyn Museum, the Rhode Island School of Design, and the Detroit Institute of Art.

Nadelman, however, seemed to consider his drawings, exceedingly spirited, of more importance than his sculpture. In the *Younger Artists Series,* published in 1922, he wrote: "These drawings made sixteen years ago, have completely revolutionized the art of our time. They introduced into painting and sculpture *abstract* form, until then wholly lacking. Cubism was only an imitation of the abstract forms of these drawings and did not attain their plastic significance. Their influence will continue and will be felt more profoundly in the art of the future."

Whatever may be the opinion of critics concerning this large claim, there can be no question in regard to the historical interest and importance of another phase

of Nadelman's art activities. Over a course of years his wife and he collected some 15,000 items of folk and peasant art—kitchenware, tools, toys, dolls, iron work, and the like. This collection, mainly American, is owned by the Museum of Natural History, New York city.

GEORGE S. HELLMAN.

NADIR, BANU, *see* BANU NADIR.

NADIR, MOISHE (ISAAC REISS), Yiddish writer, b. Narajow, Poland, 1885. He was brought to the United States at the age of fourteen, and his first published work appeared in 1902, with the contribution of verses to the *Teglicher Herold.*

From that beginning, while he was barely out of his adolescence, Nadir moved into a position of singular significance in 20th cent. Yiddish literature. Versatile and prolific, he nevertheless held faithfully to one conviction: that the Yiddish language is flexible, rich, colorful, sententious and subtle to a degree not achieved by other languages. His own talents, particularly in poetry, were of a kind to combine with these qualities, for he has been compared to Peter Altenberg and even more truthfully to Heinrich Heine, with whose mordant felicity of expression he had much in common.

The first volume of poetry to be published by Nadir was *Vilde Roizen* (1915). *Fun Mensh zu Mensh,* an anthology edited with Moishe Leib Halpern, appeared in 1916. Others of Nadir's books were *In vilden Vertervald, Oif Gelechter, Unter der Zun,* a collection of his later work (1926), and five volumes chosen from his collected works (1928). But all of his published volumes represent only a small portion of what has appeared; not only in verse, but in feuilletons, dramatic criticism, and sketches, Nadir was represented in every periodical, long- or short-lived, that existed during the long period of his production. He wrote under several pseudonyms, and much of his work has been lost. He also wrote several plays, translated some of Hauptmann, Anatole France, Peter Altenberg, and Jerome K. Jerome into Yiddish, and also wrote for English periodicals. One book, *Peh el Peh,* written with Joseph Kling, appeared in English.

Nadir was for a time assistant editor of the *Groisser Kundes* and also co-editor of *Der Yiddisher Gazlan.* Later he worked with the *Day,* for a time. For many years he was a daily contributor and columnist for the *Freiheit,* but renounced his Communist affiliations (1939) upon the signing of the Russian pact with Germany. He returned to the staff of the *Day,* and in 1942 was still a regular contributor to that paper.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930) cols. 500-13.

NADJARA, ISRAEL, Hebrew lyric poet and Cabalist, b. Safed, Palestine, 1555; d. Gaza, Palestine, 1628. He was the son of Rabbi Moses Nadjara. In 1579 he settled in Damascus, and during the last years of his life he was rabbi in Gaza. Although he inclined chiefly toward religious poetry, he wrote also poems of a secular and mundane character. But even his love poetry gave expression to the mystic longing for godliness characteristic of Isaac Luria, although reminiscent of the chivalrous Arabian or Spanish songs. Their rhymes and melodies, too, were constructed in such a manner as; unintentionally, to ruffle the sensibilities of pious circles. He was accused of undignified behavior by men like Menahem de Lonzano and Hayim Vital. Later on, however, he seems to have taken on a more serious attitude, and some of his poems gained great popularity in the liturgy of Oriental and European communities.

Of several hundred of his poems, 108 appeared in a collection entitled *Zemiroth Yisrael* (Safed) as early as 1586, and in 1599 there appeared, under the same title, an extended collection consisting of 347 poems for liturgical use on weekdays, Sabbaths and holidays. In 1605 a collection of his prose writings was published. A further collection, *Pizmonim* (Hymns), taken from old manuscripts, was published as late as 1858. Some of his poetry appeared as supplements in collections of poems of other writers, while others still remained unpublished in 1942. Especially popular is his spirited hymn sung at the Sabbath table, "Yah Ribbon Olam Veolmaya" (God, Master of the World and of Eternity).

NADLER, MARCUS, finance expert, b. Campelung, Austria, 1895. He settled in the United States in 1920 and there continued his higher education, taking his J.D. degree from New York University in 1926. That same year he was appointed chief of the foreign division of the Federal Reserve Board; he had already engaged in research for the Board soon after his arrival in the country, and had been assistant economist for the National Bank of Commerce from 1924 to 1926. Then he went to teach at New York University (1927), where he was professor of finance in 1942. Likewise, since 1927 he has been research director of the Institute of International Finance.

Nadler is an associate editor of the *New York Journal of Commerce;* and among his publications are: *Revision of Conant's History of Modern Banks of Issue* (1927); *Foreign Securities* (with J. T. Madden, 1929); *Corporate Consolidations and Reorganizations* (1930); *International Money Markets* (with J. T. Madden, 1935); *Banking Crisis* (with J. I. Bogen, 1935); *America's Experience as a Creditor Nation* (with J. T. Madden and H. C. Sauvain, 1937); and with several coauthors, *Money and Banking* (revised edition, 1940).

Nadler was a director of the Joint Distribution Committee.

NAGDELA (NAGRELA), ABU HUSAIN JOSEPH IBN, minister of state, b. about 1031; d. 1066. At the age of twenty he succeeded his father, Samuel Hanagid, as vizier of the Mohammedan King Badis of Granada and head of the Jewish community there. Opinions of his contemporaries differ as to his character. While his efforts in behalf of the advancement of science and the welfare of the state were acknowledged, he was, on the other hand, condemned for having filled important public offices exclusively with Jews. A Mohammedan judge and poet whom Nagdela had banished resorted to slander for revenge, arousing the populace by a defamatory pamphlet, and thus, near

the end of 1066, brought about the first persecution of Jews in the Islamic empire on the Iberian peninsula. About 1,500 Jewish families in Granada were killed and their houses destroyed. Nagdela was dragged from the king's palace to the gates of the city, where he was killed. Among the few who succeeded in escaping were Nagdela's wife, who was the daughter of Nissim ben Jacob of Kairwan, and their son, Azariah.

Lit.: Graetz, H., *History of the Jews,* vol. 3, pp. 254-65.

NAGDELA, SAMUEL HALEVI IBN, *see* SAMUEL HANAGID.

NAGID, *see* TITLES.

NAGLER, ISADORE, labor official, b. Uscie Biscupie, Poland, 1895. He came to New York city in 1909, and was there educated in the public schools. As a young man, he began to participate in the struggle of New York city's garment workers for better conditions in their industry. Elected general manager of the Joint Board of the Cloakmakers Union in 1928, he came to the fore as a leader of the next year's decisive strike. He headed the cloakmakers until 1939. In 1929 he was likewise elected a vice-president of the International Ladies' Garment Workers Union, holding office until 1942; and he became manager-secretary-treasurer of the Amalgamated Ladies' Garment Cutters' Union, Local 10, in 1939, still filling that post in 1942.

Nagler was delegate to the International Federation of Trade Unions meeting in England in 1934; in 1936-37 he was a member of the Labor Delegation to Palestine. He was elected co-chairman of the National Labor Committee for Palestine. Nagler gained political prominence in New York city with the birth of Labor's Non-Partisan League and the American Labor Party, both of which he helped found in 1936. He directed the New York city campaign of the latter in the elections of that year. In 1937 he was himself American Labor Party-Fusion candidate for borough president of the Bronx and the following year he ran for United States Congress. He received the endorsement of the Citizen's Union of New York, as well as of outstanding individual liberals.

Nagler's general Jewish communal affiliations included membership and directive posts in the Jewish Education Committee, the Federation of Jewish Philanthropic Societies, General Jewish Council, and ORT.

NAGY, ENDRE, author and cabaret director, b. Nagyszőllős, Hungary, 1877; d. Budapest, 1938. He studied at the Academy of Law of Nagyvárad and began early to contribute to newspapers, first at Nagyvárad and subsequently at Budapest. In 1907 he took over the direction of the Bonbonnière cabaret at Budapest and conducted it so successfully that his direction set the standard for theatres of that species in Hungary. He directed various cabarets and intimate theatres until his retirement in 1929. As a novelty, he had the poems of the great Endre Ady sung on the stage; he also introduced novel announcements on theatre programs, chiefly mordant comments on the political and social events of the day. His unerring instinct in summing up in witticism what the public felt was rendered the more effective by the apparently shy and hesitant manner in which his words were uttered. Nagy thus afforded his audience the means by which to injure or devastate men and things by satire when political power was lacking—a formula that was to become characteristic of the Hungarian capital.

Nagy won the award of the Hungarian Academy through his play *A zseni* (The Genius, 1911); several other full-length plays of his were also performed. He wrote a number of novels among them *Apostol a Hódságon* (on the social movement among peasants); *Birsai vándorforrás* (Wander Source of Birsa); *Hajnali beszélgetések Lukits Milossal* (Conversations at Dawn with Milos Lukits), and books of practical philosophy such as *Öregek kalauza* (Guide for the Old; 1933) and *Szerelmesek kalauza* (Guide for Lovers; 1934). His best published works were short stories which displayed all the exquisite qualities of his art of the miniature, and his story of the Hungarian cabaret, *A kabaré regénye.* Nagy embraced Christianity.

NAGYBÁNYA (BAIA MARE), town in Szatmár county, Hungary, with a Jewish populataion of 1960 in a total of 12,800. From 1919 to 1940 Nagybánya formed part of the kingdom of Roumania.

The Jewish community of Nagybánya was founded about 1860. Jews had probably lived in the town before, but their settlements and the documents referring to their presence were destroyed in the vicissitudes of civil war and religious strife during the 16th and 17th centuries. In 1687, the Jesuits, with the support of the house of Hapsburg, wiped out reform at Nagybánya and their influence met halfway the reluctance of the German burghers to tolerate Jewish competition within the confines of this mining town. Thus Jews were forbidden by law to reside in the mining communities, but they could trade with them, and even supplied the royal mine treasury.

After the Revolution (1848-49) some Jewish tradespeople and tenants settled at Nagybánya and in 1860 the community was constituted on the principles of the *Shulhan Aruch.* Developing with great rapidity, the community consisted of 500 families in 1900, of 1,400 in 1910 and again only of 540 in 1920. It is noted for its many educational institutions which embrace secular as well as Torah schools; under Rabbi M. Weinberger a Yeshiva of repute flourished. Other rabbis were Benjamin Fuchs and the scholar Mór Krausz. Conditions since 1937 in Roumania, and subsequently in Hungary, were adverse to the development of Jewish communities.

NAGYKÁLLÓ, town in Szabolcs county, Hungary, with about 1,000 Jewish inhabitants in a total population of 9,247. Jews lived at Nagykálló several centuries ago. Due to repeated catastrophes the community was dispersed several times, and reconstituted again. The names of Rabbis Baruch ben Sabbatai, Joel, Eliyahim and Aryeh Yehuda have been preserved. When Joseph II promulgated the Edict of Toleration (1782), Szabolcs county had 393 Jewish families scattered in 106 communities, the largest of which consisted of nineteen families. In that year a congregation was organized at Nagykálló and Rabbi Isaac (Eisik) ben Mose Ezekiel Taub (1751-1821), a pupil of Rabbi Elimelech of Lezaisk, was invited to become chief rabbi of Szabolcs county, with residence at Nagykálló. He established a Talmud Torah and a Hebrah Kaddisha; a synagogue was built in 1800.

The name of his great Zaddik is forever linked with Nagykálló and after one hundred and fifty years his memory inspired Jews of the Nyiség (Szabolcs county) with singular regional patriotism and religious emotion. On the seventh of Adar, 5699 (1939), the anniversary of his death, special trains took worshippers from various cities of Hungary to the grave of the Zaddik of Kálló. He was credited with authorship of the stirring song so dear to Magyar Hasidim, *Szól a kakas már.*

From 1821 to 1840 Dayan Saul Engel ministered to the community. In 1840 Isaiah Benét, son of the chief rabbi of Moravia, was installed as chief rabbi of Szabolcs county. The Jews of Nagykálló maintained excellent relationships with the Magyar population; they were allowed to own houses in the chief square of the town. Their language at this time was Magyar; only later, through an influx of Hasidic elements from neighboring counties, did Yiddish become prevalent. The community also had a secular chief justice whose business it was to collect the toleration tax. Mention is made in the contract given to Rabbi Isaiah Benét of a special fee to be paid by the Jews of the county to the rabbi for Christmas. The holiday is properly Rosh Hashanah, which is called by the Magyar population as the Jewish Christmas. A school established in 1855 was still in existence in 1942. Rabbi Benét took part in the action which was to prevent establishment of the rabbinical seminary. His son and successor, Abraham Benét (1865-1902), was rabbi only of Nagykálló, other cities of the county (Kisvárda and Nyiregyháza) having developed and chosen leading rabbis of their own. Rabbi Emanuel Bródy (1902-1938) also enjoyed the reputation of a Zaddik. The famous Yeshiva of Nagykálló trained more than 10,000 students who went to all parts of the world. In accordance with the traditions of Nagykálló, Rabbi Bródy's pupils were eager to perpetuate his spirit by conserving the songs he created as faithfully as his teachings.

NAGYKANIZSA, city in Hungary. The Jewish community here was founded about 1700. The Jewish cemetery being filled in 1784, grounds were acquired for a new cemetery from Count Lajos Batthyány whose protection they enjoyed. In 1786 the count issued an edict for the maintenance of order within the community. In 1817 Count Philip Batthyány contributed toward the cost of their first synagogue; another synagogue was erected in 1856. The community has had a hospital since 1830; it founded the first (German) school in 1786, which was supplanted by a Magyar school in 1832. The scrupulous observance of Jewish law, prevalent up to 1840, gave way to more progressive views of Judaism, due to the ministry of Lipót Löw (1840-46).

After being dissolved for a brief interval as a penalty for participation in the Magyar revolution, the community reorganized under Rabbi B. H. Fassel (1851-83), eminent author and orator, who abolished the Kol Nidre; Rabbi Ede Neumann (1883-1918) introduced the ritual and prayerbook of Abraham Geiger. A reversion to more specific forms of expression of Judaism, due to persecution in 1919, was brought about under the leadership of Rabbi Ernö Winkler, who still held his post in 1942.

The community has maintained a commercial school since 1857 on and a high school from 1886 on. Rabbi Neumann was president of the inter-denominational society for the promotion of education. Mór Horschetzky, translator of Josephus, and Johann Schnitzler, father of the novelist Arthur Schnitzler, hailed from the Nagykanizsa community. In 1910 it numbered 4,278, in 1920 only 3,663 souls in a total population of 30,416. The Jews of Nagykanizsa were engaged in diverse manufacturing industries.

NAGYKÁROLY, town in Szatmár county, Hungary. In the twentieth century the total population of Nagykároly of 16,000 included two co-existent Jewish communities totaling 2,800. The origins of the Jewish community of Nagykároly—one of the oldest, most prosperous and privileged in Hungary—date back to about 1600. In 1724, Count Sándor Károlyi settled about thirty Jewish families in Nagykároly, bestowing upon them the privileges of free residence and commerce as well as of self-government and placing them under jurisdiction of their chief magistrate, the rabbi of Szatmár county. Count Károlyi himself provided the spiritual and political head for his Jews by sending for a rabbi to Vienna. The chief rabbi of Szatmár county had legislative, executive, judiciary and police functions. He rendered sentence in cases of a Christian plaintiff versus a Jewish defendant, the plaintiff being free to appeal to the count, whereas the Jew had to present his suit against a Christian to the city court. This had no jurisdiction whatever over the Jews and did not have the right of summoning a Jew. For these rights and privileges the Jews of Nagykároly paid the count an annuity of 600 gulden. The privileges were renewed by Count Sándor in 1741 and by Count Antal in 1769. The latter also made a contract with the brothers Frenkli and Izsák Sámson, Jews of Temesvár, to whom he rented a house with plot and a mill at an annual rental of 750 gulden. They were licensed to manufacture on their premises soap and candles, also to maintain a bakery, and enjoyed the special privilege of not being subject to the jurisdiction of the community but solely to that of the count.

The Jews soon made Nagykároly a prosperous commercial center. In 1770 they numbered fifty-six families. They contributed generously to county and national causes; thus in 1790 they gave 200 gulden toward a battalion to be sent by the county nobility to the coronation of King Lipót II; in 1796 the Jews of Nagykároly contributed 300, and the Jews of the whole county 1,000 gulden, toward the cost of the war against Napoleon. Their importance and self-respect was evinced by the triumphal arch which they erected in 1847 for the reception tendered to the highest Magyar dignitary, the Palatine István. It displayed the fourth commandment, an effigy of Moses, as well as some ringing and lofty distiches in Magyar about the destiny and mission of the Jews.

The rabbis of Nagykároly were Aaron Lebl, Mayer Judah Östreich (d. 1774); his son Moses Aryeh Östreich (1774-1820). The latter protested to the county authorities (1792) against the presence in the county of one rabbi Jehiel Marton who had come from Poland and been rabbi at Szeged for one year only. Rabbi Moses Aryeh demanded that the "vagrant" rabbi of

"strange demeanor" be expelled lest the credit which he might gain with the Jews of the county affect the authority of the chief rabbi in collecting the toleration tax for the king. Jehiel was probably a Hasid and, according to a legend, he prophesied to Rabbi Moses Aryeh that his infant son also would become an adherent of Hasidism. The fact is that the son, Jonathan Benjamin, was not elected by the community to succeed his father because he was a Hasid; Isaac Frenkel (d. 1834), rabbi at Szántó and author of *Zebed Tob,* was invited instead.

The laws of 1848 abolished the privileges of the nobility and placed the Jews under public jurisdiction. The toleration tax, however, was paid by the Jews of Nagykároly up to 1850. In that year, the Austrian government taxed them with 69,300 gulden as a penalty for assisting the Magyar revolutionary army (1848-49) with clothing, horses and soldiers from their own midst. Soon afterward they were compelled to subscribe heavily to a national loan. In the sixties of the 19th cent. the community numbered 300 families. 1867, the year of Jewish emancipation, saw the laying of two cornerstones of the Nagykároly synagogue, one being laid by Rabbi Mayer Perls (1834-93), the other by the local head of the Protestant church who had written for the occasion a poem, saluting the Jews as brothers. Rabbi Perls rejected both the Orthodox and the Congressional constitution; the community stayed in the status-quo ante. In 1881 sixty families seceded, forming an Orthodox community which established (in 1883) a Yeshiva and a synagogue (1901). Its rabbis were Jacob Mose Schwartz, Saul Brach and (from 1926 on) Joel Teitelbaum. The latter's community consisted of 1,600 members.

In 1922 the status-quo community (1,200 members), under the spiritual leadership of Rabbi Lazar Schönfeld (1913-25; subsequently in New York city), also turned Orthodox without being recognized as such by the Orthodox Chancery. Between 1918 and 1940 Nagykároly (under the name of Carei Mare) formed a part of Roumania. The Jews of Nagykároly were prominent in banking and industries. ANNA BETTELHEIM.

NAGYSZOMBAT, *see* TRNAVA.

NAGYVÁRAD (in German; **Grosswardein;** in Roumanian, **Oradea),** city in Hungary with a population of 81,000, of which approximately 25,000 were Jews. The Orthodox Jewish community of Nagyvárad (about 16,000 souls) is deeply anchored in the traditions of its past. It was constituted in 1722, but without any doubt Jews had lived and traded in the city long before that time. In 1723 Lázár Simon rented the city tavern for a period of twelve years and at a rent of 15,000 Rhenish gulden, depositing 2,000 ducats as a security. In 1740 the city repeatedly complained to the Imperial War Council at Vienna against the vice-commander of Nagyvárad, Colonel Baron Lubeticz, who bestowed upon the Jews the protection of his armed forces when they visited the market. The city also protested that the Jews were building small houses and had chosen a judge without sharing with the citizens in the taxes. The houses of the Jews clustered around the fort and "Soldier-Town," a district of the city, came to be considered as the ghetto of Nagyvárad. From 1835 on the Jews were free to live in any part of the city. The Orthodox community built three large synagogues, the first being erected in 1803, and held service in sixteen houses of prayer. It maintained two types of elementary school, Gymnasiums and orphan asylums for boys and girls, also a trade school, a five-grade Talmud Torah and a Yeshiva. The men who were rabbis of the Orthodox community included Joseph Rosenfeld, David Joseph Wahrmann, Aaron Landsberg and Mór Fuchs, who was followed by his son Benjamin Fuchs (d. 1936). A eulogy of the latter, containing his 118 Talmudic interpretations, was published by Joseph Schwartz (*Zichron Binyamin,* 1936). From 1914 until his death in 1936, Rabbi Israel Hager, formerly of Wischnitz, lived at Nagyvárad where he was a powerful Hasidic influence. The community maintained institutions in all fields of charitable and social work, employing a staff of 160 persons attending to its widespread activities. During the annexation of Nagyvárad to Roumania (1919-40) the Zionist spirit flared up in the community, which largely aided Palestine, and local Talmudists as well as Talmudists and university students abroad.

In 1870 a minority, seceding from the Orthodox community, formed one based upon the statutes of the National Jewish Congress (1868-69). A spacious synagogue building, modeled on the then existing synagogue of Nuremberg, was erected in 1878. After the first World War, the community numbered 9,000 souls and its members played a prominent part in the public and economic life of the city, as well as in journalism, and many a well-known author and publicist began his career at Nagyvárad. Prominent members of the Nagyvárad community were the oculist Frigyes Grósz and his son, Albert Grósz, who founded and maintained an eye hospital for the poor; some of the notables stemming from the Jewish community of Nagyvárad include: Bernát Munkácsi, Finno-Ugric philologist; Martin Schreiner, formerly professor at the Lehranstalt für die Wissenschaft des Judentums, Berlin; the councillor of court Ármin Neumann and the member of the Hungarian Lower House, Géza Dési; Blum Pasha, minister of finance in Egypt. Louis Rittenberg, executive and literary editor of this encyclopedia, attended the Yeshiva at Nagyvárad (1904-06). Rabbis of the community were: Sándor Rosenberg, Alexander Kohut (subsequently of New York), and Lipót Kecskeméti. The community maintained elementary and high schools; in the upper grades of the latter Rabbi Kecskeméti taught rabbinic literature. In 1927 the synagogue was looted and partly destroyed by anti-Semitic Roumanian students, and 14 Torah scrolls were torn or defaced. The burial of the Torahs was attended by the Catholic bishop of Transylvania, Count Gusztav Mailáth, and the Protestant Church of Nagyvárad offered to pay for the cost of restoring the synagogue. Like Rabbi Kecskeméti, the president of the community, Béla Konrád, was one of the leaders of the Magyar minority under Roumanian rule. Nándor Hegedüs represented the Hungarian minority of the city in two successive Roumanian parliaments. A Sephardic community was formed in 1931. For their devotion to the Magyar cause, the Jews of Nagyvárad

were honored by the anti-Semitic government of Hungary after the city was recovered by the Hungarians in 1940. The Jewish hotel owner, Emil Vaiszlovich, was the first in Transylvania to be awarded a distinction for exemplary patriotic attitude. The Jewish author, Péter Adorján, in 1941, published a monograph of Nagyvárad under Roumanian rule, *A halott város* (The Dead City). ANNA BETTELHEIM.

NAHAWENDI, BENJAMIN, *see* BENJAMIN BEN MOSES NAHAVENDI.

NAHM, MAX BRUNSWICK, banker, b. Bowling Green, Kentucky, 1864. In 1929 he was named "the most useful citizen of the state" by the University of Kentucky, and awarded the Sidney Sullivan medallion. A prominent finance expert and executive, he has held numerous banking offices: since 1901 he has been vice-president of the Citizens National Bank of Bowling Green; in 1916 he was president of the Kentucky Bankers' Association; from 1927 to 1941 he was director of the Federal Reserve Bank of St. Louis. Nahm has held a number of offices in the American Bankers' Association, and was a delegate to the International Chamber of Commerce in Amsterdam in 1929.

In public life he has been a leader in promoting the state's welfare. In 1933 he served on the State Recovery Board of the NRA; and in 1934-35 he was director of the Federal Housing Administration. Since 1929 he has been a member of the National and State Park Commission, serving as chairman from 1934 to 1941. In 1942 he was likewise president of the board of trustees of Ogden College.

NAHMAN BAR ISAAC, Babylonian Amora of the fifth generation, b. about 280; d. about 356. He studied under Raba at Mahoza, and was so remarkable for his learning that even in his early years he was made Resh Kallah, or chief speaker. After Raba died, the academy at Mahoza declined and was replaced by that of Pumbeditha, of which Nahman was chosen head. He regarded himself principally as the transmitter and arranger of previous teachings. He said of himself: "I am neither a sage nor a seer, and not an authority of my own; but I present what I have learned, and the academy follows my views in its decisions" (*Pes.* 105b). He devised mnemotechnic apparatus to aid in organizing the gigantic material of the Oral Law (*Sab.* 33a and other places). He was also scrupulous as to transmitting the Halachoth in the name of the exact authority (*Kid.* 44a).

He coined many Halachic sayings, such as the famous description of mutual aid in study: "Just as a small piece of wood kindles one that is larger, so even the small help the great in study" (*Taan.* 7a). In contrast to Raba, who held that the learned needed a certain amount of pride, he regarded pride as contemptible (*Sotah* 5a).

NAHMAN BEN SIMHAH OF BRATZLAV (The Bratzlaver), Hasidic leader, b. Medzibozh, the Ukraine, 1772; d. Uman, 1811. He was the great-grandson of Israel Baal Shem Tob, the founder of Hasidism, and was raised in an intensely Hasidic environment. A legend tells that at the age of six he already practised asceticism to attain a state of religious ecstasy. He was married at the age of twelve—not unusual for the age and the country—and lived in a village with his father-in-law, where he studied Talmud and Cabala, and for the first time began to commune with nature, feeling that every blade of grass gives praise to God.

After the death of his father-in-law, Nahman went to the town of Medvekovka, whither he attracted many followers. Realizing that the Hasidism of his time was in a period of decadence, he sought to recover its spiritual values. In 1798 he made a trip to Palestine, visiting the graves of Simeon ben Yohai and Isaac Luria, and settling for a time in the Hasidic center of Tiberias. He later ascribed much of his inspiration to the feelings inspired by the sight of the Holy Land. On his return he settled in Zlatopol, but his criticisms of the Hasidic Zaddiks of his time aroused their enmity, and he was compelled to leave. He settled in Bratzlav, where he gathered more followers.

In 1808 Nahman contracted tuberculosis and went to Lemberg, where he decided to begin the publication of *Likkute Maharan,* a collection of his thoughts and doctrines made by his disciple Nathan of Nemirov. Later he went to Uman, the city in which so many martyrs had lost their lives in the Haidamack riots of 1768. There, he said, their souls were awaiting him; there he died.

Nahman contributed much to the Hasidic doctrine. He taught that the Zaddik is to be the mediator between God and the people; he is not to be a miracle-worker, but he is to bring the understanding of God to the multitude. Nahman required his followers to maintain an unquestioning faith in God. He vehemently opposed philosophizing and preached a simple mode of living, avoiding the pursuit of riches. He exhorted his followers to pray incessantly in order to reach the ecstatic state in which man comes nearest to God and perceives His presence and His glory. He advised them to supplement the regular prayers by their own extemporaneous supplications. Joy, ecstasy, dance and song were among the elements of worship; yet at the same time all sensuousness was to be avoided.

In Bratzlav Nahman began to tell various tales to his followers in an attempt to give to his ideas a concrete form. These were written down and published under the title *Sippure Maasiyoth* (1815). The *Likkute Maharan* were published in sections (vol. 1, Ostrog, 1808; vol. 2, Mohilev, 1811; vol. 3, Ostrog, 1815). The persecution of Nahman's followers continued after his death, and but a small group of the Bratzlav Hasidim still survived, who visited the grave of their teacher, especially on Rosh Hashanah. NAHMANIDES (RaMBaN, the abbreviation of Rabbi Moses ben Nahman), Talmudist and commentator, b. Gerona, Spain, 1195; d. Acre, Palestine, about

1270. He was given the surname Gerondi from his native town; his Spanish name was Bonastruc da Porta. His principal teacher was Judah ben Yakar, and he was initiated into Cabala by Azriel and Ezra. He showed his talents at an early age and at the age of sixteen wrote a defense of the Halachic work of Isaac Alfasi against the attacks of Zerahiah Halevi Gerondi and Abraham ben David. This was followed by his commentaries to the greater part of the Talmud. In spite of his reverence for the great philosopher Maimonides, Nahmanides, a conservative in his views, fought frequently against the former's rationalizing of the Scriptures, his rejection of miracles and his enumeration of the 613 commandments. On the other hand, while he sympathized with the anti-Maimunists, he did not join them and he tried to reconcile the friends and opponents of Maimonides. He proposed that the ban against studying the philosophical part of the *Yad Hazakah* be lifted, but that the prohibition of studying the *Moreh Nebuchim* should be made more rigorous. He decidedly rejected the Bible exegesis of Ibn Ezra, and he showed an inclination toward Cabala. During the greater part of his life he was a practising physician; at the same time he served as rabbi at Gerona and later as chief rabbi of Catalonia.

Nahmanides' teaching is well illustrated in his commentary to the Pentateuch. While he does not ignore the plain meaning of the text and strives to reach it, he adds a wealth of Haggadic and Cabalistic interpretations. He emphasizes the Biblical miracles, and in fact declares that belief in miracles is one of the most important Jewish doctrines. He regards the six days of creation followed by the Sabbath as a prediction of a world era of six thousand years followed by the millenium, and other Biblical stories as prophetic of future events. He calculated the date for the coming of the Messiah as being 1358.

Nahmanides lived quietly in Gerona, supporting himself as a physician until 1263, when a sudden turn of events changed his whole life. A renegade Jew, Paulus Christiani (Fra Pablo), had challenged the Jews to a series of disputations. King James I of Aragon ordered Nahmanides, as the most eminent Jewish authority, to participate in the disputation, which was held at Barcelona. Nahmanides, who had requested and received from the king permission for full freedom of speech, spoke with great force and boldness. He easily refuted the arguments of Christiani and his Dominican colleagues, showing that their arguments about the Messiah had no validity and that the Jews were entitled to retain their beliefs. So successful was his defense that his adversaries, after four days, were anxious to end the discussion, and the king dismissed him with a rich present.

The Dominicans, however, claimed the victory in the disputation; when Nahmanides tried to counteract this propaganda by publishing a true account of the discussions, he was charged with blasphemy and brought to trial. Despite his defense that he had published nothing except what he had said by permission of the king, Nahmanides, on the insistence of the Dominicans, was eventually condemned to banishment. In 1267 he set out for Palestine, visiting Jerusalem and settling in Acre. He found the Holy Land in great desolation from the Tatar and Mongol invasions, the Jewish communities scattered and almost devoid of Jewish knowledge. Nahmanides spent the last few years of his life in trying to rejuvenate the Palestinian Jewish communities. He succeeded in persuading the fugitive Jews to return to Jerusalem and rebuild the synagogue and house of study; he gathered around him disciples and gave public lectures; he compiled for them his commentary to the Pentateuch and other works. Nahmanides is said to have sent a copy of the *Zohar* from Palestine to Spain, thus introducing this mystic work to the West. He was buried in Haifa, near the grave of Jehiel of Paris.

Haim Nahoum Effendi

NAHOR (*Gen.* 11:22-25; *I Chron.* 1:26), according to the Bible, the son of Serug, and the grandfather of Abraham. He lived 148 years.

One of Abraham's brothers was also called Nahor (*Gen.* 11:26). He married Milcah, the daughter of his brother Haran (*Gen.* 11:29); their son, Bethuel, was the father of Rebekah and Laban. Through his twelve sons, eight by his wife Milcah, and four by his concubine Reumah, Nahor was the ancestor of the twelve Aramean tribes (*Gen.* 22:20-24). The Bible refers to Haran in Mesopotamia as "the city of Nahor" (*Gen.* 24:10). That is where Abraham sent his servant, Eliezer, to find a wife for his son Isaac. Bethuel and his son Laban are described as Syrians (Arameans; *Gen.* 25:20). Nahor is mentioned also in *Gen.* 31:53 and in *Josh.* 24:2.

NAHOUM EFFENDI, HAIM, chief rabbi of Cairo, Egypt, senator and philologist, b. Magnesia (Aidin), Turkey, 1872. At the age of eight he was sent to the Yeshiva of Rabbi Abbo in Tiberias, where he remained for over five years. He studied later at the Smyrna College, and followed an extensive course

on Moslem jurisprudence at the faculty of law in Constantinople. Afterwards he went to Paris, where in 1879 he graduated from the rabbinical seminary, and then studied Semitic languages at the College de France. He was then invited to assume the post of sub-director of the rabbinical seminary of Constantinople, which was under the supervision of Rabbi Abraham Danon. The Turkish government appointed him professor of languages at the Superior Academy of Artillery and Military Engineering in the capital of the Ottoman Empire.

In 1907 Nahoum Effendi was delegated by the Alliance Israélite Universelle to take part in a mission to Abyssinia to study the early history, customs and the particular needs of the Falashas. The result of this exploratory voyage was a book on the Falashas in which he threw new light on the origin and history of that remarkable, exotic Jewish population. During the audience in Addis Ababa granted him by Menelik II he delivered a speech in Amharic, the language of the country. The Abyssinian ruler bestowed upon him the distinction of Commander of the Order of Solomon.

When the constitution was introduced in 1908, as a result of the Young Turk revolutionary movement, the aged Haham Bashi, Moses Halevy, was compelled to resign. Nahoum Effendi was then nominated acting chief rabbi, and later was confirmed as chief rabbi of the Turkish Empire. He held this post until 1920, when he resigned because the government did not accede to his demand to grant foreign Jews residing in Turkey the right to vote in communal elections. At the end of 1923 he was called by the president of the Cairo community, Moses Cattaui Pasha, to assume the chief rabbinate of that city. In 1931 he was appointed by King Fuad I member of the Egyptian Senate, and in 1933, by royal decree, he became member of the Arab Academy. He was decorated with the Broad Ribbon of the Order Osmanie and the Order of Medjidje. Later Fuad entrusted him with the scientific task of cataloguing and translating all the decrees and laws promulgated by the Turkish government affecting the vilayet of Egypt. During his rabbinate the social, religious and charitable institutions of the Jewish community of Cairo experienced a considerable development. He intervened with the Egyptian government to indicate the extent and dreaded results of the Nazi propaganda in Cairo and in Egypt. As a result, German and Italian Jews were spared internment in concentration camps after the outbreak of the second World War, in September, 1939. DAVID KLEINLERER.

NAHSHON, prince of the tribe of Judah during the period of the wandering through the wilderness; his sister, Elisheba, was the wife of Aaron. He was the first of the princes to make an offering at the dedication of the Tabernacle. According to *Ruth* 4:20-22, he was an ancestor of David.

The rabbis have extolled Nahshon as an example of nobility, declaring that he was the first to spring into the Red Sea when the people hesitated to cross at the command of Moses. Aaron's marriage to his sister is used by the rabbis to enforce the advice that in choosing a wife one should judge by the character of her brothers. They also state that Nahshon was not only the ancestor of David but also of five other heroes: Daniel, the Messiah, and the three youths who passed through the fiery furnace.

NAHUM ("consolation" or "consoler"), a 7th cent. B.C.E. prophet of Judah, about whose life very little is known. Called an Elkoshite (*Nah.* 1:1), Nahum was probably a native of the Southern Kingdom, who delivered his prophecy in Jerusalem during the reign of Josiah (638-608 B.C.E.). A tradition locates Nahum's tomb at Alkush near Mosul and north of the site of Nineveh.

His name appears in the title verse of the seventh book of the Minor Prophets, called Nahum, which consists of three chapters. While the superscription (1:1) makes the book an "oracle against Nineveh," it is not a single, integrated work, but a triumphal ode of Nahum on Nineveh's fall in August, 612 B.C.E. (2:4-3:19), preceded by an incomplete alphabetic acrostic (1:2-10) of considerably later date. The intervening material (1:11-2:3) is largely editorial with a few verses of original poetry.

Following W. R. Arnold (*The Composition of Nahum* 1-2:3) and others, Pfeiffer accounts for the book's lack of unity by showing that a redactor at the close of the 4th cent. C.E. wrote an acrostic poem which had nothing to do with the fall of Nineveh, but, like the psalms of Hannah, Hezekiah, and Jonah, was introduced because it seemed appropriate. The introductory alphabetic psalm (1:2a, 3b, 4a, 4b, 5a, 5b, 6a, 6b, 7, 3a, 9b, 9c, 9a, 2b, 10; incomplete, from *aleph* to *samech*) presents Yahweh as a tempestuous God of vengeance, who will annihilate his foes and vindicate those who trust in him. In place of the balance of the acrostic which the editor apparently could not remember, there followed Nahum's superb ode (1:11, 12, 14, 2:1, 4ff), with certain editorial insertions, addressed to Judah in the masculine, whereas Nahum addresses Nineveh in the feminine. In Nineveh's destruction, so graphically portrayed by Nahum, the pious editor saw the fulfillment of prophecy and a happy omen for Israel's safety and future.

While the superscription calls for a prophetic oracle against Nineveh, the ode is essentially a secular poem, exulting over the inevitable downfall of a cruel Assyria, which had oppressed Judah since 701. The poem is patriotic and nationalistic, displaying in verse of matchless power and beauty a burning hatred for the "city of blood, filled with falsehood, abounding in violence" (3:1), for the empire that "sold nations for harlotries and peoples for witcheries."

The composition of Nahum's poem, scholars agree, is to be placed just before the destruction of Nineveh in 612 B.C.E. It is clearly later than the fall of Thebes (No-Amon, 3:8) at the hands of Ashurbanipal in 661. Assyria's star did not descend until the conqueror's death in 625, and Judah's nationalism did not flare up until Josiah's reforms of 621. It was about 614 that Assyria was seriously threatened by Cyaxeres of Media. And it was in June of 612 that the Mede in league with Nabopolassar of Babylonia laid successful seige to Nineveh. The poem could hardly have been written before 625.

While the prophecy centers unswervingly on the destruction of Nineveh, chapter 1 brings out poetically God's qualities of divine vengeance and divine mercy.

Faith in God will secure divine favor. Nahum's righteous indignation over the barbarities of Nineveh is but the individualized voice of an outraged humanity. The universality of God is evident, especially in chapter 3, in that all nations must bow to His moral law or suffer the consequences of their wickedness. It is this divine insistence upon universal moral principles which gives the Book of Nahum unique significance.

NAHUM OF CHERNOBYL, *see* MENAHEM NAHUM OF CHERNOBYL.

NAHUM OF GIMZO, Tanna of the first generation who lived in the latter part of the 1st cent. C.E. He lived in Gimzo, a small town near Lydda. He was the creator of a system of exegesis (*ribbui umi'ut*), according to which the Hebrew particles had a significance in the interpretation; thus the sign of the accusative, *'eth,* denoted the inclusion of something not specifically mentioned in the text, and the word *rak,* "only," indicated a limitation. This method was continued and expanded by Nahum's famous pupil, Akiba.

Nahum was reputed to be a saint and a miracle-worker. Toward the end of his life he suffered from paralysis, which he explained as being due to the fact that he had once been unkind to a poor man (*Taan.* 21a). This willingness to accept fate may be the reason why the name Gimzo was interpreted as meaning "everything is for the best" (*gam zu letobah*), and that Nahum is reported as having said this on the occasion of every misfortune that happened to him.

NAIDITSCH, ISAAC, Zionist, b. Pinsk, Russian Poland, 1868. He was the descendant of a family that had played a role in Hasidism as well as in the political history of the Pinsk Jewry, one of his ancestors having been a delegate to the Council of the Four Lands. Naiditsch studied the Talmud, but also read such prohibited modern Hebrew books as the nationalist writings of Moses Löb Lilienblum and Perez Smolenskin. Although he was familiar with the revolutionary Russian literature of his time, he recognized at an early age, chiefly under the impression of the pogroms and influenced by Leon Pinsker's *Autoemancipation,* the necessity of Jewish self-help and nationalism. At fifteen he became secretary of the Hibbath Zion of his native city, furnishing Rabbi Friedmann with a letter of introduction to the Kattowitz Conference of the Hibbath Zion (1884). At eighteen he started writing Hebrew poems and essays on Hebrew literature.

In 1889, after his marriage, he moved to Moscow where he started the production of alcohol out of potatoes. After a few years Naiditsch owned the largest alcohol factories in Russia and was called the "alcohol king of Russia." Despite the official anti-Semitism of the Czarist government, he was sent abroad on important commercial missions on various occasions. His fortune was estimated at fifteen million rubles. Forced by the new regime to leave Russia and to abandon his property, he went to France (1920) where, five years later, he obtained citizenship. Having established his industrial enterprises (alcohol and sugar factories), he lived in France until the debacle of June, 1940. In 1942 he was residing in New York city.

In addition to his commercial activities Naiditsch devoted much effort to the Zionist cause. In Moscow, together with Ussishkin, Tschlenow and others, he had founded the Bene Zion society (1889). In 1907 he visited Palestine. From 1913 to 1927 Naiditsch served as member of the executive committee of the Zionist Organization. During the first World War he was a member of the aid committee for Russian refugees and proposed a voluntary self-taxation of the Jews for the benefit of the refugees. He was also one of the founders and directors of the Keren Hayesod (Palestine Foundation Fund) on which he wrote a pamphlet (1920). In 1936 he represented the General Zionist fraction at the World Jewish Congress at Geneva.

As chairman of the finance and economic committee of the Zionist organization (1920-1927) he was instrumental in the support of Ruttenberg's project of the generation of electric power in Palestine and the industrial exploitation of the Dead Sea. He also helped in the founding of the Agricultural Bank in Palestine.

NAIMAN, YECHEZKL MOSHE (I. M. Neumann), Yiddish writer, b. Zhiklin, near Warsaw, 1893. He was born of working-class parents, who moved to Lodz when Naiman was an infant, and opened a saloon. Later, to get him away from the saloon atmosphere, Naiman was sent to Ozorkow, to study with an uncle of his who was a teacher. At the age of ten he ran away from the Yeshiva in Ozorkow and engaged in the sale of kvass (cider). With his profits he entered a school in Lodz from which he was subsequently expelled, despite his good scholarship, for having caricatured an instructor.

In the meantime, Naiman's interest in literature, in art and in the theatre had already asserted itself. He had written several one-act plays which were produced. The history of Jewish participation in art was perhaps his major concern, a fact he attributed to his maternal family heritage, for his mother came from a family which had fled from Spain and had for many generations, in Spain and later, been masons and school-builders. After a period of work for the Yiddish press in Lodz, Naiman joined the staff of the *Haint* in Warsaw, remaining with the paper until the subjugation of Poland by the Nazis in 1939. He was theatre critic, essayist, and art critic, and was the first to introduce art criticism to the Yiddish press. He wrote on Jewish art also for the *Davar* in Tel Aviv and the *Menorah Journal* in New York. Among Naiman's auxiliary activities were the founding of a Yiddish marionette theatre and, in cooperation with Sholom Asch, the preparation of a Yiddish film on Polish-Jewish life, based on Asch's work. He was the author of *Shabbos-Oibs,* a folk drama in three acts, and of a

history of Jewish artists in all forms of art. Naiman was also a translator and had published fragments of a long poem, *Kadmon*. In 1942 he was believed to be living in Palestine.

NAKDANIM (punctuators), *see* MASORAH.

NAKDIMON BEN GORION, according to the Talmud one of the three wealthy Jews of Jerusalem who helped accumulate stores for the siege by the Romans in 70 C.E. (*Git.* 56a). The name may be the same as Nicodemus, though it is given a Hebrew etymology and explained as being due to the wonders that God wrought for him by sending rain in a time of drought (*Taan.* 19b, 21a). It is doubtful whether he is the same as the Nicodemus mentioned in *John* 3 as a prominent Pharisee who visited Jesus at night, and who later assisted in burying Jesus (*ibid.* 19:39).

NAME OF GOD, DESECRATION OF, SANCTIFICATION OF, *see* KIDDUSH HASHEM AND HILLUL HASHEM.

NAMES, COMPULSORY ADOPTION OF. Up to the 19th cent. the question of Jewish family names was one that was left to the individual Jew. Many of the Jews had already adopted family names; this was particularly the case among the Jews of Spain, Portugal and Italy, where the names chosen were often place names. Such names as Cohen, Levi, Segal, Sachs and their variants are practically derived from ancient Hebrew appellations and passed quickly into use. However, the bulk of the Jews in Germany and Eastern Europe still followed the custom of giving as name merely the personal name and the patronymic. With the emancipation of the Jews in some countries, and the increasing concern about them on the part of others, the Jews were required by government order to assume family names by which they were to be henceforth known.

In the French-created Kingdom of Westphalia a decree issued on March 31, 1808 required all Jews to take family names within three months. On July 20 of the same year Napoleon made a similar decree for all the Jews of his empire. Both decrees forbade Jews to take names based on localities or to adopt names of famous families. The Prussian edict of March 11, 1812, which emancipated the Jews, made this emancipation conditional upon the adoption of family names, to be approved by the authorities, in six months. This requirement was extended to Posen in 1833, and to other parts of the Prussian kingdom in 1845.

Austria had introduced compulsory name-taking even earlier, first in connection with the reforms of Joseph II in Galicia in 1785; in 1787 the requirement was extended to all the Austrian provinces except Hungary. In the course of the registration of the new names of the Jews, the governmental officials exacted various sums from the Jews in return for granting them names with a pleasant sound. Names derived from flowers and gems, such as Rosenthal, Goldstein and the like, were assessed at the highest value; such names as Stahl and Eisen could be obtained at a lower figure; while the penniless Jews were laden with such ridiculous names as Ochsenschwanz, Temperaturwechsel, Singmirwas, Galgenstrick, Wanzenknicker, and the like.

In Russia the statutes of 1804 and 1835 decreed that Jews might not be permitted to alter their family names, but did not compel them to adopt them. In 1844, when the Kahals were abolished, Jews were compelled to enter their names in the public register, and in the years following the Jews were obliged to assume family names. In Poland a decree requiring family names had been issued as early as 1821, but was not strictly enforced, and it was only in accordance with the later Russian regulations that the Jews of the kingdom all came to bear family names.

NAMES OF GOD, *see* GOD, NAMES OF.

NAMES OF THE JEWS. I. Biblical Names. Primitive peoples believe that a man's name is an essential part of him, in the same way as is a member of his body or a trait of his character. In Biblical times, accordingly, the naming of a person was considered to confer on him a certain amount of being, and great significance was therefore attached to the actual choice of name. Children were usually named at birth (*Gen.* 4:1; 29:32-35; 30:6-13; *II Sam.* 12:24), but sometimes the ceremony was postponed until the occasion of circumcision, or formal initiation into the tribal group (*Gen.* 21:3-4). New names were frequently adopted when it was desired to invest a person with a new individuality. Abram and Jacob, for instance, had their names changed when they were called to their high destinies. Similarly, Gideon was renamed Jerubbaal after he had overthrown the altar of Baal (*Judges* 6:32), while the kings of Judah, like the Egyptian Pharaohs and like modern monarchs, often received new names when they ascended the throne (*II Kings* 23:34; 24:17).

Biblical names either indicate a characteristic, such as "red" or "small," express a wish (Jehoiachin, "May God establish"), voice gratitude (Elhanan, "God has been gracious"), or suggest comparison with various objects, usually animals or plants, such as Jonah (Dove) and Tamar (Palm). The majority of them are readily intelligible from Semitic speech, but there are not a few which come from the ancient non-Semitic languages of Palestine, and in many cases these defy interpretation. Sometimes, indeed, foreign names were distorted into like-sounding Hebrew words, so that the correct explanation of them is even more difficult.

Personal names found in the Bible may be roughly classified into the following groups:

A. Nature Names. 1. ANIMAL NAMES. The best-known of these are: Deborah (Bee), Rachel (Ewe), Leah (Wild Cow), Rebekah (Tethered Beast), Huldah (Mole), Jonah (Dove), Caleb (Dog), Achbor (Mouse) and Shaphan (Rock-badger).

Many of the non-Israelites mentioned in Scripture bear animal names, these being especially common among the Midianites and Edomites. Examples which may be cited are: Zeeb (Wolf), Eglah (Calf), Epher (Young Gazelle), Oreb (Raven), Zipporah (Songbird). Some of the Horites likewise bear names which appear

to be those of animals, such as Ayyah (Vulture), Dishon (Mountain-goat?) and Zibeon (Hyena), but our increasing knowledge of the Horite (Hurrian) language renders it probable that these are Hebraizing distortions. Ayyah, for instance, may really be connected with the Horite deity Ayya, while Dishon may conceal the known Horite name Taishenni.

It has been suggested that animal names, especially when borne by tribes or by their eponymous ancestors, may derive from a primitive Semitic totemism. There is, however, no certain evidence that this institution obtained in the ancient Near East, and it is therefore more likely that the names derive from sentiments of endearment (cf. "my lamb"), or that they express the wish that a child may possess the qualities of a given animal.

2. Plant Names. In addition to such well-known names as Hadassah (Myrtle) and Tamar (Palm), there are a large number of personal names derived from various trees or plants, such as the oak (Elon) and the olive (Zethan). A particularly interesting example is that of the prophet Habakkuk, whose name has now been explained from the Assyrian *hambakuku,* denoting a garden plant.

Many of the animal and plant-names occur only once, in the late book of *Chronicles.* When given to figures of early history, their authenticity might therefore appear doubtful. Such doubt, however, is largely removed by the fact that identical or similar names do indeed occur in other Semitic documents of high antiquity.

3. Meteorological Names. Among these are: Samson (Sun-man), Lebanah (Moon), Zerah (Sunrise?) and Barak (Lightning). These names, however, are probably derived from those of ancient Semitic deities who personified the natural phenomena. A deity Shamash (Sun), for instance, figured in both the Babylonian and the Canaanite pantheon, while Birku is known as a West Semitic god of lightning.

B. Theophorous Names. Theophorous names contain the name of a deity.

1. The simplest of these are those which consist of the divine name alone. Examples are: Gad (the Aramean god of luck), Reshef (the West Semitic plague-god), Baal (*1 Chron.* 5:5) and Zebul (*Judges* 9:28). It must be observed, however, that in several cases names of this type are probably contractions of longer forms, originally containing a verbal element.

2. More frequently, theophorous names are compounded with an accompanying verb or adjective, after the manner of Jerubbaal (Baal contends), Melchizedek (Zedek is king), and the like. In later times the opprobrious epithet *bosheth* (shame) was substituted for Baal, giving rise to such formations as Ish-bosheth (Man of Shame) for Ish-baal (Man of Baal).

Sometimes it is difficult to determine, in names of this class, which is the divine element and which the accompanying predicate. Thus, Melchizedek may mean alternatively "Zedek (a Canaanite god) is king" or "Malku (another Canaanite god) is righteousness." Similarly, it is not yet clear whether such names as Adonimelech and Adonizedek contain the name of a god Adon (cf. Adonis), or whether that word is merely a predicate, meaning "lord," i.e. "Malku is lord," "Zedek is lord," and the like.

3. Especially significant in the category of theophorous names are those which preserve reminiscences of pre-Mosaic deities. Such are Zurishaddai (Shaddai is a rock), Ammishadai (Shaddai is a kinsman), and the like, many of them being borne by the leaders of the Israelite tribes at the time of the Exodus (*Num.* 1, 5, 6 and 12). Similar, too, are the many names compounded with El (God), for although this name was preserved by the Israelites as an appellation of the Deity, it is now known that in earlier times El was the head of the Canaanite pantheon, and that many of the names are, in fact, pre-Israelitic.

4. Names compounded with El or YHVH (shortened to Yahu, Yeho, Yo, Yah) preponderate in the Old Testament, and there are usually parallel forms, such as Elnathan (God gave) and Jonathan (YHVH gave), Eliab (God is a father) and Joab (YHVH is a father). The divine name may occur either at the beginning (Elnathan) or at the end (Nethanel), and the accompanying predicate invariably describes a function or activity of the god, either absolutely (Jehoshaphat), "YHVH has judged") or in particular relation to his votary (Bezalel, "(I am) in the shadow of God"). Examples are: Hananiah (YHVH has been gracious), Elijah (YHVH is God), Immanuel (God is with us). Names such as Jedidiah (Beloved of God), Johanan (YHVH has been gracious) and Mattathiah (Gift of YHVH) have their parallels and imitations in other languages in names such as Gottlieb, Theodore, Dorothy, and the like.

C. Names Implying Relationship. These may refer either to divine or to human associations, but the former is far more probable. In some cases, such as Abimael (God is indeed a father) or Ammishaddai (Shaddai is a kinsman), there can, of course, be no room for doubt, but in names like Ahi (Brother), it is not clear whether this denotes a purely human relationship, or whether it is short for some theophorous name like Ahijah (YHVH is a brother or YHVH is an ally). Moreover, the possibility must be recognized that in cases where such names are compounded with -yah (Abijah), that element may be a diminutive suffix, rather than a divine name, despite the fact that in certain instances there are parallel forms with the longer and definite -yahu (Abijahu; in Hebrew, *Abiyahu*). Names implying relationship are formed with *'ab* (father), *'ah* (brother), *ben* (son), *bath* (daughter) and *'am* (kinsman).

D. Descriptive Names. The most familiar of these are, no doubt, Korah (Bald Head) and the cognate Kareah. Less known names of this class are: Ikkesh (Crooked), Pekah (Stark-eyed) and Paseah (Lame).

E. The following are the principal ways in which names are formed:

1. With verbs in the perfect tense, expressing thanks or confirmation: Elhanan (God has been gracious), Jonathan (YHVH has given).

2. With a nominal predicate, denoting assurance and trust: Elijah (YHVH is God).

3. With verbs in the future tense or jussive mood, expressing wish or aspiration: Jehoiachin (May YHVH keep firm). Names of this type are often shortened by the omission of the divine element. Thus Isaac ("laughs") is evidently short for Isaac-el ("God

laughs"), while Jacob and Joseph are doubtless abbreviations of Jacob-el and Joseph-el, even though their meaning can not yet be determined with accuracy. Such formations are called *hypocoristic.*

4. With verbs in the participle, either active or passive: Baruch (Blessed), Saul (Besought), Menahem (Comforting). In some cases these names also are hypocoristic, really describing an active function of the Deity.

5. In the form of a rhetorical question: Micaiah (Who is like YHVH?), Michael (Who is like God?).

6. It is claimed by some authorities that there are also names with verbs in the imperative mood: Shemaiah (Hear, O YHVH), Hosea (Save!). This, however, is doubtful. Such formations do indeed occur in other Semitic languages. Nebuchadrezzar, for instance, is simply the Assyrian *Nabu-kudurri-uzur,* "O (god) Nabu, protect the boundary!" At the same time, it must be remembered that the standard (Masoretic) text of the Bible frequently exhibits a false vocalization of names, so that those which appear to contain verbs in the imperative have often to be corrected, with the guidance of the ancient versions, into corresponding indicative forms. Thus, *Refa'el,* apparently meaning "Heal, O God," may really be *Rafa'el,* "God has healed," and so forth.

7. With the ending *-i* or *-ai.* This suffix has two functions. On the one hand, it is possessive, being usually attached to divine names to indicate that a person belongs to, or is a votary of, the god in question. Examples are: Mordecai, "votary of Marduk," and Shimshai, "votary of Shamash, the sun-god." On the other hand, the suffix is frequent in abbreviated, or hypocoristic names, such as Abd-i, "servant," standing for some such formation as Abdiel, "servant of God."

8. With the ending *-â.* Examples of this form are Abdâ (Servant) and Gerâ (Guest). The ending has the force of a diminutive abbreviation, and may be compared with the English *-y* in such a name as Tommy.

9. With the ending *-on* or *-an.* This ending is likewise of diminutive force. Examples are: Zimran and Jithran.

G. Finally, there are a number of Biblical personages who bear names which are not Hebrew, and which come from the peoples in whose midst they lived. Egyptian furnished Joseph's other name, Zaphenath-paneah (*Gen.* 41:45), now usually explained as *Dje-pnute-ef-onkh,* "the god speaks and he lives." Similarly, Phinehas is the Egyptian *Pe-nehasi,* "the negro," while the very name Moses has been compared (wrongly) with the Egyptian *mesu,* "child," as in Thoth*mes* or Ra*meses.* Babylonian appears in Mordecai (from the divine name Marduk), Belshazzar (*Bel-shar-uzur,* "Bel, protect the king") and Bilshan (*Ezra.* 2:2), which is probably a distortion of the common Babylonian name Belishunu (Their Lord). Persian names appear in those of the sons of Haman, such as Aridatha (Given by the god Hari), as well as elsewhere in the books of *Esther* and *Daniel.* The name Job is possibly Edomitic. Ruth has been claimed by Hrozný for the language of the recently deciphered "Syro-Hittite" hieroglyphs, in which Rutas is the name of a goddess. Progress in the study of the Horite (Hurrian) language has led Maisler, Feiler and Julius Lewy to find several Horite names in the Old Testament, the last-named scholar even claiming Moses and YHVH among their number. While this last, however, is extremely improbable, there can be little doubt that when the ancient tongues of the Near East are better known, the study of Biblical names will enter a new phase, and many current interpretations will then require revision.

H. In contrast to the Biblical explanations of obscure and ancient names, which usually depend upon fanciful folk-etymology and rarely arrive at the correct meaning, the symbolic names which the prophets gave to their own children or invented upon other occasions mean exactly what they indicate; they are expressions of national feelings and wishes. Such names are Ichabod (The Glory is Departed), *I Sam.* 4:21; Jedidiah (Beloved of God), *II Sam.* 12:25; Lo-ruhamah (Unloved), *Hosea* 1:6; Lo-ammi (Not My People), *Hosea* 1:9; Shear-jashub (A Remnant will Return), *Isa.* 10:21; 7:3, and Maher-shalal-hash-baz (Speedy Booty, Swift Spoil), *Isa.* 8:3.

I. There are a great many Biblical names which are now common among other peoples, either because they were borne by Christian saints or because they were favorite Biblical characters. They have been altered to conform with national dialects, and have often become typical national names. Of those popularly associated with the personification of countries, the English John Bull, the American Brother Jonathan, the French Marianne, the German Michel and the Russian Ivan all come, wholly or in part, from Hebrew originals. Johanan, through the Greek Ioannes, becomes John in English, Jean in French, Johannes and Hans in German, and Ivan in Russian. Jacob becomes the French Jacques, typical of the peasant, and, through the Italian Giacomo, the English James. Hannah becomes Anna and Anne, Miriam is changed to Maria, Mary, Marie and Marion, while Shoshanah becomes Susan. Elijah, through the Greek Elias, becomes the Russian Ilya. Old Testament names were especially frequent in Anglican and Puritan circles in England and America, and it was even the custom, during the early 17th cent., to call children by entire Biblical phrases, such as "Bind-their-kings-in-chains."

J. The scientific study of Biblical names is as yet in its initial stages. One of the major difficulties which attend it is our ignorance of many of the languages anciently spoken in Canaan. While we now know something of Hittite, Horite, Canaanite and Amorite, we are utterly in the dark about the tongue of the Hivites, Perizzites and Girgashites (if, indeed, they had separate tongues), nor, despite recent progress, has the language of the Syro-Hittite hieroglyphic inscriptions yet yielded up all its secrets. It can scarcely be doubted, however, that these lost languages contributed their due share to Israel's repertoire of proper names, but we have no means of isolating the several elements. The result is that much is still perforce explained from Semitic which may really be of non-Semitic origin. A case in point is the name Nimrod. For generations this was derived from the Hebrew *marad,* "rebel," but we now know that it is more probably of Sumerian provenance.

Sometimes, again, it is the presence rather than the absence of new knowledge that creates the difficulties. Thus, in the early days of Assyriology, it was commonly asserted that Amraphel, king of Shinar, men-

tioned in *Gen.* 14:1, 9, was the famous Hammurabi, king of Babylonia. We now know, however, that both philology and chronology are against this equation. As Albright has suggested, Amraphel is more probably an otherwise unknown Amurru-pal, king of a place called Shangara.

Nevertheless, with all its drawbacks, Biblical onomatology has yielded encouraging results. The study of theophorous names has recovered to us considerable information about the pre-Mosaic pantheon and the way in which the Canaanites conceived of their gods, while a careful analysis of grammatical and morphological features has been of great benefit in reconstructing ancient Semitic dialects. Amorite is a case in point. Our entire knowledge of this tongue (such as it is) derives from proper names, and there is no doubt that when more controls can be established, we shall have in Biblical proper names a rich source for tracing the evolution of the Hebrew language. At the same time, it must be remembered that many of these names have been corrupted in the course of transmission, and it is therefore necessary at all times to check the authority of the Hebrew text against the evidence of the ancient versions.

B. Comparative material. Canaanite: Harris, Z. S., *A Grammar of the Phoenician Language* (1938), Glossary; Diringer, *Le Inscrizioni antico-ebraiche palestinesi* (1934). Amorite: Bauer, T., *Die Ostkanaanäer* (1926). Assyrian: Holma, H., *Assyrisch-babylonische Personennamen* (1914); Tallquist, K., *Neubabylonische Namenbuch* (1905). South Arabian: Pilter, W. T., "Index of South Arabian Proper Names," *Proceedings of the Society of Biblical Archaeology*, vol. 39 (1917) 99-112, 115-32. Horite (Hurrian): Feiler, "Hurritische Eigennamen im Alten Testament," *Zeitschrift für Assyriologie* (1939); Lewy, J., "Influences Hurrites sur Israël," *Revue des études sémitiques* (1938) 49-75.

II. Post-Biblical Names. Jewish nomenclature in the earlier post-Biblical period is distinguished by three especial features: (1) adoption of foreign names; (2) development of surnames; (3) a tendency toward contractions.

A. Foreign Names. These are derived principally from Greek, Babylonian, Roman and Persian sources.

When the Jews came to adopt Greek as their vernacular, in the 3rd cent. B.C.E., Greek names became increasingly popular. Such were Aristobulus, Menelaus and Jason. Alexander also was especially common. Hebrew names were frequently translated into their current Greek equivalents. Thus, Tobiah would become Agathon (good), Nathaniel would be turned into Theodotion (God-given), or the like, and Uri (as if from *'or,* "light") would be associated with Phoebus. Sometimes Hebrew names would be distorted into like-sounding Greek names, especially if the latter were famous in mythology. Thus, Eliakim became the Homeric Alcimus, while Joshua became Jason, and Menahem masqueraded as Menelaus. Occasionally, however, the reverse process took place. Ptolemy, for instance, which could not be pronounced by Jews because of the initial double consonant, was promptly equated with the Biblical Talmai (*Num.* 13:22) *II Sam.* 3:3), itself originally a Horite name (Talamiya).

Certain prominent Jews of the Greek (and later) period are at present known to us only under Greek names, but we must remember that this is often due to the fact that our information about them happens to come exclusively from Greek sources. Judas Maccabeus was probably known to his contemporaries as Judah, while Jesus is simply Joshua or Jeshua.

Babylonian influence is especially marked in the early Talmudic period, many of the sages of both the Babylonian and the Palestinian schools bearing names reflected in Neo-Babylonian documents. Thus the names Abba, Asi, Aha, Rabba and Nuri are contractions of current Babylonian names with the corresponding elements *abu, ahe, asu* and *nuru.* Similarly, names with the prefix Mar, such as Mar Zutra or Mar Ukba, have their parallels in Babylonian compounds with *mar* (son of). Names like Mar and Baba possess counterparts in Babylonian names compounded with *aplu* or *babu* (child). Similarly, such names as Bissa, Zuma and Zira have Babylonian parallels in Bisa, Zimma and Zira.

Roman names show less tendency toward Hebraization. Among them are Julianus, Rufus and Justus.

B. Surnames. A tendency toward the development of surnames manifests itself in the Talmudic period. These, of course, are not yet hereditary; they are merely sobriquets used to identify a man more precisely or to distinguish him from others of the same name. The beginnings of this tendency may be seen already in the Bible, where we hear of Joshua, son of Nun, Balaam, son of Beor, Haman the Agagite, and the like. In the Talmudic period these surnames usually take the form of patronymics, both Tannaitic and Amoraic sages being commonly designated by their fathers' as well as their own names. Examples are: Joshua ben Levi, Hiyya bar Abba, Joshua ben Hananiah, Eliezer ben Hyrcanus. Sometimes, however, the surnames are vocational, as in Abba the Bleeder, Daniel the Tailor, Honi the Chariot-Maker, Johanan the Cobbler, Abba Jose the Potter, and Isaac the Smith. There are also several surnames derived from places, such as: Antigonus of Socho, Nittai of Arbela, Nahum of Gimzo, Jeremiah of Difte, Nehemiah of Sihin. The name Judas Iscariot is possibly of this type, for it has been suggested that Iscariot is simply the Hebrew Ish Kerioth, "the man of Kerioth." Mary Magdalene is properly Miriam of Magdala.

C. Contracted Names. Characteristic of the early Rabbinic period are abbreviated or contracted names, often ending in *-a.* Such names are Abba, Huna, Baba, Rabba. It is often exceedingly difficult to determine whether such names are indeed contractions, since the longer form can not easily be identified. Huna, for instance, is still something of a mystery.

D. The primitive attitude toward names survived into the earlier post-Biblical times. Indeed, it still obtains in Jewish folklore. Thus it was commonly believed that a man's soul was bound up with his name, whence it followed that a man's soul would be deprived of its rest after death if his name were bestowed during his lifetime upon one of his descendants. For this reason, Judah the Pious expressly forbade any of his immediate descendants to bear his own name or

that of his father, Samuel, and this custom still obtains among many Jews at the present day. Similarly, because name conferred personality, proselytes were renamed, males being described also, with reference to the rite of circumcision, as sons of "our father Abraham." This usage also is still maintained.

E. When Jews began to adopt non-Jewish names, the custom arose of giving them a second, Hebrew name for religious purposes. This was used in marriage certificates, in calling persons up for the reading of the Law in the synagogue, in communal assessments and on tombstones. The name was given to boys at circumcision, and to girls on the first Sabbath after birth. In the case of boys it was pronounced by the Mohel in the words: "Our God and God of our fathers, preserve this child to his father and mother, and let his name be called in Israel N son of N." The formula for girls, more common among Sephardic Jews, is as follows: "May He who blessed Sarah, Rebekah, Rachel and Leah, Miriam the prophetess, Abigail and Queen Esther, daughter of Abihail, bless this sweet girl-child, and may her name be called N, with good omen (*mazal tob*) and in a blessed hour."

In some parts of Europe, especially in Germany, a curious ceremony accompanied the name-giving. The child was lifted thrice into the air, while his or her name and that of the child-stealing witch Holle was called aloud. This was termed Holle Kreish, i.e. "calling Holle." It combines a widespread rite of raising the newborn from the ground (in England, he or she is carried upstairs) and forefending maleficent spirits.

III. Names of the Jews in Europe and America. Family names passed down from generation to generation are of comparatively recent date. Originally, men were distinguished, in their several lifetimes, by appellative epithets. These either indicated the names of their immediate fathers, or else stated their vocation or provenance, or drew attention to some distinctive feature of their person. Jewish surnames are no exception, and may therefore be classified according to the categories just stated.

A. Patronymics. The earliest form of surname, and one especially common in Oriental and Sephardic communities, was the patronymic. The normal form of this is N ben (son of) N, but in Arabic-speaking countries, Arabic *ibn* (sometimes pronounced *aben*) was substituted for the Hebrew *ben*. In Spain the form *en* was often used, and in France and Angevin England we find the translation *fil*. Examples of the patronymic are: Moses ben Maimon (Maimonides), Solomon ibn Gabirol, Abraham ibn Ezra, Abraham fil Rabi. Sometimes the word for "son" was joined to the name of the father to form a simple surname. Thus, "son of Elisha" yielded the common Sephardic name Benelisha, whence Belish. The equally common Benzimra and Benzecry (Ben Zechariah) are of the same type, while Ibn Gabirol was styled Avecebron by medieval writers. Subsequent corruption and erosion often render it difficult to recognize the true origin of such names. Thus it is difficult to realize that the modern Benroy conceals Ben Aryeh (son of Aryeh).

In European countries, native patronymic suffixes are added to the original Hebrew names. Thus the son of Jacob appears as Jacobsohn, Jakobowski and Jacobowitz. Abraham's son appears as Abramowitz, Abrahamsohn, Abrahamowski and the shortened Abrahams. Not infrequently, the father's name appears in a diminutive or caritative form. Thus the diminutive of Menahem is Mendel, which leads to such surnames as Mendelowitz (son of Mendel), or Mendelsohn. Samuel becomes Schmul, whence Schmulewitz, Schmelkes, Schmuller and even Schmal. Solomon appears as Salm, whence Salmon, Solmsen and, by further distortion, Saling and Salinger.

Sometimes, again, the original Hebrew form of the paternal name will undergo dialectic variations. Thus Levi will become Löwy (through assimilation to German *Löwe* "lion") and produce Löwysohn and the like, while "the son of Cohen" will appear in Russian as Cohanovitch and Kaganovitch.

The German ending -witz, Slavic -vitch or -icz (-wicz), and Roumanian -vici indicate "son of." Thus Bercowicz, Bercovici and Berkowitz all mean "son of Berko." The Slavic suffix -ski denotes place of origin; thus Poznanski = native of Poznan, and Moscowski or Moscovitch = native of Moscow.

B. Vocational Names. These are less common among Sephardim than among Ashkenazim, where they often arose from descriptions attached to the names of local Jews in official registers. Sacerdotal functions produce, beside the common names Cohen and Levi, several combinations with Rabbi, such as Rebbe, Rabbiner, Rabbinowitsch and Rabbinersohn. Analogous is the Russian Chachamovitch, from *hacham,* "sage, ecclesiastical chief," while the Sephardic names Hazan and Schamasch referred originally to the cantor and the beadle of the synagogue. Similarly, Cantor, Kantorowski and Kanterowitsch allude to the former official, while Klausner was originally the rabbi of a *klaus,* or conventicle. The profession of dyeing yields the Sephardic name Sebag (black), while medicine furnishes the Sephardic Rofe and Del Medigo and the Jewish-Arabic Tabib. The tailor finds himself commemorated in the Hebrew Hayyat, which becomes in turn Chait, Chaitkin, and (by assimilation to a common Scots name) Keith. The mason gives Steinschneider, the printer Drucker, the goldsmith Goldschmidt and Goldsmid, while Schuster is the cobbler. An interesting name in this class is that of Azariah de Rossi, author of the famous *Meor Enayim.* The name derives from the Italian *rosso,* "red," and refers to descent from a line of miniaturists, so called because they used red minium in their work. It was translated into Hebrew as *Min Haadumim* (*'adom,* "red").

Other vocational names which may be cited are: Sandler (cobbler), Metzger (butcher), Schnitzer (carver) and the Dutch Kustenaar (artist) and Kleerekooper (old clothes man). Arabic gives Mallah, analogous to German Pfefferman, and Al-Bahari (apothecary), analogous to Apteiker. Hebrew yields Halfan or Halphan (money-changer), comparable with Wechsler, and Rokeach (spice-merchant). Many of these names were not, of course, exclusive to Jews.

C. Place Names. Sephardic Jews often took their surnames from the places in which they lived. Thus, Spanish habitat yields such names as: Alfambra, Almanzi, de Cordova, de Castro, de Lima, de Medina, Mezquita, Toledano and Villa Real. From Portugal there come Carvalho, Lisbona, Miranda and Paiba, while the Dutch de Haas is said to derive from the

Portuguese Diaz. Place names common to Italian Jews include: Ferrara, Ascoli, Lucca, Reggio, Soncino, Padua, Piperno, Montefiore and Romain. The names Luzzatto, Terracina and Ottolenghi may also be mentioned, while of especial interest is Levi-Civita.

Among German and East European Jews the name of a person's original habitat was often added to his name after migration to another city. This accounts for such surnames as Deutsch, Hesse, Preuss (Prussian), Bayer (Bavarian), Schlesinger (Silesian), Schwab (Swabian), Frank, Fraenkel and Frankenstein (Franconian) and Böhm (Bohemian). From the names of cities we have: Berliner, Breslau and Breslauer, Danzig, Danziger and Dancyger, Heilbrunn and Halpern, Auerbach and Orbach, Leobschütz and Lipschitz, Bing and Bingen, Prager and Präger, Brody, Broide, Broyde, Brader and Brodowski, Oppenheimer, Lissauer, Mannheim and Mannheimer, Witokow and Witkowski, Warschauer, and many others. Bacher derives from Bacharach, Zunz from Zonz on the Rhine, Laski from Lask in Poland, Shapiro and Spiro from Speyer, and Horowitz, Hurwitz, Hurwich, Howitt, and Russian Gurevitch from the Bohemian city of Horovice. Prins comes from Firenze (Florence), while the city of Trier (Trèves) yields Italian Treves, Alsatian Dreyfus and Russian Trebitsch. Ginzberg and Ginsburg come from Ginsberg in Bavaria.

Names derived from places in France include Créhange, Crémieux, Ballin and Lattes. Many French Jews bear the Hebrew name Zarphati, because Zarfat (*tzarefath*) is Hebrew for France. Others are known in old German records as Wallach, or Walloon, and this becomes Polish Wlock, Block and Bloch. In England it is frequently naturalized as Welsh or Welch.

Sometimes family names arose out of street names. Thus the Neugass family is descended from the famous wit Leiser Neigass, who lived in the Neue Gasse of Berlin, while colloquial German (*Plattdeutsch*) yields such surnames as Vandamme, Achter den Wal, and the Polish Schrek or Scherek ("broad place").

D. Jewish surnames arose also from family escutcheons, especially in southern and western Germany. Thus, families of Levites would have a jug (*Kann*) carved on their doors, since it is the office of the Levites to pour water over the hands of the priests before the latter bless the congregation. This gave rise to the name Kann. Such escutcheons likewise explain the names Schild (escutcheon), Rothschild (red shield), Braunschild, Schwarzschild (black shield), Nussbaum (nut-tree), and the like. The sign of the flask explains Flasch, Flesch and Flaschin. In southern Germany a family named Kahn had a boat (*Kahn*) as their house-sign. Their descendants are the Schiff family, and as late as 1750 one of them signed himself Aberle Schiff Kahn.

E. Animal Names. Animal names, sometimes translated directly from Biblical originals, sometimes adopted from their non-Jewish neighbors, were also common among Jews. Such names are: Wolf, Bär ("bear"), Löwe ("lion") and Hirsch ("stag"). Katz, however, does not mean "cat," but is an abbreviation of *ḳohen tzedeḳ*, "priest of righteousness." In many cases animal names were chosen because they had symbolic connections with ancient Biblical characters. Thus, in the Blessing of Jacob (*Gen.* 49), Judah is likened to a lion's whelp, Benjamin to a wolf, and Naphthali to a nimble hind. These gave rise to a whole series of new names, which became still more extensive when the German animal names were translated back into Hebrew. Judah was always connected with Löwe in such various forms as Löw, Löb, Loeb, Liebl, Leibusch, Löbl, Lion (corrupted by scribal errors into Lin), Lyon, Leon, Leibowitsch, De Leeuw, Löwensohn, Leeb, Leibsohn, Lebensohn, Lew, Lefmann, Lewkowitz, Lefkowitz, Leibowitz, Löbmann and Löbe. Translated back into the Hebrew *'ari*, it produced such names as Benary, Benario and Gur-Aryeh, and even, by abbreviation, Brill and Brilles (see below). The name Judah itself underwent similar transformations. It gave rise to such names as Yahudah, Jehudah, Judasohn, Jüdel, Jidel, Judilowitsch, Judilobitz, Idelsohn, Judey, Judelsohn, Udin and Udell. Benjamin produced Benensohn, Bonum and the Caucasian Benschwili. Moreover, it was connected with the wolf (in Hebrew, *ze'eb*), yielding such names as Wolf, Wulf, Wolk, Walk, Wilk, Seiffer, the Roumanian Lupo, the Spanish Lopez, as well as Zeeb, Seif, Seifmann, Siff, Seff, Siew, Wolffsberg, and Wolfermann. Wilczek is the Slavic diminutive of Wilk, and means "little wolf." Naphtali is combined with Hirsch (hind), which is pronounced Hirz or Herz in the dialect of Upper Germany; hence we find names such as Hirsch, Hirschsohn, Herz, Herzenstein, Hartwig, Harris, Herschel, Herzl, Cerf, Serphos, Jellin, Jellinek. Bär produces Beermann, Berman and Berish. Ochs ("ox") and the corresponding Schorr and Byk are similar animal names; but see below under F. Other animal names found among the Jews are Hase ("hare"), Fuchs ("fox"), Adler ("eagle"), Geier ("vulture"), which is the same as Sokol, hence Sokolov and Sokolovski, Amsel ("ousel"), Fink ("finch"), Hahn ("cock") and its equivalents Gallo and Petuchowski, Gans ("goose") and Ganz, Falk ("falcon") and Falkenheim, Nachtigal ("nightingale") and the corresponding Solowei and Soloweitschik. Sometimes the origin of the names is a purely superficial one. Thus there was a town named Rybnik, which means "place of fishes." This produced families with the names of Aal ("eel"), Forell ("trout"), Lax and Lachs ("salmon"), Hecht ("pike") and Karp ("carp"). The name Fisch, generally in the affectionate form Fischl, is connected with Jonah and Joshua; the latter was "bin Nun," fancifully explained as "son of the fish." Hence we find the regular combinations of Fischl-Schi'e (Schi'e being the Yiddish form of Joshua) and Fischel-Jaune.

F. Names Describing Characteristics. Many names are derived from the characteristic features of the person who received them. Thus we have Gross ("large"), Klein ("small"), Alt ("old"), Jung ("young"), Neu ("new"), Schwartz ("black") and Weiss ("white"). The idea of large stature appears also in such names as Grossmann and Riese ("giant"); Riess and Riesser, however, are place names. Klein appears also as Kleinmann and in French as Petit; Jung becomes Jungmann and De Jonge; Neu gives rise to Neumann, Naumann, Neimann and even Neander. Other names of this sort are Schön ("beautiful"), with the corresponding Jaffa and Joffe (from the Hebrew *yafeh*), Steinhart ("hard as stone"), Butterweich ("soft as butter"), Schwarz and other names of the same meaning, such as Czerni, Cerny, Cernea, Tschorny,

Fekete, and Negro, Weiss and the similar Blank, Blanco, Bianco, Bialik, Weissenberg, Weissmann and Weissbart, Gelber ("yellow") and its derivatives Geller, Gellert, Gelbart and Hellebard, Rotmann and Rothmann ("red"), Grün ("green"), Braun ("brown"), with the synonymous Pardo in Spanish.

G. Surnames from Feminine Names. Many Jewish surnames are derived from feminine names, the latter being usually subjected to dialectical modifications. Thus Bella became Beile, and Schöne became Scheine. Other feminine names, besides those in the Bible, were Perle, Rose, Hinde, Biene, Süsse, Liebe, Frummet ("pious"), Broche, Pesse, Gute, Gelle (Gelbe, "blond"), Braine (from Braune), Edel (in Yiddish Eidel, hence Edlin and Eidles; the latter became Atlas), Freude, and others. These gave rise to a number of family names, as follows: Freude: Freide, Frade, Frat, Fradkin, Freudenberg, Freudenthal; Miriam: Mirkin; Hannah: Chankin, Hanemann, Hantke, Henschel and Hensel; Deborah: Dobka, Dobkin and Dwoiresohn; Perle: Perlin, Perles and Perlmann; Rose: Rosenmann, Rosin and Rosen; Chayeh: Chajes and Chaikin; Hinde: Hindes; Beile: Beilis, Beilin, Beil, Beilsohn and Beilinson; Liebe: Liebmann, Lipmann, Lubmann, Liebes, Lipke, Lübke and Lipkowitz; Frummet: Fromm and Frommann; Süsse: Sussmann, Süssmann and Süsskind; Grone: Gronemann; Chava (Eve): Chwolles, Chawales, Chawkin and the French Haffkine; Scheine: Schönemann, Schömann, Schönmann, Scherkin, and Scheinhaus, a folk-etymology of Scheines; Gute: Guttmann, Gutkind, and the French translation of the latter, Bonenfant. There are also such names as Gelle, Gelles, Braine, Brainin, and many others.

H. Names Commemorating Dates and Events. Names arose also in connection with specific occasions or events. A child born on a festival, for instance, might be called Yontef or Bondi (Good day), the former being later corrupted to Jandorf. If the date of birth fell on Passover, the child might be named Pesach, whence Bettsak, Paysack and Peissachowitsch. Other such names were Tischebow ("ninth of Ab"), common in Riga, and Majofis in Mariampol. Birth in the month of Nisan gave rise to such names as Nissan and Nissanowitsch, while boys born on the Sabbath were frequently called Shabbetai.

An instance of how surnames sometimes arose out of chance circumstances is afforded by the case of the Jew Pinkus Seligman Pappenheim, who saved a Prussian officer, at the battle of Leuthen (1757), with a great deal of trouble (*Mühe*); in 1784 Frederick the Great conferred upon him the surname Mühsam.

I. Superstitious Names. Piety and superstition also produced several Jewish names. In the Orient, when several children have died in a family, a newborn child is often called Behai, meaning "may he live." When the same thing happens in Poland, the child is given not only a Hebrew name, which is never uttered, but also an appellative Yiddish one, such as Alte, Alter (Another) or Zekeine (Old Man), the idea being that should the angel of death come to claim him, he would be baffled by finding "another" or an "old man." A similar motive inspires the Jewish custom of changing the name of a person dangerously ill, although in this case ideas of endowing him or her with a new personality also enter into the picture.

J. Names from Abbreviations. There are a great many names that have arisen out of abbreviations. For the most part the latter were formed out of the initials of a man's own name and that of his father. Thus the descendants of the famous Sabbatai Cohen have Schach as their family name. The following names arose in a similar manner: Bry (Ben Rabbi Israel), Brill (Ben Rabbi Judah Löwe), and the genitive form Brilles. The son of Rabbi David the Hazan becomes Bardah. Ben Rabbi Akiba is abbreviated to Brock, which becomes Bruck, Byk, Brockmann and Brückmann, by assimilation to common German names. Similarly, Ben Shimeon becomes Basch, Brasch, Brosch and Brisch, while Ben David appears as Badt, Bradt, Barth, Bardowicz and even Budewig.

The initials of an official title were sometimes taken as a surname. Thus Katz originated from Kohen Zedek, "priest of righteousness," and Schatz from Sheliah Tzibbur, "minister of the congregation," while Segal (of which variant forms are Segel, Ségalle, Zoegell and Segalowitch) is said to come from *segan leviyyah,* a title of the Levites (literally, assistant of the Leviteship).

Place names also were abbreviated to form surnames. Thus Fraustadt and Freystadt produce Pasch and Presch. Eisenstadt and Amsterdam appear as Ash and Asch. (A later folk-etymology took this to mean "ashes" and translated it into Hebrew as Efer.) Ash is also an abbreviation for the Altschul in Prague. Similarly, Basch is believed to be an abbreviation of Bochstein or Burgkunstadt.

Famous rabbis are usually designated by their initials, which are then read together as names. Familiar examples are Rashi (Rabbi Solomon Yitzhaki) and Rambam (Rabbi Moses ben Maimon). Similarly, the founder of Hasidism is known as "the Besht," which originated in the initials of Baal Shem Tob, "master of the good name."

K. Imposed Surnames. In addition to names which evolved naturally, there were others which were arbitrarily imposed upon Jews, especially as the result of the decrees issued by Joseph II of Austria, in 1787, and by Napoleon, on July 20, 1808, compelling them to adopt family names. The latter were often conferred on them against their will, and in a great many cases hostile officials gave them sobriquets of opprobrious, ludicrous or bizarre character, such as Eselskopf (Donkey's Head), Wohlgeruch (Good Smell), Lumpe (Hoodlum), Fresser (Glutton), Küssemich (Kiss Me) and Edelstein (Precious Stone). In a Viennese trial of 1878 we find among the witnesses: Rebenwurzel (Vine Stock), Nussnacker ("nut-cracker") and Weisheitsborn ("well of wisdom"). Other such names were Tintenpulver ("ink powder"), Geldschrank ("money-chest"), Getreide ("grain"), Puderbeutel ("powder bag"), Elephant, Zucker ("sugar"), Honig ("honey"), Salz ("salt"), Schmalz ("grease"), Butterfass ("butter-vat"), Grabscheid ("spade"), Gewürz ("spices"), Pfeffer and Pilpul ("pepper"), Rettig ("radish"), Zimmt and the Polish Cynamon ("cinnamon") and Durst ("thirst"). Ashkenazic Jews had also such usual names as Goldlust ("lust for gold"), Mandelstamm ("almond stalk") and Silberfarb ("silver color"). In Galicia, and in Galicia only, do we find Jews bearing such names as Hübner, Schultze, Schiller and Ritter. In other regions

we find Müller (Milner in Yiddish and Molnár in Hungarian), Windmüller, Hoffmann and Lehmann as Jewish family names.

Sometimes, the answers given by Jews to the questions of officials were turned into surnames. Thus, a Jew who stated, in Yiddish, that his name was *poshet* Yankele (simply Yankele) was promptly registered as Yankele Poshet, while a family who remarked in Hebrew, when asked their surname, *Anu lo neda'* (We don't know), were entered as Neuda.

When the Jews were permitted to select their own names, they usually preferred such as sounded most attractive. In northeastern Germany they preferred names compounded with Rose, Blume or Veilchen; hence we find such names as Rosenfeld, Rosenberg, Rosenthal, Rosenwald, Rosenbluth, Rosenzweig, Rosenau, Rosenow, Rosenstock, Rosenstrauch, Rosenstiel, Rosenblum, Rosenmann, Rosenhain and Rosenstein. Here it is probable that they were influenced by the feminine names Blume, Veilchen and Rose. Reis, Rösner and Reissner are generally derived from the feminine name Rose, which also appears as Reise and Resele.

L. Assimilation of Names. Under the influence of assimilation Jewish names were frequently accommodated to those current among the non-Jewish majority. This is the same tendency as that which converted Eliakim to Alcimus and Menahem to Menelaus in the Hellenistic period. In medieval Normandy and England, for instance, Hebrew names were usually translated into French equivalents. Thus, Haim became Vives and Gamaliel became Dieulecresse. In Europe and the United States this tendency was one of the consequences of the movement of emancipation in the 19th cent., for Jews who were thus integrated into the general community sought to throw off all outward marks of foreign origin, especially such as might strike their neighbors as outlandish. First-generation immigrants usually altered their first names to non-Jewish equivalents beginning with the same letter. Thus, Abraham became Albert, Baruch became Bernard, Chaim was turned into Charles or Cecil, Ephraim was Edward or Edgar, Isaac was Irving or Isidore, Moses was Morris or Maurice or Mortimer, Levi was Louis or Lewis, while Solomon, Samuel and Simon were naturalized as Sidney or Stanley.

Surnames likewise were subjected to radical modification. Thus, in Hungary, where assimilation was particularly advanced, Deutsch appeared as Dömeny, Bamberger as Vambery, and Cohen as Kömeni, Körösi, Koracz and the like. In English-speaking countries, names compounded with Rabbin were turned into Robin, Rabbinowitch becoming Robinson. Even old Sephardic names were changed. Martinez became Martin, Rodriguez was changed to Rogers, and Rey was translated into King. Foreign suffixes were dropped. Pilichowski became Pilley, Reichenheim became Reigate, and Eppenheim was altered to Elton. More grotesque transformations also took place. Thus, the American Milldollar conceals Mühlthaler, Cashdollar does duty for Käsenthaler, and Isaac becomes Hitchcock.

Extensive changes of name took place also when Jews were converted. Thus, Amschel Meyer became Bleibtreu, Lazarussohn became Lasson, and Levy became Volkmar and Liebert.

On the other hand, the reverse of this process has revealed itself in modern Palestine, where there has been a marked tendency to Hebraize European surnames. In many cases the system of patronymics has been revived, Jews substituting for their surnames the first names of their fathers, with the prefix *ben* (son of). Thus, Goldmann becomes Ben Haim, while such names as Ben-Gurion and Ben-Zevi come into currency. More frequently, however, the European names are simply translated into Hebrew, often with grotesque effect. Thus an erstwhile Goldberg becomes Har Zahab, while Friedmann is renamed Ish-Shalom (man of peace). Significant of this tendency to perpetuate, rather than discard, Jewish associations in surnames is the fact that when Sir Herbert Samuel, first High Commissioner for Palestine, was raised to the peerage, in 1937, he adopted the title of Viscount Samuel of Mount Carmel.

M. Double Names. Although all Jews have, in fact, a Hebrew as well as a vernacular name, in certain communities there is an established usage concerning the employment of one or the other. Thus the Persian Jews of Demawend called one another by Mohammedan names when they were with Persians, but used their Jewish names when they were alone. The same usage obtains also today among the Samaritans of Palestine. In Germany, Jewish women usually had such German names as Perle, Liebe and Gute, while the men bore Hebrew names, such as Abraham, Isaac, Jacob and Moses. The same is true in Persia; men usually have Hebrew names, women Persian and Arabic names.

N. Popularity of Names. The popularity of names among Jews undergoes strange and often unaccountable fluctuations. Instructive is the following list of frequencies drawn up, in 1903, by Arthur M. Hyamson, on the basis of 2,000 names recorded in subscription lists of the London Jewish community: Cohen 159, Levi 159, Jacobs 111, Solomon 102, Davis 93, Barnett 50, Lazarus 43.

It is often the case among Jews that certain names will prevail for decades or centuries and then fall out of use. Thus, in Germany, such names as Günther, Horst, Ingeborg, Inge, Walter, Herta and Ruth (not because it was Hebrew, but because it was a German name) all enjoyed a temporary popularity, while the old German name Siegfried was for a time borne by Jews only. In the United States, Cyrus is one of the names which were once fashionable but have now become rare.

In recent years double names have become increasingly popular, just as they were among the Jews of Great Poland a century or two ago. This tendency has been stimulated, in certain cases, by the desire to commemorate historic characters. Thus Jewish boys in Austria were often named Franz Josef, while after the death of the Zionist leader (1904) the combination Theodor Herzl became especially common.

O. Names from Books. Lastly, mention should be made of the fact that in rabbinic and literary circles it was, and still is, customary among Jews to name an author after the title of his best-known work. Thus Eleazar of Worms is referred to as "the Rokeah." Conversely, many Hebrew authors attempt to introduce their own names, by way of pun, into the titles of their books. Thus, Shabbethai *Sheftel* Horwitz (16th cent.) entitled one of his Cabalistic works *Shefa Tal* (Effusion of Dew).

In Nazi Germany, in 1938, Jews were forbidden to change their family names. They were even compelled to reassume Jewish names which had been changed years before. The law of August 17, 1938, restricted Jews to the use of a limited number of first names of Jewish origin. A list of "official Jewish" names, 185 for men and ninety-one for women, appended to this law shows that the Nazis preferred corrupted East European versions of the names instead of the original Biblical forms, while such names as Abraham, David, Joseph, Ruth and Miriam were not included. Jews

who had other given names than those permitted by this law had to add the given name Israel for males and Sara for females.

In France, in March, 1942, Jews were forbidden to change their family names, and in Norway, in July, 1942, Jews were forbidden to bear Norwegian-sounding names.

NAMIER, LEWIS BERNSTEIN, historian, b. Russia, 1888. He was educated in England and became a naturalized British subject. In 1913 he was engaged in business in the United States, but when the first World War broke out, he became a private in the Twentieth Royal Fusiliers. Subsequently he served in the political intelligence bureau of the Department of Information. From 1918 to 1920 he was with the political intelligence division of the Foreign Office.

Thereafter, save for another two-year period in business, he continued to engage in historical research, writing and teaching. In 1920 he lectured in modern history at Oxford, and in 1931 was appointed professor of modern history at Manchester University, a post he still held in 1942. From 1929 to 1933 Namier served on the Record Committee of the House of Commons, and from 1929 to 1931 he was political secretary for the Jewish Agency for Palestine.

His reputation as a historian and political analyst is based on his writings, chief among which are: *Germany and Eastern Europe* (1915); *The Structure of Politics at the Accession of George III* (1929); *England in the Age of the American Revolution* (1st volume, 1930); *Skyscrapers and Other Essays* (1931); *Additions and Corrections to Sir John Fortescue's Edition of the Correspondence of King George III* (vol. 1, 1937); *In the Margin of History* (1939). The latter volume includes several essays on the Jewish question.

NAOMI (Hebrew, "pleasant"), wife of Elimelech and mother-in-law of Ruth, who plays a prominent part in the Biblical book of the same name. According to the rabbis, she was a descendant of Nahshon, the brother-in-law of Aaron. After the death of Elimelech in the adopted land of Moab, she returned with her devoted daughter-in-law, Ruth, to Beth-lehem, in Judah. Her misfortunes wrought such startling physical changes in her that those who had known her previously asked: "Is this Naomi?" Hereupon Naomi replied: "Call me not Naomi, call me Marah (bitterness); for the Almighty hath dealt very bitterly with me" (*Ruth* 1:19-20). Naomi contributed to bringing about the marriage of Boaz and Ruth, and became the nurse of their child.

According to one version, Naomi was one of the twenty-two "women of valor" referred to in the last chapter of *Proverbs,* while others maintain that it was written only in praise of Sarah.

NAPHTALI, son of Jacob and Bilhah, handmaid of Rachel, and eponymous ancestor of one of the twelve tribes of Israel. The name is fancifully explained in the Bible from the Hebrew word *naphtulim,* "wrestlings," because Rachel "wrestled" with her rival, Leah, and "prevailed" by the birth of a son to her handmaid. This, however, is folk etymology, and the real origin of the name, possibly non-Semitic, remains obscure.

From the fact that its eponymous ancestor is described as the son of a concubine, it is assumed by modern scholars that the tribe of Naphtali was a pagan Canaanite clan later absorbed into the federation of Israel, but never recognized as a true blood-brother.

Knowledge of the tribe is meager. Its fighting men were numbered at 45,400 at the time of Israel's entry into Canaan, but modern scholars believe that this figure is retrojected from the later census lists of Joab, and that Naphtali was already settled when the Israelites arrived. Its tribal territory was a long fertile strip in Upper and Lower Galilee, extending some fifty miles across. It was bounded on the north by Zebulun, on the west by Asher, on the east by the Jordan and its lakes, and southwards it reached to the Lake of Gennesareth. The land possessed nineteen fenced cities, including Hazor, Beth-shemesh and Kadesh (*Josh.* 19:32-38), the last-named being the home town of the hero Barak (*Judges* 4:6). The territory was ravaged about 910 B.C.E. by Ben-hadad I, king of Aram, (*I Kings* 15:20), and in 734 B.C.E. it was annexed by Tiglath-pileser III, king of Assyria (*II Kings* 15:29).

Exposed to constant marauding expeditions, the men of Naphtali developed a marked degree of hardihood and courage. Their bravery is commended in the ancient Song of Deborah (*Judges* 5:18), and they served valiantly also under Gideon (*Judges* 6:35) and David (*I Chron.* 12:35). Josephus (*Jewish War,* book 3, chap. 3, section 2) praises them as doughty warriors.

Sub-divisions of the tribe, represented in the Biblical genealogies as sons of Naphtali, were Jahziel, Jezer and Shallum (*Gen.* 46:24; *I Chron.* 7:13), but nothing is known about them.

Naphtali figures occasionally in later Jewish literature. *Tobit* 1:1 would indicate that Tobit was a descendant of Naphtali, while the Targums declare that, being fleet of foot, Naphtali was the first to inform Jacob that Joseph was still alive. The *Sefer Hayashar* asserts that Naphtali married Meremith, daughter of Amoram, a descendant of Nahor, but the book of *Jubilees* (34:20) states that his wife was Resuch of Mesopotamia.

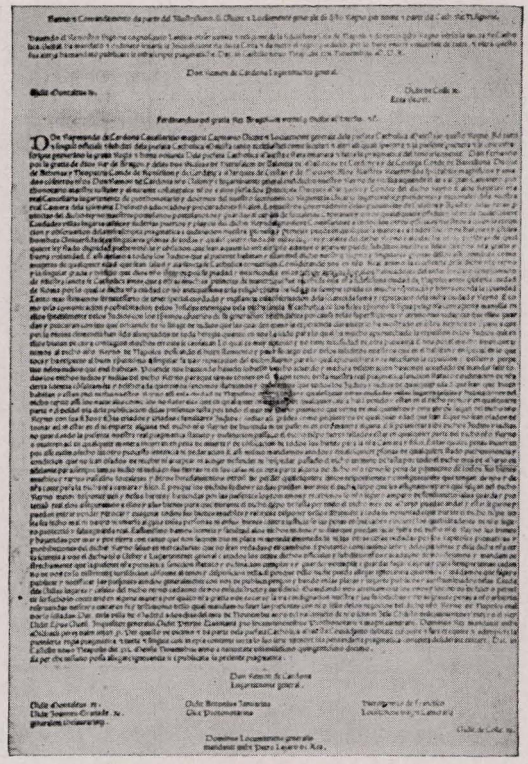
NAPHTALI BEN ISAAC HAKOHEN, *see* COHEN, NAPHTALI BEN ISAAC.

NAPHTALI, FRITZ, economist, b. Berlin, 1888. He was educated at a non-classical high school at Berlin, where he was later employed by banking and industrial firms. He attended the commercial academy, and in 1912 became a member of the editorial staff of the *Vossische Zeitung* and the *Berliner Morgenpost,* which were owned by the Ullstein brothers. Naphtali was attached to the business department of these newspapers, which supported the Democratic Party but whose editorial staff was composed of both democratic and socialist political leaders. Among the latter were Julius Kaliski and Max Cohen-Reuss, who influenced Naphtali. They played an important part in German politics, especially in the first days after the outbreak of the revolution, advocating the institution of a second chamber which should represent the economic and professional structure of the German Empire in addition to political representation of the Reichstag.

Kaliski and Cohen-Reuss were soon defeated by Wels and Scheidemann, leaders of the Social Democratic Party, but Naphtali later succeeded in influencing the German trade unions along the lines advocated by Kaliski's. Like Kaliski and Cohen-Reuss, Naphtali was a member of the German Socialist Party and interested in the Zionist movement. He became a member of the Reichswirtschaftsrat, instituted as an equivalent of the professional chamber but by no means a realization of the ideas of Kaliski and Cohen-Reuss. In 1921 Naphtali became a member of the editorial staff of the *Frankfurter Zeitung,* which he left in 1926.

Naphtali published *Kapitalskontrolle* (1919); *Wertschwankungen und Bilanz* (1921); and *Währungsgesundung und Wirtschaftssanierung* (1924), stressing the necessity of combining monetary and economic reforms. From 1926 on he was the most influential economic adviser of the directorate of the German trade unions. From 1926 to 1928 these unions reinterpreted their ideology, and Naphtali had an important part in the formation of their new program. His speech at the congress of trade unions in Hamburg (1928) attracted wide attention, and led to a long discussion of his statements during and after the congress. In his pamphlet *Wirtschaftsdemokratie* (1928), edited by the trade unions administration, Naphtali stressed the conviction that economic welfare should be possible only within the realization of socialistic ideas, but he was opposed to sudden changes. He advocated "economic democracy,"



Proclamation issued by King Ferdinand I pertaining to the expulsion of the Jews and Marranos from the kingdom of Naples in 1510

participation of the workers and employees in the management of private enterprises. He was severely attacked therefor by the radicals on the right and the left. Naphtali became lecturer at the Freie Socialistische Hochschule, and was entrusted with the education of the rising generation of trade union officials who were interested in economics. From 1929 to 1933 he was director of the national organization for politico-economic research. In 1929 he published *Die Reparationsfrage,* and in 1930 *Wirtschaftskrise und Arbeitslosigkeit.*

In 1933 Naphtali left Germany and settled in Palestine, where he became professor of economics at the Haifa Technikum, and director of the section on modern economics of the *Dawar.* In 1935 he wrote *Perakim Bechalkalah Medinith Ubethorath Hakonyunkturah.*

HUGO BIEBER.

Lit.: Goetz-Girey, Robert, *Les syndicats-ouvriers après la guerre* (1936).

NAPLES, city of Italy, which as early as 536 had a large Jewish population. These Jews defended the city valiantly when Justinian's general Belisarius besieged it from the sea. Letters of Pope Gregory the Great (590-604) mention the Neapolitan Jews. As far back as the 10th cent. the existence of a synagogue in Naples is reported and in the 12th and 13th centuries Jews are registered as house and land owners. According to Benjamin of Tudela (about 1165) 500 families then dwelt in Naples. Such Jewish scholars and philosophers as Jacob ben Abba Mari Anatoli lived at the court of Frederick II of the Holy Roman Empire (d. 1250). Charles I of Anjou (1265-85) counted also among his "faithful men" such Jewish scholars as Faraj ben Salim of Girgenti, Moses of Palermo, who

is possibly identical with Faraj, and the physician Joash of Naples. In spite of that, on the accusations of a converted Jew, Manuforte of Trani, he ordered in 1270 the confiscation of all the Talmudic and liturgical books of the Jews.

In 1290 Charles II compelled his Jewish subjects to conversion and many then became Christians, most only in appearance. His successor Robert (1309-43) again drew Jewish scholars to his court, including Judah Romano, Kalonynos ben Kalomynos and Samuel Cretese (from Crete). With his reign began a period of undisturbed peace for the Jews of Naples, until queen Johanna II (1414-1434) again imposed restrictions on them. The kings of the house of Aragon (since 1442), were, on the contrary, tolerant and well disposed towards the Jews and under their rule Jewish trade, industry and science, particularly the art of printing Hebrew books, flourished. Ferdinand I wholeheartedly welcomed the Jews driven out by Spain, Sicily and Sardinia, in 1492. Among them there was Don Isaac Abravanel, who soon became the king's adviser.

The invasion of Charles VIII of France (1494) was a source of much suffering for the Jews of Naples and even after the return to power of the house of Aragon (1495), peace did not return for the Jews. The transfer of Naples to the Spanish rule (1503) had dire consequences for them. The Jews were temporarily banished from Naples in 1510-11 and permanently in 1540-41, so that the community, whose leaders were Don Samuel Abravanel, son of Isaac Abravanel, and Rabbi David ibn Yahya, ceased to exist. Not until 1738 did Charles VIII permit some Jews to settle in Naples as merchants, as this promised to benefit the commerce of the country. This permission was rescinded, however, three years later.

At the beginning of the 19th cent. some Jews, among them a member of the house of Rothschild, settled in Naples. When Naples was united to Sardinia (1860) and to the kingdom of Italy (1861) full equal civil rights were granted to the Jews. Since then the number of Jews of the city increased and made possible the foundation of a community which, in the 20th cent. grew with the addition of immigrants from Salonica. Later it declined, and only a few dozen Jewish families lived in Naples in 1942. UMBERTO CASSUTO.

NAPOLEON BONAPARTE, emperor of the French, b. Ajaccio, Corsica, 1769; d. on the island of St. Helena, 1821. His first contact with Jews occurred at the time of his expedition to Egypt (1798). In order to win the Jews to his side in the conflict with the Turks, he issued a proclamation urging the restoration of the kingdom of Jerusalem. He also encouraged the enlistment of Jews in the French army of Egypt.

In 1806 complaints of Alsatian debtors against Jewish creditors had reached the Imperial Council. In response to Napoleon's request, Marshal Kellermann had reported that the Jews of Alsace charged a high interest rate and that their mortgage holdings between 1799 and 1806 were not less than twenty-one million dollars. In addition, there was ten million dollars in debts owed them. What had happened was that after the French

Napoleon I

Revolution the peasants had borrowed money in order to purchase parcels of land and agricultural equipment. Thus, they had become debtors of the Jews.

In a decree promulgated on May 30, 1806, Napoleon established a moratorium for a year on all debts owed to the Jews of the Rhine provinces. It was apparent at the time that Napoleon was beginning to think about the larger aspects of the Jewish question because the decree goes on to state that "the conditions in Alsace have at the same time brought to our attention how urgently necessary it is that among those who profess the Jewish faith in the countries which are subject to us there be restored those civic and befitting morals and manners which, in regrettable fashion, have already disappeared from among many of them by reason of the humiliating circumstances under which they have long suffered." Accordingly, on July 15, 1806, there was to be held in Paris an assembly of people "who professed the Jewish faith and dwelt upon French territory."

The Assembly of Notables met on July 29th, with Abraham Furtado presiding. But the emperor, who was concerned with discovering the things permitted and forbidden to the Jews, was not satisfied with the limited authority of the assemblage. Consequently he planned to revive the Sanhedrin.

In a letter written from Posen on November 29, 1806, Napoleon stated the problem as he saw it. He divided the Mosaic laws into religious and political categories. The religious he recognized as immutable, but the political, he maintained, were to be adapted in a befitting and appropriate manner to the prevailing conditions and circumstances. It was Napoleon's desire that polygamy cease, that the Jews should regard persons of other faiths as similar to themselves, and that they should take up "useful" occupations and become owners

of homes. He would have prohibited them from practising usury. Furthermore, the Jews were to acknowledge France as their fatherland and obligate themselves to perform military service. Of every three marriages that took place among the Jews, one was to be entered into with a Christian. In this manner, Napoleon hoped, the Jews would be amalgamated with the French.

The Sanhedrin began, on February 4, 1807, the task of acquainting Napoleon with Jewish custom concerning matrimony, non-Jews, usury, occupations, and devotion to the land in which they lived. Napoleon's decree of March 2, 1807, from Osterode imparted the force of law to the rulings of the Sanhedrin.

As a means of enforcing these decisions, Napoleon organized the Jewish community on a corporate basis. A decree from Madrid, issued on March 17, 1808, instituted a system of consistories which were administered in the spirit of the following oath taken by members: "I vow and promise before God, on the Holy Bible, to show obedience to the constitution of the empire and loyalty to the emperor. . . ." Another decree permitted the Jews to adopt family names, greatly facilitating the task of recruiting for the army.

However, the "infamous decree" promulgated on March 17, 1808, restricted the economic freedom of the Jews and the area within which they could settle. Although the decree was to remain in force for ten years, exemptions were readily granted. In Holland and Westphalia the decree was never adopted. Napoleon himself eliminated that section which forbade Jews to furnish substitutes for military service. Yet in many regions along the Rhine the discriminatory legislation was perpetuated even after 1818.

Napoleon's real contribution to Jewish emancipation was perhaps less direct than some of his decrees. Thus the Russian government, fearful of the effect of Napoleonic legislation on the loyalty of the Jews in the Polish provinces, for a time pretended friendliness to the Jews. Although Napoleon imparted more of the spirit than of the practice of the French Revolution to the conquered areas of Europe, the sum total of his efforts was to weaken the feudal structure and at the same time to alter the position of European Jewry. Although there is some evidence which would tend to show that his interest in Jewish affairs was for the purpose of exercising more direct control over the community, Heinrich Heine and Karl Ludwig Börne hailed Napoleon as a liberator.

NAPRAVNIK, EDUARD, conductor and composer, b. Beist, Bohemia, 1839; d. St. Petersburg, 1916. He was a pupil at the Prague organ school. In 1856 he accepted a teaching post at the Maydl institute for music in Prague. Five years after this, Prince Yussupov appointed him Kapellmeister in St. Petersburg. Thenceforth Nápravnik's career was intimately associated with the musical life of Russia. In 1869 he became first conductor at the Russian Opera, and from 1870 to 1882 was conductor of the music society, successor to Balakirev. He wrote music abundantly, including operas, symphonies, choruses, chamber music works, and a variety of smaller works for orchestra and solo instruments. Although his works were performed in Russia, and were frequently well received, his reputation rests almost exclusively on his distinguished career with the baton. He was responsible for enriching the repertoire, introducing to Russia masterpieces which he presented with care and artistic fastidiousness.

NAQUET, ALFRED JOSEPH, chemist and French deputy, b. Carpentras, France, 1834; d. Paris, 1916. He studied chemistry, and became assistant professor at the University of Paris (1862) and at the University of Palermo (1863). For his participation in a socialist convention in Geneva he was sentenced (1867) to fifteen months' imprisonment and the loss of his civil rights for five years. Because his *Religion, propriété, famille* (1869) opposed religious marriages, he was fined 500 francs and his civil rights were suspended.

Naquet played an important part in the political events of 1870, edited *La démocratie du Midi* and became Gambetta's secretary. In 1876 he founded the political journal *La Révolution,* and became senator in 1882. In 1884 he successfully introduced in the Chambre des Députés a bill legalizing divorce. His unfortunate participation in the Boulangist movement led to his withdrawal from politics. He wrote *Principes de chimie fondés sur les théories modernes* (Paris, 1882).

NARBONNE, city in Southern France, with a population of 32,000. Jews are known to have settled in Narbonne as early as the 5th cent. They fared well under the Visigothic rulers, but were expelled by King Wamba (672-80) for having aided Count Hilderic of Nîmes and Duke Paul in a revolt against him. The presence of Jews in Narbonne in the 8th cent. is confirmed by a letter of Pope Stephen III to Archbishop Aribert, complaining of the many privileges granted them. They had their own section, Ville Neuve, with their own chosen community leader who bore the title of Nasi. In 1306, however, the Jews, by decree of Philip the Fair, were banned from the city, which afterward played no part in Jewish history.

Narbonne, which had 2,000 Jews in the 12th cent., was for a time one of the chief centers of Jewish learning. A Babylonian scholar, Machir, was the founder of its famous Talmudic academy, praised by the traveler Benjamin of Tudela as a center from which the Law spread throughout all regions. Noted scholars of Narbonne were, beside Machir and his descendants, Joseph ben Isaac Kimhi and his dynasty, Moses Narboni (Maestro Vidal), author of a celebrated commentary on Maimonides' *Moreh Nebuchim,* Moses Hadarshan, and the historian Nathan Hababli (10th cent.).

NASATIR, ABRAHAM PHINEAS, consular official and historian, b. Santa Ana, Calif., 1904. He was educated in the public schools of his native state and received his doctor of philosophy degree from the University of California in 1926, after having been awarded the Native Sons travelling fellowship for 1924-25. In 1928 he was appointed to the history faculty at San Diego State College, and still held a professorship there

in 1942. Designated vice-consul of Paraguay to the United States in 1935, he still held that post in 1942.

As an original research scholar in the early history of Spanish and French settlements of the American west and mid-west, Nasatir became a steady and noted contributor to a number of leading regional historical journals. Many of his studies were afterwards reprinted. These writings include: "Bibliography of the Sources of the Explorations of Jedidiah S. Smith," *Publications of the Historical Society of Southern California,* No. 13 (1926) 270-303; *Anglo-Spanish Frontier in the Illinois Country During the American Revolution, 1779-1783* (1928); *Anglo-Spanish Rivalry on the Upper Missouri* (1930); *The Inside Story of the Gold Rush* (1935); *The International Significance of the Jones and Immell Massacre* (1939). In press in 1942 were: *Imperial Osage, 1763-1810,* and *French Activities in California; An Archival Calendar.*

Nasatir was elected a director of the United Jewish Fund and vice-president of the Jewish Welfare Society.

NASCHÉR, SINAI SIMON, preacher and scholar, b. Liptószentmiklós, Hungary, 1841; d. Baja, Hungary, 1901. He studied at Baja and subsequently at Berlin, where he was ordained by the Hochschule für die Wissenschaft des Judentums and received his Ph.D. degree from the university. In 1866 he was appointed preacher at Berlin. Recurrent spells of mental disequilibrium caused him to retire in 1880. He spent the rest of his life at Baja. Naschér's published works include: *Unsere Richtung, Glauben ist Denken* (Berlin, 1860); *Der Gaon Hai, zur Geschichte der semitischen Sprachforschung* (Berlin, 1867); *Die Sentenz bei Juden und Arabern* (Berlin, 1868); *Einfluss der deutschen Philosophie auf die Volksbildung* (Berlin, 1872); *Wissenschaftliche Vorträge über Kunst und Philosophie* (Berlin, 1875); *Das Judentum der Aufklärung: Reden für die Gebildeten aller Konfessionen* (Magdeburg, 1876); *Auswahl von Gedichten* (translations of the verse of Gyula Reviczky; Budapest and Leipzig, 1876); *Franz Deák* (Berlin, 1877); *Die jüdische Gemeinde in ihrer Vergangenheit, Gegenwart und Zukunft* (Berlin, 1877); *Moses Naschér: Eine exegetische Monographie* (Berlin, 1879).

NASH PAPYRUS, *see under* PAPYRI.

NASHIM ("women"), third division of the Mishnah and Talmud, comprising seven tractates. As the name indicates, the subjects discussed are chiefly those which affect the legal status of women, as is indicated by the titles *Yebamoth* ("levirate marriages"), *Kethuboth* ("marriage portions"), *Sotah* ("the wife suspected of adultery"), *Gittin* ("bills of divorce") and *Kiddushin* ("marriages"). The two remaining tractates, *Nedarim* ("vows") and *Nazir* ("the Nazirite") were apparently incorporated into the division because they deal with vows, and the vow legislation of the Torah (*Num.* 30) deals with vows made by women. The ordinary arrangement is not by logical order of subjects, but by the number of chapters in each tractate, beginning with the largest and ending in the least; there are minor variations in various editions.

See the articles on the respective tractates.

NASHVILLE, capital city of the state of Tennessee with a population of 167,402, including approximately 3,000 Jews. Jews have lived in Nashville since 1845. In 1854, by the same act incorporating the first congregation in Memphis, Congregation Khal Kodesh Magen David was chartered. Named as trustees by the act were Isaac Garrison, Henry Harris, M. Sulzbacker, Lewis Hanf, Marx Elsbach, A. B. Oppenheimer, E. Wolf, A. Lande, L. Sohn, S. Nathan, and H. Jessel. Abram Schwab was first president.

Congregation Magen David was strictly Orthodox. The Reform element organized congregation B'nai Yeshurun in 1862. Chiefly because of the unsettled conditions resulting from the Civil War, both congregations were barely able to get along. In 1868, they agreed to merge and Congregation Khal Kodesh Ohavai Sholom was created from this union. In 1874, when the temple cornerstone was laid, Andrew Johnson, war governor of Tennessee and ex-President of the United States, spoke at the ceremony. However, in 1879, due to a difference of opinion among the members of the congregation concerning the abandonment of the traditional prayerbook, the opposition to the change withdrew to form Congregation Adath Israel, another Orthodox congregation, Sherith Israel was organized in 1895 by a group of Hungarian Jews.

In 1942 Congregation Ohavai Sholom, known as the Vine Street Temple, and practising the Reform ritual, had a membership of 552. Julius Mark was the rabbi. Congregation Adath Israel, Orthodox, had a membership of some 300 and was under the spiritual leadership of Samuel B. Yampol. Congregation Sherith Israel (membership, 250) had Abraham Chill as its rabbi.

A Young Men's Hebrew Benevolent Society was organized in Nashville in 1853 and remained in existence until 1882. At that time, the work of the society, care of the indigent, was taken over by the Hebrew Relief Society. This, in turn, gave way to the Jewish Welfare Federation in 1925. This organization in 1942 was a member of the Nashville Community Chest and was supported by it. The Jewish Community Council, organized in 1936, with headquarters in Nashville, administered the Jewish Welfare Fund, which included twenty-two communities in Middle Tennessee. The Young Men's and Young Women's Hebrew Association was founded in 1902, and in 1905 the Bertha Fensterwald Social Center was established.

Nashville had a branch of the Zionist Organization of America and of the Hadassah. *The Observer,* an Anglo-Jewish weekly publication, was founded in Nashville in 1934 by Jacques Back, former feature editor of the *Atlanta Constitution.*

Nashville's most prominent Jewish citizen was Lee J. Loventhal (d. 1940). Pronounced Nashville's most useful citizen, Loventhal was founder of the Community Chest and served on the boards of trustees of Vanderbilt University, Fisk University and Watkins Institute, and was a member of the Board of Park Commissioners. Other leading Jewish citizens were the late Ben Herman, L. Jonas and Mrs. Corinne Lieberman Cohn, who served on the Board of Education. Nathan Cohn at one time served as special judge in Chancery Court; in 1942 Charles Gilbert was County Court Judge.

NASI, *see* SANHEDRIN; TITLES.

NASI, DON JOSEPH, DUKE OF NAXOS, *see* JOSEPH NASI.

NASSI (NASSY), DAVID, planter and Jewish leader of the 17th cent. Of Portuguese descent, he was a native of Brazil, where he must have lived as a Marrano under Spanish-Portuguese rule. After the expulsion of the Jews from Brazil (1654) he obtained (1659) a charter from the Amsterdam Chamber of the Dutch West India Company to establish a Jewish colony in Cayenne. His countrymen who accompanied him were to be allowed the full enjoyment of every civil and religious privilege on condition that they grant the same to all who might choose to be their fellow-colonists. A copy of this charter was reprinted in the *Publications of the American Jewish Historical Society* (No. 16). In 1664, when the French took Cayenne, Nassi, at the head of the Jews, left the colony for Surinam. There he was for many years one of the leading men of the Jewish congregation and one of the foremost planters and slaveholders.

NASSI, ISAAC COHEN, notary (jurator) and Mohel of the Jewish congregation of Surinam, mentioned in a list of Mohelim (1731-1732), possibly the father of David Nassy, author of the *Lettre politico-theologico-morale sur les juifs* (1798). In 1751 Nassi and two other members of the congregation were sent to Holland to settle serious disputes in the community and to protect the interests of parties there. In 1781 he wrote a letter to Christian Wilhelm von Dohm, the Prussian advocate of civil rights for the Jews. This letter greatly astonished Dohm and all the European friends and adversaries of Jewish emancipation. Nassi was also one of the authors of *Essai sur la colonie de Surinam, avec l'histoire de la nation juive portugaise y établie* (1788).

When Malouet, commissioner of the French government, went to Surinam, he made Nassi's acquaintance, and was deeply impressed by his personality. Malouet admired Nassi's profound knowledge of history and of Hebrew, Arabic and Chaldean literature. He was even puzzled by Nassi, the "extraordinary man" who for eight hours of the day was absorbed in scholarly studies and earned his living by buying and selling old clothes. Malouet was surprised that the most learned man of Surinam was in the most miserable situation, yet never lost his equanimity.

Lit.: *Publications of the American Jewish Historical Society,* No. 3 (1895) 127-30; No. 4 (1896) 4-5; No. 5 (1897) 119; No. 9 (1901) 132-34; No. 16 (1907) 11; No. 18 (1909) 188, 203.

NASSY, DAVID, doctor of medicine, author, and a champion of the emancipation of the Jews in Holland during the latter half of the 18th cent. He was a native of Surinam, Dutch Guiana, of Portuguese-Dutch descent. He lived for some time in St. Thomas, West Indies, and also in Philadelphia, where he practised medicine. Shortly after May, 1795, he returned to Surinam, where he subsequently brought out a work in French entitled *Lettre politico-theologico-morale sur les juifs,* which was dedicated to the governor-general of Surinam and dependent districts on December 10, 1798, but was probably not published until two years later. Nassy wrote the book in French, but it was translated into Dutch and published with the French text on the left facing the Dutch translation on the right.

In a preface to the book, he declares: "I love my country, despite its injustices toward me." From this statement one may infer that certain injustices induced him to reside in St. Thomas and in Philadelphia for a time. In the body of the pamphlet the author formulates the contemporary criticisms and attacks upon the Jews into five so-called "accusations," to which he replies at some length but with occasional directness and force. He refutes the charge that "the Jews have always lived apart from other nations and do not look upon Christians as their brethren." Among other things he discusses the uprisings and revolutions in various countries, the question of the Messiah, intermarriage between Christian and Jew, and the participation of the Jews in trade with the colonies and in military service, not forgetting the American Revolution. But the gist of Nassy's *Lettre* is his plea for the emancipation of the Jews in Holland.

Nassy was the author also of a *Memoir* of the colony of Surinam, in which he tries to show the influences at work to check its prosperity. According to his own written statement, Nassy composed the *Memoir* while a resident of Philadelphia, and sent it in manuscript to the new government in Holland, in May, 1795, the receipt of it being duly acknowledged. But all efforts to locate this *Memoir* in recent years have proved fruitless. According to a letter, dated November 11, 1797, which the royal court of Lisbon addressed to "Doctor David Nassy and the heads of the Portuguese Jewish Nation, residing in Surinam," as an expression of thanks for the aid and comfort rendered to some Portuguese sailors who had been stranded on the island, it appears that David Nassy was looked upon as the chief or leader of the Jewish community in Surinam. From all indications he was a benefactor not only of his coreligionists but of his fellow countrymen as well.

CLARENCE I. FREED.

Lit.: Seeligmann, S., in *Publications of the American Jewish Historical Society,* No. 22 (1914) 25-38; No. 9 (1901) 143-44.

NASSY, DAVID, planter, b. 1672; d. Surinam, 1743. In 1718 the bush-negroes destroyed his plantation in Surinam. They were chastised by the Jews under the leadership of Captain Jacob d'Avilar, under whom Nassy served with distinction. In 1738 he helped avenge the murder of Manuel Pereira. Nassy was successful in more than thirty engagements with the bush negroes, by whom he was eventually killed. His praises were sung by the Judeo-Spanish poetess Benvenida Belmonte, and his place as *capitein* was taken by Isaac Carvalho.

NASSY, SAMUEL, the richest planter in Surinam at the end of the 17th cent. A talented and scientifically trained man, he wielded great influence on the free development of the colony of Surinam and on the condition of the Jewish inhabitants there. However, when he strove to introduce a few necessary reforms in ritual and ceremony—called by G. A. Kohut the first traces of the Reform Movement in America—he met with considerable opposition, although he had the sanction and support of the rabbis in Amsterdam. In 1677 an asylum for the education of children was founded in a house belonging to him and afterwards presented to the community by him. In 1682 he gave the Jews an island on the river Surinam, about seventy miles from the sea, where most of them settled and which was thenceforth known as "de Jooden Savane" and became the principal

seat of the Jewish community of Surinam. In 1685 he bestowed twenty-five additional acres of land around the synagogue on the savannah. Nassy was designated "citizens' captain," and displayed his bravery on many occasions. The attacks of the Indians upon the colony after the death of Governor Aerssens were repulsed with the help of the Jewish inhabitants, who were headed by Captain Nassy. He was the first to arrive in town with his men after the assault in 1688 upon Governor van Sommelsdyck, and two vessels belonging to him were manned in order to pursue the riflers. In 1689, at the assault of the Frenchman Du Casse the defence of the principal fortress in the colony (Zeelandia) was entrusted to Captain Nassy with eighty-four Jewish citizens, who did good service in beating off the French squadron. He was a candidate for the position of governor of the colony, and his failure to obtain this post caused him to betake himself in 1694 to Amsterdam, where his influence was still powerful. Because of the unfriendly treatment which the Jews received at the hands of the new governor, they appealed to Captain Nassy and Baron de Belmonte in Amsterdam to demand his recall. As soon as the governor landed in Amsterdam after his recall he was arraigned by Nassy before the civil court and was compelled to vindicate his conduct.

See SURINAM.

Lit.: Kohut, G. A., in Wolf, S., *The American Jew as Patriot, Soldier and Citizen* (1895) 454-59; *Publications of the American Jewish Historical Society;* Wiernik, P., *History of the Jews in America* (1912) 45-46.

NATAL, province of the Union of South Africa, with 3,736 Jewish inhabitants out of a total European population of 190,549 (1936 census). The first known Jew to have contact with Natal was Nathaniel Isaacs who explored the country (1825-1831) and had intimate associations with the Zulu rulers, Chaka and Dingaan, both of whom granted him a large tract of land between the Rivers Umslutie and Umlaas. He was followed by Benjamin Norden of Grahamstown, who, in 1832, organised his first trading expedition to Dingaan's Kraal. He was there again in 1835. George Britton, a trader, was amongst the earliest British adventurers who founded Durban in 1835. Adolphe Coqui, stated to be of Belgian-Jewish extraction, was one of the first non-Afrikaaners to follow in the wake of the Voortrekkers. Subsequent to the year 1840 he favoured British rule in Natal, and in the 1860's he served as a member of the Natal Legislative Council.

Jonas Bergtheil was, however, the most noted Jewish personality in Natal during the second half of the nineteenth century. A pioneer colonizer and industrialist, he was one of the earliest promoters of the cotton industry there. "He was strictly honest in all his dealings with his German emigrants, being the only emigration agent of whom this can be said," declares Barbara L. Buchanan in *Pioneer Days* (Pietermaritzburg, 1934). He was also active in public affairs. He was, in 1857, elected a member of the Natal Legislative Council.

Daniel de Pass was another Jew who did much for the development of the sugar industry in Natal during the latter half of the nineteenth century. In the early 1880's he introduced the Uba strain which was able to resist the ravages of disease. "Durban's prosperity has been largely built upon cultivation of the cane," according to A. F. Hattersley in *More Annals of Natal* (Pietermaritzburg, 1936).

From early times Jews have actively participated in the public life of the Garden Province. Shortly before the close of the 20th cent., C. G. Levy was mayor of Pietermaritzburg. F. C. Hollander was mayor of Durban (1910-13). He was also for years a leading member of the Natal Provincial Council. In Nov. 1939, he was elected Senator for Natal. C. P. Robinson represented Durban County in the Natal Parliament (1906-09). From 1910 to 1920 he sat as member for Umbilo in the Union House of Assembly, followed by a year as senator for Natal. From 1921 to 1938 he was returned several times as a member of the Lower House. A. Goldberg was elected member of Parliament for Durban (Umlazi) in 1938.

Sir Matthew Nathan, Anglo-Jewish civil servant and administrator, was governor of Natal from 1907 to 1909.

Other outstanding Jewish names connected with Natal in modern times were E. S. Henochsberg, K.C. (first Jew to be appointed a King's Counsel in Natal), sometime Puisne Judge of the Native High Court; Professor Philip Stein, of the department of mathematics, Natal University College; and H. A. Smith, who in 1939 was appointed city and water engineer of Durban. Albert S. Nathan (d. 1924) of Pietermaritzburg, philanthropist, bequeathed large sums to Palestine.

Jewish communal life in Natal is well organised. Congregations are to be found at Durban, Pietermaritzburg and Vryheid. The Durban Jewish Club is the best of its kind in South Africa. The Council of Natal Jewry, established in 1931, is the representative body of local Jewry. S. A. ROCHLIN.

NATANSON, JAKOB, chemist, b. Warsaw, Poland, 1832; d. Warsaw, 1884. He studied at the University of Dorpat, and in 1862 became professor of chemistry at the University of Warsaw. Natanson wrote several books on agricultural and industrial chemistry, and did research work on acetylene and its derivates as well as on the artificial production of urea. He left a foundation of 30,000 rubles (about $15,000), to be used for the publication of valuable scientific and literary works. His works include: *Über Acetylanim und seine Derivate* (1856); *Krótki Rys Chemji Organicznej* (Warsaw, 1857-58); *Nyklad Chemji Organicznej* (1866).

NATANSON, LUDWIK, physician, b. Warsaw, 1822; d. Warsaw, 1896. Soon after he began practice, he became an important medical figure in Warsaw. He performed outstanding work during the city's cholera epidemic of 1848-52; and later was active in the reorganization of the country's health services. In 1863 he was president of the Warsaw medical society. Though he was a favored doctor of the rich, he gave free services to the poor as well.

He gained a wide reputation as contributor to medical literature, founding the journal *Tygodnik Lekarski* (1847), and acting as its editor until 1864. He wrote several volumes, including his noted *Analyse Der Funktionen des Nerven Systems.*

Natanson was a leading factor in the Warsaw Jewish community and its president from 1871 until his death. He was one of the founders of Warsaw's leading syna-

The Prophet Nathan before David, as depicted by Rembrandt van Rijn

gogue, built in 1878; and the great Jewish hospital, finally completed in 1902, was likewise started by him. He organized a free-loan association, gave money for a Jewish artisan school, and promoted other educational projects.

NATHAN, prophet at the time of David and Solomon (about 980-950 B.C.E.). He is first mentioned (*II Sam.* 7; *I Chron.* 17) in connection with David's plan to build a temple. Although originally encouraging it, the prophet is later vouchsafed a dream in which he learns that the privilege is to be reserved for David's son, Solomon. Thereupon he dissuades the king from the project. Nathan appears also (*II Sam.* 12) in the incident of David's designs upon Bath-sheba, the wife of Uriah the Hittite. The prophet reproves his royal master by asking his decision in an imaginary case wherein a rich man has stolen the ewe-lamb belonging to a pauper. When the king orders that restitution be made, Nathan replies: "Thou art the man." Later, however, when Bath-sheba gives birth to Solomon, it is Nathan who bestows on the child the special name of Jedidiah, "beloved of the Lord." He also takes an active part in protecting Solomon's claim to the throne, lending support to Bath-sheba when the latter acquaints the aged David with the conspiracy organized by Adonijah and Joab (*I Kings* 1:8-48; cf. *Ps.* 51:1). Nathan is credited with having written histories of the reigns of David and Solomon (*I Chron.* 29:29; *II Chron.* 9:29).

Little is said about the prophet in post-Biblical literature. He is listed among the famous men of Israel in the apocryphal book of *Sirach* (47:1). Some rabbinic sources regard him as a nephew of David, reared by his grandfather Jesse, while the *Zohar* asserts that he was Solomon's tutor. He is said to have occupied a golden seat beside the throne of King Solomon.

NATHAN THE BABYLONIAN, Tanna who lived in Palestine in the 2nd cent. He was a contemporary of Rabban Simeon ben Gamaliel III and of Rabbi Meir, and may have lived up to the time when Judah Hanasi held office. Nathan, who came from Babylonia, where his father was exilarch, settled in Palestine and there became the deputy of the Patriarch (Ab Beth Din). Driven by the desire to obtain the post of Nasi, he attempted, together with Meir, who occupied the office of speaker (Hacham), to force the old Patriarch to resign from his post. However, the plan was discovered and the conspirators were barred from the Sanhedrin. Later Simeon ben Gamaliel saw himself compelled to withdraw his drastic step, yet under no conditions were the doctrines of these two teachers to be expounded under the actual names of the authors. Thus it was said "Many believe" instead of "Rabbi Nathan believes," and "Others believe" instead of "Rabbi Meir believes." In due time, however, Nathan reconciled himself with the Patriarch.

Nathan was equally well schooled in both the Halachic and the Haggadic writings. According to *B.M.* 86a, he played a great part in the editing of the Mishnah; this would mean either that his expositions of the Mishnah were used by Judah Hanasi or that they were incorporated into the text.

Some of his Haggadic sayings became famous, such as: "Man is judged every hour" (*R.H.* 16a); "By the same measure with which we measure others, we ourselves are measured" (*Mechilta, Beshallah*); "Before you reproach another for being at fault, see first whether the same fault is not also in you" (*B.M.* 59b). Nathan is said to have been the author of the *Aboth de Rabbi Nathan* and of the *Baraitha of the Forty-Nine Rules,* which deals chiefly with mathematics and contains also Haggadic material.

NATHAN BEN JEHIEL, Hebrew lexicographer, b. Rome, about 1020; d. Rome, 1106. He appears to have been a member of the Anav family, and he received his first instruction from his father, Rabbi Jehiel ben Abraham. He studied in Sicily and at Narbonne, returning to Rome in 1070; there he and his two brothers undertook the direction of a rabbinical school. Nathan's life was unhappy, for all of his children died at an early age. He consoled himself with philanthropy and with communal endeavor, including the erection of a beautiful synagogue, completed in 1101.

Nathan's fame rests upon his *Aruch,* completed in 1101. This is an encyclopedic dictionary covering the entire range of post-Biblical literature of a Talmudic, Midrashic and Targumic nature. It was formerly believed that the work was a product of entirely original research on the part of Nathan; it has since been proven that he made extracts from the explanations of words and attempts at interpretation made by his predecessors as far back as the Gaonic period, and gathered them into a systematic whole. One of the invaluable features of the work is its preservation of quotations and passages from earlier literature which would otherwise have been lost; thus Zunz was able to reconstruct the *Pesikta* on the basis of citations from it in the *Aruch.* Another important service was the preservation of the original text of the Talmud and other rabbinical works.

Nathan's philological equipment was extensive. He knew Latin, Greek, Arabic and Italian, besides Hebrew and Aramaic, and was thus able to solve many problems as to the meanings of words. His work, accordingly, became an indispensable reference book, and served countless scholars from the Tosafists of the Middle Ages to modern times. It was one of the first Hebrew works to be printed, the earliest edition being probably at Venice and apparently before 1481. There have been numerous reprints; several of the later editions contain

additions, notably that of Benjamin Mussafia of Hamburg (Amsterdam, 1655) and the *Aruch Completum* of Alexander Kohut (Vienna, 1878-92). A photostatic copy of the Pesaro edition of 1517 was issued in Berlin in 1927.

Lit.: Enelow, H. G., in *Jewish Encyclopedia,* vol. 9, pp. 180-83; Waxman, M., *A History of Jewish Literature,* vol. 1 (1930) 279-81; Kohut, A., *Aruch Completum* (1878-92).

NATHAN BEN JOSEPH OFFICIAL, rabbi who lived at Sens, France, during the second half of the 13th cent. Leopold Zunz, however, sets the period of Nathan's activities between 1220 and 1240. His position with the archbishop of Sens—he was possibly manager of his estate—gave him a great deal of influence. Nathan was called the "prince of orators," and distinguished himself by his numerous scholarly disputations with bishops, Dominicans, Franciscans, royal fathers confessors and even with Pope Gregory X. His speeches attracted wide attention because of their striking candor and brilliancy. They were collected and compiled by his son, Joseph ben Nathan. Nathan wrote also many notes to the Pentateuch which can be found in the *Tosafoth* to *Taan.* 9a and in *Minhath Yehudah.*

NATHAN OF GAZA, *see* GHAZZATI, NATHAN BENJAMIN LEVI.

NATHAN HABABLI, historian who probably lived in Baghdad about 960. The first editions of *Yuhasin,* a historical work of Abraham Zacuto, contain among other insertions, certain historical narratives given as those of Nathan Hakohen ben Isaac Hababli. These historical narratives deal with events between 920 and 960 and reveal the author as an unbiased observer and vivid portrayer of the events, and as one who possessed a good knowledge of the general status and administration of the Jews of Mesopotamia. His account differs in some particulars from that of Sherira Gaon and it is not absolutely certain which of the two is the more trustworthy. In 1905 an Arabic original of Nathan's narrative was found, which indicates that he wrote a general history of Baghdad, which was perhaps the source for other extracts. The views of Graetz and Halevi on Nathan are entirely untenable.

Lit.: Epstein, A., in *Harkavy-Festschrift,* p. 169 et seq.

NATHAN DE SUSITA, a Babylonian exilarch of 4th cent. The name de Susita may mean either "sparks" or "hair" and there are various explanations given for its use in regard to Nathan. One of them is that Nathan, in offering repentance to an angel for a sin, emitted sparks when the angel touched him; another says that the angel took him by the hair, and a third that Nathan, while a young man, had the habit of playing with his curls. Nathan de Susita is evidently the same as Nathan Ukban ben Nehemiah. There is also a possibility that the addition of de Susita to his name came only later, as the result of a comparison between Nathan Ukban and a Nathan de Susita who is supposed to have lived in the 2d cent., and about whose repentance and experience with an angel the same story is told.

NATHAN, ADELE GUTMAN, author and theatrical director, b. Baltimore, Md. She began her career in Baltimore, where in 1916 she founded the Vagabond Players. Subsequently she directed the theatrical unit of the Maryland war camp community service, and also served as dramatic director of Baltimore's playgrounds. Removing to New York, she was in turn associated with the Cellar Players, the Junior Theatre Workshop and the Cherry Lane Theatre, all "little" groups. Among the authors whose plays she staged, from 1927 to 1935, were Elmer Rice, T. S. Eliot and Kenyon Nicholson. Her special knowledge of industrial history was employed in the staging of several pageants, including: *Romance of the Reaper,* the centenary film made by International Harvester Company in 1928; Chicago's Century of Progress exposition, and Cleveland's Great Lakes exposition. From 1931 to 1936 she was director of the city of Rochester's *Century on Parade.* In 1937 Adele G. Nathan was appointed acting state director of the New Jersey Federal Theatre. She produced radio shows, and acted as technical director and script writer for several motion picture producers. From 1938 to 1939 she served as eastern editor of Grand National Pictures, and in 1941 was that company's chief script writer in the department of education.

Her publications include: *The Iron Horse* (with Margaret Ernst, 1931); *The Farmer Sows His Wheat* (1933).

NATHAN, SIR CHARLES (SAMUEL), industrialist and government official, b. 1870; d. Perth, West Australia, 1936. He was educated in New Zealand. Nathan was active in the development of Australian trade and industry. From 1920 to 1923 he was chairman of the West Australian Council of Industrial Development. Subsequently (1924-25) he was a commissioner for the Commonwealth of Australia at the British Empire Exhibition; vice-chairman of the Commonwealth of Australia Development and Migration Commission (1926-27), and Commonwealth Missioner to England for Overseas Settlement and Finance (1928). He was also, from 1930 to 1934, a member of the Australian Legislative Council. Nathan was knighted in 1928.

NATHAN, CLARENCE SEIXAS, master printer, b. New York city, 1856; d. New York city, 1924. He opened a printing plant in 1876 and was one of the first to introduce the monotype and to use steam power printing in New York. He belonged to the Congregation Shearith Israel and the Sons of the American Revolution, and was affiliated with numerous charitable, philanthropic and civic organizations.

Lit.: *Publications of the American Jewish Historical Society,* No. 31, pp. 284-86; *American Hebrew,* May 4, 1928, p. 1022.

NATHAN, EDGAR JOSHUA, JR., lawyer and public official, b. New York City, 1891. His father was Edgar Joshua Nathan Sr., prominent New York attorney active in Jewish communal affairs, particularly in the Spanish and Portuguese congregation and the American Jewish Historical Society. Young Nathan began his law practice in 1917 in his father's firm, Cardozo and Nathan, becoming one of its members in 1923. He became interested in the work of a number of bar associations, and was made chairman of the committee on Domestic Relations in the Bar Association of the City of New York. From 1920 to 1933 he was a member of the New York County Republican Club, and in 1938 was elected delegate to the state constitutional convention. The following year he was unsuccessful

Ernesto Nathan

Republican candidate for the first district Supreme Court. But in 1941—as candidate of the combined forces of the Republican, Fusion, American Labor and United City parties—he waged a vigorous and successful campaign for borough president of Manhattan, and took office in January, 1942, succeeding Stanley M. Isaacs.

Descendant of Benjamin Mendez Seixas and Lewis Moses Gomez, Nathan, like his father and other antecedents, became an outstanding factor in the Spanish and Portuguese congregation of which he was vice-president. In 1932 he became a director of the Jewish Theological Seminary and the following year president of the Seminary's New York Society. In his post as chairman of the lawyers' division, he had been active in ORT campaigns; in 1942 he became general chairman of ORT's greater New York drive.

During the first World War, Nathan was chief (1918-1919) of the War Trade Board's division of restricted imports.

NATHAN, EDWARD ISAAC, b. Philadelphia, 1878. After a brief period of law practice in his native city he was sent as United States consul to Patras, Greece, where he served from 1907 to 1909. He then went to serve at Mersina, Turkey, where he stayed until 1917. It was at Mersina, after Turkey entered the first World War on the side of Germany, that Nathan, charged with the protection of French and British interests, rendered important service to French and British nationals stranded in Turkey. Nathan continued to act for the Allies, and as vice-president of the International Relief Committee did outstanding work in the relief of British prisoners in the Adana district. His later consular appointments were at Vigo, Spain (1917); Palermo, Italy (1921); and Santiago, Cuba (1921). In 1931 he became American consul general at Monterrey, Mexico, where he remained until his retirement in 1937. An expert in languages, he contributed to several publications, including the *Jewish Encyclopedia* and the *Jewish Quarterly Review*. In 1914 he lectured at Dropsie College.

NATHAN, ERNESTO, mayor of Rome, b. London, 1845; d. Rome, 1921. The circumstance that Giuseppe Mazzini, the spiritual leader of the "Risorgimento," when he was exiled to London, was a frequent visitor in Nathan's parents' house, had a great influence upon the latter's political career and his life in general. In 1859, his mother, Sara Nathan, took him to Italy and, when Rome was united to the kingdom, Nathan became manager of the newspaper *Roma del Popolo,* founded by Mazzini. After 1871 his house in Rome was the meeting place of authors, scientists and politicians. In 1889 he became an Italian citizen. He distinguished himself in the Italian Masonry of which he twice became grand master. Finally, in 1907, he was elected mayor of Rome (1907-1913), an event which, taking place only forty years after the abolishment of the Roman ghetto, and owing to Nathan's pronounced anti-clericalism and republicanism created a sensation. Nathan presented to the Italian nation the manuscripts of Mazzini and in 1905 after the latter's death, he supervised their publication. In 1915, at seventy, he enlisted in the Italian army, and saw action at the front as a first lieutenant. He was co-founder of the Dante Alighieri association.

Lit.: Enciclopedia Italiana, vol. 24, p. 302.

NATHAN, SIR FREDERIC LEWIS, English colonel, b. London, 1861; d. London, 1933. He joined the Royal Artillery, and early in his career became an authority on the manufacture of explosives and the organization of factories. During the World War his services were employed both at the Admiralty and the War Office. An authority on motor fuel problems, he represented the Department of Scientific and Industrial Research at the World Fuel Conference in London (1928) and at other conferences. He was co-founder and from 1925 to 1927 president of the Institution of Chemical Engineers, concerning himself chiefly with its educational policy. He was knighted in 1906, and was awarded Russian and Belgian decorations. His chief interest in Jewish matters centered about the Jewish Lads' Brigade, of which he was commandant from 1903 to 1924.

Lit.: London Times, Dec. 11, 1933, p. 17; Dec. 13, 1933, p. 9; Dec. 14, 1933, p. 19; *Jewish Chronicle,* Dec. 15, 1933, p. 14.

NATHAN, GEORGE JEAN, dramatic and literary critic, b. Fort Wayne, Ind., 1882. He received his A.B. degree from Cornell University in 1904, and spent the next year at the University of Bologna, in Italy. On his return he joined the staff of the New York *Herald,* and after that worked for *Bohemian Magazine* and *Outing.* In 1908 he began to write for the *Smart Set,* and it was here that he and his literary "twin," Henry L. Mencken, did their famous job of blasting away at what they conceived to be the case-hardened stupidities, pretensions and absurdities of American life and letters. Nathan reviewed the drama until 1923; from 1914 on he was the magazine's co-editor with Mencken. The critical work, was, however, not exclusively iconoclastic; it was the *Smart Set* which first recognized the contributions to American literature of such writers as F. Scott Fitzgerald and Eugene O'Neill, Nathan's great literary discovery and later his intimate friend.

In 1924 Mencken and Nathan launched the *American Mercury,* which became the organ of their violent and witty critical dissent. Nathan's quick-witted and in-

exhaustible opinions on the theatre became familiar to American readers all over the country through the pages of numerous other journals; from 1912 to 1929 he wrote for a national syndicate of newspapers, and from 1915 to 1916 he was dramatic critic of *Puck,* working with his literary master, James Huneker. Like Huneker, too, Nathan became well-known in British literary circles through his contributions to the London press. In 1930, upon terminating his editorial connection with the *American Mercury,* he became dramatic editor of the *New Freemen,* and critic for *Vanity Fair,* until 1935. In 1932, in collaboration with Theodore Dreiser, Eugene O'Neill, James Branch Cabell and Ernest Boyd, he organized the *American Spectator,* and was its editor and thereby a powerful influence in the theatre.

His journalistic activity continued unabated. As drama critic he served the *Saturday Review of Literature* (1937), *Scribner's* (1937-38), and *Newsweek* (1937-40). He joined *Esquire* in 1935, the new *American Mercury* and *Liberty* in 1940, and was still, in 1942, writing for all three. All this while he was publishing in more permanent book form; from 1913 to 1942 he issued more than twenty-five volumes. These included *The Eternal Mystery,* a one-act play (1913); *Europe after 8:15* (with Mencken; 1914); *Mr. George Jean Nathan Presents* (1917); *The Popular Theatre* (1918); *The American Credo* (1920); *The Theatre, The Drama, The Girls* (1921); *The World in False Face* (1923); *Materia Critica* (1924); *The Autobiography of an Attitude* (1925); *Testament of a Critic* (1931); *Passing Judgments* (1934); *The Morning After the First Night* (1938); *Encyclopedia of the Theatre* (1940); *The Bachelor Life* (1941); *The Entertainment of a Nation* (1942). To the *Encyclopaedia Britannica* he contributed the article on the American theatre.

These volumes constitute an encyclopedia of the opinions of Nathan—critic, student, bachelor man-about-town—on everything: himself and his most personal attitudes, women, food and drink, great drama, low burlesque, actors and actresses, good and bad, the despised movies, the admired Irish playwrights and cordially disliked English drama, all his violent distastes and equally violent attachments. They are written in a uniformly brittle, easy, witty style, full of his pet colloquialisms and slang (much of it invented by him), a style considered by some critics to be brilliant at its best, and at its worst monotonous. Nathan said of himself: "What interests me is the surface of life: life's music and color, its charm and ease, its humor and loveliness. The great problems of the world . . . do not concern me in the slightest." His friendly critics, however, point to his keen espousal of such serious writers as Eugene O'Neill, Theodore Dreiser, Willa Cather, Sean O'Casey, and, later, John Steinbeck and William Saroyan; they point also to the keen mind beneath the surface cynicism and sophomoric thumbing of the nose. It has been said of him that he has the highest visibility and the lowest gullibility of any American dramatic critic. Some have traced a mellowed tone in the expression of his later opinions.

Nathan was president of the New York Drama Critics Circle from 1937 to 1939. SHERRY ABEL.

Lit.: Goldberg, Isaac, *The Theatre of George Jean Nathan* (1929); Brown, John Mason, *Upstage* (1930).

NATHAN, GERSHOM, early American writer, son of Seixas Nathan and Sarah Seixas, b. New York city, 1821; d. New York city, 1864. He wrote an article relating to the early Jewish cemeteries of New York, printed originally in the *Jewish Messenger* (July, 1859), one of several articles of his concerning the history of the Jews of New York in Colonial times. Gershom Nathan married Rosalie Gomez, of the well-known Gomez family, and was the father of Clarence S. Nathan of New York, the master printer, and Edgar J. Nathan, a prominent New York lawyer and a director of the American Exchange-Pacific National Bank.

NATHAN, HARRY LOUIS (first Baron of Churt), soldier, b. 1889. He was educated at St. Paul's school, London. One of the original officers of the British Territorial Force, he served with the London regiment in Gallipoli, Egypt and France, and became a major in the first London Regiment. He was made honorary colonel of the 33rd (St. Pancras) anti-aircraft battery of the Royal Artillery in 1937 and honorary air commodore (No. 906 balloon squadron of the Auxiliary Air Force) in 1939. In 1942 he served as director of welfare for the troops in Eastern and London Commands.

Nathan was Member of Parliament for Northeast Bethnal Green (1929 to 1935); he sat in the ranks of the Liberals until 1934 when he joined the Labor Party. He was Labor Member of Parliament for Central Wandsworth (1937 to 1940). In 1940 he was elevated to the peerage for distinguished political and public service and was introduced in the House of Lords. He served as deputy lieutenant and justice of peace for the County of London and took an active part in many civic and patriotic movements. Upon outbreak of the second World War he was made chairman of the National Defense Public Interest Committee. Nathan was also member of the Jewish Agency for Palestine, of the Royal Institute of International Affairs, of the Royal Economic Society and of the Royal Statistical Society. He was associate officer of the Order of the Hospital of St. John, Jerusalem, and a member of many scientific societies. Nathan wrote *Free Trade Today* (1929) and edited a variety of publications for the Liberal Party.

NATHAN, ISAAC, composer, b. Canterbury, 1791; d. Sydney, Australia, 1864. In 1805, he went to Cambridge to specialize in the study of Hebrew, but while there he veered to music and concentrated on courses in singing and composition. For a brief period he sang in Covent Garden (under the assumed name of Henry Bertram). A close friend of Lord Byron, Nathan began his career as composer by setting many of Byron's poems to music, including the *Hebrew Melodies.*

In 1823 Nathan composed his first successful work, an operetta, *Sweethearts and Wives.* Other operettas followed, including the *Alcaid* (1824), and *The Illustrious Stranger* (1827). In 1841 he emigrated to Sydney, where he produced several operettas and edited a journal. He also wrote an excellent treatise on singing, *Musurgia Vocalis* (1823), an *Essay on History and Theory of Music,* and a biography of the singer, Mme. Malibran (1836). He was killed accidentally by a tramcar.

Lit.: Bertie, Charles H., *Isaac Nathan* (1922); Phillips, Olga Somech, *Isaac Nathan* (1941).

NATHAN, MANFRED, jurist and author, b. Hanover, South Africa, 1875. He was educated at Gill College, Somerset East, and at the University of South Africa, taking his B.A. and LL.D. degrees. After working as a journalist, he began his legal career as an articled clerk and was called to the bar at Cape Town in 1897, and in the same year to that of the Transvaal. Subsequently he was made a member of the Middle Temple, London.

He was a prolific writer on South African legal themes. Perhaps his principal publication is the *Common Law of South Africa,* in four volumes (1904-7), reissued in 1912.

He has also written several works on South African life generally. His *South African Commonwealth* (1919) and *South Africa from Within* (1926) are of an informative character. His historical efforts include *The Voortrekkers of South Africa* (1937) and *The Huguenots in South Africa* (1939). He is author of a novel entitled *Sarie Marais* (1938), which deals with the Anglo-Boer War of 1899-1902.

Nathan has been an active figure in South African public life, particularly in the field of education. He was a member of the council of the University of South Africa (1924-30) and a law examiner (1903-33). He has done valuable work as a member of the Transvaal government commissions on secondary education and hospital management. He was chairman of the Witwatersrand central school board (1910-13), and in 1916 was elected a member of the public committee to supervise the University interests in Johannesburg. He was a member of the Transvaal Provincial Council (1917-20).

Nathan has taken an active interest in Johannesburg Jewish affairs. He was president of the Jewish Board of Deputies for the Transvaal and Natal (1907-10); vice-president of the South African Zionist Federation (1904-07), and president of the Johannesburg Jewish Guild (1925-27). He was created a King's Counsel in 1919. He was appointed acting judge of the Natal Supreme Court in 1928, and of the Eastern Province in 1930. From 1931 on he acted as president of the Special Court for Income Tax Appeals. S. A. ROCHLIN.

Lit.: South African Jewish Year Book (1929) 361; *South African Who's Who* (1940) 295; *The Pictorial* (Johannesburg) May, 1938, p. 38.

NATHAN, SIR MATTHEW, soldier, governor and statesman, b. London, 1862; d. there, 1939. In 1880 Nathan entered the Royal Engineers, in 1889 he was promoted captain, in 1898 he became major, and at the end of his military career he was appointed lieutenant-colonel. Nathan participated in the Sudan expedition (1884-85), and in the Lushai expedition (1889). In 1895 he was appointed secretary to the Colonial Defense Committee. In this capacity he was attached to Joseph Chamberlain who formed a high opinion of Nathan's abilities. While secretary to the Colonial Defense Committee, Nathan was sent to Sierra Leone in 1898 to administer the government of that colony. He was the first Jew entrusted by the British government with such a mission.

In 1900 he was appointed governor of the Gold Coast. His report (1901) to the secretary of state concerning the treatment of natives manifested unusual understanding of the mental constitution of the natives and equally unusual methods of governing them. Because of his psychological acuteness Nathan became one of the most successful British governors. In 1903 he was sent to Hong-Kong, and from 1907 to 1909 (until the foundation of the Union of South Africa) he was governor of Natal. There Nathan protected Rev. John Dube, a native of the Inanda district who started a school to teach handicrafts and agriculture and had been hampered by Nathan's predecessor. Nathan also opened new schools for the natives of the colony. In 1909, he was appointed secretary to the Post Office; in 1911 he became chairman of the board of Inland Revenue, in 1914 permanent under-secretary to the government of Ireland. He was criticized for failure to appreciate the seriousness of the Irish Easter rebellion of 1916.

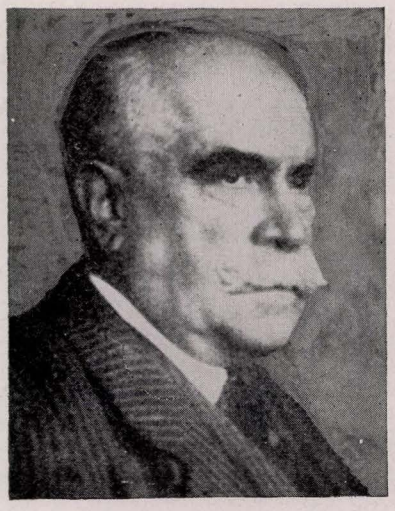
Returned from Ireland, Nathan became minister of pensions in Lloyd George's cabinet. From 1920 to 1925 he was governor of Queensland. After returning to England, he was chairman of various committees for the reform of civil service and economic development. Through his extensive experience in dealing with the natives of various countries and of his ability to grasp their mentality, Nathan contributed greatly to the reform of the administration of the British Empire. He was an active member of the Anglo-Jewish Association.

Lit.: Evens, Maurice S., *Black and White in East-South Africa* (1911), with a preface by Sir Matthew Nathan; Claridge, W. W., *A History of the Gold Coast and Ashanti,* vol. 2 (1915).

NATHAN, MAUD, social worker, b. New York City, 1862. Descended from the colonial Seixas, Nathan, and Myers families, and the wife of Frederick Nathan, she was one of the first Jewish women in the United States to go outside of the field of Jewish philanthropy into the broader arena of various national and international women's movements. Her earliest activities in New York city included directing the Mt. Sinai hospital training school for nurses and working with the New York Exchange for Women's Work and the Women's Auxiliary Civil Service Reform Association. Eventually, through the influence of Josephine Shaw Lowell, she became involved in the work of the famous Consumers' League, which was organized in 1891 to ameliorate, through consumer pressure, the working conditions of girls employed in New York city's department stores. From 1897 to 1917 Mrs. Nathan was the League's president, succeeding Mrs. Lowell. She wrote the history of the League in *The Story of An Epoch Making Movement* (1926).

Speaking in parlors and from soap-boxes, lobbying in Albany, N. Y., and in Washington, D. C., she made a name for herself as a pioneer agitator for women's suffrage. Theodore Roosevelt appointed her head of the woman-suffrage committee in his National Progressive Party. Her activities took her to all parts of the world. In 1899 she spoke at the International Congress of Women in London; she was a delegate to the International Congress for Labor Legislation in Lucerne in 1908, attended women's suffrage conventions in Stockholm and Budapest, and was at the Hague in 1913 as a representative of the Daughters of the American Revolution. In 1921 she spoke at the universities in Pekin and Canton.

As an outstanding Jewess, she appeared in various pulpits, speaking on Judaism and Christianity, and



Paul Nathan

was one of the first Jewish women to preach in a synagogue. She was honorary vice-president of the New York section of the Council of Jewish Women.

In 1933 Mrs. Nathan wrote her autobiography, *Once Upon a Time and Today.*

Lit.: Nathan, Maud, *Once Upon a Time and Today* (1933).

NATHAN, SIR NATHANIEL, British magistrate, b. London, 1843; d. London, 1916. He received his B.A. degree from the College of the University of London in 1863, and was called to the bar in 1866. In 1888 he moved to Jamaica, British West Indies, becoming a magistrate in Kingston. From 1891 to 1893 he was an acting judge of the supreme court of Jamaica; then he was appointed senior puisne judge of Trinidad, later attorney general, and from 1901 to 1903 he acted as chief justice. He was knighted in the latter year. Nathan wrote *Economic Heresies* (1909).

NATHAN, PAUL, political writer, social worker and philanthropist, b. Berlin, Germany, 1857; d. Berlin, 1927. The liberal deputies Ludwig Bamberger, Theodor Barth and Karl Schrader were responsible for his interest in German politics—especially Barth, in collaboration with whom he published the political weekly *Die Nation* for about twenty years. As head of the committee to prevent anti-Semitic attacks in Berlin, he supervised the publication of *Die Kriminalität der Juden in Deutschland* (1896), *Die Juden als Soldaten* (1896), and *Über das jüdische rituelle Schlachtverfahren* (1894). He was co-founder of the Hilfsverein der Deutschen Juden (1901), and its vice-president until his death.

Nathan's activities in behalf of the welfare and political rights of the Jews were extensive. During the first World War he took a prominent part in relief activities in behalf of the Jews in the territories of Russia occupied by the German armies. In the Hilfsverein he devoted himself especially to the founding of schools in Palestine, from kindergartens to teachers' seminaries and the Technical School in Haifa.

He was deeply interested in the Jewish problem in Czarist Russia. He intervened with Count Witte and Prime Minister A. Stolypin regarding the civic rights of Jews. When the Soviet government promoted agricultural settlement of the Jews, Nathan welcomed this move, but insisted that the masses of the Jewish population be shifted from the western districts of the Soviet Union to Siberia and the Far East. He wrote a pamphlet on this subject which caused a sensation (1926). In November, 1926, he participated in a Moscow conference on the settlement of Jews on the land. Nathan was active in the fight against the anti-Semitic movement in Germany conducted by the Centralverein Deutscher Staatsbürger Jüdischen Glaubens, to whose board he belonged for many years. He was active in the ORT Union's work of vocational training of Jewish youth.

Nathan was an outstanding journalist, contributing extensively to the general and Jewish press. In 1892 he published *Der Prozess von Tisza Eszlar, ein antisemitisches Kulturbild.* He edited the political writings and memoirs of Ludwig Bamberger (6 vols.). A liberal in German politics, Nathan joined the Socialist Democratic party under the Weimar republic.

Lit.: Feder, Ernst, *Paul Nathan, Ein Lebensbild* (1928); Wischnitzer, Mark, "Paul Nathan, der Gründer des Hilfsvereins," in the *Gemeindeblatt* of the Berlin Jewish community, March 14, 1937.

NATHAN, ROBERT, author and poet, b. New York city, 1894. On his paternal side he was a direct descendant of the Sephardic Gershom Seixas, who was an incorporator of Columbia University in 1784. He was a nephew of Annie Nathan Meyer and of Maud Nathan, and a cousin of Benjamin N. Cardozo. Nathan was educated at Phillips-Exeter Academy and at Harvard University (1912-15).

Disinclined to enter his father's law firm (Cook, Nathan, and Lehman), he wrote advertising copy for two years (1915-17) and left the glorification of industry for the celebration of glory as author and (briefly) poetry instructor at New York University (1924-25).

At twenty-three he wrote his first published novel, *Peter Kindred* (1919)—there were two earlier unpublished volumes—and this work was not only an effort at self-appraisal but a nostalgic reminiscence of Harvard. More than twenty-four titles, prose and poetry, appeared since then. *Autumn* (1921), *The Puppet Master* (1923) and *Jonah* (1925) established Nathan as a writer of fanciful prose which had strength under the suppleness and firm design beneath the delicacy. These works, as well as their immediate successors—*The Fiddler in Barly* (1926), *The Woodcutter's House* (1927) and *The Bishop's Wife* (1928)—were highly praised by the critics, envied by his fellow craftsmen, and sought as "collectors' items." But the public did not buy them. Nathan's name never appeared on the list of best sellers; it seemed he was doomed to be a "writer's writer."

Then, when his admirers had concluded that Nathan's faintly melancholy style could be appreciated only by the few, he published *One More Spring* (1933), which was not only a popular success, but was adapted for the films. This was in Nathan's fortieth year. Those who had championed him during his relative obscurity were not only gratified but justified. The critics were more enthusiastic than ever, and the public was impressed. But Nathan changed neither his attitude nor his style. He continued to write blithe or bitter fantasies in a mixture of light irony and grave sug-

Robert Nathan

gestiveness reminiscent of Anatole France, his acknowledged master. In *Road of Ages* (1934), a fantasy which treats of the plight of the Jews in a civilization which fears, persecutes and finally exiles them to a barren refuge in the Gobi Desert, the strain of gentle resignation spiced with satire was exchanged for a deeper universal irony, with an undercurrent of enigma and parable. *The Enchanted Voyage* (1936) and *Winter in April* (1938) marked a return to the lighter dexterous mood.

Besides his prose, Nathan published three volumes of poetry, of which *Selected Poems* (1935) include his most characteristic earlier verse. *A Winter Tide* (1940) was a later volume. As a poet Nathan preferred form to experiment, finesse to force. He was in no sense a modernist, and there are no outstanding mannerisms, no technical departures in his work. There is, on the other hand, a little sadness, a little shrugging whimsicality, and more than a little wisdom. "Gentle" is the adjective most often applied to his books, but the connotations of the word may be misleading. Nathan is gentle as a surgeon is gentle, or as an analyst is gentle, when depths are being probed. Nathan restates traditional themes and, by the serenity of his utterance, accomplishes that verbal miracle which changes platitudes into poetry. "There is a peace that I have made my own," Nathan writes in one of his sonnets, and that half-tired, half-triumphant peacefulness emanates from all his work.

Besides maintaining his quiet distinction as an unperturbed writer in the midst of loud choruses of publicized authors—Irving Fineman once referred to Nathan as "a solitary reed in a big brass band"—Nathan was an expert fencer, an accomplished pianist, and a distinguished amateur composer. He was vice-president of the National Institute of Arts and Letters (1939-42), and a charter member and president (1940-) of the American P.E.N. Club.

The Barly Fields (1938) was a collection of five of his early novels, published in one volume. *Journey of Tapiola* (1938) and *Tapiola's Regiment* (1941) were satires set in the canine world. Among his other novels were *Portrait of Jennie* (1940), in his imaginative style; *They Went on Together* (1941), a story of children fleeing an invasion in an unnamed country; and *The Sea-Gull Cry* (1942), which tells how two Polish émigrés found their place in the New World. Works of his were translated into Norwegian, Swedish, Dutch, French, Portuguese and Hungarian.

NATHAN, SIR ROBERT, English government official, b. 1866; d. London, 1921. Among the offices which he held in the Indian civil service were those of under secretary to the Home Department of the government of India, Financial and Commercial Department (1903), private secretary to the viceroy of India (1905), commissioner of the Dacca Division, East Bengal (1907), and officiating chief secretary to the governor of East Bengal and Assam (1910). An ardent advocate of higher education for the natives, Nathan became president of the Indian Universities (Dacca and Patna) Commission (1902), and wrote on the progress of education. He was author of the official *History of Plague in India.* During the first World War he served with the Secret Service Department.

Lit.: *London Times,* June 27, 1921, p. 14; June 28, 1921, p. 10; *Jewish Chronicle* (London), June 29, 1921, p. 11.

NATHAN, SEIXAS, banker, b. New York city, 1785; d. New York city, 1852. Like his father, Simon Nathan, founder of the Nathan family in America, Seixas Nathan owned considerable real estate in New York and was a man of prominence in civic and communal affairs. His name appears among the signers of the Constitution of the New York Stock Exchange, in 1817, of which he became an active member. He was an official of the United States Custom House at New York, and also a commissioner of charities. He took an active part in the affairs of Congregation Shearith Israel, was a member of the St. Nicholas Society, and belonged to a Masonic lodge, of which he was junior deacon in 1808 and secretary in 1809. He served as president of the New York Commercial Exchange Association (1846-47). Nathan married his cousin Sara Seixas. Of their fourteen surviving children, twelve married and thus became closely related to other distinguished American Jewish families, including those of Moses, Solomons, Lazarus, Gomez, Judah, Solis, Cardozo, Morrison and Florance.

Lit.: *Publications of the American Jewish Historical Society,* No. 4 (1896) 211-12; No. 19 (1910) 31, 33, 40; No. 27 (1920) 166; *American Hebrew,* May 4, 1928, pp. 963, 1022.

NATHAN, SIMON, American merchant and founder of the family of that name in the United States, b. 1746; d. New York city, 1822. He was the son of Judah Nathan of England, and came to America before the outbreak of the Revolution. He espoused the

Henri Nathansen

patriot cause and was among the Jews who left New York during the British occupation. Nathan was a trustee of Mickve Israel Congregation of Philadelphia when its first synagogue was dedicated in 1782, and its president in 1783. Subsequently he returned to New York, where he owned considerable real estate. He is frequently mentioned in the proceedings of Congregation Shearith Israel, of which he was president four times and a trustee from 1786 to 1790. His name is included in the first New York City Directory published in 1786.

Nathan advanced large sums of money to the state of Virginia during the Revolution, for which he was never repaid. He was active in Masonry as early as 1781. While in Philadelphia, in 1780, he married Grace Seixas, daughter of Isaac Mendes Seixas and Rachel Levy.

Lit.: *Publications of the American Jewish Historical Society,* No. 4 (1896) 211-12; No. 18 (1909) 119; No. 20 (1911) 93-94; *American Hebrew,* May 4, 1928, p. 1022; *Calendar of Virginia State Papers,* vol. 3, p. 259.

NATHANAEL (in Arabic, Hibat Allah ibn Djami), physician who lived in Egypt in the 12th cent. He was the personal physician of Saladin and director of the Jewish school at Alexandria. He wrote a number of medical essays, including one on the climate and inhabitants of Alexandria and another on rhubarb and its use in medicine, which is still of value.

Lit.: Münz, I., *Die jüdischen Ärzte im Mittelalter* (1922) 12.

NATHANS, HORACE AUGUSTUS, merchant and communal leader, b. Philadelphia, 1840; d. Philadelphia, 1903. He was the son of Moses and Benvenida (Solis) Nathans; several of his ancestors had played a prominent part in Congregation Mickve Israel, of which Nathans himself became president in 1893. He participated actively in educational affairs, being trustee of Gratz College from the days of its organization on. He was also secretary of the Philadelphia branch of the Alliance Israélite Universelle. He belonged to the Georgia Chapter of the Sons of the Revolution.

His wife, Marie Louise Samson Nathans, whom he married in 1877, was director of the Hebrew Education Society.

NATHANSEN, HENRI, Danish novelist and playwright, b. Hjörring, Denmark, 1868. Although he studied law, he early turned to the stage and literature. From 1909 to 1911 he was stage director of the Copenhagen Royal Theatre. Before abandoning law he had published the novels *Sommernat* (1899); *Den forbudne Frugt* (1901); and *Floden* (1902). During subsequent years he wrote the following plays which, with one exception, had their premiere at the Copenhagen Royal Theatre: *Mor har Ret* (1905); *Den gode Borger* (1907); *Daniel Hertz* (1909); *Danas Have* (1910); *Drömmen* (1911); *Inden for Murene* (1912); *Affæren* (1913); *Dr. Wahl* (1915).

Nathansen achieved his greatest success with *Inden for Murene,* which in Germany was known as *Hinter Mauern.* This play, as well as his outstanding novel *Af Hugo Davids Liv* (4 vols., 1917), deals with the problem of Jews in their non-Jewish surroundings, involving mixed marriage and kindred questions. The novel *Mendel Philipsen og Sön* (1932), with which he ended his literary career, likewise portrays Jewish characters and Jewish problems. Nathansen was known also for his biographical essays, of which *Georg Brandes* (1929) is the most important. In 1928 he published a volume of poems, *Jord og Stjerne,* under the pseudonym of Frater Taciturnus. He was regarded as a leading Danish author of his period. Most of his works deal with contemporary themes of general interest.

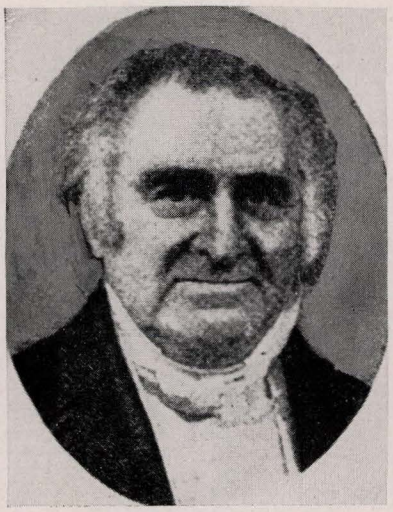
NATHANSON, BERNHARD, Hebrew author, b. Satanów, Podolia, Poland, 1832; date and place of death unknown. He made his literary debut in the *Hamaggid* (1864). It soon devolved upon him to revise and edit Isaac Baer Levinsohn's writings posthumously, in collaboration with his nephew, Jacob Israel Levinsohn. He published also *Sefer Hazichronoth* (Warsaw, 1875), a biography of Levinsohn. Other works of Nathanson's were *Maarecheth Sifre Kodesh* (Odessa, 1871), a Biblical lexicon, and *Sefer Hamillim* (Warsaw, 1880), a dictionary of difficult terms in Talmudic literature.

Lit.: Sokolow, N., *Sefer Zikkaron* (1889) 73-75; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 4 (1930) 503-4.

NATHANSON, JONAS BERNARD, physicist, b. Vilna, Lithuania, 1889; d. Pittsburgh, 1939. He came to the United States at an early age, and was educated in science. From the faculty of the University of Illinois (1913-16) he was called to the Carnegie Institute of Technology where he was designated associate professor in 1930, and was still incumbent at the time of his death. Throughout his career Nathanson contributed valuable research in his special subject, the optical properties of metals, publishing his findings in numerous scientific journals. He worked also on the ratio of the charge to the mass of the electron interference in metallic films and optical dispersion of metals.

During the first World War Nathanson was assigned to instruct in the radio and ordnance detachments of the United States Army at Carnegie Institute. He was a prominent member of many scientific societies, and in 1929 was elected president of the Physical Society of Pittsburgh.

NATHANSON, JOSEPH NORMAN, obstetrician and gynecologist, b. New York city, 1895. He was



Mendel Levin Nathanson

educated for a medical career at McGill University, Montreal, and went into practice in Ottawa, Canada, in 1922; in 1925 he moved to New York city. There he became attending surgeon at the Jewish Maternity Hospital and at several other hospitals. In 1932 he became attending obstetrician and gynecologist at New York Hospital, as well as at Cornell University Medical College, where he had taught from 1925 on.

Among his writings on the problems of obstetrics and gynecology are: *Prophylaxis in Obstetrics* (1922); *Syphilis in Relation to Pregnancy* (1925); *Anatomy Genesis and Clinical Considerations of the Placenta Accreta* (1928); *Dentistry in Relation to Obstetrics* (1930); *A Parallel Study of Labor in Young and Old Primipara* (1935).

NATHANSON (NATANSOHN), JOSEPH SAUL HALEVI, rabbi and rabbinical author, b. Brzeźany, Poland, 1808; d. Lemberg, Galicia, 1875. He studied at the school of the first Mordecai Zeeb Ettinger, rabbi of Lemberg, and acquired great learning. In Lemberg, also, he later conducted a Yeshiva which trained many Talmudists. In 1857 Nathanson was appointed rabbi in Lemberg. Together with his brother-in-law, the second Mordecai Zeeb Ettinger (1804-63), he composed a series of noteworthy Talmudic works, under the title of *Mefareshe Hayam* (Lemberg, 1828). Nathanson was author also of several rabbinic works of Halachic, Haggadic and homiletical nature, including *Yad Shaul* (1851); *Dibre Shaul zur Torah; Dibre Shaul,* sermons; *Dibre Shaul zu Agadoth; Sefer Meirath Enayim* (Vilna, 1839; Zólkiew, 1842); *Magen Gibborim* (part 1, Lemberg, 1834; part 2, Zólkiew, 1839), discussive commentaries on *Shulham Aruch, Orah Hayim.* Parts of his legal opinions, which enjoy high esteem in rabbinical circles, were published after his death in his *Shoel Umeshib* (6 vols., Lemberg, 1865-79). His large and valuable library was divided equally among three institutions.

Lit.: Buber, Solomon, *Anshe Shem* (1895) 97; *Hashahar,* vol. 6, p. 292; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 4 (1930) 504; Fürst, Julius, *Bibliotheca Judaica,* vol. 3, p. 23.

NATHANSON, MENDEL LEVIN, editor and economist, b. Altona, Germany, 1780; d. Copenhagen, Denmark, 1868. In 1806 he became an associate of the Copenhagen banking house of Meyer and Trier. The firm ceased operation in 1831, and Nathanson began his career as editor and a writer on economics. His first economic work, *Forerindring,* had been published anonymously (1813). His best known work is *Danmarks Handel, Skibsfart, Penge- og Finansvæsen fra 1730 til 1830* (3 vols., 1832-34), later enlarged and published under the title of *Historisk-statistik Fremstilling af Danmarks National- og Statshusholdning fra Frederik IV's Tid til Nutiden* (1836; 2nd ed., 1844).

Nathanson was an ardent champion of the Jewish cause and advocated Jewish education, although his own children all were baptized. In 1805 he founded a free school for Jewish boys in Copenhagen, and in 1810 a similar school for girls. In emergencies he often financed both schools. He was in great measure responsible for the full civic rights won by Jews in Denmark in 1814. From 1838 to 1858, and again from 1865 to 1866, Nathanson was editor of the *Berlingske Tidende* of Copenhagen. He developed this newspaper from a comparatively unknown publication to Denmark's leading conservative daily of international reputation. Nathanson is regarded as the father of Danish journalism.

NATHANYAH, *see* COLONIES, AGRICULTURAL.

NATIONAL ASSOCIATION OF JEWISH CENTER WORKERS, an organization composed of men and women who are professionally engaged in the administration of the Jewish community centers, YMHA's, YWHA's and kindred institutions in the United States and Canada, affiliated with the national Jewish Welfare Board. Associate membership is open to professional workers in related fields. The Association is concerned with the professional problems of its membership and is organized to afford an opportunity for exchanging experience or acquiring additional knowledge of and newer insights into content, method and philosophy of group work as conducted in the distinctive Jewish setting which has come to represent the typical Jewish community center.

The National Association of Jewish Center Workers was organized in 1918 in New York city as the National Conference of YMHA Secretaries. A dozen persons attended that first meeting. In 1942 there were hundreds of members.

Some of the personages associated with the movement at the time of its founding included Charles S. Bernheimer, Philip R. Goldstein and Mordecai Soltes of the Jewish Welfare Board; Mrs. Ray Schwartz, of the YWHA, New York; Tobias Roth, Rochester, N. Y.; Samuel B. Kauffman, Mount Vernon, N. Y. The late Rabbi Aaron G. Robison and Harry L. Glucksman, formerly executive director of the Jewish Welfare Board, from the inception of the movement exerted a profound influence on the thinking and development of the Association.

The National Association of Jewish Center Workers functions through its annual conference, held in conjunction with the annual meeting of the National Conference of Jewish Social Welfare and the National Council on Jewish Education, and usually in alternate

years in conjunction with the National Conference of Social Work. The official publication of the Association is *The Jewish Center Worker,* while the papers read at the annual conference together with the reports of the discussions, round tables, clinic consultations and business sessions appear in the *Annual Proceedings.*

The list of presidents up to 1942 included, among others, the following: Isidore Beierfeld, Maurice Bisgyer, Julian Greifer, Miriam Ephraim, Allan Bloom, E. J. Londow, Louis Kraft, Gilbert Harris, Herman Passamaneck, A. W. Rosenthal, Tobias Roth, Jack Nadel, Philip L. Seman, Samuel Shair, William Cohen, M. H. Chaseman, William Pinsker, Charles Nemser, Sol Bluhm, Rabbi Aaron G. Robinson, and Harry L. Glucksman.

In 1942 the president was Herman Jacobs, executive director of the Jewish Community Center, of Detroit.

HERMAN JACOBS.

NATIONAL CONFERENCE OF CHRISTIANS AND JEWS, THE, an organization founded in 1928 by Newton D. Baker, former United States secretary of war; Dr. S. Parkes Cadman, one of the nation's eminent clergymen; and former Chief Justice Charles Evans Hughes. Prior to 1928, the movement for better understanding among Protestants, Catholics and Jews was centered in the Permanent Commission on Better Understanding Between Christians and Jews and in a committee of the Federal Council of the Churches of Christ in America. But the limitations of the latter committee as an agency of the Federal Council, made up wholly of Protestants, was realized, and the movement was widened to include Catholics and Jews, through the formation of the National Conference of Christians and Jews.

Three co-chairmen were immediately appointed: Newton D. Baker, Protestant; Professor Carlton J. H. Hayes, Catholic; and Roger W. Straus, Jew. Baker defined the purpose of the organization as follows: "The aim of the National Conference of Christians and Jews is to moderate—and finally to eliminate—a system of prejudices which disfigures and distorts our business, social and political relations." Adopted as the official statement of purpose since its beginning, the National Conference has striven for three goals:

1. To analyze and allay prejudice arising among religious groups in the United States;
2. To establish a basis of cooperation for common ends while insuring the right of individuals and groups to differ;
3. To immunize the public mind and emotions against propagandas of misinformation and hatred by developing mutual understanding and appreciation.

The National Conference has sought to attain these objectives through a national and local program of education. The central unit for carrying out this program is the local "round table," of which there were several hundred throughout the United States in 1942. The round table is a body of Protestant, Catholic and Jewish leaders which exists to further the aims of the National Conference in its community. Attached to each round table is usually a speakers' bureau, a women's committee, a committee on school and college work, a radio and press committee, and other committees for special interests. These take the message of better understanding and interfaith cooperation to schools, churches, civic, women's and service clubs, labor unions, business and youth groups and other community agencies. The round table groups meet frequently or infrequently, as the need dictates, for group study and adjustment of local problems.

In many areas of the United States the round tables are assisted by regional offices which are supervised by full-time directors attached to the staff of the National Conference. These regional directors furnish program materials to local round tables, help them to solve problems and organize new round tables where they do not exist.

One of the most widespread techniques employed by the National Conference to spread better understanding is that of the trio team consisting of a priest, minister and rabbi, or of laymen of the three faiths. These teams travel through every area of the country, appearing before audiences of various types, such as luncheon clubs, church federations, business men's groups, forums, high schools assemblies and college convocations or special meetings called by local units of the National Conference.

Another educational technique employed in various parts of the country is the Human Relations Institute or seminar. The first seminar of Protestants, Catholics and Jews on a national scale in the history of the United States was held by the National Conference in Washington, D.C., in 1932 to discuss the topic "American Community Relations." In 1935 the National Conference established the Williamstown Institute of Human Relations, which was held biennially thereafter on the campus of Williams College in Massachusetts. It is the largest national gathering of religious and lay leaders of the three faiths. They come together to interchange knowledge and judgment of problems related to the work of the National Conference. During those years when the Williamstown Institute is not in session, an Institute of Human Relations is held at Estes Park, Col., or elsewhere, bringing together leaders from many states. A south-wide Institute of Human Relations is also held every year under the sponsorship of the Southern area of the National Conference. A similar annual Institute is held every year in Chicago, attended by leaders of the three faiths from the Middle West.

As a climax of its year's activities, the National Conference sponsors the observance of Brotherhood Week, held each year during the week of Washington's Birthday. Begun in 1933, Brotherhood Week has developed into a national event. Each year it has been endorsed by the president of the United States and, in 1942, was observed in nearly 2,000 communities in every state of the Union. During this occasion the National Conference enlists the aid of every type of organization as well as churches and religious bodies for emphasis upon understanding and cooperation among the various faiths.

A unique activity of the National Conference is its sponsorship and operation of Religious News Service, the first successful interfaith news service in the history of the United States. Launched in 1933, Religious News Service obtained a clientele consisting of leading large and small daily secular newspapers in the United States and Canada, principal religious journals of the three faiths, radio stations throughout the country, news magazines and other types of publications. To these it furnishes spot news and interpretations of de-

velopments in the three faiths, and a feature service of an interfaith nature.

The National Conference also utilizes many other forms of education. It publishes books, pamphlets and other literature which are widely distributed to study and forum groups and individuals. Educational articles are prepared and syndicated. Radio and films also are used to disseminate the message of the organization. The cooperation of educators, scientists, dramatists and writers is obtained in the preparation of study materials and programs calculated to develop attitudes of understanding among churches in relation to Jews as an integral function of Protestant education.

In addition to these regular channels, the National Conference issues special pronouncements signed by leaders of the three faiths and addressed to the American people. Among statements of this kind which have been issued are:

A nation-wide pronouncement signed by clergymen of the three faiths all over the country reaffirming those fundamental civil and religious rights which are cherished as a part of the best tradition of the American people (1937).

A joint appeal to Americans, signed by more than 550 Catholic, Protestant and Jewish clerical and lay leaders, to repudiate doctrines which "pit class against class," promote racial and religious hatred, and aim to destroy liberty (1939).

An appeal to Americans to strengthen religious conviction, free themselves of all forms of bigotry, and overcome the tendencies toward race, class, religious and individual hatred which are threatening the future of our nation as well as the world. It was signed by prominent laymen of the three faiths in more than 1,000 communities throughout the country (1939).

An appeal for national unity and goodwill among citizens of all faiths and classes, issued jointly by religious and lay leaders of the three faiths in communities throughout the country. The statement warned that individuals and groups promoting hatred against religious and racial elements are "America's potential traitors" (1940).

A statement, signed by nearly one hundred leading Americans, holding diverse religious, social and political beliefs, urging the fullest freedom of debate on national policy, but denouncing efforts to "pit religion against religion, race against race" in the course of such discussions (1941).

A declaration of fundamental religious beliefs held in common by Protestants, Catholics and Jews, the first statement of its kind in the nation's history. Signed by leaders of the three faiths in communities across the nation (1942).

Headquarters of the National Conference are in New York city. In 1942 there were ten regional offices, located in New York city, Newark, N. J., New Haven, Conn., Washington, D. C., Dallas, Texas, Chicago, Cleveland, St. Louis, Milwaukee and Minneapolis.

The National Conference does not seek uniformity of religious beliefs or any least common multiple of faith. It does not hold that "one religion is as good as another." It does not aim at any sort of merger or union of religious bodies, nor does it undertake to represent official religious bodies.

The Conference holds and demonstrates that those who differ deeply in religious beliefs may work together in the American way towards mutual good—such as amity and understanding among religious groups, religious liberty, peace, social justice, freedom of speech, assembly and press—ideals that can be fully implemented only by interfaith cooperation.

LOUIS MINSKY.

NATIONAL CONFERENCE OF JEWISH SOCIAL WELFARE, THE, a forum for the exchange of experiences on the part of lay and professional persons interested and active in the various fields of Jewish communal work. During the forty-three years of its existence (up to 1942), the annual meetings of the Conference concerned themselves with the economic, social and cultural life of Jewish people the world over, as these phases of interest created problems for local organizations and communities and the need for national and overseas services. Committees of the Conference, during its history of development, stimulated and initiated activities which served local communities through a central national channel and established practices and policies of intercity relationship and cooperation.

The Conference was originally organized (1899) as the National Conference of Jewish Charities. The early leaders were laymen rather than professional social workers, and included such men as Leo N. Levy, Lee K. Frankel, Julian W. Mack, Nathan Bijur, Max Senior, Cyrus L. Sulzberger and Boris D. Bogen. From 1899 through 1918 the Conference met biennially, during which time the National Association of Jewish Social Workers, representing professional groups, met in the alternating years. These two organizations were merged in 1918 to form the National Conference of Jewish Social Service, which in 1936 took its present name—National Conference of Jewish Social Welfare. In its early days, transients, transportation and family desertion problems occupied the primary attention of the Conference. To meet the needs of local organizations and communities, the Conference in 1913 created the National Desertion Bureau, whose services in the apprehension of deserters considerably reduced the problem. Through its transportation committee, rules were devised to form the basis for adjustment of disputes between Jewish communities with reference to the treatment of transient families and individuals. In 1925, through the initiative of the Conference and after several years' study by a special committee of the Conference, the Training School for Jewish Social Work in New York city was created to meet the need for trained workers in Jewish social agencies. This school, chartered by the Regents of the University of the State of New York, was reorganized in 1930 as the Graduate School for Jewish Social Work, and was granted the right to give the Master's and Doctor's degrees. At the time of its discontinuance in 1940 the school had given training to more than 1,000 students and had made important contributions to Jewish and general social work.

In response to the need for stimulating communal development and standard practices, the Conference maintained a field bureau from 1916 until 1919, when these functions were assumed by the Bureau of Jewish Social Research, later the Council of Jewish Federations and Welfare Funds. During its existence, the field bureau made surveys of agencies and communities, and served as consultant and advisor on problems in Jewish social work. For consideration of national services, the Conference promoted the National Appeals Information Service to provide federations and welfare funds with authoritative information on national and overseas work. This function was subsequently taken over by the Council of Jewish Federations and Welfare Funds.

The National Conference is not a functional agency but a conference where members may meet to discuss their problems and stimulate the development of such national functions and services as will meet the needs with which local organizations can not cope on an individual basis.

In 1942 the National Association of Jewish Center Workers and the National Council for Jewish Education were associated with the Conference, and held their annual meetings in conjunction with it. The Conference meeting, which occupied a four-day period in May or June each year, was organized around the problems of family and individual welfare, of cultural and recreational activities, of community organization, and of economic and industrial programs.

The annual meetings were rotated among the various cities of the country so as to make the discussions of the Conference available to as many social workers and Jewish communities as possible. In most years it was held at the same time and place as the National Conference of Social Work. Proceedings of the annual meeting were published, also.

Another important activity carried on by the Conference was the publication of *The Jewish Social Service Quarterly,* which contained authoritative discussions of the philosophy and guiding principles of community organization and Jewish social work, as well as articles on current developments.

The officers of the Conference for the year 1941 to 1942 were: president, Israel S. Chipkin, New York; 1st vice-president, Louis Kraft, New York; 2nd vice-president, Joseph E. Beck, Philadelphia; treasurer, Harold Silver, Detroit; secretary, Marcel Kovarsky, New York.

In addition to the officers, the following were members of the Executive Committee: Philip Bernstein, Cleveland; Miriam R. Ephraim, Pittsburgh; Virginia C. Frank, Chicago; Michael Freund, New York; Joseph C. Hyman, New York; Samuel C. Kohs, Los Angeles; Samuel Levine, Cleveland; Clara Rabinowitz, Brooklyn; Joseph J. Schwartz, New York; John Slawson, New York; Isidore Sobeloff, Detroit; Maurice Taylor, Pittsburgh.

MARCEL KOVARSKY.

NATIONAL COUNCIL FOR JEWISH EDUCATION, an association organized in 1925. Following the first World War, bureaus of Jewish education were established in a number of communities (Chicago, Philadelphia, Boston, Cincinnati, Cleveland, etc.). The first such bureau, headed by Samson Benderly, had been established in New York City in 1910 by the Kehillah. It was later taken over by the Federation for the upport of Jewish Philanthropic Societies. Benderly was a pioneer in advocating organized Jewish education, training a group of educators who later became the directors of the new bureaus which were opened in various parts of the United States. On January 1, 1925, a committee met at the home of I. B. Berkson to organize a "national conference of Jewish educational executives and superintendents." This committee consisted of Berkson, Israel S. Chipkin, A. M. Dushkin, Leo L. Honor, and Ben Rosen. The committee proposed that the organization be called "The Jewish Educational Council of America," the aim of which was to "serve as a meeting ground for the exchange of experiences and for establishing a basis of cooperation among Jewish educators of America"; and to "stimulate the study of Jewish education and the development of professional standards in the field of Jewish education."

The first meeting of the Council was held in Cleveland, May, 1925, two days prior to the meeting of the National Conference of Jewish Social Service. The official name finally adopted was "The National Council for Jewish Education." The Council became a constituent member of the National Conference of Jewish Social Welfare. The Council holds professional conferences annually, some of its sessions jointly with the social workers and Jewish center executives. It has met, from time to time, with representatives of the National Federation of Hebrew Teachers, and has conducted regional conferences as well as joint educational sessions with rabbis at the rabbinical conferences.

The Council was instrumental in furthering the establishment of a uniform Hebrew transliteration code; also helped to advance the standard of requirements for teachers' training institutions, and aided in the establishment of a National Board of License for qualified teachers. The Council was also instrumental in founding a national laymen's organization for Jewish education called The American Association for Jewish Education..

The Council publishes the magazine *Jewish Education* three times a year, which entered its fourteenth year of continuous publication in 1942. It participates in the publication of a Hebrew pedagogic quarterly *Shevile Hahinuch,* and it has aided in the issuance of educational books and materials.

The organization numbered 110 members in 1942. The officers were: president, Samuel M. Blumenfield, Chicago; vice-presidents, Azriel L. Eisenberg, Cleveland, and Samuel J. Borowsky, New York; secretary, Judah Lapson, New York; treasurer, Nathan Brilliant, Cleveland; Editor of *Jewish Education,* Ben Rosen, Philadelphia. Past presidents of the Council were: Leo L. Honor, Israel S. Chipkin, A. P. Schoolman, A. M. Dushkin, Ben Rosen, A. H. Friedland, Louis Hurwich, Jacob S. Golub, Samuel Dinin, and Louis L. Kaplan.

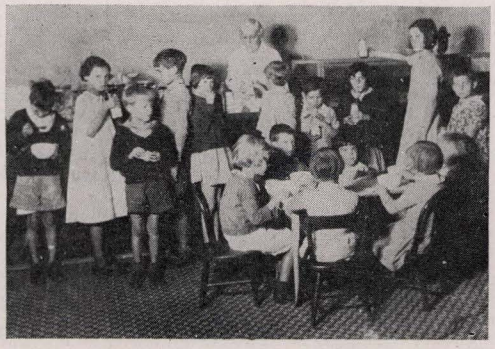
JUDAH LAPSON.

NATIONAL COUNCIL OF JEWISH WOMEN. The National Council of Jewish Women was founded in 1893 by Mrs. Hannah G. Solomon during the Congress of Religions held at the Chicago Worlds Fair. Out of this first meeting held under the auspices of the Congress of Jewish Women, there developed a permanent organization which in 1942 had 350 Senior and Junior sections in the United States and Canada—with a membership of more than 60,000. The organization functions democratically with policies decided upon at triennial conventions by delegates elected from the local sections in proportion to their membership.

The National Council of Jewish Women carries out a five-point program of service to community and country. Its interests lie primarily in the fields of contemporary Jewish affairs, international relations, social legislation, social welfare and service to the foreign-born.

Contemporary Jewish Affairs. Although the Council is not a religious group, it attempts in all its activities to reflect the finest in Jewish culture. In study groups, Council members are familiarized with the history, background and basic values of Judaism. Religious training for children is sponsored and supported by the Council in communities where such training would not otherwise be available to young people. Council members work in close cooperation with non-sectarian groups in an effort to combat racial and religious prejudice and to foster inter-faith cooperation. The Council is represented on the governing boards of the various groups, which makes for clearer understanding of mutual problems. Study outlines, lecture courses and publications are prepared in the national office to be used in the sections throughout the country.

Naturalization and citizenship classes conducted by the National Council of Jewish Women



A dining room for children maintained by the National Council of Jewish Women

International Relations. The Council pursues a vigorous study and action program on international relations. It is committed to the principles of a world society and believes that isolation is an impractical and completely unsympathetic ideal. In the past, wars have been followed by waves of bigotry and prejudice against minority groups. The Council is in the forefront of the fight against such prejudice and is vitally interested in educating its members to the realization of their responsibilities toward helping to achieve world organization. After the first World War the Council supported collective security. The Council is clearly aware of the necessity for the defeat of Nazi aggression and the necessity for the achievement of an adequate peace which will eliminate future wars and aggressions.

In line with its principles, the Council supports free trade and intercultural relations. The Council works in close cooperation with the National Committee on the Cause and Cure of War, the Foreign Policy Association, the National Peace Conference and other national organizations concerned with international relations.

Social Legislation. A record of the legislative endorsements of the National Council of Jewish Women is a history of social progress. As early as 1911, Council Committees were working for slum clearance, low-rent housing, mothers' pensions, more stringent health inspection and the elimination of child labor. The Council endorses and works for better food and drug legislation, health provisions for low-income groups, uniform marriage and divorce laws, anti-lynching laws, improved motion pictures, extension of the merit system, and anti-poll tax laws.

Local sections throughout the country are encouraged and assisted in the organization of study groups. Complete kits, giving content, material and factual information as a basis for study and discussion, are sent to all sections. Study of legislation problems makes for an articulate and enlightened membership, whose opinions are recorded in resolutions at triennial conventions. When a controversial bill is not covered by such a resolution, a referendum is conducted before Council members embark on concerted action.

Council's representatives on the Women's Joint Congressional Committee in Washington attend hearings in the name of the Council and notify the national office concerning the progress of important legislation. In this way the Council is informed when the strategic time for action has arrived. Similarly, state chairmen of legislation keep local sections informed regarding the importance of action on state legislation which affects the welfare of women and children.

The Council cooperates closely with such organizations as the National Child Labor Committee, the National Maternal and Child Health Council and The American Association for Social Security.

The Council supports and works for the defense of the American way of life. It stands for an expansion of our democratic institutions, elimination of slums, freedom for minorities and defenseless groups, an America in which security for each citizen is founded upon the recognition of his liberty as an individual and upon his assured role in a functioning democracy.

Social Welfare. Social betterment has been the goal of the National Council of Jewish Women for forty-nine years. Each Council section is organized to supply necessary welfare service. Wherever possible, professional assistance is obtained. In many instances, after a project has been in existence for a period of years, after techniques of service have been developed and its value to the community demonstrated, a public agency or educational system has incorporated the project into its own program. This frees the Council to pioneer and meet new needs in communal welfare.

Council Sections have initiated many outstanding community services: family welfare organizations, settlement houses, luncheons for needy children, lighthouses for the blind, toyeries, day nurseries, playschools for underprivileged children, summer camps, public health clinics, birth control clinics, vocational guidance and scholarship awards, big sister activities, opportunity shops, summer playschools and extensive programs for the prevention of blindness and deafness. The Council cooperates with local welfare agencies and lends its aid to community chests and campaigns.

From the very beginning, the national office has kept the sections informed on the development and importance of the Civilian Defense Program. The national office has sent releases to all its sections advising them to request their mayors to set up local defense councils. They were also given instructions for setting up central volunteer bureaus. In addition, the sections have been urged to enroll for protective instruction in the various divisions of the war effort, such as air raid wardens, fire watchers, rescue squads, drivers corps, nurses aides, nutrition and consumer courses.

The Council is alert to adjust its program to meet the changing needs in social service. Emphasis is placed on adequate preparation and training of volunteers to improve standards in all services.

Service to the Foreign-Born. The work of the National Council of Jewish Women with the foreign-born dates back to 1903, when a government commission, appointed to investigate white slave traffic, asked the Council to take the responsibility for meeting unaccompanied Jewish women and girls upon their arrival at the port of New York. The services which the council offers to the foreign-born can be divided into the following major classifications:

International Service. Advice on immigration problems, location of relatives on behalf of persons living abroad, assistance with affidavits, with applications for extension of visitors' visas and for change of status. A monthly bulletin, *Shop Talk,* keeps the Council sections informed of all current changes in immigration and naturalization rulings as well as of any new developments affecting the status of the alien.

Port and Dock. The Council employs trained social workers at ports of entry throughout the United States for the purpose of assisting unaccompanied Jewish women and girls who arrive in the United States. These workers also assist detention cases and, as a result of new rulings brought about by the war, represent aliens from enemy countries at hearings. Work at all ports is under the direct supervision of the chief of port and dock work at the national office.

Social Adjustment. The national office forwards the names of arriving immigrants to its local sections, which offer the immigrant a variety of projects designed to integrate aliens into community life. Classes in English, membership in social and recreational groups, retraining for employment, scholarships for students, and shops which sell the wares of newcomers are among the social adjustment projects of Council sections. The new National Alien Volunteer Project is designed to offer a nationwide survey of the skills, aptitudes and time available to the Civilian Defense Program by non-citizens. Registration of aliens who are eager to contribute to the defense program was in 1942 being carried on by Council sections throughout the country.

Naturalization and Americanization. Under the supervision of the professional director in the national office, Council sections cooperate with or set up naturalization centers in their communities. The national office provides institutes and training courses for volunteer council members who assist applicants for citizenship with the preparation of necessary forms, and offer them courses in the American form of government.

Educational Program. For its own members, the Council maintains an educational program designed to acquaint the American citizen with the problems of the immigrant. Council sections are kept informed of the implications of all proposed legislation regarding aliens and are encouraged to take action on such measures by informing their Congressmen of their support of or opposition to particular bills.

In addition to its early achievements of winning recognition for the Jewish women in religious work, through appointments to the boards of religious schools, the National Council of Jewish Women, through its constituent sections, established religious schools for the especial purpose of assisting communities, districts or institutions in cities deprived of such facilities, and in some instances to counteract the efforts of Christian missions. It fostered study circles on Bible, Jewish history and Judaism, distributed the Jewish holy day calendar in the public schools, and, through its "School Friend" system, took special cognizance of the needs and problems of Jewish pupils. It sponsored the annual celebration of a "Council Sabbath," and published considerable literature on various subjects of Judaism. Its prayer-book in Braille for the Jewish blind was the first of its kind. Its field representatives visited isolated farm houses and small communities throughout the United States, forming Women's Leagues, and its rural program dealt with questions of citizenship, hygiene, sanitation, religious educational facilities and social service problems in all states wherein large Jewish farm populations were concentrated. For the period from 1914 to 1918 the federal government designated the National Council of Jewish Women as the only social service agency for women at Ellis Island, and it published *The Immigrant,* containing authoritative news on immigrational matters.

The past presidents of the National Council of Jewish Women were: Hannah Greenebaum Solomon (1893-1905), Pauline H. Rosenberg (1905-8), Marion L. Misch (1908-11), Janet Simons Harris (1911-17), Rose Brenner (1917-23), Ida Weis Friend (1923-32), Mrs, Arthur Brin (1932-38).

In 1942 its officers, residing in various parts of the United States, were: president, Blanche Bauman (Mrs. Maurice L.) Goldman; first vice-president, Mrs. Joseph M. Welt; second vice-president, Mrs. Oscar S. Marx; third vice-president, Mrs. Benjamin Spitzer; treasurer, Mrs. Jacob Loeb Langsdorf; financial secretary, Aimee Stone; recording secretary, Mrs. Edgar Menderson; chairman of the executive committee, Mrs. Karl J. Kaufmann; executive director, Flora R. Rothenberg. The national office was in New York city.

In 1942 the Council published a quarterly, *The Council Woman,* founded in New York city (1940).

The National Council of Jewish Juniors. The Junior Council was organized in 1919 as an auxiliary of the Senior Council to serve as a training ground for the parent organization. In 1942 the Juniors numbered 7,000 members in 134 sections throughout the United States and Canada.

They carry on a six-fold program of service in the fields of peace, legislation, education, religion, social service, and service to the foreign-born. Following the lead of the Senior Council, each Junior section fills a need in its community that is not answered by other existing organizations. Among the Junior welfare projects are: toyeries, summer camps, dental clinics, hospital visiting, and summer playschools.

The Hannah G. Solomon Scholarship Fund, the national project of the Junior Council, is supported by voluntary contributions from each section. This fund, named in honor of the Council's founder, provides scholarships for graduate students to continue their studies in the field of social service. Approximately twenty awards are given each biennial period at the University of Chicago and Tulane University. During the past few years a portion of this fund has been allotted to the University in Exile.

Much of the energy of this Junior group is used to alleviate the suffering of the refugee, both by generous financial contributions and by active service. The young women, following the pattern of Senior Council, participate in an active program for the adjustment and Americanization of the immigrant.

NATIONAL COUNCIL OF YOUNG ISRAEL, an organization consecrated to the task of preserving and perpetuating traditional Judaism in the scene of American democracy. It was organized in New York city in 1912 for the immediate purpose of establishing a model synagogue which would preserve the Orthodox order of services and wherein dignity, congregational singing and the lack of commercialism would be prevalent. Around the Young Israel Synagogue of Manhattan there developed cultural and educational activities, the main stress in the organization being laid on the training of juniors and intermediates for future participation in religious affairs. Services in the synagogues of Young Israel are mainly conducted and attended by young people.

Through its thirty-five branches in Greater New York and an equal number throughout the United States (1942), the National Council of Young Israel also endeavored to educate the Jewish youth of the United States for participation in civic endeavors and for the promotion of the welfare of the entire community. It participated in all charitable and philanthropic enterprises regardless of sect, religion or race. Through its employment agencies it endeavored to solve the problems of vocational guidance and employment for Jewish youth observant of the tenets of Jewish law. It advocated the building of a Jewish homeland in Palestine in the spirit of Orthodox Judaism.

Among the principal founders were Moses H. Hoenig, Samuel Mandelbaum, Harry G. Fromberg, Hyman Goldstein and Jacob O. Zabronsky. In 1941 to 1942 Samuel H. Fromberg was president of the organization. ISRAEL UPBIN.

NATIONAL FARM SCHOOL, THE, a school of practical agriculture located in Bucks County, at Farm School, Pa. It was founded in 1896 by Rabbi Joseph Krauskopf. The School is intended primarily to train city boys to become successful practicing farmers. An unusual system of alternating half-terms of farm work with half-terms of classroom studies makes this achievement possible. Students do all the work under the supervision of capable instructors on the farm of some 1,200 acres and in departments that are correspondingly extensive. The School does not attempt to duplicate the work of state agricultural colleges. Vocational training in six different fields of agriculture is offered: poultry husbandry, horticulture, dairying, landscape gardening, floriculture, and general agriculture. To qualify for admission, candidates must be between seventeen and twenty-one years of age and hold high school diplomas.

Krauskopf was among the first to realize the need for action when the influx to American cities of thousands of Jews fleeing the pogroms and persecutions of Eastern Europe in the 1880's created a serious situation. A return of the Jew to the soil seemed to him one practical solution.

In the fall of 1894 Krauskopf went to Russia to obtain first-hand data on the condition of the Jews there. At the suggestion of Count Leo Tolstoi, he visited the Jewish agricultural school at Odessa. What he saw there convinced him that the agricultural instincts fostered in Biblical times still lingered in the will of the Jews and needed only an opportunity for expression.

After his return to the United States, Krauskopf, despite little support of his plans, started The National

The Allman administration and farm mechanics building at the National Farm School

Farm School. In 1896, with funds raised by lecturing and a sum saved from rabbinical fees, he purchased the first farm of 122 acres. Friends now rallied to his side and raised the funds for the first building, dedicated in June, 1897. The following September, fifteen boys enrolled from different parts of the United States. Krauskopf, already busy with manifold duties, found time to come to the School several times each week to teach classes and conduct religious services. In 1901 seven students graduated from the then four-year course. Some years later the curriculum was reduced to the present three-year course.

While the primary purpose was to divert Jewish boys from cities to agricultural occupations, Krauskopf established the School on a non-sectarian basis, and boys of any creed have always been welcomed.

By 1942 the School had grown to embody a spacious campus, substantial buildings of appropriate architecture, extensive farm acreage and large farm departments. Over 1,000 graduates had gone out from the School, with several hundred others still profiting by the training, even though they did not complete the full course. A haven of refuge had been opened again, through The National Farm School, to exiles from Germany and other Nazi-dominated countries. One-year specialized units, to supplement the regular three-year course, had been introduced to help meet the war emergency for trained agricultural manpower.

Tuition is free to all students. Moreover, comprehensive scholarships provide every needy student with free board and room. In order, however, that the student may have something at stake in this investment, each must pay an incidental fee which amounts to $350 for the three-year course. The school year begins around April 1st and continues throughout the twelve months.

MAURICE JACOBS.

NATIONAL FEDERATION OF JEWISH MEN'S CLUBS OF THE UNITED SYNAGOGUE OF AMERICA, an organization founded in 1929 by the United Synagogue of America, on the initiative of Theodore Charnas, Samuel M. Cohen and Edward C. Weinreb, to stimulate activities in the men's clubs and brotherhoods affiliated with United Synagogue congregations. Through its regional branches established in various parts of the country it also served as a connecting link between its widely scattered groups, and facilitated cooperation among them. It issued program suggestions and program aids, and conducted a Speakers' and Artists' Bureau.

Among its publications were: Samuel M. Cohen's *A Manual for Men's Clubs,* Joseph Miller's *An All Year Round Program,* Samuel M. Cohen's *Jewish Child Guidance* and Eugene Kohn's *Syllabus—The Future of Judaism in America.*

Through its publication, *The Torch,* which appeared quarterly, it provided a medium for exchange of ideas and a means for crystallizing and expressing the viewpoint of its constituents on national issues.

In 1942 the officers of the organization were: Abraham J. Leonard, president; George Greene, Abe Caplan, Bernard S. Cohen, Joseph L. Blum, vice-presidents; Max Gross, financial secretary; Miltor Berger, treasurer; Samuel M. Cohen, executive director.

SAMUEL M. COHEN.

NATIONAL FEDERATION OF TEMPLE BROTHERHOODS, THE, a national organization founded at New York city in 1923, affiliated with the Union of American Hebrew Congregations. At that time there were approximately forty-seven men's clubs affiliated with various Reform Jewish congregations in the United States, and the success of the previous federation of women's groups as Temple Sisterhoods suggested that an organization of men's groups would be

equally valuable in strengthening congregational life, thus, as the preamble of the constitution of the Federation states, enlisting "the support of the men of American Jewry in the cause of Judaism."

In 1942 the Federation comprised 135 brotherhoods, with an individual membership of approximately 23,000. The efforts of the organization and its affiliates were directed along three main lines: religious stimulation, educational advancement and congregational unity. Thus the brotherhoods have sponsored laymen services at which members read the ritual and, in many instances, deliver the sermons; this impresses upon the layman his duty of participating personally in worship and upholds the traditional Jewish viewpoint that there is no demarcation of privilege or responsibility between pulpit and pew. Brotherhoods have conducted such special festal observances as Hanukah rallies, Purim celebrations and congregational Seders.

Educationally, the brotherhoods organize and sponsor forums, round tables, lecture courses, study circles, current events groups, debates, musical programs and book review discussions, all of which deal primarily with matters pertaining to Jews and Judaism. Socially, the brotherhood unites the congregation, fosters the spirit of good will within Jewry as well as between Jew and non-Jew, and helps democratize the synagogue, making Judaism's preachment of democracy a functioning force in the religious institution itself.

While these programs constitute the effort of the individual brotherhood, the National Federation of Temple Brotherhood performed certain unique tasks in furthering the cause for which the movement stands. It gave a national concept to local groups, thereby broadening their attention beyond the individual congregation to the wider horizon of Jewry. It meets in national conventions biennially as well as in regional and city conferences at more frequent intervals. From November, 1926, on it has published the Brotherhood monthly magazine *The Jewish Layman,* containing articles of Jewish cultural value and news of club activities. Its national committees sifted out the best ideas from local groups, and conducted concentrated drives in furthering various types of programs and activities. It published such helpful literature as program suggestions, Kiddush cards for the use of members in their homes, and a course on the ceremonies of Judaism. It conducted surveys on the layman's religious attitudes and practices, and published the results.

In October, 1939, the National Federation of Temple Brotherhoods assumed complete responsibility for and control of the Jewish Chautauqua Society, an institution founded in 1893 and dedicated to the spreading of Jewish knowledge. After the fall of 1939 this society materially expanded its program of sending speakers to American colleges and universities, primarily to meet with and address non-Jewish students and members of faculties on the background and contributions of the Jew and the meaning and principles of Judaism.

Through the program of the Federation new lay leadership in Jewish religious life was recruited and developed, so that the synagogue was able to draw upon this new manpower in molding the course of Reform Judaism in America.

Roger W. Straus was the first president of the Federation, serving from 1923 to 1931. He was followed by Charles P. Kramer (1931-33), Samuel B. Finkel (1933-39) and Albert F. Mecklenburger (1939-41). In 1941 Kramer was once more elected president, and in 1942 was still incumbent.

ARTHUR L. REINHART.

NATIONAL FEDERATION OF TEMPLE SISTERHOODS, THE, a national organization founded on January 21, 1913, in Cincinnati by the Union of American Hebrew Congregations and Mrs. Abram (Carrie Oberdorfer) Simon. The first meeting of the Federation brought together representatives of forty-nine sisterhoods affiliated with Liberal Jewish congregations in the United States. In 1942 the Federation numbered about 385 units located throughout forty-five of the forty-eight states and in cities of Canada, Cuba, Panama, Scotland, England and South Africa.

The underlying purposes of the organization include serving Jewish and humanitarian causes, its objects being: to bring the sisterhoods of the country into closer cooperation and association with one another; to quicken the religious consciousness of Israel by stimulating spiritual and educational activity; to cooperate with the Union of American Hebrew Congregations in the execution of its aims and purposes; to espouse such religious causes as are particularly the work of Jewish women.

The Federation set up the following projects:

1. The Hebrew Union College Scholarship and Religious Education Fund. Raised by voluntary contributions and proceeds from the sale of Uniongrams—special message blanks—the fund grants scholarships to eligible students for residence in the dormitory building of the Hebrew Union College. This building, erected and equipped in 1925, was the gift of the Federation to the Union of American Hebrew Congregations for the College. This fund also makes contributions to the Union for lay religious educational work, and especially for its Department of Youth Activities, which, in 1939, established the National Federation of Temple Youth.

2. The intensification of Jewish knowledge, observance and adjustment is aided by the Federation through the dissemination of cultural programs and educational materials, and by fostering interest in modern Jewish and social problems. An annual Jewish Art Calendar is published; cooperation is given to local religious schools; temple attendance is emphasized; Jewish women in isolated communities are reached; special radio broadcasts are frequently sponsored. In addition, the Federation underwrites lecture institutes for Jewish teachers and adults for the Union, and a correspondence school in Jewish subjects. The Federation maintains a Publication Fund for the creation of new religious school literature.

3. The Federation cooperates with Jewish and non-Jewish organizations to provide education in problems of world relations and social betterment. In college towns, local members and units extend hospitality to students away from home. It sponsors congregational youth activities. Units of the Federation aid in the religious and social adjustment of new Americans, cooperating with existing agencies.

4. A Jewish library in braille was created by sisterhood volunteer braillists for the Jewish Braille Institute of America, Inc. Sisterhood members aid in the free

distribution of *The Jewish Braille Review.* A Special Committee on War Service was created in 1942.

The Federation attempts to devise "a way of life for every individual member through her religious contacts." It provides a program of activities for local units flexible enough to meet the needs of groups as small as six in number or as large as 1,000. It publishes a bi-monthly bulletin, *Topics and Trends,* and various study and program materials.

The work of the organization is carried out through national standing committees, among which are: The National Committee on Hebrew Union College Scholarships and Religious Education; on Uniongrams; on Jewish Literature for the Blind; on Child Study and Parent Education; on Religious Schools; on Religious Extension; on Youth Activities; on Jewish Ceremonials and Art; on Peace and World Relations; on Aid to Refugees; on Programs; the Special Committee on War Service, and the National Committee on State Federations. The latter deals with the twenty-one state or district federations of the National Federation. The national body meets at a biennial assembly, which is held at the same time and place as the meetings of the Council of the Union of American Hebrew Congregations.

The presidents of the Federation have been: Mrs. Abram Simon, Washington, D. C. (1913-19; since then, honorary president); Mrs. Joseph Weisenfeld, Baltimore (1919-23); Mrs. J. Walter Freiberg, Cincinnati (1923-29); Mrs. Maurice L. Steinfeld, St. Louis (1929-34); Mrs. Leon L. Watters, New York (1934-41). Mrs. Hugo Hartmann, of Winnetka, Ill., assumed the office in 1941. The executive directors have been: George Zepin (1913-29); Helen L. Strauss (1929-33); Jane Evans (since 1933). JANE EVANS.

NATIONAL FEDERATION OF TEMPLE YOUTH, *see* UNION OF AMERICAN HEBREW CONGREGATIONS.

NATIONAL FUND, JEWISH, see JEWISH NATIONAL FUND.

NATIONAL HOME, *see* BALFOUR DECLARATION.

NATIONAL HOME FOR JEWISH CHILDREN AT DENVER, THE, an institution, founded June 12, 1907, in Denver, Col., for the purpose of caring for, sheltering and educating dependent Jewish children of the tuberculous poor seeking restoration of health in Colorado. In recent years the service was extended to include children afflicted with asthma and other non-contagious respiratory diseases. Only those are admitted whose treatment in local communities has been of no avail and for whom the high and dry climate of Colorado is prescribed by clinics.

From its inception up to 1942 the Home had taken care of nearly 3,000 children. The grounds covered ten acres containing nine buildings with a bed capacity of 150. The cost of the buildings and equipment approximated $400,000. The Home received (1942) financial support from 235 federation and welfare funds, thirty-two auxiliaries, from the Denver Community Chest, and also from individual memberships throughout the country.

The Home in 1942 was governed by a board of fifty-two members, thirty from Denver and the remaining residing in the country at large. The president from its inception was Mrs. Fannie E. Lorber, who still held office in 1942. Other officers in that year were: Mrs. Bessie Willens, vice-president; Dr. J. M. Morris, secretary; Graham Susman, financial secretary; L. K. Sigman, treasurer; and William Cohen, superintendent, all of Denver. The Home maintained an office in New York city. The officers (1942) of the New York Committee were as follows: Justice Mitchell May, honorary chairman; Samuel Friedlander, chairman; Bert Rosen, vice-chairman; Jacob Gerstein, secretary; Dr. John J. Myers, treasurer. The national executive director was William R. Blumenthal, of New York city. WILLIAM R. BLUMENTHAL.

Bedside instruction at The National Jewish Hospital, Denver

NATIONAL JEWISH HOSPITAL AT DENVER, THE, first of the health agencies under Jewish auspices operating on a national basis. It has won widespread recognition for its activities in the field of tuberculosis treatment and control. The movement for a free hospital to serve the tuberculous poor of the United States, without regard to race or creed, on a national scale, had its origin with a small group of Denver pioneers in the late 1880's. Among these was Rabbi William S. Friedman, rabbi emeritus of Temple Emanuel of Denver, in whose honor the first building of the institution was later named. Although dedicated primarily to the free treatment, on a national, non-sectarian basis, of men, women, and children suffering from tuberculosis, The National Jewish Hospital is more than a mere hospital, in the narrow sense of the term.

Beginning with its opening on December 10, 1899, by B'nai B'rith, it steadily expanded its tuberculosis services. In 1942 it was a national medical center, embracing treatment and rehabilitation of patients, clinical and experimental research, and medical education. The Hospital comprised sixteen buildings occupying fifteen acres of ground. Its land, buildings, equipment and other assets were valued at over $2,000,000. It was the pioneer institution of its kind in the United States. From its very inception the Hospital's motto has been "None May Enter Who Can Pay—None Can Pay Who Enter," and its service is limited to the indigent tuberculous regardless of creed. Over 27,800 men, women, and children, of all creeds, from every state in the union (except Nevada) and the District of Columbia, have found here the opportunity for health they could not otherwise have had. Each year over 800 patients are treated in the Hospital and in the out-patients' department and clinics.

Recreational, educational and religious activities are

provided by the department of vocational therapy and rehabilitation. The social service department provides necessary medical and psychiatric social work. The Hospital finances and administers a grade school and a junior high school, accredited by the Denver board of education. A Kosher dietary is maintained. The research department received special awards from numerous scientific organizations for its researches in the organic nature of tuberculosis. Medical education is aided through lectures to medical students, nurses and physicians by staff members.

The annual budget of the Institution is $425,000, which is secured through voluntary contributions, since no patient pays, and since the Hospital receives no federal or state aid.

The B'nai B'rith is the patron society of the institution, and contributes annually about 6 per cent of the Hospital's budget.

The principal officers in 1942 were: Louis D. Beaumont, honorary president; Rabbi William S. Friedman, president; Paul Felix Warburg, vice-president; John Block, treasurer; Mrs. Seraphine Pisko, honorary secretary; Samuel Schaefer, executive secretary. SAMUEL SCHAEFER.

NATIONAL JEWISH MONTHLY, THE, an illustrated periodical published monthly (except in August) by the B'nai B'rith, containing Jewish news and giving a Jewish interpretation to world events, and designed to meet the needs of English-reading Jewish families. In 1942 it had a circulation of 100,000, the largest of any Anglo-Jewish periodical in the United States.

Its name was changed four times, and its character in 1942 was completely different from what it was originally. It was founded in 1886, through the initiative of Benjamin Franklin Peixotto, first United States consul to Roumania and a former president of B'nai B'rith, who proposed to President Julius Bien the founding of a magazine, to be called *The Menorah* and to be designated as the official organ of B'nai B'rith.

Since B'nai B'rith membership in those days consisted largely of German-speaking Jews, during its first two years *The Menorah* carried a German-language supplement of several pages in each issue. The first number contained an editorial with the pledge to advocate not only the special claims of B'nai B'rith, but also to aid "the efforts of all Israelites who aim at the amelioration of our race"; the beginning of a serialized history of B'nai B'rith by Bien; an unsigned essay on the influence of B'nai B'rith in American Jewish life; the beginning of a serial by Peixotto on his experiences in Roumania; an account by Simon Wolf of his part in establishing the first B'nai B'rith lodge in Egypt; a literary and art department of general Jewish interest; an "editor's bureau" reporting activities of local B'nai B'rith groups; and the German supplement.

The Menorah appeared regularly each month until 1907, and soon became a well-balanced cultural organ. In 1888 the German section was dropped and the number of pages (originally forty-eight) greatly increased. Outstanding Jewish and non-Jewish writers contributed to it, including Henry George, Henry Ward Beecher, Chauncey M. Depew, Richard J. H. Gottheil, Isaac M. Wise, Emma Lazarus, Alexander Kohut, Israel Zangwill, Kaufmann Kohler, Louis Lipsky and Cyrus Adler.

After Peixotto's death (1890) Morris Ellinger became editor; he held the post for a decade, and was followed, in 1900, by Frederick de Sola Mendes. During the last seven years of its existence *The Menorah* gradually grew thinner. In 1901, while remaining the official organ of B'nai B'rith, it was designated also as the official organ of the Jewish Chautauqua, and soon became solely the official organ of the latter. In 1907 it ceased publication.

B'nai B'rith therefore began to publish a house organ, *B'nai B'rith Bulletin.* Shortly thereafter the executive committee authorized the publication of an illustrated newspaper (monthly, except in July and August), to be the official organ of B'nai B'rith, with B'nai B'rith completely responsible for it both editorially and financially. Its purpose was "the dissemination of information of affairs of the Order as well as public character." The first number appeared on September 10, 1908. Entitled *B'nai B'rith News,* the successor of *The Menorah* was in tabloid newspaper format. Advertising was neither solicited nor accepted, and the paper announced that it would have nothing to do with politics. A. B. Seelenfreund, secretary of B'nai B'rith, was editor during the entire period of its existence (1908-24).

Circulation was strictly limited to B'nai B'rith members until 1923. In that year the paper was transformed into magazine format, and in the following year its name was changed to *B'nai B'rith Magazine* and it became an illustrated Jewish literary and news organ, carrying national advertising, with B'nai B'rith news occupying several pages, but the major portion being given over to coverage of important Jewish events and movements on an international scale.

By January, 1939, the magazine had achieved such nationwide circulation and was publishing so much vital material of national Jewish interest that its name was changed to *The National Jewish Monthly,* and its appearance was completely altered. It was streamlined and brought completely into line with modern journalism, profuse illustrations were introduced, and contributors of outstanding fame were enlisted, including Maurice Samuel, Melvyn Douglas, Eddie Cantor, Abba Hillel Silver, Louis Golding, Gerhart Seger, Alfred M. Landon, Bruce Barton, Max Brod, Cecil Roth, Abraham L. Sachar, Norman Bentwich, Ludwig Lore, Ludwig Lewisohn, Prince Hubertus zu Lowenstein, Sholem Asch and Dorothy Canfield Fisher.

The National Jewish Monthly, like all its predecessors back to 1886, and like B'nai B'rith itself, is non-political in the general field, and non-partisan with respect to controversial issues which divide Jewry. Alfred M. Cohen was editor during his several administrations as president of B'nai B'rith (from 1925 to May, 1938). He was succeeded by Henry Monsky, who was president in 1942. Edward E. Grusd became managing editor in 1928, and still held that post in 1942.

EDWARD E. GRUSD.

NATIONAL LABOR COMMITTEE FOR PALESTINE, an organization founded in 1923 for the purpose of aiding the Histadruth Haobedim (general federation of Jewish labor) in Palestine. In 1924, at its first convention in New York, the National Labor Committee launched the "Gwerkschaften Campaign" for the Histadruth, and conducted the drive annually thereafter. It gained the support of most of the trade

unions with large Jewish memberships, including the International Ladies' Garment Workers' Union, the Amalgamated Clothing Workers of America, the United Hat, Cap and Millinery Workers, and many others. In addition, it was, in 1942, supported by the Poale Zion, Zeire Zion, Jewish National Workers' Alliance, Pioneer Women's Organization, Habonim, Hashomer Hatzair, and hundreds of branches of the Workmen's Circle, as well as Landsmannshaften and Jewish societies. The first chairman of the National Labor Committee was Max Pine (1924-28), who was succeeded by Abraham Shiplacoff (1928-34), and Joseph Schlossberg (1934-).

In 1930 the National Labor Committee sent its first delegation to visit Palestine for the purpose of obtaining first-hand information about the work of the Histadruth. Arriving shortly after the 1929 riots, this delegation brought encouragement to the Yishub, and pledged the continued support of American Jewish labor. A second delegation was sent in 1937 with the three-fold purpose of reaffirming solidarity with Palestine labor, meeting with Arab workers and acquainting them with the friendly intentions of Jewish labor, and meeting with leading laborites in France and England for the purpose of eliciting their support for the Jewish national home. In Paris, the delegation was received by the then Premier Leon Blum, and in London by the International Commission of the British Trade Union Congress.

By 1942 the National Labor Committee had established effective contacts with 400 communities throughout the United States, Canada, Mexico and Cuba. 2,500 affiliated organizations, with a membership of 600,000 were represented at the annual conventions. The Committee raised $3,750,000 for the Histadruth from its inception up to 1942, and conducted an extensive educational program throughout the United States and Canada in the form of lectures, films, literature and mass celebrations. Its annual "Third Seder" in New York is a new tradition being copied by numerous communities.

The Histadruth delegates one or more of its leading members to lecture in the United States and Canada under the auspices of the National Labor Committee to enlighten the Jewish communities and the general American public as to the aims and achievements of Labor Palestine.

The Committee was incorporated under the laws of New York state in 1931, stating as its aims: "To aid the Jewish workers and the incoming Jewish pioneers in Palestine; to build agricultural settlements and industrial enterprises, labor homes, cooperatives, technical schools, laboratories, and schools for children and adults; to provide tools, machinery and medical aid for the workers; to maintain employment bureaus, loan funds, support cultural institutions, and render such financial support which would assist said workers to advance the progress of the country on a productive basis."

The national officers of the Committee in 1942 were: Joseph Schlossberg, chairman; Joseph Breslaw, Sarah Feder, Louis Hollander, Alexander Kahn, Saul Metz, Isidore Nagler, David Pinski, Alex Rose, Louis Segal and David Wertheim, co-chairmen; Morris Feinstone, chairman of the administrative committee; Max Zaritsky, treasurer; Abraham Miller, associate treasurer; Isaac Hamlin, secretary; Harry Arial, associate secretary. NACHUM GUTTMAN.

NATIONAL REFUGEE SERVICE, THE, an organization created in June, 1939, to meet one of the most important problems ever faced by American Jewry—the task of aiding refugees arriving in the United States. The certificate of incorporation, filed on May 15, 1939, states the purposes of the agency:

(a) to give voluntary financial aid and support and assistance, and to furnish advice, information, guidance or any other form of assistance in so far as this may be lawful and proper, to Jewish or non-Jewish persons who entered or who are about to enter or who are endeavoring to enter the United States of America, its territories or possessions, as refugees from political, religious or economic oppression or for other reasons, and (b) to cooperate with and to give voluntary support and assistance to other corporations, associations, committees or groups organized and operated exclusively for charitable or educational purposes. . . ."

The National Refugee Service, Inc., known as the N. R. S., is the successor agency to the National Coordinating Committee, which was organized in October, 1934, to coordinate the work of the agencies engaged in service to émigrés and to act as a national clearing agency for certain activities in behalf of émigrés coming to the United States. Funds to carry on the work of the National Coordinating Committee were advanced by the Joint Distribution Committee, by foundations and by welfare funds. The New York Federation and the Brooklyn Federation, though not assuming a continuing financial responsibility, gave appropriations to the work in 1938.

Just prior to 1939, while refugees were still being served by the National Coordinating Committee, the United Jewish Appeal made possible the expansion of the program by including the National Coordinating Committee Fund, Inc., which was organized to provide for central financing and also to assure more widespread support.

Some of the major organizations financed in whole or in part by the National Coordinating Committee Fund, Inc., were: National Coordinating Committee, Greater New York Coordinating Committee, Jewish Social Service Association (German Department), Jewish Family Welfare Society of Brooklyn, various sections of the National Council of Jewish Women, Employment Department for Greater New York and for Women Residing in Brooklyn, Self-Help Committee, and committees aiding physicians, medical scientists, musicians, rabbis and other professionals.

Early in 1939 the refugee problem ceased to be confined to exiles from Nazi Germany. It had come to include persons driven from virtually all countries of Central and Eastern Europe, as well as many located in temporary havens of refuge throughout the world. A study of Jewish refugee immigration to the United States reveals that 1939 was a peak year in the nine-year period from 1933 to 1941. The following table of Jewish refugee immigration into the United States, according to figures from the United States Department of Justice, shows a rapid rise upon the Nazis' accession to power:

FISCAL YEAR (JULY 1 TO JUNE 30)	TOTAL
1933	4,134
1934	6,972
1935	7,772
1936	10,564
1937	17,051
1938	25,563
1939	51,033
1940	42,424
1941	28,808
Total	194,321

These immigrants represented all trades and professions—skilled and semi-skilled. Estimates based on releases of the Department of Justice revealed the following range of occupational classifications of Jewish immigrants over the same period of years: commercial, 42.2%; professional, 19.4%; skilled, 27.5%; servants, 5.7%; miscellaneous, 4.0%; laborers, 1.2%.

The increase of immigration in 1938 and 1939, and the rising pressure of events abroad, made it necessary to reexamine the way in which service to refugees could best be given. For this purpose a study of the National Coordinating Committee was made which emphasized the previously recognized need of a central agency which could carry through a coordinated program of assistance to refugees. The National Refugee Service, Inc., was created to help meet this problem on a national scale.

In 1942 the extent of this problem could be measured by the fact that 201,412 (Department of Justice figures from July 1, 1933, to December 31, 1941) Jewish refugees entered the United States following the Nazis' advent to power up to 1942. When the first refugees arrived in the United States in 1933 the American Jewish community was under attack and attempts were made by certain elements to undermine it through continued agitation on the refugee question. From the first the American refugee program sought to prevent tensions and developments which would react to the detriment of the community.

Furthermore, the refugee immigrant to the United States presented both an opportunity and a challenge. In assisting him to make a rapid adjustment to the American scene, and to find ways and means of making a livelihood, the American Jewish community had an opportunity to rescue the victims of Nazi racial and ideological persecution.

The National Refugee Service, Inc., met this challenge with a broad program of relief, economic rehabilitation, resettlement and integration. The broad program with which the refugee problem is met by the National Refugee Service, Inc., includes:

Aid on Arrival: prompt aid for the refugee who has just come.

Financial Assistance: to help the destitute refugee and family meet essential needs until the breadwinner can secure a job and become self-supporting.

Employment Service: help for the refugee in finding a job—at the same time making every effort to see that no refugee displaces an American worker, or takes a job at lower than prevailing American standards.

Retraining: to refit refugees whose former skills are useless in the United States with new skills in uncrowded fields where they may earn their living.

Capital Loan Service: helping the refugee business man establish himself (usually on a fifty-fifty basis with communities) in a small self-supporting enterprise, or in his profession.

Professional Assistance: to doctors, dentists, rabbis, musicians, scholars and others—helping these persons meet American requirements in their professions, and helping them to establish themselves.

Resettlement: aids the refugee and his family to move away from crowded cities to smaller interior communities where he has a better opportunity to become quickly integrated into American life.

Migration Service: refugees and Americans acting in their behalf are assisted in meeting the requirements of immigration regulations.

Americanization: English, civics, American history courses, and other instruction in American ways and principles, or advice as to where these may be secured.

The scope of the National Refugee Service, Inc., as a national agency may be measured by the fact that in 1942 it provided guidance and direction to 900 refugee committees throughout the country. It served the community as a representative in Washington on matters affecting refugees—such as immigration, alien regulations, special problems. The National Refugee Service, Inc., further served as a national agency by carrying out resettlement on a national scale (within the limitations of wartime regulations), by cooperating with communities in setting up retraining courses and making loans and by conducting nation-wide placements of doctors and other professionals. It also assisted local committees in migration matters, and eased the problem of relief for local communities by assuming the bulk of the burden in New York city.

President Franklin D. Roosevelt characterized the resettlement policy of the National Refugee Service, Inc., as "of value not only to the immigrant himself, but to the nation also," and praised the agency for its part in helping "these new Americans to become good Americans."

"The work which the National Refugee Service, Inc. has been doing to facilitate the adjustment of the refugees who have come to the United States has been most constructive," the president stated in a letter to William Rosenwald, president of the National Refugee Service, Inc. "Its resettlement program, which seeks to distribute these newcomers away from the large cities on the eastern seaboard, is especially significant. Such resettlement is of value not only to the immigrant himself, but to the Nation also. It may well be that the experience which you have had in providing for an orderly adjustment of the refugees who have come to our shores in recent years, may provide a model of constructive absorption of immigrants into our economic and social life."

In the two and one-half years since its inception in June, 1939, up to 1942, the National Refugee Service, Inc., provided relief for 30,240 individuals, made over 14,200 employment placements, made nearly 5,000 placements for professionals, provided over 58,500 social adjustment services, performed 230,000 migration services, made over 2,500 capital loans and met 716,000 personal requests for services. Since the inception of the resettlement program, 13,500 individuals were resettled throughout the United States.

With the entrance of the United States into the second World War, the National Refugee Service, Inc., assumed additional responsibilities. Within a few hours of President Roosevelt's proclamations imposing wartime restrictions upon the movements, possessions and activities of "enemy aliens," the National Refugee Service, Inc., supplied community leaders throughout the country with the text and an advisory letter on the proclamations. Since that time, the National Refugee Service, Inc., has kept the communities continually informed of official regulations affecting refugees. Through its field service and Special Information Bulletin, the agency assisted refugees in fulfilling the requirements of wartime regulations.

The National Refugee Service, Inc., was in 1942, a beneficiary of the United Jewish Appeal. Its officers in that year were: Joseph P. Chamberlain, chairman of the board; William Rosenwald, president; David H. Sulzberger, chairman of the executive committee; Paul Felix Warburg, secretary; Richard P. Limburg, treasurer; William K. Frank, Morris Wolf, vice-presidents; Albert Abrahamson, executive director; Arthur D. Greenleigh, assistant executive director.

The executive committee included Mrs. Myron S. Falk, Jr., Richard S. Goldman, Samuel A. Goldsmith, I. Edwin Goldwasser, Harry Greenstein, William Haber, Joseph C. Hyman, S. Marshall Kempner, Peter I. B. Lavan, Clarence E. Pickett, Eric M. Warburg, Ethel H. Wise, Jonah B. Wise. A board of directors was responsible for the broad, general program of the organization.

NATIONALISM, JEWISH. I. Nationalism is the term used to describe the movement based on the modern conception of nationality and its place and influence in organized society, which developed in Europe early in the 19th cent. The basic term is "nation," which has various meanings. It may refer to an organized society which includes the members of many peoples, religions and cultures, i.e. a political state like the United States. It may also denote a community of persons all bound together by ties of race, culture, religion, and organized as a political entity, which coincides with the idea of state, like Germany. Nation is used also as the equivalent of "people" in a broader sense. Certain aspects of the concept "nation" require the possession of territory which the people occupy.

Nationalism includes all manifestations of national consciousness; it is the feeling of attachment to a people, based upon a sense of historical solidarity and belief in a common destiny. In international law, nationality is used to indicate the status of membership in a nation or state. In a more extended sense, it is taken to denote a group of persons claiming to be united by racial, territorial, cultural or other bonds, not necessarily organized in a political form.

In the period of Jewish history antecedent to the dispersion, and for centuries thereafter, the idea of peoplehood or nationhood assumed a spiritual and ethical character because it was interwoven with the Messianic ideal which was an integral part of Jewish aspirations. Messianic nationhood found roots in Jewish mysticism and was one of the inspirations of Hasidism, which had a large influence upon the Jewish masses in Eastern Europe. The traditional idea was that the Jewish people were in exile, would be redeemed through the Messiah who would bring them back to the Promised Land, and their return to Zion would usher in the Messianic days.

It was not until the second half of the 19th cent., when the processes of emancipation gradually broke down the walls of Jewish segregation, that the traditional idea of a return to their homeland took a more definite and effective form. The growth of anti-Semitism in Western Europe and persecutions in Eastern Europe stimulated the view that the salvation of the Jewish people would not come from passive faith in Messianism, spiritual or intellectual self-isolation or cultural assimilation. This change was fostered by the development of nationalism in Europe, following the French Revolution. Groups of Jews accepted the term "nationalism" as a synonym for the Jewish ideal of returning to the Land of Promise. The reestablishment of the Jewish nation or people upon their own territory assumed the form of a political movement.

The general theory of Jewish nationalism takes for granted that the Jewish people, although dispersed throughout the world and possessing no territory of their own, are a nation like all other nations. The Jewish people have the right to live their own life and develop their own culture everywhere in freedom, and have an equal right to establish their own homeland, which is the one thing lacking for the completion of their nationhood. This general theory divided into two currents of thought: one called Diaspora Nationalism (autonomism), the other called Territorialism.

The theory of Diaspora Nationalism was advanced by the historian, Simon Dubnow, and by Nathan Birnbaum at the end of the 19th cent. They believed it possible for the Jewish people or nation fully to unfold their natural qualities even if scattered among other nations and living among them as a minority. They argued that national self-consciousness was the only essential element of a nation, and that it did not necessarily imply the occupation of a territory of their own. They relied on the historical fact that the Jewish people had been able to preserve and develop their own culture during many centuries although they lived in an alien environment. They believed that the Jewish problem, where it existed, could be solved by a synthesis of the ideas of segregation and assimilation; that it was possible to retain the individuality of the Jewish nation or people and, at the same time, live in harmonious relations with other nations. The fundamental error of Diaspora Nationalism lies in the belief that the freedom of Jewish national life could be safeguarded without a national economy of its own and without the support of an effective political organization. The peculiar position of the medieval Jewish community as an autonomous body in an alien world could arise and be maintained only in the midst of a feudal order. With the dissolution of the conditions that produced Jewish segregation, communal autonomism lost its material and spiritual basis.

On the other hand, the Territorialists took the position that Jewish life in the Galuth was untenable. They maintained that a homeland and a degree of political self-government were indispensable for the survival and the normal evolution of a nation, and that therefore the Jewish problem could not be solved in the Diaspora. Conditions for a normal Jewish life had to be created. Historic associations had to be evoked, a national renaissance had to be inspired and this was possible only by undertaking to establish a Jewish homeland. The homeland would mold and shape the national character. It would be the receptacle of the national ideal. It would give purpose and direction to the whole course of Jewish history. It would provide the conditions for a normal existence and solve the problem of the homelessness of the Jewish people. The Zionists were Territorialists in whose view the national territory had been determined by historic destiny. They were Territorialists who had made up their minds whither they were to go.

In the first days of his adventure in Jewish life, Theodor Herzl was a Territorialist indefinite about the territory, but he was soon driven by inexorable circumstances to accept Palestine as the Promised Land. He was not familiar with the writings of Zionist theorists like Leo Pinsker or Moses Hess, but his reasoning followed theirs. In the *Jewish State* he planned a large colonization enterprise in unidentified territory. He

had no conception of what would happen to the Jews remaining in the Diaspora after the establishment of the Jewish state, nor did he give thought to the question. In fact, he did not clearly foresee the kind of national home the Zionist movement would produce in Palestine. His novel *Altneuland* describes a Jewish state with few of the qualities of Jewish national tradition or culture.

The progress of Zionism from the years 1897 up to 1929 transformed Jewish life in Palestine and had the effect of arousing Jewish solidarity in the Diaspora, stimulating Jewish culture and modifying assimilationist tendencies in religion and in general Jewish outlook. The Basel Program suggested as a means to achieve the Zionist objective "the organization of the whole of Jewry by means of appropriate local and international institutions; and the strengthening and fostering of Jewish national sentiment and consciousness." This was not intended to further the ideals of the Diaspora Nationalism of Dubnow. It was intended to arouse a world interest in Zionism on the part of all Jews and to create a world interest among non-Jews in the cause of Jewish emancipation. The Jews were to be organized for their own self-liberation. It was a natural consequence of Zionist faith to foster Jewish culture and cultivate the Hebrew language and literature. It was a natural expression of the idea of freedom and self-government to foster the ideals of democracy in Jewish life. Palestine could not be rebuilt without the support of a virile, nationally self-conscious, self-sacrificing Jewish people. Everything Jewish was to be prized and nurtured. Everything alien was to be denied place in the structure of Jewish life. Assimilation was to be regarded as national suicide. Zion was not to be rebuilt in a day, and therefore the Jewish people in dispersion had to be sustained and strengthened until the day of redemption.

This emphasis upon culture and national consciousness in the Diaspora was largely due to the influence of Asher Ginzberg (known in Hebrew literature as Ahad Haam). His theories developed side by side with the theories of political Zionism. He was not an autonomist in the strict sense of the word, and had no political orientation. His views seemed to imply the growth of cultural autonomy both in the Diaspora and in the homeland as preliminary to the creation of conditions that would ensure the survival of the authentic Jewish people.

Jewish nationalism and Zionism aroused a discussion in American Jewish life which went on over a period of forty-five years. The opponents of Zionism contended that with the destruction of the Jewish state by the Romans, the political aspects of Jewish life had disappeared and the Jewish people had lost the political ties which bound them together. They conceived the dispersion of the Jewish people as being the fulfillment of a mission to preach monotheism and prophetism to the Gentiles; that the Jewish people were a religious group and not a national group in the Western sense of the term. They repudiated the Zionist theory of Galuth. In practice, however, many of them, inconsistent as it may seem, aided in the practical endeavors of the Zionist Organization and helped to found the Hebrew University. They joined in the reorganization of the Jewish Agency for Palestine, and cooperated with Zionists in political action from time to time.

II. Opposition to Jewish Nationalism. Opposition to Jewish nationalism has taken two principal forms: religious and political, corresponding to the two ways in which the movement has itself been envisaged.

1. Religious Opposition. Religious opposition comes from both Orthodox and Reform quarters.

a. The Orthodox View. Traditionally Orthodox Jews have contended that any restoration of the Jews to Palestine by their own efforts, and any rehabilitation of the Jewish nation on political lines, is a denial of Scriptural prophecy, which conceives of the event as realizable only by an external and miraculous act of divine intervention and as an essentially religious renaissance. The Messiah, scion of David, it is held, will come in God's own good time, to restore the fortunes of Judah, "lead back the captivity," and rebuild the Temple on Mount Zion. This, however, will be more than a purely political restoration, for the whole of mankind will come to accept the teachings of Israel. The "chosen people" will have completed its mission, and the Torah will become universal. It is for this that Orthodox Jews pray daily, and expressions of this aspiration are ubiquitous in the traditional liturgy. Any attempt to anticipate the event, or to substitute for it a purely political regeneration of Israel, is a repudiation of the Divine Purpose, and a "profanation of the Holy Name."

Typical of this attitude is the statement of Samson Raphael Hirsch (1808-88), founder of the Neo-Orthodox movement:

> For this future, which is promised us in the glorious predictions of the inspired prophets, whom God raised up for our ancestors, we hope and pray; but actively to accelerate its coming were sin, and is prohibited to us. The entire purpose of the Messianic Age is that we may, in prosperity, exhibit to mankind a better example of "Israel" than did our ancestors the first time; hand in hand with us, the entire race will be joined in universal brotherhood through the recognition of God, the all-embracing Unity.

With a few notable exceptions, among whom were Marcus Ehrenpreis and Moses Gaster, this was the view of most Orthodox rabbis at the time of the first Zionist Congress in 1897, while at the second congress Gaster was obliged to convene a special ecclesiastical conference in order to persuade his colleagues that Zionism was compatible with religious principles. Since that date, large numbers of Orthodox and Conservative rabbis and scholars, as well as laymen, have come to espouse the once unpopular cause, and there has been a growing tendency to accept the view of the historian Graetz that "the Jewish people is its own Messiah," and that the divine purpose may in fact be fulfilled through a political vehicle. Indeed, the combination of political aspiration with religious orthodoxy has found expression in the creation of the Mizrachi wing of the Zionist Movement, which works "for the achievement of the Zionist aims . . . on the basis and in the spirit of Tra-

ditional Judaism." Similarly, the Reconstructionist Movement of Mordecai M. Kaplan in the United States, itself an outgrowth of Conservative Judaism, while denying that Jewish life is possible only in Palestine, nevertheless regards that land as "the cultural center for Israel's intellectual and spiritual rebirth," and obliges its members to pledge "moral and material support" to Zionist enterprise within it.

In more extreme circles, however, the Orthodox opposition has continued. Typical of this diehard intransigence is the position adopted since its foundation in 1912 by the Agudath Israel, world organization of Orthodox Jews. Writing in 1919, Isaac Breuer, one of its leading spokesmen, and rabbi of the rigidly Orthodox community of Frankfort, stigmatized Zionism as "the most formidable enemy that has ever arisen against the Jewish people." Although not averse to colonization in Palestine as a measure of relief or as a means of focussing intensive religious life, the Agudah has consistently opposed the wider national policies of the Zionist Movement. Not only has it allied itself upon occasion with Arab nationalists, but it has also addressed repeated protests to the League of Nations and the Mandatory Power.

The attitude of the Orthodox is not uninfluenced by the growing tendency to conceive of Jewish nationalism along purely secular lines. This, it is held, is to rob the Jewish people of its *raison d'être* and to sacrifice its true eternal character for the exigency and expedience of the moment. In the eyes of the Orthodox Jew, the termination of the Galuth (exile) must necessarily involve the restoration of the Jewish religion to its full strength, and the reestablishment of the Jewish nation is but a means to this end. To create such a nation merely in order to relieve a political situation is to forfeit the end for the means and to cast overboard that which alone gives validity to Jewish coherence. In keeping with this attitude, the religious laxity of Zionist leaders is regarded as a legitimate target of attack, and it is not insignificant that Agudist leaders and Hasidic rabbis have even based their opposition on the fact that many of the spokesmen of the nationalist movement do not observe the religious ordinance of wearing Tefillin (phylacteries) daily.

Closely allied to the view that the Jews are essentially a *religious* nationality, and that Zionism loses sight of the religious element, is the contention that the Jews are not a nation at all, but solely a religious community. Especially representative of this attitude was Chief Rabbi Moritz Güdemann of Vienna, who, in his *National Judaism,* published in 1897, the year of the first Zionist Congress, argued that Zion was, in Jewish thought, essentially a *religious,* rather than a national symbol, and that restoration to Palestine meant the realization of the Jews' religious mission, rather than the political reestablishment of their nation. In other words, Zion, like the Parnassus of the Greeks, had come to lose its strictly territorial associations, so that a physical return to it in a political sense was a repudiation of its sublimated and spiritualized character.

b. The Reform View. Quite different in ideology is the opposition of Reform Judaism to Jewish nationalism. To Reform Jews the destruction of the Temple and the dissolution of the Jewish state was not a disaster, but a blessing in disguise. It lifted Judaism from the local to the universal. The position of Reform Judaism was stated concisely in 1869 by the Philadelphia Conference of American Rabbis:

> "The Messianic aim is not the restoration of the old Jewish state under a descendant of David . . . but the union of all the children of God in the confession of the unity of God.
>
> "We look upon the destruction of the second Jewish commonwealth . . . as a result of the divine purpose revealed to Abraham which, as has become ever clearer in the course of the world's history, consists in the dispersion of the Jews to all parts of the earth, for the realization of their high priestly mission, to lead the nations to the true knowledge and worship of God."

In the following year (1870), Abraham Geiger, undoubtedly the foremost thinker of the movement, summarized the Reform attitude by observing:

> "Judaism . . . must get out of its national enclosure and, secure its eternal validity, penetrate without hesitation the spacious halls of humanity."

This view, based on a fusion of universalism with antinationalism, found further expression at the Pittsburgh Conference of 1885, which declared:

> "We consider ourselves no longer a nation, but a religious community, and we therefore expect neither a return to Palestine nor a sacrificial worship under the sons of Aaron, nor a restoration of any of the laws concerning a Jewish state."

Such resolutions, adopted originally (after the model of a similar pronouncement at the Frankfort Reform Conference of 1845) as a statement of theological position, came, after the advent of political Zionism, to represent the reaction of Reform Judaism to the Jewish national movement. Their substance was repeated in 1899 by the American Reform leader, Kaufmann Kohler, who asserted that "Judaism is a religious truth entrusted to a nation destined to interlink all nations and sects, classes and races." While not denying that the Jews were a nation, Kohler insisted that they were a cosmopolitan nation, and that to give them "a local habitation and a name" was to frustrate their mission. Lucien Wolf, writing on "The Zionist Peril" in the *Jewish Quarterly Review* (vol. 18, 1897, pp. 1-25), took the same position, that Jewish nationalism implied retrogression; while in 1905 the Anglo-Jewish littérateur, Laurie Magnus, addressing a meeting in Birmingham, England, gave terse expression to the Reform Jewish standpoint:

> An ultimate Zion, not geographically fixed, nor dated in time, but gradually to be approached by the fulfillment of our mission in the countries in which we are dispersed.

This position was reiterated by Rabbi Israel Mattuck, leader of Liberal Judaism in England, who wrote:

> Liberal Judaism is universal Judaism. It gave up deliberately the connection between Judaism and Palestine which Orthodox Judaism still maintains. It aims for a Judaism at home in every land.

In accordance with this view, Reform and Liberal Jews expunged all references to a return to Zion from the traditional prayers still retained in their liturgies, or alternatively reinterpret them in a symbolic and universal sense.

While, however, Reform Judaism as a movement has adopted an anti-national definition of the Jewish iden-

tity, many of its leading spokesmen have been staunch adherents of the Zionist Movement. Among these mention may be made especially of Rabbis Gustav Gottheil and Stephen S. Wise, the latter being the founder of the Federation of American Zionists and the president (from 1936) of the Zionist Organization of America. Moreover, the inspiring results of Zionist enterprise in Palestine and the need of finding a refuge for persecuted Jews, after the rise of Nazism in 1933, led to a marked change of attitude on the part of the Reform rabbinate in the United States. In 1937 the following "guiding principle" was adopted by the same body, meeting at Columbus, Ohio:

"In the rehabilitation of Palestine, the land hallowed by memories and hopes, we behold the promise of renewed life for many of our brethren. We affirm the obligation of all Jewry to aid in its upbuilding as a Jewish homeland by endeavoring to make it not only a haven of refuge for the oppressed but also a center of Jewish culture and spiritual life."

It should be noted, however, that while viewing with favor the development of Palestine as a cultural and spiritual center for Jews, the resolution makes no commitment on the score of Jewish nationalism. In the discussion on the motion, Rabbi Samuel Schulman pointed out that the reference to *"a* Jewish homeland," rather than to *"the* Jewish homeland," was purposeful and deliberate, while the resolution itself was supplemented by a further "guiding principle," reiterating the traditional position of Reform Judaism concerning the nature and function of the Jewish people:

"Throughout the ages it has been Israel's mission to witness to the Divine in the face of every form of paganism and materialism. We regard it as our historic task to cooperate with all men in the establishment of the kingdom of God, of universal brotherhood, justice, truth and peace on earth. This is our Messianic goal."

It will be seen, therefore, that the change of attitude is confined to the question of the spiritual and cultural value to Jewry of Jewish colonization in Palestine. It does not, as is too often supposed, imply any reversal of policy on the wider issue of Zionism and Jewish nationalism.

2. Political Opposition. Political opposition to Jewish nationalism has turned almost entirely upon the question of emancipation. In 1897, when the Zionist Organization was brought into being, most of the Western European countries had already emancipated their Jewish inhabitants, while those of Eastern Europe had not. Western European Jewry, therefore, was anxious not to compromise its new-gotten status of equality by claiming a nationality distinct from that implied in its citizenship. Quite different, however, was the problem of Eastern European Jewry. Here equality had still to be won, and the most practical method of doing so was to secure recognition of the Jewish groups as cultural or ethnic minorities within their several states of residence. To claim a separate universal nationality, as envisaged by the Zionists, would, it was held, destroy the basis of the struggle and thereby condemn the Jews to a permanently inferior status.

a. Eastern Europe. The Eastern European opposition finds expression in what may be described broadly as the doctrine of autonomism. This movement repudiates the notion of a universal Jewish nation, and seeks instead to establish the civil and political rights of Jews by having them recognized as cultural or ethnic minorities. Autonomism, however, has taken various forms, inasmuch as the criterion of the Jewish group has been variously defined. Its principal exponents are: (1) the Bund; (2) the Jewish People's Party of Simon Dubnow; (3) the Austrian Yiddishist movement of Nathan Birnbaum.

The Bund, established in 1897 as the General League (Bund) of Jewish Workers of Russia and Poland, opposed Zionist nationalism as a bourgeois reaction to anti-Semitism. Socialist in outlook and program, the Bund (which later incorporated Baltic and other elements) was first and foremost a workers' organization, and its object was to regulate the situation of the Jews in a given area. The nationalism which it sponsored amounted, in fact, to no more than an ethnic qualification for minority status within the framework of a larger political state. It was not a Jewish state nationalism, and therein lay its difference from, and its opposition to, Zionism. While it sought cultural autonomy and the official recognition of Yiddish as a Jewish minority language, it insisted that the acknowledgment of Jewish nationality should be but an instrument for the acquisition of civic status in the larger state. If it had served to brand Jews as aliens, members of a foreign state or nation, this would have been the last thing in the world that the Bundists would have desired.

The underlying philosophy of the Bund, by virtue of which it defined its Jewish nationalism, approximated closely the philosophy of Chaim Zhitlowsky. In his Russian monograph, *A Jew To Jews,* published in 1892, Zhitlowsky had argued that a nation is "a people which for generations has coped distinctively with human problems." Rejecting the criteria of common religion or common intellectual ideology, Zhitlowsky found the hall-mark of nationhood in common historical experience and by this test pronounced the Jews to be a nation. It was therefore unnecessary to advocate the cultivation of any one specific culture or way of life as a justification for their national status. Within themselves, they could be as diversified as possible, so long as all shared the common historical experience. As a consequence of this thinking, Jewish nationalism, in the philosophy of Zhitlowsky, could scarcely be construed in terms of renascence of group revival. All it could ever be was a political status.

Somewhat more mystical in its philosophy, but presenting many similar features, was the movement founded by Dubnow in 1906 under the name of the Jewish People's Party (Volkspartei). Here, too, the emphasis was placed upon cultural autonomy and minority rights rather than upon the acquisition of a national homeland. Dubnow's point, resulting from his historical researches, was that the bond uniting all Jews was essentially of a spiritual-cultural character and not of political distinctiveness. Accordingly, if the Jews claimed from the world any kind of special recognition, it had to be on the basis of their being a cultural community, not a political nation. Therefore the form of recognition which they demanded had to be such as would preserve that cultural unity and distinctiveness, and not such as would convert them into what they were not—a nation. The Dubnow philoso-

phy, outlined principally in a series of "Letters Concerning Ancient and Modern Judaism," appearing in the journal *Voskhod* (1897-1902), drew its main adherents from intellectual followers of the historian. It was opposed to political Zionism, regarding the latter as based upon a distorted view of the Jewish genius. The only nationhood which Dubnow would recognize was what he called "a Diaspora nationhood," and this meant no more, in fact, than individuality as a distinctive group. The "nation" as postulated by him lacks every characteristic of the term as defined by the dictionary or by political usage.

To the same school of Diaspora nationalism belonged the Austrian "Yiddishists," headed by Nathan Birnbaum. Birnbaum's position, defined at a Czernowitz conference in 1908, may best be described as "non-assimilationist non-nationalism." It was based upon the conviction that Jews are distinctive in every society, but that they also exhibit no unity of culture among themselves. In other words, Birnbaum saw only Jews, but no Jewish people or nation. He realized, however, that these Jews *were* Jews by virtue of a distinctiveness which marked them off in every community from their non-Jewish neighbors. What he sought, therefore, was a political safeguard for the maintenance of this distinctiveness, but without implying that Jews everywhere constituted a single unit. Birnbaum found the solution of the problem in a demand for recognition in each country of a Jewish cultural minority, enjoying autonomy in cultural matters and permitted to use Yiddish (not Hebrew) as its own minority language. The preference for Yiddish rather than Hebrew played a large part in Birnbaum's program, and its significance was cardinal. Hebrew is the "ideal" tongue of an "ideal" Jewish nation, and of this Birnbaum would not hear. Yiddish, on the other hand, was, in actual fact, the distinctive cultural vernacular of the distinctive Jewish group in most countries. Accordingly, in the light of Birnbaum's philosophy, Yiddish, and not Hebrew, was the obvious language of the Jewish cultural minority.

b. Western Europe. Different entirely were the grounds for political opposition in Western Europe. First, there was the fear that a recrudescence of territorial nationalism might liquidate the movement of emancipation. Second, there was the fear that it might liquidate that tendency toward the greater immersion of Jews in the life of the nations which had followed in the wake of political emancipation, and which, in France, Germany and Austria, had even led to positive assimilation.

The leading communal organizations in Western European countries were resolutely opposed to the Zionist Movement. None of them was represented at the first Zionist Congress of 1897, while the fruitlessness of Herzl's appeals to acknowledged Jewish leaders is recorded in detail in his *Diaries*. Characteristic was the fact that the Union of German Rabbis intervened to prevent the holding of the first Zionist Congress in Munich, as originally planned, while in England the Sephardic chief rabbi, Moses Gaster, was prohibited by the elders of his congregation from indorsing Zionism or speaking in its favor in his official capacity. Even before the Congress convened, and before Herzl had published his *Judenstaat,* the Central Conference of American Rabbis, meeting in 1891, had achieved a fusion of religious and political opposition in the declaration that "America is the American Jew's Jerusalem and Washington his Zion." Similarly, in 1897, the German Association of Jewish Rabbis had adopted a resolution affirming that Judaism is a religion, not a nationality, and that "the Jews in Germany are *national* Germans, though as such faithful to the divine religion of Sinai" (*Die Welt,* June 11, 1897). In the same year, too, the Board of Jewish Ministers of Germany placed on record their conviction that Zionism was contrary to inner national loyalty. Most eloquent of all in this respect was the utterance of Ludwig Geiger, leader of the German Liberal Jews, who declared (1905) that "the withdrawal of civil rights appears to be the necessary consequence of Germany's legislative reaction to Zionism, the only answer that the German national conscience can give." This view, it may be remarked, was based, implicitly if not explicitly, upon the nation that emancipation was a kind of contract, whereby the Jews were bound, in return for the civil status accorded them, to surrender all claims to a separate nationality. This notion has persisted, indeed, as an undercurrent of the opposition to Jewish nationalism to the present day, and it has this much justification, that in some cases, such as that of Austria, the granting of emancipation was, in fact, expressly conditional upon the suppression of all distinctively "national" exclusiveness on the part of the Jews.

The readjustment of Europe after the first World War brought the question of Jewish nationalism prominently to the fore. It was realized on all sides that a settlement of the so-called "Jewish question," especially acute in Eastern Europe, would have to form part of a general settlement, and this realization naturally inspired considerable activity on the part both of Zionists and autonomists. These efforts at once aroused the apprehension of emancipated Jewries, who feared that a new definition of the Jewish identity might impair their coveted civil rights.

In England, news of Zionist negotiations with Sir Mark Sykes, Lloyd George and other representatives of the government, toward the end of securing an internationally recognized Jewish homeland, caused alarm in circles where it was feared that such recognition of Jewish nationality might impair the civic status of British and European Jews, and where any attempt at defining Jews in political terms was traditionally rejected. Accordingly, a letter in this sense was addressed to the London *Times,* on May 24, 1917, by David L. Alexander, president of the Board of Deputies, and Claude G. Montefiore, president of the Anglo-Jewish Association. The letter, however, was completely unauthorized and did not, in fact, represent the attitude of the organizations named. Protests immediately followed. On May 25th Lord Rothschild, president of the United Synagogue and later addressee of the Balfour Declaration, officially repudiated the letter in a note to the *Times.* On May 27th he was followed by Chaim Weizmann, president of the Zionist Organization, and on May 28th by Chief Rabbi Joseph Hertz. The Haham of the English Sephardim, Moses Gaster, also entered his protest. On June 1st, however, a letter appeared in the *Times,* signed by representative Anglo-Jewish laymen, supporting the stand taken by Alexan-

der and Montefiore. The letter was signed by Lord Swaythling, Charles H. Henry, Matthew Nathan, Lionel Abrahams, Isidore Spielmann, Edward Stern, Israel Abrahams, Leonard L. Cohen, Ernest Franklin, Israel Gollancz, Michael A. Green, H. S. Q. Henriques, Joshua M. Levy, Laurie Magnus, E. Sebag-Montefiore, A. R. Moro, Philip S. Waley and Albert M. Woolf.

All these men were important figures in communal life. Thus, Lord Swaythling was the president of the Federation of Synagogues, Albert Woolf was a treasurer of the United Synagogue, Israel Abrahams was reader in rabbinics at Cambridge University, Israel Gollancz was a famous Shakespearian scholar and professor of English in London University, Israel Spielmann was a prominent art connoisseur, and Laurie Magnus was a former leader-writer for the *Morning Post.*

Opposition to the nationalist cause was not confined to this protest. Previously, on January 6, 1917, at a dinner given to him in London, Israel Zangwill had outlined his position as follows:

"The essence of Jewish history is not the Holy Land, but the Holy Spirit. . . . Desirable as is the re-establishment of a Jewish state, nevertheless, were that re-establishment taken as an end in itself, did it succeed merely in adding another to the states that already fill the world with fire and fury, then it would be a very poor end to the dream of four thousand years."

(*Jewish Chronicle,* January 6, 1917)

The issuance of the Balfour Declaration, in the following November, inspired further efforts on the part of the opposition. In England, a League of British Jews was constituted out of those who wished to resist the assertion that Jews were a nation. The organization, which included most of the influential members of the community, opened negotiations with the American Jewish Committee (June, 1918), endeavoring to secure its support. The Committee, through its president, Louis Marshall (July 12, 1918), made it clear that while it welcomed the establishment of a home for Jews in Palestine, it resisted the creation of a *national home for the Jewish people.* Marshall wrote:

"We deemed it our duty, for many reasons, . . . to give expression to our attitude towards the British Declaration, but at the same time considered it highly important to give emphasis to those controlling principles which we look upon as essential to the preservation of our status as American citizens, and to file a caveat against future misinterpretation of the theory on which our acceptance of the Declaration is based." (*Jewish Opinion,* London, December, 1918)

In this spirit, a Statement to the Peace Conference, protesting against the theory of Jewish nationalism, was sent to President Woodrow Wilson, for the attention of the Peace Conference. The Statement said:

"This demand not only misinterprets the trend of the history of the Jews, who ceased to be a nation 2,000 years ago, but involves the limitation and possible annulment of the larger claims of Jews for full citizenship and human rights in all lands in which those rights are not yet secure. For the very reason that the new era upon which the world is entering aims to establish government on principles of true democracy, we reject the Zionistic principle of a 'national home for the Jewish people in Palestine.' "

(The full text is in the Supplement to *Jewish Opinion,* No. 3.)

In a memorandum addressed to Foreign Minister Pichon, on July 16, 1918, the Alliance Israélite Universelle, of France, adopted the same attitude, but subsequently altered its view and accepted a compromise worked out by the Conjoint Committee of the British Board of Deputies (October 2, 1918) whereby recognition would be demanded of the Peace Conference for the oppressed Jewries of Eastern Europe on the basis of their being *minorities,* rather than *a national minority.*

The imminence of the Peace Conference led to a revival of nationalist demands. On October 25, 1918, the Zionist headquarters at Copenhagen issued a manifesto demanding full national recognition for the Jewish people. At the same time, a Jewish National Council was organized in Bucovina, under Benno Straucher, for the advancement of claims for recognition as a national minority. A similar movement was inaugurated, the following month, at a Vienna conference of the Jewish National Council of German Austria, and on December 15, 1918, a Hungarian Jewish Conference, meeting at Temesvár, followed suit. Simultaneously, at a joint congress of Jewish parties in the Ukraine (Kiev, November, 1918), all groups demanded a platform of national autonomy, while the Jewish National Council of reconstituted Lithuania adopted the same principle early in 1919.

The Western European delegates to the Peace Conference were therefore confronted with a solid bloc of Eastern European Jewish representatives one and all wishing to regulate the future status of the Jews on a nationalist basis. This naturally encountered opposition on the part of the emancipated elements. Especially intransigent in their attitude were the representatives of the Alliance Israélite, consisting of Eugene, Sée, Salomon Reinach, Charles Netter, Israel Lévi and Sylvain Lévi. Sée insisted that nothing more was required than such "tolerance" as obtained under the French Constitution. This, however, drew the ire of Menahem Mendel Ussischkin, the Ukrainian Jewish representative and a prominent Zionist leader, who outlined a plan for *national* autonomy and affiliation with a "World Jewish Parliament." Similar, too, was the line of Leo Motzkin, who argued that only by a national solution of the problem could the situation be definitely regulated. Nahum Sokolow proposed the formula of ethnic, as distinct from national rights, that is, recognition of language and culture, but not of separate national status. To this formula Claude G. Montefiore, one of the leading British anti-nationalists, assented. The Alliance Israélite, however, stoutly maintained its stand that no distinctive recognition of Jews was to be demanded. Finally, however, a compromise was worked out by a specially appointed committee of seven, and the well-known provisions of the Minority Treaties were ultimately secured. By these provisions, Jews were recognized as cultural and ethnic minorities, while the larger issue of national status for the Jewish people as a whole was shelved.

Another form of opposition to the Jewish national movement may be described as Territorialism. In this case, however, the target of attack is not the conception of a Jewish nation, but the focussing of that nation in a Palestinian state. In other words, it is an opposition to Zionism, rather than to Jewish nationalism per se.

3. The Situation in 1942. A number of commissions and committees were engaged (1942) in drafting

plans for the new world order after the second World War. Most of those published up to that year envisaged some form of internationalism or federalism, and it was generally recognized that the time-honored principle of *cuius regio eius natio* had broken down. In the light of this development, it would appear that the old-time solution of the so-called "Jewish problem" along strictly national lines is no longer adequate, and that it must give place to a reformulation of the Jewish identity in terms of the newly emergent conceptions. So far, no Jewish organization had attempted to face this issue, involving as it does not only the future of the Jews as a distinctive entity, but also a restatement, or reformulation, of the Jewish religion. There can be little doubt, however, that it is along this line that the next stage of Jewish nationalism must be sought.

NATIONS, THE SEVENTY, *see* ETHNOLOGY, BIBLICAL.

NATONEK, JOSEF, rabbi and pioneer of Zionism, b. Kömlőd, Hungary, 1813; d. Bátor, Hungary, 1892. He studied at Zagreb and Nikolsburg and obtained his rabbinical diploma from Rabbi Moses Sofer, of Pressburg. As a merchant he supplied the Hungarian revolutionary army and had to flee before the Austrians. He was principal of the Jewish school at Nagysurány, and subsequently rabbi at Jászberény and Székesfehérvár (1861-67). He gave up his rabbinate to devote himself wholly to the reclamation of Palestine. In concurrence with the Alliance Israélite Universelle and Sir Moses Montefiore, he negotiated unsuccessfully with the grand vizier at Constantinople. He returned to Hungary, settling in Budapest, where he edited what may be considered the first Zionist weekly, *Das einige Israel* (1870).

Natonek collaborated on Lipót Löw's journal, *Ben Chananja,* and in answer to an attack by Löw on Rabbi Moses Sofer published *Rabbi Moses Sofer und der Magier Ben Chananja* (1865). His other published works include *Wissenschaft-Religion* (1876) and *Shir Hashirim* (with the German translation and the commentaries of Holländer; 1871). He collaborated with Joseph Paux on *Pentaglotte,* a dictionary of the Hebrew, Latin, French, German and Magyar languages, of which the letter *A* was published.

NATRONAI, 1. Gaon of Pumbeditha from 719 to 730. He was surnamed Mar Yanka. He was so harsh toward the scholars that he forced many of them to resign and to attend the academy at Sura. On the other hand, he was lenient to the repentant followers of Serenus, the false Messiah, although they had rejected certain Talmudic ordinances, and permitted them to return to the community.

Samuel Naumbourg

2. exilarch of the 9th cent. He was deposed by the Geonim of Sura and Pumbeditha, and went to Northern Africa, probably Kairwan. There he is reported to have written down from memory the text of the Babylonian Talmud and to have sent it to the Spanish Jewish communities.

3. Gaon of Sura about 860. He wrote a number of responsa, including some to the communities in Spain, to which he sent the oldest known arrangement of the customary benedictions.

NATURAL SCIENTISTS, *see* PHYSICIANS; SCIENCE AND INVENTION.

NAUMBOURG, SAMUEL, cantor and liturgical composer, b. Donaulohe, Bavaria, Germany, 1817; d. Paris, 1880. Son of a local cantor and the offspring of a family of cantors dating back four generations, he evinced great musical talent even as a mere child. For a while he served in Besançon as cantor and Shohet. His yearning for music led him, however, to Strasbourg, where he obtained employment as choirmaster. Going later to Munich, he studied general music and voice with Hofkapellmeister M. Roder, and Hazanuth with cantor Maier Kohn. Looking about for greater opportunities he went to Paris where, aided by the well-known operatic composer Jacques Halévy, Naumbourg was commissioned by the French government to compile a service to be introduced into all synagogues throughout France. After one year Naumbourg submitted (1843) the first part of his monumental *Semirot Jisrael,* which was hailed by all cantors and musicians.

In 1845 Naumbourg's renown was sufficient to secure for him the position of chief cantor of the Paris Kehillah, which had been vacant since the death of Israel (Glogau) Lowy (1832). Although his two volumes, *Semirot Jisrael* (1847) and *Agudas Shirim* (1874), the latter containing a scholarly treatise on Jewish music, earned him high prestige, he gained the further appreciation of music-lovers by collecting and

rewriting in modern notation, and finally publishing, the by then almost extinct works of Salomon Rossi, cantor of Mantua. Through the generosity of Baron Edward Rothschild and Rabbi Marco Mortara of Mantua, a complete collection of Rossi's work for the synagogue was compiled and through Naumbourg's painstaking scholarly work was republished in Venice (the original was printed in 1622) and thus preserved for posterity. His original compositions are marked by graceful melody, their harmony by effective use of solo parts. MAX WOHLBERG.

Lit.: Friedmann, Aaron, *Lebensbilder berühmter Kantoren,* vol. I (1918); Idelsohn, A. Z., *Jewish Music* (1929) 261.

NAUMBURG, AARON, merchant, b. Allegheny City, Pa., 1859; d. Montecatini, Italy, 1928. After starting his business career in Richmond, Va., he went to New York, in 1890, where he founded the hatters' fur company of Jonas and Naumburg, recognized in that industry as perhaps the largest in the world. During his life-time Aaron Naumburg was noted for his many philanthropies. In celebration of his thirty-fifth wedding anniversary he distributed $350,000 in gifts to relatives and institutions. He contributed $20,000 to establish a permanent travel and study scholarship at the College of the City of New York. Upon his death he left public bequests that totalled $1,305,000. His widow, born Nettie C. Goldsmith of Cleveland, who donated $50,000 to the Girls' Home Club of New York, 1929, died in 1930. At her death her art collection was bequeathed to Harvard University, with a fund for its maintenance.

Lit.: American Hebrew, Aug. 10, 1928, p. 401.

NAUMBURG, BERNARD, lawyer, b. New York city, 1875; d. Chicago, 1930. He received his degree from the New York University Law School in 1897, and pursued a long career of successful legal practice in New York city, involving numerous cases of importance, one of these resulting in a judgment of $150,000 against the czar of Russia. He figured in the breaking up of the Ramapo water-supply ring, and was thus instrumental in saving New York city millions of dollars.

In 1916 he became supervisor of lectures in the post-graduate law department of the College of the City of New York, where he had formerly taught Latin. He served as president and president emeritus of the college alumni association for a number of years. During the first World War Naumburg was instructor in French to officers of the Signal Corps. He was author of various legal monographs.

He was likewise active in the Jewish community and in the Society for Ethical Culture.

NAUMBURG, ELKAN, banker and music patron, b. Germany, 1834; d. New York, 1924. He was the first to endow and introduce free concerts in the New York city parks. Naumburg donated a large bandstand to Central Park, New York, said to be the finest in the world, and was also a liberal contributor to various philanthropies.

Lit.: American Hebrew, Aug. 8, 1924, p. 373.

NAUMBURG, GEORGE WASHINGTON, banker, b. New York city, 1876. He was the son of Elkan Naumburg, and married Ruth Morgenthau, daughter of Henry Morgenthau, Sr. Naumburg was a member of the firm of E. Naumburg and Company of New York from 1898 to 1931, when he retired. He was appointed president of the New York Guaranteed Mortgage Protection Corporation in 1933 by Governor Herbert H. Lehman. During the first World War he was assistant to the chief of the cotton section of the War Industries Board. Naumburg was active in the affairs of the New York Merchants' Association and in the National Economy League.

His diverse social and communal activities included work with the Baron de Hirsch Fund, of which he was elected president in 1933; he still held that post in 1942. He was likewise elected to directive posts in the Hawthorne School for Delinquent Jewish Boys and Girls, where he introduced mental hygiene in correction; on *Parents' Magazine,* the People's Music Foundation, the National Child Welfare Association, the Refugee Economic Corporation and the Joint Distribution Committee.

NAUMBURG, MARGARET, educator, b. New York city, 1890. She was a student of philosophy, economics and psychology, and in 1912 went to London to pursue social research studies with Sidney Webb. Becoming interested in child education, she left to study with Montessori in Rome, and when she returned to the United States in 1913 began her teaching career with a class of young children at the Henry Street Settlement in New York. In 1914 she started the Children's School; this experiment later became the famous Walden School, of which she was director until 1922, then retiring to serve as advisory director. Her central theory of education stressed the cultivation of each child's "individual essence"; she preached, not the following of a rigid technique no matter how new or modern, but of those methods which experience continued to prove best adapted to the central aim.

Miss Naumburg's theories of education were expounded by her in *The Child and the World* (1928). She published also articles, poetry, and drama. She was married to the writer Waldo Frank.

Lit.: Rosenfeld, Paul, *Port of New York* (1924) 117-35, 302-3.

NAUMBURG, ROBERT ELKAN, engineer and inventor, b. New York city, 1892. As a mechanical engineer he became an executive in several important New York and Massachusetts firms. In 1935 he was appointed head of the research department of the Jonas and Naumburg Corporation of New York, a position which he still held in 1942. In the course of his career he invented a number of devices of all kinds, most important of which proved to be his visagraph, a mechanism which enables a blind person to read, without outside assistance, any book printed in ink. It operates to produce enlarged and raised letters on a roll of aluminum foil by means of a photoelectric cell "eye" directed on the print. The reader can operate the machine by himself and then feel the letters it produces with his fingers, as in the reading of Braille, but with the advantage that he need possess only the ordinary printed book. This device Naumburg gradually perfected between 1926 and 1936. For it he was awarded the Franklin Institute's John Price Wetherill Medal.

Naumburg served as a machine gun instructor in the

first World War, and was an engineer officer in the aviation corps. He contributed to numerous technical magazines, and published *Evolution of the Cotton Spinning Frame.*

Lit.: *Literary Digest,* May 23, 1931, p. 27; *American Hebrew,* Dec. 7, 1928, p. 150.

NAVARRE, a province of northern Spain, formerly a kingdom. Sancho El Mayor, the first king of Navarre (1000-35), made the Jews settle in the cities that had become depopulated after the expulsion of the Saracens. They were granted special privileges (*fueros*), and Jews were even employed by the rulers as financial agents.

Under the French kings, the fate of the Jews grew worse, but Theobald I of Champagne (1234-53) defied the pope's order to make the Jews wear badges and he protected them not only against the violence of the mob, but also against oppression by the municipal authorities. Not until the accession to the throne of Theobald II (1253-70), when Navarre came under direct French suzerainty, did the Jews come to occupy the same position as those of France and become victims of many acts of violence. A series of grave persecutions started in 1321, when the Jews were severely attacked by the fanatical Pastoureaux (shepherds) of France, and it reached its climax in 1328, when the ghetto of the city of Estella was set afire and almost the entire population was slain after a gallant self-defense. According to an eye-witness, Menahem ben Zerah, more than 6,000 Jews lost their lives in these persecutions that spread all over the kingdom.

When Navarre separated from France (1329), the new ruler, Philip III, Count of Evreux, punished the rioters, but at the same time confiscated all the property taken from the Jews and imposed a coronation tax of 15,000 livres upon them. The Jews, their number diminished due to the pogroms and to the plague (the Black Death, 1348 and 1349), were forced to live in ghettos (juderias); Tudela, the largest community, which had formerly had 500 Jewish families, in 1366 had only 270. On the other hand, the Navarre Jews were not subjected to the bloody persecutions that ravaged Spain in 1391. Similarly, when the Jews were expelled from Spain (1492), some Jews from Aragon found asylum with the counts of Lerin, Navarre. But in 1498 the Jews were banished also from Navarre; the number of those who became Christians in order to be permitted to remain in the country was considerable.

The Jews of Navarre followed many trades—there were tanners, weavers, goldsmiths and silversmiths, shoemakers and tailors among them—but chiefly mercantile pursuits; through them, Pamplona, the capital, and Estella became important commercial centers. Some Jews were appointed physicians to the court. Charles III of Navarre was accompanied on his journey to Paris by two physicians, a surgeon and an astrologer, all of them Jews. Outstanding scholars were Hayim Galipapa, rabbi of Pamplona (14th cent.), and Rabbi Joseph Orabuena (d. about 1410), who was also physician to the king. Benjamin of Tudela was a famous traveler.

NAVON BEY, JOSEPH, Palestinian financier and philanthropist, b. 1852; d. Paris, 1934. He was a scion of one of the richest Sephardic families of Jerusalem. Long before the movement of political Zionism, his painstaking efforts in behalf of Jewish colonization in Palestine finally resulted in his obtaining, in 1884, permission to found the colony Ekron (near Jaffa), which up to then had never been granted. He participated in the establishment of Petach Tikvah and Rishon Le Zion. As a result of his relations with the Turkish government he succeeded in buying secretly large tracts of land in Galilee and Judea. He established Jewish settlements at the gates of Jerusalem. He obtained from the Turkish government permission for the settlement of 800,000 Jewish families in Asia Minor, but nothing came of it. Navon Bey also built the railway from Jaffa to Jerusalem. His name is closely connected with all great Jewish social works of this epoch.

Lit.: *Menorah* (1927), Nos. 14, 15, 16 and 17.

NAZARETH, town in lower Galilee, famous as the home of Jesus (*Matt.* 2:23; *Mark* 1:9; *Luke* 4:16). The place is not mentioned in the Bible or in Talmudic literature, but several elegies of Eleazar Kalir (8th or 9th cent.), doubtless on the basis of an old tradition, mention a class of priests who came from a town of that name. Nazareth was a Jewish city as late as the 7th cent. It is probable that the original name of the town was Nazrat; the Arabic name is El Nazira. In modern times Nazareth is a beautiful town of some 9,500 inhabitants, or whom 3,000 are Mohammedans and the rest Christians.

It is probable that the name Nazarene (Hebrew, *notzri*) which was given to Jesus and his followers was derived from Nazareth. It was borne especially by the Ebionite Christians, who continued to observe Jewish customs and who came into contact with the Jews, and is therefore in general use to designate Christians in rabbinic literature. They had a gospel of their own, which has survived only in fragments; they were eventually regarded as heretics, and disappeared. The claim that it was prophesied in the Bible that Jesus would be called a Nazarene (*Matt.* 2:23) has no actual basis in the Hebrew Bible; it may, however, rest on an interpretation of the word *netzer* ("shoot") in *Isa.* 11:1.

Lit.: The Bible dictionaries.

NAZIMOVA, ALLA, actress, b. Yalta, Crimea, Russia, 1879. She studied dramatic art in Moscow, and in 1905 came to the United States with a Russian dramatic company headed by Paul Orlenoff. She made her New York debut in the Russian language as Lia in Eugene Chirikoff's *The Chosen People,* but soon turned to the English stage and became noted for her presentation of Ibsen roles, such as Hedda Tesman (*A Doll's House*), Hilda Wangel (*Master Builder*), Hedwig (*Wild Duck*), Rita Allmers (*Little Eyolf*) and Mrs. Alving (*Ghosts*). The German author Gerhart Hauptmann, after seeing her in a play by Eugene O'Neill, praised her as "the greatest actress he had seen since the death of Elenora Duse."

In 1916 Nazimova appeared on the screen for the first time in *War Brides,* and for several years starred in many movies, such as *Heart of a Child* and *The Madonna of the Street.* In 1938 she assisted in the production of *Zaza,* and in 1940 played in the anti-Nazi film, *Escape.*

NAZIR ("Nazirite"), fourth tractate of Nashim, the third division of the Mishnah; it contains nine

Alla Nazimova

chapters. It is placed sixth in the division in both Talmuds. The tractate deals with the laws about the Nazirite who, according to the legislation in *Num.* 6, takes a vow to let his hair grow long and to abstain from wine and all products of the grapevine. The tractate is apparently placed in the third division because of its resemblance to the tractate *Nedarim* which precedes it.

The subject matter of the tractate consists mainly of information as to the rites and customs of the Nazirites in the time of the Second Temple. It differentiates two kinds of Nazirites, temporary and permanent, and gives the minimum term for the Nazirite vow as being thirty days. It describes the restrictions placed upon the Nazirite, the procedure to be followed if he has been accidentally polluted by contact with a corpse, and the ceremonies at the conclusion of his vow. The tractate concludes with a discussion as to whether the prophet Samuel was a Nazirite.

The Tosefta, called Neziruth ("Naziriteship"), has six chapters. The commentary on the Babylonian Talmud is not by Rashi, but by his son-in-law Judah ben Nathan. A noteworthy passage in the Babylonian Talmud is: "The Nazirite commits a sin by his vow to refrain from wine; all the more grievous is the sin of him who denies himself all the enjoyments of life" (19a, 22a).

Lit.: Danby, Herbert, *The Mishnah* (1933) 280-93; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 9, pp. 197-98.

NAZIRITE, one who consecrated himself, by a vow, not to drink wine or liquor, not to cut his hair and not to touch a dead body. The Hebrew word *nazir* is related to the root *nadar,* "to vow." The law of the Nazirite, contained in *Num.* 6:1-21, prohibits such a devotee from enjoying even fresh or dried grapes or grapestones. He may not even approach the dead bodies of his nearest relatives. The vow was for a limited period, the minimum, according to the Talmud, being thirty days. If the Nazirite had accidentally defiled himself by contact with a dead body, he had to shave his head, bring atoning sacrifices, and recommence the period of his vow. When his vow was over, he had to bring abundant offerings, his head was shaven, and the hair thus cut off was burnt underneath the sacrifices.

The abstention from wine and liquor and from contact with dead bodies is reminiscent of similar restrictions for priests. One of the psychological roots for such a vow may have been the wish of laymen to take on themselves a priestly conduct of life, as the profession of priests was open only to members of Aaron's family. The vow not to cut the hair seems to come from the ancient idea, found all over the world, that the strength of a person is in his hair. The actual cases of Nazirites in the Old Testament are Samson (*Judges* 13:57) and perhaps Samuel (*I Sam.* 1:11). But Samson seems not to have abstained from wine and contact with dead bodies, and Samuel is not expressly called a Nazirite. The whole tribe of the Rechabites abstained from wine, and Absalom from cutting his hair. For these reasons the critics regard the law in *Num.* 6 as a later attempt to regulate different types of ancient self-dedication.

The institution seems to have flourished to an even greater extent in the period of the Second Temple. Nazirites are mentioned in *I Macc.* 3:49, by Josephus (*Antiquities,* book 19, chap. 6, section 1; *Jewish War,* book 2, chap. 15, section 1), and in the New Testament (*Luke* 1:15; *Acts* 18:18; 21:23-24). Paul was a Nazirite, so was John the Baptist and probably James, the brother of Jesus. In this later time emphasis was laid more upon the abundant offerings which the Nazirite was to bring at the expiration of his vow than on his abstentions. It was regarded as a pious act to assist Nazirites who could not afford the expense involved. The Mishnah devotes a whole tractate to the Nazirites, and the ample discussion given to this tractate in both Talmuds indicates that the institution was still in vogue among those ascetically inclined. On the other hand, the same discussions show that many rabbis disapproved of this and other forms of asceticism (*Nazir* 19a; 22a). Eventually the entire institution disappeared.

ERNEST I. JACOB.

Lit.: Maimonides, *Hilchoth Neziruth* 1 to 10; the commentaries on *Numbers* and *Judges;* Eaton, in Hastings, James, edit., *Dictionary of the Bible,* under "Nazarite."

NAZISM, the political and philosophical system of Adolf Hitler's National Socialist German Labor Party (Nationalsozialistische Deutsche Arbeiterpartei). The word originates from the German pronunciation of the first half of the word "national." Nazism, exclusive of any other political party, dominated Germany after January 30, 1933, and transformed the Reich from a republic into a fascist dictatorship under Adolf Hitler as *Führer* (leader).

Political System. The party was founded in 1919 by thirteen men, among whom Hitler received "7" as a party number. Using propaganda of unprecedented violence, and favored by the unfortunate situation of the German people following the first World War and the subsequent inflation, the Nazi party won over al-

most half of the German electorate before it took over the government in 1933. Nazism is a totalitarian system, under the symbol of the swastika, embracing the entire life of the German people. In its emotional appeal it had the character of a new, expansive religion, comparable to early Islam. Its view of the world and its aims were set forth in a party program of twenty-five points, in Hitler's *Mein Kampf,* and in numerous other books. However, in view of the great role played by propaganda in Nazism, this mass of published material can not be taken at its face value. In making an appraisal of the movement, other ideas and purposes which have come to light in the practical politics of Hitler, as well as the meager information afforded by persons, such as Hermann Rauschning, who knew him intimately, must be taken into consideration.

The Jewish Aspect. Nazism has greatly affected Jews and Judaism because it is in theory and practice one of the most vehement anti-Semitic movements in history and has determined the lives of millions of Jews and possibly the course of Jewish history for the future.

Nazism attributes to the Jews an enormously exaggerated influence over the world and a totally false evil influence upon Germany. There is no public utterance by Hitler and no publication of the party that does not come back to this same "Jewish peril." How much of this is political propaganda, how much genuine conviction, can be determined only by history. As propaganda it has possessed deadly efficiency. Hitler openly admitted that in his politics he was guided by a few psychological principles, one of which is that the masses need some kind of personification for all evils, while another is that gross lies are more effective than petty ones. In selecting the Jews for the role of wicked opponents of the human race, Hitler capitalized on the fact that anti-Semitism had always been rife among the German people in spite of, or perhaps because of, the fact that the number of German Jews was small (500,000 among 70,000,000) and their accomplishments and their devotion to their native country were great.

Anti-Semitic Theory. In the beginning Hitler had to compete with several other anti-Semitic parties. He overcame them all because of his extreme radicalism. Making use of the lowest features of racial hatred, he created out of the Jew a veritable mythical monster. His partners in this enterprise were his intimate friends Julius Streicher of Nuremberg and Alfred Rosenberg, a German from Baltic Russia. These men mustered every argument against the Jew in the course of history and reaped the harvest planted in the German soul in the time of imperial Germany by such men as Heinrich von Treitschke, Adolf Stöcker, Eugen Dühring, Paul de Lagarde, Houston Stewart Chamberlain and Theodor Fritsch.

In Nazi philosophy the Jew is evil because he is of a separate race hostile to the "Aryan" race represented, primarily, by the German people. Nazism asserts that the Jews never accomplished anything for mankind, and always exerted a harmful influence. Hence it is hopeless, it continues, to assimilate the Jews; the subsequent "pollution" of German blood would be even more pernicious. The Jew is charged with being cunning, shameless, calculating and unpatriotic, an uncreative parasite of all nations. His secret aims are said to have been revealed in that proved forgery, the *Protocols of the Elders of Zion;* and this farrago of worthless statements proved to be one of the most efficient propaganda weapons of Nazism. The Jew is charged by the Nazis with aiming at world domination and exploitation. He is declared guilty of causing the first World War, the defeat of Germany and the revolution there. He is pictured as a born profiteer, the symbol of materialism, sensuousness, pornography, every kind of obscenity and corruption. He is branded as the protagonist of both capitalism and communism. His Bible and his Talmud are asserted to reveal the baseness of his character, which is said not to shrink even from political murder. In the view of the Nazis, the Jew had subjugated the entire economic, political and cultural life of the German nation, and the Weimar republic had been Jewish through and through. To the Nazi, the Jew is the demon of all mankind. Hitler's battle cry was, "Germany awake! Judah perish!"

Hitler's Personal Views on the Jews. This Nazi myth of the Jew is so fantastic and full of contradictions that the question has been raised whether Hitler and his party can possibly be sincere in professing it. To his intimates Hitler has admitted that his conception of race is no scientific reality, but a political weapon. Of his primitive hatred against the Jews, which borders on a mania, there can be no doubt. It seems that he acquired this rancor in his youth from his personal impressions of the Jews of Vienna. Judging from some of his utterances, it is very likely that Hitler is well aware of the significant qualities and accomplishments of the Jews and hates them for just such constructive aptitudes. Their spirituality is the opposite of his mystic broodings. Their achievements in science are so many evils in his eyes, since he regards science not as the promoter but as the destroyer of life.

Christianity, being founded on Judaism, is hateful to this follower of Nietzsche, who had nothing but contempt for a religion that preaches sinfulness of human nature and the virtues of compassion, humility and holiness, that glorifies the cross and directs man to expect his bliss in another world. The Jew stands for critical analysis and Hitler for unquestioning faith. The Jew is the living triumph of the weak, whereas Nazism concedes the right of survival only to the strong. Hitler in his way recognized that the Jews are a chosen people, but he wanted to substitute his chosen people, the Germans, in their place (Rauschning, *The Voice of Destruction,* 235). The minor Nazi leaders are naturally not aware of the arguments or ideas of Hitler; they certainly regard anti-Semitism as a stimulus to revolutionary activity and a means of enriching themselves or satisfying their baser instincts.

The Jews in the Party Program. Its anti-Semitic theories made Nazism demand drastic measures against the Jews from the very beginning. The party program, drawn up by Gottfried Feder, deals with them extensively. It says, under point 4: "Only those who are members of the nation can become citizens. Only those who are of German blood, without regard to religion, can be members of the German nation. No Jew, therefore, can be a member of the nation"; under point 5: "He who is not a citizen shall be able to live in Germany only as a guest and must live under

a code for foreigners"; point 6: "Every public office shall be occupied only by citizens"; point 7: "We demand that the state be obliged, in the first instance, to provide the possibility of work and life for the citizens. If it is not possible to feed the entire population of the state, the subjects of foreign states (non-citizens) must be expelled from the Reich"; point 23: "All editors and contributors of newspapers which appear in German must be members of the nation"; point 24: "The party fights the Jewish materialistic spirit within and without."

Anti-Semitism in Nazi Practice. The anti-Semitic features of the Nazi party program were widely surpassed when the Third Reich came into being. Among its very first acts were the great boycott against the Jews (April 1, 1933), the elimination of Jews from civil service, and the oppressions. Individual Jews were brutally persecuted and pressed to emigrate. The Nuremberg Laws of September, 1935, deprived the Jews of citizenship and made them practically outlaws. In November, 1938, there was a still more violent attack upon synagogues, combined with fines and wholesale arrests.

The last phase of persecution came with the second World War. The Nazis expelled the rest of the Jews from Germany to Poland, after having shipped a smaller number to concentration camps in France. The Nazi ideal was about to come true, namely, that the last Jew would leave as a beggar the country where his forefathers had lived as peaceful and useful citizens for more than a thousand years. By the terms of the eleventh executive order to the Reich nationality act of November 25, 1941, which went into effect two days later, Jews who had their ordinary residence abroad could not be or become German citizens, and the property of all such Jews who lost their German citizenship as the result of this executive order was declared forfeited to the Reich.

At the same time Nazism exported its brand of violent anti-Semitism to all the conquered countries of Europe. In Poland and elsewhere Jews were segregated into ghettos and, as in Germany itself, compelled to wear a yellow star or armlet. They were employed at compulsory labor, and untold misery was inflicted upon them.

Jewish Reaction to Nazism. The reaction of the Jews to Nazism was that of a defenseless and more or less unorganized group. The Jews outside of Germany assisted their persecuted coreligionists in the most generous way and were aided in doing so by many sympathetic non-Jews. Emotionally, Nazism evoked among many Jews a new pride, "Wear the yellow star with pride!" Others were seized by panic fear, resulting in despair. There was no tendency on the part of the Jews to accept the implications of the Nazi racial distinctions.

NEANDER, JOHANN AUGUST WILHELM (before his conversion, David Mendel), theologian, b. Göttingen, Germany, 1789; d. Berlin, 1850. On his mother's side he was related to Moses Mendelssohn. He was graduated in 1805 from the Johanneum of Hamburg; his thesis, *De Judaeis optima conditione in civitatem recipiendis,* dealt with the emancipation of the Jews. In 1806, impressed by Plato's writings and under the influence of his friend Varnhagen von Ense, he decided to be baptized, and devoted himself to the study of Protestant theology. He settled in Heidelberg in 1811, and became assistant professor of theology in 1812. In 1813 Schleiermacher called him as professor to the University of Berlin; he served until his death.

Neander was one of the greatest church historians, and came to be regarded as the father of modern church history. He protested publicly and in print against the ritual murder accusation of Damascus.

His writings include: *Denkwürdigkeiten aus der Geschichte des Christentums und des christlichen Lebens; Allgemeine Geschichte der christlichen Religion und Kirche* (1826); *Das Leben Jesu* (1837). Together with Nietzsche and Julius Müller, he published *Die deutsche Zeitschrift für christliche Wissenschaft und christliches Leben.*

NEBO, mountain in Moab from the summit of which Moses, before his death, was permitted to view the land of Canaan. The name is still preserved by the mountain El Neba in Trans-Jordan, west of Heshbon. It is impossible to establish with any certainty just which summit of the mountain is indicated in the Biblical narrative (*Deut.* 32:48-52; 34:1-6).

Lit.: Hastings, *Dictionary of the Bible* (1927) 649.

NEBRASKA, a central state of the United States, with a population of 1,315,834 in 1940, including about 14,500 Jews. Within a year after the creation of the Nebraska territory in 1854, Jews had settled in Nebraska. They were mainly of German, Austrian and Bohemian origin, refugees from the political struggles and economic crises of the late 1840's and early 1850's. Many had settled in New York city, Baltimore and other eastern cities, but were attracted to the West because of the building of the Union Pacific Railroad and the enactment of homestead legislation.

In 1855 Lewis and Henry Wessel of St. Louis established a store in Nebraska City. A year later came Aaron Cahn, his wife, and Meyer Hellman. Hellman and Cahn went into the clothing business in Omaha,

outfitting emigrants who followed the Oregon trail. Doctor Carl Ernest Louis Golding came up the Missouri River from Leavenworth, Kan., in 1856 and settled in Plattsmouth, where he combined the practice of medicine and Indian trading.

Harris L. Levi, who was killed in an Indian attack in 1869, arrived in Plattsmouth about 1850. He peddled dry goods and groceries among the Indians for a while and then took up a homestead near Cedar Creek in 1869. He was short of money, and therefore signed up with General Buck's surveying party, which was massacred near Kearney, Neb.

Among the other early arrivals was Edward Rosewater, founder of the *Omaha Bee,* and one of the most important figures in the early history of Nebraska. He settled in Omaha in 1863.

A colony of Hungarian Jews, headed by Laizer Brown and Jacob and Leopold Unger, homesteaded in Madison County in the late 1860's. They endured many hardships but were finally discouraged by the grasshopper scourge of 1874. Another effort to settle the Jews on the land was made in Cherry County in 1908 to 1909 by the Jewish Agricultural Society, of New York. Between 1901 and 1913 the Industrial Removal Aid Society of New York sent more than 2,000 Jews to Nebraska. They and their descendants constituted a large part of the Jewish population of Omaha in 1942.

The following Nebraska cities had Jewish populations of twenty or more in 1937:

Columbus	54
Fremont	160
Grand Island	62
Hastings	20
Lincoln	1,200
Norfolk	50
North Platte	34
Omaha	11,500
Scottsbluff	21

Most of the Jewish population of Nebraska is concentrated in the cities of Omaha and Lincoln. In areas of lesser importance the history of the Jewish communities is fragmentary.

ARAPAHOE. Joseph Einstein, the only Jewish resident in 1942, settled in Arapahoe in 1889. He served as a member of the city council, and was elected mayor in 1921.

CHADRON. Benjamin Lowenthal came from Deadwood, S. D., to settle in Chadron in 1885. He was elected city treasurer in 1886 and county commissioner in 1893. He served for twenty years on the local school board, became a member of the city council, and was finally elected mayor.

COLUMBUS. Albert Heller, the first Jewish resident, came to Columbus in 1870. He was followed by Israel Gluck and Carl Kramer. Kramer was elected mayor of Columbus in 1886, and served as county supervisor, city councilman, and president of the Nebraska State Association of School Boards. In honor of his forty years of service on the local school board, a high school was named after him.

FREMONT. Before moving to Columbus, Israel Gluck established a small mercantile business in Fremont in 1869. This was purchased by Albert Heller, who moved from Columbus in 1871 and remained in Fremont until 1877. Bennett Goldsmith, Henry Fuhrman, Hershel Kavich, Abraham Zlotky and Abraham Bordy were among the early settlers. In 1914 the Fremont Hebrew Society was organized and a synagogue built; this was a conservative congregation in 1942, with Sol Oster as rabbi, and included schools, a welfare agency and a Ladies' Aid Society.

GRAND ISLAND. Israel Gluck lived in Grand Island for three years (1871-74) between his residence at Fremont and Columbus. Among other early settlers were Samuel Hexter, Samuel Urbach and Samuel N. Wolbach. The latter was born in New York city in 1851, was elected to the lower house of the Nebraska legislature in 1885, and to the state senate in 1887 and 1889. The town of Wolbach was named after him.

HASTINGS. Emanuel Steinau came to Hastings in 1873, and Jacob Wolbach arrived a year later. Mark Levy, who settled there in 1885, was the first to introduce the cultivation of the sugar beet into Adams County. In 1889 he was elected to the city council, to which he was reelected five times at various times in his career. Levy was instrumental in obtaining for Hastings a municipal electric plant, water works and parks. He was president of the Hastings Commercial Club for two terms.

MADISON. In 1942 Henry and Charles Altschuler, merchants, were the sole survivors of a colony of Jewish farmers who settled in Madison County.

NEBRASKA CITY. Nebraska City was the site of the first Jewish settlement. In addition to the business established there by Henry and Lewis Wessel in 1855, there was the Siegel-Greenbaum clothing company in 1860. Other early settlers included Moses Oppenheimer, Jacob and Solomon Blum, Jacob Siehl, L. Levi, Henry Froelich and E. Reis.

NORFOLK. Dr. Alexander Baehr was the most distinguished citizen of Norfolk. A native of Richmond, Va., he came to Nebraska about 1870, and in 1875 was elected to the Nebraska legislature from Norfolk. After two terms in the lower house he was elected to the state senate in 1879. He served there until 1885, and three years later was elected mayor of Norfolk. Other early settlers were Morris Mayer and his wife, who may have come to Norfolk before Baehr. At one time there was a group of Jewish farmers between Norfolk and Pierce, Neb.

NORTH PLATTE. The earliest Jewish settler was Samuel Urbach, a native of Hungary. He opened a bakery and restaurant in North Platte.

PLATTSMOUTH. Plattsmouth had one of the larger pioneer Jewish settlements in Nebraska. Among the early settlers were Dr. Carl Louis Golding, Julius Pepperberg and Jacob Levy. In 1937 Plattsmouth had an estimated Jewish population of fourteen.

SIDNEY. The first Jewish settler was Moritz Urbach, brother of Samuel Urbach. He, too, opened a bakery and restaurant. He was county commissioner for several years, and served on the local school board. Robert and Joseph Oberfelder came to Sidney during the Black Hills gold rush of the 1870's.

WALTHILL. Walthill had two Jewish mayors, R. Brody and H. D. Horwitz.

WEST POINT. Frederick Sonnenschein, a native of Prague, was the first Jewish resident in West Point. He was elected councilman and then mayor. Carl Rosenthal, the next Jewish resident, was a farmer in

Cuming County for two or three years in the early 1870's before he moved to West Point. Bennett Goldsmith, a native of Posen, settled in West Point in 1875. He was elected to the town council in 1889 and to the state legislature in 1892. In the following year he was chosen mayor of West Point.

The following were elected to the Omaha state legislature: Edward Rosewater (1870-72); Alexander Baehr (1879-85); Samuel Wolbach (1884); Edward Simon (1912); Jacob Klein (1912); Martin L. Sugarman (1912); Jacob Crounse (1932); Sam Klaver (1938). In 1929 Irvin Stalmaster sat on the state Supreme Court bench; he was also assistant attorney general (1931-34).

NEBUCHADNEZZAR, *see* NEBUCHADREZZAR.

NEBUCHADREZZAR II (Babylonian, Nabukudur-uzur, "Nebo, defend the border!; less correctly, Nebuchadnezzar), king of Babylonia from 604 to 561 B.C.E. He was the son of Nabopolassar, who had overthrown the Assyrian empire with the aid of the Medes in the years after 612; as crown prince he commanded the armies that marched against the Egyptian forces in upper Mesopotamia. He defeated the army of Pharaoh-necoh at Carchemish in 605 and pursued it as far as the boundary of Egypt, when news reached him of the death of Nabopolassar and he hastened back to Babylon to ascend the throne. During the campaign he had received the submission of Jehoiakim of Judah, whom he permitted to continue on the throne. When Jehoiakim rebelled three years later, Nebuchadrezzar first sent marauding bands to harass the country, and then one of his generals to besiege Jerusalem. Jehoiakim died during the siege, and the city fell in the third month of the reign of his son Jehoiachin (597). The Babylonians took away into exile both the king and most of the nobility and craftsmen.

Nebuchadrezzar then set Zedekiah, the uncle of Jehoiachin, upon the throne. He, too, rebelled after a few years, relying on the aid of Egypt, and Nebuchadrezzar again marched against Jerusalem. An Egyptian attempt at rescue was beaten off, and the city fell after a siege of about a year and a half (Ab, 586 B.C.E.). Nebuchadrezzar was not present at the time; his officers destroyed the Temple and carried away most of the people into captivity. Gedaliah was appointed governor over the remainder, but his assassination a short time later caused the inhabitants of Judah to flee in panic.

Nebuchadrezzar is also known to have besieged Tyre for thirteen years and apparently to have taken it, and to have made one more expedition to Egypt about 567 B.C.E. He was a great builder, and enlarged and beautified Babylon by the famous "hanging gardens" and other edifices. The exile of the Judeans was perhaps due to the desire to build up the population of the metropolis. He was not especially cruel, although he followed the barbarous practices of ancient warfare; he seems to have tried as far as possible to leave the Judeans under their own rulers.

Later legend made of Nebuchadrezzar an imaginary figure of grandeur and glamour. In the stories in *Daniel* he is merely the lay figure of a tyrant who is terrified by dreams, tries to force all his subjects to worship an idol, and is smitten by God for his presumption.

An Aramaic seal superimposed upon a cuneiform tile of Nebuchadrezzar

Rabbinic literature tends to represent him as cruel and cunning, and tends to dwell on the hardships he inflicted on the Jews.

See also: DANIEL; JEREMIAH; JUDAH; JUDITH.

Lit.: King, L. W., *History of Babylonia;* Olmstead, A. T., *History of Palestine and Syria,* with further literature.

NEBUZARADAN (more exactly, Nabu-zar-iddin), captain of the bodyguard of Nebuchadrezzar, king of Babylonia. He was in charge of the destruction of the Temple and the deportation of the people, first in 586 B.C.E., and then five years later, after the assassination of Gedaliah (*II Kings* 25; *Jer.* 52).

Rabbinical stories elaborate on the life of Nebuzaradan. They say that he was surnamed Arioch, because he fought like a lion (*'ari*). Undeterred by the fate of Sennacherib, he boldly assailed the gates of the city. Every axe that he used broke, and he was about to desist when a heavenly voice bade him try again for the destined time had come. He took his remaining axe and with this burst the gates. When he arrived at the court of the Temple he found a place where blood was bubbling up. Learning that this blood was that of the martyred Zechariah, the son of Jehoiada (*II Chron.* 24), he slew thousands of the noblest of the Judeans in order to appease it. It still continued to bubble, and ceased only when he rebuked it by asking if it wanted to kill the whole people. After this event, Nebuzaradan began to reflect on the severity of the divine judgment on one murder, while he himself had slain thousands. He resigned his office and became a proselyte to Judaism (*Git.* 57b; *Sanh.* 96b and parallels).

NECHES, SOLOMON M., rabbi, b. Jerusalem, 1891. A descendant of Rabbi Elijah Gaon of Vilna, he was educated in the Etz Haim Yeshiva in Jerusalem and there ordained rabbi in 1910. Coming then to the United States, he served as rabbi in Pittsburgh and subsequently in Columbus, Ohio. While there he was president of the Zionist district of Columbus, and founded the Hebrew Institute of that city. In 1919 he worked with the Ohio State Americanization Committee. He was called to the Jewish Orthodox Communities of Los Angeles in 1921, and still occupied that position in 1942. From 1926 on he was on the execu-

tive committee of the Union of Orthodox Congregations of America.

Neches continued his higher studies at the University of Southern California and at Pacific Coast University, receiving the degree of Doctor of Hebrew Letters in 1934; in the previous year he had been elected dean of the Western Jewish Institute in Los Angeles.

Neches became a contributor to various journals, and published, among other writings: *Shemen Turak* (1916); *Children's Services for Sabbath Schools, According to the Orthodox Ritual* (1916 and 1918); *The Jew and American Citizenship* (1924); *Toratho Shel Shem* (1930); *Humorous Tales of Latter Day Rabbis* (1938); *Alpha Beta De Aboth* (1941). In addition, he contributed to the Hebrew encyclopedia *Otzar Yisrael.*

NECHO (609-593 B.C.E.), the second king of the twenty-sixth Egyptian dynasty, also called the Saite period. He received his name from his grandfather, Necho I, a vassal of Assyria. His father, Psammetichus I, wrested independence from the Assyrians, but in 616 B.C.E. came to their help when they were threatened by the Chaldeans and Medes, probably in return for important territorial concessions in Palestine and Syria. Despite the Egyptian support, Nineveh was destroyed by the Medes in 612 B.C.E. However, the Egyptians set up a new Assyrian king, who maintained himself in Harran for two years. Necho, who had probably directed these operations as his father's representative, marched to the help of the Assyrians in his accession year (609 B.C.E.), and on the way defeated and slew King Josiah of Judah, who had attempted to bar his advance at Megiddo. With Chaldean support Josiah had secured his independence some years before, and had occupied most of northern Israel. However, all Necho's further efforts to check the Chaldeans were in vain, and Nebuchadrezzar defeated him at Carchemish in 605 B.C.E. (*Jer.* 46). It was probably not until 603 B.C.E. that Necho lost Palestine, and his Jewish vassal, Jehoiakim, was forced to submit to the Chaldeans. Necho seems to have devoted the remaining years of his life to commercial activities, in pursuit of which he undertook to dig a canal across the Isthmus of Suez and sent a Phoenician squadron to circumnavigate Africa.

Lit.: *The Cambridge Ancient History,* vol. 1 (1923) 294-300; Gadd, *The Fall of Nineveh* (1923); Albright, W. F., in *Journal of Biblical Literature* (1932) 84-90.

NECROMANCY, the art of recalling the spirits of the deceased for the purpose of inquiry into the future. It was widely practised among all ancient peoples, particularly in Egypt, which was generally considered the center of all sorcery and magic. No wonder, therefore, that it was found in ancient Israel as well. The Bible consistently links it with magic and idolatry, which points to its foreign origin (*Deut.* 18:10-11; *II Kings* 21:6; *II Chron.* 33:6; *II Kings* 23:24).

The very fact that the Bible so often prohibits necromancy testifies by implication to its extensive practice (cf. *Lev.* 19:31; 20:6, 27; *Deut.* 18:11; *Isa.* 8:19). Saul's visit to the witch of En-dor—despite his own law banning all necromancers—is the most famous single incident recorded (*I Sam.* 28). Subsequent history shows the futility of all efforts to eradicate this type of divination.

The Bible calls the necromancer either *doresh 'el hamethim,* which is a general term meaning "one who inquires from the dead," or, more often, *'ob* and *yidde'oni.* The exact derivation of these words is not clear; *'ob* may come from the Arabic *a'ba,* "to return." Originally these designations may have had reference to various methods of inquiry; but already the Bible seems to use them more or less synonymously. The explanation of the Mishnah that the *yidde'oni* is one "who speaks with his mouth," and the *baal 'ob* "a Python who speaks through his armpits" (*Sanh.* 7:7; cf. *Ker.* 3b), seems hardly adequate. It is not even certain to what the Biblical *'ob* refers; sometimes it means the necromancer, but often the spirit itself (*Lev.* 20:27; *I Sam.* 28:8; *Isa.* 29:4, where there is no need to translate it as "dead man"). Mainly because of *II Kings* 21:6 (where it is said that Manasseh "made" an *'ob*), Henry P. Smith holds that the *'ob* was an idol like the Teraphim.

The Septuagint denotes the necromancer as a ventriloquist, and so does Josephus (*Antiquities,* book 6, chap. 14, section 2). Thus it appeared as if the spirit's voice came out of the deep, which explains Isaiah's description of the sound as "muttering and chirping" (*Isa.* 8:19); it was audible only to the questioner, and not to the necromancer who alone, on the other hand, could *see* the spirit (*Sanh.* 65b; *Midrash Lev.* 26:7).

Necromancers were mostly women, and it is likely that sexual practices were linked to their metier (cf. the use of *zanah* in connection with it, *Lev.* 20:6; also *Isa.* 2:6; the frequent connection of sorcery with illicit love: *Mal.* 3:5; *II Kings* 9:22; *Nahum* 3:4; *Ex.* 22:17; and the translation of *zechuru* as "membrum" by Rashi *Sanh.* 65b and Jastrow's *Dictionary*). Among the chief paraphernalia seems to have been a human skull or some other piece of bone (*Sanh.* 65b; *Sab.* 152b), although fasting and sitting among the graves were also methods likely to intrigue the dead (*Isa.* 29:4; 65:4).

In Talmudic times necromancy continued to be practised both extensively and openly, and to be frowned upon by the authorities (*Ber.* 59a). Josephus, in commenting upon the story of the witch of En-dor, expresses his indignation at the injustice perpetrated against her guild. Akiba himself quoted necromantic proof for his contention that the river Sambation ceased flowing on the Sabbath (*Midrash Gen.* 11:5); another pious man was even rewarded for his eavesdropping on the prophecies of the departed (*Ber.* 18b); while another passage considers such action foolish, it does not at the same time forbid it (*Hag.* 3b). There is reason to assume that it was not so much necromancy itself that was deemed impious, but the manner in which certain professionals proceeded. Thus Kattina, a 3rd cent. Amora, inquired of a necromancer and received a prediction which was later substantiated; nevertheless, he called him a liar "so that people should not be led astray" (*Ber.* 59a). Banaah, an early 3rd cent. scholar, was well versed in the art, and was able to visit with Adam and Abraham (*B.B.* 58a); Resh Lakish "measured the grave" of Hiyya (*B.M.* 85b), doubtlessly for divinatory purposes (an old custom, and not, as Trachtenberg, *Jewish Magic,* p. 285, note 6, believes, of fairly recent origin). It is furthermore related, as a matter of fact, that the ghosts of Titus, Balaam and Jesus were conjured up for questioning (*Git.* 56b).

Basic to the Talmudic belief in the possibility of necromancy was the assumption that "for twelve months the body is preserved; after twelve months the body decomposes and the soul ascends, never to descend again" (*Sab.* 152b). It was asserted that unless the spirit was summoned by a king it appeared head down; that the conjuring was to be done during the day (*Midrash Lev.* 26:7; *Tanhuma, Emor,* at the beginning); that the dead rose in the garments in which they were buried; and that outside of the necromancer and the questioner no one heard or saw anything.

In medieval times official belief in the efficacy of necromancy hinged largely upon the interpretation put upon the story of the witch of En-dor (*I Sam.* 28), because there the Bible itself seemed to testify to the power of the forbidden art. The first to declare all necromancy outright deception and fraud was the Gaon, Samuel ben Hophni (10th cent.; quoted by Kimhi in his commentary on *I Sam.* 28:25), although Saadia and Hai Gaon had previously expressed their doubts. Maimonides (commentary on *Sanh.* 7:7) and Gersonides joined Samuel ben Hophni, as did Kimhi, while on the other hand Abarbanel, Bahya ben Asher and Nahmanides (commentary on *Deut.* 18:9) reaffirmed their belief in the power of the necromancer. In this they represented the majority of medieval Jewry, who continued to attempt to obtain insight into the future by such means. As late as the 17th cent. we find Manasseh ben Israel writing a whole chapter on "How to inquire of the dead by using the divine name and other secret means" (*Sefer Nishmath Hayim,* Stettin, ed. 1861, book 3, chap. 7). The *Sefer Hasidim* and the *Sefer Tziyuni* give further evidence of the astounding credulity in this matter which, of course, is indicative of the general superstitious trend of the medieval mind. The *Shulhan Aruch* (*Yoreh Deah* 179:14) says that "it is allowed to make a pact with a sick person that he should return after death and tell the questioner what he will ask of him. Some allow this pact even after death, but one must not invoke the body of the dead, only his spirit." This fine distinction was bound to remain theoretical, and it was common practice to inquire from the departed by secret incantations, spending the night on the grave, burning incense, fasting, making strange noises with rattles, and by invoking angelic names. Remnants of these superstitions might conceivably be found even in the 20th cent., just as spiritism in general has still its adherents in every part of the world.

NEDAN (popular term for Nedunya), *see* DOWRY.

NEDARIM ("vows"), third tractate of Nashim, the third division of the Mishnah and Talmud; it consists of eleven chapters, and deals with vows. The reason why this tractate is placed among the laws which apply to women is that the Bible law about vows (*Num.* 30) applies only to the vows of women and was the original basis for the tractate, although in the course of time this section was relegated to the very end of the discussion. Most of the vows dealt with in the tractate are those by which one individual breaks off relations with another, either in whole or in part. The first eight chapters deal with the formulas that are to be regarded as vows and the exact implication of such vows; the ninth reveals the efforts of the rabbis to dissolve foolish vows wherever possible; the last two chapters deal with the vows of women.

The Tosefta to the tractate has seven chapters. Both Babylonian and Palestinian Talmuds have a Gemara to the tractate. The former contains a long discussion about visiting the sick, dwells on the importance of circumcision, and tells the story of Akiba. The latter collects various conflicting statements in the Torah and harmonizes them. Both contain a number of interesting moral reflections on the part of the rabbis.

NEDER, *see* VOW.

NEDERLANDSCH ISRAELIETISCH SEMINARIUM (Hebrew name, Saadath Bahurim), an Orthodox rabbinical seminary for the training of rabbis and teachers in Amsterdam, Holland, conducted under this name from 1834 on. It developed from the Beth Hamidrash Ets Hayim founded by Aryeh Löb in 1760. Joseph Hirsch Dünner, a renowned Talmudic scholar, became its rector in 1862 and reorganized it; it flourished under his direction for several decades. His successors were P. J. B. Gobits and L. Wagenaar. The seminary was divided into a lower and upper curriculum; the lower department, comprising a seven-year course of training equivalent to the curriculum of a Gymnasium, ended with a state examination entitling one to university attendance; the upper department provided a five-year course corresponding in general to that of other well-known seminaries and entitling one, upon its completion, to take the rabbinical examination before a special examination board.

NEDUNYA, *see* DOWRY.

NEEDLE TRADES. Among the industries of the United States the needle trades occupy a position of great importance. The establishments in the needle industries numbered about 17,000 in 1942, with more than 700,000 wage earners employed and an annual production valued at about $3,000,000,000. This annual production consisted of approximately 175,000,000 dresses, 20,000,000 men's suits, 17,000,000 coats for women and 4,000,000 for children, 170,000,000 dress shirts, 72,000,000 work shirts, and 50,000,000 overalls.

The needle trades have been the most distinctively Jewish group of industries in the United States. Most branches of needle work are largely concentrated in New York city and in other metropolitan areas in which the percentage of Jewish population is high. Jews gravitated to the needle industries when they arrived in the United States, partly because many of them had become experienced in needle work in Europe, partly because that was the type of work most

readily available to them in the ghetto districts in which most of them made their first homes. Jews long made up the bulk of the needle trades workers in the United States, as they continue to provide a high proportion of the workers in a number of crafts and branches, and the majority of both employers and union leaders.

The big migration of Jews from Eastern Europe to the United States in the closing decades of the 19th cent. and the opening years of the 20th coincided with the expansion of the garment manufacturing industry. In its earlier years garment making had been largely a custom industry, with only the cheaper grades manufactured ready-to-wear. The Civil War stimulated the production of ready-made clothes, the experience with uniforms demonstrating that certain combinations of measurements occurred with great frequency. As the style and fit of men's ready-made garments improved, factory production whittled down the custom share of the industry. The factory production of women's garments developed somewhat more slowly, for most women had been long accustomed to making their own clothes, perhaps having the better garments made to order by private dressmakers. In rapid succession, however, manufacturers of cloaks and suits, shirtwaists and dresses, undergarments and nightwear, infants' and children's wear, and lesser branches of the industry improved the quality and style of their products, lowering their prices so that ever larger numbers of women were persuaded to purchase their garments ready-made.

The needle trades as a group were long among the most sweated of industries in America, with long hours, low wages, and unsanitary working conditions. Except for a small percentage of the work, little skill was required. Machines were light and inexpensive, workers were easily trained, and production could be carried on in almost any type of building. Consequently most branches of the needle trades have been among the most mobile in American industry, with employers quick to migrate to whatever area offered them lowest production costs. This tendency has been modified only by the importance, in many branches of the needle trades, of being near the style center.

In men's clothing, cotton dresses, and shirts a number of substantial houses developed, but in women's coats and suits, silk dresses, headgear, and fur the average business unit has been small, and ambitious workers have been able to enter business with very little capital. As a consequence competition has been exceedingly keen and failures numerous, with the ability to keep costs down an important factor in determining business survival. Under non-union conditions the resulting pressure on labor standards made for sweatshop conditions. The seasonal slackness that has been so typical of garment manufacturing, alternating with periods of overwork, added to the troubles of the industry and intensified the sufferings of the workers. An additional evil was the divorce between business control and the manufacturing process found in the contracting system, under which businessmen escaped the worries of manufacturing and incidentally avoided responsibility to the working force by farming out the actual production to contractors.

As a result of all these factors the labor force in the needle trades has undergone a number of changes, with national group succeeding national group as the industry sought lower labor costs. To a great extent competition was at the expense of the most helpless elements in the working population, which included, of course, the most recent immigrants to arrive at American shores. Driven by persecution from the lands of Eastern Europe and seeking economic opportunity and freedom, the Jews arrived in the United States in large numbers in the years in which the needle industries experienced their most rapid expansion.

By the 1880's German Jews already comprised an important part of the working force in some branches of the needle trades, and many of their number were prominent among the manufacturers as well. Of the Eastern European Jews who migrated to the United States in large numbers beginning with the 1880's, approximately half the skilled workers were needle tradesmen. Others, desperately in need of work, found employment most readily in the garment sweatshops that dotted the growing ghetto districts of the new world, where they soon mastered the little skill needed for most operations. Students and men with professional training were among the recruits to the garment sweatshops, where they labored at the sewing machine until they could complete their schooling or obtain sufficient mastery of the language to enter other fields. Despite the sufferings of the sweatshop, the Orthodox Jewish masses found it most satisfactory to work in the shops maintained by their coreligionists, where the Sabbath and all the Jewish holidays were observed. Only the hardy ventured forth during their early years in the United States to seek employment in the strange world outside the crowded city center.

The low wages and long hours which economic necessity forced the Jewish immigrants to endure led to a migration from the industry of workers of older immigrant or native stock who could command better conditions elsewhere. Many Irish and German workers continued to be found among the cutters, whose high degree of skill enabled them to maintain much higher standards than prevailed elsewhere in the needle trades. In the lesser skilled operations, however, Jewish workers soon came to predominate, although beginning in the 1890's large numbers of Italian immigrants followed the Jews into the needle industries. Virtually every other national and racial group to be found in cosmopolitan United States likewise contributed its quota to the garment sweatshop. Descendants of the earliest European groups to settle in North America were also to be found in the needle industries, particularly in trades such as overalls, work clothing and cotton dresses, which were widely scattered about the country.

Sweatshop conditions sank to their lowest level in the 1890's. Working hours were as long as fourteen to sixteen daily, and during the busy seasons workers frequently stayed in the shop all night, sleeping for a few hours on bundles of cloth. The wretchedly low pay was subject to a variety of fines and charges to which the helpless workers were forced to submit. Sanitation was so deplorable that the attention of the government was attracted to the industry, and groups of enlightened consumers sought to use their purchasing power to elevate standards.

It was the workers, however, who compelled the

industry to establish decent standards. Throughout the 1880's and 1890's a great many efforts to form unions were made, and concessions were won in busy seasons only to be lost during the slackness that followed. Most of the Jewish immigrants were seasonal unionists, who made good strikers when improvements might be won but who saw no reason to pay dues and attend union meetings when work was slack. Only the highly skilled cutters were able to maintain stable and effective organizations.

The first branch of the needle industries to witness the growth of a fairly strong and permanent union was the relatively small cap and cloth hat trade. In this trade the United Cloth Hat and Cap Makers of North America, formed in 1901, within several years organized the overwhelming majority of workers under its jurisdiction.

The real impetus to the organization of the needle trades workers, however, came with the historic strikes of the women's dress and waist makers of New York city in 1909, the women's coat and suit makers of New York city in 1910, and the men's clothing workers of Chicago in 1910 to 1911. Although only the second of these three great strikes was an unqualified success, each laid the foundation for unionism in a major branch of the needle trades, and helped to provide inspiration and leadership to needle trades workers in other trades and other centers. Immediately following the two great strikes of 1910 the workers and employers in the affected industries launched experiments in industrial peace, arbitration of disputes, and sanitation that commanded nation-wide attention. From then on the needle trades workers continued to pioneer, and to engage in social experiments of interest and significance to all American industry.

The two New York strikes were fought under the leadership of the International Ladies' Garment Workers' Union, which had been formed in 1900 but which had exerted relatively little influence in its first decade. The Chicago strike was nominally fought under the banner of the United Garment Workers, but a sharp cleavage in philosophy between the immigrant workers in the men's clothing industry and the more conservative workers in the overall and work clothing trade led to a split in 1914, with the more progressive elements forming the Amalgamated Clothing Workers of America. The first World War period provided the I. L. G. W. U. and the Amalgamated with an opportunity, of which both made good use, to build their organizations and improve standards in their respective industries. The millinery and fur industries were likewise organized, the former by the Cap Makers and the latter by the International Fur Workers' Union of the United States and Canada. All the needle trades unions affiliated with the American Federation of Labor except the Amalgamated Clothing Workers, who were barred by the jurisdictional dispute with the United Garment Workers. For a time a similar dispute with the United Hatters of North America kept the union of cap and millinery workers outside the A. F. of L.

Further progress was interrupted and many of the gains already achieved were lost in a period of bitter internecine warfare into which the needle trades unions were plunged during the 1920's, when under communist leadership the Trade Union Educational League sought to win power in the labor movement. Although other American unions also experienced bitter conflicts, the struggle was sharpest in the needle trades organizations, whose progressive members, so many of them recent immigrants from Russia, were particularly responsive to communist appeals. Dissatisfaction caused by adverse economic conditions and unpopular union policies increased the following of the left-wing group in some of the unions. In the I. L. G. W. U., where the conflict was fought on the largest scale, the right-wing group finally emerged victorious, although the union was almost shattered in the process. In the A. C. W. A. and the Cap and Millinery Workers the more conservative group likewise won, but in the furriers' union the left-wing group won supremacy. The depression years of the early 1930's found the needle trades organizations at their lowest ebb since their great period of growth two decades earlier.

Few industries, however, profited to a greater extent than the competition-ridden needle trades from the opportunities for stabilization and the raising of standards provided by the National Industrial Recovery Act of 1933. The labor organizations quickly revived and grew in size and influence far beyond their previous stature. The codes that were adopted to regulate the needle trades were among the most enlightened to be found in American industry, considering the low wages from which many branches of needle work had long suffered. When the N. I. R. A. was declared unconstitutional the workers and employers in the women's coat and suit industry sought to retain the machinery of the code authority, and accomplish many of the same objectives through a voluntary organization, the National Coat and Suit Industry Recovery Board. Shortly thereafter a somewhat similar body, the Millinery Stabilization Commission, was created in the New York and New Jersey millinery industry.

The needle trades have been distinguished by their practical idealism, by their willingness to experiment in efforts to correct abuses for the benefit of employers, workers, and consumers alike. The Protocol of Peace in the New York city coat and suit trade and the arbitration machinery perfected in the men's clothing plant of Hart, Schaffner & Marx in Chicago were highly significant efforts to achieve industrial peace. The elevation of sanitary standards was the task of the Joint Board of Sanitary Control, established as part of the Protocol of Peace. From these efforts of 1910 through the promotion and efficiency provisions of the New York city dress agreement of 1941 the needle trades continued to pioneer, to chart new courses in constructive industrial relations. At the same time the unions won nation-wide attention and acclaim for their educational and cultural activities, their interest in unemployment insurance and in health, their ventures in banks and cooperative housing, their generosity to victims of suffering and oppression anywhere in the world.

Although the public continued to think of the needle trades as predominantly Jewish, the percentage of Jewish workers steadily declined as opportunities in other walks of life were opened to the children of the immigrants who manned the early sweatshops. Among the Italian group there has been a far greater tendency for children to follow their parents into the garment shops.

Standards in the industry, moreover, have been so elevated that needle work now attracts many who in earlier years would have sought employment elsewhere. As a result only a few of the branches of the needle trades, such as fur manufacturing and the women's coat and suit industry, have continued to be predominantly Jewish. In the remainder of the needle trades a veritable League of Nations is to be found, with virtually every race or national group to be found on American shores participating in the industry.

Among the employing group, which tends to lag behind changes in the working force, Jews continued to predominate, as they continued, because of experience and proved ability, to furnish most of the union leaders. Under their leadership the needle trades established constitutionalism in industry and embarked upon a notable series of experiments, and the workers in a relatively short span of years progressed from sweatshop degradation to full industrial citizenship.

M., and Soule, George, *The New Unionism in the Clothing Industry* (1920); idem, *Sidney Hillman: Labor Statesman* (1939); Levine, Louis, *The Women's Garment Workers: A History of the International Ladies' Garment Workers' Union* (1924); Zaretz, Charles Elbert, *The Amalgamated Clothing Workers of America: A Study in Progressive Trades-Unionism* (1934); Strong, Earl D., *The Amalgamated Clothing Workers of America* (1940); Carsel, Wilfred, *A History of the Chicago Ladies' Garment Workers' Union* (1940); Wolman, Leo, and others, *The Clothing Workers of Chicago: 1910-1922* (1922); Kopald, Sylvia, and Selekman, Ben M., "The Epic of the Needle Trades," *The Menorah Journal,* vol. 15, pp. 293-307, 414-27, 526-39; vol. 18, pp. 303-14.

NEETHE, JOHN, *see* GALVESTON.

NEFILIM, *see* ANGELS (Section II).

NEGAIM ("plagues"), fourth tractate of Toharoth, the sixth division of the Mishnah. It consists of fourteen chapters, and discusses the rules about leprosy (*Lev.* 13 and 14). The first ten chapters deal with various kinds of leprosy or changes in the appearance of the skin, and the signs which determine whether the disease is to be regarded as true leprosy or not. These observations are of great value in estimating the nature of the disease called leprosy in ancient times. The eleventh chapter treats of a moldy appearance on garments that was called leprosy, and the twelfth and thirteenth of the similarly termed mold in houses. The fourteenth chapter describes the ritual of purification after the leprosy has been cured.

Neither Talmud has a Gemara to the tractate. There is a Tosefta of nine chapters, containing some details not found in the Mishnah. It states (6:1) that there never actually was a case of "house leprosy," and that the regulations about it are purely theoretical.

Lit.: Danby, Herbert, *The Mishnah* (1933) 676-97.

NEGBA, *see* COLONIES, AGRICULTURAL.

NEGEB, a tract of land in the southernmost part of Palestine; in Biblical times, in southern Judah. It was arid country (*Negeb* means dry land) but not uncultivated and even productive. Because Negeb was the name of the southern territory, the word has, in some Bible translations, been incorrectly rendered as "southward." During the time of the second Temple, the territory, together with Edom, was also called Darom. In the 20th cent. drillings for oil were made there.

NEGINOTH, *see* ACCENTS, HEBREW; CANTILLATION.

NEGLIGENCE (*shegagah,* "oversight," "error"). In penal law, every punishable act presumes guilt on the offender's part, i.e. that he has a mental attitude disapproved of by the law. Negligence is one of these kinds of guilt, bounded on the one hand by deliberate intent (*mezid*), and on the other by accident (*'ones*). In fact, the doctrine of negligence originally grew out of the latter, since it developed at a comparatively late period in the history of Jewish penal law. In negligence, the one who does a forbidden act either lacks knowledge of the definite characteristics of the transgression—knowledge presumed in deliberate intent—or else he is mistaken as to the nature of those characteristics. Talmudical casuistics furnishes a rich profusion of possible circumstances in the presence of which it is assumed, on the ground of practical experience, that an issue, with the exercise of ordinary care, could have been foreseen, and that if the wrongdoer fails to exercise that care, he is guilty of negligence.

Jewish law does not usually judge negligence from a subjective point of view. It does not take into account the mental capacity and psychic temperament of the wrongdoer, as well as his attitude and probable intent in the special conditions of each individual case. Most of the cases mentioned in the Talmud refer to total or partial lack of knowledge of the causality of the punishable act (*B.K.* 26a et seq.; 32a et seq.; *Mak.* 7b).

Besides total negligence, Jewish law recognizes "negligence bordering on deliberate intention" (*shogeg karob lemezid*) on the one hand, and "negligence bordering on accident" (*shogeg karob le'ones*) on the other. In these two cases the penalty for negligence does not apply; in the first case, because it would be too light, and in the second, because it would be too severe. In *Deut.* 19:5-7 and *Num.* 35:22-25 carelessness with a fatal result is mentioned. The punishment is banishment to a city of refuge. In general, for the instances of carelessness mentioned in *Num.* 15:27 and *Lev.* 4:27, a sin-offering is brought as an atonement. Maimonides, in a special section on unintentional violations of the law (*shegagoth*), enumerates the cases where such negligence is expiated by a sin-offering; if such acts were done intentionally the penalty would be excision (*kareth,* "cutting off"). Special rules apply to careless infractions of the law of Sabbath rest (*Hul.* 15a; *Sab.* 67b et seq.).

In regard to religious precepts, the general principle is laid down that when it may be presumed that admonitions will not be heeded, careless law violators should not be informed; "it is better that they should sin through heedlessness than that they should do so deliberately" (*Betz.* 30a). Haggadic literature emphasizes that all violations by those versed in the law, even if due to carelessness, are as reprehensible as if they were intentional (*Aboth* 4:12). In addition, there is the principle: *talmid hacham 'en tzarich hathra'ah,* "a scholar does not require warning" (in order to be punished for transgressions). However, an ordinary individual not a scholar must be warned that an act is an offense against the law before he can be punished for it. This is milder than the principle of European and American law: "Ignorance of the law is no excuse." On the other hand, in the case of an ignorant Israelite or one brought up among adherents of other

faiths, who has neither knowledge nor experience, error is always presumed (*B.M.* 33b).

In the domain of civil law, responsibility for damage caused by carelessness, especially in the doing of unlawful acts (*nezikin,* "damages"), is treated in the Mishnah (*B.K.* 1:1). These are divided into four principal groups, *'arba'ah 'aboth nezikin.* Where there is a contractual relation, responsibility for damages which result from gross negligence (*peshi'ah*) or from trifling negligence (*genebah va'abedah*) is discussed under the category of one or the other of the four classes of bailments (*'arba'ah shomerim,* "four guardians").

NEGRO JEWS, a general designation applied to all those of Negro or part Negro blood who profess the Jewish faith; the term is often commonly used to include Falashas, who, however, according to Faïtlovich, were of non-African origin. In West Africa, on the Loango coast, the investigator Adolf Bastian found the "Judeos," who call themselves Mavambu, professing Judaism, strictly observing the Sabbath. Loango is not far from the Portuguese island of Sao Thomé, to which, in 1493, 2,000 forcibly baptized Jewish children were brought; this suggested to investigators a possible origin of the "Judeos." Off the east coast, in Madagascar, a Negro sect calling themselves Zafy Ibrahim (descendants of Abraham), though seemingly not otherwise distinguished from the surrounding natives, claim to be Jews. In northern Africa, general infusion of Negro blood gave rise to "negroid" types among the Jews, just as among the region's non-Jews. It is perhaps due to historically remote intermarriages between European Jews and proselytized North African Moorish slaves with an admixture of Negro blood, that there are to be found occasional "negroid" types among the Jews of Germany and of Eastern Europe.

About 1750 a colony of half-breeds, offspring of Jewish-Negro intermarriage, was founded near Surinam (Dutch Guiana); the "Djo-tongo" or "Jew language" they spoke was a mixture of corrupted Portuguese, combined with Hebrew and native words. Later the Negro-English dialect replaced this patois, leaving only a few traces.

In the West Indies, in Jamaica, Spanish and Portuguese Jews frequently intermarried with Negroes. The descendants continued to bear Jewish names; in 1942, there still existed a community professing the Jewish faith. An important congregation existed in that year also in the Virgin Islands, at St. Thomas.

In the United States, communities of Negro Jews were established in Pennsylvania at Philadelphia, Media, Pittsburgh and Sharon; in Ohio, at Youngstown and Farrell; in Cullen, Virginia; and in Chicago. Chief of the country's Negro Jewish communities, in Harlem, New York (with a lesser community in Brooklyn), attracted an estimated 3,000 adherents, 800 of whom belong to the central congregation presided over by Chief Rabbi Wentworth Matthew. Matthew, ordained by the chief rabbi of the Ethiopian Falashas, as well as by the Ethiopian National church, was born in Lagos, West Africa, and originally named Moses ben Benjamin ben Judah. After extensive travel and education, he came to New York city in 1927 and organized the congregation, Commandment Keepers, maintained by contributions of tithes. There is a fraternal order and a cemetery. The more observing adherents follow modified Orthodox ritual, including Kashruth. The children are taught Hebrew. A New York court decision at one time granted the community the legal right to be designated Jews. As Falashas, they claim descent from Menelik, son of King Solomon and the Queen of Sheba, and pay homage to Haile Selassie. Various theories as to the origin of Negro Jews in the United States point to possible circumcision and conversion of slaves born in the homes of Jewish planters, as well as to obvious intermarriages of Jews and Negroes.

A rabbi named Brother Jacobs of the Negro congregations (Mourish Palestine Temple) in New York city

To be distinguished from Negro Jews are the Black Jews of India, so called in contradistinction to the White Jews of the same communities; the color of their skin, however, is brown.

NEHARDEA, a city situated in ancient times on the river Euphrates in Babylonia; its exact location was at the beginning of the "royal canal" (Nehar Malka) connecting the Euphrates and the Tigris. Since it was well protected by walls and the river, Nehardea was a favorite refuge of Jews in times of misfortune in the early centuries C.E. According to the epistle of Sherira Gaon (10th cent.), the first Jewish settlement took place

when King Jehoiachin of Judah (6th cent. B.C.E.) was exiled to Babylonia; the king is said to have built a synagogue there, called Shaf Veyathib. When Akiba visited Nehardea in the 1st cent. C.E., he found a considerable Jewish community.

In the 2nd cent. C.E. Shela founded an academy in Nehardea which, in the course of time, became very famous, especially through the work of Mar Samuel, Shela's successor. During this period Nehardea was the place of residence of the exilarch and his chief judges, and medicine, astronomy and calculation of the calendar were taught at the academy, in addition to the Talmud. In 259 Nehardea was plundered and destroyed by Papa bar Nazr (Odenathus of Papyrus or one of his captains), and activities ceased; but the Jews returned as soon as the city had recovered. For a time scholars again taught there; the Amoraim of Nehardea were famous, particularly for their development of the law; Nehardea was praised as a city that had no sectarians (Minim) within it. But the leading role formerly possessed by Nehardea had already been transferred to Pumbeditha, together with the academy which had been transferred thither. It remained, however, a spiritual center for Jewry, especially in the 5th cent., when Amemar and Dimi lived there. After that the community declined; Benjamin of Tudela visited it in the 12th cent. and reported that he had seen the ruins of the Shaf Veyathib synagogue.

NEHEMIAH, 1. governor of Judea and savior of the Jewish community about 445 B.C.E., together with Ezra. He tells his own story in the Bible, in *Nehemiah.*

As cupbearer to the Persian king, Artaxerxes I, in Susa, Nehemiah learned of the attacks of the foreigners on Jerusalem, and he received permission to rebuild the city walls. Equipped with powers equivalent to those of a viceroy, he quickly accomplished his task despite great difficulty. He divided the work among the aristocrats of the city and its environs, and as a reward he named them in his memoirs (*Neh.* 3). He sweetened the work for the poor by releasing them from all debts, and in this he set a good example for the other rich members of the community. His opponents were Sanballat, governor of the neighboring province of Samaria, Tobiah, an Ammonite, and the Arab Geshem (Gashmu), who were able to win to their side the high priest Eliashib and several prophets. They rightly feared a strong Jerusalem, for the victory of the national party meant the end of the internal and external influence of the foreigners. At first they offered to cooperate, then they threatened to vilify Nehemiah before the king and sought to kill him, and finally they tried to hinder the work through the use of armed violence.

Nehemiah remained calm, energetic, reflective, armed the workers and completed the task, according to *Neh.* 6:15, in fifty-two days. (It would seem from this that the work consisted mainly of improvement and rebuilding of demolished portions.) According to Josephus (*Antiquities,* book 11, chap. 5, section 8), Nehemiah required two years and four months. Perhaps this is the time until the great inaugural ceremony which is described in *Neh.* 12:27-43, when two processions moved along the wall in opposite directions. This was a powerful demonstration of the new Jerusalem.

Nehemiah appointed his brother commandant of the city. He drove the foreigners from the city and compelled the residents of the land to settle in the depopulated city. Finally he joined with Ezra so that the nation might make, in solemn gathering on the 24th of Tishri (444 B.C.E.), a league and covenant to observe the laws of the Torah. Nehemiah himself was the first to sign. (According to Josephus and many critics, this compact was not made at the time of Nehemiah.)

Nehemiah also fought against the desecration of the Sabbath and against mixed marriages; he provided for a system of collecting the contributions and tithes of the Levites; moreover he drove out the son of the high priest who was also the son-in-law of Sanballat. According to *Neh.* 13:6, he interrupted his life-long governorship in its thirteenth year by a trip to the king. (Since this refers to the king of "Babylon," it has been questioned by critics.) Nehemiah died before the year 412 B.C.E.

The reconstruction of Jerusalem and the support which it gave to Jewry had been in the best interests of the Persian Empire, which had been shaken by the revolt of the satrap Megabyzos and the wars with Egypt and Greece. Nehemiah faithfully fulfilled his obligation to the king, but at the same time with a sense of responsibility to his people. His selflessness (he refused even his salary as governor) makes Nehemiah lovable; he compels admiration for his strength and cleverness, for his organizational talent and for the foresight of his principle of national and religious isolation, which was the only thing that could save Judaism and Jewry at the time. Nehemiah is one of the most significant personalities of all Jewish history and one of the rare Jews, like David and Judas Maccabeus, who became outstanding in Judaism without working directly for religion and for spiritual ends. That he sensed his own importance he showed by the writing of his memoirs. That others later recognized his importance despite their more religious attitude and position is indicated by the preservation of his memoirs in the Bible. HUGO FUCHS.

2. one of the last and, historically, one of the most important books in the Biblical canon, following *Ezra,* and preceding *Chronicles.* Roughly speaking, it may be divided into three parts. The first (chaps. 1 to 7), written in the first person, is Nehemiah's own account of his appointment as governor of Judea, his arrival in Jerusalem, his efforts for the rebuilding of the wall, the difficulties which he experienced, and his final success. The second portion of the book (chaps. 8 to 10) deals with one of the most significant moments in Israel's history, the reacceptance of the Law by the people, in the presence of Ezra and Nehemiah, and their solemn covenant to guard and keep forever "the Law of Moses, which the Lord had commanded to Israel" (*Neh.* 8:1). There follows the story of the celebration of the Feast of Tabernacles, "for since the days of Joshua the son of Nun unto that day had not the children of Israel done so" (*Neh.* 8:17); it then tells of the keeping of a sacred fast day on the 24th

of Tishri, and gives a long prayer acknowledging Israel's historical bond with God, and the names of those who signed the new covenant for the people.

The last section of the book (chaps. 11 to 13) contains further lists of names and tells of Nehemiah's temporary return to Babylon, and of his second governorship, during which he abolished trading on the Sabbath and enforced the abolition of mixed marriages, which had occurred to such an extent that the children of these wedlocks "spoke half in the speech of Ashdod, and could not speak in the Jews' language" (*Neh.* 13:24). The book closes with a supplication of Nehemiah for recognition of his valiant and successful efforts: "Remember me, O my God, for good."

Ezra and *Nehemiah* were originally one book. Josephus (*Against Apion,* book 1, chap. 8) knows of no division, and the Codex Vaticanus starts the text of *Nehemiah* without even making a new paragraph. The Talmud speaks only of one book (*B.B.* 15a; *Sanh.* 93b). Jerome seems to have been the first to give the second part the now common name of *Nehemiah,* and since the Bomberg edition of 1525 all Hebrew texts have taken over this arrangement. In chronological order, *Chronicles* should precede both *Ezra* and *Nehemiah,* an order which was adopted in the Septuagint and preserved in the King James version. Although this is more logical, it is probably less historical, for the *Ezra-Nehemiah* book was admitted to the canon before *Chronicles* was given recognition, because the former deals with a period not covered in any other canonical work.

Neither *Ezra* nor *Nehemiah* was, however, the only literary creation dealing with the period in question. Some scholars believe that *I Esdras,* traditionally considered apocryphal, was originally canonical. In the Septuagint, *Nehemiah* appears as *III Esdras,* with *II Esdras* being our book of *Ezra, I Esdras,* a work containing an account appearing now in both *Ezra* and *Nehemiah,* and *IV Esdras,* an elaborate apocalypse. In addition, the figure of Nehemiah inspired later generations to surround him with legends of various kinds, remnants of which have come down to us in *II Macc.* 1:18 et seq.; 2:13.

Concerning the authorship of *Nehemiah,* the Talmud in one place (*B.B.* 15a) says that it was Ezra, in another (*Sanh.* 93b) that it was Nehemiah for both *Ezra* and *Nehemiah,* but that the book was not named after him because of the arrogance which he showed in repeatedly praising himself. But that neither Ezra nor Nehemiah could have been the author of the book as we have it now is apparent. *Neh.* 12:10, for instance, recounts three generations after Eliashib, who was a contemporary of Nehemiah according to 13:4 (according to Josephus, Jaddua was high priest in 332 B.C.E.). *Neh.* 12:22 speaks of "Darius the Persian," an expression obviously used only when the Persian empire was no longer in existence. *Neh.* 12:47 uses the phrase "in the days of Nehemiah," clearly referring thereby to a period long since past. Most scholars agree that, while the major portions of the so-called "I" passages of the book (especially 1:1 to 7:73) were written by Nehemiah himself, the compilation of the whole book belongs to a later historian, probably the Chronicler or a man of his school. There are many affinities in style between *Chronicles* and *Nehemiah* (cf., for example, *Neh.* 12:25 et seq., 33-36, 41-47), and their historical outlook is basically the same. This would suggest that the book was composed around the beginning of the 3rd cent. B.C.E. The authorship of the individual chapters, particularly 8 to 10, has received much attention by modern critics, but no agreement has been reached, particularly since the whole historical framework of the book has been questioned and a number of theories have been advanced to alter it.

Traditionally it has been believed that Ezra arrived in Jerusalem in 458 B.C.E.; that, despite his great personal influence, he possessed no political powers of enforcing the rules which he laid down; and that, in consequence of this, Nehemiah came, in 445, to reorganize the community. He succeeded in doing so; the wall was built, the people concluded a covenant with God and accepted His Law. Later Nehemiah returned to Babylon for some years, but in his absence a state of religious anarchy recurred; once again he came to Jerusalem and enforced his and Ezra's authority. At this point the account ends.

Some scholars, such as Hoonacker and Kosters, believe that there was no return under Zerubbabel, that the Judeans still left in the country rebuilt Jerusalem, and that Ezra came to Jerusalem after Nehemiah was recalled; this is hardly likely in view of the fact that only the poorest Judeans were left after the destruction of the First Temple. Others place the activity of Ezra at a period much later than that of Nehemiah. Torrey denies the historicity of Ezra altogether and thinks him a figure created by the priests. Still another group identifies the Persian king who favored Nehemiah with Artaxerxes II (404-358 B.C.E.) instead of Artaxerxes I. Finally, Schaeder places Ezra's activities in one single year, 458-457 B.C.E. (after which he is said to have departed), and assumes that Nehemiah came in 445 B.C.E.

The very fact that there is such wide divergence of opinion suggests that the problem has not been solved satisfactorily. Since there is lacking a thoroughly convincing counterproof, the traditional view of the sequence of events still seems most plausible, despite all its admitted difficulties. Particularly since the discovery of the Elephantine papyri, the basic historicity of the book seems established. Beginning with a unique set of personal memoirs, which may have been conceived as political reports to Artaxerxes or as autobiographical fragments in the style of some Jeremiah passages, the book represents a new type of historical writing: history based on documents, some of which are reproduced verbatim. This fact alone points out the great achievement of the author; and the much doubted lists served their purpose in that they testified to the continuity of Israel, pre-Exilic and post-Exilic.

From the standpoint of religious development the work of the author looms even larger, for in his novel subjective-objective way of writing history he was able to impart to later generations the significance of the time of Nehemiah for the survival, growth and power of a renascent Jewish religion.

NEHEMIAH, Tanna of the third generation, about the middle of the 2nd cent. C.E. He is mentioned in the Mishnah as a contemporary of Judah ben Ilai and Meir, and as a scholar of Akiba. Little is known of his life, and the name of his father has not been preserved. According to Johanan (*Sanh.* 86a), the basis of the *Tosefta,* a collection of teachings paralleling the Mishnah, comes from Nehemiah, although it was later amplified by Hiyya bar Abba. A number of Halachic and Haggadic utterances of Nehemiah have been recorded; the former deal for the most part with the laws of ritual purity.

NEIDUS, LEIB, Yiddish poet, b. Grodno, Russia, 1890; d. Grodno, 1918. During his adolescence, Neidus wrote verse in Yiddish, Hebrew and Russian, but as he neared maturity he chose Yiddish as his medium. Though he had earned a reputation as poet, translator, critic and lecturer during his lifetime, it was not until after his death that his significance to modern Yiddish literature was discerned. He had brought precise form and structure into Yiddish verse, and at the same time introduced nature and classical mythology into the subject matter.

Intimme Niguns (1919) was the first of his posthumously published books. Later two volumes of collected poems were published: *Dos Buch fun Poemmen* (1923) and *Litvische Arabesken* (1924).

Lit.: *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930), cols. 552-61.

NEIGHBOR. At the basis of the rights of neighbors is the concept that a person should make only such use of his property as will not harm another person. The Bible itself does not contain any rules for respecting the rights of the neighbor. The Mishnah, however (*B.B.* 2:1-13), quotes definite regulations as to how the owner of a plot should regard the rights and interests of his neighbor when making a cistern, water channels, setting up a furnace, barns, stables for cattle, wine cellars, bakery or dyehouse. No one may prevent his neighbor from working with the hammer or hand mill on the ground that the noise interferes with his sleep, but a man may protest against his neighbor's having a store in the common courtyard on account of the disturbance caused by the coming and going.

The Talmud (*B.M.* 108a) refers to the Biblical norm, "And thou shalt do that which is right and good in the sight of the Lord" (*Deut.* 6:18), as establishing a special option for the owner of the adjacent property, *dina debar mitzra* (the right of the son of the boundary), in case of a sale. If the property was given away or bequeathed, this right did not apply.

In practice the right of the neighbor was probably eluded by means of fictitious agreement on a better price with a third party. This is the probable explanation for rulings authorizing the neighbor to demand evidence that the higher price was actually paid. The right of the immediate neighbor, originally conceived as attaching to the person and as inalienable, was subsequently reinterpreted to regard the third buyer of such property as the legal representative of the optionee, the material nature of the right justifying such juridical construction.

It should be noted that the word "neighbor" in the English Bible, given as the translation of the Hebrew *re'a,* is not used in a local sense, but rather as the equivalent of "friend," "associate," "fellow-man." The famous commandment, "Thou shalt love thy neighbor as thyself" (*Lev.* 19:18), means practically the same as "Love one another."

Lit.: Maimonides, *Hilchoth Shechenim; Shulhan Aruch, Hoshen Mishpat* 153-56, 175; *Otzar Yisrael,* under Bar Metzra; Bloch, M., *Das mosaisch-talmudische Besitzrecht;* Mayer, Samuel, *Die Rechte der Israeliten, Athener und Römer,* vol. 2.

NEIGRESHL, MENDEL, Yiddish poet, b. Neusandez, Galicia, 1903. He attended the Gymnasium in Lwów and finally the University of Vienna. From 1914 to 1938 he lived in Vienna. From May, 1938, until February, 1939, he was in the Nazi concentration camps of Dachau and Burnwald. Neigreshl emigrated to Brazil in 1939 and came to New York city in 1941.

Among Neigreshl's volumes of poetry were: *In Shvartzen Malchuth* (1924); *Getzellten* (1930); *Balerdike Teg* (1935) and a volume of translations from the Polish poets (1936). Neigreshl also edited an anthology of Galician Yiddish poetry from 1891 to 1935. In Vienna he was editor of a monthly periodical, *Yiddish,* and of *Gezerd,* a periodical published in German and devoted to propaganda for Biro-Bidjan, which was suppressed under the Schusschnig regime. Neigreshl may be classed as a neo-romanticist, and as an adherent of the "pure poem," showing the influence of Rainer Maria Rilke and of the Polish poet Leopold Stach. In the United States his affiliations have been with the younger Yiddish poets and their publication, *Der Indzel.*

NEILAH ("conclusion"), the fifth and concluding service of the Day of Atonement (Yom Kippur). Today the Neilah service is associated exclusively with the Day of Atonement. In the time of the Temple, however, the Neilah was the daily prayer of the Maamadoth (deputations of laymen) at the time of the closing of the gates (Neilath Shearim), i.e. shortly before the gates of the Temple were closed; from this it derives its name. In addition, this concluding service was read on public fast days. When the old order of the Temple divine service was forgotten and Neilah came to be used only in the synagogue on Yom Kippur, the name was taken to refer to the closing of the gates of heaven, and the view developed that at the time of Neilah the divine sentence passed upon man was sealed. Hence the "sealing" of all good things is requested in the petitions of the Neilah service.

As the climax and concluding point of the devotions of the Day of Atonement, the mood of the Neilah is extraordinarily solemn. It finds its expression in melodies in the minor key. The section of the Eighteen Benedictions (Tefillah) is as usual, with the exception that the confession of sins (the Viddui) is changed.

The litany Al Het ("For the sins . . .") is omitted, and in its place there is recited the prayer Attah Nothen Yad ("Thou stretchest forth Thy hand [to the sinner]"); this prayer is a remarkably clear portrayal of Judaism's doctrine regarding the forgiveness of sins.

The Reform service, as contained in the *Union Prayer Book,* has considerably altered the Neilah service, but has emphasized its mood of solemnity and reverence.

Lit.: Elbogen, Ismar, *Der jüdische Gottesdienst,* 152-53; Idelsohn, A. Z., *Jewish Liturgy* (1932) 233-48; Adler, *Mahzor for the Day of Atonement,* 243-72.

NEISSER, ALBERT, dermatologist, b. Schweidnitz, Germany, 1855; d. Breslau, Germany, 1916. He became associate professor (1907) of the University of Breslau. In 1879 he discovered the pus-producing bacterium (now named after him) which causes gonorrhea. In the same year he proved that the microbe discovered by Armauer Hansen (1871) was the bacillus of leprosy.

Neisser made two expeditions to Batavia, Java, where he experimented with monkeys to elucidate important questions on syphilis. Together with August von Wassermann and Karl Bruck, he created the blood test for syphilis ("Eine serodiagnostische Reaktion bei Syphilis," *Deutsche Medizinische Wochenschrift,* 1906). He was a founder of the German society for combatting venereal diseases (1902), and advocated the regulation of prostitution.

Neisser's report on researches on syphilis which he conducted in Java and in Breslau appeared in *Arbeiten aus dem kaiserlichen Gesundheitsamte* (1911). He also wrote *Der Krieg und die Geschlechtskrankheiten* (1915).

Neisser was baptized, and attempted to persuade his aides of the Jewish faith to accept conversion.

NEISSER, MAX, immunologist, b. Liegnitz, Germany, 1869; d. Frankfort, Germany, 1938. From the Hygienic University Institute in Breslau he went to the faculty (1899 to 1909) of the Royal Institute for Experimental Therapy in Frankfort. Appointed professor at the University of Frankfort in 1901, he founded (1909) the State Institute of Hygiene, which he headed until 1933. Neisser, a co-worker of Paul Ehrlich, contributed numerous articles on hygiene, bacteriology and immunology to scientific journals, and published a treatise on the inflammation of the spleen in *Lehrbuch der Mikrobiologie* (vol. 2, 1919). Two scientific processes were named after him.

NELSON, LEONARD, philosopher, b. Berlin, 1882; d. Göttingen, Germany, 1927. He was baptized in his early youth. From 1917 to his death he taught philosophy at the University of Göttingen and was head of the Fries school which, reviving the philosophy of Jakob Friedrich Fries (1773-1843), opposed a purely speculative idealism. According to Nelson, Kant's critical method should be the lode-star for all philosophical thinking, but one great task was not achieved by Kant himself: the examination of the axiomatic character of all possible theories on the origin of knowledge. Nelson regarded Fries as Kant's true successor, especially in his psychological deduction of philosophical principles. At the age of twenty-two Nelson published a new series of the philosophical publication *Abhandlungen der Friesschen Schule* which, although interrupted some years later, was republished from 1929 on, after Nelson's death. As a scholar, teacher and writer, Nelson exerted great influence on academic youth and their problems. He sought to gain for his philosophy not only scientific recognition, but also its application in individual and social life.

Nelson's most important works are: *Jakob Friedrich Fries und seine jüngsten Kritiker* (1909); *Über das sogenannte Erkenntnisproblem* (1908); *Kritik der praktischen Vernunft* (1914); *Die Rechtswissenschaft ohne Recht* (1917); *Die neue Reformation* (1918); *Vorlesungen über die Grundlagen der Ethik* (1917-32). His *System der philosophischen Ethik und Pädagogik* (edit. Grete Hermann and Minna Specht, 1932) was published after his death.

Lit.: Hauer, Eugen, *Person und Handlung in der Ethik Leonard Nelsons* (1928); Hermann, Grete, and Rauschenplat, Hellmut, *Verzeichnis der Schriften Leonard Nelsons* (1929).

NEMÉNYI, AMBRUS, Hungarian deputy, and publicist, b. Pécel, Hungary, 1852; d. Budapest, 1904. He studied at the University of Budapest and at the Sorbonne, Paris, receiving his Ph.D. degree from the former. He contributed articles to *Pester Lloyd, Budapesti Szemle,* and various periodical publications; from 1896 to 1901 he was an editor of the daily *Pesti Napló.* In 1884 he was chosen deputy to the Lower Chamber, where he joined the ranks of the Liberal Party.

Neményi published: *Rabelais és kora* (Rabelais and his Age; 1877); *Parlamenti fegyelem és tekintély* (The Discipline and Authority of Parliament; 1879); *Journals und Journalisten der französischen Revolution* (1880); *Kortörténelmi rajzok* (Sketches of Contemporary History; 2 vols., 1880); *Das moderne Ungarn* (1883); *Az állam és határai* (The State and its Confines; 1889); *Die Verstaatlichung der Eisenbahnen in Ungarn* (1890); *Bürokrácia Magyarországon* (Bureaucracy in Hungary; 1902).

NEMÉNYI, IMRE, Hungarian under-secretary of state, and educator, b. Rákospalota, Hungary, 1862. He was a brother of Ambrus Neményi. He was brought up in the Jewish faith, but later in life adopted Christianity. He received his Ph.D. degree from the University of Budapest, and, after serving as principal in Magyar schools of Sarajevo, Bosnia, and in several cities of Hungary, became (1893) supervisor of the schools of Csanád county, in 1900 counselor at the ministry of education, and, in 1917 under-secretary of state. Pensioned during the ensuing revolutions, he founded and directed as president (1919) the Party of the Hungarian Kingdom; subsequently he became curator of the Veres Pálné Girls' Gymnasium and deputy president of the Baár-Madas Protestant Girls' Gymnasium, foremost Hungarian institution for the education of girls. He founded and edited *Magyar Közalkalmazottak Lapja,* a journal devoted to the interests of those employed in civil service.

Neményi published several volumes on the education of girls, on reading and children's libraries as a means of education, and on the Hungarian pedagogue János Apáczai Cseri. Important are his books *Állami Népoktatás* (Public Education; 1902) and *Népfőiskolák* (People's Universities). He contributed to the government review *Magyar Szemle,* authoritative articles on the trends of national education.

NEMES, MARCEL (DE JÁNOSHALMA), art dealer and collector, b. Jánoshalma, Hungary, 1866; d. 1930. Nemes was one of many children in the house of a poor village cantor, his original name

George Wolf

having been Moses Klein. Up to the age of thirty-five his life was a medley of temporary occupations. He engaged in buying and selling paintings and developed a passionate love and understanding of real values in that art. The exhibitions of his collection at Munich (1909) and Düsseldorf (1912), which had assembled a number of old masters deprived of their coats of varnish, paintings by Greco and the French impressionists, revolutionized Germany's art circles.

Nemes, who gave generously to Hungarian art museums, was knighted by Francis Joseph I. One of his most prized gifts to the Hungarian Museum of Fine Arts was the portrait of Ferenc Rákóczi II by Ádám Mányoki, which he had acquired from the Royal House of Saxony. He helped young artists by means of many foundations and scholarships.

His first collection was sold in 1913, part of his second, mostly old masters, was auctioned at Amsterdam (1928), the rest after his death at Munich and Budapest (1931). He engaged in painting late in his life, and the Budapest Ernst Museum showed his paintings in 1933.

NÉMETKERESZTUR (known also as Sopronkeresztur; in Yiddish, Tzelem), a town formerly in Hungary but later known as Deutschkreuz, in Austria. The expulsion of the Jews from Vienna and other cities in the years 1670 to 1671 resulted in the settling of twenty-four Jewish families at Németkeresztur, where they joined a community of four families. Their rabbi was Marcus Lipschitz who, in 1678, left for Bamberg, Germany. In 1735 the community consisted of fifty-four and in 1780 of one hundred families. The synagogue, destroyed by the fire of 1777, which devastated the Jewish quarter, was rebuilt with the aid of the princely house of Esterházy. The steady increase of the population during the 18th cent. ceased during the 19th, when the larger cities opened their gates to the Jews. Thus the community never exceeded the approximate number of 400 persons.

Although numerically small, the Jewish community of Németkeresztur was famous as a well of Orthodox inspiration in Hungary. Its spirit had been established and strengthened by such rabbis as Joseph Kaufmann (1735-36), Judah Löw Hamburger (1751-82), the great Halachist Joab Mattersdorf (1783-1805), Moses Levi (1806-37), Menahem Katz (1838-91), David Friedman and Joseph Kohn. The community also boasted of the poet laureate Baron Lajos Dóczy as its native son; Karl Goldmark spent his childhood there.

The numerous charitable institutions of the community which existed after the first World War, dated from the 19th cent., as did its school and its Yeshiva, founded in 1860. In 1921, Németkeresztur was incorporated into Austria as a part of Burgenland, a territory which Hungary had to cede to its neighbor. In 1938 Németkeresztur was the first village of Burgenland where Hitler's men displayed the white flag signaling that the village was cleared of Jews. The Jews of Németkeresztur, about 350 in number, were taken to Vienna, where the Kultusgemeinde maintained them with funds received from the American Jewish Joint Distribution Committee. Those who found refuge in Belgium, Palestine and the United States escaped the fate of the rest, who were deported to Poland.

NEMOY, LEON, librarian and orientalist, b. Balta, Russia, 1901. He was a brother of Simon Nemoi. Nemoy was educated at the University of Odessa; then, having come to the United States in 1923, he received his M.A. degree from Yale University in 1926 and his Ph.D. degree in 1929. From 1914 to 1920 he had served as cataloguer for the Library of the Society for the Promotion of Education, and from 1918 to 1929, also, as assistant librarian of the Jewish Academic Library of Odessa. From 1921 until his departure for the United States Nemoy was director of the Communal Library of Lemberg (later Lwów), Poland, and acted, in addition, as cataloguer for the Lemberg University Library.

On arriving in the United States in 1923, Nemoy became curator of Hebrew and Arabic literature at Yale University, a post he still held in 1942. Specializing in the Arabic literature produced by the Karaites, Nemoy was the author of various papers on Karaite literature, Arabic philology and oriental bibliography. He was also editor of Jacob Kirkisani's *Kitab al-Anwar wal-Marakib,* a five-volume edition of which the first four volumes appeared between 1939 and 1942. Nemoy was associate editor of Jewish literature for the *Universal Jewish Encyclopedia.*

NEMTZEANU, BARBU (originally, Benjamin Deutsch), poet, b. Galatz, Roumania, 1886; d. Bucharest, Roumania, 1919. He published his first poems at the age of seventeen in the literary journal *Inainte* appearing at Galatz, but it was his volume of poetry entitled *Stropi de soare* (Drops of Sunshine) which established his place in Roumanian poetry. His satirical poem "Galatz," pointed at the upper middle classes of that important Danubian port, was widely read and quoted. Nemtzeanu combined profoundness and delicacy of sentiment with the gift of rich and musical lyricism. He translated into Roumanian some of the poetry of Nikolaus Lenau and Heinrich Heine, including the latter's *Hebrew Melodies.* Suffering from tuberculosis, he had to submit to long periods of complete inactivity, and died at the age of thirty-three.

NEO-HEBREW LITERATURE, *see* LITERATURE, HEBREW.

NEO-PLATONISM, a system of philosophy which originated in the 3rd cent. C.E., and is principally represented by the writings of Plotinus and his disciples. It is characterized by a strong leaning to a mystic religiosity; it contains a doctrine of intermediate existences between the primeval Being and the material world, and a cathartic ethics. Its followers showed a strong tendency to find allusions to its original concepts in predecessors such as Plato and Aristotle. This tendency led to a Neo-Platonic interpretation of the teachings of Aristotle during the Middle Ages, as a result of which the Aristotelianism of the Middle Ages is often mixed with Neo-Platonism. It was for this reason that Neo-Platonism affected the philosophers of Judaism as well as those of Islam and Christianity. While Jewish philosophers as a rule followed the Aristotelian school, many of them were affected by Neo-Platonic concepts.

Isaac Israeli, Solomon ibn Gabirol and Joseph ibn Zaddik were among the Jewish Neo-Platonists in the narrower sense. They were less influenced by Plato than by Porphyry and his disciples, who leaned more toward Aristotle. They borrowed from Aristotle the separation of matter and form, the doctrine of categories and the theoretical life ideal. What makes their systems Neo-Platonic in character is the doctrine of

intermediary existences and their cathartic ethics. They naturally applied Neo-Platonism eschatologically. They looked to study and catharsis to free human beings of the shackles of the world of sense perception, as well as create a connection with the spiritual world which is the basis for immortality and bliss in the hereafter.

In a broader sense, Jewish Aristotelians were also to some extent influenced by Neo-Platonism. Maimonides shows a certain influence of the doctrine of emanation and of cathartic ethics. Judah Halevi perhaps drew from it his idea of the separation of the world of clarity, the "kernel," from that of confusion, the "husk." Related currents of thought are also to be perceived in the Cabalistic teachings about the Sefiroth and the four worlds.

NEPI, GRAZIADIO (HANANEL), rabbi and physician, b. Ferrara, Italy, 1759; d. Cento, Italy, 1836. He was rabbi, teacher of Talmud and physician in Ferrara until 1822, when he was called to Cento. He was an ardent Cabalist. At the meeting of Jewish notables called by Napoleon in 1806 he was one of the Italian Jews' delegates. Besides various religious books, he compiled *Zecher Tzaddikim Liberachah,* a biographical and bibliographical lexicon of the Italian Jewish writers and rabbis, which, however, remained unfinished. This work was continued by Mordecai Samuel Ghirondi, and after the latter's death by his son Ephraim Ghirondi, who published it at Trieste in 1853 under the title *Toledoth Gedole Yisrael.*

NER TAMID, *see* PERPETUAL LIGHT.

NERO (Nero Claudius Caesar Drusus Germanicus), Roman emperor, b. Antium, Italy, 37 C.E.; d. near Rome, 68 C.E. It was during his principate that the Jews rose in final and futile rebellion in the Great War. In Rome itself, under Nero, the Jewish colony of Trastevere worshipped and worked unmolested. At court the Jewish dancer-clown Aliturus and the Jewish historian Josephus were in great favor, especially with Nero's notorious wife Poppaea, whom Josephus calls a "religious woman." There is no evidence that she was actually a proselytized Jewess; but she seems to have been attracted to Judaism and visited the synagogue out of a fashionable restlessness, like other Roman matrons. Following her express wish, however, Nero (who had mortally wounded her in a fit of anger) did not have her cremated in Roman style, but embalmed and buried according to Jewish custom.

But if the Jews at Rome were quiet under imperial rule, not so those millions living in the province of Judea, which at the time of Nero's accession was composed of Judea proper, Samaria, Galilee and Perea, beyond the Jordan. They chafed under the political and fiscal domination of the Romans. In opposition to the conservative peace-at-any price leaders, the party of patriotic Zealots, led by Eleazar, was ready for revolt against Rome. When the uneasy peace was broken in 60 C.E. with a riot between Syrian Greeks and Jews living in Caesarea, the seat of government, Nero ruled in favor of the Greeks. Shortly afterwards, however, in a dispute between the Jewish King Herod Agrippa II (to whom Nero had given vast additional territory) and the guardians of the Second Temple, Nero, influenced by Poppaea, decided against Agrippa. The incidents piled up, and the bloody massacres of the ruthless procurator Gessius Florus (64-66) precipitated the revolt. Nero did not heed the warning of the responsible governor Cestius Gallus, who pointed out that three million Jews demonstrating in Jerusalem during the Passover of 66 could not be ignored in their plea for a just administration. To Gallus's warning he replied: Should Nero, whose triumphs surpassed those of Pompey, Caesar and Augustus, fear Judea?

With the decision of the Jews to stop the customary daily sacrifice to Nero in the Temple, the revolution began. The first phase of the Great War that followed was a defensive triumph for the Jews; despite bloodshed up and down the land, despite internal dissensions among the defenders of the city, Jerusalem held, and Cestius Gallus was routed. Nero, amusing himself in Greece, became suddenly serious when he heard of his general's rout and death. He then appointed, in 66, the great general Vespasian to proceed against the Jews. Before Vespasian completed the conquest, Nero had killed himself when the legions of Gaul revolted.

The sudden disappearance of Nero gave rise to the legend that he still lived and would return; at various times there actually appeared pretender Neros. In the Apocalypse written shortly after his death, it is predicted that Nero would return as Antichrist. But the Messianic idea was known to the Roman world, and Suetonius wrote that Nero had been assured that he would be "King of Jerusalem." Stories of Nero's return were current also among Jews. The Talmud tells a legend as to why Nero sent Vespasian against the Jews and tells, too, that Nero was converted to Judaism and that from him was descended Rabbi Meir, who apparently seems to have been a descendant of proselytes.

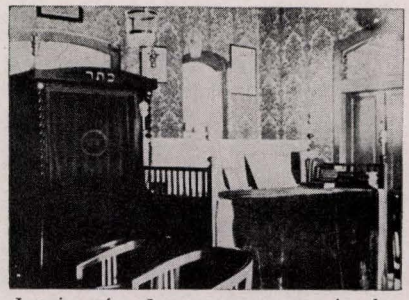
NETHERLANDS EAST INDIES, the possessions of The Netherlands in Malaysia, comprising the large islands of Java, Sumatra, Celebes, part of Borneo,



Interior of a Javanese synagogue in the Netherlands East Indies

and numerous smaller islands, with a population of sixty million, of whom, in 1940, about 1,100 were Jews. It was alleged by Werner Sombart (*The Jews and Modern Capitalism,* 1913) that the part taken by the Jews in the enterprises of the Dutch East India Company, founded in 1602, with headquarters at Batavia, Java, was very important, but more recent researches established the fact that their contribution to the original capital was insignificant, "4,800 florins out of a total of 6,500,000, or less than one-tenth per cent—approximately proportionate, that is, to their actual numbers in relation to the general population. Moreover, Jews were rigorously excluded from the administration of the Company until the Age of Emancipation had begun to dawn. It was only long after the original establishment, when the institution had passed its apogee and the Amsterdam Jews had lost their pioneering spirit, that they began to invest their funds in its stocks on a large scale, for the sake of security: a procedure which was to entail almost fatal consequences to the community as a whole at the time of the great slump in the eighteenth century, when the shares fell to one-tenth of their previous level, never to recover" (Roth, Cecil, *The Jewish Contribution to Civilization,* 1938, p. 237).

In the late 1850's Jacob Saphir, a rabbi from Jerusalem, visited Java and learned there through a merchant from Amsterdam of the existence of Jews at Batavia. He met there twenty persons of Dutch and German origin who, however, concealed their Jewish origin. Some of them had served in the Dutch colonial military forces, and most of them were married to non-Jewesses. Saphir met Jews also in Semarang and Surabaya. He wrote to the communities in Jerusalem and Amsterdam, requesting them to send a rabbi to the Jews in Java to instruct them in the Jewish law, the knowledge of which they had lost completely. The Amsterdam Community thereupon despatched a rabbi to Java, who organized congregations in Batavia and Semarang, but nothing is known about their further development.

In 1921 Rabbi Israel Cohen, of London, on a propaganda tour for the Jewish National Fund, visited Java, and estimated the number of Jews living there at 2,000, most of whom, however, concealed or even denied their Jewish origin. The majority of them were Sephardim from Baghdad; the rest were Europeans. They played an important part in the commercial development of the country, and several of them occupied governmental posts, but there existed no Jewish life in the communal sense, mixed marriages were frequent, and there was not even a synagogue in Java. On the high holy days religious worship was held in private houses or public halls in the three or four largest centers. There was a Jewish cemetery in Surabaya. Outside of Batavia, Jews lived at Surabaya, Semarang and Bandoeng. Cohen reported the existence of a few struggling Zionist societies; anti-Semitic propaganda was carried on by one of the local papers, *Nieuws van den Dag.* His belief that Jan Petersen Coen, one of the earliest administrators of Surabaya, was of Jewish descent was erroneous.

Refugees from Russia settled in Batavia and Surabaya in the early 1920's, and small numbers of German refugees came thither after 1933, among them an engineer from the Neckar region. Outside of Java, a few Jews were reported living on Madura, Sumatra, Celebes and Borneo. In 1941 some Polish Jewish refugees were admitted to the archipelago. In addition, the Netherlands government in exile paid for the transportation of about 100 Dutch Jewish families to the Netherlands East Indies, and the American Jewish Joint Distribution Committee allocated a large sum of money to help meet the costs of settling these families.

NETHERWORLD, *see* SHEOL.

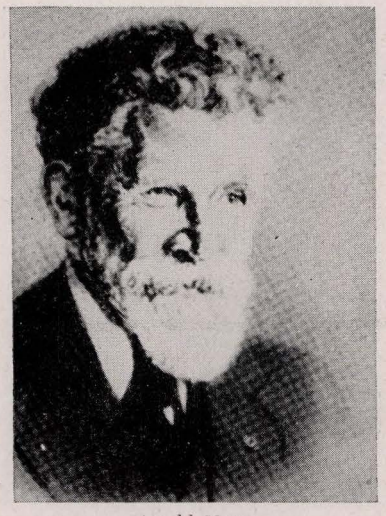
NETHINIM, a class of Temple servants mentioned in the Biblical books of *Ezra, Nehemiah* and *Chronicles.* The name means "the given ones," and denotes persons *given,* or *appointed* to the sacred service. The Nethinim were assistants of the Levites, performing the more menial chores. They are classed beside doormen and choristers, dwelt in special quarters (*Neh.* 3:31), were under the supervision of overseers (*Neh.* 11:21) and, like other Temple officials, were exempt from tax, tribute or toll (*Ezra* 7:24). Most of them lived within the Temple precincts, but some were to be found also at Ophel, the part of the eastern hill of Jerusalem just south of the Temple, and in outlying districts.

The origin of the order is obscure. *Ezra* 8:20 traces it to King David. The most probable view is that the Nethinim were prisoners-of-war assigned to Temple duties. In favor of this is the direct reference to such a practise in *Joshua* 9:23, 27, where Joshua is said to have *given* the captured Gibeonites to the service of the sanctuary. Moreover, it is noteworthy that in later Jewish law the Nethinim were classed with bastards and forbidden to marry outside of their own order (*Kid.* 3:12; *Yeb.* 2:4), while the Syriac Bible renders the term by the word "aliens."

There are, however, several alternative explanations:

(1) The Nethinim have been compared with a Babylonian order of temple servants called *shirku.* This word likewise means "given one," and the duties of the two orders correspond remarkably. Both perform menial chores, both are forbidden to marry outside of their class, both are controlled by overseers, and both live in special quarters.

(2) The Nethinim invite comparison, if only indirectly, with the female *lawiât* of the early North Arabian sanctuary of El-Ola. This term, which means "acolytes," has been associated by Grimme with the Hebrew Levi, and both in turn connected with the verb *lavah* "to loan," in the sense of



Arnold Netter

"one loaned to the temple." The Nethinim and the Levites would thus have stemmed from a single ancient institution, and this would explain their Biblical relationship.

(3) Joseph Jacobs suggested that the Nethinim were the offspring of the Kedeshoth, or Temple harlots. There is, however, no solid evidence in support of this view.

(4) Montgomery would see in the Nethinim Temple slaves imported through the South Arabian slave traffic. While it is true, however, that many of those listed by *Ezra* and *Nehemiah* bear exotic names, there is nothing to connect these specifically with Arabia, and it must therefore be supposed that that country was at best a center of their distribution, but not of their origin.

NETILATH YADAYIM, *see* ABLUTIONS.

NETO, ISAAC, first Haham or rabbi of the Jewish community of Surinam (place and date of birth and death unknown). He is to be distinguished from the Isaac Neto (son of David Neto) who became chief rabbi of London in 1701, as well as from the Isaac Nieto who (born about 1575 in Ferrara, Italy) went to Mexico, where he was involved in a trial by the Inquisition and was subsequently converted to Catholicism. Isaac Neto was educated at the institution which was founded by the rich De Pintos at Rotterdam and transferred to Amsterdam after De Pintos' death. Neto studied there together with David Neto, later chief rabbi, with Josiah Pardis, and with Jacob Abendana, who translated Judah Halevi's *kuzari* into Spanish. For several years Neto held the position of teacher and preacher in various charitable institutions of the community of Amsterdam, and in 1674 was called to Surinam. He was succeeded by Abraham David de Pardo, the first on the preserved list of the names of the rabbis of Surinam.

Lit.: *Publications of the American Jewish Historical Society,* No. 3 (1895) 18-19.

NETTER, ARNOLD, physician, communal worker, and president of the Alliance Israélite Universelle, b. Strasbourg, France, 1855; d. Paris, 1936. In 1885 Netter became chief of the clinic at the Faculty of Paris, and in 1886 chief of the laboratory of hygiene. In 1889 he was appointed assistant professor at the Faculty of Medicine, physician to the Tenon Hospital in 1894, and physician to the Trousseau Hospital in 1895. Two years later he was appointed to the chair of experimental and comparative anatomy. Proust, who, together with Bourges, had collaborated with Netter in writing the *Traité d'hygiène,* was succeeded by his disciple Netter in 1892 as a member of the Academy of Medicine. In the same year he was made a chevalier of the French Legion of Honor for his distinguished services during the cholera epidemic, and later he became a commander.

Most of Netter's writings represent contributions to the *Comptes rendus de la société de biologie,* to the *Comptes rendus de la société médicale des hospitaux,* and to the *Archives générales de médecine.* He treated especially the diseases of the lungs and pleura, epidemic cerebro-spinal meningitis, pathogenic microbes of the buccal cavity and the digestive tube, children's diseases, sleeping sickness, and vaccination against diphtheria. His other works include: *Nouveau traité de médecine et de thérapeutique* (1911); *La méningite cérébro-spinale; La bactériologie des obites mogennes suppurés; La peste et son microbe.*

For many years Netter was active in Jewish education, philanthropy and organization. He was a member of the committee on Jewish schools of Paris, and of the Supreme Council of Public Hygiene of France. In 1935-36 he served as president of the Alliance Israélite Universelle. Until his death he served as a member of the board of directors of the Jewish Colonization Association.

NETTER, CARL LEOPOLD, industrialist and communal worker, b. Bühl, Germany, 1864; d. Baden-Baden, Germany, 1922. Netter entered his father's firm (Wolf Netter and Jacobi) at Strasbourg, and after removing its central seat to Berlin, developed it to one of the most important plants in Germany's iron industry. Netter was a founder of the metal exchange of Berlin, a member of the chamber of commerce and a trustee of the Commercial Academy of Berlin; he received an honorary degree from the University of Heidelberg. In 1911 he attracted attention through a lecture on the organization of the iron industry. His main interests were devoted to Judaism. He was a member of the directorate of the Jewish community of Berlin, represented the community in the Jewish Colonization Association, and collaborated in the founding of the Jewish hospital of Berlin, the Hilfsverein der Deutschen Juden, the I.C.A., the Academy of Jewish Science, and the Centralverein Deutscher Staatsbürger Jüdischen Glaubens.

NETTER, CHARLES, merchant and philanthropist, b. Strasbourg, France, 1826; d. Mikveh Israel, Palestine, 1882. Scion of an Alsatian Jewish family of rabbis, he was early interested in the problems of Jewish life. In his Paris home there took place in 1859 the first meetings which, later, resulted in the founding of the Alliance Israélite Universelle. In 1878, delegated by the Alliance to the Congress of Berlin, he fought for the recognition of the political rights of the Jews in the new Balkan countries. At the conference of Madrid (1880) he asked protection of the Jews in Morocco. In

1881 he spent several months in Brody to organize relief work for the emigration or reinstallation of the Russian Jews who had been persecuted and expelled from their homes.

His main work, however, was the regeneration of the Jews in Palestine, and the improvement of living conditions in that country by means of farming. His efforts resulted in the erection of an agricultural school near Jaffa in 1869. A year later he obtained from the Sultan the firman authorizing the establishment of the institute, and granting 3,000 dunams of land. The school was named Mikveh Israel (Hope of Israel). Until 1873 Netter remained in Mikveh Israel to supervise the preparatory work. He returned there later for long stays. On one of his visits he died, and was buried on the school grounds.

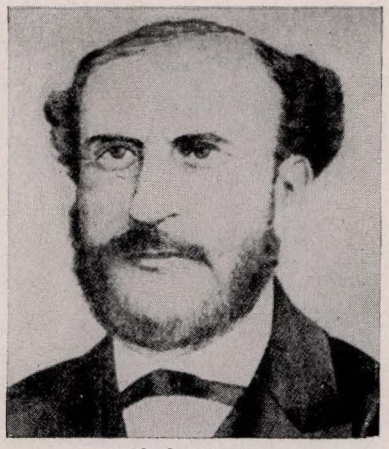
Lit.: Jaari-Poljeskin, J., *Charles Netter, His Life and Work* (Hebrew; 1926); Leven, N., *50 Years of History, the Alliance Israélite Universelle* (1911-20), especially vol. 2, pp. 295, 417; *The New Palestine,* May 18, 1928.

NETTER, NATHAN, rabbi and historian. He was graduated with the Ph.D. degree from the University of Strasbourg in 1891, and in the same year became rabbi of Bouxwiller, in Alsace. In 1898 he was appointed rabbi of Sarreguemines, and in 1900 rabbi of the important community of Metz. Aware of the difficulties confronting a rabbi at Metz at a time when this town was under German control and the great majority of the population, including Netter himself and most members of the Jewish community, sympathized with France, Netter looked after the interests of his community vis-à-vis the German government and strove to prevent any charge of disloyalty. He also had to cooperate with the Jewish communities and organizations of the rest of Germany, gaining the confidence of the German government, which confirmed his election to the Upper Chamber of Alsace-Lorraine in 1916, and became highly esteemed in France as well. Even the French nationalist Maurice Barrès paid respect to Netter for his attitude during the years of the German occupation of Metz.

When Metz was reunited with France, Netter was appointed chief rabbi of the Jewish consistory of the department of Moselle; in this office he fostered the conservation of the small Jewish communities of Lorraine. After the Nazis came to power in Germany, Netter took an active part in rendering assistance to Jewish refugees, especially from regions contiguous to the French frontier.

Netter's works include: *À travers l'antiquité juive* (1924), a popular history of the Jewish people to the destruction of the Second Temple; *Israel et son Talmud* (1926), a history of the Talmud; *La patrie absente et la patrie retrouvée* (1929), a patriotic manifestation crowned by the Académie Française; *Vingt siècles d'histoire d'une communauté* (1938), a valuable history of the Jewish community of Metz.

NETTER, YVONNE, attorney, feminist, and communal worker, b. Paris, 1889. She studied at the Sorbonne, intending to become a teacher. During the first World War she nursed wounded soldiers in a lazaretto in the army zone. After the War she was graduated as a doctor of law from the Sorbonne, and practised in the Paris courts. She was president of the Société de secours mutuel des dames israëlites, and vice-president of the Union des sociétés de secours mutuel juives. She directed the organizing of the



Charles Netter

French feminist movement in Paris. In 1911 she married Pierre Gompel, but after her divorce a few years later resumed her maiden name.

When German Jewish refugees streamed to France after the Nazis came to power in 1933, she took an active part in the organizing of a relief institution, and protected many of them against unjustified measures on the part of the French police. She organized charitable institutions after the outbreak of the second World War. When France was defeated in June, 1940, and the Pétain government issued anti-Jewish laws, she was forced to resign her attorneyship and left Paris for Southern France. Yvonne Netter wrote: *L'indépendence de la femme mariée* (1923); *Le travail de la femme mariée* (1923); *Le code de la femme* (1926 and 1930).

NETTL, PAUL, musicologist, b. Hohenelbe, Bohemia, 1889. He studied musicology with Rietsch, and theory with Keussler. In 1913 he was appointed music critic of the *Deutsche Arbeit* and became instructor (1920) at the Musicological Institute of the German University of Prague, a post he held for many years. In 1937 he became music director of the leading radio station in Prague. In November, 1939, he came to the United States, shortly thereafter joining the faculty of the Westminster Choir School in Princeton, N. J.

Nettl was the author of several valuable books on music, including: *Über den Ursprung der Musik* (Prague, 1920); *Alte jüdische Spielleute und Musiker* (Prague, 1923); *Musik-barock in Böhmen und Mähren* (Prague, 1927); *Das Wiener Lied im Zeitalter des Barock* (Prague, 1934); *Mozart in Böhmen* (Prague, 1938). He contributed articles on music to the foremost music journals of the United States and Europe. His first book written in English and published in the United States was a history of music for the dance.

NEUBAUER, ADOLF, orientalist and bibliographer, b. Nagybittse, Hungary, 1831; d. London, 1907. He went to Paris in 1857, and remained there until 1864, except for a period when he served in the Austrian consulate at Jerusalem and at the same time carried on his researches. At Paris he had the opportunity of examining the Imperial Library and of meeting such scholars as Salomon Munk and Ernest Renan. In 1861 he began to publish scholarly articles in the *Allgemeine Zeitung des Judentums* and the *Journal Asiatique,* including extracts from a lexical work of David ben Abraham of Fez (10th cent.) which he had discovered in a Karaite synagogue in Jerusalem. In 1864 he was summoned to the Asiatic Museum at St. Petersburg to examine the Karaite manuscripts collected

Carl Neuberg

by Firkovich; the results of this investigation were published in his *Aus der Petersburger Bibliothek* (1866). In 1863 he won the prize offered by the French Académie des Inscriptions et Belles-Lettres for a critical exposition of the geography of Palestine according to the Talmud and other Jewish literature; this was published as *La Géographie du Talmud* (1868), and established Neubauer's scholarly reputation.

In 1868 he was made a member of the library staff of the Bodleiana at Oxford, where he served until 1900; from 1884 he was lecturer at the same university. He compiled the well-known catalogue of the Hebrew manuscripts of the Bodleiana (1886; the 2nd volume was finished by A. Cowley, 1905). In addition to numerous articles in scholarly periodicals, he wrote: *Notice sur la lexicographie hébraïque* (1863); *Zwei Briefe von Obadjah aus Bartinora* (1863); *Un vocabulaire hébraico-français* (1871); *Abraham Ha-Babli* (1878); *Berichte an den französischen Kultusminister über mehrere hebräische Handschriften in Petersburg, Spanien, Portugal, Süd-Frankreich, Italien, Schweiz* (1880); *Jewish Interpretations of the Fifty-Third Chapter of Isaiah* (1876-77), and edited the following works: the Arabic text of the Hebrew dictionary of Abul Walid; the Aramaic text of *Tobit* (1887); the important *Mediaeval Jewish Chronicles* (vol. 1, 1887; vol 2, 1895); *Chronique samaritaine* (text with French translation, 1869); *Perushe* (2 vols. Hebrew and English, 1882). He issued, together with Cowley, parts of the newly discovered Hebrew text of *Sirach*. His *Les rabbins français du commencement du quatorzième siècle* (1877) and *Les écrivains juifs français du XIVe siècle* (1893), published by the French Academy as vols. 27 and 31 of its series *Histoire littéraire de la France,* appeared, in accordance with the rules of this society, under the name of its editor, Ernest Renan. The University of Heidelberg conferred an honorary doctorate upon Neubauer, and the Madrid Academy of History made him an honorary member.

Lit.: *Magyar Zsidó Lexikon,* p. 650; Lipkind, G., in *Jewish Encyclopedia,* vol. 9, pp. 234-35; Adler, Elkan N., "Bibliography of the Writings of Adolf Neubauer," *Studies in Jewish Bibliography . . . in Memory of Abraham Solomon Freidus* (1929) 31-54 (additions to this bibliography were made by Boaz Cohen in *Kiryath Sefer,* vol. 10, 1934, pp. 365-71).

NEUBERG, CARL, biochemist, b. Hannover, Germany, 1879. He received the Ph.D., M.D., LL.D., D. Ing., D. Chem. and D. Biol. degrees, was an honorary member of the Academy of Science in Barcelona, Göttingen, Halle, Copenhagen, Leningrad, Lund, Prague, Rome, and Upsala, and received the Emil Fischer, Delbrück, Berzelius, Scheele, Leblanc and Pasteur medals. In 1919 he became professor at the University of Berlin, and in 1920 director of the Kaiser Wilhelm Institute for Biochemistry, in Berlin—Dahlem.

Neuberg conducted research on different kinds of sugars and albumin chemical changes, especially on the process of fermentation and the bio-chemical effect of light. He prepared artificial petroleum, discovered the ferments carboxylas and carboligas, various sulphates and phosphates, and discovered the second, third and fourth forms of sugar fermentation. During the first World War he discovered the glycerin substitutes per- and perkaglycerin, and the method of making glycerin by means of fermentation. In the first and second World Wars the Axis Powers used this material for munitions. Butylglycerin, an important item in the preparation of synthetic rubber, is prepared according to a discovery of Neuberg.

After Neuberg's dismissal as president of the Kaiser Wilhelm Institute in 1938, the international journal *Enzymologie* dedicated to him a two-volume textbook, with supplements by his pupils and colleagues in several countries. Neuberg then became the guest of the University of Amsterdam. In 1940 he was professor at The Hebrew University, Jerusalem, and in 1942 research professor at New York University.

Neuberg's works, articles and essays, numbering about 1,000, include: *Lehrbuch des Mineral-Stoffwechsels; Chemie des Harns und der Körperausscheidungen; Die Beziehungen des Lebens zum Licht.* He founded and edited the *Biochemische Zeitschrift,* of which he revised 280 volumes during 1906 to 1938.

NEUBERGER, DAVID M., lawyer, b. New York city, 1866. His father, Jacob (d. 1909), came to the United States in 1849 with Carl Schurz; subsequently he became associated with Abraham Lincoln in Illinois and later, in New York, worked with Mayor George Opdyke. His mother, Rosalie Stein (d. 1910), born in Denmark, was a writer. Engaged in the private practice of law in New York from 1888 on, David M. Neuberger figured in several notable cases: in 1933 he successfully represented the widow of Clare Briggs in litigation over the will of the cartoonist. About the same time he was instrumental in recovering over $1,000,000 for the holders of South American bonds. Neuberger drew up the oil pollution bill passed by Congress in 1924; he also sponsored the resolution which Congress passed for the convention of maritime nations held at Washington, D. C. in 1926; his work was commended by Presidents Warren G. Harding and Calvin Coolidge. He was still in private law practice in 1942. Neuberger was known as a connoisseur and collector of paintings.

NEUBERGER, JULIUS FREDERICK, surgeon and naval officer, b. Portland, Ore., 1890. The son of Moses Neuberger, pioneer settler of Portland, Julius received his medical degree from the University of Heidelberg in 1914, and was graduated from the United States Naval Medical School the following year; in 1922 he studied in the Army School of Aviation medicine, and in that year was appointed chief surgeon of the eye, ear, nose and throat department of the Naval Hospital in New York. He went to Nicaragua

(1928) where he was chief surgeon in charge of the aviation section of the United States Marines. He was awarded the Nicaragua Medal of Merit and the United States Marine expeditionary medal. After returning to the United States, Neuberger served at Newport, R. I., and as lieutenant commander, was designated (1933) head of the School of Aviation Medicine and executive medical officer of the third naval district, in New York city. There he remained until his retirement; in 1939, as commander, he returned to active duty.

In addition to pursuing his naval duties, Neuberger was lecturer at the New York University College of Dentistry. In 1935 he was United States delegate to the Eighth International Congress of Military Medicine and Pharmacy in Brussels, Belgium.

NEUBURGER, MAX, historian of medicine, b. Vienna, 1868. He was at first a neuropathologist, but later devoted himself exclusively to the history of medicine, which he taught at the University of Vienna from 1898 on, becoming associate professor in 1917.

Neuburger, a member of learned societies in Europe and the United States, was honored on several occasions. On his sixtieth birthday (1928) a festival volume was published to which fifty internationally known scholars contributed in German, English, French and Italian. Neuburger left Austria for England in 1938 after the occupation of the former by the Germans.

His many works include: *Die historische Entwicklung der experimentellen Gehirn- und Ruckenmarksphysiologie* (1897); *Die Vorgeschichte der antitoxischen Therapie* (1901); *Handbuch der Geschichte der Medizin* (with Pagel; 1901-13); *Geschichte der Medizin* (vol. 1, 1906; vol. 2, 1910; English trans., 1910 and 1925); *Die Medizin im Flavius Josephus* (1919); *Die Lehre von der Heilkraft der Natur im Wandel der Zeiten.*

NEUDA, FANNY (née Schmiedl), authoress, b. Loschitz, Moravia, 1819; d. Merano (now Italy), 1894. The wife of Abraham Neuda (1812-54), rabbi of Loschitz, she wrote on Jewish family life, prayer and religion. Her works include: *Stunden der Andacht, ein Gebet- und Erbauungsbuch für Israel's Frauen und Jungfrauen* (Prague, 1855 and 1869; English trans., *Hours of Devotion,* New York, 1866); *Naomi; Jugenderzählungen aus dem israelitischen Familienleben.*

NEUFELD, CHARLES, merchant and explorer, b. Dombrowken, Prussia, 1856; d. Beelitz, near Berlin, 1918. In 1880 he went to Egypt as a merchant, participated in various expeditions to the Sudan to buy gum and ostrich-feathers, and was employed by the Anglo-Egyptian high command's information service. In 1885 he was attached, as interpreter, to the Gordon Relief Expedition which, however, arrived too late.

At the beginning of 1887 Neufeld, heedless of British warning, accompanied a mercantile expedition bound for Kordofan. The caravan, betrayed by Arabian guides, was captured by the dervishes, who killed all Neufeld's companions, but spared his life. For twelve years he was prisoner of the Khalifa Abdullahi, successor of the Mahdi, and with the exception of thirteen days wore fetters during his entire captivity. When Kitchener was preparing his expedition to crush the dervishes, Neufeld, who never lost communication with his friends in Egypt, sent him valuable military information at the risk of his life. Immediately after the defeat of the dervishes, Neufeld was released and went to England, where he published the story of his captivity, *A Prisoner of the Khalifa* (1899). Subsequently he returned to Germany. During the first World War he fulfilled important missions in Arabia and Syria for the German high command.

NEUGASS, MIRIAM N., *see* NEWMAN, ISADORA.

NEUGEBAUER, LÁSZLÓ (DE ASZÓD), poet and translator, b. Pest, Hungary, 1845; d. Budapest, 1919. He lived at Vienna as an official of the general secretariat of the Austro-Hungarian Bank, and was president, subsequently honorary member, of the Association of Hungarians in the Austrian capital. Neugebauer published German versions of the classics among Hungarian poets, such as Sándor Petőfi, János Arany, József Kiss, Mihály Tompa and János Vajda. His German Petőfi had three editions. Other of his translations include the fiction of Kálmán Mikszáth, Ferenc Herceg and Zoltán Ambrus, as well as some plays. Composers who wrote music for his songs include Franz Liszt, Karl Goldmark and Jenő Hubay. He was one of the founders of the Petőfi Literary Society, and a member of the Kisfaludy and Kemény Zsigmond literary societies, of Budapest. In 1890 Hungarian nobility, with use of the addition "de Aszód," was conferred on him.

NEUGRÖSCHEL, MENDEL, see NEIGRESHL, MENDEL.

NEUMAN, ABRAHAM AARON, rabbi, historian, and president of the Dropsie College for Hebrew and Cognate Learning, b. Brezan, Austria, 1890. The descendant of an old rabbinic family, he was brought to the United States at the age of eight, attended several New York parochial schools, and graduated from Columbia University (1909). He was ordained as a rabbi by the Jewish Theological Seminary of America in 1912. He received the A.M. degree from Columbia University the same year; in 1914 the D.H.L. degree was awarded him by the Seminary.

Neuman began his career as educator before entering the rabbinate. He became instructor of history at the Teachers' Institute of the Jewish Theological Seminary of America in 1912, and in 1913 joined the faculty of Dropsie College, where he was made associate professor in 1923, and professor in 1934. In 1941, after the death of Cyrus Adler, he succeeded the latter as president.

Neuman served Congregation Bnai Jeshurun, of Philadelphia, from 1919 to 1927, and in the latter year became rabbi of Mikveh Israel Synagogue, the second oldest pulpit in America, which position he still occupied in 1942. Neuman became noted as a lecturer and orator, and in his historical work distinguished himself by the use of rabbinic responsa as a source of history. His two-volume book, *The Jews in Spain: Their Social, Political and Cultural Life During the Middle Ages* (published at Philadelphia in 1942), was a pioneer work in which the attempt was made for the first time to reconstruct the social life of the Jews in Spain on the basis of rabbinic responsa as well as the archive material published in recent years.

Neuman was an able exponent and interpreter of the cause of Jewish learning. His biography, *Cyrus Adler,* published in 1942 by the American Jewish Committee and the Jewish Publication Society of America, was an exposition of the development of higher Jewish

Abraham Aaron Neuman

learning in America. Since his accession to the presidency of the Dropsie College, two new departments were added: Jewish Philosophy and Hebrew Literature, and the History of Semitic Civilization. *The Jewish Quarterly Review,* published by Dropsie College, was, from 1942 on, edited by Neuman, together with Professor Solomon Zeitlin.

As chairman of the College Committee of Gratz College and vice-president of its Board of Overseers, Neuman played a leading part in the reorganization of this institution in 1928 and in its present extended educational program. He was a member of the Publication Committee of the Jewish Publication Society of America, and recording secretary of the American Jewish Historical Society. He was associated with the *Universal Jewish Encyclopedia* as a collaborating editor in the department of history. Under his leadership the United Synagogue of America erected the Palestine Synagogue Center in Jerusalem. In the national election of 1940 Neuman served as a Democratic presidential elector for the state of Pennsylvania.

Beside the works already noted, Neuman contributed reviews and articles to the *Jewish Quarterly Review,* the *Publications of the American Jewish Historical Society, The Review of Religion, The Year Book of the American Philosophical Society* and other magazines. His monographs included *The Relation of Hebrew Scriptures to American Institutions,* in which he indicated the influence of the Old Testament upon the Puritans of New England and the part it played in shaping American democracy. ISAAC LANDMAN.

NEUMANN, ABRAHAM, painter, b. Sierpe, Russian Poland, 1873. He lived in Germany for many years, then moved to Vienna in 1914. In 1918 he went to New York and subsequently to Palestine, where he remained and identified himself with the representatives of the new Palestinian art. Neumann's best work was done in landscape and still life. In his exhibition in Berlin (1913) he won particular attention for his powerful *Winter Scene,* for a splendid still-life of apples, as well as for scenes of the picturesque old city of Goslar, in the German Harz mountains. Neumann's art was even more powerfully expressed in his dreamy, unusually impressive studies of Jewish villages in what was then Austrian Galicia, and in his winter scenes from the region of Zakopane and the Tátra Mountains.

Lit.: Cicerone, No. 5 (1913) 106.

NEUMANN, ALFRED, author, b. Lautenburg, West Prussia, Germany. He lived in Munich, later in Florence, Italy, and in 1942 resided in California. Neumann's literary significance lies in the field of the historical novel. Here he describes different periods in individual lives. Neumann developed a technique of intensive and colorful descriptions. His most characteristic novel, *Der Teufel,* was translated into twelve languages (English trans., *The Devil,* 1925). This novel received the Kleist Award in 1927. It deals with the life of Louis XI of France. The action of *Der Patriot* (1915) takes place in Russia, at the time of Emperor Paul. This story was dramatized by the author. The main character of *König Haber* is a Jewish figure; the work was dramatized under the title *Haus Danieli.*

Neumann's stay in Florence familiarized him with the period of the Risorgimento, which he chose as background for his novels *Rebellen* (1928; English trans., *The Rebels,* 1929), *Guerra* (1929), and *Der Held* (1930). The action of his latest great novel, *Der neue Cäsar* (1925; English trans., Eden and Cedar Paul, *Another Caesar*), takes place at the time of Napoleon III. A sequel to this novel, having as its historical background Paris during the siege and the commune of 1872, was published at New York under the title of *The Friends of the People* (1942).

In his youth Neumann published also two lyrical works, *Die Lieder vom Lâcaeln und der Not* (1919) and *Neue Gedichte* (1920), and translated old and new French poetry and works by Lamartine, de Vigny and de Musset.

RUDOLF KAYSER.

NEUMANN, ANGELO, opera impresario, b. Vienna, 1838; d. Prague, 1910. He made his musical debut as a lyric tenor in 1859, following which he sang in leading opera houses in Russia, Germany and Austria, appearing from 1862 to 1876 at the Vienna Royal Opera. In 1876 he was called to Leipzig to direct the Opera there, holding this post until 1882, when he founded his own opera company and traveled with it throughout Germany, Austria and Italy in performances of the Wagnerian music dramas. From 1882 to 1885 he served also as manager of the Bremen Opera, and from 1885 until his death was director of German Opera at the Landestheater in Prague. His great contribution to music was his stout-hearted espousal of the cause of Richard Wagner, whose music dramas he helped to popularize throughout Europe. He wrote a book of reminiscences about Wagner (1907) which was translated into English.

NEUMANN, CARL, historian, b. Mannheim, Germany, 1860; d. Heidelberg, Germany, 1934. He studied at the Universities of Göttingen, Berlin and Heidelberg, graduating in 1882. Going next to Basel, he became a disciple of the Swiss historian Jacob Burckhardt. Neumann combined the broad views of Burckhardt with the critical and philological methods which he had learned in the school of Waitz. This union of special inquiry and historical synthesis became the characteristic feature of Neumann's writings and lectures,

which influenced many German historians as well as the English-speaking world.

After intensive special studies in ancient Greek and Roman history, the civilization of the Byzantine Empire and of the republic of Venice, Neumann published (1894) an outstanding work, *Die Weltstellung des byzantinischen Reiches vor den Kreuzzügen,* revolutionizing many traditional views on history. He demonstrated the fallacy of contrasting the Middle Ages and the Renaissance, and proved the continuity in modern times of vital ideas inherited from medieval civilization. The book was translated into French and prefaced by Charles Diehl, who adopted Neumann's views, as did Ernst Troeltsch, German historian of religious thought. In the same year (1894) Neumann became lecturer at the University of Heidelberg. From 1904 to 1910 he was professor at the Universities of Kiel and Göttingen, and in 1911, after being baptized, he was appointed professor at the University of Heidelberg. In 1902 he published a notable monograph on *Rembrandt* which was reissued several times (4th ed., 1924).

In 1903, Neumann headed the public protest against restoration of the ruins of the castle of Heidelberg, issuing a manifesto which was followed by political repercussions in the grand duchy of Baden. He published also several studies on Jacob Burckhardt, and pamphlets on German art and esthetical pedagogics. Opposed to modern French impressionism, he advocated some form of artistic protectionism in favor of "Nordic" art. HUGO BIEBER.

Lit.: Jahn, Johannes, *Die Kunstwissenschaft der Gegenwatt* (1924); *Der Morgen* (1934).

NEUMANN, EDE, rabbi, b. Budapest, 1859; d. Nagykanizsa, Hungary, 1918. He studied at the Protestant Gymnasium, the University of Budapest (Ph.D., 1882) and the rabbinical seminary of that city, being the first rabbi to be ordained by that institution (1883). Upon his ordination he was called to the rabbinate of Nagykanizsa, which he held until his death.

Neumann, who, in the spirit of Abraham Geiger, reformed the ritual in his congregation, was considered the leader of progressive Hungarian rabbis. As president of the National Rabbinical Association he worked for a rabbis' pension institute, an effort thwarted by the first World War and Neumann's untimely death. He exerted influence on the curriculum of the rabbinical seminary, as well as on religious instruction in high schools. He contributed textbooks, wrote a history of the Jewish religion, *Zsidó vallástörténet* (2 vols., 1894-97), and a Hebrew grammar. In the city of Nagykanizsa he maintained inter-denominational goodwill, being president of the city committees for the care of the poor and of children, vice-president of the public health committee and president of the association for the promotion of education.

His first work, on the Joseph legend in Mohammedan literature (1881), was published by the ministry of education.

In addition to monographs in book form on the Nagykanizsa Jewish community and on Rabbi Moritz (Meyer) Kayserling, he published *Az asszir korszak profétái és a zsidók története* (The Prophets of the Assyrian Period and the History of the Jews; 1908). He edited *Magyar Izrael,* the journal of the Rabbinical Association, and contributed essays of merit to the *Magyar Zsidó Szemle, Allgemeine Zeitung des Judentums, Encyclopaedia Judaica* and the year books of the IMIT (Jewish-Hungarian Literary Society). He translated the three major prophets for the IMIT Bible edition.

ERNŐ NAMÉNYI, economist and author (b. Nagykanizsa, 1888), was a son of Ede Neumann, and a grandson of Moyitz Kayserling. Having studied law at several universities, including that of Budapest, he taught a collegiate course at the Commercial Academy in that city, and was deputy director of the National Trade Association. He published books dealing with the influence of emigration on the Italian financial market, on the Hungarian customs tariff and on the economic theory of advertising. In addition to essays of Jewish interest, published in the year books of the Jewish-Hungarian Literary Society, he wrote *Ein ungarisch-jüdischer Kupferstecher der Biedermeierzeit: Markus Donath* (1941).

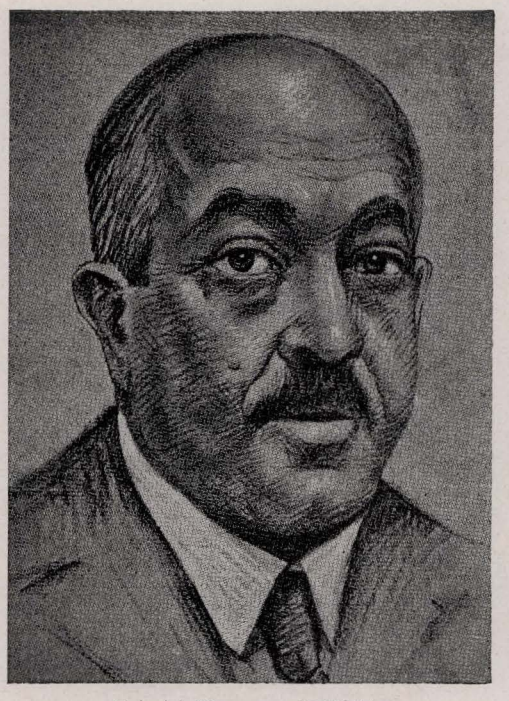
LAJOS NAMÉNYI, psychiatrist and author (b. Nagykanizsa, 1892), was another son of Ede Neumann. He studied medicine at the Universities of Budapest and Munich, and served on the staff of the Budapest Psychiatric State Hospital. He published *Neue Forschungen über den Stoffwechsel bei progressiver Paralyse* (1914), and several works in Hungarian on problems of eugenics, the education of problem children, and social psychiatry.

NEUMANN, HEINRICH (DE HÉTHÁRS), otologist, b. Héthárs, Hungary, 1873; d. New York city, 1939. While studying medicine at the University of Vienna (M.D., 1898) he specialized in the anatomy and pathology of the ear at the institute of Weichselbaum and at the private laboratory of Adam Politzer. From 1900 on the staff of the university clinic for diseases of the ear, nose and throat, he became chief of the clinic (1919) and full professor (1929). He was placed in charge (1912) of the otological department of the Franz Josef Ambulatorium. During the first World War Neumann won many distinctions as surgeon-major of the general staff. In 1918 Hungarian nobility, with the use of the addition "de Héthárs," was conferred on him. He treated crowned heads, including King Alfonso of Spain and Edward VIII of England, and many members of international aristocracy.

Neumann won the Lenval Prize at the International Medical Congress of Budapest (1908) with his work on ulcers in the small brain and painless trepanation without narcosis. Another life-saving operation which he introduced was that of the labyrinth.

He was strictly observant of Jewish law, and in his attitude toward the poor and suffering had manifested much of the humanitarianism of the great Jewish physicians. In 1938, imprisoned by the Nazis, he became leader and a source of comfort to his fellow prisoners. Upon his release he left for the Evian Conference, and in 1939 for New York city, to plead the cause of Jewish emigration from Austria. He lectured at several universities, including Princeton, as he had done, on previous occasions, at universities in New York, Chicago, Philadelphia, St. Louis and Cincinnati.

Neumann's published works include *Das otitische Kleinhirnabszess* (1905) and "Geschichte der intrakraniellen otitischen Komplikationen seit 1850" (F. Fremel, co-author), in Politzer, A., *Geschichte der Ohrenheilkunde* (vol. 2, Stuttgart, 1912). He collaborated on A. Denker and O. Kahler's *Handbuch der Hals-, Nasen- und Ohren heilkunde* (vol. 6, 1926), and wrote "Chirurgie des Ohres," in Eiselsberg, A. von, *Lehrbuch der Chirurgie* (1930), and the



Heinrich Neumann de Héthárs

chapter on syphilis of the ear in L. Arzt and K. Zieler's *Die Haut- und Geschlechtskrankheiten* (1935).

ANNA BETTELHEIM.

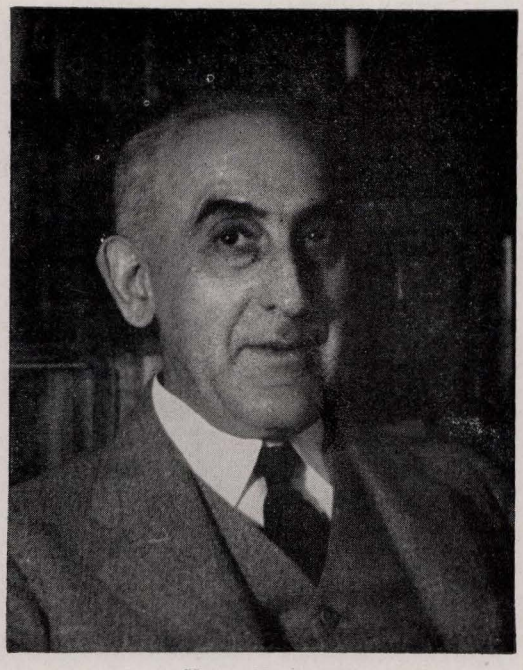
Lit.: *Jewish Chronicle* (London), Nov. 10, 1939, p. 10; Nov. 17, 1939, p. 7; *Opinion*, Dec., 1939; Fischer, I., *Biographisches Lexikon der hervorragenden Ärzte der letzten fünfzig Jahre*, vol. 2 (1932-33).

NEUMANN, HEINZ, leader of the German Communist Party, b. Berlin, 1902; d. Russia, 1937. He came from a well-to-do Jewish family; his father, Leonhard Neumann, was a grain merchant who published many articles, professing economic liberalism, in Berlin newspapers. Immediately after the first World War, Neumann entered the Communist Party, and became one of its most fanatical members. In 1921, at the age of nineteen, he was charged with organizing and directing strike movements and armed insurrections in the Ruhr valley and Hamburg. More than once revolutionary workers in northern Germany sacrificed their lives in order to save Neumann from being captured or shot by the police. Some of his Communist partisans considered him too reckless in fomenting rebellion or resistance. Neumann professed and practised the conviction that every armed insurrection of the workers contributed to the revolutionizing of the masses.

In 1925 he was called to Russia; from there he accompanied Borodin to China. In 1928 he returned to Germany and was appointed, together with Ernst Thaelmann, leader of the German Communist Party. In this post he attacked the government and the Socialist Party. After the Nazis came to power, Neumann escaped to Russia, where he was implicated in the struggle between Stalin and the opposition. In 1937 he was executed in the course of the purge.

Lit.: Rosenberg, Arthur, *Geschichte des Bolschewismus* (1932); Valtin, Jan., *Out of the Night* (1941).

NEUMANN, HENRY, educator, b. New York



Henry Neumann

city, 1882. After instructing in English and education at the College of the City of New York (1903 to 1911), he became leader of the Brooklyn Society for Ethical Culture. He founded the Society's Brooklyn school, and came to be regarded as a leading figure in ethical education. In 1933 he was chosen a leader in the Manhattan Society. During various summers, from 1908 on, he taught moral education at several of the country's largest universities; he was at the University of Hawaii in 1939. Neumann gained international reputation, and in 1912 acted as an American representative in the Hague congress of moral education leaders. Judge Ely Neumann was his brother.

His numerous articles and books include: *Education for Moral Growth* (1924); *The Drums of Morning* (1925); *Modern Youth and Marriage* (1929); *Lives in the Making* (1932).

NEUMANN, HUGO, jurist, b. Pyritz, Germany, 1859; d. Berlin, 1915. In 1888 he became a lawyer and was admitted to the highest Prussian court at Berlin. He was editor of the *Juristische Wochenschrift* from 1903 until his death. At the same time he edited the *Jahrbuch des deutschen Rechts*. In 1908 Neumann was elected permanent secretary of the Deutscher Juristentag. He published *Internationales Privatrecht* (1896), describing the doctrine of international civil law in the frame of a legislative project, and edited *Das bürgerliche Gesetzbuch* (1898-1900), the German civil code which came into force in 1900.

NEUMANN, ISIDOR, dermatologist, b. Misslitz, Moravia, 1832; d. Vöslau, near Vienna, 1906. In 1893 he became associate professor of dermatology and syphilology at the University of Vienna. Neumann published several treatises on skin diseases, and wrote: *Lehrbuch der Hautkrankheiten* (5th ed., 1880); *Atlas der Hautkrankheiten* (2nd ed., 1895); *Die Syphilis* (in Nothnagel's *Spezielle Pathologie und Therapie*, 2nd ed., 1899).

NEUMANN, JOSEPH, jurist and numismatist, b. Prague, 1815; d. Prague, 1878. He served as an Austrian law official after 1837, but devoted much of his time to music, botany and numismatics. He was an authority on copper coins of the 17th, 18th and 19th centuries. In 1876 Neumann gave to the imperial numismatic museum at Vienna his collection of 20,000 copper coins of Europe, Asia, Africa and America. He published *Beschreibung der bekanntesten Kupfermünzen* (6 vols., 1858-72), describing 40,000 coins. His commentaries discussed the general historical background of coinage. Neumann contributed also to the knowledge of the medals of Bohemia through his studies *Reihenfolge der Joachimsthaler Münzmeister* (1866) and *Beschreibung der böhmischen Privatmünzen* (1870).

NEUMANN, JSRAEL BER, art dealer and publisher, b. Skole, Poland, 1887. Self-educated in art, he became a dealer about 1910, opening galleries in Munich and Berlin. In 1924 he settled in New York city, and engaged in promoting an interest in art among specialists and the general public as well. He lectured at the New School for Social Research, and in 1924 founded an artlovers' circle, introducing to Americans the pioneering works of 20th cent. European painters. In his New York gallery he also arranged exhibits of diverse works of art culled from numerous periods and places, thus promoting his main notion that "living" art is whatever is great in art, and not the contemporary.

Neumann was editor and publisher of Artlover Pamphlets and the Artlover Library. He issued *Living Art* (1930) and several books on single modern artists, including one on *Georges Rouault* (1930). For Hendrik Willem Van Loon's *R. v. R., the Life of Rembrandt van Rijn* (1939) Neumann selected and arranged the 150 illustrations.

NEUMANN, KARL EUGEN, Indologist, b. Vienna, 1865; d. Vienna, 1915. His father, the theatrical director Angelo Neumann, was baptized. A scholar without official appointment, Karl Eugen Neumann published, in a Buddhistic anthology (1892) texts which had not been previously translated into German. On his return from a long journey to India he worked at the British Museum in London, and published (1896-1912) several volumes of Buddha's sayings and monastic hymns. After his death his translations, up to then unnoticed even in the professional world, received wide recognition.

Among his works are: *Die Reden Gotamo Buddhos aus der mittleren Sammlung* (3 vols., 1896-1902); *Die Lieder der Mönche und Nonnen Gotamo Buddhos* (1899); *Die letzten Tage Gotamo Buddhos* (1911).

NEUMANN, KARL FRIEDRICH (until his baptism in 1818 called Bamberger), orientalist, b. Reichmannsdorf, Bavaria, 1793; d. Berlin, 1870. He studied at the University of Heidelberg and in Munich. His rationalistic interpretation of the Bible compelled his retirement from a teaching post at Speyer (1825). He then devoted himself to the study of Oriental subjects, notably Armenian. A collection of 12,000 Chinese books, the greater part of which he donated to the Bavarian government, as well as his vast knowledge of the Chinese language, were the fruits of a journey to China (1829-30).

In 1831 he was appointed professor of Armenian and Chinese at the University of Munich, where his lectures, including history, attracted a host of students. Expression of his liberal viewpoint in history branded him as a revolutionary, and he was again silenced in 1852. In the years following retirement he wrote (in Munich, and from 1863 on in Berlin) his principal works on recent Oriental and North American history.

His major published works are: *Geschichte der armenischen Literatur* (1836); *Die Völker des südlichen Russland* (1846 and 1855); *Geschichte des englisch-chinesischen Krieges* (1846 and 1855); *Geschichte des englischen Reiches in Asien* (2 vols., 1857); *Geschichte der Vereinigten Staaten von Amerika* (3 vols., 1863-66). He published two translations from the Chinese and Armenian, *Catechism of the Shamans* (1831) and *Vahram's Chronicle of the Armenian Kingdom in Cilicia* (1831), and English translations of other Armenian chronicles, printed by the Oriental Translation Fund, London. The journal of the Royal Asiatic Society (London, 1871) contains a full list of his works.

Lit.: *Allgemeine Deutsche Biographie,* vol. 23, pp. 529-30; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 4 (1930) 521-22.

NEUMANN, KÁROLY (DE GÁRDONY), economist and educator, b. Budapest, 1865; place and year of death unknown. He studied at the Universities of Budapest and Berlin. In 1910 he was appointed head of the department of railroads at the Hungarian ministry of commerce; at the same time he became honorary professor of the theory and law of transportation at the Oriental Academy of Commerce and subsequently at the School of Economics. He was also a member of the National Transport Board. Neumann embraced Christianity.

He wrote several volumes dealing with railroads and duty tariffs, also a volume on the Bern Agreement (1928). In English he published *The New Projects of Convention for the Regulation of the International Barricade of Goods, Passengers and Luggage.*

NEUMANN, MOSES SAMUEL, Hebrew author and educator, b. Bán, Hungary, 1769; d. Pest, Hungary, 1931. He was a pupil of Baruch Jeitteles at Prague. From 1799 on he tutored at Pozsony (Pressburg) and Vienna. From 1822 until his death he lived at Pest.

Neumann published *Biur Milloth Higgayon Lerambam* (with the Hebrew commentary of Moses Mendelssohn; 1822). His Hebrew poems *Shire Musar* (1814) and his drama *Bath Yiftah* (1815) revealed him as a classic scholar of the Hebrew tongue.

Neumann was author also of a number of pedagogical works in Hebrew, including: *Maagal Yosher* (3rd ed., 1831), a Hebrew grammar; *Hinnuch Leshon Ibrith* (1815), a theoretical and practical grammar; *Rosh Emunah* (1820), a book of religious instruction; *Hakaddur,* a mathematical geography. He also compiled Biblical stories and an elementary arithmetic. His *Michtebe Ibrith* (4th ed., 1834) was the first Hebrew-German letter writer. His pedagogical ideas were subsequently employed in religious instruction.

NEUMANN, ROBERT, novelist and critic, b. Vienna, 1897. At the outbreak of the first World War he was a youth of seventeen. He studied medicine, chemistry and German literature, and acted as a swimming coach. The cataclysm in Central Europe at the end of the War made Neumann's life a jumble of occupations typical of post-War Austria. His first literary attempts (*Gedichte,* 1919; *Zwanzig Gedichte,* 1923) remained unnoticed. He portrayed the disin-

David Neumark

tegration of those years, the frantic efforts of degraded human beings to regain their self-respect, in his novel *Die Sintflut* (English trans., *The Flood,* 1930).

The experiences of these years were exceeded by others on board a Dutch tanker bound for the Orient, on which Neumann served as a sailor. Chaos, wrought by the passions of the masses and by the crass unscrupulousness of the mighty, became the topic and the leading theme of his novels.

On his return to Europe he found that his first prose volume, *Mit fremden Federn* (literary parodies; 1927), had been printed. Among his novels, which were published in nineteen countries, *Zaharoff* (1935), a biography of the armament king, was best known. His books were burned in Germany, and after 1938 he was forced to leave Vienna, persecuted by the Nazis whom he had exposed. Thereafter he lived in London. In 1940 he published *By the Waters of Babylon.* In the portraits of ten Jews coming from all parts of Europe and America, all bound for a common destination, the land of Palestine, he assailed Jewish cowardice and glorified Jewish courage.

Neumann was author also of the short historical novel *Die Pest von Lianora* (1927); the literary parodies *Unter falscher Flagge* (1932); *Jagd auf Menschen und Gespenster* (an account of his adventures as a traveler); *Ship in the Night* (1930); *On the Make* (1931); *Mammon* (1932); *Passion* (the marriages of six great figures of world literature; 1932); *Struensee: Doktor, Diktator, Favorit und armer Sünder* (1935; English trans., *The Queen's Doctor,* 1936); *A Woman Screamed* (a pseudo-historical novel; 1938); *Scene in Passing* (1942). His works were translated into twenty-one languages.

NEUMANN, SALOMON, physician and hygienist, b. Pyritz, Germany, 1819; d. Berlin, 1908. He was one of the most determined advocates of the democratic demands of 1848 for political equality and for the social uplift of the masses. As physician, scientist and assemblyman for the city of Berlin for nearly fifty years (1859-1906), he sought to develop the social aspect of medicine, public hygiene and statistics.

Neumann fought vigorously against Jewish disabilities, and gave much time and thought to the promotion of Jewish learning. While a student he founded a society for the aid of Jewish college students, which continued to function up to the Nazi era. Upon entering the medical profession (1845) he refused to take the medical oath "in Jewish fashion," as had been customary, and thus brought about the abolition of this requirement in all Prussia. He took an active part in defense against anti-Semitism. From 1859 to 1903 he was president of the Berlin local committee of the Alliance Israélite Universelle.

Neumann, an enthusiastic admirer of Leopold Zunz, created (1864) the Zunz foundation, which he directed for more than forty years. He was a founder of the Hochschule für die Wissenschaft des Judentums, serving as president from 1895 to 1906. With a gift presented to him on his eightieth birthday he founded the Salomon Neumann Stiftung zur Pflege der Wissenschaft des Judentums. He was among the first to recognize the need for Jewish archives and contemporary historical sources.

Lit.: Bericht der Lehranstalt für die Wissenschaft des Judentums (1909) 39; Cohen, H., *Jüdische Schriften,* vol. 2, p. 425.

NEUMARK, DAVID, rabbi and scholar, b. Szczerzec, Galicia, 1866; d. Cincinnati, 1924. He was a very precocious child, entering Heder at the age of two and one-half years and beginning Gemara at six. In addition to an Orthodox education, he studied the Talmudic, philosophic and Cabalistic books left by his father, and became acquainted also with modern Hebrew literature. From 1887 to 1892 he studied at Lemberg, after which he entered the University of Berlin and the Hochschule für die Wissenschaft des Judentums, which, in 1894, awarded him the Mendelssohn prize for a Halachic essay. In 1896 he received his doctor's degree from the former institution, his doctorate thesis being *Die Freiheitslehre bei Kant und Schopenhauer,* and in the following year he was graduated from the latter.

From 1897 to 1904 Neumark was rabbi at Rakonitz, near Prague. In 1903 he was on the point of being appointed Rabbino Maggiore (chief rabbi) at Rome, but the proposed transfer of the Collegio Rabbinico from Florence to Rome aroused the opposition of the Conservative leaders, among them Commodore Prato, who demanded of Neumark that he declare himself in favor of refusing rabbinical functions to uncircumcised Jews. He declined to do this, and while matters were in an unsettled state an offer came to become editor-in-chief of the sections of Jewish philosophy and Talmud of the Hebrew encyclopedia (*Otzar Hayahaduth*); whereupon he withdrew his name as a candidate for the former position, and accepted the latter, moving to Berlin in 1904. In 1907 he received a call to the chair of Jewish philosophy in the Veitel-Heine Ephraim'sche Lehranstalt in Berlin, while at the same time he was invited by President Kaufmann Kohler to become professor of philosophy at the Hebrew Union College, in

Cincinnati, Ohio. He accepted the latter offer, and came to the United States, where he taught until his death. In 1919 he founded the *Journal of Jewish Lore and Philosophy,* which in 1921 was continued as the *Hebrew Union College Annual.*

Neumark set out to present the history of Jewish dogma from a philosophical standpoint, to study the history of Jewish philosophy in the Middle Ages, and to seek that philosophical system which would support the doctrines of Judaism. His principal work was his history of Jewish philosophy, the authoritative textbook on this subject which has been published in Hebrew and German (German, vol. 1, 1907; vol. 2, 1910; supplement to vol. 1, 1913; vol. 3 was in press at the time of his death. Hebrew, vol. 1, 1921).

Neumark also wrote: *History of the Dogmas of Judaism* (2 vols., 1913 and 1919); *The Philosophy of the Bible* (1918); *Crescas and Spinoza* (1909); *Historical and Systematic Relations of Judaism to Kant;* and about one hundred essays and discussions in various Hebrew, German, English, Polish, Bohemian and Yiddish publications. The following were published posthumously: "The Philosophy of Judaism" (in *Hebrew Union College Jubilee Volume,* 1925, pp. 513-21); *Geschichte der jüdischen Philosophie des Mittelalters,* vol. 3 (Berlin and Leipzig, 1928); *Toledoth Hafilosofiah Beyisrael Al Pi Seder Hamehakerim Homer Vetzurah,* vol. 2, edit. Samuel S. Cohon, published by the Alumni Association of the Hebrew Union College (Philadelphia, 1929); *Essays in Jewish Philosophy,* published by the Central Conference of American Rabbis (printed in Austria, 1929).

SIMON COHEN.

Lit.: Hebrew Union College Monthly, Neumark number, Jan., 1924; Mann, Louis L., in *Central Conference of American Rabbis Year Book,* vol. 35 (1925) 240-42; *Hebrew Union College Annual,* vol. 2 (1925), memorial page.

NEUMEYER, ALFRED, art historian, b. Berlin, 1901. In Berlin he was engaged in writing and in scholarly work, and was also the author of several plays. Until 1933 he was connected with the administrative department of the Berlin museums. Subsequently he migrated to the United States, where he taught at Mill's College in California. Among Neumeyer's published work was a study on Albrecht Dürer, in French, in the collection *Maîtres d'autrefois* (Paris). In 1936 he published a study on the landscape painting in the San Francisco Museum of Art.

NEUMEYER, KARL, authority on international law, b. Munich, Germany, 1869; d. Munich, 1941. He was named professor of international law at the University of Munich in 1929. He was forced by the Nazi regime to retire in 1933. His contribution to international law was the scholarly and comprehensive research into the history of international private law, embodied in *Die gemeinrechtliche Entwicklung des internationalen Privat- und Strafrechts bis Bartolus* (vol. 1, 1901; vol. 2, 1916), and of international administrative law, with which he dealt in the four volumes of *Internationales Verwaltungsrecht* (1910-36). In his latter years he worked on the history of medieval law. In his works, as in his teachings, Neumeyer endeavored to weed out all fallacies in international law, and by painstaking effort to cement for it a solid basis on which the happiness of peoples might rest securely.

He was a member of the Institute of International Law and of the Academy of International Law at The Hague. In that city he represented the German Reich at the sixth conference for international law. He received the title of Geheimrat. Neumeyer never left Munich. He took his own life and that of his wife in July, 1941.

Lit.: American Journal of International Law, Oct., 1941, p. 672.

NEUSCHOTZ, JACOB DE, communal worker and philanthropist, b. Hertza, Moldavia, Roumania, 1819; d. Jassy, Roumania, 1888. He was born of very poor parents in the predominantly Jewish town of Hertza, and started as an apprentice in a grocery store of Jassy, working sedulously, so that in a few years he became owner of the store. In 1849 he founded, at Jassy, an exchange and broker's office which later he turned into a bank, becoming one of the great Jewish bankers of Jassy.

Neuschotz diverted much of his wealth to communal and charitable purposes. With the approval of the reigning prince, Alexander Cuza, he erected, in 1865, a Reform temple, and, in 1868, the Fany and Jacob Neuschotz Orphan Asylum, both at Jassy. Many children reared at that orphanage, which was still in existence in 1942, attained important positions in Roumanian life. Neuschotz also aided Jewish youths studying at universities outside of Roumania. In an endeavor to obtain emancipation for the Jews of Roumania, he founded (1868) the Israelite Association, which was of only short duration.

In 1882 Neuschotz applied to the Roumanian Parliament for citizenship. When his petition was refused, he left Roumania and established himself at Bojan, in neighboring Bucovina, then a province of Austria. There he continued to contribute lavishly to charitable causes, and received Austrian nobility from Francis Joseph I. He died on a journey to Jassy.

NEUSTADT, ADOLF, publicist, b. Prague, 1812; d. Vienna (year of death unknown). He became a journalist at Vienna, and by propounding liberal ideas incurred the displeasure of the Austrian government. He had to leave Vienna, but continued his agitation for freedom in the *Pannonia* and *Pressburger Zeitung* of Pozsony (Pressburg), being editor of the latter, and in the *Pester Tagblatt,* edited by Moritz Gottlieb Saphir. Neustadt attained great authority among the moderate leaders of political reform in Hungary, and held sway over public opinion, which he prepared for the revolution of 1848. The *Pannonia* and *Pressburger Zeitung* had to suspend publication by order of the dictator of Austria, Count Metternich. After the outbreak of the revolution (in the spring of 1848), he returned to Vienna, where he continued to mold public opinion.

After the revolution failed he served the cause of freedom, traveling in Western Europe, where he was considered an authority on Austro-Hungarian affairs, and in the Near East. When political freedom was granted, he returned to Vienna and edited the *Oesterreichische Zeitung.* He was active also in Jewish communal matters.

His publications in Hungary include *Literatur und Kunst in Ungarn* (1843) and *Die erste Eisenbahn in Ungarn* (1840). Those published abroad are *Aus dem Leben eines Honveds* (2 vols.); *Aus der Kaserne* (2 vols.); and *Maissm und Schnokes* (on Jewish books; 3 editions).

NEUSTAEDTER, MARCUS, neurologist, b. Zbaraz, Galicia, 1871. He came to the United States in 1888, and was awarded the M.D. degree by Bellevue Medical College in 1896. There, in 1906, he became lecturer in neurology and clinical neurologist,

serving until 1920. He served in similar capacity at a number of other New York hospitals, and as clinical professor of neurology at the New Polyclinic Medical School and Hospital (1921-24). In 1925 he was appointed chief visiting neurologist and director of service at the New York Neurological Hospital, remaining until 1940. He was also president of the medical board for ten years. In the Cancer Institute he was still consultant in neuro-psychiatry in 1942.

Neustaedter's outstanding investigations were made in poliomyelitis; in collaboration with W. C. Thro, he observed that the virus of the disease was found in the dust of the sick room. He also collaborated in producing antipoliomyelitis horse serum and antigen for complement fixation in poliomyelitis and lethargic encephalitis. His numerous papers on neuro-psychiatry appeared in the medical press, and he published *Textbook of Clinical Neurology* (1929).

Neustaedter was co-founder of the Jewish Home for the Aged of the Sons and Daughters of Israel, and was president of the United Austrian Hebrew Charities from 1907 to 1910.

NEVADA, a western state of the United States, having a population of 110,247 (1940), including about 660 Jews (1942). In 1942 about 450 Jews lived in Reno and about 150 were in Las Vegas. The remainder of the Jewish population was in communities having ten Jews or less.

The first Jews came to Nevada from California when, following the discovery of the Comstock Lode in 1859, the silver rush to Virginia City, Goldhill, and Silver City began. Two of the early Jewish settlers made significant contributions to mining engineering. Adolph Sutro (1830-98) arrived in 1860. In 1882 he built the Sutro Tunnel, which drained the Comstock Lode. Philipp Didesheimer invented the "square set system of timbering" in Virginia City in 1861. This invention made mining at greater depths possible.

The first Nevada directory, published in 1862, revealed that many Jews had settled in the rapidly growing mining towns. Forty-six distinctly Jewish names were located in Virginia City, sixteen in Goldhill, eight in Silver City, six in Dayton, and twenty-seven in Carson City. Of the 6,000 persons who lived in these towns in 1862, about 200 were Jews. A few Jews were miners, but the majority were storekeepers and artisans. Most of the early settlers had come from Germany, only a few from Eastern Europe.

The Jewish population grew steadily until 1880, when there were nearly 800 Jews in Nevada in a total population of 62,266. Following the exhaustion of the Big Bonanza in Virginia City in 1881 and the rapid fall in the price of silver in the world market, the Nevada population dropped to 47,355 in 1890 and to 42,335 in 1900. Accordingly, many Jews left the state. In 1897 there were only about 250 Jews in Nevada. The only city in the state which retained a considerable number of Jews was Reno. This city grew progressively since its founding as a railroad town in 1868.

Due to lack of spiritual leadership and continuous fluctuation in the Jewish population in Nevada, Reno included, Jewish organizational life met with difficulties. The first B'nai B'rith lodge in Nevada was founded in Virginia City in May, 1862, and had seventy-one members in 1868. In November, 1862, the Eureka (Hebrew Benevolent) Society bought a plot for a cemetery in the same city. A Hebrah B'rith Sholem was organized at Reno in April, 1878, had its property destroyed by fire in 1879, and was reorganized under the name of Reno Hebrew Benevolent Society in August, 1879. A Jewish cemetery was purchased and services on the high holidays were arranged. In 1895 a B'nai B'rith lodge, Washoe No. 450, was chartered in Reno, to which the property of the Reno Hebrew Benevolent Society, including the cemetery, was sold. But in 1906 the lodge was dissolved, and after a vain attempt to revive it the cemetery was given to the remaining trustees in 1907. In 1908 a Y. M. H. A. was established which was dissolved after the founding of B'nai B'rith lodge Reno No. 760 in August, 1914. This lodge was in existence in 1942. The Jews in Reno built an Orthodox synagogue, Temple Emanuel, in 1921. Its rabbi in 1942 was Harry A. Tarlow, whose term began in 1930. A group of younger people formed a Reform congregation, Beth Or, in 1940, under Rabbi Joseph H. Gumbiner, whom Hans J. Zucker succeeded in 1942.

Many Jews held public office in Nevada. State senators included Gabriel Cohn (1875), Hirsch Harris (1887-89), Sol M. Summerfield (1895), Herman E. Freudenthal (1901 and 1903) and Jacob A. Asher (1911). Among members of the state assembly were Henry M. Bien (1864), Henry Epstein (1864), Morris A. Rosenblatt (1864), Albert A. Lissak (1867), Jacob Tobriner (1873), Henry Bergstein (1875), Walter J. Tuska (1881), Frank Boscowitz (1883), Hirsch Harris (1893), Phil Jacobs (1901), Sol M. Summerfield (1901), Samuel Platt (1901 and 1905), John S. Sinai (1917) and Fred Philipps (1935-41). Samuel Platt was speaker of the assembly in 1905.

Samuel Platt was United States district attorney (1906-14); M. Simon was mayor of Wells (1935-37); R. J. Lewis was justice of the Las Vegas city court (1939-42); and Samuel Frank was a member of the Reno City Council (1923-30). HANS J. ZUCKER.

Lit.: Kelly, I. Wells, First Directory of Nevada Territory (1862); Collins, Charles, *Mercantile Guide and Directory for Virginia City, Gold Hill Silver City and American City* (1864); Gillis, William R., *Nevada Directory* (1868); McEachin, Malcolm, *Political History of Nevada* (1940).

NEVAKHOVICH, LEV NIKOLAYEVICH (Judah Löb ben Noach), author, b. Letichev, Russia, 1776; d. St. Petersburg, 1831. He came to St. Petersburg at the end of the 18th cent. with his friend and employer, Abram Peretz, a famous merchant. One of the first Jews to master the Russian language, Nevakhovich soon turned to writing in that tongue; his works reflect familiarity with current literature and admiration for the *Weltanschauung* of Lessing and Mendelssohn.

Although Nevakhovich's fame rests chiefly on the book *Vopl Dcheri Yudeiskoi* (1803; it appeared in Hebrew under the title of *Kol Shaveath Bath Yehudah* in 1904), in which he appealed to the people of Russia for tolerance and justice in dealings with Jews, he himself was converted to the Greek Orthodox faith in 1809. A play, *Sulioty ili Spartantzy XVIII veka,* was produced successfully at the Imperial Theatre in Leningrad (1809). He became very wealthy after 1817, when he received a government post with the ministry of finance in Warsaw, but lost his possessions when he fled during the first Polish uprising in 1831. He died before his play *Mech Pravosudiya* was produced in Leningrad (1832).

Lit.: Gorin, *Geshichte fun Yiddishen Teater,* vol. 1 (1918); Hessen, *Istoriya Yevreiskavo Naroda v Rossii,* vol. 1.

NEW BEDFORD, a city in Massachusetts having a general population of 110,341 (census of 1940), including about 3,500 Jews (1942). The early history of New Bedford is linked with that of nearby Newport. Both cities were situated on the Massachusetts coast, and an early list of sailings from New Bedford reveals the

ship, *Royal Charlotte,* fitted out in 1775 by Aaron Lopez, a Newport Jew, who was half-owner of the vessel. There is a strong likelihood that New Bedford had a small number of Spanish-Portuguese Jews about the same time that a Sephardic colony was known to have existed in Newport.

A small German Jewish group lived in New Bedford before the middle of the 19th cent. Records disclose a Bnai Israel Society here in 1857. An old non-Jewish cemetery has an enclosed plot of land in which there are Jewish graves, with inscriptions going back to 1857. The names on these graves are decidedly German. In fact, the well-known Leopold Morse, who later settled in Boston and was five times elected to Congress, lived in New Bedford briefly as early as 1850.

The third and last group of Jewish settlers came to New Bedford in the early 1870's. The earliest of the Eastern European immigrants to arrive were Isaac Goodman, Simon Simansky and Simon Davidson, while the bulk of Jewish settlement occurred between 1900 and 1925. For a short while prayers were conducted daily in Simansky's home. In 1893 Ahabath Achim Congregation purchased ground for the construction of a synagogue, which was completed and dedicated in 1899. Its first rabbi was Jacob Silberblatt. In 1940 this congregation moved from the building in Howland Street wherein it had worshipped for forty years, purchased an old estate and converted it into the house of worship in use in 1942. In 1898 the second Jewish congregation, Chesed Shel Emes, was incorporated, and a synagogue was constructed and dedicated in 1904. Hyman Papkin was chosen rabbi, and in 1942 continued to serve New Bedford's Orthodox Jewry.

The Hebrew Ladies' Helping Hand Society, outstanding charity organization, was organized in 1906, largely as a result of the efforts of the late Mrs. Max Levy. Other women's organizations in existence in 1942 were Senior Hadassah, Junior Hadassah, Tifereth Israel Sisterhood, Council of Jewish Women, Jewish Professional Women's Club, Ahabath Achim Sisterhood, and Ladies' Auxiliary of the Jewish War Veterans.

Very early, fraternal societies offering sick and death benefits were formed, among them the order Brith Abraham, the Independent Order Brith Abraham, Free Sons of Israel, and the Progressive Max Levy Society. In 1911 the Y.M.H.A. was founded, and until 1924 was the meeting place for all Jewish organizations, relief and welfare drives, and communal undertakings. It held lectures and conducted a Sunday school.

In 1924 Tifereth Israel Synagogue, the largest in New Bedford, was completed and formally dedicated. It gradually assumed the pattern of Conservative Judaism. The first rabbi of Tifereth Israel Synagogue was Nachum S. Arnoff, who served the congregation from 1924 to 1926, followed by Alexander Burnstein (1926-28). Bernard H. Ziskind, who was spiritual leader of the congregation in 1942, became rabbi in January, 1930.

Jewish educational efforts began early in New Bedford with the formation of a Talmud Torah under the auspices of the Hebrew Educational League. This functioned for twenty years, until 1935. Another Talmud Torah was that connected with Chesed Shel Emes Synagogue. Between 1937 and 1942 Tifereth Israel Synagogue assumed leadership in Jewish education in New Bedford, and in the latter year had a school enrollment of more than 250.

Other organizations active in New Bedford in 1942 were the New Bedford Zionist District, Jewish War Veterans, Kadimah Y.M.H.A., United Jewish Appeal, Free Loan Association, and Vaad Hakashrut.

The chief occupation of the Jews in New Bedford in 1942 was merchandising. From 1930 on manufacturing also became a field of endeavor, many plants and factories having been transplanted from New York to New England communities. There was also a fair proportion of Jews in the professions of law and medicine.

Prominent Jews in New Bedford in 1942 were Fisher Abramson, one time city solicitor and past president of Tifereth Israel; Judge Samuel Barnet, actively interested in all Jewish and non-Jewish endeavor; Philip Barnet, for fourteen years a representative in the state legislature; George Goodman, past president of Tifereth Israel and president of the New Bedford branch of the American Jewish Congress; Harry A. Lider, past president of the New Bedford Bar Association; Solomon Rosenberg, past commander of the American Legion in New Bedford; Dr. Hammon Wollison, active in military affairs and first commander of the Jewish War Veterans Post; S. K. Seigal and Albert Sterns, who served as city physicians.

In the first World War more than sixty-five Jewish men, residents of New Bedford, joined the United States Army. Eleven were killed in action. BERNARD H. ZISKIND.

NEW BRITAIN, a city in Connecticut, having a population of 68,685 (census of 1940), including about 2,400 Jews (1942). The first Jewish settlers were Isadore Solomon and Nicholas Cohen, who came from Germany in 1865, and Isaac Kanritch, who emigrated from Poland in 1870. In order to conduct the first Minyan in New Britain, in 1889, paid worshippers from Hartford, Conn., had to be called in. In the early 1890's Congregation Acheynu B'nai Israel was organized, with Isaac Kanritch, Joseph Abels, Fred Winkle, Isadore Solomon, Harry L. Herstein, Benjamin Margolin and Abraham Levine among its founders. The congregation occupied the converted headquarters of the Swedish Lutheran community until 1940, when a modern structure was purchased. The first leader of Acheynu B'nai Israel Congregation was Elias Rosenberg, who served as Shohet and cantor. In 1924, under the leadership of George Berson, the congregation was reorganized as a Conservative one, and affiliated with the United Synagogue of America. The rabbis who served from 1924 were Gershon Hadas, Jesse Schwartz, Murray Alstet and Harry Z. Zwelling, who was still incumbent in 1942.

An Orthodox group of the congregation, withdrawing, formed Congregation Tifereth Israel, under the leadership of Rabbi Joseph Aronson. With it then merged the members of Agudath Israel. Tifereth Israel built a new structure in 1926. Both congregations, Tifereth Israel and Acheynu B'nai Israel, sponsored sisterhoods; the latter sponsored also a men's club and a young people's organization, as well as a daily Hebrew school, a Sunday school, and adult classes. The communal Talmud Torah, conducting both a daily Hebrew school and a Sunday school, had its beginnings in 1897; in 1905 it built the structure which for years served as a general community center.

Organizations developed in New Britain were a district local of the Zionist Organization of America (1900), B'nai B'rith (1902), Hadassah (1917), Jewish War Veterans and Jewish War Veterans Auxiliary (1933). The Hebrew Ladies' Aid was established in 1907, and the Hebrew Free Loan Association in 1912. In the first decade of the 20th cent. a strong Workingmen's Circle flourished in the community, but its members and leaders were gradually absorbed into the middle class.

New Britain Jews, engaged for the most part in commerce

and the professions (with a small percentage employed in the local factories), developed the city's two largest department stores. Jews served as city councilmen and sheriffs; three occupied the office of corporation counsel. Samuel S. Googel, lawyer, was a member of the state legislature from 1929 to 1933; in 1933 he was appointed a special attorney for the United States Department of Justice. Morris D. Saxe was judge in the city and police courts from 1927 to 1933. Bernard G. Kranowitz, executive vice-president of the Chamber of Commerce in 1942, was appointed executive secretary of the local National War Council.

HARRY Z. ZWELLING.

NEW BRUNSWICK, a city in New Jersey, with a population of 33,180 (1940), including about 5,500 Jews (1942). The early Jewish settlers of New Brunswick were of Spanish origin. Among them were Daniel Nunez, who was justice of the peace in the Quarter Sessions Court in 1722, and the Louzada family, one of whose members, Aaron, was engaged in the land business. A letter dated November, 1761, written by Hannah Louzada from New Brunswick to the Shearith Israel Congregation in New York city, is preserved in the archives of the Jewish Theological Seminary of America. Information of a fragmentary sort indicates that there were a number of Jewish families in the New Brunswick area before the American Revolution.

In 1850 several German and Bohemian families came to New Brunswick. Two years later a Hebrew Benevolent Society was formed and a cemetery plot was purchased. These immigrants were either peddlers or small shopkeepers. In the 1880's immigrants from Russia began to come in.

The *Jewish Messenger* of September 24, 1858, mentioned the congregation Anshe Emeth as existing in New Brunswick. A year later the congregation was in need of a Torah and wrote to Ernest Wehly, president of the trustees of the Israelitische Kultusgemeinde of Prague, asking if one could be obtained from the Alt-Neue Synagogue. In 1859 Anshe Emeth was incorporated, with Ignatz Frankenstein as president. Other members of the congregation included Joseph Levitt, J. J. Frankenstein, William D. Plechner, Elias Seckel, Elias Frankenstein, Aaron Wolfson, M. L. Plechner, Max Gorta, Harry Solomon and Samuel Lederer. The rabbi of the congregation in 1942 was Nathaniel M. Keller.

Anshe Emeth in 1942 was a Reform congregation. Ahavas Achim (Orthodox) was founded in 1889. Its rabbi in 1942 was Philip Raymon, who served also the Poalei Zedek congregation, founded in 1901, and Ohav Emeth, founded in 1918. Former rabbis were Isaac Marcus, Samuel Baskin, Abraham Shapiro and Naftali Klein. The three congregations also established the United Hebrew School. The Highland Park Conservative Temple was organized in 1928. Its rabbi in 1942 was Philip Listokin. Benjamin Naar was, in 1942, rabbi of the Spanish synagogue, founded in 1916.

Other Jewish organizations in the community included the Hebrew Ladies' Benevolent Society, Ladies' Aid Society, Jewish Social Service, Jewish Community Center, Zionist Organization of America, B'nai B'rith, and Hadassah.

NEW HAMPSHIRE, a northeastern state of the United States, with a population of 491,524 (census of 1940), including a Jewish population of about 3,328 (1937). In 1942 the estimated Jewish population of three of the leading Jewish communities was: Manchester, 1,350; Portsmouth, 500; Nashua, 300. Estimates made in 1937 of Jewish population in other communities were: Berlin, 275; Claremont Town, 177; Dover, 138; Laconia, 150; Concord, 75; Keene, 50.

The history of the state alludes as early as 1693 to such family names as Moses and Abrams, speaking of their bearers as descendants of Hebrew-Christians. Almost a century later records mention one Joseph Levi, a land grant recipient, and William Levi of Somersworth, a private in the Second New Hampshire Continental Regiment. The first Jew discussed at greater length in the state's annals was Abraham Isaac, known as "the Jew of Portsmouth," who settled there at the close of the Revolution. A strict observer of his faith, he always kept his shop closed on Saturdays. He acquired property and prospered, and was an active Mason.

New Hampshire had few Jews, however, until the Russian and Polish immigrants began to arrive in the late 19th and early 20th centuries. In 1942 the Jewish inhabitants of New Hampshire were still largely of Eastern European origin, with comparatively few families of German descent. They were, for the most part, engaged in mercantile enterprises.

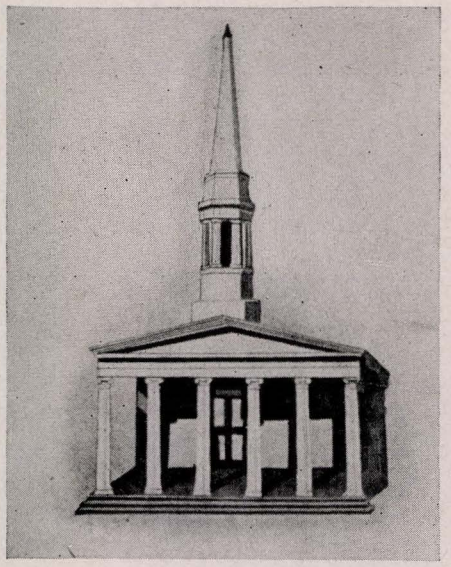
In 1906 there were two Jewish congregations in New Hampshire, with a total membership of eighty persons. By 1936 there were thirteen congregations, with a membership of 2,996. Of these, nine had buildings used solely for religious purposes.

PORTSMOUTH. The first community to establish a congregation was that of Portsmouth. In that city, in 1942, Rabbi Samuel Epstein was leader of the Orthodox Temple Israel. Other organizations were a Hebrew school, a branch of the Hadassah, a section of the Council of Jewish Women and a local district of the Zionist Organization of America.

MANCHESTER. The earliest settlers of the Jewish community of Manchester included Morris Rosenblum, Solomon Soloveitchick, Jacob Schwartz and A. Kurtz. The first congregation, Anshe Sphard, was established in 1897. The Orthodox congregation Adath Jeshurun, whose first rabbi was S. Kantor, built its new synagogue in 1914. In 1942 the rabbi was Abraham Hefterman, who had been serving for seventeen years.

NASHUA. The community of Nashua had among its early settlers Joe Wolfman, Izekiel Simon, S. W. Cohen, S. Blankenberg, S. Sharpe, A. Davis, S. Blum, Max Mandelson and Jacob Stokofsky. The Orthodox Beth Abraham Congregation, organized in 1892, was first served by Rabbi S. Silverman. Succeeding rabbis included A. Pintchuck, H. Fine, A. Goldenkoff, S. Faber, B. Rosenberg, and S. H. Nobell. In 1942 the rabbi, serving since 1939, was Solomon H. Waldenberg. Other organizations of the community included a Hebrew school, a ladies' aid society, a sisterhood, and a brotherhood. National organizations represented were Senior and Junior Hadassah and the Kadimah Zionist District.

BERLIN. The community of Berlin established its first congregation about 1910. Berlin, Manchester and



Sketch of the Court Street Temple in New Haven

Portsmouth were served by graduates of the Jewish Theological Seminary of America.

Among the Jewish members of the state legislature of New Hampshire were Louis Goldschmidt, of Dover (1894), Adolph Bauenfreund, of Manchester (1901), Abraham M. Stahl, of Gorham (representative, 1891; senator, 1909-10), Bernard Jacobs (1910), Nathan Abramson, of Berlin (1919-22 and 1926-29), Arthur J. Reinhart of Portsmouth (representative, 1938-40; senator, 1940), and Harry Lichtman of Keene. Goldschmidt was also United States consul at La Guayra, Venezuela (1898-1904), and at Nantes, France (1904-13). Jacobs was county attorney of Coos County. Jacob Shulin was judge of the municipal court of Newport, and Leo Liberson was city solicitor of Portsmouth in 1936. In 1922 Abraham Stahl was president of the New Hampshire Bankers' Association. HENRY W. LEVY.

NEW HAVEN, a city in Connecticut, having a population of 160,605 (census of 1940), including about 25,000 Jews (1942).

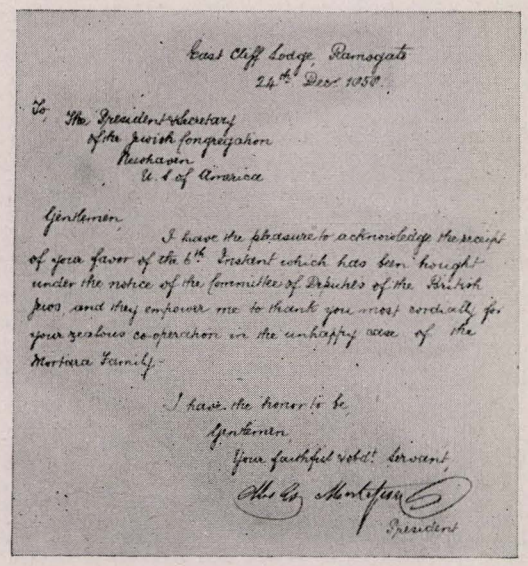
On September 11, 1772, the Reverend Ezra Stiles, later president of Yale College, made the following entry in his diary: "The summer past a family of Jews settled here, the first real Jews (except two Jew brothers Pintos who renounced Judaism and all religion) that settled in New Haven. They came from Venice, sat down some little time at Eustatia in West Indies, and lately removed here. They are three brothers (adults) with an aged mother, and a widow and her children, being in all about ten or eight souls, Jews, with six or eight negroes. Last Saturday they kept holy; Dr. Hubbard was sent for to see one of them sick. He told me the family were worshipping by themselves in a room in which were lights and a suspended lamp. This is the first Jewish worship in New Haven, A.D. 1772, that is 135 years after Reverend Mr. Davenport preached the first sermon in that town. These Jews indeed worship in the Jewish manner; but they are not enough to constitute and become a synagogue for which there must be twelve men at least. So that if thereafter there should be a synagogue in New Haven, it must not be dated from this. Besides there is a few (Jews) in town that belong to none of these meetings but are separate and associate with others scattered in the neighboring parishes. . . ."

During the Revolutionary War, New Haven Jews were to be found in both the ranks of the patriots and among the Tories who supported the British crown. The former group included the Pinto brothers, who served with distinction in George Washington's army. Abraham Pinto served as a private in the Seventh Connecticut Regiment, and was wounded in the British attack on New Haven; William Pinto volunteered for service in the local militia; Solomon Pinto, a member of the Yale class of 1778, was an officer in the Second Regiment of Connecticut infantry, and after the war became a member of the Society of the Cincinnati. Ralph Isaacs, a prosperous lawyer of New Haven, was identified with the Tory, or pro-British, faction. His descendants included a 19th cent. governor of Connecticut and the United States Minister to Russia in 1847.

New Haven's Jewish community life did not begin until 1840. In that year a group of Bavarian families established a permanent settlement. At least two of them had arrived the year before, but as far as available records indicate, it may be assumed that in 1840 Congregation Mishkan Israel had its beginnings. During the ten years that followed a number of other families were added, many of whom were related to the original pioneers.

The records of the first decade of the congregation's existence have, unfortunately, been lost, but something can be learned of the period from other sources. In August, 1846, the youthful Isaac M. Wise addressed the congregation. His memoirs reveal that he was impressed with the liberal religious tendencies of New Haven Jewry and that he thought highly of Leopold Waterman, leader of the New Haven group. Waterman is mentioned also in several town histories of the period as one of a group of representative citizens chosen to greet Louis Kossuth when the Hungarian patriot visited New Haven in 1851.

After worshipping for some sixteen years under the



East Cliff Lodge Ramsgate
24th Dec. 1850.

To The President & Secretary
of the Jewish Congregation
Mishkan
U. S. of America

Gentlemen

I have the pleasure to acknowledge the receipt of your favor of the 6th Instant which has been brought under the notice of the Committee of Deputies of the British Jews and they empower me to thank you most cordially for your zealous co-operation in the unhappy case of the Mortara Family.

I have the honor to be
Gentlemen
Your faithful obdt. Servant
Moses Montefiore
President

Temple Mishkan Israel of New Haven

ministry of various lay leaders, the first of whom was Michael Milander, the congregation summoned to its pulpit in 1856 B. E. Jacobs. That year Mishkan Israel purchased the building of what was once the Third Congregational Church. The funds for the new synagogue were a bequest from the will of Judah Touro. Jacob Heller and two others went to Newport to receive this generous gift, and under their leadership the building was purchased and redecorated.

In the post-Civil War period members of the congregation began to play an important role in the civic and industrial affairs of the community. Atwater's *History of New Haven,* published in 1887, records that the city's great educational leader of the day, Maier Zunder, was a member of Mishkan Israel, as were the founders of three of the city's chief industries, Max Adler, Lewis Osterweis, and Bernard Shoninger.

In 1894 Mishkan Israel was one of the most flourishing congregations in the East. It had been a New England pioneer congregation in the Reform movement of Isaac M. Wise; its rabbis as early as 1876 exchanged pulpits with their Protestant colleagues; and it had built up a large religious school. In 1896 the cornerstone of a new temple was laid at the corner of Orange and Audubon streets. In the following year the building was dedicated by Dr. Emil G. Hirsch of Chicago and Rabbi David Levy of Mishkan Israel. Among the rabbis of Mishkan Israel in the 20th cent. were David Levy, Louis L. Mann, and Sidney S. Tedesche. Edgar E. Siskin was rabbi in 1942.

In 1881 a group of newly arrived Russian Jews organized a synagogue. From this beginning the Orthodox community steadily increased in number and importance. There were eleven Orthodox synagogues in New Haven in 1942. Among them were Congregation Beth Hamedrosh Hagodol, with Samuel Levenberg as rabbi, and Beth Israel, whose rabbi (1942) was Jacob Flekser. Congregation Bnei Israel, Orthodox, was organized in 1892, and the synagogue standing in 1942 was built in 1894. In 1942 Rabbi J. H. Levenberg, who had been serving for fifteen years, was leader of the congregation. The Conservative congregation, B'nai Jacob, including a Hebrew and a Sunday School, was organized in 1883, and the new synagogue built in 1912. From 1922 to 1927 Leon Spitz was rabbi; Louis Greenberg, incumbent in 1942, began his service in 1924.

There were many Jewish organizations and institutions in New Haven. Their functions were coordinated through the New Haven Jewish Community Council, which directed the annual Jewish welfare drive. Four local Jewish organizations were, in 1942, members of the New Haven Community Chest: Jewish Family Service, Jewish Home for Children, Jewish Home for Aged, and Jewish Center.

Colonel Isaac M. Ullman and Major Louis M. Ullman, political and philanthropic leaders, were the first Jews to be appointed to the staff of the governor of the state. Isaac Wolfe was the first Jew to become justice of the superior court of Connecticut. New Haven Jews who were members of the state legislature included Jacob Klein, Jacob Caplan, and Isaac Wolfe. Samuel Persky was corporation counsel of New Haven, and in 1940 was a member of the examining committee of the state bar. Charles Kleiner was state compensation commissioner of New Haven, Abraham Ullman was state's attorney for New Haven county, and Mrs. Frances L. Roth was (1940) assistant city attorney in charge of domestic relations. Samuel Campner was acting mayor of New Haven (1917-18); before that he had been president of the board of aldermen. As early as 1881 Maier Zunder was head of the New Haven board of education. Felix M. Adler was a director of the Connecticut State Reformatory.

Wise* (1901); Siskin, Edgar E., and Osterweis, Rollin G., *The Centennial Volume of Congregation Mishkan Israel* (1940); Kisch, Guido, "Two American Pioneers (Sigmund and Leopold Waterman) of New Haven," *Historia Judaica,* vol. 4 (1942) 16-37.

NEW JERSEY, one of the original thirteen states of the United States, with a population of 4,160,165 (census of 1940), including about 259,970 Jews (1937). Approximately a third of the state's Jewish population resided in Newark in 1937. The remainder was distributed mainly in the following communities having more than 1,000 Jews:

Asbury Park	1,840	New Brunswick	4,900
Atlantic City	12,800	Orange	1,200
Bayonne	12,900	Passaic	10,900
Bloomfield	1,100	Paterson	23,000
Camden	8,600	Perth Amboy	4,860
East Orange	2,120	Plainfield	3,400
Elizabeth	11,700	South Orange	1,300
Hoboken	2,450	Trenton	9,650
Irvington	6,650	Union	4,800
Jersey City	21,600	West Hoboken	1,320
Lakewood Township	1,300	West New York	2,670
Linden	2,200	Woodbine	1,600
Long Branch	2,000		

In 1880, out of a total population of 1,131,116, the Jews numbered about 5,593. The Jewish population in 1900 was estimated at 25,000; in 1905 at 40,000; in 1907 at 70,000; in 1927 it was 258,306. The population increase was caused mainly by the expansion of the metropolitan area and the influx of persons from Manhattan for occupational and residential reasons. This process was facilitated by improvements in transportation, particularly the construction of the Hudson and Manhattan tubes. The growth of Jewish population was particularly noticeable in Essex, Hudson, Middlesex, Passaic and Union counties in northern New Jersey, and in Mercer County in central New Jersey. Special factors affecting the size of the population in other sections of the state were the growth of Philadelphia and the development of the tourist business in Atlantic City and Cape May County in South Jersey, in Monmouth County, including Asbury Park and Long Branch on the northern shore, Ocean County, and Morris County.

New Jersey was first settled at Jersey City Point by the Dutch from New Amsterdam in 1614. It became a direct possession of the English crown in 1702, when liberty of conscience was granted to all except Papists. It was the third of the thirteen original states to ratify the Federal Constitution in 1787. The first constitution adopted by the new state in 1776 provided that the right of free worship should be given to all persons, and no church was established. However, election to office was limited to persons belonging to any Protestant sect. The state constitution, adopted in 1844, abolished all religious tests as qualifications for office or public trust.

In 1847, in the case of Solomon Newman vs. Abraham Newman, brought in the court of chancery, an injunction obtained by Solomon Newman was dissolved by the court because the latter failed to comply with the court's order to swear to the bill according to the form and solemnities of the Jewish religion, as Abraham Newman had requested.

Among the Jews first mentioned as settled in New Jersey were Moses Levy in 1718, Rodrigo Pacheco in 1742, and David Hays, who resided in Griggs Town, Somerset County, in 1744. In the Revolutionary War Asher Levy (or Lewis), grandson of the famous Asser Levy of New Amsterdam, was commissioned ensign in the first New Jersey regiment in 1778. Lewis Trier came to Newark in 1844, and Meier Newman in 1846. Two years later, Congregation B'nai Jeshurun was organized in Newark. A Jew named Ashman, a native of Posen, came to Paterson in 1844. Four years later a family of English Jews named Harris settled there, and a local congregation was instituted in 1849. The pioneer Jew of Jersey City was Joseph Mayer, a tobacconist who arrived there on June 27, 1858. The Jewish settlement of Elizabeth dates to 1850. In the War of 1812, Isaac De Young served in the New Jersey Artillery. In the Civil War, New Jersey contributed 278 Jewish soldiers, and in the Spanish American War thirty Jewish soldiers.

Organized Jewish community life in New Jersey has been built about numerous congregations, Hebrew schools, Jewish centers, and fraternal groups. In 1942 the congregations were distributed as follows:

There was one congregation in Arlington, two in Asbury Park, eight in Atlantic City, eight in Bayonne, one in Belleville, one in Belmar, one in Bordentown, one in Bradley Beach, one in Bridgeton, one in Burlington, one in North Bergen, one in Caldwell, five in Camden, one in Carmel, two in Carteret, one in Clarksville, one in Cranford, one in Dover, two in East Orange, nine in Elizabethtown, one in Englewood, one in Franklin, one in Freehold, one in Glen Ridge, one in Gloucester, one in Hackensack, one in Hammonton, one in Highland Park, one in Hillside, four in Hoboken, two in Irvington, one in Jamesburg, fourteen in Jersey City, one in Keyport, two in Linden, two in Long Branch, one in Maywood, one in Millburn, one in Millville, one in Morristown, one in Mount Freedom, one in Mount Holly, six in New Brunswick, thirty-three in Newark, one in Newton, one in Nutley, one in Palisades Park, nine in Passaic, ten in Paterson, four in Perth Amboy, one in Pine Brook, four in Plainfield, one in Pleasantville, one in Rahway, one in Red Bank, one in Riverside, two in Roselle, two in Rosenhayn, one in South River, one in Secaucus, one in Somerville, one in Springville, one in Summit, five in Union City, one in Verona, one in Ventnor City, three in Vineland, one in Westwood, one in Wildwood, two in Woodbine, one in Woodbridge, and one in Woodbury.

In 1942 most of the congregations in New Jersey followed the Orthodox ritual, and Orthodox congregations were located in practically every Jewish community. Among them were Sons of Israel, in Asbury Park, of which Meyer Cohen was rabbi in 1942; Anshe Emeth of the Borough of South River, with Nisan Heifetz as rabbi; Hackensack Hebrew Institute, of which Irving Silman was rabbi; Sinai Congregation of Hillside, with Eliezer Cohen as rabbi; Ahavis Achim and Bnai Jacob of Vineland, with Simon Eisenstein as rabbi.

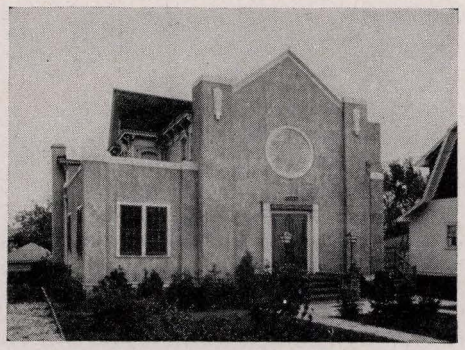
The following New Jersey congregations were (1942) affiliated with the Union of American Hebrew Congregations: Har Sinai of Trenton, with Abraham Holtzberg as rabbi; B'nai Jeshurun of Paterson, with Max Raisin as rabbi; Beth Israel of Atlantic City, with Joseph Narot as rabbi; Shaare Tefilo of East Orange, with Marius Ranson as rabbi; Adas Emuno of Hoboken, with David Sherman as rabbi; Beth El of Jersey City, with Samuel Berman as rabbi; Bnai Jeshurun of Newark, with David H. Wice as rabbi. Among the later and more prominent congregations affiliated with the United Synagogue of America were Beth El of Asbury Park, with Ario S. Hyams as rabbi; B'nai Israel of Elizabeth, with Raphael H. Melamud as rabbi; Oheb Shalom of Newark, with Louis M. Levitsky as rabbi; Bnai Abraham of Newark, with Joachim Prinz as rabbi; Beth Mordecai of Perth Amboy, with Max D. Davidson as rabbi; Temple Emanuel of Paterson, with Reuben Kaufman as rabbi.

Many of the congregations had Talmud Torahs. These were supplemented by the Jewish Education Association and its affiliated fifty schools; the Jewish Normal School of New Jersey; the School of Religion, a course of lectures delivered by eminent Christian and Jewish scholars. The New Jersey Branch of the United Synagogue of America contributed to Jewish education by sending speakers to congregations and by offering advice in the organization of congregations and schools. There was a branch of the Hillel Foundation at Rutgers University.

Jewish publications in the state in 1942 included: the *Jewish Chronicle,* Newark; *The Jewish Post,* Paterson; the *Jewish Review,* Jersey City. A number of Jewish centers and synagogues also issued publications.

Outstanding Jewish agencies concerned with social service were Beth Israel Hospital, Newark; Jewish Children's Home, Newark; Daughters of Israel for Aged, Newark; Federation of Jewish Charities of Atlantic City. The Conference of Jewish Charities was organized in Newark (1922); the Federation for the Maintenance of Jewish Welfare Work in Elizabeth (1927); the Jewish Community Chest in New Brunswick (1928); the Jewish Federation in Trenton (1929). The Essex County Council of Jewish Agencies was founded in 1940.

A state committee supervised the army and navy welfare work during the first World War. European relief work was conducted on a state basis, as was that of the Palestine Foundation Fund. Other national activities having state organizations were the Council



Synagogue of Sinai Congregation, Hillside, New Jersey

of Jewish Women, the United Synagogue of America, the Women's League of the United Synagogue of America, and Hadassah. The rabbis were organized in a rabbinical association, and the center workers in the Professional Advisory Committee.

An important organization in the field of community work was the New Jersey Federation of Young Men's Hebrew Associations and Young Women's Hebrew Associations. The Federation maintained a state office, a camp for boys accommodating 300, and a camp for girls accommodating 200. It cooperated with the Jewish Welfare Board in the development of Jewish centers. New buildings were erected in Perth Amboy (1923), Newark (1924), Paterson (1925), Union City (1927), Jersey City (1928), Hackensack (1929), and Plainfield (1929). Other centers were located in Camden, Passaic, New Brunswick, Trenton, Asbury Park and Toms River. Congregations erected synagogues with center facilities in Newark, Paterson, West New York and Asbury Park. These centers carried on a variety of activities of an educational and recreational nature.

Jews were represented substantially in a variety of New Jersey industries. Among the industries in which Jews featured most prominently were silk, leather and trunks, jewelry, chemicals and paint, dyeing, printing, wearing apparel, radio supplies, tailoring, lumber and electric products and metal works. Jews engaged extensively in automobile service, wholesale and retail dealing in food supplies, furniture and fuel business, and in the operation of motion picture houses, hotels and restaurants. They were active in building and real estate operations and trades. They became conspicuous in the fields of banking and investments, insurance, and in the development of building and loan associations. Jews were to be found in considerable numbers in medicine, dentistry, law, teaching, pharmacy, architecture, accounting, engineering, and in the advertising profession.

The Jewish Agricultural Society estimated that there were, in 1942, 1,500 Jewish families engaged in agriculture in the state. They owned 4,137 acres, the total value of which was estimated at $1,500,500 and the mortgages on which totaled $656,277.89. The Jewish farming settlements in South Jersey were founded in 1882, and were the result of the great Russian Jewish immigration to the United States that began in 1880. Twenty-five families were settled in the spring of 1882 by the Hebrew Emigrant Society at Alliance, in Salem County, about five miles from Vineland. The original settlers were followed by others until there were sixty-seven families. The tract of land on which they settled comprised 1,100 acres. Carmel and Rosenhayn, both situated in Cumberland County, were founded in 1883. In Carmel there were originally sixteen families settled on 848 acres. This colony gradually took on the character of an industrial settlement devoted largely to manufacturing men's and women's clothing. There were six Jewish families settled in Rosenhayn in 1883, and their number increased to sixty-seven in 1889. They owned, at that time, 1,912 acres. In 1891 Woodbine was settled by fifty Jewish families, and was, in 1942, a thriving Jewish town. However, the Baron de Hirsch agricultural school which had been established there was given up.

Other Jewish agricultural settlements were founded in Toms River, Lakewood, Bound Brook, Pine Brook, Perrineville, Hightstown, Flemington, Farmingdale, Point Pleasant, Englishtown and Freehold. The Jewish population of Toms River had, in 1942, a community center with 200 members. There were in the community both English- and Yiddish-speaking branches of the Jewish National Workers Alliance. Farmingdale also had a community center, as did the small Jewish population of Point Pleasant. In 1910 Congregation Agudas Achim Anshi Freehold was founded. Isidor Solomon was rabbi of this congregation in 1942. Lakewood, with its 350 Jewish families, was one of the most populous Jewish communities in this area. The first Jews to settle in Lakewood were Abraham Bayer, Charles Goldstein, Louis Meyers, and Moses L. Silverman—all immigrants from Lithuania. In 1904 Congregation Sons of Israel was founded and Judah Damesk was the first rabbi. In 1942 Nissan Waxman was rabbi of this congregation. There were branches of the Council of Jewish Women, Council of Jewish Juniors, B'nai B'rith, Jewish National Workers Alliance, and the Workmen's Circle established in Lakewood. A large percentage of the Jews living in Lakewood were proprietors of hotels.

Among the Jews of New Jersey who attained distinction in political and other aspects of communal life were David Naar, mayor and president judge of the Special Court of Elizabeth, delegate to the constitutional convention (1844), editor and publisher in Trenton of *The True American* until 1869, and state treasurer (1865-66); Michael Heilprin of Summit, promotor of the Jewish colonies in South Jersey, and author of *The Historical Poetry of the Ancient Hebrews:* Jacob G. Lipman, agronomist, dean of the College of Agriculture, Rutgers University; Samuel Kalisch of Newark, justice of the Supreme Court of New Jersey (1929); Louis Bamberger, merchant philanthropist, donor of the Newark Museum Building; Felix Fuld, donor of munificent gifts and bequests to public institutions and a prominent leader in organizations for public welfare. Isaac Bacharach of Atlantic City was a member of the United States House of Representatives in 1915, and Joseph B. Perskie was justice of the State Supreme Court (1933-). Joseph Altman was majority leader in the New Jersey assembly in 1933 and speaker in 1934. Morris E. Barison was assemblyman from Hudson County (1922-28) and minority leader (1923-38). Oscar Wilensky was majority leader in the assembly (1938) and a member of the state senate in 1940.

Other members of the state assembly included Max Sollinger (1890-92), Leonard Kalisch (1889), Morris Marks (1897-1901), Isaac Goldenhorn (1897-1901), Solomon Hahn (1904) and Edward Schoen (1911-17). David Wilentz was attorney-general of New Jersey (1934-39).

CHARLES I. HOFFMAN.

Lit.: Friedenberg, Albert M., "The Jews of New Jersey from the Earliest Times to 1850," *Publications of the American Jewish Historical Society,* No. 17 (1909) 34-43; reports of the Jewish Agricultural Society; Jewish Welfare Board reports of New Jersey communities; *American Hebrew,* Dec. 10, 1937, p. 24.

NEW LONDON, a city in Connecticut having a population of 30,094 (census of 1940), including a Jewish population of about 2,000 (1938). A survey made in 1938 of the Jewish community, which had its beginnings in the early 1880's, disclosed that the Jews ranked fourth among the ethnic groups which constituted the city's foreign-born white stock. About one-third of the Jewish population were found to be of foreign birth, and of these, more than three-fourths were from Eastern Europe. The community as a whole was well-established, with almost half the Jewish population having resided in New London for more than twenty-five years. A higher proportion of Jewish youths, as compared with the general population of New London, was in the high schools and seeking admission to the colleges.

Jews, largely self-employed, predominated in trade to the extent of three times the proportion of the general population in trade in 1930. Fourteen per cent of the Jews were in the professions, as compared with eleven per cent of the general population. As compared with general employment of women, a smaller proportion of Jewish women were gainfully employed.

The first congregation of New London was founded in 1892 under the name of Ahavath Chesed (Sick Benefit Society), and its first synagogue was built in 1902; in 1918 a Methodist church building was bought and remodeled into a new synagogue. Among the rabbis of the congregation were Abraham N. Schwartz (1902-9), Zev Wolf Rogen (1916-27) and David I. Traub, who was the incumbent in 1942.

In 1918 a group of Russian Jews organized Congregation Oheb Shalom and in that year built a synagogue. In 1942 Samuel S. Lerer was rabbi.

The Conservative congregation Beth-El, organized in 1932, had for its first rabbi Samuel S. Ruderman. In 1941 Myer S. Kripke became rabbi.

In addition to the congregations, their schools, and their women's auxiliaries, the community sponsored an Arbeiter Ring, a sick benefit society, a ladies' aid (deriving its funds from the Associated Charities of New London), Boy and Girl Scout troops, Young Judaea clubs, a B'nai B'rith lodge, a Jewish War Veterans post, a branch of Hadassah and Junior Hadassah, and a district of the Zionist Organization of America.

Among the prominent Jewish citizens of New London, Morris Lubchansky, attorney, was appointed United States Commissioner for the New London district; Samuel J. Jelleck was elected to the City Council; and Bessie Bloom Wessel, appointed to the faculty of Connecticut College for Women (1918), was made professor of sociology and chairman of the department. MYER S. KRIPKE.

NEW MEXICO, a state located in the southwestern section of the United States, having a population of 531,818 (census of 1940), including about 1,180 Jews. These were distributed approximately as follows (1942):

Albuquerque	450	Precinct 1:	
Carlsbad	31	Taos, Taos County	20
Gallup	28	Roswell	23
Las Cruces	34	Santa Fe	75
Las Vegas City	65	Santa Rosa	16
Las Vegas Town	50	Silver City	26
Precinct 1:		Tucumcari	38
Bernalillo,			
Sandoval County	20		

In 1846, two years before the United States gained possession of the area now known as New Mexico, Solomon Jacob Spiegelberg settled there. A Hanoverian by birth, he came to New York city in 1842 at the age of sixteen. He joined a caravan of covered wagons going to New Mexico via the Santa Fe trail. At Santa Fe he established a general merchandising business, and within a few years had induced his brothers Levi, Elias, Emanuel, Lehman and Willi to leave Hanover and become partners in the enterprise. The business prospered for over fifty years, and was a nucleus from which incoming Jewish pioneers went into business ventures of their own. Among these were the Seligman brothers. Betty Spiegelberg was the first woman to brave the privations of the long and arduous trip to New Mexico. She and her husband Levi Spiegelberg came to Santa Fe in 1860.

Another Jewish pioneer in New Mexico was Benjamin Lowenstein, who established a trading store. Over a period of years he brought to New Mexico about 200 German boys, outfitted them, and trained them to work in his enterprises. Many of the Jewish families in New Mexico in 1942 were descendants of these German immigrants.

Henry Lesinsky came to Albuquerque in 1859. During the Civil War he was a government agent charged with supplying grain to the federal troops. Later he obtained a government contract to carry the United States mail through Indian country west of the Rocky Mountains. An interesting character among these early Jewish settlers was Sam Dittenhofer, who clerked for the Spiegelbergs and became known as "Navajo Sam."

Also of interest is the history of the Bibo brothers (Solomon, Simon and Nathan), sons of Rabbi Bibo, of a small town in Westphalia. Solomon Bibo came to New Mexico early in the 1870's, married a Mexican woman, and brought up his children in the Jewish faith. His elder brother, Simon, married the daughter of a Pueblo Indian chief. He sent his wife to the Indian school at Carlisle, Pa., where she was one of the first pupils. They lived for a long time with the Accoma Indians, and then removed to San Francisco, it was said, where their ten children were brought up in the Jewish faith.

Other early Jewish settlers in New Mexico included Jacob Amberg; Colonel Marcus Brunswick who served in the Civil War; Gustave Elsberg; the Ilfeld brothers (Charles, Noa, Louis and Bernard); Major Arthur Morrison, who served in the Civil War; the Rosenwald brothers; the Seligman brothers; the Spiegelberg brothers; Spitz; Zadoc; A. Staab; the Grunsfeld family; and Albert and Nathan Eisenman.

There were, in 1942, four Jewish congregations in New Mexico. In 1907 there were three, and in 1917 only one. The oldest of these, Montefiore, was organized in Las Vegas in 1886. In Alberquerque there were two congregations, the older being Congregation Albert, founded in 1897 by Albert Grunsfeld, Henry Jaffa and Berthold Spitz; its rabbi in 1942 was Solomon E. Starrels.

Jews featured prominently in the political and industrial life of the community. Bernard Seligman was president of

the First National Bank of New Mexico, and the Spiegelberg brothers founded the Second National Bank of New Mexico. Louis E. Freudenthal, whose father was a pioneer in copper mining development in the West, was one of New Mexico's most prominent farmers. He was a director of the American Farm Bureau Federation (1929) and the El Paso Alfalfa Growers Association (1932-36), vice-president of the Southwestern Irrigated Cotton Growers Association (1932-36), vice-president of the American Forestry Association (1932-35) and president of the New Mexico State Farm Bureau (1927-36). The Seligman Brothers at Bernalillo were owners of the Bernalillo Mercantile Co., with several branch stores and large landed interests.

Arthur Seligman was elected governor of New Mexico in 1930.

Nathan Jaffa, who came to New Mexico in 1878, was lieutenant governor of the New Mexico territory (1907-12). In 1922 he was appointed chief tax commissioner of New Mexico, and in 1926 became mayor of Santa Fe. He was a member of the Las Vegas city council in 1936. Ernest Meyer and Charles Rosenwald were members of the territorial legislature in 1904, while Abe L. Zinn was a member of the state legislature (1921-24). In 1942 he was a justice of the state supreme court. Albert Calisch was elected state senator (1912-14). Harry S. Bowman was attorney-general of New Mexico (1921-22). Henry N. Jaffa was the first mayor of Albuquerque (1885-), and Mike Mandell also occupied this position (1892-). Berthold Spitz was postmaster at Albuquerque for twelve years.

EDWARD N. SAVETH.

NEW MOON (*rosh hodesh,* "the beginning of the month"), the first day or beginning of the month, which had a ritual significance from the earliest times. In the pre-Exilic period all work and trade ceased on the New Moon, as on the Sabbath (*Amos* 8:5). However, in the Diaspora the New Moon came to occupy a secondary position in contrast to the Sabbath; the prohibition against work and the carrying on of commerce was lifted, and the New Moon, although still celebrated by means of increased offerings, soon was reduced to the rank of a minor or half holiday. Its importance was confined to the fact that it remained of great value and necessity for the fixing of the festivals.

At that time the New Moon had not yet been fixed for all time by means of astronomical calculations, but used to be solemnly proclaimed each month after the reappearance of the crescent of the moon. Early in the morning of the 30th of the month, the Sanhedrin came together and, upon the testimony of two reliable witnesses, proclaimed: "The new moon in consecrated." Thus the 30th day of the month was declared to be the first day of the new month. If the moon's crescent had not been seen on the 30th day, the new month did not begin until the 31st day. Fire-signals were then kindled on the Mount of Olives and thence over the entire land in order to announce the beginning of the month. Later, however, because the Samaritans interfered with this practice by lighting false fire-signals, messengers were sent. Those Jews who lived at a rather great distance from Jerusalem celebrated the 30th day of the month as New Moon in all cases, with the result that if the month was a full one (one of thirty days), the New Moon was celebrated on two consecutive days. This led to the lengthening of all the Biblical festivals, except the Day of Atonement, by one day.

It was not until the middle of the 4th cent. B.C.E. that the astronomical calculation of the new moon, which had, for a long time, and up to that period, been guarded as the secret knowledge of the dynasty of the Patriarchs in Palestine, was made public. Even today there is a reminiscence of the ancient solemn proclaiming of the New Moon in the still extant custom of announcing the New Moon in the synagogue on the preceding Sabbath, followed by prayers for God's blessing in the coming month and for the redemption of Israel. This is called the Blessing of the Month (Birkath Hahodesh). On the New Moon day the prayer *Yaaleh Veyabo* ("May there go up and come") is inserted into the Eighteen Benedictions (the Shemoneh Esreh), the half-Hallel and Musaf services are read, and the passage *Num.* 28:1-15 is read from the Torah.

NEW ORLEANS, a city in Louisiana with a Jewish population of 6,472 (1938), out of a total population of 494,537 (census of 1940). Early records speak of a Jew named Pallachio trading in flour in New Orleans. At the beginning of the 19th cent. Samuel Israel, Ezekiel Salomon, Judah P. Benjamin, Judah Touro and Henry Hyams were included among the Jewish population of New Orleans.

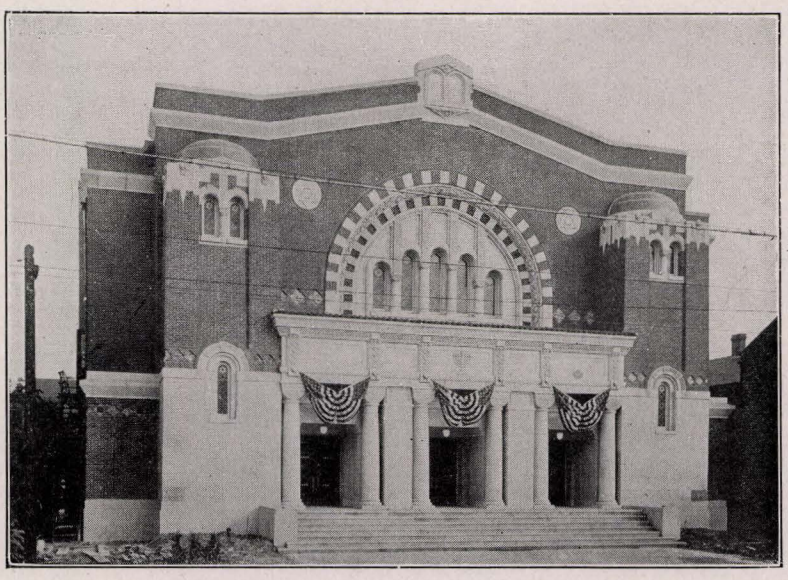
In 1828 Congregation Gates of Mercy was organized. Fifteen years later there were in New Orleans about 125 Jewish families, mainly of Spanish and German derivation. The Portuguese group had, in 1846, organized its own congregation, the Dispersed of Judah. In 1850 it had forty members, and Judah Touro presented the congregation with a building. About this time the German Jews organized another congregation, Gates of Prayer. Its building, "graced with an organ," was dedicated in 1850. Finally, in 1857, a congregation of Polish Jews was founded.

The membership of the Sephardic congregation Dispersed of Judah dwindled gradually, its decline hastened by the ravages of the Civil War and yellow fever epidemics. In 1881 it was amalgamated with Congregation Gates of Mercy under the leadership of Rabbi I. L. Leucht. It was at the time of the merger that the name Touro Synagogue was applied to the new congregation. The merger also marked the last stand of the Spanish Jews as a separate element in the New Orleans community. By 1942 even the aristocratic Sephardic family lines were practically extinct.

In 1942 Touro Congregation was Reform and its rabbi was Emil W. Leipziger. Congregation Gates of Prayer was also Reform in 1942, and had as rabbi Nathaniel Share, with Mendel Silber as rabbi emeritus. Silber's tenure began in 1914, and in 1929 he was elected rabbi for life.

During the Civil War Gutheim was compelled to leave New Orleans because of his refusal to swear allegiance to the Union after the capture of New Orleans by the federal forces. In 1870 he was recalled by the founders of Temple Sinai, a newly organized Reform congregation. He served this congregation until his death (1886). Its rabbi in 1942 was Julian B. Feibelman.

The oldest congregation serving the New Orleans



Beth Israel Synagogue at New Orleans

Orthodox community was Chevra Thillim, organized in 1875. From 1915 to 1940 Moses H. Goldberg was rabbi, and Joseph I. Singer occupied the pulpit in 1942. In 1896 Russian, Polish and Galician Jews founded Congregation Agadath Achim Anshe Sfard, whose rabbi in 1942 was Moses I. Goldberg. The largest Orthodox synagogue, Beth Israel, was organized out of several smaller groups in 1903. The rabbi in 1942 was Uri Miller.

In 1910 the charities of New Orleans were united as the Jewish Charitable and Educational Federation. Before federation occurred, the Hebrew Benevolent Society, organized in 1844, was amalgamated with the Touro Infirmary in 1869. The Association for the Relief of Jewish Widows and Orphans was organized in 1854, its founding made necessary by the yellow fever epidemic of the preceding year. This was the forerunner of the Jewish Children's Home, dedicated in 1886. Ten years later the New Orleans Y. M. H. A. was founded, and in 1902 the Provident Aid Society.

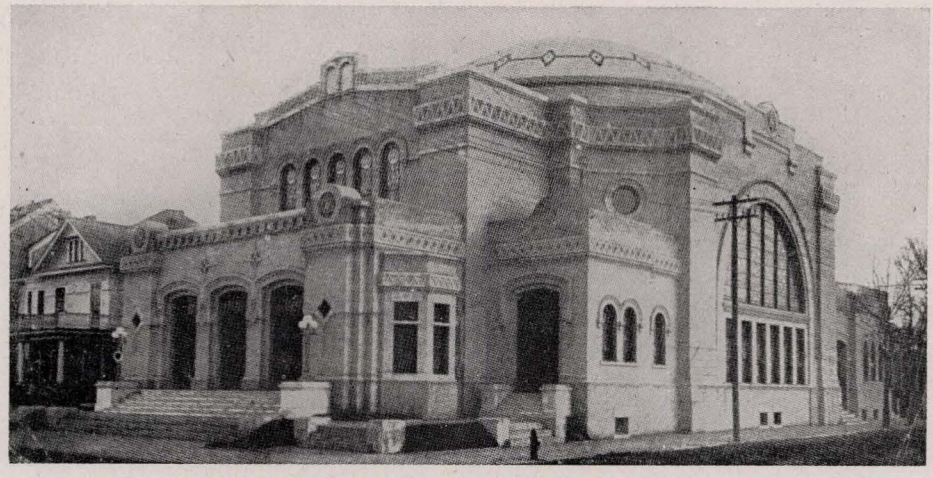
Emil Leipziger, of Touro Synagogue, was leader of a group which organized the New Orleans Community Chest in 1924. A year later the Federation of Jewish Charities affiliated with the Community Chest. The philanthropies comprising the Jewish Federation within the structure of the Community Chest were aided by a supplementary fund to care for overseas and national appeals and for Hebrew education carried forward by a communal Hebrew school. The Jewish Welfare Fund was organized for its first campaign in 1936.

An active local chapter of the National Council of Jewish Women, with a tradition of over thirty years of community service, a Hadassah organization, a B'nai B'rith lodge, and a Zionist agency served to round out the picture of Jewish communal organization. In 1942 there was a weekly, the *Jewish Ledger,* published in New Orleans. It was established in 1895.

In 1853 the New Orleans Jewish community organized a Foreign Mission Society to help ameliorate the condition of Jews in foreign lands. In 1882 this organization was active in an ill-fated plan to settle East European Jews on Sicily Island.

In 1938 sociological data concerning the New Orleans Jewish community were collected by Julian B. Feibelman. The results of the study were summarized by Feibelman as follows: "The Jewish population of 6,472 is 1.4% of the population of New Orleans. It is a mature group, 75% of which is over 21 years of age. There are 1,921 families; the average size of these families is 3.03. Maturity and small family size presage a declining group. In the population 2,932 are married and 2,911 are single. There are 1,423 families which have children, their average being 2.02. Six hundred

The Menorah Institute at New Orleans



The Touro Synagogue in New Orleans

ish families has a non-Jewish member, and more non-Jewish women marry Jewish men, than do Jewish men marry non-Jewish women.

"The population is educated, one-third have public school education; nearly one-half has some or complete high school, and more than one-quarter has some or complete college training. No illiteracy was discovered. All but 7% of the male adults have some kind of Jewish education; all but 14% of the females are educated in religion. There are 940 children now enrolled in religious schools.

"The population is 80% native born. More than one-third of it is gainfully employed, principally in mercantile types of business, such as retail and wholesale trade and manufacturing." There was a very small dependent class and practically no criminality in 1938.

Jewish members of the Louisiana state legislature who lived in New Orleans included Isaac Friedman (1905) and Simon Leopold (1905). Martin Behrman was mayor of New Orleans, Nat. W. Bond was county judge (1934), Henry A. Lazarus was a member of the state supreme court (1880), Max Dinkelspiel served on the state board of appeals (1919-24).

NEW ROCHELLE, a city in Westchester County, in southeastern New York, situated on Long Island Sound, sixteen miles northeast of New York city. It was founded by Huguenots in 1688, who named it after the Protestant stronghold in France. Its Jewish population was estimated at 6,000 (1942) out of a total population of 58,408 (1940).

Tradition has it that the first Jews to come to New Rochelle were members of the Hays family, of Dutch descent, who in 1720 were supposed to have come to the new world in their own vessel, "bringing their servants, cattle, seeds and tools of agriculture." Shortly thereafter members of this family moved to nearby Rye and Bedford.

Although a few families of German Jewish origin lived in New Rochelle, there was no organized Jewish life until the latter part of the 19th cent. In the 1880's Jews came from Lithuania, and under the leadership of Abraham and Benjamin Cohen, the first Jewish congregation, Ansche Sholem, was established. This Orthodox congregation was in existence in 1942, and its rabbi was Nota Pecker.

In 1905 Benjamin Stearns, although president of the Orthodox congregation, established the first Reform Jewish services. A permanent group was formed in 1906, and in 1908 it was incorporated as Temple Israel. In 1942 it was the largest Reform Jewish congregation in Westchester County. The cornerstone of the building on Webster Avenue was laid on November 18, 1928, and the structure was dedicated on June 7, 1929. In 1916 the congregation acquired a cemetery at Mt. Pleasant, Valhalla. Among the rabbis who served the congregation were J. D. Spear, Daniel A. Huebsch, Richard M. Stern, Clifton Harby Levy, Harry K. Jacobs and Alvin S. Luchs. The rabbi in 1942 was Jacob K. Shankman.

Affiliated with the congregation was a sisterhood, founded as the Ladies' Aid Society in 1906. In 1942 it was the second largest group in the New York State Federation of Temple Sisterhoods. A former president, Mrs. Louis A. Rosett, was in 1942 first vice-president of the National Federation of Temple Sisterhoods.

The Hebrew Institute, founded in 1917, followed the Conservative ritual; subsequently it changed its name to Beth El Synagogue. The congregation included a religious school, Hebrew school, sisterhood, men's club, Young People's League, and Junior Congregation. The building on Union Street was completed in 1927. Rabbis Louis Greenberg, Solomon Katz, Louis Schwefel, and Abraham Nowak were elected to the congregation's pulpit; the last named occupied it in 1942.

Located in New Rochelle were branches of the following national organizations. Hadassah, Jewish Consumptive Relief Society, Ort, Ivriah, Zionist Society, B'nai B'rith. It had an active loan association, the Hebrew Mutual Alliance. The United Home for Aged Hebrews was situated there.

Prominent Jewish residents of New Rochelle included Nathan and Linda Miller, Nathan Straus, Ludwig Lewisohn, Arthur Garfield Hays, Jan Peerce, Jessie Sampter and Lucius Littauer.

Jews served prominently in communal and civic positions as city judges, as presidents of the Business Men's Association, and on the executive boards of the public school system, the New Rochelle Hospital, Community Chest, and Council of Social Agencies. JACOB K. SHANKMAN.

NEW SOUTH WALES, a state of the commonwealth of Australia, with approximately 11,500 Jews (1942), out of a total population of 2,770,000. The history of New South Wales Jewry is almost identical with that of the Jewish community in Sydney, the state capital and parent city of Australia, which was also the cradle of Australian Jewry. Jews came to the infant colony at the beginning of the 19th cent.; they settled around Sydney Cove. In 1817 the first Jewish funeral in the colony took place. Ten years later the Jewish population was ninety-five, and in 1828 Philipp Joseph Cohen offered the use of his house for regular services.

In 1942 about 11,000 out of the total Jewish population of 11,500 resided in Sydney and suburbs. There was a Jewish congregation of 100 persons at New Castle, the coal port on the New South Wales coast; it had a minister, the Reverend I. Morris, and a synagogue where regular Sabbath and holiday services were held. Another Hebrew congregation was at Broken Hill in the mining district (founded in 1905). Maitland had a congregation at the end of the 19th cent.

Jews frequently played a role in the history of New South Wales, notably Jacob Montefiore and his brother, Joseph Barrow Montefiore, who did much to develop the commercial prosperity of the colony. A town in the Wellington province of New South Wales is named Montefiore. Sir Saul Samuel was postmaster general for New South Wales and agent-general. Sir Julian Salomons filled the offices of solicitor general, member of the Legislative Council, chief justice and agent general. Henry Emanuel Cohen was elected judge (1896) of the Supreme Court of New South Wales, as were John Jacob Cohen and Maurice Emanuel Cantor. Sir Daniel Levy was speaker of the state parliament. Other outstanding New South Wales Jews were Joseph Jacobs, editor of the *Jewish Encyclopedia,* and Samuel Alexander, professor of philosophy at Owen's College, Manchester, England.

NEW TESTAMENT, a collection of writings that forms the second part of the Christian Bible; it contains accounts of the life and ministry of Jesus, the early history of the church, Christian theology and ethics. The word "testament" is used in the sense of "covenant" or "dispensation," and the term New Testament implies the creation of a new system of teachings supplementary to and superior to those of the Old Testament, or Hebrew Bible. The New Testament is regarded by Christians as the fulfillment of the prophecies and the teachings contained in the Old.

The New Testament falls into four divisions: the four gospels, attributed to early Christian writers, and relating the story of Jesus from birth to resurrection; the *Acts of the Apostles,* an account of the history of the early church, attributed to Luke, the author of the third gospel; twenty-one epistles, thirteen of which are attributed to Paul and three to John; *Revelation,* an apocalypse.

In its present form, the New Testament is written in Greek, although it is possible that some of the books were originally in Aramaic. Most of the writers of the various parts were Jews, and the writings were designed for Jewish readers who had embraced the Christian faith. The authors drew more or less from contemporary Jewish ideas, ethics, legends, parables and sayings. The New Testament can not be understood without a knowledge of the Judaism of the times, a fact recognized by a voluminous literature by both Christian and Jewish scholars. Thus, in the case of many of the sayings of Jesus, it is possible to arrive at a more exact meaning by reconstructing the original Aramaic or Hebrew in which they were uttered. Because of the large proportion of Jewish ideas, and the fact that so many Jews participated in its writing, the New Testament may be reasonably regarded as a part of Jewish literature.

The first three gospels are called Synoptic, since they tell essentially the same story and contain the same ideas. The fourth is a metaphysical and mystical work that stands apart from the others. Modern Bible criticism holds that none of the gospels is a unit; they are compilations resulting from a complicated literary process, based on tradition, committing to writing, and constant revision. Only seven of the thirteen epistles ascribed to Paul are regarded by scholars as definite products of his pen.

The Greek of the New Testament is that of the vernacular spoken in the Roman empire in the 1st cent. Some of the books lack beginnings or endings. The text is very badly preserved, lacking the painstaking attention to the text (Masorah) which the Jews gave to the Hebrew Bible. The original manuscripts have long since disappeared; the earliest papyrus fragments are of the 3rd cent., and there are numerous ancient versions in various languages, as well as quotations by the Church Fathers. These show extensive variations in the text, and one of the tasks of modern scholarship is to reconstruct the original text of the New Testament.

The books of the New Testament represent a selection from a much larger Christian literature which existed during the first four centuries. Following the practice of the synagogues, churches read in public worship various books described as gospels and epistles. The first attempt to form a canon was made by Marcion about 140; it consisted of the gospel of *Luke* and ten of the Pauline epistles. It is probable that each of the four gospels gained currency and prestige through one of the great churches: *Mark* at Rome, *Matthew* at Antioch, and *John* at Ephesus. The discussion of which books to adopt as canonical lasted a long time. Some of the rejected books have been preserved in the so-called apocrypha of the New Testament, while others are known only by name. It was not until the 4th cent. that the present canon was adopted, although a Roman list from about 175, discovered by Muratori in 1740, corresponds closely to the present canon, excluding only the *Epistle to the Hebrews* and some of the non-Paulinian (Catholic) Epistles. The universally accepted canon includes the following books: *Matthew, Mark, Luke, John, Acts of the Apostles, Romans, I* and *II Corinthians, Galatians, Ephesians, Philippians, Colossians, I* and *II Thessalonians, I* and *II Timothy, Titus, Philemon, Hebrews, James, I* and *II Peter, I, II* and *III John, Jude* and *Revelation.*

The attitude of the New Testament toward the Jews varies in the different books. In the New Testament the Jews as a whole are not the enemies of Jesus; they are set above the Gentiles (*Matt.* 15:22-27), and the Jewish Law is to be preserved (*Matt.* 5:17). The opponents of Jesus are only certain Jewish groups, sometimes the scribes and Pharisees, sometimes the high priests or Sadducees. Within these books there is a difference of degree of the charge of responsibility on the part of the Jews for the death of Jesus, with *Luke* containing the story that absolves Pilate and throws all the blame on the Jewish people.

John is the first to regard the entire Jewish people as opponents of Jesus the redeemer, and his entire treatment of the story is such that its earlier portions are completely unhistorical. In the latter part, however, he notes that it was Roman soldiers who actually crucified Jesus, although he also seeks to absolve Pilate and fasten the charge upon the Jews. *Acts,* while describing the tolerant attitude of Gamaliel, is full of complaints that the Jews attacked the new movement, denounced its leaders to the Romans, and attempted to prevent them from speaking.

The epistles are generally hostile, and express the ideas of a religion that has become detached from and opposed to Judaism. Paul declares the Jewish Law to be a curse (*Gal.* 3:13); another passage, which declared that Israel walked in darkness, but was eventually to be saved (*Rom.* 11:25), determined the status of the Jews for centuries under Christianity: they were to be preserved as "witnesses of the truth," but kept in an inferior condition.

The New Testament was much read in the early church, restricted to the clergy during the Middle Ages, and restored to the people by the Protestant Reformation. Modern anti-Semitism tries to eliminate the New Testament as a Jewish literary product from the religious life of mankind with almost the same fervor as it seeks to ban the Hebrew Bible.

NEW YEAR, *see* CALENDAR; ROSH HASHANAH.

NEW YEAR FOR TREES. In addition to the 1st of Nisan and the 1st of Tishri, the rabbis of the Talmud mentioned other New Years. One of these was the New Year for Trees, which, according to Beth Shammai, was to be celebrated on the 1st of Shebat (roughly corresponding to the month of February), but which, according to Beth Hillel, was to be observed on the 15th of Shebat (*R.H.* 1:1). The latter date was subsequently fixed as the New Year for Trees, hence the popular name Hamishah Asar Bishebat (the fifteenth day of Shebat).

No special liturgy or festivity is prescribed for the day, and its observance consists merely in the omission of the Tahanun prayer from the daily service and in the eating of many species of fruits, especially such as grow in Palestine. The Cabalists, however, add mystical interpretations and observances. It is probable that trees were once actually planted on this day, and that therefore this new year's day was merely a fixed day in the agricultural calendar. When the Jews subsequently were compelled to give up agriculture, the observance became symbolic. The eating of fruits as a symbol was not practised until the 16th cent.

[The City of Greater New York consists of five boroughs: Manhattan, the Bronx, Kings (Brooklyn), Queens and Richmond (Staten Island).

This article deals with the boroughs of MANHATTAN and the BRONX. BROOKLYN, because of its history preceding its amalgamation into Greater New York in 1898 and because of the unprecedented growth of its Jewish community after that, had to be treated as an entity (vol. 2, pp. 544-57). QUEENS, in its community structure, is a series of villages, nearly all self-contained save in their political affiliation with the greater city. In the mind of the average citizen in and out of New York, Queens belongs to that unique district of the state of New York which is *Long Island:* it is therefore treated as a section of the article under that head, in this volume (pp. 200-5). RICHMOND, which comprises the whole of Staten Island and which, like Queens, is constituted by a number of self-contained village communities, is likewise treated separately, below (pp. 195-96).]

The city of New York is the largest city in the United States, with a population of 7,454,995 (census of 1940).

The Jewish population of New York city (Brooklyn became a borough in 1898) was estimated at different times by various authorities. The following are some of the estimates: in 1812, 400 by G. M. Seixas; in 1826, 950 by S. Gilman in the *North American Review;* in 1846, 10,000 by the Reverend Isaac Leeser; in 1848, 12,000 to 13,000 by M. A. Berk, in *History of the Jews up to the Present Time;* in 1880, 60,000 by the Census of the Board of Delegates of American Israelites; in 1888, 125,000 by Isaac Markens, *The Hebrews in America;* in 1891, 225,000 by Charles Frank, secretary of the United Hebrew Charities; in 1897, 250,000 by Richard Wheatley in *Harpers Magazine;* in 1897, 350,000 by Jacob H. Schiff, in his address before the Anglo-Jewish Association in London; in 1905, 672,000 by Joseph Jacobs; in 1907, 600,000 in the *American Jewish Year Book;* in 1910, 861,980 (Yiddish-speaking only) by the United States Census Bureau; in 1911, 900,000 by Joseph Jacobs, *Jewish Communal Directory* (1912); in 1912, 975,000 by Joseph Jacobs, *American Jewish Year Book* (1914-15); in 1912, 1,550,000 by Walter Laidlaw, *Census of the Federation of Churches;* in 1913, 1,330,000 in the *American Journal of Statistics* (July, 1913, "Jews in New York City"); in 1917, 1,500,000 in the estimate of the *Jewish Communal Register,* Alexander M. Dushkin; in 1927, 1,765,000 by the Jewish Statistical Bureau; in 1937, 2,035,000 by the Jewish Statistical Bureau.

A. From 1654 to 1880. 1. The Colonial Period. The first Jew to settle in the Dutch colony of New Amsterdam was Jacob Barsimon, who came from Holland on August 22, 1654. In the following month a group of twenty-three Jews arrived, refugees from the Dutch colony of Recife, Brazil.

The Portuguese had captured Brazil from the Dutch, and the Jews who lived there were compelled to dis-

pose of their properties within three months. A ship, the *St. Charles,* captained by Jacques de la Motthe, was sailing from Recife for the Dutch New Amsterdam, and twenty-three Jews hurriedly converted what they owned and engaged passage on the vessel. Sufficient funds were not realized by the Jews to pay the amount of the passage to New Amsterdam demanded of them by de la Motthe; they did, however, expect remittances from Holland on their arrival in New Amsterdam. Having made a substantial down payment at Recife, and a promise that the rest would be paid at New Amsterdam, the twenty-three were permitted by de la Motthe to embark.

For some time after the arrival of the *St. Charles* in New Amsterdam, however, the monies from Holland did not materialize. De la Motthe grew impatient and sued for the balance owed him in the court of the Burgomaster and Schepens. Before this court the pleadings of Solomon Pietersen, spokesman for the Jews, were in vain. On September 10, 1654, a judgment was issued on the property of the Jews, and six days later it was executed, yielding only partial satisfaction. Accordingly, David Israel and Moses Ambrosius were jailed as principal debtors, and on October 5th Asser Levy was also imprisoned. They were released on October 21st, when the crew of the *St. Charles* agreed to await the arrival of the expected remittances for the sum owed them.

With winter coming on, it was feared that the Jews, obviously without funds, would become public charges. Governor Peter Stuyvesant said as much in a letter to the directors of the Dutch West India Company, on September 22, 1654. He also made it clear that the Jews were not welcome in New Amsterdam, that they be urged to depart, and that further Jewish immigration to the colony be halted. The directors, however, replying to Stuyvesant on April 26, 1665, described the governor's proposals as "unreasonable and unfair, especially because of the considerable losses sustained by the Jews in the taking of Brazil, and also because of the large amount of capital which they have invested in the shares of this company. . . ." It was their further decision that the Jews might live, travel, and trade in New Netherland "provided the poor among them shall not become a burden to the company or to the community, but be supported by their own nation."

However, in a letter dated March 13, 1656, the directors made it clear to Stuyvesant that the consent given the Jews to settle in New Amsterdam and there enjoy the same liberties granted them in Holland extended to civil and political matters only and did not include the privilege of worshipping in a synagogue. Stuyvesant, replying on June 10th, informed the directors that the Jews had many times requested permission to exercise their "abominable religion," but that their petitions had been denied. Yet Stuyvesant's intolerance is not to be regarded as expressed solely against the Jewish element in the population. Lutherans, Quakers and other Christian sects which did not conform to the tenets of the Dutch Reformed Church also experienced difficulty with the New Amsterdam regime.

The directors of the Dutch West India Company expressed to Stuyvesant on April 16, 1663, the hearty desire that sectarians remain away from New Amsterdam. But they were practical men and realized that repressive measures would tend to halt immigration "which must be favored at a so tender stage of the country's existence." Consequently, Stuyvesant was instructed to allow every one to practise his own religion so long as he behaved quietly and legally.

On June 14, 1656, the directors rebuked the local council for having denied Jews the privilege of trading at certain frontier posts and of purchasing real estate. While the New Amsterdam authorities wished that this had not occurred, they were of the opinion that Jews were not to be permitted to establish themselves as mechanics nor allowed to maintain retail shops, "but they may quietly and peacefully carry on their business as heretofore and exercise in all quietness their religion within their houses. . . ." A few months earlier, in March, 1656, court records reveal that Jews and foreigners were as much encouraged to sell at retail as the citizens themselves. But in 1657, the petition of Jacob Cohen Henriques for the privilege of baking and selling bread was denied.

Early in 1657 burgher rights were established for the inhabitants of New Amsterdam, and on April 11, 1657, Asser Levy demanded this right of the court. His petition was denied, and Levy was compelled to appeal to the director-general and the council. Pleading that "our Nation enjoys in the City of Amsterdam in Holland the Burgher right," Asser Levy was admitted to the burgher right on April 26, 1657.

The burgher right granted Levy was normally prerequisite to engaging in "any store business or handicraft trade." However, there is little evidence showing that the ban on Jews engaged in retail trade was lifted as a consequence of the granting of the burgher right. As late as 1685, well into the English period, the petition of a Jew to engage in retail trade was denied. An exception was made in the case of butchers. In 1660 Asser Levy and Moses Lucena were licensed in this trade.

There were other rights to be contended for in New Amsterdam. All burghers had to perform military duty. The council denied this right to the Jews in the colony, but instead imposed a tax on them. On November 6, 1655, Asser Levy and Jacob Barsimon applied for relief from the taxation imposed on them because of the enforced exemption from military duty. The petition was refused, but there is evidence that at a later date Levy and Barsimon were permitted to perform military service. In 1658 the observance by a Jew of his Sabbath was recognized by the local authorities as sufficient reason for failing to attend court. The Jewish community was given the right to use "a little hook of land" outside of the city for a burial place, and on July 14, 1656, a cemetery lot was selected. Although Salvador D'Andrada was denied permission to purchase real estate in 1655, Asser Levy purchased a parcel of land on South William Street in 1662.

A tax record dated October 12, 1655, reveals even at that early date that there were fairly well-to-do Jews in the New Amsterdam community. Salvador D'Andrada, Jacob Cohen Henriques, and David de Ferera were assessed one hundred guilders each. This amount was equal to that paid by each of the leading city officials and by three burghers who were known to have been wealthy. In 1664, when the city was attacked by the English, Asser Levy loaned the Dutch defenders one hundred florins.

When the English captured New Netherland in 1664, the inhabitants were protected in their civil and property rights by the terms of surrender which were confirmed by the Treaty of Breda (1667). The Duke's Laws, promulgated by Governor Nicholls (1665), would have safeguarded the religious rights only of persons "who profess Christianity," but Governor Andros' instructions (1674) contained no such limitation. Governor Dongan's instructions (1683) concerning religious freedom were like the clause in the Duke's Laws, but in that same year the colonial assembly limited immunity from religious persecution only to the believers in Jesus Christ. In 1678 Jacob de Lucena was compelled to petition for a pass to accompany a shipment of goods to northern New York state. In 1685 the petition of a

Jew to engage in retail trade was denied, and in that same year the mayor and common council denied the Jews of New York city the right of public worship.

Yet the English were not intolerant. Like the Dutch, they could ill afford to persecute persons of diverse religious belief because the country was large and settlers were few. The Dutch did not object to private worship, which existed almost from the beginning of Jewish settlement, and it continued without interruption after the English conquest. Moreover, ten years after the injunction against public worship by the Jewish population, there appeared on John Miller's map of New York a Jews' synagogue on Beaver Street with Saul Brown serving as minister of a congregation which comprised about twenty families. In 1710, when the congregation's minister appealed to the public authorities for exemption from military service, he argued his case on the ground that a similar privilege had been granted his predecessors. A deed, dated 1700, located the synagogue on Mill Street. However, because the Anglican church was the only religious institution which could be incorporated under English law, the synagogue remained unincorporated until 1784.

In 1715 the New York colonial assembly authorized the naturalization of all persons then alive who were inhabitants of the colony before 1683. Between 1687 and 1740 a number of Jews were naturalized in New York, and after 1727 Jews in their oath of abjuration were permitted to omit the words "upon the true faith of a Christian." In 1740 the English Parliament passed a Naturalization Act with a special provision for Jews, making them eligible for citizenship, while Catholics were excluded.

This legislation was contrary to the spirit of the vote in the General Assembly of New York in 1737 which would have denied Jews the privilege of voting for representatives on the ground that they could not vote for members of Parliament in England. The assembly had also decided that Jews might not serve as witnesses in the matter of disputed election returns which was then under consideration. Not only were these rulings contrary to precedent, but they apparently had little practical effect. A poll-list of the electors to the General Assembly of 1761 reveals the names of several Jews. The constitution of 1777 merely embodied in law the freedoms that the Jews of New York had enjoyed in practice.

In the economic realm, international commerce was the most prominent aspect of Jewish activity. For success in this field the Jews of New Amsterdam were particularly well equipped. With relatives and coreligionists in the West Indies and in the countries of Europe, they were strategically situated at a significant apex of the trade triangle the arms of which extended to the countries of Europe and the islands of the West Indies. From the port of New York the ships of Louis Gomez, perhaps the most prosperous of New York's Jewish merchants, sailed with cargoes of wheat for Portugal, while other vessels owned by Gomez brought the products of the New World to Amsterdam, Hamburg and Dublin.

Joseph Bueno, Abraham de Lucena, Jacob Franks, Samuel Moses and Isaac Levy were prominent in trade with the islands of the West Indies, while the ships of Solomon Hays plied coastwise routes. During the French and Indian Wars the vessels of Sampson Simson, Hayman Levy and Judah Hays, equipped with letters of marque, roamed the seas in search of prizes. The business of privateering may have been a highly dangerous undertaking, but it had the double advantage of being patriotic and profitable.

International commerce was only one phase of the economic activity of the Jews of New York city. The wills of Jewish merchants filed during the colonial and early national periods reveal most of their makers as merchants of moderate wealth with a considerable diversity of business interest. Hayman Levy, head of the firm of Levy, Lyons and Co., was active in the fur trade. Sampson Simson was one of a delegation which received the charter of the New York city Chamber of Commerce from Lieutenant Governor Colden in 1770, while seventy years earlier Joseph Bueno and two other Jewish business men advanced a loan to Governor Bellomont. Jacob Franks was a prominent figure in domestic as well as international commerce. His fortune and that of Simson were considerably augmented because of their service as purveyors to the British forces in the crucial struggle with France. Joseph Bueno, Abraham de Lucena and Samuel Levy joined with non-Jewish merchants in petitioning, in 1775, for a fair standard of value for foreign coins. The slaves of the Gomez family and those of Abraham Myers Cohen were accused in the negro insurrection of 1741. In 1784 Isaac Moses was among the business men memorializing for the improvement of public credit.

2. The Revolutionary and Early National Periods. The Revolutionary War divided the Jewish as well as the non-Jewish community. While such Jews as Samuel Judah, Hayman Levy, Jacob Moses, Jacob Myers, Jonas Phillips and Isaac Seixas supported the policy of resistance to England, a loyalist petition addressed to General Howe in 1776 was signed by many representatives of New York Jewry. Perhaps the most prominent among the latter was Lyons Jonas, president of the small Jewish congregation which remained in the city after the British occupation. The larger part of the membership of Congregation Shearith Israel moved to Philadelphia, and its minister, Gershom Mendes Seixas, withdrew to Connecticut when New York fell to the British.

Among the Jews of New York city who served in the Revolutionary army were Solomon M. Cohen, David Hays, Myer Myers, Manuel M. Noah, Jonas Phillips, Benjamin M. Seixas, and Sampson Simson. The Committee of Safety of the State of New York in 1776 expressly exempted Hart Jacobs from military duty on Friday night.

The conclusion of the war brought about the resignation of Alfred Zuntz, a Hessian officer, who had succeeded Lyons Jonas in the presidency of Shearith Israel Congregation. The exiled members, on their return to New York city, elevated Hayman Levy, whose fortune and services were at the disposal of the cause of independence, to this position. Among the purchasers of confiscated loyalist estates were Isaac Moses, Jacob Mordecai and Philip Jacobs.

In 1782 Benjamin Seixas and Ephraim Hart were among the founders of the New York Stock Exchange. In 1799, among the New Yorkers whose residences were assessed at £2,000 or more, were Seixas, Hart, Solomon Sampson and Alexander Zuntz. Hayman Levy had grown wealthy in the fur trade, and owned most of the houses on Duke Street, while Harmon Hendricks founded the Soho copper rolling mills at Belleville, N. J., in 1813. During the War of 1812 Hendricks subscribed $40,000 for the conduct of the war.

In the colonial and early period of American nationality, Jewish communal life centered about Congregation Shearith Israel, of which Gershom Mendes Seixas was Hazan (1766-1816). For more than a century and a half it had been the only congregation in New York city, and its governing body, the Parnas and trustees, maintained strict control over the membership. Rules were formulated for conduct within and outside of the synagogue, and financial obligations to the synagogue were to be discharged within a given period of time under penalty of exclusion from the

congregation. The governors of the congregation strictly enforced the rules of ritual observance. The Shohet was repeatedly brought to trial for alleged carelessness, and housewives were apparently not above reproach in the matter of keeping kosher homes. In 1752 the ruling body of Shearith Israel announced that a person who absented himself from synagogue in his lifetime was to be denied burial in the synagogue cemetery. According to a proclamation made on Yom Kippur, 1757, a similar fate awaited those guilty of "Trading on the Sabbath, Eating of forbidden Meats and other Heinous crimes. . . ." However, in the late 18th cent. there was a gradual slackening of synagogal control as offending individuals were fined rather than banished or denied burial.

The kosher meat supply was a serious problem in the small Jewish community. It was necessary for the trustees of Shearith Israel to contract with a number of non-Jewish butchers, who agreed to permit the Shohet to kill the animals. Then, after inspection, the acceptable parts were sealed, separated from other meats, and offered for sale at certain hours. According to the congregational minutes of February 14, 1796, the task of the Shohet was to insure a plentiful supply of meat for the congregation; to imprint his seal plainly on the hind and fore quarters of the animal; and to remove the seal whenever in his judgment the meat was no longer kosher.

Early congregational revenues were derived from contributions, pew rentals, and penalties. While the correspondence of Hazan Seixas reveals the congregation to have been anything but prosperous in 1814, it is apparent that this condition was only temporary. In 1818 the Mill Street synagogue was rebuilt, with Mordecai Manuel Noah delivering the consecrating address. Copies were sent to ex-Presidents John Adams, Thomas Jefferson, and James Madison, all of whom replied.

Associated with the congregation was the burial society, Hebra Gemilut Hasadim, which was organized about 1785. In addition to superintending funerals and visiting the bereaved, it gave relief and medical assistance. Fines were imposed on the membership for non-attendance at Minyan and Yahrzeit services, for not sitting with the sick when summoned, and for absence from the meetings of the society. In 1802 the charitable organization Hebra Hased Va Amet was organized. Previous to that date, charity had been dispensed by congregational appropriations to needy individuals and families, while impoverished transients were boarded in the house of the beadle. A committee of the relief society Mattan Basether predicted in 1805 that New York would some day contain the largest congregation in the New World, and urged that it was time to lay the foundations of a "great and charitable institution."

The first Jewish school in New York city, Yeshibat Minhat Areb, was founded in 1731 by Shearith Israel Congregation. Reorganized at the beginning of the 19th cent. as the Polonies Talmud Torah, it was subsidized by public funds and conducted for half a century as a parochial school with a curriculum including English, reading, writing, arithmetic and Hebrew. Toward the middle of the 19th cent. the Polonies Talmud Torah became an afternoon weekday school supplemented by a Sunday school.

In this early period there were some notable examples of interfaith cooperation. A number of Jews subscribed to the building of a steeple for Trinity Church in 1711, and Gershom Mendes Seixas was particularly friendly with the Episcopalian ministers of New York. Frequently Seixas was invited to address Christian congregations, and members of the latter were supposed to have visited Shearith Israel. In 1789 he preached a Thanksgiving Day sermon, and in that same year he participated in the ceremony inaugurating George Washington. In 1787 he was made a trustee of Columbia College, and served in that position until 1815. In 1814 he assisted in the raising of a fund for the relief of the inhabitants of Genesee and Niagara counties made desolate by the British attack.

It was estimated that in 1812 there were about 350 persons affiliated with Shearith Israel Congregation, and about fifty Jews who were unaffiliated. The minutes of the congregation between 1728 and 1812 indicate that the Jewish population did not vary greatly in number. It is significant that while the general population of New York city increased greatly between 1782 and 1812, the Jewish population in the same period did not keep pace but remained stationary.

3. The Jewish Community: 1825 to 1880. Between 1815 and 1825 there was a substantial increase in immigration from Central Europe brought on by the fall of Napoleon. By 1825 the Ashkenazic Jews were a majority in the community, but they experienced difficulty in accustoming themselves to the ritual of Shearith Israel. Poorer than the older and more established Spanish Jews, they felt that the membership of Shearith Israel was, in accordance with their standards, lax in religious observance. All these factors contributed to the establishment, in 1825, of Congregation B'nai Jeshurun, with services in accordance with "the rites, custom and usage of the German and Polish Jews."

The early years of Congregation B'nai Jeshurun were characterized by strict control of the membership by its officers and a high standard of Orthodoxy. Several applicants were denied admission to the congregation on the ground that they kept their stores open on the Sabbath. In 1829 a graduated scale of fines was introduced as a penalty for lateness, non-attendance at synagogue, and disorderly conduct. According to an early by-law, an elector of the congregation who married "contrary to the Mosaic Law" was to lose his rights as an elector, while no religious ceremony could take place in any congregational home without the consent of the presiding officer of the congregation. The surveillance which the trustees maintained over the congregational burial ground was sometimes exercised for the collection of membership dues and unpaid debts owed the congregation.

Members of the congregation would bring before the board of trustees cases involving questions of Jewish law, the resolution of which intimately affected their personal lives. If the matter was of sufficient importance, appeal was made to the chief rabbi in London. Consequently, in the second quarter of the 19th cent., close ties were maintained between the Ashkenazic Jewish community in New York and the Jewish community in England. Even those of the Ashkenazim who came from European communities other than England were ready to accept the guidance of Chief Rabbi Solomon Hirschell. Among the questions which the rabbi was asked to decide as an ultimate authority were the method of construction of a Mikveh, the validity of certain types of marriages, the legitimacy of offspring, and the legality of divorce. Finally, in 1849, the chief rabbi expressed the hope that "a spiritual leader might arise in America, in the light of whose learning and virtue the Kehilloth of America could walk."

Yet despite the extreme Orthodoxy of the congregation, it is significant that Samuel M. Isaacs, its reader and preacher (1839-44), bitterly attacked the membership in a letter to the periodical *Occident*. He claimed that Sabbath-breakers were not only admitted to membership but were invited to share in the Mitzvoth and were elected to high synagogal office. Shortly thereafter, Isaacs led a secession movement from B'nai Jeshurun which organized Congregation Shaaray Tefilla in 1845.

Perhaps the most striking development in the New York Jewish community of the 19th cent. was the increasing importance of the German Jews. As early as 1665 it was noted that there were two types of Jews in the Dutch colony of New Amsterdam, the Spanish and the German, of whom the latter were poorer; and in 1712 the Reverend John Sharpe observed that there were many Jews in New York from Poland, Hungary and Germany. It may well have been that in the 1830's and 1840's the rich Jews were the Sephardim who lived in the vicinity of Crosby Street and worshipped at Shearith Israel Congregation. But the tide of European immigration was favorable to the German Jewish element who congregated on Elm Street.

The organization of Congregation B'nai Jeshurun in 1825 was followed by the incorporation of the German Congregation Anshe Chesed in 1830, and the Polish congregation, Shaaray Tsedek, was founded in 1839. Temple Emanu-el was founded in the year 1840. These were followed by the German Congregation Shaaray Hashomayim (1841), the German Congregation Rodof Sholom (1842), the Polish Congregation Shaaray Tefilla (1845), the Polish Congregation Beth Israel (1846), the Dutch Congregation Bene Israel (1847), the Bohemian Congregation Ahawath Chesed (1848), the German Congregation Shaare Rachamim (1849), the German Congregation Bikur Cholim (1849), and the Polish Congregation Beth Abraham (1850). From the nationality of some of these congregations, it is apparent that the German Jews were not alone in competing for the positions of prestige and power in the New York Jewish community which were so tenaciously held by the Sephardim.

Isaac Mayer Wise was unimpressed with the New York Jewish community as he found it in 1847. In addition to the congregations, he noted the existence of two communal schools, a number of Jewish mutual benefit associations, and two charitable societies. Wise noted that, apart from Leo Merzbacher and Max Lilienthal, there was not one leader who could read unpunctuated Hebrew or, with the exception of a few private individuals, had the least knowledge of the literature and history of Judaism. "In the mercantile field, the names of Walter, Dittenhoefer, Moses, and Content were well known; Lehmaier, Seligman, Stettheimer, Bernheimer, were as yet unknown beginners; Belmont, Speier, Ballin, Sanders, did not want to pass as Jews even at that time; Chatham Square [almost wholly devoted to the second-hand clothing and pawnbroking trade] was a disgrace; Houston Street was a vanity fair; on the Bowery, on Division, Grand, and other streets small stores were owned by Jews. On the whole, they cut no figure."

Yet it would seem that Wise's unfavorable picture of the New York Jewish community was somewhat overdrawn. In 1847, the same year as that in which Wise made his observation, Max Lilienthal wrote in testimony of the rapid economic progress which the German Jew was making. Some merchants who owned businesses worth between $100,000 and $200,000 were penniless immigrants six years earlier.

Between 1820 and 1830, members of the New York Stock Exchange included J. L. and S. I. Joseph and Co., M. J. Cohen, Seixas Nathan, and Joseph Leon. Bernard Hart was secretary of the Exchange, succeeding Jacob Isaacs in this position. Daniel Levy Maduro, Leo Wolf and Daniel L. M. Peixotto were practising physicians in 1838, and at that date Alexander Kursheedt, S. B. H. Judah and P. J. Joachimsen were lawyers.

As early as 1766 there appeared an English translation of the Sephardic prayer-book by Isaac Pinto, Joseph Aaron's *A Key to the Hebrew Language* was published in New York in 1834, while Isaac Nordheim, professor of Semitic languages at the University of New York, wrote *A Critical Grammar of the Hebrew Language,* published in 1838 to 1840. In September, 1854, there were seven Jewish parochial schools in New York city, with 857 pupils enrolled.

In politics, Naphtali Phillips had become proprietor of *The National Advocate,* established in 1813 by Tammany Hall. Between 1816 and 1826, Mordecai Noah was editor of this newspaper—becoming a leader in the Tammany organization and judge of General Sessions (1841). Naphtali Judah, M. M. Noah, Emanuel B. Hart and Albert Cardozo were either Sachem or Grand Sachem of Tammany Hall before 1864.

Ephraim Hart was a member of the state senate (1810), and Mordecai Myers served in the state assembly (1829-34) and was mayor of Schenectady (1851-54). Emanuel B. Hart was a member of Congress (1851-53), president of the Board of Aldermen in New York city, and surveyor of the port of New York during the administration of James Buchanan. Isaac Phillips was appointed general appraiser by President Franklin Pierce, and Jonas Phillips served on the Board of Aldermen (1857-59), and was acting mayor (1858).

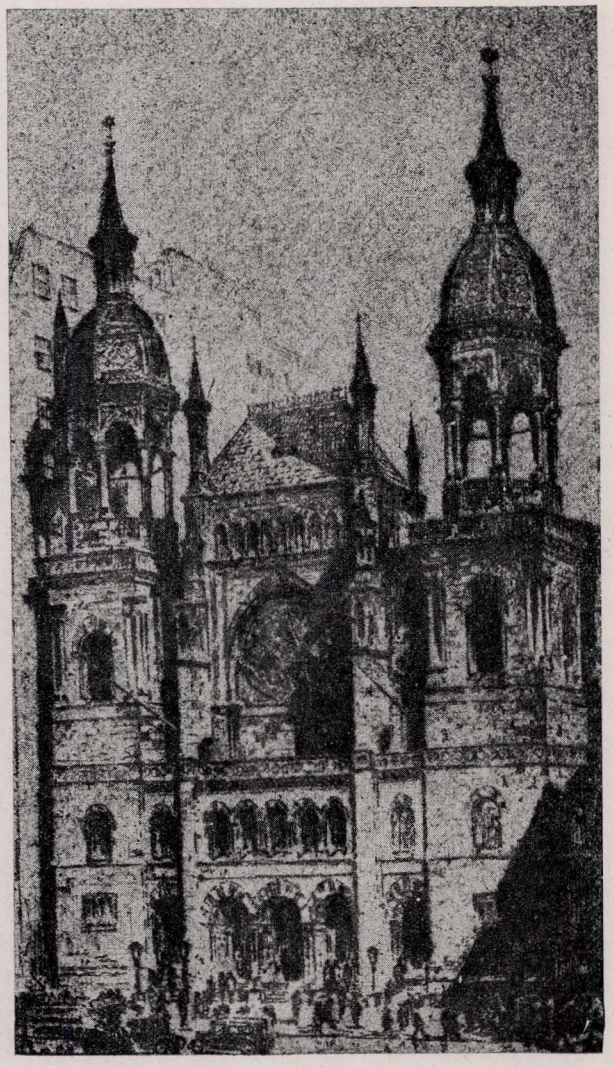
This period also marked the beginnings of the Jewish press in New York city. *The Asmonean* was founded in 1849, *The Jewish Messenger* in 1857, and *Israel's Herold* in 1849. As early as 1823 a little periodical, *The Jew,* answered the arguments of the conversionists. Among the clergy, Jacques J. Lyons was Hazan of Shearith Israel (1839-77) and Samuel M. Isaacs was minister of B'nai Jeshurun (1839-45), resigning to go to the pulpit of Shaaray Tefilla. Max Lilienthal was, in 1846, rabbi of three German congregations: Anshe Chesed, Shaaray Hashomayim, and Rodof Sholom. Morris J. Raphall began his service at B'nai Jeshurun in 1850, and served for eighteen years, while Leo Merzbacher served at Emanu-El (1845-56). The B'nai B'rith was founded in 1843, and the Free Sons of Israel in 1849.

Beth Ha-Midrash (1852) was the first Russian Jewish congregation in New York city, but a dispute over the appointment of a Shohet caused part of the congregation to withdraw and form Bene Israel (1855). Another secession from the original congregation (1859) led to the formation of the Beth Ha-Midrash Ha-Godol.

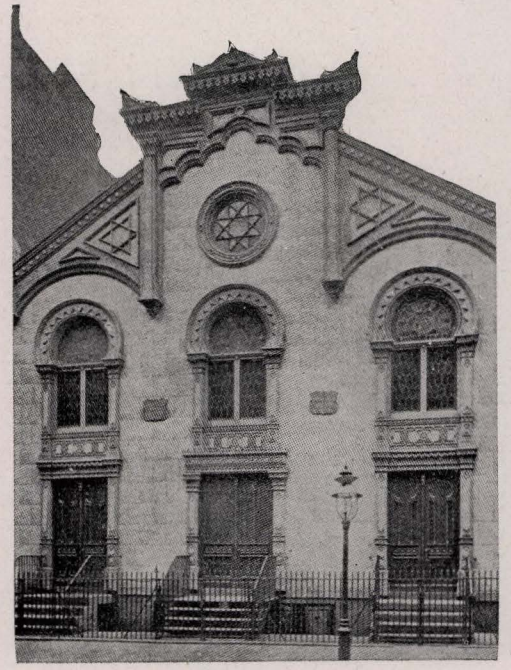
In the New York Jewish community, the Reform Movement centered about the influential congregations Emanu-El and Beth-El. Powerful voices raised in defense of Reform Judaism were those of Samuel Adler, rabbi of Temple Emanu-El in 1857, and Gustav Gottheil, who succeeded him in 1873. David Einhorn was a Reform spokesman at Beth-El (founded in 1874), and was succeeded by Kaufmann Kohler (1879-1903). As early as 1850 the advanced views of Max Lilienthal embroiled him with the more Orthodox members of his congregation, while at Shearith Israel Jacques J. Lyons fought the Reform Movement for the thirty-eight years of his ministry. The dissensions which shook B'nai Jeshurun in 1875 were perhaps typical of the experience of other congregations as a consequence of the impact of the Reform Movement.

As late as 1875 German was the language of the Jewish pulpit in New York city. At Temple Emanu-El Merzbacher and his successor, Samuel Adler, clung to German, and it was not until 1879 that Emanu-El dropped German preaching entirely. Typical of the problems which beset rabbis and their congregations in this period were the Sunday Sabbath, the observance of the dietary laws, the presence of women in the choir, the abolition of Bar Mitzvah and the practice of confirmation. Kaufmann Kohler of Beth-El introduced into the New York community the practice of supplementary Sunday services in 1880.

There were a number of charitable organizations in this period. Among the more important were the Hebrew Benevolent Society, organized in 1822, and the German Hebrew Benevolent Society, organized in 1845. In 1859 these were merged to form the Hebrew Benevolent and Orphan Asylum Society. Mount Sinai Hospital, founded as The Jews' Hospital, was incorporated in 1852. The question of Jewish rights in Switzerland during the 1850's and the Mortara affair (1858) provided the impetus toward the



(Below) The first house of worship of Congregation Emanu-El, New York city; (right) the third synagogue structure; (above) the new temple and community center, at Fifth Avenue and Sixty-fifth Street



formation of the Board of Delegates (1859). A home for aged and indigent Hebrews was founded (1872), the United Hebrew Charities (1874), Hebrew Sanitarium with a summer home at Far Rockaway (1876), Young Men's Hebrew Association (1874), Hebrew Sheltering Guardian Society (1879), and Hebrew Technical School for Girls (1880). In 1876 the Society for Ethical Culture was founded by Felix Adler.

In the Civil War period almost 2,000 Jewish soldiers from New York city served in the Union armies. For a time during the conflict the firm of J. W. Seligman and Co. served as fiscal agent for the government. Michael Heilprin vehemently denied that the Hebrew Bible justified slavery, as a contemporary rabbi attempted to prove. In the two decades following the outbreak of the American Civil War, the German Jewish community matured politically. Sigismund Kauffman was a presidential elector in 1860, and Abraham J. Dittenhoefer was a Republican presidential elector in 1864.

Gerson N. Herman was coroner of New York city in 1862, while Albert Cardozo was elevated to the state supreme court bench in 1867. Sam H. Lewis was president of the Board of Aldermen in 1874, and Arnold Sanger occupied this position in 1875. Joseph Blumenthal, Leo Dessar and Jacob Hess were members of the state assembly in 1874, and Joseph Koch was in the state senate at that date. Edwin Einstein was a member of Congress (1879-81).

In the 1880's the number of congregations in New York city increased rapidly. While the newer congregations were for the most part organized in the down town areas, the older synagogues tended to move northward in Manhattan. As early as 1860 Shearith Israel had moved from Crosby Street to 19th Street; Ahawath Chesed located on Lexington Avenue and 55th Street in 1872; and Anshe Chesed located on 63rd Street and Lexington Avenue a year later. In 1874 this congregation united with Adas Jeshurun and assumed the name Congregation Temple Beth-El. In 1881 Congregation B'nai Jeshurun could no longer resist the uptown tide and, abandoning the synagogue site which it had occupied for fifteen years, it removed to Madison Avenue and 64th Street. Uptown in Harlem were Anshe Chesed (1876) and Temple Israel (incorporated in 1887).

Thus, in 1881, the principal areas of Jewish settlement in New York city were on the lower east side, where the United Hebrew Charities building on 8th Street was definitely above the main area of concentration of the German Jewish population; on the east side of midtown Manhattan in the area of the sixties and seventies; and in Harlem. Although soon to be engulfed by a tidal wave of immigration from Eastern Europe, the German Jewish element was slow to surrender the dominant position it had gained in the social and economic life of the New York Jewish community in 1880.

B. From 1881 to 1942. 4. Population Characteristics. By 1881 the main source of Jewish immigration to the United States had advanced eastward from the countries of Western and Central Europe to those of Eastern Europe. The enormous increase in the Jewish population of New York city between 1881 and the enactment of restrictive immigration legislation in 1924 may be attributed to the outpourings of western Russia, Roumania and the old Austro-Hungarian Empire. An important point of deposit for their masses of immigrants was the area of New York city south of Houston Street and East of the Bowery.

In 1904, in the neighborhood familiarly known as the lower east side, there lived 64,268 families in 5,897 tenements. These were buildings about six or seven stories high, about twenty-five feet wide and one hundred feet deep. Each floor was divided into four sets of apartments with seven rooms on each side. The front apartments consisted of four rooms, and the rear apartments of three rooms. Of the fourteen rooms on each floor, only four received direct air and light from the street or from the small yard at the back of the building. The front room was about ten feet six inches wide by eleven feet three inches long. The next room was a kitchen which was aired and lighted by a window that opened into an air shaft. Behind the kitchen were two bedrooms, seven feet wide and eight feet six inches long. These rooms also were aired by an air shaft. There were older buildings which had no air shafts and no windows in their kitchens and bedrooms. Crowded in dwellings such as these lived New York's most recent Jewish immigrants who, in 1904, maintained on the lower east side 306 synagogues and 307 Heders.

An early exodus of Southern and Eastern European Jews from the lower east side occurred during the years of almost unprecedented business activity in the United States, 1898 to 1903. Not only were there a general improvement in the character of the stores on the lower east side and the opening up of a small number of small commercial banks, but hundreds of families began to move northward to the dwelling localities of the German Jew. Yet so strong was the pressure of the immigrant tide that for every family leaving the east side there was another to take its place. It was estimated in 1916 that 696,000 Jews lived in this area, approximately 46 per cent of the Jewish population of New York city.

However, with the enactment of the restrictive immigration legislation in 1924, the bulwark of congestion on the east side began to dissolve. In 1926 the Jewish population of the lower east side numbered about 500,000, or 29 per cent of the total number of Jews in New York city. Also, in the period from 1916 to 1925, the Jewish population of the Harlem area in Manhattan began to decline. About 10 per cent of New York's Jewish population lived here in 1916, and only 6.6 per cent a decade later.

Between 1916 and 1925 the following areas of New York city showed an increase of between 1,000 and 2,000 Jews: Greenpoint, Bay Ridge, Ridgewood, and the South Bronx. Those showing increases of from 2,000 to 4,000 Jews were Williamsburg and South Brooklyn. The Bushwick section of Brooklyn showed an increase in its Jewish population of between 4,000 and 6,000, while the Fort Hamilton area increased in Jewish population between 8,000 and 10,000. The areas which gained from 10,000 to 20,000 Jews were Washington Heights, Fordham, North Bronx, East Flatbush and Bath Beach, while those which increased in Jewish population between 20,000 and 30,000 were Brownsville, Eastern Parkway, Flatbush, North Flatbush, Lower Central Bronx and Upper Central Bronx. Jewish population increases of between 30,000 and 40,000 were registered in the borough of Queens, the New Lots section of Brooklyn, the Grand Concourse section of the Bronx, the Borough Park section of Brooklyn, Long Island and Coney Island. In this period the Jewish population of the Tremont area of the Bronx increased more than 40,000.

Between 1927 and 1937 the Jewish population of New York city increased from 1,765,000 to 2,035,000, according to the figures published in the *American Jewish Year Book*. There were increases in the Jewish populations of all the boroughs with the exception of Manhattan. In this period the Jewish population of the Bronx increased from 420,000 to 592,185; that of Brooklyn from 797,000 to 974,765; that of Queens from 75,800 to 107,855; that of Richmond (Staten Island) from 7,200 to 9,158. Manhattan's Jewish population declined from 465,000 to 351,037.

Estimated Percentage of Jews in the Population of New York City:[1]

Year	*Percentage*
1890	12.0
1900	17.4
1910	26.3
1920	29.2
1930	27.1
1937	27.84[3]

Estimated Percentage of Jews in the Population of Manhattan, Bronx, Brooklyn, Queens, and Richmond.[1]

Borough	*1910*[1]	*1920*[1]	*1930*[1]	*1937*[3]
Manhattan	31	28	24	18.64

[1] Laidlaw, Walter, *Population of the City of New York, 1890-1930.*
[2] *Jewish Communal Survey*, Bureau of Jewish Social Research (1929).
[3] Jewish Statistical Bureau.

The 1929 survey conducted by the Bureau of Jewish Social Research revealed that the Jewish death rate in New York city was lower than that of the general population. This was ascribed to the fact that the Jews of New York were a relatively younger age group than the population as a whole. However, in 1925 there were already evidences of a declining birth rate in the borough of Brooklyn, and one of the conclusions of the survey was that the Jewish population was not increasing as rapidly as the rest of the population and that, as the Jewish group matured, the Jewish death rate would approach the general death rate.

Yet in 1934 an investigation of selected areas in New York city in which the population was predominantly Jewish revealed a lower birth rate, a definitely lower rate of infant mortality, and a much lower death rate than that of the rest of the city. Jewish school children had a higher health record than that of non-Jewish children despite the fact that they were more frequently victims of visual defects.

The rate of intermarriage among the Jews of Manhattan and the Bronx between 1908 and 1912 was the subject of a study by Julius Drachsler. Intermarriage, Drachsler revealed, varied in accordance with the country and origin of the contracting parties and the degree of their assimilation. The proportion of intermarriage among Roumanian Jews in this period was .45 and among Russian Jews it was .62. The proportion rose to 4.26 among native-born Jews of native parents, to 5.16 among German Jews, and to 6.5 among French Jews.

5. Economic Development. The economic activities of the Jews of New York city paralleled within certain limits those of the non-Jewish community. Following the War of 1812, American capital was invested in increasing quantities in projects having to do with the internal development of the country and less in those connected with international trade. Accordingly, the economic prosperity of New York's wealthiest Jewish families was no longer derived from bulk cargoes carried from far-flung ports by sailing vessels.

Among the more prominent Jewish firms of the New York Stock Exchange in 1888 were Kuhn, Loeb and Co.; Bernheimer, Speyer and Co.; Hallgarten and Co.; Ladenburg, Thalman and Co.; Heidelbach, Ickelheimer and Co.; and L. Levy and Company. Foremost among the bankers were Lazard Frères, the Erlangers, the Glaziers, the Wormsers, and the Seligmans. M. Thalmessinger was president of the Mechanics and Traders Bank of New York. Many of the founders of these firms had come to the United States as poor immigrants, had established merchandising businesses and then entered the field of banking. The period 1825 to 1888 was one of rapid industrial expansion in the United States, and New York's German Jewish community was bound to make its mark.

In 1933 seven per cent of New York's bank directors were Jews. 139 firms whose members were predominantly Jewish out of a total of 578 held membership in the New York Stock Exchange in 1941. Jews controlled in 1940 about 90 per cent of New York city's metal and metal by-product business, with an estimated annual turnover of between 700 and 800 million dollars. They controlled practically all of New York city's clothing industry which did an annual business of about three and one-half billion dollars. About half the business in the insurance agency field in New York city is Jewish, and the insurance brokerage business is predominantly Jewish. In the year 1940 to 1941 about 400 Jews in New York city had incomes of $100,000 or more.

The stronghold of Jewish enterprise in New York city is the clothing industry. As the 19th cent. drew to a close, Jews exercised an increasing amount of control over the needle trades. While the Immigration Commission in 1907 revealed that the Irish and Germans predominated among workers in the tailoring shops of New York city in the period 1850 to 1888, after that date they began to be outnumbered by Eastern European Jews. Due to increased mechanization, even the unskilled among the newcomers found employment in shops. In the late 19th cent. most of the employers were German Jews, but at the beginning of the 20th cent. and even before, Russian Jews began to become employers.

About the year 1910, Italian workers entered the needle trades industries, while at the same time the occupational structure of the Jews in New York city tended to become less highly concentrated and more diffuse.

In the men's clothing industry of New York city, the number of Jews who entered the industry during the years of the first World War and the period immediately following declined sharply due to the increased economic opportunities offered by other fields. In the period following 1923 the number of Jews entering the men's garment industry increased slightly, but in comparison to the influx of other national groups there was an absolute as well as a relative decline. While Jewish women workers began to enter the industry in large numbers, particularly in the period 1933 to 1937, they did not keep pace with the entrance of Italian women in those years.

In 1942 Jews were still an overwhelming majority in the cap and millinery industry and also in the fur industry. In the cloak, suit and skirt trade in New York city Jews constituted about 75 per cent of the workers in 1942. However, in the dress industry Italians were 51 per cent of the workers in 1937, and Jews were only 32 per cent. In the men's garment industry in 1937 only 38.6 per cent of the workers were Jews and 56 per cent were Italians. A survey of fifty trade unions in New York city revealed that the number of Jewish workers in the needle trades was 59 per cent of the total. The leather trade unions were 66 per cent Jewish, the building trades were 24 per cent Jewish, the

printing trades were 17 per cent Jewish, amusements were 37 per cent Jewish, and the jewelry and ornament trade was 35 per cent Jewish. The retail salesmen's union was 98 per cent Jewish, while only 8 per cent of the trade unionists in transport were Jewish.

A study made in 1935 of approximately 17,000 Jews (males) listed in the New York city directory under five typically Jewish names revealed that the greatest percentage of Jews so classified were engaged in retail and wholesale business (17.4), a slightly smaller percentage (16.2) were brokers and salesmen; 13.8 were engaged in skilled or unskilled trades; 12.0 were engaged in clerical occupations and sales; 10.7 were needle trade workers; 6.5 gave professional services; 4.4 were engaged in building trades; 4.2 owned manufacturing establishments; 3.7 were employed in domestic and personal service; 3.7 were engaged in transportation and communication; 2.7 were managers; 1.3 were engaged in semi-professional services; 1.3 were city and federal employees; .3 were building trades contractors.

A study of Jewish youths made in 1935 revealed that although they formed 33 per cent of the employed population sixteen to twenty-four years of age, they were 56 per cent of the youths of this age group employed in proprietary and managerial work; 43 per cent of those in clerical and sales positions; 37 per cent of the youth in professions; 24 per cent of those in skilled and semi-skilled types of work; 10 per cent of the total in unskilled employment; 5 per cent in service occupations. There was also a somewhat greater tendency for Jewish than for non-Jewish youths to be employed in an occupation of a higher socio-economic grade than that of their fathers. Thirty-four per cent of Jewish youths were from families in which the father was a proprietor, manager or official. The proportion of non-Jewish youths with fathers thus classified was only 15 per cent.

A large number of Jews entered the professions in New York city, particularly among the second-generation Americans. There were 707 Jewish physicians practising in New York city in 1905 and before, while there were 4,451 Jewish physicians practising in 1936. A study of Jewish lawyers in New York city made in 1939 revealed that they found it more difficult to obtain a subsistence income than their non-Jewish colleagues. With the prolongation of the depression and the growth of discrimination in the trades and professions, large numbers of young Jews were entering the ranks of the civil servants. This trend was particularly noticeable in the middle and late 1930's.

The Southern and Eastern European Jews in the New York community probably have not made economic progress comparable to that of the German Jews who had the benefit of an early start. Jews of Eastern European origin had made considerable inroads into the needle, insurance, amusement, tobacco, real estate, liquor and publishing trades. They were prominent in the professions, and a few had seats on the Stock Exchange. But the advent of the depression in 1929 brought an abrupt halt to the steady economic progress which the Russian Jews were making. The tremendous fall in the price of securities, rents, and real estate values ruined many large and small investors among them. Moreover, it dealt a severe blow to the aspirations of a few Eastern European Jews who, having made a large amount of money in trade, had entered the banking and investment business, attempting to vie with the German Jewish banking houses. The older and more established concerns weathered the storm, but the newcomers did not.

6. The Trade Union Movement. It can not be emphasized too strongly that the Jewish immigration from Eastern Europe, with the exception of a small minority of intellectuals, was not politically radical. Jacob Lestschinsky has indicated that the Eastern European Jewish immigration which came to the United States before 1900 was composed mainly of "declassed lower middle-class elements, a middle-class conglomeration consisting in the main of children of merchants, middlemen, village traders, religious functionaries, and just *luftmenschen*." While later comers were primarily representative of the working masses, former independent handicraftsmen and wage earners, most of them were of middle class families and were without a working class tradition.

Yet, confronted with poverty and bad working conditions in the sweated trades of New York city, they sought in unionization a remedy for the difficulties facing them. In the formulation of trade union aims and objectives, the few intellectuals and trade union leaders among them were extremely influential.

It was at first necessary to organize the Jewish workers in separate unions because of a language difficulty and the extreme concentration of Jewish workers in particular branches of a trade. Moreover, the trade union experience of most of their leaders was obtained in the Russian labor movement, where the Jewish workers were organized into the Bund, an autonomous Jewish workers' organization. The first "Jewish Union" in New York city was the Progressive Cigar Makers Union (1883), in which Samuel Gompers, as vice-president, received his early training.

With the formation of the Jewish Workers' Alliance in 1884, a successful attempt was made to organize the hat and cap blockers, grocery clerks, pants makers, cloak operators, barbers, shoemakers, peddlers and tailors. In 1886 the Jewish Workers' Alliance had fourteen affiliated unions with a combined membership of about 3,000, but employer opposition and a disunited leadership proved to be the undoing of this organization.

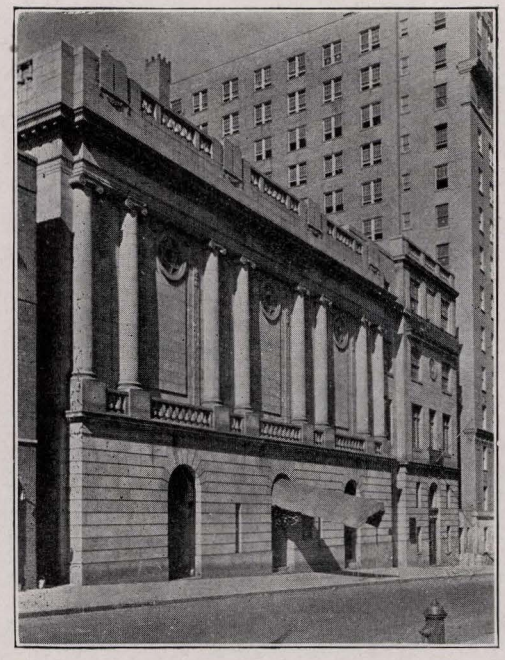
In 1888 the United Hebrew Trades, under the leadership of Magidov, Hillquit and Weinstein, was founded, with the purposes of promoting mutual assistance among affiliated unions, organizing new unions and spreading the doctrine of socialism among the workers. In addition, there were the immediate demands of an eight-hour day, abolition of child labor, abolition of sweatshops, observance of labor laws, elimination of contract labor, weekly wages, equal pay for men and women, priority payment of wages in case of bankruptcy, and inspection of shops for health conditions.

Weakened by the crisis of 1893, there were only four affiliated unions in 1897. However, after a decade of struggle, the United Hebrew trades grew rapidly. In 1909 it embraced sixty unions, and in the following year eighty-nine unions and 100,000 members. By 1918 the United Hebrew Trades had a membership of approximately 250,000. Its largest affiliate was the International Ladies' Garment Workers' Union, 80 per cent of whose 140,000 members were Jews. It was the third largest international of the American Federation of Labor. Other prominent affiliates were the Amalgamated Clothing Workers of America, the United Cloth Hat and Capmakers of America, and the International Fur Workers' Union. In 1938 the United Hebrew Trades had about 300,000 members.

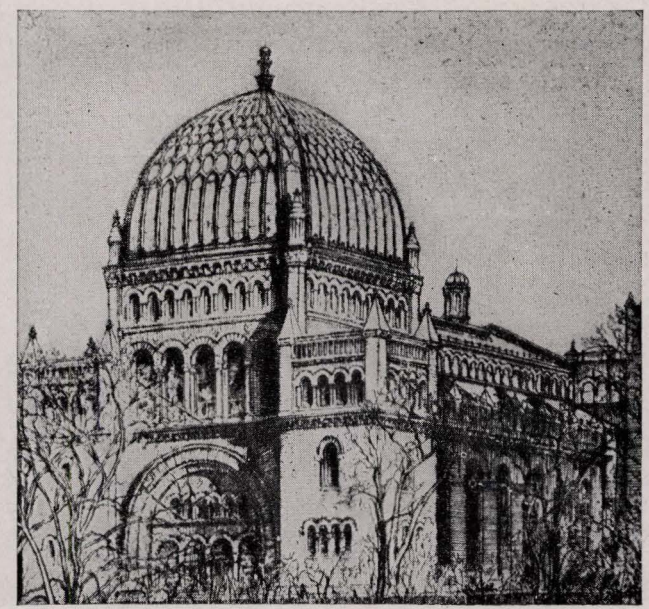
Paralleling the organization of labor was the development of employers' organizations. Although these associations were frequently organized on the eve of or during strikes, their formation inevitably contributed to the collective consideration and solution of labor problems. The earliest agreement between employers and the unions was the Protocol of September 2, 1910, between the Cloak, Suit, and Skirt Manufacturers' Protective Association and the Cloak Makers' Unions of the International Ladies' Garment Workers' Union.

The Park Avenue Synagogue at 50 East Eightieth Street, New York city

The Central Synagogue at Lexington Avenue and Fifty-fifth Street, New York city



Temple Israel at 210 West Ninety-first Street, New York city



Temple Beth-El (Fifth Avenue at Seventy-sixth Street), whose congregation merged with Congregation Emanu-El

The Jewish workers of New York city were by no means segregated from the general labor movement. The majority of the members of the United Hebrew Trades were, in 1942, affiliated with the American Federation of Labor. Jews were active in the various international unions of the needle trades, while the Jewish Bakers' Union, in existence from 1887, was merged in the International Bakers' Union in 1913.

The unions of New York city of pronounced Jewish membership were not immune to the doctrinaire battles within the structure of the American labor movement. The struggle between the opposing principles of the Socialist Labor Party (1899) and the Socialist Trade and Labor Alliance formed by De Leon in 1895 was reflected in the trade union politics of the day. So were the conflicts between the adherents of the International Workers of the World and the more conservative unionists. Following the first World War, conservative unionists had to contend with the Communist faction and the Lovestone and Trotsky groups. In the struggle between the American Federation of Labor and the Congress of Industrial Organizations, trade unions with a predominantly Jewish membership expressed divided sympathies. The Amalgamated Clothing Workers of America was one of the initiators of the Congress of Industrial Organizations, but the International Ladies' Garment Workers' Union continued to remain loyal to the American Federation of Labor even after its suspension in 1936. It returned to the fold of the American Federation of Labor in 1940.

7. Welfare. The Jews, who, Peter Stuyvesant insisted, should look after their own poor, have done so on a grander scale than the stern Dutchman could possibly have imagined.

In 1874 the Hebrew Benevolent and Orphan Asylum Society, the Hebrew Benevolent Fuel Association, the Hebrew Relief Society of Congregation Shearith Israel, the Ladies' Benevolent Society of Congregation Gates of Prayer and the Hebrew Benevolent Ladies' Society of Yorkville combined to form the United Hebrew Charities. The demands placed upon this organization were not heavy. In 1880 it spent $46,000 and showed a surplus of $14,000. A year later, the treasury balance had increased to $19,000. However, from 1882 to 1917, when this agency became the Federation for the Support of the Jewish Philanthropic Societies of New York City, there was not a single year in which the United Hebrew Charities was able to meet in full the demands made of it. In 1885 its expenditure was $58,627, and by 1895 the amount was doubled. In 1914, when the outlay reached $344,000, the United Hebrew Charities maintained departments of supply, medicine, self-support, and rehabilitation. Also affiliated with it were a committee for the care of the Jewish tubercular, the National Desertion Bureau, a community employment bureau, and a vocational guidance department.

The influx of Jews from the countries of Eastern Europe was largely responsible for the increase in budget of the United Hebrew Charities. To assist with the problem of immigrant relief, the Hebrew Sheltering Home was founded in 1881; later it became the Hebrew Sheltering and Immigrant Aid Society. The Baron de Hirsch Fund, incorporated in 1891, sponsored special classes in citizenship in the Educational Alliance, the Baron de Hirsch Trade School, and the Industrial Removal Office (1901-22), which aspired to relieve the congestion caused by the congregating of immigrants in urban areas, and the Jewish Agricultural Society (1900). In November, 1883, the Hebrew Technical Institute (later known as the Educational Alliance) was organized. It was primarily a German Jewish Agency designed to promote Americanization among Eastern European Jews. The sisterhood of the Spanish and Portuguese Synagogue, founded in 1897, strove to accomplish a similar aim among recently arrived Oriental Jews.

However, the new immigrants were not slow in looking after their own needs. The founding of Beth Israel Hospital in 1890 and of Lebanon Hospital in 1893 by recently arrived Russian Jewish immigrants was evidence that the latter had achieved some degree of economic security in the New World. By 1918 there were over 1,000 mutual aid societies, creations of East European Jews and "formed for the purpose of rendering aid to members not as gratuitous charity, but as obligatory settlement of claims based on mutual agreement." In addition, there were a number of Jewish orders and fraternal associations which in many respects were similar to mutual aid societies.

In recognition of the need caused by the entrance of women into industry, the Brightside Day Nursery was founded in 1894 to care for the babies of working mothers. The Hebrew Infant Asylum was founded in April, 1895. Two years later the problem of the unattached working girl was afforded a measure of solution by the establishment of a Home for Working Girls endowed by Baroness Clara de Hirsch. Before 1900 there were established the Home of the Daughters of Jacob, the Home for Aged and Infirm Hebrews, the Brooklyn Hebrew Orphan Asylum, a sanitarium for Hebrew children at Rockaway Park, Long Island, and the Jewish Working Girls' Vacation Society, which maintained two summer homes at Bellport, Long Island. The Montefiore Home and Hospital for Chronic Diseases was incorporated in 1884.

After 1900 the number of welfare organizations in New York city increased rapidly. In 1917 some of New York's Jewish charities were affiliated, mainly for the purposes of increased coordination and more efficient fund-raising, in the Federation for the Support of the Jewish Philanthropic Societies of New York City. Yet the eighty-four affiliates of this organization in 1917 by no means included all the Jewish welfare agencies in New York city.

In 1937 the Federation for the Support of the Jewish Philanthropic Societies of New York City combined its fund-raising activities with the Brooklyn Federation of Charities which had been founded in 1910. At the time of the merger the New York Federation had ninety-one affiliates and the Brooklyn Federation twenty-five. The table on page 187 offers some indication, in terms of finance, of the increasing function of the various agencies affiliated with the New York Federation. Funds were raised by grants from the Federation and from other sources.

It should be emphasized that the more than ten million dollars spent by the affiliates of the Federation represents only part of the sum spent by the New York Jewish community on welfare work. How large a part, it is difficult to estimate. In 1938 the Federation became affiliated with the Greater New York Fund.

Certain dominant trends within the functional groups are noteworthy. With the curtailment of immigration in 1924, and even before, the most significant aspect of Jewish family welfare work was the reduction in the number of clients and the increase in the allotments to each family. To an increasing extent the case worker was concerned with cases of chronic incapacity and the preventive aspects of relief. With the advent of the depression and the entrance of state and federal agencies into the field of public welfare, the tendency to concentrate on the complex nexus of problems incidental to the social adjustment of the individual was considerably enhanced. Beginning in 1939, refugee cases were handled by the National Refugee Service.

Between 1916 and 1925 the rate of Jewish juvenile delinquency, as reported by the Jewish Board of Guardians, was lower than that of the general white population of New York city. Between 1929 and 1940 this downward trend continued. In 1929 the Jewish percent-

*1940–41	2,102,171	391,090	5,458,423	628,483	785,670	922,407	10,288,244

* Fiscal year.

age of the total Children's Court arraignments for delinquents in Manhattan, Bronx and Brooklyn was 18.2; in 1933 it was 15.4, and in 1940 it was 6.8. In the period from 1916 to 1925 there was a significant decline in the population of institutions maintained by the Federation, and between 1929 and 1940 enrollment at the Hawthorne and Cedar Knolls institutions fell from 358 to 229. In the same period, the number receiving after care attention declined from 351 to 193.

Increased emphasis was placed on such extra-institutional procedures as follow-up work and supervisory, corrective and preventive measures in dealing with delinquents. Within the institutions, the old-fashioned system of merely segregating delinquents was abandoned for newer and more expensive techniques of psychiatric treatment. While the average daily census in institutions for delinquents declined between 1923 and 1939, the per capita cost rose from $566 in 1923 to $1,000 in 1939.

The largest items in the budget of the Federation were concerned with medical service and child care. Between 1917 and 1927 the amount of money spent in maintaining the Jewish hospitals within and outside of the structure of the Federation increased from $2,044,078.61 to $7,395,374.53. Between 1928 and 1941, the Federation increased its appropriation to affiliated medical agencies by more than one million dollars.

In 1926, according to the Bureau of Jewish Social Research, there were seven Jewish child-caring institutions in New York city, nine temporary shelters, and twenty day nurseries. In that year the seven institutions sheltered approximately 2,225 children, with the trend definitely away from institutional to foster home care. However, the Council of Jewish Welfare Funds and Federations reported in 1940 that there were still approximately 3,800 children sheltered in Jewish orphanages. In 1900 there were two homes for the aged with a capacity of 250 beds; in 1927 there were nine homes with 1,896 beds; by 1929 the number of beds increased to 2,250. This supply was more than ample to meet the needs of the community, with the trend away from the care of normal, dependent aged and toward using these institutions for the care of the chronically sick. In December, 1940, there were 2,412 aged living in nine homes affiliated with the Federation.

The Bureau of Jewish Social Research reported that in 1917 there were twenty-eight Jewish recreational agencies in New York city which spent about $400,000. In 1927 there were fifty-seven organizations with recreational programs spending an annual sum of about $1,350,000. Nine of these were of the Y. M. H. A. variety; thirteen were Jewish settlements, and thirty-five were synagogue centers. In 1942, in addition to several U. S. O. recreational centers, the Jewish Welfare Board reported that there were seventy-nine community centers affiliated under its auspices. These were mainly of the Y. M. H. A. and Jewish Center type, with many of the latter affiliated with synagogues. Beginning in the 1920's, the community center became an increasingly important factor in Jewish communal life in New York city.

8. Cultural Trends. In 1823 the first Jewish periodical in New York city made its appearance. It was entitled *The Jew,* and its chief concern was to combat the efforts of the missionaries who were attempting to convert the Jews to Christianity. It remained in existence for about two years. *The Asmonean,* founded by Robert Lyon in 1849, was somewhat more successful. Under the patronage of several New York congregations, it advocated "a congregational union of Israelites of the United States." Its contents, in the main, comprised brief editorial notes, European Jewish news, and a slight amount of American and local Jewish items of information. In addition, special attention was paid to mercantile affairs of a general nature, and *The Asmonean* answered to its description as "a family journal of commerce, politics, religion and literature." In the middle 1850's an occasional German supplement of a few columns was added. However, Isidor Busch's *Israel's Herold,* a German weekly which he began to publish for the Order of B'nai B'rith in 1849, was destined to survive for only three months.

The Jewish Messenger was published from 1857 to 1903. Founded by the Reverend Samuel M. Isaacs as a bi-weekly, it later became a weekly which championed the cause of historical Judaism. It was absorbed in 1903 by the *American Hebrew*. *The Hebrew Leader,* founded in 1859 by Jonas Bondi, maintained a conservative religious position in its editorial column. Considerable attention was paid to Jewish fraternalism, and several of its columns were printed in German. The publication lasted until 1882. During its career it absorbed (1865) *The Jewish Record,* which was founded in 1862 by Abraham Cohen, an exponent of the Orthodox Jewish viewpoint.

In 1871 *Young Israel,* a Jewish juvenile paper, appeared. Also founded in 1871 was *The New Era.* In 1879, *The Jewish Advocate* and *The American Hebrew* began their careers and in 1883 the *Hebrew Standard* succeeded the *Hebrew Leader.*

In 1895 *The American Jewess* began publication, and continued for four years. Another woman's paper, *Helpful Thoughts,* was published for six years. *The Maccabean* began to appear in 1901 as a Zionist monthly, while the *American Jewish Chronicle* began its career in 1916 as an intensely nationalistic organ.

In 1942 there were twenty-seven Anglo-Jewish periodicals published in New York city, the oldest of which was the *American Hebrew.*

Although very many Hebrew journals, monthly and weekly, made their appearance, none survived its first anniversary except the first Hebrew weekly, *Hatzofeh Beeretz Hahadashah,* published between 1870 and 1876, and *Haibri* (1892-1902). In 1918 there were two Hebrew weeklies in New York city, *Hatoren* and *Haibri,* both with an extremely limited circulation. In 1942 the number of Hebrew publications in New York city had increased to four: *Hadoar,* a weekly founded in 1921 (including *Hadoar Lanoar,* appearing bi-weekly, and founded in 1935); *Hamesillah,* a monthly in Hebrew and Yiddish (founded in 1936); *Horeb,* a semi-annual founded in 1934; *Nib,* a monthly (founded in 1936). In addition, there was the *Hebrew Medical Journal* (*Harofe Haibri*), founded in 1926.

The immigrants from Southern and Eastern Europe did not support a Hebrew press any more than the German Jews before them had supported Isidor Busch's short-lived Jewish press in the German language. In 1909 the Hebrew daily, *Hayom,* existed for only a few months. But the great increase in Jewish immigration necessitated the creation of a popular medium of current information in a language understandable to the newcomers.

Yet the Yiddish press was not immediately successful in New York city. Henry Gershuni's *Die Judische Post* (1872), the first Yiddish periodical, was not profitable, nor was Kasriel Zwi Sarasohn's weekly, *Die New Yorker Judische Zeitung* (1872). Perhaps Sarasohn's failure was due to the use of mixed German and Yiddish, which did not appeal to the increasing numbers of Russian Jews. His *Judische Gazetten* was almost instantly successful as a weekly, and attracted as competitor Mordecai Yahalimstein's *Der New Yorker Israelite,* also a weekly. Meanwhile, intellectuals among the new immigration organized the socialist and atheist periodical, *Die Volkszeitung,* in 1878.

Neither of Sarasohn's competitors was successful, while Sarasohn went on to found (1885) the *Yiddishes Tageblatt,* a daily which adopted the position of Orthodoxy. Sarasohn continued to meet with unsuccessful competition until the appearance of *The Forward* in 1897, with Abraham Cahan as editor. This was not the first radical newspaper to be printed in Yiddish on the East Side. In 1890 a weekly, the *Arbeiter Zeitung,* appeared. Between 1894 and 1902 *Das Abendblatt* of the *Arbeiter Zeitung* was the organ of the Socialist Labor Party.

Then, in 1902, Jacob Sapperstein organized the *Jewish Morning Journal,* which, like the *Yiddishes Tageblatt,* posed as the spokesman of the Jewish Orthodox community. Two years later Sapperstein began to publish *Der Amerikaner,* a weekly devoted to popular literature of interest to Jewish families. In 1905 Louis E. Miller split with Cahan, and organized the *Daily Warheit,* which assumed a position in the political sphere somewhat to the right of *The Forward* and eventually became intensely nationalistic. Herman Bernstein, in 1914, founded *The Day* along non-partisan lines. This publication subsequently absorbed the *Warheit.*

In 1918 the Jewish Telegraphic Agency was organized, and in 1922 the *Freiheit* was founded.

Less successful than the Yiddish daily newspapers were the Yiddish weeklies and monthlies. These were, for the most part, subsidized partisan organs reporting the activities of agencies advocating various types of social and economic reform, and species of Zionist sentiment. There were in 1942 more than twenty Yiddish weeklies and monthlies published in New York city. The oldest of these were the *Tzukunft,* founded in 1890, and the *Freie Arbeiter Shtimme,* founded in 1899. *La Vara* was a weekly printed in Ladino and founded in 1922.

The development of the Yiddish press in New York city provided a medium for the expression of a numerous band of poets and novelists. Because it was frequently the sole information medium of its readers, it differed radically from the make-up of the English and even the Anglo-Jewish newspaper. It was at once a literary journal, a conveyor of news, an organ of popular science, theology and politics. In addition, it helped in the solution of the reader's personal problems. With such a wide range of activity, it provided employment for the diversified talents and interests of a great number of Yiddish writers and scholars. In addition, there began to appear volumes of Yiddish fiction and nonfiction and translations of classic works into Yiddish.

Aspects of New York Jewish life were recurrent themes in American and Yiddish literature produced by American Jewish writers, the overwhelming majority of whom were in contact with the New York scene. East Side immigrant life, the conflict between the Old World traditions of parents and the New World background of children, differences in outlook between poor East European Jews of the ghetto and their rich German Jewish coreligionists on Fifth and West End Avenues, the migration of East European Jews to the lower middle class areas of the Bronx and Brooklyn, the sweat shop, the strike, the worker who becomes a boss, the impact of the bustling New York environment on idealism and Orthodoxy, are subjects frequently treated in Yiddish novels and plays. They also enter into novels written in English by Herman Bernstein, Ezra Brudno, Arthur Bullard, Abraham Cahan, David Freeman, Michael Gold, Myra Kelly, Edward King, Corinne Lowe, Bertha Moore, Samuel Ornitz, and Anzia Yezierska.

The New York environment entered more subtly into the writings of certain Yiddish writers who found it sordid. They either retreated into a world of their own or showed an inordinate interest in remote historic themes.

The first World War and its disastrous effects on the Jewish communities of Europe led to the increased importance of the East Side as a Yiddish literary center. Immigration in the years immediately following the conclusion of that conflict brought many famous European writers and strong reinforcements to the Yiddish-speaking community. Among the prominent literary figures who came to New York at this time were Sholom Asch, Abraham Reisin, Peretz Hirschbein, Jonah Rosenfeld and I. J. Singer. Their talents were combined with those of Yiddish writers of longer standing in America; this tended to enhance the claims of hegemony put forth by "Yiddish-literary New York over Yiddish-literary Warsaw or Moscow." In 1925, the New York branch of the Yiddish Scientific Institute was founded.

However, due to the curtailment of immigration in 1924, the dying off of the old generation and the coming to maturity of their children, most of whom regarded Yiddish as a foreign language, Yiddish letters in New York city appealed to a steadily dwindling public. The extent of the decline in approximately two decades is revealed in the circulation figures of the Yiddish daily newspapers.

A similar trend was apparent in the career of the Yiddish theatre. In 1882 a group of Yiddish actors migrated to the United States from Russia. They were under the direction of N. M. Shaikevitch and Abraham Goldfaden. Goldfaden and Shaikevitch combined the functions of playwright and producer. Along with M. Hurowitz and J. Lateiner, they ground out a number of plays which were less than mediocre in quality. Yet the masses of immigrants were amused.

In the 1890's Jacob Gordin succeeded in elevating the Yiddish theatre to a much higher plane. His work was taken up by L. Kobrin and Z. Libin, who stressed American Jewish themes, while David Pinski, Peretz Hirschbein, H. Sackler, and A. Glanz wrote of historic Jewish life. The work of Maurice Schwartz and Ben Ami with the Yiddish Art players had a most salutary influence, as did the productions of the Artef group.

But the small immigration quota and the Americanization of the younger generation affected adversely the Yiddish theatre on the East Side, in Brooklyn and in the Bronx. The children of the prominent Jewish actor Jacob Adler played originally on the Yiddish stage, but of necessity graduated to the English stage. Another prominent Yiddish actor, Boris Thomashefsky, could not make the transition, and as a result appeared, in his declining years, as part of a three-a-night show in a Second Avenue cabaret beneath the roar of the elevated. These incidents were symptomatic of the diminishing appeal of the Yiddish stage in New York city.

While the field of Yiddish letters found few recruits among the American-born, their creative impulses were given livelier play by the tremendous field offered playwright and actor on Broadway and in Hollywood. Not even the older generation of the Yiddish theatre was completely immune to the golden lure of the two meccas of the American entertainment world.

The trend away from the Yiddish stage was paralleled in literature by the acceptance of English as a medium of expression by the children of Jewish immigrants. As long as the content of East Side culture was expressed in Yiddish, it attracted almost no attention from non-Jewish sources. But with the appearance of a new generation who wrote in English, the nature of this latest contribution had to be evaluated. In the bitter controversy which developed between those who claimed that American culture should develop along "native" and even "racial" lines and those who claimed that it should be broadened and deepened by international impulses, the East Side became a literary symbol attacked by the exponents of native American culture and defended by the advocates of the broader viewpoint. An early manifestation of such a clash was the controversy provoked by the artistic innovations of the photographer Alfred Steiglitz. It flared up again in the dispute between Ludwig Lewisohn and Stuart Pratt Sherman in the 1920's, and in 1934 the art critic Thomas Craven warned of the dictation of the "East Side-Harvard school of aesthetics."

9. Education. The earliest attempt at Jewish education in New York city was the Yeshibat Minhat Areb, founded in 1731. In the middle of the 19th cent. there was a well-developed parochial school movement. By 1881, however, due to the improved quality of public instruction, the congregational Sunday school, with a curriculum stressing Jewish history, American Jewish history, customs, and ceremonials, had taken its place.

As early as 1864 the community had recognized its responsibility for the education of poor Jewish children, and in that year the Hebrew Free School Association was organized for the purposes of spreading Jewish learning among the poor and combatting the influence of Christian mission schools. In addition, poor children were to be taught good behavior and to be supplied with "shoes, clothing and bath." Under these auspices an industrial school for girls was opened in 1879, a kindergarten in 1882, and a Hebrew Technical Institute for boys in 1884. In 1889 the assets of this institution were transferred to the Educational Alliance.

Through the medium of agencies such as these, the German Jews sought to "Americanize" the East European Jews, to fit them for a vocation and to promote their assimilation. On their own initiative, however, the East European Jews introduced into New York city the educational institutions to which they had grown accustomed in the old country. These were, in turn, modified by the New World environment.

In the United States the institution of the Heder degenerated markedly from its high European status, and the Melammed became a mere peddler of mechanical reading skill. But the lowly Talmud Torah, the charity school of Eastern Europe, had a more distinguished career. The first school of this kind in New York city, the Machzikei Talmud Torah, was organized in 1862 by Pesach Rosenblatt and reorganized in 1883. Since then it has become the typical community type of school for all Jewish children in New York city, rich and poor alike. Most children attend it five days a week, and a six-year course of study includes Hebrew, customs and ceremonials. The Talmud Torah is almost invariably affiliated with an Orthodox or Conservative synagogue. Reform congregations, for the most part, maintained only Sunday schools.

Graduates of the Talmud Torah were eligible for entrance into any of three Hebrew high schools which in 1942 offered four years of advanced work. About 415 pupils a year were admitted to these three high schools, and about seventy-five pupils were graduated annually.

Yeshivas were supported exclusively by the Orthodox community, and were either elementary parochial institutions or advanced Talmudic academies. The first of these all-day schools which taught both secular and religious subjects was the Etz Chayim Yeshiva, organized in 1886; it was followed in 1905 by the Rabbi Jacob Joseph School. A more advanced institute was the Yeshiva Isaac Elchanan, organized in 1897 for Talmudic study. In 1915 this school and the Etz Chayim Yeshiva combined to form the Rabbinical College of America, later known as Yeshiva College.

In 1887 the Jewish Theological Seminary was established under the presidency of Sabato Morais for the purpose of preparing students for the rabbinate. In 1909 a Teachers' Institute was established under the leadership of Mordecai M. Kaplan. This institution supplied rabbis and teachers for the Conservative groups. Yeshiva College was established in 1928, and its teacher training department in 1921. This serves the Orthodox community. Another teacher-training school is the Herzliah Academy, established in 1921. It belongs to the Orthodox, nationalist group. In 1922 the Jewish Institute of Religion was organized by Stephen S. Wise as a Reform seminary. The Yiddish Lehrer Seminar was organized in 1918, and in 1923 the Hebrew Union College School for Teachers was founded; the latter was discontinued in 1932.

In 1942 there were approximately 365,000 Jewish children who were of kindergarten through high school age. About 75 per cent of these children received some measure of Jewish education, but only 21 per cent attended duly recognized Jewish schools. There were, in 1942, more than 500 such schools, with an approximate register of 60,000. In addition, there were about fifty Yiddish-Laborite schools with a register of about 4,000. More than 10,000 children received private instruction.

Regularly constituted Jewish schools were either Orthodox, Conservative, Reform, or Yiddish-Laborite, with the Orthodox attracting the greatest number of pupils. The Conservative schools were, in 1942, affiliated with the New York Schools of the United Synagogue of America; the Reform schools were associated with the New York Federation of Reform Synagogues; the Orthodox association was the Council of Orthodox Schools. However, the great majority of the latter were either unaffiliated or belonged to the Hebrew Principals' Association. The Yiddish-Laborite schools were maintained by the Workmen's Circle, the National Arbeiter Verband and the Shalom Aleichem Folkshule group. Like the Talmud Torahs, they were afternoon schools, but their curriculum stressed Yiddish and the labor movement.

The first attempt at centralized direction, coordination, and supervision in the field of Jewish education was the formation in 1864 of the Hebrew Free School Association.

This was followed by a series of competitive examinations for the religious schools of New York introduced in 1875 by the Y.M.H.A. However, the first comprehensive program for community education was begun in 1910 with the organization of the Bureau of Jewish Education, a division of the New York city Kehillah.

With the demise of the Kehillah in 1918, the Bureau of Jewish Education was supported by the Federation. In 1921 the Jewish Education Association was organized for the purpose of taking over the statistical work of the Bureau of Jewish Education, its efforts to foster community responsibility for pupil enrollment, and its fund-raising activities. In 1939 it was merged with the Jewish Education Committee, which was also representative of the interest in Jewish education of the Friedsam Foundation and the Federation for the Support of the Jewish Philanthropic Societies.

In 1942 the president of the Jewish Education Committee was Samuel I. Rosenman. Its executive director was Alexander M. Dushkin, and its associate director was Israel S. Chipkin. The purposes of the committee were (1) to improve the quality of Jewish education through professional aid to schools and teachers, through the establishment of laboratory and demonstration schools, through experimental activities, and through research and study; (2) to improve the status of schools by stimulating enrollment, aiding in administrative and curricular problems, and to help teachers by means of proper licensing to improve their economic status; (3) to extend opportunities for religious education by providing for the poor; (4) to obtain community support for Jewish education.

10. Public Office. Before the advent of the East European immigration, Jews did not participate extensively in politics. However, with the growing New York Jewish population, the number of Jewish officeholders inevitably increased.

Politically, the East Side European Jews who settled in New York city matured slowly. This was due to the language barrier and the unfamiliarity of the new immigrants with American political institutions. Steiner reported in 1902 that ghetto politics were largely Democratic, but recognized the existence of a strong Republican minority. By and large, however, the Irish political bosses continued to maintain their grip on this area despite the fact that the nationality of their constituents had altered. In 1905 East European Jews received the smallest share of party patronage and had made practically no inroads into municipal, state and federal civil service.

Yet it was not long after that that East European Jews who began to visit the Tammany clubs were gradually taken into the confidence of district leaders and began to receive nomination for elective office. Some would organize independent Democratic clubs, showing thereby how great a political following they could command. If the regular organization failed to be impressed by the showing, perhaps its rivals would. With the steady increase in the Jewish population, Tammany could not afford to be ungenerous with Jewish politicians in the distribution of the patronage. The careers of most New York Jews prominent in state and national politics have been made within the structure of the Democratic party.

Despite the influence of Tammany on the lower east side, the Jewish vote in New York city went to no single political party. Jews played a significant role in reform as well as machine administrations. In the uptown section of Manhattan, upper class Jews ambitious for political careers customarily affiliated themselves with the Republican party, while on the lower east side socialist candidates polled large votes. Jewish trade unions affiliated with the American Federation of Labor were traditionally aloof from party politics. However, with the formation of the American Labor Party in 1936, a number of Jewish trade union officials achieved prominence in its ranks.

Among other New York Jews who achieved a position of prominence in federal and state politics were Benjamin N. Cardozo, member of the United States Supreme Court (1932-38); Henry Morgenthau, Jr., Secretary of the Treasury (1934-); Herbert H. Lehman, lieutenant governor of the state of New York (1928-32) and governor (1933-42); William Leiserson, chairman of the National Mediation Board (1934-36) and a member of the National Labor Relations Board (1939-42); Edward Lazansky, secretary of state of New York (1911-12); Nathan Straus, Jr., United States Housing Administrator (1938-42); Robert Moses, secretary of state of New York (1927-28) and New York city Park Commissioner (1933-); Ernest Gruening, director of the Division of Territories and Island Possessions, United States Department of the Interior (1934-39) and governor of Alaska (1939-); Jerome Frank, member of the Securities and Exchange Commission (1935-41) and chairman of that commission (1939-41), and a justice of the United States Circuit Court of Appeals (1941-); Irving H. Lehman served as justice of the New York State Court of Appeals (1937-40) and then became chief justice of that court, with a term ending in 1946; Sidney Hillman, associate director general of the Office of Production Management (1941-).

The following is a listing of New York city Jews who have held federal, state and municipal office since 1881:

MEMBERS OF THE HOUSE OF REPRESENTATIVES: Joseph Pulitzer (1885-86), Isidor Straus (1894-95), Israel Fischer (1895-99), Mitchell May (1899-1901), Jefferson Levy (1899-1901, 1911-15), Henry M. Goldfogle (1901-15, 1919-21), Montague Lessler (1902-3), Meyer London (1915-17, 1921-23), Isaac Siegel (1915-23), Albert B. Rossdale (1921-23), Nathan D. Perlman (1920-27), Martin Ansorge (1921-23), Lester D. Volk (1921-23), Samuel Dickstein (1923-), Sol Bloom (1923-), Emanuel Celler (1923-), William Sirovich (1927-39), William W. Cohen (1927-29), Theodore Peyser (1933-37), M. Michael Edelstein (1940-41).

MEMBERS OF THE DIPLOMATIC SERVICE: August Belmont, chargé d'affaires in The Netherlands (1853-57); Minister Resident (1854-57); Herman Bernstein, Minister to Albania (1929-33); Lewis Einstein, Minister to Costa Rica (1913-21); Minister to Czechoslovakia (1921-30); Harry F. Guggenheim, Ambassador to Cuba (1929-33); Henry Morgenthau, Sr., Ambassador to Turkey (1913-16); Mordecai M. Noah, consul to Tunis (1814-16); Lawrence A. Steinhardt, Minister to Sweden (1933-37); Ambassador to Peru (1937-39); Ambassador to Russia (1939-42); Ambassador to Turkey (1942-); Jesse Isidor Straus, Ambassador to France (1933-36); Oscar S. Straus, Minister to Turkey (1887-88, 1898-1900); Ambassador to Turkey (1909-10).

JUSTICES OF THE UNITED STATES DISTRICT COURT: William Bondy (1923-), Clarence G. Galston (1929-), Samuel Mandelbaum (1936-), Grover M. Moscowitz (1925-), Simon H. Rifkind (1941-).

JUSTICES OF THE NEW YORK STATE SUPREME COURT: J. Sidney Bernstein (1938-), Nathan Bijur (1909-30), Bernard Botein (1941-), Benjamin N. Cardozo (1914; Court of Appeals, 1914-32), William N. Cohen (1897-99), Albert Cohn (1929-), Morris Eder (1939-), Mitchell L. Erlanger (1906-27), Alfred Frankenthaler (1926-40), Irving I. Goldsmith (1927-29), Samuel Greenbaum (1900-23), Ernest L. Hammer (1939-), Michael H. Hirschberg (1895-

1917), Samuel H. Hofstadter (1932-), Isaac Kapper (1910-34), Philip M. Kleinfeld (1941-), Edgar J. Lauer (1934-39), Edward Lazansky (1917-), Irving H. Lehman (1908-37), David Leventritt (1898-1908), Aaron J. Levy (1923-), Harry E. Lewis (1921-), Louis W. Marcus (1906-23), Mitchell May (1921-41), Julius Miller (1930-), Joseph E. Newburger (1905-23), Algeron I. Nova (1937-), Samuel Null (1941-), Nathan N. Ottinger (1918-32), Joseph M. Proskauer (1923-30), Samuel I. Rosenman (1932-), Benjamin F. Schreiber (1940-), Henry L. Sherman (1927-36), Bernard Shientag (1930-), Alfred Steckler (1895), Meier Steinbrink (1932-), Aron Steuer (1932-), Irwin Untermyer (1929-), Isidor Wasservogel (1920-).

BOROUGH PRESIDENTS: Jacob Cantor (1901-5), Marcus M. Marks (1913-17), Julius Miller (1921-29), Samuel Levy (1931-37), Stanley M. Isaacs (1937-41), Edgar J. Nathan (1941-). Each was president of the borough of Manhattan.

MEMBERS OF THE NEW YORK CITY COUNCIL: Louis Hollander (1937-39), B. Charney Vladeck (1937-39), Robert K. Straus (1937-), Howard Spellman (1937-39), Albert D. Schanzer (1937-39), Charles M. Belous (1937-39), Louis Cohen (1939-), Walter R. Hart (1939-), Edward Vogel (1939-), Louis Goldberg (1941-), Gertrude W. Klein (1941-).

Jews featured prominently in the educational system of New York city. Paul Klapper was president of Queens College; James Marshall was president of the Board of Education (1938-42); Elias Lieberman, Jacob Greenberg and David Moscowitz were assistant or associate superintendents of schools in 1942.

11. Religious and Communal. In 1854 the Lyons-de Sola directory listed fourteen Jewish congregations in New York city. By 1890 their number had increased to 135. It is significant that in 1890 only thirty-two Orthodox congregations out of 126 maintained buildings, while all nine of the Reform congregations were housed in synagogue buildings. Because the Reform service appealed more strongly to the economically secure German Jewish element than to the poorer Orthodox masses from Eastern Europe, the value of the property controlled by the Reform congregations exceeded that owned by the more numerous Orthodox organizations. In 1900 ninety-two congregations in New York city reported a membership of 12,166 families.

In 1918 there were approximately 784 permanent synagogues in New York city, with the greatest number concentrated in the Delancey and East Broadway districts. Of these, 730 were Orthodox, thirty-two were Conservative and sixteen were Reform. An interesting survey of the occupations of the presidents of congregations revealed that the greatest number were retail dealers, ranking next were operative employees, while the third and fourth ranking groups were manufacturers and executive employees.

Of the 1,044 congregations in New York city in 1927 there were 656 with buildings and 388 without buildings. A total of 574 of these congregations maintained rabbis in that year; 524 maintained congregational organizations, of which sixty-one were men's organizations and 463 were women's organizations.

In 1942 it was estimated by the Union of Orthodox Hebrew Congregations that there were more than 1,100 Orthodox houses of worship in New York city. The United Synagogue of America claimed approximately 110 affiliated synagogues in New York city, while the New York Federation of Reform Synagogues had a membership of twenty-eight congregations at the time of its organization in 1942.

Thus, in 1942, New York's Jewish community was overwhelmingly Orthodox. That this was so may be ascribed to the influx of Jews from Eastern Europe who attempted to transplant the religious practices to which they had grown accustomed. While German was the language of the New York city pulpits in the middle of the 19th cent., in 1918 Yiddish was used for sermons and for public announcements in almost 90 per cent of the Orthodox synagogues in New York city. After that date the use of English in the synagogue made steady progress.

New York city's Jewish religious life produced a great number of rabbis whose influence assumed nation-wide importance. This history begins with Gershom Mendes Seixas (1766-1816), of Revolutionary days, to whom there was no outstanding successor until the arrival of the Central European immigration. A number of these immigrant rabbis came to prominence especially during the period of religious controversy centering around the rise and growth of the Reform Movement in the synagogue.

Among these were Adolph Huebsch, of Congregation Ahawath Chesed (1866-84), and his successor, Alexander Kohut (1884-94). In Temple Emanu-El there were Samuel Adler (1857-74) and Gustav Gottheil (1874-99), and later Judah Leon Magnes (1908-10). In Temple Beth-El there were David Einhorn (1874-79), Kaufmann Kohler (1879-1903), and Samuel Schulman (1903-27), who, on the amalgamation of Emanu-El and Beth-El, became rabbi of Emanu-El (1927-). The brothers Henry Pereira Mendes and Frederick de Sola Mendes were unique in the synagogal life of New York city in that the former was rabbi (1877-1920) of the staunchly Orthodox Shearith Israel, and the latter was rabbi (1877-1920) of the Reform congregation Shaaray Tefillah (later known as the West End Synagogue).

Among the other notable rabbis of the city were the great preachers Isaac S. Moses, of Central Synagogue (1901-19), and Nathan Krass, who served both Central Synagogue (1918-23) and Temple Emanu-El (1923-), the noted educators, Maurice H. Harris, of Temple Israel (1887-1930), and Rudolph Grossman, of Rodeph Sholom (1897-1927), and the scholar Hyman G. Enelow, of Temple Emanu-El (1912-34). Felix Adler was the founder (1876) of the Society for Ethical Culture. There was a unique personality among the rabbis of New York city, Stephen S. Wise, founder of the Free Synagogue (1907-), who was, at the same time, orator, organizer, controversialist and educator. Philip Klein, of Oheb Zedek, was for many years (1890-1926) a powerful personality in the evolution of American Orthodoxy.

Outstanding Orthodox rabbis of New York city in the early decades of the 20th cent. were Bernard Drachman, who was rabbi of Oheb Zedek Congregation for many years, founder and president (from 1905 on) of the Jewish Sabbath Alliance of America, and one of the co-founders, with Sabato Morais, of the Jewish Theological Seminary of America; Herbert S. Goldstein, founder of the Institutional Synagogue; Leo Jung, who served as rabbi of the Jewish Center from 1922 on, and as professor of ethics at Yeshiva College from 1931 on; and David DeSola Pool, successor to the noted preacher H. Pereira Mendes in the pulpit of Congregation Shearith Israel (Spanish and Portuguese) Synagogue, and who, from 1940 on, served as chairman of the Army and Navy Committee of the Jewish Welfare Board.

In 1942 the following rabbis served the Reform congregations in New York city: I. Mortimer Bloom, Beth Israel of Kingsbridge; Jacob X. Cohen, Free Synagogue; Samuel H. Goldenson, Emanu-El; Sidney E. Goldstein, Free Synagogue; Edward E. Klein, Free Synagogue; Joseph S. Kornfeld, Free Synagogue; Nathan Krass, Emanu-El; Clifton Harby Levy, Center of Jewish Science; Edward Lissman, Riverside Synagogue; Louis I. Newman, Rodeph Sholom; Ahron Opher, Hebrew Tabernacle; Nathan A. Perilman, Emanu-El; Maurice L. Perlzweig, Emanu-El; Jerome Rosenbloom, Tremont Temple; William F. Rosenblum, Temple Israel; Herman W. Saville, Temple Sinai of the Bronx; Hyman J. Schachtel, West End Synagogue; Henry A. Schorr, Adath Israel; Samuel Schulman, Emanu-El; Samuel M. Segal, Mt. Neboh; Alexander D. Segel, Fort Washington Synagogue; Nathan Stern, West End Synagogue; Jonah B. Wise, Central Synagogue; Stephen S. Wise, Free Synagogue.

The rabbis of the principal Conservative congregations of New York city in 1942 were: Abba Abrams, Jacob H. Schiff Center; Murray A. Alstet, Pelham Parkway Jewish Center; Irving Baumol, Temple Beth Shalom; Max Drob, Concourse Center of Israel; Ira Eisenstein, Society for the Advancement of Judaism; Morris M. Goldberg, Shaare Zedek; Herbert S. Goldstein, West Side Institutional Synagogue; Israel Goldstein, B'nai Jeshurun; Mordecai M. Kaplan, Society for the Advancement of Judaism; Jacob Katz, Montefiore Congregation; Jacob Radin, Inwood Hebrew Congregation; Edward Schoenfeld, University Heights Jewish Center; Elias L. Solomon, Shaare Zedek; Milton Steinberg, Park Avenue Synagogue; Joseph Zeitlin, Ansche Chesed.

The Orthodox rabbis of Manhattan in 1942 included: Israel Barnett, Agudath Achim; Abraham M. Bass, Brith Shalom Bnai Yitzchok; Samuel Belkin, Isaac Elchanan Theological Seminary; Morris Besdin, Beth Hamidrash Hagadol; Solomon Busch, Czernowitz Bukoviner Congregation; Bernard Drachman, Congregation Zichron Ephraim; Mordecai Dzikansky, Nachal Isaac Doreshe Tov; Max Felshin, Civic Center Synagogue; Benjamin H. Fleisher, Beth Hamedrosh Hagodol of Norfolk Street; Kalman A. Goldberg, Adath Israel Synagogue; Herbert S. Goldstein, West Side Institutional Synagogue; Jacob J. Hoffman, First Hungarian Congregation Oheb Zedek; Moses Horowitz, Chevra Rab Abraham Samuel Anshe Aishishik; Moses Hyamson, Orach Chaim; Leo Jung, Jewish Center; I. Karlinsky, Chevre Sheves Achim Anshe Bielak; Harry M. Katzen, Beth Israel West Side Jewish Center; Carol Klein, First Hungarian Congregation Achei Yehuda of Yorkville; Zevi H. Lederberg, Ahavath Israel; Joseph H. Lookstein, Kehillath Jeshurun; S. Machnovsky, Hapoel Hamizrachi; Motel Nussbaum, Achim Ahuvim; M. Pohrille, First Roumanian Congregation; Moses A. Poleyeff, Yeshiva College; David DeSola Pool, Shearith Israel; Samuel A. Rubin, Agudath Anshei Maamad; Zerach Rubin, Beth Hamidrash Hagadol D'Sfardim; David Rubinstein, Talmud Torah Adereth El; Abraham S. Samuels, Talmud Torah Beth Abraham; Max Schay, Beth Hamidrash Hagadol Anshei Ungarn; Morris Schurn, Anshei Slutsk; Isaac Shedletsky, Chevra Tehillim Anshei Vishkover; Isaac Schnaidman, Poel Zedek Anshe Illia; Abraham I. Shisgal, Beth Hakneseth Anshei Jedevabno; Isaac Tendler, Anshei Kravetz; Joseph Thumim, First Galician Congregation Bikur Cholim; Herman Willmer, Ahavath Achim Anshei Ungarn Shloma Schapiro; Morris Zaritsky, Adath Israel Anshei Ungarn.

In 1942 the Orthodox rabbis serving congregations in the Bronx included: Mendel Chodrow, Gedulath Mordecai and Merkaz Harav of Concourse; Abraham I. Cutler, Mount Eden Center; Ephraim Einstein, East Concourse Hebrew Center; Moses C. Epstein, Kehilath Moishe; Max Feinstein, Shomrei Shabbath Congregation; Samuel Flaum, Ahavath Achim of the Bronx; Noah Garfinkel, Ahavath Sholom; S. Golubowski, Emanuel Synagogue; Abraham M. Gorelick, Hunts Point Chevra Bikur Cholim; Mendel Graubard, Ezrath Israel Anshei Bronx; Abraham Koran, Congregation Torath Chaim; Simon G. Kramer, Hebrew Institute of University Heights; Asher N. Levitan, Tifereth Beth Jacob; Harry L. Liebowitz, Jewish Center of Unionport; Albert N. Mandelbaum, Nathan Straus Jewish Center; Joseph M. Margolies, Ahavath Achim; Jehiel H. Meckler, New Synagogue of the Bronx; Abraham Miller, Mishkanoth Israel; Simon Morduchovitz, Chevra Mishnayoth Anshei Emeth; Chaim E. Moseson, Hope of Israel; I. Movshowitz, Beth Hamidrash Hagadol Vetomechei Torah; Samuel Parzan, Ahavath Shalom; Israel Porille, Tehilath Israel; Baruch Putterman, Zion Hebrew Institute; J. Howard Ralbag, Jewish Center of Williamsbridge; Zevi Rovitski, Zeire Jacob; Leo H. Shayovich, Talmud Torah Anshei Emeth; Lazar Schoenfeld, Congregation Beth David Augdath Achim; Abraham I. Shuchatowitz, New Beth Hamidrash Hagadol; Asher Siev, Congregation Kehilath Israel; Naphtali A. Spiegel, Congregation Kol Hachasidim of the Bronx; Ephraim M. Steinberg, Chevra Mishnayoth of the First Ladies Day Nursery of the Bronx; Moses Stillbans, Congregation Ohel Mosheh; Alexander Teitelbaum, Khal Jeraim; Solomon Teitelbaum, Yismach Mosheh Congregation; Isaac M. Wapner, Bnai Israel—Fordham Talmud Torah; Alter Williamowsky, Netzach Israel Jewish Center; Pesach Wolk, Beth Achim; Moses Halevi Zeitz, Talmud Torah Kneseth Samuel Smoliar; Moses L. Zuckerkandel, Tifereth Israel.

After 1933, and especially after 1938, a number of German Jewish congregations were founded by former German and Austrian rabbis. The liturgy is generally read in Hebrew and English, while the sermons are preached in German. The most important of these synagogues are Congregation Habonim (Rabbi Hugo Hahn, formerly of Essen), Vereinigte Gemeinden Kehillath Jawne—Austrian Jewish Congregation (Rabbi Julius Max Bach, formerly of Vienna, and Rabbi Adolf Kober, formerly of Cologne), K'hall Adath Jeshurun (Rabbi Josef Breuer), Congregation Beth Hillel (Rabbi Leo Baerwald, formerly of Munich), and American Jewish Congregation (Rabbi Benno Gottschalk, of Berlin).

In 1942, after almost two decades of immigrational restriction, the differences among New York city Jews of Spanish, German, East European and Turkish origin were still apparent. The old Sephardic families maintained allegiance to Congregation Shearith Israel. A large number of Jews of German descent lived in the fashionable areas of midtown Manhattan, and maintained several elaborate synagogues. After 1920, however, they were joined by many of East European origin. For the most part, the city's East European Jews lived in the lower middle class and proletarian neighborhoods of the Bronx and of Brooklyn, and in the Washington Heights section of Manhattan, while a fairly large number, whether for nostalgic or financial reasons, still clung to the lower east side.

Approximately 30,000 Oriental Jews lived in New York city in 1942 in colonies on the East Side, in the East and South Bronx, and in the New Lots and Bensonhurst areas of Brooklyn. They supported ten synagogues and fourteen burial societies. Arriving in New York after 1908, they represented the easternmost source of Jewish immigration to the New World and were, perhaps, the least prosperous economically. There were, in 1942, colonies of Negro Jews in Harlem and Brooklyn which had no contact with the rest of the Jewish community.

In 1942 there were hundreds of local fraternal, religious, welfare, political, economic, social, and cultural Jewish agencies which defy categorization and even enumeration. In 1938 a W.P.A. survey revealed the existence in New York of 743 Independent Landsmannschaften societies. In addition, there were 253 women's organizations, 239 branches of the Workmen's Circle, 149 branches of the Jewish National Workers' Alliance, and sixty-six branches of the International Workers' Order.

As early as 1908 there were a few Jewish leaders who recognized a need for "the unification of the various elements of the Jewish population of New York . . . and of bringing about harmony and a proper sense of solidarity in place of the deplorable conditions which now exist." Yet the Kehillah movement of the early years of the 20th cent. was not destined to succeed, and despite the efforts of a few coordinating agencies there was in 1942 little in the way of a centralized Jewish communal organization.

In New York city, where vast numbers of peoples of diverse national origin and religious belief lived in close proximity, some degree of conflict and misunderstanding among them was almost inevitable. Anti-Semitic demonstrations in New York city were occasional and sporadic before 1933, although in the years following the first World War the Ku Klux Klan had a significant following in the boroughs of Richmond and Queens and on Long Island. However, after the rise of the Nazis to power in Germany, anti-Semitic sentiment was fostered by the German American Bund, by Italian Fascist organizations, and by the Christian Front, which had a numerous membership among the Irish element. In combatting this movement the Jews had the support, among other agencies, of the New York Round Table of the National Conference of Christians and Jews and of certain sections of the

Christian clergy who were outspoken in their denunciation of anti-Semitism.

The Jewish community of New York city, largest and most influential in the world, had in 1942 a marked influence on the destinies of world Jewry. More than 40 per cent of the Jews who were sufficiently distinguished to be listed in *Who's Who in America* (1942-43) lived in New York city. Almost all the 240 Jewish organizations in the United States had either headquarters or branch offices in New York city. Much of the overseas relief and Zionist activity was directed from this source, while organizations like the American Jewish Committee and the American Jewish Congress, through their institutes for research, were harnessing the talents of European and American scholars to the solution of current and post-war Jewish problems throughout the world. In 1942, when the concerted effort of the nation was behind the total war effort for the extension of democratic principles throughout the world, the Jewish community of New York city was aware of its world-wide responsibility.

Staten Island, in New York bay, forms Richmond Borough of Greater New York. In 1942, in a general population of 174,441 (census of 1940), there were approximately 10,000 Jews residing on the island. According to one estimate, the Jewish population was 4,200 in 1910; by 1927 it had increased to 7,200, and in 1937 the figure was placed at 9,158.

The first Jew to settle on the island would seem to have been Moses Greenwald, an immigrant from Germany; his son Abram was the first Jewish child known to have been born on the island, in 1857; he was still living there in 1942. Another early family, the Levensons, established themselves in the TOTTENVILLE section. But it was not until the last two decades of the 19th cent. that a more numerous community began to emerge, concentrated on the East Shore, in the localities of NEW BRIGHTON, TOMPKINSVILLE, STAPLETON, ROSEBANK and CONCORD. At TOMPKINSVILLE, in 1888, a group incorporated the first congregation of Staten Island, B'nai Jeshurun, and later built its three-story frame synagogue. The expanding community, feeling the need for a second congregation, incorporated Agudath Achim (also Orthodox) in 1900 at New Brighton. A synagogue was erected in 1907. By that time Jews had begun to settle in the greater Port Richmond territory, and in that section, in 1907, the Conservative congregation Temple Emanu-El was founded. It built a one-story frame and limestone synagogue.

B'nai Jeshurun had several regularly elected rabbis, including Solomon Levy. B. Leon Hurwitz served as student rabbi in 1924. Otherwise services were conducted on the chief holidays by rabbis called in for those occasions. Congregation Agudath Achim was likewise served by various rabbis for the holidays. From 1922 to 1925 Moses M. Yoshor was rabbi; subsequently Zalman Dov Roshgolin was called to the pulpit, and was still the incumbent in 1942. Temple Emanu-El's first rabbi was Isaac A. Millner; he served from 1912 to 1918; was called to the pulpit in 1925, and was still serving in 1942. In 1928 an annex adjoining the Temple was dedicated to house the various educational and social activities of the congregation. From its inception Temple Emanu-El had an active sisterhood.

With the community's growth, additional congregations were founded. Tifereth Israel (Orthodox) was organized in 1916 at Stapleton under the name of Hebrew Alliance, and took its subsequent designation in 1927, when a synagogue was erected. In 1942 Morris Metzner was conducting services. Congregation Ahavath Israel (Orthodox) was organized at Tottenville in 1918, and services were held in the homes of various

members until a frame synagogue was erected in 1932. The South Shore Hebrew Alliance, on the South Shore of the Island, was organized in 1936.

At Tompkinsville, about 1929, the Jewish Community Center of Staten Island was founded, and became the hub of Jewish communal life on the island. Dr. Herman Friedel, active in Staten Island medical circles, was a leader of the Center from its inception. In 1942 Maxwell Ehrlich was president of the Center. The earliest charitable organization of the island was Chevrath Agudath Chesed Shel Emeth, organized in 1889. Later there were formed the Hebrew Charities Society and the Hebrew Benevolent Society, of which, in 1942 William Einziger was president.

In 1942 the island also had a post of the Jewish War Veterans, a section of the National Council of Jewish Women, chapters of Hadassah, and an exceptionally active lodge of the B'nai B'rith, founded in 1940. The Jewish Welfare Board became very active on Staten Island, in 1942, on behalf of the Jewish men in the armed forces stationed there. Working with the Jewish community's Committee for Defense and Recreation, of which Mrs. Jacob Stein, daughter of Abram Greenwald, was chairman, the Jewish Welfare Board instituted regular religious services for the men at Fort Wadsworth and the Staten Island Terminal United States Army Port of Embarkation.

For the most part, Staten Island Jews were engaged in business either locally or in Manhattan. A large number of them were in the professions of law, dentistry and medicine. Louis A. Dreyfus (d. 1921), industrialist and scientist, was one of the island's largest benefactors. Hero Park, on the island, was a gift of the Dreyfus family in his memory, as was also the Richmond Memorial Hospital.

NEW YORK, an eastern state of the United States, with a population of 13,379,622 (census of 1940), including about 2,206,300 Jews (1937). Much of the history of the Jewish community in New York state has been dealt with in separate articles devoted to cities having Jewish populations, in 1942, of more than 1,000. About 90 per cent of the Jews of New York state live in New York city.

During the 17th and 18th centuries, when Jewish immigration into the state was mainly Spanish and Portuguese in origin, the Jews settled principally on Manhattan Island. However, there is evidence of real estate transactions in the Albany area by Asser Levy of New York city as early as 1658, and of trading activities by a New York city Jew twenty years later. In 1820 Levy Solomons was engaged in the manufacture of snuff in Albany, and in 1838 a congregation, Beth El, was founded.

Closer to New York city than Albany and also situated on the Hudson River was the city of Newburgh where, in 1719, Lewis or Daniel Gomez established an Indian trading post. Further south and also on the Hudson is the city of Peekskill, where Solomon Levy lived in 1806. Still nearer to New York city was Westchester County, where the Hays family established itself near New Rochelle before 1732.

Enterprising Jews of New York city were keenly interested in real estate ventures in northern and western New York state. They were among the purchasers of confiscated loyalist estates following the American Revolution. Between 1805 and 1834 Aaron Levy visited upstate New York, especially the Lake George region, on business that had to do with land transactions. A partial motive behind Mordecai Manuel Noah's grandiose and short-lived Ararat project, established in 1825, was the major's keen interest in the land values of Grand Island, in the Niagara River.

In the same year as that in which Noah's project was launched, the American Society for Meliorating the Condition of the Jews established a 400-acre farm in Harrison, Westchester County. Jews converted to Christianity were supposed to be settled here, but in 1826 the project failed.

In 1838 another colonization scheme, not so well-known as Noah's project, was launched at Sholam, in Ulster County. The salient facts about this community's existence were: that eleven Jews from New York city purchased land in the community; that the colonists were supposedly cultured persons who sought social intercourse with their neighbors; that they were fairly wealthy; that they appealed to the Spanish and Portuguese congregation in New York city for help in establishing a synagogue; and that in 1842 the project was abandoned.

In the 1830's and more prominently in the 1840's the Jewish communities of New York state began to emerge. Canals, turnpikes and steamboats transported the German Jewish immigrants to the rapidly growing urban centers of Troy, Albany, Peekskill, Poughkeepsie and Newburgh, where they formed congregations and developed a communal life. Jews penetrated far north into the Plattsburg settlement. They went west to the cities of Rochester, Syracuse, Utica and Buffalo.

The population of the Jewish communities of New York state was considerably increased for the high holy days, when Jews from neighboring rural sections came in for worship. This was true of the metropolis of New York city during the 1840's and also of the small village of Plattsburg, whose Jewish community in 1942 was more than a century old. When a synagogue was built here in 1866, it became the religious center for all the Jews who eked out a livelihood as tradesmen and peddlers in the villages and outlying farms of the territory accessible to Plattsburg. On a holiday Jews would come from Vermont, from as far west as Ogdensburg, and from as far south as Whitehall. On the day following, they would leave town on as many as fifty peddler wagons, and prepared to resume trading activities in the Champlain Valley and in the Adirondacks and in the Green Mountains. There is reason to believe that the experience of Plattsburgh was not unique in this regard.

In some upstate communities it was a customary business procedure on the part of established Jewish merchants to convert indigent newcomers into pack peddlers. Credit for a bundle of merchandise was extended, and business careers were launched as merchandise was sold from door to door. The average German Jewish peddler had scant knowledge of the English language. Isaac Mayer Wise relates that a peddler who had lost a slip of paper on which were written the few English words essential to the transaction of business complained to Wise in German of having lost his entire English vocabulary. Once the initial stage had been passed, however, there was always the institution of the free loan society to which the more enterprising could appeal to establish a permanent store.

Among the earliest congregations in New York state were Anshe Emeth of Albany, founded in 1850; Beth El (1847) and Beth Zion (1850), founded in Buffalo; Brith Kodesh, founded in Rochester in 1848; Society of Concord, founded in Syracuse (1846). In New York city there were approximately fourteen congregations established in 1850 or earlier; they were: Ahawath Chesed (1848), Anshe Chesed (1830), Beth Abraham (1850), Beth Israel (1846), Bikur Cholim (1849), Bene Israel (1847), B'nai Jeshurun (1825), Emanu-El (1845), Shaaray Hashomayim (1841), Rodof Sholom (1842), Shaare Rachamim (1849), Shaaray Tefilla (1846), Shaaray Tsedek (1839) and Shearith Israel (late in the 17th cent.). According to the census of 1850, synagogue property in New York state was valued at $211,000; included in this amount were six synagogues in New York city, valued at $115,000. In 1860 the number of congregations in New York state had increased to twenty. In 1870 there were forty-seven congregations in New York state and thirty-three synagogue buildings. It is to be remembered that in compiling these statistics the census bureau defined as churches solely those "institutions in the community known and recognized." It is believed that such a definition must have resulted in the omission from consideration of a number of small congregations which were newly organized. In 1877 nineteen cities in New York state reported the existence of fifty-three congregations. There were three congregations in Albany, one in Elmira, one in Platts-

burg, one in Hudson, one in Poughkeepsie, two in Buffalo, seven in Brooklyn, two in Rochester, twenty in New York city, two in Utica, three in Syracuse, one in Newburgh, two in Troy, one in Ogdensburg, one in Schenectady, one in Oswego, one in Kingston, two in Rondout, one in Suspension Bridge. In 1890 the number of congregations had increased to 179, of which 152 were Orthodox and twenty-seven Reform. Of these, 135 were situated in New York city. This increase was perhaps more apparent than real, for the census enumerators had adopted a more liberalized attitude as to what constituted a church, while the 1877 enumeration listed only congregations reporting.

In 1900 the Jewish population was estimated at between 400,000 and 600,000, with the more important communities situated in Albany, Buffalo, Elmira, New York city, Rochester, Syracuse, and Troy. Forty-one cities and towns had one or more Jewish institutions. Of these, thirty-seven had regularly organized congregations, while four cities had no communal religious organization. There were approximately 212 congregations in New York state (121 of which were in New York city), with 148 reporting a membership of 17,404 families affiliated. There were 106 schools, seventeen of which were affiliated with the Hebrew Sabbath School Union of America. Exclusive of New York city, there were thirty-nine charitable societies and ten mutual benefit associations. In two cities there were branches of the Alliance Israélite Universelle; in seven cities there were sections of the National Council of Jewish Women; in nine cities there were thirty-two Zionist societies; in twenty cities there were 342 lodges, 254 of which were in New York city. Fifty-five of these were of the Independent Order B'nai B'rith, fifty-eight of the Independent Order Free Sons of Israel, ninety of the Independent Order Sons of Benjamin, 106 of the Order Brith Abraham, and thirty-three of the Order Kesher Shel Barzel.

The following information is available about Jewish communal organization in New York state in 1907: ALBANY, with an approximate Jewish population in 1907 of 3,500, maintained congregations Beth El (1838), Beth El Jacob (1841), Beth Emeth (1885), and Brith Sholom (1870). There were several charities, mutual benefit societies, literary and social clubs.

In 1907, AMSTERDAM (about 250 Jews) had two congregations. Sons of Israel was organized in 1882, and Temple Israel was founded in 1873. ARVERNE, Long Island, maintained Congregation Derech Emuno (1905). ASTORIA, Long Island, supported Mishkan Israel. AUBURN (about eighty Jews) had one congregation, B'nai Israel. BATH BEACH, Long Island, with about 450 Jews, maintained Congregation Sons of Israel (1896). Situated in BELLPORT, Long Island, was the Jewish Working Girls' Vacation Society.

BINGHAMTON (about 500 Jews) had Congregation Sons of Israel, organized in 1885, a Hebrew Benevolent Society, and a Hebrew Free School Society. The 10,000 Jews in BUFFALO in 1907 maintained Congregation Ahavas Achim (1890), Ahavath Sholem (1890), Berith Israel Anshe Sephard (organized in 1887), Berith Sholem (1893), Beth El (1847), Beth Jacob, Beth Zion (1865), and Dorshe Zion (organized in 1907). There were a number of charities, mutual benefit societies, and educational societies. CONEY ISLAND, with about 700 Jews, maintained Congregation Anshe Emeth (1893). CORONA, Long Island, had the Corona Hebrew Association. ELMIRA'S 1,800 Jews supported Children of Israel (1862), Shomre Hadath (1883), and Talmud Torah (1888). GLENS FALLS, with an estimated Jewish population of 100, had Congregation Shara Tefilla. GLOVERSVILLE, with an estimated Jewish population of 800, had Congregation Kenesseth Israel, organized in 1891. HAVERSTRAW had an estimated Jewish population of 232 and a congregation, Sons of Jacob, organized in 1896. There was a congregation in HUDSON, organized in 1867, named Anshe Emeth. ITHACA, with an estimated Jewish population of 120, had Congregation Chevra Kedusha. KINGSTON, with about 789 Jews, maintained three congregations, Agudath Achim, Ahawath Israel, and Emanuel. The United Hebrew Charities of the City of Kingston was organized in 1907.

LAKE PLACID, with an estimated Jewish population of sixty-two, maintained the United Hebrew Community of Lake Placid, organized in 1903. In MOUNT VERNON there was Sinai Temple, founded in 1906, with George Alexander Kohut as rabbi. NEWBURGH, with about 500 Jews, had two congregations, Agudas Achim and Beth Jacob. NEW ROCHELLE, with an estimated Jewish population of about 250, supported Anshe Sholom and Temple Israel, the latter organized in 1906. NIAGARA FALLS (about 250 Jews) maintained Temple Beth El, organized in 1905. OGDENSBURG, with about seventy-five Jews, maintained Congregation Anshe Zophen. OLEAN, with about 100 Jews, established Congregation B'nai Israel in 1884. OSSINING had 120 Jews in 1907 and a congregation, Sons of Israel, organized in 1891. PEEKSKILL, with an estimated Jewish population of 300, maintained the First Hebrew Congregation of Peekskill, founded in 1894. PLATTSBURGH, with about 125 Jews, organized Beth Israel in 1862.

In PORT CHESTER, Knesses Israel was organized in 1892 and Teferes Israel in 1906. There was a Hebrew Free Loan Society, a Hebrew Ladies' Society, and a Hebrew Progressive Association. The Port Chester Hebrew Independent Lodge constituted a mutual benefit organization. PORT JERVIS supported a Hebrew Association. POUGHKEEPSIE, with an estimated Jewish population of 200, maintained the Brethren of Israel congregation. ROCHESTER, with an estimated Jewish population of 10,000, maintained Congregation Agudas Achim Nusach Ary (organized in 1892), Ahawas Achim Anshe Rodoshkowitch (organized in 1905), Anshe Poland (organized in 1904), Bena David (organized in 1887), Beth Haknesses Hachodesh (organized in 1887), Beth Israel (founded in 1874), Chaytim Chevra (founded in 1896) and Vaad Hakolel (founded in 1894). In addition, there were a number of charities. In ROCKAWAY BEACH, Long Island, Temple of Israel was organized in 1896. In ROOSEVELT, Long Island, Congregation of Saving Justice was established. SAG HARBOR, in Long Island, supported the Jewish United Brethren and Mishkan Israel. In SARATOGA SPRINGS, with an estimated Jewish population of forty, there were Chevra Shaarei Tefillah and the Jewish Aid Society, which was organized in 1906. In SCHENECTADY, with an estimated Jewish population of 1,000, were the congregations Agudas Achim (1905), Ahawath Israel, Chai Odom, Gmilas Chassodim, Hungarian Chevra, Ohab Zedak, and Schaari Schamajim. There was a Sharon Springs Synagogue in the community of SHARON SPRINGS, and a congregation, Sons of Israel, in SPRING VALLEY. In NEW BRIGHTON, Staten Island, there was Congregation B'nai Jeshurun, while in PORT RICHMOND, Staten Island, Emanuel Congregation was founded in 1906.

SYRACUSE, with about 10,000 Jews in 1907, maintained a number of congregations. Among them were Adath Israel (1882), Adath Jeshurun (1864), Adath Yeshurun (1872), Ahavas Achim (1893), New Beth Israel (1854), Poale Tsedek (1896), Society of Concord (1841). There were several charities, including the Syracuse branch of the Jewish Orphan Asylum of western New York, organized in 1878. Anshe Hashoran of TANNERSVILLE was incorporated in 1902 and maintained by a Jewish community of about 100. TROY, with about 1,800 Jews, maintained Congregation Beth Israel Bickur Cholim (1870), Berith Sholom (1866), Chayai Odam (1887), and Sharah Tephilah (1880). TUPPER LAKE'S Jewish population of about 125 maintained Beth Joseph (1905). UTICA'S 2,000 Jews established Beth El (1903), House of David (1901), House of Israel, House of Jacob and Union of Brothers. WATERTOWN, with about 160 Jews, maintained Congregation Standard of Israel. WEST ARVERNE, Long Island, supported Israel Temple. YONKERS, with 3,000 Jews, supported Ohab Zedek.

The entrance of large numbers of East European Jews into New York city after 1881 led to efforts to reduce urban congestion by distributing them on the land. By the end of 1904 there were 161 Jewish farmers owning 14,000 acres in Sullivan and Ulster counties. In 1909 there were seven Jewish farmers' associations in New York state. In 1911 the first Jewish farmers' credit union was formed, and in 1917 a special county agent, jointly responsible to the Jewish Agricultural Society and the New York State College of Agriculture, was employed to work among the Jewish farmers of New York state.

A report of the New York State Department of Health, in 1916, revealed the existence of bad sanitary conditions in Ulster and Sullivan counties. Because of the great many Jewish farmers in this area, the Jewish Agricultural Society designed a program for improved sewage and garbage disposal and a better water supply.

Ulster and Sullivan counties were popular vacation resorts, and numbers of Jewish farmers maintained boarding houses in conjunction with their agricultural activities. The farmer would rent rooms and sell the boarders food products which were home-grown. Such small beginnings frequently proved to be the foundations of huge Catskill Mountain hotel enterprises which were opened for two or three months of the year and catered almost exclusively to Jewish vacationists who were residents of New York city.

In the 20th cent. the number of Jewish congregations in New York state increased rapidly. In 1906 there were 378; in 1916 there were 798; in 1926 there were 1,228; and in 1936 there were 1,560. The Jewish group, according to the United States Census of Religious Bodies (1936), ranked second to the Roman Catholic with regard to the number of church edifices maintained. The Methodist Episcopal Church ranked third.

Of New York state's 1,560 Jewish congregations (in 1936), 1,524 were urban and thirty-six were rural.

Apart from the data on New York city, there is little demographic material on the Jewish communities of New York state. However, as early as 1879 Rabbi S. Falk attempted to evaluate the occupational structure of Buffalo Jewry, which may have been typical of other Jewish communities in the state. At that date, Falk revealed, there were one banker, one barber, three wholesale butchers, one carpenter, twelve cattle dealers, at least sixteen retail cigar makers, one wholesale cigar maker, one cigar dealer, about eighteen retail clothiers, six clothing manufacturers, two dry goods dealers, one editor, two fancy goods dealers, two farmers in the vicinity of the city, one dealer in furnishings, one hardware dealer, one insurance agent, five wholesale jewelers, five metal dealers, three milliners, three ministers, one musician, two persons engaged in the wholesale piece goods business, five retired merchants, one shoemaker, dozens of tailors, four teachers, one wholesale variety dealer and one retail variety dealer.

Early in 1938, or almost sixty years after Falk's study, the Jewish community of Buffalo was surveyed by the Conference on Jewish Relations in cooperation with the Bureau of Jewish Education. At that date there were approximately 18,000 Jews in Buffalo. Of these, 14,457 replied to questions about their nativity and 5,193 stated that they were foreign-born. The total population of the city of Buffalo was 573,076.

The occupational distribution of 5,659 gainfully employed Jewish workers in Buffalo in 1938 was found to be as follows:

Social-Economic Classss	*Total*		*Male*		*Female*	
	Number	*Per Cent*	*Number*	*Per Cent*	*Number*	*Per Cent*
Professional persons	809	14.3	638	14.3	171	14.1
Proprietors, managers and officials	1,465	25.9	1,430	32.2	35	2.9
Clerks and kindred workers	2,015	35.6	1,069	24.0	946	77.9
Skilled workers	919	16.3	888	20.0	31	2.5
Semi-skilled workers	171	3.0	163	3.7	8	0.7
Unskilled workers	182	3.2	171	3.8	11	0.9
Unclassified and others	98	1.7	86	2.0	12	1.0
Total	5,659	100.0	4,445	100.0	1,214	100.0

The following information was available concerning Jewish communities in New York state in 1942:

ALBANY (separately treated).

AMSTERDAM, situated on the steep hills above the Mohawk River, was in 1890 a rapidly growing center of the carpet and broom industry. This was due largely to the enterprise of Julius Wasserman, one of the earliest Jewish settlers and founder of the Amsterdam Broom Company. A handful of immigrants, most of whom came from Germany, formed the Temple of Israel Society in 1874, and in the next year called to their service as rabbi Joseph Gregar, who remained with the congregation until 1887. About that time the sisterhood, Deborah Society, was established. In 1900 Amsterdam's 250 Jews worshipped in the Temple of Israel (Reform) and the Sons of Israel Synagogue (Orthodox). In 1942 Harry S. Jacobs was rabbi of Congregation Sons of Israel and Kurt L. Metzger was rabbi of Temple of Israel. At that time the Jewish population of Amsterdam was estimated at 450.

Prominent representative Jews of Amsterdam, in addition to Julius Wasserman, who served as postmaster in 1886 and donated a laboratory named for him to the Amsterdam city hospital, were Morris Lowenstein, assistant postmaster, and Jerome S. Lovenheim, county attorney. Carl S. Salmon, assistant district attorney for Montgomery County from 1914 to 1917, was mayor of Amsterdam from 1924 to 1929.

BINGHAMTON (separately treated).

ELMIRA (separately treated).

GLOVERSVILLE, the principal glove-manufacturing center in the United States, situated about fifty miles northwest of Albany, had, in 1942, about 1,400 Jews in its total population of 23,329 (1940). The Jews who first settled in Gloversville, in the 1850's, were of German origin. The first Jewish child born in the city (1859) was Lucius Nathan Littauer, the philanthropist.

An Orthodox congregation, Kenesseth Israel, was organized in 1891. In the early 1900's the Jewish community also had a Workmen's Circle and a branch of the Socialist Territorialist Labor Party. In 1926 a building, the gift of Lucius Nathan Littauer, was erected to house the religious and social activities of the Jewish Community Center, which thereafter became the leading organization of the Gloversville Jews. Newton J. Friedman, who was active in social work, served as rabbi and director of the Center in 1937 and 1938. In that period the Center was affiliated with the Union of American Hebrew Congregations. The city of Gloversville erected a statue to Littauer in 1929.

HORNELL and vicinity, in 1942, had about 120 Jews and the Erlich Hebrew Center.

ITHACA, the seat of Cornell University, numbered in it total population of 19,730 (census of 1940) approximately 400 Jewish residents (1942). In addition, about 800 Jewish students, of whom some 500 came from New York city, were attending Cornell University.

Although a Jewish Woman's Aid Society was organized as far back as 1891 and the Orthodox Congregation Chevra Kedusha, formed by a group of Russian Jewish immigrants, was in existence in the early 1900's, it was not until much later that a substantial community emerged, consisting of settlers who moved in from neighboring cities and from New York city. In 1928 Congregation Beth-El was organized, and a Temple built. Religious activities were, in the main, confined to the observance of the high holy days and to occasional Sabbath services. The Temple had a sisterhood, and the community organized a lodge of the B'nai B'rith.

The actual center of Jewish life in Ithaca came to be the Hillel Foundation established at the university in 1929. The Foundation sponsored for the students a Jewish cultural program, Hebrew-speaking groups, Zionist activities, and the like. Major activities included the annual United Jewish Appeal, aid to refugees, and united religious endeavors with Catholic and Protestant student groups. The successive directors of the Hillel Foundation were Isidor Hoffman, Maurice Pekarsky, Ephraim Fischoff, David Polish, and Judah Shapiro, who was serving in 1942.

Jews on the staff of Cornell University in 1942 were: Simon Bauer, instructor in chemistry; Louis Boochever, director of the department of public relations; Harry Caplan, chairman of the classics department; David Dropkin, Westinghouse research associate; Daniel Drucker, instructor in engineering; Michael Golomb, research in engineering; Louis Guttman, instructor in sociology; Fritz Herzog, instructor in mathematics; Henry Hurwitz, instructor in chemistry; W. A. Hurwitz, chairman of the department of mathematics; Mark Kac, instructor in mathematics; G. L. Kreezer, assistant professor of psychology; Philip Levine, assistant professor at the Veterinary College; Jacob Papish, professor of chemistry; Jack Posin, instructor in Russian.

In the community outside of the university, Ithaca Jews were largely engaged in retail merchandising of various kinds. A number were engaged also in the professions of law, medicine and dentistry.

JAMESTOWN had a Jewish population of about 229 in 1942. It supported Congregation Hesed Abraham.

LIBERTY had a Jewish population in 1942 of approximately 600. Ahavath Israel was organized in 1915, and had as rabbi in 1942 Israel Lebendiger. Other Jewish institutions in the community were Maimonides Hospital (1926) and a chapter of Hadassah (1940). Early Jewish arrivals in this community came from Russia during the last two decades of the 19th cent.

MALONE had a Jewish community in 1942 of about forty-five. It supported Beth El Congregation.

MAMARONECK in 1942 had about 975 Jews, and maintained the Mamaroneck Hebrew Institute (Orthodox). The rabbi at that time was William Novick. Jews first settled in the community in 1890.

MASSENA had a Jewish population in 1942 of about 175. An Orthodox synagogue was founded about 1902 by a group of immigrants from Lithuania who arrived in the community between 1897 and 1900. B. Brenglass was rabbi in 1942.

MIDDLETOWN, with about 850 Jews in 1942, maintained the Synagogue and Community Center of the Middletown Hebrew Association, organized in 1916. This was a Conservative institution, of which Abraham Simon was rabbi in 1942. The center was a meeting place for Jews in the nearby communities of Goshen, Florida, Warwick, Howells, Circleville, Slate Hill and Chester.

MONTICELLO (separately treated).

MOUNT VERNON (separately treated).

OLEAN had about 250 Jews in 1942. It maintained B'nai Israel Congregation (Conservative), organized in 1882. Its rabbi in 1942 was Joseph Harold Freedman.

NEW ROCHELLE (separately treated).

NEWBURGH (separately treated).

PLATTSBURG had in 1942 a Jewish population of about 225. Its congregation, Beth Israel (Reform), was founded in 1861, and seven years later a B'nai B'rith lodge was organized. Associated with the synagogue was a school in which supplementary instruction was given to Jewish children in religion, history, Hebrew and German. The rabbi was the sole teacher. In order to provide better school accommodations, an annex was built in the rear of the synagogue in 1878. In 1882 the Reform Movement had made sufficient inroads to cause family pews and an organ to be installed. In 1913 Beth Israel joined the Union of American Hebrew Congregations as a Reform synagogue. Solomon Schoenkopf was rabbi in 1942.

POUGHKEEPSIE (separately treated).

ROCHESTER (separately treated).

SUFFERN, in 1942, maintained a Jewish community of about 385. Its members supported Sons of Israel Congregation (Conservative), of which Moses Rosenthal was rabbi. Jews first settled in Suffern in the 1880's and 1890's.

The congregations in SCHENECTADY, SPRING VALLEY, SYRACUSE, TROY, UTICA, WHITE PLAINS and YONKERS are treated in articles devoted to these communities.

TARRYTOWN had, in 1942, a Jewish population of about 750, which maintained the Hebrew Congregation of Tarrytown and North Tarrytown (Conservative). Jews first settled in this community about 1887, and a synagogue building was erected in 1904. Rabbi of Tarrytown congregation in 1942 was Jacob M. Cohen.

TUCKAHOE had about 750 Jews in 1942. Genesis Hebrew Center was founded in 1936; and Leo Shubow was rabbi in 1942. Jews first settled in Tuckahoe about 1905.

The following is a partial list of the Jews of New York state, exclusive of New York city, who have held public office:

MEMBERS OF CONGRESS: Lucius N. Littauer, of Gloversville (1897-1907); Meyer Jacobstein (1923-29).

MEMBERS OF THE STATE LEGISLATURE: Benjamin Isaacs, of White Plains (1788); Simon L. Adler, of Rochester (1910-26); Benjamin F. Feinberg (1936-). Simon L. Adler was United States district court judge (1927-34).

STATE OFFICIALS: Michael H. Hirschberg, of Newburgh, member of the state supreme court (1896-1917); Louis W. Marcus, of Buffalo, member of the state supreme court (1906-23); Simon W. Rosendale, of Albany, assistant district attorney of Albany County (1863), city recorder (1868-72), state attorney general (1892-94); Irving I. Goldsmith, of Saratoga Springs, member of the state supreme court (1927-30); Alfred L. Simon, district attorney of Saratoga county (1937-39); Samuel J. Harris, of Buffalo, member of the state supreme court (1934-); Abraham E. Gold, of Binghamton, member of the state supreme court (1939-); David Diamond, of Buffalo, member of the state supreme court (1941-).

LOCAL OFFICIALS: Michael Hays, of Pleasantville, assessor (1788); Simon Fleischman, of Buffalo, president of the city council (1896-1900); Morris Block, mayor of Kingston (1906-10; 1924-26); Leopold Minkin, municipal court judge of Albany (about 1924); Myer Einstein, mayor of Dunkirk (1907); Julius Frank, mayor of Ogdensburg (1915-18); Myer W. Weinstein, of Buffalo, collector of customs; Joseph Beir, of Rochester, alderman (1865); David Wile, of Kingston, city treasurer; David Heller, mayor of Elmira (1925); Julius Jacobson, president of the city council of Glens Falls; Monroe Steiner, mayor of Larchmont (1930); Joseph Fried, mayor of Lawrence; Paul Weiss, mayor of Dunkirk (1929); Abraham Adelberg, mayor of Cedarhurst (1928-33); Herman Baer, mayor of New Hyde Park (1931); Eugene H. Lehman, mayor of Tarrytown (1931-33); Carl S. Salman, mayor of Amsterdam (1924-29); H. S. Green, mayor of Tarrytown (1933); Isaac Adler, Rochester city council (1927-33), vice-mayor (1928-34), acting-mayor (1933); Nathan Leffler, mayor of Monticello (1936-37); Julius M. Goldstein, the first elected mayor of Oneida; Jacob A. Goldbach, mayor of Buchanan (1934); William Blumberg, mayor of Cedarhurst (1933); Samuel B. Dicker, city councilman of Rochester (1937), mayor (1938-).

On April 16, 1941, Governor Herbert H. Lehman signed the Mahoney Bill forbidding racial discrimination in defense industry. The Andrews bill, signed on April 30, 1941, made discrimination in such employment a misdemeanor punishable by fine or imprisonment.

The following Jewish periodicals were published in New York state in 1942, exclusive of those in New York city: *Buffalo Jewish Review,* a weekly (founded in 1917); *Jewish Ledger,* a weekly published in Albany (founded in 1932); *Jewish Ledger,* a weekly, published in Rochester (founded in 1934); *The Voice,* a weekly, published in Yonkers (founded in 1933).

Long Island includes the Borough (the County) of Queens of greater New York, and Nassau and Suffolk counties of the state of New York. The Borough of Brooklyn (Kings County) is also in Long Island, but because of its size and previous independence as a city, it is not included under Long Island, and is treated under its own caption.

Long Island is a unique area in that of its more than one hundred communities, incorporated as villages and unincorporated, more than one-half had organized Jewish communities in 1942, with eighty-five congregations of record that maintained synagogues housed in their own buildings.

Jewish history in Long Island dates back to the American Revolution. As early as 1745, Jews lived in the villages of New Utrecht, New Lots and Gravesend, which later became parts of Brooklyn. Whatever Jewish communal life there was in these villages, however, was destroyed during the Revolutionary War, and the Jews were scattered. As far east as Easthampton, on Long Island, a Jewish refugee named Sarah Isaacs married William Payne: their son, John Howard Payne, was the author of *Home, Sweet Home.*

But it was not until after the Civil War that Jews from Brooklyn and Manhattan began to venture into the rural sections of the Island and to establish permanent homes in the villages. They began as peddlers, and then settled as small storekeepers. After the 1880's, more prosperous Jewish residents of Brooklyn and Manhattan came to the Island resort villages, such as those on the Rockaway Peninsula, during the summer; and soon, young married couples, desiring to raise their children outside of the environs of the crowded city, became Long Island commuters.

Three factors contributed to the unique growth of the Long Island communities: the pressure of population in Manhattan and the Bronx, the constant growth of transportation facilities and the elimination of old sections of Manhattan which gave way to modern housing. Finally, the World's Fair of 1939 and 1940, which was simultaneous with the opening of the city-owned Independent Subway, gave a tremendous boost to the increase in Jewish population in the Forest Hills, Kew Gardens, and Flushing sections of Long Island, which are part of the Borough of Queens. Along Queens Boulevard, literally miles of apartment houses were erected, which resulted in a constant flow of Jewish residents from Manhattan, the Bronx, and Brooklyn into this section of Long Island. The fact that congregations offering religious education for children sprang up in so many of the Long Island villages also proved a magnet that drew Jewish residents to these localities. In numerous instances, these residents simultaneously belonged to congregations in the greater city by attachment and tradition, but also joined the membership of the local congregations on the Island.

The first congregation (Orthodox) on Long Island was founded in the village of Hammels in 1890. The first Reform congregation was founded in Far Rockaway in 1908. Philanthropically, the Long Island Jewish communities support the New York and Brooklyn Federation for the Support of Jewish Philanthropic Societies. For the overseas philanthropies, these communities make their contributions through the New York City United Jewish Appeal.

A brief account of the organized Long Island Jewish communities follows:

ARVERNE, in Queens County, had two Orthodox congregations in 1942: Derech Emunah (organized 1919) and Kneseth Israel (organized 1922). Derech Emunah, known also as the Jewish Community Center of Arverne, acquired a one-story brick building, dedicated in 1930, in which it maintained, besides the synagogue, a Hebrew school and a cultural center for young men and women. From 1931 on the rabbi was Sam Horowitz. Kneseth Israel moved into its one-story brick synagogue in 1931. From 1931 on the rabbi was Isaac Blau.

ASTORIA, in Queens County, with a population of 127,879 (census of 1940), including about 5,000 Jewish families, according to one estimate, or, according to another, about 15,000 Jews, had several Jewish congregations in 1942. Most of the Jews resident in Astoria moved there from 1923 on, when transportation facilities began to make the community accessible to New York.

For all of ten years, from 1894 on, a Minyan met for worship in the home of Davis Albert. In 1905 the first Jewish congregation, Mishkan Israel (Orthodox), was organized. A synagogue—a one-story wooden structure (afterwards remodeled)—was built the same year; a priest of the neighboring Roman Catholic church of Our Lady of Mt. Carmel (Father Walsh) contributed $250 to help pay the mortgage. Rabbi of Mishkan Israel from 1938 was Kalman Trivash.

In 1914 The First Hebrew School of Astoria was organized (incorporated 1917), and a building acquired in 1915. Henry H. Rubins served at the Hebrew School as the first rabbi of the Jews of Astoria (1922-23). In 1927 the school assumed the name of Congregation Beth El of Astoria (Orthodox). Its synagogue, a two-story brick building, was erected in 1936. Jonah E. Caplan was rabbi from 1935 on. In 1940 the Hebrew school was named after Gussie Leah Kluger. The Bertha Klein Memorial Library of Beth El was founded in 1936. Beth El laid out its own cemetery.

Congregation Beth Jacob (Orthodox), originally organized as Congregation Ahavas Torah (1924), dedicated its synagogue, a one-story brick building, in 1928. The first rabbi was Benjamin Ruditzky (1935-39); his successor was Morris H. Finer (1939-41); Alexander S. Gross was rabbi in 1942. Beth Jacob maintained a Talmud Torah and had its own cemetery.

The Astoria Center of Israel (Conservative) was organized in 1925 by former members of Mishkan Israel. In 1926 it moved into a two-story brick building, in which it established a Hebrew school and other communal organizations, besides the synagogue. The first rabbi was Joshua L. Goldberg, whose service began in 1926; in 1942 he was a chaplain in the United States Navy.

BALDWIN, an unincorporated village of Nassau county, had approximately 400 Jewish inhabitants in 1942. Although there was a slowly growing Jewish community before then, it was not until 1922 that the Jewish Sisterhood was organized. In 1929 the Baldwin Jewish Center was founded. A building for the Center was erected in 1940 to house religious and communal activities which included, in addition to Conservative religious services, a religious school and a Hebrew school, the women's auxiliary and the men's club. Student rabbis conducted high holy day services until 1940, when Simon Noveck was elected rabbi of the Center.

BAY SHORE, in Suffolk County, had (1942) about 125 Jewish families who were permanent residents; in and about the town there were some 200 Jewish families, or 600 persons. Most of them settled there after the first World War.

In 1897 the United Hebrew Benevolent Association of Bay Shore—the first Jewish organization in the community—purchased a plot of ground for a cemetery. There were about eight or ten Jewish families in 1902 in Bay Shore, most of

these originally immigrants from Russia. It was not until 1919 that the United Hebrew Congregation of Bay Shore was incorporated. The congregation purchased the old firehouse, which was remodeled into a synagogue.

The Jewish Center of Bay Shore (Conservative), organized in 1933 and serving the neighboring communities of Islip, Brightwaters, Islip Manor and Brentwood, was an outgrowth of the United Hebrew Congregation. The rabbi in 1942 was Isidore S. Meyer.

BAYSIDE, in Queens County, had an Orthodox congregation in 1942, the Bayside Jewish Center. Organized in 1924, the congregation built and dedicated a two-story brick synagogue the same year. From 1929 on the rabbi was Frank Zimmerman, a contributor to this Encyclopedia.

BELLE HARBOR, see ROCKAWAY PARK.

CEDARHURST, in Nassau County, an incorporated village on the Rockaway peninsula, included in 1942 about 1,350 Jews in its general population of 5,463 (census of 1940). Many of these Jews first came there in the 1890's as summer residents.

Temple Beth El (Conservative) was founded in 1923 by Leon Sanders, who had been a judge of the municipal court in New York city from 1903 to 1913. The synagogue was erected three years later and, in 1933, an addition was built to serve as a community center and religious school. The first rabbi was Nathan Blechman; he was succeeded by Moses Abels. Harry Jacobs was rabbi from 1931 to 1937, and his successor, Edward T. Sandrow, was serving as rabbi in 1942.

Abraham A. Adelberg was three times elected a mayor of Cedarhurst without opposition (1928-32), and William L. Blumberg succeeded him as mayor (1933-37).

CORONA, in Queens County, had about fifty Jewish families in 1903; in 1942 there were about 1,500. In 1903 Anshe Kesser Congregation (Orthodox) was organized. The congregation dissolved in 1935 when its synagogue was destroyed by fire. Later a number of its members joined the newly formed Jewish Community Center of Corona (Conservative). Tifereth Israel (Orthodox) was organized in 1906. The congregation acquired a three-story brick and stucco synagogue and also a cemetery tract. In 1913 the Orthodox Congregation Anshe Emeth (incorporated in 1922 as Machzika Talmud Torah Anshai Emeth of Corona) was organized, and opened a Hebrew school in 1914. In 1918 Anshe Emeth erected its own building. Members of these three Orthodox congregations united in the Jewish Council in 1928 to elect Abram M. Kagan as their rabbi; he was still serving in that capacity in 1942. In 1938 another Orthodox congregation, Ahavath Achim, was founded, and also came into the group headed by Rabbi Kagan.

The Northside Hebrew Congregation (Conservative) was organized in 1913, and dedicated its synagogue in 1923. The first rabbi was S. Longer, succeeded in 1939 by Zvi Anderman. The Jewish Center of Corona (Conservative) was organized in 1926. It merged in 1929 with the Young Men's and Young Women's Hebrew Association (which had been in existence from 1922) to form the Jewish Community Center of Corona. The Center building, erected in 1922, was rebuilt in 1938, housing, in addition to the synagogue, a Hebrew school and several Jewish social and educational groups. From 1939 on Alfred H. Kahn was rabbi.

A Jewish credit union was established in Corona in 1914. In 1931 a Hebrew free loan association was organized by a number of Jewish women. The Corona Lodge of Brith Abraham was organized in 1914.

EDGEMERE, In the Rockaways area in Queens, organized an Orthodox congregation, Shaare Zedek, in 1918. In that year a one-story brick synagogue was built; it was enlarged in 1939. A Talmud Torah, erected adjoining the synagogue, was used not only for prayer and study but as a community center, and was likewise enlarged in 1937. The first rabbi was Hyman Solomon, who served from 1918 to 1927; the rabbi in 1942 was Mordecai Schuchatowitz, whose service began in 1934.

FAR ROCKAWAY, in Queens, had, in 1942, an estimated 7,500 permanent Jewish residents in a total general population of 13,902 (census of 1940). Population figures were always considerably increased during the summer months by the annual influx of vacationists.

As far back as the early 1900's, services for the summer residents were organized and conducted in the Nebenzahl Building, over the department store of A. Louis Nebenzahl. Of this first summer organization Hezekiah Kohn, prominent in New York's religious and communal activities, and father of the poet Annette Kohn, was president. Then, in 1908, the Jews of Far Rockaway organized Temple Israel as a Reform congregation, destined to become the leading Reform congregation on Long Island. Three years later, in 1911, a frame house of worship was erected. Temple Israel called to its pulpit a succession of notable rabbis: the first was Israel Mattuck (1909-12), who in 1942 was spiritual head of the Liberal Jewish Synagog of London. There followed Ephraim Frisch (1912-15); David Fichman (1915-16); Isaac Landman (1917-28), editor of this Encyclopedia; and William B. Schwartz, who served in Far Rockaway from 1928 to 1930, when the congregation erected its beautiful synagogue in Nassau County.

In 1910 Jews of Far Rockaway who preferred to retain the Orthodox ritual withdrew from Temple Israel and formed Congregation Shaarei Tefila (Gates of Prayer). Among the original members was Frederick Wolkow, who began a long period of service as cantor in 1910, and was still serving in 1942. Shaarei Tefila built and dedicated its synagogue, a two-story brick structure, in 1915, and later erected a center building. Successive rabbis in its pulpit were Benjamin Lichter (1911-19), Raphael Melamed (1920-22), and Norman Salit (1923-28). Irving Miller, who started his service in 1929, was the incumbent in 1942.

In 1942 Far Rockaway supported two additional Orthodox congregations. Kneseth Israel, organized in 1924, had as its first rabbi Abraham Kahan, who served until 1930. He was succeeded by Selig Fortman, who was the incumbent in 1942. In 1930, when Temple Israel left Far Rockaway, Kneseth Israel purchased the original Temple Israel synagogue, and was worshipping there in 1942. On leaving Kneseth Israel, Rabbi Abraham Kahan organized Beth Midrash Horav congregation, and was still its rabbi in 1942.

A. L. Nebenzahl came to the United States in 1879, and sold dry goods over the whole of Long Island between 1879 and 1882. He opened a department store in Far Rockaway in 1882. He helped found and organize the first Temple in Far Rockaway, Temple Israel, which met in the Nebenzahl Building in its early years. Nebenzahl contributed generously to many charities in the Rockaways, and was the founder of St. Joseph's Hospital.

FLUSHING, in Queens, had in 1942 about 100,000 inhabitants, including, according to one estimate, about 7,000 Jews, or, according to another estimate, about 10,000. There were local merchants in Flushing, who were Jews, in the 1880's; most of the 1942 Jewish population, however, had moved there from other parts of New York city when the subway was built.

The first Jewish organization in Flushing, which appears to have been the first also in Long Island, was the Conservative Congregation Shaarei Tefilla (Temple Gates of Prayer), founded in 1896 (incorporated 1922). The initial meeting took place in the home of David Ellensohn. The first rabbi was Morris Lichtenstein. Jacob Grossman was rabbi from 1928 to 1933. Abraham A. Dubin served as rabbi from 1934 to August, 1942, when he became a chaplain in the United States Army; Rabbi Harry Katzen succeeded him. The synagogue, a two-story brick building, was erected in 1921. The Center building, next to the synagogue, was built in 1931. The congregation conducted a daily Hebrew school and owned three tracts of land for use as cemeteries.

The Free Synagogue (Reform) was organized in 1917. Its first building, later used as the community house, was purchased in 1921; its synagogue was erected in 1927. Bernard Cantor, the first rabbi of the congregation, was called to the pulpit in 1920; later that year, while overseas with a unit of the Joint Distribution Committee, he was murdered by bandits in the Ukraine. Max Meyer, elected in 1923, was rabbi in 1942. The congregation owned its own cemetery.

The Flushing Jewish Center (Orthodox), organized in 1937, was originally Temple Israel of Flushing, founded in 1932 and incorporated as Congregation Israel Community of Flushing in 1934. The first rabbi was Morris Wintner (1932-36); he was succeeded by I. Usher Kirshblum, who was serving in 1942.

FOREST HILLS, in Queens, experienced an unprecedentedly rapid growth of its Jewish community after the World's Fair (1939-40), due principally to the extension of the subway from New York city. Part of Forest Hills was constructed on land that belonged to a Jewish dairy farmer named Goldberg. Prior to 1926 there were temporary organizations of Jewish residents for services on the high holy days; in that year a permanent association was formed to conduct such services and to maintain a Hebrew school. Out of this association grew the Forest Hills Jewish Center, organized by Rabbi Solomon Landman and incorporated in 1931. The building occupied in 1942 by the Center was constructed and dedicated in 1939. The first rabbi was Solomon Landman (1931-35); Ben Zion Bokser (Conservative), whose service began in 1935, was rabbi in 1942.

The Jewish Center of Forest Hills West (Conservative) was organized in 1932. The building in use as a synagogue was first occupied by the Center in 1938. Isaac Toubin was the first rabbi (1938-42); he was succeeded by Maurice H. Schatz.

Rego Park Jewish Center was organized in 1939; in 1941 Rabbi Josiah Derby was called to serve the congregation. The Center was conducting its various activities, including a school, in temporary quarters in 1942, but had acquired property for a future permanent structure.

FREEPORT, in Nassau County, with a population of 20,410 (census of 1940), including about 1,500 Jewish residents, had, in 1942, a Conservative congregation, Bnai Israel. B. Leon Hurwitz was the rabbi.

GLEN COVE, in Nassau County, with a population of 12,415 (census of 1940), including about 300 Jewish residents, supported, in 1942, an Orthodox congregation, Tifereth Israel, organized in 1899.

GREAT NECK, just beyond the boundary line of New York city on the North Shore, in Nassau County, with a population of 6,167 (census of 1940), had about 1,800 Jews in 1942. The first Jews to settle in Great Neck were Abram Wolf and his family. Temple Beth-El (Reform) was founded in 1928. The synagogue was built in 1932. The first rabbi was David Goodis, who served until his death in 1930. His successor, Jacob P. Rudin, served until June, 1942, when he became a chaplain in the United States Navy. He was succeeded by Abram Granison. A conservative congregation, Temple Israel of Great Neck, was organized in 1941, with Asher Block as rabbi.

GREENPORT, a village on the North Shore of the eastern end of Long Island, in Suffolk County, counted in its population of 3,259 (census of 1940) only eighty-seven Jews, in 1942. Jews had settled in Greenport before 1890; they were merchants, for the most part. A street, Kaplan's Avenue, is named after Nathan Kaplan. Congregation Tifereth Israel Anshei Greenport (Orthodox) was organized in 1900 and incorporated in 1902. A synagogue was built in 1903. The first rabbi to serve the congregation was a Rabbi Birkowitz (1903). William A. Buchheim, whose service began in 1940, was rabbi in 1942.

HAMMELS, *see* ROCKAWAY BEACH.

HEMPSTEAD, in Nassau County, with a population of 20,856 (census of 1940), had almost 1,200 Jews in 1942. In 1900 there were comparatively few Jews, mainly engaged as merchants. They included Barnett Salke, who had lived there since the Civil War. Dr. Adolph Rosenthal, in 1901, tried to form a religious organization, but it was not until 1908 that the first Minyan assembled in Hempstead. The Hempstead Hebrew Congregation—the first on record in Nassau County—was incorporated in 1914. Its synagogue, Temple Beth Israel (Conservative), was completed in 1922. The rabbi in 1942 was Harry E. Schwartz, whose service began in 1933.

HILLSIDE-HOLLIS, a residential community east of Jamaica, in Queens, included about 400 Jewish families in 1942. Although Jews were residents of the district for many years, it was not until 1925 that the first high holy day services were held; they were conducted in a tent. In 1927 the Hillside-Hollis Hebrew Center (Conservative) was organized, and in that year a synagogue was erected. Maurice A. Lazowick was engaged as rabbi. Subsequently the general financial depression curtailed the congregation's activities, until in 1936, Harold M. Kamsler was elected rabbi; he was still serving in 1942. The congregation acquired its own burial ground.

JACKSON HEIGHTS, a community of Queens, had a population estimated at 178,550 (Queens Borough Chamber of Commerce, 1939), including about 5,000 Jewish families. The first Jews settled in Newtown—the original name of the place—shortly after the Civil War. They were, for the most part, German immigrants from Frankfort and Hamburg, peddlers, who later opened small stores. Of these, Samuel Worms became excise commissioner of the town of Newtown (1892-94); Emanuel Brandon (1851-38), a native of Hamburg who settled in Newtown in 1880 and established a cigar factory, was elected a justice of the peace in 1883 and reelected four years later. During his second term he was also for two years a member of the Court of County Sessions. In 1893 he was elected coroner, and served for three years. Later he was cashier of the Queens highway bureau (1908-10), superintendent of public buildings, and then superintendent of highways (1910-11).

Philip Frank, a member of one of the first Jewish families to settle in Newtown, was secretary to the board of highway commissioners (1893-98), clerk to the supervisor (1897), assistant corporation counsel (1904-6), and tax transfer appraiser (1907). He was also a delegate to the New York State Constitutional Convention in 1915, and secretary to the committee for the erection of Carnegie libraries in the Borough of Queens.

With the extension of transit facilities from New York city, many Jewish families moved to Jackson Heights. Services for the high holy days were first held in 1919 by a group that incorporated the Queens Independent Society a year later, which, among its other purposes, made provision for instruction in Hebrew and Judaism. In 1921 a Hebrew school was founded, and in 1926 a two-story brick building for a synagogue and school was erected. The name was then changed to the Jewish Center of Jackson Heights and the services became Conservative instead of Orthodox. However, the traditional service continued to be conducted daily for the Orthodox. The Center maintained a Hebrew elementary school and a high school as well as classes for adults. Its rabbis were Tzvi Glickman (1924-25) and Peretz Halpern (1934-37). Ralph Simon, elected in 1937, was serving in 1942.

Congregation Tifereth Israel (Orthodox) was organized in 1928, and dedicated its synagogue, a two-story brick building, in 1931. It acquired a burial ground. The first rabbi was Carl M. Stave (1928-29). In 1932 Samuel Berliant was elected rabbi, and was still serving in 1942.

JAMAICA, part of the borough of Queens (from 1898 on), had a Jewish population in 1942 of about 15,000. Among the first Jewish residents were the Exiner and Miller families, immigrants from Germany, who lived there in 1868. In 1891 Samuel and Hyman Greenbaum settled in Jamaica. Before long, a Minyan met for services in the home of Emil Spitzer, who, with the Greenbaums and others, organized Ahavas Israel Congregation (Orthodox), of which Samuel Greenbaum was the first president. The synagogue on Washington Street was completed in 1905. From 1939 on Ahavas Israel had Raphael Weiss as its rabbi.

In 1909 another Orthodox congregation, Linas Hatzedek, was formed, and its synagogue was built in 1933. In 1909, also, the Orthodox congregation, Bnai Israel (Union Hall Street Synagogue), was organized; it built and dedicated its synagogue in the same year. The first rabbi was David Julius, who served from 1928 to 1933; Lazer Carp, his successor, was serving in 1942. Talmud Torah Mishkan Israel (Rockaway Road Talmud Torah) was founded in 1914. Its building was erected in 1921, housing as well the Yeshiva of Central Queens.

At the suggestion of Rabbi Isaac Landman of Far Rockaway, to whose religious school residents of Jamaica who were dissatisfied with existing congregations were sending their children for instruction, a Reform congregation named Temple Israel (after the Rockaway synagogue) was organized by these parents, in 1918. The congregation met for some time in the parish house of the Grace Episcopal church. In 1921 the synagogue was completed. The first rabbi was Abraham Lipkind (1918-20); Aaron L. Weinstein, whose service began in 1924, was the incumbent in 1942.

The Jamaica Jewish Center (Conservative) was founded in 1922. In 1924 a one-story structure was erected for the Center, and, in 1929, its more extensive building. The first rabbi was Nathan Lublin. He was succeeded by William S. Malev, who was still serving in 1942.

Young Israel of Jamaica was founded in 1925 at the synagogue of Congregation Ahavas Israel to promote Orthodox Judaism among young men and women. In 1936 the society was reorganized as the Young Men's and Young Women's Hebrew Association of Jamaica. Other local organizations in 1942 were the Jamaica Zionist District, a chapter of the Hadassah, and a post of the Jewish War Veterans.

Benjamin Marvin, onetime owner of the Long Island *Daily Press,* was commissioner of public works in Queens county (1922-24), municipal court judge (1924-25), and city magistrate (1928-38). In 1942 the *Daily Press* was owned and published by Samuel I. Newhouse.

Kew Gardens, a residential district in the Borough of Queens, had approximately 500 Jewish families in 1942. In 1938 there were about a hundred Jewish families, and a score of years before that perhaps no more than two or three. Kew Gardens Jewish Center (Conservative) was organized in 1929. In 1935 the congregation moved into its two-story wood and stucco building. Samuel Umen, the first rabbi, was still serving in 1942.

Temple Isaiah (Reform) was organized by Rabbi Solomon Landman in 1935. In 1939 its synagogue—a three-story stucco and tile building—was acquired, and the temple auditorium was added to it in 1942. The first rabbi, Solomon Landman, elected in 1935, was the religious leader in 1942. In that year Felix Aber was rabbi of Adath Jeshurun (the Kew Gardens Synagogue), an Orthodox congregation organized in 1939. Adath Jeshurun was, in 1942, conducting a Hebrew school and religious services in temporary quarters, but had acquired land upon which to build.

The local organizations of the B'nai B'rith, Hadassah and the National Council of Jewish Women all drew their membership from Forest Hills as well as from Kew Gardens.

Seymour Halpern of Kew Gardens was elected to the state senate in 1940.

Laurelton, in Queens County, with about 20,000 families, included in 1942 an estimated 1,500 Jewish families. There were fewer than fifty Jewish families in 1928, but in the next decade the Jewish community had grown to about a thousand families. Laurelton Jewish Center, Conservative, but conducting services also for the Orthodox, was organized in 1928. The first story of its two-story brick synagogue was completed and dedicated in 1928, the second story in 1934. The Center developed a Hebrew school and a Hebrew high school. The first rabbi, A. Herbert Fedder, elected in 1928, was still serving in 1942. The Zionist district of Laurelton, organized in 1932, drew in every member of the Center. A local post of the Jewish War Veterans was organized in 1934.

Lawrence, in Nassau County, with a population of 3,649 (census of 1940), had about 1,000 Jewish residents in 1942. The Reform congregation, Temple Israel, originally founded in Far Rockaway in 1908, where it had its own building, moved to Lawrence in 1930. For several years previously the congregation conducted its religious school and social activities in its own building in Lawrence. In 1930, on a spacious adjoining lot, it erected an unusual congregational edifice. The architect, S. Brian Baylinson, succeeded in adapting the colonial architecture of the suburban village type to the synagogue structure, which, from the air, represents the Mogen David. Rabbi William B. Schwartz, who had served Temple Israel in Far Rockaway from 1928, was serving the congregation in 1942. This congregation draws its membership from Far Rockaway and the five adjoining towns in Nassau County, known as the Five Villages of the Rockaways.

The Orthodox Congregation Beth Sholom had as its rabbi in 1942 Moses Lehrman.

Joseph Fried, for many years president of Temple Israel, was mayor of Lawrence, serving two and one-half terms (1923-28). James Loucheim (d. 1938) was, for a period of more than twenty-five years, town clerk of Lawrence.

Lindenhurst, in Suffolk County, included approximately 150 Jews in its general population of 4,756 (census of 1940). In 1942 the community supported the Orthodox Lindenhurst Hebrew Congregation, organized in 1912; Louis Goldberg was the rabbi.

Long Beach, a city in Nassau County, with a population of 9,036 (census of 1940), had about 1,200 Jewish residents in 1942. Congregation Temple Israel (Conservative) was organized in 1920, and the synagogue was dedicated in 1924. The first rabbi was Morris M. Goldberg, who served from 1925 to 1935; his successor, David I. Golovensky, was still serving in that capacity in 1942. A Talmud Torah was built by the congregation in 1930. In 1928 Congregation Beth-El (Conservative) was organized. Alexander Burnstein was the rabbi from 1932 to 1938, and from 1940 on Louis Simsovitz served. The Jewish institutions of Long Beach served the residents of nearby Atlantic Beach, which was without a Jewish community center in 1942.

Frank Frankel was elected mayor of Long Beach in 1929, Charles Gold in 1933, and Louis F. Edwards in 1937. Edwards was assassinated by a former city employee in 1939, and Theodore Ornstein, who had been park commissioner in 1929 and a member of the city council from 1934 on, was appointed by Governor Herbert H. Lehman mayor until 1941, to fill the vacancy; in 1941 he was elected mayor.

Long Island City, onetime county seat of Queens County but from 1898 on part of the Borough of Queens, supported, in 1942, Congregation Bnai Israel, organized in 1904. The services, both Conservative and Orthodox, were conducted in a one-story brick synagogue, dedicated in 1924. The first rabbi was Jacob Basoff, who served from 1904 to 1910.

Lynbrook, a village in Nassau County, with a population of 14,557 (census of 1940), including about 1,500 Jews, had for the first two decades of the 20th cent. comparatively few Jewish residents. Among the first to settle there were Morris Brown, Abe Goldberg, Isaac Jacobson and Max Levy. They came from New York city between 1895 and 1900, and opened stores in the village.

The first Jewish organization in Lynbrook was the Hebrew Educational Alliance, founded in 1918. Adolph J. Lasker was rabbi of Temple Emanu-El (Reform) from 1929 until his death in 1933. He was succeeded by Harold I. Saperstein. Congregation Beth David (Conservative) was organized in 1921. Rabbi Emanuel Rackman, elected in 1936, was serving in 1942. Other rabbis were Nathan Colish (1929), Alter Abelson (1929-32), and Ario S. Hyams (1932-34). Lynbrook organized a Zionist district and a branch of Hadassah.

Maspeth, in the Borough of Queens, had, in 1942, an Orthodox congregation, the Maspeth Jewish Center, organized in 1925 by the consolidation of Congregation Ohavei Shalom Anshei Maspeth (founded 1904) and the Maspeth Talmud Torah (founded 1921). From its inception the center occupied a two-story brick synagogue. Nathan Leiter was elected rabbi in 1939.

Merrick, in Nassau County, had a population in 1942 of about 5,000, including close to 150 Jewish families. In 1929 twelve families organized the Merrick Jewish Centre, and eleven years later A. Elihu Michelson became the first full-time rabbi. In 1941 he was succeeded by Rabbi Morris B. Chapman. The Centre membership in 1942 comprised 110 Jewish families, derived mainly from Merrick and neighboring communities where there were no organized Jewish activities.

Middle Village, in the Borough of Queens, had two Orthodox organizations in 1942. Congregation Sons of Israel was organized in 1909 and moved into a three-story build-

ing. Emanuel Marcus was rabbi from 1933 on. The Sons of Israel Hebrew Institute was formed in 1923 by the congregation. In 1934, under the leadership of Rabbi Marcus, the community organized Young Israel of Middle Village. Another Orthodox congregation, Ahabath Achim, was organized in 1920 (incorporated as Chevra Avath Achim of Middle Village). In 1924 its three-story brick synagogue was built. From 1928 the rabbi was Yitzchok Shevelovitch.

MINEOLA, a village of Nassau County and the county seat, with a population of 10,064 (census of 1940), had about 500 Jews in 1942. Among the early Jewish residents were Adolph Flesch, Harry Greenstein, Joseph Katz, Hyman Reiss, Joseph Saul and Harry Siegel. The first organization of the Jewish community (encompassing Williston Park and East Williston) was the Nassau Hebrew Association, a fraternal society incorporated in 1925. The association acquired a cemetery tract. From about 1930 on an association of the Jewish women of Mineola conducted a Hebrew school. A Conservative congregation, Beth Sholom (the Mineola Hebrew Congregation), was organized about 1933; Bernard Cohen was the first rabbi (1933-35). Moritz Speier became rabbi in 1936, and was serving in 1942. The congregation supported a Hebrew school. The South Shore chapter of Hadassah and the South Shore section of the National Council of Jewish Women were established in Mineola.

NEPONSIT, *see* ROCKAWAY PARK.

NEW HYDE PARK, a village in Nassau County with a population of 4,691 (census of 1940), had about 250 Jews in 1942. In 1942 Julian Shapo was rabbi of the congregation, the Jewish Center. The synagogue was desecrated three times during 1941 by anti-Semites, on one occasion with a swastika. Chaplain of the Central Islip State Hospital for the insane in New Hyde Park in 1942 was Joshua Bloch, appointed in 1922.

OZONE PARK, in the Borough of Queens, had two congregations in 1942: the Conservative congregation Sons of Jacob (organized 1920), and the Orthodox Jewish Community of Ozone Park (organized 1932). The latter built a three-story frame structure to house its synagogue. Alter Abelson was the first rabbi, and served from 1932 to 1936. Israel Levine was rabbi from 1938 on. Leon Spitz served as rabbi of Sons of Jacob (1935-40). Samuel Langer was rabbi in 1942.

PATCHOGUE, in Suffolk County, numbered among its 7,181 inhabitants (census of 1940) about 700 Jewish residents in 1942. It then had the Patchogue Hebrew Congregation (Orthodox), organized in 1903. In both World Wars the Patchogue Jewish community was in close touch with Camp Upton at Yaphank, and served the Jewish men in that army reception center.

QUEENS VILLAGE, in the Borough of Queens, had a Conservative congregation in 1942, the Queens Jewish Center (organized 1925). In 1929 a brick synagogue was built. Bernard Segal was rabbi from 1931 to 1940, when he was appointed a chaplain in the United States Army. In 1942 Baruch Silverstein was rabbi.

RICHMOND HILL, in the Borough of Queens, supported two Orthodox congregations in 1942: Beth Israel, organized in 1909, and the Jewish Center of Richmond Hill, organized in 1920 as Congregation Beth Elohim. Religious services in Richmond Hill, however, had been held before 1909, at first in the home of Mrs. Rosa Gold in 1899, and from then on in the home of Simon Erger.

In 1915 the first synagogue of Congregation Beth Israel was dedicated, and in 1927 a synagogue and community center was erected. Alfred H. Kahn (1917-19) was the first resident rabbi. Arthur H. Neulander became the rabbi in 1929, and in 1942 was still serving. The first rabbi of the Jewish Center of Richmond Hill was Joseph Berg, who served from 1920 to 1924; Mordecai A. Stern began his service as rabbi in 1927.

RIDGEWOOD, in the Borough of Queens, included in its 90,000 residents about 2,000 Jews in 1942. A number of Jewish families, all merchants, were settled in Ridgewood before 1910. The Jewish congregation in Ridgewood, Agudas Israel (Orthodox), was organized in 1912. Meeting at first in a vacant store, the congregation erected a three-story brick building in 1925. Agudas Israel developed a Talmud Torah and study circles for adults. It also acquired a cemetery tract. Hyman E. Scheinfeld was rabbi from 1927 on.

RIVERHEAD, the county seat of Suffolk County at the eastern end of Long Island, with a population of 8,922 (census of 1940), numbered among its inhabitants about 250 Jews. In the early 1880's a few Jews settled there. By 1910 about twelve Jewish families were living in Riverhead. A small synagogue was built in 1924, and was still being used in 1942. Several Jewish families from the neighboring villages of East Quogue and Eastport were associated with the Riverhead community.

ROCKAWAY BEACH, in Queens, in which Hammels is included, had Jewish residents as merchants and hotel-keepers —chiefly at Hammels—in the 1890's. Here the first Jewish congregation in the Rockaways, Temple of Israel (Orthodox), was organized in 1900. In 1918 the congregation built a two-story brick synagogue. Benjamin H. Tumin was rabbi from 1925 to 1940, succeeded by Alter Abelson.

ROCKAWAY PARK, BELLE HARBOR, and NEPONSIT, constituting the western part of the Rockaway peninsula, in Queens, formed a single community. The resident Jewish population, several times multiplied in the summer season, was about 6,000 in 1942. Jews began to reside here in number about 1915. Many of them were originally immigrants from Hungary, and among their names are those of Kline, Messinger, Rauch, Sommers and Weinstock.

An Orthodox congregation, Ohab Zedek, was organized in 1920, and erected a two-story brick synagogue in 1929. The first rabbi was Arnold Kajan; in 1936 he was succeeded by Alexander Budin.

The Conservative Temple Beth-El of Rockaway Park (Rockaway Park Hebrew Congregation) was founded in 1921. Its two-story brick synagogue was built in 1921; it also developed a community house, a kindergarten, a Hebrew school and a Hebrew high school. From 1926 to 1930 David A. Goldstein was rabbi. Robert Gordis, whose service began in 1931, was rabbi in 1942. Gordis became, in 1941, associate professor of Biblical exegesis at the Jewish Theological Seminary of America. An associate editor of the department of Bible of this Encyclopedia, he wrote, among other books, *The Jew Faces a New World* (1941).

West End Temple (Reform), of Belle Harbor, was organized in 1938. Emanuel Schenk, the first rabbi, became a chaplain in the United States Army in 1941. Samuel Perlman was his successor.

A number of the national Jewish organizations established local chapters in Rockaway Park, including the Zionist Organization of America, Hadassah, and the National Council of Jewish Women.

ROCKVILLE CENTER, a village in Nassau County, with a population of 18,613 (census of 1940), had about 1,600 Jews in 1942. Temple B'nai Sholom (Nassau Hebrew Congregation), originally Orthodox and then Conservative, was organized in 1903 and reorganized in 1913. Moritz Speier was rabbi for fifteen years (1922-37), and was followed by Peretz Halpern. The Central Synagogue of Nassau County (Reform) was organized in 1936; from then on Roland B. Gittelsohn, author of *Modern Jewish Problems* (1941), served as rabbi. In addition to the residents of Rockville Center, the congregation drew on neighboring villages, including Baldwin and Babylon.

The Unity Club of Nassau County was founded in Rockville Center in 1933 as an organization of Orthodox, Conservative and Reform Jews, as well as of Jews unaffiliated with any synagogue, for social, civic, cultural and philanthropic purposes. In 1941 the club had about 275 members, residing in Nassau County; the place of meeting was Lynbrook.

ST. ALBANS, in Queens, with a total population of about 35,000, including an estimated 2,800 Jews, had in 1942 a single congregation, Beth Israel Center of St. Albans, which was predominantly Conservative. In 1920 this community had only about fifteen Jewish families. Congregation Beth Israel of St. Albans (Orthodox) was organized in 1925. In 1931 the St. Albans Jewish Center was formed, but Orthodox and Conservative members withdrew, and reorganized Congregation Beth Israel as Conservative. Aaron H. Blum-

enthal served as rabbi from 1932 to 1936. In that year the congregation finally merged with the Jewish Center to form the Beth Israel Center of St. Albans. Eugene V. Kohn became rabbi in 1936. Maurice H. Schatz served from 1937 to 1941, when he was succeeded by Sidney Strumpf. The synagogue of Beth Israel Center was remodeled in 1942.

SUNNYSIDE (Long Island City), in the Borough of Queens, included among its 14,000 inhabitants about 4,000 Jews in 1942. The first Jewish congregation was formed in 1925 by the parents of children in a Sunday school class which met at the home of one of the residents, was organized in 1927 as the Sunnyside Jewish Center, Conservative, but conducting daily services for the Orthodox. A two-story brick building was erected in 1939. The first rabbi was Leo M. Reichel; Lavy Becker served from 1930 to 1935. Samson A. Shain was rabbi from 1935 to July, 1942, when he became a chaplain in the United States Army. Gershon J. Feigon was elected his successor. The Center established a daily Hebrew school.

An Orthodox congregation, Young Israel, was organized in 1937, with Meyer Leiter as rabbi (1938-40).

VALLEY STREAM, a village of Nassau County, had 200 Jewish families in 1942, in its total population of 16,679 (census of 1940). The Conservative Congregation Gates of Zion, part of the Valley Stream Jewish Center, built a synagogue in 1939. Rabbis who served the congregation were Nathan Rosen, Judah Seidler, and Meyer Machlis, who was the incumbent in 1942.

WOODHAVEN, in Queens, had, in 1942, an Orthodox congregation, Bnai Israel, organized in 1925. The synagogue, a one-story building, was erected in the same year.

WOODMERE, in Nassau County, organized a Conservative congregation, Sons of Israel, in 1929. Services were held in the firehouse of Woodmere at first, but in 1934 the synagogue of the congregation was completed and, in 1941, a school and communal center were opened. David Rubin became rabbi in 1931, and served until 1942, when he became a chaplain in the United States Army.

The first Jew to settle in Woodmere was Morris Milk. He was originally from Lithuania, but came to Long Island from Kansas in 1897. Another early resident was Louis Spitzer, whose son, Harold M. Spitzer, became assistant district attorney of Nassau County in 1935.

WOODSIDE, in the Borough of Queens, organized an Orthodox congregation, the Woodside Jewish Center, in 1925 (originally incorporated in 1923 as Woodside Congregation B'nai Yohuda). The congregation built a one-story brick synagogue in 1925. The first rabbi was Meyer Schroeder (1928-31). William Spigelman became rabbi in 1939.

Other organized Jewish communities on Long Island in 1942 were located in Babylon, Garden City, Oyster Bay, Port Jefferson and Port Washington.

CHARLES REZNIKOFF, SHERRY ABEL and EDWARD N. SAVETH.

NEW ZEALAND, a British dominion consisting of two large and numerous small islands, southeast of Australia, with about 4,000 Jews in a total population of 1,640,000 (1939). A few Jews settled on the Northern Island even prior to the establishment of British sovereignty in 1840. Among them were John Israel Montefiore, a cousin of Sir Moses Montefiore, who settled at the Bay of Islands in 1831; Joel Samuel Polack, one of the earliest writers on the country, in which he traveled from 1831 to 1837; and David Nathan, who laid the foundations of the Jewish community in Auckland in the early 1840's and who established there a flourishing firm engaged in trade with the South Sea Islands and Japan.

The number of Jewish settlers, however, remained very small (sixty-five in 1851) until, after the discovery of gold in the Otago district (1861), Jews were drawn to New Zealand in considerable numbers (1,247 in 1867). In 1891 the New Zealand parliament protested against the persecutions of the Jews in Russia in a memorial sent to Czar Alexander III (1891), but at the same time the colonists sharply opposed a proposed settlement of 500 Russian refugees in New Zealand until the plan was dismissed as a rumor by the chief rabbi of Great Britain, Hermann Adler. After the Nazis' advent to power in Germany in 1933, only about 1,200 German Jewish refugees, mainly manufacturers with capital and skilled workers, were admitted to the country which, according to the statement of a New Zealand statesman, could absorb five million immigrants.

Auckland, on the Northern Island, had the largest Jewish community (1,400 in 1939). Its congregation, founded in 1859, had a synagogue. The Wellington community was founded by Abraham Hort in 1843, when the first Jewish service was held; its synagogue, founded in 1870, was rebuilt in 1929. On the Southern Island there were the communities of Christchurch and Dunedin, the latter with the southernmost synagogue in the world (founded in 1862). No congregations were in existence in Nelson, Hokitita, and Timoru, also in the south, after the gold rush was over.

Over 90 per cent of the Jews in 1942 were living in the large cities; 35 per cent were engaged in commerce; the percentages for industry, the professions and agriculture were 23, 9 and 2, respectively. There was little or no anti-Semitism in New Zealand. For the most part prosperous, the Jews established Zionist, literary and sport clubs in all communities. There was, for a number of years, a Jewish periodical, *The Jewish Times,* published in Wellington.

Although small in number, the New Zealand Jews always played an important role in the country's political and cultural life. New Zealand Jews took part in the Boer War (1899-1902) and in the two World Wars. An outstanding figure in New Zealand politics was Sir Julius Vogel (1835-99), who emigrated to New Zealand in 1852; he served as prime minister from 1873 to 1876, and from 1876 to 1881 was agent general in London for New Zealand. Vogel organized immigration and public works, introduced postal service with San Francisco, founded the defense system of the colony, and was the originator of the government life insurance and of the Public Trust Office. He also introduced cable service between New Zealand and Australia, and founded the first daily in New Zealand, the Otago *Daily Times,* of which he was editor.

Sir Arthur Mielziner Myers (1867-1927) was mayor of Auckland (1905-8), member of the New Zealand Parliament for Auckland City East (1910-21), and held the portfolios of customs, pensions and munitions during the first World War. It is noteworthy that the first and second mayors of Auckland were Jews, A. P. Philipp and Henry Isaacs. Sir Michael Myers (b. 1873) was chief justice of New Zealand from 1929. Sir Ernest Davis (b. 1872) was made mayor of Auckland in 1935, and was still serving in this capacity in 1942. Charles Louisson was mayor of Christchurch for four terms. Several Jews were members of the Legislative Council, among them Mark Cohen, editor of the Dunedin *Star* and president of the Society of Journalists of New Zealand. Phineas Selig was editor of *The New Zealand Referee.* ALFRED WERNER.

Lit.: Wischnitzer, Mark, *Der Juden in der Welt* (1935); *Jewish Yearbook* (1940). Frydman, S., "Jews in New Zealand," *Di Yiddishe Ekonomik* (1939) Jan.-March, pp. 84-86; The Chief Rabbi (Dr. J. H. Hertz), *The first pastoral tour to the Jewish communities of the British Overseas Dominions* (1924).

Abraham Newman, a Newark pioneer

Temple B'nai Abraham of Newark

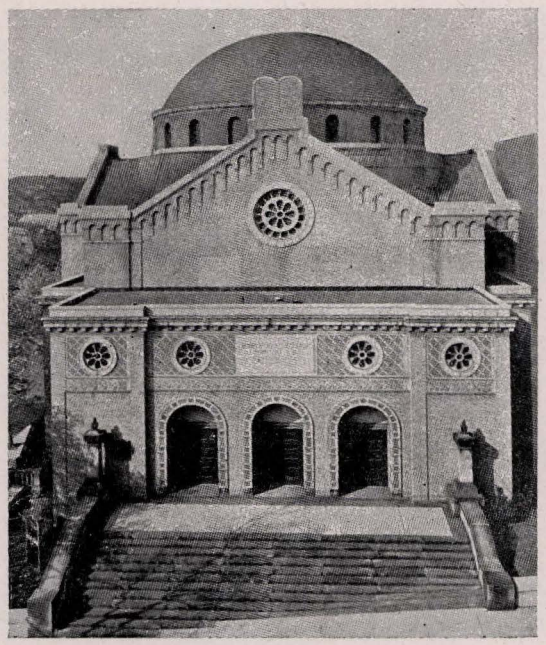
NEWARK, the largest city in the state of New Jersey, having a population of 429,760 (census of 1940), including a Jewish population of approximately 70,000 (1937). In 1942 the Jewish population was about the same, including both urban and suburban sections. By the beginning of the 20th cent., in a total Jewish population of about 20,000, at least one-half were Russian immigrants. In 1942 about three-quarters of the Jewish community were of Eastern European origin. From 1930 on a marked trend among Jewish residents to the suburban areas acted as a brake on normal increase of the city's Jewish population.

There appears to be no record of the very first Jewish residents of Newark. Louis Trier, a tanner who settled in the city in 1844, was, for long, reputed to have been the first permanent resident. From later research, however, it appeared that there were a few Jewish families resident in Newark prior to 1844. In the late 1840's a small group, predominantly German, but including a few impoverished Polish families also seeking a foothold in the new land, emerged. With the suppression of the European uprising of 1848 and the collapse of the liberal movement on which the hopes of the Western European masses were pinned, German immigration into the United States increased, and the Jewish community in Newark slowly expanded.

Louis Trier's name, together with that of Aaron Trier, a peddler, and the peddlers Emanuel and Isaac Newman, appears in the city directory of 1846-47. Abraham Newman was then already a well-to-do and active member of the small Jewish group, but his name went unlisted. Succeeding issues of the directory listed the names of further Jews settling down in the slowly growing city to make their livelihood as tanners, curriers, tailors, and for the most part as shopkeepers. These lists included the names of Solomon Newman, Isaac Cohen, David Marx, Henry Rothschild, Jacob Eichterstreimer, Joseph Levy, Ludwig Adler, Jacob Rothschild, Ignatz Kauffman, Bernard Lowy, Leopold Bornstein, Moses Bornstein, Julius Adler, Hymen Goldschmidt, Liebmann Cohen, Ignatz Frohlich, Isador Lehman, Seligman Heilbron, and Abraham Lauber. The directory of 1853-54 listed Hester Goldstein as a dressmaker: she was the first Jewish woman, and perhaps the first woman, to go into business in Newark. That year the lists included Jacob Lagowitz, who as a trunk manufacturer was soon to become Newark's first Jew of great wealth. Thus by 1855 the community comprised about 200 families. Subsequent directories listed the names of Hart and Dettelbach, pioneers in the drygoods business which was the first forerunner of the modern department store; Sampson Heller, Hirsch Wiener, whose son William Wiener was later to become the weatherman of the city of Newark; Leopold Lehman, a drover; and Bernhard Hauser, who several years later was to be elected commissioner of appeals in the Sixth Ward.

Other early families were those of Solomon Newman (brother of Isaac and Abraham Newman), Wolf Bergstrasser, Louis Adler, Seligman Bondy, Mendel Samuel, Henry Weill, Samuel Freudenthal, Moses Gans, Herschman Goldsmith, Adolph Samuel, Moses Richeimer, Moses Schlosser, Jacob Eckstein, Leopold Weiss, Simon Heller, and Gustav Kussy.

Many of these immigrants had begun life in the new world by peddling inexpensive household wares. Eventually, frugal and energetic, they were able to establish themselves in business. Thus before 1860 the leading drygoods stores of the city were owned by Jewish immigrants. In the employ of Ullman and Isaacs, drygoods merchants, was the clerk Benjamin Altman, later owner of B. Altman and Company of New York city. Lagowitz and Company, which also included Arnold Tanzer, became one of the largest in the east, and was recorded in 1878 as one of the largest in the world. Another one of the country's trunk manufacturing firms was Edward Simon and Co., founded by Edward Simon in 1863. Later William and Samuel Simon and Morris Schwerin joined Simon. Abraham Rothschild (d. 1921) built up one of the country's great leather factories, and was prominent in the civic and cultural life of Newark. R. G. Salomon, a German immigrant tanner whose name appears in the directory of 1861-62, also became a leading manufacturer of leather, a pioneer in new developments in that industry, and head of the Hamburg Cordovan Leather Manufacturing Co. The first Jewish broker of Newark was Nathaniel King; his firm, Eisele and King, eventually became outstanding in its field. Leopold S. Plaut (b. 1849; d. 1885) formed a partnership with Leopold Fox in Newark in 1871 and established the retail fancy goods store of L. S. Plaut and Co., which from a store with two clerks, grew to be "The Bee Hive," famed throughout Essex County and eventually bought by S. S. Kresge as the first of his chain stores. Isaac Schwartz, a leader in communal activities, organized a Hebrew free school in the 1880's, which gave free instruction to a large number of pupils, largely children of Russian immigrants. Subsequently the Plaut family erected a structure for the school (1889), and the name of the latter was changed to Plaut Memorial School. Other manufacturers who became prominent early in Newark were Moses Straus and Sons and Weingarten Brothers; the latter owned one of the country's largest corset factories.

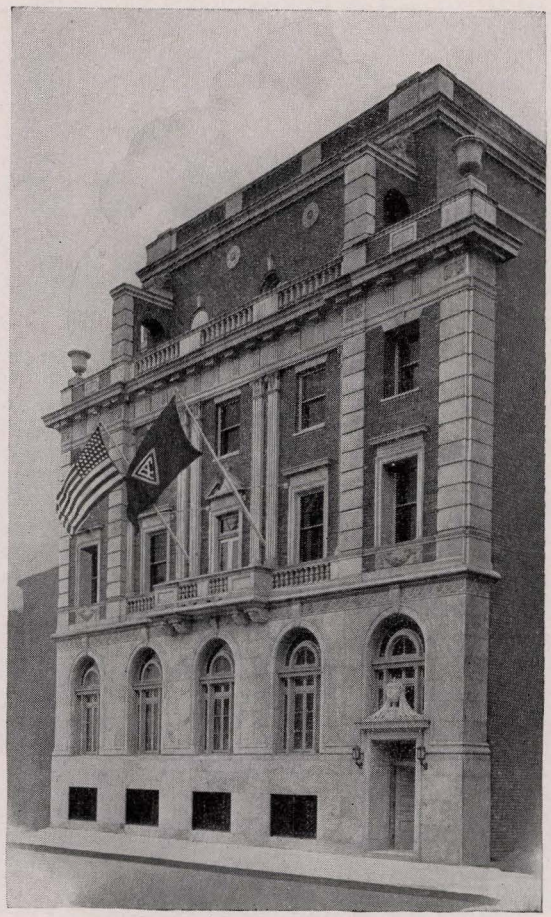


Temple B'nai Jeshurun, Newark

Synagogue of Oheb Shalom Congregation, Newark

Meanwhile matters other than business were occupying the attention of the Jewish community. In 1847 Isaac S. Cohen arrived in Newark, and shortly thereafter invited coreligionists to participate in religious services at his home. On October 6, 1848, the group filed a certificate of incorporation, and thus founded Congregation B'nai Jeshurun, the first Jewish congregation to be organized in the city of Newark, and the first in the state of New Jersey. In 1858 the congregation dedicated its first synagogue on a lot which it had acquired on Washington Street. Two years later, however, factional disputes, and rebellion against an incipient sentiment for reform in the ritual, led to the resignation of some of the members, including Bernhard Hauser, a former president; these members then proceeded to organize a new congregation, Oheb Shalom, which was incorporated in 1860. Isaac Schwarz, who had been leader of B'nai Jeshurun from 1854 to 1860, then became spiritual head of Oheb Shalom. In 1911 Woodrow Wilson, then governor of New Jersey, delivered the principal address at the dedication of Oheb Shalom's third synagogue, on High Street. During his stay, Wilson was entertained in the home of Meyer Kussy.

These congregations were largely made up of the German and Bohemian peddlers and business men, who, speaking the language of their non-Jewish German neighbors, had managed to thrive in their enterprises. Far less prosperous were the Eastern European peddlers who spoke only Yiddish, and their general poverty kept them from organizing as early as the others. Then Abraham Newman, one of the earliest Jewish settlers and a founder of B'nai Jeshurun, left that congregation, and calling together a group of the Russian and Polish Jews to conduct religious services in his house on Bank Street, helped to organize them. They incorporated into a congregation in 1855, adopting the name B'nai Abraham, in appreciation of Newman's interest and gen-



The Jewish Center in Newark

erosity. In 1861 B'nai Abraham dedicated its synagogue, formerly a Baptist church; in 1924 it erected a magnificent edifice.

In course of time B'nai Jeshurun became Reform. In 1915 the imposing Temple of B'nai Jeshurun which now houses its activities was dedicated. In 1941 Rabbi Solomon Foster, after forty years of service in the pulpit of B'nai Jeshurun which was his first and only congregation, retired, as rabbi emeritus, to devote himself to literary pursuits. In addition to serving his congregation, Foster participated in the general civic life of Newark. He helped organize the University of Newark, of which he became a trustee, the Clergy Club, and the Community Chest; he was made board member of the Newark Museum and the Social Service Bureau. For ten years he served as an editor of the *Newark Jewish Chronicle*. In 1942 Foster was succeeded as rabbi by David H. Wice, who became a member of the boards of the Essex County Council of Jewish Agencies and the Jewish Children's Home.

Oheb Shalom and B'nai Abraham eventually became Conservative congregations. In 1906 Charles I. Hoffman was elected rabbi of the former, and served in that capacity for thirty-four years, participating actively in the life of the Jewish community; he was on the board of the Y. M. and Y. W. H. A. for many years. In 1940 he became rabbi emeritus and was succeeded by Dr. Louis M. Levitsky, author of *A Jew Looks at America.* Levitsky was on the editorial board of *The Reconstructionist,* was a member of the Board of Directors of the Y. M. and Y. W. H. A., and served as one of the labor mediators of the New Jersey State Board of Mediation. In 1942 he was elected president of the Rabbinical Assembly of America.

From 1902 to 1939 Rabbi Julius Silberfeld was spiritual head of B'nai Abraham. He was on the board of the Y. M. and Y. W. H. A. for many years, and was one of the Jewish chaplains of the United States Army during the first World War. In 1939 he became rabbi emeritus, and was succeeded by Dr. Joachim Prinz, who promoted adult education through the establishment of the Institute of Jewish Learning. Prinz, who migrated from Germany when the Nazis attained to power, wrote *Jewish History, We Jews,* and *Life in the Ghetto,* a series of essays, as well as other books originally published in the German language.

As happened in all other large eastern cities of the United States, the composition of Newark's Jewish population underwent a marked change beginning with the 1880's. For it was then that thousands of Russian Jews came in, fleeing before the pogroms in their native land. During the last decades of the nineteenth century, and the first decade of the twentieth, these Jews from Eastern Euorpe, bringing with them their own culture, which included traditional orthodoxy in religion, developed their own Newark institutions. One of the earliest congregations was Adas Israel Mishnayes. A survey made in 1941 reported more than thirty Orthodox congregations organized in various sections of the city. For many years Rabbi Hyman Brodsky, of Congregation Anshe Russia, was the acknowledged leader of Orthodox Jewry. He was instrumental, in the late 1890's, in unifying the Orthodox community's diverse Jewish philanthropic efforts and agencies. On his death Orthodox leadership was divided among heads of the various groups. Among the principal Orthodox congregations in 1942 were Anshe Russia, where David Koolyk was rabbi; Young Israel Synagogue (Sidney Shulman, rabbi); Tifereth Zion (Chaim Glatzer, rabbi).

In 1852 the first organization of Jewish women was founded when the Frauenverein Nächstenliebe, later known as Friendly Sisters, was organized. Other organizations of women were subsequently formed, among them the Newark section of the National Council of Jewish Women, which came to be a cultural force in the community. In 1914 Miss Sarah Kussy, an ardent Zionist, formed in Newark the first New Jersey chapter of Hadassah. Four years later she convened a group of Zionists for the organization of the Newark Zionist District, of which Rabbi Julius Silberfeld became the first president. In 1924 the Young Men's and Young Women's Hebrew Association was organized. It had 4,500 members in 1942, and because of its broad social and cultural activities exerted considerable influence on the Jewish youth of the community. The Jewish Education Association of Essex County was founded in 1937 to coordinate educational work and raise standards in the Hebrew schools in Newark and Essex County.

To deal with matters of general concern to the Jewish community, the leading charitable, educational and social service groups united into the Essex County Council of Jewish Agencies (successor to the Conference of Jewish Charities), comprising, in 1942, twenty-two participating and affiliate organizations. From 1935 on the Council's presidents were, in succession, Michael A. Stavitsky, Julius H. Cohen and Samuel I. Kessler.

Problems connected with hospitalization led to the erection of Newark Beth Israel Hospital at a cost of $4,000,000, built to accommodate 500 patients.

The *Jewish Chronicle,* published in the English language, was the only Jewish newspaper in Newark in 1942. Its editor and publisher, Anton Kaufman, founded it in 1921, after leaving the *Jewish Chronicle* of Detroit, Mich., which he had established in 1915. In Newark he published also a number of technical journals and, prior to his arrival in the United States (1905), he was on the staff of the *Berliner Morgenzeitung* and an officer in the Hungarian army. His son, Theodore N. Kaufman, wrote the widely controversial book *Germany Must Perish* (1940). Another son, Herbert Kaufman, contributed short stories to magazines. In 1942 Samuel I. Newhouse was publisher of the daily *Newark Star Ledger.*

As it developed, the Newark Jewish community came to be represented in great numbers, and in outstanding service, throughout the larger community of Newark itself. Many Newark Jews entered the professions of law, medicine, education and public service.

Among those who achieved local or national prominence in public life were Samuel Kalisch, first Jew to be appointed to the New Jersey Supreme Court bench (1911-30). Meyer C. Ellenstein served as Mayor of the city from 1933 to 1941. Members of the New Jersey State Assembly were Leonard Kalisch (1889 and 1892), Max Sollinger (1890-92), Simon Hahn (1904), Edward Schoen (1911-17, speaker in 1916), Louis Rochester Freund (1919-20) and Joseph Siegler (1919-20). Leonard Kalisch was a municipal court judge in 1907. Freund became judge of the second District Court of Newark in 1920, and was still on that bench in 1942; Siegler was judge of the Juvenile and Domestic Relations Court of Essex County (1927-29). In 1941 Joseph Kraemer was appointed assistant attorney general of the United States. Harry Kalisch was city attorney (1915-1918). Jacob L. Newman was one time prosecutor of Essex County. In 1942 Philip Lindeman was on the Board of Freeholders of Essex County, to which office he was first elected in 1920. In 1942 Louis A. Fast, Philip J. Schotland, Thomas A. Parsonnet and Charles S. Gansler were assistant corporation counsels of Newark.

William Lewin and Max John Herzberg achieved prominence as educators; Lewin, a specialist in motion pictures in education, founded and organized the photoplay appre-

ciation movement in American schools and colleges (1928-32). Herzberg, who was appointed to the staff of the *Newark Evening News* in 1913, and served as its literary editor, was public school superintendent of English from 1929 to 1933, and in 1934 was made a member of the advisory committee of the American School of the Air. Samuel Roessler was president of the Board of Education from 1936 to 1938.

In commercial enterprise and philanthropy, Jews were among the foremost of Newark's citizens. Louis V. Aronson, inventor and financier, developed the Ronson lighter. Michael A. Stavitsky, realtor, was a prime figure in the leadership of the Community Chest; Louis Schlesinger, realtor, participated actively in Jewish communal affairs. He organized the Newark Real Estate Board.

Louis Bamberger, one of the founders of the large department store bearing his name, was interested in promoting cultural projects. He provided the funds for the erection of the Newark Museum building, and with his sister, Mrs. Felix Fuld, founded and endowed at Princeton, N. J., the Institute for Advanced Study, where Professor Albert Einstein was given a post to pursue his scientific work. During the lifetime of Felix Fuld, co-founder of L. Bamberger and Co., Fuld assumed leadership in Jewish communal activities. After his death his widow continued the work, contributing liberally to cultural, artistic and philanthropic projects.

NEWBURGER, JOSEPH E., judge, b. New York city, 1853; d. Bluff Point, N. Y., 1931. A graduate of Columbia University, he was admitted to the New York bar in 1874, and practised until 1890. He had become active in Tammany politics and, though defeated when he ran for assemblyman, he was elected to the bench of the city court in 1890, where he served five years; he was then elected to the Court of General Sessions, and in 1905 successfully ran as a Tammany candidate for the supreme court bench. On the expiration of his term in 1919, Tammany chief Charles F. Murphy, with whom he had developed differences, refused to back his candidacy for reelection. Thereupon Newburger's friends formed an independent group, and the Republicans also chose him as their candidate, with the result that he was reelected, after a history-making campaign, by a plurality of 80,000 votes over his Democratic rival. In 1923 he retired; his work on the bench was widely praised.

Newburger was one of the founders of the Jewish Theological Seminary of America. He served as a director of the Hebrew Benevolent and Orphan Asylum Society for more than thirty years, at one time also being president. During his incumbency the orphanage removed to its spacious quarters in the Bronx.

Lit.: *American Jewish Year Book* (1904-5) 160; *New York Times,* July 20, 1931.

NEWBURGER, MORRIS, banker and communal worker, b. Hohenzollern-Sigmaringen, Germany, 1834; d. Atlantic City, N. J., 1917. He was descended from a family of rabbis, but himself went into

Joseph E. Newburger

business while still in Europe. He emigrated to the United States in 1854, establishing a business in Cedar Rapids, Iowa, in 1856; seven years later he removed to Philadelphia, where he first built up a large wholesale clothing factory, and then, in 1905, organized the banking firm of Newburger, Henderson and Loeb. He became a director of the Mechanics' National Bank.

Newburger was active in the founding of the Jewish Publication Society of America in 1888, was elected its first president, and served in that post for more than fifteen years. It was he who initiated the project of making a translation of the Bible for American Jews. Newburger was also a trustee of Keneseth Israel Congregation, Philadelphia, for a quarter of a century, and served on the board of governors of the Hebrew Union College. He was a factor in arranging the Centennial Exposition of 1876, and was prominent in civic reform movements, serving as an executive member of the Citizens' Municipal Association.

Lit.: Morais, H. S., *The Jews of Philadelphia* (1894) 290-91; *Publications of the American Jewish Historical Society,* No. 28 (1922) 295-98.

NEWBURGER, SYLVIA, social worker, b. Bedford Hills, N. Y., 1913. She received her B.S. degree from New York University in 1937 and that same year became supervisor of the social department at the Samaritan Hospital of Brooklyn. In 1940 she was made director of the family service bureau of the Prison Association of New York. In this capacity Miss Newburger initiated welfare work for the children of prisoners' families, including various medical and psychiatric services. This was a new phase of prison welfare work. Miss Newburger was the organizer and chairman of the first international student conference on crime prevention (1936). She was directly descended on her maternal side from Rashi (1040-1105), noted Bible and Talmud commentator.

NEWBURGH, a city in Orange County, N. Y. Its population in 1940 was 31,797, of whom approximately 2,750 were Jews.

Just north of Newburgh there still stands a house that was built by Lewis Moses Gomez, or perhaps by his son Daniel, in 1719, and was used by them as a headquarters for trade with the local Indians until the house was sold in 1747 or 1748. There is also a record

of one Joseph Simpson, a Jew, who served in the Orange County Volunteers, organized in 1738.

The first German Jewish immigrant to arrive in Newburgh was probably Abraham Schoenfeld (1848). In 1854 Isaac Newcity and a number of other German Jews formed the First Jewish Congregation of Newburgh, which later became known as Temple Beth Jacob. They also organized the Newburgh Hebrew Cemetery Association. The first rabbi of the congregation was Joshua Falk. The congregation was renamed Beth Jacob in honor of Jacob Turner, who served as its rabbi for ten years (1865-75), and then entered commercial life in the city. In 1891 the congregation moved into a new building, which it still used in 1942. Maurice J. Bloom, who was elected rabbi in 1927, was still serving in 1942.

The bulk of the Jewish community of Newburgh arrived during the 1890's, from Eastern Europe and from New York city. In 1891, when Congregation Beth Jacob adopted the Reform ritual, a new congregation, called Agudas Achim, was formed, and purchased a church which was converted into use as an Orthodox synagogue. The Reverend Yoelson, the father of Al Jolson, was the first cantor of Agudas Achim, and R. S. Marcus was the first rabbi. In 1902 still another Orthodox congregation, B'nai Israel, was formed, in another section of the city. In 1938 both these congregations united to form the United Hebrew Schools and Congregations. Abraham N. Avrutick became its rabbi.

Each of the synagogues controls its own cemetery, and cemeteries are owned also by the Workmen's Circle and the B'rith Abraham Lodge. The Newburgh Progress Club was organized in 1899 as a social organization. The United Jewish Charities came into existence to meet overseas and national appeals in 1925. The Newburgh Jewish Community Council was organized in 1938, and there were also, in 1942, an active Zionist District, Hadassah chapter, two men's clubs and a Masonic lodge and Eastern Star chapter with all-Jewish membership. A Jewish Center was formed in 1925. Among the prominent Jews in Newburgh's history was Michael Hirschberg, judge of the Appellate Division. Sol N. Levy was for a time assistant postmaster of Newburgh. MAURICE J. BLOOM.

NEWBURGH, LOUIS HARRY, physician, b. Cincinnati, 1883. He was educated at Harvard University, then went abroad to study in Vienna and Berlin. After starting practice at Cincinnati, he went to Harvard to become assistant in medicine, and in 1912 was appointed to the staff of the Massachusetts General Hospital, staying until 1916. That year he left to teach at the University of Michigan, where he became professor of clinical investigation (1922).

A specialist in research on diabetes mellitus and diet, and a contributor to medical literature, Newburgh wrote the article on water metabolism for the *Encyclopedia of Medicine.* He was co-author, with Margaret Woodwell Johnston, of *The Exchange of Energy Between Man and the Environment* (1930), and, with Frances Mackinnon, of *Practice of Dietetics* (1934).

NEWCORN, WILLIAM, lawyer and communal worker, b. Cracow, Galicia, 1868. He was brought to the United States in 1870, and was admitted to the bar in 1897. Becoming active in Republican politics, he was elected to the New Jersey state legislature in 1901

Morris Newfield

and again the following year. From 1906 to 1913 he served as first judge of the Plainfield, N. J., district court, and in 1919 was appointed first assistant attorney general of the state, holding office until 1924. In 1932 and again in 1935 he was named corporation counsel of Plainfield. A director of numerous companies, he was elected president of the city's board of trade in 1931.

Newcorn's many Jewish interests include the Zionist Organization of America (he was elected first chairman of its New Jersey section), the United Hebrew Charity Organization, of which he was made president in 1914, and the Joint Distribution Committee. He was chairman of the board of Plainfield's Jewish Community Center, and was elected a member of the American Jewish Committee. Newcorn was organizer of Temple Sholem of Plainfield, and its president from 1913 to 1928.

NEWFIELD, MORRIS, rabbi, b. Homonna, Hungary, 1869; d. Birmingham, Ala., 1940. He received his bachelor of divinity degree from the Theological College of Budapest in 1889; two years later he was in the United States, studying at the Hebrew Union College, where he became an instructor even before his ordination in 1895. Later he was professor of Hebrew and Semitics at Howard College in Birmingham, Ala.

Temple Emanu-El of Birmingham was his first and only pulpit; there he stayed until his death, becoming not only leader in the Jewish community but also one of Alabama's renowned citizens. In Birmingham he founded the first free kindergarten, and he was on the board of the Court of Domestic Relations and Juvenile Delinquency from 1915 to 1932. He was active in the public charities of the city, and president of the state's Tuberculosis Association. Having served as an executive with the local Red Cross from 1918 to 1936, he was one of the most active relief workers in the devastating Mississippi valley floods of 1937.

Newfield organized the community's Federation of Jewish Charities, of which he was president until his death. Together with a Presbyterian minister and a Catholic priest, Newfield toured the South in an interfaith forum. It was said of him that no one in Alabama did more to "counteract the virus of the Klan movement."

In the Central Conference of American Rabbis, Newfield served as treasurer for five years and as president from 1931 to 1933.

In 1921 the University of Alabama conferred upon him the honorary D.Lit. degree; in 1939 he received the honorary D.D. degree from the Hebrew Union College.

Lit.: *Central Conference of American Rabbis Year Book,* vol. 50 (1940) 255-59.

NEWFOUNDLAND, an island in the Atlantic Ocean, with an area of 42,734 square miles, and a total population estimated at 294,800 in 1941, separated from Canada by the Straits of Belle Isle, the Gulf of St. Lawrence and the Cabot Strait. It is the oldest British colony, and a British governor was first appointed in 1728. The principal industries of Newfoundland are fishing, lumbering, and mining.

The Jewish population of Newfoundland (1942) consisted of about 200, of whom 125 lived in St. Johns, the capital city, thirty-one in the town of Corner Brook, seven at Belle Island, and a few families at Badger, Grand Falls, Bishop Falls, Botwood, Deer Lake, Buchanan and Bonavista Bay. The first Jew known to have settled in Newfoundland was I. F. Perlin, who came to Newfoundland in 1892. The majority of the Jewish residents came from the village of Tinkovich, province of Minsk, Russia.

The Jewish congregation at St. Johns was, in 1942, the only Jewish congregation in Newfoundland, and was incorporated in 1924. The community had a synagogue and a cemetery, and a Shohet and Mohel who acted also as Hebrew teacher.

The majority of the Jewish residents of Newfoundland were retail merchants, with a few tailors, butchers, and peddlers. Albert Perlin, who was born in Newfoundland and was the son of I. F. Perlin, the pioneer Jewish settler in the colony, was the publisher of the Newfoundland magazine *The Observer.* LOUIS ROSENBERG.

Lit.: Belkin, S., Report on Jews in Newfoundland (1934; unpublished).

NEWMAN, CHARLES ISRAEL, merchant and gold prospector, b. Prussia, 1833; d. New York city, 1914. He arrived in New York city from Europe in 1839, and was one of the first of the "forty-niners" to head West for the California gold rush. There he prospected and mined for a time, and then traveled east across the Sierra Nevada with a group of comrades to try his luck elsewhere; in Nevada he became one of the founders of the settlement that grew into Carson City. Newman was associated with Major William M. Ormsby, fighting in several Indian wars, and was one of Ormsby's command in the "Ormsby Raid" campaign.

In 1865 Newman returned to New York city, where he became one of the best known auctioneers; he retired in 1894.

NEWMAN, E. MANUEL, travel lecturer, b. Cleveland, 1872. He studied at Western Reserve University. He was one of the first to coordinate various modern inventions for the presentation of travelogues, combining the use of motion picture slides and travel reels with his lectures. In 1908 Newman went to Africa with Theodore Roosevelt; later he made eight trips around the world, compiling travelogues of almost every section of the globe. He prepared more than 100 travel reels for the Warner Bros. Motion Picture Corporation. He was the author of numerous books in which he presented famous cities or countries through which he had toured; among these were *Seeing Italy, Seeing Russia, Seeing Egypt and the Holy Land, Seeing Paris* and *Seeing London.*

Isidora Newman

NEWMAN, ELIAS, artist, b. Stashow, Poland, 1903. He was brought to the United States in 1913, and studied in New York city, receiving his art training at the Academy of Design and the Educational Alliance Art School. Newman's first showing was held in New York city in 1924; the next year he had an exhibition in Jerusalem. Subsequently much of Newman's time was spent in Palestine, where his brother, Mordecai Newman, was a well-known publisher. He spent part of each year in the Tel-Aviv art colony, and from 1933 to 1935 was secretary of the Palestine Artists and Sculptors Association.

In his capacity as American representative of the Tel-Aviv Museum, Newman toured the United States. He was also art curator of the Palestine Pavilion at the New York World's Fair (1938-40). His own paintings were acquired by museums in various cities throughout the United States, and were represented also in the Tel-Aviv Museum. He wrote on art for periodicals in the United States and Palestine, and was author of *Art in Palestine* (1938).

Lit.: *B'nai B'rith Magazine,* vol. 43, pp. 266-67; *Opinion,* July, 1940, pp. 8-10; Newman, Elias, *Art in Palestine* (1939) 80.

NEWMAN, ISIDORA, author and artist, b. New Orleans, La., 1878. She was living in New York city in 1942. Her original name was Miriam Newman, and she was a daughter of Isidore Newman. She took courses in playwriting at Columbia University, and her one-act plays were performed by university and settlement theatres. In 1901 she married Edwin A. Neugass. It was after her husband's death and when her chil-

dren had grown to maturity that she published her first book, *Fairy Flowers* (1926), with water-colors by Willy Pogany. It was translated into all the major European languages, and won her academic palms from the French government in 1928. In 1929 she toured Europe and gave recitals of her tales and of Negro folklore in the Josefstädter Theater, directed by Max Reinhardt, and in the Konzerthaus of Vienna; also in Paris and London. At the same time she exhibited in these cities her paintings from Negro and Creole life in the South.

On her return to the United States she exhibited at Columbia University and at the Ainslie Galleries, in New York, and in many museums in the United States. One of her paintings is permanently exhibited by the Louisiana State Museum.

Isidora Newman tried her hand also at sculpture, receiving a degree from La Horde Society of Paris. Her bust of George Gershwin was acquired by the Young Men's Hebrew Association of New York, and the bust of her father by the Isidore Newman School of New Orleans.

She had very little formal training as an artist, and in the opinion of painters whose guidance she sought, needed none. Her intuition in depicting color and innocence in the life of a primitive people won her the name of the Gauguin of Louisiana. Her flower tales were inspired by the same childlike frankness that is in direct touch with the wonder and beauty of things.

She was author also of *Shades of Blue* (1927) and *Neger und Negerlein* (German; 1929). Her *Flower Facts and Fables* (1935) won the Eugene Field award, and was accepted by the New York Board of Education as a supplementary reader. In 1942 she was working on a biography of her father.

Lit.: Women of Achievement (1940) 46.

NEWMAN, ISIDORE, banker and philanthropist, b. Germany, 1837; d. New Orleans, La., 1909. He came to the United States at the age of fourteen. He entered the cotton business in Catahoula Parish, and at the time of the Civil War went to New Orleans, where he established a bank. He bought and operated the Carrolton Railroad Company of New Orleans, subsequently selling it to become principal owner of the Maison Blanche, one of the largest department stores of New Orleans.

Newman played a prominent part in the religious and social life of New Orleans. He was a charter member of Temple Sinai, and one of the founders of the New Orleans Lodge of the B'nai B'rith. Together with Henry Newman, he provided land, at easy terms, for the settlement of 173 refugees from the Russian pogroms in 1881. This settlement, the Sicily Island Colony, was disrupted in the spring of 1882 by the Mississippi River flood. He contributed largely to the Jewish Children's Home, and in 1904 equipped it with a school which, known as the Isidore Newman School from 1913 on, was on the approved list of secondary schools and one of the most modern in the South.

Lit.: Inventory of the Church and Synagogue Archives of Louisiana, Jewish Congregations and Organizations (mimeographed; 1941); Heller, Max, edit., *Jubilee Souvenir of Temple Sinai, 1872-1922* (1922); *American Hebrew,* Dec. 3, 1909, p. 135.

NEWMAN, LEOPOLD C., American soldier, b. 1835; d. 1863 (place of birth and death unknown). He entered the Civil War as captain of Company B, Thirty-First New York Infantry, and rose to the rank of lieutenant-colonel. Newman was mortally wounded in battle, remaining at the front although his term of service had expired a few days earlier. He was taken to Washington, where President Abraham Lincoln is said to have visited him, bringing him a commission as brigadier-general. He died shortly thereafter.

Lit.: Publications of the American Jewish Historical Society, No. 17 (1909) 158-59; No. 29 (1925) 123; Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen* (1895) 285.

NEWMAN, LOUIS ISRAEL, rabbi and author, b. Providence, R. I., 1893. He received his A.B. degree from Brown University (1913), his A.M. degree from the University of California (1917), and his Ph.D. degree from Columbia University in 1924. He was ordained a rabbi by Stephen S. Wise in 1918, after he had already served for a year as assistant to Wise in the Free Synagogue. From 1917 to 1921 Newman was also rabbi of the Bronx Free Synagogue. Then, for three years, he was associate rabbi at Temple Israel in New York city, serving for most of this time, in addition, on the faculty of the Jewish Institute of Religion, department of apologetics; he returned to the Institute faculty in 1931 to 1933. Called to Temple Emanu-El in San Francisco in 1924, he remained there until 1930. He has occupied the pulpit of Temple Rodeph Sholom in New York city since.

Through his literary work and his participation in Jewish cultural and progressive civic movements, Newman became known as a forthright spokesman in American Jewry. A participant of long-standing in the Zionist movement, he became affiliated with the Revisionist group in the 1930's, acting as honorary chairman of the Revisionist Tel Hai fund and as chairman of the Palestine Mandate Defense League. He was honorary chairman of the American Friends of a Jewish Palestine (1939-) and a member of the American advisory committee of the Hebrew University. Among his other posts were the honorary vice-presidency of the American Jewish Congress and his vice-presidency of the Jewish Education Society. He was also at one time president of the Intercollegiate Menorah Association and of the national Young Judea. In 1942 he was awarded the honorary D.D. degree by Brown University.

Newman's literary work includes many monographs on historical subjects, such as *Richard Cumberland, Critic and Friend of the Jews* (1919). His *Jewish Influence on Christian Reform Movements* was published in 1925. He was author of several volumes of verse and anthologies, among them *Joyful Jeremiads,* verse (1926); *The Hasidic Anthology* (1934); *The Talmudic Anthology* (1939); also of a biography of Professor Richard J. H. Gottheil (1937) and *The Jewish People, Faith and Life* (1940). A three-volume collection of his *Sermons and Addresses* was published in 1941.

NEWMARK, MARCO ROSS, merchant and communal worker, b. Los Angeles, 1878. He received his A.B. degree from the University of California in 1902, and subsequently took post-graduate work in Berlin. Joining the wholesale grocery business owned by his family, Newmark rose to the vice-presidency of the firm, a post he held at the time of his retirement in 1931. He occupied many directive positions in Western and national commercial organizations, as vice-president of the National Wholesale Grocers Association (1930), president of the Los Angeles Produce Ex-

change (1920) and treasurer (1916-19) of the Los Angeles Merchants and Manufacturers Association.

A leading figure in Zionist activities, he was organizer, for a time president, of the Nathan Straus Palestine Society, and president of the Los Angeles Zionist District. Newmark was also (1933-37) president of the Federation of Jewish Welfare Organizations and president (1940-41) of the Historical Society of Southern California. With his brother, Maurice Harris Newmark, he edited *Sixty Years in Southern California,* by Harris Newmark (1916), and, also with his brother, wrote *Census of Los Angeles City and County for 1850* (1929).

NEWMARK, MAURICE HARRIS, merchant and civic worker, b. Los Angeles, 1859; d. Los Angeles, 1929. He was the brother of Marco Ross Newmark. Educated in the United States and in France, he entered his father's wholesale grocery firm in 1876. Later his activities extended to real estate and banking.

From 1899 to 1912 Newmark was president of the Associated Jobbers, from 1905 to 1917 president of the Southern California Wholesale Grocers Association, and for a time a director of the board of trade and of the Chamber of Commerce. Having served on the commission that consolidated the surrounding harbor towns with Los Angeles, Newmark was made harbor commissioner (1909). He was also a trustee of the Southwest Museum in Los Angeles and co-editor, with his brother, of Harris Newmark's *Sixty Years in Southern California* (1916).

NEWMYER, ARTHUR GROVER, publisher, b. Washington, D. C., 1885. In 1902 he began his career in the newspaper world by becoming secretary to the publisher of the Washington *Times,* then joined the editorial staff, and in 1906 became its advertising manager. Newmyer retained this connection until 1909, when he was made national advertising manager of the Munsey newspapers. In 1912 he went to New Orleans, to act as business manager of the New Orleans *Item;* in 1927 he became publisher of the paper. Returning to Washington in 1934, Newmyer took over the publication of the Washington *Times.* For one year (1936) he was publisher of the New York *Journal,* then (1937-38) assistant general manager of the Hearst newspapers. In 1939 he once more returned to Washington as associate publisher and general manager of the *Times-Herald.*

Newmyer held various civic and communal posts. He was chairman of the Unemployment Relief Committee of Louisiana from 1930 to 1933, served as president of the Southern Newspaper Publishers Association (1923-24) and as vice-president of the Association of Advertising Clubs of the World (1918). During the first World War he was deputy chief of the American Protective League, an auxiliary of the United States Department of Justice.

NEWPORT, a seaport in Rhode Island, bounded by the Atlantic Ocean and Narragansett Bay, distinguished for its Jewish historical background and famed for its Jewish merchants who played an important part in Colonial commerce and for its historic cemetery and synagogue. The general population of Newport in 1940 was 30,532, of whom about 950 were Jews.

The settlement of Jews in Newport dates back to 1658, when fifteen Jewish families are said to have arrived there, probably from Barbados. The city, founded

Monument to religious liberty erected on the grounds of historic Touro Synagogue at Newport, R. I. Photograph shows Dr. David de Sola Pool and Rabbi M. A. Gutstein participating in the dedication. (For further illustrations, see vol. 1, pp. 232-33.)

in 1639, offered a haven of refuge, for the Code of Laws governing the colony concluded: "And otherwise than thus what is herein forbidden, all men may walk as their consciences persuade them, every one in the name of his God," and the Commonwealth was defined as a "Democracie." Among the early settlers were Mordecai Campernell of St. Peter's Parish in Barbados, Daniel Campernell, who had formerly lived in Brazil, and Moses Israel Pacheco, of Hamburg, who had also lived in Barbados. Others were Simon Mendes, Abraham Burgos and Jacob Tinoco, all of Speightstown, Barbados. Later they were joined by Daniel Nasy.

These first settlers are said to have founded Congregation Jeshuath Israel (Salvation of Israel). They evidently held their services in the home of Mordecai Campernell, for the following record exists: "Th^{s} y^{e} (day and month obliterated) 165. . (last number stained and broken and not certain whether 6 or 8) W^{ee} mett att y House off Mordecai Campunall and affter Synagog W^{ee} gave Ab^{m} Moses the degrees of Maconrie."

For some unknown reason the early settlers must have left the colony for a short period, because when the "Jews and their Nation Society or Friends," through Mordecai Campernell and Moses Israel Pacheco, in 1677, purchased a plot of land for a Jewish cemetery, a stipulation in the deed read: "But if it Should So fall out that ye Jews Should all Depart the Island Again So as that there shall be none left. . . ."

The founders of the Jewish community of Newport engaged in business, but not without difficulty. In 1685 "Mordecai Campanell, David, Daniell & Abraham Campanell, Saul Brown, Abraham Burges, Rachell the Widow and Relict of Symon Menedes Deceasd and Aron Verse, Jews" were brought to trial by the governor, probably in violation of some navigation act, but the "Jurrors" reported: "Verdict, Wee find for the defendants," and that "the distraint upon the defendants goods be taken off and their Estates so seized be Restored by the General Serj^{t}."

This decision was probably due to the resolution of the General Assembly that "In answer to the petition of Simon Mendes, David Brown, & Associates being Jews, presenting to this Assembly bearing date June 24, 1684, we declare that, they may expect as good protection here as any stranger being not of our nation residing amongst us, in his Majesty's Collony, ought to have, being obedient to his Majesty's laws."

Toward the end of the 17th cent. the Jewish community of Newport was augmented by the arrival of many Jewish settlers from the West Indies. The earliest maps of Newport, at the very beginning of the 18th cent., show that what is now the famous Bellevue Ave. was then known as "Jew's Street."

In the middle of the 18th cent. a number of Marrano families from Spain and Portugal settled in Newport, where they reverted to the Jewish faith and became faithful members of the Jewish community and the congregation. Among them were the famous Lopez and Rivera families who, together with the others, became interested in building the synagogue which is still standing. On August 1, 1759, the cornerstone was laid, and on December 2, 1763, corresponding to the first day of Hanukah of the year 5523, the synagogue was consecrated and dedicated "by a handsome procession in which were carried the Books of the Law to be deposited in the Ark . . . in an Edifice the most perfect of the Temple kind perhaps in America," and which "could not but raise in the Mind a faint Idea of the Majesty and Grandeur of the Ancient Jewish Worship mentioned in the Scripture."

The principal occupation of the Jews in Colonial Newport was the manufacture of spermaceti (whale-oil) products. Aaron Lopez and other Jewish merchants were responsible to a great extent for the development of Newport as a port. Commerce with other colonies, England and other countries was carried on, and many of the vessels were owned by Jews. Other Jews, however, followed the trades and worked in foundries. Shortly before the American Revolution, Newport is said to have had more than 1,100 Jews, of whom about 300 attended religious services at the synagogue.

Isaac Touro, a descendant of an old Spanish family, who came to Newport from Amsterdam, Holland, through the West Indies, was the first Hazan of the synagogue. Many rabbis visited Newport before the American Revolution. Among them were several from Poland and Rabbi Isaac Karigal of Hebron, Palestine, who on Shabuoth of the year 1773 preached a sermon in Spanish, which was translated by Moses Lopez into English and published. This may be the first Jewish sermon published in America.

At the outbreak of the Revolution, the Jews of Newport joined the patriotic cause and fled from the British occupation. When the British finally evacuated the city in 1779, there were hardly enough Jews left to maintain the congregation and to continue public worship at the synagogue. The Hazan, Isaac Touro, had gone to Kingston, Jamaica, and Moses Seixas, founder of the bank of Rhode Island and the Rhode Island Grand Lodge of Masonry, conducted the services, while acting as warden. On August 17, 1790, when George Washington visited Newport for the third time, he was greeted on behalf of the congregation by Seixas and may even have visited the synagogue. Seixas was on the city's reception committee, and it was on behalf of the "Hebrew Congregation in Newport, R. I." that he presented the first president of the United States with an address, the reply to which is treasured as the most historic document in American Jewish history.

In the beginning of the 19th cent. the synagogue was closed because of the lack of worshipers. Newport had not regained its pre-Revolutionary place as a manufacturing center and the Jewish community had dwindled. The synagogue was opened occasionally for funerals of some of the former Newport Jews who desired to be buried in the ancient Jewish cemetery. Among them were the two sons of the first minister, Abraham and Judah Touro, who endowed the synagogue and the cemetery with funds to be administered by the municipal and state governments for the perpetual care of the American Jewish historic landmarks.

The 1880's witnessed the migration of a number of Jewish families from Eastern Europe into Newport. The synagogue was reconsecrated on May 25, 1883, by the Reverend Abraham Pereira Mendes, the father of Frederick de Sola Mendes and H. Pereira Mendes, for regular public worship; it is in use to this day (1942). In 1893 there were again a sufficient number of Jews in Newport to found and incorporate a congregation, which adopted the historic name, "Jeshuath Israel," of the original congregation. The legal title to the synagogue grounds and building had passed to Congregation Shearith Israel (Spanish and Portuguese Synagogue) of New York; but by an arrangement with Shearith Israel and under an agreement to maintain the traditional Spanish-Portuguese ritual in the services as practised by the New York congregation, Jeshuath Israel of Newport was granted the exclusive right to the use of the synagogue and the management of its funds. An annual rental of one dollar is paid to Congregation Shearith Israel. The rabbi of Jeshuath Israel in 1942 was Morris A. Gutstein, who came to the congregation in 1932.

An Orthodox congregation, Ahvis Achim, was founded about 1910. The Jeshuath Israel Community Center was founded in 1927.

There were the following Jewish organizations in Newport in 1942: Congregation Jeshuath Israel; Ladies Auxiliary (chartered 1910), devoted entirely to charity; Newport Chapter of Hadassah (organized 1927); Ahvis Achim Sisterhood, assisting the congregation financially; Judah Touro Lodge of the B'nai B'rith (organized 1924); Israel J. Josephson Lodge of B'rith Abraham; B'rith Sholom Lodge; Chevrah Kadishah (Hebrew Burial Society); Vaad Hakashruth; The United Hebrew School in charge of the Talmud Torah and Religious School on Sunday, founded in 1927; A.Z.A. Chapter (organized 1930); Karigal Club, consisting of young men; Emma Lazarus Club, consisting of young women; Young Maccabees, a Young Judaean organization; Jewish Community Fund, organized in 1941 to take care of all outside Jewish philanthropies; Jewish War Veterans (organized 1929); Newport District, Zionist Organization of America (organized 1939).

Congregation Jeshuath Israel has its own cemetery; B'rith Abraham, B'rith Sholom, and the Chevra Kadishah own sections in the general cemetery. A

number of the members of Congregation Ahvis Achim own private plots which are together, but the congregation does not have its own cemetery.

The president of Congregation Jeshuath Israel (known also as Touro Synagogue) in 1942 was Robert M. Dannin, judge of the Probate Court.

The Jewish population of Newport in 1942 consisted mostly of immigrants who came to the United States late in the 18th or early in the 19th centuries, and of first and second generation native Americans. Merchandising was their chief occupation, mostly in small shops, but there were a number of Jewish physicians, lawyers, dentists and representatives of the other liberal professions.

Lopez Wharf and Touro Street honor the memory of the old Jewish community, and testify to the Jewish contributions to the commercial and industrial prosperity of the Rhode Island colony.

The old cemetery and synagogue are well preserved and maintained as historic landmarks of Colonial America and of Newport's glory as a Jewish community before the American Revolution.

In 1858 Henry Wadsworth Longfellow wrote about those whose remains rest in "The Jewish Cemetery At Newport":

Pride and humiliation hand in hand
Walked with them through the world, where'er they went;
Trampled and beaten were they as the sand
And yet unshaken as the continent.
For in the background, figures vague and vast
Of patriarchs and prophets rose sublime,
And all the great traditions of the Past
They saw reflected in the coming time.

In 1867 Emma Lazarus wrote about the synagogue:

Nathless the sacred shrine is holy yet,
With its lone floors where reverent feet once trod
Take off your shoes, as by the burning bush,
Before the mystery of death and God.

In 1939, when the city of Newport celebrated its tercentenary, a monument dedicated to religious liberty was erected on the synagogue grounds by the Jewish community of Newport.

MORRIS A. GUTSTEIN.

Lit.: Kohler, Max J., in *Publications of the American Jewish Historical Society,* No. 6 (1897) 61-80; No. 27 (1920) 175-216, 413-16; Daly, Charles P., *The Settlement of the Jews in North America* (1893) 76-91; Gutstein, Morris A., *The Touro Family* (1935); idem, *The Story of the Jews in Newport* (1936); idem, *Aaron Lopez and Judah Touro;* Wiernik, P., *History of the Jews in America* (1931).

NEWPORT NEWS, a city in Virginia, having a population of 37,067 (1940), including about 1,950 Jews. About 1880, the founder of what was in 1942 Nachman's department store came to Newport News. In 1885, Beryl Moses Oser arrived there with his family, and established a merchandising business; five years later the community boasted fifteen Jewish families, for whom Abraham Benzion Mirmelstein was Shohet and reader of services. The Jewish population greatly increased in the shipbuilding boom of 1906, and again in those of the first and second World Wars.

In 1893 the Orthodox congregation Adath Jeshurun was organized. In 1936 it elected its first American-ordained English-speaking rabbi, Moses I. Goldberg, who served until 1940. The rabbi in 1942 was Milton A. Dershowitz.

The Conservative Rodef Sholem Congregation was organized in 1919, out of the Hebrew Bible Class Association, originally an adjunct of Adath Jeshurun; in 1942 Rodef Sholem's rabbi was Jesse Joel Finkle.

Other local communal organizations in 1942 included the Hebrew Aid Society, Hebrew Friendly Inn, Hebrew Free Loan Society, T. H. Shwartz Lodge, and Jewish Community Council. National organizations were represented by Senior Hadassah, Junior Hadassah, Young Judea, the Zionist Organization of America, the National Council of Jewish Women, the Independent Order of Brith Abraham, and B'nai B'rith. Graff Memorial Building, center for Jewish activities, began, in 1941, to be used by the Jewish Welfare Board for Jewish soldiers and sailors stationed in the area.

In the civic life of Newport News local Jewry was represented by Ellis J. Graff, on the school board (1900-6); Joseph Reyner, in the Common Council (1910-18); Isaac Cohen, in the Council Chamber (1914-20). From 1922 on Harry Reyner was elected six times to the City Council, the last in 1942; twice he served as vice-mayor, and for two years was mayor, the youngest in Virginia. In 1942 Harry L. Nachman was on the Waterworks Commission, and Sol Ellenson was assistant director of public works.

NEY, DÁVID, synagogal and opera singer, b. Várpalota, Hungary, 1843; d. Budapest, 1905. The son of a tanner, he became a tailor's apprentice at Veszprém. The unusual power and beauty of his voice were discovered and trained in turn by the cantor of the Veszprém synagogue, by the officers under whom he served in the Austro-Prussian War (1866), and by the operetta composer Franz Suppé at Vienna. After a brief engagement at Györ, he joined the National Theatre at Budapest (1874), and was a lifelong member of the Budapest Opera from its inception in 1884 on. He appeared in more than a hundred roles. Sarastro in the *Magic Flute,* Don Giovanni, Solomon in the *Queen of Sheba,* Hans Sachs in the *Meistersinger* and Wotan in *Götterdämmerung* were among his greatest impersonations. He appeared also in countries other than Hungary, and was considered one of the finest vocal artists of his time. He continued to sing at synagogal services on the high holy days.

DÁVID NEY, JR., was an outstanding tenor of the Budapest Opera in the 1930's. From 1939 on he starred in the opera performances of the Hungarian Jewish Cultural Association.

NEYMARCK, ALFRED, political economist, b. Châlons-sur-Marne, France, 1848; d. Paris, 1921. In 1869 he founded *Le Rentier,* a financial newspaper which he edited for more than fifty years. He was the author of *Aperçus financiers* (1872); *Colbert et son temps* (1877); *Un centenaire économique* (1880); *Évaluation nouvelle du capital et du revenu des valeurs mobilières en France* (1893); *Finances contemporaines* (2 vols., 1903). Neymarck was an officer of the French Academy, a commander of the Legion of Honor, and the recipient of several prizes and honors. Among other distinguished positions, he held that of treasurer of the National Israelite Consistory.

NEZIFAH, *see* EXCOMMUNICATION.

NEZIKIN ("damages"), fourth division of the Mishnah and Talmud, containing ten tractates. In the Tosefta and Palestinian Talmud it is euphemistically called Yeshuoth ("salvation"). The name Nezikin was originally applied to a tractate devoted to torts which, because of its length, was eventually divided into three tractates, *Baba Kamma, Baba Metzia* and *Baba Bathra.* The three following tractates, *Sanhedrin, Makkoth* and *Shebuoth,* deal with court procedure in criminal and civil cases. The other four tractates are of an entirely different nature. *Aboth* is a collection of ethical and moral teachings; *Eduyoth* and *Horayoth* are collections of Tannaitic literature made, not on the basis of subject matter, but of persons and occasions; *Abodah Zarah* deals with idolatry. The exact reason for their inclusion with the other tractates in the division is not clear. It is possible that Nezikin was the last division studied in the Talmudic academies, and that these four tractates were added as an appendix.

See the articles on the individual tractates.

NIAGARA FALLS, *see* NEW YORK (state).

NICANOR, commander-in-chief of the Syrian army under King Demetrius I. Nicanor was sent to Judea in 161 B.C.E. in order to support the Hellenist party against Judas Maccabeus. After occupying Jerusalem, he attacked Judas with a large army, but was decisively defeated at Adasa, near Beth-Horon, and fell in the battle. For some time after, the victory of Judas Maccabeus over Nicanor was annually celebrated on the 13th of Adar.

NICARAGUA, a Central American country with a population of 1,380,287 (1940), including about one thousand Jews. The bulk of the Jewish population was concentrated in the capital city of Managua, while a few Jewish families were to be found in Granada and Chinandega. In 1918, it was reported that the majority of the Jews of Nicaragua were of French and German origin, had lived there for about fifty years, and had lost their religious identity. At that time, Teodoro Teffel, private banker, importer and coffee-plantation owner, was said to have been dean of the once-existing Jewish community.

Between 1918 and 1942, the Jewish community of Nicaragua was substantially increased by immigrants from Central and Eastern Europe.

NICHOLAS I, emperor of Russia from 1825 to 1855, b. St. Petersburg, 1796; d. St. Petersburg, 1855. He succeeded to the throne after the death of the comparatively liberal Alexander I, and started a regime essentially reactionary, despite some feeble steps taken by him in the direction of reform. As a grand duke he had described the Jews of White Russia in his travel diary of 1816 as the ruin of the peasants and characterized them as "regular leeches," while admitting the "exemplary loyalty" which they had displayed toward the czarist regime during the Napoleonic invasion. Nicholas' policy regarding the Jews was dictated by the desire to "educate" them, which was equal to eliminating them by means of de-Judaizing and, if feasible, Christianizing them.

One of the first blows aimed at Russian Jewry was a decree, signed by him on August 26, 1827, imposing long military service of an especially hard character on the Jews, who had thitherto paid a specified sum for relief from conscription. Through this measure they were removed from their surroundings and prevented from practising Jewish customs, with the intention of baptizing them eventually. Particularly cruel was the fate of the so-called "Cantonists," Jewish boys who were drafted into military service at the age of twelve and brought up in military schools of distant provinces.

The same purpose of enforced assimilation inspired the two decrees of 1844, establishing secular Jewish schools with Jewish as well as non-Jewish teachers, and opening rabbinical seminaries of a "reformed" character, in the endeavor to bring the Jews "nearer to the Christian population" and to eradicate "the prejudices fostered in them by the study of the Talmud." The year 1844 saw also the destruction of the remnants of Jewish communal autonomy, when a decree ordered "the placing of the Jews in the cities and countries under the jurisdiction of the general administration, with the abolition of the Kahals."

A similar motif was behind the imperial decrees of 1850 and 1851 prohibiting the use of a distinct Jewish form of dress and forbidding Jewish women to cut their hair upon entering into marriage. These reforms, welcomed only by a minority of Jews, were met by the majority with unflinching passive resistance and merely served to increase their sufferings, without achieving the desired result. Equally, the czar's encouragement of baptism and his predilection for Jewish converts—baptized Jews were exempted from taxes for several years and enjoyed other privileges—induced only very few persons to renounce Judaism.

Altogether the situation of the Jews during the reign of Nicholas I was far from satisfactory, the more so since the "reforms" were forced upon the Jews with the help of the police. While in other countries military service of the Jews was preceded by at least a partial emancipation, Russian Jewry now suffered more than before from enforced transfer from one region to another, from their banishment from certain cities, and from the strict supervision and censorship of their entire cultural life. The intercession of Sir Moses Montefiore, who visited the czar in behalf of the persecuted Russian Jews in 1846, yielded no results, and the scheme of a mass emigration of destitute Russian Jews to Algiers, proposed in the same year by a wealthy Jewish merchant of Marseille named Isaac Altaras, was a failure. ALFRED WERNER.

Lit.: Dubnow, Simon, *History of the Jews in Russia and Poland,* vol. 2 (1918) 13-153, 172, 203, 354.

NICHOLAS II, emperor of Russia from 1894 to 1918, b. St. Petersburg, 1868; d. Ekaterinburg, Russia, 1918. He was the reactionary son of Alexander III, whose reign had been marked by bloody anti-Semitic riots; Nicholas made it clear at the start that he would guard the principle of autocracy as firmly and as uncompromisingly as it had been guarded by his father. When the Moscow Jews requested the authorities to permit them to have their synagogue open during the

coronation days "as a special act of grace, in order that the Jews of Moscow may be given a chance to celebrate the joyful event with due solemnity," the petitioners were informed that their request was "an insolent violation of the imperial will" and could not be considered. The czar surrounded himself with reactionaries, one of the most obnoxious of whom was his former tutor, Pobedonostzev, head of the Holy Synod. Not only did Nicholas strongly object to the abrogation of the Pale of Settlement, suggested to him by the governor of Vilna, but under his rule even consumptive Jews were forbidden to seek relief in the health resorts of the Crimea.

The manifold restrictions—the barring of Jews from the liquor trade, which robbed hundreds of thousands of them of their scanty livelihood, was only one of them—resulted in the economic collapse of Russian Jewry. In addition, pogroms flared up again at the end of the 19th cent. (Shpola, 1897; Kantakuzenka and Nikolaev, 1899); these increased in intensity after the appointment of Von Plehve as minister of the interior (1902). That the czar and his camarilla hated the Jews was frankly admitted by Governor Grusov in January, 1904, shortly after the Kishinev pogrom. The czar himself did not conceal that he favored the pogromists, the Black Hundred, who under his regime organized themselves in the reactionary League of the Russian People which formed a sort of "Second Government." When Grigoryev, governor of Odessa, who had opposed the pogromists and therefore was dismissed later on, was received by the czar, Nicholas wore the badge of the League of the Russian People on his breast, the same badge which was worn by the rioters in Odessa.

Nicholas was forced, in the course of time, especially after the revolution of 1905, to make a few trifling concessions to the Jews, but until his execution by the Bolsheviks on July 16, 1918, he remained bitterly opposed to any real improvement of their status. His hostility toward the Jews was expressed unmistakably in the answer which he was reported to have given to a council of ministers who laid before him a draft of moderate reforms in favor of the Jews: "As long as I am czar the Zhyds of Russia shall not have equal rights."

ALFRED WERNER.

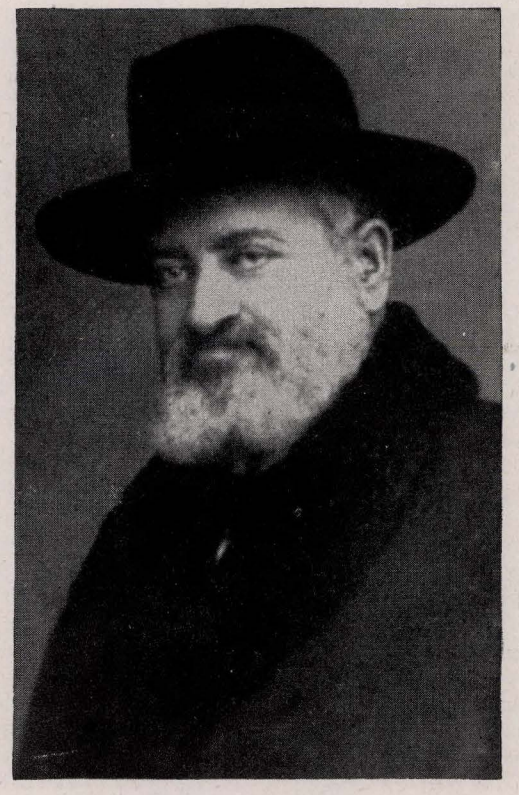
NICODEMUS, *see* NAKDIMON BEN GORION.

NIDDAH ("menstruous woman"), seventh tractate of Toharoth, the sixth division of the Mishnah. It consists of ten chapters, and deals with the regulations as to women in time of menstruation (*Lev.* 15:19-24) and childbirth (*Lev.* 12). Biblical law provided that a woman in menstruation should be regarded as ritually unclean for a period of seven days; rabbinical interpretation extended the time to include seven days after the cessation of the menses. The tractate deals with such questions as the evidence of menstruation and the like, women in childbirth, rules concerning Samaritan, Sadducean and non-Jewish women, children delivered by an operation, and the puberty of females. Many of the observations are of great medical interest.

The Tosefta has nine chapters, and contains important and interesting additions to the Mishnah, such as



Jacob Isaac Niemirower

the discussion as to the permissibility of contraceptive measures in certain instances (chap. 2) and about the embryo (chap. 4). The tractate is the only one in the division to have a Gemara, which is found in both Talmuds. Only about three chapters of the Palestinian Gemara are extant, though the Tosafists possessed it for the entire tractate. The Babylonian Gemara contains numerous legends and Haggadic sayings, of which the most interesting deal with the life of the embryo.

NIDDUI, *see* EXCOMMUNICATION.

NIEGO, JOSEPH, communal leader, b. Adrianople, Turkey, 1864. The scion of a rabbinic family, he was for eighteen years at the agricultural school in the settlement Mikveh Israel in Palestine, and for some years directed the Jewish college in Constantinople. Elected president of the B'nai B'rith Grand Lodge in Turkey in 1911, he still occupied this post in 1942. Niego who, apart from a few years spent in France, lived in Constantinople, rendered valuable services to the Sephardic community. Several essays of his were published in *Hamenorah,* organ of the B'nai B'rith lodge.

NIEMIROWER, JACOB ISAAC, rabbi, b. Lemberg, Galicia, 1871; d. Bucharest, Roumania, 1939. He was born into a family of illustrious scholars which for five generations had been established at Jassy, Roumania, and claimed descendancy from Rashi. He grew up among Hasidim, and received his education at Lemberg, at Jassy and at the rabbinical schools of Israel

Hildesheimer and Abraham Biberfeld at Berlin, and at the university of that city, from which he received the Ph.D. degree (1896).

In 1897 he was appointed rabbi and preacher at Jassy; in 1911 the Sephardic community of Bucharest invited him to be its rabbi; in 1921, as head of the Coral Temple of Bucharest, he united under his authority the scattered congregations of the Roumanian capital. Subsequently, as chief rabbi of the Jewish community of the Old Kingdom of Roumania, he was delegated to the Roumanian Senate (1924) and was named by the government constitutional representative of the Jewish community of Roumania for life. But when, in 1940 to 1941, the Roumanian government completely adopted the Nazi principles, the Jewish communities lost the right to send their religious leader to the senate as their representative.

In Roumanian Jewish life Niemirower was a central figure who imparted new meaning and vigor to Jewish endeavor, religious and communal. Due to his efforts, the degrading Oath More Judaico was abolished. While at first he was recognized as the leader of progressive Jewry only, soon the Orthodox bowed to his authority. Thus he achieved unity in Jewish communal life in almost all parts of the kingdom of Roumania. He worked for systematized Jewish education and cultural activities, endeavored to establish a theological seminary, and founded, at Bucharest, a Toynbee Hall, the Society for Jewish Culture Sharon (1911), and the Society for the Science of Judaism (1927). The international B'nai B'rith congresses of Prague (1938) and Zurich (1939) accepted on principle the proposition which he had cherished and advocated throughout his life: that of a new Jabneh, an interterritorial home for Jewish learning, in Palestine. As regards Zionism, he occupied a middle position. He delivered the memorial speech for Theodor Herzl at the Basel Congress in 1908.

Niemirower, a personality of commanding intellectual power, held great authority with the entire Jewish population. In 1936 an attempt was made on his life by a fanatical Roumanian nationalist who was later declared insane. Niemirower was not seriously injured.

Among his published books are: *Der Zusammenhang von Willensfreiheit, Gewissen, Belohnung und Strafe* (1906); *Eine moderne Jabneh Akademie* (1909); *Sur l'époque arabo-espagnole. Le Judaisme et les Juifs en Espagne* (1913); *Contributions à la philosophie historique juive* (1914); *Chassidisme et Zaddikisme* (1919); *Homilétique et rhétorique* (1923). A complete edition of his works appeared from 1923 to 1932 under the title of *Oeuvres complètes.* The fourth and fifth volumes of the journal *Sinai* were dedicated to the celebration of Nemirower's sixtieth birthday.

Lit.: American Hebrew, Feb. 7, 1936, p. 353; March 27, 1936, p. 517; Herbert, Edward, *ibid.,* Dec. 1, 1939, pp. 8, 16; *Opinion,* Dec., 1939, p. 7, *Jewish Chronicle* (London), Nov. 24, 1939, p. 6.

NIEROP, AHASVERUS SAMUEL VAN, jurist, Dutch political leader and Jewish communal worker, b. Hoorn, Holland, 1813; d. Amsterdam, Holland, 1878. In 1839 Nierop became a lawyer at Leyden, and within a few years was generally esteemed as one of the greatest attorneys of his country. By 1850 he was elected member of the second chamber of the Dutch parliament, and although he was defeated at the following election, he continued to exercise influence over Dutch political life until he was reelected. During the last

David Nieto

two decades of his life Nierop was member, and for some time president, of the central and permanent commission of the Dutch States-General, which was composed of members of the Upper and the Lower House of the Dutch parliament. He was thus able to protect Jewish rights and interests with unflagging ardor. Nierop contributed to the *Jaarboeken for Israelieten in Nederland,* and to several juridical periodicals. He was member of the Municipal Council of Amsterdam for many years.

NIEROP, FREDERICK SALOMON VAN, economist, b. Amsterdam, Holland, 1844; d. Amsterdam, 1924. After having been a lawyer from 1866 to 1870, Nierop was appointed (1871) director of the Amsterdamsche Bank, founded in the same year. The principal task of the Amsterdamsche Bank was to support commercial relations between Holland and Germany. Nierop became closely connected with many important commercial, financial and industrial enterprises of both countries; but he did not neglect cultivating relations with Belgium, France, and England. Nierop's directorship was characterized by a cautious conservatism which enabled him to keep up his banking house even in times of crisis. In 1920 he resigned his directorship and was elected president of the board of trustees of the Amsterdamsche Bank. His son, Hendrik Abraham Nierop (b. Amsterdam, 1881), succeeded him as director. Nierop was member of the Municipal Council of Amsterdam, and, from 1895, member of the Upper House. From 1898 he was president of the Central and Permanent Commission of the Dutch parliament.

NIETO, DAVID, scholar and preacher, b. Venice, Italy, 1654; d. London, 1728. Active as a physician and preacher at Livorno, Italy, he started his literary career with a treatise, *Paschologia,* in which he pointed out the irregularities in the Christian calendar from the Council of Nicea, in 325, to 1692. This work, dedicated to his friend, Cardinal Maria de Medici, was published in London in 1702; a year earlier Nieto had been appointed head of the Sephardic community of the city. When he published his theological treatise, *Della divina providencia* (1604), he was accused of a

leaning toward Spinoza's pantheistic philosophy—which at that time was equivalent to the charge of atheism—until Haham Zebi Ashkenazi of Altona, to whom the work was submitted, decided in his favor.

In his *Matteh Dan* (1714), five dialogues which appeared in Hebrew and in Spanish, he defended the Oral Law against the teachings of the Karaites. His *Esh Dath* (1715) assails the followers of Nehemiah Hayyun, a pseudo-messianic leader. Nieto wrote Hebrew, Latin, Spanish, Portuguese and Italian with ease. The time for the beginning of the Sabbath eve, determined by Nieto for the longitude of England, is still accepted in that country. He distinguished himself also as physician, mathematician, philosopher, historian and poet.

Isaac Nieto (1702-74), son of David Nieto, was also Haham of the London Sephardic congregation. His translation of the prayers into Spanish formed the basis of the later English translation.

Lit.: Solomons, Israel, "David Nieto and Some of His Contemporaries," *Jewish Historical Society of England, Transactions*, vol. 12 (1931) 1-101.

NIETZSCHE, FRIEDRICH WILHELM, philosopher and lyric poet, and one of the most original German thinkers, b. Röcken, Saxony, Germany, 1844; d. Weimar, Germany, 1900. With his sharp criticism of prevailing circumstances he introduced a new period and view of life. He impressed upon the world the terms "Superman," and "Master-spirit," as opposed to "Slave-spirit," which were adopted by the Nazis into their political program.

Nietzsche took a clearly-defined position toward Jews and Judaism. He was at first influenced against Judaism due to his boyhood friendship with Richard Wagner, but soon freed himself from his cultural and spiritual attitude, and in the sharpest of terms denounced Wagner's fight against Judaism. He went so far in his opposition to Wagner as to suspect him of being of Jewish descent, since he called this unconditional antagonism against Judaism "self-hatred." He also broke off his friendship, in the years of his youth, with his brother-in-law Forster, his sister's husband, on account of his anti-Semitic activities. Nietzsche's conception of Jews and Judaism may be classified as follows:

(1) His attitude toward the spirit of Judaism: He prizes the Jewish moral and rejects the "Christian moral"—the ethic of sympathy, as he calls it. He does not object to the Jewishness in Christianity, but is against pseudo-Aryanism, the Paul-ish, and the Buddah-ish. For him Judaism is a religion of life; Christianity, through "Aryan" influence, a religion of death. He finds the great accomplishment of ancient Judaism in the Old Testament. For him it is the book of godlike justice, in which individuals are given such great consideration that it can not be equaled by Greek and Indian literature (*Anti-Christ*). However, he resents this ancient Judaism because Christianity sprang from it. In the place of "Master-spirit," the spirit of the strong, we find there the spirit of the weak and of the holy ones.

(2) Nietzsche's attitude toward the Jews of the present day: As much as he condemns the Jews of today, he nevertheless finds a number of reasons for defending them. "I should like to know how much one ought to overlook, in a final account of a people which, not without the fault of all of us, had the most suffering history of all peoples, and to which the world owes the noblest man (Christ), the purest wisdom (Spinoza), the most moving book and most effective moral code" (*Menschliches, Allzu Menschliches*)? "Therefore a fight against the Jews was always a sign of the lower, envious and cowardly nature, and he who now takes part in it must carry in him a great deal of vulgar sentiment" (*Morgenrote*). In similar spirit Nietzsche says, finally: "Without doubt the Jews are the strongest, the toughest and the purest race that is now living in Europe. A thinker who has the future of Europe on his conscience, in all the plans he makes about this future will have to reckon with the Jews, as with the Russians, as the safest factors in the great game and battle of strength."

On the other hand, Nietzsche expresses himself about his Germans, whose influence he calls the "alcoholic poisoning" of Europe: "It is a lie that the Germans brought the spirit of freedom into the world" (*Anti-Christ*). He calls the Germans the bird of prey, the blond beasts lusting for booty and victory (*Gut und Böse*). It was four years after the Nazis' rise to power that they first understood that they would have to drop Nietzsche as "crown witness" of their program.

The idea of "the conversion of values" (*Umwertung der Werte*) and the return to nature awakened in several Neo-Hebrew poets the call to a Jewish renaissance. Among the Jewish followers of Nietzsche were: Georg Brandes, Karl Joel, Raoul Richter, the Hungarian Jewish physician Paul Landini, the Viennese Siegfried Lipiner, who founded a Nietzsche society, and the English Jewish translator of his works, Helene Zimmer. Many of his works were translated into Yiddish and Hebrew.

NIGER, SAMUEL (Samuel Charney), literary critic and historian, and cultural worker, b. Dukor, near Minsk, Russia, 1883. He was the brother of Daniel Charney, the poet, and B. Charney Vladeck. Niger studied at the Yeshiva in Berezin, then for four years (1896-1900) at the Yeshiva in Minsk. Here he came under the influence of the Zionist and Socialist movements, which the cultural circles of Minsk were seeking to fuse; in Minsk the Poale Zion was formed.

Already well-versed in Russian literature and in the spiritual Zionism of Ahad Haam, Niger joined the Minsk Poale Zion group shortly before he was to have been ordained. He entered on illegal propaganda work, and was arrested several times and imprisoned in Dvinsk, Odessa and Warsaw. Niger participated subsequently in the founding of the Zionist Socialist Party at its first congress in Odessa, and became one of its leaders in 1904. At the beginning of 1906 he was arrested in Kreuzberg, and narrowly escaped the death penalty, saved by efforts made in his behalf by his mother and by comrades.

Niger's political activity drew him into writing. He turned to Yiddish in 1902 or 1903, drafting various secret party brochures and proclamations. In 1906 and 1907 he was contributing editor to the legalized party organ *Der Neier Veg* (Vilna), which had to change its name twice because of censorship difficulties: first to *Dos Vort,* then to *Unser Veg.* During this period Niger was also writing essays and studies; his discussion of Sholom Asch's *Meshiachs Tzeiten,* published in *Dos Vort* (May, 1907), in which he dwelt on the tragedy of the Galuth, attracted particular attention in literary circles.

The trend of the intelligentsia was away from political to literary interests, and Niger exemplified this change. With A. Weiter and S. Gorelik, he founded the *Literarishe Monatshrift* (Vilna, 1908), first periodical devoted solely to Yiddish literature. A group of young Yiddish writers began to

emerge. Likewise in 1908 occurred the historic conference of Czernowitz, at which Yiddish was proclaimed a national language of the Jewish people. In the dispute between the Yiddishists and the Hebraists, Niger took a middle course. He did not deny the significance of Hebrew literature, but claimed for Yiddish the right to give literary expression to the awakening national Jewish consciousness.

Actually Niger became leader of the Yiddishists, his journal the organ of the renaissance of Yiddish literature. He paid due homage to the classics, but his own energies were temporarily devoted to the younger writers, so that he might later return to the classics, especially to Mendele Mocher Sforim and to Sholom Alechem, whom he made subjects of life study. In the meantime his own reputation as a critic was growing.

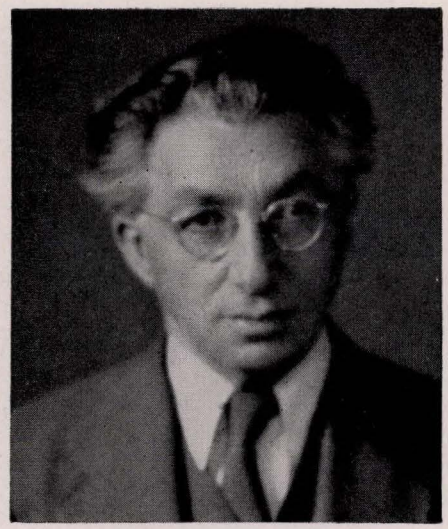
Niger went to the German capital in 1910 to study at the University of Berlin, and during the next two years he attended the University of Bern. Then he was called to Vilna by the publisher, B. Kletzkin, to edit the new monthly, *Yiddishe Velt,* and under Niger's editorship it became a model literary and social review of Jewish interest.

In 1913 he was editor also of *Pinkes,* a year book issued by Kletzkin; in his own contribution to that publication his career as literary historian had its inception. Niger was made editor of *Die Voch,* a weekly founded in Vilna (1914) and stopped almost immediately by the outbreak of the first World War. The following year he was sent to Saratov as representative of Yekopo, a Jewish relief organization in Petrograd, and labored for the establishment of children's hostels. In Petrograd he not only worked on behalf of Jewish schools (1916), but wrote in Russian, Yiddish and Hebrew for publication.

The Bolshevik revolution of October, 1917, found him in Petrograd where, in recognition of his nonpartisan point of view, he was entrusted with the editorship of the official weekly, *Kultur un Bildung.* In 1918 he left Petrograd for Moscow, then went to Vilna. An attempt—in collaboration with his former colleague A. Veiter—to reestablish *Die Voch* in Vilna was cut short by the Bolshevik occupation of that city. Again Niger was entrusted with the editorship of the official publication, *Die Neie Velt,* and permitted to engage in nonpolitical cultural work. But with the entry of the Polish armies into Vilna (April, 1919), Niger, Weiter and Leib Jaffe (living in the same house) were arrested. Veiter was shot; Niger and Jaffe were saved through intervention with Josef Pilsudski by leaders of the Jewish community. For a while Niger edited the daily *Der Tog* in Vilna, but in October of that year he migrated to the United States. A brief affiliation with the *Forward* was followed by his joining the staff of the *Tog* (Day), where he began a series of columns and literary critiques which he was continuing in 1942.

In the United States, Niger's manifold literary and cultural activities made him the prime figure in Yiddish literary development. His contributions to his newspaper and to various periodicals with which he collaborated or which he edited were supplemented by public lectures and by courses which he gave at the Jewish Teachers' Seminary and at the teachers' classes of the Workmen's Circle. He served as president of the Sholom Alechem Folk Institut, and edited (1921—) its *Kinder Journal;* he helped found and was head of the American section of the Yiddish Scientific Institute. When its headquarters moved from Vilna to New York (1941), he became head of its central committee.

Niger was a member of the executive committee of Ziko, central Yiddish culture organization, and president of the Louis Lamed Foundation for the Advancement of Hebrew and Yiddish Literature of Detroit, which awards prizes for



Samuel (Charney) Niger

Hebrew and Yiddish literature. On behalf of the Fund, Niger wrote *Die Tzveishprachigkeit fun Unser Literatur,* where he renewed his old hope of unifying the Yiddishist and Hebraist factions in Jewish literature. Niger made a number of studies of the leading figures in the Haskalah (Enlightenment) movement. In the *Tzukunft,* the new series of which (1941) Niger co-edited, he started a series of studies of pioneers in American Yiddish literature.

It is characteristic of Niger that as literary critic he is also a literary historian; in his appraisals he seeks to presage that which is likely to survive. His artistic ideals, rooted in the early days of Jewish literary rebirth and nourished during his studies of European literature and philosophy, blend varied elements in a larger balance. National heritage and tradition are to him the chief sources of artistic inspiration, but the inspiration must break through individualistically and without coercion. It must be a serene art, reflecting what is eternally human; esthetics, he holds, is not isolated from social influence.

Niger excels as the judge of a historical epoch, and though he prefers not to be the leader of a new epoch, he is among the first to discern, analyze and evaluate new literary occurrences. He has been a guide for the reader, whom he considers half artist: a participant in art. Niger portrays a writer through the writer's own works, through citations which he analyzes. His own style is expository, objective and solid, but replete with subtleties that indicate a vocabulary of rich subjectivity. He is adept at delicate comparisons: "We Jews cannot have a life of art, we can have only an art of life."

In a certain sense, Niger has been a living symbol of Yiddish literature, having traversed the path of its evolution since the days of its early triumph in Europe, when he was enthralled by the young writers. His arrival in the United States occurred at the time when Yiddish literature was in the ascendant there, and he helped teach the reader to appreciate and marvel at it. When the end of immigration brought a decline that led writers to despair, he turned to encouraging them, and to seeking unity between the various segments of Jewish life and culture.

Niger has written on virtually every Yiddish writer and literary theme, and discussed every problem with which modern Yiddish literature has been confronted. Because of his long-range view and the depth of his understanding of literature, his studies in toto might easily represent the foundation for an extensive history

of the entire Yiddish literature. He has been generally regarded as the dean of Yiddish literary criticism.

Ten volumes of his selected works have appeared: *Vegen Yiddishe Shreiber,* two volumes (1912); *Die Yiddishe Literatur un die Lezerin* (1919); *Shmuessen vegen Bicher* (1922); *Lezer, Dichter, Kritiker,* two volumes (1928); *Sholom Aleichem* (1928); *Mendele Mocher Sforim* (1936); *In Kampf far a Neier Yiddisher Dertziehung* (1941); *Die Tzveishprachigkeit fun Unser Literatur* (1941).

NIGGUN, a term derived from the Hebrew *naggen,* which means approximately "to make music"; it is therefore used in the sense of "music" and especially "melody," mainly by writers on the ritual and by poets of the Middle Ages. Traditional song distinguishes two principal forms of Niggun: (1) the rhythmic manner, for shorter texts, such as the Shema; (2) recitative melodies, not strictly bound to rhythm and time, for the longer prayer sections, such as the daily Eighteen Benedictions (Shemoneh Esreh).

See also: CANTILLATION; GEMARA NIGGUN; MUSIC, SYNAGOGAL.

NIGHT PRAYER. The night prayer owes its origin to the natural religious feelings of man. When it was made an obligatory prayer in Mishnaic times, it was given the content of the Maarib, or evening prayer of today. However, when the Evening Service was transferred to the early hours of the evening, a special prayer was introduced directly before the time for going to sleep; this was known of as early as in the period of the Amoraim (*Ber.* 46-47, 60b). Since the nucleus of the night prayer is the Shema, the prayer is called also Keriath Shema Al Hamittah ("the reading of the Shema upon the bed"). It is introduced by the petition Hamappil ("He Who causes the bonds of sleep to descend upon my eyes"; *Ber.* 60b); this is followed by *Ps.* 91 and 3, later also by *Ps.* 128 and by passages taken from the Evening Service (thus the Hashkibenu), and by other passages from the Bible having protection and safety as their content. Finally, under the influence of mysticism, there was added an appeal to the four guardian angels Michael, Gabriel, Uriel and Raphael; this is the sole invocation of the angels in the ordinary prayer-book. A still later addition to the night prayer was a detailed confession of sin (Viddui). The mystical tone of the night prayer is evidenced by the fact that several parts of it are repeated three times, and that certain permutations of words occur.

Reform Jewish prayer-books usually contain a short form of night prayer. A shorter form is given for children, and a longer one for adults. Sometimes the Adon Olam hymn is used as a night prayer because of the last verse, which commits the soul to God.

NIKOLSBURG (Czech, Mikulov), town in southern Moravia with about 12,000 inhabitants in 1942. The first reference to Jews there is dated 1450, and as a large synagogue was built in the town in the same year, it is probable that there had been a Jewish community for some time. In 1560 there were thirty-two Jewish families, each one of which had to work forty days in the year, or pay an equivalent in cash, for the count; records of the same year mention "the rabbi's house." In 1591 the Jews were granted the privilege of having a free Jewish judge by Duke Maximilian of Dietrichstein; new rights were granted by the next duke, Cardinal Francis Joseph. From 1653 there was a Hebrah Kaddisha (burial society) there, and at that time the Jews paid 2,126 florins in annual taxes and contributions.

The community suffered from a Turkish raid in 1663, but increased through exiles from Vienna in 1670. It became a great trading center, of such importance that in 1682 a fair was postponed because the proposed date fell on Rosh Hashanah. In 1754 there were 107 Jewish houses, including a community center and a hospital. By 1868 the community was able to maintain twelve synagogues, but after 1918, when Moravia became part of Czechoslovakia, there were only two: the Altschul and the Neuschul. The Jewish population grew from 3,020 in 1793 to almost half that of the town in the 1860's; after that it steadily decreased and by 1938 there were no more than about 900 Jews in Nikolsburg.

Besides the very old houses and the school which was maintained in the 20th cent., the Nikolsburg Yeshiva was famous and widely known. Among the noted rabbis of the town were David Oppenheim of Worms, whose famous library was sold to the Oxford library for 9,000 thalers, Mordecai Benet (d. 1829), Nahum Trebitsch (d. 1842) and Samson Raphael Hirsch. These were all chief rabbis of Moravia and did much to build up the Yeshiva and advance the culture of the town. Other later rabbis include Meier Feuchtwang (1840-88) and his son David (b. 1864), later chief rabbi of Vienna. A particular patron of the community was Emil Schweinburg (d. New York city, 1919), who gave it a grant of $1,500,000.

NILE, principal river of Egypt, which owes its prosperity to its waters and silt. The usual Hebrew term for Nile is *ye'or,* which may be equivalent to the Egyptian *'aur;* the word is used in the plural (*Isa.* 7:18) to mean the Nile canals. An old but erroneous identification of the Nile with Gihon, one of the rivers of Paradise (*Gen.* 2:13), is based on a misunderstanding of the term Cush in the passage. The Bible also uses the term *shihor* to denote the Nile or its branches. The Nile plays a prominent part in the early stories in *Exodus,* and is used by the prophets as the symbol of Egypt.

NÎMES, city of Southern France, with 90,000 inhabitants (1940), of whom only a few were Jews, not sufficient to form a congregation. Hilderic, count of Nîmes, permitted a number of Jews who were driven

Aron Nimzowitsch

out of Spain by King Wamba to settle in the city (672). In the 12th cent. the community was one of the most important in Languedoc; a Jew, Durand, held the high position of sub-provost. One of the most celebrated rabbis of the Middle Ages, Abraham ben David, a bitter enemy of Maimonides, headed the famous Talmudic academy of Nîmes. Banished from the city in 1306, the Jews returned in 1359, to be expelled again in 1394. Not until 1680 were a small number of Jews allowed to settle in Nîmes, but even this new community was soon expelled and its property confiscated.

A Jewish settlement which became permanent was not established until the eve of the French Revolution. Under the reign of terror Joseph Carcasson was executed because, like his fellow-citizen David Crémieux, he refused to recognize the "Cult of Reason" as a substitute for positive religion (1794). Five Jews from Nîmes belonged to the French Sanhedrin. Nîmes was the home town of the famous politician, Isaac Adolphe Crémieux.

NIMROD, a legendary character of ancient Biblical story. He is described in *Gen.* 10:8-11 as the son of Cush, and as a "mighty hunter" and "strong man" (*gibbor*) whose kingdom embraced Babylon, Erech, Accad, Calneh and other important Mesopotamian centers.

The historicity and identity of Nimrod are alike doubtful. The following are the leading views:

(a) Nimrod is the Sumerian Amar-ud, or Marduk, supreme god of Babylon.

(b) He is identical with Nazimarattas, a minor king of the Kassite dynasty of Babylon (about 1350 B.C.E.), the name of his father, Cush, standing for Cash, i.e. Kassite.

(c) Nimrod, the mighty hunter, is identical with the Babylonian mythical hero Gilgamesh, described in analogous terms.

(d) He is identical with Lugal-Marada (or Lu-Marada, or En-Marada?), an ancient hero, apparently hailing from the region of Marad, who is celebrated in Babylonian myth.

(e) He is identical with a Sumerian hero-god whose name is variously read Ninurta or Namurta (Nimrod), and who is in turn identical with Orion, the famous hunter of classical mythology. On this theory, the Hebrew word *gibbor,* usually rendered "mighty man," means "giant," Orion always being represented as a giant and being actually called *jabar* in Arabic.

Of these views, (a) and (b), dating from the early age of Assyriology, now find little acceptance among scholars, (c) being regarded as by far the most plausible.

In rabbinical literature, the name Nimrod is connected with the Hebrew verb *marad,* "rebel," Nimrod being regarded as the great rebel against God. Post-Biblical legend regards Nimrod as a giant, and as the warrior king of the descendants of Ham. Through confusion with the fact that he is said to have ruled Babel (Babylon), he is sometimes taken to be the instigator of the Tower of Babel. He is further associated with Abraham, the legend being that through hostility against the patriarch's belief in God, Nimrod ordered him cast into a furnace, from which, however, he emerged unscathed. Some versions of the story add that Nimrod and his accomplices thereupon met with a sudden death through an earthquake. This tale is common not only in the Jewish Midrash, but also in early Christian literature and among the Samaritans.

The large mound to the southwest of Babylon, which marks the site of the ancient city of Borsippa, and which was first excavated by Sir Henry Rawlinson in 1854, was known to the local Arabs as Birs-i-Nimrud, being believed to be a tower built by Nimrod. Similarly, two great pillars in the Citadel of Urfa, the ancient Edessa, are popularly known as "the throne of Nimrod," although they are, in fact, of no such hoary antiquity, dating, according to Burkitt, from the time of "the old native dynasty of the Abgars and Ma'nus of Edessa."

NIMZOWITSCH, ARON, chessmaster, b. Riga, Latvia, 1887; d. Copenhagen, Denmark, 1935. He divided second and third prizes with Spielmann at San Sebastian in 1912, and in the international chess tournament held at Marienbad in 1925 he shared the two first prizes with Akiba Rubinstein. In the international chess tournament at Dresden in 1926 he won first prize, defeating Alexander Alekhine and Rubinstein, and gained first prize also in the Hannover tournament in 1926. He won first prizes also at Berlin in 1928 and at Carlsbad in 1929. His *My System* was translated into English (New York, 1930).

NINEVEH, capital of Assyria, situated on the left bank of the river Tigris, opposite Mosul. The city was of great antiquity; the Bible assigns its founding to the time of the legendary Nimrod (*Gen.* 10:11), and excavations point to its beginnings in hoary antiquity. The chief deity of the city was Ishtar, known also as Nina. The location of Nineveh favored its growth and importance, and it became the capital of

the Assyrian empire at least as early as 1100 B.C.E. Under the great Assyrian kings the city was enlarged and beautified; Sargon built a great wall to unite three other cities with it, and it is this enlarged city to which *Jonah,* speaking of Nineveh as a city of three days' journey, probably refers. The city was besieged and taken by the Babylonians and Medes in 612 B.C.E., and ruined so completely that it was never again inhabited. *Nahum* graphically depicts the destruction of the city. Modern excavations on the site have brought to light such valuable objects as the library of Ashurbanipal.

NIRENSTEIN, SAMUEL, law secretary of the New York state Supreme Court, b. Hartford, Conn., 1899. He received his M.A. degree from the University of Pennsylvania in 1921, his Ph.D. degree from Dropsie College in 1922, and his LL.B. degree from Columbia University in 1925. When he was appointed law secretary of the Supreme Court of New York state (1932), Nirenstein became the first Orthodox Jew to hold this office. He was for a time editor-in-chief of the *Columbia Review,* and was affiliated with the *Orthodox Union.* He was author of *The Problem of the Existence of God in Maimonides, Averroes and Alanus* (1927). Nirenstein was elected president of the Union of Orthodox Jewish Congregations of America in 1942.

NISAN (a month in the Hebrew calendar), *see* CALENDAR; MONTHS.

NISHMATH KOL HAI ("The soul of all the living"), the paragraph concluding the Zemiroth for the morning service (Shaharith) of the Sabbath and festivals. Its beautiful poetic language, as well as the fact that the text of the prayer is absolutely identical in all the various rituals (Minhagim), indicate that it is of early composition. The opening words of the Nishmath Kol Hai are mentioned as early as in the Talmud (*Pes.* 118a), but its author is unknown. The legend was widespread in France and Germany during the Middle Ages that the apostle Peter composed the prayer; however, Rashi utterly rejected this legend. In its mode of expression the hymn is similar to the concluding benediction after the Hallel, the *Yehallelucha* cited likewise in *Pes.* 118a. The Talmud commentator Samuel ben Meir regarded the Nishmath Kol Hai as merely an elaboration of this; in this assumption he is probably correct. The Nishmath Kol Hai is found also in the Passover Haggadah as the concluding benediction of the Hallel.

Lit.: Elbogen, Ismar, *Der jüdische Gottesdienst,* 113; Singer, S., and Abrahams, I., *The Authorised Daily Prayer Book* (1922) 125-26, cxli-cxlii; Idelsohn, A. Z., *Jewish Liturgy* (1932) 134.

NISSÉ, BERTRAM SYDNEY, physician. He received his medical degree from the University of London Medical School, and became associated with various hospitals in the London metropolitan area. Specializing in rheumatism and heart conditions, Nissé was for a time resident medical officer, later becoming chief assistant, at the National Heart Hospital. He was also honorary physician to the British Red Cross Society's Clinic for Rheumatism. In addition to writing for various medical journals in England and other countries, Nissé was the author of *Rheumatism* (1938).

NISSELOVICH, LAZAR NISSENOVICH (Leopold Nikolaevich), jurist, b. Bausk, Courland, 1862; d. 1913. He graduated from the University of Leningrad in 1881 and received a gold medal for his work in Russian, *The Bourse, Bourse Institutions, and Decrees Regarding the Restrictions of Gambling at the Stockmarket.* From 1880 to 1882, while working at the Russian State Bank, he wrote several large works on financial and commercial law, and was for a time director of the internal political department of the newspaper *Nabljudatel,* but resigned when it adopted an anti-Semitic attitude. In 1907 he was elected to the Duma from the province of Courland as a member of the Constitutional Democrats. His report on the Jewish question in Russia (1909) contains a clear presentation of the situation of the Russian Jews and their prospects; his work *History of Factory Legislation in the Russian Empire* (Russian; 1883) was published by order and at the expense of the Russian Ministry.

NISSENBAUM, ISAAC, preacher and author, b. Bobruisk, White Russia, 1868. He was one of the leading Mizrachists in Warsaw whose Hebrew sermons of Zionistic trend were for a long time the sensation of Jewish life in that city. He published several volumes of sermons and a homiletical work in Hebrew.

Nissenbaum's more important works are: *Hadath Vahatehiyyah Haleumith* (1920); *Hayahaduth Haleumith* (1920); *Kinyane Kedem* (1931); *Rabbi Shemuel Mohilewer* (1930); *Masoreth Veheruth* (1939). His memoirs, entitled *Ale Heldi* (1929), contain abundant material for the history of his time. Other, unpublished memoir material was included in his biography written by Judah Jofes, *Harab Yitzhak Nissenbaum* (1939). In 1942 Nissenbaum was believed to be still living in Warsaw.

NISSENBAUM, SALOMON BARUCH, historian and Hebrew and Yiddish author, b. Lublin, Poland, 1866; d. Lublin, 1926. His first literary work was the translation (published in *Hatzefirah*) of Menachem Mendel Ussishkin's Russian pamphlets on the Jewish colonies in Palestine. For five years Nissenbaum edited the Yiddish newspaper *Das Lubliner Tagblatt;* in 1922 he went to Palestine, where he labored for nine months in the establishing of the Jewish National Library, and then returned to Lublin.

Nissenbaum's works include: *Lekoroth Hayehudim Belublin* (History of the Jews in Lublin; Lublin, 1900; 2nd ed., 1921); *Geschichte der Juden in Polen* (1903); *Yegar Sahadutha,* a collection of photographs of the Jewish cemeteries in Lublin from the 16th to the 19th centuries (Leningrad, 1912); a three-volume history of the Jews in Poland and Lithuania; *Midibre Hayamim Haibrim Belublin* (Chronicles of the Jews in Lublin); historical articles in the Russian Jewish encyclopedia.

NISSI (or NISSIM) BEN NOAH, Karaite writer. Great uncertainty exists as to the date of his life; he was formerly identified with a certain Aha, an alleged

pupil of Anan (hence dating at the beginning of the 9th cent.), but Harkavy found evidence that he lived in Persia not earlier than the 11th cent. Since Nissi knew the Hebrew dictionary of David Alfasi, and seems in his turn to have been known to Judah Hadasi, the latter date appears to be preferable.

Of the works ascribed to him, *Sefer Asereth Hadebarim* is a commentary on the Decalogue, and *Bitan Hamaskilim* is a disquisition on the precepts. Nissi wrote in Hebrew, although his native speech was probably Persian and Arabic, and he claimed to have known some Greek and Latin. He was familiar with the Talmud and later rabbinic literature, and urged his fellow Karaites to study them.

Lit.: Jewish Quarterly Review, New Series, vol. 11, pp. 249-50; Graetz, H., *Geschichte der Juden,* 3d ed., vol. 5, pp. 199-201, 443-45; Steinschneider, M., *Die arabische Literatur der Juden,* 75.

NISSIM BEN JACOB BEN NISSIM (known also as Nissim ben Jacob Ibn Shahin and as Nissim of Kairwan), Talmud exegete, d. Kairwan, Tunisia, about 1050 (according to Graetz, 1055). He was the son of Jacob ben Nissim, head of the Kairwan Yeshiva, and later, after the death of Hushiel ben Elhanan, Nissim was himself head of the Yeshiva. He was a contemporary of Hananel ben Hushiel, and although they lived in the same city, there seems to have been little relationship between them. Nissim corresponded with Hai Gaon and transmitted some of Hai's work to Samuel Hanagid in Granada. Samuel was related to Nissim through the marriage of his son Joseph to Nissim's daughter.

Among Nissim's exegetical works were *Kitab Miftah Maghalik al-Talmud* (in Hebrew, *Sefer Mafteah Manule Hatalmud,* Key to the Locks of the Talmud); *Megillath Setharim,* a notebook on the Halachah; and a commentary on the Pentateuch. Nissim used the Palestinian Talmud as the basis of his interpretations and disputed the Karaite rejections of the Haggadah. He was also the probable author of a *Siddur Hatefillah. Hibbur Yafe,* a collection of tales of comfort, was published in its original Arabic version, edited by Julian Obermann, at New Haven in 1933. Nissim is known to have had many pupils who carried his teachings to Spain as well as through Africa.

Lit.: Schloessinger, Max, in *Jewish Encyclopedia,* vol. 9, pp. 315-17; Graetz, H., *History of the Jews,* vol. 3 (1894) 248-49.

NISSIM BEN REUBEN GERONDI (RaN), *see* GERONDI, NISSIM BEN REUBEN.

NISSIM, CHARLES, Indian public official, b. Bombay, India, 1845; d. London, 1918. He was educated in Bombay, receiving both a secular and a Hebrew training. In 1862 he went to China, where he remained until 1880. On his return to India Nissim became associated with the David Sassoon and Company firm of bankers and merchants as a partner. He was also president of the Bank of Bombay. Among his public posts were that of justice of the peace, membership on the Governor of Bombay's Legislative Council and the honorable presidency of the magistrate for Bombay (1904). Nissim was vice-president of the Jewish Association, and held directive posts in various Jewish communal institutions in India.

MEYER NISSIM, his son, was Lord Mayor of Bombay, and several times a member of the Bombay Municipality.

NISSIM PASHA, JACQUES, Turkish military doctor with the rank of a general of a division, b. Salonika, 1858; d. Salonika, 1903. As military physician in Novi Bazar, Sarajevo and Salonika he improved the sanitary conditions of the Turkish army, and served also as chief surgeon at the Salonika military hospital. He was awarded many Turkish and foreign distinctions. Among his medical works, his treatises on malaria are outstanding.

NISSUIN, *see* MARRIAGE.

NITRA (in Hungarian, **Nyitra;** in German and Judeo-German, **Neutra**), city in Slovakia. Until 1918 Nitra belonged to Hungary; in that year it was made a part of Czechoslovakia. The Jewish community of Nitra began to flourish in the 18th cent., when Jewish merchants were commissioned to purchase supplies for the Austrian army. In 1848 riots broke out in Nitra at the news that the Jews were to receive equal rights.

The number of Jews in Nitra at the middle of the 19th cent. was about 2,500. In the secular school of the community, established in 1855, subjects were taught in Hebrew, German and Latin. During Czechoslovak rule (1918-39) the Orthodox community of Nitra, under its rabbis Aaron Katz (d. 1927) and Moses Katz (d. 1930), maintained a Yeshiva with forty students and a Talmud Torah with 145 students.

Samuel Klein (d. 1940), professor of geography at The Hebrew University, Jerusalem, was deputy rabbi of the progressive community at Nitra until the election of Rabbi Lazar Schweiger in 1929. Béla Szilágyi, Jewish vice-mayor of Nitra, died in 1932.

In the years 1939 to 1942 Jewish-owned property was confiscated; Jews were dragged away to do forced labor, and were taken to ghetto towns pending their deportation to the German-occupied regions of Poland and Russia.

NITTAI (or MATTAI) OF ARBELA, sage who lived in the 2nd cent. B.C.E. He and his superior, Joshua ben Perahiah, form the second of the five pairs (*zugoth*) who transmitted the Pharisaic tradition. His favorite saying ran: "Keep far from a bad neighbor; associate not with the wicked; do not abandon your belief in retribution" (*Aboth* 1:7).

NITTEL (NACHT), popular expression for Christmas eve (December 24th) and the following day, probably corrupted from the Latin *dies natalis* ("birthday," that is, of Jesus). It is sometimes known as Blinde Nacht. In the Middle Ages the Jews were forbidden to appear on streets and public places on the high Christian holidays under penalty of severe punishment; hence the schools and synagogues were closed on those days. Young and old, who were compelled to remain at home, enjoyed themselves with round games; consequently the meaning of the word Nittel received the folk etymological explanation as being an abbreviation for *Nit Iden-Tore-Lernen* ("Jews must not study Torah"). The Christians explained the omission of Torah-learning by the Jews in various ways, but mostly referring to *Git.* 57a, with the superstition that Jesus is comforted only while the Jews are studying, and that the latter therefore cease out of malice. It is also possible that Nittel is a transference

from Hanukah, when round games are played. In Eastern Europe Christmas eve is called by the Jews Blinde Nacht (blind night), perhaps because on that night the light of Torah-learning is extinguished. In such countries, Nittel was governed by the Russian calendar, in which Christmas falls about two weeks later.

NIZER, LOUIS, lawyer and author, b. London, 1902. He was brought to the United States in 1905 and was educated in New York city, receiving his law degree from Columbia University in 1924. That same year he was admitted to the bar in New York. Specializing in legal aspects of the film industry, Nizer was made executive secretary and attorney of the New York Film Board of Trade (1928); in 1942 he still held this position. He was also counsel for various motion picture companies in specific cases. He wrote *New Courts of Industry* (1935) and *Thinking on Your Feet* (1940).

NOAH ("rest"), the tenth in descent from Adam in the line of Seth, and son of Lamech. His story is told in *Gen.* 5:28 to 9:29. Lamech derived his son's name from the verb *naham,* "to comfort," in an apparent play on words. His expression shows pathetically the degeneracy of Noah's time: "This same shall comfort us in our work and in the toil of our hands, which cometh from the ground which the Lord hath cursed" (*Gen.* 5:29). Noah alone of his contemporaries was "righteous and blameless," therefore he and his family alone were to be saved in the catastrophic punishment which God was to bring upon the world. A hundred years after the birth of his three sons the command came to build an ark, 300 cubits long, to bear safely above the deluge the eight persons of his family and a pair of every living species. A parallel account provides for seven of each kind of clean animal. Noah obeyed, and on the tenth day of the second month of Noah's 600th year the assemblage entered the ark. Seven days thereafter, and for forty days, the deluge raged to the height of fifteen cubits above the mountains. After 150 days the water abated, and the ark rested upon Mt. Ararat. To determine the degree of the water's recession, at seven day intervals Noah sent out a raven (once) or a dove (three times). A full year after the flood began the earth was dry once more.

Upon disembarking, Noah erected an altar and offered sacrifices to God, Who in turn promised never again to inundate the earth or to disturb the seasons. A rainbow appeared in the heavens as a sign of the covenant. Noah received the laws against consuming animal blood and against the slaying of one's fellows.

That the Noah-Flood story is probably derived from similar stories of other peoples in the ancient Near East has long been known. In the cuneiform inscriptions of Assyria and Babylonia, Noah corresponds to Xisuthrus (Khasisadra), who learns of the water's abatement by the return of the birds a second time, then with clay on their feet. The twelve-part epic poem of Berosus, an Egyptian priest of the 3rd cent. B.C.E., contains a flood story in the eleventh part under the sign of Aquarius, the water-carrier. Here,

Noah and the flood. From a painting

deified Sit-Napishti or Khasisadra tells the story of the flood to his grandson Gisdubar. Ea, god of wisdom, reveals to Sit-Napishti the intention of the gods to bring about a flood. He commands him to build a ship to save what he can. The latter protests the absurdity of building a ship on dry land, but complies. The ship is completed and provisioned with the aid of Shamash, the sun-god, who fixes the season of flood the evening Sit-Napishti shuts the ark's door. After the seventh day of flood the storm subsides. The patriarch steers the ship to Mt. Nizir, where the ark rests. He sends forth a dove, a swallow, and then a raven to determine the condition of the land. After leaving the ark he sacrifices to the gods. The rainbow of Anu is lighted up. Bel refuses to receive Sit-Napishti's sacrifice until palliated by the friendly Ea. Bel then makes a covenant with Sit-Napishti and his wife, who become gods, dwelling at the mouth of the river.

Noah's latter days, according to the Bible, were spent in vine-growing, which on one occasion led to drunkenness and the exposing of himself while he slept. Although Ham beheld his father's shame, Shem and Japheth modestly covered him. For this, the two younger brothers received a parental blessing, whereas Ham, through his son Canaan, was cursed. Noah, the second father of the race, lived to be 950 years of age. His renown is attested during the Exile by reference to him along with Job and Daniel as a paragon of virtue (*Ezek.* 14:14, 20).

A wealth of tradition was built around Noah in apocryphal and rabbinic literature. A pious, precocious child of angelic appearance, the legends tell, Noah prayed to God while still in the midwife's hands. Lamech consulted his father Methuselah, who in turn consulted his own father Enoch about the miracle. Enoch assured his grandson that Noah, the earth's "consoler," would survive the flood (*Enoch* 106 et seq.). Noah obtained his name only after his invention of farming implements had brought "rest" to the land (*Midrash Haggadah, Gen.* 5:29). The same source states that Noah was born circumcised. While he was widely known as Noah, his father really named him "Menahem" (*Sefer Hayashar,* 1870, p. 56).

Much rabbinic comment centers on Noah's righteousness. Some hold that his virtue was hardly much in so corrupt a generation; others claim that his righteousness was highly meritorious and would have been even more so in a more moral environment (*Sanh.* 108a; *Midrash Gen.* 30:10). It is explained that Noah

married late and begat children at the age of 500, because he feared that they might perish in the flood; or because God rendered him sterile until it was certain his family would not be large enough to necessitate the building of more than one ark (*Midrash Gen.* 26:2). Enoch imparted to Noah his first knowledge that destruction was to befall the earth, whereupon Noah spent 120 years in the building of the ark and in warning his wicked contemporaries, who refused to hearken (*Sanh.* 108a). Another tradition states that fifty-two years were required; yet another, only five years to build the ark. Midrashic sources also describe how the angry mobs that wanted to be admitted stormed the ship but were killed by wild beasts. Noah himself was attacked by a lion within the ark and thereafter limped. In addition to all the inmates of the ark, Noah used to feed Og, who clung outside to one of the timbers. When the raven protested against being sent out on the water, Noah responded that the raven was of no use either as food or sacrifice. But the raven was spared to return, as it was destined to feed Elijah (*Midrash Gen.* 33:6).

Noah's lapse led the rabbis to divest him of much of his former merit. He is regarded as one of the three worthless husbandmen. He was the first to plant, to become drunk, to curse, and to introduce slavery (*Tanhuma, Noah* 20). His vines were the result of planting a little shoot cast out of Eden with Adam. When Noah's grandchildren had greatly increased in number, they were stricken because of their sins. Noah assembled his family, offered sacrifices, and prayed for deliverance. God sent Raphael, who taught Noah how to cure all diseases. This book of cures was handed down for generations, passing into the hands of physicians of India and Greece (*Jubilees* 10:1-14). Noah would have lived 1,000 years, but he gave fifty to Moses. He was buried on Mt. Lubar, where he settled after the flood. Noah was by some identified with Janus, and with Melchizedek, priest-king of Jerusalem.

NOAH, MORDECAI MANUEL, American diplomat, playwright and Zionist Utopian, b. Philadelphia, 1785; d. New York city, 1851. He was one of the most colorful American Jewish pioneers of the post-Revolutionary era. Of Sephardic descent—his father, a soldier in George Washington's army, was related to Samuel Ribiero Nunez, Portuguese court physician who emigrated to Savannah, Ga., in 1733—he was left an orphan at an early age and was apprenticed by his grandfather to a carver. But he went to school in his free hours, educated himself by reading a great deal, and embarked upon the journalistic career in 1800. In Charleston, S. C., where he studied law, he became editor of the *City Gazette,* to which, under the pen-name of Muley Molack, he contributed articles advocating war with England.

In 1813, during the War of 1812, the government appointed Noah consul to Tunis, North Africa, with the

Mordecai M. Noah

task of liberating American sailors captured by the African pirates and of strengthening American prestige in the Mediterranean. Noah executed his work with great success. It is interesting that, in a reply to a British protest charging that, according to a treaty, the United States, as a Christian Power, ought not sell a British prize or its cargo in an Algerian port, Noah contended that by virtue of an earlier treaty the United States could not be classed as a Christian state, thus creating a precedent. In 1816, however, his political opponents utilized this incident to have him recalled from his post, clearly indicating that they took offense at his Jewish faith.

After his return to New York, Noah was engaged primarily as a journalist, but also held successively the offices of sheriff, judge and surveyor of the port of New York and was a major in the New York state militia. He published and edited several newspapers, including the New York *Enquirer* (still in existence in 1942), and aided James Gordon Bennett when the latter established the New York *Herald.* A prolific writer, he published *Travels in England, France, Spain and the Barbary States* (1819); *Essays of Howard; On Domestic Economy* (1820); and wrote numerous plays, dealing with American life and history, which became very popular. His *Marion, or The Hero of Lake George* was revived on the stage by students of Columbia Uni-

The sacrifice of Noah. From a painting by J. A. Koch

versity in 1932, in celebration of the bicentennial of Washington's birth.

Noah deserves a place of honor in Jewish history because of his efforts to solve Jewish problems in a manner which anticipated the ideas of Leo Pinsker and Theodor Herzl. His travels had brought him into contact with Jewries living in great poverty and oppression. As early as January 19, 1820, he petitioned the state legislature to permit the sale to him of Grand Island in the Niagara River "for the purpose of attempting to have the same settled by emigrants of the Jewish religion from Europe," but not until September, 1825, did he issue his appeal to world Jewry, solemnly inviting his coreligionists to join him, Mordecai Manuel Noah, "Citizen of the United States of America, late Consul of the said States for the City and Kingdom of Tunis, High Sheriff of New York, Counselor at Law and, by the grace of God Governor and Judge of Israel," to follow him to "Ararat," as he called the planned "City of refuge for the Jews," thus linking his name to that of the Biblical Noah, whose ark rested on Mount Ararat. On September 15, 1825, after dedicatory services in St. Paul's Church in Buffalo, the foundation stone was laid—in the village, not on the island itself, as there were not sufficient boats for the crossing. But the appeal found no echo among the European Jewish masses, and the stone, later deposited with the Buffalo Historical Society, was to remain the only trace of Noah's somewhat fantastic, though well-intentioned, project.

Despite this lack of enthusiasm for his plan among his fellow-believers, Noah continued to participate fully in Jewish affairs. He advocated the reform of the religious service when, in 1834, he made the chief address on the occasion of the consecration of the Shearith Israel synagogue on Crosby street, New York. In 1837 he delivered a lecture, *The Evidences of The American Indians Being the Descendants of the Lost Tribes of Israel* (1837), trying to prove the germane origin of the Red Indians and the Jews. In 1842 Noah was elected to the leadership of the Hebrew Benevolent Society. His *Discourse on the Restoration of the Jews* (1844) was a return to his favorite idea of a Jewish mass settlement, but this time he urged the return of Israel to Palestine as the only feasible solution of the Jewish question.

Opinions about his character, especially in regard to his colonization project, are contradictory. While M. Raisin praised him as "the first real Zionist," whose only fault had been that he was far ahead of his times, Richard J. H. Gottheil admitted the grotesquerie of Noah's project, and Horace M. Kallen even found the Utopia of Noah "overlaid a little with elements of mountebankery and melodrama . . . damned from the outset by its charlatanic character," although he admitted the author's "good sense and sound statesmanship." ALFRED WERNER.

NOAH, SAMUEL, American soldier and adventurer, b. London, 1779; d. Mount Pulaska, Ill., 1871. He was a cousin of Mordecai Manuel Noah. He migrated to the United States in 1799, and was graduated from West Point in 1807. Assigned to the Second Regiment as ensign, he was detailed to watch smugglers on the Florida frontier. Discouraged by the slowness of promotion, he resigned his commission as first lieutenant in 1811.

However, the next year he accepted a commission in the ragged, undisciplined band of Mexican and Anglo-American filibusters who were determined to free Texas from Spanish control. Marching from their headquarters on the Brazos River to Fort Bahia, they entered the royalist stronghold on November 14, 1812. However, the attackers were themselves besieged by the royalist troops, and it was not until March 28, 1813, that the garrison made its escape. Shortly thereafter, the capital of Texas, Salcido, was seized by the command under which Noah served.

Informed that the United States and Great Britain were at war, Noah journeyed to Washington, where President James Madison refused to recommission him. He saw service during the War of 1812, however, as a private under the command of Captain Benjamin Dunning, who was entrusted with the defense of Brooklyn. His military career ended, Noah taught school near Goshen, N. Y., until 1820. Then he went to England for a two-year stay, and on his return to the United States resumed the duties of schoolmaster, this time in Virginia. This career he abandoned in 1848. His declining years were unhappy.

NOAHIDE LAWS. According to the rabbinic interpretation of certain passages in *Genesis,* Adam, Noah, and his descendants (the whole human race) were commanded by God to observe the following seven commandments, by refraining from: (1) idolatry; (2) adultery and incest; (3) bloodshed; (4) blasphemy; (5) robbery; (6) social injustice; (7) eating flesh cut from a living animal (*Tosefta Abodah Zarah,* at the end; *Sanh.* 56a-60a; Maimonides, *Hilchoth Melachim* 9 and 10). Early echoes of these laws are to be found in Noah's final charge to his family as described in the book of *Jubilees* (7:20-33).

The Talmud refers to thirty laws which non-Jews are supposed to observe and to which they will faithfully adhere in the Messianic period (*Hul.* 92a; *Yer. A.Z.* 2:1). Menahem Azariah Fano (*Asarah Maamaroth,* Maamar Hikkur Din, part 3, chap. 21) enumerates these thirty laws as details of the seven basic commandments.

The punishment for infraction of most of these laws is death by strangulation. Unlike Jewish law, a Noahide could be convicted on the testimony of even only one witness and could be sentenced by even only one judge. Similar to Jewish law, however, women were disqualified to act either as witnesses or as judges. In most cases the details of these seven laws were interpreted more stringently for the Jew than for the Noahide, but in some particulars the reverse is true. Jewish law divides all non-Jews into three categories: (1) the "Akkum," one who does not observe the Noahide laws; (2) the "Ben Noah," one who does observe the Noahide laws; and (3) the "Ger Toshab," one who, before Jewish courts, declares his intention of adhering to the Noahide laws, and is then permitted to reside in Palestine.

Although the Jews were never in a position to compel any large community of non-Jews to follow the Noahide laws, nevertheless no non-Jew was permitted to reside permanently in Palestine or to remain a slave of a Jew unless he accepted the Noahide laws. Unlike Christianity, Judaism does not deny salvation to those outside of its fold, for, according to Jewish law, all non-

Jews who observe the Noahide laws will participate in salvation and in the rewards of the world to come (*Sanh.* 105a). Judaism is more than a particularistic religion. It recognizes that spiritual progress is a privilege and obligation of all mankind, and it realizes that civilization is doomed to spiritual and concomitant physical annihilation unless certain basic moral precepts are adhered to.

Hugo Grotius, in the early 17th cent., makes the Noahide laws serve as the basis for his theory of the "Natural Law," which was the foundation of international law and was a "formative principle in the development of Equity." The United States Declaration of Independence, in its appeal to the "laws of nature and of nature's God," was influenced by this concept. John Selden, in the middle of the 17th cent., in his *De jure naturali et gentium juxta ebraeorum,* discusses in great detail the interrelationship between the Noahide laws and all modern laws.

John Toland, an interesting English theologian of the early 18th cent., is of the opinion that even Paul admitted that Christians are still bound by the Noahidic restrictions against idolatry, adultery and incest, and against the eating of the blood or flesh of animals that had been suffocated. According to Toland, the Noahide laws are a link between Judaism and Christianity which means "unity without uniformity" and a "fellowship in piety and virtue." The point that non-Jews are not excluded from salvation if they observe the Noahide laws, which are the "Natural Law," is explained in detail by such Jewish theologians as Moses Mendelssohn in his answer to Johann Kaspar Lavater, and Isaac Baer Levinsohn in his *Zerubbabel.*

A number of Christian sects, such as the Passagii in the 12th and 13th centuries, the various Sabbatarian movements, and the Puritans in England and America, demanded adherence to Mosaic moral law. D. Shapiro (*Yesode Hadath Hauniversalith,* New York, 1936) attempts to show how the social, political and economic problems of modern civilization could be obviated if the Noahide laws were adopted by non-Jews as a universal religion. According to the Haggadah, during the pre-Messianic period the non-Jews who come to Palestine for business purposes will be so greatly impressed by the spirituality and brotherly love in the Jewish state that they will be gradually converted to Judaism until the time comes when all nations will observe the Noahide laws (*Sifre, Deut.* 354; *Seder Eliyahu Zuta,* chap. 12).

P. Biberfeld (*Das noachidische Urrecht,* Frankfort, 1937) is of the opinion that there existed a complete system of God-given laws to which Noah and his descendants were to adhere, of which only the broad principles are recorded in the Talmud. He attempts to prove, by means of copious quotations of parallels, that the Hammurabi code, the Hittite code, and other ancient codes were based on this system of laws. C. Tchernowitz (*Toledoth Hahalachah,* vol. 1, New York, 1934, pp. 333-36), basing himself on a seemingly faulty rabbinic text, avers that the Noahide laws were adopted from the Hittite code.

NOB, a city of priests located somewhat north of Jerusalem (*Isa.* 10:32), in the territory of the tribe of Benjamin. After the destruction of Shiloh by the Philistines the descendants of Eli found refuge there. These rendered assistance with food and weapons to David on his flight from Saul, as the former had declared that he was on a mission of the king. Doeg, an Edomite, happened to be at the shrine at the time; when Saul arrived in pursuit, Doeg informed Saul of the occurrence and was ordered by him to slay the priests. The only one to escape was Abiathar, who bore away the ephod to David (*I Sam.* 21 and 22).

NOBEL PRIZE WINNERS, JEWISH. The Nobel Prizes represent a large grant, in the sum of nine million dollars, by Alfred Bernard Nobel (1833-96), Swedish engineer and inventor of dynamite. They were founded in 1896, and the first prize, awarded by the Nobel Foundation established in that year, was given in the year 1901. Five prizes are granted each year for important accomplishments in literature, physics, chemistry, medicine, and peace. These prizes are awarded through the Nobel Foundation and Institutes, with the Swedish Royal Academy of Science determining the awards for physics and chemistry, the Caroline Institute of Sweden those for medicine, and the Swedish Academy those in the field of literature. Each of the five annual prizes amounts to an average of $40,000, but they have, in the past, ranged from $35,000 to as high as $46,350; the Nobel Prizes may be divided. The award of the Nobel Prize is regarded as the greatest distinction in all fields of intellectual accomplishment.

Among the 207 Nobel Prize winners up to the year 1940, there were twenty-one Jews (four of them being half-Jews, their mothers only having been Jewesses), or 10.12 per cent of the total of the winners. The proportion of Jews in the world's population is about 1 per cent; in Europe and the United States the Jewish population is about 2.4 per cent. Germany records the largest number of Nobel Prize winners, i.e. forty, of whom twelve were Jews (two of them half-Jews), or 30 per cent, although the Jewish population in Germany was less than 1 per cent of the total population when the Nazi blows fell upon the community. In Italy, France and England, which count winners of the Nobel Prize, the number of Jews is very small; in Russia and Poland it was very difficult for Jews to gain access to intellectual occupations, or to secure a university and post-graduate education.

There is an interesting paradox involved in the character of achievement among Nobel Prize winners who are Jews. Whereas enemies of the Jews contend that Jews are superficial, lacking the ability to do serious, exact research, they credit them with ability in the fields of the arts, of beauty, and of literature. However, with the exception of the German poet, Paul Heyse, whose mother was a Jewess, and Henri Bergson, the French Jewish philosopher, there have been no Jewish Nobel Prize winners in literature. On the other hand, the Jews have been strongly represented in the three great fields of science, i.e. physics, chem-

istry, and medicine. Six Jews received the Nobel Prize in physics, four in chemistry, and seven in medicine. Two were awarded the Nobel Prize for their endeavors in the advancement of peace.

By their countries of origin, or of residence at the time they were awarded the prize, the Jewish Nobel Prize winners were represented as follows: Germany, twelve (including two half-Jews); United States, two; France, two; Austria, two; Denmark, one (half-Jew); Russia, one (half-Jew); Holland, one.

The following is an alphabetical list of the twenty-one Jewish and half-Jewish winners of the Nobel Prize in the various fields:

TOBIAS MICHAEL CAREL ASSER (1838-1913), of Holland, awarded the Nobel Prize for peace in 1911. He was the author of important works on economics and law.

ADOLF VON BAEYER (1835-1917), of Germany, whose mother was a Jewess. He was awarded the Nobel Prize in 1905 for his work in the field of chemistry.

ROBERT BÁRÁNY (1876-1936), of Austria (Vienna), awarded the Nobel Prize in 1914 for his work on the physiology and pathology of the vestibular system.

HENRI LOUIS BERGSON (1859-1941), of France (Paris), who in 1928 received the Nobel Prize in literature (philosophy) for 1927 "in recognition of his rich and life-giving ideas and resplendent art with which they were presented."

NIELS BOHR (1885-), of Denmark (Copenhagen), whose mother was a Jewess, received the Nobel Prize in 1922 for his outstanding achievements in the field of physics.

PAUL EHRLICH (1854-1915), of Germany, in 1908, received the Nobel Prize in medicine together with Élie Metchnikoff, of Russia. It was said of Ehrlich, at the time of the award, that "he is the exponent par excellence of the application of a fundamental science such as chemistry to the elucidation of medical problems."

ALBERT EINSTEIN (1879-), of Germany (later he emigrated to the United States, of which he became a citizen), awarded the Nobel Prize in physics in 1921, not for his famous theory of relativity, which had already been published, but "for his services in the theory of physics, and especially for his discovery of the law of photo-electric effect."

JAMES FRANCK (1882-), of Germany (Göttingen), who in 1925 shared the Nobel Prize in physics with Gustav Hertz for "their discovery of the laws governing the impact of an electron upon an atom." In 1933 Franck left Germany and came to the United States, where, in 1939, he was appointed professor of physical chemistry at the University of Chicago.

ALFRED H. FRIED (1864-1921), of Germany (he was born in Vienna, Austria, but at an early age settled in Berlin, where from 1891 on he devoted himself to propaganda in behalf of peace), who received the Nobel Prize in peace in 1911, at the same time as Tobias Michael Carel Asser, for his numerous books and publications as the champion of the idea of permanent peace among the nations.

FRITZ HABER (1868-1934), of Germany, director of the Kaiser-Wilhelm Institute in Berlin-Dahlem, and noted as the discoverer of *Ersatz* (substitute) materials in the first World War, was, in 1918, awarded the Nobel Prize in chemistry "for his work in the synthetic production of ammonia from its element."

GUSTAV HERTZ (1887-), of Germany, who, in 1925, shared with James Franck the Nobel Prize in physics for "their discovery of the laws governing the impact of an electron upon an atom."

PAUL HEYSE (1830-1914), of Germany, whose mother was Jewish, won the Nobel Prize in literature in 1910.

KARL LANDSTEINER (1868-), who, born in Vienna, Austria, was awarded the Nobel Prize in medicine in 1930, when he was a member of the Rockefeller Institute of Medical Research, in New York city, "for his discovery of the human blood-groups."

GABRIEL LIPPMANN (1845-1921), of France, professor of physics at the Sorbonne, awarded the Nobel Prize in physics in 1908 "for his method based upon the phenomenon of interference for reproducing colors by photography."

The following table presents the names of the Jewish Nobel Prize winners in chronological order, together with their country of origin or residence and their special field.

Name	*Country*	*Field*	*Year*
*Adolf von Baeyer	Germany	Chemistry	1905
Albert Abraham Michelson	United States	Physics	1907
Gabriel Lippmann	France	Physics	1908
Paul Ehrlich	Germany	Medicine	1908
*Elie Metchnikoff	Russia	Medicine	1908
Otto Wallach	Germany	Chemistry	1910
*Paul Heyse	Germany	Literature	1910
Tobias Michael Carel Asser	Holland	Peace	1911
Alfred H. Fried	Germany	Peace	1911
Robert Bárány	Austria	Medicine	1914
Richard Willstätter	Germany	Chemistry	1915
Fritz Haber	Germany	Chemistry	1918
Albert Einstein	Germany	Physics	1921
Otto Meyerhof	Germany	Physics	1922
*Niels Bohr	Denmark	Physics	1922
James Franck	Germany	Physics	1925
Gustav Hertz	Germany	Physics	1925
Henri Louis Bergson	France	Literature (Philosophy)	1927
Karl Landsteiner	United States	Medicine	1930
Otto Heinrich Warburg	Germany	Medicine	1931
Otto Loewi	Austria	Medicine	1936

(*those marked with an asterisk were half-Jews, having had only a Jewish mother)

OTTO LOEWI (1884-), of Austria, then professor at the University of Graz, but who, in 1942, was at New York University, was awarded the Nobel Prize in medicine in 1936 for his "medical-physiological discoveries relating to chemical transmission of nerve impulse."

ÉLIE METCHNIKOFF (1845-1916), of Russia, whose mother was a Jewess, received the Nobel Prize in medicine, together with Paul Ehrlich, in 1908, for his outstanding contributions in that field.

OTTO MEYERHOF (1884-), of Germany, then at the University of Kiel, was awarded the Nobel Prize in physics in 1922, together with the English physicist A. B. Hill, of London, for the discovery of the correlation between the consumption of oxygen and the production of lactic acid in the muscles. Meyerhof came to the United States in 1940 to teach biochemistry at the University of Pennsylvania.

ALBERT ABRAHAM MICHELSON (1852-1931), of the United States, professor at the University of Chicago, was awarded the Nobel Prize in physics in 1907 "for his optical instruments of precision, and the spectroscopic and metrological investigations which he carried out by means of them."

OTTO WALLACH (1847-1931), of Germany, professor at the University of Göttingen, was awarded the Nobel Prize in chemistry in 1910 "in recognition of the services rendered by him to organic chemistry and chemical industry, through his pioneer work in the field of alicyclic compounds."

OTTO HEINRICH WARBURG (1883-), of Germany, then at the Kaiser-Wilhelm Institute in Berlin-Dahlem, received the Nobel Prize award in medicine in 1931 "for his discovery of the character and mode of action of the respiratory ferment."

RICHARD WILLSTÄTTER (1872-1942), of Germany, received the Nobel Prize in chemistry in 1915, when he was in Munich, for his researches in the chemistry of chlorophyll.

In 1939, due to the outbreak of the second World War, no Nobel Peace Prize was awarded, and in the following year the further awarding of any of the Nobel Prizes was suspended for the duration of the War.

Nehemia A. Nobel

NOBEL, NEHEMIA ANTON, rabbi, b. Totu, Hungary, 1871; d. Frankfort, Germany, 1922. The son of Rabbi Josef Nobel, who later served in Halberstadt, Nobel acquired there a classical education and extensive Talmudic knowledge. From 1896 to 1899 he was Klausrabbiner in Cologne, and at the same time a member of the governing body of the Zionist Federation of Germany and an intimate of Theodor Herzl and David Wolffsohn. After a short period as rabbi in Königsberg he again became a student under Hermann Cohen (1900). Subsequently Nobel was rabbi in Leipzig (1902), Hamburg (1905) and Frankfort (1917). In 1921, as an outstanding Conservative, he was chosen president of the Allgemeiner Deutscher Rabbinerverband and joined the board of the Akademie für die Wissenschaft des Judentums. On his fiftieth birthday a jubilee volume, *Die Gabe,* was published, to which many scholars contributed. At the beginning of 1922 Nobel obtained a professorship of Jewish religious science and ethics at the University of Frankfort, but died soon after.

Nobel was a preacher of whose persuasive power his few printed papers give no conception. A student of Goethe, a mystic and a Cabalist, he lived above all in the Halacha, believing in its perpetuity and in its powers of regeneration.

Lit.: Wolfsberg, O., *N. A. Nobel, 1871-1922* (1929).

NOBILITY, a class favored with privileges of a political, judicial and social nature; it arose at a very early period in all countries of Europe with the exception of Norway and Turkey. Originally it was necessary to be lord of a manor, in addition to possessing good birth, in order to belong to the nobility. It gradually developed into a hereditary class and could be acquired by a patent of nobility granted by a sovereign without one's being simultaneously vested with the possession of a manor.

Until about the 19th cent. Jews could not enter the nobility, as they were not allowed to own land in Christian Europe. Those Jews who occupied high state offices in Mohammedan countries, such as Turkey and Arab Spain, were allowed to use the title Nasi (Hebrew, "prince"), but this title was not associated with the same privileges as that of the Christian aristocracy. The kings of Hungary in the 13th cent. gave land and the title of count to their Jewish chamberlains, thereby defying the hostility of the church and of the hereditary nobility. In the 16th cent. the physician Mordecai, the grandfather of Leon da Modena, was made a knight of the Golden Fleece by Charles V. In 1525 Michael Esofowicz of Poland was made a noble, but his rank was not hereditary. The first Jew actually to be ennobled was Jacob Bassevi, to whom Emperor Ferdinand II of Germany granted a patent of hereditary nobility with the surname "von Treuenberg."

There were several Jews who are known to have been ennobled in the 18th cent. In Russia the Dutch Sephardic Jew, De Vier, chief of police in St. Petersburg, was made a noble by Peter the Great; in Austria another Sephardic Jew, Diego d'Aguilar, was made a Spanish baron by Maria Theresa. By the end of the 18th cent. there were already several Austrian Jews who had been ennobled, and in the 19th cent. the granting of patents of nobility to Jews was no longer of rare occurrence. The greater number of the Jews to be ennobled were those of Austria and England; but many Jews received this rank also in the smaller states of Germany and in the Italian principalities. In most countries the Jewish nobility is extensively alienated from Judaism; in England, however, the Jews who are nobles have remained conscious of their duties to the Jewish people and to Judaism. Isaac Lyon Goldsmid was the first English Jew to be raised to the hereditary nobility, in 1841. Nathaniel Rothschild became a peer in 1885. The English *Jewish Year Book* of 1940 listed ten Jewish peers, five knights grand cross, seventeen baronets, and forty-four knights, all of whom are prominent in social life in England. The most distinguished families are those of the Rothschilds, the Samuels, the Montagus and the Montefiores.

The ennobled Jews of Austria were still more numerous. Some of them participated in the work of the Jewish community; but the second generation usually deserted Judaism. Practically all the early Rothschilds were Austrian barons; the Königswarter, Hoffmansthal and Morpurgo families are also well-known. In Hungary, between 1867 and 1918, hereditary nobility was bestowed upon 280 Jews for outstanding services in the economic or cultural field; twenty-six families among these were made barons. Many of the Hungarian Jewish barons intermarried with the aristocracy of long standing; the barons Dirsztay, Kohner, Hatvany and Weiss actively served Jewish causes.

In Prussia Jews were ennobled only after they had accepted baptism, with but few exceptions, such as Gerson Bleichroeder and Maximilian Goldschmidt-Rothschild. Hirsch-Gereuth and Wassermann were ennobled in Bavaria. Altogether there are about a hundred families of Jews who have been ennobled in Germany, most of them having been baptized. They include the Cohn-Oppenheimers, the von Weinbergs, the von Simsons, the von Friedländer-Fulds, the von Heines, and the von Mendelssohns.

In France only a few Jews were ennobled and these by Napoleon III. In Russia only the highest nobility played a prominent part in social life; however, the titular rank of "counsellor of state" conferred the right of hereditary nobility, and several Jews were ennobled in this fashion. It was not until the end of the 19th cent.

that a movement started among aristocratic organizations opposing the ennobling of Jews; although the law was not changed, the names of Jewish nobles were not entered in the "blue book" of the nobility after 1900, but were listed in special books of their own. The best known of these baptized Jewish nobles is Baroness Stieglitz.

The highest rank ever attained by a Jew was that of duke; this was granted to the Sephardic Jew Isaac de Lousada by Charles III, king of the Two Sicilies, and by Napoleon III to Count Salomon Henri d'Avigdor.

NOCHRI, *see* AKKUM; GENTILES; PAGANISM; STRANGERS.

NOIR, VICTOR (YVON SALOMON), journalist, b. Attigny, France, 1848; d. Paris, 1870. He contributed to several French republican newspapers, such as the *Journal de Paris,* directed by Ranc, and was especially friendly with the famous pamphleteer Henri Rochefort, who edited *La Marseillaise.* At first considered the most serious adversary of Napoleon III, Rochefort later became a rabid anti-Semite and anti-Dreyfusard. In January, 1870, Rochefort and his collaborator, Paschal Grousset, were strongly offended by Prince Pierre Bonaparte, a son of Lucien Bonaparte, and a cousin of Emperor Napoleon III. Noir and another collaborator of Rochefort's, Ulric de Foncielle, were sent to the prince to demand reparation. The prince asked Noir whether or not he would declare solidarity with Grousset and Rochefort, and when Noir answered: "Monsieur, I always declare my solidarity with my friends," the prince whipped out a revolver and killed Noir. The murder caused general indignation. The government, fearing insurrection, kept an armed force ready. More than 100,000 persons followed Noir's coffin. Rochefort was arrested because he insulted the emperor and the whole Bonaparte family in his obituary of Noir. The prince was tried, but was acquitted, on the false claim that he had been threatened by Noir. This assassination and the acquittal of the murderer contributed considerably to Napoleon III's unpopularity.

Lit.: Rochefort, Henri, *Aventures de ma vie,* vol. 2; Delord, Taxil, *Histoire illustrée du second empire,* vol. 6; Aubry, Octave, *The Second Empire* (1940).

NÖLDEKE, THEODOR, non-Jewish orientalist, b. Harburg, Germany, 1836; d. Karlsruhe, Germany, 1930. He taught Semitic philology at the Universities of Göttingen, Kiel and, from 1872 to 1906, Strasbourg, attracting to his lectures students from many countries. Through his numerous works on the history and civilization of Islam—his history of the Koran won for him the prize of the French Académie des Inscriptions (1859)—and through his researches on the Semitic languages (*Beiträge zur semitischen Sprachwissenschaft,* vol. 1, 1904; vol. 2, 1910) he contributed invaluable services to Jewish learning. An adept in Hebrew and Biblical and Talmudic literature, he became a close friend of Abraham Geiger, who was twenty-six years his senior.

Nöldeke wrote: *Die alttestamentliche Literatur* (1868); *Untersuchungen zur Kritik des Alten Testaments* (1869); *Die semitischen Sprachen* (1887); *Orientalische Skizzen* (1892; English trans., *Sketches from Eastern History,* 1892), the latter two written in a more popular vein. He was the author of more than 600 treatises. In celebration of his seventieth birthday (1906), two volumes of *Orientalische Studien* were published, to which such outstanding Jewish scholars as Hartwig Derenbourg, Siegmund Fränkel, Moses Gaster, Louis Ginzberg, Ignaz Goldziher, Morris Jastrow, Samuel Landauer, Immanuel Löw, David Heinrich Müller and Abraham Shalom Yahuda contributed.

NOMBERG, HIRSH DAVID, Yiddish writer, b. Amshinov, Poland, 1874; d. Warsaw, 1927. In 1897, after a break from the Orthodox, Hasidic atmosphere in which he had been reared, he went to Warsaw, and I. L. Peretz urged him to write. His early work was in Hebrew; later he turned to Yiddish and, with Abraham Raisin and Sholom Asch, was one of the early figures in Yiddish literature. Nomberg's work, which appeared in periodicals of the time, including Raisin's *Yud,* and in the Hebrew journals *Hatzofeh* and *Haboker,* displayed profound social sympathies and penetrating psychological insight, and introduced the conflicts faced by Jewish intellectuals between old and new values. During the German occupation of Warsaw in the first World War, Nomberg was one of the founders of the Jewish Volkspartei, and sat in the Sejm as its representative.

Later he traveled a great deal, in 1926 visiting the United States for the second time (he had been there once in 1911). In 1923 he had gone to the Argentine and in 1924 to Palestine. Nomberg wrote for the Yiddish press in North and South America, and helped found the Argentine Yiddish writers organization. His collected Yiddish writings appeared in five volumes; his Hebrew works in two.

NON-SECTARIAN ANTI-NAZI LEAGUE (Corporate title, The Non-Sectarian Anti-Nazi League to Champion Human Rights, Inc.). Founded in 1933 by the late Samuel Untermyer, in association with James W. Gerard, George Gordon Battle, and other leaders in the crusade for human rights, the Non-Sectarian Anti-Nazi League to Champion Human Rights—familiarly known as the Anti-Nazi League—is a nation-wide public policy organization dedicated to the task of weakening the hold of Nazism upon the world, opposing anti-democratic organizations and practices, and combatting Nazi and Nazi-inspired propaganda. In modern warfare, where economics, politics, and propaganda play equally important parts with airplanes and battleships, it is vitally important for civilian organizations to strengthen the resolve of the people, and to interpret and counteract that subversive propaganda which is carried on in such a subtle or even "respectable" fashion that governmental agencies can not move directly against it.

The League was incorporated on November 22, 1933, as a membership corporation, under the laws of New York State, "to champion human rights, to foster the principles of American democracy . . . , to combat religious and racial discrimination and oppression" and for other related purposes. From its beginning, the League placed emphasis upon the economic boycott as a weapon against Nazism, and endeavored to secure widespread participation in the observance of a black list consisting of those companies, trade names and individuals commercially, financially or economically in-

volved in relations with Nazi or Nazi-dominated interests or so conducted as to give aid and support to the Nazi regime. All Americans were urged to refuse to purchase articles made in Germany or in Nazi- or Fascist-dominated countries (including Japan and Japanese-dominated areas), or to buy from, sell to, or trade with concerns or agencies in the United States or abroad having relationships in such areas.

In 1938 the League's Department of Field Activities and Propaganda Investigation was established for the purpose of uncovering and combatting Nazi propaganda and propagandists. This department of the League was a principal factor in running to earth the so-called "Christian Front" organizations, and in securing the withdrawal of mailing privileges from numerous pro-appeasement or openly pro-Nazi publications (such as *Social Justice*). The League was repeatedly labelled in official publications of the German-American Bund as the principal active factor in bringing about the exposure and disruption of the Bund and the arrest of its leaders. The League is continuously active in the discovery and exposure of Nazi and Fascist propagandists and anti-Semitic agitation, and of all organized groups attempting to weaken democracy. In this connection, the League has openly fought the aspirations of appeasers to public office, and carried on campaigns to drive out of public office persons friendly to the cause of the enemies of the United States.

The League's Department of Education and Public Relations is its agency for reaching the public through the press, radio, and affiliated organizations. The League prints the *Anti-Nazi Bulletin* (originally called the *Economic Bulletin*), and supports a public relations program in several foreign-language fields.

The Bureau of Latin-American Relations was inaugurated early in 1942 for the purpose of coordinating anti-Nazi activities in the countries of Latin America. At a dinner to inaugurate this Bureau, the League received official felicitations from Secretary of State Cordell Hull and from Nelson Rockefeller, Federal Coordinator of Relations Between the American Republics.

A special Committee on Discrimination is engaged in fighting such un-democratic practices as discrimination in employment and elsewhere, because of race, color, creed or nationality.

Structurally, the League is a federation of approximately 2,000 affiliated organizations, some of which are local in scope, and others of which are themselves subdivided into chapters or branches. These organizations include, among others, fraternal, labor, business, financial, farmers', women's, religious, patriotic, foreign-language and civic groups, and are formally affiliated with the League as a result of the appropriate official action by each organization, including the extension of some financial support to the League. The League is governed by a national convention, to which all affiliated organizations in good standing are entitled to send delegates. This convention elects a board of directors who, in turn, elect officers of the League and administer its affairs.

The League was instrumental in establishing the World Non-Sectarian Anti-Nazi Council, with branches in twenty-four countries (Argentina, Belgium, Brazil, Canada, Denmark, Egypt, Finland, France, Holland, Latvia, Luxembourg, Morocco, Norway, Palestine, Roumania, Spain, Switzerland, Uruguay, Venezuela, Yugoslavia, Czechoslovakia, Great Britain, South Africa, United States). Initial officers of this Council included Samuel Untermyer, president; Sir Walter Citrine, chairman; and Philip Guedalla, vice-chairman, with headquarters in New York, London, Brussels and Prague. This organization, of course, was largely dismantled at the outbreak of the second World War, but some of its functions are continued by the League's Economic Research Department and Bureau of Latin-American Relations.

The Non-Sectarian Anti-Nazi League is organized on a non-sectarian basis, which of course includes active Jewish participation and leadership, to perform functions necessary alike to the Jewish community and to the general community. In this regard the League has carefully pursued the policy first established by Untermyer.

The staff of the main office of the Non-Sectarian Anti-Nazi League numbered (1942) about twenty-five persons, including regularly paid investigators engaged in discovering sources of enemy agitation. Its funds are derived from appropriations from community federations and from organizations affiliated with the League, as well as from individual contributors.

The officers in 1942 included: Honorable James W. Gerard, former United States Ambassador to Germany, honorary president of the National Advisory Board; Professor James H. Sheldon, formerly of Boston University, administrative chairman; Julius L. Goldstein, Esq., of New York city, chairman of the Executive Committee; Rabbi Leon Fram, Ezekiel Rabinowitz and John Frederick Lewis, Jr., vice-presidents; Isidore Lipschutz, vice-president and treasurer; Louis Schifrin, Esq., of New York city, associate treasurer; Mme. Irene Harand and Mrs. Lillian Harris, respectively, chairman and vice-chairman of the Women's Division. The national office was located in New York city.

JAMES H. SHELDON.

NONES, BENJAMIN, American patriot and soldier during the Revolutionary War, b. Bordeaux, France, 1757; d. Philadelphia, 1826. He came to Philadelphia in 1777 and enlisted as a private in Captain Verdier's regiment under General Pulaski. His bravery in the field soon won him recognition. He fought in almost every battle in Carolina, and especially distinguished himself during the siege of Savannah, for which he received a certificate, on December 15, 1779, commending him for his gallantry in action. In consequence, he was entrusted with a legion of 400 men, among whom there were many Jews. This legion, of which he became major, served under General De Kalb and took part in the battle of Camden, on August 16, 1780, wherein De Kalb was mortally wounded.

At the end of the war, Nones went back to Philadelphia, where he was appointed an interpreter of French and Spanish for the United States government. He filled a similar position on the Board of Health. As late as 1825 his name is listed in the Philadelphia Directory as a sworn interpreter and notary public, his office being then located at 10 Chestnut Street. Nones became a naturalized American citizen in October, 1784. Thereafter he took an active part in politics, and became an ardent supporter of Thomas Jefferson and his principles. He was a prominent member of the Philadelphia Jewish congregation, serving as its president from 1791 to 1799, as well as in later years.

Benjamin Nones married Miriam Marks (1764-1822) of Philadelphia; they had fourteen children, among whom several sons won distinction in the United States Army and Navy. One of his daughters, Miriam, married the grandson of Haym Salomon. The father emerges as a forceful personality. His sterling character is best exemplified in his reply to the attack made upon him by a newspaper man who reported the proceedings of a republican meeting of citizens at which Nones played a prominent part. Assailed for being a Jew, a republican, and for being poor, Nones, in a

letter dated August 11, 1800, which was published in the Philadelphia *Gazette,* replied eloquently: "I am a Jew, and if for no other reason, for that reason am I a republican. . . . In republics we have rights, in monarchies we live but to experience wrongs. . . . I know that to purse-proud aristocracy poverty is a crime, but it may sometimes be accompanied by honesty—even in a Jew." The entire letter breathes a spirit of glowing patriotism, and reveals Nones as a distinguished American Jewish patriot. CLARENCE I. FREED.

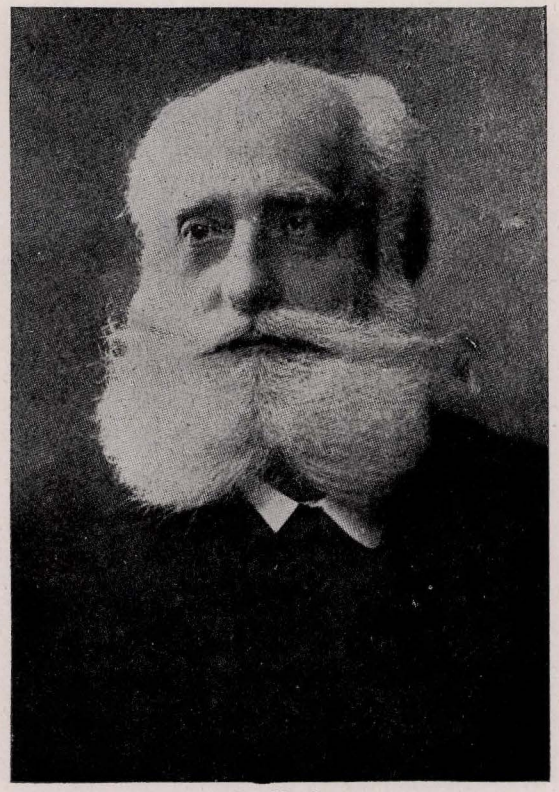
Lit.: Morais, H. S., *The Jews of Philadelphia* (1894) 26-27, 457; Markens, I., *The Hebrews in America* (1888) 126-27; *Publications of the American Jewish Historical Society,* No. 1 (1892) 111-15.

NONES, JOSEPH B., American sailor, b. Philadelphia, 1797; d. New York city, 1887. He was the son of Benjamin Nones. At the age of fifteen he entered the United States Navy and was under the command of Decatur during the War of 1812. In January, 1814, when President James Madison named John Quincy Adams, Bayard, Gallatin and Henry Clay the American peace commissioners on the Ghent mission, which was to conclude a treaty of peace between England and the United States, Joseph B. Nones, both as midshipman and private secretary to Henry Clay, accompanied the party abroad. He served with Decatur on the *Guerriere* during the Algerian War, in 1815, and participated in the memorable naval encounter, on June 15th, when the *Guerriere* captured an Algerian battleship near the coast of Spain. The young midshipman was badly wounded in action, receiving a sabre cut across the head, a ball through his left foot and three shots in his right leg. As a result of these wounds he was compelled to retire from the Navy and resigned his commission in 1822.

Following his retirement, Joseph B. Nones became a merchant and commissioner of deeds. In the Philadelphia Directory for 1825 he is listed as a merchant doing business at 112 South Front Street. After his early career of fighting and adventure, he settled down to a comparatively peaceful life, married and raised a family, attaining the ripe old age of four score years and ten. He was a prominent Mason and, as a member of St. John's Lodge, attained the degree of Rose Croix.

The example of Joseph B. Nones in entering upon a naval career appears to have been followed by several members of his family. A younger brother, HENRY B. NONES (1804-68), served in the United States Navy, beginning in 1831, and rose from third lieutenant to the rank of captain. He died in the service of the Revenue Marine, and left a son, HENRY B. NONES, JR., who was commissioned third assistant engineer in the United States Navy (1853) and became chief engineer in 1887.

Other members of the family who went to sea were JEFFERSON H. NONES, midshipman from 1840 to 1846, and WASHINGTON H. NONES, who died in the service in 1853 as second assistant engineer. On the other hand, ABRAHAM B. NONES served in the First Pennsylvania Volunteer Infantry in the War of 1812 and was, in 1837, United States consul general to Maracaibo. Moreover, SOLOMON B. NONES, an elder brother of Joseph B. Nones, was consul general to Portugal in the early years of the republic. A story is told of Solomon B. Nones to the effect that, while on his way to Europe, the ship on which he sailed fell into the hands of corsairs, who were about to kill him, along with the rest of the passengers, when he gave them the Masonic sign which saved his life. CLARENCE I. FREED.



Max Nordau

Lit.: Morais, H. S., *The Jews of Philadelphia* (1894) 400-1, 477, 470-72, 478; Markens, I., *The Hebrews in America* (1888) 134-35, 174; *Publications of the American Jewish Historical Society,* No. 19 (1910) 50; No. 26 (1918) 185; No. 27 (1920) 495-96; Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen* (1895) 85-86.

NORDAU, MAX (originally Max Simon Südfeld), author and Zionist leader, b. Pest (Budapest), 1849; d. Paris, 1923. The house where Nordau was born in the Jewish quarter of Pest stood at only a little distance from the one which, in 1860, saw the birth of Theodor Herzl. Max Simon Südfeld, who in 1873 adopted the pseudonym "Nordau" as his legal name, received instruction in Hebrew and Ladino (Judeo-Spanish) from his father, Gabriel Südfeld, who was of Sephardic lineage and claimed descent from Don Isaac Abravanel. He was educated also at the Catholic Gymnasium of Pest. He was thirteen years old when his first poem was published by a magazine of Pest. By frequently writing for the publications *Salon* and *Entre-Act* he assumed, as a school boy, the burden of providing for the family.

At the age of eighteen he entered the medical faculty of the University of Pest, becoming at the same time a regular contributor to the daily newspaper *Pester Lloyd.* As a correspondent for that paper he toured Europe from 1873 to 1875. In 1875 he received from the University of Pest the M.D. degree, which, after a period of practical work in gynecology at Paris (1875-78) and two years of medical practice at Budapest (1878-80), was confirmed by the University of Paris in 1882. Nordau, by that time a contributor to the leading newspapers of Germany and author of a book, *Aus dem wahren Milliardenlande, Pariser Studien und*

An early photograph of Max Nordau, his mother and sister

Bilder (2 vols., 1878; 2nd ed., 1881), settled in Paris in 1880.

During the next fifteen years Nordau, while practising medicine and pursuing medical research, evolved from an observer of society into a keen diagnostician of the maladies of the social system. The sensation caused by his volumes, *Vom Kreml zur Alhambra* (2 vols., 1880) and *Paris unter der dritten Republik,* was surpassed by the storm of controversy raised by *Die conventionellen Lügen der Kulturmenschheit* (1883; seventy-three thousand copies had been published by 1922), which blamed the inadequate institutions and the hypocrisy of our civilization for the individual and social restlessness of the 19th cent. The book, translated into all civilized languages and banned from Austria and Russia, made Nordau's name known the world over. It was followed by *Paradoxe* (1885). In his novels, *Die Krankheit des Jahrhunderts* (2 vols., 1889), *Gefühlskomödie* (1891), and *Seelenanalysen* (1892), Nordau viewed society with the eyes of the psychiatrist. In *Entartung* (2 vols., 1892-93), he interpreted contemporary art as the manifestation of an ailing society; artists, he contended, show the characteristics of the mentally deficient, and in its moral and social implications this art is a threat to European civilization. In reply to this book, George Bernard Shaw wrote *The Sanity of Art* (1908).

Nordau met Herzl in Paris in 1892. As Paris correspondents for German language newspapers, they witnessed anti-Semitism raise its head in the French Chamber. In 1892 Nordau first wielded his dread pen in defense of the French Jews, on whom anti-Semites were trying to blame the Panama canal scandal. Previously he had exerted, for the first time, his prestige in favor of Russian Jews when he aided Wilhelm Löwenthal in winning Baron Maurice de Hirsch for his colonization project. It was because he felt that Nordau was passing through a process of evolution toward Jewish consciousness akin to his own that Herzl resolved, in November, 1895, to submit to Nordau his plan for the Jewish state, which had been derided by many others. It was Nordau's approval that encouraged Herzl to make his plan public by submitting it—at Nordau's suggestion—to the Maccabeans Club of London.

Nordau unreservedly identified himself with Herzl's plan and assumed his share of the work. He was vice-president of the First to the Sixth Zionist Congresses held in Herzl's lifetime, and president of the Seventh to the Tenth Congresses after Herzl's death. His speeches, eloquent surveys of the situation of the Jews throughout Europe, vivified by his passion for righteousness, were the highlights of those Congresses. He formulated the Basel Program at the First Congress (1897), and sounded an inspired warning at the Fourth Congress (London, 1900), on the occasion of the enforced migration of the Roumanian Jews. Nordau planned for the society of the Jewish state by encouraging Jewish youth to train their bodies (muscle Jews). Jewish sports clubs and gymnasiums sprang up everywhere at his suggestion. Nordau envisaged also a statistics of the Jewish people to serve as a foundation for social planning. In lectures and articles he was the theorician and apologete of Zionism, justifying it to non-Jews as well as to assimilated Jews. In the polemics following the publication of Herzl's *Der Judenstaat* (1896) and in his play *Doctor Kohn* (1898), Nordau stressed the impossibility for Jews as individuals and as a people to be submerged in the European nations.

Although Nordau bitterly attacked selfish assimilationists and struggled for the happiness of the great masses of Eastern European Jews, it was a tragic contradiction that he himself shared a common background with the assimilated Jews, that his language was not understood by, and his ideas were opposed to, those of the Eastern European Jews. This contrast between East and West burst into open conflict when Nordau contemptuously answered Ahad Haam's criticism of Herzl's *Altneuland* (1902). At the Sixth Congress (Basel, 1903) Nordau, out of loyalty to Herzl and against his better judgment, supported the Uganda project, for which he coined the word *Nachtasyl* (overnight asylum). Shortly after this Congress, at a Zionist ball in the Salle Charas at Paris, a young student, Chaim Louban Selig, a fanatical Zione Zionist, fired two shots at him, both of which missed.

At the Seventh Congress (1906), after Herzl's death, although supported by Nachman Syrkin, who represented 10,000 American Poale Zionists (socialist Zionists), Nordau declined the presidency of the Executive Committee, which then included several "practical" Zionists, men who advocated the immediate colonization of Palestine. Nordau was opposed to colonization without a charter on the ground that it would put Jewish colonists at the mercy of the Turkish government. Nordau's mind recognized the need for and demanded a state, not a colony; a son of the emancipation, he demanded rights, a charter, and would not be content with mere toleration. As a confirmed rationalist, he strove for tangible results which he was not prepared to surrender for achievements which would satisfy emotions only.

After Wolffsohn's abdication from the presidency of the organization at the Tenth Congress (1911), Nordau came forward in frank opposition to the Inner Executive Committee of Berlin elected from among the "practical Zionists." In 1912 he sought to be invited to the Balkan Conference in order to have the charter for Palestine included in the peace treaty with Turkey. He did not appear at the Eleventh Zionist Congress (1913).

The first World War (1914-18) removed Nordau from the scene of action for Zionism. As a citizen of Austria-Hungary, he was imprisoned in France and subsequently released to leave for Spain. In 1917 he opposed the building of the Jewish homeland on the basis of the Balfour Declaration, which he considered an insecure foundation. In 1920 he was invited by the Zionist Executive Committee to the London Conference and was made honorary president of the Twelfth Congress (Karlsbad, 1921). His demand that the Executive Committee immediately send 600,000 Jews from the Ukraine, Poland and Roumania to Palestine was turned down. It was Nordau's postulate that the Jewish people should immediately establish itself in Palestine and organize its power before further political events paralyzed its action. In an address held before

Maxa Nordau, daughter of Max Nordau, speaking to a reverent crowd at the grave of her father in Tel Aviv

English statesmen at Albert Hall, London (1920), he formulated this demand, intimating that the Jews would guard for England the door to the Near East.

Finding himself once more in disagreement with Zionist leadership, Nordau retired from active work and returned to Paris (1921). Having sacrified his career as a writer to the cause of Zionism, he spent the last years of his life in poverty and illness, too proud to accept any financial aid from the Zionist Organization. He died in Paris (1923), leaving a work on philosophy which was published in Spanish, *Esencia de la civilizacion* (1932). In accordance with his wish, his remains were transferred (1926) to Tel-Aviv, where the suburbs Nordia and Tel Nordau were named in his honor.

Nordau's prestige helped the Zionist cause at many different stages in its history. Armin Vámbéry, who established contact between Herzl and the Sultan, was one of Nordau's friends. After Turkey's entry into the first World War (1914), Russian interests in that country were taken over by Italy, and Nordau intervened with the Italian foreign minister, Luigi Luzzatti, on behalf of the Russian Jews in Palestine who were then enemy aliens on Turkish territory. Among Nordau's friends who became powerful influences at the Paris Peace Conference (1919) were Georges Clemenceau and Eleutherios Venizelos, prime minister of Greece. As a result of a presentation (1913) on Zionism by Max Nordau to Stephen Pichon, the foreign minister of France, Pichon took up the Zionist question with Great Britain at a moment of the first World War when a Jewish state appeared to him susceptible of serving Allied interests.

Nordau was a commander of the Hellenic Order of the Holy Saviour and an honorary member of the Greek Academy of the Parnassos. He was also an officer of the French Academy and a foreign member of the Royal Academy of Medicine of Madrid. In addition to the works already mentioned, Nordau's published works include:

Miscellanies. *Seifenblasen* (1879); *Der Krieg der Millionen* (1882); *Ausgewählte Pariser Briefe* (1884); *La funzione sociale dell'arte* (1897); *Zeitgenössische Franzosen* (1901); *Morganatisch* (1904); *Maha-Rôg* (1905); *Märchen, seiner Maxa von ihrem vierten bis zum siebenten Lebensjahre erzählt* (1910); *Der Sinn der Geschichte* (1910); *Der Lebenssport* (1912); *Französische Staatsmänner* (1916); *Impresiones españolas* (1920); *Los grandes del arte español* (1921). Plays: *Die Journalisten* (F. Gross, co-author; 1880); *Das Recht zu lieben* (1894); *Die Kugel* (1894); *Drohnenschlacht* (1897).

Works in English. *Conventional Lies of Our Civilization* (1884); *Paradoxes* (1885); *Degeneration* (1895); *The Drones Must Die* (1897); *The Shackles of Fate* (1902); *The Dwarf's Spectacles and Other Fairy Tales* (1905); *On Art and Artists* (1907); *A Question of Honor* (1907); *The Interpretation of History* (1910); *Moral and the Evolution of Man* (1922).

Zionist Writings. *Zionistische Schriften* (1909; 2nd revised ed., 1923); in French: *Écrits sionistes* (1936); *Max Nordau el Ammo* (Hebrew; 1937); English version: *Max Nordau to His People* (with an introduction by B. Netanyahu; 1941); *Selected Works of Max Nordau* (Hebrew; 6 vols.). In 1919 a jubilee volume was published in Berlin in honor of his seventieth birthday.

In 1928 his widow, Anna Nordau, published her memoirs of Max Nordau, *Erinnerungen* (1928; Hebrew version, *Zichronoth,* 1929); in 1942 she and her daughter Maxa Nordau-Gruenblat were writing Max Nordau's biography. The only biography published up to 1942 was one in Hungarian by Béla Révész, *Max Nordau élete* (The Life of Max Nordau; 1940).

Maxa Nordau (b. Paris, 1899), painter, was the only child of Max Nordau. She studied under J. Adler and J. M. L. Mezquita, and first exhibited her works at the Círculo de Bellas Artes (Madrid) in 1919; later exhibitions were held at the New Art Gallery, New York city (1926), at Tel-Aviv (1937), at the exhibit of French artists in England (1939), and at that of artists of the United Nations in New York (1942). Her painting *The Holy Grave* (1929), acquired by France, was sent to the French embassy at Santiago, Chile; her *The Port of Jaffa* (1935) was placed in a museum in France, and her *The New Life* and *Child's Head* in the Tel-Aviv Museum. She painted studies of Arab types of Morocco and Palestine, a portrait of Miguel de Unamuno in sepia, and illustrated her father's *Tales.* She was one of the artists who decorated the Palestine pavilion at the Paris World's Fair (1937). From 1941 on she lectured in the United States and Canada, having made her permanent home in New York city.

NORDEN, BENJAMIN, trader and communal worker, b. London, 1798; d. Ramsgate, England, 1875. He went to South Africa with the British 1820 Settlers, and until his departure for Cape Town in 1840 to 1841 he resided at Grahamstown, where he took an active part in public affairs. He was interested in developing trade in Natal and farther north. In 1832 he organized his first expedition to collect ivory and other products between Grahamstown and Natal. In 1835 he again visited Natal for trading purposes, interviewing at the same time Dingaan, the Zulu despot. He was a friend of Piet Retief, the Voortrekker leader.

Norden was one of the founders of the first organized Jewish communities in South Africa. It was at his house in Cape Town on September 26, 1841, that Cape Town Jewry met for the first time for religious exercises. Until his retirement to England in 1858, Norden was actively associated with public life at Cape Town. He was one of the earliest members of the Cape Town municipality. He supported the Cape government in the famous anti-convict agitation of 1849 to 1850, and as such suffered much dislike.

Joshua Davis Norden (d. near Grahamstown, South Africa, 1846), soldier, was a brother of Benjamin Norden. Like his brother, he was a member of the British 1820 Settlers. Until his death he lived at Grahamstown, where he was a commissioner for the municipality and a member of the Emigration Committee. He was instrumental in forming the Grahamstown Yeomanry, of which he was the commanding officer. It was while leading his men in battle against the marauding natives that he was killed in April, 1846. His death was widely mourned by his contemporaries, who erected a tablet to his memory in the Grahamstown Cathedral.

S. A. Rochlin.

Lit.: Herrman, Louis, *A History of the Jews in South Africa* (1930) 109 et seq., 126-27; Rochlin, S. A., in *South African Jewish Times,* Sept. 27, 1940, p. 13; idem, in *Zionist Record,* Feb. 18, 1938, p. 13; MacKeurtan, Graham, *The Cradle Days of Natal* (1930) 167, 186-87, 306, 308-9.

NORDEN, EDUARD, philologist, b. Emden, Germany, 1868; d. Berlin, 1937. A descendant of a Jewish family domiciled in his native town for more than a century, Norden was baptized in his youth. He was appointed professor at the University of Greifswald in 1893, at the University of Breslau in 1898, and from 1906 to 1933 he was professor of Latin language and literature at the University of Berlin. Norden's great authority in matters of literary history, especially in criticism of literary style, was founded upon his important work *Die antike Kunstprosa* (1898). He contributed considerably to the knowledge of Tacitus and Virgil, and wrote a history of Latin literature until the Middle Ages, which was considered a standard work both in Germany and abroad. Proceeding from Latin literature, Norden became more and more interested in the general history of religious life. In 1913 he published *Agnostos Theos,* an inquiry into the various forms of religious diction, both oral and literary. In 1924 he contributed to comparative mythology in *Die Geburt des Kindes,* developing the history of the story of a holy child which was worshipped as the Savior, and its spread and tradition as well as its various analogies among primitive and civilized peoples. Norden was elected member of the Royal Academy of Sciences of Berlin and of several other learned societies.

NORDHEIM, MARCUS M., communal worker and philanthropist, b. Memmelsdorf, Germany, 1811; d. Hamburg, Germany, 1899. In 1837 Nordheim left his Bavarian native town and established a trade in hides and skins at Hamburg, where such a business was almost unknown till then. He acquired a great fortune, which he spent almost exclusively for Jewish charitable institutions. During his life, and by his last will, Nordheim invested nearly twelve million marks in Jewish foundations, both existing ones and those created by himself. He erected Jewish schools at Hamburg and Memmelsdorf, and created the Nordheimstift, where fifty poor Jewish families found a refuge. For many years he was president of the Deutsch-Israelitische Gemeinde of Hamburg.

NORFOLK, a maritime city in the southeastern part of Virginia, with an estimated general population (1942) of 200,000, and a Jewish population of about 5,750. The presence of a tombstone in the Hebrew Cemetery to the memory of Solomon B. Nones (d. 1819), son of Benjamin Nones, famous Revolutionary patriot and partner of Haym Solomon, indicates the existence of Jewish communal life as early as the beginning of the 19th cent. The yellow fever epidemic which decimated the general population of Norfolk in 1855 counted many Jews among its victims. At least one Jew, Michael Umstadter, served in the Confederate army.

The first Hebrew congregation was organized in 1836, and was later divided into the Beth El and Ohev Sholom congregations. The former was organized in 1850 by A. L. Goldsmith and Jacob Umstadter. One of its early cantors and teachers was the Reverend J. C. Campe (d. 1859). The congregation occupied various sites, and in 1942 was situated on Fifteenth Street. It had a spacious temple, erected in 1921, and a center, erected in 1939. Among its spiritual leaders were Herman Benmosche, Louis Goldberg, Nahum Kruger, Alan A. Steinbach and Paul Reich (1934-).

Ohev Sholom Congregation seceded from the original group in 1859 because of its Orthodox tendencies. It also occupied several sites in Norfolk, and in 1942 was housed in an imposing structure on Stockley Gardens. Among its rabbis were Jonas Hecht, the Reverend Field, Bernhard Eberson, Simon R. Cohen and Louis D. Mendoza (1906-). Besides Beth El (Conservative) and Ohev Sholom (Reform), there were several Orthodox congregations in Norfolk in 1942. Jacob D. Gordon was, in that year, chief rabbi of the Orthodox Jews of the city, and spiritual leader of Congregations Bnai Israel, Ahavath Israel and Khal-Chasidim. Other Orthodox congregations were Beth Abraham and Mikro Kodesh.

The Jewish community of Norfolk was highly organized. The United Jewish Fund was the central fund-raising agency for philanthropic endeavors. The Hebrew Ladies Charity Society and the Hebrew Sheltering Society cared for local needs. Every national and international organization and movement was rep-

resented. There were chapters of Hadassah, the Zionist Organization of America, the Council of Jewish Women, B'nai B'rith, Workmen's Circle, the Order Sons of Zion, the Jewish National Workers Alliance, and the Denver League. The sisterhoods of the several congregations were active. Among the youth groups were two chapters of the International A.Z.A. and several Greek letter fraternities. The Norfolk City Lodge of the Independent Order Brith Sholom had a membership, in 1942, of over 400, and occupied its own center, erected in 1936.

The earliest Jewish settlers came from Germany. The majority of Jews were of East European descent, they or their parents having come with the intensive wave of immigration from Poland and Russia at the beginning of the 20th cent. For the most part, the Jews of Norfolk were middle-class or petty merchants, with a fair sprinkling of professional men and artisans.

PAUL REICH.

Lit.: Stewart, William H., *History of Norfolk County, Va., and Representative Citizens* (1902); Huhner, Leon, "The Jews of Virginia from the Earliest Times to the Close of the Eighteenth Century," *Publications of the American Jewish Historical Society,* No. 20 (1911) 85-105.

NORTH CAROLINA, an eastern seaboard state of the United States, having a population of 3,571,623 (census of 1940), including about 7,000 Jews in 1942. In 1917 the Jewish population of North Carolina was estimated at about 5,000, and in 1927 at about 8,000. The 1942 figure represented a decline of approximately 1,000 Jews, while in the period from 1930 to 1940 the total state population increased by 401,347. The Jewish population was distributed in 1942 mainly as follows:

Asheville	900
Charlotte	700
Durham	350
Fayetteville	150
Goldsboro	150
Greensboro	500
Hendersonville	100
High Point	200
Kinston	125
Raleigh	350
Wilmington	350
Winston-Salem	375

The first Jews to enter North Carolina probably came from the island of Barbados in the autumn of 1665. Early religious restrictions, however, and the lagging commercial development of the state made for an exceptionally slow rate of increase in the Jewish population. The editor of *A Century of Population Growth,* published by the United States Bureau of the Census (1909), treating the subject of national and religious groups in connection with the census of 1790, concluded that there was only one Jew in North Carolina in that year. The numbers of Jewish names in the state census, however, contradict such an inference.

Names of individual Jews emerged in the historical records of the last half of the 18th cent. Aaron Moses was witness to a will in 1740. In 1750 David David successfully petitioned the council for a grant of 180 acres of land at New Hanover. In 1752 David's name appeared on the muster roll of the Wilmington county militia. At Edenton, in 1758, Jacob Franks was allowed a claim of proclamation money. In 1759 and 1760 the name of "the Jew," Mr. Laney, appeared in colonial records for the first time, and continued to appear until 1784, in numerous business transactions. In 1768 William Levy, of Orange County, is noted among the petitioners to the governor setting forth a list of grievances.

Jews appear in the records of the American Revolution. In 1775 "two Jews," Francis Salvador and Richard A. Rapely, were recorded as "making speeches in favor of the rebellion." Francis Salvador belonged, however, to South Carolina, and was a leading citizen of that state. Among those who took the oath of allegiance to North Carolina in 1778 was Jacob Holstein. Isaac Aaron and Joseph Laney were active in furnishing supplies to the American army during the Revolution. One Isaacs, a colonel in the North Carolina militia, was wounded at Camden, N.J., in 1780. After the battle of Camden, Jacobs Cohen, Jacob Henry, and Philip Meyers were prisoners of the British in 1781. William Solomon, Abraham Moses, Lazarus Solomon, Isaac Sampson and Moses Stern also fought in the Revolutionary War.

In the state census for 1790 appeared numerous names of Jews, and names which suggest Jewish origin, as well. These latter included such surnames as Goodman, Hays, Hendricks, Jacobs, Simpson, Phillips, and such Biblical given names as Sarah, Lazarus, Solomon, Tobias and Joseph. There is listed an Elias Coan and a Simon Cohon and family; Levi Cone, Isaac Cowin, and a Solomons. In the various counties are found a number of Emanuel families, the families Aaron, Isaacs, Gabriel, Israel, Levi, Moses, Myars, Solomons, and Franks. By 1826, according to the estimate of Isaac Harby, there were 400 Jews in the state of North Carolina.

To these Jews of North Carolina full civil and religious equality came slowly. In an election of 1702-1703 there is recorded a protest against the returns on the ground that the votes of Jews, as well as those of such other undesirables as strangers, sailors, servants, Negroes and Frenchmen, were counted. The Established Church of the state required support from all citizens; when the Dissenters came into power, they in turn discriminated against the non-Protestant sects. Thus, although the state constitution of 1776 granted liberty of conscience, it stated also: "That no person who shall deny the being of God or the truth of the Protestant religion or the Divine Authority either of the Old or New Testament, or who shall hold religious principles incompatible with the freedom and safety of the state, shall be capable of holding any office or place of trust or profit in the Civil Department within this state." This provision was dramatically tested when Jacob Henry, a Jew, elected to the legislature in 1808, was reelected in 1809. The second year a fellow member disputed Henry's right to be seated. The final decision was evasive: Henry was permitted to remain, on the ground that a legislator was not an officeholder in the civil department of the state. Despite vigorous attempts at succeeding state constitutional conventions to abolish the former disability, the statute remained. In 1858 twenty-six Jews, including two named Drucker and Hiellnen, petitioned the legislature for repeal of the officeholding restriction. But it was not until 1868 that the constitution was finally amended to remove all civil disabilities.

By that time many Jewish personages and events of Jewish interest had left an impress in the annals of North Carolina. The above-mentioned Jacob Henry was the first Jew to be a member of the state assembly. Jacob Mordecai, who settled in the state about 1787, founded a well-known non-sectarian school for girls at Warrenton, and gained wide repute as an educator. Major Alfred Mordecai, his son, achieved a high position in army life and an international reputation as a military science investigator. His sister, Rachel, was a correspondent of the Irish novelist Maria Edgeworth, in an effort to eradicate prejudice against the Jew. Judah P. Benjamin, one of the South's greatest statesmen, lived as a child in Wilmington and received his early schooling in Fayetteville.

Records reveal that fifty-two Jews from North Carolina fought in the Civil War; six brothers of one Cohen family were enlisted. Albert Moses Luria, soldier of the Confederate Army cited for heroism, was lieutenant in the North Carolina Infantry Regiment. At Bentonville, N. C., at the close of the Civil War, Dr. Marx E. Cohen, Jr., of Charleston sacrificed his life to avert disaster to Confederate troops. Abe Weill of Charlotte gave refuge in his home to Jefferson Davis, president of the Confederate States. It was Governor Zebulon Baird Vance, prominent figure in the Civil War in North Carolina, who defended and extolled the Jews in his monograph *The Scattered Nation*.

Thus, undeterred by the comparatively late recognition of their equal status, the Jews of North Carolina had been gradually building up their communities.

WILMINGTON, before the 20th cent. the principal city of the state, had the earliest Jewish settlement of any considerable size. Two early arrivals were Aaron Lazarus and Aaron Riviera. The former, born in Charleston, S. C., in 1777, settled in Wilmington as one of the first directors of the Wilmington and Weldon Railroad. Riviera, a relative of the Newport, R. I., Rivieras, became cashier of the Bank of Cape Fear. About 1798 Abraham Isaacs is recorded as being a prominent figure in Wilmington Masonic circles. Jacob Levy married Maria Lopez, daughter of Aaron Lopez of Newport, R. I. Lewis Gomez died at Wilmington in 1827. By 1849 the community had about twenty Jews. In 1852 the True Brothers Society was organized for burial purposes, but not until 1867 was a congregation formed, with E. C. Myers as rabbi. The congregation was permanently organized five years later as Temple of Israel, and its synagogue was dedicated in 1876; the same synagogue was in use in 1942. Samuel Mendelsohn became rabbi, and served the congregation for more than forty-five years, until his death in 1921. There followed Rabbis Harvey E. Wessel (1921-22), Frederick I. Rypins (1923-28), and Benjamin Kelson (1928-35). In 1935 Mordecai Thurman came to the pulpit, and was still the incumbent in 1942. In 1906 an Orthodox congregation, B'nai Israel, was founded.

ASHEVILLE. The pioneer Jewish community of Asheville included M. Marks, Max Lindau, Louis Marks, S. J. Lindau, R. Jacobson, E. Sternberger, B. Whitlock, E. Straus, M. Meyers, Max Marcus, A. L. Solomon, A. Whitlock, G. H. Mayer, S. Lipinsky, M. C. Long, B. Zageir, M. Shuman, and J. Cohen, who came from Germany. From Poland and Russia there were B. Swarzberg, Morris N. Epstien, L. Blomberg, L. Berman and Sam Finestein. Also among the early settlers were M. Swarzberg, A. Blomberg, S. Schiffman and A. H. Schayer. They gathered to organize Congregation Beth Ha-Tephila in 1891, establishing a Sunday school in the following year. In 1902 the permanent synagogue was acquired. Rabbis of the congregation included A. Jacoby, Morris S. Lazaron, Nathan E. Barasch, Harvey E. Wessel, Moses P. Jacobson, Alexander S. Kline, and Robert P. Jacobs, who was the incumbent in 1942. At that date the congregation was characterized by an amalgamation of all tendencies, but was predominantly Reform. Congregation Bikur Cholim, founded in 1920, was Orthodox.

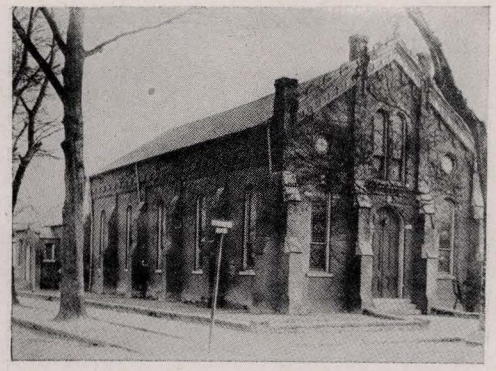
Other organizations in Asheville in 1942 included a B'nai B'rith lodge, a Zionist society, a chapter of the Hadassah, a Federation of Jewish Charities, and a section of the National Council of Jewish Women. In 1940 the Jewish Community Center of Asheville was organized, and purchased a structure for various communal uses.

CHAPEL HILL, the seat of the University of North Carolina, had, in 1942, about 300 Jewish students. At the invitation of the faculty a Hillel Foundation was established to provide a center for these students. The funds for the project were raised by the North Carolina Association of Jewish Women and the North Carolina Association of Jewish Men. From 1936 to 1939 the director of the Foundation was Rabbi Bernard Zeiger. He was succeeded by Rabbi Samuel Sandmel, who was still in that post in 1942. Among the projects of the Foundation was a study of the early history of the Jews of North Carolina, undertaken primarily to prepare an exhibit for the convention of the North Carolina Association of Jewish Women meeting at Greensboro in 1942.

The North Carolina Association of Jewish Women, organized in 1921 under the leadership of Mrs. Sol Weil of Goldsboro, and Mrs. Hattie S. Weinberg as state organizer, came to be one of the chief institutions of North Carolina Jews, as did, later, the Hillel Foundation. A study of 1927 revealed the exceptional fact among Jewish populations, that no less than 53 per cent of the Jews of North Carolina were living in rural communities. It was the Association of Jewish Women which organized these scattered communities into eight districts, and brought to them educational influences. It set up religious schools throughout the state, at a time when there were only two rabbis in all of North Carolina; it established an annual Religious School Institute, a traveling library, the Etta Spier Scholarship Fund and the Sophie Einstein Student Loan Fund, by which scores of Jewish and non-Jewish students were assisted in their education. Thus the Association acted as one of the most powerful agencies for unifying the Jews of North Carolina.

DURHAM became a Jewish center of some importance in 1880, when 300 Jewish cigarette makers were brought to the city by W. Duke and Sons Co. With the introduction of machines for cigarette manufacture, many of these Jews returned north. Thereafter additional Jews settled in Durham at a very gradual rate. The first organization, in 1884, was the Chevra Kadisha. In 1892 the Orthodox Beth-El Congregation was organized, and a new synagogue was built in 1920. A Hebrew school was founded in 1910, and a Ladies' Aid in 1913. Rabbis who served included G. Hailig and Chaim Williamowsky (1928-37). Israel Mowshowitz was rabbi in 1942. Other organizations in Durham in 1942 included a chapter of Hadassah, Mizrachi Men and Mizrachi Women, a B'nai B'rith Lodge and A. Z. A., and a Bonim Youth Group.

FAYETTEVILLE started a congregation in 1908, and erected a synagogue in 1918.



The synagogue of Oheb Shalom Congregation at Goldsboro, North Carolina

GASTONIA organized a congregation in 1906, and erected Temple Emanuel in 1929.

GOLDSBORO. Congregation Oheb Sholom of Goldsboro was inaugurated in 1880 and permanently organized in 1883. Julius L. Mayerberg served the congregation from 1890 until his retirement in 1924. Succeeding rabbis were Abraham I. Shinedling (1924-26), Iser L. Freund (1926-38), and Joseph I. Weiss, who came in 1938 and was still the incumbent in 1942. In 1942 the North Carolina State Association of Jewish Women had its offices in Goldsboro.

GREENSBORO. The Jewish community of Greensboro developed later than that of Goldsboro. The Greensboro Hebrew Congregation, which in 1942 included Conservative, Orthodox and Reform elements, each pursuing its activities under the same roof, was founded in 1908, and the new synagogue was built in 1923. Rabbis were G. Mendelsohn (1908-9), Louis I. Egelson (1912-14), Simon Cohen (1916-17), Max Kaufman (1923-25), Milton Ellis (1925-31), and Frederick I. Rypins, who came to the pulpit in 1931 and was the incumbent in 1942. In 1940 the Greensboro United Jewish Charities was founded. Other organizations in 1942 included a B'nai B'rith lodge and a council-sisterhood. Early settlers of Greensboro were Jacob Hildesheimer, Jacob Klein, Morris Pretzfelder, Simon Schiffman and the Cone family. The latter figured prominently in philanthropic and educational projects of Greensboro. The first Negro Y.M.C.A. in the state was the gift of Caesar Cone II. In 1942 the Sternberger Educational Loan Fund, established in 1925, was still assisting North Carolina Jewish youth to further their education. By that date it had aided 300 youths at an outlay of $80,000. The mayor of Greensboro and the president of the chamber of commerce were on the commission in charge of the fund. Sidney J. Stern Sr. was chairman in 1942.

Beth Or Temple at Raleigh, North Carolina

NEW BERN. Jews in New Bern purchased a cemetery and a lot for a Temple in 1881. In 1906 Temple Bnai Shalom was erected. However, the community soon dwindled to a few families who held holiday services only.

RALEIGH. The Hebrew Cemetery Company was organized in Raleigh in 1870, and a congregation was formed in 1885. In 1912 the Orthodox group separated and founded the House of Jacob Congregation, while the Reform element built Temple Beth Or. The rabbis of Temple Beth Or included William Lowenberg, Howard L. Fineberg, Carl N. Herman, Arthur S. Montaz, and Avery J. Grossfield, who was the incumbent in 1942.

STATESVILLE. As far as is known, the first Jew to come to Statesville was Isaac Wallace, who opened a store there about 1859. His brother David came in the following year, and joined the business, which in time developed into a supply house of roots and herbs for various great drug firms throughout the United States. Statesville then became known as one of the largest crude drug centers in the world. The Wallace Brothers firm attracted other Jews to settle in the town. About 1870 the names Witkowski, Saltzgiver, Lewis Elias, Cohen, Jacob Rintels and David Goldberg appear. In 1883 Congregation Emanuel was organized. In 1892 a Temple was erected, with Julius L. Mayerberg, later of Goldsboro, as rabbi. Comparatively few families were left of this congregation in 1942, and the Temple and parsonage had fallen into disuse. The exodus of Jews from Statesville for the cotton mill and tobacco towns followed the decline of Statesville as a trading center.

TARBORO. The Tarboro Jews organized a congregation in 1875, and erected a synagogue in 1896. For many years the congregation was active, but with the gradual decline in the city's Jewish population the congregation went out of existence.

WINSTON-SALEM. The early community was made up of merchants in the retail clothing business, one department store owner and a few peddlers. Among the settlers were Joe Jacobs, Joe Rosenbacher, Zigmond Rosenbacher, the Rose family, and the families of Morris Levy, Jacob Citrenbaum, Eli Robinson and A. Shapiro. They met together in 1890 for their first high holy day services; six years later they organized a congregation, of which Rabbi Mordecai Shapiro was leader. With the growth of the community, a church was bought and remodeled into a synagogue. In 1920 the Winston Hebrew Congregation, reorganizing into the Beth Jacob Congregation, secured formal title to this synagogue, and was, in 1942, the Orthodox group in Winston-Salem.

About 1925 Moses Shapiro led a movement to organize a separate group for Reform services; this group, the Winston Hebrew Congregation, was, in 1942, the Reform congregation of the city. Successive rabbis included Meyer S. Simon (1932-33), Morris Leiberman (1933-35), Arthur Zuckerman (1935-38), Edward Ellenbogen (1938-40), and Frank Rosenthal, who was the incumbent in 1942.

In 1937 the Jewish Community Council of Winston-Salem was founded.

Social relations between Jews and non-Jews in the years of the first Jewish settlement in Winston-Salem were not intimate. However, with the Christian and Jewish joint drive for the relief of the Russian Jews during the first World War, a new era in friendship was initiated, and the community became one of the country's outstanding examples of interracial amity.

Other North Carolina communities having organized Jewish activities in 1942 were: Burlington, Charlotte, Hen-

dersonville, High Point, Kinston, Rocky Mount (Congregation Beth El), and Weldon. The 1926 census of religious bodies reported twenty-two congregations in the state.

In the last quarter of the 19th and the first half of the 20th cent. North Carolina Jews participated in numerous activities in the state. In Wilmington, Solomon H. Fishblate was alderman (1872-77), then mayor (1878-82). Solomon Cohen Weill of Wilmington served as assistant United States attorney in 1893. Sol Weil was alderman of Greensboro (1880-86), and Gus Rosenthal served as alderman of Raleigh (1882-90).

At Goldsboro, Henry and Solomon Weil, prominent merchants who founded the firm of H. Weil and Brother, were active in philanthropic work. Nathaniel Jacoby founded, in that town, the State International Order of Odd Fellows orphanage; he and his son Marcus were conspicuous figures in the North Carolina division of the Odd Fellows. At Greensboro, Moses and Caesar Cone established the Cone Export and Commission Co., and, together with Emanuel Sternberger, were among the leaders in the cotton textile industry of the state. Solomon Lipinsky of Asheville was a prominent merchant of western North Carolina. In Tarboro, Arthur J. Morris originated and organized the Morris Plan banking system.

In the first World War Arthur Bluethenthal, a member of the Escadrille Lafayette in the flying service in France, was the first to be killed from the city of Wilmington; the aviation field of that city was named after him. In that period Governor Thomas W. Bickett of North Carolina was the first governor to issue a proclamation for Jewish war relief, thus bringing the per capita contribution of North Carolina above that of all other states. In the 1921 Joint Distribution Campaign for relief of overseas sufferers, under the leadership of Lionel Weil (son of Solomon Weil), of Goldsboro, more than $200,000 was raised, mainly from non-Jews throughout the state. The event took on historic significance, both in its demonstration of Jewish unity in the state and in its evoking of Jewish sympathies among non-Jews.

The same Lionel Weil of Goldsboro was in the city council (1904-22), and president of the State Farm Debt Adjustment Commission (1934-36). Julius W. Cone, of Greensboro, was in the city council (1923-40). Harriss Newman, of Wilmington, served in the state assembly (1931-35), and was state senator (1935-40). Stanley Seligson, of Raleigh, became city court judge in 1939, and was still serving in 1942.

In education, in 1942, Marc Friedlaender and Elizabeth Jastrow, of Greensboro, were on the staff of the Woman's College of the University of North Carolina, in the departments of English and art, respectively. The Jewish community of Durham was represented on the staff of Duke University by Leonard Carlitz (mathematics), William Perlzweig (biochemistry), Raphael Lemkin (law), F. London (physics), I. T. Reamer (pharmacy), Alfred Apsler and Mortimer Taube (library). E. M. Manasse, of Durham, was in the philosophy department at North Carolina College for Negroes, at Durham. Rabbi Robert P. Jacobs, of Asheville, appointed in 1939, was instructor on the summer school faculty of Asheville College in history and literature of the Old Testament, the first Jew on the teaching staff of the college.

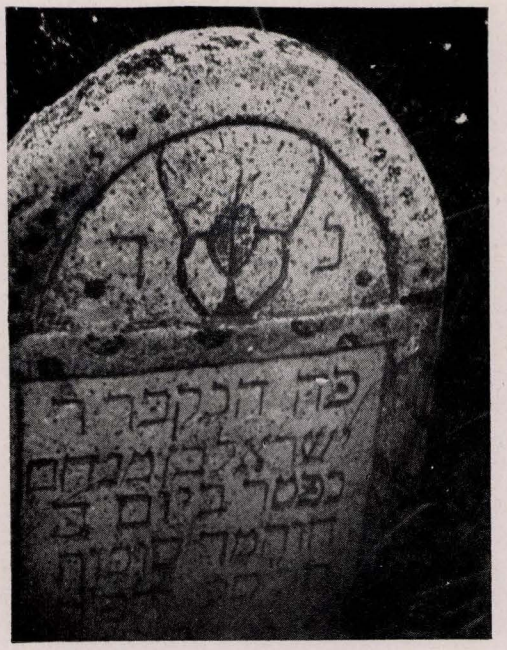
NORTH DAKOTA, a north central state of the United States, having a population of 641,935 (census of 1940), including about 2,500 Jews (1942). Cities having Jewish populations of more than 100 in 1942 were:

Bismarck	300
Fargo	550
Grand Forks	460
Minot	150

The railroad reached the city of Bismarck in 1873,



A Jewish tombstone (of the early 1880's) in an Indian cemetery at Devil's Lake, North Dakota. Reproduced by courtesy of Harry Lashkowitz

sixteen years before North Dakota achieved statehood. In 1871 Abe Eppinger had come overland to Bismarck, while his wife and daughter followed by river steamer from Sioux City, Iowa. In 1879 Sam Thal settled in the area of North Dakota later known as Lakota. Two or three years afterward he influenced his brother and sister-in-law, Sholem and Sarah Thal, to homestead in the Lakota region. Six children were born to Sholem and Sarah Thal on the isolated homestead.

The Thals and Eppingers were followed by other Jews who settled in North Dakota in the territorial period. Among the early immigrants were the Adler and Mendelsohn families, Max and Alex Stern, I. Herbst, Max Rabinovich, M. Levitz and Aron Friedman. Within the Dakota territory were colonies of Jewish farmers situated near Lakota, Mandan, Ashley, Garske, Webster, Williston, Gackle and the Devils Lake region. Many of the Jewish farmers were assisted by the Baron de Hirsch fund.

These early Jewish settlers conducted religious services and secured burial grounds for their dead. Of particular interest is the old Jewish cemetery of the Devils Lake region. Many of the graves were marked by stakes, while others were marked by prairie stones. Although by 1942 the inscriptions were either obliterated or indistinct, a death is known to have occurred in 1889.

The first synagogue built in North Dakota was at Ashley. There were four synagogues in the state in 1942, all Orthodox. The synagogue in Minot was built in 1905, and that of Fargo in 1908. The Grand Forks synagogue was established about 1900, while the Bismarck synagogue was, in 1942, the most elaborate in the state. There were B'nai B'rith lodges in the cities of Fargo, Bismarck, Grand Forks and Minot. There were Hadassah chapters in Fargo, Grand Forks and Minot. In 1942 the rabbi of the Minot synagogue, Beth Israel, was Abraham Album.

Among the Jews who held public office in North Dakota were Alex Stern, who was president of the Fargo city council (1914-18) and later became mayor of that community. Julius Sgutt was mayor of the city of Harvey (1907-9); Louis Rubin was a member of the Ashley city council (1905), and mayor of Ashley (1906-8). Among the Jewish members of the state legislature were Alex Stern (1911-13); Herbert Mackoff, of Dickinson (1917-19); Julius Sgutt (1911-13); Morris Beck, of Jamestown (1919-21). William Stern was prominent in the state and national activities of the American Legion. He was, in 1942, the oldest member of the national executive committee of the American Legion. He was also a member of the national committee of the Republican party, beginning in 1932 and continuing in this position in 1942. Harry Lashkowitz was, in 1942, first assistant United States district attorney for North Dakota. He seconded the nomination of Franklin D. Roosevelt for the presidency of the United States at the Democratic national convention of 1936.

HARRY LASHKOWITZ.

NORTHAMPTON, county town of Northamptonshire, England. Jews were settled in the city in pre-Expulsion times, their community being the fourth largest in the country. The earliest record of their presence occurs in the Pipe Rolls of 1180, when a certain Samuel is mentioned as owing five shillings for an amerciament of a bill of divorce. In 1194 Northampton was the scene of a pledge given by the Jews of England to donate 5,000 marks toward the ransom of King Richard I on his return from Germany. An extant rescript of this pledge (known as the *Northampton Donum*) shows that while only half of the sum was eventually collected, the community of Northampton was fourth on the list in the amount of its subscription, being exceeded only by those of London, Lincoln and Canterbury. Some thirty-six Jews contributed no less than £163. 13s. 11d.

The city was the seat of a Jewish *archa,* and a document of 1204 makes specific allusion to "the wardens of the cyrographs of the Jews of Northampton." The community appears to have included men of substance. We hear of a local manor owned by a Jew, and the congregation possessed its own synagogue and cemetery, for which it paid annual dues to the prior of St. Andrews. On two major occasions the peace of the pre-Expulsion community was rudely disturbed. In 1264 they were victims of a bloody outbreak staged in the course of the Barons' War, while in 1279 several of their number were accused of a "ritual murder" and taken to London to be hanged.

Following the Expulsion of the Jews from England, in 1290, Northampton remained without Jews until the large-scale immigration from Russia at the end of the nineteenth century. In 1888 a synagogue was erected in Overstone Road, but the community scarcely increased, and in 1940 numbered no more than 74 persons in a total population of 96,360 (approximately 0.077%). In November, 1941, however, the air raids on London caused a considerable influx of refugees, and Northampton became an important center of Anglo-Jewry. It was estimated that between 600 and 700 Jewish children from the metropolis were billeted in and around the city. Religious classes, attended by 300 pupils, were established, and a branch of the Habonim youth movement was founded. A Kasher Feeding Center was organized in February, 1942, and a complete network of Jewish communal activity, including a Zionist Society, a Jewish Discussion Group and a Jewish Soldiers' Canteen and Club, came into being. In 1942 the rabbi of the community was E. Auerbach.

NORTHERN RHODESIA, *see* SOUTH AFRICA.

NORWALK, a city of Connecticut having a population of 39,849 (census of 1940), including a Jewish population of about 2,500. Records indicate that a not inconsiderable number of Jews were residing at Norwalk as early as 1760. Among these, Michael Judah was most prominent, his name appearing several times in Connecticut historical annals. It is recorded that he succeeded in having reversed a court decision rendered against him at Litchfield in 1763. Norwalk Jews are mentioned in the records of Congregation Shearith Israel of New York. Thus it is noted that in 1776 is born "Rebcka, daughter of Myer Myers of Norwalk." And it was probably because this Connecticut Jewish settlement was known to the members of the New York congregation that many of these latter, fleeing before the British invaders of New York, took refuge in the town of Norwalk in 1776. One of the refugee patriot merchants from New York was Benjamin Etting, who died in Norwalk in 1778. Alarmed by the repeated raids of the British against their town, the citizens of Norwalk petitioned the Council of Safety in October, 1777, to furnish an eight-gun vessel for patroling their shore; the petition bears the Jewish names Myer Myers, Solomon Simson and Benjamin Jacobs. That year Michael Judah's name again appears, asking this same Council of Safety for permission to convey a quantity of sugar from Rock Hill to the inhabitants of Norwalk; permission was given. The year before, David Judah was listed as a soldier in the Connecticut Line.

Little trace was left of a Jewish settlement in Norwalk until, in the 1870's, Jewish immigrants began to arrive from Eastern Europe. These included the families of Goldschmidt, Davis, Navasky, Slomansky, Harris, Joseleff, Gutkevsky and Roodner. Increase in population after 1925 was accounted for mainly by the trek of families from New York city to Norwalk.

A Minyan of this community met in Raymond's Hall on Washington Street, South Norwalk. The Orthodox congregation, Beth Israel Society, was the first to be organized and the only one existing in the town up to 1934; the congregation's synagague on South Main and Concord Streets was erected in 1905. David Genuth was the first and only rabbi of this congregation. In 1934 the Beth Israel Conservative Congregation was organized, and Rabbi Maurice Lazowick was called to the pulpit. He served until 1939, when Benjamin H. Tumim, still serving in 1942, became the incumbent. The Orthodox congregation had dwindled, many of its numbers having become affiliated with the Conservative group, and Rabbi Tumim was ministering unofficially to the Orthodox group as well. In 1942 the Conservative congregation had an affiliated membership of 150 families. Other organizations in Norwalk included a Y.M.H.A., Senior and Junior Hadassah chapters, and Senior and Junior Council Sisterhoods. The burial organization, known as the Independent Hebrew Society of Norwalk, was organized in 1918.

The Jews of Norwalk engaged for the most part in retail trade and manufacturing. Prominent among them in 1942

were Edward M. Gans, merchant, who was president of the Norwalk Board of Councilmen (1924-26) and state representative (1933 and 1934); S. Roodner, the city's largest tax-payer, noted for his philanthropies. Bernard A. Nevas (d. 1942) was an outstanding attorney and highly regarded by members of the Connecticut bar. Other active citizens were Barney Berman, E. L. Greenberg, L. Harris, Robert Joseleff, H. Jacoby, G. Meyers, S. Meyers, M. Steinberg, A. D. Slavitt, H. Rubin, H. Wolfe, A. Salvin, H. Schwartz and I. Weitz.

NORWAY, the West Scandinavian peninsula in northwest Europe, with an area of 124,555 square miles and a population of approximately 2,814,000 (1940). In 1930 there were 1,359 Jews in Norway, 852 of whom lived in Oslo, 268 in Trondheim, twenty in Bergen and the rest in other parts of the country.

The earliest information as to the presence of Jews in Norway dates back to the year 1734, when a number of Jews from Holland came to the small city of Tönsberg, from where they were soon driven out. Between 1814 and 1851 Jews again immigrated into Norway, but all of them had been baptized before entering the country, and although, on the whole, it is very difficult to state with certainty anything that would throw light on the history of the Jews in Norway prior to the year 1851, we have knowledge that the first law against the Jews dates back to 1687. There were two groups of Jews living in Norway, the Portuguese Jews, or Sephardim, and other Jews; with distinct discrimination the law was enforced only against the latter group.

In 1814, when Norway was detached from Denmark, with which country it had been affiliated from 1319 on, and established its own constitution, all Jews were expelled from the country, and it was only after long and bitter struggles that this law was rescinded (1851). Henrik A. Wergeland, the eminent Norwegian writer, initiated this struggle. His unceasing endeavors to bring about the emancipation of the Jews was a great contribution to its final success. In 1841 he wrote *Replications Relating to the Jewish Question,* after he had, three years before, submitted an application to the president of parliament, Sören Anton Wilhem Sörenson, entreating permanent stay of the Jews in Norway, which proposal, however, had been declined by parliament in 1842. Wergeland died during the summer of 1845, and Sörenson continued his unwearied activities, but again the motion was denied twice, in 1845 and in 1848, and it was not until 1851 that the petition passed almost unanimously and was ratified by the government. Many years later, in 1891, all government positions in Norway were opened to the Jews. In appreciation and gratitude for his great work, the Jews of Norway erected a monument to him in Oslo, its capital.

After the law of prohibition had been abolished, and the new law adopted, the immigration of Jews into Norway began in the year 1852. Still, in 1875, their number hardly reached more than thirty. In 1876 a Jewish cemetery was set aside in Oslo. The first Jewish congregation, bearing the name of Jodisk Samfund, was established in 1892. One year later its name was changed to Det Mosaiske Trossamfund (the Mosaic Religious Congregation), and in 1920 it built its own synagogue. A second congregation in Oslo, Den Israelitiske Menighet (Jewish Congregation), split off from the main body in 1917 and built its own synagogue in 1920 to 1921. In 1939 the two congregations were merged.

From 1914 on Oslo had a Hebrah Kaddisha (Jewish burial) society and a number of charitable institutions. The younger generation belonged to the Israelitisk Ungdoms Forening (Jewish Youth Society), an organization formed in 1909. In 1919 the Society founded the Scandinavian Union of Jewish Youth, consisting of nine branches in the Scandinavian countries; from 1912 to 1919 it published a monthly, *Israeliten.* In 1919 this publication was taken over by the national body, the Union of Jewish Youth, with headquarters in Copenhagen. From 1910 on Oslo had also a Zionist organization which published the monthly *Hatikvoh* from 1929 on; in Trondheim, besides its congregation formed in 1905, with its own synagogue built in 1925, there were a youth society, a branch of the Zionist Organization, and a women's organization.

Anti-Semitic feeling in Norway was practically nonexistent, which, no doubt, was attributable to the fact that the Scandinavian nations, consisting of Norway, Sweden and Denmark, ranked among the most advanced and progressive nations in the world, and Jews enjoyed full civil liberties in Norway. Nevertheless, in the late 1920's the slaughtering of cattle according to Jewish rites became the object of parliamentary attack on the part of some farm groups and to a lesser extent, also of the labor group, although it can not be denied that the attitude of the majority of government officials has always been friendly toward the Jews.

Up to the Nazi occupation of the country in 1940, most Jews in Norway were merchants. In industry, chiefly in the shoe and tobacco branches, there are a number of prominent Jewish firms; large Jewish firms were found in manufacturies and other manufacturing enterprises. HARRY MEIER KORITZINSKY.

In June, 1929, parliament passed a law, by 130 votes against twenty, prohibiting the slaughtering of cattle in accordance with Jewish religious rites. This law, which went into effect on January 1, 1930, created much dismay in every Jewish community, but did not go through without strong opposition. Thus Fridjof Nansen, explorer and humanitarian, wrote: ". . . When we in this country insist upon free religious expression for everyone it seems to me it is reason to take under consideration whether the prohibition of 'schächting' can be united with our demand for such a freedom" (Abrahamsen, David, *Jeg er jöde,* Oslo, 1935, p. 88).

Among the leaders of the Labor Party, which from 1935 on formed the government, many expressed sympathy with the Jews, notably Halvdan Koht, foreign minister, who pleaded their cause at the League of Nations in Geneva. Furthermore, it was announced on March 21, 1937, that a voluntary "Nansen assistance" was to be organized in Oslo to take care of about two million "persons without country." It was founded by the architect Odd Nansen, son of Fridjof Nansen, and had branches all over Europe to take over after the liquidation of the Nansen International Office of the League of Nations.

But neither did Norway escape Nazi anti-Semitic propaganda. In December, 1938, anti-Jewish posters appeared on Jewish stores in the capital, Oslo. They were traced to a journalist, Alf Amble, who was tried under the penal code for inciting one part of the people

against another but was acquitted on the ground that, since no Jewish problem existed in Norway, the posters would not have any effect. Another incident took place on January 24, 1939, when Norwegian firms dealing with Germans were requested by the latter to submit a list of non-Aryans among their employees and employers. The Norwegian Business Association advised its members not to reply to the questionnaire. The Norwegian Nazis, organized from 1933 on in a party called Nasjonal Samling (National Union), with its official publication, *Fritt Folk* (Free People), had made very little headway. In the elections of 1933 Vidkun Quisling's party secured 27,850 votes in the whole country, i.e. 2.23 per cent of all the votes. In 1936 the party was reduced to 1.83 per cent, obtaining 26,577 as against Labor's 618,616 votes. The Quisling party was still further reduced in the municipal elections. In 1934 it had 0.82 per cent of the votes in the country districts; in 1937 it had sunk to 0.15 per cent. Still clearer is the picture in the cities; after obtaining 2.75 per cent of all the votes in 1934, the party had almost disappeared in 1937, when it had only 0.06 per cent of all the votes. Its activities, however, gave ground for a statement by Prime Minister Johan Nygaardsvold on January 13, 1940, in reference to fascist agitation: "We have had some of these also, but since the last election (1936) little has been heard of them. Our people are democrats, and a system which does not tolerate free criticism will never have any following in this country."

Like all the other Scandinavian countries, Norway attracted some German Jewish refugees, but fewer than either Denmark and Sweden because of rigid immigration laws. In April, 1939, the Medical Association rejected a governmental suggestion to admit twenty prominent refugee physicians. However, it adopted a substitute plan under which ten medical scientists were to be admitted for five years. During that time they were to work in hospitals and be paid out of a special fund set up by Norwegian doctors.

The German invasion of Norway on April 9, 1940, completely changed the situation for the Jews, too. In May of that year Jewish persecution started with the confiscation of their radios. As a result of protests from the Civil Administration Board, Reich Commissar Joseph Terboven had to withdraw the decree when he was apprised that the Norwegian Constitution of 1814 did not recognize any differences on a racial basis. By the fall of 1941 all radio sets were confiscated.

The Norwegian population never failed to show its sympathy for the Jews. When the Nazis damaged Jewish-owned stores in Oslo, Norwegian students demonstrated and went out to repair them, and patrons flocked to the establishments. Later, when the Nazis showed a violent anti-Semitic film, called *Grenadierstrasse,* it aroused such great disturbances that the motion picture had to be withdrawn in both Trondheim and Oslo. The failure to create anti-Semitism in Norway became apparent when the Swedish *Dagens Nyheter,* of Stockholm, stated that "the Nazi drive against Free Masons had started only because it was discovered that the number of Jews was insufficient to warrant an anti-Semitic campaign." Quisling, in a speech at Frankfort at the end of March, 1941, said at the inauguration of the Institute for the Exploration of the Jewish Question: "It is not the number of Jews which is of main importance for the Jewish problem in Norway. Above all, the destructive ideas of the Jews had a fatal influence on the inner development in our country, since the Jews had secured certain key positions and also had found several very eager and willing Norwegian pupils. More than ten thousand Norwegians of great influence through Free Masonry became 'artificial Jews' (*kunstjöder*), but it was hard to make people believe in the invisible Jewish power to which Norway was submitted. Always the same answer was given: 'There is no Jewish problem in Norway.' We have to face the tragic fact that in spite of the relatively small number of Jews in Norway the consequences of the process of dissolution inspired and directed by Jews were of a far more destructive character than in other countries with more Jews."

On October 3, 1940, all Norwegian Jews were barred from all professions and from state employment. The Nazi Reich Commissar Terboven announced at the same time a prohibition against Christian pastors' converting Jews. However, a threatened strike by the members of the National Theater and the symphony orchestra resulted in withdrawing the dismissal of Jewish members. It was not until May 28, 1941, that the chief rabbi of Oslo was informed that the Nuremburg Laws were henceforth in force. Jews were to retain their Norwegian citizenship, but applications in the future would be denied.

Arne Fjellbu, well-known dean of the cathedral in Trondheim, was removed in June, 1941, for his opposition to and protest against the anti-Semitic movement which the Nazis started. His removal created violent excitement all over the country. In February, 1942, the bishops of Norway, in a circular letter, denounced anti-Semitism as unethical and contrary to Christianity.

In November, 1941, the police were ordered to register all property owned by Norwegian Jews. By that time several of the largest enterprises owned by Jews had been appropriated by the Nazis. The anti-Jewish laws of December 25, 1941, called for the wearing of a badge by all Jews and by those whose names indicated that they were of Jewish extraction. They were barred from entering restaurants and hotels, and to practise as lawyers, doctors and actors. Dispatches from Norway in early 1942 stated that all Jews had to have a large capital "J" stamped in their passports and identification papers before the end of February, 1942.

The appointment of M. Fugelsand, chief of the Norwegian state secretariat, as chief of anti-Jewish activities, in January, 1942, led to a strong increase in anti-Semitic propaganda and the preparation of additional anti-Jewish laws. In March, 1942, the Quisling government issued a special order forbidding Jews and "non-Aryans" to enter Norway. The same month saw the intensification of the anti-Jewish drive throughout the country, the forced closing by the Quisling officials of the few remaining Jewish-owned stores in Trondheim, and the execution of four Trondheim Jews on the charge that they had listened to prohibited radio broadcasts from Great Britain. Several Quisling newspapers demanded the deportation of all Jews.

In mid-1942, by decision of the racial department of the Quisling administration, Jews in Norway with "Aryan-sounding" surnames were ordered to change them. By June, 1942, all Jewish-owned stores and in-

dustries in the entire country had been placed under Quisling commissioners, following the completion of the registration by the racial department of the 1,300 Jews and of the half- and quarter-Jews of Norway.

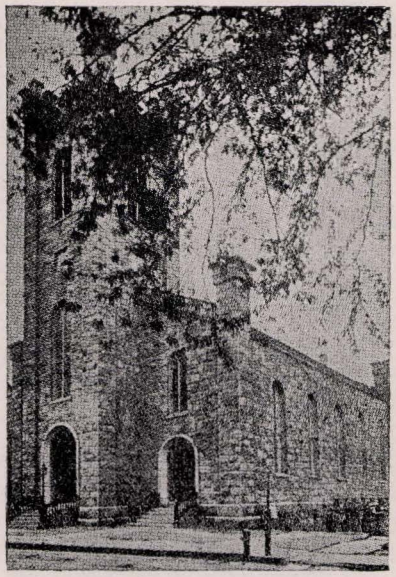
NORWICH, county town of Norfolk, England. The city is the fourth oldest Jewish settlement in the British Isles, and figures prominently in the history of pre-Expulsion English Jewry. In 1144 it was the scene of the first recorded instance of the "blood libel" in Europe, local Jews being accused of slaying a child named William for "ritual purposes". In 1190, following the accession of Richard I and the outbreak of similar violence in London, a massacre was staged in which the majority of the Jewish population perished. In 1234 Norwich Jewry was once more victimized when charges were raised that they had forcibly circumcised a Christian child.

The site of Norwich Jewry extended from Hogg Hill to Haymarket and was bounded on either side by the Sadle Gate and Little Orford Street respectively. The community appears to have included several persons of substance. The synagogue was valued at five shillings a year, a not insignificant sum in those days. Moreover, a Norwich Jew named Jurnet who was fined the enormous sum of 6,000 marks in 1186 for marrying a Christian girl, Miryld (Muriel), daughter of Humphrey de Haville, was still able to continue actively in business some three years later, while in 1194 some thirteen Jews of the city raised no less than £88. 9s. 4d toward the Northampton Donum for the ransom of Richard I. A Jew named Isaac of Norwich is described (and portrayed) in contemporary documents as the king of moneylenders, and in 1218 we read of his being fined the exorbitant sum of 10,000 marks.

Norwich was also a center of Jewish learning. A school of Tosafists known as "the men of Gornish", and including Rabbis Judah and David, is mentioned by Joseph del Medigo of Crete and other authorities, and was identified by Chief Rabbi Hermann Adler as being sages of Norwich, the Hebrew word *Norwish* being easily corruptible into *Gornish.* This identification, however, has been challenged by Solomon Schechter and others. A collection of liturgical poems, by a certain "Meir son of Rabbi Elias of the City of Norwich in Angleterre," is preserved in a manuscript now in the Vatican Library. This was published by A. Berliner in 1866 in an edition limited to twenty-five copies. (A copy of this rare volume is in the Davidson Library of Judaica at City College, New York.)



The Beth Jacob Community Synagogue at Norwich, Conn.

The resettlement of the Jews in Norwich dates from the beginning of the nineteenth century. A small synagogue was established in 1813, but was short-lived. In 1842, however, it was reorganized and continued as the focus of a local congregation. In 1940 the Jewish population of the city numbered some 150 persons out of a total of 123,700 (approximately 0.01%). There were a local Hebrew school, a Zionist and Literary Society, and a branch of the Jewish National Fund. After the air raids on London in 1941 the community was increased by an influx of evacuees, but the savage bombardment of this cathedral town in the "Baedeker raids" of 1942 led to further evacuation, disturbances in Jewish and civic life, and destruction of the synagogue.

In 1912 Lord Mancroft, formerly Sir Arthur Michael Samuel (1872-1942), was Lord Mayor of Norwich.

NORWICH, TOWN OF, a town in Connecticut (it includes the city of Norwich), with a population of 34,140 (census of 1940), including a Jewish population of 1,647 (1938). A survey conducted in 1938 indicated that although one-third of the Norwich Jews were foreign-born, the community was a well-established one, with about half the Jews having resided in Norwich for at least twenty-five years. Up to the age of thirty-five, the Jewish population was found to be predominantly native, the natives were largely of Connecticut origin, and about three-fourths of the native-born Jews had lived in Norwich all their lives.

The first of the Jewish settlers arrived about 1860. These included Ley Spier, Joseph, Abraham and Isaac Plaut, and Joseph Semansky, all of Germany. Elias Raphael came from England. About twenty years later the first Jewish immigrants from Eastern Europe came into Norwich; among them were Eli Alofsin, Akiba Lahn, Eliezer Markoff, Jacob Gordon, Peter Strom, William Trachtenberg and Abraham Blum.

In 1898 the Orthodox congregation Brothers of Joseph was formed, with Jacob Baron as the first rabbi. The synagogue built at that time was remodeled in 1930. Joseph N. Rosenberg, who began his service in 1909, was the rabbi still incumbent in 1942. The congregation had an affiliated Hebrew school. The second oldest congregation was Agudath Achim (United Brothers), also Orthodox; in 1942 Rabbi Osher Reisman was its spiritual leader. The Conservative Beth Jacob Community Synagogue, largest of the three, was organized in 1929, and in that year purchased a building and remodeled it into a synagogue; it was named for Jacob R. Slosberg, Norwich's leading Jewish philanthropist. Rabbis who served the congregation were Harry A. Cohen, Abraham Silverstone, Herman A. Glatt, Meyer Rubin, and in 1942, Zev K. Nelson, who came to the pulpit in 1940. In 1942 the synagogue had a religious school (organized in 1930) and the Berkman Memorial Library, established in honor of Bessie L. Berkman by her children. The community center of the synagogue served as the meeting place of the sisterhood and the men's club and for the organizations of Norwich, which included a Zionist district, distinguished by having the largest proportional membership in the country, a chapter of Hadassah, Junior Hadassah, Young Judea, a section of the Council of Jewish Women, and a B'nai B'rith lodge, together with an auxiliary. The entire community of Norwich contributed $15,000 to the United Jewish Appeal of 1941.

The survey of 1938 found three-quarters of the Jews of Norwich engaged in trade and in the manufacturing and mechanical industries; by virtue of the existence of many small dealers, approximately half of the gainfully employed Norwich Jews were self-employed. Local clothing and shoe factories employed others. About 10 per cent were found in the professions. The merchant Abner Schwartz was president of the Norwich Merchants' Bureau (1928-32).

Members of the Jewish community prominent in Norwich public life included: Irving Eisenstein, representative in the Connecticut state legislature (1930-32) and appointed city auditor (1940), a post he still held in 1942; Josiah Greenstein, onetime assistant prosecuting attorney, and in 1942 in the Town Council (elected 1939), as well as registrant's consultant for the local draft board; Harry Schwartz (son of Abner Schwartz), deputy judge of the police court (1933-35), chairman of the Republican Town Committee (1937-42), and in 1942 county commissioner of New London County; Oscar Silverman, president of the Board of Aldermen (1935-37), fire commissioner (1931-33) and police commissioner (1933-35); Orrin Carashick, in 1942 corporation counsel for the city of Norwich. Maurice William Meyer, alderman (1930-32), fire commissioner (1930-31), police commissioner (1931-32), and assistant prosecutor of the city court (1933). Kopland K. Markoff, president of Beth Jacob Community Synagogue, was appointed, in 1940, head of the ear, nose, and throat department of the William Backus hospital, and still occupied that post in 1942, as well as the post of consultant at the Norwich State Hospital.

NORZI, Italian family of rabbis and scholars; the name is probably derived from the town of Norcia. The most famous member of the family was Solomon Jedidiah ben Abraham (1560-1626) of Mantua. He issued a complete critical and Masoretic commentary on the Bible, which he originally entitled *Goder Peretz;* for this purpose he had to study and compare about 900 manuscripts of the Bible, Talmud and Midrash. He undertook several extended trips in order to examine the rarer copies. The work was completed in 1626, but was not published until 1742, by Hayim Basilea, and under the title of *Minhath Shai;* since then it has been frequently reissued. Another member of the family, Benjamin ben Emanuel Norzi, lived in the 15th cent. and wrote a work on the Jewish calendar (*Sod Laasoth Luah*). Further notables of the family, arranged by centuries, are: 16th cent., Eliezer ben David, Hayim ben Jehiel, Moses ben Jedidiah Solomon, Raphael ben Gabriel, Solomon ben Samuel; 17th cent., Jehiel Vidal, Moses ben Jedidiah; 18th cent., Isaac ben Moses.

NOSTRADAMUS (Michel de Nostre Dame), physician and astrologer, b. St. Remy, Provence, France, 1503; d. Salon-de-Creux, France, 1566. A very successful physician, he distinguished himself in combatting the plague in various cities. But when he failed to save his own wife and children from the dread disease, he reduced his practice and devoted himself to the study of astrology. He became famous by predicting the accidental death of Henry II in 1559. He published astrological weather almanacs between 1550 and 1566. The almanac for 1562 was translated from Latin into Hebrew by Moses Botarel ben Leon II (16th cent.), and an undated edition was printed in Constantinople under the title of *En Mishpat.* His most famous work is his *Centuries,* rhymed prophecies for the next four hundred years; the first four parts were published in 1555, but not a copy is extant. The first complete text was published in 1610 (not in 1566, as the title-page claims). Written in the form of quatrains, in a crabbed, cryptic French, and full of vague allusions, these "prophecies" have exercised the fancy of commentators and interpreters down to modern times; there has been an especial revival of interpretation since the beginning of the second World War (1939).

It is believed by many historians that Nostradamus was of Jewish origin, though this can not be absolutely proved. Most of the families that took this name were baptized Jews, and the name itself is of the type most preferred by converts. According to Joseph Pierre Haitze's *La vie de Michael Nostradame* (Aix, 1711), Nostradamus' grandfather, Abraham Solomon of Saint Maximin, a personal physician of René of Anjou (1409-80), was baptized in 1469 and took the name Pierre de Notre Dame. A list of New Christians upon whom a special tax was imposed by Louis XII in 1512 (manuscript in the library of the Jewish Theological Seminary of America, New York city) states that Nostradamus' father, Jeaume de Notre Dame, paid twenty florins. However, full credit can not be given to such lists, as no contemporary manuscript has been preserved, and a decree by Louis XVI (1778) expressly declared that all existing lists were void. It is probable that no entire proof will be found, as the New Christians were anxious to conceal their Jewish origin. It is interesting, however, to note that Nostradamus claimed descent from the tribe of Issachar, for this rests upon a purely Jewish interpretation of the phrase, "children of Issachar, men who had understanding of the times" (*I Chron.* 12:33) to mean astrologers (cf. *Targum Esther* 1:13).

NOTABLES, ASSEMBLY OF (in France in 1806), *see* FRANCE; SANHEDRIN, NAPOLEONIC.

NOTARIKON ("shorthand"), a form of abbreviation prevalent in ancient times, in which a word was indicated by a single letter, usually its initial. It was in frequent use among the Jews as early as the period of the Mishnah, for it is mentioned in the discussion of the prohibition of writing on the Sabbath (*Sab.* 12:5). It was often used as a means of exegesis, and is given as the thirtieth of the thirty-two rules of Eliezer ben Jose Hagelili. Thus 'AB HaMON ("father of a multitude"), an explanation of the name of Abraham, is interpreted as a combination of abbreviations of the words *'ab* ("father") *bahur* ("chosen"), *habib* ("beloved"), *melech* ("king"), *vathiḳ* ("ancient one") and *ne'eman* ("faithful"). There are numerous similar Notarikon interpretations in Cabala.

NOTGEMEINSCHAFT (Emergency Relief Organization). The Emergency Relief Organization of German scientists had its origin in a German organization for research in the fields of chemistry, natural sciences and the like. Its purpose was to further the efforts of German scientists who were driven from the cities in which they worked by Nazism and Fascism, and to help them establish themselves in the countries of their adoption. Founded in 1933, it at first had its seat in Switzerland, under the leadership of the privy councillor Demuth, former head of the Berlin Chamber of Commerce. In the following years its headquarters were transferred to London, where it received the support of the Academic Assistance Council.

In late 1933 a branch was organized in New York city, headed at first by Professor Karl Brandt, former professor at the Agricultural College in Berlin, who in 1942 was with the Food Research Institute in California. His successor was Professor Gerhard Calm, former professor of national economy at the University of Kiel, then at the New School for Social Research, in New York, and in 1942 in the federal government service. He was followed by Dr. Rudolf Littauer, former lecturer, in 1942 an attorney in New York, and the latter by Erich Hula, who in 1942 was a member of the Graduate Faculty of the New School for Social Research. From 1940 to 1942 its head was Henry Jordan.

In 1940 the Notgemeinschaft changed its name to the Association of Immigrant Scholars. In that year and in 1941 it made contacts for about 200 scientists, artists and other men of intellectual professions with American institutions or relief organizations. Its board in 1942 included Carl Landauer (University of California), Max Reinstein (Chicago), Robert Ulich (Harvard) and Arnold Weissberg (Eastman Kodak Company, Rochester).

NOTZERI, *see* NAZARETH.

The synagogue at Nové Mesto Nad Vahom (Vágujhely)

NOVA, ALGERON I., judge and communal figure, b. Brooklyn, N. Y., 1881. He was admitted to the New York bar in 1902, and remained in private practice until 1925. His first public office was that of assistant district attorney of Kings county (1911-12); in 1925 he took his seat on the bench as county judge and served continuously for many years. In 1937 he was elected to the Supreme Court of Brooklyn, and began his fourteen-year term in 1938.

A man of wide philanthropic interests and diverse activities, Nova became a member of the board of the Brooklyn Hebrew Orphan Asylum in 1922, and five years later was chosen president of the institution, a post he held until 1935. The next year he was elected president of the Brooklyn Federation of Jewish Charities, an organization to which he had devoted his energies for many years previously and in whose drives and campaigns he was a leading force. In addition, he served on the board of the Brooklyn Hebrew Home and Hospital for the Aged, and was a trustee of Union Temple, Brooklyn.

Lit.: American Hebrew, Nov. 20, 1936, pp. 562, 565.

NOVÉ MESTO NAD VAHOM (in Hungarian, **Vágujhely;** in German and Judeo-German, **Waag-Neustadtl** or **Neustadtl**), town in Slovakia, which belonged to Hungary until 1918 and to Czechoslovakia from 1918 to 1939. *Sefer Shemoth* (Book of Names), a Hebrew publication about 1600, mentions it among the places where Jews resided. In 1689 the noble landlords of the region admitted to their domains Jewish refugees from the massacre of Ungarisch-Brod, Moravia. In 1736 eighty Jewish families were counted at Nové Mesto nad Vahom. The Jewish school, founded in 1784, developed into the only Jewish high school of Hungary prior to the first World War. It was taken over by the Czechoslovak state.

Among the rabbis of the community were the illustrious scholars David Deutsch (1810-30), author of *Ohel David,* and Joseph Weisse (1855-97), author of *Michtab Al Debar Rashi* (Treatise on Rashi's commentary on *Chronicles*). His successor, Rabbi Philip Rosenberg, in 1925 became rabbi of Congregation Knesseth Israel of Cleveland, Ohio, and still occupied that pulpit in 1942. Dayan Joseph Weiss, who ministered to the community from 1925 on, translated the Pentateuch into the Slovak language.

The Hungarian under-secretary of state, Ignatz Einhorn (Eduard Horn), and Samson Weisse, rabbi at Berlin, were born in Nové Mesto.

Under Czechoslovak rule the community consisted of 1,550 persons in a total population of 5,900. It maintained three synagogues, a small Yeshiva, a Talmud

Torah school and a number of charitable institutions.

Under the puppet state of Slovakia, Jewish-owned property was confiscated, the Jewish community board was forced to dissolve, and the Jews themselves were crowded into camps and "ghetto towns" pending their eventual deportation to the German-occupied regions of Poland and Russia (1941-42).

NOVÉ ZÁMKY (in Hungarian, **Érsekujvár**; in German, **Neuhäusel**), city in Hungary; from 1918 to 1938 it was in Czechoslovakia. After many unsuccessful attempts during the 18th cent., Jews finally settled at Nové Zámky early in the 19th cent. The Jewish community, which in 1870 was split into one Orthodox and another moderately Reform congregation, rapidly developed under the Liberal governments of Hungary and in the democratic republic of Czechoslovakia. In 1920 Nové Zámky had 1,200 Jews in a total population of 19,000; when the city was returned to Hungary, in 1938, the Jewish population had increased to 2,770 in a total of 22,000. The Jews greatly contributed to making Nové Zámky a central market for grain products and horses. After the return of the city to Hungary, the Jews were greatly restricted in their occupations by the anti-Jewish laws (1938-42).

Among the rabbis of the progressive community, Samuel Klein (d. 1940), professor of geography at The Hebrew University, Jerusalem, was the most outstanding. In 1927 a Jewish junior high school was dedicated. The Hebrew language and Jewish literature were enthusiastically cultivated in the community.

The Orthodox community established a school in 1870 and a synagogue in 1880, and elected as rabbi Vilmos Groszmann (1870-82), whose son, Péter Ujvári, occupies the place of Sholem Alechem in Hungarian Jewish letters. The Yeshiva founded by Rabbi József Tigermann (from 1885 on) had, in the 20th cent., an average of thirty students. Rabbi Arnošt Klein (1930-) introduced sermons in Slovak.

NOVI SAD, city in Bačka, Yugoslavia (in Hungarian, **Ujvidék**; in German, **Neusatz**). Until 1918 Novi Sad belonged to Hungary. Jews were living at Novi Sad early in the 17th cent., but they were not permitted to constitute a community. Their Hebrah Kaddisha (burial society) was in existence from 1729 on. The records of the community were lost in a conflagration in which, during the war of 1848 to 1849, the synagogue, school and archives and all the Jewish-owned property were destroyed. The synagogue was built in 1829 to hold one hundred Jewish families. With the support of Countess Nitzki, it was rebuilt in 1851. The Jewish community at that time was under the control of the city magistracy. Its rabbi was the scholar Jacob Sholom Freier (d. 1880). Toward the end of the 19th cent. Novi Sad, a flourishing industrial and business center, attracted large numbers of Jews. A new spacious synagogue was dedicated in 1909.

Under Yugoslav rule (1918-40), Novi Sad, with a Jewish population of 2,600 in a total of 50,000, was one of the most important Jewish centers of Yugoslavia.

The economic activities of the Jews of Novi Sad, who contributed greatly to the development of the Bačka and Banat districts of the country and were also the intermediaries of Balkan commerce, were greatly appreciated by the Yugoslav government. The king of Yugoslavia and all the authorities sent their representatives to the 200th anniversary festival of the Hebrah Kaddisha of Novi Sad in 1929. In 1932 the Jewish community of Novi Sad dedicated a national home for the aged, and in 1937 an orphan asylum, making these institutions available to Jews from the poorer sections of South Serbia.

In 1940 Bačka was occupied by the German and Hungarian armies. A large number of the population in the district, including many Jews, were killed. Many Jews fled into Serbia to escape persecution by the Germans, the younger people joining the guerrilla forces of General Dragoljub Mihailović. According to reports, the property of the surviving Jews was confiscated and they themselves were mustered into a labor battalion under ruthless overseership.

NOWACK, WILHELM, Christian theologian and professor, b. Berlin, 1850; d. Leipzig, Germany, 1928. From 1891 to 1921, while he was professor of theology at the University of Strasbourg, he published commentaries on various books of the Bible, including *Judges, Samuel,* the Twelve Minor Prophets, *Psalms, Proverbs, Ruth,* and *Ecclesiastes.* The commentary of Nowack is the most detailed of the critical school; it contains the translation of the Hebrew text in which the several sources as well as the poetical passages are distinguished by a difference in type, and detailed explanations and interpretations. Such pioneering works as Gunkel's *Genesis* and *Psalms,* Duhm's *Isaiah,* and Budde's *Job* are contained in his commentary.

Nowack wrote a manual of Hebrew archeology (Freiburg and Leipzig, 1893-94) and a translation of and commentary on the Mishnah tractates *Sabbath* (Giessen, 1924) and *Erubin* (1926). Other works of Jewish interest by Nowack include: *Hieronymus und die alttestamentliche Textkritik* (1875); *Die sozialen Probleme in Israel* (1892); *Die Entstehung der israelitischen Religion* (2nd ed., 1896).

NOWAKOWSKI, DAVID, East European composer of synagogal music, b. Malin, province of Kiev, Russia, 1848; d. Odessa, Russia, 1921. At twenty-one he became choirmaster and assistant cantor in the Brody Synagogue in Odessa. During the next fifty years his masterful conducting and his numerous beautiful compositions placed him in the forefront of composers for the synagogue. Nowakowski was fortunate in having Cantor Pinchos Minkowsky as his associate in this progressive congregation, for the latter, unlike Nisen Blumenthal, encouraged him to compose and the two thus established the finest synagogue service in Russia. Although only two of his works were published, *Shirei Dovid* for Friday evening and *Tefilas N'iloh* (1895), his countless compositions were copied from manuscript and were transmitted from cantor to cantor.

More than any other synagogal composer before or after him, Nowakowski was able to clothe the ancient melodies in a modern European harmonic and contrapunctal garb without obscuring the traditional character of these chants. Although he was mainly self-taught in music, his harmonies are competent and his fugues well developed. For thirty years he was teacher of music and conductor in the Jewish Orphan Asylum. He served four other organizations in a similar capacity, including the People's Conservatory.

Lit.: Friedman, A., *Lebensbilder berühmter Kantoren,* vol. 3 (1927); Idelsohn, A. Z., *Jewish Music* (1929) 308.

NOZIÈRE, FERNAND (WEYL), dramatic critic and playwright, b. Paris, 1874; d. Passy, France, 1931. Nozière's career began as an office boy with the Jewish Colonization Association. While working as a clerk he studied at the Sorbonne, and edited students' papers. Later he presented modern plays at the People's Theatre, but was rebuked by part of the public for the immorality of these performances. Writing dramatic

critics for *Le Temps,* he adopted his pen-name of Nozière, while he worked for *Le Matin* under the pseudonym of Guy Launay. As a leading theatrical reporter he was a spokesman for the new generation of dramatists.

Nozière wrote many comedies, some of them in collaboration with Alfred de Savoir and other colleagues of his. Among his very successful plays are: *Les liaisons dangereuses; Les hasards du coin du feu; Le baptême* (1907); *La sonate a Kreutzer* (after Tolstoi; 1910; the last two with Alfred de Savoir); *Les deux visages* (1909); *La maison de danse* (1909); *Les oiseaux* (1911); *Bel-Ami* (after Maupassant; 1912). He was a chevalier of the French Legion of Honor.

NUMBERS, BOOK OF (Hebrew, *Bemidbar*), the fourth book of the Torah, or Pentateuch, containing thirty-six chapters. The name is derived from the Greek *arithmoi,* which the Vulgate rendered as *Numeri,* whence the word Numbers comes as a direct translation. Similarly, the Mishnah employs the term *homesh hapikḳudim* as a title (*Yoma* 7:1); later on, however, the first word of the book, *vayedabber,* came into use together with *bemidbar* ("in the desert"), which is the fifth word; this latter title has become the accepted name of the book in all modern Hebrew editions of the Bible.

"In the desert" is perhaps the best summary description of the contents of the book. There is a great variety of laws, narratives, and poetry, which deal with Israel's experiences of forty years in the desert. It narrates the story from the first day of the second month of the second year after the Exodus to the close of the forty-year stay. While the beginning and the end of this period are dealt with in detail, the passing of the thirty-eight years of peregrination is drawn only sketchily, although there is a very clear picture of the great difficulties which faced Moses as the leader of a tired and often discontented people.

Numbers can be divided into three parts. The first deals with the last events and legislation originating in the Sinai peninsula (1:1 to 10:10). These events concern the census which was taken; particulars about the desert camp; about the Levites and rules pertaining to them. Chaps. 5 and 6 relate various legal enactments, among them the test of marital chastity, Nazirite laws and, in 6:22-27, the priestly benediction, "The Lord bless thee, and keep thee. . . ." *Num.* 7:1 to 10:10 deals with princely and Levitical matters; with the *pesach sheni* (the second Passover); and with certain ritual objects, such as the golden candlestick and the silver trumpets.

The second part of the book (10:11 to 22:1) describes the wanderings of Israel from Sinai up to the arrival of Israel in the land of Moab. Outstanding events are: the appointment of the seventy elders; Eldad's and Medad's prophecies; the incident with the quails; in chap. 12, Miriam's strife with Moses and her leprosy; in chaps. 13 and 14, the sending of the spies into Canaan, the disheartening effect of their report, the mutiny of the people and the consequent condemnation of the desert generation to thirty-eight more years of continued wandering. This part of the narrative ends with Israel's unsuccessful attempt to invade Canaan from the south. Chap. 15 contains a number of laws, and the story of the punishment of the man who gathered wood on the Sabbath day. Chap. 16 tells of the rebellion of Korah; chaps. 17 to 19, of the consequent strengthening of the position of the tribe of Levites, of laws of defilement, of the *parah adummah* (the red heifer). Chap. 20 relates the death of Miriam, Moses' and Aaron's sin, and the latter's death. Further wanderings are described in chap. 21; the incident of the serpent of brass is told; the defeat of the Amorites and of Og, king of Bashan. *Num.* 22:1 finally tells of Israel's arrival in Moab.

The last part (22:2 to 36:13) begins with the encounter of Moab and Israel and the story of Balak and Balaam. The zeal of Phinehas and his reward are told; a second census is taken (chap. 26); the right of women to inheritance is treated with regard to the daughters of Zelophehad (27:1-11). Moses is warned of his approaching death, and Joshua is selected to succeed him. Chaps. 28 to 30 deal with sacrificial laws and vows; chap. 31, with the destruction of Midian; chap. 32, with the settlement of Gad, Reuben, and half the tribe of Manasseh in the East Jordan region; the end of the book makes provision for the conquest of Canaan with respect to boundaries, Levitical cities, cities of refuge and other matters.

While both traditional Judaism and orthodox Christianity hold firmly to the Mosaic authorship of Numbers and admit no multiplicity of sources, modern criticism has endeavored to show that the book is the result of a long historical development and that the age of its various sources can be fairly well determined. Bible critics hold that the style of different passages, their conception of place, circumstance and religion, the difference of approach in one and the same matter, link the sources of the book to the main documents in the preceding three parts of the Torah, i.e. to *J, E,* and *P.* Thus they believe that the bulk of the book must be assigned to *P,* and that less than a quarter, particularly chaps. 10 to 12, parts of 13 and 14, and the Balaam stories, belong to the 8th cent. B.C.E. *JE* document. In addition, 21:14-15 contains a quotation from an ancient, and lost, "Book of the Lord's Battles"; 21:17-18 is clearly an old folk song, and 10:35-36, the "song of the Ark," may confidently be put in the same class. Likewise, some of the Balaam poetry may be of considerably older origin than its constituent sources.

The God concept found in Numbers shows the same different aspects, the same fullness of view, warmth and reverence as in the other parts of the Torah. He is a God of prayer (10:35-36), He loves His people (chap. 11), and His might stretches out even over the kings of the other nations. He unfailingly punishes sin, although His mercy is great beyond imagination. He appears as a God of battle, as well as the Lord of justice; He orders the affairs of His people even to the details of their existence, as He maintains throughout the closest contact with the nation of His covenant.

No weakness of the people is glossed over. They succumb to indolence and despondency; they fail to see the ideal which Moses has set up for them; they fall prey to the lures of the daughters of Moab (25:1-9), and they rebel numerous times against Moses and God (11:1, 4-6).

The central figure of the book is Moses. It is Numbers no less than *Exodus* that gives us a full portrait

of the humanness of the man. Despite his outstanding position he remains essentially one of the people, albeit their model and example. His humility is praised as his noblest feature (12:3); his trust in God and his complete faithfulness are emphasized (10:29-32; 12:6-8), as well as his unwavering and deeprooted affection for his people (11:2, 29; 21:7). On the other hand, he, like others, is subject to depression and despair (11:10-15), to indignation and exceeding anger (16:15), and to sin (20:10-13).

Numbers makes the years in the desert a period of deep spiritual experiences, as well as a time of decisive historical events. Even extreme Bible critics have of late admitted the undoubted historicity of many of its aspects, especially the encounter of Israel with the nations bordering on Palestine; the failure of the first invasion from the south; and the acquisition of the Transjordan as the opening wedge in the conquest of Palestine. NUMBERS IN MYSTICISM. 1. General Survey. Numbers and their concepts and implications intrigued all ancient peoples. Among primitive peoples, numerals are simply names for sensual perceptions; thus our "calculate" is derived from the Latin *calculus*=pebble. The basic Hebrew terms for numbering are *nasa', safar,* and *manah. Safar,* from which the word *mispar,* the common Hebrew term for "number," is derived, means originally "to shear" sheep. Thus quite logically the need for higher numbers developed with an expansion of flocks and with growing economic and commercial needs.

But with higher numbers came also the divorcement of numbers from their material objects; they became "things in themselves;" and since they follow their own rigid laws, numbers were thought to have special significance as such, to represent astral and terrestrial matters, and to have particular degrees of importance and even sanctity.

2. Symbolism and Mysticism. Jeremias and Winckler have attempted to prove that an elaborate numerical system lies at the basis of oriental religions. Hilprecht has tried to show that the number 12,960,000 ($=60^4$ or 3600^2) was, to the Babylonians, the arithmetical expression of a law controlling the universe. He claims that consequently 13, being no divisor of this number, has always been regarded as an unlucky number. According to Jeremias, 5 and 7 are the sacred numbers of the Babylonians, and from them ($5+7=12$) there stems the duodecimal and sexagesimal system. Others, however, derive it from the Sumerians. In the oldest Biblical sources we already find a combination of the sexagesimal with the decimal system, although the latter prevailed both in language and in symbolism.

It is difficult to say whether in Biblical literature the authors consciously incorporated systemic numbers, and if they did so, what symbolism they meant to express. That certain preferences, such as for 7 and its derivatives, and for 10 and 40, were common to ancient Jewish thinking, appears certain; but at no time in the Bible do we find numbers invested with expressly stated symbolic values. This is significant, inasmuch as the Babylonians, on the other hand, had their godheads represented by definite numerical—and therefore sacred—figures (Adad=6; Marduk=11; Shamash =20; Sin=30; Ea=40; Bel=50; Anu=60, etc.).

With the influx of Pythagorean ideas, however, numbers took on a more independent philosophical and later, mystical, meaning. In a work now lost (the *Peri Arithmon*) Philo developed his philosophy of numbers, building upon the Pythagorean Speusippos to whom the "original numbers" were eternal principles and foundations of the world.

From such "philosophical symbolism" to mysticism is but one step, and from Mishnaic days on through medieval times, Jewish literature is filled with the mystical, and finally, magical and superstitious application of numbers and their secrets. The fifth chapter of *Aboth* reflects preferences for numerical groupings; chaps. 32 to 41 of the *Aboth de Rabbi Nathan* contain various plays and speculation on 3 to 10; the *Pirke de Rabbi Eliezer,* the *Alphabet of Rabbi Akiba,* and especially the *Sefer Yetzirah* abound in numerical mysticism. The opening sentence of the latter book says that God "has created the world by number, the numberer and the numbered."

The *Sefer Yetzirah* elaborated on the 32 ways of secret wisdom, which are based on the 10 vowels and 22 consonants of the alphabet and are reminiscent of the 32 hermeneutic rules of the Talmud (one of which deals with Gematria, or the numerical value of letters, and another with the analogous use of numbers). Further mystical investigations deal with the dimensions of Eternity (*Sod Shiur Komah*), although Saadia, Sherira and Hai Gaon, and particularly Maimonides attempted to prevent this type of speculation.

Ibn Gabirol (*Fons Vitae* IV, 17), harking back to Philo and the Neo-Platonists, wrote: "I believe that . . . . the number is the origin of all things," and others, like Ibn Zaddik, Ibn Daud and Abraham Ibn Ezra, express themselves in similar manner. Ibn Ezra in various writings (*Sefer Haehad, Sefer Hamispar, Sefer Zachuth,* and in mystical riddles) evinces the strongest interest in numbers, although he warns against the indiscriminate usage of Gematria in interpreting the Bible (on *Gen.* 14:14, "the Torah does not speak through Gematria").

Another channel of number speculation was to determine the time of the arrival of the Messiah. According to Talmudic tradition, the 4 heathen Kingdoms will last one "day of God" (1000 years) minus $\frac{2}{3}$ God-hours; so that the Messianic era was expected in the 7th cent. (see *Pirke de Rabbi Eliezer* 28; *Sanh.* 96b et seq.).

The Cabalists carried the number cult to its extremes. The *Sefiroth,* the 10 mystical emanations of God, are built on numerical conceptions. Superstition played its generous part; magical squares were in vogue both for determining the future and for healing purposes. Numbers were regarded as bringing luck ("3 arrests sickness, 5 heals, and 7 even helps against magic," *Sab.* 66b), a belief common to many peoples. Even numbers were thought to be dangerous (*Pes.*

110a) and the 4 cups of wine on the Seder Night were permitted only because the holiness of the holiday was a special protection (*ibid.* 109b). In Talmudic as well as later mysticism and symbolism all number schemes are inextricably bound up with Gematria. Thus, to give but one example, the number of righteous men in every age (36) is derived from the word *lo* in *Isa.* 30:18 (*lo* = to him; numerical value, 36).

3. Individual Numbers. It must be emphasized that particularly in the Bible many numbers, or groups of numbers, are used only as approximations (for example, *Prov.* 6:16-19; 30:15 et seq.). Of the few individual numbers that can be mentioned here, emphasis will be placed on symbolic and mystical interpretations in post-Biblical literature.

ONE. Important as the principle of Unity (*Deut.* 6:4), and therefore little used in magic and superstition.

Two. "The beginning of numbers," "the true forms" (Ibn Ezra). Pairs are dangerous; after drinking 2 cups of wine one says to the demon: "you (2 cups) and I are three" and makes the so-called *fica* motion. The danger of pairs was taught to Moses at Sinai, "with regard to 2 eggs, 2 nuts, and 2 cucumbers and something else; and since the sages did not know what this "something else" was, they prohibited *all* pairs" (*Pes.* 110b).

THREE has long had sacred implications (see *I Kings* 17:21), probably because it signified the three dimensions. To Ibn Ezra it was "the beginning, middle, and end" and had therefore the aura of perfection and strength.

FOUR, the "limited number" of Pythagorean speculation; for it is composed of unity (1) and perfection (3), and the *tetractys* (1+2+3+4) gives the number of completion (i.e., 10). The Bible has it repeatedly (*Gen.* 2:10; *Jer.* 15:3); Philo calls it the "ratio divina ac sacra" (*Quaestiones* II, 87), for it denotes the 4 directions of the compass, or the 4 elements of Greek philosophy. Of special significance became Zechariah's 4 chariots (6:1 et seq.) and Ezekiel's 4 beasts of the Merkabah (chap. 1). It played its role in the mystical meaning of *Pardes* and in the 4 worlds of the Cabalists (*Atziluth, Beriah, Yetzirah, Asiyah*). It obtained special significance because of the 4 lettered name YHVH.

FIVE, claimed by Jeremias as a basic number of the Babylonian cults, appears but rarely in Hebraic mysticism. "I call thee further by the power of the 5 selected Names, etc." (*Sword of Moses,* edit. Gaster, I, 335).

SIX too occurs seldom; examples in *Midrash Lev.* 4:2; *Midrash Lam.* to 1:13.

SEVEN is the sacred number par excellence. Its holiness is derived by some from the 7 planets, by others from being the quarter of the 28 day month. This seems the more plausible since in Jewish tradition the seven received its major significance from the 7 day week and the Sabbath. The explanation that it is the sum of expansion (3) and dimension (4) is certainly later reasoning. With its derivatives it occurs more than 500 times in the Bible; of special importance are the 7th year of release and the year of Jubilee, the 7 weeks from Pesach to Shabuoth and the 7 branch candlestick. In Hebrew the word for seven (*sheba*) bears significant relation to the words for "fullness" (*soba*) and for "oath" (*shebu'ah*); some go as far as taking a name like Elisheba (*Ex.* 6:23) to mean originally "My God is Seven." Mysticism as well as magic (*Sab.* 67a) made extensive use of this number.

TEN, important because of the decimal system; therefore sometimes used as a round figure (*Gen.* 24:10; *Josh.* 22:14), important in Jewish thought because of the Decalogue (*Ex.* 20). Yom Kippur falls on the 10th day of the 7th month; 10 tribes were lost; *Ex.* 26:27 and *I Kings* 6:7 speak of the 10 cubits, and *Dan.* 7:7 of 10 horns. There were 10 generations from Adam to Noah, 10 plagues in Egypt, 10 words with which the world was created; 10 perpetual miracles in the Temple; 10 things created on the eve of the Sabbath (*Aboth* 5), 10 are necessary for community prayer (*minyan*); and *Aboth de Rabbi Nathan* 32 to 36 knows of many further symbols. The preference for 10 is universal; the Pythagoreans built on it; Aristotle and Philo call it the number of perfection. The *Sefer Yetzirah* regards it as fundamental, since it is composed of 4 (spirit, air, water, fire) and 6 (Height, North, West, East, South, Depth).

TWELVE, a composite of 3 times 4: the twelve tribes of Israel and Ishmael. The 12 lettered name of God (*Kid.* 71a) is thought by *Sefer Raziel* (24a) to consist of the 12 possible mutations of the 4 lettered YHVH.

THIRTEEN, important because of the 13 attributes of God (*Ex.* 34:6-7), elaborated in the ditty "Who knows one?" in the Haggadah. O. Fischer has drawn attention to the fact that *YHVH, 'adonai, mal'ach,* Israel, Jacob and Joseph all are multiples of 13 by way of Gematria.

The twenty-two letters of the alphabet are the soul of everything past, present and future (*Sefer Yetzirah* II, 2). There is a 22 lettered divine name in mystical literature (*Sefer Raziel* 45a) and in a *Selihah* by Benjamin ben Zerah, as The Name taught to Moses by Galitzur.

FORTY, the number of days and nights spent by Moses on Sinai (*Ex.* 24:18; 34:28; see also *Mark* 1:13); the number of years in the desert; in *Lev.* 12:1-5, 40 days signify the length of a woman's uncleanliness. It was thought that a male embryo takes on human form in 40 days, a female in 2 × 40 days (see *Nid.* 3:7; *Ber.* 60a). There should be 40 seahs to the ritual bath (*Men.* 4:1), and in general, a magical formula should be repeated 40 additional times in case no specified number of incantations is given (*Sab.* 66b).

FORTY-TWO: in mystical literature the great Name of God consists of 42 letters (*Kid.* 71a; Rashi to *Sanh.* 60a); the number of letters of the 10 Sefiroth is 42.

SIXTY often expresses an indefinite number (see *Song of Songs* 3:7; 6:8; *Sanh.* 101b). A ritually unfit food is allowed by tradition if it is admixed with clean food 60 times its quantity.

SEVENTY is composed of 7 and 10 and therefore is of symbolical significance (see, e.g., *Ex.* 1:1). Benno Jacob finds it expressed in the story of creation; rabbinic literature knows of 70 thrones of the Kingdom (*Hechaloth,* chap. 2, in Jellinek, A., *Beth Hamidrash,* 1938, vol. 2, p. 41), of 70 nations and 70 languages, and of the 70 names of God (*Sefer Hahinnuch,* at the beginning).

SEVENTY-TWO is the sacred number of the sexagesimal system (6×12) and loomed large in Jewish mysticism because of the all-powerful secret 72 lettered Name of God. Mentioned first in the Midrash (*Midrash Gen.* 44:19) it was derived by counting *Ex.* 14:19-21, which verses have 72 letters each, or by reading YHVH by way of various modes of Gematria. It was this 72 lettered Name which occasioned the most excessive mystical speculations.

NINETY-TWO names of the Metatron were engraved on the throne of God (*Sefer Hahinnuch*).

NUMBERS RABBAH, *see* MIDRASH NUMBERS.

NUMEROLOGY, *see* GEMATRIA; NUMBERS IN MYSTICISM.

NUMERUS CLAUSUS. Literally a "closed number" (limited number), numerous clausus was originally the name given to a limited percentage of Jews, especially Jewish students and those working in the academic and free professions, as contrasted with the rest of the inhabitants of the city, land, state, or those working in similar fields. The term is employed in this sense after the middle of the 19th cent., about the time when the Jews began to make more general use of the permission to attend higher schools of learning. It was, however, used earlier. The Jewish students at the University of Padua, for example, were not granted academic degrees. But in other fields, too, there was a sort of numerus clausus, when Jews were permitted to pursue medicine and handicrafts only in relation to the number of non-Jews pursuing them; or when Jewish doctors could treat only Jewish patients; or when, in accordance with old-Austrian family laws, only the first-born son of a Jewish family was permitted to marry. Soon after the emancipation of the Jews in Europe, with the resulting reaction, whether direct or indirect, official or unofficial, difficulties and limitations were definitely imposed upon Jewish students, as well as upon those engaged in the professions.

In AUSTRIA, where no discriminatory laws were passed, Jews were nevertheless excluded from the consulate academy in Vienna (the institution for training in consular and diplomatic service), the agricultural college was practically closed to them, and the Army Officers' School was accessible to only a very limited number. At the turn of the 20th cent., in the Austrian universities and technical schools, especially those of Vienna and the Alps countries, a strong feeling arose against the great number of Jews on the different faculties, increased by the influx from the Eastern European crown countries. The leaders of the "movement" were Mayor Karl Lueger and the German radical Georg von Schönerer, who is given the credit for the expression:

> Was der Jude glaubt ist einerlei,
> In der Rasse liegt die Schweinerei.

(It makes no difference what the Jew believes; the corruption lies in the race.) Raging excesses in university halls resulted. From time to time Jews were cruelly persecuted, especially in the lecture halls and laboratories, mostly out of envy, as the Jews were recognized to excel as physicians and were occasionally preferred by non-Jewish patients. Even in professions subject to license or concession, adherence to Judaism soon became a disadvantage. However, laws of this nature never were approved by the majority.

In the much smaller Austria after the first World War, there were many controversies about the unrestricted admission of Jews to the academic professions, because the struggle for existence had become much more severe. But in general, with the exception of certain hospitals and organizations, Jews pursued their studies and professions undisturbed. At the time of the forced Anschluss with the Reich, half of the doctors and lawyers in Vienna were Jews.

GERMANY. Before the first World War, following the example of Prussia, Jews in Germany were not admitted to the active class of army officers. In the higher teaching faculties only 2 to 3 per cent were admitted, and the highest rank Jews could attain was associate professor. A similar limitation was enforced in the judiciary.

In the democratic post-War Germany these restrictions were not official, but under the pressure of the growing German National and National Socialist movement, were practised because of existing political conditions. Even at that time the Nazis permitted the attendance of Jews at the universities and allowed them to practise certain professions important to the state only in proportion to the number of Jews in that state. From the time they began to become powerful until the appearance of the Nuremberg Laws (1935), this scale was used (somewhat more than ¾ of 1 per cent of the population, and besides these about 1,200,000 persons of mixed blood, who were counted as Jews, according to the racial theory). Beginning in 1933, positions of state were not permitted to German Jews; they could not practise law, and physicians could treat only Jewish patients. From 1938 on there was no participation of Jews first in the intellectual, and soon in the commercial, fields.

ITALY. Even under Mussolini until 1938, there were practically no restrictions in Italy. From then on, however, as in Nazi Germany, the Nuremberg Laws were systematically carried out.

CZECHOSLOVAKIA, the republic of Thomas G. Masaryk and Eduard Beneš, knew no numerus clausus, which was entirely in keeping with the spirit of the government, even though, in 1929, class room riots against Jews were stirred up by the students at German colleges.

RUSSIA, in actuality, was the starting point of official restrictions of Jews in universities and certain professions. As early as 1887 a law was decreed which, according to the part of the country, limited the enrollment of Jews in the middle and higher schools to between 2 and 15 per cent. This law was in effect, with various changes, until the first World War.

In SOVIET RUSSIA the picture was changed; officially, all restrictions were dropped, and party membership

became the primary factor. Part of the population which was still anti-Semitically inclined attempted to make discriminations against Jews in education and in various professions. However, the government took pains to guide this tendency; it opened a special school for Red soldiers to inculcate in them tolerance toward their Jewish comrades, and delegations from factories were sent to Jewish agricultural settlements to demonstrate the existence of productive tendencies among the Jews. However, the numerus clausus was active in the economic field in different parts of Russia. In the Ukraine, for instance, out of 181,000 railroad workers, only 1,500 Jews found employment. The efforts of the government to place Jews in the metal factories in the Don region were foiled, principally because of the hostility and boycott of the non-Jewish workers. With the opening of the second World War, however, every discrimination and restriction of Jews were silenced.

HUNGARY reflects a different picture. The case of this country is an example wherein its state, for so-called state reasons, installed machinery extremely dangerous to Jewish cultural existence. This machinery is commonly called the numerus clausus law, or, officially, Law XXV, 1920. In the words of M. de Millo Franco, speaking for the Committee examining this question before the Council of the League of Nations on December 16, 1925, the ostensible aims of the law were "that only the names of such persons shall be inscribed in the universities and other institutions for higher education as are known to be of absolutely unimpeachable national loyalty and morality; in addition to these requirements, the intellectual capacity of the candidates shall be taken into consideration, and further, care shall be taken that the number of students of different races shall be in proportion to the number of inhabitants of such races and nationalities in the country." This law seemed to be a harmless precaution, but it was pointed almost altogether at the Jews, and was also used against them, although according to Law XLIV, 1868, Jews in Hungary constitute neither a race nor a nationality but a religious denomination. In Budapest, for example, this was the result: In 1913 to 1914 there were 7,513 students; of them 1,598 were Jews. In 1922, out of 7,140 students, only 558 were Jews. In 1928, only 393 were Jews.

In 1928 Law XXV, 1920, was amended formally by removing the sting of discrimination against members of a race or nationality and substituting economic considerations. This amendment did not change practice at the University of Budapest where the government continued to keep the number of Jewish freshmen at 5%; at the smaller universities of Szeged, Pécs and Debrecen, however, Jews were admitted in larger numbers. The percentage of Jewish students admitted to the four Hungarian universities and to the Technical School of Budapest in 1929 was 9.3% of the total (1,205 students). In 1942 the "lawful" percentage of Jews was still admitted to the universities, reportedly on condition that they identify themselves as Jews by wearing a badge with the Star of David.

POLAND attempted to enforce a numerus clausus law similar to that of Hungary in 1923. But it met with the opposition of the League of Nations, because of the "protection of minorities" clause in the peace treaty. The different universities, however, acted upon it independently. The Faculty of Law of Lwów, in 1925, decided that of the 600 incoming students, only 40 per cent could be Jews and Ukrainians. In the school of medicine of Cracow, out of 100 new students, only thirteen Jews were admitted. In Warsaw, only nine Jews were admitted in a class of 200, although 30 per cent of the population of Warsaw was Jewish. The pharmaceutical department in Cracow admitted fourteen Jews, among 148 non-Jews. In Posen and Lublin Jews were entirely excluded from attending the university. In 1937 there occurred such serious student disorders in a number of Polish universities that a complete numerus clausus was imposed.

ROUMANIA, in spite of the mediation of the League of Nations, excluded Jews from universities altogether in 1926. This was done at the students' initiative, and was supported by the university officials.

ARGENTINA, influenced by Nazi propaganda, developed a threat to Jewish students. In the medical school in Buenos Aires, officials announced that "no Jewish student would be able to stay after the following Monday." There were about 200 Jewish students enrolled at the time. They fought bravely against this discrimination. The number of Jewish students, however, decreased steadily thereafter from about 5 per cent to 2 per cent.

UNITED STATES. In the United States there is no numerus clausus in the sense in which it was practised in European countries. There is a definite limitation to the admission of Jewish students in certain privately endowed colleges and universities, especially in New England, but not in the public tax-maintained state institutions of similar calibre. There is likewise a limitation of admissions to medical colleges.

The reason for these limitations, however, springs from conditions other than those commonly called anti-Semitic. Colleges like Harvard, Yale and Columbia, like Dartmouth, Brown and Williams, like several privately endowed institutions in the South, seek to maintain the tradition that their student bodies constitute cross-sections of the entire nation. And admissions committees labor carefully not to overload the student enrollment from a single section of the country—either urban or rural. To that end, admissions committees give first preference to sons and relatives of alumni. They offer special "regional scholarships," seeking to attract students from the various regions, in order to variegate the complexion of the student body. Other things being equal, admission is granted to applicants who have already demonstrated certain skills and aptitudes sought for campus life and activity in their preparatory and public high school years.

An unofficial survey made in a number of privately endowed institutions brought replies from members of the corporations and from chairmen of admissions committees, which may be summed up thus: Yes, we have quotas. Should it become obvious that our colleges would be swamped by Catholics, or mid-Westerners, or students from the deep South, or descendants of Poles or Italians, we should set up quotas against these. If we should indiscriminately admit students on their preparatory school intellectual records, without regard to their achievements in the various phases of activities which make up a college campus and without proportionate representation from all the states, soon (name of college) would no longer be the (name) of the long tradition we seek to maintain.

The limitations on the admission of Jews to medical schools in the United States stem from a different set of conditions. In a survey made in 1930 by Dr. Harold Rypins, at that time secretary of the New York State Board of Medical Examiners and president-elect of the Federation of State Medical Boards of the United States, he came to the conclusion that "there is no evidence of racial or religious discrimination in the admission of applicants to medical schools, either generally throughout the country or particularly in New York City." At the time, in the entire United States, there were only seventy-six registered medical schools whose distribution paralleled more or less the general distribution of the country's population. Nine of these were in New York and five in New York city. (The *Journal of the American Medical Association* reports exactly the same number in August, 1941.) These schools admitted annually approximately 6,000 freshmen, selected from over 12,000 eligible candidates, so that each candidate has one in two chances of being acted upon favorably for admission. Since these 12,000 candidates frequently applied to more than one school, there was a total of 28,000 applications, which gave each application about one chance in five to be acted upon favorably. In 1930, while the Jews formed approximately 3½ per cent of the total population of the country, Rypins says that 17 per cent of all medical students in the country were Jewish, "the best evidence against the allegation of religious discrimination." The situation in New York city, according to Rypins, constitutes a special problem: Of the 4,789 applications to medical schools in New York city in 1930, 3,640, or 76 per cent, were from Jews. Because of multiple application, it was presumed that this number represented 1,500 individual Jewish applicants.

Of the 4,789 applicants only 524, or 9.13 per cent, were admitted, of whom 226, or over 43 per cent, were Jewish. "Since the Jews form less than 30 per cent of the total population of New York City, the fact that over 43 per cent of all the freshmen admitted to medical schools in New York City were Jewish is the best possible evidence of the absence of racial or religious prejudice in the selection of candidates for admission to medical schools in Greater New York."

Rypins adds that the situation is more complicated due to the fact that while the medical schools of New York city welcome applicants from a distance, medical schools outside of New York city are skeptical about New York city applications on the theory that the local schools will select the choicest candidates.

NUMIDIA, ANCIENT, *see* ALGERIA.

NUMISMATICS. 1. History and General. No actual coins were known in the earliest Biblical period. Gold used to be weighed out, in accordance with definitely fixed weights and measures, silver being used as the standard of value. Hence the Hebrew word *kesef* ("silver") is tantamount in meaning to "money." The standard was the shekel, which was then a weight, not a coin. In the Biblical narrative of Abraham's purchase of the cave of Machpelah (*Gen.* 23:16) the term shekel and the term silver are both used: " . . . And Abraham weighed to Ephron the silver . . . , four hundred shekels of silver, current money with the merchant."

The actual weighing was done by means of two different kinds of scales, the one the ordinary balanced scale, the other scales or balances in which weighing-stones were placed (*Deut.* 25:13). In the period of the First Temple these weighing-stones generally bore the inscription *netzef* ("half"), or, in accordance with another reading, *kesef* ("Silver"). Gold was rarely employed as a means of payment, for even large sums were expressed in terms of silver. Gold is mentioned only rarely and only in exceptional cases in the Bible, as in *II Kings* 5:5 for the first time; in this passage Naaman, the captain of the Aramean army, brought with him six thousand pieces of gold in addition to ten talents of silver. Gold was demanded only in cases of the payment of tribute (*II Kings* 18:14; 23:33); the gold was paid mostly in the form of objects, such as pottery, vases and jewelry.

The gera was worth one-twentieth of a shekel. Nothing is stated in the Bible regarding the contents of the silver; warnings are issued in *Lev.* 19:36 and *Deut.* 25:13-16 against giving false weight, but not against the debasing of the metal. The weight of the silver shekel as the unit amounted to about fourteen grams. The relation between the value of silver and gold varied constantly; in the Near East one shekel's weight of gold was equal in value to thirteen and one-third shekel weights of silver. In Israel, until the time of Jehu, the silver shekel was reckoned as being one-fifteenth the value of the gold shekel. In later times the Babylonian unit became standard, until Simon Maccabeus reintroduced the ancient standards of weight and value as a sign of the nation's independence. Thus the weight of the silver shekel varied between 16.3 grams and 14.5 grams. According to Josephus, the Jewish shekel had the value of four drachmas in Jesus' time.

Actual money was not coined by the Jews until very late. The first coins which became current in Palestine were the Persian gold coins of Darius I (522-486 B.C.E.), the so-called *darkemonim,* equivalent to darics or drachmas (*Ezra* 2:69). The face of the coin shows the figure of the king, either kneeling or standing, holding a bow in his left hand and a spear or scepter in his right hand. The reverse side of the coin displays a four-cornered depression.

At the time of the Second Temple the coins of the Egyptian kings, the Ptolemies, and of the Syrian kings, the Seleucids, were in use. The face of these artistically designed coins bears the king's head; the reverse of the gold coins bears a cornucopia, while the reverse of the silver and copper coins bears an eagle. The Egyptian rulers thus represented on coins were: Ptolemy I (316-284 B.C.E.), Ptolemy II (284-247 B.C.E.), Ptolemy III (247-222 B.C.E.), Ptolemy IV (222-204 B.C.E.), Ptolemy V (204-181 B.C.E.) and Ptolemy VI (163-146 B.C.E.). The Seleucids, who ruled Israel up to the time of the Hasmoneans, were: Antiochus III (222-187 B.C.E.), Seleucus IV (187-175 B.C.E.), Antiochus IV Epiphanes (175-164 B.C.E.), Antiochus V (164-162 B.C.E.), Demetrius I (161-150 B.C.E.), Alexander Balas (152-144 B.C.E.), Antiochus VI (144-142 B.C.E.), Trypho (142-138 B.C.E.), Antiochus VII (138-128 B.C.E.), Demetrius II (128-125 B.C.E.), Antiochus VIII (124-116 B.C.E.) and Antiochus IX (116-85 B.C.E.). The coins of the Seleucids show on the face the head of the ruler; the reverse bears Apollo, Jupiter, Minerva,

the Dioscuri, the quadriga, horse, elephant, panther or eagle. Local coins, in which the likeness of the ruler was replaced by that of the city queen, were coined in Ashkelon, Damascus, Ptolemais, Sidon and Tyre.

The first coins with Hebrew inscription were coined by the Jews in the Maccabean period as a sign of their independence. Simon Maccabeus (142-135 B.C.E.), who permitted himself to be proclaimed as ruler and high priest, coined whole and half-shekels of silver. Only silver coins were permitted for coinage, the legality of which was confirmed by Antiochus VII Sidetes, since the suzerainty of Syria still prevailed (*I Macc.* 15:6). The dating of these coins, which bear the years 1 to 5 of the "era of Jerusalem," is still a matter of dispute. The face bears a chalice with the mark *shekel yisrael* or *hatzi hashekel* (half-shekel) and the number of the year; the reverse bears three lilies and the inscription *yerushalayim hakedoshah* ("holy Jerusalem"). Of doubtful authenticity are the copper coins with palm-tree between two baskets of fruit on the one side and with the Ethrog and Lulab on the other side.

Of the later Hasmoneans only copper coins are known. John Hyrcanus (135-104 B.C.E.) was the first to put his name on coins, which bear a poppy-head between two cornucopias on the one side, and have only the inscription on the other side. There is extant a quite similar coin of Judah Aristobulus (104-103 B.C.E.). Beginning with the time of Alexander Jannaeus (103-76 B.C.E.) and his wife Salome Alexandra (76-67 B.C.E.) Jewish coins bear Hebrew inscriptions on the one side and Greek ones on the other.

The Herodians struck only copper coins with inscriptions solely in Greek or in Latin. The emblems of these coins are the helmet with supporter and palm-branch, the helmet with star or writing, and the like. The copper coins struck by the Roman procurators in the land usually display a plant together with the name, in place of the likeness of the emperor.

During the brief period of freedom during which Judea had rebelled against Rome and Jerusalem was independent (66-70) the Zealot leaders Eleazar ben Simon and Simeon bar Giora had copper coins struck with Hebrew inscriptions; these coins, however, are still regarded as doubtful. They bear the inscription *leheruth yisrael* (" . . . year of the freedom of Israel") and grapes, the palm-leaf and other Jewish emblems.

After the Roman reconquest of Jerusalem Vespasian had victory coins struck; these bear, in addition to the likeness of the Roman emperor, the inscription "Judaea" or "Judaea Devicta" or "Judaea Capta," and display on their reverse a figure symbolizing Victory, a Jewess in chains or a Jew and a Jewess near a palm-tree. Titus, too, coined similar coins. Coins struck by Domitian bear in addition the symbols of the Tenth Legion, which remained as a garrison for Judea in the land.

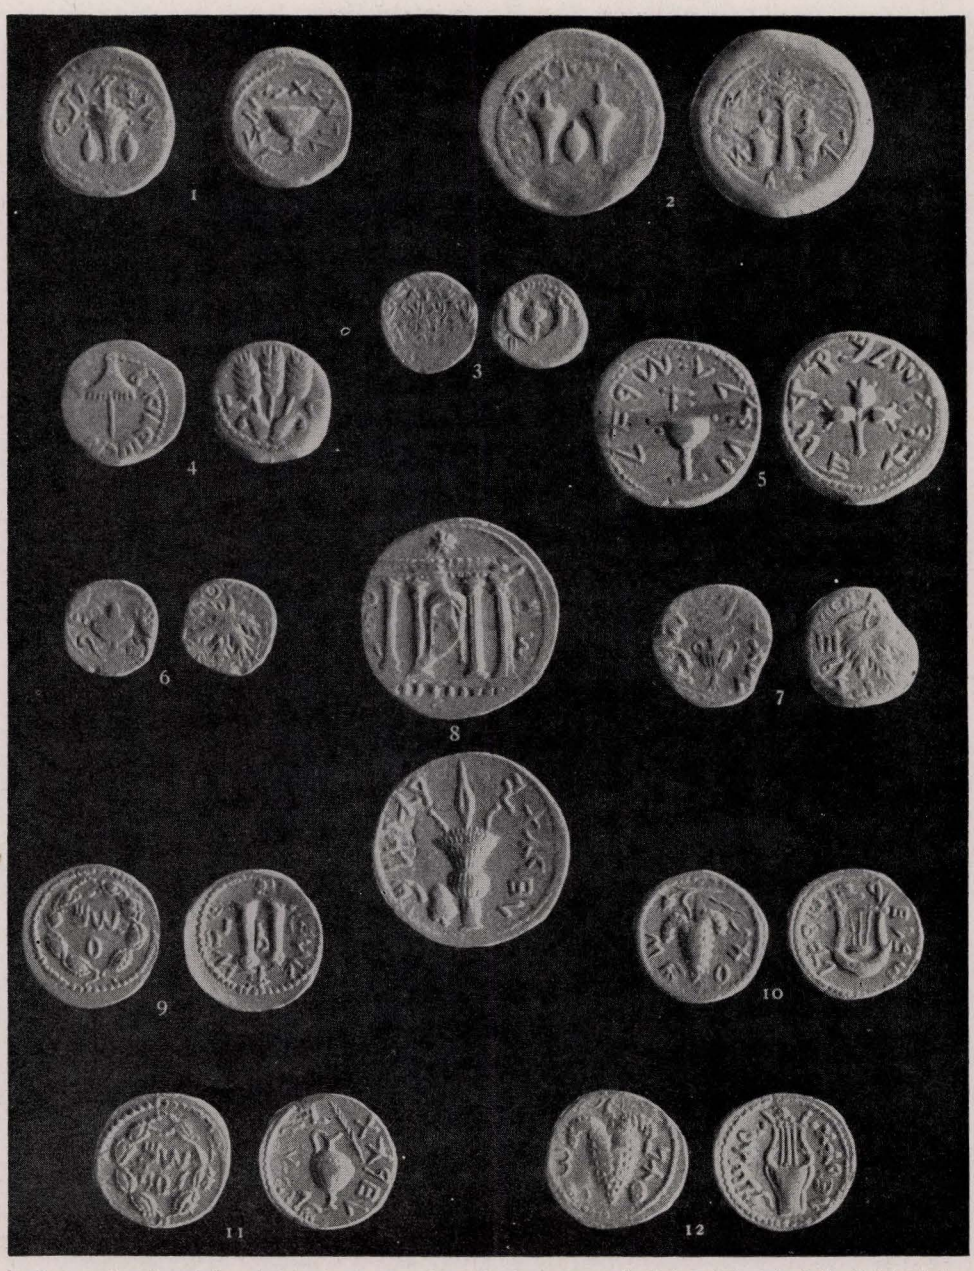
The last Jewish coins were struck at the time of the second rebellion against Rome under Bar Kochba (132-35). Most of these silver coins were made from Roman coins of Vespasian, Titus and Trajan on which Bar Kochba had the Hebrew inscription or stamping put on so lightly that in many instances the Roman inscription underneath is still recognizable. There are about seventy species of these coins. The following emblems are found, in addition to the Hebrew inscriptions: sacrificial vessel, grapes, palm-branch, four-columned hall (perhaps the Temple gate), the Ethrog and the Lulab. The copper coins bear the same emblems. From that time on the Jews no longer possessed the right to coin their own coins.

After the final subjugation of the Jewish state, the Roman emperor Hadrian had struck various coins bearing the inscription "Aelia Capitolia" (a designation for Jerusalem). Lucius Severus (193-211) again commemorated the conquest of Jerusalem through a coin bearing the likeness of the she-wolf that had become the Roman national emblem.

The importance of the coins which were struck and which were current in Palestine for the history of the culture and art of the land is inestimable. They enable us to understand the life and thought of the times. Several cities had the right to coin their own coins. This right they retained even in the period of the Roman empire, when the face of the coin bore only the likeness or the symbol of the emperor ruling at the time. The reverse sides of the coins bore figures and representations of the most diverse kinds; these are of especial interest for the knowledge of the religion, civilization, organization and employment of the city. Thus, for example, the emblem of Shechem, the Nablus of today, was Mount Gerizim, on which the Samaritans used to sacrifice the Passover offering more than 2,000 years ago. In the environs of the Philistine cities coins were found which point to a mixed Arabian and Philistine culture. During the period of the Maccabees the Jews opposed the influences of Hellenistic culture with extreme resoluteness, and thus aroused a national self-consciousness which expressed itself also in the emblems employed on the coins, i.e. the cult vessels and fruits of the country. The Herodians totally ignored the civilization of Palestine, while the procurators, who took the religious sensitivities of the Jews into consideration, omitted from their coins the likeness of the emperor, which so often offended the Jews, and substituted therefor plants and jars. The coins struck at the time of the two rebellions of the Jews against the Romans (66 and 132 C.E.) are the only ones which, with certainty, can be assumed to have been made by Jews. They evidence a strongly marked national character, and display Hebrew inscriptions and representations of cult utensils and vessels, plants, harps, and trumpets which were to proclaim the jubilation of the liberated people. From the artistic point of view, these coins show the influence of Jewish artisanry as well as of Greek art, which penetrated into Palestine beginning with the time of Alexander the Great and which in that period perhaps evidences the flower of Palestinian artistic achievements.

Since September 1, 1927, there have again existed in Palestine coins with Hebrew inscriptions. These are the first current coins since antiquity which again bear Jewish designations. The coins bear inscriptions in English, Arabic and Hebrew, and the copper coins are of one and two mils denomination, the nickle in five, ten and twenty mils, the silver in fifty and one hundred mils. The bills are issued in denominations of 500 and 1,000 mils.

2. Names of the Jewish Coins. (a) Biblical Period. See under 1. **(b) Talmudic Period.** During the Talmudic period, apart from the shekel, the



Early Jewish Coins: (1) and (2) Simon Maccabeus (136-135 B.C.E.); (3) Judah Aristobulus (Aristobulus I; 104-103 B.C.E.); (4) Herod Agrippa I (42-43 C.E.); (5) to (7) Coins of the First Revolt against Rome (67-69 C.E.); (8) to (12) Coins of the Second Revolt against Rome (132-35 C.E.)

Sketch of what is probably the oldest Jewish coin ever minted. It dates back to the 5th to 4th cent. B.C.E. According to E. L. Sukenik, the inscription spells the name "Yehud," i.e. Judea. From the collection of A. Sulzberger, Jerusalem.

most important coins were: the mana, worth 200 zuz (but also of varying value); the sela, worth four dinars; the gold dinar (*dinar zahab*), worth twenty-five silver dinars; the silver dinar (*dinar ḳesef*), identical with the zuz; the imperial dinar (*dinara ḳisrana*), with the inscription καίσαρος (of the emperor); the zuz, worth one-fourth of a shekel; the as (*'isar*), worth one-twenty-fourth of a silver dinar, a copper coin; the two-as piece, the smallest copper coin; the perutah, worth one-eighth of an as; the tresis, worth three as. Several other small coins are mentioned more rarely in the Mishnah.

(c) Post-Talmudic Period. In the post-Talmudic literature sometimes the old names are used in the various countries as designations for the old coins, as, for example, dinar for denarius, aureus, mithkal, sol, gros, sueldo, schilling, and sometimes Hebrew transcriptions of the current coins were made. Yet new terms also were used, such as pound as a coin as previously as a weight, litra (still used today); heller, equivalent to halisch, from Hall (*hala*); the white penny (*laban*); the mahatzith (half-penny), perutah or pashut or peshit (plural peshitim), equivalent to pfennig; gedolim or gassim, equivalent to groschen; gedolim tobim, equivalent to good groschen; pagim, equivalent to Pöhmische (Böhmische), also Polish groschen (from the Hebrew abbreviation of the two words Pöhmische Groschen); zehubim or perahim or pirhe zahab, equivalent to gulden, then also florin, and used also for various local coins; shok, equivalent to old gulden; tzaruf or zakuk kesef, equivalent to fine mark, rat for Reichstaler. The employment of these terms is, however, not uniform. Yiddish, too, employs various designations for coins, such as ranisch (properly, Rheinisch), equal to gulden; rendel (plural, rendlech), meaning ducats (from the milled edge); kerbel (plural, kerblech), equivalent to the ruble (likewise from the milled edge), and the like.

NUN, *see* ALPHABET.

NUÑEZ (also **NUNES**), Marrano family which lost many members as martyrs to the Inquisition. Clara Nuñez was burned in Seville, Spain, in 1632. In the same year Isabel and Helen Nuñez were condemned to the galleys. Samuel (Ribiero) Nuñez, Portuguese court physician in the 18th cent., was suspected of adherence to Judaism, kept prisoner for a long period, and finally escaped to North America, where he settled at Savannah, Ga., in 1733. One of Samuel (Ribiero) Nuñez' descendants was Mordecai Manuel Noah. Henrique Nunes was an "agent provocateur" in the service of the Inquisition. He betrayed many Jews to the Inquisition, among them his own brother; in retribution, he was assassinated by two Marranos, Diogo Vas and Andreas Dias (1524). Henrique Nunes was surnamed "Firme Fé" and canonized; his grave became a place of pilgrimage. David Nuñez Torres, Haham of the Spanish Portuguese community in The Hague, Holland, a bibliophile and publisher, printed Bibles, the works of Maimonides and the *Shulhan Aruch.* After his death his world-famous library was sold at public auction (1728). Isaac Nuñez Vaes, Talmudist and Cabalist, lived at Livorno, Italy, in the 18th cent.; he was author of notes to the Talmud and the *Shulhan Aruch.*

NUÑEZ (RIBIERO), SAMUEL, physician and early settler in Savannah, Ga., where he arrived with a party of Jewish refugees on July 11, 1733. He was born in Lisbon, Portugal, of a distinguished family of Marranos (secret Jews), and rose to eminence as a court physician in his native city. Despite his high rank as court physician, he and his family were denounced as heretics and thrown into prison, but were finally liberated on certain conditions and because his medical services were in great demand. Fearing a recurrence of the same treatment at the hands of the Portuguese Inquisition, Nuñez contrived a means of escape from his persecutors. In order to avert suspicion he gave a grand dinner to a number of invited guests; while the dinner was in progress, Nuñez and his family repaired to an English frigate which had been requisitioned for the purpose of effecting their escape. The ship brought them to England, where they joined a party of Jewish refugees bound for Georgia, and safely arrived at their destination.

Nuñez was the wealthiest and most cultured Jew in the party that sailed with him. He came over as a man of means, bringing with him rare plate and silver, in addition to his other belongings. By his medical services and professional ability Nuñez won the admiration of James Oglethorpe, who called the attention of the trustees in England to the admirable qualities of the Jewish doctor following a protest made against the presence of Jews in the colony. The trustees directed Oglethorpe to remunerate Nuñez for his professional

The Judenmeister of Nuremberg. From Andreas Surfel's "Historische Nachrichten von der Judengemeinde zu Nürnberg"

services, but, at the same time, insisted that all grants of land should be withheld from the Jews. Oglethorpe, however, disregarded the latter injunction, for the name of Nuñez appears in a deed that shows him to have been a landowner in Savannah, six farms having been allotted to him.

The unfriendly attitude of the trustees toward the Jews and other unwelcome groups in the colony prompted Nuñez to leave Savannah—but only for a time. To judge by the records, wherein his name appears frequently, the pioneer physician returned to Savannah and resided there with his family until his death. Among his descendants was Mordecai Manuel Noah of New York.

Lit.: *Publications of the American Jewish Historical Society,* No. 2 (1894) 45-47; No. 10 (1902) 70-74; No. 22 (1914) 158-59; Wiernik, Peter, *History of the Jews in America* (1931) 77-78.

NUREMBERG, city in Bavaria, Germany, with a total population of about 392,500 (1935); before the advent of the Nazi regime in 1933, its population included about 8,600 Jews.

The presence of Jews in Nuremberg is attested at the beginning of the 12th cent., although there is reason to suppose that Jews lived there from the 11th cent. on. As early as 1180 and 1200 persecutions of Jews occurred, yet they increased in number during the Second Crusade (1247), mainly through the immigration of Jewish fugitives. During the Rindfleisch persecutions (1298) 628 Nuremberg Jews were slain. Emperor Albrecht settled new Jewish families in the city, as well as in other German towns. However, in 1349, when the Jews were accused of poisoning the wells, 562 of the Nuremberg Jews were burned at the stake, and the rest were expelled from the city. Three years later some of them returned, but for many years thereafter their number remained less than 200, as against 1,060 in 1338. In 1449 to 1450 the community was ravaged by war and pestilence, and again in 1494 by pestilence.

The first Jewish quarter in the city, which they inhabited until 1349, was situated below the castle on the city boundary, a site later occupied by the main market and the vegetable market. The second Jewish district was in the so-called Taschenthal. The Jews had a synagogue, dance hall, hospital, slaughterhouse, and bakery at that time. During the persecutions of 1349 and 1499 their cemeteries were destroyed, and the tombstones used as building material.

The Nuremberg Jews, like those in the rest of Germany, were serfs of the imperial chamber (*servi camerae*), subject to the emperor, who in 1298 had granted the city the right to have Jews. Only heads of Jewish families were permitted to become citizens. The privileges of the Jews, together with those of the city, were always renewed by the emperor, as was also the city's right to collect taxes from the Jews in the form of receipts and body and other taxes. The taxes due to the emperor from the Jews were repeatedly pledged (pawned) by him, especially to the burgraves of Nuremberg and to the bishop of Bamberg.

In 1310 King Henry VII restricted the Jews as regards their consumption of meat and as regards the conduct of their businesses. Louis the Bavarian imposed oppressive taxes upon them (1331), but two years later expressly asked the city to protect them. In 1347 Emperor Charles IV released the burgraves of Nuremberg from the payment of their debts to Jews. In 1355, at the

The principal synagogue at Nuremberg which became the victim of Nazi vandalism

imperial diet of Nuremberg, at which the German constitution known as the "Golden Bull" was announced, he granted to the electors the privilege of holding Jews, as an added source of revenue.

In 1385, as in all other cities of the Swabian Federation, the Jews of Nuremberg were suddenly imprisoned, the object being the seizure of their property. Five years later, when Emperor Wenceslaus ordered the cancellation of all debts owed to Jews, they again suffered the loss of all their possessions. In 1414 Emperor Sigismund imposed upon the Jews of the city a levy which was to defray part of the expense of holding the Council of Constance, and in 1422 a special tax for combatting the Hussites. However, in 1416 he granted them sweeping protection privileges, and in 1425 exempted them from the payment of a tax imposed upon the entire empire. Frederick III issued repeated privileges protecting the Nuremberg Jews; after a plea made to him by the city council, he saw to it that the decrees passed by the Bamberg synod of 1451 with reference to the prohibition of usury and the introduction of the Jew badge were not rigorously enforced.

During the Middle Ages the Jews of Nuremberg engaged in the pawnbroking and money trade, and were cattle traders. Handicraft and commercial activities were permitted only to individual Jews; other occupations and professions were almost completely closed to them. In penal matters and in disputes between Jews and Christians they were subject to the jurisdiction of the civil courts. In their own civil affairs and religious disputes they could resort to the Jewish council, whose members were elected for a five-year term under the supervision of the city council. This Jewish council was responsible for the collecting of all taxes to be paid by Jews, whom it represented before the city council and the emperor. At its head was the rabbi, known also as "Bishop of the Jews," "Jewish master" (*Judenmeister*), or *Hochmeister.*

The Talmud schools of Nuremberg were famous. Meir of Rothenburg and Rabbi Jacob Mölln were active in Nuremberg for a time. Other noted rabbis of the city in past centuries were Mordecai ben Hillel, Jakob Weil and Jakob Margolioth. Several rabbinical synods were held in the city. Of the several literary works which had their origin in the city, the Nuremberg *Mahzor* and *Memorbuch* are extant.

Beginning with the 15th cent. the situation of the Nuremberg Jews grew constantly worse. New accusations of ritual murder, as in the 14th cent., were made against them. In 1467, as the result of an alleged charge of child murder, eighteen Jews were put to death on the Judenbühl (Jews' Hill). Eight years later, a number of rabbis from various parts of Bavaria met in synod in Nuremberg, and decided that all Bavarian Jewish communities and individuals, except those utterly impoverished, were required to contribute to the fund necessary to free the Jews of Regensburg, who had been accused of a ritual murder. A new city law passed in 1484 was totally hostile to the Jews. In March, 1499, they were again expelled from the city, and the right of the city council to refuse to admit Jews to residence was recognized for all time. Even after the expulsion of that year the city persisted in its anti-Jewish policy, and strove in every possible way to interfere with the commercial relations between the expelled Jews, who had settled in the neighboring Fürth, and the Christian inhabitants of Nuremberg. The guilds protested more than once against the return of the Jews to Nuremberg, because they feared their competition.

Not until the year 1693 were Jews permitted to enter the city once more, mostly to attend the fairs or for short business visits, and then only when accompanied by a living escort (at first this live escort consisted of a musketeer, later of an old woman), and upon the payment of a body tax. Both body tax and escort requirement were abolished in 1800, after which only an entrance fee and a passage tax were exacted from Jews entering the city. In 1839 individual Jews were once more granted the right of permanent residence in Nuremberg. Thereafter the third Jewish community of the city developed rapidly, so that by 1866 a district rabbinate was established there. Its most eminent rabbis of the 19th and 20th centuries were Moritz Levin (1872-80), Bernhard Ziemlich (1881-1907), and Max Freudenthal (1907-35).

In 1874 the Jewish community of Nuremberg dedicated the synagogue on the Spitalplatz, and several other synagogues were erected subsequently. The first cemetery of the new community was opened in 1864. Strong intellectual and commercial relations prevailed between the Jews of Nuremberg and the Jewish community of Munich, located about 100 miles away. The second Jewish cemetery was laid out in 1910. In 1875 the "Torah-true" (Orthodox) members of the community formed the Adas Jisrael society, and in 1902 erected a synagogue which used the old ritual; from 1909 on A. Klein served as its rabbi. In the 1920's and 1930's there were two tendencies evident in the community, the liberal (progressive) and the Orthodox, but unity of administration was maintained.

Under the Nazi regime, from 1933 on, the Jews of Nuremberg were subjected to the same discriminatory laws as were those throughout Germany, and the community lost heavily from then up to 1942 through emigration and deportations. Even before the general destruction of synagogues throughout Germany in November, 1938, in which several of those in Nuremberg were razed or set on fire, one of the Nuremberg synagogues was destroyed by the Nazis. Nuremberg was the place of publication of Julius Streicher's rabid anti-Semitic newspaper *Der Stürmer,* and when the Nazi Party made that city its headquarters, the lot and life of the Jews there became unbearable. Nuremberg was the scene also of the drawing up of the so-called "Nuremberg Laws," which, decreed by the Nazi-dominated German Reichstag on September 15, 1935, were designed to "protect" German blood and German honor, and were made the most important part of the Nazi Party program. In 1942, according to reports, only about 1,000 Jews remained in Nuremberg, attended by a single Jewish physician and with their communal affairs supervised by the Bureau of the Jewish Community.

NUROK, MORDECAI, rabbi and communal leader, b. Tuckum, Latvia, 1879. Prior to the first World War, as rabbi in Mitau, he championed the settling of Jews in Courland and furthered the cause of education and the Haskalah movement; from 1905 on he taught religion at the high school of Mitau. During the first World War he was active in Jewish political and social relief work in Russia. He was prominent in the world movement for the defense of minority rights, and a leading member of the Mizrachi and of the Zionist Actions Committee.

Nurok settled in Riga (1921), aided the Jewish schools, and was a member of the Latvian Parliament until 1941. When the Nazis conquered Latvia, Nurok was taken by the Russians to Siberia where, after a period of imprisonment, he was released in 1942.

NUSBAUM, LOUIS, educator, b. Philadelphia, 1877. After teaching for a number of years in the Philadelphia school system, he was elected assistant district superintendent in 1912, and in 1915 was made associate superintendent. In that office he organized the continuation schools of the city, the summer sessions and the evening high school, and took general direction of the building program. As supervisor of the vocational curriculum he organized also the defense training program; for his outstanding leadership in these fields he was presented with a life membership in the American Vocational Association. Nusbaum, a contributor to various magazines, was for six years on the staff of *The Teacher,* for three of these, editor-in-chief. An active force in Jewish education, he was elected to the boards of the Hebrew Education Association, Gratz College and the National Farm School.

NUSBAUM-HILAROWICZ (NUSSBAUM), JOSEF, zoologist, b. Warsaw, Poland, 1859; d. 1917. He was the son of Hilary Nusbaum. In 1891 he was appointed instructor of comparative anatomy and embryology at the University of Lwów, and in 1902 he was made professor. Nusbaum became director of the Zoological Institute of Lwów in 1906, and of the first Polish fresh water works, in Grodek Jagiellonski, in 1909. Among his books were *Zasady anotomii torownawczej*

(The Principles of Comparative Anatomy; 2 vols., 1898-1903); *Idea Ewolucjii w Biologii* (1910) and *Szlakami Wielzy* (In the Paths of Knowledge, 1916).

NUSSBAUM, ARTHUR, jurist, b. Berlin, 1877. He became a lawyer in Berlin in 1905. In 1914 he was appointed lecturer at the University of Berlin, and from 1918 to 1934 was professor of law there. In 1906 he published *Der Polnaer Ritualmordprozess,* a penetrating inquiry into the trial of Leopold Hilsner, especially a methodical criticism of the testimony of the witnesses, based on the records of the trial and on a knowledge of modern criminal psychology. Nussbaum's thorough examination of the Polna trial, although it remained within the boundaries of pure science, definitely established the fact that Hilsner was the victim of a judicial murder, and directed the attention of the jurists of the world to this fact. In 1909 he published a commentary of the German law of stock exchange, *Kommentar zum Börsengesetz,* and in 1914 *Rechtstatsachenforschung,* an inquiry into methods of jurisprudence, problems of form and matter, and reform of academic lectures on law.

After the first World War, Nussbaum contributed to the knowledge of the juridical problems issuing from the changed economic structure of Germany.

In 1925, he published *Das Geld in Theorie und Praxis des deutschen und ausländischen Rechts.* Under the title *Money in the Law,* a new edition of this work was published by Nussbaum in 1939 when Columbia University, of New York, and its Council for Social Research enabled him to continue the studies interrupted by the Nazi regime. The new edition, emphasizing United States law, discussed United States monetary history from a legal point of view. Before Nussbaum left Germany he published studies on the law of mortgages and on international civil law. He was co-editor of the *Archiv für civilistische Praxis,* and edited the *International Yearbook of Civil and Commercial Arbitration.*

NUSSBAUM, HILARY (HILLEL), Polish historian and educator, b. Warsaw, Poland, 1820; d. Warsaw, 1895. Himself educated in the Warsaw rabbinical seminary, he soon engaged in the education of Jewish youth in Warsaw. He founded and was in charge of a school for boys; later he taught the inmates in the home for children built by the philanthropist, Mathias Rosen, and managed the home as well. As an active participant in the Lomede Torah society, he encouraged Jewish learning among the young men of the city. Nussbaum was one of the organizers and builders of the first Reform synagogue in his native city in 1850, and the first to preach in Polish. In 1867 he was chosen to work on the committee of charities for Poland.

Nussbaum's Polish writings, valuable source material for other historians of the Jews of Poland, include the five-volume *History of the Jews from the Earliest Times to the Present* (1888-90) and *A Guide to Judaism: A Course in Literature and Religion* (1893). He contributed for many years to the Warsaw *Izraelita.*

Lit.: Yevreiskaya Entziklopedia, vol. 11, pp. 819-20.

NUSSBAUM, JACOB, painter, b. Rhina, district of Cassel, Germany, 1873; d. Palestine, 1936. After completing his studies at the Academy in Munich, he settled in Frankfort, where he lived until his departure for Palestine in 1933. Nussbaum was one of the best painters of the impressionist period in Germany, having gained much through travel (Hungary, 1896, Tunis, 1903-04). Nevertheless, he dealt mostly with scenes from his homeland. He loved Frankfort and was one of those who knew the old city best. Some of his paintings, like *Hauptwache* and *Schiller-Platz,* which were in the Staedelsches Museum (and Städtische Galerie) in Frankfort, and also his numerous paintings included in private collections, are little masterpieces. First considered primarily paintings of local interest, they soon roused admiration everywhere for the intimacy and the seriousness of their mood, for the delicate coloring and the distinguished restraint of their representation. The same was true of his landscapes of the regions around Frankfort—the moderately mountainous sections of Taunus, Odenwald, and Vogelsberg. Nussbaum found an increasing number of supporters among the members of the Berlin Sezession (independents).

On his fiftieth birthday, the city of Frankfort held a comprehensive exhibition of his work. The public museum of the city possesses also a self-portrait, a winter scene, an early spring landscape and other outdoor studies of the artist. In Palestine Nussbaum continued to practice his individualized art. He chose to live far from the crowded cities, and settled near Tiberias, where he tried to catch the characteristic color and light of the surroundings. No one has more warmly depicted the Palestinian landscape, with its vistas over the Sea of Galilee, its settlements and plantations, its young forests, with bright sunlight flickering through. He had successful exhibitions in Tel-Aviv and Jerusalem, and the museum in Tel-Aviv bought several of his paintings. MAX OSBORN.

Lit.: Kunst and Künstler, No. 21 (1922-23) 219, 222; Deutsche *Kunst und Dekoration,* No. 15 (1922-23) 273.

NUSSBAUM, JOHN D. (CHAIM DAVID), lawyer and poet, b. Lutzk, Russia, 1860. He emigrated to England, and after a short period of study at Cambridge University came to the United States in 1887. Admitted to the New York bar in 1903, he practised in that city until 1934.

Writing in English and Hebrew, Nussbaum was a frequent contributor of poetry to the press of both these languages. His Hebrew translation of Edgar Allan Poe's "The Raven" appeared in Reuben Brainin's magazine *Hatoren.* Other works include *Melo Hakometz,* a book of poems, memoirs and reminiscences, written in Biblical Hebrew (1920), and *Shirim,* original poems and translations, including Heine's "Princess Sabbath" and "The Lorelei," with introduction by Brainin (1922). He was one of the founders of the Czernowitz Congregation in New York city.

NUSSINOV, ISAAC MARKOVICH (YITZCHOK), writer and critic, b. Chernigov, Volhynia, Russia, 1889. In 1911 he organized one of the few Jewish schools in the Ukraine. During the first World War Nussinov lived in Italy and Switzerland, returning to Russia after the revolution. Joining the Communist party in 1919, he became an interpreter of history and a critic of literature, using the Marxian method. He wrote both in Russian and Yiddish; in Russian, Nussinov discussed Russian and French literature, in Yiddish he wrote on Russian and Yiddish authors. In 1926 Nussinov edited an edition of the work of Isaac Loeb Peretz; later he edited a Russian translation of Joseph Opatoshu's *In Poilishe Velder.* He was the editor of several Russian classics and of the works of Tolstoi.

As an educator Nussinov was almost equally well known, lecturing on literary history in several universities and on Yiddish literature at the Pedagogical Institute of Moscow. He was affiliated with the Institute of Jewish Proletarian Culture attached to the Ukrainian Academy of Sciences.

N'VEH EITHAN, N'VEH YAAKOV, N'VEH ZION, *see* COLONIES, AGRICULTURAL.

NYBURG, SIDNEY LAUER, lawyer and author, b. Baltimore, 1880. He received his law degree from the University of Maryland in 1901, and started the practice of law in Baltimore the following year. Nyburg was author of *The Final Verdict* (1915) and *The Conquest* (1916). *The Chosen People* (1917) is a novel about a rabbi who tries to put idealism into practice in social and economic exigencies affecting the community. Nyburg's other books are *The Gate of Ivory* (1920) and *The Buried Rose* (1932), which is a collection of short stories about Baltimore.

NYIREGYHÁZA, city in Hungary, the capital of Szabolcs county, with a Jewish population of 5,000 (1939) in a total of 51,000. Early in the 19th cent. the Jews of Nyiregyháza, few in number, were under the jurisdiction of the chief rabbi of Szabolcs county, residing at Nagykálló. Their number greatly increased after 1840, when freedom of residence was granted to the Jews, and in 1865 they were permitted to install a rabbi of their own. The Hebrah Kaddisha (burial society) functioned from 1856 on.

The Jewish community of Nyiregyháza was one of the most important status quo communities of Hungary, its chief rabbi, Béla Bernstein (from 1909 on), being president of the national federation of status quo communities from the inception of that federation (1929). Late in the 19th and early in the 20th cent. the element inclined toward modern forms of community life played the leading role. The neighboring stronghold of Orthodoxy, Nyirbátor (1,800 Jews in a population of 10,000), under the spiritual leadership of Rabbi Naphtali Teitelbaum, and Nagykálló, center of Hasidism, as well as the influx of Jews from the regions adjacent to Galicia, effected a swerving of the community toward Orthodox Judaism in the spirit and practice traditional in Northeastern Hungary. Rabbi Isaac Friedmann, traveling in the vicinity, undertook propaganda in favor of Orthodox Judaism. The assistant to Chief Rabbi Bernstein, Rabbi Krausz, had been trained at the Hasidic Yeshiva of Nagykálló.

In the counter-revolution of 1920 the Jews of Nyiregyháza were subjected to the reign of terror of Miklós Budaházy, captain of an irregular military detachment, who persecuted his victims for alleged communist activities.

Partly from the considerable property left to the community by István Burger in 1920, a hospital for the Jews of northeastern Hungary was built, but in the financial crisis of 1929 the hospital had to be sold to the county of Szabolcs before it was dedicated. The community, with the aid of city and county, enlarged its school (1929) so as to accommodate 500 pupils.

From 1938 on the Jews of Nyiregyháza were subjected to the rigors of the anti-Jewish laws and the highhandedness of anti-Semitic officials.

O

OAKLAND, third largest city of California, having a population of 302,463 (census of 1940), including about 7,500 Jews. Jewish religious and social service institutions of Oakland extend their influence throughout Alameda and Contra Costa counties, affecting Jews in such communities as Hayward, Richmond, Martinez, Pittsburg, Antioch, Lafayette and Walnut Creek. There were 9,500 Jews in this territory of some 550,000 population in 1942.

The earliest record of Jewish settlement in Oakland is 1866. Among the first Jews are the names Coffee, Abrahamson, Rosenberg, Hirshberg, Samuels, Wachs, Bernstein, Furst, Biehl, Marcuse, Marks, Jonas, Greenhood, and Fibush. Aaron Fibush was one of the early councilmen in Oakland, and the only Jew to hold that office.

Another group with Orthodox inclinations included the names Bercovich, Markowitz, Silverstein, Simon, Buchman and Lewis. The First Hebrew Congregation, later known as Temple Sinai (Reform), was founded in 1874. Meyer S. Levy was elected its first rabbi (1881); other rabbis were M. Sessler (1892), M. Friedlander (1893-1915), Harvey B. Franklin (1917-21), Rudolph I. Coffee (1921-33). The rabbi in 1942, William H. Stern, commenced his tenure in 1934.

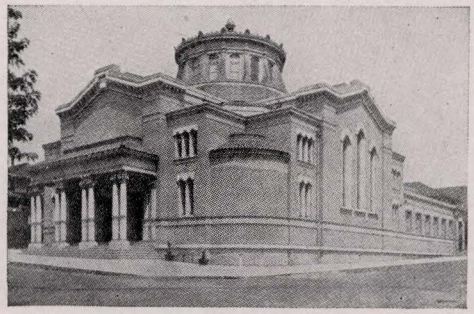
Beth Jacob Congregation (Orthodox) was founded in 1893. Its first rabbi was A. Meyerovich (1909-12). Rabbi B. M. Paper served from 1923 to 1941. In 1942 the rabbi was Tibor H. Stern.

Congregation Beth Abraham (Orthodox) came into existence in 1907. Its structure, opened in 1929, houses the Conservative congregation of the community. M. Goldberg served as rabbi from 1927 to 1929, Jack Levy from 1929 to 1932, and David Cohn from 1933 to 1940. Philip A. Langh, the incumbent in 1942, assumed his post in 1940.

Charitable work in Oakland and its environs dates back to 1876, when the Daughters of Israel Relief Society was organized. The Chevra Kadasha was founded in 1883, and the Free Loan Society in 1900. In 1918 the Jewish Relief Society of Alameda County was organized under the impetus of B. L. Mosbacher; it coordinated the work of the Daughters of Israel Relief Society, the Fruit and Flower Mission, Memory Fund and the Free Loan Society, and was incorporated. In 1922 it became one of the first functional Jewish federations in the United States, doing its own work through committees and departments, reincorporated under the name of Oakland Jewish Federation. Presidents of the Federation from 1922 were Frederick Kahn, B. L. Mosbacher, S. J. Freudenthal, Bernard Silverstein, Charles F. Wise, Herbert J. Samuels, Harold G. Trimble, and Lionel Wachs. In 1925 Oakland had the distinction of organizing the first federated technique for supporting national and foreign organizations, the United Jewish Welfare Fund of Oakland, incorporated in 1926. Its presidents were Lionel Wachs, Michael Grodin, Matt Wahrhaftig, Leonard J. Meltzer, and Sydney J. Silverstein. Professional executives of the Federation and Welfare Fund since their respective organizations were Samuel Ginsburg (1921-23), Samuel C. Kohs (1923-26), and Harry J. Sapper (1926-). The Jewish Community Center building was opened as a function of the Federation in 1924.

Oakland had a B'nai B'rith Lodge, initiated in 1875 and numbering (1942) over 1,000 members, and two A.Z.A. units; a section of the Council of Jewish Women and chapters of Hadassah, Junior Hadassah, and Council of Jewish Juniors; four units of the Workmen's Circle; sisterhoods in each of its Temples; Ladies Auxiliary of the B'nai B'rith; Jewish Consumptive Relief Society, affiliated with the Los Angeles Sanatorium at Duarte, Cal.

Jews of Oakland who achieved prominence were: George E. Samuels, judge of the Superior Court (1921-27); Harold Jacoby, judge of the Superior Court (1941); Bernard Sil-



Temple Sinai of Oakland, California.

verstein, president of the Oakland Civil Service Board (1931-37); Morris Mazor, vice-chairman of the city planning commission (1937); Jacob Lesser, vice-chairman of the city park board (1937); Nathan H. Miller, assistant district attorney (1927); Leonard J. Meltzer, assistant district attorney (1927); Stella Silverstein, member of the Oakland Charities Commission (1934-37); Abraham Jonas, president of the Oakland Chamber of Commerce (1914); Rudolph I. Coffee, member of the state department of social welfare (1924-31) and chaplain of the California state assembly (1925-26); Nat Levy, member of the Alameda County Charities Commission (1932-34); Harry J. Sapper, president, Alameda County Association of Social Workers (1928), and chairman, Emergency Education Program, State Department of Education (1933); Mrs. Philip Markowitz, member, Oakland Charities Commission (1938-40); Mrs. J. H. Lesser, member, Oakland Charities Commission (1940-); Matt Wahrhaftig, member, Alameda County Probation Committee (1937-). Albert S. Lavenson made a gift of $50,000 to Mills College in 1927.

OATH (*shebu'ah*). **1. Concept and History.** The oath is an imprecation uttered by one who calls down upon himself the punishment of God if he does not tell the truth or does not keep a promise that he is making. It is thus a confirmation and an intensification of the words spoken and is intended to increase their force and effect upon the auditors.

There are two main uses of the oath: confirmation of a statement, and in legal matters. In early Israel the first was widely employed, and swearing by the name of the Lord was regarded as a token of faithfulness to Him (*Deut.* 6:13; 10:20). God is called as witness of the statement or the promise, and is invoked to punish perjury. Thus the sacredness of a word given by one man to another, even in purely secular matters, is fortified by the sanctity of God. God's own promises in the Bible are expressed by the idea that He swears by Himself (*Gen.* 22:16; *Isa.* 45:23, and frequently).

The sacred nature of the oath led it to be used frequently in the courts in order to establish the truth. It was expected that a claimant or a witness would hardly take or make an oath unless he were sure that his statement was true; otherwise he would anticipate the imminent judgment of God.

So strong was the sanctity of the oath in the eyes of the Israelites that it could not be broken even if brought about by fraud or duress. Joshua felt it necessary to observe his oath to the Gibeonites who had deceived him (*Josh.* 9:19); Ezekiel condemned Zedekiah's failure to keep his oath, even though it was an oath which he was forced to take, in the severest tones (*Ezek.* 17:13-21). Perjury—of which the prophets frequently complain—is expressly forbidden in the Third Commandment, which comes immediately after the prohibition of idolatry and polytheism; it is branded as desecration of the Name of God (*Lev.* 19:12). It is avenged by the punishment of God, which strikes not only the offender but also his descendants (*Zech.* 5:4).

The Essenes, in the period of the Second Temple, refused to take an oath, holding it worse to take an oath than to commit perjury. Philo also mistrusted the oath. These teachings passed over into Christianity, where the Sermon on the Mount bids the followers of Jesus, "Swear not at all" (*Matt.* 5:34). (On the other hand, *Heb.* 6:16 stresses the value of the oath.) Some Christian sects in modern times still retain the prohibition of the oath. Many Talmudic rabbis took pride in the fact that they had never taken an oath in their lives, and the Talmud itself advises: "Whether you are right or wrong, never take an oath" (*Yer. Shebu.* 37b; cf. *Git.* 35a). However, the Talmud never goes so far as to prohibit the oath, recognizing it as an indispensable instrument in legal matters.

This avoidance of taking an oath continued in post-Talmudic times, and has continued to the present day. Disputes between Jews were conducted in such a way that there was as little occasion as possible for oaths; the medieval codes established the custom of pronouncing a ban against those who made an oath necessary because of a false or baseless charge.

Anti-Semites have frequently asserted that Jews did not take oaths seriously, basing their assertions on the Kol Nidre prayer for the forgiveness of hasty vows. The falsity of this assertion is proved not only by the express language of the prayer itself, but by the frequency with which Jewish codifiers expressly declared that Jews must observe with particular care the sanctity of an oath made to non-Jews.

2. Technique of the Oath. There was no exact formula for oaths in Bible Times. Typical examples are "I swear by God" (cf. *Ex.* 22:10) and "The Lord so do unto me and more also" (*I Sam.* 20:13). An example of a complete oath is the promise made by David to Bath-sheba in *I Kings* 1:29-30. As a rule, the maker of the oath seems to have uttered it in his own words; on the other hand, in such cases as that of the woman suspected of adultery, the oath is made by the priest, and the woman merely answers, "Amen" (*Num.* 5). By the time of the Mishnah it seems to have been the usual custom, which naturally was much older, to incorporate into the oath the name of God or one of His attributes (*Shebu.* 4:13).

Later on the formula of the oath was made more brief, and the use of the name of God was avoided. The language of the oath always had to be clearly understood by the person taking it. Similarly, on important occasions, the force of the oath was increased by preceding it with a solemn admonition on the part of the judge (*Shebu.* 39a). Witnesses were not permitted to take an oath with a mental reservation. The Talmudic authorities repeatedly insist that unspoken thoughts are to be regarded as of no account whatsoever (*debarim shebaleb 'enan debarim; Ned.* 28a).

A witness was warned against taking an oath even in such cases where his words might be the absolute truth yet would give a false impression. A famous case of this is known as the "hollow staff of Raba" (*kanya deraba*), which is described as follows (*Ned.* 23a; *Shebu.* 29a): A creditor once sued for repayment before Raba,

who summoned the debtor to appear before him and make oath that he had repaid the sum in question. The debtor, who had in reality not made the payment, hid the amount of money he had borrowed in a hollow staff, which he handed to the creditor just before he took oath that he had handed him back the money. The creditor in anger dashed the staff to the ground; it broke and revealed the fact that while the oath had been literally the truth, its intention was one of fraud.

Other customs prevailing with respect to the oath include:

Raising the hands toward heaven (as in *Gen.* 14:22; *Ex.* 6:8), a manner of taking an oath that is still in use.

Placing the hand upon the privates (as in the case of Abraham and Jacob; *Gen.* 24:2; 47:29); this seems to rest upon the mysterious powers associated with the sexual organs, or upon the covenant of circumcision.

Taking the oath before the altar in the sanctuary (*I Kings* 8:31). Similarly, in Talmudic and post-Talmudic times it was customary for the one who made an oath to touch some holy object such as a scroll of the law, or a set of phylacteries (Tefillin; *Shebu.* 38b; *Hoshen Mishpat* 87:13 et seq.).

3. Classes of Oaths. The application of the promissory oath extends to practically every circumstance of human life. It often appears in connection with a vow. Such an oath is valid only when it contains a promise to do something that is permitted, especially an act of beneficence. It is void if the promise is to do that which is contrary to the Law or morality. There is in Jewish law no such thing as an oath to be taken by judges, officials, or soldiers; these were expected to form their proper duties even without the obligation of an oath. However, the oath was frequently used in ancient times to seal an agreement (*I Sam.* 20:12-17) or to confirm the installation of a ruler (*Judges* 11:10).

The following classes of oaths are distinguished in Jewish law:

1. The rash oath (*shebu'ath bittui*), defined as an oath given unnecessarily by a person to another without any legal compulsion. It generally is added to a promise to do or to refrain from doing a certain thing in the future, or a declaration of the same sort referring to the past. Breach of such an oath is punishable by flagellation if deliberate, by an offering if unintentional.

2. The vain oath (*shebu'ath shav*), defined as an oath that is incorrect, impossible or contrary to the Law. The Mishnah cites as makers of vain oaths such as swear that a stone pillar is of gold or that a woman is a man, such as take an oath that they have seen a flying camel, or to disobey the ritual law. Another interesting example is the following: if a man swears that he will eat a loaf of bread, and immediately afterwards that he will not eat it, the first is a rash oath, the second a vain oath (*Shebu.* 3:8, 9). The punishment for an intentional vain oath is flagellation; if it is unintentional there is no punishment.

3. The witnesses' oath (*shebu'ath ha'eduth*), limited to cases where one who is summoned to court declares that he has no evidence to offer; in this case he is to affirm this statement by an oath. On the other hand, witnesses who give testimony that requires an oath to confirm it is of doubtful validity.

4. The deposit oath (*shebu'ath hapikkadon*), given when the one with whom a deposit has been made declares that he has already returned it in response to a claim made by the depositor.

5. The judicial oath (*shebu'ath hadayyanim*), the oath imposed by the judges upon parties in a suit, especially the defendant.

4. Details of the Judicial Oath. The oath is used in Jewish courts as one of the forms of proof, in addition to admission, testimony of witnesses and proof by means of documents; it is employed only when the other forms of proof are insufficient. In criminal cases, the only proof admitted is that of the testimony of at least two witnesses; the oath is not permitted as a form of proof. If the defendant in the case can not or will not take the oath, it is regarded as proof of guilt.

An oath is regarded as valid only when taken by a person possessing legal competency. This rule excludes deaf-mutes, insane persons and minors, as well as those regarded as frivolous or likely to commit perjury, gamblers, usurers, or those who deal in produce of the Sabbatical year. In such cases the necessity of making oath is transferred to the other party in the case (*Shebu.* 41a). In other cases there is an additional oath by implication when the first oath as originally given carries a responsibility as to related subjects.

Three separate classes of legal oaths are distinguished, according to the sources of the legislation: Bible, Mishnah or the rabbis:

I. The oath of the Torah (*shebu'ath hatorah*). This is always used to clear an individual of a charge made by the opposing party in the case; if he takes oath, he is considered absolved from the necessity of payment. This applies in the following cases:

a. Partial admission of the claim (*modeh bemiḳtzath*). If the defendant admits part of the claim of the plaintiff, he must take oath that he does not owe the balance of the amount.

b. When the accusation is supported by one witness only (*shebu'ah lehachhish 'eth ha'ed*). Whereas a claim supported by two witnesses is valid, that supported by only one witness can be answered by the defendant's taking an oath, in which case he is absolved from payment.

c. Cases of damage to property which has been entrusted to another (*shebu'ath hashomerim*). This varies according to the type of bailee and consequent degree of responsibility, as follows:

1. The gratuitous bailee (*shomer hinnam*), who is responsible only for gross negligence, can swear that the property has been damaged or lost by minor negligence, and is freed of all responsibility.

2. The paid trustee (*shomer sachar*) and the hirer who pays rental for the use of the object (*soher*), who have a greater responsibility, can swear that the loss occurred by pure accident.

3. The borrower (*sho'el*), who is most responsible, can swear that the property was damaged in the course of its normal use.

II. The oath of the Mishnah (*shebu'ath hamishnah*). This is an oath imposed upon the plaintiff in certain cases, thereby establishing his claim and enabling him to collect from the defendant. Thus a paid worker can take an oath as to wages due him in order to collect from his employer; claims based on theft or personal injuries are established; the entries of a merchant in his ledger are affirmed.

Another oath in this class is that required of a certain group of persons who are trustees for the goods of others, such as the guardian, the lessor, the business partner and the wife who does business for her husband. In order to avert any suspicion that these have abused their trust, they are required to make an oath of manifestation that they have acted without taking advantage.

III. The oath of the rabbis (*shebu'ath heseth,* literally, "oath of equity"). This is applied if one is sued for a debt and denies it entirely. Since it is deemed unlikely that a person would go to court without having some claim, it was deemed fit to require the defendant to take an oath, in order to make him consider very carefully if he had overlooked a debt that he owed the plaintiff. This oath goes back to the 3rd cent. C.E., and in course of time became the most usual form of oath in Jewish courts.

Two classical rabbinic works discuss the numerous points that occur in the field of oaths: Hai Gaon, in his *Mishpete Shebuoth,* originally written in Arabic (translated into Hebrew and published at Venice, 1612), gave a survey of oaths and an exact summary of the cases of the different types of oaths. Isaac ben Reuben Barceloni collected the different cases of oaths in the twenty chapters of his *Shaare Shebuoth.*

MARCUS COHN.

OATH MORE JUDAICO ("oath according to the custom of the Jews"), an oath required of Jews in court proceedings in the Middle Ages and up to modern times; it consisted of a special ceremonial and a special formula. Charlemagne had made the regulation that when a Jew took an oath in a case where he was opposing a Christian, he had to gird himself with sorrel or thorns, take the scroll of the Torah or a Latin Bible in his right hand, and as evidence of the truth of his words call down upon himself the leprosy of Naaman (*II Kings* 5:1-27) and the punishment of the faction of Korah (*Num.* 16:32). Constantine VII required a similar oath from the Jews of Constantinople, in a suit against a baptized Jew about 950.

The oath was still more complicated in German codes of law, such as the *Schwabenspiegel* and the Saxon *Weichbildrecht* (Municipal Right). The one who was to make oath had to step into water, girt with a wreath of thorns, spit three times on his male member, and then say the words: "By the *Bereshith Bara*... Who has led Israel through the Red Sea with dry feet, by the Law, by the spitting on the circumcised member, and by the thorn with which I have encircled my hips, I swear not falsely in the name of the Lord Zebaoth. . . . But if I swear falsely, may the descendants of my body be cursed; may I grope at the wall like a blind man, and fall down like one without eyes. At the same time may the earth open and swallow me like Dathan and Abiram." The Saxon law adds the stipulation that the Jew must stand upon the hide of a sow that has littered within the past fourteen days, and which has been removed by a special cut. The Silesian law compelled the Jew who made an oath to stand on a three-legged stool, with his face to the sun, his feet bare, and wearing the Tallith (prayer shawl) and Jewish hat. The accompanying ceremonies gradually fell into disuse; but the Oath More Judaico persisted until the time of the emancipation in the 19th cent. In Russia a special and distinct Jewish oath at the recruiting of Jewish soldiers still existed as late as the middle of the 19th cent.

OBADIAH, book of the Minor Prophets, fourth in order in Hebrew Bibles. Nothing at all is known about its author. It is the shortest book of the Bible, consisting of but twenty-one verses, and is couched in the form of a prophecy of destruction against Edom. Verses 1 to 9 are very similar to those found in *Jer.* 49:7-22. The date of the book is uncertain, but it is later than the destruction of the First Temple (586 B.C.E.), since it reproaches the Edomites for their hostility to Judah at that time. Some Bible students hold that the book is a collection from several sources. Its tone is purely nationalistic; it looks for vengeance on the enemies of Judah and a return of the exiles to inherit the kingdom. According to the rabbis, Obadiah was a proselyte.

OBEDIENCE. Judaism, being a religion based on law, sets especial store upon obedience to the commandments of God. The injunctions of the Bible, both on the part of the legislator and the prophet, deal again and again with the necessity of obeying the command of God. Again and again the reward of obeying and the punishment of disobedience are stressed; yet at the same time there is a consistent thought that the highest form of obedience is that which comes from a sense of love for and duty to God. The story of the sacrifice of Isaac, with Abraham's and Isaac's unquestioning acceptance of the decree of God, no matter how much it grieved them, was always an example to all generations of Jews. The Talmud declares that true service of God is that which is given without thought of reward (*Aboth* 1:3); Akiba gave thanks that by his martyrdom he was able to fulfill the commandment (*Deut.* 6:5): "Thou shalt love the Lord, thy God, with all thy heart, and with all thy soul, and with all thy might" (*Ber.* 61b). The rabbis, convinced of the excellence of the Law, urged the Jews to obey it whether they understood it or not, "for from doing it not for its sake one comes to do it for its sake" (*Nazir* 23b), that is, unquestioning obedience to the Law leads to a true understanding of it. Some of the commandments for which they could find no logical explanation, such as the laws of prohibited mixtures, were explained by some of the rabbis as intended to test the obedience of Israel.

Jewish teaching also stresses, though to a lesser degree, obedience to human superiors, such as parents, teachers, masters and authorities. Yet it is noteworthy that the wording of the Fifth Commandment is not "Obey thy father and mother" but "Honor thy father and mother." There is no Jewish equivalent to the Paulinian: Slaves, obey your masters (*Eph.* 6:5 and elsewhere). The attempt of Gamaliel II to force the Sanhedrin to obedience to him succeeded once in the case of Joshua, but ended in Gamaliel's deposition. That there was obedience in Jewish life throughout the centuries is unquestionable; but it was an obedience based upon respect and not upon servility.

OBERDORFER, EUGENE, JR., United States army officer, b. Atlanta, Ga., 1896. He graduated from a military school and received his B.S. degree from the University of Georgia in 1916. Shortly thereafter he entered the service of the United States Army and took part in the Mexican border war; when the United States entered the first World War he became a captain in the infantry. After the War he remained in the Georgia National Guard, with the rank of colonel in the 122d Infantry. At the time of his retirement in 1930 Oberdorfer was elevated to the rank of brigadier general in the Georgia militia. He was the first Jew to receive a commission in the Georgia National Guard, and the first to serve as acting adjutant general of Georgia. Oberdorfer was engaged in the insurance business, was a director of the Chamber of Commerce, and held executive posts in commercial organizations. In 1942 he was recommissioned as a major in the United States Army Air Forces Technical Training Command.

OBERMANN, JULIAN JOEL, orientalist, b. Warsaw, Poland, 1888. He received the Ph.D. degree from the University of Vienna in 1915, and was on the pedagogical staff of the University of Hamburg from 1915 to 1924, when he came to the United States. He served as professor of Bible and Semitic philology at the Jewish Institute of Religion, in New York city, from 1924 to 1932. In the spring of 1929 Obermann lectured as guest professor at The Hebrew University, Jerusalem, on Biblical mysticism and spiritual contact between Judaism and Mohammedanism. In 1933 he was appointed professor of Semitic languages at Yale University, a post which he still occupied in 1942. He served as co-editor of the *Journal of Biblical Literature* from 1933 on.

Obermann was author of several scholarly works in German and English, including *Das Problem der Kausalität bei den Arabern* (1916); *Der philosophische und religiöse Subjectivismus Ghazalis* (1921); "Political Theology in Early Islam" (*Journal of the American Oriental Society,* 1935). He edited Hugo Gressmann's *Israel and the Tower of Babel* (New York, 1929) and *The Arabic Original of Ibn Shahin's Book of Comfort, known as the Hibbur Yaphe* (New Haven, (1933).

OBERMAYER, LEON JACOB, lawyer and communal worker, b. Sciota, Ill., 1886. His father, Herrmann, served in the Confederate Army during the Civil War. In practice at Philadelphia from 1908, and a member of Edmonds, Obermayer and Rebmann from 1920, Obermayer became prominent in a number of legal organizations in Pennsylvania. In 1932 and again in 1936 he was vice-president of the Pennsylvania Bar Association; in 1937 to 1938 he was chairman of the governing board of the Philadelphia Bar Association, and was then made head of its important committee on professional guidance.

In addition Obermayer's numerous activities in the cultural and civic life of Philadelphia included membership and directive posts on the Board of Public Education, the Selective Service Board, the Council of Defense, the Pennsylvania Museum of Art and the University of Pennsylvania Museum. In 1941 he was made a member of the Recreation Commission of the state, and that year he was given the Silver Beaver award for his work with the Boy Scouts of America.

Equally energetic in the Jewish community, Obermayer was appointed to the executive council of the National Jewish Welfare Board in 1917, serving as local chairman from that date to 1941. During his incumbency (1915-26) as president of the Young Men's and Young Women's Hebrew Association of Philadelphia, the association built its new quarters. He was also elected to executive posts in the Jewish Hospital (1917), the Hebrew Sunday School Society (1922), and Gratz College (1931). He was formerly president of Congregation Adath Jeshurun, and in 1941 was elected a member of the board of trustees of Congregation Rodeph Shalom.

OBERMEYER, JAKOB, Orientalist, b. Steinhardt, Bavaria, Germany, 1845; d. Würzburg, Germany, 1935. In 1868 he made a journey to Baghdad, where he taught French for two years at the Alliance Israélite Universelle school and was also tutor of the pretender to the Persian throne, Prince Mulk-Ara, who lived there in exile. When, in 1878, the prince became reconciled with his brother Nasr-Eddin, the shah of Persia, Obermeyer accompanied him to Persia, where for two years he headed a French school. After returning to Vienna, he became (1880) professor at the Vienna Institute for Oriental Languages, and in 1898 was appointed court interpreter of Arabic and Persian in the district court in Vienna. He wrote *Das moderne Judentum im Morgen- und Abendland* (1907) and *Die Landschaft Babylonien im Zeitalter des Talmuds und des Gaonats* (1929).

OBERNAUER, HAROLD, attorney, b. Pittsburgh, 1887. He received his B.A. degree from Yale University in 1910 and his law degree in 1913 from the University of Pittsburgh Law School. Admitted to the bar the same year, Obernauer entered practice in Pittsburgh. Subsequently he was vice-president (1936-38) and president (1938-40) of the Bar Association of Allegheny County. Obernauer was also a member of the board of law examiners of Allegheny County in 1935, and in 1942 was still serving on the board. He was chairman of the committee on public relations of the Pennsylvania Bar Association, and a member of the committee on public relations of the American Bar Association.

Among Obernauer's activities in the Jewish community were his directorship of the Federation of Jewish Philanthropies of Pittsburgh (1935-36), of the Hebrew Free Loan Association (1934-37), of the Young Men's and Young Women's Hebrew Association (1929-35; 1939-), and his trusteeship of the Irene Kaufmann Settlement in Pittsburgh. During the first World War Obernauer was chairman of the legal advisory board of district no. 2, Pittsburgh; in 1942 he was serving as chairman of Appeal Board A, Area 9, of the Selective Service System of Pennsylvania.

OBERNDORF, CLARENCE PAUL, psychiatrist, b. New York city, 1882. He graduated from Bellevue Hospital in 1908, and began to practise medicine in New York the same year. From 1914 to 1920 he was instructor in neurology at the Cornell University Medical School, and from 1915 to 1920 adjunct neurologist at Bellevue Hospital. Oberndorf became associate psychiatrist at Mt. Sinai Hospital, in New York city, in 1925, and retained this connection until 1939. In 1936 he was clinical professor of psychiatry at Columbia University. Among his posts in scientific organizations were the presidency of the American Psychoanalytic Association, of the New York Psychoanalytic Society and of the New York Society for Clinical Psychiatry.

Oberndorf was a director of the New York Association for Jewish Children. He wrote many articles on psychiatry for technical journals, and was himself a contributing editor of the *Journal of Criminal Psychopathology* and of the *Psychoanalytic Review;* he was also (1922-) editor of the *International Journal of Psycho-analysis.*

OBERNECK, HERMANN, lawyer, b. Berlin, 1854; d. Berlin, 1930. He practiced law and was a notary in Berlin, and published numerous articles and books in the fields of cadaster and mortgage law. Oberneck was president of the Berlin notaries association, and the editor of the *Zeitschrift des deutschen Notarvereins.* Some of his outstanding works are: *Kommentar zum preussischen Grundbuchgesetze* (1888); *Das Reichsgrundbuchsrecht* (1900); *Das Notariatsrecht der deutschen Länder* (new edition, 1928); *Das Hypothekenrecht des deutschen bürgerlichen Gesetzbuches* (1897). Oberneck was active for many years on the board of the Jewish hospital in Berlin.

OBLATION, *see* SACRIFICE.

ÓBUDA (in German, Alt-Ofen; in Hebrew literature, Oven Yashen), an ancient city in Hungary; in the 20th cent. it formed the third district of Budapest, with a Jewish population of 5,500. The earliest reference to the presence of Jews in Óbuda was found in a document of 1349. In the 15th cent. a Jewish community was in existence; it was destroyed in the time following the invasion of Hungary by the Turks in 1526. A census of 1712 counted eighty-eight Jews at Óbuda. In 1737 they numbered 198, and erected a synagogue in 1738. Under the protection of the Counts Zichy, to whom they paid protection tax, they were allowed to organize their communal and religious life. Their judge enjoyed great authority; a scepter of wrought silver was the emblem of his power, and he was preceded by a herald when walking in the streets. The Jews were granted the rare privilege of owning landed property. In 1749 they paid a toleration tax of 340 gulden. From 1766 on they were under the protection of the Royal Hungarian Chamber. They established a Hebrah Kaddisha (1770), a hospital (1780), and the first Jewish secular school in Hungary (1784). The number of Jewish families in 1787 (after the Edict of Toleration) was 320.

In 1848 the community dedicated to the cause of the national revolution the silver treasure of its synagogue; it equipped fifty horsemen for the army.

Rabbis of Óbuda were Issachar Beer Oppenheim (d. 1745); Matathia Günsberg (1752); Isaac Kicse (after 1786); Moses Münz (1789-1831), who was also chief rabbi of Pest county. He was followed by Zebi Hirsch Heller, author of *Hiddushe Tib Gittin;* Marcus Hirsch (1861-80), subsequently chief rabbi of Prague and Hamburg; Gyula Klein (1887-95); Illés Adler (1896-1907); Gyula Wellesz (1910-15); Ignác Schreiber (1919-22); and Joseph Neumann.

Although Óbuda was placed under the administration of the city of Budapest, the Jewish community retained its religious and communal autonomy. The well-to-do members of this industrial district established many religious and charitable institutions. Their great synagogue was built in 1820; another was dedicated in 1927. A Talmud Torah for children and one for adults, a soup kitchen supplying 120 meals daily, a home and a hospital for the aged, a kindergarten and a literary association testify to the public-mindedness of the community. The trend of religious life was decidedly traditional; a large group of Orthodox Jews accepted the authority of and paid taxes to the autonomous Orthodox Jewish community of Budapest.

Óbuda was the site of largely Jewish-owned textile industries. The Goldberger cotton and rayon industries were major export industries of Hungary. Due to the discriminatory laws of 1938 to 1942, hundreds of Jewish employees and executives were deprived of work, and non-Jewish administrators were appointed to manage the plants. ANNA BETTELHEIM.

OCCUPATIONS. 1. Social-Economic Development of the Jews During the 19th and Early 20th Centuries. Small in number, settled in villages or little towns, engaged as petty shopkeepers or petty traders, segregated from the non-Jewish world, the greater part of the Jewish people (with the exception of a small group of bankers and wealthy merchants) once lived lives of terrible poverty—ghetto existences as pariahs.

During the 19th cent. this monotonous set-up of middlemen was transformed into a variegated nation, professionally and socially divided into strata and classes. On the one hand, there developed a large group of haut and middle bourgeoisie and a large group of professional intelligentsia. These groups were deeply rooted in the surrounding non-Jewish environment and became organic parts of it. On the other hand, a large class of Jewish artisans grew up, workers in shops and factories, who altered the physiognomy of Jewish life.

Jews were a significant influence throughout Europe in the development of capitalistic forms of life and in drawing backward countries into the stream of modernity, but their importance varied in different countries.

In Northern and Western Europe (England, Scandinavia, France), where there were few Jews and where capitalism developed in the 17th and 18th centuries, the Jews played a minor part from a quantitative point of view, but were qualitatively important. Jewish participation was marked in banking, foreign trade and certain branches of industry—such as the chemical and clothing industries—in England, in the publishing business in Sweden, in banking and railroad construction in France.

More conspicuous in all phases was the influence of Jews in the capitalistic development of the Central European Germanic countries (Germany, Austria, Bohemia, Moravia and Hungary), where the percentage of Jews in the population was higher, and where they stood at the cradle of the capitalistic transformation. Here they were the pioneers and the prime movers in railroad construction, export, import, general trade and in many branches of industry. In these countries they belonged to the upper and middle classes, but they were particularly well represented and manifest in the professional intelligentsia. In banking and in foreign trade they occupied a dominant role until 1933.

The influence of Jews in Eastern and Southern Europe was of even greater scope and effect. Here they had lived in large numbers for centuries, and had been occupied not only with the upper and middle classes of trade and industry, but with the lowest classes as well, without competition or jealousy until the end of the 19th cent.

Because of differences in the tempo of development in various countries and as the result of the uneven distribution of Jews among the various countries, three classes of Jews had developed by the 20th cent.:

a) A Western European class of Jewry, consisting of a broad stratum of middle-class and professional intelligentsia, another of haut bourgeoisie and a still broader stratum of white collar proletariat.

b) Eastern European Jewry, made up of a broad stratum of petit bourgeoisie, a narrow strip of haut bourgeoisie and professional intelligentsia and a wide working-class stratum, consisting of artisans and manual laborers.

c) A transitional class in the countries of immigration, where both the first two classes were represented, with the tendency to become more like the Western European type.

In 1825 the social-economic structure of the Jews was subdivided about as follows:

1. Taverns and distilleries..... 30%
2. Trade and middlemen..... 30%
3. Handicraft..... 18%
4. Agriculture..... 0.5%
5. Religious functions. 3.5%
6. Household service and unskilled labor..... 5%
7. Without definite occupation..... 13%

100%

In 1930 the occupational structure of the Jews throughout the world was about as follows:

1. Commerce and credit 35%
2. Industry and handicraft..... 40%
3. Liberal professions and public service 5%
4. Agriculture..... 4%
5. Domestic service and unskilled labor..... 6%
6. Without definite occupation..... 10%

100%

If the taverns and distilleries in the first grouping are classed as petty trade, the figures indicate that in 1825 about 60% of the Jews of the world were engaged in commerce and in 1930 about 35%. In the interim the nature of the commerce in which the Jews engaged had changed radically from a village and provincial type of trading. It had become urbanized into merchandising. In those countries which still had mass settlements of Jews, like Poland, Roumania, and Hungary, the village and small-town type of trade retained considerable importance.

Participation in industry and handicraft more than doubled in the interim, and even here there was a profound qualitative change. The Jewish small industrialist arose, employing five or ten workers. A Jewish proletariat, still moderate in numbers, also developed in major and minor industries. The participation in agriculture was multiplied by eight, and a class of intelligentsia developed. Not much information is available about the occupational division of Jews at the beginning of the 19th cent. A few statistics, however, can be offered.

In 1818 the Jews of Russia derived their livelihoods as follows:

Region	Trade, Taverns and Middlemen	Handicraft	Agriculture	Total
*Ukraine	342,803, or 86.5%	48,237, or 12.1%	5,390, or 1.4%	396,430
**Lithuania and White Russia	242,938, or 86.6%	30,316, or 10.8%	7,295, or 2.6%	280,549
Total	585,741, or 86.5%	78,553, or 11.6%	12,685, or 1.9%	676, 979

*Including the provinces of Kiev, Ekaterinoslav, Poltava, Cherson, Tavrig, Volhynia and Podolia.
**Including the provinces of Mohilev, Vitebsk, Grodno, Vilna, Minsk, Courland and Bialystock.

There are indications, however, that the percentage of those engaged in handicraft was larger than the cited statistics show. The following statistics deal with Jewish artisans at the beginning of the 19th cent. In 1802, the percentage of Jewish artisans in the province of Minsk was as follows:

Occupation	Total Number of Workers	Number of Jews
Tailors	164	160, or 97.5%
Shoemakers	137	2, or 1.5%
Masons	30	– –
Construction-carpenters	26	1, or 4 %
Furriers	21	16, or 76.2%
Jewelers	18	18, or 100 %
Tanners	15	– –
Blacksmiths	15	3, or 20 %
Cabinet-makers	12	2, or 16.6%
Bankers	12	10, or 83.3%
Saddlers	12	– –
Others	45	36, or 80 %
Total	507	248, or 48.97%

In general, Jews made up about half the total number of artisans in the province of Minsk, but they comprised almost all the tailors and only a small percentage of the shoemakers. Almost 65% of all the Jewish artisans were tailors. If one adds furriers and jewelers, the percentage of Jewish artisans engaged in the clothing and related industries was 78.

Occupational statistics for the Jews of Galicia in 1820 were as follows:

Commerce and distilleries	15,800, or 54.8%
Factories and handicraft	11,140, or 38.6%
Liberal professions and religious functionaries	1,200, or 4.1%
Agriculture	836, or 2.5%
Total	28,976, or 100%

These figures include only registered Jews. Many middlemen and traders who traveled from village to village, and even artisans who worked as clothiers for the peasants, were not included.

Of 1,441 large commercial firms in Galicia in 1820, 1,172, or 81.3%, were Jewish. Of 5,349 traders in Galicia at the same period, 3,073, or 57.5%, were Jewish. Of 2,487 tavern keepers, 1,003, or only 40.3%, were Jewish.

Of 12,359 artisans in Galicia in 1820, 4,187, or 33.9%, were Jews. In Galicia, too, however, 94.3% of all the tailors were Jewish, 98.5% of the glaziers, and 70% of the hatmakers.

The professional structure of the Jews of Prussia (excluding Posen) in 1816 was as follows:

Large-scale commerce, banking and industry	2%
Small-scale commerce	8%
Petty trade and taverns	40%
Peddlers	20%
Total of traders	70%
Handicraft	7%
Domestic service	10%
Religious functionaries	2%
Liberal professions	1%
Without occupation, and beggars	10%
	30%

Artisans were much fewer here. There were no agriculturists at all. The greatest percentage consisted of poor petty traders or of peddlers who dragged themselves about from village to village with packs on their backs.

The statistics for Posen in 1816 were:

Commerce, taverns, landlords and manufacturers	63.3%
Handicraft	34.0%
Religious functionaries and liberal professions	2.5%
Agriculture	0.2%

The percentage of artisans here is higher, although here, too, about $\frac{2}{3}$ of the Jewish population was engaged in commerce.

In the larger cities of Germany, particularly in Berlin, where, at the beginning of the 19th cent., the Jewish haut bourgeoisie was concentrated, as well as the rapidly expanding Jewish intelligentsia, the occupational structure was quite different. The statistics for Berlin in 1816 were:

Commerce, credit, landlords, manufacturers	48.0%
Liberal professions	45.0%
Handicrafts	2.0%
Landowners	0.5%
Religious functionaries and others	4.5%
	100%

More detailed and therefore more interesting statistics about the Jewish population in Vienna in 1804 are available. Jews did not have residence privileges in Vienna at that time; only specially privileged Jews lived in the city, and their numbers were not large.

	Number	Percentage
Bankers and credit exchange	2	1.6%
Large-scale commerce	16	12.7%
Petty trade	64	50.8%
Taverns	10	7.9%
Handicraft	8	6.3%
Manufacturers	2	1.6%
Physicians	3	2.4%
Dentists	1	0.8%
Others	20	15.9%
Total	126	100%

These characteristics may be considered typical for the many cities in Germany and Austria where Jews did not have residence privileges at the beginning of the 19th cent.

The 19th cent., and the 20th cent. until 1914, were a period of steady development for all segments of the Jewish population. The degree of development varied in different parts of the world, but everywhere Jews occupied economic positions out of proportion to their percentage in the general population. In industrialized countries, where the percentage of Jews was small, Jews reached a high economic level and occupied significant positions, but even in agrarian countries they were important parts of the urban bourgeoisie. In the agrarian countries, the masses of Jews remained impoverished, but in comparison to their status at the beginning of the 19th cent., they had made much progress. From a colorless mass of village Jews, craven before the caprices of the landowners on whom their bread depended, they grew into a congeries of different classes—traders, artisans, workers and employees, who fought shoulder to shoulder with the same classes in the surrounding populations to gain economic and political rights. A particularly progressive evolution was achieved by the Jewish working class, which was a product of the second half of the 19th cent.

2. Jews in Agriculture. Agriculture among the Jews developed in the 19th cent., when the percentage of other persons engaged in agriculture grew smaller throughout the world. This is one of the manifestations of the peculiar condition of the Jews, and of their occasional divergence from the main stream of development. Yet, despite this contradictory development, the percentage of Jews engaged in agriculture is very different from the percentage of the rest of the population so engaged, and this remains a striking line of division between Jews and non-Jews.

No more than 25,000 or 30,000 Jews, or about 9.5% of the total number of Jews, were engaged in agriculture in the period around 1825. In the years before the beginning of the second World War the number of Jews supported by agricultural pursuits in the various countries was as follows:

Country	Year	Number of Jews Engaged in Agriculture	Percent of Jewish Population
Soviet Union*	1939	180,000	6.0%
Poland**	1931	134,965	4.3%
United States**	1939	100,000	2.0%
Roumania**	1930	43,145	5.7%

Canada**	1930	2,000	1.3%
Other Countries*	1939	6,000	–
Total		614,907	4.0%

* Approximation
** Actual Count

More than 600,000 Jews were engaged in agriculture at the outbreak of the second World War in 1939, or about 4% of the total Jewish population of the world. During a century of intensive commercialization and industrialization, in both of which Jews played colossal roles, the Jewish people seems nevertheless to have saved a part of its energies for reunion with the earth, so that the body of the people as a whole might be refreshed.

There still remained, however, a chasm between the respective participation in agriculture by Jews and non-Jews. This can be seen from the comparative tables showing the economic and agricultural activities of Jews and non-Jews in various countries.

Table 1 (on page 268) presents the number of gainfully employed Jews engaged in agriculture in seven countries of Eastern European and Western European types. Only 5.5% of the Jewish population was engaged in agriculture, as compared to 37.1% of the non-Jews. The ratio was one to seven. But conditions varied in the different countries. In Germany, Bohemia, Moravia, Latvia and

Total		64,525,652	23,908,658	37.1	1,266,517	71,014	5.5	0.3

* As of 1937.

Canada, barely 1% of the Jewish population was engaged in agriculture, but in Palestine 20% of all the gainfully employed Jews were agriculturists, in Slovakia and Carpatho-Russia more than 13%, and in Roumania more than 4%. In Germany, Jewish agriculturists constituted .04% of the total number of agriculturists in the country, in Palestine they constituted 21%. In comparison to the total number of persons engaged in agriculture in the countries included in the table, the Jews provided only a nominal percentage. Non-Jewish Germans had proportionally 19 times as many agriculturists as Jewish Germans offered, Hungarian 20 times as many, Roumanians 18 times as many and Slovakians and Carpatho-Russian only five times as many.

3. Professional Structure. Tables 2A and 2B show the professional structure of Jews and non-Jews in eight countries of different kinds. The table covers about 45,000,000 non-Jewish and more than 2,250,000 Jewish gainfully employed persons—figures large enough to be considered typical.

The general total indicates that about 42% of gainfully employed Jews (excepting those engaged in agriculture) were engaged in trade, while among non-Jews the percentage was 13.7%, or slightly less than

* Includes domestic and those not engaged in gainful occupations.
** Includes other and those not engaged in gainful occupations.
† Persons maintaining themselves without gainful work such as: pensioners, capitalists, inmates of asylums, prisons, etc.

one-third as many. This difference in proportion is second to the difference found in agriculture. In the remaining occupations the differences are not so marked. About 37% of the Jews are engaged in industry and 45.7% of the non-Jews. The liberal professions and official employees took 9.1% of the Jews and 7.2% of the non-Jews. Another striking difference is found in the category of domestic services, where the proportion of Jews was about one-third that of non-Jews.

The general statistics are informative, but they partly erase the pictures of the separate countries. In most countries, between 40 and 50% of the Jews are engaged in commerce, in Poland and Canada about 40%, and in Palestine only 20.5%.

Poland provides the highest proportion of Jews engaged in industry and handicraft—45.4%. The smallest proportion of Jews engaged in industry and handicraft was in Germany, Bohemia and Moravia. A broader line of distinction may be drawn. In the Eastern European countries between 30 and 45% of the Jews were engaged in industry and handicraft; in Western Europe only about 20%.

Palestine is prominent in the category of liberal professions and public service; here about one-sixth of the gainfully employed worked in these fields. This was partly a consequence of the fact that a growing country requires such direction, and partly because many intellectuals from Germany and other Nazi-dominated countries went to Palestine.

The more highly developed a country, the less differences there are in the occupational structure of the Jewish and non-Jewish populations; the more backward a country, the deeper the chasm between them. Germany on the one hand and Slovakia and Carpatho-Russia on the other provide a good contrast. In Germany the proportion of Jews engaged in commerce was three times that of non-Jews; in Slovakia and Carpatho-Russia it was six times as great. This is the most extreme difference between Jews and non-Jews; in other occupations it was not so great. In Roumania only 2.9% of the Jews were engaged in the liberal professions and public service, while of non-Jews, 13.4%, or four times as many, were so engaged.

Soviet Russia. The tables cited above have not covered all of European Jewry. The Jews within the Soviet Union have been omitted. For them only approximations for the year 1939 can be offered. The census figures for 1926 are outdated, and newer official statistics on the occupational structure of the Jews are not available. The approximations cited below are on the basis of Soviet data.

The Jews resident in the Soviet Union in 1939—before the annexation of the Baltic countries, of Polish districts, and of Bessarabia and Bucovina—were divided as follows:

Civil Service	450,000	or	32.2%
Liberal professions	250,000	or	17.8%
Manual labor	300,000	or	21.5%
Agriculture	100,000	or	7.1%
Cooperative or independent handicrafts	200,000	or	14.3%
Others	100,000	or	7.1%
	1,400,000	or	100%

These figures include only those gainfully employed. Inasmuch as most of the representatives of the liberal professions were also in the employ of the state, it may be said that about half of the gainfully employed Jews in the Soviet Union were in government service.

Workers, including manual laborers, agriculturists and handicraft artisans, comprise only 42.9% of the

gainfully employed, or a smaller percentage than among the Polish Jews.

These are the more detailed figures of the Jews engaged in the liberal professions in the Soviet Union:

Engineers, technicians and architects	85,000
Teachers, cultural workers, journalists and writers	76,000
Physicians	52,000
Artists, actors and musicians	17,000
Professors and scientists	7,000
Agronomists	2,000
	239,000

Comparison with the occupational structure of the non-Jewish population discloses a wide difference. About 63% of the non-Jewish population was engaged in agriculture in 1939, and only 7% of the Jewish population, or 1/9 as many. Government employees comprised only 7.5% of the gainfully employed non-Jews and 5 times as many of the Jews. The liberal professions took 17.8% of the Jewish population and only 4% of the non-Jews.

The large number of Jewish students in the Soviet Union indicates that the percentage of the Jewish population engaged in the liberal professions was still growing. Of every thousand in the population at large, the average number entering universities was:

Jews	20.4	White Russians	2.4
Russians	2.8	Ukrainians	2.0

In 1935, therefore, the Jews, according to the population percentage, had 7 times as many students as the Russians, 8 times as many as the White Russians, and 10 times as many as the Ukrainians. In 1939 the figures were probably even more favorable for the Jews.

America. In American countries, few statistics are available, except in Canada, where they are arranged according to race or religion. In the United States, privately gleaned statistics have to suffice. The following is a table for the Jewish population of Detroit:

DISTRIBUTION OF GAINFULLY EMPLOYED JEWISH WORKERS, 15 YEARS OF AGE AND OVER, BY OCCUPATIONAL GROUPS AND SEX: DETROIT, 1935

Occupational Groups	Total		Male		Female	
	Number	%	Number	%	Number	%
Manufacturing and mechanical	6,653	23.3	5,853	27.0	800	10.5
Transportation and communication	627	2.2	520	2.4	107	1.4
Trade	15,850	54.1	11,773	54.3	4,077	53.5
Public service	257	0.9	173	0.8	84	1.1
Professional service	2,884	9.5	1,604	7.4	1,280	16.8
Domestic and personal service	2,910	9.6	1,691	7.8	1,219	16.0
Agriculture and not specified	118	0.4	65	0.3	53	0.7
Total	29,299	100.0	21,679	100.0	7,620	100.0

In Detroit, which may be considered typical of large Jewish communities outside of New York city, more than half of the gainfully employed Jews are engaged in trade. Industry takes one-fourth and the liberal professions one-tenth.

In smaller cities the percentage engaged in industry is less, while the percentage engaged in trade is higher, and the liberal professions take still more. Stamford, Conn., which may be considered a characteristic smaller community, provides the following statistics:

DISTRIBUTION OF 1,434 GAINFUL JEWISH WORKERS, 16 YEARS OF AGE AND OVER, BY OCCUPATIONAL GROUPS AND SEX: STAMFORD, 1938

Occupational Groups	Total		Male		Female	
	Number	%	Number	%	Number	%
Industry	231	16.1	176	16.9	55	14.1
Trade and commerce	807	56.2	608	58.2	199	51.1
Public service	12	0.9	8	0.8	4	1.0
Professional service	193	13.5	143	13.7	50	12.9
Public utilities	2	0.1	—	—	2	0.5
Service trades	78	5.5	51	4.8	27	7.0
Unclassified	111	7.7	59	5.6	52	13.4
Total	1,434	100.0	1,045	100.0	389	100.0

Here more than 56% of the gainfully employed Jews are engaged in trade; 13.5% in the professions.

The Stamford statistics offer also interesting facts about the comparative occupational structures of the native American Jewish and foreign-born Jewish populations. The liberal professions take 18.5% of the native Americans and only 5.9% of the foreign-born, a ratio of 3 to 1. Industry takes 14.2% of the native Americans and 18.9% of the foreign-born, trade 52.8% of the native American and 61.4% of the foreign-born. Public service occupies 1.4% of the native Americans and none at all of the foreign-born.

Maurice J. Karpf offers (on page 271) interesting statistics for New York city.

OCCUPATIONAL DISTRIBUTION OF JEWISH MALE RESIDENTS OF NEW YORK CITY COMPARED WITH THE GENERAL POPULATION IN THAT CITY BASED ON THE FEDERAL CENSUS OF 1930

Occupation	Jews		General Population	
	Number	%	Number	%
Trade	4,594	34.5	230,326	21.2
Manufacturing and mechanical	4,540	34.1	361,795	33.2
Clerical	1,823	13.7	112,731	10.4
Professional service	887	6.6	79,961	7.4
Domestic and personal	748	5.6	150,112	13.8
Transportation and communication	594	4.5	124,348	11.4
Public service	133	1.0	26,165	2.4
Agriculture	—	—	1,722	.2
Extraction of minerals	—	—	431	—
Forestry and fishing	—	—	116	—
Total	13,319	100.0	1,087,707	100.0

OCCUPATIONAL DISTRIBUTION OF JEWISH FEMALE RESIDENTS OF NEW YORK CITY COMPARED WITH THE GENERAL POPULATION IN THAT CITY BASED ON THE FEDERAL CENSUS OF 1930

Occupation	Jews		General Population	
	Number	%	Number	%
Clerical	1,794	52.5	110,727	24.2
Manufacturing and Mechanical	579	16.9	89,030	19.5
Trade	514	15.0	36,573	8.0
Professional service	354	10.4	59,518	13.1
Domestic and personal	144	4.2	146,913	32.0
Transportation and communication	23	.7	13,843	3.1
Public service	9	.3	566	.1
Agriculture	—	—	51	—
Extraction of minerals	—	—	2	—
Total	3,417	100.0	457,223	100.0

A combination of both tables provides the following occupational structure:

Trade	30.5%
Clerical	21.6%
Industry	30.6%
Liberal professions	7.4%
Household and personal service	5.3%
Transportation	3.7%
Public Service	0.9%
	100.0%

If the clerical employees are divided, and three-quarters of them assumed to be in trade and commerce, and one-fourth in industry, 45 or 46% of the gainfully employed Jews in New York are seen to be engaged in trade, or 15% less than in Detroit and 18% less than in Stamford. This may be attributed to the fact that New York is the center of the clothing manufacturing industry, which contains many Jewish workers. Industry, including the clerical workers engaged in it, occupies about 36% of the gainfully employed Jews in New York, 56% more than in Detroit and more than twice as much as in Stamford.

The Karpf statistics show that the percentage of Jews engaged in trade in New York is twice that of the non-Jews. In industry the percentages are the same. The greatest difference is under the "domestic and personal" classification. Of 3,417 Jewish women, only 144, or 4.2%, were engaged in this labor, while of 457,223 non-Jewish women, 146,913, or 32%, were so engaged—eight times as many. Among men the difference is not so great; nevertheless, domestic and personal work occupies 2½ times as many non-Jewish men as Jewish men. This situation was repeated in European countries as well. Even in impoverished Poland, Jewish girls preferred to earn less in sweatshops than to enter domestic service.

In the "public service" classification there is a wide difference between the participation of Jewish and non-Jewish men. Non-Jews are occupied 2½ times as much as Jews. The statistics for the women are too small to be important.

Another source provides more detailed statistics about Jewish participation in trade and commerce in New York. In 1935 the percentage of store owners who were Jews was:

87.3% in furniture
86.8% in clothing
72.5% in food
66.3% in drugs
23.7% in drinks

Jews constituted 68.7% of the retailers and 53.2% of the wholesalers. This includes only employers. As employees Jews are lesser participants. In retailing Jews constituted only 42.3% of the employees, and in the wholesale trade only 32.3%.

In industry, in New York, Jews provided 61.2% of the employers and 33.5% of the employees. In two industries Jews provided exceptionally high percentages; in the fur industry they constituted 94.3% of the employers and 80.7% of the employees; in the clothing industry they constituted 87% of the employers and 58.3% of the employees. In metals only 13.2% of the employers were Jews and 4% of the employees.

Statistics for Boston in 1900 show that 36.7% of the gainfully employed Jews were engaged in trade, and 52.9% in industry. At that time more American Jews participated in industry. Between 1910 and 1930 a

widespread departure from industry to trade occurred. In 1900 only 2.4% of the gainfully employed Jews in Boston were engaged in the liberal professions, or 1/3 as many as among New York Jews in 1935 and 1/4 as many as among Detroit Jews in 1935. In 1900 7% of the gainfully employed Jews in Boston were engaged in domestic service; necessity drove them to participate even in this unpopular occupation.

In the United States, where Jews have absolute equality, the 20th cent. changed them from industrial workers to trade employers and to practitioners in the liberal professions. In Poland, where the Jews had practically no rights, the opposite occurred. The following table shows the comparative development, in Poland, of Jews and non-Jews in trade and industry, between 1921 and 1931:

POLAND. JEWS AND NON-JEWS IN COMMERCE AND INDUSTRY (1921 AND 1931)

Year	Percentage of All Jews Engaged in Gainful Occupations	Percentage of Total Engaged in Gainful Occupations	Percentage of All Non-Jews Engaged in Gainful Occupations	Percentage of Total Engaged in Gainful Occupations
		Commerce		
1921	39.4	62.2	8.2	37.8
1931	38.2	52.3	9.3	47.7
		Industry		
1921	36.6	22.2	42.8	77.8
1931	45.4	19.9	49.0	80.1

The number of Jews engaged in trade fell from 39.4% in 1921 to 38.2% in 1931, while among non-Jews the percentage increased from 8.2% to 9.3%. In 1921 Jews constituted 62% of those engaged in trade in Poland; in 1931 only 52.37, and in 1938 only 48%. During the years just before the outbreak of the second World War the participation of non-Jews in trade grew especially fast.

The comparative participation of Jews in industry also dropped because the absolute increase of non-Jews in it was marked. But the number of Jews engaged in industry increased. In 1921 only 36.6% of the gainfully employed Jews were in industry; in 1921, 45.4%.

Table 3 shows the proportion of Jews in various occupations at various periods.

Jewish participation in trade was (1942) decreasing in all countries except Canada. The decrease was especially marked in Germany, where 7.5% of those engaged in trade in 1907 were Jews and only 3.3% in 1933—less than half. In Czechoslovakia Jewish participation, within nine years, dropped from 16.6% to 12.7%, or by one-fourth.

The comparative participation of Jews in industry also decreased everywhere, except in Canada, and the same was true of the liberal professions. This is explained by the increase of non-Jewish urban populations and their urge to enter Jewish occupations—trade, the liberal professions, and handicrafts.

Africa. The following table offers the occupational structure of the Jews of Tripoli:

TABLE 3. PERCENTAGE OF JEWS AMONG THOSE ENGAGED IN GAINFUL OCCUPATIONS IN VARIOUS COUNTRIES

Country	*Year of Census*	*Of 100 Engaged in Gainful Occupations*			*Jews Were in:*

† Consists of persons maintaining themselves independently without gainful work, such as pensioners, capitalists, inmates of asylums, prisons and the like.

PROFESSIONAL STRUCTURE OF THE JEWISH POPULATION IN TRIPOLI IN 1931

Occupation	Jews		Non-Jews	
	Absolute	%	Absolute	%
Industry and handicraft	2,130	46.2	7,373	58.9
Commerce and credit	1,465	31.7	1,663	13.3
Transport and communication	142	3.1	1,022	8.2
Public service and liberal professions	369	8.0	2,144	17.1
Domestic	506	11.0	318	2.5
Total	4,612	100.0	12,520	100.0

It is remarkable that the occupational structure of the Jewish communities in Tripoli, which have been isolated from their European counterparts for centuries, is similar to that of the latter. The percentage of artisans is larger than the percentage of traders, but the same was true in Poland. In only one classification do they differ from the European communities: the number of servants totals 11%, 4 times the percentage found among non-Jews.

The following table shows the proportion of Jews engaged in various occupations in 1931:

JEWS AS COMPARED TO THE TOTAL POPULATION ENGAGED IN GAINFUL OCCUPATIONS: TRIPOLI, 1931

Occupations	Engaged in Gainful Occupations		
	Total	Jews	
		Absolute	%
Agriculture	1,695	13	0.8
Industry and handicraft	9,503	2,130	22.4
Commerce and credit	3,128	1,465	46.8
Transport and communication	1,164	142	12.2
Public service and liberal professions	2,513	369	14.7
Domestic Service	824	506	61.4
Grand Total	18,827	4,625	24.6

These figures also resemble European records. The Jews of Tripoli constituted more than half of the gainfully employed population engaged in trade and more than 1/5 of those engaged in industry and handicrafts. They constituted approximately one-seventh of those engaged in the liberal professions and civil service.

A few statistics are available for the district of Constantine, in the French North African colony of Algeria. In 1930 there were 22,929 Jews in the district, of whom 6,297, or 28%, were gainfully employed. This is a very low proportion. The city of Constantine, in 1930, had 11,921 Jews, of whom 3,735, or 31.5%, were gainfully employed. In the city of Constantine there were the following Jewish artisans:

Tailors	381	Mechanics	36
Shoemakers	206	Blacksmiths	32
Jewelers	141	Electricians	14
Barbers	132	Miscellaneous	178
Carpenters	158		
Masons	108	Total	1,428
Printers	42		

This means that 38.2% of all the gainfully employed Jews were artisans, which is approximately the percentage found in European cities. Also, the list is headed by clothing workers, again a characteristic common to all Jewish communities.

Maurice Eisenbeth, from whose *Le judaïsme nord-africain* (1931) the statistics are taken, says that the Jewish community of Constantine underwent a great evolutionary development after the end of Turkish rule (1837). The Jews of the city were then either tailors or traders; now they participate in all the professions, including law, medicine, engineering and banking.

Of 786 gainfully employed Jewish women in Constantine, 520, or ⅔, were domestic servants. Dressmaking occupied 164, or 20.9%. About 87% of the Jewish women were engaged in these two professions, but there were also some midwives, dentists, and one lawyer.

Class structure. Tables 4A and 4B (on page 274) show the class structure of Jews and non-Jews in various European countries. More than 54% of the Jews are "independents" and only more than 13% of the non-Jews, or ¼ as many. Jews are therefore less varied than non-Jews in class structure. But the majority of these Jewish "independents" were petty traders or poor artisans, constituting a large mass of petit bourgeoisie, frequently earning less than workers, certainly less than qualified workers. In Poland, out of 693,160 Jewish independents, only 75,362, or 10.9%, had employees. The rest, or 81.1% of the independents, had no assistants. And even among the 10.9%, there were many who employed only one worker in their shops, or one assistant in their stores.

White-collar proletarians included 15.3% of the Jews and 17.9% of the non-Jews, about the same proportion. In manual labor the difference is marked. Only 22.9% of the gainfully employed Jews are so occupied and 50.5% of the non-Jews, or twice as many. Unskilled labor, which makes up a large part of the final classification "unknown," occupied twice as many non-Jews as Jews.

But Jews have different social classifications in different countries. Manual labor engaged the following percentages:

Jews in Hungary	32.3%
Jews in Poland	26.8%
Jews in Slovakia and Carpatho-Russia	16.8%
Jews in Germany	7.8%
Jews in Bohemia and Moravia	5.7%

Six times as many Hungarian Jews were manual laborers as Bohemian and Moravian Jews, and four times as many Hungarian as German Jews. In Poland five times as many Jews were manual laborers as in Bohemia and Moravia, and three and a half times as many as in Germany.

On the other hand, in the classification of clerks the Jews of Bohemia and Moravia head the list, with more than a third of the gainfully employed Jews engaged in this work—four times as many as in Poland. German Jews also had a large number of white-collar proletarians. The belief that all of German Jewry consisted of middle-class elements was not true. 36.4% of them were proletarians (clerks and workers). However, this was less than half the percentage found among non-Jews. Besides, 47.8%, or almost one-half, of the non-Jews in Germany were manual laborers, and 7.8%, or about one-thirteenth, of the Jews. In Poland there was also a substantial difference, but not quite so great—59.2% of the gainfully employed non-Jews and 26.8% of the Jews, a ratio of more than two to one.

Table 5 (on page 275) shows the percentage of Jews in the various classes in the several countries under discussion. Of all the independents in trade, Jews constitute the following percentages:

In Poland	65.4%
In Carpatho-Russia	57.3%
In Hungary	41.9%
In Bohemia and Moravia	8.2%
In Germany	5.5%

* Excluding Palestine.

In the comparatively undeveloped countries, commercially speaking, Jews make up two-thirds of the independent traders (Poland) or more than a half (Carpatho-Russia). In the highly commercialized countries, the proportion is less; Germany shows only 5.5%. The same is true of industry and handicraft. Of all the independents in industry and handicraft, Jews constituted:

In Poland	35.6%
In Carpatho-Russia	16.0%
In Hungary	10.6%
In Bohemia and Moravia	1.8%
In Germany	1.3%

Tables 6A and 6B give the class structure of Jews and non-Jews in trade and commerce. Of the total number of Jews engaged in trade, 71% are independents, and

only 38.3% of the non-Jews, or almost half as many. This is to be explained by the fact that even in those countries where major commerce is in Jewish hands, there are a large number of small shopkeepers. In Poland the number of small shopkeepers and market stall owners was especially large. Of every hundred

%		100.0	49.3	9.5	41.2

gainfully employed Jews in trade in Poland, more than 84 were independent, while among non-Jews the percentage was only 49. Even in Germany, where Jews participated widely in large and moderate-scale commerce, 62.5% of those engaged in trade were "independent"; among non-Jews only 36.9%. The same situation is repeated, without exception, in all other countries. The more backward a country, the more "independent" the Jews are who are engaged in trade. But this is a nominal, unfortunate independence, enjoyed by the many market stall keepers, who earned so little that on Jewish holidays they turned to charity.

The reasons for this condition are to be found not only in certain objective causes, but also in the avowed desire of the Jew to be on his own, to earn less, if necessary, but not to be dependent on an employer. Under circumstances in which the non-Jew remains in the employ of someone else, the Jew breaks away to open his own store or stall. The Jew finds it easier, too, to raise the small amount of capital needed for such a venture; he can borrow from a relative or from a cooperative loan association. Partly for this reason, there are half as many clerks among Jews as among non-Jews, and one-third as many ordinary employees in trade. The same is true in industry and handicraft.

Tables 7A and 7B show the class structure of Jews and non-Jews in industry and handicraft. Among Jews the independents in industry total 49.3% of those engaged in it and among non-Jews only 14.8%, or less than one-third as many. Manual labor occupies 41.2% of the Jews and 76.1% of the non-Jews. This situation occurs in every country which is studied, and is evidently repeated throughout the world. The second of the usual manifestations also repeats itself everywhere —the richer a country, the smaller the number of independents among Jews. But among workers the exact opposite is true. In Hungary, of every 100 Jews engaged in industry, 48 are manual laborers, in Poland 42.7, in Slovakia and Carpatho-Russia 38.5, in Germany only 26.4, and in Bohemia and Moravia 18.9.

Total		18,370,286	2,720,325	1,673,892	13,976,069
%		100.0	14.8	9.1	76.1

Data on clerks in industry are interesting. Among the Jews in Germany, more than one-third of those engaged in industry were clerks, but among the Jews in Poland only 4.1%. Here certain basic differences in regional Jewry manifest themselves. In Eastern Europe the Jewish proletariat consists of manual laborers, in Western Europe of white-collar proletarians. The Jews of Germany were more widely variegated than the impoverished Jews of Poland. Combining the two proletarian groups (workers and clerks) in the tables, one finds that 60.3% of the Jews in Germany were proletarians and only 46.8% of the Jews of Poland. This can be explained by the fact that in Poland the independents earned much less than the employees in Germany. In Poland there were many poor artisans who were classified as independents. The same is true in comparing the Jews of Carpatho-Russia with those of Bohemia and Moravia. Among the Jews of Carpatho-Russia there were fewer proletarians (workers and clerks), but among the Jews of Bohemia and Moravia there were many clerks, probably of high-salary standing, and in Carpatho-Russia there were a large number of impoverished artisans.

The concept of a proletarian as a person who lives on wages and not on his own capital permits of varied inclusion. A bank executive who lives on wages is a proletarian, like the night-watchman in the same bank. The engineer in a factory is a proletarian, living on wages, like the unskilled laborer in the factory's courtyard. Classifications of proletarians and employers derived from wage livelihood are not as illuminating as they should be, but no other statistics are available.

The social structure of the Jews in the United States must again be studied from privately-gathered information. Detroit Jewry is studied in the statistics which are given below:

DISTRIBUTION OF GAINFULLY EMPLOYED JEWISH WORKERS, 15 YEARS OF AGE AND OVER, BY SOCIAL-ECONOMIC CLASSES AND SEX: DETROIT, 1935

Social-Economic Classes	Total		Male		Female	
	Number	%	Number	%	Number	%
Professional persons	2,259	7.6	1,474	6.8	785	10.3
Proprietors, managers and officials	7,541	26.8	7,175	33.1	366	4.8
Clerks and kindred workers	11,873	39.1	6,829	31.5	5,044	66.2
Skilled workers and foremen	2,480	8.9	2,450	11.3	30	0.4
Semi-skilled workers	4,315	14.8	3,187	14.7	1,128	14.8
Unskilled workers	831	2.8	564	2.6	267	3.5
Total	29,299	100.0	21,679	100.0	7,620	100.0

The combination of the last four categories—all of them proletarians—shows that they constitute 65.6% of the gainfully employed Jews in the city. Even among the professionals there may be employees, such as dental technicians, nurses, and teachers. This would bring the percentage of Jews in Detroit who derive a livelihood from wages to about 68 or 69%. This percentage approaches the percentage of proletarians in the general population of the United States, among whom the proletarian elements constituted 75 or 76% of the gainfully employed. The difference manifests itself, however, in the respective structures of the proletarian classes among the Jews and the non-Jews. Among non-Jews about 12% of the proletarians are engaged in domestic service; among Jews this category hardly exists. Among non-Jews about 15% are agricultural workers, another category which is almost non-existent among the Jews. About one-fourth of the proletarians, from the categories of lowest rank, are not found among the Jews. Another difference lies in the fact that among non-Jews about 40% of the proletarians are engaged in industry and 30% in trade, while among Jews 70 or 75% of the proletarians are in trade and 20 or 25% in industry. Moreover, Jews are not engaged in heavy industry, but mostly in light and medium industry, while non-Jews are engaged in heavy industry. An example of a smaller Jewish community is found in Buffalo.

DISTRIBUTION OF 5,659 GAINFULLY EMPLOYED JEWISH WORKERS, BY SOCIAL-ECONOMIC CLASSES AND SEX: BUFFALO, 1938

Social-Economic Classes	Total		Male		Female	
	Number	%	Number	%	Number	%
Professional persons	809	14.3	638	14.3	171	14.1
Proprietors, managers and officials	1,465	25.9	1,430	32.2	35	2.9
Clerks and kindred workers	2,015	35.6	1,069	24.0	946	77.9
Skilled workers	919	16.3	888	20.0	31	2.5
Semi-skilled workers	171	3.0	163	3.7	8	0.7
Unskilled workers	182	3.2	171	3.8	11	0.9
Unclassified and others	98	1.7	88	2.0	12	1.0
Total	5,659	100.0	4,445	100.0	1,214	100.0

The unification of the same four categories (clerks, skilled workers, semi-skilled workers, and unskilled workers) shows only 58.1% of proletarians. The smaller the Jewish community, the smaller the percentage of proletarians. Even the structure of the Jewish proletarian class is different in smaller communities, where the percentage of commercial clerks is larger than in larger communities.

In Canada, where the count is official, the following condition obtained in 1931:

George Wolf

PERCENTAGE DISTRIBUTION OF GAINFULLY EMPLOYED JEWISH WORKERS, 10 YEARS OF AGE AND OVER, BY SOCIAL-ECONOMIC CLASSES AND SEX: CANADA, 1931

Social-Economic Classes	Total	Male	Female
Professional persons	5.1	5.2	4.4
Proprietors, managers and officials	24.7	30.3	5.9
Clerks and kindred workmen	30.3	24.3	50.2
Skilled workers	13.8	16.9	3.4
Semi-skilled workers	20.4	17.6	29.6
Unskilled workers	5.7	5.7	6.5
Total	100.0	100.0	100.0

The four proletarian groups here total more than 70% of the gainfully employed. But the large proportion of semi-skilled and unskilled workers indicates that the Jews of Canada are poorer than the Jews of the United States.

An approximation of the number of proletarians among the Jews throughout the whole world in 1939 would present the structure of the Jews before the outbreak of the second World War, a period during which rumor tried to depict the Jews as constituting a capitalist bourgeoisie. The approximate number of proletarians of all categories among the Jews was:

In United States	1,000,000	In France	50,000
In Soviet Russia	1,000,000	In the rest of Europe	30,000
In Poland	450,000	In Canada	70,000
In Palestine	125,000	In South America	100,000
In Hungary	100,000	Elsewhere	150,000
In Roumania	125,000		
In Czechoslovakia	70,000	Total	3,320,000
In England	50,000		

In the statistics for the Soviet Union, the liberal professions were included, for most of the Jews engaged in such professions are government employees. In the United States the minimum figures were taken. Of the five million Jews in the United States, at least two million, or 40%, are in all probability gainfully employed. Fifty per cent of this figure, or 1,000,000, were relegated to the proletarian category, although such detailed statistics as are available indicate that the percentage is higher.

Few statistics are to be had as to the structure of the Jewish proletarian class. Some official material is available for Poland, and it may be considered typical for East European countries.

JEWISH AND NON-JEWISH WORKERS IN POLAND

Occupation	Of 100 Workers		Average Weekly Wages (Zlotys)
	Jewish	Non-Jewish	
Handicraft	58.7	33.2	18.4
Commerce and transport	18.7	12.5	22.5
Home-workers	9.2	1.9	14.0
Small industry	8.9	9.6	22.8
Industry	3.8	23.0	27.4
Mining	0.4	8.4	37.7
Electric works, water and railway factories	0.3	8.9	40.9
Foundry	—	2.5	46.2

This small table is sententious; it removes some of the confusion from the concept of proletarianism. The number of workers earning less than 20 zlotys ($4.00) per week constituted 67.9% of the Jewish proletarians and only 35.1% of the non-Jews, almost half as much. Occupations which paid more than 35 zlotys engaged only 0.7% of the Jews, while 19.8% of the non-Jewish proletarians belonged to this aristocracy. Almost one-fifth of the non-Jews were in the highest wage category, and not even 1% of the Jews.

The whole proletarian structure is different among Jews from the status among non-Jews. A proletarian engaged in trade or handicraft is psychologically close to the petit-bourgeoisie; a small bit of capital and he opens his own store or shop. The possibility of making this change influences the Jewish proletarian long before it becomes a reality. But the non-Jewish proletarian, employed in a large factory or mine, can not dream of establishing the one or buying the other, and the result is that his proletarian mentality is stabilized and rooted. The last four groups in our table constitute the category of proletarians who must consider themselves sentenced to perpetual proletarianism. Non-Jews have 42.8% of their proletarians in this group; Jews only 4.5%, or one-ninth as many.

During the third and fourth decades of the 19th cent. the condition of the Jews in Germany and Poland aroused a great deal of interest. Table 8, compiled in 1933, after the establishment of the National Socialist (Nazi) state, offers a thoroughly objective view of the participation of the Jews of Germany in liberal professions. The table includes 22 occupations, and in all of them Jews constituted little more than 2%. In only three occupations did Jews constitute more than 10%—law (16.3%), patent representation (13.3%), and medicine (10.9%). Jews contributed 2.6% of the professors and only 0.9% of the instructors. Among judges and state attorneys they constituted only 2.8%, in pharmacy 3.6%, in literature and journalism 5.1%.

Of the public school teachers, who influence the population extensively, Jews constituted only 0.5%, which was less than the percentage of Jews in the population. In engineering and technical work the percentage was only 0.7. It must be added that the statistics do not include baptized Jews. The inclusion of the latter group would have increased the percentage somewhat, but not greatly.

Statistics offer only quantitative information. The editor of the *Frankfurter Zeitung* is counted as a literary unit, and also the editor of a provincial sheet that wields no influence at all. But the three most important newspapers in Germany—the *Frankfurter Zeitung*, the *Berliner Tageblatt* and the *Vossische Zeitung*, the staffs of which were largely Jewish, had more political weight and cultural influence than a thousand provincial newspapers edited by "Aryans." This influence attracted more attention than the mere number of Jewish editors and journalists. Besides, the Jewish intellectuals were concentrated in the larger cities, where their proportion was more conspicuous.

Table 8 includes only the intellectual professions, and also those intellectual categories which were government-employed, like judges, district attorneys and professors. A study of the Jews in government employ, according to the census of 1925, gives a picture of the status of the Jews of Germany, long before they were aware of the Hitlerian terror hanging over their heads.

Of 168,993 upper grade employees in the postal and telegraph division, in 1925, only 156, or 0.09%, were Jews. Of 247,604 upper grade railroad employees, 113, or 0.05%, were Jews. Of 344,831 employees in the departments of administration and justice, 1,474, or 0.43%, were Jews. Of 201,643 teachers, 1,927, or 0.96%, were Jews. Most of these teachers were employed in Jewish schools. Of 73,644 employees in the medical category (physicians and other personnel in hospitals

TABLE 8. JEWS IN GOVERNMENT SERVICE AND IN THE LIBERAL PROFESSIONS IN GERMANY (1933).

Profession	*Total*	*Number of Jews*	*Percentage of Total*
Lawyers and notaries	18,641	3,030	16.3
Patent representatives	595	79	13.3
Physicians	51,067	5,557	10.9
Dentists	12,120	1,041	8.6
Stage directors	1,070	60	5.6
Legal advisors	3,058	165	5.4
Journalists and writers	17,277	872	5.1
Private teachers	10,730	461	4.3
Pharmacists	18,220	657	3.6
Stage entertainers	23,694	703	3.0
Judges and district attorneys	10,359	286	2.8
Professors	7,272	192	2.6
Solicitors	14,683	367	2.5
Painters and sculptors	14,750	360	2.4
Chemists and laboratory technicians	31,013	715	2.3
Dental technicians	30,981	653	2.1
Musicians	93,861	1,915	2.0
Veterinarians	6,307	98	1.6
Religious functionaries	40,165	434	1.1
Instructors	37,505	317	0.9
Engineers and technicians	202,574	1,443	0.7
Elementary and secondary school instructors	251,102	1,323	0.5
Total	896,984	20,728	2.3

and similar therapeutic institutions), 1,326 were Jews, or barely 1.80%. This was the only category in which the participation of Jews was greater than the percentage of Jews in the population.

In general, Jews were not overly prominent, quantitatively, in economic life, but there were branches in which they concentrated and were conspicuous, especially in certain cities. To all employed in banking, for instance, Jews contributed only 3% of the participants. But of the owners of private banks, Jews constituted 52.3% in 1928 and 48.1% in 1930. In Frankfort, 81% of all the private bankers were Jews; of the 58 private banks in Frankfort, 47 belonged to Jews in 1930. Of 9,984 textile wholesale houses, 3,938, in 1930, belonged to Jews, or 39.5%. In Berlin, however, Jews owned 61.5% of the wholesale textile houses, in Breslau 74.9%, in Frankfort 69.5% and in Offenbach 89.9%.

Even more conspicuous was the concentration in Vienna. Of 180,000 Jews in Austria in 1938, about 165,000 lived in Vienna. But 62% of the lawyers were Jews, 62.7% of the dentists, 47.2% of the physicians and 28.6% of the professors. Including baptized Jews, the figures would be much higher.

The groups mentioned above were conspicuous and fed the anti-Semitic accusations that Jews were not engaged in productive occupations, as if the healing of the sick and the teaching of students were unproductive occupations. But these groups constituted only a small minority of the Jews in Vienna. In the side streets of Vienna were the Jewish working elements. In 1938 there were 25,898 Jewish shops in Vienna; of them 13,046 were handicraft workshops and 10,992 trade or commercial establishments. There were more artisans than traders. Of the trade establishments, 2,076 were wholesale, or only about one-fifth. The rest were small stores. There were only 85 Jewish banks. Of 13,046 Jewish handicraft workshops, 4,500 housed locksmiths, blacksmiths and glaziers, there were 1,840 tailoring establishments, and 1,106 were dressmaking houses. There were 426 Jewish watchmakers and jewelers and 398 shoemakers.

Economically, the Jews of Germany, Austria and the Sudeten territories were, in 1942, 100% liquidated. In 1933 there were about 750,000 Jews in these countries; in 1942 the 180,000 left there were engaged in something approaching slave labor. The total capital of the German Jews was about 15 billion marks, or about 4 billion dollars, according to the 1932 exchange. Including the wealth of the Austrian and Sudeten Jews, the capital of the Jews totalled about 20 billion marks, or more than 5 billion dollars. Five or ten percent remained in the hands of the Jews, and even less than that was transported out of the country.

In Poland, out of 52,234 upper grade employees in the government departments of administration and justice, only 1,228, or 2.3%, were Jews—one-fourth the percentage of the Jews in the country, according to the census of 1931. The figures for 1939 were certainly smaller. Of 42,432 upper grade employees in the communities, 1,384, or 3.3%, were Jews—one-eighth the percentage of Jews in urban populations. Of the 39,309 postal employees in Poland, there were only 307 Jews, or 0.7%. Of 194,171 railroad employees, only 700, or 0.3%, were Jews. Of 4,432 upper grade police employees in 1931, only 48, or about 1%, were Jews. Of 37,702 lower grade police employees, 26, or 0.08%, were Jews.

OCHLAH VEOCHLAH, a Masoretic work so called from its first words. It contains the Masorah

Magna, arranged independently of the Bible text, and was intended for the correction of Bible manuscripts of the Middle Ages, especially the copies of the Torah used in public reading in the synagogue. It makes notes of unusual passages in the texts, and the number of times that certain forms or expressions occur; thus it begins by pointing out that the form *'ochlah* occurs only in *I Sam* 1:9 and the form *ve'ochlah* only in *Gen.* 27:19. The work further contains notes on parallel passages in the Bible, Kere and Kethib, mnemotechnical sentences and like Masoretic notes.

The work seems to have originated in Babylonia in the Gaonic period, and the original text was variously revised and expanded in different countries. Rabbenu Gershom (10th cent.) made additions, and his recension was circulated in Germany and Northern France. A second related and expanded recension was made by Menahem ben Peretz of Joigny (about 1150) and was probably very similar to that of Gershom. The North African and Spanish scholars used still another form of the Ochlah Veochlah.

Modern scholarship regards the following as independent recensions of the original Ochlah Veochlah: the manuscript in the Bibliothèque Nationale at Paris, published by Salomon Frensdorff (*Das Buch Ochlah W'ochlah, übersetzt und mit erklärenden Anmerkungen versehen,* Hannover, 1864); a manuscript at the University of Halle; the Masorah Finalis, arranged by Jacob ben Hayim and printed for the first time in the Bomberg Bible (Venice, 1524-25).

Adolph S. Ochs

OCHS, ADOLPH SIMON, newspaper publisher, b. Cincinnati, 1858; d. New York city, 1935. His career began as a newsboy in Knoxville, Tenn., when he was eleven years old. At the age of twelve he was cash boy in his uncle's grocery store in Providence, R. I., and attended business school at night. His first job on a newspaper was as printer's devil on the Knoxville *Chronicle* from 1873 to 1875, which was followed by a year as printer's apprentice in the job printing office of Henry Watterson's Louisville, Ky., *Courier-Journal.* In 1876 he was employed by the Knoxville *Daily Tribune,* where he occupied many positions from assistant foreman and reporter to assistant business manager and managing editor.

In 1877 Ochs accompanied Frank Paul to Chattanooga, Tenn., then a city of 12,000 inhabitants, to assist him in establishing the Chattanooga *Daily Dispatch.* Paul's limited resources were soon exhausted and the paper failed in 1878. Ochs was appointed receiver, succeeded in paying all its debts, and then effected a consolidation with the Chattanooga *Times,* of which he later (July 1, 1878) gained ownership and control with an initial payment of $250 in cash. Under his management, the paper became one of the most influential and successful daily newspapers in the South. In 1878 he compiled and printed a directory of the city of Chattanooga, and a year later founded *The Tradesman,* a local trade publication. He was the principal factor in the organization of the Southern Associated Press, and was conspicuous in the leadership of all civic movements for the welfare and development of Chattanooga.

In 1896 he came to New York to consider an offer to assume the management of *The Daily Mercury,* but the negotiations were halted when he learned that the newspaper was financed to champion the currency policies of William Jennings Bryan, with which Ochs disagreed. In fact, he led the opposition to Bryanism in Tennessee.

While in New York, Ochs learned that the New York *Times* (established in 1851) was in financial difficulties. He made an inquiry about it, and was invited to reorganize the company. This was done by selling 5 per cent first mortgage bonds at par by giving a stock bonus of $1,500 with each $1,000 bond. In 1930 this bonus stock commanded a market value of $5,000 a share, thus yielding $75,000 on a $1,000 investment. He reorganized The New York Times Company and became its publisher in 1896 with a contract to acquire its control when the newspaper was placed on a paying basis. The conditions of the contract were accomplished in three years (1899), and the controlling interest passed into his hands. He was president, publisher, and majority stockholder until his death, and the phenomenal rise of the paper to its present world-wide leadership is credited largely to his management.

In 1901 he purchased the Philadelphia *Times,* and a year later the Philadelphia *Public Ledger.* He consolidated the two papers, and in 1912 sold them to Cyrus H. K. Curtis. In 1901 he became a director and member of the executive committee of the Associated Press.

In 1925, at a cost of over $500,000, he underwrote the preparation of the *Dictionary of American Biography* by the Learned Societies of America. He also financed the publication of the *American Year Book.* In 1925 he was made chairman of the committee for the raising of a $5,000,000 endowment fund for the

Hebrew Union College, heading the list of contributors with a gift of $500,000 on behalf of himself and Mrs. Ochs. By personal interviews, letters, and public addresses, he succeeded in raising nearly the entire amount. In 1924 he presented to Mizpah Congregation of Chattanooga the Julius and Bertha Ochs Memorial Temple and Community House, costing more than $400,000.

Early in 1930 Adolph S. Ochs presented two Menorahs of bronze to the Cathedral of St. John the Divine in New York, where they were placed on the high altar as an appropriate gift from a Jew to a Christian church. In 1900 he was chosen a member of the board of trustees of Temple Emanu-El, New York.

On the occasion of the fiftieth anniversary of his ownership of the Chattanooga *Times*, in July, 1928, the city of Chattanooga paid him a tribute in the form of an elaborate two-day celebration, conferring on him the honor of "Citizen Emeritus." The most representative sections of the American press, secular and religious, the Associated Press, the New York State Chamber of Commerce and numerous other organizations, including all civic and religious organizations in Chattanooga, joined in honors and testimonials to him at that time. In 1940 the citizens of Chattanooga erected and dedicated the Adolph S. Ochs Observatory and Museum on Lookout Mountain in Tennessee.

In 1918 Columbia University awarded to the New York *Times* the first Pulitzer Gold Medal in Journalism for meritorious public service, and in 1930 the School of Journalism of the University of Missouri conferred a like honor on the newspaper.

Adolph S. Ochs received honorary degrees from Columbia University, New York University, Yale University, the University of Chattanooga, Dartmouth College, and Lincoln Memorial University. President Nicholas Murray Butler, of Columbia, in conferring the degree of that university, said of him:

> "The master mind of the outstanding triumph of modern journalism in any land; building on the firm foundation of sound principle and large vision a great organ of public education and public opinion, which now has no equal in influence, which sets the standard of excellence for newspaper service and the fair and adequate treatment of the world's news, and which faithfully represents the United States to the world and the world to the United States. I gladly admit you to the degree of Doctor of Laws."

The National Institute of Social Sciences awarded Ochs its gold medal in 1927. A number of foreign decorations were tendered to him, but as a newspaper publisher he deemed it unwise to accept them. However, he made an exception in permitting the orders of chevalier, officer, and finally commander of the Legion of Honor of France to be conferred upon him. In 1938 an American Legion post was formed in his honor in New York.

Ochs' contribution to American journalism was the publication of a "true news-paper," an aim he evolved while publishing the Chattanooga *Times*. He insisted on a complete separation of news and editorial opinion. In a terse phrase, "all the news that's fit to print," he expressed the essence of his journalistic creed. Under the guidance of Ochs, the New York *Times* became known the world over for its complete news coverage.

Much of his amazing success Ochs attributed to his Jewish background. "My Jewish home life and religion gave me a spiritual uplift and a sense of responsibility to my subconscious better self—which I think is the God within me, the Unknowable, the Inexplicable. This makes me believe I am more than an animal, and that this life cannot be the end of our spiritual nature." "I inherited good health and sound moral principles; I found pleasure in work that came to my hand and doing it conscientiously; I found joy and satisfaction in being helpful to my parents and others, and in thus making my life worthwhile, I found happiness and consolation."

His ideas on Judaism represented "a departure from Orthodoxy—not in conflict with it, but in step with progress as we understand it." He maintained that he was a Jew by religion only, opposed Zionism, and urged the fullest participation of the Jews in the life of the communities in which they lived. "Jews are no different from other people," he argued. "They are made up of all classes, represent all kinds of temperaments and dispositions. We have those who are doubters, agnostics, among those who are religiously inclined . . . a reflection of the community as a whole."

At the dedication of the cornerstone of Temple Beth-El in Glens Falls, New York, Ochs gave further testimony to his absorption in religion, declaring: "I know Judaism only as a religion. I wish nothing of Judaism in me that does not spell religion. Religion is all I stand for as a Jew. I know no other definition for a Jew than religion, which spells responsibilities." Elucidating his religious credo, Ochs went on to say: "There are many many wonderful things that I do not know, that I do not understand, yet know to be facts, that I am willing also to believe the things that give peace, happiness and hope and cause us to be better neighbors and to cooperate for the common good."

He viewed ideal citizenship as attainable "by standing as Jews for what is best in the life of our commonwealth."

A non-Jewish appraisal of Adolph S. Ochs while still alive was penned by the editor of the Central Christian Advocate, leading Methodist journal, who believed that "to Ochs the New York *Times* comes pretty near being a religion. . . . His Jewish mother, incarnating what is most lovely in Jewish home life, though long gone, continues to influence him and through him, the whole world. The *Times* is based on the ancient and homely virtues taught the lad, Adolph, by Bertha Ochs, his beautiful mother. There is integrity of conscience, that religion of conscience, those old-fashioned fidelities in it, as well as being the greatest newspaper on earth. Those things too are the values Ochs wanted in the synagogues to which his hereditary religion relates him."

Ochs married Effie Miriam Wise, daughter of Rabbi Isaac M. Wise of Cincinnati, in 1883. He had one child, a daughter, Iphigene, who married Arthur Hays Sulzberger (1917), who succeeded Ochs as publisher of the *Times* upon the latter's death.

JONAH B. WISE.

Lit.: Rittenberg, Louis, "Ochs at Seventy-Five: a Spiritual Estimate," *American Hebrew*, March 10, 1933, pp. 291, 296; Rich, Louis, in *American Jewish Year Book* (1935-36) 27; various articles, including the necrology, published in the *New York Times*.

OCHS, JULIUS, American soldier and public official, b. Fürth, Bavaria, Germany, 1826; d. Chattanooga, Tenn., 1888. He was the father of Adolph S. Ochs and of George Washington Ochs-Oakes. He came to the United States in 1845, joining his brother Leopold and his sisters Nanie and Sarah, who lived in Louisville, Ky. He served as an orderly sergeant in the war between the United States and Mexico. In 1850 he went into business in Natchez, Miss., where he witnessed the workings of the slave system and became sympathetic to the abolitionist cause. At Natchez he met "an attractive girl named Bertha Levy," whom he married in 1855. She had been forced to leave Germany because of her sympathy with the revolutionary movement of 1848. Although Ochs served as brevet-major in the Union armies during the American Civil War, the sympathies of Bertha Levy Ochs were strongly pro-Southern.

Settling in Knoxville, Tenn., in the summer of 1865, he was a delegate from Knox County to the state convention which nominated William G. Brownlow for governor. In 1868 he was elected justice of the peace and a member of the Knox County Court, and later became United States commissioner and tax assessor. He served on the commission to erect the first bridge which spanned the Tennessee river at Knoxville. He was an influential member of the County Court, and was offered the nomination of county court clerk, which he declined. In 1872 he was selected as delegate from the second Tennessee Congressional District to the Liberal Republican National Convention at Cincinnati, which nominated Horace Greeley for the presidency. In 1878 he moved to Chattanooga, where he became head of the small Jewish community there, organized a congregation, and served as volunteer rabbi for twenty-five years. He also served as chaplain of the Grand Army of the Republic Post in Chattanooga.

Lit.: Ochs-Oakes, G. W., *Julius Ochs, 1826-1888.*

OCHS, MILTON BARLOW, publisher and editor, b. Cincinnati, 1864. In 1878 he joined his elder brother, Adolph S., in Chattanooga, Tenn., to become vice-president and managing editor of the latter's Chattanooga *Times.* After an interruption in 1890 to 1891, when he was general tourist agent of the passenger department of the Colorado Midland Railway, he again assumed the managing editorship of the *Times* until 1899. In 1909 he became publisher and owner of the Nashville *American.* Three years later he went to the Philadelphia *Public Ledger,* but returned once more to the Chattanooga *Times* in 1913 in his former capacity, finally becoming vice-president of the Times Publishing Company.

Ochs was closely associated with the development of Southern highways, serving as president of the Taft Memorial Highway and director of the Dixie Highway. He was president of the Lookout Mountain Scenic Highway and board chairman of its park, which was given to the federal government in 1935. The local county court named the Ochs Highway on Lookout Mountain for him and his brother Adolph.

During the first World War Milton B. Ochs became a colonel in the Fourth Tennessee Infantry, resigning after the armistice; in the second World War he was made chairman of the selective service board of Hamilton County in Tennessee.

OCHS, SIEGFRIED, choral conductor and teacher of music, b. Frankfort, Germany, 1858; d. Berlin, 1929. He renounced the study of chemistry for music, and in 1882 founded the Philharmonic Choral Society which, under his direction, became one of the great musical organizations in Germany. When, in 1920, the Philharmonic Choral Society was merged with that of the Berlin Hochschule für Musik, Ochs continued as its conductor, and combined these duties with the teaching of oratorio classes at the Hochschule.

He composed many works, including a comic opera, *Im Namen des Gesetzes* (first performed in Hamburg in 1888), two operettas, songs and choral works. Ochs edited many works of Johann Sebastian Bach, including the *Passion According to St. Matthew,* and was author of several books, notably *Der deutsche Gesangsverein* (4 vols., 1923-28), *Über die Art, Musik zu hören* (1926), and an autobiography, *Geschehenes, Gesehenes* (1922).

Lit.: Singer, K., *Siegfried Ochs und der Philharmonischer Chor* (1932).

OCHS-OAKES, GEORGE WASHINGTON, journalist and mayor, b. Cincinnati, 1861; d. New York city, 1931. A son of Julius Ochs and brother of Adolph S. Ochs, he was graduated from the University of Tennessee in 1880 and became a candidate for the Ph.D. degree at Columbia University in 1924. He entered journalism and was connected in various capacities with the Chattanooga *Times,* becoming publisher in 1896, when his brother, Adolph, purchased the New York *Times.* In 1900 he directed publication of the Paris Exposition edition of the New York *Times,* for which he was decorated by the French government with the Cross of the Legion of Honor. From 1901 to 1914 he was editor and publisher of the Philadelphia *Times,* which later became the *Public Ledger.* In 1915 he became editor and general manager of *Current History Magazine,* published by the New York Times Company. While in Tennessee he was active in civic life. He was twice mayor of Chattanooga (1893-98), and declined a third nomination offered him by acclamation.

Ochs-Oakes was president of the Chattanooga police commission, of the board of education, of the library association, and of the chamber of commerce. In Philadelphia he was president of the National Jewish Chautauqua Association. He was president of the Civitan Club of New York (1924-26), and honorary president from 1927. He was president of the Chattanooga Society of New York; member of the Advisory Board of the George Washington Bi-Centenary Celebration (1929-32); commissioner of the State of New York Sesqui-Centennial Exposition (1926).

Lit.: American Hebrew, Oct. 30, 1931.

ODES OF SOLOMON, *see* PSALMS OF SOLOMON.

ODESSA, city of the Ukraine on the Black Sea, with 180,000 Jews out of a population of 500,000 inhabitants (1939). Little is known about the ancient history of the Jews in Odessa. When, in 1789, the Russians took the fortified city of Chadshibey, which in 1794 was named Odessa, only five Jews are believed to have lived there. In a travel report of 1799 their number was given as 312, and it was stated also that a Jewish school existed in Odessa. The city played an important economic and cultural part in the life of the Russian Jews, economically because the Jews participated actively in the grain and money trades. The Odessa Jews came mostly from Volhynia and Podolia and in part from Lithuania. The Jews originating from

Brody, who came to Odessa in large numbers, contributed particularly to the improvement of the comfort and social level of the Jews in Odessa. In 1826 the first public school was founded by Jews in Odessa and was directed by Bezalel Stern. The school had essentially a German character. The Russian language was taught by a Christian. Odessa was also one of the first cities where instruction in Jewish religion was introduced into secular schools.

In general, the city, through emissaries from Galicia, was very strongly under the influence of the Mendelssohnian ideas. Odessa was one of the most important centers of the Haskalah movement; synagogal reforms (sermons and choirs) were introduced here. It was one of the gathering places of the Jewish intelligentsia. Important Jewish periodicals, such as *Zion* (1861), *Denj* (1872), *Hashiloah* (from 1907) and *Haolam* (from 1912), were published in Odessa, and Jewish journalists for the first time were active on non-Jewish newspapers. Here the so-called Odessa Comité, the leading organization of the Chovevei Zion, had its seat. Founded shortly after the Kattowitz Conference of 1884, it obtained legal recognition as an "association for the support of Jewish farmers and workers in Syria and Palestine" (1890). The Odessa Committee, whose first president was Leo Pinsker, originally confined its activities to giving financial aid to colonists in Palestine, but later also supported schools and libraries, the wine-trade company Hacarmel Hamizrahi, the land-purchasing company Geulah and the Palestine Teachers Organization. It also published Israel Belkind's work, *Eretz Israel* (New York ed., 1919). The Committee worked in harmony with the Zionist Organization, but its end came with the first World War and particularly with the rise of the Bolshevik government in Russia (1917). Men like Ahad Haam, Chaim Nahman Bialik, Simon Dubnow, Mendele Mocher Sforim, Hayim Tchernowitz, the leader of the modern Yeshiva, the noted cantor Minkowski and many others were active in Odessa. The community was organized in an exemplary manner.

Odessa was beset by pogroms many times, especially in 1821 in consequence of false rumors that the Jews were accomplices in the assassination of the Greek patriarch of Constantinople. This pogrom inflicted severe economic losses on the Jews. At Eastertide of 1871 outbreaks against the Jews occurred, caused, according to official reports, by the spontaneous agitation of the Christians for adequate repressive measures against the Jews and protest against exploitation by Jews. Ten years later (May 3 to 5, 1881) another pogrom took place in Odessa, and only the courageous intervention of the Jewish self-defense guard prevented its prolongation. A much more severe blow fell upon the Jews of Odessa at the pogrom of October, 1905, when the masses were led by priests under religious colors. Its victims were 301 dead, thousands wounded and disabled, 140 widows, 600 orphans and 40,000 shattered lives. In the post-War period (1918 on) the Jewish population suffered severely from the general conditions. Famine, epidemics and the aftermath of the civil war greatly reduced the Jewish population, but it recovered in the 1930's and before the German invasion (1941) had increased by almost 20 per cent over their number in 1904.

The Nazi occupation of Odessa (in the fall of 1941) was accompanied by the mass execution of Jews, of whom 25,000, including women and children, were herded into military barracks and mowed down by squads of Roumanian machine-gunners. For the rest, a ghetto was established near the Jewish cemetery, "in retaliation for Jewish sabotage." Labor squads were driven by the Nazi military police to the outskirts of the city, where they were forced to demolish the bunkers and barricades blocking the roads to the city. They were also forced to demolish the barricades in the center of the city and to remove the sandbags from the buildings.

ODETS, CLIFFORD, playwright, b. Philadelphia, 1906. His first association with the theatre was in 1923, when he began to play small parts in various Broadway productions. Subsequently, from 1928 to 1930, Odets played juvenile roles in productions of the Theatre Guild. In 1930 he joined the Group Theatre.

When his one-act play *Waiting for Lefty* sounded its youthful challenge in January, 1935, not only was a new talent born to the American theatre, but the distinctive dramatic tone of the era between the great depression and the second World War was struck. *Waiting for Lefty* was the first of a line of eager "socially conscious" plays and of corresponding theatre units, just as *Awake and Sing,* written before it, introduced a new idiom to literary vocabulary. And with *Till the Day I Die,* during the same year, the pioneer anti-Nazi play was produced in New York.

All this served to make critics and public aware that a real personality had come upon the scene. Four things were specially noted in the enthusiastic reception of this writer. His peculiar gift for vivid dialogue, his success in presenting sharp characters, a fascinating originality in the statement of short dramatic bits of action, a daring and earnest conviction in the choice of contemporary themes. Thus, Odets today is safely set down as "the playwright of the thirties," and admitted to be one of the outstanding younger playwrights of this epoch.

Actually, although there is some justification in associating Odets' temper with the atmosphere of the 1930's—a composite of misery and hopeful rebelliousness—the designation that limits his meaning to this period is misleading. Odets is one of the very few artists who have written for the American theatre at any time. He is, to put it another way, one of that remarkably small number of playwrights that can be seriously compared with important contemporary American writers in the field of the novel or of poetry.

Odets is a tender singer of the American middle class troubled by the contradictions of our civilization. The

Clifford Odets

protagonist of Odets' plays is not so much the "proletariat," which the so-called propaganda theatre had presumably come to celebrate, but that universal conscience that seeks for dignity in life, for freedom and completeness, for faith, comradeship, for security not alone of economic stability but of values tested by time in the crucible of man's total experience.

Odets' plays portray, in a mingled vein of comedy and sorrowfulness, the absurdity, the helplessness and the all-pervading plaintiveness of a world deprived of an operative moral principle. Nearly all of Odets' people are good people, endowed with capacities for love. Nearly all are crippled by some fear, ignorance, resentment, above all bewilderment, that reflects a time which supplies even less of the certainty of a spiritually cemented social organism than of the means of subsistence.

The typical Odets figure is some variant of the middle class man who complains, in an unpublished monodrama (1935), "I can't sleep!" The prevailing mood that dominates Odets' plays is not one of dissent but of worry and longing. In all of Odets the people are seen to wander in a maze that is the modern cosmos of commerce—feverish, fearful, lonely. Their dynamic motivation lies in the fact that all, in some way, are seeking the key to redemption; they all want to be men in a humanely ordered world. Those who are most removed from this quest are grotesque figures; those who offer fraudulent or oversimplified solutions are the comic ones. The central characters are those most conscious of the question, "What is to be done?"—even when they are uncertain of the answer or choose the wrong ones.

Odets' work is compassionate and understanding. It is his feeling for people that is the clue to his extraordinary talent for character creation, a talent second to none in our dramatic literature. From this in turn is derived that imagistic shorthand—the widely admired Odets dialogue—which is the conglomerate speech of our energetic, hectic, rich tohu-bohu of a world. With all this—giving it the unmistakable Odetsian stamp—is the fervor of a passionate delicate being whose soul shifts constantly between a typically American belief in "victory," and a mournful discouragement that makes so many moments of his plays sound like heart-broken jeremiads.

The failure of some of Odets' work—which is partly the failure to achieve his own proper form—his unevenness, and the fact that his unproduced play (*The Silent Partner*) is in many respects his most ambitious work, suggest that this young American writer—already eminent—is still in the process of his artistic evolution. His other plays include: *Awake and Sing* (1935); *Paradise Lost* (1935); *Golden Boy* (1937); *Rocket to the Moon* (1938); *Night Music* (1940); *Clash By Night* (1941). Odets was the author also of *The General Died at Dawn* (1936) and other scenarios.

HAROLD CLURMAN.

Lit.: Current Biography, vol. 2 (1941).

OELSNER, HERMAN, philologist, b. England, 1871; d. London, 1923. He received his B.A. degree from Cambridge in 1892, and his Ph.D. degree from the University of Berlin in 1896. Later he served as lecturer and examiner in various Romance languages at Cambridge, Oxford, the University of London and the Royal University of Ireland. He was also temporarily professor of French language and literature at the University College of North Wales (1903-4). In 1905 Oelsner was given the Taylor Lectureship in Old French and Romance Philology at Oxford—the first to hold this post, which he retained until 1909, when he was made the first professor of Romance Languages at Oxford. This chair he retained until his resignation in 1913.

Oelsner, known as one of the foremost scholars of his time, was author of many studies on Romance literature and writers, and edited as well as translated the work of Dante, Calderon, Cervantes and Gaspary's *History of Italian Literature* (1901). He was a contributor to the *Encyclopaedia Britannica* and *Nelson's Encyclopedia.*

OENOMAUS OF GADARA, *see* OINOMAOS OF GADARA.

OESCUS, a town in northern Bulgaria, located at the junction of the Iscar (Oescus) and the Danube. Under the name of Colonia Ulpia, Oescus was a military colony of the Romans in Moesia; as early as the 2nd cent. B.C.E. a Jewish settlement existed of which only the following inscription has been preserved:

IOSES ARCISINAO
ET PRINCIPALES
FILIVS MAXIMINI
PANNONI SIBI ET
QYRIAE COIVGI
SVI VIVO SVO ME
MORIA DEDICA
VIT

(National Museum, Sofia)

This inscription is the oldest Jewish monument in Bulgaria. In the 20th cent. Oescus has been a small village without importance or Jewish inhabitants.

Jacques Offenbach

OESTERLEY, WILLIAM OSCAR EMIL, non-Jewish orientalist, b. Calcutta, India, 1866. He was educated at Cambridge and at Wells Theological College. Prior to 1923, when he was made rector of St. Mary, Aldermany, London, Oesterley held many church posts throughout England. In 1936 he was also made prebendary of St. Paul's Cathedral in London. Oesterley wrote voluminously on Biblical and historical subjects, and much of his work dealt with Jewish aspects of the material.

Among his studies were: *The Religion and Worship of the Synagogue; The Evolution of the Messianic Idea; The Literature of Rabbinical and Medieval Judaism; A Study in Old Testament Religion; The Jewish Background of the Christian Liturgy; Hebrew Religion* (1930) and *A History of Israel* (2 vols.), both with T. H. Robinson; *An Introduction to the Books of the Old Testament* (1934); *The Gospel Parables in the Light of Their Jewish Background; The Jews and Judaism during the Greek Period,* and many studies and translations of specific books of the Bible.

In addition to his posts in the church, Oesterley held various positions in English universities. He was, from 1926 to 1936, professor of Hebrew and Old Testament Exegesis at King's College, the University of London, and was made professor emeritus in 1936. He served as examiner in Hebrew at the Universities of Cambridge, Durham, London, Bristol, Wales and Liverpool.

OESTERREICHER, JOSEPH MANES, physician, b. Óbuda, Hungary, 1756; d. Vienna, 1832. He was the first Jew in Hungary to receive (1781) the degree of M.D., although Jews had not yet been admitted to the schools when he was a young boy. Emperor Joseph II intervened on his behalf with the medical faculty of the University of Buda. His thesis analyzed the mineral springs of Buda. Oesterreicher served as physician in the hospital at Óbuda. Subsequently he was appointed physician-in-chief of Zala county and, by order of the emperor, physician-in-chief of Balatonfüred which, due to his efforts, became a popular spa. He also created a foundation for soldiers at Balatonfüred.

From 1803 on he lived at Vienna as a successful physician. He invented several chemical processes, such as the manufacturing of sodium sulphate and of bicarbonate of soda. He was named imperial and royal chamber physician, received a gold medal, and was allowed to work at the Institute of Medical Technology at Vienna. He published a work describing the springs of Balatonfüred and another (in Hungarian) on the sodium sulphate he found in Hungary.

Lit.: Reich, Ignatz, *Beth-El Ehrentempel verdienter ungarischer Israeliten,* part 1.

OFANNIM, a class of angels; they are mentioned in the Kedushah of the daily Morning Service (Shaharith) in the first benediction before the Shema; such mention is probably as early as in *Yer. Ber.* 9c. Accordingly, the term Ofannim was used to designate also the Piyutim (liturgical poems) which were to be interpolated before this section and which contain the song of praise of the angels; the older of such Piyutim refer to the song of praise, the later ones are descriptive of the angels. Examples hereof may be found in the Mahzor and in Brody-Wiener, *Anthologia Hebraica* (pp. 81, 123, 157, 197).

OFFENBACH, JACQUES, composer of operettas, b. Cologne, Germany, 1819; d. Paris, 1880. He was the seventh child of Isaac Juda Eberst, a Jewish musician and cantor who, coming from Offenbach, called himself by that name on settling at Deutz in 1802. At the age of nine Jakob (as his given name was originally) began to practise the cello, and as soon as he had acquired the necessary technique, he started playing with his brother Julius and one of his sisters in the restaurants of Cologne. In November, 1833, the father took him and Julius to Paris, where Cherubini, the director of the Conservatoire, admitted Jakob as a pupil. After only a year, Jacques, as he called himself now, left the Conservatoire and found a berth as cellist in the Opéra-Comique. At that time he had the good fortune to meet Jacques Halévy, the composer of *La Juive,* who gave him lessons in composition, and he began to compose waltzes for the café-concerts at the Jardin Turc.

In 1837 Offenbach was released from the Opéra-Comique. Fortunately he was befriended by Friedrich von Flotow, the composer of the opera *Martha,* who introduced him as a virtuoso into the musical homes of Paris. A long pilgrimage through the salons enabled Offenbach, at the end of January, 1839, to give his first concert. Others followed in the next years, in all of which he included his own compositions. In the spring of 1843 he arranged, at the Salle Herz, a performance designed to present his theatrical duet, *Le moine bourru,* with which he vainly tried to force the theatre. Spiced with boulevard wit, it testified to his comic gifts.

On August 14, 1844, he married Herminia Mitchell; she was a strict Catholic, and on the demand of her family Offenbach changed his faith. During the years that followed he played in the most distinguished salons, caused hurricanes of laughter with a musical parody of Félicien David's symphonic ode *Le désert,* and continued to besiege the Opéra-Comique.

The revolution of 1848 interrupted his plans; he fled with his little family to Cologne, where he composed

some patriotic songs in honor of revolutionary Germany. After his return to Paris, a year later, he was invited by Arsène Houssaye to reorganize the orchestra of the Comédie Française; but the actors resented his innovations, and the only positive result there was his wonderful music for Musset's poem, *Fortunio's Song*. Also during that period he composed the charming little opera *Le trésor à Mathurin,* which, under the title of *Marriage aux lanternes,* was later to enjoy a tremendous success.

In the meantime, Napoleon III had made himself emperor. At about this time Offenbach's luck turned. He succeeded in hiring a tiny theatre near the Universal Exposition in the Champs-Elysées and opened it, on July 5, 1855, with a musical farce, *Les deux aveugles,* the success of which surpassed his fondest hopes. The theatre, called Les Bouffes-Parisiens, became the rage. During the winter Offenbach installed the Bouffes in the Théâtre des Jeunes Élèves, opening with *Ba-ta-clan,* a chinoiserie musicale, with libretto by Ludovic Halévy. It satirized Meyerbeer's grand opera, and its music was sung everywhere.

Thanks to an inexhaustible stream of musical ideas Offenbach produced in the following years a multitude of little operas: *Le savetier et le financier, Croquefer, ou le dernier des Paladines, Mesdames de la Halle.* But he was a bad businessman, and despite his triumphs financial difficulties overtook him. Thus he built his hopes on his first elaborate operetta, *Orpheus in the Underworld,* the libretto of which was written by Halévy and Hector Crémieux. With this work, which, through its glamorous frenzy, served the ends of imperial policy and at the same time contributed to the decomposition of the Second Empire, the genre of the "offenbachiade" was created. *Orpheus,* produced on October 21, 1858, conquered Paris. Offenbach tried to follow up his success by presenting, in November, 1859, *Geneviève de Brabant,* ridiculing medieval themes. Three months later he produced the revue *Le carnaval des revues,* containing a satire on Richard Wagner. The harvest was at hand. In 1860 he became a French citizen, and in the following year he was awarded the ribbon of the Legion of Honor. Even the Opéra-Comique now accepted one of his works, *Barkouf;* it proved to be a failure. This disaster was somewhat compensated by the enthusiastic reception of *La chanson de Fortunio,* resurrecting *Fortunio's Song.*

Offenbach's operettas spread over Europe. Each year he went to Bad Ems, where he launched such delightful little works as *Les bavards, Il Signor Fagotto* and *Lieschen and Fritzchen.* At Vienna he became a positive cult. He composed for the Opera House there the romantic opera *Rheinnixen,* which, boring as it was, contained the marvellous *Goblin's Song* that was to reappear as the *Barcarolle* in *The Tales of Hoffmann.* Depressed by its cold reception, Offenbach wanted another *Orpheus,* and with his librettists Halévy and Meilhac he wrote *Helen of Troy,* a major work, presented on December 17, 1864, in the Variétés, with Hortense Schneider as Helen. This offenbachiade, that mirrored the whole frivolity of the Second Empire, became one of his greatest triumphs. Almost in the same style was *Barbe-Bleue,* produced in February, 1866, and followed on October 31, 1866, by the masterpiece *La vie parisienne,* the most enchanting of all paeans of praise written to any city. In 1867, the year of the sparkling Universal Exposition, Offenbach offered at the Variétés the brilliant military satire, *The Grand Duchess of Gerolstein,* again with Schneider as heroine.

Like the empire itself, the offenbachiade began to decline, although Offenbach, indefatigable as ever, continued to produce one work after another: *La Perichole,* rich in beauties; *La Diva,* an obvious failure; finally, at the end of 1869, *Les Brigands,* an incomparable blending of offenbachiade and comic opera. The Franco-Prussian War broke out and during it France became a republic. Immediately after the peace Offenbach returned from Vienna to Paris and tried to establish himself anew in a world hostile to the defeated empire. He took over the large theatre of the Gaîté and began to attract a broad public with lavishly staged shows and pantomimes. *Madame l'Archiduc,* more reminiscent of his former operettas, is one of the most notable works of that period. In consequence of his prodigality the Gaîté went bankrupt (1874), and the old man was forced to compose even more than before. *La Créole* and *Le voyage dans la lune* are among the creations of those years.

To save himself from penury, Offenbach in 1876 accepted the offer of an American impresario, Bacquero, to make an American tour. He conducted concerts in the Gilmore Garden at New York and then at the Centennial Exposition of Philadelphia, with the result that his music became highly popular in the United States. Back in France again, Offenbach suddenly was struck with the idea of composing a grand opera on the old play by Barbier and Carré, *The Tales of Hoffmann.* While he worked over it, tortured by the gout, he carried on his usual production; at the end of 1879 *La fille du Tambour-Major,* his hundredth work, renewed his popularity. Carvalho, the director of the beloved Opéra-Comique, started rehearsing *The Tales of Hoffmann,* but Offenbach was not to be present at the première. He died before it, on October 5, 1880, just after having finished the piano arrangement of this world-famous work.

OFFNER, RICHARD, art historian, b. Vienna, 1889. He was brought to the United States in 1891. After being educated at Harvard University, he went to Rome on a fellowship to the American Academy there (1912-1914); he was awarded his doctor's degree at Vienna in 1914, and in 1920 to 1922 was Sachs fellow at Harvard. In 1923 he was appointed professor of the history of fine arts at New York University.

Besides contributions to various art journals, Offner's published works include: *Studies in Florentine Painting* (1927); *Italian Primitives at Yale University* (1927); *The Works of Bernardo Daddi* (1930); *A Corpus of Florentine Painting* (section 3, vols. 1-4, 1930-34).

OFNER, JULIUS, lawyer and politician, b. Horschanz, Bohemia, 1845; d. Vienna, 1924. In 1896 he was elected to the Lower Austrian Diet on a democratic ticket. He entered the Reichsrat in 1901, representing (1907-1919) the second district of Vienna (Leopoldstadt), which had a large Jewish population, but was defeated by the Jewish National candidate Robert Stricker, at the election to the Austrian National Assembly in 1919. In parliament Ofner fought for woman's suffrage and sponsored several laws in favor of the working men as well as other social measures of great benefit to actors and civil service employees; he also achieved the elimination of child labor. Ofner was the author of the so-called Lex Ofner, a law preventing criminal indictment of perpetrators of petty larceny.

In 1913 he became a member of the Austrian Su-

preme Court, and, when this court was supplanted by the Constitutional Court in 1919, he became its permanent referee. In 1918 he was instrumental in obtaining a pardon for Leopold Hilsner, alleged slayer of Agnes Hruza, after Hilsner, a Jew, had been in prison for nineteen years.

Ofner was president of the Vienna Bar Association and author of many articles on juridical and philosophical themes. Among his writings are: *Der Servitutenbegriff nach römischem und österreichischem Recht* (1884); *Der soziale Character des allgemeinen bürgerlichen Gesetzbuches* (1914); *Der soziale Gehalt der Hypothek; Der soziale Rechtsgedanke* (1923). His collected essays and lectures were published in 1931 (*Recht und Gesellschaft*).

Ofner was an opponent of Zionism and a champion of assimilation. His monument, erected in the second ward by the Social Democratic administration of Vienna, was demolished by the Nazis in 1938.

OG, king of Bashan who was defeated and slain by the Israelites in their conquest of the Transjordan (*Num.* 21:33). He was said to have been of gigantic stature and his bed—nine cubits (about thirteen feet) in length and four cubits (about six feet) in breadth—was exhibited at Rabbah in Ammon (*Deut.* 3:11).

The Biblical account of Og is much elaborated in the Midrash. Og is said to have lived at the time of the Flood, and to have begged Noah to save him from the deluge; the latter consented on condition that Og would serve his (Noah's) descendants. As Og was too large to enter the Ark, he rode on the outside and Noah passed out his food to him through an opening in the side of the Ark. Og was also the "one who escaped" (*Gen.* 14:13) to inform Abraham that his nephew Lot had been made a captive. He derided Abraham for his childlessness and later, when Isaac was born, he declared that he could crush him with a finger. Thereupon God predicted that Og would live to see a multitude of the descendants of Isaac and would be slain by one of them. The death of Og was accomplished by Moses himself. Moses, who was ten cubits (about fifteen feet) in height, took an ax ten cubits in length, jumped ten cubits in the air, and even then only nicked Og in the ankle; but this blow felled him. Another report declared that a grave-digger chased a deer for three days through a gigantic bone, and was later informed that it was the thigh-bone of Og.

OHALOTH ("Tents"), second tractate of the sixth division of the Mishnah, Toharoth, and of the Tosefta (where it is called Ahiluth, "overshadowing"). It discusses the ritual impurity to man and utensil spread by a corpse. According to Biblical law, a corpse defiles not only by contact, like all unclean things, but by the mere fact that a person or a thing happens to be in the same Ohel ("tent," "house") with it (*Num.* 19:14-16). The contents of the eighteen chapters of the Mishnah are: 1. Defilement by a dead body and its transfer. Enumeration of the 248 members of the human body. 2. How much of a dead body defiles in the tent, how much by contact and by carrying. 3. Adding up of that which defiles. Blood. Which openings (doors, windows) and which spaces prevent and which further the spread of impurity. 4. Cabinets in the open and in a room with regard to impurity. 5. A covered pit (a cistern) in the unclean house. 6. How persons and vessels may become "tents." Partitions. 7. The slanting roof; the slanting sides of anything that is roofed over. The doors of a house with a corpse in it. Defilement in connection with a still-born child. When the unborn child may be cut up while in the womb and removed piecemeal in order to save the life of the mother, and when the child may not be injured in spite of the danger to the mother. 8. Things which do or do not transmit impurity and those which do or do not protect against it. 9. A species of basket. A tomb hewn in the rock. 10. Openings in the house. 11. The house with a roof cracked. When one leans out of a window over a corpse; when one is lying on the threshold of a house and the carriers of a corpse pass over him. 12. Expansion or non-expansion of impurity upward and downward. 13. The size of windows and other holes requisite for the progress of impurity. 14. Cornices, jetties, and other projections. 15. Boards lying on the top or by the side of each other; similarly, clay barrels, wainscotings. 16. The finding of one or more corpses. 17-18. A place containing bones of dead bodies (Beth Haperas). Houses and dwellings of heathens.

The Tosefta is also divided into eighteen chapters and contains various details which serve to explain the Mishnah. There is neither Babylonian nor Palestinian Gemara to this tractate. The Halachoth in Ohaloth were considered difficult in Talmudic times (*Hag.* 14a).

OHEL MOED, *see* TABERNACLE.

OHIO, a north central state of the United States, having a population of 6,907,612 (census of 1940), including about 183,500 Jews in 1942. In 1877 Ohio was estimated to have approximately 14,600 Jews, mainly of German and Hungarian extraction. Twenty years later the exodus of Jews from pogrom-harried Eastern Europe had increased that number to 50,000, and in the following decade, other thousands of Russian and Bessarabian Jews, crossing the Atlantic, swelled the total to 85,000. In the next score of years Ohio's Jews increased to about 174,000, which was approximately two and one-seventh per cent of the general Ohio population. Of this Jewish total, Cleveland and Cincinnati alone had two-thirds.

In 1942 the Jewish population was distributed approximately as follows:

Akron	7,500
Canton	4,200
Cincinnati	20,000
Cleveland	90,000
Cleveland Heights	10,000
Columbus	8,000
Dayton	5,000
East Cleveland	1,200
Lorain	800
Steubenville	1,000
Toledo	10,000
Youngstown	8,000

In addition, there were ten other cities or towns where the Jews numbered almost 300 and over; ten localities in which there were more than 100 Jews, and a large number of communities with less than that total.

The first Jew to participate actively in the settlement of Ohio was Colonel David Salisbury Franks, who, in 1790, in return for his services in the American Revolutionary War, received a land grant from Congress situated within the territorial limits of what later became the state of Ohio. Franks was also appointed an agent charged with receiving French settlers in the

Ohio Valley at the distribution point of Alexandria, Va. He was well qualified for this task; for, having traded with the Indians of the Ohio territory for a number of years before the outbreak of the American Revolution, he knew the country well. Another Jew, Joseph Simon, who had established a trading post at Lancaster, Pa., about 1740, made frequent excursions into the Ohio area.

The first actual settlement of Jews, however, was made at Cincinnati, which was originally founded by white pioneers in 1790. There, in 1817, settled the Jew Joseph Jonas, watchmaker and silversmith of Exeter, England. From miles around, the inhabitants came to see the strange Hebrew. One old Quakeress said: "Thou art one of God's chosen people. Wilt thou let me examine thee?" After the examination, she exclaimed: "Well, thou art no different to [from] other people!"

Friends had warned Jonas: "In the wilds of America and entirely amongst Gentiles you will forget your religion and your God." But in the fall of 1819, forced to disregard the traditional Minyan, Jonas and three fellow Jews from England, together with David Israel Johnson of Brookville, Ind., held religious services on the high holy days. Five years later the community, its numbers swelled by women and children as well as by additional men (still mainly from England), formed Bene Israel, the first Jewish congregation in the Ohio Valley and in the vast northwest territory. A synagogue was erected on Broadway between Fifth and Sixth streets; on September 9, 1836, this synagogue was dedicated. Later, Joseph Jonas, who read the dedicatory address, wrote an account of the ceremony: "What must have been the exciting feelings of the founder of this congregation at the consecration of this first temple west of the Allegheny mountains when, in knocking thrice outside the inner door, he was addressed by the reader within: 'It is the voice of my beloved that knocketh,' and he answered, 'Open to me the gates of righteousness; I will go into them and I will praise the Lord!' "

Jonas gives an interesting account also of the nature of Christian-Jewish relations in this early period. "From the period of the arrival of the first Israelite in Cincinnati to this date [1842], the Israelites have been much esteemed and highly respected by their fellow-citizens, and a general interchange of civilities and friendships has taken place between them. Many persons of the Nazarene faith, residing from fifty to one hundred miles from the city, hearing that there were Jews living in Cincinnati, came into town for the special purpose of viewing and conversing with some of the children of Israel, 'the holy people of God,' as they termed us."

After the first influx of English Jews, large numbers of German Jews began to settle in Ohio. In 1837 Simson (or Samson) Thorman arrived in Cleveland from Bavaria and started a community there, establishing the second congregation in Ohio, the Israelitische Society, in 1839. By 1850 the German Jews far outnumbered the English. Jews were quickly becoming an integral part of the Ohio community as a whole, and were respected for their industry and sobriety.

Early in the history of the Jewish community a satisfactory Sunday law precedent was established. In 1845 a Jewish merchant of Cincinnati appealed to the Court of Common Pleas of Hamilton County against fines imposed by the mayor of Cincinnati for violation of a municipal ordinance against selling goods on Sundays. The judge reversed the mayor's decision, condemning it as "unconstitutional and at variance with the spirit of free toleration," and declaring that Jews who kept their stores closed on their own Sabbath had the right to remain open every other day.

In 1860 to 1865 excitement ran high in archeological and religious circles. "Hebrew" relics had been discovered in a great stone mound near Newark, Ohio, and were regarded by some as proof that the primitive, pre-Indian Mound Builders once in that vicinity were really the Ten Lost Tribes of Israel. But the relics were eventually revealed to be planted frauds.

In Ohio, the Civil War offered a striking example of Jewish participation. Over 1,000 Ohio Jews enlisted on the side of the Union, a number second only to New York state's Jewish enlistment. (The total Jewish population of Ohio was estimated at about 14,600 in 1877, and must have been considerably less in the Civil War period.) Fifty-two of the Jewish soldiers were reported killed in action, and sixteen wounded. Five were cited for bravery: Colonel Marcus M. Spiegel, David Orbanski, Henry Heller, Abraham Grunwalt, Isaac Gans.

Meanwhile, the Jewish communities of Cincinnati and Cleveland kept growing. In Cincinnati, in 1841, a group of German Jews established Congregation Bene Yeshurun which, like Bene Israel, was Reform. In 1848 the third congregation, Ahabath Achim, was organized. The Polishe Shul split in 1847, and some of its members organized Adath Israel (Conservative). The first Orthodox congregation was Beth Tefillah, founded in 1866. In 1942 Cincinnati had nine Orthodox congregations. In that year Cincinnati Jews resided in large numbers in the suburb of Avondale.

In Cleveland, The Israelitische Society (founded in 1839) split, and the Ansche Chesed Society was formed in 1842; the two were again merged to become Ansche Chesed Israelitische Society. Other congregations sprang up in Cleveland: Tifereth Israel (1850), B'nai Jeshurun (1865), and Ansche Emeth (1870). The latter two were Conservative. The early Orthodox congregations were Bes Medrosh Hagodol, Ahavath Israel, Neveh Tzedek, and Oheb Tzedek. In 1942 Cleveland had two Reform and thirty-four Conservative and Orthodox synagogues. In Cleveland, Rabbi Emanuel Eckstein of Congregation B'nai Jacob, noted Hebrew bibliographer, had collected one of the country's outstanding Hebrew libraries.

Thus the history of Ohio Jewry was largely the history of Cincinnati and Cleveland up to the middle of the 19th cent. From then on, the Jewish communities began to spread and thrive throughout the state. By the end of that century, eighteen cities and towns had at least one Jewish institution; sixteen had a total of fifty organized congregations.

AKRON appears to have had Jewish settlers as early as 1850. The Akron Hebrew Congregation (Reform) was the first to be founded, in 1865. The synagogue of the congregation (Temple Israel) in use in 1942 was built in 1912. Five Orthodox congregations were organized: Sons of Peace (Bene Shalom), Edgewood Ave. Synagogue, Ahavas Zedek, Anshe Sfard and the United Hebrew Congregation.

BELLAIRE had, in 1942, about 275 Jews. The two Orthodox congregations were Agudath Achim, organized about 1890, and The Sons of Israel, organized

in 1896. In 1913 the latter joined the Union of American Hebrew Congregations; in 1942 it had twenty members, and conducted annual high holy day services.

CANTON, a city of eastern Ohio about fifty miles south of Cleveland, organized the Canton Hebrew Congregation (Reform) in 1885. The congregation's rabbis included Herbert C. Straus (1917-20), Carl N. Herman (1922-23) and Charles B. Latz, who became rabbi in 1923 and was still serving in 1942. The congregation also had a religious school, a sisterhood, a junior congregation and study organizations for men and women. Orthodox congregations include Tifereth Zion, Beth Ha-Midrosh, Agudas Achim and Shaare Torah. These have religious schools, ladies' auxiliaries, and adult study classes. Other communal organizations are the Canton Talmud Torah, the Jewish Welfare League, the Jewish Family Service, and a lodge of the B'nai B'rith. The welfare fund allocates funds not only to various local groups, but to national and international organizations as well. In 1924 the Welfare League and the B'nai B'rith organized a Jewish Community Center, where many of the communal activities were carried on, including meetings of the local Zionist organization and the Hadassah chapter. The *Stark County Jewish News,* a bi-monthly, was established at Canton in 1921. Abe M. Luntz of the Jewish community was elected president of the Canton board of education in 1934, and was still in that post in 1942.

CIRCLEVILLE, a small community with a handful of Jews, had a congregation as far back as 1855. In 1907 the congregation was known as Children of Israel. Ben Gordon was mayor in 1942, elected in 1941.

COLUMBUS, one of the oldest Jewish communities, had its beginnings in 1838. In 1852 the first congregation, B'nai Jeshurun (Temple Israel), was organized; in 1942 its membership consisted of over 400 families. Samuel M. Gup, rabbi of Temple Israel, and prominent in the civic and cultural life of both the Jewish and general community, was a former officer of the Franklin County Ministerial Association, and active in interfaith relations in the state. He was a director of Columbus Civic Defense, and a member of the board of the Columbus Philharmonic Orchestra. The Conservative congregation Tifereth Israel was founded in 1901, and Agudath Achim, the most important of the Orthodox congregations, in 1883. Beth Jacob (Orthodox) was organized in 1897.

DAYTON had its first Jewish settlers as early as 1842. Congregation B'nai Jeshurun was organized in 1850 as the Hebrew Society; later it adopted the Reform ritual, and from 1927 on was known as Temple Israel. In 1941 its membership numbered 400 families. The Dayton View Synagogue Center, also Reform, was organized in 1924. The Orthodox congregation Beth Jacob was organized in 1875, and Beth Abraham in 1895.

EAST LIVERPOOL, with a Jewish population in 1942 of about 300, was first settled in the 1880's. Among the early comers were Adolf Joseph, William Erlanger, Gus Bendheim and Sol Whit, from Germany. Meyer Reich came from Austria, and Abraham Fisher from Russia. Temple B'nai Israel (Reform) was founded in 1892 and was served part time by Hebrew Union College students and by Rabbi Isador E. Philo of Youngstown, until 1941, when Harry Lasker was elected to the pulpit as the first full time rabbi. The synagogue built in 1922 was considered unusually fine for so small a community. The Orthodox congregation, B'nai Jacob, was founded about 1900. Other organizations included the B'nai B'rith lodge and the Jewish Federation, supporting the United Jewish Appeal as well as an orphanage and hospitals.

ELYRIA, which in 1942 had approximately 375 Jewish inhabitants, numbered among its earliest settlers S. Altfeld and M. Mendelson, both of Russia, who arrived about 1852. The Conservative congregation Agudath Ahim B'nai Abraham was organized in 1917. The first rabbi was C. Kramer; in 1938 Lothar L. Lubasch was called to the pulpit and was still serving in 1942. The synagogue then in use was purchased in 1924. The congregation included a Hebrew and Sunday school and a sisterhood. In addition, the communal organizations were a B'nai B'rith lodge and a district of the Zionist Organization of America, the former sponsoring Jewish speakers of national reputation at the Theological Seminary in Oberlin. Alex Altfeld of the Jewish community was for one year vice-president of the Elyria chamber of commerce.

HAMILTON, whose Jewish inhabitants in 1942 numbered approximately 450, had its first Jewish settler about 1855 in the person of Jacob Grabenheimer, who was also the first Jew to settle in Butler County. Other early settlers were Moses Klein, Jonas Hirsch, Ferdinand Steinfeld, Jacob Maas, David Koppel (grandfather of Fannie Hurst), Meyer Roth, Moses Saver, Herman Guggenheimer, Louis Davis and Samuel Levy (all from Bavaria). In 1866 they organized Congregation Bene Israel (Reform), which in the initial decade of its existence was served by a Reverend Rosenthal. The first synagogue was built in 1878; later a new one, given to the community by Ben Strauss as a memorial to his parents, was erected in 1923. Rabbis succeeding Rosenthal were Herman Wolff, Adolph Pollack, Possmann, and Lippmann Liebmann, who left in 1913. Thereafter a series of students from the Hebrew Union College conducted bi-weekly services until 1937, when Arthur J. Lelyveld was called to the pulpit. He was succeeded in 1941 by Myron Silverman. The sisterhood of the congregation was originally organized in 1866. A B'nai B'rith lodge was established in 1922. In 1941 Mrs. Myron Kahn of the Jewish community gave a camp to the Hamilton Boy Scout Council in memory of her first husband.

LANCASTER, a small community of about fifty Jewish inhabitants (1942), supported its own B'nai Israel Congregation, which purchased a synagogue in 1926. Julius L. Baker was elected to the pulpit in 1932.

LIMA, whose estimated Jewish population in 1942 was about 420, supported Beth Israel Congregation (Reform), whose rabbi in that year was Bernard M. Dorfman, and the Orthodox congregation Shaare Zedek.

LORAIN had, in 1942, approximately 800 Jews. The Hungarian immigrants Joachim Resek, Ben Klein, Michael Langsam, Samuel Klein and Malvin and Joseph Gould arrived in the 1880's and 1890's. In 1895 Nathan Berger came from Poland, and Isaac Haas from Russia. Congregation Agudath B'nai Israel was organized in 1925, out of the merger of the South and North Lorain congregations (the latter, Agudath Achim, having been organized in 1901). In 1931 a new synagogue, ad-

judged the finest house of worship in Lorain County, was built. The congregation, served by Shohets and Hebrew teachers, had as its first ordained rabbis Jacob Cohen (1931-32) and Max Dubrow (1932-33). In 1934 Julius Kerman was elected rabbi, and was still the incumbent in 1942. The congregation also organized a Hebrew and Sunday school, the Jewish Relief Society, and the Community Center. Other organizations included a lodge of the B'nai B'rith, and a Workmen's Circle, organized in 1921. Harry Shiff was safety director of the city (1916-20), and Jacob Gould held the same post in 1921.

PIQUA, a small but old community, organized Congregation Anshe Emeth in 1858. A Hebrew ladies' aid society was formed in 1893. In 1942 the congregation had twenty contributing members, but no rabbi.

PORTSMOUTH, likewise an old community, incorporated Congregation Bene Abraham Kahal Kodesh in 1858. Auxiliary societies were the Ladies' Aid and the Jewish Charity Society. In 1942 the congregation had thirty-seven contributing members.

SANDUSKY had, in 1942, Congregation Oheb Shalom (Reform), with a contributing membership of twenty. For a number of years the rabbi of the Toledo Congregation Shomer Emunim visited the community; in 1942 the congregation held services only on the high holy days.

SPRINGFIELD. Early Jewish settlers in Springfield, the Jewish community of which, in 1942, had approximately 400 individuals, included Jacob Wolf, Moses D. Levy and M. M. Kaufman, who arrived in the decade from 1860 to 1870. Congregation Ohavay Zedukah, which was Reform in 1942, was organized in 1865, and the synagogue was built in 1918. Among the rabbis who served the congregation were Sidney S. Tedesche, Simon Cohen (1920-22), Director of Research of the *Universal Jewish Encyclopedia,* and Phineas Smoller. In 1939 Jacob Polish became rabbi, and still occupied the pulpit in 1942. There was also a Sunday school. In addition to the Federated Jewish Women's Club, the community sponsored a lodge of the B'nai B'rith and a district of the Zionist Organization. The Orthodox congregation Chesed Shel Emes was organized in 1886. Jacob Wolf held the office of county commissioner, and Jacob Klein was on the city board of public works.

STEUBENVILLE had a large Jewish community of about 1,000 in 1942. The Orthodox congregation B'nei Israel was organized in 1891. Beth-El Congregation, which joined the Union of American Hebrew Congregations in 1923, was supported by eighty-one members in 1941, and was served by Rabbi Irving I. Hausman.

TOLEDO appears to have had Jewish settlers early, and in 1866 the Orthodox congregation later incorporated under the name of B'nai Israel was organized, with Solomon Van Noorden, a clothing merchant, as first rabbi. In 1942 the congregation was Conservative. Morton Goldberg, whose service began in 1937, was rabbi. The Reform congregation, Shomer Emunim, organized in 1870, had a membership of 400 families in 1942; the rabbi was Leon I. Feuer. In addition, there were several Orthodox congregations. Bene Schulom was organized in 1904. Bnai Abraham was incorporated in 1906.

WARREN, in 1942, had a Jewish population of about 650. One of its early settlers was Jacob Knofsky, who arrived from Lithuania in 1892. Congregation Beth Israel was organized in 1918, and the synagogue was built that year. The first rabbi, P. Greenstein, served for a score of years. In 1942 Rabbi Leon Stitskin, who came to the pulpit in 1932, was the incumbent; he organized the Warren Community Forum and in 1938 published the volume *Judaism as a Religion.* Other organizations were the Hebrew Institute, the Jewish Center and the Warren Family Welfare.

YOUNGSTOWN had, in 1942, approximately 8,000 Jews. The Reform congregation, Rodef Sholem, was organized in 1867 by German and Austrian settlers, and the new synagogue built in 1915. Isador E. Philo was elected to its pulpit in 1912, and was still serving in 1942. The Orthodox Congregation Emanu-El, organized in 1907, had as its rabbi in 1942 Carl L. Manello, who began his service in 1929. Anshe Emeth, Conservative, was organized in 1919, and its synagogue built in 1927. Rabbi Nathan Kollin served from 1933 to 1941.

ZANESVILLE had an estimated Jewish population of 370 in 1942. The Orthodox congregation Beth Abraham was organized in 1891. Another early congregation was Keneseth Israel.

The contribution of Ohio Jewry to American Judaism was not confined to the sum total of Ohio's numerous congregations. Particularly through its second largest city of Cincinnati did Ohio become the flourishing ground for widespread movements in Reform Judaism, which in turn affected the life of all American Jewry. From the pulpit of Bene Jeshurun, in Cincinnati, Isaac Mayer Wise, America's leading Reform rabbi, wielded his nation-wide influence. His pioneer weekly, *The American Israelite,* founded in 1854, was a unique force in Anglo-Jewish culture. The Hebrew Union College, of Cincinnati, which Wise founded in 1875, sent its rabbis not only to the farthermost localities of the United States, but also to pulpits in Cuba, Canada, Scotland, England, South Africa and Australia. In Ohio itself leading pulpits were served by such nationally famous rabbis as Max Lilienthal, David Philipson, Abba Hillel Silver, David Lefkowitz, Louis Grossman, and Eliezer Silver (Orthodox). Julian Morgenstern, a graduate of the Hebrew Union College and its president from 1922 on, gained a reputation as a Biblical scholar; he served for a time as president of the American Oriental Society, and wrote many books and articles on Biblical exegesis and history. The Union of American Hebrew Congregations developed the National Federation of Temple Sisterhoods, the National Federation of Temple Brotherhoods, and the National Federation of Temple Youth, all with large memberships in 1942. The B'nai B'rith had important developments in Ohio; Alfred M. Cohen, of Cincinnati, was its national president from 1925 to 1938. Interracial amity had a striking instance in the state when, in March, 1867, Rabbi Max Lilienthal occupied the pulpit of a Christian church. In Ohio, and especially in Cleveland, Zionist activities were intensive and of national scope. Rabbi Abba Hillel Silver, of Cleveland, became national chairman of the United Palestine Appeal.

Equally notable was the contribution of Ohio's Jews to the Ohio commonwealth, in commerce and industry, in education and in public office. Early Jews were, in the main, shopkeepers. Later, Jews developed some of Ohio's most important industries, such as textile and clothing factories, distilleries, shops, and the manufacture of yeast and cigars. Later still they became leaders in metal and steel, in the overall industry, and in merchandising and jobbing. The famed B. Manischewitz Matzo Company was founded in Cincinnati. Many Jews went into the insurance business; in Cincinnati they conducted 50 per cent of this business. The motion picture industry attracted many.

There were a number of Jewish participants in Ohio public life in the 19th cent. Beginning with the pioneer Joseph Jonas, who served in the state assembly in 1860, that body had among its members Daniel Wolf (1873-75), Jacob Wolf

(d. 1881), Henry Mack (1884), and Theodore Mayer (1896-98), all of Cincinnati. In the state senate were Henry Mack (1888-90) and Alfred M. Cohen (1887-1901), both of Cincinnati. Julius Freiberg of that city was a delegate to the state constitutional convention of 1873. In addition to those mentioned in the separate article on Cincinnati, the following were officeholders: Daniel Wolf, alderman (1865); Morris Bauer, in the common council (1876-78) and its president (1878-90); Julius Reis, president of the board of aldermen (1876-80); Gustave Lowenstein, president of the board of aldermen (1886-90). In Cleveland, besides the public servants enumerated in the separate article on that city, Hays Kaufman was in the city council (1886-88) and city treasurer (1888-90), and Peter Zucker was president of the board of education (1896-98).

Later, there sat in the state assembly Max E. Meisel, of Cincinnati (1900); Joseph Lustig, of Cleveland (1916); Joseph H. Silbert, of Cleveland (1931-32); Jacob Deutsch, of Dayton (1940-42). In the senate were Walter M. Shohl, of Cincinnati (1917-18), Joseph N. Ackerman (1925-33) and James Metzenbaum (1935-36), both of Cleveland.

Maurice Maschke, of Cleveland, was collector of customs for Ohio (1904-12) and on the Republican National Committee (1924-32); Bernhard Bettmann, of Cincinnati, was Collector of Internal Revenue for the First District of Ohio (1897-1905 and 1907-13). A. F. Bernstein served as United States district attorney for Northern Ohio (1921-23); Otto Zinner, of Cleveland, was United States Commissioner for Ohio (1915); Rabbi Joseph S. Kornfeld served as United States Minister to Persia (1921-24); Alfred Bettman, of Cincinnati, was made a member of the state judicial council in 1923, and was still serving in that position in 1942; Alfred A. Benesch, of Cleveland, was state director of commerce (1935-40); Gilbert Bettman, of Cincinnati, was state attorney general (1928-32) and Republican candidate for the United States Senate (1932); at the time of his death in 1942 he was serving as a judge of the Ohio Supreme Court (the first Jew ever to be elected to such office). Rabbi Samuel M. Gup, of Columbus, a member of the board of the Ohio Constitutional League, was appointed to the commission to study and revise the state laws on divorce and marriage; he was also a member of the state traffic safety committee (1938) and of the state salvage committee (1942).

Judges were Benton S. Oppenheimer, of Cincinnati, in the Ohio Superior Court (1912-16), and Emerich B. Freed, of Cleveland, who was elected to the United States District Court in 1940 and was still serving in that post in 1942. Manuel Levine was made chief judge of the Court of Appeals of the 8th Appellate District of Cleveland in 1932.

Municipal court judges in Cleveland were Joseph N. Ackerman (1933-39), Lewis Drucker (1933) and Jacob Stacel (1937), the latter two still serving in 1942. In Cleveland, also, David Zinner was president of the city council (1913-15); Leonard Levy was city treasurer (1935-38); and Samuel Doerfler was Cuyahoga County prosecutor (1926-28). In Cincinnati, three Jews served as mayor. Irwin M. Krohn was appointed to the park commission in 1912, and was made its chairman in 1926; he was still serving in 1942. William J. Shroder was president of the board of education (1926-34); Willis D. Gradison was in the city council (1934) and vice-mayor (1941); he was still serving in both posts in 1942. Harry A. Freiberg was treasurer of Hamilton County (1932-34). Nicholas Klein was in the city council (1936-40).

Samuel Eichenbaum was mayor of Corning (1911-13); David Zinner was mayor of Fairview (1921-23). A. Joe Levy was president of the Dayton board of education (1935-39). Fred B. Cramer, of Middletown, was made judge of the court of common pleas of Butler County (1940), and still served in that position in 1942. Ben Gordon was mayor of Circleville in 1942 (elected 1941).

ABRAHAM I. SHINEDLING.

Lit.: *Publications of the American Jewish Historical Society;* Shinedling, Abraham I., "The Jews of Ohio," *American Hebrew,* March 7, 1941, p. 8 et seq.; April 11, 1941, p. 24 et seq.; Jonas, Joseph, "The Jews of Ohio," *Occident,* vol. 1, pp. 547-50; vol. 2, pp. 29-31, 143-47, 244-46.

OHOLAH AND OHOLIBAH, two unchaste sisters used in *Ezek.* 23 as symbols of the two divisions of the Israelites, the Northern Kingdom of Samaria and the Southern Kingdom of Judah. The sexual symbolism, first employed by the prophet Hosea, is here expanded and amplified; it indicates idolatry and political and cultural relations with heathen nations, particularly Egypt, Assyria and Babylonia. A liturgical lamentation (Kinah) for the Ninth of Ab, beginning with the words *Shomron ḳol titten* ("Samaria raises her voice"), uses the symbol of the two sisters.

OINOMAOS OF GADARA, cynic philosopher who lived about the middle of the 2nd cent. C.E.; only fragments of his writings have survived, which indicate that among other things he made a violent attack upon the heathen oracles. He has been plausibly identified by Graetz, Blau and others with the Abnimas Hagardi who was an intimate friend of Meir. In *Midrash Gen.* to 27:22, he is called one of the great pagan philosophers, ranking with Balaam. He is reported to have interpreted the verse (*Gen.* 27:22), "The voice is the voice of Jacob, and the hands are the hands of Esau," as meaning, "As long as the voice of Jacob is heard in the houses of assembly" (that is, as long as Jewish children study), "the hands of Esau can never prevail against this people." His knowledge of the Bible was probably extensive, as he was able to answer Meir by quoting Scripture.

OISTRAKH, DAVID FEDOROVICH, violin virtuoso, b. Odessa, Russia, 1908. His father was an office worker, his mother a member of the Odessa opera chorus. At the age of five he began studying the violin under P. S. Stoliarsky, and at eight was already giving concerts. In 1926 he was graduated from the Odessa Conservatory, after a period of intensive study.

In 1930 he won first place at the All-Ukrainian Violin Competition in Kharkov, first prize (1935) at the Leningrad Second All-Union Contest for Musicians, and that same year second prize at the Wieniawski Violin Contest in Warsaw. He capped this series of triumphs by taking first prize at the Ysaye Violin Contest in Brussels (1937).

Following this Oistrakh made a concert tour of Belgium, France, Britain, and Poland, being acclaimed everywhere together with other Soviet musicians, including Liza Hillels, Busya Goldstein, Misha Fichtenholz. The Soviet government awarded Oistrakh the "Badge of Honor" (1937). From 1932 on he taught at the Moscow State Conservatory, where he was a professor in 1942, continuing recital work, at the same time often entertaining the Red Army at the front and behind the lines. Oistrakh was proficient in several European languages. His main interests, next to music, were art, science and literature.

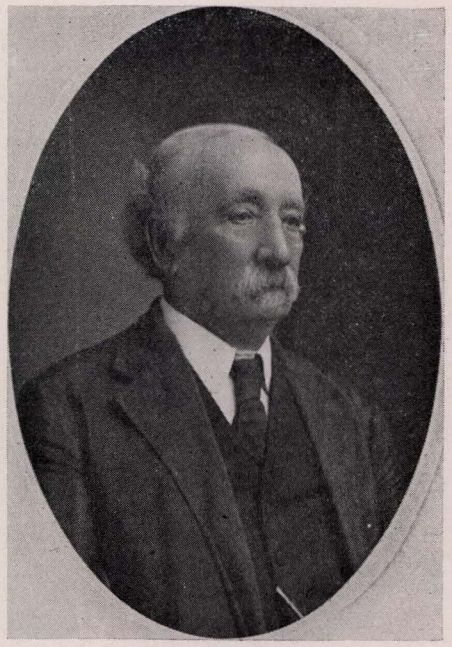
OKLAHOMA, a central state of the United States, having a population of 2,336,434 (census of 1940), including about 4,500 Jews (1942). The largest Jewish settlement in Oklahoma was at Tulsa, which had about 1,800 Jews in 1942, while the second largest was in



Joseph Sondheimer, the first Jew to settle in Oklahoma

Oklahoma City, which had about 1,500 Jews. Two additional communities in the state had populations of more than one hundred Jews, Ardmore with about 110 and Muskogee with 155. There were in the state in 1942 three Reform congregations: Beth Ahaba, of Muskogee, with Max Nussbaum as rabbi; B'nai Israel, of Oklahoma City, with Joseph Blatt as rabbi; Temple Israel, of Tulsa, with Ely E. Pilchik as rabbi. In Oklahoma City there was Congregation Emanuel (Orthodox), with Melvin Goodman as rabbi in 1942, and in Tulsa there was Congregation B'nai Emunah (Orthodox), with Morris H. Finer as rabbi.

Between 1906 and 1916 Joseph Blatt, of Temple B'nai Israel, was the only rabbi in the state of Oklahoma, and it was with his assistance that congregations were established in other sections of the state. In addition to the congregations listed above, Ardmore maintained a Temple building and a part-time rabbi, while Shawnee, Enid, Okmulgee and McAlester had religious schools, sisterhoods, and sections of the Council of Jewish Women. These small communities were accustomed to engage rabbinical students to officiate for the high holy days.

Among the Jews holding state office in Oklahoma were Isaac B. Levy and Isaac Jacobs, who were members of the first territorial legislature (1890); Charles B. Emanuel, who was a member of the fourth territorial legislature (1894); and Isaac B. Levy, a member of the territorial legislature (1905-6). Leo Meyer was state treasurer (1907-9), and Louis A. Fischl was a member of the state senate (1933-37). Between 1929 and 1933 Fischl served in the state assembly. William G. Pfeifer was United States commissioner at Ardmore (1903), and Louis Loeffler was a member of the Bristow City Council (1917-21).

Rabbi Joseph Blatt taught Jewish history at the University of Oklahoma, and in 1942 Max Nussbaum was chairman of the department of Hebrew language and literature at the School of Religion of the University of Oklahoma. Outstanding in philanthropic activity in the city of Muskogee were Mr. and Mrs. Alex Sondheimer and Samuel Sondheimer, descendants of Joseph Sondheimer, who in 1867 was the first Jew to settle in Oklahoma. JOSEPH BLATT.

OKLAHOMA CITY, capital of Oklahoma, having a population of 204,424 (census of 1940), including about 1,500 Jews. In the fall of 1890 high holy day services were held in Oklahoma City. The first Jewish organization in the state was the Hebrew Cemetery Association of Oklahoma City, which was incorporated in 1902. In the following year Rabbi W. H. Greenberg, of Dallas, Texas, organized Temple B'nai Israel as a Reform congregation. A religious school was established and students from the Hebrew Union College officiated during the holiday service. In February, 1906, Joseph Blatt became rabbi of the congregation, and continued to hold this position in 1942. A Temple building was constructed in 1908, and a Temple center building was dedicated in 1926.

In 1904 Congregation Emanuel (Orthodox) was organized, and a synagogue was built in 1917. Milton Rosen was the first rabbi, serving for ten years. The rabbi in 1942 was Melvin Goodman, whose service began in 1938.

Gus A. Paul was county attorney for Oklahoma county in 1904 and city attorney in Oklahoma City between 1905 and 1907. Seymour Heyman was president of the Oklahoma City board of education (1922-26).

JOSEPH BLATT.

OKO, ADOLPH S., librarian and author, b. Russia, 1883. He was educated in Germany and came to New York city, where he was a member of the Astor Library staff. From 1906 until 1933 he was librarian of the Hebrew Union College Library, Cincinnati, which he succeeded in building up remarkably. Under the name of S. Baruch, Oko wrote a great deal on subjects of Jewish learning and philosophy, chiefly in the *Menorah Journal,* of which he was for many years associate editor. He was also the author of *Solomon Schechter, A Bibliography* (1938). Oko was one of the founders of the Societas Spinozana, and its American secretary; he was also a trustee of the Domus Spinozana, The Hague. In 1931 the Hebrew Union College awarded him the honorary degree of Doctor of Hebrew Law. In 1942 Oko was living in Connecticut.

Lit.: *Hebrew Union College Monthly,* April 15, 1931.

OLAM HAZEH AND OLAM HABA, terms used in Hebrew literature for present and future life. The former means literally "this world"; the latter "the world that is to come." The "world to come" is used in a double connotation, that of the life of the soul after death and that of the millennial age after the Last Judgment; it is often difficult to determine which meaning is intended in numerous passages in Jewish literature. In the majority of passages, however, the Olam Haba is the reconstructed world that is to be the scene of the reign of righteousness on earth.

This concept grew directly out of the teachings of the prophets. From Hosea on these consistently held to the hope of an age in which Israel, purified of its wrongdoing, would be restored to the glories of the great age of David. As prophecy passed into apocalypse, the expected manner for the coming in of the world to come was changed from the natural to the supernatural, and it was thought that the age of bliss was to be preceded by great catastrophes. In the period of the Second Temple, especially in times of suffering, much thought

was directed to the future world, and the motivation of ethics became not so much the creation of a better life upon earth for humanity as the securing of an assured place for the individual in a world miraculously changed.

It is in this spirit that some of the most important passages in Jewish literature which mention Olam Hazeh and Olam Haba can be understood. Thus, "Olam Hazeh is only the antechamber to Olam Haba; prepare thyself in the antechamber that thou mayest be admitted to the banquet hall" (*Aboth* 4:16). "All the prophets have predicted only for the Messianic age, but as for Olam Haba, no eye but God's hath seen what is in store there" (*Sab.* 63a). A more sober note, intended probably to contradict the fancies of those who conceived of reward only in terms of sensuous enjoyment, is struck by the statement: "In Olam Haba there will be neither eating nor drinking, begetting or propagation, but the righteous will sit with crowns on their heads and rejoice in the glory of the Divinity" (*Kallah Rabbathi* 6:2; cf. *Ber.* 17a). A universal idea is advanced in the thought that the righteous among all nations will have a share in Olam Haba (*Tos. Sanh.* 13); while a feeling that the suffering of the Jews will be repaid finds expression in the statement that all Israel will have a share in Olam Haba (*Sanh.* 10:1). It is noteworthy, however, that the prayers of the Talmudic period pay little attention to Olam Hazeh and Olam Haba. Their hope for the future is in the deliverance of Israel from oppression, and the union of all humanity to worship God in a common service and brotherhood.

An analogous contrast between present and future life is current in Eastern Europe in modern times. On the one hand, there is Olam Hasheker, "the world of falsehood," the present life in which the wicked prosper and the righteous suffer; on the other, there is the Olam Haemeth, "the world of truth," the heavenly life in which both virtue and vice receive their true rewards.

OLASZLISZKA, town in Zemplén county, Hungary. The Jewish community of Olaszliszka, founded early in the 19th cent. by growers and merchants of Tokay wines, in the 1830's elected Hershele Friedmann, a pupil of the Zaddik Moses Teitelbaum, as their rabbi. During the forty years of his rabbinate, Friedmann (d. 1874), attracted large crowds of worshippers and pupils, bringing growth and prosperity not only to his community but to the town itself. He himself lived in poverty, diverting all his income for the purposes of the community and for the poor.

The tradition of wonder rabbis has been preserved in Olaszliszka. In the 20th cent. crowds still flocked to the wonder rabbi Hermann Friedländer. Economically the community declined, but with the help of donations offered by visitors, its 312 members still maintained a school, Talmud Torah and home for the poor, as well as providing room and board for the students of their Yeshiva and enlarging the Yeshiva library.

OLD AGE. The Bible, in the sentence of God limiting the span of man's life, declares: "My spirit shall not abide in man forever, for that he also is flesh; therefore shall his days be a hundred and twenty years" (*Gen.* 6:3). A more normal statement is given in the Prayer of Moses: "The days of our years are threescore years and ten, or even by reason of strength fourscore years" (*Ps.* 90:10). Ben Sira, contrasting the insignificance of man with the magnanimity of God, says: "The number of man's days is great if it reach a hundred years; as a drop of water from the sea, or as a grain of sand, so are man's few years in the eternal days." In the glorious future of Jerusalem, the prophets declare, men will live beyond a century. "For the youngest shall die a hundred years old" (*Isa.* 65:20). The Patriarchs only were granted the supernatural length of life, while all other men died at normal age. Rabbi Judah ben Tema (2nd cent. C.E.), describing the stages of man's life, continues: "At sixty a man attains old age, at seventy the hoary head, at eighty, labor and sorrow, at ninety decrepitude, at a hundred he is as though he were dead and had passed away and faded from the world." That sixty was considered old age is proved by the compulsory retirement of the Levites from active service on reaching the age of fifty (*Num.* 8:25). Not one of the kings of Judea reached the age of seventy, and the prophet Samuel, according to tradition, died at the age of fifty-two.

The Talmud (*A.Z.* 19b) tells the story of a man masquerading as a medicine vendor, offering for sale the elixir of life. He prescribes to his customers the verses "Keep thy tongue from evil, and thy lips from speaking guile. Depart from evil, and do good; seek peace, and pursue it (*Ps.* 34:14-15). Several rabbis of the Talmud gave reasons for their longevity. "I never trod on the heads of the holy people"; "No one came to the house of study earlier than I did"; "I never honored myself by the disgrace of my neighbor, and I never went to bed with the curse of my neighbor"; "I never in my life accepted presents, was never obstinate, and was liberal with my money"; "I never in my life looked into the face of a wicked man"; "I never was angry in my house, I never rejoiced when my neighbor was in misfortune, I never walked four ells without meditating in the Torah" (*Meg.* 27b). Many dietetic and hygienic rules are also given in the Talmud for longevity; the habits of eating slowly, due regulation of bodily functions, bathing and moderate exercise are recommended (*Ber.* 54b; *Keth.* 77b, 111a; *Hul.* 24b). Maimonides, after quoting many dietetic prescriptions from the Talmud, concludes as follows: "To every man who obeys these rules I guarantee that he will never be ill, but, on the contrary, will achieve old age and need no doctor" (Maimonides, *Hilchoth Deoth* 4:20).

Length of days is accounted a blessing; it is one of the rewards promised for upright living (*Ex.* 20:12; *Deut.* 4:40; *Prov.* 3:2, 16; *Job* 5:26). "The hoary head is a crown of glory, it is found in the way of righteousness" (*Prov.* 16:31). The prophet, picturing the happy future of Jerusalem, declares: "There shall yet old men and old women sit in the broad places of Jerusalem, every man with his staff in his hand for very age" (*Zech.* 8:4). The presence of the aged in a community is regarded as a sign of peace and God's favor. They are the depositories of wisdom and tradition (*Deut.* 32:7). "Reject not the tradition of the aged, which they heard from their fathers, for therefrom wilt thou receive instruction" declared Ben Sira (*Sirach* 8:9). Rehoboam, re-

jecting the advice of the aged, and following the unwise suggestions of the youth, brought about the dissolution of the united kingdom (*I Kings* 12:6-20). The rabbis, referring to the event, declared that the advice of the aged, even if it be to pull down the Temple, is to be preferred to the advice of the young, though it be to rebuild it (*Tos. A.Z.* 1:19). Because of their experience and wisdom the old became the "elders" in Israel. The Lawgiver declared: "Thou shalt rise up before the hoary head, and honor the face of the old man (*Lev.* 19:32). Although deference to old age is in many instances attributable to the wisdom and experience which are often the accompaniments of advancing years, yet the rabbis would rise even for heathen aged, or before an unlettered old man, for his longevity proved to them his merits (*Kid.* 32a).

The decline of life which brings about physical infirmities and suffering caused the Psalmist to cry out: "Cast me not off in the time of old age; when my strength faileth, forsake me not (*Ps.* 71:9, 18). Because of the weakening of the power of memory Elisha ben Abuyah said: "If one learns as an old man, it is like ink written on blotted paper" (*Aboth* 4:25).

In vivid, memorable and majestic metaphors, *Ecclesiastes* gives a superb description of the decrepitude of old age: "The sun grows dark, the light goes from moon and stars, and the clouds gather after the rain. The guards tremble in the house, when its upholders bow, the maids that grind are few, and they that look out lose their lustre. The doors to the street are shut, and the sound of the mill runs low, the twitter of the birds is faint, and the daughters of song are dull. There is fear of that which is high, and terrors are in the way. The hair is almost white, and he drags his limbs along and the spirit fails. So man goeth to his long home, and mourners pass along the street. The silver cord is snapped, the golden lamp is shattered, the pitcher breaks at the fountain, and the wheel breaks at the cistern. The dust returneth to earth as it was, and the spirit to God who gave it" (*Eccl.* 12).

Although the disabilities of age make no distinction of sex, yet the rabbis remark that "An old man in the house is a burden, an old woman a treasure" (*Arach.* 19a). She will even dance a jig to music (*M.K.* 9b).

Reverence and tender consideration for the old were inculcated by lawgiver and moralist, and in all ages the family or community took care of its weak and disabled dependents. Those aged who combined piety and learning with the hoary head were especially venerated. They were distinguished in synagogue and assembly, and received special consideration on all occasions.

OLD TESTAMENT (OT), the usual designation for the books of the Hebrew Bible, in contradistinction to the term "New Testament," which was first used by Tertullian and Origen, is based on *II Cor.* 3:14, and denotes the oldest documents of Christianity. Jews generally avoid using the expression "Old Testament," as it implies the recognition of a later divine message and of Jesus as the Messiah. "Testament" is the literal translation of the Greek *diatheke,* the Septuagint rendering for *berith* ("covenant"). *See also* BIBLE.

OLDEN, BALDER, author, b. Zwickau, Germany, 1882. He was the son of Hans Olden. From 1904 on Olden published various novels, short stories and travel impressions. He was in German East Africa when, in 1914, the first World War broke out, and fought under General Lettow-Vorbeck against the British. From 1916 to 1920 he was a prisoner in India. After returning to Germany, Olden published (1922) the story *Kilimandscharo,* exalting the feats of the German colonial army. But he aroused the fury of German nationalists when he published (1927) a novel criticizing German methods of administration in Africa. Although, during the following years, Olden turned from politics and published psychological novels, the hate which the nationalists harbored against him did not subside.

Olden was one of the first German refugees expatriated by the Nazi regime. He went to France, where he was active in the journalistic struggle against Hitler. After the outbreak of the second World War Olden was interned in a French concentration camp. At the end of 1940 he emigrated to Brazil.

OLDEN, HANS, playwright and actor, b. Frankfort, Germany, 1859; d. Wiesbaden, Germany, 1932. His original name was Oppenheim. A nephew of the political economist Heinrich Bernard Oppenheim, and a grandnephew of the painter Moritz Oppenheim, he studied chemistry at Stuttgart, but gave up his studies in order to become an actor. Olden excelled in many heroic roles, especially as a member of the Deutsches Theater, the first modern stage in Germany. In 1886 he began to utilize his stage experiences for writing comedies.

His first play, *Ilse,* met with approval. He then wrote many comedies, mostly in collaboration with Paul von Schoenthan and Ernst von Wolzogen. Olden was in favor with several German princes; in particular, Grand Duke Charles Alexander of Saxe-Weimar showed him distinction.

OLDEN, RUDOLPH, writer, b. Stettin, Germany, 1885; d. en route to the United States, 1940. He became a barrister of the Berlin High Court, served with the German forces in the first World War and subsequently became an editor of the *Berliner Tageblatt.* Under the auspices of the League for Human Rights he edited, together with Joseph Bornstein, *Der Justizmord an Jacubowski* (1928), dealing with a case believed to be a grave miscarriage of justice in the German republic. In 1932 Olden edited *Propheten in deutscher Krise,* containing twelve short biographies of swindlers and imposters who had achieved enormous influence in German finance, science and philosophy.

Olden became widely known as the author of brilliant psychological biographies; *Stresemann* (1929; English trans., 1930) gives the life story of the outstanding German Reichs Chancellor, Foreign Minister and Nobel Prize winner. As an émigré Olden wrote *Hitler* (1935; English transl., *Hitler the Pawn,* 1936) and *Hindenburg oder der Geist der preussischen Armee* (1935). In 1940 he published *Is Germany a Hopeless Case?*

Having left Germany in 1933 for England, he was a lecturer in modern German history at Oxford University. In 1940 he was invited to lecture at a university in the United States, but he and his wife were among the missing on the liner torpedoed (Sept., 1940) en route to Canada with many refugees aboard.

OLDENBURG, a state in northwestern Germany, with eighteen Jewish congregations with twelve synagogues and thirteen cemeteries, including the cities of

Oldenburg and Wilhelmshaven. These formed the United Synagogue (*Landesgemeinde*), headed by the chief rabbi (*Landesrabbiner*), who presided over the Legislative Assembly of Representatives (*Landesgemeinderat*) and the executive council (*Landesausschuss*). These governed by state authority, and the Jewish public school in Oldenburg city, founded by the last rabbi, ranked as a state school. The synagogues were destroyed by the Nazis in 1938, and the remaining Jews were expelled in 1939.

Jewish settlement in Oldenburg began in the 13th cent. The constitution adopted in the 19th cent. brought unity and advancement. In 1829 Nathan Marcus Adler (later chief rabbi of Great Britain) became chief rabbi, and Oldenburg thus was the first Jewish community having a rabbi who held a Ph.D. degree, and one of the first communities having modernized services and sermons in German. The constitution of the United Synagogue in Britain suggests the influence of the Oldenburg pattern. Samson Raphael Hirsch, succeeding Adler (1830-41), developed his idea of *Torah 'im derech 'eretz* (synthesis of Judaism and worldly culture) in Oldenburg. He wrote his *Nineteen Letters* and *Horeb,* which became the platform of "Neo-Orthodoxy." Stirred by Hirsch's ideas, Heinrich Graetz studied with him for three years in Oldenburg (1837-40), and a great similarity of thought developed in both men (both stressed the importance of the individual, of the critical intellect, of the esthetic in Judaism and Israel's spiritual mission), which can be traced in spite of their later controversies. The chief rabbis after Hirsch were: Wechsler, Glueck, Mannheimer, de Haas, and Leo Trepp (until December, 1938).

LEO TREPP.

OLGIN, MOISSAYE J. (Moshe Yosef Novominski), writer, lecturer and editor, b. province of Minsk, 1878; d. New York city, 1939. He studied law at the University of Kiev (1900-03). In 1901, however, he became identified with the revolutionary movement in Russia; thereafter he acted as propagandist among the students and was several times arrested. Olgin's first association with the Jewish labor movement was in 1903, when he joined the Bund, the Jewish Socialist party. After leaving the University in 1904, Olgin traveled throughout Russia secretly organizing Bund branches. In 1906 he joined the staff of the Bundist paper, *Der Veker,* in Vilna, and subsequently became literary editor. The years from 1907 to 1909 were spent in Germany, studying at the University of Heidelberg and elsewhere.

Returning to Russia in 1909, Olgin resumed his Bund activities. In 1912 he edited a three-volume Yiddish anthology, *Dos Yiddishe Vort,* and also issued a collection of his own writings, *Ven Dos Leben Ruft.* The latter book was suppressed by the Czarist regime; it was finally re-issued, in Warsaw, in 1918, as *Ven Kaiten Klingen.* The outbreak of the first World War in 1914 caught Olgin in Germany. Unable to return to Russia, he came to the United States, joining the staff of the *Forward* as writer on literary, sociological and political matters. He also entered Columbia University, from which he received his Ph.D. degree in 1918. For the *Zukunft* and other literary journals, Olgin continued his studies in literature; in 1919 a study of poets and poetry, *In der Velt fun Gesangen,* appeared.

A visit to Russia in 1920 brought Olgin to the advocacy of a break from right-wing Socialism for the Jewish labor movement. When the split in the Socialist party occurred in 1921, Olgin went along with the radicals and joined the Workers' Party, later the Communist Party. He was one of the founders of the *Freiheit,* the Yiddish Communist daily (1922), and remained its editor until his death. He was also editor of *Der Hammer,* a Communist literary periodical. From 1932 on he was American correspondent of *Pravda* (Moscow).

Olgin translated into Yiddish from Russian, Polish, German, Hebrew and English. *Fun Mein Togbuch* (1926) was written originally in Yiddish and translated into several other languages. Among his works in English were *The Soul of the Russian Revolution* (1917); *A Guide to Russian Literature,* in two volumes (1920); *Gorky: Writer and Revolutionist* (1932); *Why Communism* (1934; translated into many languages); *Trotskyism* (1935; rev. 1937).

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 1 (1928), cols. 92-97.

OLINSKY, IVAN GREGOREWITCH, painter, b. Elizavetgrad, Russia, 1878. He was brought to the United States in 1891, living thereafter mostly in New York. From 1893 to 1898 Olinsky studied at the National Academy of Design in New York; from 1908 to 1911, in Europe. Olinsky was assistant to John La Farge from 1900 to 1908; after returning from Europe, he was made a member of the faculty of the National Academy of Design (1912). Later he also joined the faculty of the Art Students' League, and in 1942 he still held both posts.

Olinsky's work won wide recognition, among his awards being the Thomas B. Clarke prize at the National Academy of Design (1914), the Samuel T. Shaw prize of $1,000 at the Salmagundi Club (1919), the Carnegie Prize at the National Academy of Design (1929), the Maida Gregg Memorial prize of $1,000 at the National Arts Club (1931), the gold medal of honor, Allied Artists of America (1935), the Isidor prize at the Salmagundi Club (1938 and 1939), the Adolph and Clara Obrig prize at the National Academy of Design (1940) and the drawing prize of the Lotos Club (1941). He was made an associate of the National Academy in 1914 and a National Academician in 1919. His studies and portraits are represented in municipal museums and private collections throughout the country, among them the museums of Detroit, Dallas, Texas, Youngstown, Ohio, Omaha, Neb., Dayton, Ohio and Scranton, Pa.

OLIPHANT, LAURENCE, non-Jewish Zionist and author, b. Cape Town, South Africa, 1829; d. Twickenham, England, 1888. The descendant of a famous old Scotch family, he had been in the diplomatic service for many years, a member of Parliament and a successful novelist, before he conceived the idea —partly under the influence of religious mysticism— of a Jewish settlement in Palestine. In 1879 he visited Palestine where, after thorough investigation, he chose a region in Transjordania, at the upper end of the Dead Sea (the ancient land of Gilead), for a project intended as "the opening to a persecuted race of a refuge from their oppression, the help to civilization and human progress, to good government and justice and peace." However, his scheme, praised by the London *Jewish Chronicle* as "the most feasible plan that has yet been put before the world" and favored by Lord Beaconsfield and Lord Salisbury, was rejected by the Sultan, who opposed mass settlement of Jews in Palestine. This notwithstanding the fact that Oli-

phant, in his interview with the monarch, had pointed to the possibilities of exploitation of the vast chemical and mineral resources of the Dead Sea.

Although Oliphant had the support of such Jewish intellectual leaders as Perez Smolenskin and Samuel Mohilever, West European Jews were not attracted to his plan, despite the rapid worsening of the situation of the East European Jews. The Christians also failed to grasp the importance of his idea, as Oliphant complained in his book, *The Land of Gilead* (1880):

"The redemption of the Jews to Palestine has been so often urged upon sentimental or scriptural grounds that now, when it may possibly become the practical and commonsense solution of a great future difficulty, a prejudice against it exists in the minds of those who regarded it as a theological chimera."

Retaining his interest in Jewry, Oliphant was selected to administer the Mansion House Fund for the relief of the persecuted Jews of Russia (1882). In this connection he traveled in Eastern Europe, where he became affiliated with the Chovevei Zion movement, particularly its Roumanian branch, and concluded that the only real solution of the Jewish problem lay in the creation of a Jewish state in Palestine.

He renewed efforts to obtain from the Sublime Porte permission for colonization of Palestine by Jews, but was again unsuccessful. Yet his endeavors were valuable insofar as they gave impetus to the Chovevei Zion and the first settlers, the Biluim. During his final years, living with his wife in the German colony near Haifa, Oliphant became an intimate friend of the Hebrew poet Naphtali Herz Imber, and gave assistance to the colonists, whose endeavors he praised in his book, *Haifa, or Life in Modern Palestine* (1887). In it, however, Oliphant turned against Halukkah, the "system of religious mendicancy," and advocated the conversion of the Halukkah Jews into farmers. Recognizing that some of the new arrivals sought to become landed gentry rather than agricultural workers, and anticipating the ideas of Aaron David Gordon and Ber Borochov, he declared that the noblest phase of Jewish renaissance would be the retraining of Jews to manual labor, and into a cooperative way of life. ALFRED WERNER.

Lit.: Oliphant, Margaret, *Memoir of the Life of Laurence Oliphant* (1891); Owen, Rosamond Dale (Mrs. Laurence Oliphant), *My Perilous Life in Palestine* (1929); Sokolow, Nahum, *History of Zionism* (2 vols., 1919); Tannen, Nathan, "A Pioneer Non-Jewish Zionist," *The New Palestine,* Feb. 7, 1941.

OLIVES, MOUNT OF (*har hazethim*), a ridge situated to the east of Jerusalem and separated from it by the Kidron Valley. It is divided into a series of summits by means of gentle depressions and one rather deep cleft; one of these peaks is more than 2,700 feet high. The Mount of Olives is mentioned only a few times in the Bible. David ascended it on the occasion of his flight from his son Absalom, and there was a sacred place on its summit (*II Sam.* 15:30-32). *I Kings* 11:7 states that Solomon built altars to foreign gods "in the mount that is before Jerusalem"; this is the southern end of the ridge, called Jebel Batn el-Hawa by the Arabs. The latter is called *har hamashhith* (mount of corruption); this name the Talmud (*Sab.* 56b) explains as derived from the idolatrous shrines set up there. Others hold that the name *har hamishhah,* which occurs also in the Mishnah (*R.H.* 2:4), was merely another designation indicating the abundance of olive-trees there (cf. the rendering in the Targum, *tur mishha*). The mount is referred to, but not mentioned by name, in *Ezek.* 11:23, as the scene of a prophetical theophany. In *Zech.* 14:4 God is pictured as making the Mount of Olives His vantage-point in His struggle against the nations which threaten the existence of Jerusalem. Finally, in *Neh.* 8:15 it is stated that the people went forth to the Mount of Olives to cut branches in order to make booths for the celebration of the Feast of Tabernacles. During the war against Rome in 70 C.E. the tenth legion of Titus pitched its tents on the Mount of Olives. In Mishnaic times torches were lighted on the Mount of Olives in order to announce the New Moon.

The Mount of Olives is mentioned frequently in the New Testament likewise, thus *Matt.* 21:1; 24:3; *Mark* 14:26; *Luke* 19:37; 21:37. At the present day part of its southwestern slopes is covered by the burial field outside of the eastern wall of Jerusalem. The crest of the hill to the north, improperly called Scopus, is the site of the buildings of The Hebrew University.

OLIVEYRA, SOLOMON DE, rabbi and author, d. Amsterdam, 1708. As Haham of the Sephardic Jewish community in Amsterdam, he taught at the Keter Torah of that city and was, after 1698, head of the Sephardic rabbinical college. He wrote in Portuguese and Hebrew. Among his works in Portuguese were translations from the Arabic and Hebrew, and sermons. In Hebrew Oliveyra wrote poetry, a rhyming dictionary, text books, lexicons and essays. He also compiled several Hebrew-Portuguese-Aramaic dictionaries.

OLLENDORFF (OLLENDORF), HENRI, philologist, b. Rawicz, Posen, 1802; d. Paris, 1865. As author of the widely known *Ollendorff Method* for self-instruction in foreign languages he gained international fame. His system is founded on the principle of learning foreign languages by means of questions and answers that occur in daily life. Ollendorff's book, *Méthode appliqueé a l' allemand,* was issued in French, English, modern Greek and several other languages, among them Gujarati, spoken in British India.

Lit.: Munk, Salomon, *Esquisse Biographique, Le Professeur Ollendorff,* Paris, 1865.

OLLENDORFF, PAULA, communal worker, b. Kostenblut, near Breslau, Germany, 1860; d. Jerusalem, 1938. Prior to her marriage to Isidor Ollendorff, a Breslau lawyer (d. 1911), she was a teacher of languages, and had visited England and several Continental countries in that capacity. Later Mrs. Ollendorff became a leader of the Breslau community in social work and liberal activities. In recognition of her efforts in the field of child care and the training of Jewish girls the Paula Ollendorff Haushaltungsschule, a school for household workers, was named in her honor, on her seventieth birthday, as was a library. A Paula Ollendorff Prize for ability in Jewish social work was also established.

Among her activities in Breslau was the founding of a home for Jewish infants. Mrs. Ollendorff was president of the Jewish Women's Federation of Germany and vice-president of the International Jewish Women's Federation. As a lecturer, she traveled throughout Germany and visited the United States three times, in 1927, 1932 and 1936. On her seventy-fifth birthday, the Jewish community of Breslau made Mrs. Ollendorff an elder. After the end of the first World War, she was an alderman in Breslau.

OLMO, JACOB DANIEL ben Abraham, rabbi, b. Ferrara, Italy, about 1690; d. Ferrara, 1757. He was a pupil of Isaac Lampronti, and became rabbi of his native city. Olmo was the author of many of the divisions included in Lampronti's *Pahad Yitzhak*. His first rabbinical commentary was published in Venice in 1715 under the title of *Reshith Bikkure Katzir*. His collection of decisions, *Pi Tzaddik*, remained unpublished. Elegies, hymns and Piyutim were also composed by him; some of them were published in the Italian *Mahzor*. In imitation of Zacuto's *Tofteh Aruch* Olmo wrote *Eden Aruch*, a Hebrew poem of 277 hendecasyllabic sextains (stanzas containing six lines, each of them of eleven syllables). In it he describes the last moments of a righteous man and the delights of Paradise, according to the conception of the Midrash and the Cabala. This poem, published together with Zacuto's (Venice, 1744), was translated into German in 1777 and into Italian by Cesare Foa in 1905.

Lit.: Delitzsch, *Zur Geschichte der jüdischen Poesie*, 73, 160; Wininger, S., *Grosse Jüdische National-Biographie*, vol. 4, p. 561; Coen, *Saggio di eloquenza sacra* (1828).

OLOM HAZEH, OLOM HABO, *see* OLAM HAZEH AND OLAM HABA.

OLSCHKI, LEO S., editor and antiquarian, b. Johannisburg, East Prussia, Germany, 1861; d. Geneva, Switzerland, 1940. In 1883 he emigrated to Verona, Italy; and in 1897 to Florence. Olschki edited *Il giornale dantesco*, formerly *L'Alighieri*, a periodical founded by him in 1889, and from 1899 on published an illustrated monthly magazine, *La Bibliofilia*. He wrote numerous works on bibliographical subjects and on the history of art. His monumental work was *Inventari dei manoscritti delle biblioteche d'Italia*, which reached seventy-one volumes. Together with his son, Leonardo Olschki, he founded (1917) the Archivum Romanicum in Geneva, directed by G. Bertoni.

Olschki directed several archivistic and bibliographical publications, such as the *Rivista d'arte* and the *Biblioteca di bibliografia*. He was granted honorary Italian citizenship by King Victor Emmanuel in 1925 for his contributions to Italian culture, but he left Italy for Switzerland when, owing to the racist legislation, his citizenship was revoked.

OLSCHKI, LEONARDO, philologist, b. Verona, Italy, 1885. He was the son of Leo S. Olschki. He studied at the Universities of Florence, Rome, Munich and Heidelberg (Ph.D., 1908), and was made professor at the University of Heidelberg (1908-32). From 1932 to 1938 he was an exchange and visiting professor at the University of Rome, but left his position owing to Italy's introduction of anti-Jewish legislation, and went to the United States in 1939. In 1939 and 1940 he was a lecturer at Johns Hopkins University, Baltimore.

Olschki wrote numerous books and articles, chiefly on old French and Italian science, literature and art. His German writings include: *G. B. Guarinis Pastor Fido in Deutschland* (Leipzig, 1908); *Paris nach den altfranzösischen nationalen Epen: Topographie, Stadtgeschichte und lokale Sagen* (Heidelberg, 1913); *Die Literatur der Technik und der angewandten Wissenschaften vom Mittelalter bis zur Renaissance* (Heidelberg, 1919); *Bildung und Wissenschaft im Zeitalter der Renaissance in Italien* (Leipzig and Florence, 1922); *Galilei und seine Zeit* (Halle, 1927); *Die romanischen Literaturen des Mittelalters* (1928), a volume of the series *Handbuch der Literaturwissenschaft*). In Italian he wrote *Giordano Bruno* (1927); *La Poesia italiana del cinquecento* (1933); *Struttura spirituale e linguistica del mondo neolatino* (1935); and *Storia letteraria delle scoperte geografiche* (1937). Olschki edited Dante Alighieri's *La divina commedia* (with comments and glossary, Heidelberg, 1918).

OLTARSH, DAVID MOSES, architect and engineer, b. New York city, 1883; d. New York city, 1940. He received his degree in civil engineering from New York University in 1906, after having graduated from City College in 1902. Joining the construction company founded by his father, he retained the connection until 1914, when he formed his own company. Among the important buildings for which Oltarsh was either engineer or architect, or both, were the Hotel Taft, the Russeks Department Store, the Bar Association Building, the B'nai Jeshurun Community House, and the Grand Street Boys Club House in New York city, the Ochs Memorial Institute in Chattanooga, Tenn., and a theatre in Santiago, Chile.

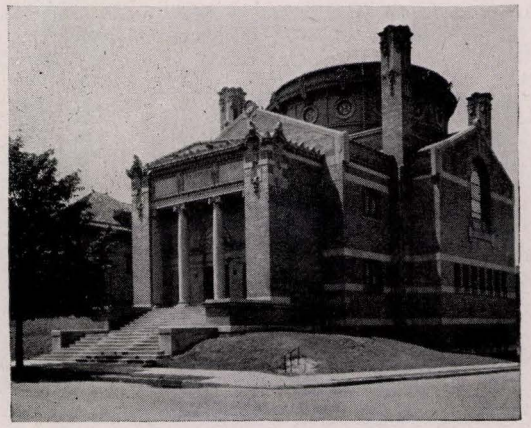
Oltarsh, who held the rank of lieutenant-colonel in the United States Army at the time of his death, served in France during the first World War with the 28th Engineers; after his return to the United States, he was commanding officer of the 438th and 401st Engineers, and division engineer of the 61st cavalry division. Oltarsh was also, from 1925 until his death, a member of the engineering examining board of the United States Army.

OMAHA, a city in Nebraska, having a population of 223,844, including approximately 11,500 Jews (1937). Aaron Cahn, his wife, and Meyer Hellman arrived in a two-horse wagon in 1856. Almost immediately they returned to their home in Ohio, where they collected a store of materials and floated them down the river to Omaha. Here, on the bank of the muddy Missouri, they established a small business.

For six years the Cahns and the Hellmans were the only Jews in the city, although other Jewish families had settled in nearby Nebraska communities. Cahn and Hellman were considered among the more solid citizenry of the frontier town, and Cahn represented Douglas County in the eighth territorial legislature.

During the early 1860's several Jewish families of German, Austrian, or Bohemian origin came to Omaha. Among them were the Rosewaters, who had originally settled in Cleveland. Twenty years later, the persecutions of Russian Jewry caused an influx of East European Jews into the Omaha community. The renewal of these persecutions at the beginning of the 20th cent. created congestion in the eastern cities of the United States, and between 1901 and 1913 2,035 Russian Jews were sent to Nebraska, the bulk of whom settled in Omaha.

In 1868 the first known Jewish religious service took place in the old Masonic Temple, with the Orthodox ritual being used. By 1870 members of this group had formally organized a B'nai Israel Society under the presidency of J. A. Hart, an English Jew. On September 16, 1871, the first Sunday school class was confirmed by Rabbi Alexander Rosenspitz. These were the beginnings of what was in 1942 Temple Israel. Regular religious services began in 1872, and in 1875 the congregation was reorganized by Rabbi David Stern of Virginia. Convinced that the community was still too small to support a rabbi, Stern resigned after eight months. Until 1883, when H. Saft was chosen



Temple Israel of Omaha

Temple B'nai Israel Synagogue

spiritual leader of the community, there was no rabbi. After a year Saft was succeeded by E. H. Harfield, who served the congregation when the first temple, a frame structure, was erected in 1884.

The first Hebrew Union College graduate in Omaha was Rabbi William Rosenau, in 1889. During his term as rabbi Temple Israel joined the Union of American Hebrew congregations. In 1892 Rabbi Leo Franklin succeeded Rosenau, who had accepted a pulpit in Baltimore. Later Franklin was called to Detroit, and his place was taken by Rabbi Abram Simon.

In 1904 Rabbi Frederick Cohn succeeded Simon. Until his death in March, 1940, Cohn was closely identified with Omaha religious and cultural life. In 1933 he was named rabbi emeritus, and Rabbi David H. Wice, called to Newark, N. J., in 1941, took over the leadership of the congregation. Arthur J. Lelyveld was rabbi in 1942.

The first Orthodox congregation was organized in 1882 by a group of Hungarian Jews meeting in the Unitarian church. Another Orthodox congregation, the Beth Hamedrosh Hagodol, was started in 1884 by Lithuanian Jews. The Russian congregation, B'nai Israel, was founded in 1886, and the B'nai Jacob Anshe Sholom was organized in 1889. The Beth Hamedrosh Adass Yeshuren congregation was founded in 1920. In 1942 South Omaha had its own congregation, the Congregation of Israel.

Rabbi Henry Grodinsky, a native of Minsk, was the first Orthodox rabbi in the city, and Jacob Gordon was the first Hebrew teacher. One of the most prominent of Orthodox rabbis to serve the community was Rabbi Esau Fleischman, who was an early communal leader as well. In 1942 the Orthodox congregations were affiliated with the United Orthodox congregations under the leadership of Rabbi Isaiah Rackovsky.

Beth Hamedrosh Hagodol

The Conservative congregation, after several preliminary attempts, was organized in 1929 with Rabbi Abraham Bengis as the first spiritual leader. The following year he was succeeded by David A. Goldstein, who for over a decade occupied the pulpit of the Conservative synagogue, Beth-El. Until the fall of 1940 this group worshipped at the Jewish Community Center. Their synagogue was finished in time for the high holiday services of 1940, and was formally dedicated during Hanukah of 1941.

Organized philanthropy began in the years 1897 and 1898 with the organization of the Young Men's Hebrew Benevolent Society. In 1903 the work done by this group was taken over by the Associated Jewish Charities. During the next few years, other Jewish organizations were established for philanthropic purposes, and in 1916, to avoid duplication of effort, a Jewish Welfare Federation was organized. In 1930 another amalgamation took place and the Jewish philanthropies began annually to conduct campaigns for all local, national, and overseas agencies. The Welfare Federation still existed, however, as an agency for the care of local needs. Henry Monsky was president of the Jewish Welfare Federation in 1942.

The focal point of all community activities was the Jewish Community Center, opened in 1926. The beginnings of this institution go back to 1907, when a Jewish People's Institute was founded. Among the Jewish national organizations in Omaha were the B'nai B'rith (a lodge was founded in 1884) and the Workmen's Circle. The first Zionist organization was the Chovevei Zion, organized in 1895. In 1942 all phases of Zionist opinion were represented in the Omaha Zionist Council.

The Jewish Press, an English-language weekly with David Blacker as publisher, was in its twentieth year of publication in 1942, succeeding an earlier venture, *The Jewish Bulletin.* The first Jewish publication was the short-lived *Western Jewish Journal,* which was issued for three months in 1909. The first editor of *The Jewish Press* was Morris E. Jacobs.

Harry Lapidus was an early communal leader for whom the A. Z. A. forest was planted in Palestine. Dr. Philip Sher, Harry A. Wolf and Morris Levy were prominent in philanthropic activities. Sam Beber organized the Junior B'nai B'rith in 1924. William L. Holzman was president of the Jewish Welfare Federation for ten years.

Among the Jews who occupied political office were Edward Rosewater, founder and editor of the defunct *Omaha Bee*. Rosewater was a member of the Nebraska legislature, and represented the United States at the International Postal Congress. Harry Zimman was a member of the city council from 1900 to 1909, and was acting mayor of Omaha between 1903 and 1905. Albert Cahn, son of the early settler, Aaron Cahn, was a member of the city council in 1894 to 1895, and Sol Prince served on the council in 1892, 1895 and 1896. Harry Trustin was serving a third term as a member of the city commission in 1942. Sam Klaver was a member of the Nebraska Unicameral House. Andrew Rosewater, in 1860, planned the Omaha water works and was one of the principal engineers of the Union Pacific Railroad. Harry Lapidus was a member of the Iowa-Nebraska boundary commission. LEONARD NATHAN.

OMER, 1. a dry measure for grain (*Ex.* 16:16). According to *Ex.* 16:36, the omer was a tenth part of an ephah; for this reason, the omer was frequently called simply "tenth part," or "tenth" (*'issaron, Lev.* 14:10; 23:13, 17; *Num.* 28:13), or "tenth part of an ephah" (*'asirith ha'efah, Num.* 28:5). According to Benzinger the omer consisted of about 3.6 litres. Benzinger believes, further, that the omer was not originally a part of the Hebrew system of weights, but that it was added to it only at a later period, since it did not fit in with the sexagesimal system of measures which was derived perhaps from Babylonia and then came into general use, but must have belonged rather to the decimal system. The omer was of great importance in the ancient Hebrew religious cult as a measure for the meal-offering which formed a part of the sacrifices; cf. the passages cited above, and especially *Num.* 28.

2. a sheaf taken from the first-fruits and offered in the Temple in the period between the festival of Pesach and the festival of Shabuoth; it was forbidden to eat of the new grain before this omer, or sheaf of the first-fruits, had been offered up (*Lev.* 23:9-14). It is the consecration gift, the thank-offering given to God in return for the harvest. The seven weeks which elapse between Passover and the Feast of Weeks are still called the "days of the Omer" (the days of the counting of the Omer; cf. the term "Sefirah period").

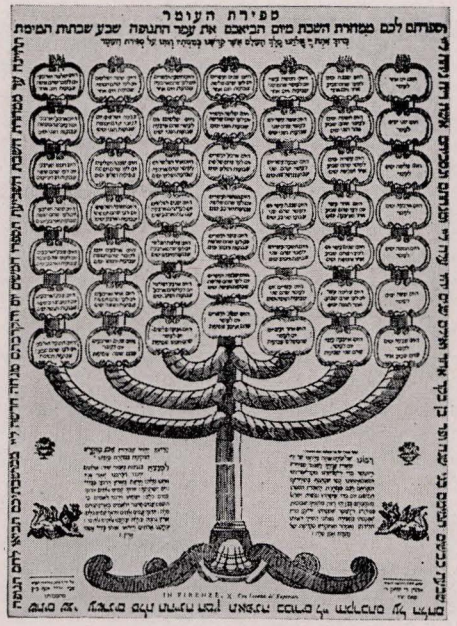
OMNAM KEN ("Indeed, it is true"), a Piyut for the evening of the Day of Atonement (Yom Kippur) in the German and Polish prayer-book, in which the sinfulness of man is described and God's forgiveness is requested. The Omnam Ken is arranged alphabetically according to lines and with several rhymes. Each strophe ends with the refrain *salahti* ("I have pardoned"), taken from *Num.* 14:20. The Piyut's rhythmic melody has made it extremely popular. Translations of it are to be found in Sachs' *Mahzor* and in Hellers' *Echte hebräische Melodien.* Zangwill made a beautiful English translation of this poem, retaining



Omer table in candelabrum form

with remarkable skill even the alphabetical acrostic.

OMNIPOTENCE OF GOD, OMNIPRESENCE OF GOD, OMNISCIENCE OF GOD, *see* GOD.

OMRI, Israelite king of the early 9th cent. B.C.E., founder of an important dynasty which bears his name. In 886 B.C.E., the 27th year of Asa, the Judean ruler, Elah of Israel was assassinated by Zimri (*I Kings* 16:9-12), who in turn proclaimed himself king. The people, however, probably influenced by the prophetic party under the leadership of Jehu ben Hanani (*I Kings* 16:1 et seq.), supported Omri, another of Elah's generals, who at the time was engaged in wresting the town of Gibbethon from the Philistines. Zimri was overcome and Omri made king; but the anti-prophetic party supported Tibni, another contender who was finally eliminated after four years of civil war.

When complete domestic peace was established, Omri found himself the ruler of a weakened nation, beset by strong neighbors, particularly Damascus (Aram). In consequence, certain border towns had to be ceded to the Arameans who likewise reserved to themselves economic privileges and even extraterritorial rights in Samaria, Omri's new capital. The change of the capital from Tirzah to the beautiful (*Isa.* 28:1) and strategically formidable site of Samaria was a clever move on the part of Omri and had also commercial implications. It was an attempt to divert to Phoenicia the South Arabian traffic, which came from the gulf of Akabah and ordinarily took the so-called "Highway of the King" to Damascus. Omri had established friendly relations with the western traders and he cemented these by the marriage of his son Ahab to the Phoenician Jezebel. Omri, further to strengthen his policy of friendliness, permitted Baal worship in the country; and this act drew harsh condemnation from the Deuteronomic historians of *Kings* (16:25-26).

A time of prosperity must have returned to the Kingdom of Israel. Omri became strong enough to subdue the Moabites. The inscription on the Moabite stone mentions the military prowess of Omri, which is not found in the Bible, and which testifies to Omri's political stature.

This, and the fact that in Assyrian sources Israel is referred to as *Mat Bit Humriya* (the land of the house of Omri), has led modern scholars to believe that the significance of Omri was far greater than the few verses of the Bible would intimate. So strong was the identification of the land of Israel with the personality of Omri that many years after his death the Assyrian Shalmaneser II calls Jehu, the very destroyer of Omri's dynasty, *Jaua abal Humri* (Jehu the *son* of Omri). *Micah,* too (6:16), refers to the habits of the times as the "statutes of Omri." Omri's orientation toward the West, and his friendly relations with the surrounding nations, laid the foundation for the economic expansion of the kingdom which reached its climax under Ahab. Likewise it opened the country to foreign influence, a fact which became of paramount importance in the subsequent history of the people.

According to the Bible, the murder of Elah, the defeat of Zimri and the elevation of Omri took place in the 27th year of Asa (*I Kings* 16:15) but in verse 23 his kingship is counted from the 31st year of Asa, and the length of his reign is given as twelve years. Yet in verse 29 he is said to have died in the 38th year of Asa. These apparent contradictions are explained by Rashi, Kimhi and other medieval commentators as well as by most modern scholars in such a way that, inasmuch as Omri was supreme only after Tibni's defeat, i.e. four years after his accession, verse 23 reckons his full kingship from that time on, but compiles the *total* number of years as twelve, i.e. from the death of Zimri, so as to avoid the appearance of an interregnum, and to leave the chronological scheme intact. On the other hand, the Septuagint counts Omri's years from 882, the end of the civil war, and therefore brings his reign down to the second year of Jehoshaphat. It has 16:29 read accordingly, thus differing decisively from the Masoretic account. Noting this confusion of the chronological order, some scholars (such as Whitehouse, following Schrader) think that Omri ruled much longer (see also the "forty years" mentioned in the Mesha stone and observe that according to Biblical figures Omri and Ahab ruled only 22 years altogether). They suggest that he may have ruled for as many as 25 years (from about 900 to 875), and declare this to be more in consonance with the deep impression which Omri made upon his contemporaries and the generations following him.

ONAAH, *see* Overreaching.

ONDERWIJZER, ABRAHAM (ALI) SAMSON, rabbi, b. Muiden, near Amsterdam, 1862; d. Amsterdam, 1934. He was appointed rabbi of the Ashkenazic synagogue of Amsterdam in 1888, and in 1917 became chief rabbi there. He wrote a Dutch translation of the Pentateuch (together with an explanatory text on Rashi's commentary, Amsterdam, 1895). In 1895 he founded and became honorary president of the Bezalel Association, a Jewish labor union for the improvement of the religious and economic condition of the Jewish workmen of Amsterdam, who were for the most part diamond workers. He was made an officer of the Order of Orange-Nassau.

ONEG SHABBAT. According to the Talmud (*Sab.* 117b), every Jew should eat three meals on the Sabbath (*Shalosh Seudoth*). The third meal (*Seudah Shelishith*) developed into a communal institution which became the occasion for singing and instruction.

The Oneg Shabbat (literally, "joy of Sabbath") is a modern adaptation of the traditional *Seudah Shelishith.* Chaim Nachman Bialik, the modern Hebrew poet, was responsible for the modern form of the Oneg Shabbat. Soon after his arrival in Tel Aviv, in 1923, he began the practice of devoting Sabbath afternoons to a leisurely and genial get-together, at which lectures were delivered by himself and others on subjects vital to the growing Palestinian community. In 1929, an American, Samuel Blum of Philadelphia, donated funds for the establishment of a building known as Ohel Shem so that Bialik could conduct the Oneg Shabbat for a larger number of people.

The program consisted of some musical selections by a choral group, a lecture and an impressive Habdalah service for the close of the Sabbath. Late in the 1930's, the Oneg Shabbat was introduced by many institutions and organizations into American Jewish life. The Hadassah made it a regular feature in certain cities. Synagogues have introduced it, retaining some of the features of the original *Seudah Shelishith,* and serving refreshments.

Ira Eisenstein.

ONEN, *see* Mourning and Mourning Customs.

ONIAS, name of several high priests during the time of the Second Temple. The name is probably the same as the Talmudic Honi, a shorter form of Hananiah.

Onias I was the son of Jaddua and probably a contemporary of the Spartan king Areus (309-265 B.C.E.; *I Macc.* 12:7, 8, 20). The correspondence reported there between Jonathan and Areus speaks of a previous letter of Onias. However, the historicity of these reports has not been established.

Onias II was high priest in the time of Ptolemy III Euergetes (about 230 B.C.E.). He refused to pay tribute to the king, who threatened Judea with a heavy punishment. These events led to the rise of the Tobiads to power.

Onias III, a grandson of Onias II, was high priest under Seleucus IV (about 180 B.C.E.). He was denounced by the Tobiads to the king, who sent Heliodorus to inspect the treasury of the Temple. When Heliodorus failed in his mission, Onias was summoned to Antioch to render an account. He was deposed by Antiochus IV Epiphanes in 174, and settled at Daphne,

near Antioch, where he was murdered a few years later at the instigation of Menelaus.

Onias IV, son of Onias III, fled to Egypt, whither many priests and pious Jews had migrated because of the attempted suppression of Judaism by Antiochus IV. He settled near Heliopolis and built a Temple, by permission of Ptolemy IV, and became its first high priest. His descendants were high officers in the Egyptian army; Aristobulus, the educator of a later king and perhaps the same as the noted Alexandrian philosopher, seems to have been a relation of Onias.

Lit.: The Jewish histories; Büchler, *Die Tobiaden und Oniaden* (1899).

ONIAS, TEMPLE OF, shrine built by the fugitive high priest, Onias IV, in Egypt after he had fled from the persecutions of Antiochus Epiphanes in Palestine. The Temple was situated in the district of Heliopolis, at a place called Leontopolis, since it was the site of an ancient shrine of the Egyptian goddess Pasht. According to Josephus, Onias based his claim to build a Temple outside of Jerusalem on the prophecy in *Isa.* 19:19 that there would be an altar to the Lord in Egypt. The external appearance of the Temple of Onias was not the same as that in Jerusalem; its form was that of a tower and its dimensions were less. On the other hand, all the appointments of the shrine, such as the altar of burnt-offering and the vessels, were the same, except that a great hanging lamp replaced the Menorah. A large tract of ground near the Temple was given to it by the king for the use and support of the priests.

The Temple of Onias maintained essentially the same worship and the same sort of sacrifices as the Temple at Jerusalem. Naturally the Palestinians regarded this shrine as unlawful, and so apparently did some of the Egyptian Jews. Nevertheless, the teachers of the Law paid attention to the practices of the Onias Temple and this gave it a measure of recognition. The Temple continued in existence until about 73 C.E. when Vespasian used a revolt of the Egyptian Jews as an excuse for closing it and stripping it of its treasures. In 1905 Flinders Petrie excavated the Tell el Yehudiyeh near Cairo, identifying it with the site of the Temple of Onias.

ONKELOS, reputed translator of the Targum to the Pentateuch, which is accordingly called Targum Onkelos. The confusion seems to have arisen out of a mistaken identification of an Onkelos who was a Tanna and lived in the 1st cent. C.E. and Aquila, who translated the Bible into Greek in the 2nd cent. Hence stories are told in the Babylonian Talmud about a translation made by Onkelos, of his being a proselyte of the imperial family, and of his adventures, which are clearly to be referred either to Aquila or such prominent proselytes as Flavius Clemens. The historical Onkelos is represented in the Tosefta and other places as being extremely scrupulous in religious matters and a close friend of the patriarch. Whether he, too, was a proselyte, is uncertain.

Lit.: Ginzberg, L., in *Jewish Encyclopedia,* vol. 9, p. 405; Friedmann, M., *Onkelos and Akylos* (1896); Anger, *De Onkelo chaldaico* (1845).

ÓNODI, ADOLF, neurologist and laryngologist, b. Miskolc, Hungary, 1857; d. Budapest, 1919. He received the degree of M.D. from the University of Budapest where he became professor (1910) for the then established chair and director of the nose and throat clinic. Ónodi was regarded an international authority on laryngology. In addition to several volumes published in Hungarian, he contributed many articles in that field to medical journals and dictionaries all over Europe.

His standard work on the sinuses of the skull (1893) was translated into English, German and Italian. In the earlier phase of his work Ónodi had described the functioning of the sympathetic nervous system, and of the spinal cord; as well as the morphological anomalies of the general nervous system. His research on the larynx also embraced the neurology of that organ.

His one hundred plates of neurology were employed by the medical schools of several countries and his collection of microscopic slides was acquired after his death by the London laryngological clinic, where his bust was also erected.

ONOJCHI, S. J. (pseudonym), *see* ARONSOHN, ZALMAN ISAAC.

ONTARIO, one of the nine provinces of Canada, bordering the shores of Lake Superior, Lake Huron, Lake Erie and Lake Ontario and adjoining the Canadian provinces of Quebec and Manitoba, and the states of New York, Ohio, Michigan and Wisconsin.

Ontario is the second largest province in Canada, with an area of 363,282 square miles of land, and the most populous, having a population of 3,756,632 in 1941. Until the Act of Confederation in 1867 it was known as Upper Canada, in contrast to Quebec, which was known as Lower Canada.

There is no doubt that Jews traded in and visited Ontario from the earliest days of British occupation of the territory, and the Franks and Solomon families maintained fur-trading posts on the island of Michilmackinac in the northwestern corner of Lake Huron as early as 1763. However, the first authentic mention of a permanent Jewish resident in what is now the province of Ontario was in 1833, when Arthur Wellington Hart, an insurance agent, settled in Toronto. He was followed by L. Joseph, in 1834. In 1835 two brothers, Goodman and Samuel Benjamin, opened a wholesale dry-goods business in Toronto. In 1838 Henry A. Joseph opened a fur business in the same city, and Judah G. Joseph established himself as an optician and jeweler. Gershon Joseph was the first Jew to register as a student in the University of Toronto (1838).

The first Jewish congregation to be established in Ontario was that of Holy Blossom in 1856 in Toronto, although the first permanent synagogue was not opened until 1876, and the congregation was not incorporated until 1894.

In 1857 Noah Freedman arrived in Lancaster, Ontario, from Poland, and was followed by the Jacobs, Kellert, Levinson and Cohen families. In the same year the Levy brothers were among the first Jews to settle in Hamilton, and Moses Bilsky founded the Jewish community in Ottawa.

In 1858 the brothers Henry Jacob Michaels and Michael Michaels opened the first Canadian cigar factory in the town of Dundas, Ontario, and in 1877 Jewish merchants first settled in North Bay and Chapleau, in Northern Ontario.

Population. The Jewish population of Ontario rose from 103 in 1851 to 614 in 1861, remained almost stationary at 636 in 1871 and increased again to 1,245 in 1881. The Jewish population of Ontario doubled in the next decade, reaching 2,540 in 1891, and redoubled to 5,337 in 1901. The greatest increase in Jewish population came in the first decade of the 20th cent., when it jumped to 27,015 in 1911 as a result of the wave of immigration which followed the Russian pogroms. By 1921 the Jewish population of Ontario was 47,798, and reached 62,383 in 1931.

Jews formed less than one out of every 2,500 persons of all origins in Ontario in 1871. In 1891 the Jewish population formed one out of every 800 persons of all origins in Ontario. By 1911 Jews formed 1% of Ontario's population, and in 1931 Jews constituted 1.81% of the population of the province.

The Jewish population of Ontario in 1931 formed the third largest ethnic group of non-Anglo-Saxon origin in the province, being exceeded by those of French origin with 8.73% and those of German with 5.09%.

Toronto, the provincial capital of Ontario, is both the second largest city and the second largest Jewish community in Canada. Of the total Jewish population of Ontario 46,751 lived in Greater Toronto in 1931, forming 74.9% of the Jews in the province.

There were 332 cities, towns and villages in Ontario in 1931, and Jews were living in 186 of them. There were three Jewish communities in Ontario with more than 1,000 Jews in 1931; Greater Ottawa (1931), 3,482; Greater Hamilton (1931), 2,667; Greater Windsor (1931), 2,517.

Jewish communities with more than 100 and less than 1,000 Jews were found in 1931 in the following fourteen Ontario towns and cities; London, 683 (1891; 144); Kitchener, 411 (1901; 10); St. Catherines, 314 (1891; 15); Fort William, 294 (1901; 13); Kingston, 232 (1891; 39); Cornwall, 210 (1891; 51); Timmins, 208 (1921; 95); Brantford, 208 (1891; 5); Sudbury, 194 (1891; 11); Oshawa, 171 (1911; 13); North Bay, 154 (1911; 35); Guelph, 147 (1891; 11); Peterborough, 139 (1891; 17); Sarnia, 106 (1891; 38).

Occupational Distribution. Of all Jews gainfully occupied in the province of Ontario when the 1931 census was taken, 34.26% were engaged in manufacturing industries, as compared with only 15.07% among the gainfully occupied of all origins; while 33.53% of all gainfully occupied Jews were engaged in merchandising, as compared with 8.85% of all persons gainfully occupied in the province. Out of every 100 Jewish men in 1931 gainfully occupied in Ontario, eighteen were retail merchants. Tailors and salesmen numbered eight each. Sewing machine operators and hawkers numbered six each. There were four fur workers and three ironers and pressers, while metal workers, wholesale merchants, clothing manufacturers, office clerks, clothing cutters, and leather workers numbered two each. Farmers, hat- and capmakers, furniture makers, printers, carpenters, painters, commercial travelers, bookkeepers, lawyers, teachers, barbers, truck drivers and shippers numbered one each.

Out of every 100 Jewish women gainfully occupied in 1931 in Ontario, nineteen were sewing machine operators, sixteen were salesladies and seven were stenographers. Retail merchants and office clerks numbered four each, bookkeepers and domestic servants numbered three each; tailoresses, milliners, dressmakers, dressmakers' apprentices, textile workers, and leather workers numbered two each, while fur workers, hat- and capmakers and teachers numbered one each.

Jews in Civic Life. The first Jew in Ontario to be elected a member of the Dominion Parliament was Samuel Factor, who was first elected Liberal member for the Spadina constituency of Toronto in 1930 (reelected 1935, 1939 and 1940).

David Arnold Croll was first elected a member of the Ontario Legislative Assembly for Windsor in 1934, and re-elected in 1937. He was appointed Provincial Minister of Labor and Public Welfare in 1934, being the first Jew to become a member of a Provincial Cabinet in Canada, but resigned in 1937 because of a difference in opinion with the premier of the province. Croll was elected mayor of Windsor in 1931, and held that office until 1934. He was reelected mayor in 1939, and resigned in 1940 on going overseas as a private in the Canadian active army. John J. Glass of Toronto was another Jewish resident of Ontario who was elected a member of the Ontario Legislative Assembly. Aaron Horovitz was elected mayor of Cornwall in 1930, and was reelected mayor for seven consecutive annual terms. The Jewish population of Cornwall in 1931 was 210.

OPATOSHU (OPATOVSKY), JOSEPH, Yiddish writer, b. Mlava, near Plotzk, Russia, 1887. His Jewish education was received primarily from his father, but he attended the government school in Mlava, and a commercial school in Warsaw. In 1905 he went to France, and entered the polytechnic institute in Nancy. Called back to Russia because revolutionary events necessitated the closing of his father's lumber business, Opatoshu later emigrated to the United States (1907). In 1914 he received a degree in civil engineering from Cooper Union. But almost immediately he renounced his engineering career for literature.

His first work had already appeared in 1910 in the anthology *Literatur,* and in 1912 he wrote also for *Shriften,* an anthology published by the "Yunge"—representatives of the new Yiddish literary movement which had been instituted in the United States by the heavy immigration that followed the events of 1905 in Russia. His *Roman fun Ferd Ganev,* which had appeared in *Shriften,* and stories published in other anthologies soon assured Opatoshu his place in the literary scene.

Opatoshu's first trends were toward a romanticized version of the semi-underworld of the Polish frontier region: brutal passion was compensated for by physical courage, and cloaked in a mystical haze. His later ventures onto the American scene showed plain realism; the romanticism had been incorporated into the structure of the work.

In 1915 Opatoshu began work on a Polish-Jewish trilogy, which occupied him for ten years. *In Poilishe Velder* was published in Yiddish and Hebrew simultaneously in 1921, and subsequently appeared in Polish, German and English translations (English trans., Isaac Goldberg, *In Polish Woods,* Philadelphia, 1939). The second section, *1863,* was published in the early 1920's; the third part, *Der Roman fun a Vald Maidel,* had appeared in the *Tzukunft* as early as 1918.

In Poilishe Velder is Opatoshu's greatest work, but the trilogy as a whole is a monumental undertaking; it is the first presentation in Yiddish of a historical territory through three generations. Opatoshu drew on all the resources he had carried with him from his paternal home, and interwove them with legends of the Polish woods. In *Die Tentzerin* (1930) Opatoshu sought to do for the American scene, although on a smaller scale, what he did for Polish Jewish history—describe the Americanization of all classes of East European Jewry.

Joseph Opatoshu

A Tog in Regensburg (1932), written in old Yiddish, is an excursion into the Middle Ages. *Pundika Retivtah* (The Inn) carries one back to an even older period of history—Palestine under Greco-Roman domination—and is stylized in Hebrew-Yiddish (1933). *Rab Akiba,* published serially in 1940 in the *Day,* to which Opatoshu became a weekly contributor in 1918, was a return to a sober, realistic style. Opatoshu's desire to cover as much historical ground as possible prompted him to travel whenever he could, and from his trips he always emerged with piquant Jewish characters: a Yeshiva Bochur become a Soviet commissar, an old woman in Holland who remembered old Yiddish. A compilation of sketches, *Shtett un Menshen,* contained about 800 of such semi-belletristic pieces.

Opatoshu is a conscious craftsman, an engineer-organizer, but he possesses enough intuitive power to hold and excite the reader. His objectivity has increased with the years, but he has so much understanding for mystical ecstasy that he appears to be its participant. Mainly this is the benefit of his rapid style, which is utter mobility, activity, narration. Every sentence, every phrase, is an event. Even his description is narrative. He moves so quickly from period to period that time becomes space: a fused and galvanized plane. To Opatoshu is due the elevation of the Polish Yiddish dialect to a literary level; many basic Polish Yiddish terms, purified by him, have become part of the Yiddish linguistic heritage.

By 1914 the Kletzkin publishing firm in Vilna had published fourteen volumes of Opatoshu's work. *Menshen un Chaies* was published in New York city in 1936. B. RIVKIN.

Lit.: *Literaturnaya Entziklopedia,* vol. 8 (1934) 303-4; *Opatoshu Bibliografi* (1937); *Yosef Opatoshu, Sein Leben un Shaffen* (1937); Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 1 (1926), cols. 145-51; *Allgemeine Entziklopedia,* vol. 4.

OPHIR, the land from which Solomon obtained gold, precious stones, and costly wood (*I Kings* 9:28; 10:11; *II Chron.* 8 and 9). In order to reach it, Solomon made an alliance with Hiram, king of Tyre, and sent a joint expedition from the northern end of the Red Sea. Ophir is probably to be identified with the Egyptian Punt, a region at the southern end of the Red Sea, from which the Egyptians obtained gold, precious stones, tropical woods, and spices. In *Gen.* 10:29, Ophir appears between Sheba and Havilah, both situated in southwestern Arabia, modern Yemen. Seba and Havilah also are mentioned in the same chapter (verse 7) among the descendants of Cush, Ethiopia, so it would seem that Ophir may have been situated on the African side of the Red Sea. Most Egyptologists place Punt on the African side of the southern Red Sea, but some follow Hess in placing it on the Arabian side. Apparently Solomon and Hiram were interested in breaking the Egyptian monopoly of trade with the rich land of the south. Jehoshaphat attempted to send another expedition to Ophir, nearly a century later, but the fleet was wrecked (*I Kings* 22:49).

No attention should be paid to the baseless and absurd attempts still made to identify Ophir with India or South Africa.

OPHITES, designation of a number of Gnostic groups which flourished in Asia Minor and Egypt in the first centuries C.E. The name is derived from the Greek word for "serpent," and some called themselves Naasites, from the equivalent Hebrew term *nahash.* The exact doctrines of the Ophites are uncertain, as all information comes from hostile sources. They seem to have revered the serpent as sacred, and to have had various mysteries connected with it; it is identified with wisdom (*sophia*) and to some extent with the serpent of the Paradise story which brought to mankind the knowledge of good and evil. Some groups exalted such Biblical characters as Cain, Seth, Esau and Korah. The God of the Jews is identified with Ialdabaoth ("child of chaos") and has seven demons, in contrast to the true, with seven spirits. The group was still in existence as late as the 6th cent.

OPINION, FREEDOM OF. While the entire framework of Jewish law and religious teachings rests upon the Law as laid down in the Bible, there was room for differences of opinion as to the interpretation of the Scriptures and the teachers were free to set forth and to defend their individual views until an authoritative opinion was reached by the voice of the majority. The proof of this is the numerous differences of opinion (Hebrew *mahloketh;* Aramaic *pelugta*) which are carefully recorded in Jewish literature.

The whole structure of the Talmud rests on the differences of opinion among the sages in interpreting the Bible, and the opinions of earlier sages and controversies of a moral, legal and logical nature. Very often differences of opinion are represented by different schools. Thus we have the controversies of the Beth Shammai and the Beth Hillel, the former generally following a strict interpretation of the Law and the latter leaning toward a lenient and liberal interpretation. While authority was respected, the individual had the right to his opinion within the framework of the Law. It goes without saying that no one could gainsay a Biblical law; neither could an Amora contradict a Mishnah, Baraitha, or Tanna without citing another Mishnah, Baraitha or Tanna as a supporting authority. The earliest conflict of opinion reported is that of the "Zugoth" or "pairs" (*Hag.* 16a; cf. Rashi to the passage). In general, most of the important Tannaim and Amoraim may be grouped into pairs of disputants.

It is quite a difficult matter to decide which opinion

is to be accepted, although scattered throughout the Talmud there are numerous rules concerning the relative weight of opinions and methods of determining which opinions are binding. The following are some of the general rules followed by the codifiers of rabbinical law: In all cases the majority prevails against the minority in accordance with the dictum expressed in *Ex.* 23:2 (*Ber.* 9a). Even divine intervention can not persuade one to the contrary (*B.M.* 59b). The dissenting sage generally submitted to the majority; the Babylonian Talmud prevails against the Palestinian; if a conflict of opinion in one Mishnah is followed by an anonymous and undisputed Mishnah (*setam*) elsewhere in the same book, then the law expressed in the latter prevails (*Yeb.* 42b); conflicting opinions in the Baraitha are decided by an unchallenged opinion in the Mishnah, while an unchallenged Baraitha is not sufficient to decide a conflict in the Mishnah; in doubtful cases a lenient interpretation is followed when rabbinical injunctions are involved, and the strict interpretation prevails when a commandment of the Torah is in question; in laws concerning mourning the lenient interpretation is generally followed (*M.K.* 18a). Similarly for laws concerning Erubin; in a conflict of opinion between two Tannaim or Amoraim which can not be decided on the basis of the rules laid down in the Talmud, if one is a pupil of the other, the opinion of the teacher prevails for all periods up to that of Raba, but from then on, in a conflict between an Amora of an earlier generation and one of a later generation, the opinion of the latter prevails.

Of the teachers whose opinions generally prevail, the following may be mentioned: The Beth Hillel prevails against the Beth Shammai with some exceptions; the opinions of Akiba prevail against any single adversary; the opinions of Simeon ben Gamaliel expressed in the Mishnah prevail, with three exceptions; the opinions of Judah Hanasi prevail against any single adversary, except Simeon ben Gamaliel; the decisions of Eliezer ben Jacob prevail.

The following are the important rules followed in conflicts between prominent "pairs" of Tannaim and Amoraim: Eliezer ben Hyrcanus prevails against Joshua ben Hananiah; Jose prevails against Judah; Judah prevails against Meir; Jose prevails against Meir. Generally, Meir's opinions were not accepted because his reasoning was too subtle (*Erub.* 13b; cf. *Keth.* 57a). Rab prevails against Samuel in ritual matters, and Samuel prevails against Rab in legal matters, similarly in the case of Nahman and Shesheth; Johanan prevails against Rab; Johanan prevails against Simeon ben Lakish with three exceptions; Raba prevails against Joseph; Raba prevails against Abaye with six exceptions; Judah prevails against Rabbah; Rabbah prevails against Joseph with three exceptions. Rabina prevails against Aha with three exceptions.

According to the Jewish view, as expressed in the principle of Miut (minority), both sides to a conflict of opinion or to a controversy have their rights, and the rights and opinions of the minority are respected.

SAMUEL RABINOWITZ.

Lit.: *Mebo Hatalmud,* ascribed to Samuel Hanagid and appended to *Berachoth.*

OPINIONS, LEGAL, *see* RESPONSA AND DECISIONS.

OPPENHEIM, ALFONS, chemist, b. Hamburg, Germany, 1833; d. Hastings, England, 1877. He received his Ph.D. degree from the University of Göttingen (1857), went to London, where he conducted a number of researches at Professor Alexander W. Williamson's laboratory, then to Paris, and returned to Berlin in 1867. After he had been an instructor for several years, he was appointed assistant professor at the University of Berlin in 1873, and in 1877 accepted a call to the chair of chemistry in the Royal Academy of Münster, but died in the same year.

Oppenheim was first active in the field of inorganic chemistry (tellurium, phosphorus, manganese), but later devoted himself mainly to organic chemistry. He published *Geschichte der chemischen Theorie seit Lavoisier* (1870), and translated into German Odling's *Manual of Chemistry* and Wurtz' *History of Chemical Theories.*

Lit.: *Nature,* vol. 16, Oct. 25, 1877; *Jahrbuch der Erfindungen,* vol. 14 (1878) 447.

OPPENHEIM, AMY SCHWARTZ, civic and political worker, b. Louisville, Ky., 1878. In 1911 she helped organize in New York city the School Art League, of which she was first vice-president and chairman of the scholarship committee; at the Metropolitan Museum of Art she sponsored lectures for public school children; between 1922 and 1933 she served as director of the Art Alliance of America. Devoted to music, likewise, she served as an executive member of the Philharmonic Symphony Society of New York in 1929 to 1930. She early became active in political life when she campaigned for woman suffrage in New York state in 1915.

Later she was vice-president of the Woman's Municipal League, and in 1925 was elected to the Republican county committee in New York County. She was an executive member of the Citizens' Union from 1924 to 1938. In the Republican presidential campaigns of 1932 and 1936 she participated in the work of the Eastern headquarters.

During the early 1940's her efforts were directed to the drives for the United China Relief, and was active on behalf of inter-American relations.

OPPENHEIM (also **OPPENHEIMER**), **DAVID,** rabbi and book collector, b. Worms, Germany, 1664; d. Prague, 1736. He was educated in rabbinics and in 1690 became chief rabbi of Moravia, with his seat in Nikolsburg. In 1703 he was called to Prague, and in 1718 became chief rabbi of all Bohemia.

Oppenheim was a man of considerable wealth, and diverted much of his means to aiding his own students at the Yeshiva of Nikolsburg and to assisting scholars in the publication of their works. He owned a library of some 6,000 to 7,000 volumes of the rarest and most precious Hebrew books, in addition to 1,000 manuscripts, many of which had been given to his uncle, the court factor Samuel Oppenheimer, by Prince Eugene of Savoy. The collection was enlarged by Oppenheim himself in the course of extensive travels. Due to the strict censorship of the Catholic church, Oppenheim removed his library to Hannover. After his death and that of his son in 1739, the collection was involved in a lawsuit between the heirs and was not released until 1826. In 1829 the Bodleian Library bought it for a fraction of its estimated value of $60,000.

Johann Christian Wolf used the library in composing his *Bibliotheca Hebraea,* a bibliography of Hebrew literature. One of the many catalogues of the library was published under the title *Kehillath David* (1826).

David Oppenheim

In addition to several works that have remained in manuscript, Oppenheim was the author of *Moed David* (1698); *Haskamoth* (1707); *Hanhegeth Adam* (1713); and *Hiddushim al Sugya Dearba Mittoth* (1725). Some of his responsa were published in collective works.

Lit.: Löwenstein, L., *Gedenkbuch zur Erinnerung an David Kaufmann* (1900) 539-59; Grunwald, Max, in *Monatsschrift für Geschichte und Wissenschaft des Judentums* (1896) 425 et seq.; idem, *Samuel Oppenheim und sein Kreis* (1913); Lieben, S. H., in *Jahrbuch für jüdische Geschichte und Literatur;* Duschinsky, C., in *Jewish Quarterly Review,* vol. 20, pp. 217-47; "Materialien zur Geschichte der Bibliothek David Oppenheims," *Soncino-Blätter,* vol. 2, pp. 59-80; Marx, A., "Some Notes on the History of David Oppenheimer's Library," in *Mélanges offertes à Israel Lévy* (1926) 458-60.

OPPENHEIM, ERNEST FERDINAND, British government official, b. 1875; d. 1939. He was admitted to the bar in London in 1898, and the following year he entered the Indian Civil Service. Subsequently he became a collector and magistrate (1911) and a commissioner (1925). From 1930 to 1934 Oppenheim was a member of the board of revenue for the United Provinces of India. After his retirement in 1934 he lived in Italy.

OPPENHEIM, HEINRICH BERNARD, journalist and German deputy, b. Frankfort, Germany, 1819; d. Berlin, 1880. He was a grandson of the rich Hamburg Jewish banker Gumpel. After great difficulty because of his Jewish descent, he finally became instructor of political science at the University of Heidelberg (1841-45). In collaboration with Ruge, he edited the Berlin *Reform, Organ der demokratischen Partei* (1848). Forced to flee because of his liberal views, he lived in France and England for eleven years. A theorist rather than a public leader (his *Kathedersozialismus,* 1872, made this impression widespread), he became editor of the *Jahrbücher für deutsch Politik* (1862), which exerted great influence on political life and thought in that period. After the events of 1866 his views became more moderate. He later joined the National Liberal Party, and was a Reichstag deputy from 1873 to 1877. His writings on political economy dealt with labor contracts and grain tariffs.

Lit.: *Handwörterbuch der Staatswissenschaften,* vol. 5, p. 1024; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 4 (1930) 568-69.

OPPENHEIM, HERMANN, neurologist, b. Warburg, Westphalia, Germany, 1858; d. Berlin, 1919. In 1883 he became assistant to the Clinic for Nervous Disorders at the Charité, Berlin, where he worked until 1891. He was appointed associate professor of neurology at the University of Berlin in 1893. Oppenheim founded a private clinic (1891), which he directed until his death. His works treat of clinical and pathological anatomy of brain and spinal diseases. Through his diagnoses of the brain and spinal tumors, operations on these diseases were made possible.

Oppenheim devised the theory of the pseudo-tumors of the brain and of the chronic serous meningitis. Oppenheim made a study of aphasia and of a certain disease of the muscles (named after him the "Oppenheim disease"). He wrote, among other works, *Lehrbuch der Nervenkrankheiten für Ärzte und Studenten* (2 vols., 1894); it was translated into several languages.

OPPENHEIM, HERMANN, industrialist and financier, b. Vienna, 1878. He was director of the Austrian society of creditors before the first World War. After the War Oppenheim directed (1918-20) the demobilization of merchandise, and rendered the Austrian republic valuable service by preventing waste of national property. From 1920 to 1923 he was president of the Austrian loan bank for public enterprises, then president of the Österreichische Escompt-Gesellschaft.

He was a trustee of the most important Austrian industrial enterprises, including the Alpine Montangesellschaft. For many years Oppenheim was member of the board of deputies of the Jewish community of Vienna and president of the Union Österreichischer Juden. In this post he aroused the fury of the anti-Semites, and after the Nazis invaded Austria Oppenheim was severely persecuted.

OPPENHEIM, HIRSCH DAVID, rabbi, b. Temesvár, Hungary, 1794; d. Temesvár, 1859. He succeeded his father, David, in the rabbinate of the Ashkenazic community of Temesvár. He was of German descent and a member of the noted Oppenheim family. The Austrian government bestowed upon him the title and functions of chief rabbi of Temes county and of the Military Guard Region, a position which gave him authority over all the new Jewish communities which sprang up in that territory recently recovered from Turkish occupation. Oppenheim, a staunch Orthodox Jew and author of several scholarly works, welcomed the opportunity for Jews to obtain citizenship rights and fostered the process of rapprochement with those of other faiths in the surrounding communities.

OPPENHEIM, JACQUES, jurist, b. The Hague, Holland, 1849; d. The Hague, 1924. He studied at Groningen University, and served as secretary of the Dutch Municipal Council from 1873 to 1884. Thereafter he was made professor of state and administrative law, first at Groningen University and, in 1893, at Leyden University, where he also taught international law. In 1907 he resigned and became a member of the privy council, the legislative body of advisers to the queen. On the occasion of his seventieth birthday Leyden University conferred upon him the honorary degree of professor of economics.

Oppenheim was a member of various state commissions, and in 1916 became curator of Leyden University. His most important and best-known work is *Netherlands Municipal Law,* which appeared in two volumes in 1895 and has since been repeatedly reprinted. In 1928, four years after Oppenheim's death, this valuable standard work was extended a third volume written by Professor C. W. van der Pot.

OPPENHEIM, JAMES, poet and novelist, b. St. Paul, Minn., 1882; d. New York city, 1932. He attended Columbia University as a special student (1901-03) and gave his spare time, as assistant head-worker, to the Hudson Guild settlement. From 1905 to 1907 he was teacher and superintendent of the Hebrew Technical School for Girls in New York city.

His contacts with the East Side of New York were numerous and intimate; the background there furnished the setting for his first book, *Dr. Rast* (1909), a collection of short stories. This volume displayed far more than the proverbial promise; it revealed Oppenheim's strength as well as the weaknesses which were emphasized in his later work. The strength was embodied in a social vision, a consciousness that was also conscience, a passion for justice, and a hunger for hidden beauty. The weaknesses sprang from a tendency to sentimentalize material and character, to preach and point a moral, to suggest simple but inadequate solutions.

The conflicting strains were manifest in his novels *Wild Oats* (1910), *The Nine Tenths* (1911) and *The Olympian* (1912), in *Pay Envelopes* (1911), another collection of short stories, and most expansively in his poetry, of which there were five volumes, the best summed up in *The Sea* (1923).

It is as a poet that Oppenheim was happiest, and it is as a poet that he will survive. Many of his rhapsodic poems can be found in the anthologies of his day and their sonorous expression is not dulled by time. Philosophically, he never clarified his position, which was that of a mystic endeavoring to be a realist. He was, by turns, a champion of "the machine age" and an enemy of mechanism. But it was his creative energy, not his rationalism, which mattered.

His early poetry, *Monday Morning,* was lilting in rhythm and conventional in rhyme; but, beginning with *Songs for the New Age* (1914), Oppenheim employed a form that was free and an idiom that was distinctive. Thus he achieved a characteristic utterance that was loose and eloquent. Even his short lyrical poems were psalms rather than songs, psalms of the modern spirit, prompted by a prophetic impulse, vibrant with social significance, and influenced by psychoanalysis. "They were," according to the author of *From Another World,* "fragments of David, Isaiah, and the book of Job in terms of the twentieth century; they were the Bible retranslated by Walt Whitman in collaboration with Freud."

Oppenheim's attitude was ethical rather than esthetic, a throw-back to the minor prophets of the Old Testament; it was so incongruously ancient that it sounded new and startling in the early 1900's. His passionate credo was: "We are flesh on the way to Godhood."

Besides his work as an author, Oppenheim was for a short time editor of what has been described as "the best, if shortest-lived, literary magazine that the country has known." This was *The Seven Arts,* a monthly devoted to the cultural soul of America, an exploratory journal which numbered among its associate editors Waldo Frank, Randolph Bourne, Van Wyck Brooks, Louis Untermeyer and others. It promised to become a forum for a rising generation of truth-seeking intellectuals, occupying a place between the liberalism of *The New Republic* and the socialism of *The Masses.* Its first issue appeared in November, 1916; the war brought about its abrupt demise exactly a year later.

Oppenheim was also the author of two handbooks on psychoanalysis: *Behind Your Front* (1928) and *American Types: A Preface to Analytic Psychology* (1931).

LOUIS UNTERMEYER.

OPPENHEIM, LASSA FRANCIS LAWRENCE, authority on international law, b. Germany, 1858; d. England, 1919. After teaching international law at the Universities of Freiburg and Basel, he emigrated to England in 1895, and was appointed lecturer in the University of London. In 1900 he became a naturalized British subject, and in 1908 was named to the post of Whewell professor of international law at Cambridge University, a position he held throughout his career.

Oppenheim was a leading authority on international law and diplomacy, and published a number of important works in this field.

His early books were in German, and include his first *Die Rechtsbeugungsverbrechen* (1886); *Gerechtigkeit und Gesetz* (1895); and *Das Gewissen* (1898). Later juridical writings in English include the outstanding *International Law:* vol. 1, *Peace* (1905; 2nd ed., 1912); and vol. 2, *War* (1906; 2nd ed., 1912); *The Panama Canal Conflict* (1913); and *The Collected Papers of John Westlake on Public International Law* (1914). Oppenheim was a corresponding member of the American Institute of International Law. While at Cambridge, he belonged to the local Anglo-Jewish Association.

OPPENHEIM, MAURICE, dermatologist, b. Vienna, 1876. He was a descendant of the court factor Samuel Oppenheimer. Having received the M.D. degree from the University of Vienna in 1899, he served as an assistant and received the title of professor in 1915. During the first World War he served in the Austro-Hungarian army as surgeon-major. From 1927 on he was acting professor of dermatology and syphilology at the University of Vienna. He was also head of the department of skin and venereal diseases of the Wilhelminen Hospital (1918-38).

In 1939 Oppenheim came to the United States, where he became full-time professor and head of the dermatological department of Chicago Medical School. He was living in Chicago in 1942.

A member of many dermatological societies, Oppenheim received several gold medals and distinctions for his exhibits on occupational disorders of the skin.

He published: *Kurzes Repetitorium der venerischen Krankheiten* (1902); *Atlas der venerischen Affectionen der portio vaginalis uteri und der vagina* (1908); *Die Hautatrophien* (Finger, co-author; 1910); *Praktikum der Haut- und Geschlechtskrankheiten,* 6th ed. 1936); *Die Schädigungen der Haut durch Beruf und Arbeit* (3 vols.; Ullmann and Pille, co-authors; 1922); *Die Schädigungen der Haut durch Beruf, Sport, Jahreszeiten, Kosmetik und erste Hilfe bei plötzlichen Hautschädigungen* (1937).

OPPENHEIM, MORITZ DANIEL, artist, b. Hanau, Germany, 1800; d. Frankfort, Germany, 1882. The first Jewish painter in Germany, he was born in the Judengasse and attended a Talmudic school, but after the Jews in the Grand Duchy of Frankfort were granted full civil rights in 1811, he studied at the Gymnasium and later at the Staedelsches Kunstinstitut at Frankfort. In 1817 he entered the Munich academy of arts, and in 1820 he went to Paris, where he was a pupil of Jean Baptist Regnault. The following year he went to Rome, where he was the protégé of the Danish sculptor, Bertel Thorwaldsen. Although he came under the influence of the prevalent school of Nazarenes and painted New Testament scenes, such as his *Parable of the Prodigal Son,* for which he was awarded a prize, he did not succumb fully to its spirit, as did

other Jewish-born artists, such as Philip Veit and Eduard Bendemann. On the other hand, even his paintings of Jewish topics, such as *David Playing the Harp before Saul,* are composed in the idealistic stilted style of the Nazarenes.

Composition, however, was not his strong point. Oppenheim, who returned to Frankfort in 1825, was at his best as a portrait painter. He painted Johann Wolfgang von Goethe, whom he visited at Weimar in 1827. Goethe suggested that Oppenheim, who had illustrated Goethe's epic, *Hermann und Dorothea,* be made honorary professor by the grand duke, Karl August. In 1828 Oppenheim married Adelheid Cleve, whose portrait is considered one of his finest works. During this period he painted Ludwig Börne (1827) and Heinrich Heine (1831).

He achieved his greatest renown, however, when he embarked upon the painting of Jewish family scenes. His *Homecoming of a Jewish Volunteer* (1833) started a cycle of Jewish genre paintings which occupied him for more than thirty years. The *Homecoming of a Jewish Volunteer* (see volume 4, p. 460) was presented to Gabriel Riesser, champion of Jewish rights, by a group of Jews of Baden. Sentimental and saccharine though these pictures were, they became immensely popular, notably from 1865 on, when a Frankfort publisher started to produce moderate-priced prints of them. Typical of this cycle is *The Old Talmudist Hearing his Grandson's Lesson* (1866). Oppenheim's importance in the realm of art rests upon the fact that he was the first artist to discover and to dare to depict the beauty of everyday Jewish life, and thus became a pioneer of a new school of art that later included men like Joseph Budko, Hermann Struck, Ephraim Moses Lilien and Leopold Pilichowski.

Oppenheim was superior in portraiture, as evidenced in his psychological pictures of Ferdinand Hiller, Gabriel Riesser, the Rothschild family (he painted a cycle of Rothschild portraits, from the old mother Gudula to the bankers of his time), and particularly by his portraits of Börne and Heine. For the Römersaal in Frankfort he produced the pictures of the emperors Otto IV and Joseph II. Shortly before his death he wrote *Erinnerungen;* it was published by a relative of his in 1924. ALFRED WERNER.

Lit.: Schwarz, Karl, *Die Juden in der Kunst* (1928); Oppenheim, Alfred, in his appendix to Moritz Daniel Oppenheim's *Erinnerungen* (1924).

OPPENHEIM, NATHAN, physician, b. Albany, N. Y., 1865; d. New York city, 1916. He received his A.B. degree from Harvard University in 1888 and his M.D. degree from Columbia University in 1891. Later he took post-graduate work in various European cities, and settled in New York as a child specialist. In addition to occupying several posts in various New York city hospitals, Oppenheim, who was acknowledged as an authority on the diseases and psychology of childhood, was the author of *The Development of the Child* (1899); *The Mental Diseases of Childhood* (1900); *The Care of the Child in Health* (1901); and *Mental Growth and Control* (1902).

OPPENHEIM, SALOMON, JR., pioneer banker, b. Bonn, Germany, 1772; d. Cologne, Germany, 1828. His family was domiciled at Frankfort until, in 1740, Salomon Herz Oppenheim went to Bonn. There the Oppenheims and their relatives, Cassel Wolff (d. 1810) and Philipp Gomperz (d. 1831), were court Jews or court factors of the Elector Clement August. Little by little these court Jews became modern bankers. According to a family tradition, the banking house of Salomon Oppenheim Jr., which was still in existence when the second World War broke out, was founded in 1789, the year of the French revolution, while Max Freiherr von Oppenheim asserted that the firm was already established in 1783.

In 1798 Jews were allowed to reside in Cologne, whence they had been expelled in 1424, and in 1801 Salomon Oppenheim Jr., together with Cassel Wolff and Philipp Gomperz, removed their business from Bonn to Cologne, the capital of the elector's principality. Their families constituted the larger half and the most important part of the rising Jewish community of Cologne, while the other Jews, coming from neighboring towns, were almost all very poor people. The Christian bankers of Cologne showed distrust and hostility toward the newcomers, but in 1810 the banking house of Oppenheim was already considered second only to the firm of Schaaffhausen, then the greatest and most reputable banking house in western Germany. Oppenheim derived from his experiences as a court Jew advantages which enabled him to deal with princes and government officials skillfully. Furthermore, his family became related by marriage to the Rothschilds, Habers, Foulds, Bischoffsheims and Heines, all of whom supported the Oppenheims in their great enterprises.

Oppenheim at first recognized the immense possibilities resulting from the great changes in economic life which the French revolution and the Napoleonic wars produced in Germany. He acquired a considerable fortune by administering or selling the great estates of the secularized clerical properties.

After his death, his sons, SIMON OPPENHEIM (b. Cologne, 1803; d. Cologne, 1884) and ABRAHAM OPPENHEIM (b. Cologne, 1804; d. Cologne, 1878), succeeded him in the direction of the banking house. Abraham Oppenheim was one of the most important bankers, perhaps the greatest, who ever lived in Germany. He introduced, in 1830, the arbitrage of exchange of stocks in Cologne. From 1840 he financed the heavy industry of western Germany on long terms by means of shares and obligations. Almost all the great industrial enterprises of western Germany, especially the mines and steelworks, including Krupp, owe their early growth to Abraham Oppenheim. He also, jointly with the liberal leaders Hansemann and Mevissen, financed most of the German railway and insurance companies. In politics Abraham Oppenheim supported liberalism. For a certain time he even protected the *Rheinische Zeitung,* whose editor was young Karl Marx.

After his death and that of his brother, ALBERT EMIL, ABRAHAM OPPENHEIM (b. Cologne, 1834; d. Cologne, 1912) and Simon's son, EDUARD OPPENHEIM (d. Cologne, 1904), continued to conduct the business. They were both made barons by the German emperor. Their banking house, however, receded somewhat into the background when the modern joint-stock (public depository) banks developed.

Eduard's son, SIMON ALFRED, Freiherr von Oppenheim (b. Cologne, 1864; d. Cologne, 1932), became a partner in 1893, after a journey around the world and a stay in the United States, and senior partner in 1913. He was baptized.

The last directors of the banking house were EBERHARD FREIHERR VON OPPENHEIM (b. Cologne, 1890) and WALDEMAR FREIHERR VON OPPENHEIM (b. Cologne, 1894), who was, at the same time, a partner of the great banking

George Wolf

house of A. Levy at Cologne. MAX SIMON ADRIAN FREIHERR VON OPPENHEIM (b. Cologne, 1860) was also a partner of Salomon Oppenheim Jr. But he devoted much time to the study of Islam and to voyages of discovery in Africa and the Middle East. He entered the diplomatic service and took an active part in the negotiations between Germany and Turkey on the Baghdad railroad. He published many contributions to the knowledge of the Orient. In 1939, when he was in his eightieth year, he edited the first volume of an important work on the Bedouins, and prepared the two following volumes. HUGO BIEBER.

Lit.: Die Stadt Cöln im ersten Jahrhundert unter preussischer Herrschaft (1916); Krueger, Alfred, *Das Kölner Bankiergewerbe* (1925).

OPPENHEIM, SAMUEL (court factor), *see* OPPENHEIMER, SAMUEL.

OPPENHEIM, SAMUEL, political economist, b. Mayence, Germany, 1806; d. Mayence, 1876. A savant without official appointment, living in obscurity, he left his great collection of books on political economy to the city of Mayence, and his fortune to non-sectarian schools. In 1855 he published *Die Natur des Geldes,* and from 1868 to 1876 the two volumes of *Die Natur des Kapitals und Kredits.* Although Oppenheim was ignored during his life because he was opposed to the classical theory of money, after his death he influenced several outstanding economists and sociologists and pioneered ideas which were approved by many modern theorists without doing justice to Oppenheim's merit.

He outlined the historic evolution of the idea of money, stressing particularly the fundamental change of psychology which differentiated the use of money in ancient and modern times. Dealing with money as a yardstick of value, Oppenheim advocated a theory of measurement which was developed later on by Georg Simmel in his *Philosophie des Geldes.* He was also a precursor of the political theory of money announced by Knapp and of modern nominalism in the theory of currency. It was Oppenheim who examined first, at least in Europe, the purchasing power of money, the relation between the prices of the different precious metals, and stated the independence of the price of gold of the costs of production. Oppenheim's criticism of monometallism was revived later on without mention of his name.

Lit.: Barthelmess, Eugen, *Die Geldlehre Samuel Oppenheims.*

OPPENHEIM, SAMUEL, astronomer and mathematician, b. Braunsberg, Moravia, 1857; d. Vienna, 1928. In 1903 he became professor at the University of Vienna, and was president of the Astronomical Society of Vienna and a member of several academies of science. He was primarily interested in the mathematical phase of astronomy, and was a master of astronomical calculations. He was editor of the volume on astronomy of the *Enzyklopädie der mathematischen Wissenschaften.* His writings deal with mechanical analogies to the pattern of the heavenly bodies, the individual motions of the fixed stars, and the calculation of orbits. His most popular books are: *Das astronomische Weltbild im Wandel der Zeiten; Probleme der modernen Astronomie; Weltentstehung in Sage und Wissenschaft.*

Lit.: Kürschners Deutscher Gelehrten-Kalender (1926) 1395; Wininger, S., *Grosse jüdische National-Biographie,* vol. 4 (1930) 574-75.

OPPENHEIM, SAMUEL, lawyer and historian, b. New York city, 1859; d. New York city, 1928. Admitted to the bar in New York in 1885, he had a distinguished legal career in private practice; he was an executive director of the Missouri, Kansas and Texas Railway Company from 1889 to 1891, and from 1896 to 1901 the company's assistant general counsel. In 1895 Governor Levi P. Morton appointed him secretary of a state commission to recommend new methods in legislation.

But his outstanding contribution was in the field of American Jewish history. Over a fifteen-year period of intensive research he discovered and collected a vast store of new source material relating to the early history of Jews in colonial New York and in Newport, R. I., in Brazil and the Dutch South American colonies. He learned old Dutch, and in correspondence with the Jewish communities in Holland was successful in obtaining records which threw new light on many obscure historical points relating to the early colonists of the New World. He often made journeys throughout New York and the neighboring states. This entire collection of photostats, original documents, voluminous notes and transcriptions, data invaluable to future historians, went, on Oppenheim's death, to the American Jewish Historical Society, of which he was a prominent member, and recording secretary from 1914 on.

In the Society's *Publications* appeared Oppenheim's writings. These include: "An Early Jewish Colony in Western Guiana" (No. 16, 1907, pp. 95-186); "Early History of the Jews in New York" (No. 18, 1909, pp. 1-91); "The Jews and Masonry in the United States before 1810" (No. 19, 1910, pp. 1-94); "The Chapters of Isaac the Scribe" (No. 22, 1914, pp. 39-51); "More About Jacob Barsimon, the First Jewish Settler in New York" (No. 29, 1925, pp. 39-52). In No. 33 of the *Publications* appeared Herbert I. Bloom's "A Study of Brazilian Jewish History, 1623-54," based on Oppenheim's material.

Lit.: Publications of the American Jewish Historical Society, No. 32 (1931) 132-34.

OPPENHEIMER, ALBERT MARTIN, lawyer, b. 1872. His father was Sir Charles Oppenheimer (1836-1900), consul general under Queen Victoria at Frankfort. It was in Frankfort that Oppenheimer took part in the First Aid and Life Saving Congress in 1908; later he participated in a similar congress at Vienna in 1913, and that year he published his *First Aid Dictionary* in six languages.

An authority in international law, he lectured at Berlin, Budapest, Zurich and elsewhere in Europe, and his writings include translations of a number of legal works on the Versailles Peace Treaty, as well as original essays on the same subject. He was made a Commander of the Order of the British Empire in 1927; besides three war medals, he was awarded other decorations by the government of Great Britain, and was honored by several European countries.

OPPENHEIMER, BENTON S., lawyer and professor, b. Cincinnati, Ohio, 1878; d. Cincinnati, 1937. From 1906 to 1907 he was assistant city solicitor and prosecuting attorney of Cincinnati. In 1912 he became judge of the Superior Court, serving for four years. Thereafter he was in private practice, being, from 1919 on, with the firm of Harmon, Colston, Goldsmith and Hoadly. He was also professor of law at the University of Cincinnati. Oppenheimer was active in civic and philanthropic work in his native city: among the organizations in which he was interested were the Legal Aid Society, the Anti-Tuberculosis League, and the Masonic Relief Association.

OPPENHEIMER, SIR BERNARD, diamond merchant, b. 1866; d. London, 1921. One of the pioneers in the South African diamond industry, he was chairman and permanent director of the South African Diamond Corporation, as well as of several other diamond-mining enterprises. After the first World War Oppenheimer established diamond-cutting factories for disabled soldiers in various places throughout England. He was created a baronet in 1921, shortly before his death. After his death his title passed to his son, Michael Oppenheimer (b. 1892; d. 1933). In 1942 it was borne by Sir Michael Grenville Oppenheimer (b. 1924).

OPPENHEIMER, BERNARD SUTRO, physician, b. New York city, 1876. After studying medicine at Columbia University, he completed his training abroad. In 1942 he was clinical professor of medicine at Columbia, a post to which he was appointed in 1936. He was also consulting physician to Mount Sinai, Montefiore, and Mount Vernon hospitals, and on the board of the New York Tuberculosis and Health Association. An original investigator in the field of cardiology, Oppenheimer established, together with collaborators, the site of origin of the mammalian heartbeat. He and his co-workers made researches into electrocardiographic signs in certain diseases of the heart, and concluded that the electrocardiograph was of definite value in the diagnosis and prognosis of patients with myocardial disease. In 1917 he was awarded the gold medal of the American Medical Association for his exhibit on electrocardiography.

Oppenheimer published original work on Werner's syndrome, transplantation of the adrenal cortex for Addison's disease, circulatory measurements in chronic lung disorders, and related subjects. His work on cardiovascular disorders and internal medicine, though not put out in book form, was reported to the scientific press over a long period of years. In February, 1942, the *Journal of Mt. Sinai Hospital* issued an anniversary volume in honor of his sixty-fifth birthday. Oppenheimer served as captain in the first World War and was a colonel in the Officers' Reserve Corps from 1925 to 1935.

Lit.: Kagan, Solomon R. *Jewish Contributions to Medicine in America* index.

OPPENHEIMER, CARL, biochemist, b. Berlin, 1874; d. Zeist, Holland, 1942. He was a son of a preacher of the Reform Jewish community in Berlin and a brother of the political economist Franz Oppenheimer. In 1908 he was appointed professor at the Agricultural Academy in Berlin, and in 1915 director of the Division for Popular Maintenance. He headed the agricultural department of the firm Krause and Company. Oppenheimer was concerned chiefly with the study of the ferments (enzymes) in animals, and wrote valuable works on nutrition, problems of metabolism and energy.

His works include *Die Fermente und ihre Wirkungen* (1st ed., 1900; 5th ed., 5 vols., 1924-29; supplement, 2 vols., The Hague, 1935-39); *Der Mensch als Kraftmaschine* (1921); *Grundriss der Biochemie* (1925); *Handbuch der Biochemie des Menschen und der Tiere,* in collaboration with E. Abderhalden (2nd ed., 9 vols., 1924-27); *Lehrbuch der Enzyme* (1927); *Organische Chemie* (1928). He edited the scientific periodicals *Zentralblatt für Biochemie und Biophysik* (1903-21) and *Enzymologia* (The Hague, 1936-41).

OPPENHEIMER, DAVID, *see* OPPENHEIM, DAVID.

Sir Ernest Oppenheim

OPPENHEIMER, SIR ERNEST, diamond merchant and parliamentarian, b. 1880. Settling in Kimberley, South Africa, in 1902, he soon became one of South Africa's most powerful diamond capitalists; in 1917 he stepped into the post of chairman and permanent director of the Anglo-American Corporation of South Africa, and as his interests expanded he assumed directorship in one company after another. In 1929 he was elected chairman of the De Beers Consolidated Mines, Limited. At the same time his political interests were developing. He was elected mayor of Kimberley, serving from 1912 to 1915. Then in 1924 he was sent up to the Legislative Assembly from Kimberley; he was a supporter of General Jan Smuts. Oppenheimer stayed in Parliament until 1938.

It was in 1928 that he and his wife, the first Lady Oppenheimer (d. 1934), became interested in the Jewish community life of South Africa. They contributed to the South African Jewish Orphanage at Johannesburg, and through their efforts a bond of £15,000 on the Johannesburg Jewish Guild was paid off. Oppenheimer was knighted in 1921.

Lit.: American Hebrew, May 10, 1929, p. 1015.

OPPENHEIMER, FELIX FREIHERR VON, political economist, b. Vienna, 1874. Interested mainly in the reform of housing and in world politics, he studied the scarcity of dwelling-houses and the attempts to smooth over it in Germany and England, and published several pamphlets dealing with that problem. After his return to Austria he organized public utility societies in order to reform housing. In 1905 Oppenheimer published his study *Der englische Imperialismus,* and from 1908 to 1923 edited the *Österreichische Rundschau,* by far the most important Austrian review. On many occasions Oppenheimer was a champion of Austria's independence of Germany, although he was by no means opposed to the idea of the German-Austrian alliance before 1914. Related by marriage to the Catholic aristocracy, Oppenheimer nevertheless defended liberalism and social reform.

OPPENHEIMER, SIR FRANCIS, diplomat, b. London, 1870. The elder son of Sir Charles Oppenheimer, consul general at Frankfort under Queen Victoria, he was himself appointed consul general at Frankfort in 1900, remaining in that post until 1911. He then continued to reside at Frankfort until 1914 as British commercial attaché for northern central Europe, with the rank of an acting councillor of embassy. When the first World War broke out, Oppenheimer went to The Hague, where on Christmas Day of 1914 he established the Netherland Oversea Trust, first of the private organizations set up in neutral countries in connection with the blockade. The following year he helped establish a similar body in Switzerland.

Oppenheimer was in Paris as British delegate at several post-War inter-allied conferences, and in 1919 he was active in Vienna on a special mission as British financial commissioner. In 1920 he retired from the diplomatic service.

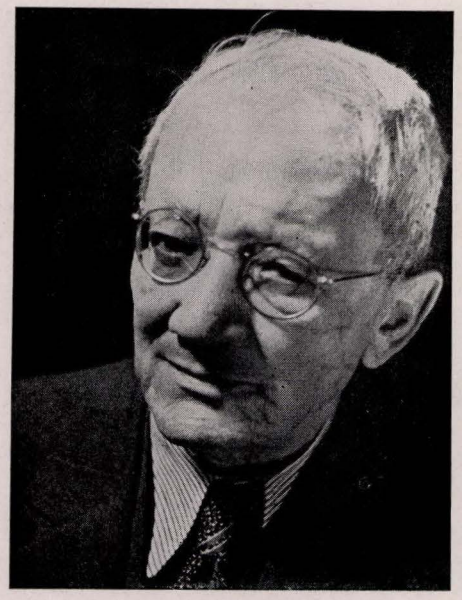
OPPENHEIMER, FRANCIS JOSEPH (Francis Opp), writer, publicist and cartoonist, b. New York city, 1881. One of the directors of the National Liberal Immigration League (1906-07), he wrote *History of the Restriction of Immigration* (1910). His interest in the Jewish question was then aroused, and he made an extended study of the Jews of greater New York, reporting in various publications on their temples and philanthropies, their wealth, their social attitudes, their success in the professions and arts. A series of such articles on the Jew in America appeared in the New York *Herald* in 1908. That year, through an article in the *Independent,* Oppenheimer was instrumental in forcing the New York city police commissioner to retract an assertion that New York's criminals were fifty per cent Jews. The statistics Oppenheimer gathered gave the leaders of the New York city Kehillah a weapon with which to fight anti-Semitic attacks. In the *New Tyranny* (1927) he offered an original interpretation of Jewish success in the arts. *Ezekiel to Einstein* (1940) analyzed the Jewish contribution to science.

In addition, Oppenheimer—who managed several large professional and civic exhibits—wrote on various aspects of business and became well-known for his cartoon illustrations done at political and business conventions. He was associated with numerous publishing ventures, including *The News Letter* (1911), *Modern Theatre, Magazine of Wall Street* (1920), *Success Magazine* (1924-25). Other writings published by him were: *The Truth About the Black Hand* (1909); *Failure of Pacifism* (1917); *The New Tyranny* (1927). The last named was an attack on adherence to mysticism and skepticism as against the true philosophies of idealism and materialism.

In 1942 Oppenheimer was employed as special assistant in the United States Office of Government Reports.

Beatrice Bisno, his wife, assistant director in the Wages and Hours Division of the Department of Labor, wrote the novel *Tomorrow's Bread* (1937), which won the $2,500 Edwin Wolf Prize of the Jewish Publication Society of America for the best novel of Jewish interest in English.

OPPENHEIMER, FRANZ, economist and sociologist, b. Berlin, 1864. He studied medicine and practised as a nose and throat specialist until 1896, when, interested in social problems, he abandoned the medical profession and took up studies in the social sciences. In 1908 he obtained the Ph.D. degree, and in 1909 became lecturer in economics at the University of Berlin. From 1919 to 1929 he was professor of sociology and economic theory at the University of Frankfort. In 1942 he was living in the United States.



Franz Oppenheimer

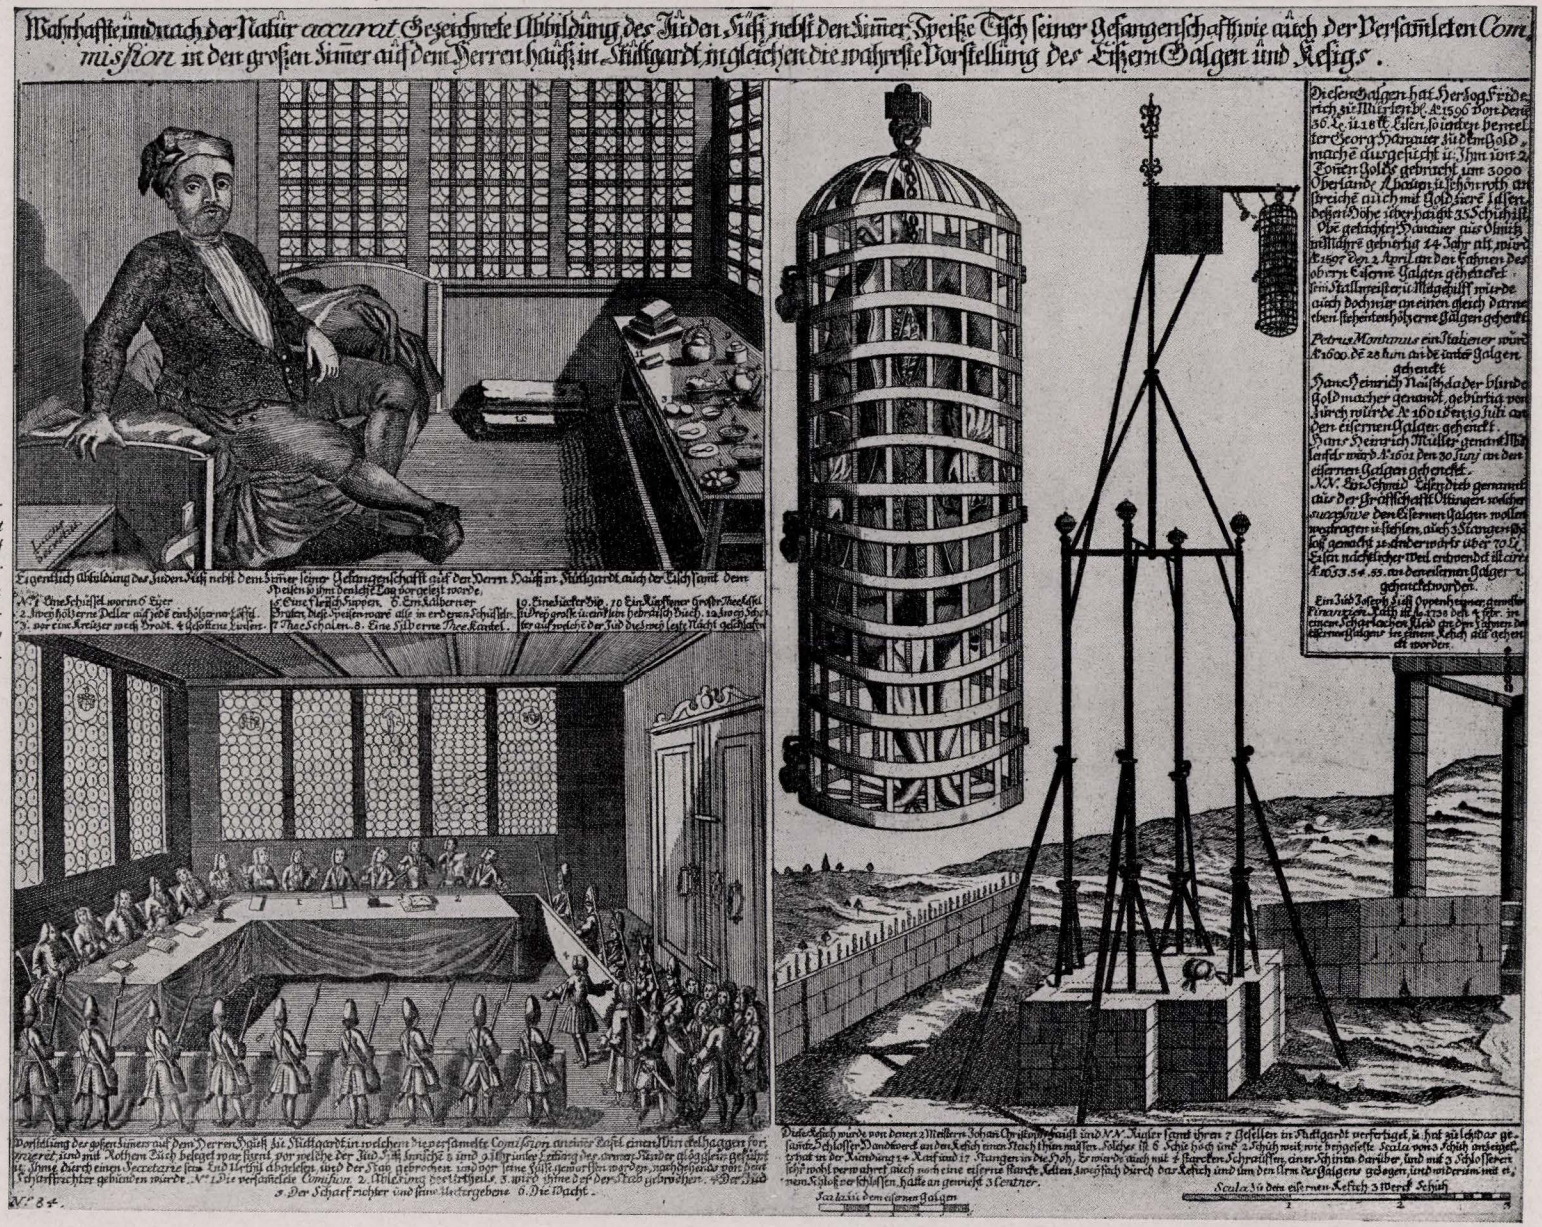
Oppenheimer has sought to link the classical theory with agrarian-socialist thought towards a liberal socialism directed against the monopoly of the soil which, he believed, makes for proletarization of vast masses who, deprived of free access to the soil, must toil at dictated low wages. The monopoly of the soil creates secondary capital monopolies, which exclude free competition. Only the abolition of the monopoly of the soil and the secondary monopolies will achieve a free society in which each will be rewarded according to his merits and free access to the soil will guarantee just wages.

Oppenheimer rejects the Malthusian population theory as well as the economic theory of Marxism and the value theory of the marginal utility theorists. He distinguishes between political and pure economy. Only the latter is free from monopolies and political pressure, while the former is the present established order with all its shortcomings. He attempted to realize his plans of agrarian cooperative settlements in practice, and took particular interest in Jewish settlements in Palestine.

Oppenhimer's main works are: *System der Soziologie* (1901); *Die soziale Frage und der Sozialismus* (1912); *Grossgrundeigentum und soziale Frage* (1922); *David Ricardos Grundrententheorie* (1909); *Das Bevölkerungsgesetz des I. R. Malthus und die neuere Nationalökonomie* (1901); *Das Kapital* (1938).

Lit.: *Wirtschaft und Gesellschaft,* Festschrift for Franz Oppenheimer (1924); Weigert, Otto, *Der liberale Sozialismus Franz Oppenheimers* (1929); Werner, Kurt, *Oppenheimers System des liberalen Sozialismus* (1928); Oppenheimer, Franz, *Erlebtes, Erstrebtes, Erreichtes* (1931).

OPPENHEIMER, JOSEPH SÜSS (called also Jud Süss), court Jew and financier, b. Heidelberg, Germany, 1692 or 1698; d. Stuttgart, Germany, 1738. The son of Issachar Süsskind Oppenheimer, leader of a wandering troupe of actors, and of Michele, daughter of the Hazan Salomon of Frankfort, he was one of the most colorful and puzzling personalities of the era



Joseph Süss Oppenheimer: In prison, at the pronouncement of the verdict, and after his execution. From a contemporary copper plate owned by the Jewish Community of Berlin

before the emancipation. It was rumored that he was the illegitimate son of Georg Eberhard von Heidersdorf, imperial deputy generalissimo and knight of the Teutonic Order—Lion Feuchtwanger, in his novel, stressed the possibility that his hero was only half-Jewish—but Oppenheimer, during his trial, firmly claimed to be the legitimate son of Issachar Süsskind Oppenheimer. As his father died early, he was brought up by an uncle and destined for the rabbinate, but his ambition made him choose a financier's career, the only way by which, before Moses Mendelssohn, a German Jew could attain prominence. He did not renounce Judaism, however, despite his indifference to Jewish customs and rites, as did two of his brothers, one of whom became agent to the privy council at the Darmstadt court, under the name of Baron Tauffenberger.

At the age of eighteen he went to Frankfort, then to Amsterdam, Prague and finally to Vienna, where he worked for a relative of his, the imperial court factor and banker, Samuel Oppenheimer. Returning to Southern Germany, Oppenheimer obtained the privilege of delivery of stamped papers for the Court of the Palatinate, then became a mint-master in Darmstadt and finally private banker to the Landgrave of Hesse-Darmstadt.

Having acquired the foundation of his fortune and a profound knowledge of business, he was introduced, in 1732, by Isaac Simon of Landau, one of the most powerful men in the world of money in Germany, to Prince Karl Alexander of Württemberg, then governor general of Serbia, with the words: "Here I present the man who has supplanted me." Oppenheimer became the chamber agent of the prince and princess, advanced large sums of money for him and procured silk, jewels and rings for her. He contracted for the delivery of munitions and war equipment, went on secret diplomatic missions for the prince, and won his confidence to such an extent that, in 1733, when Karl Alexander succeeded to the duchy of Württemberg, Oppenheimer became his sole confidential adviser, into whose hands finally passed the entire financial administration of the duchy.

The duke was continuously in need of money for his luxuries and debaucheries, and Oppenheimer was a genius in discovering new sources of revenue. When the old councillors of the duke were removed, Oppenheimer introduced new taxes and monopolies, such as on salt, leather, wine and tobacco, and, believing in the mercantile theories, he started with the founding of a porcelain manufactory in Ludwigsburg, a silk manufactory in Stuttgart, and the establishment of a bank, probably the first in southern Germany. Although these were steps towards the necessary industrialization and capitalization of the country, it was quite natural that these reforms could not be accomplished in a purely agrarian country.

It is true that Oppenheimer, in his desire to lead the life of a "grand seigneur," filled his own pockets with large sums from these enterprises and that the assignment of the entire war equipment to his fellow Jews—which led to the first Jewish settlement in Württemberg—also yielded him rich profits. But the real culprit responsible for the sufferings of the population was the extravagant and wasteful duke, who ordered the laws which had been designed by Oppenheimer. The worried population made him the scapegoat: "All the righteous indignation that had been gathering for the space of a lifetime against the Ducal arrogance and corrupt government welled up and was directed exclusively against one man who was not the most guilty party at that" (Elwenspoek).

The duke was ready to sacrifice him to the people, although, in the words of Oppenheimer's defender, no man had ever, like him, "served his prince with assiduity, with faithfulness and zeal, with the devotion of his property, his goods and his credit, nay, with his very person and to the full extent of his capacities." Karl Alexander secretly issued orders to arrest him, but died suddenly; Oppenheimer, however, was arrested by members of the opposition to the duke. During the long complicated trial Oppenheimer, accused of almost every possible crime, defended himself on the grounds that he had done nothing without the duke's knowledge or command, that he had never wittingly offended against equity or law and that he was prepared to replace every loss or damage which had been caused to anyone by his collaboration in the fiscal ministry and the ministry of donations. But the tribunal, on December 13, 1737, reached the conclusion that Oppenheimer should be sentenced to death by hanging, although no sort of proof had been brought of any of the charges made against him. Stoutly refusing to embrace Christianity, although the conversion would probably have saved him, he died on the gallows with the Jewish confession of faith on his lips.

Oppenheimer's character was a peculiar blend of cool calculation and fantastic dreaming, of ruthlessness and kindheartedness. Equally contradictory was his attitude to Judaism and to his fellow Jews. On the one hand he was a freethinker who caused a general scandal by his open violations of Jewish practices, on the other hand he refused, time and again, to renounce Judaism, "even if he could become a Roman emperor." He also bequeathed some of his fortune to fellow Jews.

After his death he became a legendary figure. The "Jew Süss" bibliography numbered, from 1737 to 1925, more than fifty volumes. More recent research has proved that, far from being a monster of wickedness, as he appears to be in Wilhelm Hauff's short novel *Jud Süss* (1826), he was merely a child of his confused times and a victim of strange circumstances. The death sentence is now regarded as "a political murder in which justice was used as a convenient tool."

Lion Feuchtwanger's novel *Jud Süss* (1925; English transl., *Power,* 1927) endeavored to vindicate him, giving a vivid picture of the time and delving deeply into the psychology of Oppenheimer; the motion picture, also called *Power* (starring Conradt Veidt as Jew Suss) followed this line, while the Nazis produced a Jud Suss film which showed Oppenheimer as a demon of corruption and evil. OPPENHEIMER, MAX (Mopp), painter, b. Vienna, 1885. He studied at the Art Academy in Vienna (1900-3), and later in Prague (1903-6). In 1911 he went to Berlin; from 1915 to 1926 he spent some time in Zurich, Geneva, and Vienna, and in 1926 he settled in Berlin. There Oppenheim remained until

Samuel Oppenheimer

1933, after which he lived in Vienna until 1939, when he came to New York city.

Oppenheimer was one of the most important representatives of the Vienna school of expressionism. After his early landscapes and portraits, which, remotely related to Oskar Kokoschka, showed the influence of Van Gogh, he developed a highly personalized style, using a radiance of disjointed, vivid and bright colors, and a highly cultivated picture, to depict the rich and nervous inner life of people and things. Several Gothic elements are also included, as well as traits from El Greco. Oppenheimer's portraits displayed especially profound psychological insight; among his subjects were the writers Thomas Mann and Heinrich Mann (1911), Peter Altenberg and Arthur Schnitzler; the musicians Arnold Schönberg and Feruccio Busoni (1916; National Gallery, Berlin); the actresses Tilla Durieux (1913) and Maria Orska (1926); and the Berlin officials Böss (1927) and Lange (1928; in the Berlin City Collection), and von Webern (1928; in the Elberfeld Museum). Himself a cultured music-lover and fine violinist, Oppenheimer had a predilection for musical subjects, and among his paintings of this classification were: *Dur* (Ruhmeshalle Barmen); *Berliner Klingler-Quartett* (1917; Staatsgalerie, Vienna); *Wiener Rosé-Quartett* (Städtische Galerie, Nuremberg); his interesting studies of musicians' hands (Busoni) and of musical instruments; and, finally, his magnificent large painting, *Orchestra,* which was intended as a work of homage to the memory of Gustav Mahler. Its first draft was made in 1920, the second was begun with the Vienna Philharmonic in 1934 and completed in New York in 1940.

Oppenheimer also painted religious pictures: *Pietà* (1912; Wallraf-Richartz-Museum, Cologne); and the *Scourging* and *Burial of Christ* (1913). His paintings with a sport or medical background included *Operation* (1912), and a portrait of the laryngologist Dr. Friedmann, of Berlin, in which the crystalline presentation produces highly original effects. Among his other paintings were a *Self-portrait* made in 1921 (Modern Gallery, Prague); *The Editor* (1927); *The Black Cat* (1928); and numerous still-lifes (1913-39).

In New York, Oppenheimer continued his paintings, with a freer, more natural approach; he completed a series of portraits of American women and of still-lifes, called *Daily Life,* also a painting of the Kolisch Quartett (1940). Oppenheimer's etchings comprise a number of technically and creatively unusual pieces, and are included in the collections of the Albertina Museum, Vienna, as well as in the etching rooms at Munich, Berlin, Nuremberg and Zurich. He also did a series of ten illustrations for Heinrich Heine's *Le Grand* (1914) and for Flaubert's *La Légende de Saint-Julien l'hospitalier* (1929). In New York he produced, under the name of Maximilian Mopp, illustrations to Eduard Lasker's *Chess for Fun and Chess for Blood.* Oppenheimer was himself a master of chess.

MAX OSBORN.

Lit.: Michel, W., *Max Oppenheimer* (1911); Stix, A., and Osborn, M., *Das graphische Werk von Max Oppenheimer* (1931); *Veröffentlichungen des Kunstarchivs,* Nos. 24, 25 and 26; Glaser, C., *Graphik der Neuzeit* (1922); Kleefeld, W., in *Velhagen und Klasings Monatshefte,* vol. 43 (1928-29) 338-44; Brattshoven, O., in *The Studio,* vol. 92 (1926) 267-71; *Kunst und Künstler,* vol. 12 (1913-14) 305, 480; *ibid.,* vol. 23 (1924-25) 24, 26.

OPPENHEIMER, MORRIS SIMEON, jurist and communal worker, b. London, 1824; d. London, 1883. While he was secretary to the Jews' and General Library Institution, he studied law, and became a lawyer in 1858. He served on the law and parliamentary committees of the Board of Deputies until, in 1869, he was elected member of the board. Oppenheimer contributed to the constitution of the legal status of Jewish organizations of various kinds and of the Jewish community. He constantly endeavored to study British legislation in so far as it affected Jewish life, especially the matrimonial laws, which he dealt with in Picciotto's *Sketches of Anglo-Jewish History.* During the last years of his life Oppenheimer suffered from grave mental depression, and committed suicide.

OPPENHEIMER, SAMUEL, court Jew and banker of Leopold I of Austria, b. Heidelberg, Germany, 1635; d. Vienna, 1703. When the Jews were expelled from Vienna in 1670, Oppenheimer was permitted to remain in the city together with a number of other Jewish families, whom he declared to be his household servants and helpers. For twenty-four years thereafter he was engaged in the supplying of general provisions to the Austrian and German armies, and as a result attained to a prominent social position. During Leopold I's reign he financed the war against the Turks.

Oppenheimer was the typical court Jew, who rendered himself indispensable to the ruling prince and could be used for the most diverse purposes and missions. He employed the considerable wealth at his disposal to help the government or the rulers out of their financial difficulties. On one occasion he advanced the sum of 100,000 gulden to Margrave Ludwig von Baden, the imperial general in Hungary. At the time when Austria was struggling for its very existence in the Spanish War of Succession, Oppenheimer rendered her great financial aid; for these services he was granted the title of court agent and head factor. Yet these honors did not protect him from the attacks of the Vienna mob which pillaged his house in 1700.

Oppenheimer always defended the Jews and Judaism ardently, and became practically their spokesman in Vienna. He built synagogues and schools, helped the poor, and liberally supported artistic and scientific enterprises. In the early part of the year 1700 he gave financial aid, supplied passports, and ordered two ships to take 1,500 Hasidim to Constantinople on their way to Palestine. He spent large sums of money to combat

Johann Andreas Eisenmenger's bitterly anti-Jewish work *Entdeckţes Judentum,* and eventually succeeded in having the work confiscated by order of the emperor.

When Oppenheimer died, his fortune amounted to over 800,000 gulden, besides the sum of 5,000,000 gulden still owed to him by the government. After long and wearisome litigation, however, the state finally declared its debt to Oppenheimer null and void.

OPPENHEIMER, SELBY CHARLES, impresario, b. San Francisco, Calif., 1878; d. San Francisco, 1940. Starting out as an executive officer of theatres in his native city and other towns of California, he began his career of concert and special management in 1907. He had already directed the first American performance of La Bohême given by the Royal Italian Opera company in San Francisco in 1898. In 1916 he became the first business manager of his city's symphony orchestra, and seven years later he was appointed business manager of the San Francisco Opera company.

As director and sponsor of western engagements of numerous companies and artists he brought to the west coast, among others, the Chicago Opera company and the German Opera company (1917-31); the latter performed Wagner's complete Ring cycle in the west for the first time under Oppenheimer's management.

Famed artists under his direction included Paderewski, Pavlowa, Galli Curci, Mischa Elman, John Philip Sousa, Chaliapin. From 1924 to 1936 he acted as coast manager for Yehudi Menuhin. In 1932 he was appointed managing director of the six million dollar War Memorial of San Francisco, comprising the Opera House and the Veterans' Building.

OPPENHEIMER, ZACHARIAS, neurologist, b. Michelsfeld, Baden, Germany, 1830; d. Heidelberg, Germany, 1904. An associate professor at Heidelberg University from 1864 until his death, he made important contributions to neurology. Oppenheimer was the first to call attention to the possibility of arsenic poisoning through the use of house carpets. Among his works are: *Über progressive fettige Muskelentartung* (1855); *Über Rachitis* (1881); *Schmerz und Temperaturempfindung* (1893); *Physiologie des Gefühls* (1899).

OPPER, CLARENCE VICTOR, lawyer, b. New York city, 1896. Admitted to the New York bar in 1921, he was admitted five years later to practice before the Supreme Court of the United States. He was associated with Guggenheimer, Untermyer and Marshall in New York city from 1921 to 1923, and then with Griffiths and Content until 1926, in which year he became a member of the latter firm, until 1931. That year, turning to public service, he became counsel of the City Housing Corporation of New York, and in 1933 went to Washington, D. C., to be assistant general counsel of the Farm Credit Administration. The next year he was appointed to serve in the Treasury Department in the same capacity, and remained until 1938. In 1938 he was commissioned a member of the United States Board of Tax Appeals. Opper was editor of the *Columbia Law Review* (1920-21).

OPPER, FREDERICK BURR, cartoonist, b. Madison, Ohio, 1857; d. New Rochelle, N. Y., 1937. His father, Lewis Opper, was a brother of the famous French political journalist Henri de Blowitz, originally Adolf Opper. F. Opper, as he invariably signed his work, was one of the country's most important contributors to the early evolution of the American art of the comic strip and to the development of modern political caricature. While working on a home town newspaper, he sold several drawings and, thus encouraged, headed east in 1873, where he first attached himself to *Frank Leslie's* weekly, and then to the weekly *Puck.* There he remained for eighteen years, leaving finally to go with William Randolph Hearst's New York *Journal* in 1899. From then on his work was syndicated through the International News Service.

On *Puck* he had created a number of characters who became familiar to the American household: the commuter living in Lonesomehurst (Opper was a commuter from Brooklyn's Bensonhurst), the actor returning "broke" to Broadway, the tramp cast up by the panics of 1893 to 1894. Famous to millions of children and adults alike was the character of foolish, good-natured Happy Hooligan, with his inverted tin can hat; and Opper's "Alphonse and Gaston" became widely known symbols for politeness carried to delightfully absurd extremes.

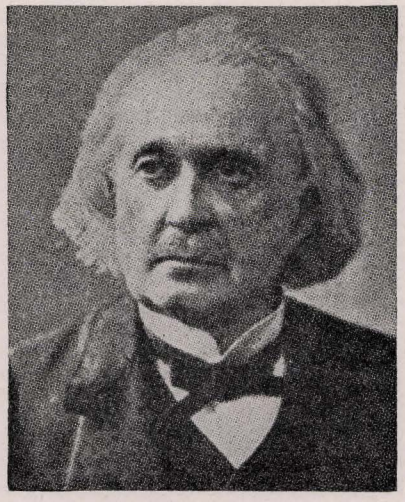
A man of serious ideas and versatile talents, Opper became Hearst's leading political lampoonist, developing the method of harping on a singular weakness of a person or thing until it was completely exposed. In this way, during the presidential campaign of 1900, with Hearst backing William Jennings Bryan, he caricatured William McKinley, Mark Hanna, the trusts, and Theodore Roosevelt; these drawings were collected in book form in *Willie and His Papa* (1901). His cartoons dealing with the supersession of England as a world power by the United States were published in *John Bull* (1903). His symbolic figures of bewildered John Bull, the downtrodden common man, and the bloated American trust financier were familiar to the country's daily newspaper readers. Other books include: *Alphabet of Joyous Trusts* (1902); *Our Antediluvian Ancestors* (1902); *Happy Hooligan* (1902); *Happy Hooligan Home Again* (1907), *Cy and Maude, His Mule* (1907). In addition, Opper illustrated the writings of such famous contemporary humorists as Mark Twain, Peter Finley Dunne, Bill Nye and George V. Hobart.

Lit.: The Deadline, Sept., 1917, p. 26; *New York Times,* Aug. 28, 1937.

OPPER DE BLOWITZ, ADOLF, *see* BLOWITZ, HENRI.

OPPERT, GUSTAV SOLOMON, orientalist, b. Hamburg, Germany, 1836; d. Berlin, 1908. In 1860 he became assistant librarian at the Bodleian Library at Oxford, England, and then held the same office at Windsor. In 1872 he went to Madras to be professor of Sanskrit at Presidency College. In 1894, after a trip through the Far East and America, he returned to Europe and became a private instructor of the Dravidian languages at the University of Berlin. Oppert was editor of the *Madras Journal of Literature and Science.* His chief works dealt with the civilization and literature of the Dravidian aborigines in India. He bequeathed his property to the Hochschule für die Wissenschaft des Judentums, of which he was a trustee.

OPPERT, JULIUS (JULES), Assyriologist, b. Hamburg, 1825; d. Paris, 1905. In 1848 he became an instructor in German and English at the Lycée National of Laval. Three years later he joined the expedition



Julius Oppert

which was sent by the French Government to explore Media and Mesopotamia. He succeeded in identifying the site of ancient Babylon and later published a report, *Expédition scientifique en Mésopotamie* (1857-64), which received the grand prix biennal. The French Government bestowed citizenship upon him and he was awarded the Cross of Legion of Honor in 1856. In 1857 his career as a distinguished scholar began when he was appointed professor of Sanskrit and comparative philology in the school of languages attached to the Bibliothèque National. Subsequently he became professor of Assyrian philology and archeology at the Collège de France. In 1881 he was made a member of the Académie des Inscriptions et des Belles Lettres, succeeding the Egyptologist Mariette. In 1891 he was appointed its vice-president.

Ledrain and Oppert founded the *Revue d'Assyriologie* (1881) and the latter was its editor. His work in Biblical research resulted in the publication of *Commentaire historique et philosophie du livre d'Esther* (1864); *Le livre de Judith* (1865); and *La chronologie de la Genèse* (1877).

He was the first to present a coherent Assyrian grammar in his *Éléments de la grammaire assyrienne*. He was a charter member of the administrative board of the Société des Études Juives and an active contributor to its publication, *Revue des études juives,* and was active in the Alliance Israélite Universelle and the Central Consistory of the Jews of France.

OPPLER, ALEXANDER, sculptor and designer, b. Hanover, Germany, 1869; d. Berlin, 1937. He was the son of Edwin Oppler. After attending the Academy of Munich, he lived for eight years in Brussels, six years in Paris and finally settled in Berlin, where he became a member of the Secession. Large-size plastic works by him could be found in the art galleries of Munich, Cologne, Stuttgart and Brussels, and he created many distinguished portrait busts. Oppler was awarded the Grand Medal at the international exposition at Munich in 1913. After the first World War he turned to designing and engaged especially in portrait etchings. One of his outstanding works was *Drunk Heracles.*

OPPLER, EDWIN, architect, b. Oels, Lower Silesia, Germany, 1831; d. Hannover, Germany, 1880. He studied architecture in Paris, where he devised a scheme for the restoration of cathedrals in Paris, Rouen and Amiens. Oppler was the creator, among others, of the Palace of the princes of Solms-Braunsfeld in Hannover, and he completed the Marienburg Castle in Hannover. He was active in the building of synagogues (Hannover and Breslau), in the Gothic style.

Edwin Oppler (b. Hannover, Germany, where his father was an attorney), painter, was the grandson of Edwin Oppler, and a nephew of Alexander and Ernst Oppler. From 1934 on, with great skill, he painted landscapes, still lifes and interiors.

OPPLER, ERNST, painter and etcher, b. Hannover, Germany, 1867; d. Berlin, 1929. A son of Edwin Oppler, he studied in Munich from 1886 to 1891; the following year he had the first exhibitions of his works, and one of his paintings was bought by the prince regent of Bavaria. In 1894 he went to London, where he stayed until 1901, then moved to Holland and in 1905 returned to Berlin.

Oppler, a member of the artists' group known as Secession, was renowned for his interiors and etchings. Originally an expressionist, he fell under the influence of Max Liebermann. His talent was at its best in the interpretation of dance and ballets, although he excelled also in portrait and landscape painting. A collection of his sketches drawn from the Jewish life of Eastern Europe was published in book form. Among his best works are *The Seamstress; Torah Study; The Letter; Russian Ballet;* and *Cracow Jews.*

OPTIMISM AND PESSIMISM. The question of the desirability of human existence is one that has concerned all philosophies and religions. On the one hand life brings many benefits; on the other, it brings sickness, suffering, poverty and humiliation. From such miseries men have sought to escape through an explanation of their origin that would lay the basis for pious resignation, or through a hope of better things to come. The manner and content of the solutions offered reveal the optimistic or pessimistic view of human life.

The Jewish contribution to this subject, as revealed in the Bible and rabbinic literature, is for the most part on the side of optimism, though there are occasional Jewish pessimists. To some degree their attitude has been modified by the contemporary prosperity or misfortunes of the Jews as a whole. Nevertheless, the cheerfulness of the Jewish view is generally in direct contrast to the gloomy speculations of Hindu philosophy, or to the melancholy streak that runs through Greek thought.

With the Hebrew people the general trend is in a decidedly opposite direction. First of all, it solves the problem of evil by declaring that man himself creates it. Man is endowed with free will; if he abuses it in committing sin he must suffer the consequences in ensuing evil. There is no evil in matter itself. The Bible states explicitly that whatever God created was good; He pronounced everything good after each successive day of creation. The fact that He created the world is in itself proof that the world is perfect. This optimism is rooted in the belief in the existence of God and is accentuated by the complementary belief that He rules over all that which He has called into existence.

This conception of a world that is good is one of the basic elements in the religion of Israel. In the farewell address of Moses, as reported in *Deuteronomy,* the Law-giver says: "God's work is perfect for all His

ways are justice; a God of faithfulness and without iniquity, just and right is He. Is corruption His? No; His children's is the blemish" (*Deut.* 32:4-5). Again, "I call heaven and earth to witness against you this day, that I have set before thee life and death, the blessing and the curse; therefore choose life" (*Deut.* 30:19).

Optimism in Judaism is rooted in the Hebraic concept of the origin of evil. Judaism does not regard man as having fallen from a state of perfection—a belief common to most pagan peoples. Man is not born with the taint of an original sin. Nowhere in the Bible is sin against God traced to Adam's disobedience. On the contrary, man comes pure from the hand of his Maker; he is created in the very image of God. He has been endowed with free will; and, to guide him, the moral law has been revealed. He is "but little lower than the angels." In brief, the world God has created, especially where it concerns man, is good from the very beginning.

However, experience often reveals a striking incongruity between belief and reality. Evils there are in the world and their existence cannot be denied, notwithstanding an abiding faith in God and in His goodness. A pessimistic note is heard now and then, sometimes just audible, at other times shrill with intense feeling. There is *Ps.* 90 with the despairing conclusion that in the end human life is but labor and sorrow. In a similar strain are *Ps.* 88, 39 and 22. Already in *Genesis* there is a view of the world comparable to Hesiod's description of the ages ever becoming worse. This is emphasized in *Daniel* where, however, the pessimistic conception of life is supplemented with a belief in the final establishment of the Kingdom of God.

The most pronounced pessimism is voiced by the author of *Ecclesiastes,* whose bitterness has seldom been surpassed, not even by Schopenhauer in modern times. In *Ecclesiastes* all human life is vanity and human wisdom breeds only sorrow. There is no divine Providence, and the day of death is better than the day of birth. Nevertheless, in the concluding chapters there is a recognition of the existence of God and the divine law operating in the universe—a sort of makeshift apology which prevented the exclusion of the book from the Biblical canon.

In a milder form the author of *Job* rebels against the stark realities in a world where the righteous suffer and the wicked flourish. Here is a God-fearing man subjected to unending moral and physical suffering. His friend Eliphaz maintains that he must have committed a sin for which he is being punished. But Job's righteous life is a flat refutation of it. There must be another reason. That the author finds in a dual doctrine: first, suffering serves a moral purpose in that it purifies and strengthens character; second, God's justice is manifest in the end—if a man suffer through no fault of his own, he will enjoy divine compensation. We have here, perhaps, the original idea of divine justice in the hereafter. The righteous who have been afflicted on earth will there be rewarded and the wicked punished.

As in the Bible, marked pessimistic tendencies are occasionally found in the Talmud. Thus, for example, in a commentary on the account of the creation, the Midrash Rabbah relates that in the Scroll of the Law used by Meir (2nd cent.) the Hebrew words for "behold it was very good" were changed into words meaning "behold, it was good to die"; and by the phrase "very good" the rabbi indicated the angel of death. The Talmud generally is less optimistic than the Bible. There is a spirit not of hopefulness but of resignation in the saying of Akiba that man should accustom himself to say "all that happens is for the best." However, there is found a definite leaning towards optimism in the discussions between the schools of Hillel and Shammai on the subject of human existence. The opinion of the Hillel school that human life is good and is a gift of God prevailed.

The pessimistic tendencies left no lasting impression upon the Jewish people. The idea that what God has created is good, so dominant in the Bible, has remained dominant in Jewish life and character. In prophetic times it is assumed almost with the certainty of a self-evident truth. It is not even put in question in the critical periods of Israel's history. Misfortunes were explained as a prelude to a manifestation of God's justice. The prophets had taught with the greatest force of conviction that divine justice must prevail, if not in the present day then in the days to come. Thus arose the Messianic idea on a universal scale, exactly as divine justice was discerned in the ultimate destiny of man as an individual.

While all other peoples placed the golden age in the past, Judaism sets the millennium in a future. The reason for this is plain. The history of Israel reveals the fact that with the exception of Joshua's conquest of Canaan and the heroic victory of the Maccabees there was no glorious past, from a political point of view, to look back upon. Yet they were unshaken in their belief that they were God's chosen people, and the prophets had assured them of a time when the glory of Israel will be universally acknowledged (*Isa.* 2:2-4).

Medieval Jewish philosophy reflects the prevailing Talmudic conception of human life, always leaning towards optimism. Saadia, for instance, is concerned with the problem why good is often accompanied by so much evil, and arrives at the conclusion that eternal bliss is the reward of the righteous who have suffered on earth. Maimonides sees in pessimism the false premise that man is made the center of creation; philosophy and religion have a universal outlook; viewed thus, evil in its very nature is only negative while the good is positive, creative and predominant. He held that the greatest blessing is the belief in God and in His providence. Armed with such a belief man can prevail against every form of evil.

OR ZARUA, *see* ISAAC BEN MOSES OF VIENNA.

ORACLE. Oracles were frequently consulted by the peoples of ancient times for the purpose of learning the future or obtaining advice in meeting their problems. Such an oracle usually consisted of a priestly group, generally located at a sacred place or possessing a special cult object, which used such means as trance, dream, casting of lots or the inspection of slaughtered animals as aids in determining their replies. The most

famous example is the oracle at Delphi which played such an important part in the history of Greece.

The Bible contains a number of such oracular responses in the stories of its heroes. The dreams of Jacob (*Gen.* 28) and Solomon (*I Kings* 3), taking place as they did in sacred localities, are very close to the oracular dreams of the ancients. When Rebekah went to inquire of the Lord (*Gen.* 25:22-23) it was probably to an oracle, and the response that was given to her is in the verse-form characteristic of an oracle. Moses apparently used the tent of meeting (Ohel Moed) for the same purpose; it is here that he consults God about the punishment of the blasphemer (*Lev.* 24:12) and the claims of the daughters of Zelophehad (*Num.* 27:5). The historical books of the Earlier Prophets contain several references to the oracular use of the Urim and Thummim, apparently a form of oracle by lot, in which objects were drawn from a bag to determine the answer to be given by God; this seems to have been connected with the ephod (*I Sam.* 23:9-12). A good example of such an oracle is in *I Sam.* 14:41 which, according to the Septuagint, should read: "If I and Jonathan are guilty, give Urim; if not, give Thummim."

There is no mention of oracles in the period after Solomon. This coincides with the rise of the prophets, who then seem to have replaced the priests as the bearers of the word of God.

See also: DIVINATION; DREAMS; URIM AND THUMMIM.

ORAL LAW (*torah shebe'al peh*), that part of traditional Jewish law which is not contained in the Torah itself (*torah shebichethab*). The idea is based on the fact that occasionally the Torah speaks of directions which are not incorporated in the actual Scriptures (*Deut.* 12:21), and the feeling that such concrete commandments as those dealing with the fringes, the phylacteries and the like, require authoritative directions in order to be properly fulfilled. The sages, beginning with the Pharisaic teachers, taught that in addition to the Written Law there was an Oral Law; for this a chain of tradition was provided (*Aboth* 1:1), through Joshua, the elders, the prophets, and the men of the Great Synagogue. Since, according to this view, Moses himself had not written down these laws, the writing down of them was forbidden, and they were transmitted orally by the sages to their pupils. Eventually, probably after the suppression of the Bar Kochba rebellion (135 C.E.) when persecution threatened to destroy the educational system, they began to be written down. As a justification for this innovation the Biblical verse (*Ps.* 119:126): "It is time to work for the Lord, for they have made void Thy law" was cited (*Tem.* 14b). The distinction between Written and Oral Law was no longer a literal one, but rather between the Torah itself and the laws that had developed under the influence of the Mishnaic and Talmudic teachers and their successors; the validity of the two Laws was equal.

This theory of the Oral Law had been developed and defended by the Pharisees. The Sadducees, and later the Karaites and the Reform Jews at the beginning of the 19th cent., denied that the Oral Law came from God or Moses, and were therefore regarded as heretics. Modern Orthodoxy retains the belief in the Oral Law in the same form as that of the Pharisees; modern liberal Judaism regards both Written and Oral Law as products of the same religious genius, but holds that both must be modified from time to time in accordance with the needs and the religious thought of the times. Both agree that the Oral Law has served the purpose of preventing the Written Law from becoming fixed and rigid by adding new elements, popular customs, and further expansions and applications of the Law.

ORAH HAYIM, the first part of the *Shulhan Aruch.*

ORAN (Arabic and Hebrew, Wahran), capital of the department of Oran in the western part of the French colony of Algeria, in Northern Africa, with a total population of 164,000, of whom 19,765 were Jews (1931). The department of Oran had, in 1931, a total population of 1,640,000, of whom 45,511 were Jews. A Jewish community had been in existence in this great center of commerce for several centuries when, in 1391, Spanish Jews from Catalonia and the Balearic Islands fled thither from persecution. When Oran fell into the hands of the Spaniards (1509), the Jews were banished from the city, but permitted to remain in its neighborhood; in 1679, however, they were expelled from the entire province.

In 1792 Mohammed al-Kabir took possession of Oran, after having forced the Spaniards to leave; the bey invited the Jews of Tlemcen, Mostaganem, Mascara and Nedroma to settle in the city. They were granted a place for their settlement, on condition that they pay certain taxes; the stipulation was dated 1801. The community increased owing to the arrival of Jews from Gibraltar and from various regions in Northern Africa, and the commercial development of Oran was fostered by the Jews, who carried on an extensive export trade in corn and cattle, the chief products of the province.

In 1805 the Oran Jews were threatened by a rebellious Mohammedan fanatic who had maltreated the Jews of Mascara, and many of them fled to the city of Algiers. The community suffered also in consequence of the Napoleonic wars, since the population was partly pro-French, partly against Napoleon. The occupation of Algeria by the French (1831) marked for the Jews the end of their insecurity, and the Jews of Oran used to celebrate the sixth of Ab as a holiday to commemorate the French conquest. A census taken in 1832 showed that the city had only 3,800 inhabitants, of whom more than two-thirds were Jews.

In 1870 the Jews of Oran, together with the other Algerian Jews, were granted French citizenship. Oran was a center of anti-Semitism; when, in 1898, four of the six Algerian deputies elected to the French Chamber were anti-Semites, one of them, Firmin Faure, represented the city of Oran.

The majority of the Oran Jews, up to 1940, were artisans and unskilled laborers. The men were shoemakers, tailors, cabinetmakers, plumbers, goldsmiths, bakers, chauffeurs and

porters, the women typists, dressmakers, domestic workers and laundresses. Some of them were farmers; the first vineyards in Oran were planted by native Jews. Altogether, most of the Oran Jews were poor. In some sections of Oran there were only 3½ square metres of living space per person.

The Jewish consistory of Oran, in 1940, comprised thirty-eight communities, including Tlemcen. Oran had its own ritual, the Mahzor Wahran. An outstanding scholar was Mordecai Darmon, author of the homiletical work *Maamar Mordecai* (Livorno, 1787), friend of Mohammed al-Kabir Bey.

The anti-Semitic legislation introduced into Algeria by the Vichy regime from 1940 on gravely affected the Jews of Oran. ALFRED WERNER.

ORANGE, a city in New Jersey within the New York and northeastern New Jersey metropolitan district. In 1942 it had in its total population of 35,717 (census of 1940) a Jewish population conservatively estimated at 1,200. Congregation Agudath Anshe Achim was organized in Orange in 1904. In 1930 the congregation (Conservative) elected Hyman J. Landau as rabbi, and in 1942 Baruch I. Treiger was the incumbent. In addition to a daily Hebrew school, a religious school and a women's auxiliary, the congregation sponsored an active cultural-social program. The synagogue was also used as a center for the Orange City Lodge, the Senior and Junior Daughters of Israel, the Senior and Junior Hadassah, the Ladies' Benevolent Society, and the Arbeiter Verband. In Orange, Jewish residents were largely engaged as local shopkeepers and retailers, some in the professions.

EAST ORANGE, in the same area, had in its total population of 68,945 (census of 1940) approximately 3,500 Jews in 1942. Here Congregation Sharey Tefilo (Reform) was organized in 1873, and the first synagogue built in 1894. The Ladies' Montefiore Aid Society, still in existence in 1942, was founded in 1883. In 1927 the congregation erected a new synagogue, and in that year Samuel S. Kaplan was called to the pulpit, serving until his death in 1929. Marius Ranson began his service in 1930, and was still the incumbent in 1942. Ranson, well-known as lecturer and writer, was one of the leaders in interfaith activities in New Jersey, and was president of the Essex County Conference of Catholics, Jews and Protestants from 1934 to 1938. Affiliated organizations of the congregation, which drew its membership from the four Orange communities and from Maplewood, N. J., were the men's club, the sisterhood, and the Junior League. The Temple sponsored an extensive religious and cultural program, and was, in addition, the meeting place of the B'nai B'rith lodge, the Infants' Welfare League and the Montefiore Aid Society.

In greater proportion than those in Orange, Jews residing in East Orange pursued their business and professional activities in Newark, N. J., or in New York city. The Jewish agencies of the Orange and East Orange communities were affiliated with the Essex County Council of Social Agencies and the United Jewish Appeal of Essex County, as well as with the Jewish Education Association of Essex County.

ORANGE FREE STATE, *see* SOUTH AFRICA.

ORDER BRITH ABRAHAM, *see* BRITH ABRAHAM, INDEPENDENT ORDER.

ORDER SONS OF ZION, the fraternal Zionist organization in America, with camps (branches) and members in twenty states (1942). The Order was founded in 1908 by a group of distinguished Zionists, including Dr. Judah L. Magnes, Dr. Joseph I. Bluestone, the Reverend Zvi Hirsh Masliansky, Joseph Barondess, E. W. Lewin-Epstein and Abraham Goldberg. The primary purpose was to utilize the fraternal urge of American Jews for the support of political Zionism. Its program is to aid the Zionist Congress in the establishment of a Jewish National Home in Palestine, to support all Jewish institutions devoted to the strengthening of Jewish nationalism, to foster the study of the Hebrew language and Jewish learning, and to provide medical, relief, life insurance and other services for its members.

Principal Zionist achievements are: (a) the launching of the Keren Hayesod (Palestine Foundation Fund) in the United States in 1921; (b) the organization of the Judea Industrial Corporation and the Judea Insurance Co., Ltd., the first Jewish insurance company in Palestine, and through it, the Palestine and Near East Fair Exhibition; (c) the Jewish National Fund is the Order's principal Zionist activity and receives from the Order the largest per capita contribution of any Zionist body. Between the years 1933 and 1942 it remitted to the Jewish National Fund a total of $150,000 for the establishment of a colony, K'far Bnei Zion, for Jewish refugees; a reforestation project in honor of Harris J. Levine and a Shechunah near Jerusalem in honor of Stephen S. Wise and Harry Grayer; (d) the endowment of the Bezalel Art School in Jerusalem; (e) the establishment (1941) of the American Red Magen David for Palestine to aid the Magen David Adom Societies in Palestine, known as the Jewish Red Cross.

The Order has an English and Hebrew ritual. English is the language used in the majority of the camps, although many of the older groups are Yiddish-speaking. Several camps conduct their business exclusively in Hebrew. The Order sponsors an extensive cultural program, including lectures, classes and cultural meetings, the publication and distribution of literature on general Zionist and Jewish topics, a monthly publication, the *Bnei Zion Voice,* contributions to the Histadruth Ivrith, the Hebrew University, and other cultural institutions.

Although its membership includes many Zionists of various leanings, the Order is committed to no faction and its Zionist activities are within the framework of the General Zionist Organization. Membership in the Order automatically includes membership in the Zionist Organization of America and the World Zionist Organization. It is represented on the executive of the Zionist Organization of America and on the directorates of the Palestine Foundation Fund, Jewish National Fund, United Palestine Appeal and United Jewish Appeal.

From 1935 on most newly-organized camps consisted of fully Americanized or second-generation American young men and women between the ages of sixteen and thirty. Special leadership and Zionist courses were provided for new groups. One bureau was devoted exclusively to youth work.

The presiding officers (Nasiim) of the Order since its organization were Judah L. Magnes, David Blaustein, Joseph I. Bluestone, Leon Zolotkoff, Joseph Barondess, Judge Jacob S. Strahl, Abraham Shomer, Nathan Chasan, Sol Friedland, Max Perlman, Isaac Allen, Joseph Kraemer, Dr. Harris J. Levine, Harry Grayer and Harry A. Pine. In 1942 the grand secretary (Mazkir) was Herman Zvi Quittman. The principal offices of the Order were in New York city.

HERMAN ZVI QUITTMAN.

ORDINANCE, *see* TAKKANOTH.

ORDINATION (Hebrew, *semichah*). All Jewish religious leaders had to be ordained before they were permitted to decide practical questions in Jewish law. The Bible records that Moses ordained Joshua by placing his hands on him (*Num.* 27:22-23), and this became the standard mode of ordination until the Hadrianic persecutions (about 135 C.E.), when death was the penalty decreed for any one ordaining or being ordained. The teachers then decided to ordain by merely conferring the title rabbi. After the persecutions ceased some went back to the old method, but by the 12th cent. the ceremony of the laying on of hands

as a mode of ordination had completely disappeared.

Ordination could be conferred only by one who himself had been ordained, and both the ordainer and the ordained had to be in Palestine. It was, however, not necessary for them both to be together in Palestine, as one could be ordained by letter or messenger. Ordination was conferred by a board of three, except in times of emergency, when one was sufficient. While he was being ordained the scholar wore a special cloak trimmed in gold, and after the ceremonies the praises of the ordained were told (*Midrash Lev.* 2:4; *B.M.* 85a).

Until the middle of the 2nd cent. C.E. ordination was granted by individual rabbis, but as this led to certain abuses it was decided to center all power of ordination in the hands of the Nasi (Patriarch) and the rabbis of his academy. The Patriarchs were given this honor because of their great learning, their Davidic descent, and because their direct ancestor Hillel could trace the chain of his ordination back to Moses (*Aboth* 1:1-12). Before the time of Judah Hanasi ordination was usually granted only when there was a vacancy in the courts, whose members also had the title Zaken (elder). Appointment to the court was called Minnui. As the Jews became more scattered and great communities arose in Babylonia and in various parts of the Roman Empire, it was deemed advisable to ordain scholars even though there was no immediate vacancy for them in any Palestinian court.

Although a scholar was well versed in all phases of the law, he could be ordained by the Patriarch to decide only certain phases of the law. His ordination, also, could be limited in time and locality. If it turned out that the ordained was unfit, his ordination was revoked (*Yer. Taan.* 4:2). Those who were worthy of being ordained but for some reason did not receive their ordination were called Hakim (*Sanh.* 86a).

Unordained judges in Babylonia and other countries were permitted to decide all phases of the law, but were forbidden, unless they received ordination, to impose Biblical fines (*dine ḳenasoth*), such as the double restitution of the thief, the fines of the ravisher and seducer, and certain types of damages (*B.K.* 84a).

The Babylonian Amoraim bore the title Rab, as Rabbi was a title reserved for those who were ordained in Palestine. Some of the Babylonian Amoraim of the late 3rd and 4th centuries went to Palestine to study and receive their ordination, but toward the end of the 4th cent. the Patriarchs decided not to ordain any foreign scholars who did not intend to reside in Palestine.

It has been believed that ordination ceased in Palestine either in 359 C.E., when the Patriarch Hillel II revealed the rules by which the calendar was calculated, or in the early 5th cent., when Theodosius abolished the Patriarchate. Bernard Revel has adequately shown that ordination did not cease in Palestine until the death of the Nasi and Gaon, Daniel ben Azariah, in 1062 C.E., although it seems to have continued sporadically until 1099, when the Crusaders pillaged Jerusalem (Marcus, J., in *Horeb,* vol. 6, p. 28).

Babylonia, from the end of the Tannaitic period until the end of the Gaonate (last half of the 2nd cent. to the middle of the 11th cent.), had been under a dual leadership: the exilarch, and the heads of the great academies and their successors, the Geonim. The exilarch appointed judges from among those deemed fit by the heads of the academies and the Geonim to be worthy of such office. Although there was sometimes severe friction between the exilarch and the scholars, most of the time they worked in close harmony.

During the medieval period the spiritual leaders of Spanish Jewry, which was of Babylonian origin, were called Rab. The scholars of France and of German and Italian Jewry, which was of Palestinian origin, were called rabbi, and those actually occupying rabbinic positions were often called Rab Rabbi. As the title rabbi had gradually fallen into misuse, it was decided in Franco-Germany of the 14th cent. to substitute the title Morenu (our teacher) to designate those who were well versed in the intricacies of the law. The term, however, gradually lost this meaning and became an honorary title for a learned layman. Haber is also an honorary title for a learned layman who was not deemed worthy of the appellation Morenu.

In 1538 Jacob Berab, basing himself on the statement of Maimonides (*Hilchoth Sanhedrin* 4:11; Commentary on *Sanh.* 1:3; *Bech.* 4:3), that if all the wise men of Palestine agreed to ordain a certain scholar the chain of ordination could be renewed, gathered together twenty-five of Safed's outstanding scholars who ordained him. After his ordination, Berab ordained four scholars, among whom were Joseph Caro and Moses di Trani. Joseph Caro ordained Moses Alshech, who ordained Hayim Vital. Berab made the mistake of asking the consent of the Jerusalem rabbis after the ordination had already been granted. Levi ibn Habib, the principal rabbi of Jerusalem, refused his consent, and this led to a violent controversy. With the death of Berab the whole movement died out.

In medieval and modern times, ordination, usually in writing, has been granted by individual rabbis and by heads of Yeshivas for the following two reasons: first, to show that the one ordained is sufficiently versed in the intricacies of the law to be able to render authoritative decisions (Hattarath Horaah), and, secondly, to observe the injunction which prohibits a pupil from giving decisions in the vicinity of his teacher unless he obtains his teacher's permission (*netilath reshuth*).

The crux of the written ordination is that the ordained has learned from or has been examined by the ordainer, who finds him worthy to "Yoreh Yoreh" (render decisions in ritual matters) and to "Yadin Yadin" (render decisions in monetary disputes), for which he is ordained (*semichah*).

As the Russian government for a while appointed rabbis who were usually very poor scholars, and as Reform and Conservative theological seminaries confer the title rabbi on their graduates, the title rabbi is no longer an indication, as it was up to the last two centuries, that its bearer is thoroughly acquainted with the laws of the *Shulhan Aruch* and its commentators. In modern Hebrew Rab (Ashkenazic pronunciation, Rav) denotes an Orthodox rabbi, while rabbi is an appellation for Conservative or Reform rabbis. The English term "rabbi," however, is the commonly accepted title for the spiritual leaders of all three groups.

ORDRONAUX, JOHN, privateersman, b. Nantes, France, 1778; d. South America, 1841. Educated at a naval academy at Bordeaux, he became a seaman of extraordinary ability. At the outbreak of the War of 1812 Ordronaux obtained a letter of marque and, with official status as a privateer, sailed for America. While at New London he barely escaped the British, and shortly thereafter he captured the British ship *Lady Sherlock* and brought the prize to New York. This was the beginning of a successful career as a privateer which reached its climax in 1814, when he was given the command of the *Prince de Neufchâtel.* In March of that year he took nine valuable prizes in the English Channel, and although invariably pursued, always managed to escape. The goods captured by him from the enemy sold for nearly three million dollars. In addition, a large amount of specie was secured.

His crowning achievement was the capture of the *Endymion,* an English frigate vastly superior in guns and manpower. When the battle was fiercest Ordronaux threatened to blow up the ship if his men retreated further. The threat had considerable effect, because in twenty minutes the men of the *Endymion* were willing to surrender.

Captain Ordronaux, described in the diary of one of his crew as "a Jew by persuasion, a Frenchman by birth, an American for convenience, and . . . diminutive in stature," retired after this engagement and became part owner of the vessels of Mme. Charretton, his former employer. In 1815 he married Mlle. Jeanne Charretton and became a merchant in New York. He was a pioneer in the development of the South American trade.

JOHN ORDRONAUX, his son, an alienist and authority on military hygiene, was professor of medical jurisprudence at Columbia University from 1860 to 1894, and donor of the Ordronaux prize awarded the Columbia student of highest standing in the law school.

OREGON, a North Pacific state of the United States, with a population of 1,089,684 (census of 1940), including about 11,650 Jews. Approximately 10,000 of these lived in Portland in 1937. The rest were distributed mainly in urban communities in the western portion of the state approximately as follows:

Albany	17	Klamath Falls	24
Astoria	41	McMinnville	12
Baker	50	Medford	22
Ben	15	Oregon City	14
Burns	20	Pendleton	23
Eugene	77	Roseburg	24
Hillsboro	14	Salem	85

Although there was a tendency among Jews to flock to the western portion of the state, away from the grazing and agricultural east, the city of Heppner, in the northeastern part of the state, was named for Henry Heppner in 1873, and Reuben Alexander was mayor of Pendleton, situated still further to the east.

Jews settled in Oregon during the gold rush of 1848, attracted by opportunities to trade with prospectors who required food and supplies. Like the other pioneers, some Jews came to Oregon by the overland route, crossing mountains, prairies, and deserts. Others rounded Cape Horn or crossed the treacherous Panama isthmus in order to reach the western coast of the United States. These early Jewish settlers were for the most part German in origin, as pioneer days in Oregon coincided with the period of German immigration to America. As the industrial life of the state developed, they established businesses both wholesale and retail in Portland, Salem, Eugene, Roseburg, Oregon City, Albany, and Corvallis. Thus, Aaron Meier and Sigmund Frank came to Oregon as peddlers in the early territorial days of the state. In 1857 they formed a partnership and opened a store in Portland. The enterprise eventually developed into one of the outstanding commercial successes of the Pacific Northwest.

For the Holy Days, the Jews of Oregon travelled to Portland for services. In 1858, the first Jewish congregation, Beth Israel, was organized in that city. Among the founders were H. F. Bloch, L. Cahn, L. Cohn, S. L. Blumauer, Abraham Frank, Jacob Mayer, Leopold Mayer, M. Mansfield, B. Simon, and J. Micholup. Because of the predominantly German Jewish membership it was spoken of as the Deutsche Schul in distinction to Ohavai Sholom, the Polische Schul, founded in 1869 by some of the members of Beth Israel. Among the earliest members were N. Goodman, H. Harris, H. Mitchell, E. Elkeles, G. Wood, H. Wolf, I. Franklin, L. Cohen, and M. Simon. The membership of this congregation was strongly reinforced by the influx of Jews from the south and east of Europe. These newcomers were also instrumental in establishing Neveh Zedek in 1901. In 1942 Beth Israel was the only Reform congregation in Oregon.

Outside the city of Portland, the only congregation in Oregon was founded in Albany in 1878. It did not flourish, however, due possibly to the tendency to regard Portland as the center of religious life.

Jews have featured prominently in the political life of Oregon. Solomon Hirsch was American minister to Turkey in 1891 and Julius L. Meier was governor of Oregon from 1931 to 1935. Joseph Simon was United States Senator from 1898 to 1903 and mayor of Portland. Benjamin Selling, S. Sichel, Edward Hirsch, and Henry Blackman were state senators. Other members of the state legislature included D. Solis-Cohen, Phillip Wasserman, and McKinley Mitchell. Louis Fleischner and Edward Hirsch were state treasurers and S. H. Friendly was regent of the state university.

OREN, *see* DAVNEN.

ORENSTEIN, BENNO, founder of the world-famous engineering firm, Orenstein and Koppel Com-

pany, b. Posen, 1581; d. Berlin, 1926. The firm established by Orenstein and Arthur Koppel in 1876 had for its initial object the introduction into Germany of narrow-gauge light industrial railways. In 1893 the firm started manufacturing "transportable railways," until then unknown in Germany; in 1899 it began to make equipment for standard-gauge railways, such as locomotives, cars, and railway signals. Orenstein's family abandoned the Jewish faith.

ORENSTEIN, MOSES, Hebrew writer, b. Lisko, near Sanok, Galicia, 1839; place and date of death unknown. He was director of a Jewish school at Ploesti, Roumania, and editor of *Haholech* (Jassy, 1878-79) and *Hamitzpah* (Czernowitz, 1888). He published many popular books on the history of the world, and also a few novels. His *Toledoth Haammim* (Vienna, 1870) is a descriptive history of the customs, usages, religions and forms of government of various nations of the world.

ORGAN. In the 19th cent. struggle which took place in Germany for reforms in the synagogue service, the matter of the permissibility of the organ in the synagogue became the shibboleth of the opposing parties, and was of decisive importance. No other synagogal reform met with such bitter resistance as did this one; in many German communities it provided the occasion for the formation of "Torah-true" (more Orthodox) congregations. A synagogue with an organ finally came to be regarded as a Reform synagogue.

Before the 19th cent., instrumental music was used only sporadically in the various synagogues, for example at Baghdad in the Middle Ages and at Corfu, Venice, Modena and Mayence in the 18th cent. A synagogue at Prague had for a long time owned an organ which was played on the eve of the Sabbath and festivals, just before sundown, at the commencement of the festival. In the 19th cent., for the first time, the organ was introduced into the temple established by Israel Jacobson at Seesen, Germany, in 1810, in connection with other reforms in the service. After he removed to Berlin, Jacobson, in 1815, introduced a similar divine service with organ into his private synagogue. His intention of carrying over this reform, including the organ, to the Berlin synagogue service evoked violent resistance on the part of the older and pious Jews, and led to the closing of this synagogue by the government.

In the meantime, however, the "Temple" community at Hamburg had established a Reform divine service with organ in 1818. This service and the introduction of the organ were resolutely opposed by the rabbis of Hamburg. In their defense the Reformers published an opinion by various Hungarian and Italian rabbis which had been secured at the instigation of Jacobson in favor of his Berlin services. In opposition to this work, which was published by Eliezer Liebermann under the title of *Or Nogah* (Bright Light), the Hamburg rabbinical collegium had published a great collection of opinions entitled *Eleh Dibre Haberith* (These Are the Words of the Covenant), in which the organ as well as the other reforms introduced by the Temple were violently opposed and declared to be forbidden by many of the greatest Talmudists and authorities of that time, such as Akiba Eger, Jacob Lissa and Moses Sofer. All the numerous opinions and treatises dealing with the matter of the organ dispute which have since been published go back, for their proofs both for and against, to these two Hebrew books, as well as to a third, written in 1820 by Rabbi Abraham Löwenstamm and called *Tzeror Hahayim* (Bundle of Life).

Three questions are at issue in the matter of determining whether the organ is ritually permitted in the synagogue:

1. Is instrumental accompaniment in general permissible at synagogal divine service?

2. Is it permitted on Sabbath and festivals?

3. Is organ-playing in particular permitted in the synagogue?

In opposition to the organ, it was pointed out that mourning for the fall of Jerusalem and the destruction of the Temple entailed a prohibition of music; that it was forbidden, both within and without the synagogues, to play music on Sabbath and festivals or to have such music played for one by non-Jews; finally, that the organ was to be regarded as a musical instrument of the church and that it was therefore prohibited under the category of imitating the religious customs of Christianity (*hukkoth hagoyim*).

Those in favor of the organ brought out the fact that the Talmudic prohibition of music referred rather to music at feasts or banquets than to music at divine service, and declared that the latter had never been excluded from the synagogue; furthermore, that the prohibition of music was made in a period of great suffering and sadness, which provided the impetus toward asceticism. As regards the prohibition of playing music on the Sabbath, however, the Talmud itself considers music as an art, and not as in the nature of work; the fear, mentioned in the Talmud, that one might fix or repair musical instruments on the Sabbath did not apply at all to the organ, and since it was permitted to play music before a bridal couple on the Sabbath in order to heighten the religious solemnity of the occasion, the same must assuredly be permitted for the enhancement of the religious solemnity of an entire congregation. The third objection was refuted by the proof that the organ was not a Christian invention, but that in all probability it was derived from the Temple at Jerusalem, in which, it is mentioned, there was a sort of organ which had a hundred tones; in addition, the term *hukkoth hagoyim* means something utterly different from Christian customs and practices, as is clear from the *Shulhan Aruch*.

In the further discussion as to the organ the latter argument, the question of the adoption of a Christian custom, played the most significant role as a matter of feeling, and represented both before and after the main reason for the rejection of the organ by the Conservative Jews. Leopold Zunz' statement in his *Gottesdienstliche Vorträge* is of significance: "That which is new is only the accompaniment of the music—but it is not un-Jewish. Music and song formed a chief component part of the Temple service. . . . However, communal concord is the best-sounding harmony; for this reason, the organ and choir-singing should be omitted if they only are the cause of serious dispute in the community." Abraham Kohn, rabbi of Hohenems, in Abraham Geiger's *Wissenschaftliche Zeitschrift für*

jüdische Theologie, declared himself in favor of the introduction of the organ, and asserted that a Jew should play it on the Sabbath. At the Frankfort rabbinical assembly of 1845 Leopold Stein, called as arbiter in this matter, gave as his decision that playing the organ in the synagogal divine service is permitted and that the organ may be played by a Jew. A number of larger Jewish congregations introduced the organ at that time.

In 1857 the author Ludwig August Frankl was consulted about this matter by the Jewish community of Vienna; without attempting to assume the competence of a rabbinical authority, Frankl declared against the organ because the Jews regarded it as something specifically Christian. The organ was nevertheless introduced into several Austro-Hungarian communities, and even into a synagogue at Cracow and one at Lemberg, in Galicia.

The question of the organ again became acute in Germany when, in 1862, the Berlin Jewish community proposed introducing an organ into the New Synagogue in the Oranienburger Strasse. Geiger and Philippson issued detailed opinions in favor of the organ, whereas Michael Sachs and the rabbinical assessor Rosenstein in Berlin warned against its introduction; the latter were joined by Meyerbeer for musical reasons. A large number of other rabbis, including Löwe of Ratibor, Landsberger of Darmstadt and Maier of Stuttgart, favored the organ at that time, opposed by Lehmann of Mayence, Cohn of Schwerin, Deutsch of Sohrau, Schwartz of Cologne, and Gugenheimer of Kolin. The Leipzig Synod of 1869 declared: "The introduction of the organ is to be recommended; no religious scruple hinders its being played on the Sabbath and on the holidays." The following synod, which met at Augsburg in 1871, added: "A Jew is permitted to play the organ in a house of worship on the Sabbath."

In more recent times the organ question aroused considerable dispute and discussion in Cologne from 1898 to 1902, when the question of its introduction into the second communal synagogue was bitterly debated, and in Berlin from 1902 to 1905, when the overwhelming majority of those intending to attend the synagogue there expressed their desire to have an organ introduced into the Rykestrasse Synagogue. The status of the organ question in Germany was best expressed by Elbogen's decisive historical conclusion: "In almost all the larger congregations, little by little, a divine service with musical accompaniment was instituted; as a result, in almost all places a portion of the congregation continued to hold a separate religious service in the traditional manner."

The Jewish community of Charleston, S. C., was the first in America to introduce an organ, in 1841. The organ was introduced without any considerable opposition into a number of new synagogues constructed throughout the United States. There are even congregations belonging to the Conservative wing of Judaism which employ organ accompaniment in the divine service. When, in 1856, the French chief rabbis wished to give permission for the playing of the organ by a non-Jew on the Sabbath, several of the rabbis of Alsace-Lorraine rigidly opposed it, whereas Gerson Lévy of Metz ardently favored the necessary reform and the introduction of the organ. As early as the first half of the 19th cent. a number of Jewish congregations in Italy introduced organ accompaniment, without making any change in the ritual. In England only the three Reform synagogues as well as the synagogues of the Jewish Religious Union have organs; at weddings, however, the organ is customarily employed even in Orthodox synagogues. ORGANIZATIONS. There have been Jewish organizations ever since the beginnings of Jewish community life in the period of the Second Temple. Practically all of these, however, were of a purely local nature, devoted to the various problems of the community. It was not until the 19th cent., when the Jews began to be admitted into the larger world and to attempt to revise their culture, that there arose in Germany such organizations as the Gesellschaft zur Verbreitung der Handwerke und des Ackerbaus unter den Juden (1812) and the Verein für Cultur und Wissenschaft der Juden (1819). A few decades later news of the persecutions of the Jews led other groups to band together into various relief organizations, beginning with the Alliance Israélite Universelle (1860). At the same time various religious groups of like minds began to form organizations as a means of furthering their ideas, and with the rise of Zionism there came organizations to promote the creation of a new Jewish center in Palestine.

By the 20th cent. there were over a hundred different organizations which were steadily growing and increasing their influence. After 1933, however, many of them were suppressed or forced to suspend their activities in Germany and in countries that fell under Nazi domination. The chief Jewish organizations in the 20th cent. are given in the list below:

Agudath Israel (Orthodox, founded 1912, headquarters London).

Alliance Israélite Universelle (defense and educational, founded 1860, headquarters Paris).

Allianz, Israelitische, zu Wien (relief work, founded 1873, headquarters Vienna).

American Jewish Committee (defense and relief work, founded 1906, headquarters New York city).

American Jewish Congress (defense and relief work, organized 1917, reconstituted 1922, headquarters New York city).

Anglo-Jewish Association (political and philanthropic, founded 1871, headquarters London).

Anti-Defamation League (defense, organized 1913, headquarters Chicago).

Avukah (Zionist, organized 1925, headquarters New York city).

B'nai B'rith (fraternal and service, organized 1843, headquarters Washington, D. C.).

Board of Deputies of British Jews (defense and relief, founded 1760, headquarters London).

Bund (Socialist, founded 1897, headquarters Paris).

Central Conference of American Rabbis (Reform, organized 1889, headquarters Macon, Ga.).

Central-Verein Deutscher Staatsbürger Jüdischen Glaubens (general organization of the Jews of Germany, founded 1893, headquarters Berlin).

Deutsch-Israelitischer Gemeindebund (communal, founded 1869, headquarters Berlin).

Hadassah (women's Zionist, founded 1912, headquarters New York city).

Hicem (emigration, founded 1926, headquarters Lisbon).

Hilfsverein der Deutschen Juden (relief and emigration, founded 1901, headquarters Berlin).

Histadruth Haobedim (labor, founded 1920, headquarters Tel-Aviv, Palestine).

Jewish Agency for Palestine (advising and cooperating with the administration of Palestine, founded 1929, headquarters London).

Jewish Colonization Association (immigration, founded 1891, headquarters Paris and London).

Jewish National Fund (land-purchasing agency for Palestine, founded 1901, headquarters Jerusalem).

Jewish War Veterans of the United States (fraternal, founded 1896, headquarters New York city).

Joint Distribution Committee, American Jewish (relief, founded 1914, headquarters New York city).

Maccabi (athletics, founded 1895, no headquarters).

Mizrachi (Orthodox Zionist, founded 1902, headquarters Jerusalem).

National Council of Jewish Women (women's, founded 1893, headquarters New York city).

ORT (relief and reconstruction, founded 1890, headquarters Marseille, France).

OSE (hygiene, founded 1912, headquarters Montpellier, France).

Palestine Foundation Fund (upbuilding of Palestine, founded 1921, headquarters Jerusalem).

Rabbinical Assembly of America (Conservative, founded 1901, headquarters New York city).

Rabbinical Council of America (Orthodox, founded 1923, reorganized 1935, headquarters New York city).

Reichsvereinigung der Deutschen Juden (representation of German Jews, founded 1933 as Reichsvertretung, headquarters Berlin).

Union of American Hebrew Congregations (Reform, founded 1873, headquarters Cincinnati).

Union of Orthodox Rabbis of the United States and Canada (Orthodox, founded 1902, headquarters New York city).

United Synagogue of America (Conservative, founded 1913, headquarters New York city).

World Union for Progressive Judaism (Reform, founded 1926, headquarters London).

World Zionist Organization (Zionist, founded 1897, headquarters London). SIMON COHEN.

Lit.: *Philo-Lexikon* (1935) 508-12; annual lists are published in the *American Jewish Year Book* and the *Jewish Year Book* (London).

ORGELBRAND, SAMUEL, publisher, b. Warsaw, 1810; d. 1868. After completion of his studies at the rabbinical seminary he opened in 1836 a small antique shop in Warsaw and established some years later a publishing house in which, up to his death, some 250 works, among them 100 in Hebrew, were published. Among others he published, for the first time in Poland, the Babylonian Talmud in 12,000 copies and also the great Polish encyclopedia in twenty-eight volumes.

ORIENTALIA, term used in bibliography and book catalogues for works that deal with the Orient (either the Near East or the Far East) or which are written in the languages of the Orient. It often embraces certain Hebraica, as well as Judaica that are written in languages spoken by the Jews in the Orient: Judeo-Spanish (Ladino, Spaniolish), Judeo-Persian, Judeo-Tatar and the like. Accordingly, catalogues of Orientalia contain many items of Jewish interest.

For further details, *see* BIBLIOGRAPHY.

ORIENTATION, *see* ARCHITECTURE; MIZRAH.

ORIGEN, church father, b. Alexandria, about 185; d. Tyre, 254. He won great fame as a theologian, but was condemned by many as a heretic. His most noteworthy achievement in the field of Bible exegesis was his *Hexapla,* a work arranged in six columns for the purpose of comparing the Hebrew text with the current Greek renditions. The first column contained the Hebrew text, giving one or two words to each line; the second, a transliteration of the Hebrew in Greek letters; the third, the translation of Aquila, as being nearest to the Hebrew; the fourth, fifth and sixth, those of Symmachus, the Septuagint and Theodotion, respectively. In addition, Origen made an attempt to make the Septuagint text conform with the Hebrew by additions and marking off of passages not found in the Masoretic text; these he indicated by the use of various signs. His reconstructed Septuagint text was widely copied and added considerably to the confusion which prevailed in the manuscripts of that version. The *Hexapla* itself has survived only in fragments through citations; G. Mercati discovered a small portion, in a minuscule manuscript of the 10th cent., containing the second to sixth column of eleven Psalms. The Syriac translation made by Bishop Paul of Tella in 617 is so close in language and construction to the Greek that it gives an almost exact idea of the original text of the *Hexapla.* A photolithic edition of this was made by A. M. Ceriani (Milan, 1874); see also Lagarde, *Bibliotheca Syriaca* (1892).

ORIGINAL SIN. According to the teachings of the Christian church, all men are born with a burden of guilt resting on their souls which makes them incapable of either desiring or doing the good by themselves. This burden is conceived of as an inner wickedness and guilt clinging to the souls of all men, an eternal condition of backsliding. The doctrine is based upon an interpretation of the story of Adam's disobedience as related in *Gen.* 3 and his subsequent fall from a state of original justice or righteousness, and support is sought for it in similar exegetical interpretations of various isolated passages of the Bible.

Both Catholicism and Protestantism find the cause of moral and spiritual imperfection in man in the sin of Adam, but they describe the effects of this sin differently. Catholicism teaches that through the sin of the First Man, the image of God in man, though not entirely destroyed, was disfigured, inasmuch as the power of the will was weakened so that it is more inclined toward the evil than the good. What is left to man is a capacity for performing acts of civil virtue to which no special religious values are ascribed, but these acts are not a means of reuniting man with God. Protestantism depicts even more sternly, especially in its Lutheran and Calvinist branches, the effects of the "Fall." Man is not merely crippled in his moral capacities, but is utterly depraved and completely unable to do anything good through his own power. Thus all the works of man, even his so-called "good deeds," are basically sinful.

The sin of Adam, then, according to Christian theology, did not remain merely the first sin of man, but was transformed into an eternal blemish transmitted from him to all his descendants, so that each man enters the world in a condition of sinfulness. Since it is, in this theology, the source of all other sins, it is called the "original sin."

Many of the other important dogmas of Christian theology are corollaries to this doctrine. If, for example, all mankind incurred grievous guilt through Adam, justice demanded that full atonement be made. This, however, could be achieved only if someone who was without sin—i.e. who was in the same state as Adam was before the "Fall"—would take upon himself mankind's sin and through suffering and death expiate the guilt and redeem mankind. Since God alone was without sin, He alone could make this atonement; but in order to do so, He had to assume the form of man. Thus Jesus, who was, according to Christian doctrine, at once God and man, took the sin of man upon himself, offered himself as an expiatory sacrifice, and redeemed mankind, or rather those who believe in him, from the punishment due to it because of Adam's sin. In this way the doctrines of the vicarious atonement, the incarnation and the messiahship of Jesus may be derived from the doctrine of the original sin.

Even after the period of the Enlightenment the theological essence of the doctrine was preserved in Christian thought. In liberal Protestant circles this doctrine was reinterpreted as a poetic statement of what was still for the liberal Christian the incontestable truth that a natural impotence dwells in the human soul and that there is a fundamental tendency in man toward evil which can not be overcome by his own strength. Salvation is still acquired through faith in the unique personality of Jesus who, although he is no longer considered the son of God in the orthodox Christian sense, serves as a guide and model through whom man overcomes his natural sinfulness.

Judaism, on the other hand, refuses to accept the doctrine of the eternal transmission of a spiritual blemish and believes instead in the inborn power of man to do good. Without disputing in the least the seriousness of the temptation to sin, Judaism maintains that it is possible for man to avoid sin through his own spiritual strength and determination. It believes in the unsullied purity of each new-born soul—a doctrine classically stated in the Talmud (*Ber.* 60b)—and thence taken over into the prayer-book—in the phrase "My God, the soul which Thou gavest unto me is pure." It does not concede sin's predominant power over man, but rather adheres to the belief that man, through the power for good with which he is endowed, can keep in check the impulse and the tendency toward evil.

In Judaism there was developed the doctrine of the Yetzer Hara and the Yetzer Hatob, the evil and the good inclinations which reside in man. The evil inclination, however, is not conceived of as either independent or arbitrary, nor as a blemish inherited from Adam as consequence of his disobedience. Thus in the rabbinic interpretation of *Gen.* 8:21, "the imagination of man's heart is evil from his youth"—which is frequently used by Christian exegetes as a Biblical basis for the doctrine of original sin—the answer to the question "Why did God create the Yetzer Hara, the evil inclination?" is put in God's mouth. "You yourselves pervert your goodness. When you are a child you do not sin; when you grow up, you sin. And if you argue that man can not guard himself against sin, know that there are many things more terrible and more bitter in the world than the evil inclination and man is able to make them sweet and pleasant through his own efforts. So, too, the evil inclination which is given into man's power may be overcome by him" (*Tanhuma Bereshith* to the passage).

Thus man himself is responsible for the outcome of the struggle between good and evil that takes place within him. The doctrine of individual responsibility which was enunciated by Ezekiel, "the soul that sinneth, it shall die" (*Ezek.* 18:4), has provided a strong bulwark against the acceptance of the doctrine of original sin into Judaism; and although occasionally it has cropped up in Jewish thought, nevertheless, in the words of Kaufmann Kohler: "The phrase, 'The Fall of Man,' can mean, in fact, only the inner experience of the individual, who does fall from his original idea of purity and divine nobility into transgression and sin. It cannot refer to mankind as a whole, for the human race has never experienced a fall, nor is it affected by original or hereditary sin"; "Judaism rejects completely the belief in hereditary sin and the corruption of the flesh."

ORIGINAL VIRTUE, a term sometimes used by Jewish theologians as a contrast to the Christian doctrine of Original Sin. Under it are comprised two separate ideas. The first is that, in contrast to the Christian idea that all men are tainted with the sin of Adam, the first man, all human beings are born in a state of purity, and hence their righteousness or wickedness, which determines their state in the future life, is solely dependent upon their own conduct. The other is the idea that each person at birth possesses a store of accumulated credit for the meritorious acts of his ancestors, which serves to bring blessings into his life and ward off calamity.

For details, *see* MERIT OF THE FATHERS; ORIGINAL SIN; ZECHUTH ABOTH.

ORLAH ("uncircumcision"), tenth tractate of Zeraim, the first division of the Mishnah. It consists of three chapters, and deals with the law prohibiting the eating of the fruits of trees for the first three years of their growth (*Lev.* 19:23-25). It deals with such subjects as in what cases the prohibition applies, and to what extent the products of trees in their first three years may not be used. There is no Babylonian Gemara to the tractate; the Palestinian Gemara contains explanations of the Mishnah and some interesting statements in connection with the dietary laws.

Lit.: Danby, Herbert, *The Mishnah* (1933) 89-93.

ORLEANS, a city in north central France, on the river Loire. A Jewish community is known to have existed there in the 6th cent. because of various decrees aimed against the Jews passed by various sessions of the Council of Orleans. Intermarriage between Jews and Christians was forbidden (533), Jews were banned as judges and barred from public appearance in the Easter season (538), and subjected to punishment for trying to argue converts to Christianity out of their decisions or attempting to convert Christians to Judaism (585).

During the 12th cent. the Jews of Orleans had to flee from the city for a time as the result of a false rumor that their importunities had prompted the caliph to destroy the Holy Sepulchre in Jerusalem. Nevertheless, despite local and general persecutions, culture flourished, and the academy in Orleans was one of the leading academies in France. Among the scholars who lived in the city were Isaac ben Menahem and Meir ben Isaac, in the 11th cent.; Eleazar ben Meir ben Isaac, Solomon ben Isaac, Joseph ben Isaac Bechor Shor, Jacob of Orleans (pupil of Rabbenu Tam) and Abraham ben Joseph, all of the 12th cent.

In 1182 the Jews were expelled from Orleans, but during the 13th cent. their presence in the city provided fluctuating but usually substantial revenue through the tax on the Jew-badge. When Philip the Fair expelled the Jews from France in 1306, the goods confiscated from the Jews of Orleans brought about 337,000 francs at auction, while the building in which the academy had been housed brought 3,400 francs and a subsidiary school building about 1,400. In modern times there were only a few Jews in Orleans.

Lit.: Graetz, H., History of the Jews, vol. 3 (1927) 35-37; vol. 4 (1927) 48; Depping, Georg, *Les juifs dans le moyen âge* (1845) *Revue des études juives,* vol. 2, p. 17, 42; vol. 15, pp. 247, 250, 258.

ORLIK, EMIL, painter and engraver, b. Prague, 1870; d. Berlin, 1932. He studied in Munich under Lindenschmit, Raab and Knirr. Orlik's travels took him to Holland, England, Egypt, China, Japan, Siberia and the United States (1924). During a second visit to Japan he studied color wood engraving, and produced numerous works of art in this medium, inspired by Oriental life. Although Orlik used the etching needle and the lithographer's pencil skillfully, he was best known as an engraver. His early work was influenced much by Millet and Rembrandt, whose *Descent from the Cross* he copied.

Orlik won a silver medal in Paris in 1900, and a gold medal in Dresden in 1910. From 1903 to 1932 he was a professor at the Industrial Art Museum in Berlin. Among his paintings are: *A Barber of Singapore* (1900), at the Albertine Museum in Vienna; *Autumn Song.* His engravings include studies of historical and contemporary figures. Orlik's published collections were: *Aus Japan* (1904); *Caricatures from Brest-Litowsk* (1918); *Reise nach Japan* (1921); *Aus Ägypten* (1922); *Studies from Spain* (1928). He became a Christian.

Lit.: The Studio, vol. 11, pp. 157-65; *ibid.,* 1907, pp. 219-24; Osborn, Max, *Graphiker der Gegenwart,* vol. 2 (1920).

ORLOFF, CHANA, sculptress, b. Tsaré-Constantinovska, Russia, 1888. At the age of sixteen she went to Jaffa, and lived in Palestine for the next six years. After that she went to Paris, where she studied at the École des Arts Décoratifs. France became her home. There, in 1913, she exhibited two works of sculpture at the Salon d'Automne. During the next twelve years her talent became so widely recognized that in 1925 the French government conferred upon her the decoration of chevalier of the Legion of Honor. In the following year she was naturalized as a French citizen.

Departing from all formal French tradition, Chana Orloff's sculpture, whether in bronze, marble, iron or wood, is distinctly individualistic. Wide in its range, it has force, robustness, humor; it has freshness, subtlety

Chana Orloff

and at times mystery. In her portraits of men and women she seeks and achieves not the obvious likeness, but that truth of character which is most revelatory. She exaggerates and simplifies, but her portraits are not caricatures that lessen or deride her subjects; they magnify the essential. Her portraits of Rubin, of Mme. Edmond Fleg, of George Hellman, of Jakovleff, of Per Krogh with his accordion, of Romaine Brooks are among the many amazing examples of her art. In her nudes, such as *Femme Assise* and *Eve,* there is, added to profundity of thought and feeling, the grace of line and surface that is always at Chana Orloff's command. Humor comes fascinatingly to the fore in such representations as those of Widhoff and the artist's own son. In her *Turkey* and her *Paroquet* the decorative quality is delightful. Altogether it is not surprising that the consensus of French critical opinion placed Chana Orloff in the front rank of living sculptors and one of the foremost women artists of all times.

Chana Orloff visited the United States in 1929 and 1938. Exhibitions of her work at the Marie Sterner gallery in New York city and at the School of the Museum of Fine Arts in Boston evoked high praise from American critics. Her sculpture is in numerous collections in America as well as in Europe. Her *Femme à la Guitare* is perhaps her generally most admired piece. For fuller comment concerning her art, one is referred to two books on Chana Orloff, the more important by Léon Werth, and the briefer by E. des Courières, in the series *Les sculpteurs français nouveaux.*

GEORGE S. HELLMAN.

ORLOFF, NIKOLAI, pianist, b. Jeletz, Russia, 1892. He graduated with honors from the Moscow Conservatory in 1910, and in 1912 began concert work in Russia. In 1913 he was appointed professor of piano at the Moscow Conservatory. He interrupted his work as teacher to give numerous concerts throughout Russia. Such was his popularity that in some seasons he was compelled to give as many as fourteen recitals in Moscow alone. In 1922 Orloff left Russia, and thereafter performed with outstanding success in most of the capitals of Europe. His American debut took place in 1926. His style is of the utmost refinement and

sensitivity which have tempted many critics to speak of him as a "poet of the piano." A series of five concerts devoted to the music of Chopin was one of the major music events of the season in London in 1933. Orloff also enjoyed a great following in South America; at one time he gave fifteen recitals in a two-month period in Buenos Aires.

ORMANDY, EUGENE, conductor, b. Budapest, 1899. He was admitted as a pupil to the Budapest Academy at the age of five, the youngest student ever to enter that conservatory. Two years after this he made his concert debut, as violinist. After a period of study with Hubay, Ormandy graduated from the Academy with the M.A. degree. In his nineteenth year he was appointed professor of music at the Academy. He made several moderately successful tours of Europe as violinist.

In 1920 he came to the United States, and joined the orchestra of the Capitol Theatre, New York city. It was with the Capitol Theatre Orchestra that he made his official debut as conductor. For several years Ormandy appeared as a conductor of symphony concerts over the radio. In 1930 he was invited to give a guest performance with the New York Philharmonic at the Lewisohn Stadium. He made such a fine impression that, one year later, he was invited to conduct the Philadelphia Orchestra as a substitute for Toscanini, who had fallen ill suddenly. His subsequent rise as conductor was meteoric. In 1931 he became permanent conductor of the Minneapolis Symphony Orchestra, which under his direction became one of the great orchestral organizations in the country. After five years in Minneapolis Ormandy was recalled to Philadelphia to succeed Leopold Stokowski as the permanent conductor of that organization. In the fall of 1938 Ormandy was given also the post of "music director" of the Philadelphia Orchestra, an office apart from that of conductor which had been created a few years earlier to give Stokowski dictatorial powers. Ormandy distinguished himself in guest performances with the Budapest Philharmonic, the Vienna Philharmonic and the Bruckner festivals at Linz, Austria.

Ormandy combines an extraordinary memory (he invariably directs his concerts without scores) with a remarkable knowledge of orchestral resources. He is a born conductor in his capacity to dominate his players and to convey to them his slightest wishes. In a bewilderingly short time he developed maturity, discrimination, scholarship. Although born of Jewish parents (named Blau), Ormandy regards himself as not of the Jewish faith.

DAVID EWEN.

Lit.: Ewen, David, *Men and Women Who Make Music* (1939).

ORMÓDY DE ORMÓD, VILMOS, economist and philanthropist, b. Miskolc, Hungary, 1838; d. Budapest, 1932. He became director general (1898) of the First Hungarian Insurance Company, whose service he entered at the age of nineteen. In 1868 he was instrumental in securing the first loan for the Hungarian State Railways. He was knighted in 1897, and made a member of the Upper House in 1906.

Ormódy had a large part in the founding of a sanitarium for tuberculous patients and of a dispensary for the poor sick. He was a charter member of the distinguished Kisfaludy Literary Society, and a patron of authors and artists. He endowed a foundation at the Hungarian Academy in the name of his wife, and contributed generously to Jewish causes.

Torah ornamentation

BERTALAN ORMÓDY, poet and journalist (b. Miskolc, Hungary, 1836; d. 1869), was a brother of Vilmos Ormódy. He wrote an epic poem in seven parts, *Smüle Itzig* (1861). As a publicist he was actively engaged in the movement for Jewish emancipation.

ORNAMENTATION. The Hebrews, like all Orientals, loved to wear ornaments. A list of such jewels and adornments, in addition to costly wearing apparel, is given in *Isa.* 3:18-23. Even the Talmudic rabbis mention twenty-four toilet articles, including special clothing, that were needed for every bride. Ornaments consisted of artistic objects of gold, silver, precious stones and pearls. In many cases the ornament was also an amulet. Crowns or wreaths were worn on the head, rings on fingers and in ears and noses. Women wore golden strings on the cheeks, and chains, small moons and corals around the neck; men wore cords with signet rings. The arms of women were covered with chains or bracelets, which they wore around their ankles as well; sometimes these anklets were joined by chains which compelled their wearers to take small graceful steps. Rings were worn by women on toes as well as on fingers. The Talmud mentions many separate ornaments, such as the "city," a golden tiara with a picture of Jerusalem, fans, glass and sandalwood buttons and other emblems.

Ornamentation was applied also to ritual objects which received special devotion. The chief of these was the Scroll of the Torah, lavishly ornamented with silver. Books were often kept in special ornamental cases, as were Ethrogs and spices for the Habdalah; Menorahs and other ritual objects, and dishes for such occasions as the Seder, were often richly decorated and adorned.

See also: TORAH, ORNAMENTATION OF, and the illustrations to such articles as BOOKS; ETHROG; HABDALAH; CEREMONIAL OBJECTS AND INSTITUTIONS.

Lit.: Nowack, W., in *Jewish Encyclopedia,* vol. 9, pp. 436-37; Hartmann, A. T., *Die Hebräerin am Putztische und als Braut* (3 vols., 1809-10).

ORNITZ, SAMUEL BADISCH, author, b. New York city, 1891. For a time he did penological research work for the Prison Association of New York, and was active in promoting the welfare of deformed young people. He was the author of *Haunch, Paunch and Jowl* (1923), a novel which created a sensation because it depicted the rise of an unscrupulous Jewish immigrant from Eastern Europe to the position of judge in the United States. Subsequently Ornitz wrote *A Yankee Passional* (1927). Later he went to California, where he collaborated on the writing of motion picture scenarios.

ORNSTEIN, ABRAHAM FREDERICK, minister, b. London, 1836; d. Cape Town, South Africa, 1895. At the age of eighteen he was appointed minister to the Hebrew Congregation at Portsea, England, where he inaugurated the first Sabbath classes for Jewish children, after having been a teacher at the Jews' Free School, London. From 1860 to 1866 he acted as principal of the Birmingham Hebrew National Schools. In 1866 he was asked to fill the post of minister to the Melbourne Hebrew Congregation. He resided in Melbourne for about a decade during which he edited the *Australian Israelite,* laid the foundation-stone of the St. Kilda Synagogue, established the Almshouses, and earned a life-governorship of the Melbourne Hospital as a result of his untiring efforts on behalf of that institution.

He returned to London in 1875. He spent the year 1876 touring the United States, after which he was elected principal of Aria College, Portsea.

In 1882 he succeeded the Reverend Joel Rabinowitz as minister to the Cape Town Hebrew Congregation. He held this position for thirteen years. He laid the foundation-stone of the Oudtshoorn Synagogue. He was instrumental in organizing a Hebrew Congregation at Paarl, Cape Colony, and in 1891 revived the Cape Town Hebrew Philanthropic Society.

He successfully conducted a Jewish Collegiate School at Cape Town, and served on the committee of the Cape Town Free Dispensary as well as on that of the St. George's Orphanage—a non-Jewish institution. He was a member of a commission appointed by the Cape Government to enquire into the state of the lepers on Robben Island. Ornstein reprinted at Melbourne in 1868 *The Humble Addresses of Menasseh ben Israel.* S. A. ROCHLIN.

Lit.: Jewish Chronicle, Jan. 3, 1896; Herrman, Louis, *A History of the Jews in South Africa* (1930) 257-66.

ORNSTEIN, ISRAEL, author and novelist, b. Yampol, Podolia, Russia, 1831; d. Jassy, Roumania, 1905. He came to Jassy as a youth of twenty-one, and remained there for the rest of his life. Although he was not a novelist of talent, his long-winded novels are of documentary value, for they abound in information on Jewish life in Roumania. Goaded by the indifference of the reading public, he turned with envenomed bitterness to "expose" what appeared to him paltry, petty or unjust in the lives and tendencies of his fellow-Jews. He ridiculed the snobbishness of the prominent and rich, the ignorance and superstitiousness of the poor, the assimilationist tendencies and eagerness to obscure one's Jewishness.

His novels include: *Chibut Hakever* or *Die Geheimnisse der Jassyer Gemeinde* (Mysteries of the Jewish Community of Jassy); *Dus Shlechte Kind* (The Naughty Child); *A Voil Ingl Chleiben,* a popular tale in three parts; *Der Verdorbener Daitch; Etz Hadath* or *Die Zivilisation* (1882); *Die Genarte Velt* (1896). His manuscript, *Mizraim Hind,* was published after his death.

ORNSTEIN, JACOB MESHULLAM, rabbi and antagonist of the Haskalah, b. Lemberg, Galicia, 1774; d. Lemberg, 1839. He was rabbi in Zólkiew, but later, inheriting the rabbinical position of his father, Mordecai Zevi Ornstein, he became rabbi in Lemberg, where he remained until his death. He is known for the bitter struggle which, together with his son, he waged against the intellectual liberalization and modernization of the Jews in Galicia. Their attacks were particularly directed against Zebi Hirsch Chajes, Solomon Loeb Rapoport and Isaac Erter. The one most responsible for the persecution of these champions of enlightenment was his son Mordecai Zeeb, who was probably the author of the document placing these opponents under the ban, which, however, Ornstein was compelled to revoke. Ornstein was a gifted Talmudist, as is evident from his *Yeshuath Yaakob* (1828), a commentary in many volumes on the *Shulhan Aruch,* which brought him great fame. Under the same title he wrote a commentary on the Pentateuch, which is printed with the text in many Pentateuch editions.

ORNSTEIN, JOHN ISIDORE MAURICE, Egyptian government official, b. 1854; d. 1919. Before the first World War, he was Under Secretary of State and Assistant Financial Adviser to the government of Egypt. In recognition of his services he was awarded two Turkish decorations: first class Medjidie and second class Osmanieh.

ORNSTEIN, LEO, composer, pianist and teacher, b. Kremenchug, Russia, 1895. The son of a well-known cantor, he revealed signs of musical genius at an early age. After a short period of study at the Imperial Music School in Kiev, he entered the St. Petersburg Conservatory on recommendation of Josef Hofmann. In 1906 he came to the United States, and completed his studies at the Institute of Musical Art. In 1911 he made his debut as pianist, following which he gave many recitals throughout the country, and appeared as soloist with leading orchestras. But it was as a composer that he attracted the limelight. His early works, including two piano concertos, a string quartet, and various pieces for the piano, revealed such independence of thought and such disregard for musical laws that they were hotly discussed and fought over.

Ornstein became a stormy petrel of contemporary music, violently denounced by more conservative musicians, bitterly defended by the younger and more independent composers. But, unfortunately, Orstein's music was hardly more than attempts at experimentation in the free use of harmonic and rhythmic resources. It lacked artistic conviction, the drive and force of true inspiration. When experimentation in music lost its vogue, Ornstein lost his position of importance as creator. He composed little in the period between 1920 and 1942, and nothing which can point to his growth and development as a creative personality. In recent years Ornstein devoted himself to teaching the piano in Philadelphia, where he was (1942) director and head of the piano department of the Ornstein School of Music, as well as member of the music faculty of Temple University.

ORNSTEIN, LEONARD SALOMON, physicist, b. Nymwegen, Holland, 1880; d. Amsterdam, Holland, 1941. At one time president of the Netherlands Zionist Federation, he was instrumental in the establishment of the Institute of Physics at The Hebrew University, Jerusalem, of whose board of trustees he was a member. In 1909 he became assistant professor of physics at the University at Groningen and its president in 1931. From 1920 on Ornstein was director of the physical institute of that university, and in 1929 was made a member of the Netherlands Royal Academy of Sciences.

He wrote numerous works on the various branches and phases of physics, such as the theory of heat, entrophy, crystal magnetism, opalescence, quantitative light measurements, optics, probability and uses of the calculation of probability in physics, quantitative ray measurements, and barometric variations. Ornstein's funeral in German-occupied Holland turned into a demonstration.

ORPHAN HOMES, *see* SOCIAL SERVICE.

ORPHANS (Hebrew, *yethomim;* singular, *yathom*). Orphans are given a special place in Jewish law. The Biblical legal principle (*Deut.* 24:17): "Thou shalt not pervert the justice due to the stranger, or to the fatherless," applies not only to court proceedings but also commands everyone to take the part of orphans in society. It is a duty to refrain from afflicting them (*Ex.* 22:22). It makes no difference whether orphans are poor or rich; since they are regarded as defenseless, every individual must strive to prevent the least infringement of their rights.

Injustice against orphans was stigmatized by the prophets as the most shocking symptom of unrighteousness, and they were never tired of pleading the cause of the fatherless. Thus Isaiah, in summing up the duties of righteousness, includes the phrase: "Judge the fatherless, plead for the widow" (*Isa.* 1:17). The idea that God protects orphans and will come to their aid was so strongly impressed upon the minds of the Israelites that the Midrash often compares Israel to an orphan in order to drive home the point that it can hope for God to come to its aid.
