THE UNIVERSAL JEWISH ENCYCLOPEDIA

IN TEN VOLUMES

An Authoritative and Popular Presentation of Jews and Judaism Since the Earliest Times

EDITED BY

ISAAC LANDMAN

Rabbi of Congregation Beth Elohim, Brooklyn, New York
Founder and Director of the Academy for Adult Jewish Education

In Collaboration with the Following

BOARD OF EDITORS:

EXECUTIVE AND LITERARY EDITOR
Louis Rittenberg, American Editor, *London Jewish Chronicle;* formerly Editor, *The American Hebrew*

AMERICANA: A. S. W. Rosenbach, President, American Jewish Historical Society

ANGLO-JUDAICA: Paul Goodman, Historian and Author, London

ARCHAEOLOGY: William F. Albright, Professor, Semitic Languages, Johns Hopkins

ART: Clifton Harby Levy, Rabbi, Author and Journalist

BIBLE: Julian Morgenstern, President and Professor of Bible and Semitic Languages, Hebrew Union College

ETHICS: Louis L. Mann, Rabbi of Temple Sinai, Chicago; Lecturer, Oriental Languages and Literature, University of Chicago

HISTORY: Ismar Elbogen, Research Professor, Jewish Theological Seminary, Hebrew Union College, Jewish Institute of Religion, and Dropsie College

Abraham A. Neuman, President and Professor of History, Dropsie College

JEWISH LITERATURE: Joshua Bloch, Chief, Jewish Division, N. Y. Public Library

LITURGY: Solomon B. Freehof, Rabbi of Congregation Rodef Shalom, Pittsburgh; formerly Professor of Liturgy, Hebrew Union College

PHILOSOPHY: Leo Strauss, Associate Professor, Political Science, Graduate Faculty of Political and Social Science, New School for Social Research

RABBINICS: Louis Finkelstein, President and Professor of Theology, Jewish Theological Seminary of America

SOCIAL INSTITUTIONS: Maurice J. Karpf, Formerly President, Faculty, and Professor, Social Technology, Graduate School for Social Work, New York; Executive Director, Federation of Jewish Welfare Organizations and Jewish Community Council, Los Angeles

THEOLOGY: Samuel S. Cohon, Professor of Theology, Hebrew Union College

REVISION EDITOR: Abraham Shinedling, Rabbi, Linguist and Reviewer

DIRECTOR OF RESEARCH
Simon Cohen, D.D., Former Instructor at the Hebrew Union College School for Teachers

P

PROSBUL (from the Greek, *pros boule,* "before the council"), a document of preservation deposited with the court as a means of preventing the annulment of debts in the year of release (Shemittah). When an economic crisis arose as a result of many poor harvests at the beginning of the reign of Herod and there was a great increase in the number of loans, Hillel the Elder found it necessary to institute the Prosbul in order to prevent debts from being cancelled and credit being refused. Hillel's purpose in making this supplementary ordinance was not that of annulling the remission of debts in the Shemittah year, but rather of maintaining the old social laws of the Bible in their ethical intention.

The Prosbul was a written protest against the cancellation of debts, signed by the judges and witnesses, and became valid when it was deposited with the court. It contained the formula: "I hereby declare in the presence of you, N.N., judges in X., that I will collect all the claims which I have against N.N. at any time that is suitable to me" (*Git.* 36a; *Shebi,* 10:3-4). The creditor could then use the Prosbul to meet the objection of the debtor that the debt had been cancelled by reason of the year of release. However, a Prosbul was regarded as valid only when the debtor owned real estate, which was regarded as the only proper security in such cases; it was felt that in any case the creditor could receive from the debtor a part of his real estate in payment of the debt. In the period of the Amoraim (200-500) the Prosbul was simplified and an oral declaration was considered sufficient.

Some of the post-Talmudic rabbis (Posekim) held that the year of release and the Prosbul were still valid institutions even in their own time; the law was still enforced as late as the time of Asher ben Jehiel (1250-1327). However, the majority of authorities held that the law in both instances was no longer valid for their own time.

PROSELYTES. As used in this work, proselyte means a person of non-Jewish birth who adopts the Jewish religion. The word convert is reserved for Jews who have accepted other faiths; converts who have displayed special hostility toward Jews and Judaism are denominated apostates.

The term proselyte is derived from a Greek word used in the same sense by Hellenistic Jews. The equivalent in rabbinic Hebrew is *ger,* more fully *ger tzedek,* righteous proselyte. In the Bible *ger* means simply "foreigner," particularly a foreigner resident in Palestine. For such a resident alien the rabbis coined the term *ger toshab.*

1. **The Biblical Period.** One who possesses a great faith of universal significance inevitably feels the need to share his faith with others. A missionary element was from the start implicit in the Jewish religion, with its message of a universal God. During the Babylonian Exile and the years immediately following, this impulse became more articulate. The second Isaiah declares that Israel's mission is to bring the message of God's unity to all mankind (*Isa.* 42:1-8). The book of *Jonah* is a protest against narrow nationalistic conceptions of Judaism. In reaction against Ezra's austere demand that the Judeans divorce their foreign-born wives, the author of *Ruth* declared that King David himself was descended from a Gentile woman who had joined herself to the people and God of Israel. A later prophet speaks with affection and encouragement to "the aliens, that join themselves to the Lord" (*Isa.* 56:6-8). Several psalms (115 and 118) refer to "them that fear the Lord"—persons of Gentile origin who have adopted the worship of Israel's God—as a separate class in the Jewish commonwealth.

It appears that a substantial number of Gentiles were attracted to the Jewish religion during the last centuries of the Biblical period, a fact which accounts in considerable part for the rapid increase of the Jewish population. Beyond the old law (*Gen.* 17:10-14) that all males living in a Jewish household must be circumcised, the Bible nowhere mentions a procedure of formal conversion; but some such ceremony probably existed by the end of the Biblical period.

2. **The Hellenistic Period.** The Maccabean victory appears to have given new stimulus to the Jewish missionary movement. Proudly faithful to the God Who had wondrously rescued them from their enemies, the Jews were well fitted to propagandize for their religion, in a period when the old pagan cults were in decline and people were receptive to new doctrines. The opportunity was the greater because the Jews were dispersed throughout the Mediterranean world, while on the other hand there were numerous Greek settlements in Palestine. Many non-Jews were profoundly impressed by the simple, sublime teachings of Judaism, its noble morality, and the purity of Jewish home life. Numerous visitors were attracted to the synagogue by the religious and ethical discourses to be heard there. A large body of semi-proselytes now appears, persons who accepted Jewish monotheism and ethical standards without being formally converted or adopting all the provisions of the ceremonial law. Such persons were called "fearers of Heaven" (that is to say, of God); many of them, more often their children, became full proselytes. Josephus records with pride (*Against Apion,* book 2, chap. 39) that the Sabbath and many other Jewish observances had become widely accepted among Gentiles of his day.

John Hyrcanus and several of his successors forcibly imposed Judaism upon the Idumeans and other conquered peoples; probably, however, this action was inspired more by political expediency than by religious zeal. These forcible conversions are not mentioned in rabbinic literature, and are entirely foreign to the spirit of authoritative Judaism.

The vigor of the missionary movement in Alexandria is indicated by the Jewish *Sibylline Oracles,* propaganda documents in which an ancient heathen prophetess is made the protagonist of Jewish beliefs. Philo speaks repeatedly and warmly of proselytes, and many of his writings appear to have a missionary intent.

The greatest triumph of the Jewish missionary effort in this period was the conversion of the royal family of

Adiabene, a Hellenistic state on the Tigris river. Queen Helena and her sons, Izates and Monobaz, were distinguished for their scrupulous piety, and for their munificent gifts to charity and to the Temple. Their descendants supported the Jews in the final struggle against Rome.

Sometimes the proselytizers seem to have been motivated by less worthy purposes. Josephus (*Antiquities*, book 18, chap. 3, section 5) tells the story of Fulvia, a Roman patrician woman who had been converted to Judaism, and had sent a large gift to the Temple. This money had been diverted by the proselytizers to their own use, and the scandal became so great that Emperor Tiberius banished many Jews from Rome.

The Gospel statement (*Matt.* 23:15) that the Pharisees compassed land and sea to make one proselyte, although uttered with hostile intent, correctly describes the zeal with which Jewish leaders sought to win adherents to their religion.

3. **The Talmudic Period.** This desire to enlarge the household of Israel continued unchanged throughout the Talmudic period, despite the disasters that befell the Jewish people. Surprisingly, the destruction of the Temple and the loss of Jewish national life did not discourage the spokesmen of Judaism, nor deter prospective proselytes from accepting the faith of the downtrodden. In the decades immediately following the fall of Jerusalem Judaism made notable headway in the highest circles of Roman aristocracy. It is almost certain that Flavius Clemens, whose sons had been designated for the imperial succession, was a Jewish proselyte. He was executed by Domitian on the charge of "impiety."

The rise of Christianity seems to have affected Jewish missionary effort (for the time being) only in one respect. Many of the supporters of the early apostles were drawn from the class of "God-fearers," the unofficial hangers-on of the synagogue. For this reason, and apparently because they suspected that such persons might include heretics and even informers, the rabbis discouraged these semi-proselytes. Candidates for proselytism were required to make a definite decision within a year (*A.Z.* 65a; *Mishnath Rabbi Eliezer*, p. 374).

The laws governing the admission of proselytes, and the numerous regulations concerning their status, are treated at length in the Talmud. A prospective proselyte must be warned that the Jewish people is subject to persecution and contempt; further, that by accepting Judaism he takes upon himself heavy religious responsibilities, of which he has hitherto been free. This warning, however, should not be so prolonged or gloomy as to discourage a sincere candidate. Males are formally admitted to Judaism by means of circumcision and the ritual bath, women by means of the ritual bath alone. (This ritual bath has both a purificatory and an initiatory character, but not a sacramental one.) Before the destruction of the Temple, the proselyte was also required to bring a sacrifice before his entrance into the Jewish fold was complete. The custom of bestowing a new name upon the proselyte is not clearly attested until the post-Talmudic period. A favorite name was Abraham, for the Biblical Abraham, as the first Jew and as the traditional founder of Judaism, was regarded as the national patron and protector of proselytes.

The proselyte is regarded as a Jew in every respect. In practice, however, he was subject to a few discriminations. A priest might not marry a woman of Gentile birth; but this rule reflects the insistence that priests shall ally themselves only with aristocratic families, rather than an active prejudice against proselytes. There was a tendency to exclude proselytes from public office, which some of the leading rabbis worked to overcome.

According to Jewish legal theory, a proselyte is "like a new-born child." All his relationships prior to conversion, even those of blood, are regarded as cancelled. Children born while he was a Gentile are not heirs at law; only by a special dispensation of the rabbis is the proselyte permitted to inherit his heathen father's estate.

Talmudic teachers speak frequently in praise of proselytes, and the Mishnah contains a severe warning against embarrassing a proselyte by referring to his former idolatries. The rabbis go so far as to declare that the proselyte who, of his own accord, seeks out the service of God is dearer to Him than the born Israelite; further, "Israel was scattered among the nations only that they might make many proselytes." The Haggadists depict various Biblical characters as formally converted to Judaism, notably Jethro, Rahab, Ruth, Obadiah and Nebuzaradan. Among the famous teachers known for their special interest in proselytes were Hillel, Rabbi Joshua, and Rabbi Judah ben Ilai.

The most notable proselyte of the period is perhaps Aquila, who translated the Bible into Greek. Other famous proselytes were Onkelos, a disciple of Rabban Gamaliel I (probably not to be identified with Aquila); Rabbi Samuel ben Judah; and Rabbi Judah the Hindu. The dedicatory inscription of the Dura synagogue records that the building committee included a proselyte, whose name, however, has been obliterated. Simon bar Giora, the Zealot leader, was—as his name indicates—the son of a proselyte; the famous teachers Shemaiah and Abtalion were said to have been of proselyte families. And Akiba is reported to have been a descendant of Haman! The Palestinian sources record several incidents about the Ashtor family, which over several generations kept proudly alive the tradition that its founders were proselytes.

Occasionally, in the vast Talmudic literature, one encounters an expression of ill will toward proselytes—the characteristic attitude of the "old timer" to the newcomer. Such expressions are to be regarded as outcroppings of prejudice, not as the view of a "school" hostile to proselyting. (Of course, some remarks questioning the sincerity of proselytes or their accuracy in observing the law may have been based on individual experiences.) The oft-quoted statement of Rabbi Helbo, "Proselytes are as hard for Israel as leprosy," is of uncertain meaning, and in any case is not typical of the rabbinic viewpoint.

Legally, the status of the freed slave in Jewish life is identical with that of the proselyte; in practice, the freedman seems to have been on a lower social level.

4. **The Medieval Period.** Although the attitude of the rabbis toward proselyting remained unchanged throughout the Talmudic period, the number of proselytes in Palestine must have declined greatly in the early Christian centuries, first as a result of the Hadrianic persecution, later because of Christian oppression. When Christianity became the official religion of the Roman Empire, the Jews were forbidden to make proselytes and to circumcise their slaves. Severe penalties were invoked for the enforcement of these laws; that at first they were frequently disobeyed is shown by the fact that the punishment for their violation was made increasingly harsh. Only by degrees did the Jews give up the effort to increase their numbers. The proselyting movement continued longer in Babylonia, but was eventually checked by the Magian persecution. Likewise Islam, itself an aggressive missionary faith, brooked no competition from the Jews.

About the year 615 a Palestinian monk, who for years had lived in a monastery on Mount Sinai and

whose real name is unknown, voluntarily embraced Judaism at Tiberias; he was given the name Abraham, and is often referred to as Abraham the Monk. Abraham the Monk later married a Jewish woman, and throughout the rest of his life was a devoted advocate and fosterer of the Jewish faith.

During the Middle Ages proselytes were rare, and the Jews gradually lost the urge to win new adherents. Certain communities, fearing reprisals by the church, even adopted rules forbidding the acceptance of proselytes. Nevertheless, there were occasional bold spirits who dared the displeasure of the ruling powers and the disabilities of Jewish life in order to accept the faith of Israel. References to them are scattered through the legal treatises and responsa of almost every country and century. One such, a certain Obadiah of Norman origin, came to the Orient as a crusader with Geoffroy of Bouillon; after his conversion to Judaism he became a distinguished personage in Damascus, Aleppo and Alexandria. He wrote an autobiographical "scroll" in excellent Hebrew, of which portions have been preserved. Among the French Tosafists, we read of Rabbi Abraham the Proselyte. The last great success of the Jewish missionary effort was the conversion of the ruling family of the Khazars, and eventually of a large portion of their subjects; for several centuries there was a predominantly Jewish state in what is now southeast Russia. Particularly famous and beloved among more recent proselytes was the 17th century Valentin Potocki, of a well-known Polish noble family, who finally died at the stake as a martyr to Judaism.

5. The Modern Period. When the period of Emancipation began, Jewish missionary activity had long been in abeyance, because of compulsion; as a result the impulse to seek proselytes had almost disappeared. This indifference was heightened almost to the point of aversion by the widespread acceptance of baptism by Jews seeking to improve their worldly situation. Many loyal Jews were thus led to feel that any change of religious affiliation was essentially discreditable; and some Jewish writers went so far as to deny that Judaism is interested in proselyting. Nevertheless, proselytes were not infrequent in the 19th and 20th centuries.

The Central Conference of American Rabbis has found it desirable to publish a manual for the instruction of proselytes and to draw up a conversion certificate. Already in 1891 the Conference had declared that circumcision need not be required of adult proselytes. (This ruling, of course, has been accepted only among Reform Jews). Most recent proselytes have come to Judaism through the desire to marry a Jew or Jewess. In many cases, however, the outcome has shown that the conversion, although occasioned by an ulterior motive, was neither perfunctory nor insincere. Some of these proselytes have taken an honorable and active part in Jewish life. Particularly interesting is the case of Nahida Remy, whose formal conversion and marriage to Professor Moritz Lazarus occurred many years after she had abjured Christianity and devoted herself to writing on Jewish themes. Other proselytes have been attracted to Judaism by its spiritual values alone. Outstanding among these is Aimé Pallière, who became a rabbi in Paris, and wrote *The Unknown Sanctuary*.

Perhaps we should include as proselytes the Judaizing sects in Transylvania and especially in Russia, although they were not attracted to Judaism by missionary effort, or even by contact with Jewish life. These sects were the result of a process, which occurred several times in the history of Christianity, whereby a preoccupation with the Hebrew Scriptures led to Judaizing heresy and even back to Judaism itself. The more extreme elements among the Russian Judaizers have attempted, wherever they could, to affiliate themselves with official Judaism and intermarry with Jews.

After the rise of Hitlerism, several Christians of part-Jewish extraction returned to Judaism; and there are even a few cases of out-and-out proselytes who took this strong form of protest against Nazi anti-Semitism.

BERNARD J. BAMBERGER.

In addition to those mentioned above, the following were important proselytes to Judaism in the past:

Minyamin (Benjamin), an Egyptian, and Judah, an Ammonite, who were pupils of Akiba in the 2nd cent.

Bodo, a former bishop of the Catholic church, and the confessor of Louis the Pious, king of France. Bodo was converted to Judaism at Saragossa, Spain, in 838. He adopted the name of Eliezer, and later married a Jewess.

Vezelin, a Christian clergyman of Germany, about 1012.

Abraham of Augsburg, who died as a martyr in the year 1264 or 1265, and was an opponent of Christianity; Mordecai ben Hillel and Moses ben Jacob mourned his death.

Katherine Malcherova Weigel, wife of the mayor of Cracow, Poland, who died as a martyr in 1539.

Diego de Assunção, a Franciscan father, who died as a martyr at Lisbon, Portugal, in 1603.

John Peter Spaeth, of Augsburg, Germany, who, after becoming a proselyte to Judaism, adopted the name of Moses Germanus; he died at Amsterdam, Holland, in 1701.

Marina Davidova and Marina Wojciechova, who died as martyrs in Dubno, Poland, in 1716.

Alexander Voznitzyn, a Russian naval officer, who died as a martyr in either 1737 or 1738.

Joseph Steblicki, of Nikolai, Upper Silesia, who became a proselyte to Judaism at the beginning of the 19th cent., adopting the name of Abraham.

PROSKAUER, ADOLPH, United States Army officer, b. Breslau, Germany, 1826; d. St. Louis, 1911. Proskauer lived in Mobile, Ala., at the outbreak of the Civil War and entered the Confederate Army as a private in the 12th Alabama Infantry. Subsequently he was promoted to the posts of color-sergeant, senior captain, and major. He was wounded four times. At the battle of Gettysburg he was seen standing calmly with his regiment, smoking his cigar, issuing his orders and encouraging his men, until a bullet through his cheek disabled him and he became a prisoner of war.

After the war Proskauer was secretary of the Mobile Board of Trade, a member of the Alabama legislature, president of the Hebrew congregation for ten years, and the first president of the first lodge of B'nai B'rith formed south of Memphis. In 1895 he moved to St. Louis and, until his death, was president of a congregation there.

PROSKAUER, BERNHARD, hygienist and medical author, b. Ratibor, Germany, 1851; d. Berlin, 1915. His most important works, written with others, include: *Beitrag zur Kenntnis der Säurebildung bei Typhus Bazillen und Bacterium Coli* (with Capaldi; 1899); *Über das Berliner Trinkwasser* (with Plagge); *Zum sechzigsten Geburtstage Kochs* (with P. Pfeiffer). He published the *Enzyklopädie der Hygiene* (2 vols.), and was director of the Berlin bureau of research for industry and hygiene.

PROSKAUER, JOSEPH, printer and philanthropist, b. Richmond, Va., 1856; d. New York city, 1937. He was the son of Adolph Proskauer. Proskauer was regarded as an international authority on printing, having participated in the development of the printing industry from hand press to high speed multiple presses.

After learning the printer's trade in Richmond and in several other cities, Proskauer came to New York in

1893. Here, with William C. Popper, he founded the internationally-known firm of William C. Popper and Co. In 1924, at the death of Popper, Proskauer became head of the firm, one of the world's leading printing and lithography establishments.

Proskauer was a benefactor of several private charitable undertakings, including the Lakeview Home for Girls at Arrochar Park, Staten Island. This home was founded by his wife, Bertha Richman Proskauer, and her sister, Julia Richman, first woman superintendent of New York city schools.

PROSKAUER, JOSEPH MEYER, judge and leader in charitable and civic movements, b. Mobile, Ala., 1877. He attended Columbia University (A.B., 1896; LL.B., 1899), and was admitted to the New York bar in 1899. In 1903 he became a partner in the law firm of Elkus, Gleason and Proskauer, the senior member of which was Abram I. Elkus, later a judge of the New York state supreme court and Ambassador to Turkey. This association continued for twenty years, and was dissolved only upon the election of Proskauer to the New York state supreme court in 1923. In 1927, after receiving the honorary LL.D. degree from Columbia University, he was appointed by Governor Alfred E. Smith associate justice for the Appellate Division, resigning in 1930 to resume the practice of law as senior member of the firm of Proskauer, Rose and Paskus. His skill as a jurist won recognition in many ways, including appointment (1935) by Mayor Fiorello H. LaGuardia to the nine-member Charter Revision Commission of New York city.

Throughout his career Proskauer devoted time and energy to many communal and philanthropic activities. After serving for some years as vice-president of the Jewish Board of Guardians, he was elected (1926) president of the Ninety-Second Street Young Men's Hebrew Association, New York, the oldest organization of its kind in the country. In 1931 he was elected president of the Federation for the Support of Jewish Philanthropic Societies of New York City, a post which carried with it leadership of the world's largest community chest. Proskauer was a member of the executive committee of the American Jewish Committee from 1933 on, and director of the National Refugee Service from 1942 on. In January, 1943, he was elected president of the American Jewish Committee, to succeed Maurice Wertheim, who had resigned that office.

A striking and forceful personality, Proskauer achieved distinction as an incisive, eloquent speaker. He was frequently called upon to deliver keynote addresses on notable occasions in both Jewish and general American life.

Throughout his career, Proskauer adhered firmly to the principle that the Jewish community is essentially a religious one, and that the only valid basis for Jewish unity is the fellowship of religious belief and philanthropic conduct. This led him into vigorous opposition to political Zionism. On similar grounds he opposed the formation of a World Jewish Congress. But recently he emphasized the importance and the possibility of securing "united conduct" without the necessity of any compromise of principles.

McDonald"; Nov. 11, 1936, on "Americanism and Judaism"; Nov. 27, 1936, on "Shattering the Communist Myth;" Sept. 12, 1938, on Patrick Cardinal Hayes; Jan. 24, 1939, for the "Relief of German Christian Refugees;" Oct. 4, 1940, on the election of Wendell L. Willkie.

PROSKAUER, JULIAN JOSEPH, writer, b. New York city, 1893. He was the son of Joseph Proskauer and the grandson of Adolph Proskauer. Proskauer followed his father in the presidency of the William C. Popper printing firm, but also worked as a newspaper reporter and writer. He was the author of many short stories and of several humorous and advertising books. Proskauer was interested also in magic, served as chairman of the commission which continued the work started by Harry Houdini in exposing fake mediums, and was president of the Society of American Magicians in 1934 to 1935.

Joseph M. Proskauer

PROSSNITZ, LÖBELE, Sabbatian visionary and impostor, b. Brody, Galicia, at the end of the 17th cent.; d. in Hungary, about 1750. He lived in Prossnitz, Moravia—hence his surname—first in dire poverty as a peddler and then as a teacher. Suddenly he claimed to have received mysterious instructions from Isaac Luria and Sabbatai Zevi in a dream. His announcement of this dream and its message caused a sensation among the credulous Jews, and Prossnitz preached his gospel to the Jews of Moravia and Silesia.

He gradually surrounded himself with a small group of devoted followers whom he urged to practise self-castigation in preparation, according to his prophecy, for the return of Sabbatai Zevi as the Messiah in 1706. Moreover, he laid claim to being a profound Cabalist, and by means of every kind of hocus-pocus pretended to perform miracles. He was at last unmasked at such a performance at which he pretended to "reveal the Shechinah" by means of tricks worked with fire. He was first excommunicated by Chief Rabbi David Oppenheim, and was then sentenced to a three-year pilgrimage. Upon his fervent pleadings he was permitted to return to Prossnitz, but shortly thereafter, following a visit allegedly paid him by the Sabbatian emissary Nehemiah Hayyun, he again began to proclaim himself the Messiah ben Joseph, signed his name "Joseph ben Jacob," and taught that God had surrendered His guidance of the world to the Messiah. Prossnitz was finally excommunicated for the second time (1725), on this occasion together with two other followers of Sabbatai Zevi; it is believed he died among non-Jews years later in the course of his wanderings in Hungary.

Marcel Proust

PROTECTION OF THE JEWS. As early as the time of the Carolingians, the Jews enjoyed a special protection from the king in return for the payment of special taxes. They needed such, because of their lack of rights as strangers and unbelievers. Originally such protection was given to individual Jews only; but after the Crusades, it became a general one in the form of the "Kammerknechtschaft." About the end of the Middle Ages, and in the early part of modern times, the older form of protection, which was to be purchased by individual Jews, reappeared. Most of the German cities expelled the Jews in the 15th cent., but they permitted some few Jews to remain in return for special taxes (thus Abraham of Leipzig in 1418, Baruch in Dresden in 1468). In the 17th cent., many princes accepted certain Jews into their territories in exchange for special taxes (for example, the Great Elector of Prussia and the Vienna exiles of 1671). This special tax was usually known as the *Leibzoll* (body tax).

The Jews so privileged were carefully distinguished from the Jews "without passports," who settled there little by little, despite the efforts of the government to prevent them. Sometimes, as in the Prussian regulation of 1750, they were divided into "ordinary" and "extraordinary" protected Jews. The former could transfer their right of residence to their children; the latter had only an untransferable right of residence which expired at their death. They could deal in all wares with the exception of a few articles, but, on the other hand, they were excluded from all handicrafts that were controlled by the guilds. Their children, with the exception of the first-born of the ordinary protected Jews, could obtain the right of residence only by making a large payment; often this was denied to them altogether, since the number of protected Jews was to be limited. The Jews "without passports" were considered to be burdensome immigrants; they could pursue no trade of their own, but could only be the servants and employees of protected Jews.

PROUST, MARCEL, writer, b. Paris, 1871; d. Paris, 1922. His father was a professor at the Faculty of Medicine, his mother was a Jewess whose maiden name had been Weill. Proust's devotion to his mother was as great as hers to him, and the asthma which manifested itself during his childhood and was to invalid him for life made the intensity of their relationship greater.

Proust's first books, *Les plaisirs et les jours* and *Portraits de peintres,* were published in 1896. In 1914 the first volume of what was to be his life work, *À la recherche du temps perdu,* appeared; it was translated into English as *Remembrance of Things Past.*

The work of Marcel Proust will remain, in the history of the French novel, a landmark as important as the works of Flaubert or Balzac. It is, by the quality of its style and by the subtlety of character analysis, in the tradition of the best French classical culture, but it could have been written only at the time of Bergson and Freud. In fact, *Remembrance of Things Past* is, to the history of the novel, what *Matter and Memory* is to the history of philosophy. What is the subject of the book? It would be a great mistake to answer: "It is the story of a nervous child, of his parents, of his loves for two girls: Gilberte and Albertine, of his friend Saint-Loup, of the extravagant Charlus." The facts, in Proust's novel, are not important. What really matters is a certain way of remembering the past.

"There are," Proust says, "two kinds of memories. The first is *voluntary or intellectual memory;* we make use of it when we rebuild, consciously, a past event. The second is *involuntary memory,* a phenomenon that takes place when an actual sensation conjures up an image of the past." At the beginning of the book the hero dips a cake in lime-tea and, because when he was a child an old aunt of his, at Combray, used to give him the same cake and the same tea, suddenly all his childhood, and his aunt, and Combray, come back to him. Such is involuntary memory.

The past having been evoked, what does the hero see? He sees, in the center of the picture, his parents' house. On one side of the house is *Swann's Way,* which leads to the home of a neighbor, Mr. Swann, a friend of the hero's father. The other road is *Guermantes' Way,* which leads to Guermantes Castle, the seat of an old aristocratic family. Of the Guermantes, Marcel (the narrator) knows nothing, except legends; of Swann, he knows very little. All those characters, at the beginning of his life, are only *names* to him. Every life begins with the *age of names.* The whole book will be the slow discovery of what really lies behind the names.

Progressively, through chance encounters, Marcel gets to know better both the Swanns and the Guermantes and, much to his surprise, he finds that one never knows anybody. Temperaments are not definite objects you can appraise once for all. They change all the time. Human beings do not appear the same to different spectators. To Swann, who is in love with her, Odette, his

wife, is a precious and rare being; to others she is just a vulgar and uninteresting woman. "Beauty lies in the eye of the beholder." Thus Marcel understands the *relativity of sentiments.* When he is himself in love with Albertine, he realizes that he loves her, not because of what she really is, but because of what he does not know about her. Love is an illusion. Everything is an illusion.

"Life, as it flows, is so much time wasted and nothing can ever be recovered and truly possessed save under the aspect of eternity which is also the aspect of art." In the last volume of the novel (*Time Recaptured*), the hero discovers that art alone can give shape to a shapeless world and transform the fleeting illusions into things of eternal beauty, which was Flaubert's philosophy. One will also note the similarity between Proust's involuntary memory and Bergson's intuition. Both these admirably intelligent men were not of course anti-intellectual, but both were convinced that there is in man something that goes deeper than intellect.

Such is the general outline of Proust's work. Yet its value is not only philosophical; it is literary and poetical. Of all French novelists he is the one who had understood best the lesson of English literature. Once, when he was asked who his masters were, he answered: "Dickens, George Eliot and Ruskin." From Dickens he got his humor. Some of his characters (the Verdurins, Charlus, Morel and many minor ones) were drawn in the Dickens manner. From George Eliot he received some of his ideas about time and the novel. From Ruskin he learned the art of describing, in long and beautiful sentences, minute details in nature.

But if he owes a great deal to English masters, he owes even more to his French masters, the great classical writers, and especially to Saint-Simon. Proust was himself a marvellous literary critic and he has written a penetrating article about the style of Flaubert. A similar study might be, and should be, written about his own style, his beautiful images, his slow and involved periods. There are French writers as great as Proust; none is greater. PROVENCE, a maritime province of southeastern France, which, independent until 1481, was united with France in that year under Charles VIII. Documentary evidence as to the presence of Jews in Provence goes back to about 400 C.E.; they can be traced at Arles, Avignon and Marseille. On several occasions Jewish refugees from Spain and France found a haven in Provence. About the year 1160 Arles had 200 and Marseille 300 resident Jewish families; at the same period, the city of Carpentras, and from the 13th cent. on also Aix, Apt, Cadenet, Digne, Draguignan, Forcalquier, Lambèse, Manosque, St. Maximin, Martinique, Orange, Oraison, Orgon, Pertuis, Salon, Sisteron, Trets and Toulon are mentioned as places harboring Jews.

Provence frequently changed rulers; even the counts of Anjou (after 1245), who were also the kings of Naples, seldom visited the country; therefore the individual cities and regions of Provence followed various patterns of development, as did also the history of the Jews living in them. Jews are found to have been engaged in the most variegated occupations; they were active in the Mediterranean sea trade at Marseille, as owners of land estates (in 1341, 203 of them were owners of land estates at Arles), as public officials (up to about 1300), as physicians and in money-lending. At Marseille, in the principality of Orange and in the feudal domain of Trets, the Jews had certain rights equal to those of the non-Jewish population up to about the 15th cent.

Compared to the north of France, the position of the Provence Jews was a favorable one; they were subjected to nothing like the expulsion of the Jews from the kingdom of France or like the burning of the Talmud at Paris in 1242. But they suffered from the synods of the church and from the Inquisition which, in the second half of the 13th cent., played a part in Provence. At the solicitation of Jewish delegates, Charles I, by an edict of March 26, 1276, delimited the jurisdiction of the Inquisition, but he, as well as his son, Charles II (1285-1309), repeatedly forbade the Jews to hold public offices (thus in 1294 and 1308); the Jews had to live in separate Jewish quarters.

The expulsion of the Jews from France, in 1306, reflected upon the Provence Jews. Robert of Calabria, as deputy of his father, decreed on May 6, 1306, that Jewish creditors should return the certificate of indebtedness to the non-Jewish debtor upon refund of part of the amount owing to them; on June 24, 1306, he forbade Jewish physicians to attend non-Jewish patients and non-Jews to employ the services of Jewish physicians. Regulations concerning the Jew badge (*rouelle*) were renewed; a distinction was made between Jewish and non-Jewish butcher shops. The bewildered Jews appealed to Charles II; on August 20, 1306, he issued the first general privilege in behalf of the Provence Jews: the decree of his son was cancelled; Jews everywhere were to pay reasonable taxes; at Orgon they were exempted from duty; for the writing of court briefs they were to pay no more than the usual fee; they were free to reside everywhere in the cities; Jewish physicians were permitted to attend non-Jewish patients after the latter had been confessed. The non-Jewish owner was required to sign a new document of indebtedness to the Jewish creditor for the unpaid part of his debt.

In 1348 there was a persecution of the Jews in Provence, of which no details are known; as a consequence, Queen Jeanne ordered the tax of the Jews to remain at 2,000 livres. A massacre put an end to the small Jewish community of Toulon on April 13, 1348.

After the fashion of France prior to 1394, toward the end of the 14th cent. the counts of Provence created the office of Conservateur of the Jews of Provence. The Conservateur was called to watch over the privileges of the Jews, and he had authority over them in matters of common and criminal law. In addition to the fines, the Conservateur received a yearly allowance of 500 livres; in 1463 the son-in-law of King René himself became Conservateur. The jurisdiction of the Conservateur, however, encroached upon the rights of the prelates, barons and other lords; in the ensuing conflict the Parliament of Provence took a stand against the Conservateur. In spite of repeated protests, the royal edict of Aversa, dated November 26, 1424, definitely forbade the prelates and barons to intervene in the law suits of the Jews, and this edict remained in force until the expulsion of the Jews from Provence. The Jewish communities, constituting the Communauté générale des Juifs de Provence, held several assemblies whose business it was to raise the taxes demanded by the count of

Provence, for instance in the years 1276, 1419, 1420 and 1446, when the Jewish delegates had to apportion among the Provençal Jewish communities a tax of 2,545 livres for the king and 500 livres for the Conservateur. The statute of Queen Yolanda of May 27, 1423, granted the Provençal Jews individual liberty, safety and protection of their persons against malicious calumny and accusation (something of a "habeas corpus" act).

King René (1434-80), the most tolerant and benevolently inclined among all the protectors of the Jews, confirmed the edict of Queen Yolanda in 1443. In another statute, dated May 19, 1454, he conceded to the Jews permission to wear a badge of smaller size and none while traveling; they could practise as physicians, collect taxes and be free to pursue other occupations; they were to be unhampered in their business dealings with non-Jews, to be free to reside where they pleased, not to be forced to attend sermons in churches and sermons were to be supervised as a means of protecting the Jews. King René in many ways protected the Jews not only against the fanaticism of the masses, but also against the highhandedness of the lords and of Parliament. When, in 1475, preaching friars instigated a pogrom at Digne, he had his coat of arms affixed to the door of every house in which Jews lived and took a determined stand against enforced baptism. By the granting of delays he eased the tax burden of the various Jewish communities, and in 1478 he suppressed the general commission on usury.

The Jews were to pay dearly for these favors, but with his death the period favorable to the Jews of Provence came to an end. King René's nephew, Charles VI, in 1481, ceded Provence to France. From the years 1484 to 1485 on the Jews of Provence were subjected to persecution as a result of fanatical sermons preached against them. Acts of destruction and violence were committed at Arles, Aix, Tarascon and Marseille. The king of France forbade molesting the Jews of Provence (April 25, 1485), but complaints against Jews and their usury became ever more pressing; finally, in 1493, the Jews were expelled from Arles and, between July and September, 1500, also from the rest of Provence. Only at Avignon and in Venaissin County (from 1274 on papal dominions) did the Jews lead a precarious existence until the French Revolution, forming a cultural unit, however. In 1789 those territories had 2,500 Jews.

Culturally, Provence can not be separated from other regions of the south of France (such as Languedoc and Narbonne). It was the point where the Bible and Talmud studies of northern France met with the Jewish philosophy, science and poetry which flourished in Spain. Medicine and astronomy were eagerly cultivated. There were Jewish scholars in Aix, Arles, Marseille, Orange, Salon, Tarascon and in several other places. Judah al-Harizi (d. about 1230) called the songs of the poets of Provence "profound in meaning and forceful"; among them Eleazar, Joseph and Meshullam, the sons of Hanan ben Nathan Esobi, and especially Isaac ben Abraham Gorni, the Jewish satirist of Provence, were outstanding in the 13th cent. Best-known among philosophers born in Provence, also an astronomer and interpreter of the Bible, was Levi ben Gershom, born probably at Bagnols in 1288.

Part of the Jews exiled from Provence settled in the county of Venaissin, in Italy and at Salonika. Many distinguished scholars in those regions preserved the name Provençal for a long time after.

In modern times, the history of the Jews of Provence was that of the Jews of France.

PROVERBS. 1. Biblical. Ancient Israel, a people that set great store on clever sayings, wit and jest, naturally had many proverbs. It is characteristic that the same word (*mashal*) is used for comparison and jest alike. The proverbs that have been preserved in the Bible include: "Out of the wicked cometh forth wickedness" (*I Sam.* 24:14); "The fathers have eaten sour grapes, and the children's teeth are set on edge" (*Jer.* 31:29; *Ezek.* 18:2); "As the mother, so her daughter" (*Ezek.* 16:44); "The days are prolonged, and every vision faileth" (*Ezek.* 12:22); "Woe unto him that increaseth that which is not his; how long?" (*Hab.* 2:6). Similar to these are the proverbial sayings, such as "Is Saul also among the prophets?" (*I Sam.* 10:12; 19:24) and "ploughing with another's heifer" (*Judges* 14:18). There are numerous artistic proverbs in the Wisdom Literature, especially in *Proverbs, Ecclesiastes* and the Apocryphal *Wisdom of Solomon* and *Sirach.* Many of the proverbial expressions in the Bible have become a fixed part of the literary vocabulary of all languages.

See also: PHRASES, BIBLICAL; PROVERBS (book).

2. Talmudic. The number of proverbs in Talmudic literature is also large. Some of these are popular sayings which the Talmudic teachers quote to serve their own purposes; some are the sayings of famous sages which acquired a subsequent entrance into popular speech because of their wit and brevity. *B.K.* 92ab contains a list of popular sayings which the Talmudic teachers cite and offer as parallels to similar proverbs in the Bible and the Mishnah. Thus the popular saying, "Do not throw dirt into the well from which you have drunk," is made parallel to *Deut.* 23:8, "Despise not the Egyptian, for thou wast a sojourner in his land." A proverb, "Poverty presses hard on the poor," is used to explain a passage in the Mishnah (*Bik.* 3:8): "The rich used to bring their first-fruits in bowls of silver and gold; the poor in baskets of peeled willow. The valuable bowls were returned to their owners, but the baskets were kept by the priests." Other popular proverbs that are quoted include: "Tobi does wrong and Sigud gets the punishment" (*Pes.* 113b); "Not the mouse but the hole is the real thief" (*Git.* 45a); "Myrtle is still myrtle even when it grows among thorns" (*Sanh.* 44a); (We desire) "neither its honey nor its sting" (*Tanhuma* to *Num.* 22:12); "When you enter a city, follow its customs" (*Midrash Gen.* 18:8).

The proverbs of the sages include such sayings as that of Hillel, "What thy own soul hateth, do not to thy neighbor" (*Sab.* 31a); "Love work, hate office" (*Aboth* 1:10); "If not now, when?" (*Aboth* 1:14); "Trust not thyself until the day of thy death" (2:5); "Judge not another man until thou art in his place" (*ibid.*); "Envy, passion and misanthropy take a man away from the world (cause him to die prematurely)" (2:13); "The day is short, the work is great, the workmen are lazy, the reward is great, and the owner of the house is urgent" (2:17); "Render unto Him that which is His, for thou and all thou hast are His" (3:8); "Whom his fellowmen do not desire, God does not desire" (3:13); "Silence is the fence of wisdom" (3:17); "Who is wise? He who learns from everyone. Who is a hero? He that controls his passions. Who is rich? He who is happy in his lot. Who is honored? He who honors others" (4:1); "Rather be the tail of lions than the head of foxes" (4:20); "Look not at the bottle but its contents" (4:27); "A man is judged by three things; his purse, his drinking cup and his anger" (*ḳiso, ḳoso, ḳa'aso; Erub.* 65b).

Talmudic teachers frequently apply such proverbs to the uses of daily life, even changing their application to give them an ethical interpretation. Thus the priestly rule that whatever is joined to an unclean thing is unclean (*Kelim* 12:2) is applied to purity in ethical matters. EDUARD BANETH.

3. Post-Talmudic. Post-Talmudic literature contains many proverbs, especially the Arabic literature of the Jews. Some of these proverbs are scattered in the writings of the great poets of this period, while others appear in great collections. There are comparatively few of these proverbs that seem to have arisen from the people; the majority are based on thought and observations and are intended for didactic purposes. The works intended for such moral instruction include the following, with sample proverbs:

Judah al-Harizi, *Taḥkemoni:* Repentance is to sinners like medicine to the sick.
The way is often but short between rise and fall.
Abraham ibn Ḥasdai, *Ben Hamelech Vehanazir:* If nobility does not speak from you yourself, a thousand ancestors are of no avail.
Shemtob ben Joseph Falaquera, *Tzeri Hayagon.*
Honein ben Isaac, *Musere Hapilosofim.*
Solomon ibn Gabirol, *Mibhar Hapeninim:* To triumph through unrighteousness is to be defeated.
Jedaiah Bedaresi, *Behinath Olam.*

Moral and ethical books are also a good source for such maxims, which give in brief and convenient form an ethical principle or a rule of experience. Such works are:

Judah of Regensburg, *Sefer Hasidim.*
Bahya ibn Pakuda, *Hoboth Halebaboth.*
Solomon Hakohen, *Shebet Musar.*
Zebi Hirsch Kaidanover, *Kab Hayashar.*
Hähndel Kirchhahn, *Simhath Hanefesh* (Yiddish).

Many of these proverbs have been collected and translated into German and English.

JAKOB PINCHAS KOHN.

4. East European. The Jews of Eastern Europe form a special group with their own speech and forms of literature, including legends, songs, anecdotes and proverbs. Of course all these fields are influenced by the older Jewish literature. Traces of proverbs which originated in the Bible, Talmud or Midrash are plainly perceptible, while other popular proverbs seem to have been derived from proverbs current among the German and Slavic peoples. Nevertheless, a large number of the proverbs current among East European Jews bear the stamp of Jewish thoughts and feelings, Jewish views of the world and of life, and are steeped in Jewish wit and humor. The proverbs current among East European Jews could be used to define the general views of the Jews on the most important problems of life and the world.

It was not until the late 19th and early 20th cent. that an attempt was made to create a systematic collection and arrangement of the proverbs of the East European Jews. The most comprehensive collection is that of Ignaz Bernstein, aided by Benjamin W. Segel, *Jüdische Sprichwörter und Redensarten* (Frankfort, 1908); it contains nearly 4,000 proverbs, given in Yiddish in Hebrew letters and with a transcription into Roman script. This is only a fragment of the entire mass of East European proverbs. A characteristic feature is the intense and courageous trust in God and love for God. The proverbs philosophize, laugh and weep about every object in life and in numerous forms. Thus in the above-mentioned book about fifty columns each are devoted to the subjects Man, Woman, Money, Poverty, and Dog, and more than seventy to Jew. Numerous proverbs deal with Jewish months and festivals, prayers and weekly Scriptural portions, as well as Biblical and Talmudic figures and concepts. It is noteworthy that the proverbs which speak about women contain no references to faithlessness or fickleness.

N., and Rabnitsky, J. H., *Sefer Ha-agadah;* Karpeles, *Zionsharfe* (1889); Weinberg, M., *Ewige Weisheit; Jewish Encyclopedia,* vol. 10, pp. 226-29.

PROVERBS, BOOK OF, the second book of the Hagiographa (Kethubim), or third section of the Bible, belonging to the Wisdom (Hochmah) Literature, which includes also *Psalms* and *Job.* Ascribed to Solomon by the superscriptions in the first and twenty-fifth chapters, the book is a collection of aphorisms and wise sayings about the moral and religious way of life. Proverbs is primarily concerned not with prophetic or legalistic Judaism, but rather with the sages of post-Exilic times and with wisdom, frequently personified. Like *Psalms,* Proverbs is a "collection of collections," most of which are provided with titles.

The text itself indicates the following divisions: A. Discourses on the conduct of life (chaps. 1 to 9), including a general title on the book's purpose of teaching wisdom (1:1-6); and a lengthy discourse of father (teacher) to son (pupil) on the theme that "fear of the Lord" is the essence of wisdom (1:7 to 9:18). There are warnings against immoral women (5 to 7), admonitions against certain social faults (6:1-19), a description of wisdom as a guide for life and an aid to the creation of the world (8), and a contrast between wisdom and folly (9). *Prov.* 6:1-19 and 9:7-12 are out of place. B. A book of "the proverbs of Solomon," consisting of poetic couplets, totalling 375 verses (10:1 to 22:16). C. A collection of "words of the wise" (22:17 to 24:22), consisting of an introduction (22:17-21) and then thirty (22:20 should read, "Have I not written for you *thirty* sayings, etc.") couplets, based on an Egyptian book, "The Wisdom of Amen-en-ope" (1000-600 B.C.E.). Like its Egyptian predecessor, the collection gives practical advice for prospective public officials, sound moral counsel, the virtues of wisdom, and admonitions against adultery, intemperance, envy, and

joy at an enemy's misfortune. D. Another collection of "words of the wise" (24:23-34), containing aphorisms, and a vivid picture of the sluggard's field. E. "The proverbs of Solomon, which the men of Hezekiah king of Judah collected" (25 to 29) may be further divided into two readily distinguished parts (25 to 27 and 28 to 29). The first part (25 to 27), except for glosses (25:21-22; 25:5; 27:11, and other passages), is secular and presumably one of the older sections of the book, whereas the second section (28 to 29) has the strong ethical and religious emphasis of post-Exilic Judaism, very much like the aphorisms in (B). F. "The words of Agur the son of Jakeh" (30:1-10) is the statement of a skeptic, wrestling with the concepts of God and creation, whose heresy is offset by a pious prayer (30:7-9). There follows a group of sayings, against slandering a servant (30:10), and against certain vices and errors (30:11-33). G. "The words of Lemuel" (31:1-9), warning the king against sensuality and intemperance, and exhorting him to aid the needy. H. The picture of an ideal housewife (31:10-31), in a poetic, alphabetic acrostic.

Two schools of thought may be recognized in the wisdom materials of Proverbs, a secular and a religious. The theology of the secular group is that of *Job, Ps.* 104, and *Ecclesiastes.* The religious school is akin to *Deuteronomy,* the later codes, and *Sirach* (*Ecclesiasticus*). The secular school conceives of God as Creator (3:19-20) about Whom man can gain little knowledge (30:2-4). God is the source of all things (16:9), directing every move of man (16:1; 21:1, 31), who is powerless against Him (21:30). Man may obtain the good things in life only by his own efforts. Wealth is acquired through intelligence (24:3-4), hard work (10:4-5), especially in herding (27:23-27) and in farming (12:11; 28:19). The wise man will retain his property by abstaining from laziness (6:6-11; 24:30-34), profligacy (5:9-10; 6:26; 23:27-28; 29:3b), intemperance (23:20-21) and going surety for another's debts (6:1-5). The pleasures of life, if in moderation, are not to be shunned; such pleasures are ointment and perfume (27:9), wine (31:6-7), honey (25:16), friendship (25:17), and marriage and family (5:15-20). A nagging wife (17:1; 21:9, 19), false friendship (16:27-30; 19:4; 26:18-19), association with fools (13:20b), quarrelsome men (15:17-18; 19:19), flatterers and tale-bearers (26:20-28) are to be avoided. Wisdom is either a professional skill (20:18; 24:3-6; 30:24-28) or a utilitarian morality (14:3; 24:4-5). Admonitions of wisdom against adultery, usury, fraud, theft, and ill-gotten gains are not moral or religious, but dictated by expediency. These derelictions are fraught with serious, personal or material risks. Self-interest is the chief criterion in avoiding them. Bribery is approved when fruitful of results (17:8; 19:6), despite religious laws against it.

In the religious and ethical section of Proverbs, the influence of the social ideals of *Deuteronomy* is felt. Prophecy and law are mentioned (29:18); inward spiritual religion (16:2), appeals for the widow and orphan (15:25b; 23:10-11) and for the poor (14:20-21; 17:5; 19:17; 21:13; 22:2), and the feeding of one's enemy (25:21-22), all reflecting the spirit of the prophets and of *Deuteronomy.* In the religious school, the wisdom of God is now accessible to man (1:20-33; 8:1 to 9:6). It is equated with morals (8:13) or religion (1:7), as in the prophetic writings. Ethical and religious wisdom is a gift of God (3:7; 2:6-7). The wise are identical with the pious (9:9; 10:31; 23:24), and contrasted with scoffers (9:8; 13:1; 15:12; 29:8). Identified with all that is noble and pious, wisdom becomes the summum bonum of life (3:13-18; 8:6-21) through which long life, security, honor, wealth and happiness are found (6:23; 1:33; 3:16; 8:18; 3:13). God is no longer unapproachable, but Creator and Judge (16:4), Who sees man's innermost thoughts (5:21), weighs his heart (16:2), and metes out reward or punishment (24:12). The pietists firmly believed that wealth and happiness were the reward of piety and righteousness (3:16; 8:18). All derelictions, such as bribery, drunkenness, and adultery, were now moral and religious sins, not merely inexpedient forms of conduct (6:16-19; 15:27; 2:16-19). The pious sages regarded wealth neither with the unreserved praise of the secularists nor with the utter condemnation of the proletarian psalmists. Proverbs reflects the ideals of the prosperous middle classes of Judea, whose children were taught by the pietists that wealth had a spiritual meaning in the light of pious and philanthropic giving (3:9-10; 11:24-26; 19:17; 22:9), and in that there was no real difference between rich and poor (22:2; 29:13). Many things in life were more precious than riches, namely wisdom (3:14-15; 8:11), religion (15:16), righteousness (16:8), and a good name (22:1). Proverbs presented, as in *Deuteronomy* (11:26) and *Jeremiah* (21:8), the two ways of life, the good and the evil, the pious way of reward as against the wicked way that leads to retribution (2:13; 5:5; 12:28; 15:19). The religious proverbs as a whole are idealistic, pious, and morally religious, whereas the secular proverbs are realistic and practical, with an occasional strain of cynicism.

Scholars are generally agreed that the book of Proverbs was composed out of several collections of aphorisms extant in Palestine between 400 and 200 B.C.E. That its final compilation could not have occurred later than 200 B.C.E. is evident from the reference to Proverbs in *Sirach* 47:17 and 8:8. That the book as a whole can not be older than 400 B.C.E. is clear because of the Aramaic and late Hebrew forms (collected by Wildeboer in Marti's *Kommentar*), the absence of earlier nationalistic sentiments, the references to the law and prophets (28:4, 9; 29:18), its advanced religious conceptions (14:31; 16:4; 22:2; 28:13), the sharp division of the Jewish community into pious and scoffers (*letzim,* a late word), and other parallels with *Psalms* and other late writings (especially *Sirach*). It is extremely unlikely that anything at all originated with Solomon. His name in 10:1 can perhaps be explained by the fact that the number of proverbs in 10:1 to 22:16 is equal to the numerical value of the word Solomon (Hebrew, *SHeLoMoH*), or 375. Similarly, the collection in 25 to 29 has 136 verses, corresponding to the letters in the name Hezekiah (Hebrew, *HiZKiYaHU*). Whether the number of verses was chosen on account of the name, or the name on account of the number of verses (which is more likely), can not be definitely determined. On the assumption that the king proverbs refer to Jewish kings, scholars like Kittel and Gunkel assign the older collections to pre-Exilic times. Yet some of the verses they cite refer to the Pharaoh (22:29), originally a part of Amen-en-ope's book, and to an Arabian chieftain (31:1-9). While individual collections and statements may go back to

earlier times in line with an Egyptian prototype, their compilation is clearly post-Exilic (see Erman, in *Orientalistische Literatur-Zeitung,* 1924-25). As for the inclusion of Proverbs in the canon, Proverbs, like the two other books ascribed to Solomon, *Song of Songs* and *Ecclesiastes,* was not finally included in the canon of the Bible until about the year 100 C.E. (*Sab.* 30b; *Aboth de Rabbi Nathan* 1). ADOLPH J. FEINBERG.

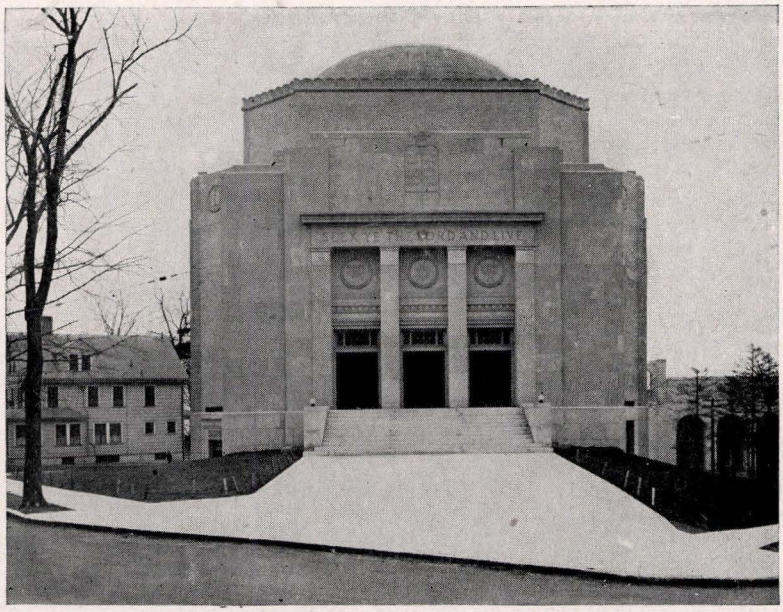
PROVERBS, MIDRASH TO, *see* MIDRASH PROVERBS.

PROVIDENCE. In Jewish tradition divine Providence means God's foreknowledge from the beginning of all the events which will transpire, and also His guidance and moral control of the entire universe. It denotes at once His omniscience and His loving care for all His creatures. In Biblical literature Providence is implicit. The term *hashgahah* which is used by later philosophic writers is not found in Scripture, although the verbal form *hishgiah* is found in *Ps.* 33:14, where it suggests providential care: "He *looketh intently* upon all the inhabitants of the earth." Throughout the Bible there are innumerable references to God's foreknowledge (*Amos* 3:7; *Isa.* 40:21; 41:4, 22, and other passages). Even more definite are the references to God's guidance and control. Not only is this true of His guidance of Israel, which is the leitmotif of the entire Pentateuch, but also of His care for individuals. This becomes explicit in the Joseph story (*Gen.* 50:20), in which Joseph interprets events, seemingly evil, in terms of God's larger and beneficent plan. "Ye meant evil against me; but God meant it for good." This guidance is given a mildly deterministic tone in certain prophetic statements (for example, *Jer.* 10:23).

The term "Providence" is first used in the Apocrypha (*Wisdom of Solomon* 14:3 and other passages). In the minds of the rabbis and of the Jewish philosophers, belief in providence gives rise to a philosophic problem to the solution of which considerable thought is devoted. "From a strictly rational or philosophic point of view, God's foreknowledge—Yediah—and man's freedom of will—Bechirah—are utterly incompatible" (*Central Conference of American Rabbis Year Book,* vol. 27, p. 317). When the Jewish mind first became aware of this problem can not be determined, but it is evident that controversies about providence, free will and determinism took place among the Essenes, Pharisees and Sadducees in the days of the Second Temple (Josephus, *Antiquities,* book 13, chap. 5, section 9). Philo also is troubled by it (*Creation of the World* 61:6). In general, the Jewish philosophers attempted to reconcile these seemingly contradictory doctrines by adopting the Aristotelian point of view. They declared that God's providence is of species rather than of individuals (*Moreh Nebuchim* 1:23; *Ikkarim* 4:1-11). They also adopted Aristotelian terminology by declaring that God is not the immediate but the remote cause of everything. Among secondary or immediate causes is the free will of man. Thus the conflict was resolved by placing God's guidance and man's freedom of choice in separate spheres of causality.

The rabbinic solution is strikingly different. The rabbis refused to deny either divine control or man's moral freedom. On the contrary, they accepted both (*Central Conference of American Rabbis Year Book,* vol. 27, p. 317 et seq.). They declared in unmistakable terms that God is the governor and orderer of the universe and all it contains. All He does is for a good purpose. Even the evil is part of His plan (*Ber.* 60b). Nothing happens in this world which is not of His doing. Even the most insignificant event is ordained by Him (*Midrash Gen.* 18; *Midrash Eccl.* 10). But this does not nullify man's freedom. Before a child is born his physical nature, his knowledge and his success are determined by God, but his character is of his own making (*Nid.* 16b; *Ber.* 33a). In the realm of morality there is no determinism. This is clearly expressed in the rabbinic statements that "Everything is in the power of God, except the fear of Him" and that "All is foreseen; yet free will is given" (*Ber.* 33b; *Aboth* 3:15).

By affirming both doctrines the rabbis refuse to relinquish their sublime faith in both God and man. Man is elevated to the position of co-worker with God (*Sab.* 119b). Kohler declares that "it is at this point that philosophy and religion part company" (p. 173).



It is the faith of the Jewish religionist that God's omniscience and omnipotence do not destroy the basis of morality, which is human freedom, without which the moral struggle loses its meaning. In more recent years the doctrine of divine guidance has been challenged by the emphasis of modern science on absolute cause and effect relationships in the realm of nature. In rabbinic spirit the leaders of Reform Judaism declared in the Pittsburgh Platform that the discoveries of modern science are not antagonistic to divine Providence (Cohon, p. 94). ABRAHAM SHUSTERMAN.

PROVIDENCE, capital of the state of Rhode Island. Its Jewish population was estimated (1940) at 23,000, in a total population of 253,504.

The first Jew who is known to have been a resident of Providence was David Lopez, Jr., apparently a grandson of Aaron Lopez, one of the leading figures in American commerce. On January 2, 1781, Lopez, Jr., wrote to Lopez, Sr. "sincere acknowledgments that so justly is due for your great benevolence in negotiating a plan for my establishment." The first city directory of Providence lists Samuel Lopez, a jeweler in Cady's Lane. The directory of 1841 lists Isaac Fish, another jeweler. But the other early settlers appear to have been peddlers, tailors and clothing merchants.

In 1920 Mary Pareira Hirschorn, over eighty years old, visited her native city of Providence. She told her friends that when a very young child she remembered hearing through a chink in the door of the living room in her father's home on Bridgham Street the voices of men reading religious services. Her father was Solomon Pareira, who at one time owned three clothing stores in Providence. The year is estimated to have been 1844. Oral tradition must suffice for the first eleven years in lieu of the records lost in a fire. In 1855 the General Assembly of the State of Rhode Island granted

Temple Emanu-El of Providence, R. I.

a charter to "Joseph Stern, Solomon Pareira, Abraham H. Goodman, David DeYoung, Morris Marks, Leonard Halberstad, Henry Solomon, Isaac Fish, with their associates and successors," who incorporated under the name "The Congregation of the Sons of Israel." In 1858 Abraham Pareira presented a parcel of land to the congregation. The land was the nucleus for the present (1943) Reservoir Avenue Cemetery. In that year, too, Moses Cohen, the first resident minister, was engaged, to be followed shortly by Lazarus Kantrowitz. Among the settlers who arrived in the 1870's and 1880's and became well-known were the Winograd and Dickens families.

In 1874 Sons of David, which had seceded from the mother congregation because its members wanted more rigorous adherence to the transmitted liturgy, rejoined Sons of Israel. Neither congregation was willing to give up its name; hence the enlarged congregation was reincorporated under the name Sons of Israel and David.

In July, 1877, Solomon Sonnenschein, of St. Louis, and Benjamin Franklin Peixotto, former American consul general to Roumania, came as representatives of the Union of American Hebrew Congregations to explain the principles of Reform Judaism. The congregation joined the Union. Early in the following year the service was embellished by the use of an organ and the introduction of a mixed choir. These innovations were brought into the newly rented chapel located on the corner of Pine and Page streets. At that time the congregation numbered seventy-three families. The first structure erected by the congregation was built on the corner of Friendship and Foster streets and dedicated on December 7, 1890, by Rabbi Isaac M. Wise. The present (1943) building on the corner of Broad and Glenham streets was dedicated on September 15 to 17, 1911. It is generally called Temple Beth El. Its membership in 1942 was 300.

Among the rabbis who served the congregation were Abraham Jacobs (1862-68), Jacob Voorsanger (1876), Meyer Noot (1881-86), Morris Sessler (1887-92), David Blaustein (1892-98), Henry Englander (1905-10), Nathan Stern (1910-15), Sidney S. Tedesche (1916-17), Simon Cohen (1917-19), Samuel M. Gup (1919-32) and William G. Braude (1932-).

Jewish distress in Europe began bringing large waves of Russian, Galician, Roumanian and Lithuanian Jews to Providence. Hitherto most of the settlers were of Dutch, Posen and Bohemian origin. Toward the end of the 19th cent. there were 3,000 Jews in Providence. In 1906 the Jewish population had more than tripled and was estimated at 10,000. These years were marked by the organization of many congregations and their steady growth. The newcomers could not adjust themselves to the Reform services of Sons of Israel and David. Therefore, in 1885, they formed Sons of Zion (rabbi, David Werner, 1935-), in 1889 Ahavath Sholom Roumanian Congregation, and in 1891 Mishkan Israel Anshe Russia or Beth Dovid (rabbi, Eliezer Poupko, 1940-).

B'nai Jacob, organized in 1897, built its first synagogue in 1906 and moved into a new structure in 1922. Its first rabbi was Isaac Bick, who served from 1924 to 1933. In 1941 Carol Klein, formerly of Czechoslovakia and Frankfort, was made rabbi. B'nai Jacob, with three other Orthodox congregations in Providence, established the Vaad Hakashruth, which has total supervision of Kashruth in the city. Among the Orthodox synagogues which were founded after B'nai Jacob were the Hebrew Congregation of South Providence (1899), of which Joshua Werner became rabbi in 1931, and Ahavath Sholom, a Russian group, founded in 1904, with Morris G. Silk as rabbi (1939-).

In the 1920's the children of the immigrants of the 1890's wanted modernized services and preaching in English. Congregation Beth Israel, organized in 1921, had B. Leon Hurwitz for its first rabbi. Jacob Sonderling (1929-31) and Morris Mazure (1931-33) were rabbis later. Morris Schussheim, who occupied the pulpit from 1923 to 1929, returned in 1933, and in 1943 was still serving as rabbi. A synagogue was built in 1942. The congregation follows the Conservative ritual.

Emanu-El, which is also Conservative, was organized in 1924; its own building was dedicated in 1927. Israel M. Goldman was rabbi in 1943, having been elected in 1925. A new Orthodox congregation was formed in 1938—the Sons of Abraham. Nathan Taragin, the first rabbi, was serving in 1943. The synagogue was completed in 1939.

All the congregations have religious schools attached to them. Two of the Orthodox rabbis instituted a small parochial school, which was functioning in 1943. Temple Beth El has a library of Judaica of almost 5,000 volumes. There is a large Jewish cemetery in Warwick owned by the Sons of Zion, with sections parcelled out among many congregations and lodges.

Between 1933 and the outbreak of the second World War about 400 refugees, men, women and children, settled in Providence.

Providence had (1943) many welfare societies and institutions. The oldest was the Montefiore Ladies Hebrew Benevolent Association, organized in 1878. There were, in 1943, two free loan societies—that of the North End (organized 1903) and that of South Providence (organized 1906). There was a Jewish Home for the Aged (Samuel Magid, president; Isaac Feinstein, director), the Jewish Community Center (Samuel H. Workman, president; Jacob I. Cohen, director), Miriam Hospital (Max L. Grant, president; Maurice Stollerman, director), Jewish Children's Home (Dr. Archie A. Albert, president), Jewish Family Welfare Society (Jacob Temkin, president; Joseph Galkin, director). The strongest women's organizations were Hadassah, the Temple Sisterhoods, the Women Pioneers and the Council of Jewish Women. At one time Providence had many lodges and mutual benefit societies. Many of them have disappeared. The strongest of those which survive are the B'nai B'rith and the Touro Fraternal Association. Providence had a chapter of the Jewish War Veterans of America, with its own headquarters. There were two Jewish shelters for transients—one in the North End, the other in South Providence.

At one time the Jewish community had a cloth hat and cap makers' union as well as a painters' union. These were dissolved. There existed in 1943 a bakers' union and a furriers' union. The Workmen's Circle (Arbeiter Ring) had four branches. In 1926 it organized a Yiddish School; Beryl Segal was principal in 1943.

In 1943 the Jews of Providence were engaged in commerce, industry, the professions and many trades. There was a weekly newspaper called the *Jewish Herald* (established 1929). John J. Rosenfeld, once managing editor of the Providence *Journal*, was the most prominent Jew in local journalism. Israel J. Kapstein was assistant professor of English, and William G. Braude was lecturer in Biblical literature at Brown University.

Zionist sentiment loyally cultivated by Archibald and Ida Silverman was strong. Besides the Zionist District, there was a Mizrachi chapter, Poale Zion group and several young men's and women's Zionist societies.

Harry Cutler headed the Jewish Welfare Board in the first World War. Marion L. Misch was national president of the Council of Jewish Women. Joseph Samuels gave a dental clinic to the state of Rhode Island, and J. Jerome Hahn erected a monument at the spring where Roger Williams landed in 1636.

Isaac Hahn was the first Jew to be elected to public office. He served in the state legislature in 1884. He was followed by Leopold Dimond, Jacob A. Eaton, Harry Cutler, Philip C. Joslin (who was speaker of the House and who, in 1943, was a judge of the Superior Court), Harry Horowitz, Charles Brown, Ira Marcus, Joseph Smith, Elisha Scoliard, Ernest L. Shein, Thomas H. Goldberg and Samuel C. Kagan. Maurice Robinson, in 1943 judge of the Sixth District Court, and Paul J. Robin served in the senate. John J. Rosenfeld, grandson of Rabbi Abraham Jacobs, was very influential in state and city politics in the days of General Brayton. (In his will Rosenfeld left $150,000 for the erection of a school building for Temple Beth El.) J. Jerome Hahn, the son of Isaac Hahn, served as judge of the Superior and Supreme Courts of the state. (He left over $1,500,000 for the Rhode Island Hospital.) David C. Adelman was a member of the Board of Elections, Nat C. Cohen of the Board of Parole, Max L. Grant of the State Board of Defence, and Hyman Lisker, assistant attorney general of Rhode Island. Harry Edward Miller was, in 1943, professor of political economy at Brown University.

PRUSSIA. 1. Political History. The history of the first Jewish settlements in Prussia is given under BRANDENBURG. The first of the Hohenzollern princes to follow a systematic policy toward the Jews was the Great Elector, Frederick William I (1640-88). This ruler was tolerant in matters of religion; he was one of the first princes to draw a distinct line of division between the policies of government and religion. He was also desirous of increasing the population and revenues of his state, and accordingly promoted the settlement of Jews in Cleves, Ravensberg and East Prussia, and in the provinces which he had obtained in 1648, Magdeburg, Halberstadt, Minden and Farther Pomerania. He accepted in Brandenburg fifty Jews who had been driven out of Austria.

In an edict issued on May 21, 1671, Frederick William I granted the Jews the right of staying in all places and cities of the margraviate, of renting and purchasing houses, of buying and selling in open stores and shops, and of visiting the yearly markets and fairs. He declared that he would be satisfied with protection money of eight talers a year per person, in addition to the ordinary taxes and contributions required of all citizens. In this he was guided by the desire to secure the aid of the Jews in transforming the economic state of his country from one based on agricultural products to one based on money and credit; he hoped that they would help to restore trade in the provinces which had been devastated by the Thirty Years' War. At the same time he regarded the economic power of the Jews as an important potential political tool in his fight with the estates and the guilds. As in the case of other princes of the mercantile era, a great role was played in his reign by the court and mint Jews, such as Israel Aaron, Bernd Wulff, Jost Liebmann and the Gompertz family. To these he entrusted the supplying of the army with ammunition and provisions, and the delivery of furnishings for the court.

The first Prussian king, Frederick I (1688-1713), followed the same policy. This extravagant and luxurious successor of the Great Elector regarded the Jews as a welcome source of revenue which was to be entirely at the disposal of the prince. For this reason he permitted a steady increase in the number of Jews, but

also ordered a constant increase of the protection money and of the gifts which they had to furnish on special occasions. The Great Elector had not interfered in the internal affairs of the Jews. Under a form of self-government they were left to their own jurisdiction; they conducted their own system of education and held community property; they were permitted to elect their own officers and rabbis. Under the absolutism of Frederick I, however, the state began to supervise the Jews, to control them, to meddle in their internal affairs and, finally, to place them under a Jews' commission composed of the royal ministers (1708).

King Frederick William I (1713-40) carried this policy to an extreme. The state began to control the budgets of the Jewish communities, to settle disputes, and to decide all important proposals of the elders. Hitherto the taxes from the provinces had been collected separately, and their amount had been determined from time to time. Now Frederick William I demanded a strictly centralized and unified state, and that all Jews should bring their taxes and protection money at the same time. While the king thus bound the Jews more closely to the state than any of his predecessors had done, he sought, on the other hand, to limit their numbers. Strictly religious, almost a bigot, he was personally hostile to the Jews. Although his confirmation edict of 1714 was still very favorable, being based on the Great Elector's decree of acceptance of 1671 and removing many limitations which had been made in the meanwhile, Frederick William's general privilege and regulation of September 29, 1730, imposed certain restrictions. The number of protected Jewish families in Berlin was fixed at 120, and only two children might be "established" provided that there was a guarantee of property worth 1,000 talers and a fee of fifty talers for the first child and a tax of one hundred talers for the second. Only those who were especially granted the concession were allowed to maintain stores and shops; the wares in which they were permitted to trade were expressly stipulated.

The general regulation of 1750, issued by Frederick the Great (1740-86), divided the Jews into regular and special protected Jews. Only the regular protected Jews could bequeath their privileges to their children; the privileges of the special Jews expired with their death. Both the latter and the younger children of regular protected Jews were forbidden to marry or to carry on a business of their own. In the matter of business enterprises, even the protected Jews were limited. In the meantime the pressure of taxes became greater and greater, and the number of ordinary and extraordinary gifts to the king pyramided. There were recruiting monies, delivery of silver, calendar money, money for the provost, correspondence money, and a number of other kinds. Especially burdensome were the obligation to export manufactured wares, the maintenance of the Templin factory, the compulsory export of porcelain and the joint responsibility of the entire Jewish community for the taxes and for theft and concealment of stolen property.

Under the rule of the liberal Frederick William II (1786-97) the situation of the Jews in Prussia underwent a fundamental change. The process of assimilation began. It was brought about by the change from the centrally ruled military and police state to a constitutional state, by the ideas of humanity and tolerance of the 18th cent., and not the least by the efforts of Gotthold Ephraim Lessing, Christian Wilhelm von Dohm, Alexander von Humboldt, and, above all, of Moses Mendelssohn, to lessen or solve the difficulties and constraints under which the Jews labored.

This movement, which began in 1787 and was led chiefly by such Jews as David Friedländer and by such Prussians as the ministers Humboldt, Schroetter and Hardenberg, and the Königsberg jurist Brand, ended with the issuing of the emancipation decree of March 11, 1812. This edict, which was in very close connection with the Prussian reform of the organization of the cities, the freedom of commerce and the arrangement of the guilds, declared in section 1 that the Jews were "natives and Prussian citizens." It removed all restrictions as to residence and profession, all special taxes and discriminatory laws; it admitted the Jews to the municipal service, to academic offices and to military service. It granted them freedom of settlement and freedom of trade, dissolved the separate bond of the Jewish communities and removed the separate jurisdiction of the elders and rabbis.

These events had taken place during the reign of Frederick William III (1797-1840); but under him there began also a period of the worst reaction, starting in the time of the War of Liberation. The romantic period held up the ideal of a national and Christian state; it naturally turned against the Jews, who were of a different race and of a different faith. Jewish deputies were not allowed to be elected, and the patrimonial jurisdiction of Jewish property owners was removed. Jews were debarred from the most important communal offices, were denied appointment to the higher academic and military offices, and were limited as to the purchase of land. In Posen, where two-fifths of the Jewish population lived, the "Temporary Regulations" of June 1, 1833, divided the Jews, as in the time of Frederick the Great, into two classes. The first included the naturalized inhabitants, the second those "who as yet were not fitted to acquire the rights granted to the naturalized class."

Under Frederick William IV (1840-61), who was under the sway of medievalism, feudalism and Christian romanticism, reaction prevailed during the first years of his rule. But the influence of the liberal tendencies of the 1840's resulted, at the proposal of the estates of the individual Prussian provinces, in a law, issued on October 31, 1845, which compelled the Jews of Prussia to take definite family names. On December 12, 1845, all Prussian Jews were made subject to military service; the right to engage in a regular business had been granted them on January 17, 1845.

Although the Jewish law of 1847 still excluded them from every communal and official position, the storm of 1848 soon annulled it. The diet summoned under the pressure of the "March days" worked out the plan of a constitution, in which the enjoyment of civil and civic rights was declared to be independent of religious belief (section 5 of the order of April 6, 1848). This paragraph was accepted by the constitutional convention, in which Johann Jacoby, the well-known Jewish deputy from Königsberg, played an important part. The article about equality remained in the constitution proclaimed by royal decree on January 31, 1850, after the convention had been dissolved by the king. Article 4 stipulates: "All Prussians are equal before the state.

There can be no distinctions in rank. The public offices are . . . equally accessible to all who are competent."

The further history of the Prussian Jews is identical with that of the Jews of Germany. *See* GERMANY.

2. Communal Affairs (Up to 1933). The first modern ordinance relative to a community of Jews in Prussia is the Great Elector's edict of May 21, 1671, regulating the settlement of the fifty families of Jews who had been driven out of Vienna. This did not deal with them as a community, but as individual families; it granted them free exercise of their religion, the right of meeting for prayer, such officers as a ritual slaughterer and a schoolteacher, and the possession of a burial-ground. In later years, however, the state, regarding the Jews as somewhat harmful, yet an undoubted source of revenue, resolved to make use of their communal organization for the purposes of taxation. It therefore entered into the already existent religious community and gave it a political nature; it granted it a constitution of its own, all for the purpose of making it assume the collection of the Jewish taxes demanded by the state.

This development began with the ordinance and regulation of 1700, and was continued by the laws of the subsequent period, especially the edict of 1714, the regulation of 1730, and the "general Jewish regulation" of 1750. The principal features of the organization thus created for the Jews were the following:

(a) The Jews of every city were grouped into communities, and every Jew resident in a place was a member of its community.

(b) The community had the right to tax its members.

(c) The tasks allotted to the community were partly religious and partly political.

The regulation of 1750 made the number of the duties of the community so comprehensive that the latter even had to be responsible for every theft committed by a Jew; if the thief was not discovered or was unable to make restitution, the community had to replace the stolen property. The community was also obliged to see to it that the debts of deceased members of the community to the public treasury or to Christians were paid by the parents or heirs of the deceased.

The rabbi and the elders were the officials of the community. Their election as well as their functions were regulated by the state, and the latter reserved to itself the right to confirm the selection. The regulation of 1750 decreed that a college of thirty-two men should be formed out of the three classes into which Jewry was divided for the assessment of taxes, namely, the wealthy, the middle-class, and the poor Jews, and that the rabbi should be elected by this college. The elders were elected as follows: Seven men were chosen by lot from the three classes, and these bound themselves by oath to elect no one "who was not capable of representing the community." This college of seven chose also "the learned judges, the administrators of the poor, and the treasurers." The number of elders was six, and their term was three years; a reelection at the end of their term was permitted only for special reasons. Wherever possible, two relatives were not to be elected to offices at the same time.

The only way in which the state interfered with religious worship was to forbid any private religious services besides the community synagogues, unless special permission had been obtained. An exception was made in winter for the aged and sick, and for children under twelve.

The elders, rabbi and vice-rabbi had certain powers of punishment in case of certain transgressions of the religious law, and the rabbi and vice-rabbi had jurisdiction in cases of disputes between Jew and Jew in matters of civil law.

The edict of 1812 made the Jews natives and citizens of the state instead of strangers and wards and thus gave them full equality. This act destroyed the legal basis for the maintenance of their separate autonomy. On the other hand, this law did not make any regulations with reference to the Jewish communities, since it limited itself to the regulation of civic conditions. The result was uncertainty and lack of clearness as regards the management of the communities by the state authorities, which gradually led to an intolerable state of affairs.

In the early 1820's, however, the view became more and more prevalent that Judaism in Prussia belonged to the class of tolerated religious organizations, and that therefore the community had the status of a private organization. It therefore had claim only to the free exercise of religion, and the state concerned itself with its affairs solely when the police interest warranted it. It did not promote or regulate the formation of communities, but left it entirely to the discretion of the individual whether he wished to be a member or not. This viewpoint menaced the very existence of the communities. Despite the principle of non-interference, the state required the communities to maintain certain institutions, as for instance a cemetery, since Jewish oaths had to be sworn there, and a synagogue, since Jewish marriages had to be performed there. These institutions called for heavy expenditures on the part of the community, and if it could not be sure of its revenues by reason of the right of individuals to withdraw or to refuse to pay their taxes, the community could not plan new institutions, and even feared lest it might not be able to support its old ones.

The provisional ordinance issued for the Grand Duchy of Posen in 1833 was the first step taken to improve this condition. It once more made the synagogal communities of the province corporate organizations with corporate rights. Compulsory membership in the community took the place of voluntary adherence. The administration of property affairs was put under the control of the state authorities, and it was the task of the corporation to see that provision was made for the instruction of all children of school age.

For the rest of Prussia the law of 1847 made a reorganization on practically the same principles. The communities were raised to the sphere of public law, received the rights of corporation and of taxation, and membership was again made compulsory. The most essential principles in this regulation were as follows:

(a) Every Jew had to be a member of a synagogal community.

(b) Synagogal districts were to be formed; their formation and alteration were effected by the government with the cooperation of the parties concerned.

(c) The synagogal communities were corporate bodies with the right of taxing their members.

(d) The officers of the synagogal communities were: 1. the executive committee, which consisted of not less than three nor more than seven members, who received no salary for their services; 2. the assembly of representatives, which consisted of not less than nine and not more than twenty-one members.

(e) The state reserved for itself a far-reaching right of control and participation in a number of legal acts. However, this cooperation was never extended to religious worship.

(f) The communities had extensive autonomy, especially in reference to the regulation of taxes, organization and religious worship. However, community statutes required the sanction of the state.

(g) Foreigners required the sanction of the state for appointment as rabbis and synagogal officials.

The principle of compulsory membership in the community was subsequently rendered ineffective by the secession law of 1876, permitting any Jew to retire from the Jewish community out of religious considerations, without renouncing Judaism. Later legislation in 1918 and 1920 even facilitated this possibility of secession.

The Weimar Constitution of 1919 laid down certain regulations in Article 137 which were of considerable importance for synagogal communities. They provided that every religious association should order and administer its affairs independently without the interference of the state or the civil authorities.

ISMAR FREUND.

PRYLUCKI, NOAH, Yiddish writer and communal leader, b. Berdichev, Russia, 1882. His early activities were divided between Zionism and socialism, both of which were illegal in Czarist Russia. For his left-wing activities he was expelled from the University of Warsaw in 1905. Subsequently he completed his course in St. Petersburg and started to practice law in Warsaw (1910).

Prylucki had begun to write in both Yiddish and Hebrew in 1900. Soon after his arrival in Warsaw in 1910 he founded *Der Moment,* a Yiddish daily, with which he remained affiliated until the German occupation in 1939 forced him to flee from Warsaw to Vilna. His devotion, after 1910, turned entirely to Yiddish, and he was an unfailing partisan of that language.

When a city council was elected in Warsaw (1916) for the first time, under German auspices, Prylucki was chosen as a representative of the Jewish Popular Party, the Folkisten. The party, under Prylucki's leadership, demanded that Yiddish be the language of instruction in Jewish schools, and made a special appeal for the support of Jewish workers and small retailers. In addition to publicizing the aims of the party in the *Moment,* Prylucki was the co-editor of the party periodical, *Dos Folk.* In 1918 he was elected to the provisional state council, in 1919 to the constituent assembly, and in 1922 to the Sejm. At Geneva, in 1925, Prylucki delivered the opening address of the Congress of National Minorities, speaking in Yiddish. His political activity grew less marked after 1926, following a split in his party. He was not reelected to the Sejm in 1928.

A knowledge of Yiddish philology and folklore made Prylucki's contributions to Yiddish literature particularly valuable. Among his works were a collection of Yiddish folksongs, *Yiddishe Folkslieder* (1911-13); several volumes of *Zammelbicher far Yiddishe Folklore, Filologie un Kulturgeshichte; Der Yiddishe Konsonantismus* (1917); *Zum Yiddishen Vokalismus* (1920); *Yiddish Teater* (2 vols., 1921); *In Poilen* (1921); *Dos Gevet,* dialogues on language and culture (1923); and *Dialektologishe Forarbeten* (1937). A collection of his speeches in the Warsaw Council was published in 1922. Prylucki was also the editor of *Teater Velt* and *Der Yunger Geist.* After the German occupation of Vilna in 1941 Prylucki was not heard from; in 1943 his whereabouts were still unknown.

First page of the Book of Psalms. From Daniel Bomberg's second edition of the Bible (Venice, 1524-25)

PSALMS, the first, longest and principal book of the Hagiographa (Kethubim), or third division of the Bible. It consists of 150 religious poems of varying length and themes, written by unknown authors at different times. It therefore differs from other books of the Bible in that it is not a narrative or a series of writings attributed to a single prophet or sage, but a collection of the works of countless individual writers. The book contains the entire range of human thought on matters religious, couched in the form of adoration, confession, praise, benediction and supplication. It is the most quotable of all the books of the Bible, and its turns of expression and poetic utterances have become part of the literature of all Western peoples.

The Hebrew title of the book is *Tehillim* (often abbreviated to *Tillim* or the Aramaic form *Tillin*), which is the plural of the word *tehillah,* "song of praise." The English title comes from the Greek *psalmos,* a translation of the Hebrew *mizmor,* meaning a poem sung to the accompaniment of stringed instruments. An alternate Greek title of the book, *psalterion* (Septuagint, Codex Alexandrinos), gives another title for the book, the Psalter.

The exact number of the Psalms is uncertain. Both the Hebrew and the Septuagint list 150 psalms, but the Greek has several differences (*Ps.* 9 to 10 and 114 to 115 are combined; *Ps.* 116 and 147 are divided, and a *Ps.* 151 is ap-

The vicissitudes of David, described in the superscriptions to the Psalms

pended). Rabbinic commentary reflects yet a different division (*Yer. Sab.* 15c finds only 147 psalms; *Ber.* 9b combines *Ps.* 1 and 2). Some of the Psalms are repeated within the book (14 = 53; 40:14-18 = 70; 57:8-12 and 60:7-14 = 108); some are clearly composite and thus divisible (18, 19, 22, 24, 89, 144; at least one is divided into two psalms, 42 and 43); psalms found elsewhere in the Bible might well be added to the Psalter (*Ex.* 15; *I Sam.* 2; *Isa.* 12; 38:9-20; *Lam.* 1 to 5; *Jonah* 2; *Hab.* 3). The Psalms range in length from two verses (*Ps.* 117) to 176 verses (*Ps.* 119). The poetic form of the Psalms is widely varied; nine psalms are alphabetic acrostics (9 to 10, 25, 34, 37, 111, 112, 119, 145); fourteen have refrains (for example, *Ps.* 42 and 43) bearing some relation to the cryptic musical notations in the superscriptions. After *I* and *II Chronicles,* Psalms has the largest number of verses among the Biblical books.

Psalms is divided into five books: I. chaps. 1 to 41; II. chaps. 42 to 72; III. chaps. 73 to 89; IV. chaps. 90 to 106; V. chaps. 107 to 150; the first four concluding with special doxologies (41:13; 72:18-20; 89:52; 106:48). These divisions into books are connected with the growth and arrangement of the Psalms. The captions or titles of the individual psalms, scholars agree, bear little relation to the assigned authors, are of later origin than the Psalms themselves, precede the Septuagint (150-100 B.C.E.), and seem to designate certain psalm categories. The following terms may be noted as psalm designations: a. *shir,* a song (thirty times; *Ps.* 120 to 134 adds "of ascents," *Ps.* 45 adds "of loves"); b. *mizmor,* a religious psalm (fifty-seven times, thirteen with *shir*); c. *maskil*—instructive or meditative ode (thirteen times, once with *shir, tefillah,* and *mizmor*); d. *michtam,* something highly valued (six times); e. *tefillah,* prayer (five times); f. *tehillah,* praise (once); g. *shiggayon* (in the plural in *Hab.* 3:1), perhaps a dithyramb (once). These captions, while not always justified by the contents, indicate how the poems were distinguished by the final redactor. *Maskil* and *michtam* may refer to some forgotten liturgy. If so, they are in a category with certain works of intended use, like "to teach" in *Ps.* 60, "to remind" in *Ps.* 38 and 70, "for thanksgiving" in *Ps.* 100, "for singing" in *Ps.* 88, "for the dedication of the House" in *Ps.* 30; and "for the Sabbath" in *Ps.* 92. The Septuagint adds rubrics assigning *Ps.* 24, 48, 94 and 95 to the first, second, third, fourth and sixth days of the week. *Lamenatzeah,* "for the director," occurs fifty-five times, perhaps applying to previous Psalms. There are twenty-six cases of additional words presumed to refer to some form of musical reading.

The name of an author, assigned by tradition to a psalm, is found in 101 cases. Seventy-three bear the name of David (3 to 9, 11 to 32, 34 to 41, 51 to 65, 68 to 70, 86, 101, 103, 108 to 110, 122, 124, 131, 133, 138 to 145; see *II Chron.* 29:30; *Sirach* 47:9; *II Macc.* 2:13). Asaph's name appears in the superscriptions of twelve (50, 73 to 83), and Korah in eleven (42, 44 to 49, 84 to 85, 87 to 88), Solomon in two, and Moses (90), Ethan (89), and Heman (88) in one each. Forty-nine remain unidentified, although of this number the Septuagint assigns twelve to David (43, 67, 91, 93 to 99, 137 with Jeremiah), four to Haggai and Zechariah (138 with David, 146 to 148), and one to the Sons of Joarib (71). The Talmud (*B.B.* 14b) assigns two of the anonymous group to Adam (92, 139) one each to Melchizedek (110) and to Abraham (89). The Hebrew *le,* "to," may not mean "by" but merely "is associated with," although tradition took the sign to mean authorship.

The authorship and the time of composition of each individual psalm must be determined from its contents. But in this matter there is the widest disagreement among Bible scholars. Some consider more of the Psalms as pre-Exilic. They hold the mention of the kingship of David (for example, 122:5) as a poetic fiction, since the Hasmoneans considered themselves David's heirs. In fact, there is no compelling evidence of the pre-Exilic origin of any psalms. Pre-Exilic literature knows neither Davidic nor other psalms. The David songs (*II Sam.* 1:19-27; 3:33-34; see *Amos* 6:5) are not of a religious type. *II Sam.* 22, which corresponds to *Ps.* 18, is clearly not Davidic; and even the so-called "last words" (*II Sam.* 23:1-7) are quite questionable. The myth of David as the singer of psalms arose at the time of the pious Chronicler, who projected back upon the early Israelite worthies the religious attitudes and achievements of his own day. It must be remembered, however, that certain public and private hymns existed before post-Exilic times (see *Amos* 5:23; *Ps.* 137:3-4). On the basis of the similarity between cultic songs, hymns, and atonement psalms of ancient Egypt and Babylonia with those of Psalms, a few scholars have maintained the pre-Exilic composition of several psalms, particularly a few of

the so-called "Royal Psalms." The oldest, clearly datable psalm is 137, which reflects the beginning of the Babylonian Exile. Among the latest psalms (44, 74, 79, 83, 118, 149) are those which clearly point to the period of the Maccabean struggle (170-160 B.C.E.). Such terms, however, as *hasidim, tzaddikim, paritz* (17:4), and *ligeyonim* (123:4), which are occasionally taken to refer to Zealots, Sadducees, Pharisees, and Roman legions of Maccabean times, probably do not reflect so late a period. The bulk of the Psalms indicates a Palestinian setting of the time of Ezra and following, giving an important place to Temple, sacrifice, teaching of Torah, living by its laws, and to ethical monotheism within a religious, rather than a political, community.

The assembling of the five books of the Psalms, which correspond to the Pentateuch, could clearly not have taken place at one time, as is evident from the repetition of several psalms (see above). Thus Book I must have been collected by one individual, Books II and III by another, and Books IV and V by yet a third. The name of the Deity in Books II and III has almost throughout (*Ps.* 42 to 83) been changed to Elohim (elsewhere it is Yahveh), leading to redundant repetition of the divine name (45:8; 50:7, and other passages). Books I and II were a unit when Book III was added (72:20 is clearly a colophon to Books I and II). The division of the first three must have been the work of their editor. Similarly, the later editor who added Books IV and V left his mark in the five-fold pattern which Psalms follows.

The reason for the collection was the practical object of creating a prayer-book and hymnal for Temple, synagogue and home (see *Sirach* 39:5). The last objective was probably the original one, if Book I be regarded as the oldest section, for it contains principally individual prayers. Since another primary objective was to collect prayers to accompany the Levitical singing, Books IV and V must also be regarded as early psalm material.

Before the Hebrew original of *Sirach* (about 190 B.C.E.) was known, the earliest known reference to Psalms was in *I Macc.* 7:16-17, quoting *Ps.* 79:2 verbatim. *Sirach* proves the existence of a Book of Psalms at the close of the 3rd cent. (see Strack, *Sirach-Ausgabe,* and Kautzsch, *Übersetzung,* on *Sirach* 47:5 = *Ps.* 148:14; *Sirach* 47:11 = *Ps.* 103:19, and other passages), citing, among others, some of the late Psalms. It is thus likely that *II Chron.* 29:30, "the words of David, and of Asaph the seer," refers to our Psalm book, at least to one containing Books II and III. It is, therefore, quite likely that a book of psalms with the general framework of our present book existed long before Maccabean times and that the Maccabean psalms are merely late interpolations. Duhm with good argument places the final redaction of the book of Psalms just before the start of Roman domination in 63 B.C.E., because at this time arose the similar *Psalms of Solomon,* which was excluded from the canon.

By contents, the Psalms may be grouped in a variety of ways, such as atonement psalms (for example, 51); nature psalms (for example, 104), king psalms (for example, 21, 72), historical psalms (78), and the like. Many scholars, such as Gunkel, Mowinkel, and Oesterley, developed elaborate categories of classification based on content as well as form, but these schemes raise more problems than they solve. We shall consider two broad and generally inclusive categories, namely, the liturgic and the individual psalms.

The liturgic psalms were sung or recited in processions to the sanctuary (118), at the Temple gates (24, part 2, verses 7 to 10), during the sacrificial offering, and later in the synagogue. They include hymns, supplications, and atonement prayers, as well as didactic stories of historical content. The didactic psalms were frequently sermonic (95, part 2), forerunners of the medieval Piyut (119). In a sense these psalms took the place of the prophets and preachers of a former day. This accounts for the frequent change of tone within a psalm. The transition from hymn to supplication or admonition could readily be made by means of music and cult procedure. These psalms do not arise out of the spontaneous, artistic, and religious creativity of their authors. The poets are functionaries of the cultus, whose object is to have the community join in the songs responsively (129). Because these liturgies were for popular use, they are simple and traditional in thought, and repetitious in form. It was the repetitive cultic forms, mingled with the thought of individual creative genius, which formed the normative Judaism of the Greek and Roman periods. These psalms reflect a view of Israel's religion based on an ethical and universal monotheism. The liturgic psalms also contain such striking formulations of these popular thoughts and figures, that they have been drawn upon in the homilies of all Biblical faiths from that day to this. Their religious vitality is greater than that of the festal liturgies which later took their places. The close alliance of the nation with its God, which is powerfully portrayed by patriotic Psalmists, belongs among the most worthy of Israel's religious concepts.

The individual psalms are, however, the real glory of the book of Psalms. In them are combined an ability for the creation of artistic forms and a pious devotion, a quality which is not found before or after this period. Unknown poets without pride of authorship, exiled priests and princes, the poverty-stricken, the wise and educated portray out of the poetic muse their longing for God or their beloved Temple, their religiously colored exaltation of nature, their relation to friend and foe, their consciousness of sin, philosophic doubts, and physical needs, and their freedom from all these during the aspiration of the soul toward God. They depict graphically their thankfulness for His help, and laud the contrite, humble, devoted, holy life in the certainty of God's nearness. These thoughts are expressed in artistic style, although not always in the most cogent or the most poetic forms. They present almost universally, however, original expressions and stirring simple pictures of life. Also, religious concepts of universal significance are found frequently throughout these Psalms. There are observations on the unworthiness of sacrifices and the worthiness of inner purity, on God in nature and nations, on His supreme power and wisdom, eternity and omnipresence, goodness and righteousness, and on His world dominion and supremacy over other national gods. The Psalmist deals, too, with the weakness and strength of men, and with the hope of God's kingdom with its earthly center in Zion. How the individual outlooks of the Psalms correspond with those of the present day and to what extent the Psalms borrowed from older or foreign poetic forms are secondary. Above temporary considerations stands the spirit of the Psalmist as a powerful and eternal expression of the religious viewpoint, making Psalms the most universally read and loved of all Scriptural writings. From early times to the present, the deep worth of these Psalms has been felt; long after the liturgic psalms had fallen into disuse, the individual psalms were used as communal hymns, the first person singular becoming collective, and additions to the Psalms fitting them for public use in the synagogue. This latter fact accounts for some of the textual corruptions. The extensive use and repeated copying of the beloved popular book led to deliberate and unintentional distortions, as the abovementioned parallel sections indicate. The Psalms still remain, however, living witness to the "life" in God, which, long before Christianity, was the vital, pulsating soul of Judaism.

Great has been the influence of the Psalms on the last two millennia of man's thought and worship. Jewry in

the Middle Ages sought the miracle of prayer in reciting psalms. In the course of the week, either before or after the divine service, the entire book of Psalms was read responsively by cantor and congregation, becoming for each Jew a spiritual treasure-trove. In every situation of life, sickness or health, salvation from danger or building a house, on occasions of travel, birth, celebration, or death—morning, noon, or night—appropriate psalms were read, quite apart from their extensive use in the divine service. Mendelssohn's translation of the Bible, which opened European culture to Jewry, gave Psalms first consideration after the Torah was completed. To Christianity, Psalms is the most beloved of the Biblical books, because in it Christian theologians have found not only references to Jesus, but a source-book of early Christian and Protestant principles. Its use in the hymnology and liturgy of the church is equalled only by that of the synagogue. The book of Psalms, which has been called "the hymn-book of the Second Temple," has become the universal heritage of mankind, an eternal fount of inspiration for the God-aspiring of all creeds and all ages. ADOLPH J. FEINBERG.

PSALMS, LITURGICAL. The Psalms were originally written as hymns for devotion, either by individuals or by the community. It was natural, therefore, that some of them should be taken into the liturgy both of the Temple and of the synagogue. According to one of the oldest passages in the Mishnah (*Tamid* 7:4), the Levites in the Temple sang a psalm for each day of the week: on Sunday, *Ps.* 24 ("The earth is the Lord's, and the fulness thereof"); on Monday, *Ps.* 48 ("Great is the Lord, and highly to be praised"); on Tuesday, *Ps.* 82 ("God standeth in the congregation of God"); on Wednesday, *Ps.* 94 ("O Lord, Thou God to whom vengeance belongeth"); on Thursday, *Ps.* 81 ("Sing aloud unto God our strength"); on Friday, *Ps.* 93 ("The Lord reigneth; He is clothed in majesty"); on the Sabbath, *Ps.* 92 ("It is a good thing to give thanks unto the Lord"). In the Hebrew Bible only the last of these contains a superscription that indicates this use of the Psalm (*mizmor shir leyom hashabbath,* "A Psalm, a Song. For the Sabbath day"); the Septuagint, however, indicates the appropriate days for all except those for Tuesday and Thursday, and as this translation was no later than 100 B.C.E., the usage must be very old. After the destruction of the Temple, the custom of reciting these Psalms in daily sequence was transferred to the synagogue.

Two other passages in the Mishnah (*Suk.* 5:4; *Mid.* 2:5) speak of the fifteen steps in the Temple on which the Levites sang songs, and say that they correspond to the fifteen Songs of Ascents (*Ps.* 120 to 134). This may indicate that these Psalms were actually sung in the Temple on the occasion of the annual pilgrimage festivals, to which they refer. *Ps.* 118, with its references to entering "the gate of the Lord" (verse 20) and forming a procession up to the horns of the altar (verse 27), was probably composed for the liturgy of the Temple; it is possibly a Passover hymn, as are the other Psalms (*Ps.* 113 to 117) which with it constitute the Hallel. Other Psalms are mentioned in the Talmud as being part of the Temple service for the New Moon, Rosh Hashanah, Sukkoth, and other festivals.

The Psalms at an early period became a part of private devotion. *Ps.* 145 ("I will extol Thee, my God, O King") was so highly regarded that one passage declares that he who recites this Psalm daily (another reading says, thrice daily) is certain of a share in the world to come (*Ber.* 4b). Kaufmann Kohler has suggested that this is due to the fact that the verses, "The eyes of all wait for Thee, and Thou givest them their food in due season. Thou openest Thy hand, and satisfiest every living thing with favor" (verses 15 and 16), could serve as a grace after meals. Together with *Ps.* 84:5 and 144:15 it constitutes the Ashre prayer. *Ps.* 145 to 150 were sometimes called Hallel, because of their note of thanksgiving, and it is to them that Jose ben Halafta referred when he said, "May my lot be of those who finish the Hallel every day" (*Sab.* 118b), which indicates that the recitation of these Psalms daily was the practice of pious individuals.

From the Temple service and private devotion the Psalms found their way into the liturgy for public worship. The older prayers are independent compositions, though their language is influenced by the Psalms. It became customary, however, to insert Psalms into the prayers recited in preparation for the liturgy proper (which begins with the Barechu, "Praise ye the Lord to Whom all praise is due"), and into other parts of the service. This process lasted over many centuries, until the close of the Middle Ages, and hence the various rituals do not agree as to the Psalms which they include.

The first Psalm passages in the morning service are known as Pesuke Dezimra (Passages of Song; it is derived from *Sab.* 118b). They are introduced by the doxology Baruch Sheamar ("Blessed be He Who spoke"). This is followed by *I Chron.* 16:8-36 (equivalent to *Ps.* 105:1-15; 96:1-13; 106:1, 47, 48) and a selection of verses from various Psalms, beginning with *Ps.* 99:5 ("Exalt ye the Lord our God, and prostrate yourselves at His footstool"). The first of the Psalms recited as a whole in this section of the prayers is, on ordinary days, *Ps.* 100 ("Shout unto the Lord, all the earth"); on Sabbaths, holidays and Hoshana Rabbah it is replaced by a series consisting of *Ps.* 19 ("The heavens declare the glory of God"), 34 ("I will bless the Lord at all times"), 90 ("Lord, Thou hast been our dwelling-place in all generations"), 91 ("O thou that dwellest in the covert of the Most High"), 135 ("Hallelujah. Praise ye the name of the Lord"), 136 (the Great Hallel), 33 ("Rejoice in the Lord, O ye righteous"), 92 (the Sabbath Psalm) and 93 ("The Lord reigneth; He is clothed in majesty").

The section continues with a series of individual verses, mainly from the Psalms. Then comes the Ashre and *Ps.* 146 to 150. The above arrangement is that of the Ashkenazim; the Sephardim have a somewhat different selection of Psalms, and still other Psalms and Psalm verses have been inserted under Cabalistic influence.

The evening service for weekdays begins with *Ps.* 134 ("Behold, bless ye the Lord, all ye servants of the Lord"). The introduction of the Sabbath is much more elaborate, the Pesuke Dezimra consisting of *Ps.* 95 ("O come, let us sing unto the Lord"), 96 ("O sing unto the Lord a new song"), 97 ("The Lord reigneth; let the earth rejoice"), 98 ("O sing unto the

Lord a new song; for He hath done marvellous things"), 99 ("The Lord reigneth; let the peoples tremble") and 29 ("Ascribe unto the Lord, O ye sons of might"). This is followed by the Lechah Dodi and *Ps.* 92 and 93.

The afternoon service is begun by the recitation of the Ashre prayer.

The Eighteen Benedictions (Shemoneh Esreh) are introduced by a Psalm verse, "O Lord, open Thou my lips; and my mouth shall declare Thy praise" (*Ps.* 51:17), and practically close with another: "Let the words of my mouth and the meditation of my heart be acceptable before Thee, O Lord, my Rock, and my Redeemer" (*Ps.* 19:15). On ordinary weekdays a penitential Psalm is recited; for this the Ashkenazim use *Ps.* 6 ("O Lord, rebuke me not in Thine anger"), the Sephardim *Ps.* 25 ("Unto Thee, O Lord, do I lift up my soul").

The Hallel Psalms (*Ps.* 113 to 118) are recited on Passover, Shabuoth and Sukkoth and during Hanukah; on New Moon and the festival of Passover from the third day on, only *Ps.* 113, 114, 117 and 118 are recited. *Ps.* 148:13-14 and *Ps.* 24 are used in the return of the Scroll of the Law to the Ark. A late Cabalistic insertion to begin the removal of the scroll from the Ark consists of *Ps.* 86:8; 145:13 and 29:11, together with a petition for the rebuilding of Jerusalem and an expression of trust in God.

On Sabbath afternoons between Sukkoth and Passover the Ashkenazim recite *Ps.* 104 ("Bless the Lord, O my soul. O Lord my God, Thou art very great") and the Songs of Ascent (*Ps.* 120 to 134). The Sephardim use *Ps.* 119 ("Happy are they that are upright in the way") instead of 104.

The Reform liturgy has omitted most of these Psalms from its services for the purpose of making the latter more compact. However, the Psalms are well represented in the services. Selections from the Pesuke Dezimra, together with *Ps.* 92, introduce the Sabbath Eve services; other liturgical Psalms are used freely as responsive readings in English. *Ps.* 24 is used for the removal of the scroll from the Ark, and the Ashre becomes a responsive reading after the return of the scroll or after the sermon.

Psalms are used liturgically in various forms of service devoted to individuals. *Ps.* 126 ("When the Lord brought back those that returned to Zion") introduces the grace after meals. *Ps.* 30 ("I will extol Thee, O Lord, for Thou hast raised me up"), 15 ("Lord, who shall sojourn in Thy tabernacle?"), 101 ("I will sing of mercy and justice") and others are used in the dedication of a house. The Hallel Psalms are a feature of the Seder Service. *Ps.* 91, 16 ("Keep me, O God; for I have taken refuge in Thee") and 23 ("The Lord is my shepherd") are used for funeral and memorial services. Both *Ps.* 23 and 91 are frequently used as night prayers. SIMON COHEN.

PSALMS OF SOLOMON, a book of the Pseudepigrapha which does not occur in the Septuagint and therefore not in the Apocrypha. It contains eighteen poems of psalm-like character of six to forty-six lines in length. The original Hebrew work has been lost. The Greek translation, which is fairly accurate, was edited by Cerda as early as 1626. The name Solomon is arbitrary, and probably of later addition, along with the headings, referable to *I Kings* 5:12, in order to call special attention possibly to their contrast with the *Psalms* of David. The Psalms of Solomon originated during the time between the conquest of Jerusalem by Pompey (63 B.C.E.) and the assumption of rulership by Herod (37 B.C.E.). The fourth psalm could have originated in the time of Alexander Jannaeus, and in that case was probably composed somewhat earlier, about 80 B.C.E. The second psalm was possibly written shortly after the death of Pompey (48 B.C.E.), to whom it refers. To Herod there is no further reference. Only Palestine presents itself as the origin of the work and a Pharisee as its author. The poems exhibit the parallelism of Hebrew poetry. Some (3, 7 and 14) show the design of parallelistic verses. The seventeenth psalm to the end is considered by some to be a supplement.

The contents of the Psalms of Solomon are, generally speaking, religio-political, sometimes almost equalling prophetic admonition. The Hasmonean rulers were censured, like their party (the Sadducees), as usurpers of the throne of David and as materialistic and irreligious worldlings. God had rightly punished them by means of Pompey. The latter had at the same time, through his own insolence, merited death. In contrast with this stands the hope in a Messianic ruler, a son of David, who, without supernatural power, will depend upon God instead of upon physical might and material power and will prepare the state for the rulership of God. This coming ruler is a man who will, primarily as a military leader, easily drive out the enemy; then, as judge, he will also gather the family of Israel and will newly apportion the land to them. No longer will strangers make it unclean nor will any Jew do that which is unrighteous, even as he himself is clean and full of the Holy Spirit. He will hold the people also under his yoke: in no place are the glories of the anointed one of David more splendidly sung as in this oldest of the hymns, the Seventeenth Psalm of Solomon to the end.

Over against the national warnings, laments and promises, one finds also warmer personal notes of piety after the manner of the Biblical *Psalms* (13:7, the monitory sufferings of the just; 9:6 et seq., the forgiveness that comes from repentance and confession). Since, however, the mistakes of the pious are considered only as an incidental oversight, God will punish them in secret so that they will not be exposed before the wicked (13:8). This shows a moral favoritism in behalf of those who are of one's own group, which attitude is found behind the piety of many Biblical psalms.

The language of the book shows a strong reliance on the Bible and is full of enthusiasm and feeling. On the whole, the Psalms of Solomon are a worthwhile witness to the national piety of the 1st cent. B.C.E. and a courageous confession of the old prophetic ideas of justice in history and an indestructible belief in the future of God's people.

One must not confuse this work with the forty-two Syriac Odes of Solomon, which is probably of Gnostic Christian origin (first edited by J. Rendel-Harris, 1909). It is an exalted esthetic poetical work clothed in Jewish form but quite evidently of the Judeo-Christian sphere of influence of the 2nd cent. (cf. Gunkel, "Salomo-Oden," *Die Religion in Geschichte und Gegenwart;* Hausen, H., *Die Oden Salomos,* German translation; Kittel, G., *Die Oden Salomos,* 1914; Frankenberg, W., "Das Verständnis der Oden Salomos."

PSANTIR, JACOB, historian, b. Botoshani, Roumania, 1820; d. Bucharest, Roumania, 1890. He was the first historian of the Jews of Roumania. Orphaned at the age of eleven, he had to earn his living, and learned to play music so well that he joined a troupe of wandering gypsies, with whom he traveled all over Roumania and also in Turkey. In 1868, at the age of forty-eight, he played with his band before some boyars (feudal families of Roumania), whom he heard discuss the Jewish question, referring to the Jews as vagabonds whose presence in the country was quite recent. This conversation inspired Psantir, who had a family to maintain, to give up his job and devote himself to the study of the Hebrew language, which was to serve him as an instrument in his investigations on the history of the Jews in Roumania. For five years, from 1869 on, he devoted all his time to this pursuit, in which he was a pioneer in his country. He went from community to community, inquiring from elderly Jews about early events which, but for the record he made of them, would have passed into oblivion. He also copied the inscriptions in the Jewish cemeteries and the records found in the community archives. Although, due to his lack of formal education, he proceeded without method, the material he gathered proved an invaluable foundation for the systematic research of his successors.

Psantir was the author of two volumes in Yiddish, *Dibre Hayamim Leartzoth Romaniah* (1871) and *Die Yiden in der Rumenishen Historie* (1873). He also published in German a synopsis of his two works, under the title of *Amintirea Sionului* (The Remembrance of Zion).

PSEUDEPIGRAPHA, a name applied to non-Biblical books, written in Hebrew and Greek, often under names of well-known Biblical characters to give them authority. The dates of authorship range between 200 B.C.E. and possibly 200 C.E.

The pseudepigraphic literature was later banned by the rabbis, because it in part was accepted by the early Christians. While the literature was deeply ethical, it contained also visions of the writers dealing with the individual and national future, with life after death, the Messiah, immortality of the soul, the Day of Judgment, with angels and heaven, and with the fate of the righteous. When many of these ideas were taken over by the growing Christian sect, the books were banned by the rabbis and, strangely enough, later, by the church fathers also.

The object of this literature was to hold out the promise of the future; to console suffering Israel during the difficult days of the Greek persecutions; to encourage faith in the Torah and to point out the rewards of that faith by assuming Biblical names most fitted for the purpose, or by writing anonymously altogether. The canon, both the Torah and the Prophets, was closed. Nothing could be added; but there was possible the free circulation of works that enhanced these, and continually reminded the readers of the value of the Torah and the Prophets, in which there was implicit faith. Schürer puts it as follows: "In thus throwing around the sacred history as bright a halo as possible, the object was to show to what extent Israel had from time to time been enjoying the miraculous protection of its God, but above all, how by their exemplary conduct and wonderful exploits, the holy patriarchs had proved themselves to be true men of God." While this does not apply to all the books in the present classification, it is a good statement of purpose of most of them.

Because of the large ethical content of most of these books, they are being reclaimed by Jewish scholars. It is now recognized that they played a more or less important part in preserving the ethical values of the Torah during the years when Israel came into intimate contact with Persian, Greek and Egyptian influences. Some of these books, like *Enoch, Jubilees* and *Testaments of the Twelve Patriarchs,* rise to the greatest heights in their ethical teachings. It is now accepted as a historical truth by some scholars, notably Albert T. Olmstead and his school, that Jesus and other New Testament teachers were not only acquainted with some of these apocryphal and pseudepigraphic works, but that Jesus actually quoted from *Ahikar, Tobit, Sirach* and the *Testaments of the Twelve Patriarchs.*

These pseudepigraphic writings are not found in the Septuagint. They are known from translations of the original Ethiopic, whose texts are frequently corrupt. It is only in the 19th cent. that most of the works were rediscovered.

The non-canonical Old Testament pseudepigrapha, according to Charles, are: *Book of Noah, I Enoch, Testaments of the Twelve Patriarchs, Book of Jubilees, Psalms of Solomon,* fragments of a Zadokite work, *Assumption of Moses, 2 Baruch, IV Ezra* (*II Esdras*), *The Letter of Aristeas,* the *Books of Adam and Eve,* the *Martyrdom of Isaiah, 3 Baruch, IV Maccabees,* the *Story of Ahikar, 2 Enoch,* and the *Sibylline Books.*

While the Ethics of the Fathers (*Aboth*) is also included in Charles' list, the treatise is not one of the true pseudepigrapha. Charles added *Aboth* that students might get an idea of later Jewish ethics in the Talmud.

See the articles on the individual books.

PSEUDONYMS. There are hardly any pseudonyms in ancient Hebrew literature, the Hellenistic Jewish literature or the Jewish literature of the Middle Ages. The nearest approach to pseudonyms in the Bible are the designation Koheleth for Solomon and the name Malachi given to the twelfth book of the Minor Prophets. The numerous pseudepigrapha of the post-Biblical period invariably replaced the name of the author by one taken from ancient history in order to give them a greater authority, but these are rather ascriptions than genuine pseudonyms. Similarly, the abbreviations, such as Rashi for Solomon Yitzhaki and Rambam for Maimonides, are not pseudonyms at all.

Pseudonyms began to appear in Jewish literature with the rise of the Haskalah in the 19th cent., first in Hebrew and then in Yiddish writings. Two classes of such pseudonyms may be noted:

1. Genuine Pseudonyms. In this case the author's name given to a work is often different from the genuine name of the author, and, as a result, in many cases the real name of the latter is no longer known. This is particularly the case when the writing was of such satiric or personal nature that the author was afraid to reveal his identity, or where the subject is a topical one, such as wedding song, an address to the ruler, or the like.

The following are some of the best-known pseudonyms in Jewish literature:

Ahad Haam (Asher Ginzberg).
Adam Hakohen (Abraham Baer Lebensohn).
Adir (Ephraim Deinard).
Baal Machshoves (Isidore Eliashoff).
Bar Katzin (J. H. Rabnitsky).
Ben Ami (Mordecai Rabinowicz).
Ben Avigdor (Abraham Loeb Schalkowitz).
Ben Bag Bag (Judah L. Kantor).
Buki ben Yogli (Judah Loeb Benjamin Kazenelson).
Dr. Mibeth Hamidrash Hayashan (Dr. M. Altschüler).
Efrathi (David Frischman).
Eliezer ben Jehudah (Eliezer Perlmann).
Hazaz (H. S. Slonimsky).
Hillel ben Sachar (J. L. Landau).
Ish (Eliezer Isaac Schapira).
Ish Yehudi (J. Rabbinowitsch).
Iyyob Miminsk (Joseph Brill).
Jaabetz Yeshua Sar Esek (Zebi H. Schereschewski).
J-A-P-S (Israel Issar Goldblum = Perah-Zahab).
Lapidoth (Eliezer David Finkel).
Mathias Acher (Nathan Birnbaum).
Mendele Mocher Seforim (Shalom Jacob Abramowitsch).
Mibashan (Menahem Mendel Braunstein).
Micah Joseph bin Gorion (Micah Joseph Berdyczewski).
Nahum ben Ozer Haziyuski (Judah Leib Kantor).
Obadiah ben Pethahiah (Joseph Perl).
Rabbi Karob (E. L. Lewinsky).
Rab Tzair (Chaim Tchernowitz).
S. An-Ski (Shalom Rapoport).
S. Ben Zion (S. Gutmann).
S. J. Agnon (S. Czaczkes).
Sefog (S. Tchernowitz).
Shefer (Saul Pinchas Rabbinowitz).
Sholem Alechem (Shalom Rabinowitsch).
Zelophehad bar Huchim (M. L. Lilienblum).

2. Translation Pseudonyms. In these the original name of the author is merely translated into Hebrew, such as:

Erez (Zederbaum).
Mahallalel (Gottlober).
Har Shalom (Friedberg).
Meir Ish Shalom (Meir Friedmann).
Barzilai (Eisenstadt).

The pseudonyms of writers in other languages than Hebrew and Yiddish are given in their biographical articles.

PTOLEMAÏS, *see* ACCO.

PTOLEMIES, Macedonian royal dynasty in Egypt (323 to 31 B.C.E.), founded by PTOLEMY I LAGI, called Soter ("Savior"), one of the cleverest and ablest generals of Alexander the Great. The center of their dominion was Alexandria, Egypt, where they resided and where they were honored and regarded as legitimate Pharaohs by the natives. After the battle at Ipsus (301), they acquired the southern part of Syria (the coast as far as north of Sidon, the entire mountain country including Judea, the Jordan valley and Transjordania, called Coelesyria) which they maintained until about 200 in incessant stubborn struggles with the Syrian empire of the Seleucidae, their northern neighbors. They promoted Hellenism in their territory; the entire coast of Palestine and Coelesyria became Hellenistic; only the Judean mountain country could maintain its cultural individuality with great difficulty. As protectors of Jerusalem and the Temple, the Ptolemies did not object to the religious autonomy granted the Jews by the Persian kings, permitted them self-administration and even increased the political authority of the high priests. However, Ptolemy I (323-285) chastised the Jews, who would not open the gates of Jerusalem to him after he had taken possession of the city on a certain Sabbath, without trouble, and he dragged many of them to Egypt, where as slaves they were subjected to hard labor. On the other hand, he favored the settlement in Alexandria of Jews who emigrated from Palestine.

PTOLEMY II PHILADELPHUS (285-247) chose a kinder policy toward the Jews since he could not remain indifferent to their cooperation in his wars against the Seleucidae. The time during which he ruled is the beginning of the Golden Age for Egyptian Jewry, which became assimilated with Hellenism without losing its religious individuality. His name is connected with the legend of the Greek translation of the Pentateuch, the so-called Septuagint. The number of the Jews in Egypt who, by degrees, attained equal civil rights in Macedonia, grew rapidly.

The later Ptolemies, with the sole exception of PTOLEMY IV PHILOPATOR (220-204), promoted the Jewish colony in Egypt, and even the capture of Judea by the Seleucidae at about 200 could not alter their policies toward the Jews.

It was under PTOLEMY VI PHILOMETOR (181-145) that the Jews were of great influence in Egypt. They gradually constituted the most important element in the

army and replenished the ranks of the Macedonians, which had grown very thin during the earlier wars. They were the commanders-in-chief of the army, and as high state officials governed the state affairs, especially those relating to revenues. Because of the religious persecution of Antiochus IV of Syria a great many Jews had fled from Jerusalem to Egypt, and Ptolemy VI permitted them to erect a Jewish temple for the purpose of sacrifices in Heliopolis. Onias, the creator of this temple, attained high honors at the court of the Ptolemies, and his descendants were repeatedly commanders-in-chief; among them should be mentioned the brothers Ananias and Helkias, in the time of Cleopatra (100 B.C.E.), who frustrated the plan of the Egyptian court to amalgamate with Jerusalem and to remove the Hasmoneans.

The last queen of the dynasty of the Ptolemies, Cleopatra, owed her dominion to the Jews, who rendered their assistance to her and Julius Caesar in the Alexandrian war. Later, however, she quarreled with Herod and seized a fertile part of Judea, called Jericho, which was returned to the Jews after her death (30).

PUAL, *see* HEBREW LANGUAGE.

PUBLIC OFFICE, JEWS IN.* Jews as public officials, serving under foreign rulers, are mentioned as early as in the Bible. Joseph, the son of Jacob and Rachel, was made vizier in Egypt by the Pharaoh. Sheshbazzar was appointed governor of Judea by King Cyrus of Persia, and Nehemiah was given the same position by King Artaxerxes I of Persia. The book of *Esther* tells that, in appreciation of his services rendered, Mordecai was made chief minister by King Ahasuerus of Persia (generally taken to be Xerxes, 485-465 B.C.E.).

Ever since the beginning of the Common Era a number of Jews have served their respective countries of residence in various political capacities, although, until the era of emancipation, this was more often in unofficial than in official positions. The Roman emperors Vespasian and Titus availed themselves of the advice of Flavius Josephus (about 37 to after 100); the apostate Tiberius Julius Alexander was appointed procurator of Judea in 46 and became prefect of Rome under Nero.

In the Middle Ages, the linguistic talents and diplomatic skill of the Jews were often appreciated by the emperors. A certain Isaac was a member of a mission despatched by Charlemagne to Caliph Haroun al-Rashid at Baghdad (797). The Mohammedan rulers of Spain, more liberal than the Christian princes, frequently appointed Jews as ministers, tax collectors, ambassadors or court physicians. Hasdai ibn Shaprut (915-90) was vizier under Caliph Abd-al-Rahman III of Cordova. Samuel Hanagid (called also Samuel ibn Nagdela; 993-1055) served as vizier under King Habus of Granada. In Christian Spain, the apostate Paulus de Santa Maria (originally Solomon Halevi; about 1351-1435) became privy councillor to King Henry III of Castile. Two professing Jews, Dom Judah Abravanel and his better-known son, Isaac Abravanel (1437-1508), were treasurers to Alfonso V, king of Portugal; Isaac Abravanel served King Ferdinand and Queen Isabella of Spain and later King Ferdinand of Naples in the same capacity. In Turkey, numerous Jews served the Sultans both as physicians and as councillors. Joseph Nasi (1510-79) was made Duke of Naxos and of the Cyclades Islands by Selim II. In Poland, Saul Wahl (whom legend made a king of Poland) was appointed tax collector (1588), and was honored with the title of *sluga krolewski* (royal official; 1589) by King Stephen Bathory.

Numerous Jews served during the 17th and 18th centuries as financial advisers to individual sovereigns, particularly in Holland, Sweden, and some of the smaller German states. Outstanding were Joseph Süss Oppenheimer (1692 or 1698 to 1738), adviser to Duke Karl Alexander of Württemberg, and Diego Texeira Sampayo (d. 1666) and his son, Manuel Texeira (about 1625-1705), who were financial agents and resident ministers to Christina, queen of Sweden.

Most of the Jews who attained to public office in European countries before the Revolution of 1848 were converts to Christianity, such as Friedrich Julius Stahl (1802-61), deputy and leader of the Conservative Party in Prussia, and Benjamin Disraeli (1804-81) in Great Britain. Lionel de Rothschild was elected a member of Parliament by the city of London (1847), but as a professing Jew he was not permitted to take his seat; he was reelected five times before he could take his seat in 1858, being sworn on the Hebrew Pentateuch on the faith of a Jew. In France, Michel Goudchaux (1797-1862), a professing Jew, was elected Conseiller Général of the Seine district after the Revolution of 1830, and was made minister of finance (twice in 1848), while his coreligionist, Isaac Adolphe Crémieux (1796-1880), was elected deputy in the French Chamber in 1842. The Frankfort National Assembly of 1848 had several Jews, including Martin Eduard Simson, Moritz Veit, and Gabriel Riesser, who was vice-president of the Assembly, and the Austrian delegates Moritz Hartmann and Ignaz Kuranda. To the Austrian Parliament of 1848 belonged Adolf Fischhof and Josef Goldmark (representing Vienna), Abraham Halpern (representing Stanislawów), Isaac Noah Mannheimer (representing Brody), and Ignaz Kuranda (representing Teplitz). In Russia the first general parliamentary elections took place in 1906; twelve Jewish deputies were elected to this first Duma.

In the Western Hemisphere, David Salisbury Franks was designated as American vice-consul at Marseille, France (1785), and in 1786 he was sent as confidential agent to conclude a commercial treaty with Morocco. Mordecai Manuel Noah (1785-1851) served as United States consul to Tunis (1813-16). In Jamaica, Alexander Bravo became the first Jewish member of the Legislative Assembly (1835). Ezekiel Hart (1770-1843), elected to the Assembly of Lower Canada in 1807 and reelected in 1809, was denied his seat, and not until 1831 were the civil disabilities of the Jews in Canada completely removed.

Many of the Jews who held public office in the various countries since the era of emancipation are presented in the following lists. However, these lists are not exhaustive, partly due to the fact that in many cases the origin of a public official is obscure, partly because the records are not complete or are inaccessible.

1. Austria. a. Austria Proper (including Bohemia and Moravia). MINISTERS: Julius Anton Glaser (justice, 1871-79), Josef Unger (without portfolio, 1871-79), Emil Steinbach (finance, 1891-93), Viktor Adler (foreign affairs, 1918), Otto Bauer (foreign affairs, 1918-19), Wilhelm Ellenbogen (socialization, 1919-21), Julius Deutsch (war, 1918-20), Arnold Eissler (justice, 1918), Josef Redlich (finance, 1918 and 1931).

* A number of the persons included in this article as having held public office, especially in Central and Eastern European countries, had left the Jewish faith.

DEPUTIES: Friedrich Adler (1919), Rudolf Auspitz (1873-1906), Friedrich Austerlitz (1919-31), Moritz Benedikt (1917-20), Joseph Samuel Bloch (1883-85, 1891-97), Robert Danneberg, Arnold Eissler, Wilhelm Ellenbogen (1901-34), Salomon Frankfurter (1934-38), Emmy Freundlich, Josef Goldmark, Julius Ritter von Gomperz (1871-1909), Theodor Gomperz (1901-12), Karl Samuel Grünhut (1897-1918), Moritz Hartmann (1848), Moritz Freiherr von Königswarter, Camillo Kuranda (1907-18), Ignaz Kuranda (1848, 1861-84), Josef Kareis, Felix Oppenheimer, Baron Anselm von Rothschild (1861-74), Baron Josef Schey von Koromla, Robert Stricker (1918-21), Leo Verkauf (1897), Bernhard Wetzler.

DIPLOMATS: Ludo Hartmann (Ambassador to Germany, 1918), Richard Schueller (envoy to the League of Nations, 1932).

b. Bucovina. DEPUTIES: Leibuka Barber (1871-77), Josef Blum, Josef Fechner (1861-69), Janku Fischer, Max Fokschauer, Jakob Hecht, Isidor Katz, Leon Kellner, Jakob Kohn (1874-98), Hermann Poras (1870-71), Heinrich Popper (1885-96), Leon Rosenzweig (1901-4), Salomon Rudich, Isak Rubinstein (1861-63), Josef Steiner (1901-3), Benno Straucher (1900-14), David Tittinger (1886-1901), Wilhelm Tittinger (1904-14), Heinrich Wagner (1878-85), Neumann Wender (1911-14), Salo von Weisselberger (1911-14).

c. Croatia. DEPUTIES: Emanuel Prister (elected 1860), Josip Singer (elected 1883), Ljudevit Schwarz (1884-1906).

d. Bosnia. DEPUTIES: Moritz Levy, Jeschua Salom, Vita Alkalay (elected 1912).

e. Dalmatia. DEPUTY: Vid Morpurgo.

f. Galicia. DEPUTIES: Joseph Samuel Bloch (1850-1923; Polish Club, 1879-96), Emil Byk (Polish Club, 1891-1906), Hermann Diamand (b. 1860; Polish Socialist, 1907-18), Henryk Gabel (Zionist, Jewish Club, 1907-10), Rudolf Gall (b. 1873; Polish Club, 1911-18), Josef Gold (b. 1864; Polish Club, 1906, 1907-18), Adolf Gross (b. 1862; independent, Jewish Club, 1907-18), Oswald Hönigsmann (Constitutional Party, 1873-79), Nathan von Kallir (Constitutional Party, Liberal Club, German-Austrian Club, 1873-91), Henryk Kolischer (b. 1853; Polish Club, 1897-1906, 1907-11), Joachim Landau (b. 1878; Constitutional Party, 1873-79), Maximilian Landesberger (Polish Club, 1867-73), Hermann Liebermann (b. 1870; Polish Socialist, 1907-18), Nathan von Löwenstein (Polish Club, 1907-18), Arthur Mahler (Zionist, Jewish Club, 1907-11), Albert Mendelsburg (Polish Club, 1873-79), Hermann Mises (Constitutional Party, 1873-79), Jakob Piepes-Poratynski (Polish Club, 1897-1906), Arnold von Rapoport (Polish Club, 1879-1906), Edmund Rauch (Polish Club, 1911-18), Henryk Reizes (b. 1878; Radical Democrat, 1911-18), Moritz Rosenstock (Polish Club, 1885-1900), Simon Schreiber (Polish Club, 1879-85), Adolf Stand (Zionist, Jewish Club, 1907-11), Nathan Seinfeld (Polish Club, 1901-6), Ignaz Steinhaus (Polish Club, 1911-18), Bernard Stern (Polish Club, 1911-18), Maximilian Trachtenberg (Polish Club, 1896-1900).

2. Belgium. MINISTERS: Paul Hymans (foreign affairs and justice, appointed several times between 1914 and 1936).

DEPUTIES: Paul Errera, Paul Hymans, Paul May, Herbert Speyer, L. Straus, Samuel Wiener.

DIPLOMATS: Paul Hymans (Ambassador to Great Britain, 1914-18), Paul May (Ambassador to the United States, 1931-34).

3. Bulgaria. DEPUTIES: Gabriel Avramov, chief rabbi of Bulgaria (delegate to the Constituent Assembly of 1879), Gabriel Almosnino (1879), Peter Gabé (1889), Haim Farchi (1911), Nahim Issakow (1920), Abraham Jakow (1920), Haim Pizanti.

MINISTER: Iosif Fadenhecht (justice, 1918).

4. Czechoslovakia. MINISTERS: Ludwig Czech (social welfare, 1929-34; public works, 1934-35; public health, 1935); Alfred Meissner (justice, 1920, 1929-34; social welfare, 1934-35), Adolf Stránský (commerce, 1918-19), Jaroslav Stránský (justice, government in exile), Lev Winter (social welfare, 1918-20, 1922-26).

DEPUTIES: Fanny Blatny (German Social Democrat), Angelo Goldstein (Zionist), Victor Haas (German Social Democrat), Karl Heller (German Social Democrat), Arn. Hirsch (German Social Democrat), Bruno Kafka (German Democratic Freedom Party), Irene Kirpal (German Social Democrat), Robert Klein (Czech Social Democrat), Chaim Kugel (Zionist), Johann Polach (German Social Democrat), Julius Reisz (Czech Social Democrat), Ludwig Singer (Zionist), Ludwig Spiegel (German Democratic Freedom Party), Victor Stern (Communist), Jaroslav Stránský (Dr. Eduard Beneš party).

MISCELLANEOUS: Oscar Butter (counsellor in the ministry of foreign affairs), Julius Friedman (minister plenipotentiary, chief of the economic section of the ministry for foreign affairs), Camil Hoffmann (counsellor of the ministry for foreign affairs, press chief of the Czechoslovak Legation at Berlin).

5. Denmark. DEPUTIES: David Baruch Adler (Folketing [lower house], 1864-69; Landsting [upper house], 1869-78), Ivar Berendsen (Folketing, 1910-20), Anton Bing (Folketing, 1901-3), Herman Meyer Bing (Folketing, 1890-92, 1895-96), Carl Edvard Brandes (Folketing, 1880-94; Landsting, 1906-27), Moritz Gerson Melchior (Landsting, 1866-74), Gustav Philipsen (Folketing, 1898-1903), Bernhard Rée (Constitutional Assembly, 1848-49; Folketing, 1850-54, 1864-66; Landsting, 1866-67), Julius Rée (Folketing, 1864-74), Herman Trier (Folketing, 1884-87, 1890-1909; president of the Folketing, 1901-5; Landsting, 1910-25; vice-president of the Landsting, 1918-20).

MINISTER: Carl Edvard Brandes (minister of finance, 1909-10, 1913-20). ALFRED WERNER.

6. France. MINISTERS, SECOND REPUBLIC: Adolphe Crémieux (justice, 1848), Michel Goudchaux (finance, 1848).

SECOND EMPIRE: Achille Fould (finance, 1849-52, 1861-67; state, 1852-60).

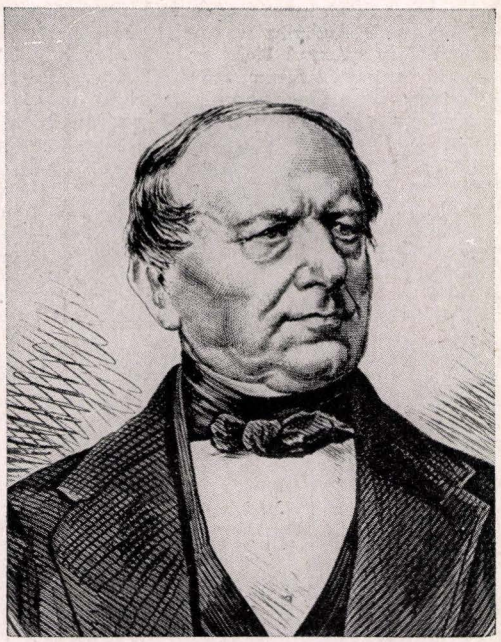
THIRD REPUBLIC: Marcel Abraham (chef de cabinet Jean Zay, 1936), Leon Abrami (under-secretary, administration, 1917-20), André-Hesse (colonies, 1925; public works, 1926), Léon Blum (under-secretary of state, 1915-17; premier, 1936-37, 1938; vice-premier, 1937-38), J. Blumel (chef de cabinet Léon Blum), Maurice Bokanowski (navy, 1924; commerce, 1926-27; aviation, 1929), Madame Cécile Léon Brunschvicg (under-secretary of national education, 1936), Adolphe Crémieux (member of the government of national defense, 1870-71), Achille Fould (agriculture, 1931-32), Edouard Ignace (under-secretary, justice and war, 1917-20), Alexandre Israel (interior, 1933-34; public health, 1934), Lucien Louis Klotz (finance, 1910-11, 1917-20; interior, 1913), Levy-Ulmann (chef de cabinet, justice, 1932), René Lisbonne (public health, 1933), Georges Mandel (chef de cabinet Clemenceau, 1917-20; postmaster general, 1935-36; colonies, 1938-40; interior, 1940), Léon Mayer (merchant marine, 1924, 1932), Edouard Millaud (public works, 1886-87), Alexandre Millerand (president, 1922-24; he was the son of a Jewish mother), Jules Moch (public works, 1938), Ernest Picard (interior, 1871-73), David Raynal (public works, 1881-82; interior, 1894), Joseph Reinach (chef de cabinet Gambetta, 1879), Abraham Schrameck (interior, 1925, 1928-30), Jacques Stern (navy, 1930; merchant marine, 1933; colonies, 1936), Paul Straus (under-secretary, public health and insurance, 1922), M. Valabrègue (chef de cabinet, ministry of war, 1905), Jean Zay (under-secretary to the premier, 1936; national education, 1936-38).

SENATORS: Fernand Crémieux (1905), Fernand Dreyfus (1914), Achille Fould (1852), Alexandre Israel (1927), Lucien Louis Klotz (1897), Moïse Levy (1930), René Lisbonne, L. Louis-Dreyfus, Edouard Millaud, Ernest Picard (1875), Maurice de Rothschild, Abraham Schrameck, Paul Straus, Lazare Weiller (1908).

DEPUTIES: André-Hesse (1912), Edouard A. Bamberger (1871), Pierre Bloch (1928), Max Théodore Cerfberr (1846), Adolphe Crémieux (1842), Fernand Crémieux (1885), Achille Fould (1842), Achille Fould (grandson of the minister; 1889), Adolphe Fould (1863-69), Benoît Fould (1834), Edouard M. Fould (1863-69), Louis Gross (1932), Salomon Grumbach (1928), Maximilian Koenigswarter (1852-61), Georges Lévy (1928), Georges Lévy-Alphandeau (1928), Georges Mandel (1920-24, 1928-40), Léon Mayer (1924), Edouard Millaud (1871), Jules Moch (1928), Alfred Naquet (1881), Camille Picard (1912), Ernest Picard

(1859), David Raynal (1877), Joseph Reinach, Théodore Reinach (1906), Henri Torres (1932), Jules Uhry (1920), Georges Weill (1932), Weill-Mallez (1897), Jean Zay (1932).

7. Germany. MINISTERS: Hermann Badt (Prussian representative in the Reichsrat, 1926-32), Bernhard Dernburg (vice-chancellor and minister of justice, 1919; secretary of the colonies, 1907-9), Kurt Eisner (prime minister of Bavaria, 1918-19), Moritz Ellstaedter (finance, Bavaria, 1868-93; member of the Bundesrat, 1871-79), Heinrich von Friedberg (Prussian minister and imperial secretary of justice, and member of the Bundesrat, 1847-79), Karl Rudolph Friedenthal (Prussian minister of agriculture and imperial secretary of agriculture, 1874-77; agriculture and interior, 1877-79), Georg Gradnauer (prime minister, Saxony, 1918; interior, Germany, 1921; Saxony's representative in the Reichsrat, 1922-32), Hugo Haase (commissary of the German people, 1918), Johannes Heckscher (justice, Reich government, 1848-49; Hamburg's minister to Vienna, 1852-56), Rudolf Hilferding (finance, 1923, 1928), Paul Hirsch (prime minister, Prussia, 1918-20), Paul Kayser (colonies and director of the foreign office, 1890-95), Otto Landsberg (commissary of the German people, 1918; justice, 1919; minister to Brussels, 1920-24), van Philippsborn (director of the Prussian and German foreign office, and member of the Bundesrat, 1871-79), Hugo Preuss (interior, 1919), Walther Rathenau (reconstruction, 1921; foreign minister, 1922), Werner Richter (Prussian representative in the Reichsrat, 1926-32), Eugen Schiffer (vice-chancellor and justice, 1919 and 1920; justice, 1921), Heinrich Simon (member of the provisional government, rump parliament, Stuttgart, 1849), Robert Weismann (Prussian secretary of state, 1923-32).



DEPUTIES, NATIONAL ASSEMBLY, FRANKFORT, 1848: Gabriel Riesser, Eduard von Simson, Moritz Veit.

NORTHERN GERMAN REICHSTAG: Ludwig Bamberger, Friedenthal, Max Hirsch, Eduard Lasker, Leonor Reichenheim, Anton Rée.

GERMAN REICHSTAG (IMPERIAL): Otto Arendt (Conservative, 1898-1918), Ludwig Bamberger (Liberal, 1871-93), Eduard Bernstein (Social Democrat, 1902-7, 1912-18), Heinrich Braun (Social Democrat, 1903-7), Burg (Progressive), Max Cohen (Social Democrat, 1912-18), Cohn-Martinikenfelde (Progressive), Oscar Cohn (Social Democrat, 1912-18), Georg Davidsohn (Social Democrat, 1912-18), Friedrich Dernburg (Liberal, 1878-81), L. Dirichlet (son of Rebecca Mendelssohn; Progressive, 1881-88), Felix Eberty (Progressive, 1882-84), Ludwig Frank (Social Democrat, 1907-14), Wolf Frankenburger (Liberal, 1874-78), Freund (Breslau; Progressive, 1878-81), Friedenthal (Conservative, 1871-81), Lewin Goldschmidt (Liberal, 1875-77), Georg Gradnauer (Social Democrat, 1898-1907, 1912-18), Ludwig Haas (Progressive, 1912-18), Hugo Haase (Social Democrat, 1884-1907, 1912-18), Josef Herzfeld (Social Democrat, 1898-1907, 1912-18), Max Hirsch (Progressive, 1878-84), Max Kayser (Social Democrat, 1878-84), Eduard Lasker (Liberal, 1871-80), Ludwig Loewe (Progressive, 1878-81), Emanuel Mendel (Progressive), H. B. Oppenheim (Liberal, 1873-77), Anton Rée (Progressive, 1881-84), Baron Karl Mayer von Rothschild (Conservative, 1871), Adolf Saber (Social Democrat, 1884), Bruno Schoenlank (Social Democrat, 1893, 1903), G. Sello (Liberal, 1882-84), Eduard von Simson (Liberal, 1871-74), Paul Singer (Social Democrat, 1884-1907), Leopold Sonnemann (Democrat, 1871-84), Arthur Stadthagen (Social Democrat, 1890-1918), Felix Waldstein (Progressive, 1912-18), Isaak Wolffson (Liberal, 1871-81), Emanuel Wurm (Social Democrat, 1890-1907).

NATIONAL ASSEMBLY, WEIMAR. The Weimar National Assembly (1919) had the following Jewish members: Eduard Bernstein, Adolf Braun, Oscar Cohn, Bernhard Dernburg, Bernhard Falk, Hugo Haase, Hugo Heimann, Otto Landsberg, Hugo Preuss, Eugen Schiffer, Felix Waldstein.

REICHSTAG (REPUBLICAN, 1920-33): Siegfried Aufhaeuser (Social Democrat, 1921-33), Eduard Bernstein (Social Democrat), Adolf Braun (Social Democrat), Bernhard Dernburg (Democrat), Ruth Fischer (Communist, 1924-28), Hugo Heimann (Social Democrat, 1921-33), Paul Hertz (Social Democrat, 1920-33), Rudolf Hilferding (Social Democrat, 1924-33), Otto Landsberg (Social Democrat, 1924-33), Ivan Katz (Communist), Paul Levi (Communist, later Social Democrat, 1920-30), Kurt Löwenstein (Communist, later Social Democrat), Heinz Neumann (Communist), Arthur Rosenberg (Communist, 1924-28), Kurt Rosenfeld (Social Democrat, 1920-33), Toni Sender (Communist, later Social Democrat), Friedrich Stampfer (Social Democrat).

Heinrich von Friedberg, Prussian statesman, 1850-79

PRUSSIA, FIRST CHAMBER, 1848-50: Wilhelm Beer, Guraden, Magnus-Danzig.

PRUSSIA, UPPER HOUSE, 1854-1918: Eduard Arnhold, Heinrich Friedberg, Friedenthal, Dagobert Friedlander, Fritz von Friedländer-Fuld, Karl Maier von Rothschild, Friedrich Julius Stahl (1843-61).

PRUSSIAN NATIONAL ASSEMBLY, 1848: Brill (Breslau; Democrat), Johann Jacoby (Democrat), Raphael Kosch (Democrat).

PRUSSIAN LOWER HOUSE (Landtag, Abgeordnetenhaus); Aronsohn (Bromberg; Progressive, 1903), Oscar Cassel (Progressive, 1928-30), Bernhard Falk (Democrat, 1928-30), Ernst Heilmann (Social Democrat, 1919-33), Max Hirsch (Progressive, 1898), Paul Hirsch (Social Democrat, 1919), Ivan Katz (Communist, 1919-33), Gertrud Klausner (Democrat, 1925-28), Raphael Kosch (Progressive, 1861-72), Erich Kuttner (Social Democrat, 1921-33), Eduard Lasker (Liberal, 1865-81), Levy-Hohensalza (National Liberal, 1903), Ludwig Loewe (Progressive, 1876), Otto Mugdan (Progressive, 1903), Peltasohn (Liberal, 1898-1908), Hugo Preuss (Democrat, 1919), Leonor Reichenheim (Progressive, 1858-67), Leopold Rosenow (Progressive, 1903), Wolf Strassmann (Progressive, 1876-84), Felix Waldstein (Progressive, 1908-19), Wolff-Lissa (1898-1908).

BAVARIAN DIET: Fischel Arnheim (1850-64), Wolf Frankenburger (1889-96), Wolfgang Gunzenhäuser (1875-93), Sigmund von Henle (1873-81), Simon Levi (1869-75), Gabriel Löwenstein, Carl Maison (1876), Morgenstern (1849), Carl Saenger (1919).

BADEN, LOWER HOUSE: Ludwig Frank, Rudolf Kusel (1861-63), Ladenburg, Lenel, C. Marum (1919-33), Naphtali Naef (1879).

HESSE-DARMSTADT, DIET: Edinger, Hirschhorn, Otto Wolfskehl (vice-president). HUGO BIEBER.

8. Great Britain and the British Commonwealth. a. Great Britain. In 1942 there were no Jews in the government of Great Britain, nor were there any serving as Ambassadors or foreign envoys.

CONSTITUENT ASSEMBLY: There was a considerable number of Jews among the 600 delegates to the All-Russian Constituent Assembly which was dissolved by the Bolsheviks after it had held a single session on January 18 to 19 (New Style), 1918. Half a dozen delegates, including Yakov Isayevich Maze, rabbi of Moscow, the celebrated lawyer Grusenberg, and the former Duma deputy Friedman, were candidates of the Jewish National Election Committee. A score had been elected on the ticket of the Party of Socialist Revolutionists. Another score belonged to the Menshevik and Bolshevik factions of the Social-Democratic Party. Among these were men who gained prominence as Soviet leaders: Adolf Joffe, Kamenev, Ryazanov (Goldendach), Sverdlov, Sokolnikov, Uritzky, Zinoviev, Trotsky.

MINISTER: Isaac Nachman Sternberg (justice, 1917, in the Kerensky government).

THE PEOPLE'S COMMISSARS (CABINET MINISTERS) AND OTHER HIGH ADMINISTRATORS. 1. OF THE USSR: Yakov Mikhailovich Sverdlov (Chairman of the Central Executive Committee of Soviet Russia, 1917), Lev Borisovich Kamenev (Chairman of the Moscow Soviet, 1918-26; Acting Chairman of the Council of People's Commissars, 1922; Chairman of the Council of Labor and Defense, 1924; Commissar of Trade, 1926), Grigory Yakovlevich Sokolnikov (Commissar of Finance, 1925; Acting Chairman of the State Planning Commission, Acting Commissar of the Timber Industry, 1932-37), Lev Davidovich Trotsky (Commissar of Defense, 1918-27; Chairman of the Committee on Concessions, 1927), Aron Lvovich Scheinman (Commissar of Home Trade, 1925; Acting Commissar of Finance, 1926-28; Chairman of the State Bank, 1927-28), Semyon Samoilovich Joffe (Acting Chief of the Administration of the Northern Sea Route, 1924), Israel Mikhailovich Kleiner (Acting Chairman of the Council of Labor and Defense, 1934), Ruvim Yakovlevich Levin (Acting Commissar of Finance, 1934), Moisei Ilyich Frumkin (Acting Commissar of Foreign Trade, 1925; Acting Commissar of Trade, 1926; Acting Commissar of Finance, 1927-29; Acting Commissar of Foreign Trade, 1934), Moisei Iosifovich Kalmanovich (Commissar of State Grain and Livestock Farms, 1934-35), I. Ya. Weitzer (Commissar of Home Trade, 1935-36), Arkady Pavlovich Rosenholz (Acting Commissar of Inspection, 1929; Commissar of Foreign Trade, 1931-36), Moisei Lvovich Rukhimovich (Acting Chairman of the Supreme Council of Popular Economy, 1927-29; Commissar of Land Transport, 1931; Acting Commissar of Heavy Industry, 1934; Commissar of the Defense Industry, 1936), Lazar Moiseivich Kaganovich (Acting Chairman of the Council of the People's Commissars; People's Commissar of Land Transport, 1936; People's Commissar of Heavy Industry, 1938-39; Commissar of Railways, 1940-41), Mikhail Moiseivich Kaganovich (Acting Commissar of Heavy Industry, 1934; Commissar of Aeronautical Industry, 1937; Commissar of the Defense Industry, 1938), Abram Lazarevich Gilinsky (Commissar of the Food Industry, 1938), Maksim Maksimovich Litvinov (Commissar of Foreign Affairs, 1930-39), Semyon Zakharovich Ginsburg (Commissar of Construction, 1941), Lev Zakharovich Mekhlis (Commissar of State Control, 1941), Moisei Lazarevich Granovsky (Acting Commissar of Postal and Electrical Communication, 1941), Yefim Solomonovich Brailovsky (Acting Commissar of the Electrical Industry, 1942), Ilya Solomonovich Kogan (Acting Commissar, Machine Construction, 1941).

2. OF THE CONSTITUENT REPUBLICS: Solomon Ilyich Kantorovich (Commissar of Public Health of the USSR), M. G. Gurevich (Acting Commissar of Public Health of the USSR), Moisei Abramovich Segal (Commissar of Justice, White Russia, 1926-28), Boris Isaevich Berliner (Acting Commissar of Public Health, Uzbek SSR, 1942).

SOVIET DIPLOMATS (AMBASSADORS, CONSULS, AND OTHERS): Lev Davidovich Trotsky (chairman of the Brest-Litovsk Delegation, 1918), Adolf Abramovich Joffe (member of the Brest-Litovsk Delegation; Ambassador to Japan, China, and Austria in the early 1920's), Lev Borisovich Kamenev (Ambassador to Italy, 1927), Grigory Yakovlevich Sokolnikov (Ambassador to Great Britain, 1929-32), Yakov Zakharovich Suritz (Ambassador to Turkey, 1927-29; Ambassador to Germany, 1934), Konstantin Umansky (chargé d'affaires to the United States, 1937-39; Ambassador to the United States, 1939-41), Maksim Maksimovich Litvinov (Ambassador to the United States, 1941-), Nison Davidovich Khavin (consul, Kalgan, China, 1925), Arkady Pavlovich Rosenholz (counsellor to the embassy in Great Britain, 1926), S. I. Rabinovich (counsellor to the embassy in Latvia, 1928), Marcel Israelevich Rosenberg, consul general, Peking, China, 1925; counsellor to the embassy in France, 1934; Soviet Ambassador to Spain, 1936-37), Ilya Moiseivich Heizman (consul, Manchuria, China, 1927), Genrich Iosefovich Melamed (consul, Sakhalian, China, 1927-29), Ezekiel Davidovich Kantor (consul general, Hamburg, Germany, 1927-28), Israel Solomonovich Karas (consul, Hakodate, Japan, 1934), Jean-Iosif Lvovich Arens (counsellor to the embassy, France, 1928-29; consul general, New York, 1935-37).

A considerable number of Jews were employed (1943) in the Soviet Foreign Office, and as diplomatic agents and commercial attachés. AVRAHM YARMOLINSKY.

18. Sweden. DEPUTIES: Edvard Fränckel (member of the Upper Chamber of the Riksdag, 1889-1911), Hermann Lamm (member of the Upper Chamber of the Riksdag, from 1910 until his death in 1928), Filip Leman (member of the Upper Chamber of the Riksdag, 1896-1904), Sally Luterkort, Aron Philipson (member of the Lower Chamber of the Riksdag, 1873-77), Moritz Rubenson (one of the first Jews elected to the Lower Chamber of the Riksdag after the Emancipation Act of 1870), Carl Jacob Wahren, Karl Warburg (member, Lower Chamber of Riksdag, 1906-8).

19. Switzerland: David Zwi Farbstein (councillor of the canton of Zurich, 1902-6; in 1902 elected member of the city council of Zurich; in 1922 elected deputy of the Swiss parliament; reelected in 1928, 1931 and 1935), Jacques Dicker (municipal councillor at Geneva, 1922-27; national councillor, 1922-25; elected Socialist deputy of the Grand Conseille; reelected in 1931 and 1935), M. J. Jacques Kunstenaar (elected president of the Ninth Congress of the International World Federation of the League of Nations Unions at Geneva, 1932).

20. Turkey. MINISTERS: Sir Ezekiel Sassoon (Finance, Mesopotamia), Haskiel Sassoon (public works).

Mayer (1865-1925; United States Circuit Court of Appeals, 1912-25), Grover M. Moscowitz (b. 1886; United States District Court, 1925-), Simon H. Rifkind (b. 1901; United States District Court, 1941-), Charles C. Simons (b. 1876; United States District Court, 1923-32; United States Circuit Court of Appeals, 1932-), Louis Sulzbacher (1842-1915; Supreme Court of Puerto Rico, 1900-4; United States District Court of Indian Territory [now a part of Oklahoma], 1904-9), Jacob Trieber (1853-1927; United States District Court, 1900-27), Adolph G. Wolf (b. 1869; associate justice of the Supreme Court of Puerto Rico, 1904-41), Charles E. Wyzanski, Jr. (b. 1906; United States District Court, 1941-), Leon R. Yankwich (b. 1888; United States District Court, 1935-).

STATE SUPREME COURT JUDGES (unless otherwise indicated, all those listed in this category were state supreme court judges): J. Sidney Bernstein (New York, 1938-), Nathan Bijur (1862-1930; New York, 1909-30), Bernard Botein (New York, 1941-), Albert J. Cardozo (1828-85; New York, 1867-71), Benjamin N. Cardozo (1870-1938; New York, 1914; New York court of appeals, 1914-32), William N. Cohen (1857-1938; New York, 1897-99), Albert Cohn (b. 1885; New York, 1929-36; Appellate Division, New York, 1936-), David Diamond (b. 1898; New York, 1941-), Morris Eder (New York, 1939-), Abram I. Elkus (b. 1867; New York state court of appeals, 1919-20), Mitchell L. Erlanger (1857-1940; New York, 1907-27), Alfred Frankenthaler (1881-1940; New York, 1926-40), Samuel Frauenthal (Arkansas, 1909-23), Louis D. Gibbs (1880-1929; New York, 1925-29), Abraham E. Gold (New York, 1939-), Irving I. Goldsmith (b. 1881; New York, 1927-29), Samuel Greenbaum (1854-1930; New York, 1900-23; New York Appellate Division, 1920-23), Joseph Jerome Hahn (1868-1938; Rhode Island, 1930-35), Ernest L. Hammer (New York, 1939-), Samuel J. Harris (b. 1877; New York, 1924-40; associate justice, New York State Appellate Division, 1940-), Solomon Heydenfeldt (California, 1852; chief justice, 1853), Michael H. Hirschberg (1847-1929; New York, 1895-1917; presiding justice, New York State Appellate Division, 1917-29), Samuel H. Hofstadter (b. 1894; New York, 1932-), Samuel Kalisch (1851-1930; New Jersey, 1911-30), Isaac M. Kapper (b. 1864; New York, 1910-34), Philip M. Kleinfeld (b. 1894; New York, 1941-), Edgar J. Lauer (b. 1871; New York, 1934-39), Edward Lazansky (b. 1872; New York, 1917-), Henry A. Lazarus (Louisiana, 1880), Irving H. Lehman (b. 1876; New York, 1908-37; New York Court of Appeals, 1937- ; chief justice of that court, 1940-), David Leventritt (1845-1926; New York, 1898-1908), Aaron J. Levy (b. 1881; New York, 1923-), Walter H. Levy (California), Harry E. Lewis (b. 1880; New York, 1921-), David A. Lourie (1878-1930; Massachusetts Superior Court, 1924-30), Henry A. Lyons (California, 1851), Louis W. Marcus (1863-1923; New York, 1905-23), Mitchell May (b. 1870; New York, 1922-40), Julius Miller (b. 1880; New York, 1930-), Columbus Moise (chief justice, New Mexico Supreme Court, 1880-86), Franklin J. Moses (1804-77; chief justice, South Carolina Supreme Court, 1868-77), Joseph E. Newburger (1853-1931; New York, 1905-23), Algeron I. Nova (b. 1881; New York, 1937-), Samuel Null (1941-), Nathan Ottinger (1874-1940; New York, 1918-32), Joseph B. Perskie (b. 1885; New Jersey, 1933-), Marx Warley Platzek (1854-1932; New York, 1907-24), Joseph M. Proskauer (b. 1877; New York, 1923-30), Samuel I. Rosenman (b. 1896; New York, 1932-), E. Ivan Rubenstein (b. 1895; New York, 1942-), Benjamin F. Schreiber (b. 1885; New York, 1940-), Henry L. Sherman (d. 1936; New York, 1927-36), Bernard Shientag (b. 1887; New York, 1930-), Marcus C. Sloss (b. 1869; California, 1906-19), Charles Solomon (b. 1889; New York, 1938-), Irvin Stalmaster (b. 1897; Nebraska, 1929), Meier Steinbrink (b. 1880; New York, 1932-), Horace Stern (b. 1878; Pennsylvania, 1935-), Aron Steuer (b. 1898; New York, 1932-), Irwin Untermyer (b. 1886; New York, 1929-), Isidor Wasservogel (b. 1871; New York, 1920-), Abe L. Zinn (b. 1893; New Mexico, 1932).

UNITED STATES SENATORS: Judah P. Benjamin (1812-84; Louisiana, 1853-61), Simon Guggenheim (1867-1941; Colorado, 1907-13), Benjamin Franklin Jonas (1834-1911; Louisiana, 1879-85), Isidor Rayner (1850-1912; Maryland.

Ira Nelson Morris, United States Minister to Sweden

1905-12), Joseph Simon (1851-1935; Oregon, 1897-1903), David Levy Yulee (1811-86; Florida, 1845-51, 1855-61).

UNITED STATES REPRESENTATIVES: Martin C. Ansorge (b. 1882; New York, 1921-23), Isaac Bacharach (b. 1870; New Jersey, 1915-38), Victor L. Berger (1860-1929; Wisconsin, 1911-13, 1923-29), Sol Bloom (b. 1870; New York, 1923-), Jacob A. Cantor (1854-1920; New York, 1913-15), Emanuel Celler (b. 1888; New York, 1923-), William M. Citron (b. 1896; Representative-at-Large for Connecticut, 1935-38), William W. Cohen (1874-1940; New York, 1927-29), Samuel Dickstein (b. 1885; New York, 1923-), M. Michael Edelstein (1888-1941; New York, 1940-41), Edwin Einstein (1842-1906; New York, 1879-81), Henry Ellenbogen (b. 1900; Pennsylvania, 1933-38), Martin Emerich (1847-1922; Illinois, 1903-7), Israel F. Fischer (1858-1940; New York, 1895-99), Nathan Frank (1851-1930; Missouri, 1889-91), Benjamin N. Golder (b. 1891; Pennsylvania, 1925-33), Henry M. Goldfogle (1856-1929; New York, 1901-15, 1919-21), Julius Goldzier (1854-1925; Illinois, 1893-95), Emanuel B. Hart (1809-97; New York, 1851-53), Julius Houseman (1832-91; Michigan, 1883-85), Meyer Jacobstein (b. 1880; New York, 1923-29), Florence Prag (Mrs. Julius) Kahn (b. 1869; California, 1925-36), Julius Kahn (1861-1924; California, 1889-1902, 1905-24), David S. Kauffman (Texas, 1846-51), Arthur G. Klein (New York, 1941-), Herman P. Koppelmann (b. 1880; Connecticut, 1933-38, 1940-42), Milton Kraus (b. 1866; Indiana, 1917-22), Montague Lessler (1869-1939; New York, 1902-3), Lewis C. Levin (1808-60; Pennsylvania, 1845-51), Jefferson M. Levy (1852-1924; New York, 1899-1901, 1911-15), Lucius N. Littauer (b. 1859; New York, 1897-1907), Meyer London (1871-1926; New York, 1915-17, 1921-23), Mitchell May (b. 1870; New York, 1899-1901), Adolph Meyer (1842-1908; Louisiana, 1891-1908), Leopold Morse (1831-92; Massachusetts, 1877-85, 1887-89), Nathan D. Perlman (b. 1887; New York, 1920-27), Theodore A. Peyser (1873-1937; New York, 1933-37), Henry M. Phillips (1811-84; Pennsylvania, 1857-59), Philip Phillips (1807-84; Alabama, 1853-55), Joseph Pulitzer (1847-1911; New York, 1885-86), Isidor Rayner (1850-1912; Maryland, 1887-95), Benjamin L. Rosenbloom (b. 1880; West Virginia, 1921-24), Albert B. Rossdale (b. 1878; New York, 1921-23), Adolph J. Sabath (b. 1866; Illinois, 1907-), Leon Sacks (b. 1902; Pennsylvania, 1937-42), Isaac Siegel (b. 1880; New York, 1915-23), William I. Sirovich (1882-1939; New York, 1927-39), Isidor Straus (1845-1912; New York, 1894-95), Myer Strouse (1825-78; Pennsylvania, 1863-67), Lester D. Volk (b. 1884; New York, 1921-23), Samuel A. Weiss (b. 1902; Pennsylvania, 1940-), Harry B. Wolf (b. 1880; Maryland, 1907-9).

GOVERNORS OF STATES OR TERRITORIES: Moses Alexander (1853-1932; Idaho, 1915-19), Simon Bamberger (1847-1926; Utah, 1917-21), David Emanuel (1744-1808; Georgia, March to November, 1801), Ernest H. Gruening (b. 1887; Puerto Rico, 1935-39; Alaska, 1939-), Michael Hahn (1830-86; Louisiana, 1864-65), Henry Horner (1878-1940; Illinois, 1933-36, 1937-40), Herbert H. Lehman (b. 1878; New York, 1933-42), Julius L. Meier (1874-1937; Oregon, 1930-34), Payne Ratner (b. 1896; of part-Jewish descent; Kansas, 1939-42), Arthur Seligman (1873-1933; New Mexico, 1930-33), David Sholtz (born a Jew; Florida, 1933-37), Edward S. Solomon (1836-1913; Washington Territory, 1870-74, before Washington became a state in 1889).

MISCELLANEOUS: Bernard M. Baruch (b. 1870; Chairman of the War Industries Board, 1918-19; member of a federal committee of three to investigate the rubber supply, 1942), Jerome N. Frank (b. 1899; member of the Securities and Exchange Commission, 1936-41, and its chairman, 1939-41), Ernest H. Gruening (b. 1887; director of the Federal Division of Territories and Island Possessions, 1934-39), Sidney Hillman (b. 1887; labor commissioner on the National Defense Advisory Commission, 1940; associate director general of the Office of Production Management, 1941- ; member of the Supply Priorities and Allocations Board, 1941; Director of the Labor Division of the War Production Board, 1942-), Albert D. Lasker (b. 1880; head of the United States Shipping Board, 1921-23), Herbert H. Lehman (b. 1878), Director of Foreign Relief and Rehabilitation (from December, 1942), William M. Leiserson (b. 1883; secretary of the National Labor Board, 1933-34; chairman of the Petroleum Labor Policy Board, 1934; member of the National Mediation Board, 1934-39, and its chairman from 1934-36; member of the National Labor Relations Board, 1939-), Eugene Meyer (b. 1875; governor of the Federal Reserve Board, 1930-33; member of the National Defense Mediation Board, 1941-), Henry Morgenthau, Jr. (b. 1891; chairman, Federal Farm Board, 1933; governor, Farm Credit Administration, 1933; acting and under secretary of the Treasury, November 17 to December 31, 1933), Anna M. Rosenberg (b. 1900; regional director of the Social Security Board, 1935-42; member of the National War Labor Board and secretary of the President's Combined War Labor Board, 1942-), Leo S. Rowe (b. 1871; assistant secretary of the Treasury, 1917-19; chief of the Latin-American division of the United States Department of State, 1919-20; director general of the Pan American Union, 1920-), Nathan Straus, Jr. (b. 1889; United States Housing Authority Administrator, 1937-42), Leo Wolman (b. 1890; member of the National Labor Board, 1933-34); Charles E. Wyzanski, Jr. (b. 1906; member of the National Defense Mediation Board, 1941).

H., *Die hervorragendsten jüdischen Staatsmänner und Mäzene in früheren Jahrhunderten* (1903); Schay, Rudolf, *Juden in der deutschen Politik* (1929); Ginsburger, Ernest, *Le comité de surveillance de Jean-Jacques Rousseau* (1934); Roth, Cecil, *The Jewish Contribution to Civilization* (1938).

PUBLICANS, *see* TAXATION.

PUBLISHING HOUSES. The enterprise of Jews in the publication and distribution of books began even before the invention of printing, as is shown by the existence of early booksellers' catalogues from the Orient. Immanuel ben Solomon of Rome, a poet of the 12th and 13th centuries, mentions a bookseller named Aaron, who disposed of the greater part of a collection of 180 Hebrew manuscripts at Perugia, while on a journey from Toledo to Rome. Activity which was to develop into the modern manifold aspects of publishing was not possible, however, until after Gutenberg, or about the end of the 15th cent. The first Rashi edition, printed in Reggio, Italy, in 1475, inaugurated the art of the printed book, from the Jewish point of view. Naples and Rome were early publishing centers for Hebrew books. Once established, the publishing houses passed from father to son, sometimes for several centuries; among those which remained in the possession of one family line were the Soncino concern in Italy, the Gersonides (family and descendants of Gershon ben Solomon Kohen) in Prague, and Proops in Amsterdam.

One of the first attempts to bring Jewish publishing eastward was made by Shabbethai Meshorer in 1688, when he tried to establish a publishing house in Breslau, Silesia, to save the Polish and German scholars from having to take their manuscripts to Amsterdam for printing. A few years earlier, while in Amsterdam, Meshorer had issued a Hebrew bibliography—the first on record. It was not until early in the 19th cent., however, that commercial Jewish publishing took a secure hold in the German-speaking countries. The print-shop established in 1799 by Wolf Benjamin Heidenheim in Rödelheim, which later became J. Lehrberger and Co., made possible the opening of book-stores in various cities by providing prayer-books and other published material. The Lehrberger firm was bought in 1899 by Ignaz Kauffmann, the son of Isaak Kauffmann, who had established a publishing house in Frankfort in 1832. The firm brought out the works of Leopold Zunz, Moritz Steinschneider, Samson Raphael Hirsch, Marcus Lehmann, and other leading exponents of Jewish culture. M. Poppelauer, founded in Berlin in 1860, and C. Boas Nachfolger (1863) both lasted until well into the 20th cent. In the German provinces, the firm of B. L. Monasch had been active in

Krotoschin from 1835 to 1910, issuing prayer-books and Jewish scientific literature, and the house of Zirndorfer in Fürth, in the middle of the 19th cent.

In 1902 Martin Buber, Berthold Feiwel, E. M. Lilien and Davis Trietsch founded the Jüdischer Verlag in Berlin. Among its major publications were the *Jüdisches Lexikon*, in five volumes, and Simon Dubnow's history of the Jewish people. It published also a periodical, *Der Jude*.

In 1903 Louis Lamm founded a publishing house in Berlin that dealt with Jewish subjects; after the first World War Alvin Löwenthal established the Weltverlag, with which a book guild, the Heine Bund, was later affiliated. The Eshkol Verlag began the publication of the *Encyclopaedia Judaica* in 1928; ten volumes had been published when the work was suspended in 1934. The Philo Verlag, established by the Central Verein deutscher Staatsbürger jüdischen Glaubens, specialized in statistical literature, and issued a bi-monthly, *Der Morgen*. Benjamin Harz published, among other books, a new edition of the Goldschmidt translation of the Talmud. S. Schocken was among the newest Jewish publishers in Berlin.

Many general publishing firms throughout Germany were founded and headed by Jews. The outstanding one, among book publishers, was the house of S. Fischer. In 1936, having been liquidated in Germany proper, the firm of Beerman-Fischer was established in Vienna. In 1938 it was moved to Stockholm, and in 1941 to New York city, as L. B. Fischer. Among the authors originally presented by the Fischer firm was Thomas Mann. Other general publishing firms headed by Jews were Bruno and Paul Cassirer, Georg Bondi, Propylaen Verlag, Erich Reiss, Albert Goldschmidt (Grieben) of Leipzig, who published the Baedeker guides, Carl Heymann of Berlin, who specialized in jurisprudence, M. and H. Marcus of Breslau, Mosse (Ullstein) in Berlin, the Frankfurter Societäts Verlag, and Kurt Wolff in Munich. From 1942 on he was in New York city as head of the firm of Pantheon Books, Incorporated. In 1938 also the publishing houses (the general publishing houses owned by Jews had by then been "Aryanized") were forced to turn over all books written by Jews to the exclusively Jewish publishing houses, which were permitted to sell them only to Jews.

There were also in Germany at various times important publishing houses which specialized in Hebrew and Yiddish literature; most of these eventually found their way to Palestine. The Dvir publishing house was founded by Chaim Nachman Bialik and Shemarya Levin. It merged with the Moriah firm of Odessa, and was transferred to Tel-Aviv in 1924. Other Hebrew publishing houses in Berlin were the Yalkut, the Choreb, the Yivneh, the Ayanoth and the Yuval, the latter specializing in music. From 1926 to 1930 Berlin housed also the Stybel publishing firm, founded in 1915 in Russia by Abraham J. Stybel. Later its headquarters were in Copenhagen, then in Berlin, after that in Warsaw, and finally in Palestine. The Stybel firm published not only much original Hebrew work, but translations of the classics from other languages into Hebrew, and issued the periodicals *Hatekufah* and *Miklat*. The Klal publishing house and Wostock in Berlin sponsored Yiddish literature.

In Vienna the firm of R. Löwit was established in 1833; it issued numerous volumes of Jewish interest, including the works of Herzl. Joseph Schlesinger, established in 1858, had a branch in Budapest. The Fiba Verlag of Vienna specialized in Palestinian items. Paul Zsolnay, one of the leading general publishers in Vienna, was a Jew. In Holland the Proops publishing house existed for more than two centuries, until after the end of the first World War. After the establishment of the Nazi regime in Germany, the Querido Press was founded in Holland. Although not Jewish, it published, in German, the work of many refugee writers.

Livorno, Italy, had the firm of Belforte, which published prayer-books for Italy and North Africa. The general publishing house of Fratelli Treves, in Milan, was of Jewish origin. Leo Olschki was a publisher in Florence. In Paris the firm of Durlacher specialized in prayer-books and M. Lipschütz in other material of Jewish interest. The firm of Calmann Levy was founded by Jews; it published the works of notable French writers, including Ernest Renan.

Among the major publishing houses in Hungary, some were founded, others were taken over by and gained scope and momentum under the direction of Jews. In the 1870's Sámuel and Leó Révai founded the important firm of Révai Testvérek, which published Hungarian and other classics and the largest Hungarian encyclopedia. József Wolfner founded Singer és Wolfner, which became the publishing house for large masses of the Hungarian middle class. It published *Uj Idők*, a magazine of large circulation, and *Uj Lexikon* (1940). Fülöp Wodianer de Vásárhely, who took over the Lampel Róbert publishing house in 1874, made it an important factor in Hungarian cultural life. Among its publications were books in all branches of knowledge, textbooks and several newspapers. He was knighted in recognition of distinguished achievement, as was Lipót Hirsch de Örményes, who from a printer became managing director (in 1894) of another publishing house of rank, Franklin Társulat. Andor Miklós, a newspaper publisher, acquired Athenaeum and published the works of the contemporary literary élite. In the 1920's and 1930's some publishing corporations operating with Jewish capital featured translations of low-type foreign literature and shut their doors to Hungarian authors of merit. Tábor was a publishing house for books on Jewish subjects. From 1939 on the Hungarian government strove to eliminate Jewish influence, if not vested interest, from publishing.

The initiative in publishing the works of outstanding Roumanian authors was taken by a Jewish bookseller and publisher named Elias Saraga, who founded his business at Jassy in 1878. Prior to the first World War (1914-18) the role of Jews in the publishing business, a role which demanded much initiative, was predominant. The Jewish-owned publishing houses included Cuperman at Jassy, publisher of the important socialist review *Contimporanul* (1880-90); Samitca of Craiova (founded about 1895), one of the largest printing and publishing houses in Roumania, which published books at popular prices and were the only Jewish publishers to interest themselves in literature of a Jewish trend. They published the illustrated weekly *Lumea Israelita* (The Jewish World; 1900-13) in a de luxe edition. Leon Alcalay (Bucharest, 1900-34) published *Biblioteca pentru toti* (Library for All), popular priced editions; the firms Ciornei and Socec also belonged to Jews. Before 1930 Cultura Nationala became, and for many years thereafter remained, the property of the Marmorosch-Blank Bank, which developed it into one of the most outstanding publishing houses in Roumania. Between 1930 and 1936 the Jewish-owned daily newspapers *Adeverul* and *Dimineatza* founded an important publishing house. Little bookselling and publishing houses, owned by Jews, such as Pinath, Julius Hertz and others, played an important role in the 1880's and 1890's, popularizing leaflets, calendars and books.

In the 1930's and 1940's, under the influence of Hitlerite ideas, the Jewish publishers were accused of "corrupting the public taste and working against the Roumanian spirit," and the Jews were forced out of the bookselling and publishing business as they were from other branches of the economic and cultural life of Roumania.

In 1836 the Russian government shut down all the Hebrew printing presses, except those located in Vilna and Kiev; nine years later Kiev's privilege passed to Zhitomir, and in 1862 this monopoly system was abandoned, and printing presses were permitted to function throughout the Pale of Settlement as well as in St. Petersburg. Thereafter the publishing of books and periodicals in Hebrew and Yiddish and of Russian books for Jews grew steadily. Perhaps the most important publishing and printing enterprise was that founded by Baruch Romm (d. 1803). It was first established in Grodno in 1789, and later moved to Vilna. Deborah Romm, who inherited the firm in 1860 (in 1863 its name was changed to Widow and Brothers Romm), was an important figure in the Haskalah (Enlightenment) movement. Prior to 1860 Hebrew published material was almost entirely liturgical, and the publishers remained prejudiced against the belletristic work which the Haskalah was producing. Deborah Romm was progressive, and she initiated an attitude of hospitality toward modern literature.

The publishing houses which were active in Russia before the first World War included:

Hebrew: Achiasaf, Warsaw; Aron-Shmul Kneller, Lublin; Bletnitzki Brothers, Odessa, later Warsaw; A. Feder, Lublin;

G. Folman, Piotrków; A. Gins, Warsaw; I. Golman, Warsaw; M. Halpern, Piotrków; A. Katz, Berdichev; Borys Kletzkin, Vilna; Lebensohn, Warsaw; Moriah (founded in 1903 by Chaim Nachman Bialik and others), Odessa; F. Munk, Warsaw; Rosenkrantz and Shriftsetzer, Vilna; Safrus, Warsaw; M. Schneiderman and M. N. Hershenhom, Lublin; Z. M. Srebrek, Vilna; M. Zederbaum, Piotrków.

Yiddish (Hebrew and Yiddish): I. Bakst, Zhitomir; M. E. Belinson, Odessa; Baumritter and Gonsior, Warsaw; Bicher far Alle, Warsaw; D. Edelstein, Warsaw; I. K. Eisenberg, Warsaw; Ezra, St. Petersburg; L. Finkel, Warsaw; S. J. Fünn and A. Z. Rosenkrantz, Vilna; Hatzefirah, Warsaw; L. Lev, Warsaw; Lewin-Epstein Brothers, Warsaw; F. Lidski, Warsaw; L. L. Matz, Vilna; M. J. Meinster, Warsaw; Progress, Warsaw; J. H. Ravnitzki, Odessa; A. Warshawer, Odessa; Schulze, Odessa; Shadov, Zhitomir; Tushia, Warsaw; Die Velt, Vilna; Vilner Verlag, Vilna.

The Society for the Promotion of Education among the Jews in Russia, founded in 1863, published a considerable number of books in Hebrew and some Russian books for Jews. Underground literature in Yiddish was published by the Socialist Bund.

Jews played only a very minor part in the development of Russian publishing before the Revolution. However, mention should be made of Ilya Abramovich Efron, who was instrumental in bringing out the standard Russian encyclopedia, *Entzyklopedicheski slovar* (1890-1904), and the brothers Ignati Naumovich Granat and Alexander Naumovich Granat, who published a number of books, including a monumental encyclopedia, partly revised under the Soviet regime.

After the Revolution of October, 1917, all Hebrew publishing in Russia ceased, but publications in Yiddish continued to appear and increased in number. For a while private and cooperative publishing organizations were permitted to exist: Dos Yiddishe Vort, Petrograd; Molot, Shkola i Kniga, Leben—all in Moscow; Kultur Lige, Moscow and Kiev. Eventually publishing in Yiddish was taken over by the state. The most active publishing organization is Der Emes, Moscow. It originated in the publishing department of the Jewish section of the Central Committee of the Communist Party (Yevsektziya). Although the daily newspaper, *Der Emes,* was discontinued in the late 1930's, the publishing body under that name was functioning as late as 1940. Yiddish publications were also issued by the Ukrainian State Publishing House (Section of National Minorities) and by the White Russian State Publishing House.

The countries formed by the peace treaties following the first World War from the territories that had once belonged to Imperial Russia took over the body of Hebrew publishing and independent Yiddish publishing. In 1910 Borys Kletzkin had established his publishing firm in Vilna. During the first World War it functioned from other Russian cities, and afterward it was reestablished in Vilna. It sponsored the work of many of the younger Yiddish writers. Later, under the direction of Kletzkin's son, the firm remained in operation until the second World War enveloped Vilna in 1940.

Despite the presence of many older publishing firms in Vilna, however, Warsaw became the center of Hebrew and Yiddish publication in the 20th cent., and thus it remained, throughout the period when it was still part of Russia and later, when it was the capital of only one of the countries which had been formed out of Russian border territories. Vilna remained second in importance. The Polish cities shared with pre-1933 Germany the responsibility of providing the bulk of the Yiddish and Hebrew material published in Europe.

Warsaw was the home of the Kulturliga, which published a large number of belletristic works, of the Brzoza firm, and of many others. Among the other publishing houses functioning in Poland at the outbreak of the second World War were the firms of Shimin, Srebrek, Gitlin, Tamar, Goldfarb, Die Velt, Sozialistishe Yugent Bibliotek, Kazakevitch, Tarbuth, Ivriah, Achiasaf, Lewin-Epstein, M. I. Fried, Shapiro, Graubard, Alt Neiland, Literarishe Bletter, Bibliotek Mark Rakavski and the Bicher Velt. AVRAHM YARMOLINSKY.

The first Hebrew book of modern times printed in Palestine appeared in 1841: *Abodath Hakodesh,* by Hayim Joseph David Azulai. Rabbi Israel Back, who started to publish in Safed, later transferred his press to Jerusalem. It was taken over by his son Nissan Back, and in 1880 was bought by J. M. Hershenzon; the press on which it worked during this period was the gift of Moses Montefiore. Another early press in Palestine was established by Yoel Mosheh Salomon.

The development of Palestine that followed the first World War brought numerous publishing houses into the country; the forced migration of Jewish concerns from German-occupied countries in the 1930's increased the roster to still greater length. Among the publishing houses in Jerusalem in 1943 were the firms of Moriah, Goldberg, Weiss, Cahana, Hashayish, Azriel, Cohen, Schocken, Achiasaf, Bamberger and Wahrmann, Lewin-Epstein, Rubin Mass, Moadon Hasefer, Ever, E. Heimatzky, Cosmos, and the Hebrew University Press Kiryath Sefer. Tel-Aviv had the A.B.C., Dawar, Dvir, Haim, Yavneh, Azriel, Massadah, Mizpah, Omanuth and the Stybel firm. The Bialik Foundation, cooperating with various publishing houses, particularly Dvir, sponsored books having to do with cultural and language research, while the Rabbi Kook Institute served as a sponsor for literature of a national religious interest.

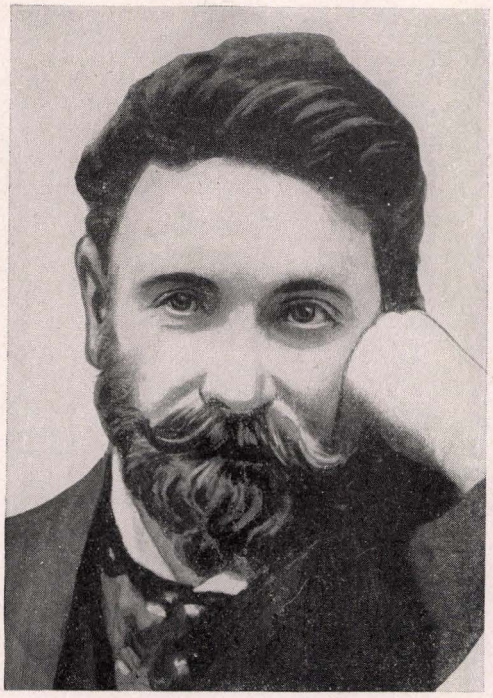
In England the firm of Shapiro, Vallentine and Company and that of Mazin and Company handle Jewish material. Jews have been active in the general publishing field. Leonard Woolf, with his wife Virginia Woolf, was the founder of the Hogarth Press; Victor Gollancz and Michael Joseph were also active publishers in the 1940's.

The history of Jewish publishing in English in the United States was begun in 1854, with the establishment of the Bloch Publishing Company in Cincinnati. In 1901 the firm moved to New York. In 1921 the Behrman firm (Louis Behrman) came into existence in New York, and the Hebrew Publishing Company began the publication of books in English in addition to its earlier enterprise in prayer-books. The Jewish Publication Society, a venture which has no parallel in any other country, was founded (after one earlier attempt had been burned out and another failed) in 1888, in Philadelphia. The first book published was Lady Magnus' *Outlines of Jewish History* (1890), and the second the English translation of Heinrich Graetz' *History of the Jews* (begun in 1891). By 1942 more than 200 titles had been published under the auspices of the Society. Included among these were treatises, translations from the Hebrew classics, a new translation of the Hebrew Bible, and numerous historical studies. Beginning with 1899, the Society also published an annual edition of the *American Jewish Year Book*. In the 1940's the Society began to issue belletristic works, and also added a Hebrew press, thus becoming the most comprehensive Jewish publication house in the country. The Scopus publishing house, established late in the 1930's, specialized in Zionist literature. Books appeared also under the imprint of the Union of American Hebrew Congregations, the Central Conference of American Rabbis, the Jewish Theological Seminary of America, and the United Synagogue of America.

Early publishers of prayer-books included the S. Druckerman firm, which was established late in the 19th cent. and existed until the late 1920's. The house of Scharfstein specialized for many years in Hebrew textbooks, and was still publishing in 1943. Other publishers of Yiddish and Hebrew books were Max Maisel and various publishing corporations representing specific political or cultural groups: Ziko (Yiddish), the right-wing writers, Ikuf (Yiddish), left-wing, the Sozialistisher Verband (Yiddish), Sofrim (formerly Ogen, representing American and Palestinian Hebrew authors) and Yivo (Yiddish Scientific Institute).

In general American publishing, Jews became active in the second and third decades of the 20th cent. Pascal Covici published first in Chicago, then formed the house of Covici, Friede in New York, and subsequently became identified with the Viking Press, of which Harold Guinzburg and B. W. Huebsch were already members. An earlier pioneer had been Thomas Seltzer, brother-in-law of Henrietta Szold. Horace Liveright was a member of the firm of Boni and Liveright, of New York city, which, during its comparatively short period of existence, introduced the *Modern Library Series*. Another short-lived firm was that of Albert

and Charles Boni, also in New York city. Alfred A. Knopf was known for his presentation of writers who had already made their name in Europe, while Simon and Schuster were successful sponsors of books with an American accent. A newer house was that of Howell, Soskin headed by William Soskin. NATHAN RICARDO.



PUERTO RICO, an island of the West Indies belonging to the United States. Christopher Columbus discovered the island on his second expedition to the New World, in 1493. For 400 years Puerto Rico was Spanish-owned, until in 1898 it passed into the possession of the United States. Its people and culture remained basically Spanish.

There may at various times have been a few Dutch or Spanish Jews resident in the island in its very earliest days; but no records of such settlers would seem to exist. In 1917 a trade expert of the Pan American Union reported that there resided in Puerto Rico about six Jewish families, comprising a total of twenty-five individuals. Despite this small number, several Jews played a prominent role in the civic and governmental affairs of the island. In 1900 President William McKinley appointed Leo Stanton Rowe to a commission to codify the laws of Puerto Rico; in 1902 Rowe issued an eight-volume report which became the basis for the governing laws of Puerto Rico. Also at this time McKinley appointed the political economist Jacob H. Hollander treasurer of Puerto Rico's new government (1900); Hollander drew up a revenue system which, known as the Hollander Law, still served the island in 1943. In 1914 to 1915 Robert Szold was assistant attorney general of Puerto Rico; in 1917 a Jew was superintendent of schools. Most prominent was Adolph Grant Wolf, appointed associate justice of the Supreme Court of Puerto Rico in 1904; he served until his retirement in 1941. Wolf was Puerto Rican representative on the Commission on Uniform State Laws (1918-30).

By 1943 there were in the island's total population of 1,880,000 an estimated number of sixty-five or seventy Jewish families, the members of which were engaged in various occupations. Many were in activities connected with the war effort. Others were in business. Klein's Department Store in San Juan, chief city of the island, was owned by the Klein brothers. Another prominent businessman of San Juan was Charles Gans. Although religious services had been previously held under the direction of laymen, it remained for the circumstances of the second World War to bring about the emergence of a unified community among the Puerto Rican Jews.

On behalf of the Jewish boys stationed in the army posts of the island, Charles Gans initiated a Jewish Welfare Board army and navy committee in Puerto Rico. On Passover of 1941, under the auspices of the Board, religious services were conducted in the island for the first time by an ordained rabbi, Lavy Becker of New York. Necessary Passover provisions were shipped to San Juan, and with Becker presiding a Seder was celebrated for civilians and soldiers in a hotel of that city. On the following high holy days of 1941, another rabbi, taking with him a Sefer Torah, went from New York by plane to Puerto Rico. For the Passover of 1942, again with the cooperation of the United States Army authorities, Rabbi Shepherd Baum of New York was flown down to officiate. An army chaplain conducted services on the high holy days of 1942.

Through this activity of the Jewish Welfare Board Committee in advancing a program of service for Jewish boys in the island's army posts, impetus was given for the initiation of a Jewish Community Center movement. The first steps in its organization were taken in 1941, with Milton H. Farber, a prominent resident of San Juan, as president. By 1943 the Center had a substantial sum as the start of a building fund. Regular Friday night religious services were instituted; these were conducted, from the summer of 1942 on, by Leo Jacobs, United Service Organization overseas worker stationed in the island by the Jewish Welfare Board. JOHN S. SILLS.

Joseph Pulitzer

PULGAR, ISAAC BEN JOSEPH IBN, *see* IBN PULGAR, ISAAC BEN JOSEPH.

PULITZER, JOSEPH, publisher and philanthropist, b. Budapest, 1847; d. Charleston Harbor, S. C., 1911. He was of Jewish descent on his father's side; his mother was a Roman Catholic. Pulitzer came to the United States in 1864, served in the Union Army until the end of the Civil War, then studied law and was admitted to the bar in Missouri. After many vicissitudes he began his journalistic career as a reporter on a German newspaper in 1868, later becoming its managing editor and part owner. In 1878 he bought the St. Louis *Dispatch,* which was merged with *The Evening Post* as the *Post-Dispatch.* In 1883 he came to New York and purchased the New York *World,* which became under his management (and, after his death, under that of his sons) one of the leading newspapers in the United States. Pulitzer was active in politics; from 1869 to 1871 he served in the Missouri legislature, and was elected as a Democrat to Congress from New York in 1885, but resigned in April, 1886, due to the pressure of his journalistic ventures and to the ill-health which led to his blindness. He remained in charge of the newspaper, however. Pulitzer was active in philanthropy, and established the School of Journalism at Columbia University and numerous scholarships including the Pulitzer prizes.

His younger brother, Albert Pulitzer (1851-1909), founded the New York *Morning Journal* (later the *American*) in 1882, and conducted it until 1895. Ralph

Pulitzer (b. 1879; d. 1939) and Herbert Pulitzer, sons of Joseph Pulitzer, retained the New York *World* until 1931; Joseph Pulitzer (b. 1885), a third son, was in 1943 still owner of the St. Louis *Post-Dispatch*.

Lit.: Seitz, Don C., *Joseph Pulitzer* (1924); *Appletons' Cyclopaedia of American Biography* (revised), vol. 8, pp. 552-54; *Biographical Dictionary of the American Congress* (1928) 1435; Ireland, Albeyne, *An Adventure with Genius* (1920); Barrett, James Wyman, *Joseph Pulitzer and His World* (1941); *Missouri Historical Review,* vols. 25 and 26 (1931-32); *ibid.,* April, 1941, pp. 416-40.

PULPIT. The pulpit is mentioned just once in the Bible, as the place on which Ezra stood as he read the Law to the people (*Neh.* 8:4); the word used is *migdal,* "tower," which would indicate a high platform. It is not known whether there was a pulpit in early synagogues; more likely the Almemar served as the place for reading the Torah and as the pulpit alike. In the Middle Ages, however, a pulpit was attached to the Almemar, from which it arose as a sort of elevated platform, reached by six steps. At the same time there was a reading desk (*'omed*) in front of the Ark, from which the leader in prayer (Baal Tefillah) chanted the services; he faced the Ark and therefore had his back to the congregation. In more modern times, the Almemar and platform were brought closer together and the pulpit was placed close to the platform, generally on the southern side. Reform Temples as a rule use the pulpit as a place for sermons and reading the prayers; it is located in the center of the platform, directly in front of the Ark.

PUMBEDITHA (also **PUMPADITA**), city in Babylonia, not far from the Euphrates river. For eight centuries this city was the center of one of the most important academies of Talmudic scholars, which was founded about 260 C.E. by Judah bar Ezekiel. After his death Rabba bar Nahmani became director of the academy in Pumbeditha. His successor was Joseph bar Hiyya (320-22), and after him Abaye, until 338. At that time this seminary was the only center of scholarship in Babylonia. After the death of Abaye its splendor was transferred to Mahoza, whither in 338 Raba bar Joseph bar Homa, the director of Pumbeditha, removed his teaching activity. After 352 Pumbeditha again became a Talmudic academy. Its director was then Nahman II bar Isaac, who was followed by Hama ben Tobiah, of Nehardea (356-77).

In the 5th cent. a wave of persecution in Persia caused the temporary closing of the academy, until, under the reign of Chosroes I Anushirwan (531-79), the Babylonian communities, and particularly the one in Pumbeditha, were reestablished. In the time of Hormisdas IV (579-91) the academy of Pumbeditha was again closed as a result of renewed outbreaks against the Jews. In the 7th cent. Mar Isaac, who was the director of the school at Anbar near Pumbeditha, swore allegiance to the victorious Caliph Ali, and that perhaps explains why the academies in Pumbeditha and Sura once more flourished. From that time on directors of the academies in Pumbeditha and Sura were known as Geonim.

For 300 years both these academies were maintained at Pumbeditha and Sura, but in general the latter acquired a greater reputation. On the other hand, the one at Pumbeditha continued for a longer time, for while the academy at Sura was temporarily closed in 948 after the death of Saadia, the one at Pumbeditha was maintained for a century longer. Its last Geonim were Sherira (968-98) and his son Hai (998-1038), at whose death the academy of Pumbeditha was also dissolved.

PURGATORY (*'esh shel gehinnom*). There is no reference to hell as a place of damnation and torment in the Bible. Instead, the realm of the dead is a place of absolute rest, where all earthly troubles are ended. It was only in later Judaism, when the realm of the dead was brought into connection with Gehinnom, that there was developed a conception of purgatory which appears in the Talmud accompanied by most fearsome pictures. Thus we are told that the fire of Gehinnom is sixty times as intense as ordinary fire, and that a stream of fire (*Dan.* 7:10) is poured over the heads of the sinners (*Ber.* 57b; *Hag.* 13b; *Pes.* 54a).

This doctrine, derived from an old Persian source, has been adopted by the Catholic church. Augustine taught that this torment was a half-way stage between heaven and hell, and based it on *I Cor.* 3:15, "yet so as by fire"; but this does not refer to real fire. Nor is this doctrine justified by the reference to prayers for the dead in *II Macc.* 12:40-45, although this passage was also quoted in support of it. Pope Gregory the Great (about 600) further extended the doctrine of purgatory. The lighter, more venial sins are not punished in hell, but expiated in purgatory. In order to redeem the souls from this punishment, the surviving relatives may appeal to the saints, have masses said, make offerings or secure indulgences; the feast of All Souls' Day is especially devoted to this thought. On the other hand, the Greek Catholic church does not believe that the fire of purgatory is a real fire, and Protestantism entirely rejects this doctrine.

PURIFICATION (*taharah*). For a religion that observed laws of ritual purity and impurity, as was the case with Judaism of Bible times and after, it was necessary to provide certain means of purification for those who had become defiled in one way or another. While many of the modes of purification, like some of the laws of ritual purity, go back to prehistoric times, it was not until the time of the Priestly writer, according to the critics, that is, the period after the Babylonian Exile (6th cent.), that all the modes were reduced to a system. For impurities connected with sexual emissions it was regarded as sufficient purification to bathe and to immerse any object that had become unclean (*Lev.* 15:16-18). A woman who had given birth, one who had a bloody flux, and a man with gonorrhea had to bring a sin-offering and a burnt-offering at a definite period of days (*Lev.* 12:6-8; 15:28-30). The purpose of the sin-offering was that of restoring communion with the deity, while the burnt-offering was an act of worship. One who had become unclean by contact with a corpse underwent several acts of purification, including washing his garments and being sprinkled on the third

Mordecai and Haman. From a drawing by Ephraim Moses Lilien

and seventh day with water mixed with the ashes of the red heifer (Parah Adumah). Purification after leprosy involved two separate stages and a complicated ritual in which birds, cedar-wood, scarlet and hyssop, and the presence of running water were utilized (*Lev.* 14:1-32).

With the gradual disappearance of the observance of most of the laws of ritual purity, the term *taharah* was transferred to the purification of a corpse, that is, its ritual washing and clothing. The corpse, among Orthodox Jews, is thus prepared, with appropriate ceremonies and prayers, by the Hebrah Kaddisha, or burial society. The body is washed with warm water, the hair is combed, and the burial garments are put on it. Every burial society has special vessels for the washing; the burial garments are generally of white linen without any adornment. It is often customary to place under the head of the corpse a small bag containing earth from Palestine.

PURIM, a Jewish festival which occurs on the 14th of Adar (the twelfth Hebrew month, corresponding generally to either February or March) and which reminds one of the deliverance of the Jewish people from serious danger in the remote past. Haman, the favorite and prime minister of the Persian king Ahasuerus, wished to have all the Jews of the Persian empire killed because he believed that he had been insulted by Mordecai, who had failed to show him proper respect. However, his plan was frustrated by Mordecai, with the aid of his cousin and foster-daughter Esther, who had become the second queen of Ahasuerus. The 13th of Adar was determined by lot for the destruction of the Jews. However, on this day the Jews defeated those who attacked them, and therefore celebrated their victory and their deliverance from danger on the 14th of Adar. The Jews of Susa (Shushan), the Persian capital, had to defend themselves also on the 14th of Adar, and therefore celebrated the 15th of Adar, which for this reason is called *shushan purim* ("The Purim of Susa"). Mordecai and Esther decreed that the festival of Purim should be celebrated for all time annually by means of a festival meal and in joyfulness, together with the exchange of gifts (*mishloah manoth,* "the sending of gifts"; popularly corrupted to Shlachmones) and of gifts to the poor. In leap years Purim is celebrated on the 14th of Adar Sheni (the second Adar); the 14th and 15th of the first Adar are, in leap years, called Purim Katan ("Little Purim"). In reminiscence of the three-day fast observed by Esther before her dangerous approach to the king, a fast day is observed on the 13th of Adar; this fast day is called Taanith Esther ("The Fast of Esther"), and was introduced in the 9th cent.

The name Purim is believed to owe its origin to the fact that *pur* means "lot" in Persian (hence its

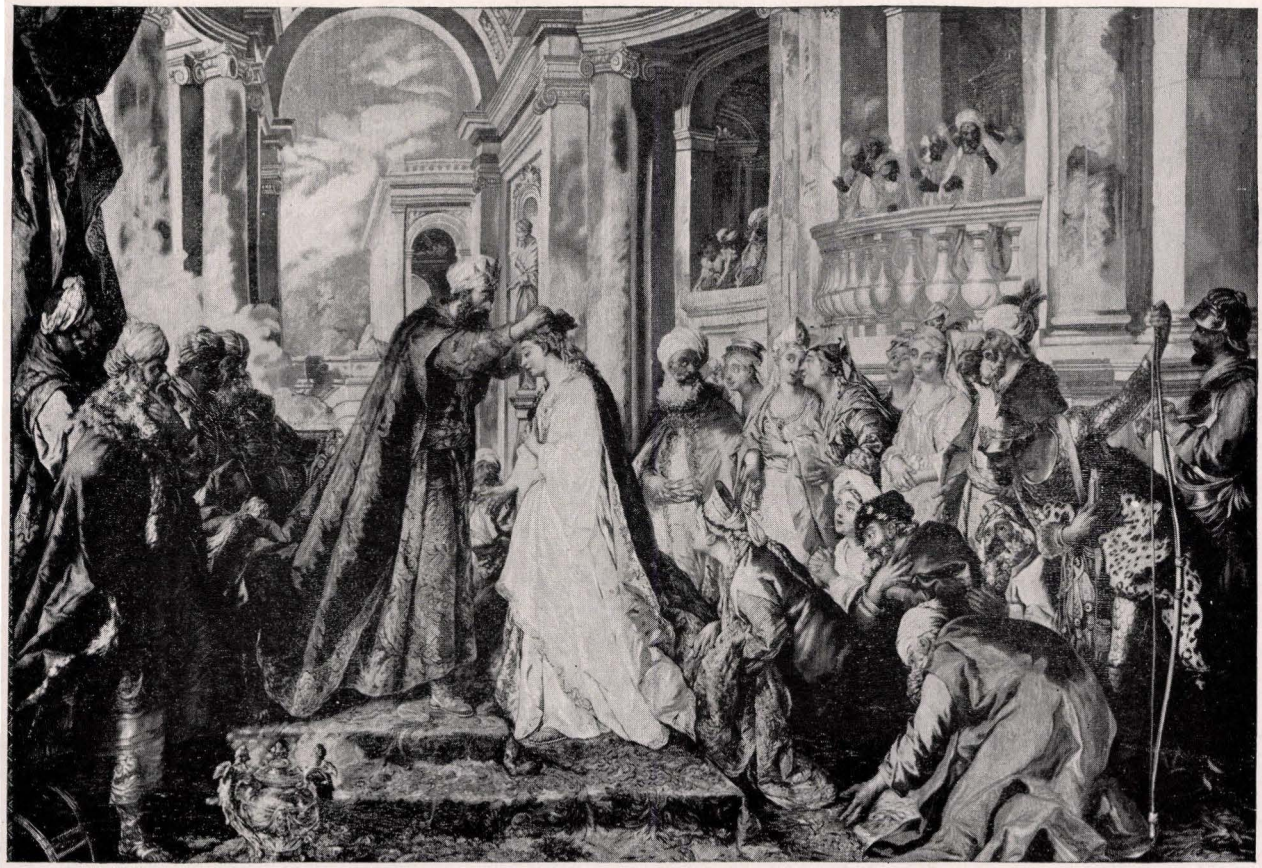
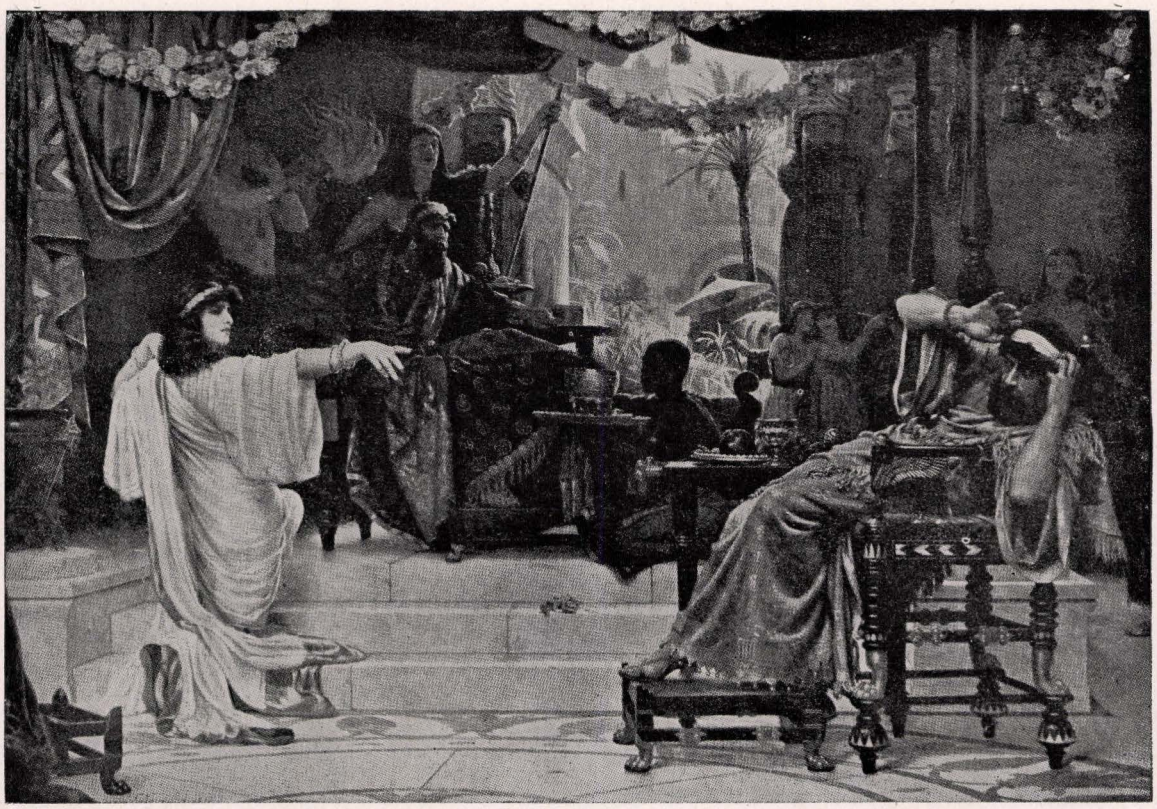
Section of an old Megillah. Reproduced by courtesy of the Union of American Hebrew Congregations

translation as "Feast of Lots"). Originally the book of *Esther* (Megillah) was read only on the morning of Purim; in later times, however, beginning with the early Amoraim, it was read also in the divine service of the evening before Purim (Ereb Purim). The method of such recital is peculiar. Even women are required to read the Megillah or to listen to it as it is being read, because the deliverance of the Jews, as recorded in the story of Purim, was effected by a woman.



Purim celebration in modern Palestine

An appropriate prayer, called Al Hanissim and containing references to the Purim events, is inserted into the weekly Eighteen Benedictions (Shemoneh Esreh). The Hallel hymns of praise are not sung on Purim, because while Purim recalls the frustration of Haman's plan to murder the Jews, it contains nothing about the gaining of national liberty by the Jews as was the case in connection with the festival of Hanukah. However, according to the Talmud, this is because the miracle took place outside of Palestine.



The festival meal of Purim, at which, by way of exception, noise is not forbidden, takes place late in the afternoon of the 14th of Adar, and often lasts until late in the night, accompanied by games and merriment and the playing of mummers. There were dramatizations of the story of Purim even as early as in the Gaonic period; however, actual Purim plays did not come into usage until the beginning of the 17th cent. They arose at first in Italy, and from there spread to Germany and other countries. They were written in

A PURIM PLAYERS' MELODY
Transcribed by Arno Nadel

The Purim festival at home. From a representation by Moritz Oppenheim

the vernacular spoken by the Jews, usually Yiddish. There is usually but one act, and the characters are sketched in broad and simple lines: Ahasuerus and Esther, Haman and Mordecai follow the broad outlines of the Purim story, with some humorous allusions. A comic element is introduced by a clown called Pickelhering, borrowed from non-Jewish comedy. Purim plays are not limited to the Esther story, but deal with other Biblical narratives, such as David and Goliath, Jacob's Blessing, Joseph and his brethren, and the life of Moses. In modern times numerous writers have essayed Purim plays written in accordance with modern standards, and these are usually part of the observance of Purim in Jewish religious schools.

Purim masquerading arose in the Middle Ages under the influence of the Italian carnival. The masqueraders, dressed to represent the characters of the Esther story, or other Biblical personages, would go about from house to house, accompanied by musicians, to whose tunes they would perform songs and dances. For this they would receive presents of money or Purim dainties (*Purimgebäck*). The custom persisted, despite the efforts of the more serious-minded to restrain it.

Children were granted considerable license during the festival. They were given noise-makers (Hamandreher or Greger) which they would swing or rattle at every mention of the name of Haman during the reading of the Megillah. A doll called "Haman" was frequently burned in effigy or beaten. There were numerous Purim songs, written in the vernacular, which described the events of the Esther story or the joy of the Purim observance. In some places it was customary to inscribe the name Haman upon a stone, and to pound this with other stones until the word was obliterated. The usual restrictions against drinking were relaxed on the festival; even the Talmud remarks that one should drink so much that he can not distinguish between "Cursed be Haman" and "Blessed be Mordecai" (*Meg.* 7b). Parodies for Purim were written upon serious works, such as the *Massecheth Purim* upon the Mishnah and *Haggadah Lelel Shikkurim* to the Passover Haggadah; both of these works emphasize the idea of drinking as much as possible on the festival. In many instances a "Purim Rav" was elected by the students of the Yeshiva, who conducted a mock Talmudic lecture, called "Purim Torah."

Purim had, and still has, a predominantly secular character. Its religious and ethical side is less than that of other festivals. However, it was of great value during the time of the persecutions of the Jews, since it contained the hope of miraculous deliverance. Yet Purim as a festival arouses little of the exaltation and inner emotion which Jews experience on Hanukah. The difference is that Hanukah represents deliverance by heroic deeds; Purim is the festival of the deliverance of the helpless through the aid of God.

The historicity of the Purim narrative has been frequently contested; however, nothing certain has as yet been ascertained regarding the origin of the festival. Many scholars assert that Purim is based on a Persian festival called Frawardin, but this furnishes no parallels and presents difficulties as regards the name. Another suggestion connects it with *puroth*, "heaps," implying an agricultural origin. Of greater probability is the association of Purim with the Babylonian New Year festival, Zagmuk, and with the presumably related myth which tells of the struggles between Marduk, the chief Babylonian god, and the Elamite deity, Humman. In addition, other figures of the Esther story, such as Vashti and Zeresh the wife of Haman, are reminiscent of such figures as Ishtar, Vashti and Kirisha in Babylonian and Elamite mythology. Furthermore, in the Zagmuk festival there were such elements as the casting of lots, wailing and jubilation, and great banquets and drinking-bouts at which intoxication often occurred. However, much of the origin and development of the festival of Purim as well as many features of the narratives and of the customs and practices of this festival still remain altogether obscure.

Since Purim was the festival of deliverance, its name was given to other occasions of deliverance observed by communities or by individual families. The chief of these are:

Purim of Shiraz (Heshvan 2). According to tra-

dition, a Jew named Abu al-Hasan, who had been accused of selling Terefah meat, turned Moslem and laid many accusations against the Jews, who were in grave danger, until the accuser died, leaving a confession that his accusations were false. The date of these events is unknown.

Purim of Hebron, or **Window Purim** (Tebeth 14). An avaricious pasha commanded the Jews to deliver an enormous sum of money within three days under penalty of death by fire and slavery. They were saved at the last minute when the Jewish watchman found the sum in the window of the gate. The pasha later declared that he had placed the money there himself, after having been visited in a dream by the three Patriarchs and warned of vengeance.

Purim of Narbonne (Adar 21). This celebrates the deliverance of the Jews of the city from an attack made upon them by the Christian population in 1236, after a quarrel between a Jew and a Christian fisherman.

Purim of Saragossa (Shebat 17 and 18). In 1380 or 1420 a renegade Jew informed the king that the Jews, out of religious scruples, had removed the scrolls of the Torah from the cases which they carried in a parade in his honor. The king determined to catch the Jews on the occasion of the next parade; but the prophet Elijah warned the Jews in time to replace the scrolls; the renegade was hanged and the Jews were delivered.

Purim of Cairo (Adar 28). A threatened massacre of the Jews of Cairo in 1524 by the cruel Ahmed Pasha was averted through the assassination of the latter by one of his officers.

Purim of Edom (Heshvan 4). This commemorates the overthrow of the Spanish invasion fleet which assailed Algiers in 1541; it was destroyed by a tempest said, according to legend, to have been due to the prayers of Solomon ben Simeon Duran.

Purim de los Christianos (Elul 1). This is celebrated by the Jews of Morocco in observance of the defeat of an expedition of Sebastian of Portugal in 1578.

Purim Winz or **Frankfort Purim** (Adar 20). This festival commemorates the deliverance of the Jews of Frankfort after the Fettmilch riots of 1616.

Purim of Buda (Elul 10). When the city of Buda, then in the hands of the Turks, was besieged by the Christians in 1684, the Jews of the city aided in its valiant and successful defense. This led to a bitter feeling against the Jews in Italy, especially at Padua. A riot against the Jewish quarter was checked by the authorities, and the Jews instituted the Purim in memory of their escape from massacre.

Purim of Ancona (Tebeth 21). This commemorates a severe earthquake which occurred in 1690.

Purim of Florence (Sivan 27). The occasion for this observance was the deliverance of the Jews by the bishop from the attacks of a mob in 1790.

Purim Borghel (Tebeth 29). This festival commemorates the date of the deliverance of the Jews of Tripoli, in 1793, from a pirate named Borghel who had seized the city and treated them in cruel fashion.

In addition there are a number of Purims that were observed by various families to commemorate occasions of deliverance, such as those of the Abraham Danzig (Kislev 15), Enoch ben Moses Altschul (Tebeth 22), David Brandeis of Jungbunzlau, Bohemia (Adar 10), and Yomtob Lipmann Heller (Adar 1) families.

PURITY, RITUAL. The Jewish concepts of ritual purity and impurity did not arise solely in the religion of Israel, but are the products of a much older religious feeling, which goes back far into prehistoric times and is a common feeling not only of the Semites but also of many other peoples both ancient and modern. In order to understand this group of concepts, it is necessary to remember that originally the ideas of purity and holiness were closely connected, and that holiness was originally the expression of the close relationship of men and objects to the deity. Before such men or objects could come into relationship with the deity, they had to be "pure." This "purity," for the most part, consisted in being free from such forces that were considered to be baneful or inimical to the deity that was worshipped. The students of religion and the sociologists are alike deeply concerned with discovering the reasons why certain actions are forbidden, "taboo," while others are regarded as holy, pure or desirable.

The religion of Israel adapted the older ideas to its higher religious concepts. It endeavored to make them a part of the national religion by giving them a more definite meaning, and in many ways it succeeded; but it could not completely conceal the traces of the older, prehistoric forms. The Biblical teachers felt that God could no more be approached at the convenience of man than could any mortal ruler. If one had come into contact with things that were displeasing to God, he was regarded as ritually unclean; this meant that he could not appear before God, participate in ritual observances, or touch the objects which had been consecrated to God. Many of the laws dealing with ritual purity can be traced back to the oldest period of Israel.

Modern Bible scholars attribute a number of the concepts of ritual purity and impurity to the Deuteronomic Reformation that was effected in the time of Josiah (621 B.C.E.) under the influence of the prophets. One of the features of this reformation, they hold, was the concept of Israel as a "holy people," and this holiness involved both ethical and ritual purity. Many conclusions were drawn from this concept of Israel as a holy people, and these conclusions were presented as the extension of old traditional customs; the ritual system was given a symbolic meaning and was closely connected with the moral law (cf. *Deut.* 14:1-2; 21:22-23; 23:11-12; 27:20-23). Idolatry, murder, incest and immorality were not only ethically wrong, but also made the land unclean (*Lev.* 18:6-30; *Deut.* 21:1-9; *Ezek.* 36:16-36). That part of the Torah which is regarded by scholars as the Priestly Code, and written after the Babylonian Exile, likewise expands the old ideas of ritual purity for a similar purpose.

The following is the system of ritual purity and impurity as it appears in the Torah:

1. Animals, the flesh of which may be not eaten, are listed, and certain characteristic signs are given to distinguish these "unclean" animals from the "clean."

2. An animal carcass, whether of clean or unclean animals, is unclean. Whoever eats it or even touches it is unclean until evening (*Lev.* 11:24-28; 17:15). A carcass does not make objects unclean, only human beings. However, there are eight reptiles, the weasel, mouse and six kinds of lizards, which make unclean by contact objects of every kind, including vessels, garments, foods and drinks; however, springs, cisterns and dry

seeds can not be made unclean by them (*Lev.* 11:29-40).

3. Contact with a human corpse or with a part of it, such as the bones, brings about an uncleanliness of seven days. Persons and uncovered vessels in a tent where one has died become unclean, and this uncleanliness is transmissible by contact (*Num.* 19:11, 14-15).

4. Women after childbirth, in menstruation or who have bloody fluxes, as well as men who have seminal discharges, are unclean; during the period of their uncleanliness they make persons and objects unclean by contact. A menstruating woman is unclean for seven days. Those persons who have fluxes or discharges are unclean as long as the condition lasts; whoever comes into contact with them or with their saliva is unclean until evening (*Lev.* 15:1-15, 19, 27). A woman who has given birth is unclean for seven days after the birth of a boy, and for fourteen days after the birth of a girl; during this period she renders unclean by contact. There is still a further period of thirty-three days in the case of a boy, and of sixty-six in case of a girl, in which she is in the time of "purification of blood" and can not participate in any ritual observance (*Lev.* 12:4-5). A man who has had sexual intercourse or a nocturnal emission is unclean until the evening (*Lev.* 15:16-18).

5. Lepers are regarded as unclean. They must rend their garments like mourners, go about with disheveled hair and beard, and dwell outside of the camp or city. If it is possible that one has leprosy, he must be examined by the priest to determine his status. One afflicted with leprosy is set apart at least seven days from all relations with others, and from all social and religious life. There was also a sort of "leprosy" on garments and walls of houses; the procedure in such cases is minutely detailed (*Lev.* 13:47-59; 14:33-48). Whoever enters such a "leprous" house is unclean until evening; if he eats or sleeps there, he must in addition wash his garments (*Lev.* 14:46-47).

The reasons why the above mentioned objects and persons—and only these—were regarded as unclean can only be conjectured. It is plain that the chief purpose of the legislators was religious; any reasons of a sanitary nature were only incidental or merely instinctive. The concepts of "clean" and "unclean" are eminently suited for the concept of Israel as a holy people (cf. *Deut.* 14:2). Hence it is necessary to reject the view of Maimonides that the laws of ritual purity were disciplinary, to teach the people reverence for the sanctuary (*Moreh Nebuchim,* book 3, chap. 47), as well as that of Spencer, who thought that they were for the purpose of separating Israel from the other peoples—an assumption which is refuted by the fact that the same customs are found in numerous other peoples. The same fact refutes all attempts to base the ritual impurity of persons and objects on their relations to procreation and birth, death and corruption, or to sin.

The impurity of the human corpse was probably not derived from the ancient religion of Israel, but arose out of the idea of the unique nature of the God of Israel and in contrast to the idea of ancestor worship. Probably the idea of the uncleanliness of an animal carcass is merely an extension of the uncleanliness of the human corpse. The impurities connected with menstruation and similar sexual disorders were regarded by many peoples as due to the influence of evil spirits or the like, or as having an evil effect in their contact. Leprosy was regarded in ancient times as the punishment of God (cf. *II Kings* 5) or the result of evil spirits. In the course of time the original purposes of the laws were forgotten; in the Torah they were given a motive based on holiness and acquired a symbolic character.

The modes of purification from ritual impurity, as summed up in the Torah, include bathing, washing unclean objects in water, the bringing of an offering, sprinkling with water mixed with the ashes of the red heifer, and, in the case of the leper, a complicated system of purification, which is described in detail (*Lev.* 14:1-32).

The laws of ritual purity were observed in their entirety by Jews only until the destruction of the Second Temple (70 C.E.). For a time after this they were observed by the faithful in the hope that the Temple would speedily be rebuilt. As this hope faded, most of the regulations as to ritual purity fell into disuse. In modern times Orthodox Jews observe such portions of the laws of ritual purity as the regulations that affect women in menstruation and after childbirth, the washing of the hands after touching a human corpse and after its burial, and the keeping away of a descendant of the priesthood (Kohen) from a house in which there is a corpse. Reform Jews regard none of the laws of ritual purity as binding, although sometimes observing similar practices in the interests of hygiene.

PURJESZ, IGNÁC, physician and author, b. Szentes, Hungary, 1857; d. Budapest (date of death unknown). He was a younger brother of Zsigmond Purjesz. He received the M.D. degree from the University of Budapest, and from 1889 on was head of the otological section of the Budapest dispensary. His *Therapeutisches Recepttaschenbuch* was published in Stuttgart, Germany, in 1883. In addition, he wrote in Hungarian a dictionary of prescriptions on the treatment of venereal diseases (1884); handbooks of practical otology (after V. Kirchner, 1889), of general medical practice (1892) and of clinical diagnostics (2 vols., 1892-93). Purjesz was also the author of the work *A gyakorlati orvostan haladása* (The Progress of Practical Medicine; 1888-91), and the editor of several medical publications and year books. His articles on otology appeared in German and Hungarian medical journals.

PURJESZ, LAJOS, editor and publicist, b. Nagytótipuszta, Hungary, 1881; d. Budapest, 1925. He graduated from Law School in the University of Budapest, and became a columnist and subsequently responsible editor of the daily newspaper *Egyetértés* (Concord). As editor-in-chief of *Világ* (The World), Purjesz undertook the task of instilling into the reading public the principles of ethical democracy. Following the Counter Revolution of 1919 he courageously denounced unlawful actions and the curtailing of human rights, thereby aiding a return to more democratic conditions. For some time he was also the editor of the Masonic publications *Kelet* and *Orient,* and held several distinguished positions in newspapermen's organizations. Purjesz was active in endeavors for the welfare of journalists and other groups.

PURJESZ, ZSIGMOND, physician and educator, b. Szentes, Hungary, 1845; d. Budapest, 1896. He studied medicine at the Universities of Pest and Vienna. After serving as an assistant to the outstanding internist Frigyes Korányi, he was named, in 1877, lecturer on medical history at the University of Budapest. His works on the history of medicine include *Az Ebers-féle orvosi papyrus* (The Medical Papyrus Found by Ebers; 1876) and *A st.-galleni kolostor könyvtárában őrzött orvosi kéziratok* (The Medical

Manuscripts in the Library of the Monastery of St. Gallen); others were published in Hungarian and German periodicals. He wrote a textbook of internal medicine for students and practitioners (2 vols.; 3rd ed., 1894), in addition to several translations of medical works and original dictionaries of prescriptions.

PURJESZ, ZSIGMOND (DE BELSOECSER), physician and educator, b. Szentes, Hungary, 1846; d. Budapest, 1918. He received the M.D. degree from the University of Budapest, and in 1876 became lecturer on internal medicine at the University of Kolozsvár. Purjesz, who accepted the Christian faith, became, in 1880, full professor and head of the internal clinic of Kolozsvár. He was knighted and received the title of councillor of the court.

Among his major works published in book form are *A kórisme megállapitására szükséges vizsgálati módszerek* (Methods of Investigation in Diagnostics; 1874) and *A különös kór- és gyógytan házikönyve* (Handbook of Therapeutics and Diagnostics; 1874). His textbook of internal medicine, reedited several times, was among those most widely used in Hungarian medical schools.

His son, BÉLA PURJESZ, was professor at the medical faculty of the University of Szeged.

QIRQISANI, JOSEPH, *see* KIRKISANI, JACOB.

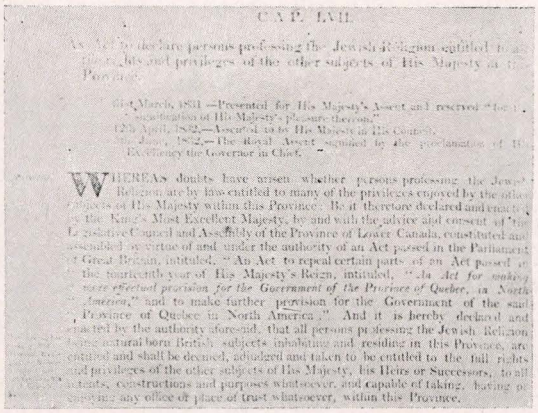
QUAIL, a migratory bird used by the Israelites as food during their wanderings in the wilderness (*Ex.* 16:13; *Num.* 11:31-32). The quails fly in large swarms, crossing the Mediterranean southward in the autumn and northward in the spring. But because of the weakness of their wings compared to the weight of their bodies, they are often forced to come down to rest, so fatigued that they may be captured with the bare hands. *Num.* 11:31 tells of a strong wind that brought swarms of quails to the camp of the Israelites. Such phenomena are not unknown; fish as well as birds have been lifted by strong winds and then rained down in regions far from their habitat.

QU'APPELLE, *see* COLONIES, AGRICULTURAL.

QUASTEL, JUDA HIRSCH, biochemist, b. Sheffield, England, 1899. He was educated at London University and Trinity College, Cambridge. In 1923 Quastel was made demonstrator and lecturer in biochemistry at Cambridge. He was a fellow of Trinity College in 1924, Meldola Medallist in 1927 and Beit Memorial Research Fellow in 1928. From 1929 to 1941 he was director of research at the Cardiff City Mental Hospital; at the same time he held the post of honorary lecturer in biochemistry at the University College of South Wales. During this period (1936) he was a Rockefeller Foundation Fellow. Quastel left Cardiff in 1941 to join the scientific staff of the Agricultural Research Council. He wrote for scientific journals.

QUEBEC, largest of the nine provinces of the Dominion of Canada, having a population of 2,874,255 in 1941. The census of 1831 revealed that there were 107 Jews in the province of Quebec in that year. By 1844 the number had increased to 154, reached 549 in 1871, and 989 in 1881. The Russian pogroms in the early 1880's brought a wave of immigrants from Eastern Europe which increased the number of Jews in the province to 2,703 in 1891. Thereafter the Jewish population increased rapidly to 7,607 in 1901; 30,648 in 1911; 47,977 in 1921; and 60,087 in 1931. The Jewish population constituted in 1931 the fifth largest group in Quebec, and was 2.09% of the total population. It was exceeded by the French who were (1931) 78.97% of the total population; the English, who were 8.4%; the Irish, who were 3.77%; and the Scotch, who were 3.04%. Of the total Jewish population in Canada, 38.34% lived in the province of Quebec in 1931.

Montreal, the largest city in the province of Quebec and in the Dominion of Canada, was in 1942 the largest Jewish community in Canada. Of the total Jewish population of the province of Quebec, 57,997, or about 97%, lived in Greater Montreal in 1931. Three additional cities had Jewish populations of more than 100 in 1941: Quebec, Sherbrooke, and Joliette. Quebec, the capital of the province, had a Jewish population of 45 in 1891; 398 in 1911; 375 in 1921; and 436 in 1931. Communities with less than 100 Jews in 1931 and more than twenty were: St. Agathe (86); Three Rivers (52); St. Jean (47); Ste. Hyacinthe (30); Noranda (28); Rouyn (23); Baie St. Paul (21); Drummondville (21); Riviere du Loup (20). There were 424 cities, towns, and villages in the province of Quebec in 1931, and Jews were living in 117.



No professing Jews were legally permitted to settle in Quebec under French rule. However, as early as 1744, the Gradis family, a Portuguese Jewish family established in Bordeaux, France, operated a number of sailing ships between France and what was to become the province of Quebec. The earliest Jewish settlements in Canada were in the province of Quebec in 1760. In that year Aaron Hart and Samuel Judah established themselves at Three Rivers. Emanuel de Cordova, Hananiel Garcia and Samuel Jacobs came to Montreal, and Abraham Franks became a resident of the city of Quebec. All were Sephardic Jews who had served with the British army of occupation and subsequently engaged in the fur trade.

Henry Joseph, a nephew of Aaron Hart, came to Canada from England in 1775 and settled in Berthier after serving with the British Army at Fort William Henry. He was the founder of Canada's merchant marine, and chartered vessels in the English-Canadian trade as early as 1801. There were Jews among the United Empire loyalists who came to Quebec from the American colonies after the American Revolution. Many of these settled in the Eastern Townships.

The earliest Jewish congregation in Canada was the Sephardic congregation Shearith Israel, established in Montreal in 1768. The only Reform congregation in Montreal was Emanu-El, founded in 1882. Beth Israel Congregation of the city of Quebec was organized about 1867.

Of the Jews gainfully employed in the province of Quebec at the time of the 1931 census, the largest group was engaged in merchandising which accounted for 33.16% of all Jews gainfully employed, compared with 8.14% of the total population of all origins. The second largest Jewish occupational group was that engaged in manufacturing, which accounted for 32.27% of all Jews gainfully occupied, as compared with 13.81% among the total population.

STATISTICS. Of the male Jewish population gainfully employed in the province of Quebec in 1931, 16% were retail merchants, 12% salesmen, and 9% tailors. Clothing factory owners and sewing operators accounted for 4% each of the employed Jewish male population. Clothing cutters, commercial travelers, peddlers and office clerks were 3% each. Pressers, bookkeepers, wholesale merchants, shippers and fur workers were 2% each, while butchers, shoe repairers, hat

CAP. LVII.

An Act to declare persons professing the Jewish Religion entitled to the rights and privileges of the other subjects of His Majesty in this Province.

31st March, 1831.—Presented for His Majesty's Assent and reserved "for the signification of His Majesty's pleasure thereon."
12th April, 1832.—Assented to by His Majesty in His Council.
... June, 1832.—The Royal Assent signified by the proclamation of His Excellency the Governor in Chief.

WHEREAS doubts have arisen whether persons professing the Jewish Religion are by law entitled to many of the privileges enjoyed by the other subjects of His Majesty within this Province: Be it therefore declared and enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Assembly of the Province of Lower Canada, constituted and assembled by virtue of and under the authority of an Act passed in the Parliament of Great Britain, intituled, "An Act to repeal certain parts of an Act passed in the fourteenth year of His Majesty's Reign, intituled, "*An Act for making more effectual provision for the Government of the Province of Quebec, in North America,*" and to make further provision for the Government of the said Province of Quebec in North America." And it is hereby declared and enacted by the authority aforesaid, that all persons professing the Jewish Religion [illegible] natural born British subjects inhabiting and residing in this Province, are entitled and shall be deemed, adjudged and taken to be entitled to the full rights and privileges of the other subjects of His Majesty, his Heirs or Successors, to all intents, constructions and purposes whatsoever, and capable of taking, having or enjoying any office or place of trust whatsoever, within this Province.

Reduced facsimile of the equal rights statute (1832) which is popularly referred to as the "Magna Charta" of the Jews of Quebec

and cap makers, printing trade workers, mechanics, building contractors, carpenters, painters, truck drivers, messengers, lawyers, doctors, musicians, teachers, accountants, restaurant owners and barbers were 1% each.

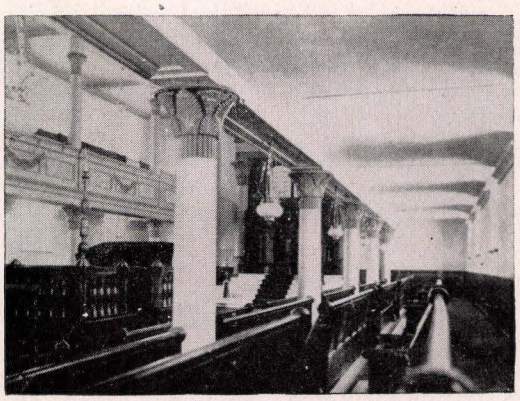
Of the female Jewish population gainfully employed in the province of Quebec in 1931, 21% were sewing machine operators, 18% stenographers, 18% saleswomen, 8% bookkeepers and cashiers, 5% office clerks, 4% domestic servants, and 3% dressmakers Retail merchants and teachers were 2% each, while textile finishers, clothing forewomen, hat and cap makers, milliners, tailors, music teachers and boarding house keepers constituted 1% each of the employed Jewish female population of Quebec in 1931.

THE QUEBEC SCHOOL QUESTION. The province of Quebec has no public school system. The province maintains a dual system of Protestant and Catholic schools which are supported by taxation from real estate. Catholic owners of real estate pay these taxes into the Catholic panel and Protestant owners into the Protestant panel. From the beginning of the Jewish community in the province, Jewish landowners paid their taxes into the Protestant panel and Jewish children attended the Protestant schools. When, however, Montreal Jews (Montreal had a Jewish school population of 7,622 in 1940) demanded representation on the Protestant School Board, it denied their petition.

Appeal by Jews to the courts of Canada was in vain, but the Privy Council of London finally ruled that the Quebec legislature could grant the Jews the right to establish separate schools. Thus, in 1930, the legislature enacted a bill establishing a Jewish School Commission of Montreal, which set up powers for the Jewish community in respect to education, equal to those enjoyed by the Catholic and Protestant communities: the Jews could have a separate school system or, by terms of the act, they could enter into an agreement with either of the other school boards. Similar provision was made for the city of Outremont. The law met with much opposition from the Catholic church.

Montreal Jews were divided on the desirability of a separate Jewish school system. Representative of those who thought such separation would be injurious to Jewish interests was Peter Bercovitch, member of the provincial legislature. On the other hand, the Montreal Yiddish *Daily Eagle* and the English weekly, Canadian *Jewish Chronicle,* maintained that the establishment of such separate schools would serve to indoctrinate Jewish youth in the spirit of Judaism.

The members of the Jewish School Commission (appointed in April, 1930) were: Samuel W. Livingston, chairman; Rabbi Herman Abramowitz, Edgar M. Berliner, A. Z. Cohen, Michael Garber, Nathan Gordon and Dr. Max Wiseman. This commission decided against separate schools, and in 1930 entered into an arrangement with the Montreal Protestant School Board under which the Jewish children were to be received and instructed in the Protestant schools. Jewish children were to have the same advantages and obligations as Protestant children; they were not compelled to participate in religious or devotional exercise except by parental consent; they were to suffer no loss or reduction in marks because of absence on the following Jewish holidays: New Year (two days), Day of Atonement, Feast of Tabernacles (four days), Passover (four days), Pentecost (two days). In addition, Jewish applicants were eligible for appointment as teachers. The agreement was for a period of fifteen years from July, 1930. Similar agreements were entered into with the Protestant school authorities of Outremont and Westmount. In 1943 Jews still continued to have no representation on Protestant school boards, although the school taxes (levied on real estate) of Jews were being paid into the Protestant panels.



ANTI-SEMITISM IN QUEBEC. Anti-Semitism in the province of Quebec made its first organized appearance at the time when the Dreyfus agitation in France was at its height. The venomous outpourings of Edouard Drumont found their way into the old French-Canadian province, where the Catholic press gradually assumed a hostile attitude toward Jews.

Carried on incessantly for many years and openly supported by the clergy, the campaign upon which it embarked grew in intensity and violence. When Sarah Bernhardt in 1905 came to Quebec to perform there, she and her company were attacked by a mob which shouted "à bas la Juive." Sir Wilfrid Laurier, the then Canadian prime minister, telegraphed Mme. Bernhardt his regrets at the incident. In 1906 the Quebec nationalist, Henri Bourassa, speaking in the House of Commons at Ottawa, bitterly assailed the victims of czarist massacres in Russia. There were anti-Semitic affrays and demonstrations in Montreal, while at one time Jews were assaulted in Quebec and synagogue windows were smashed.

The attacks by such sheets as *La Vérité, L'Action Sociale* and *La Croix* continued unabated, becoming more virulent in tone. A certain Jacques E. Plamondon, a notary and journalist of Quebec, even revived the ritual murder charge. A case was instituted against Plamondon in 1913 before the Superior Court of Quebec, which was dismissed on a technicality. The Jews then carried it to the Court of Appeals, whose decision in their favor for a time baffled their enemies.

After the first World War, anti-Semitism again raised its ugly head. Backed now by economic interests, spurred on by certain political leaders and fed on the forgeries of the *Protocols of the Elders of Zion,* it became more violent than ever. It assumed the proportions of a veritable menace during the excitement over the Quebec Jewish school question, when the notorious Adrien Arcand appeared on the scene. The latter, who became the Nazi firebrand of Canada, for many years thereafter in the filthy press which he founded waged a furious campaign against the Jews. His monstrous propaganda, which poisoned public opinion in the province, did incalculable harm. It was the cause of many a heated debate in legislature. It led to action in the Abugov case in 1932. It was responsible for the fact that the internes of Notre Dame and other French-Canadian hospitals in Montreal in 1934 went on strike because of the appointment of a Jewish interne. It brought forward the dangerous "l'achat chez nous" movement.

With the arrest, on the outbreak of the second World War, of Adrien Arcand and his immediate cohorts because of their Nazi affiliations, and with the outlawing of their party, anti-Semitism in the province lost its backbone. It was, however, not entirely dead. In the summer of 1942 *L'Action Catholique,* of Quebec, in a

An interior view of the Stanley Street Synagogue in Montreal, Quebec

series of articles, made a most ferocious attack upon the Jews. The Canadian Jewish Congress did much in combatting the evil.

QUEENS, *see* NEW YORK (state).

QUERIDO, ISRAEL, writer, b. Amsterdam, Holland, 1874; d. Amsterdam, 1932. His family, Sephardic Jews, belonged to the colony of Jews engaged in diamond-cutting in Holland, and Querido himself had to start earning his living in the jewelry trade while he was still a child. Watchmaking was his first choice, but an injury to his eye made a continuation of this work impossible. He turned to diamond-cutting, but at the same time began to write about music, art and literature. Art and literary criticism received part of his efforts throughout his life; among his works in that field were two books on Beethoven, a life (1909) and a study of Beethoven's youth (1919).

Details of Querido's existence fell into the pattern which the lives of great writers frequently assume; he had renown and honor, but loneliness and misunderstanding accompanied them. Unquestionably the outstanding Dutch writer of his generation, he was by that token the representative of a literature which is as fine as any Continental literature of the 20th cent., but remains comparatively untranslated and unknown.

Querido's novel, *Menschenwee* (1903), translated into English as *Toil of Men* (1909), is an epic of the soil, replete with life and vigor in their positive and negative aspects. *De Jordaan* (2 vols., 1912-14) and *Van Nes en Zeedyk* (1915) described the life of the Amsterdam proletariat. Much of Querido's work had Jewish significance. *Levensgang* (1903), his first novel, dealt with the Jewish diamond-workers. *Het Volk Gods* (2 vols., 1931-32) dealt with the diamond-dealers, but nevertheless drew on the lives of the poor Jews of the city. Thus, from his first work to the book he completed just before his death, his life was framed in matters of Jewish interest.

Querido's dramatic productions, also, fell into this realm. *Saul en David* (1914) was a Biblical tragedy in four acts, and *Aaron Laguna* (1917) was set in the milieu of the wealthy Jews of Holland. Querido was a socialist, and his socialist affiliations made doubtful his actual allegiance to Judaism in the latter years of his life.

QUINCY, a city of Massachusetts within the area of Greater Boston, with a population of 75,810 (census of 1940), including, in 1943, approximately 1,600 Jews. Eastern European Jewish immigrants began to establish themselves in the city in the late 1890's; among these early arrivals were Henry Litchuvan of Hungary, Louis Warshaw and Barnet Julius of Poland, and Louis Grossman of Russia. By 1907 there was an estimated Jewish population of 350. The first religious organization was the Orthodox Ahavath Achim congregation (established 1902), on School Street. A synagogue was erected in 1906. In 1907 it was supported by forty members; the officers were H. Litchman, M. Abrams and B. Asness. The rabbi was J. Londlovitz. There were also at that time the Hebrew Independent Educational Club, and a lodge of the Brith Abraham. A Ladies' Aid Society was formed in 1916. Beth Israel Synagogue, likewise Orthodox, was erected in 1918. Two years later a Talmud Torah and a community center were established. Rabbis who served the community were Abraham Reznik, Moses Shochat and David Toboules. In January, 1940, Kalman Friedman, a refugee from Florence, Italy, where he had been chief rabbi, was installed as spiritual leader of Quincy's Jewry, to serve both synagogues. Friedman (b. Poland, 1903) was ordained superior rabbi in 1932 at the Italian Rabbinical Seminary. He obtained his Ph.D. degree from the University of Florence, was a scholar, educator and active Zionist, and published numerous historical and bibliographical studies of the Jews.

In addition to its synagogues, Quincy had, in 1943, a chapter of Hadassah, organized in 1925, and a lodge of the B'nai B'rith, organized in 1937.

The leading Jewish citizen of Quincy, Joseph B. Grossman, besides being a foremost factor in Jewish communal life, held several public offices; he was with the city's board of registrars for nine years, a member of the Massachusetts state legislature for four years, and a member of the Governor's Council from 1936 to 1942.

QUITO, *see* ECUADOR.

QUITTNER, ZSIGMOND (DE VÁGFALVA), architect, b. Budapest, 1857; d. Vienna, 1918. He studied architecture at Munich under Neureuther (1874-78), and traveled in Europe, Asia and Africa. In 1880 he settled at Budapest, where he provided the designs for an orphan asylum (1880), pavilions at the national exhibition of 1885 and the millennial exhibition of 1896, the building of the journalists' pension fund (1890), of the Gresham Insurance Co. (1906), of the Hungarian Commercial Bank of Pest, as well as for several memorial monuments. He was president of the Association of Hungarian Architects, a member of the construction boards of the Hungarian state and of the city of Budapest. Quittner published the books *Die Säule* (1878) and *Architekturformen* (1897). He was knighted by Francis Joseph I.

ERWIN QUITTNER DE VÁGFALVA (b. Budapest, 1891), architect, a son of Zsigmond Quittner, was a member of the Papal Academy of Fine Arts, Rome, and an officer of the Order of the Holy Sepulchre, Jerusalem.

LORÁND QUITTNER DE VÁGFALVA (b. Budapest, 1893), economist, a second son of Zsigmond Quittner, was a member of the International Institute of Rationalization, Geneva, and held an outstanding position in the textile industry of Hungary.

QUORUM FOR WORSHIP, *see* MINYAN.

R

RAAMSES (or **RAMESES**), one of the store-cities which the Israelites built during the Egyptian oppression (*Ex.* 1:11), and later the starting-point of the Exodus (*Ex.* 12:37). The name was employed also to designate the surrounding district, in which Joseph settled his brethren (*Gen.* 47:11), and seems therefore to be more or less synonymous with the terms Goshen and Field of Zoan (Tanis), which are also used for the district occupied by Israel. There can be no reasonable doubt that the place is identical with the Egyptian Pe-Rameses, or simply Rameses, the residence of Ramses II, in the northeastern part of the Delta, not far from Tanis and Pithom. Gardiner, followed by many, identifies it with Pelusium and Avaris, but it was probably nearer Tanis, though hardly identical with the latter, as often supposed.

RAB (Amora), *see* ABBA ARICHA.

RABA (full name, **Raba ben Joseph ben Hama**), Babylonian Amora of the fourth generation, b. Mahoza, about 280; d. 352. His teachers were Hisda of Sura, whose daughter he later married, Joseph ben Hiyya of Pumbeditha and Nahman bar Jacob of Mahoza. He was one of the most famous teachers of his time and his discussions with his equally famous rival Abaye became proverbial. Both of them appear to have set up independent schools of their own and to have attracted a group of disciples. When Abaye died, Raba succeeded him as head of the academy, which was then transferred from Pumbeditha to Mahoza and joined to the one in the latter city. During the next fourteen years, until the death of Raba, Mahoza was the only place in Babylonia with an academy.

Raba was highly ranked as a Halachist; in all but six of his differences with Abaye, his opinion was given the preference because of his clarity and logical deductions. He was famous as a Haggadist and many of his sayings reveal lofty ethical and religious views: "God desires only the heart, the feelings" (*Sanh.* 106b); "The man who puts his neighbor to shame in public will have no share in the world to come" (*B.M.* 59a). He set great store upon learning and the learned; "How foolish," he said, "it is to rise in the presence of the Scroll of the Law, and not before the great scholars" (*Mak.* 22b). A daily prayer of Raba has become part of the Orthodox liturgy for Yom Kippur: "My God, before I was created, I was of no worth; now that I am created, I am as though I were never created. Dust am I in my life, and all the more after my death. I stand before Thee like a vessel full of scorn and shame" (*Ber.* 17a).

Raba is reported to have acquired considerable wealth, which he had gained through possessing much land and by extensive trading. He was a favorite of the mother of King Sapor II of Persia, and through her intercession was able to alleviate the hardships suffered by the Jews at this time. It is reported that on one occasion the queen mother sent him a donation of three hundred golden bracelets, which he sold and used to help poor non-Jews of the city.

RABAD, abbreviation for the following: Ibn Daud, Abraham Halevi; Abraham ben Isaac of Narbonne; Abraham ben David of Posquières.

RABBAH, abbreviation of *rabbath bene 'Ammon* (capital of the Ammonites), now called Amman in Transjordania, on the Mecca Railroad. It is an ancient town on the Wady Zerka (Jabbok) river, southeast of the Dead Sea.

At the time of David, Rabbah was part of his kingdom (*II Sam.* 11:1). Later, probably after the division of the kingdom (937 B.C.E.), it reverted to the Ammonites. Subsequently, however, it became a Hellenistic city, and was renamed Philadelphia. At the time of the beginning of the revolt against Rome (66 C.E.) the city was destroyed by the Jews, but was later rebuilt and became an important center in both the Roman-Byzantine and Arab periods. The final destruction of Rabbah is attributed chiefly to earthquakes, and occurred before 636 C.E. The ruins are part of Amman, the capital of Transjordania.

RABBAH, *see* RABBAH BAR NAHMANI.

RABBAH BAR BAR HANA, Amora of the third generation. The peculiar form of his name, with the double bar ("son"), was due to the fact that his father, a nephew of Hiyya I, was also named Rabbah. Although Rabbah was born in Babylonia, he spent many years in Palestine, where he was a pupil of Johanan, many of whose teachings he transmitted. On his return to Babylonia he lived in Pumbeditha in close association with Judah bar Ezekiel, but spent a few years in Sura. He proposed to include a recitation of the Decalogue in the daily prayers, but Hisda rejected the idea. Rabbah is especially famous for his fantastic stories of his journeys by water and through the desert (*B.B.* 73b-74a; *Keth.* 111b-112a; *Sab.* 21a); he himself, however, reported that the sages called him ass and fool because of these stories.

Lit.: Bacher, *Agada der babylonischen Amoräer,* 87-93; Eisenstein, J. D., *The Tales of Rabbah bar-bar Hannah* (1937).

RABBAH BAR HUNA, Babylonian Amora of the third generation. Although he was well along in years at the time of the death of his father (297), he was not the latter's immediate successor as head of the academy at Sura, but had to wait eleven years, until the death of Hisda. Rabbah served in the office for thirteen years and was distinguished not only for scholarship but also for piety, humility and modesty (*M.K.* 28a). When he died, his body was brought to Palestine for burial.

Lit.: Bader, G., *The Jewish Spiritual Heroes,* vol. 3 (1940) 145-46.

RABBAH BAR NAHMANI, Amora of the third Babylonian generation, d. about 330. He was so noted that he is generally mentioned in the Talmud by the name Rabbah alone. He was the descendant of a family that traced its ancestry back to the high priest Eli; he studied under Huna and Judah bar Ezekiel. After the death of Huna bar Hiyya, Rabbah was chosen head of the academy of Pumbeditha, where he served for twenty-two years. During this period the fame of the academy grew to a great extent and more than 400 students are reported to have attended the academy throughout the year; his lectures in the Kallah months (Adar and Elul) are reported to have drawn audiences of 12,000. Rabbah's method of lecturing combined brilliant dialectic and interesting examples. His skill at argumentation was so great that he was called "overthrower of mountains" (*'oḳer harim*); he generally began his addresses with interesting stories or some clever saying, by way of introduction to more sober themes. They covered every field of Jewish law. Comparatively few of the Haggadic sayings of Rabbah have been preserved.

Rabbah was poor all his life, and often met with misfortune. His life came to an early end because of renewed persecutions of the Jews by Sapor II. The accounts are embroidered with legend, but it appears that he fled to avoid being seized by the governmental officials and died as the result of the hardships of his flight.

RABBENU GERSHOM, *see* GERSHOM BEN JUDAH.

RABBENU HAKADOSH, *see* JUDAH HANASI.

RABBENU TAM, appellation of Jacob ben Meir, great Talmudic authority, head of the French school of Tosafists, b. Ramerupt, in northern France, 1100; d. Troyes, France, 1171. He was the youngest son of Meir ben Samuel and Jochebed, daughter of the celebrated commentator Rashi. Rabbenu Tam was recognized by the Jews of Western and Central Europe as the "leader of his time," and so high an authority as Asher ben Jehiel appraised his knowledge as even greater than that of Maimonides. Disciples came to him from many lands, including Russia, and became Tosafists, grammarians and exegetes. Questions were addressed to him from German, Italian, Spanish and English communities; and his responsa and enactments were accepted as binding. He would often consult with his famous brothers, Samuel and Isaac, in matters of Halachah.

Besides his Tosafoth (notes), which are printed in the editions of the Talmud, his most important work is the *Sefer Hayashar,* containing explanations and novellae to thirty Talmudic tractates, as well as responsa. Many of his legal opinions are found also in *Teshuboth Hachme Tzarfath Velotir* (edit. Joel Müller, Vienna, 1881). His method of Talmud study was opposed to the over-theorizing casuistry known as Pilpul. Likewise he emphatically opposed the tendency of many scholars to emend supposedly corrupt readings in the text of the Talmud. With his critical keenness he tried to search out old readings. He disagreed with his grandfather Rashi as to the order in which the Biblical selections should be inserted into the Tefillin (phylacteries), hence the phrase "Rabbenu Tam's Tefillin," which very pious Jews use in addition to those universally accepted according to Rashi's view.

Rabbenu Tam often presided over synods and assemblies where he established Takkanoth, ordinances made necessary by the changed conditions of the time, to strengthen the unity and religious life of the Jews during the period of the Crusades. His enactments tended to elevate the status of women and, in general, to render ritualistic practices more lenient.

A poet of considerable merit, he wrote both liturgical and secular poetry. Abraham ibn Ezra, while traveling through France, was greeted by Rabbenu Tam in verse, whereupon Ibn Ezra exclaimed: "Who hath brought a Frenchman into the temple of the muses?" His responsa are often preceded by short poems in pure, metrical Hebrew. He was also a grammarian, and in a special work *Sefer Hahachraoth* he sought to harmonize the grammatical strife between Menahem ben Saruk and Dunash ibn Labrat; actually, however, he took the part of Menahem.

Of his personal life we know that he had dealings with the king of France and was influential in governmental circles. On May 8, 1147, on the Feast of Weeks, crusaders broke into his house, seized his entire possessions, tore to shreds a scroll of the Torah and inflicted five wounds on his head. Fortunately, a friendly knight passing by saved the scholar from the hands of the mob, persuading them that he would succeed in converting the famous rabbi to Christianity.

Rabbenu Tam's old age was saddened by the news of the destruction of the community of Blois on May 26, 1171, as the result of a false blood accusation; the entire community of forty men, women and children was committed to the flames. The rabbi ordered a general day of fasting and mourning (20th of Sivan), which was observed by the Jews throughout France and the Rhineland. Two weeks later, on June 9, 1171, the broken-hearted scholar died. JOSEPH MARCUS.

RABBI AND RABBINATE. From the time of Joshua until the establishment of the monarchy, the elders, judges and prophets were the spiritual leaders of Israel. With the advent of the monarchy, spiritual and religious authority was divided among the prophets, whose duty it was to inspire; the priests, whose function it was to draw the people nearer to the worship of God; the scholars, whose work it was to interpret the law and give counsel; and the king, who was to maintain social justice and internal peace (*Jer.* 18:18).

From the period of Ezra until the destruction of the Second Temple (70 C.E.), when prophecy had ceased, the influence of the priests gradually began to wane, as the authority of the scholars—the Men of the Great Assembly, the Soferim (Scribes), and the members of the Great Sanhedrin—increased. The term Rabbi (my master, my teacher) first came into general use toward the end of the 1st cent. C.E., although the Patriarchs had borne the title "Rabban" (master or teacher) since the time of Gamaliel I. Palestinian and Babylonian Tannaim and Amoraim who received their ordination in Palestine were called Rabbi, while the Babylonian Amoraim who were not ordained in Palestine were called "Rav" (a master, a teacher). The title "Rabbenu" (our master, our teacher) was first applied to Judah Hanasi, because he was the outstanding scholar of his time, and since then it has been a title designating the outstanding scholars of every generation, such as Hananel ben Hushiel, Gershom ben Judah, Jacob Tam, Maimonides and Nissim Gerondi.

The rabbis of the Talmudic period did not accept any

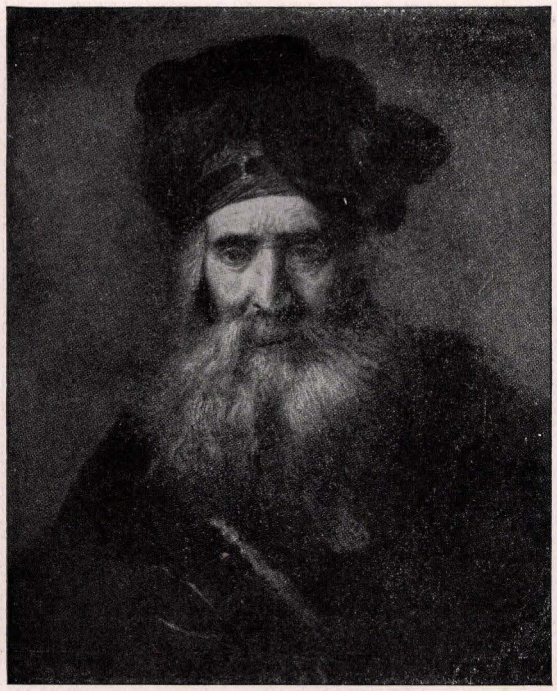
salary from the community, but engaged in various labors, trades, and professions. Only the members of various courts who had no time to earn their own living drew a salary from public funds. Often a community would support a rabbi and his Yeshiva. The rabbi was always accorded great respect, for his honor was the honor of the Torah—all rose when he entered, he was addressed with great deference, he was freed from taxes, and it was regarded as a privilege to entertain him or do business with him.

As a representative of the Torah, the rabbi always conducted himself with befitting dignity. He did not eat or drink in public except at a meal celebrating some religious precept, his dress was immaculate and distinguished, he greeted all graciously, he was always ready to be of assistance to the poor and needy, and he wasted no time in idle talk. He was not an intermediary between man and God, but was a teacher of the Torah, of the divine way of life, as he guided his flock to the leading of a righteous life. Especially during the Sabbath would the rabbi preach in the synagogue to the women and the unlearned, and would discourse on legal matters to the more learned.

During the Gaonic period (589 to 1038 C.E.) the heads of the Sura and Pumbeditha Yeshivas (academies), who were called Geonim, were the spiritual leaders of Babylonian Jewry. As in the Amoraic period, many outsiders gathered during the Kallah months of Elul and Adar, when they were free from their agricultural labors, to study in these great Yeshivas, where popular courses were offered.

As the rabbis were neither employed by the communities nor received any wages from them, the Parnasim (lay leaders) controlled communal affairs, such as court appointments and excommunications. According to Solomon Zeitlin, Rashi (11th cent.) succeeded in making the authority of the rabbi equal to that of the lay leaders in deciding communal questions. Not until the 15th cent. did it become generally customary to pay the rabbi a stipulated salary. Until then rabbis had accepted remuneration only for the time they expended in judging litigation, drawing up various contracts, and arranging divorce and Halitzah ceremonies. Some rabbis earned a living by arranging marriages among their large circle of acquaintances.



With the advent of the salaried rabbis, the duties of the rabbis were clearly defined. The main stipulations between the rabbi and his congregation were usually set forth in the letter whereby the community informed the rabbi of his election (*kethab rabbanuth*). This contained the period of his tenure, usually three years, the amount of the salary to be paid him, and any special clauses. As cities of thirty families and over elected a rabbi, the rabbi had sometimes to combine in himself the functions of Shohet, cantor, teacher, and Mohel, although usually there were special men for these functions.

Among other duties, the rabbi was to organize and head the communal court; establish and head a Yeshiva and supervise the lower schools; supervise the Shohetim and the Kashruth situation; answer the multifarious questions in Jewish law which were brought to him; and participate in the circumcision, Bar Mitzvah, marriage, and other eventful ceremonies in the lives of his parishioners. He was also the first resort of the poor and needy, gave sage counsel, consoled mourners in their bereavement, and supervised the various religious and philanthropic institutions in the community.

In addition to all this, the rabbi was expected to devote a number of hours each day to the study of the Torah and to compose learned works which the community was usually proud to publish. As a rule, the rabbis preached many times during the year, delivered eulogies on worthy dead, and acted as cantors on special occasions, such as the Neilah services of the Day of Atonement. Outstanding rabbis, especially, were kept busy answering the religious and academic questions which were constantly sent to them from other communities and countries. As the fame of the knowledge and nobility of character of a certain rabbi would spread, he would be invited to more important communities, until it was not unusual for one rabbi to have occupied six or more rabbinates within his lifetime. Often a rabbi would have to steal away from a community in

the middle of the night because his parishioners were so distressed to see him leave. Usually, when a rabbi departed from a city, the entire community accompanied his carriage to a few miles past the city limits, while the most important members of the community to which he was going awaited his carriage many miles from their city. The relations between the rabbi and his community are well illustrated in many anecdotes, such as those in the collections of Jacob Richman and M. Lipson. Those rabbis who had personal means, or who engaged in business and received no salary, usually ruled their communities with an iron hand, brooking very little interference from the lay leaders in carrying out what they deemed right and justice.

Gutheim, New York; 36. Samson Raphael Hirsch, Frankfort

The spiritual leaders of the Hasidic sect, which placed more emphasis on the emotional approach to God than on knowledge of the Torah, are called "Rebbi" (Rebbe) or "Zaddik." In the United States many of them have assumed the title "Grand Rabbi." These Hasidic rabbis were usually men capable of deep religious fervor, such as the Baal Shem Tob and Levi Isaac of Berdichev, and among them there were many great scholars, such as the Alters of Gora, the Schneirsohns of Liubawicz, and the Shapiros of Munkács. One of the reasons for the decline of Hasidism is the fact that upon the death of a leader they do not always appoint a successor with the same qualities, but choose a son or relative of the deceased, who often does not possess the requisite qualities of leadership.

From early times the government under which the Jews lived realized the advantage of utilizing the rabbinate as an agency for the collection of taxes, and on occasion attempted to appoint rabbis with whom they felt they could work. However, in the 12th cent. a ban was issued threatening excommunication to anyone who requested or received the help of the government in gaining any position of spiritual or secular dominance over the community. This ban has since been reenacted many times. This explains why attempts in 15th cent. Germany and 16th cent. Poland to appoint a government chief rabbi failed. In Moslem and oriental countries where the Jews have been granted some degree of local autonomy the rabbis of the Sephardic community, who are called "Haham," and especially the "Haham Bashi" (Chief Haham), have usually worked in close harmony with the government.

In the Middle Ages certain regions in Spain and Portugal had chief rabbis, and in Austria and Germany of the 16th to the 19th centuries some rabbis were appointed Landesrabbiner, which meant that they were to supervise tax collections and other financial regulations. In Russia of the middle 19th cent. it was decreed that all rabbis had to possess a certain amount of secular education, and those communities whose rabbis did not possess such knowledge were required to employ in addition a crown rabbi (Kazyonny). These crown rabbis were often irreligious, and some even acted as informers for the government. Their official function was to keep birth, marriage and other civil records. The Grand Rabbin of France, and the chief rabbis of England, Palestine and other countries, although not appointed by the government, are recognized by it as the chief Jewish ecclesiastical authority of their country.

The following is a short outline of the five main types of rabbis in the United States and their activities:

(1) Reform—graduates, in the main, of the Hebrew Union College, in Cincinnati, and of the Jewish Institute of Religion, in New York city. As ritual and religious

law plays very little part in their rabbinates, their main duties are spiritual, education, social and pastoral. Many of them have taken leading parts in movements of social reform. There are both Zionists and non-Zionists among them.

(2) Semi-Reform—graduates, in the main, of the Jewish Institute of Religion, in New York city, and those who follow the Reconstructionist Movement. These rabbis endeavor to keep all ceremonies and laws which are attractive and not onerous, and they stress the cultural contributions of the Jews.

(3) Conservative—graduates, in the main, of the Jewish Theological Seminary of America, in New York city. They follow Zacharias Frankel in the belief that a scientific and historical approach will solve all the problems of Judaism, and they therefore adjust Biblical and Talmudic law to conform with the demands of modern civilization and society. They emphasize Zionism, Hebrew literature, and Jewish *Wissenschaft* (learning).

(4) Orthodox—graduates, in the main, of the Rabbi Isaac Elchanan Theological Seminary, in New York city, and of the Hebrew Theological College, of Chicago. This group is sometimes referred to as "Neo-Orthodox," because its members have received a thorough secular education, and because of their belief that traditional Orthodoxy is compatible with modern civilization without any arbitrary adjusting. Their duties, as well as the duties of the larger group of their older colleagues who received their education outside of America, are essentially the same as those of the medieval rabbi, as previously enumerated.

(5) Orthodox rabbis of the traditional European type, and educated abroad.

Modern Hebrew and Yiddish designate the Orthodox rabbi as "Rav" or "Harav," and the non-Orthodox rabbi as "rabbi." The English word rabbi refers to the spiritual leaders of all these groups. There are two rabbinical functions peculiar to the American scene. One is the speeches, addresses and lectures which the rabbi is called on to make before numerous organizations and at many testimonial affairs. The second is the social visits which the rabbi and his wife are expected to pay his parishioners at regular intervals. This latter function is one of the reasons why the rabbi's wife (Hebrew, Rabbanith; Yiddish, Rebbetzin) has acquired a semi-professional status in her own right, for she is frequently called on to organize and supervise certain phases of the girls' and women's clubs connected with the synagogue. The wives of the younger Orthodox rabbis and of the Conservative rabbis have their own special organizations.

Portrait of a Rabbi. From a painting, by Rembrandt van Rijn, owned by the Duke of Devonshire, Chatsworth

Since the middle of the 19th cent. rabbis have been appointed chaplains in the armies and navies of various nations, as well as in penal institutions, hospitals, asylums and other civil institutions.

RABBI ISAAC ELCHANAN THEOLOGICAL SEMINARY, *see* YESHIVA COLLEGE.

RABBINERSEMINAR FÜR DAS ORTHODOXE JUDENTUM, a rabbinical institute founded in Berlin in 1873 by Israel Hildesheimer. Based on traditional Judaism, the Seminary was intended to equip rabbis with a thorough and comprehensive knowledge of Biblical and Talmudic literature and ritual laws, to instruct them in the discipline of Jewish learning, and to develop independent creativeness. The entrance requirement for the six-year course was a school certificate entitling the holder to enter college.

Hildesheimer was rector of the institution for twenty-six years. His successors were David Hoffmann (1899-1921), then J. Wohlgemuth, and finally S. Weinberg. Among its teachers were Abraham Berliner, Jacob Barth, Hirsch Hildesheimer, Simon Eppenstein, Abraham E. Kaplan, S. Grimberg, and M. Auerbach.

The Seminary became noted, and its graduates were appointed instructors and professors in numerous Jewish educational institutions. Its library contained about 20,000 books. The institution was supported by the annual dues paid by members of an organization founded for this purpose, by the interest accrued from its founding capital, and by voluntary contributions. In 1938, under the Nazi regime, the Seminary was closed; the library was confiscated and probably taken to Munich.

RABBINIC TEACHINGS, PARALLELS BETWEEN GOSPELS AND, *see,* PARALLELS BETWEEN THE GOSPELS AND JEWISH TEACHINGS.

RABBINICAL ASSEMBLY OF AMERICA, the organized body of the Conservative rabbinate in the United States and Canada. Organized on Independence Day, 1901, as an alumni association of the Jewish Theological Seminary of America, in New York city, it soon changed its name to its present form when it opened its membership to American rabbis who are graduates of other theological schools, but who subscribe to the philosophy of Conservative Judaism. It continues to maintain, however, its close affiliation with the Jewish Theological Seminary of America, in whose building at 3080 Broadway the national headquarters of the Rabbinical Assembly are maintained. Furthermore, three of its elected representatives are members of the board of trustees of the Jewish Theological Seminary.

The objects of the Rabbinical Assembly, as stated in its constitution, are: "To conserve and promote traditional Judaism; to cooperate with the Jewish Theological Seminary of America and with the United Synagogue of America; to advance the cause of Jewish learning; to promote the welfare of its members; and to foster the spirit of fellowship and cooperation among the rabbis and the other Jewish scholars in America." The organization publishes annual volumes of the proceedings of its conventions, and a quarterly, *Rabbinical Assembly Bulletin,* which is devoted to a discussion of professional problems confronting rabbis. Its 322 members (1942) served Jewish communities in the United States, Cuba, Canada, England, Australia and New Zealand. Its members served as Jewish chaplains not only in the American forces, but also with the Canadian, Australian and New Zealand armies.

The activities of the Rabbinical Assembly concerned with the furtherance of traditional Judaism in America are concentrated in its Committee on Jewish Law, whose functions were stated as follows:

"The Committee was organized primarily with the object of rendering aid to members of our group who may be faced with problems involving Jewish law and practice, in the solution of which they might want the support of the opinion of a recognized body. The Committee was to weigh these questions from the standpoint of Jewish law and precedent in relation to modern requirements and with the view that its decisions in particular cases may eventually become the norm for the members of the Assembly, and perhaps also for American Jewry. Recognizing the bindingness and continuity of Jewish law, the Committee has been guided by the new requirements of our environment and sought to interpret the provisions of the law in harmony with these requirements. It has not undertaken to produce a revised version of the Shulhan Arukh, nor did it consider to be within its province the abrogation or suspension of any of the vital principles underlying Jewish law. Nor was the application of Jewish law to modern conditions conceived of by them as implying always a lenient attitude. Under certain conditions the preservation of the integrity of Jewish life may demand a more rigorous attitude toward certain questions about which our ancestors could afford to be more lenient than we can at the present time. While adhering to the principle of favoring, in general, the more lenient opinion, the Committee occasionally found it necessary, from considerations of taste and present-day mode of life, to be more rigorous in the provisions of the law than the Shulhan Arukh or its commentaries were."

This Committee carries on a lively activity in the continuance of the traditional responsa. It takes under advisement and renders decisions, together with dissenting opinions, on all matters of Jewish law brought to its attention by the members of the Assembly. All these questions deal with an attempt to adjust Jewish traditional religious practices to contemporary American life. There has already grown up a very large collection of these responsa dealing with problems involving the Sabbath, dietary laws, marriage and burial rites, ritual of initiating a convert to Judaism, and the like. The Committee also maintains a Beth Din at the Seminary, which is empowered to grant Jewish religious divorces, after state divorces have been obtained, as well as perform other religious rites which require a Beth Din.

The most prolonged activity of the Committee, however, has been its efforts to ameliorate the plight of a deserted wife, the Agunah. This problem was aggravated by the large number of women whose husbands have not returned from the first World War, and is being faced to a much larger degree in the second World War. Led by Louis M. Epstein, of Brookline, Mass., the Committee carried on extensive negotiations with rabbis the world over, and accumulated an enormous amount of opinions from the leading

Jewish scholars in the world, before it finally decided upon a formula which will resolve many of the difficulties faced hitherto by deserted wives. In this, as well as in other matters, the Committee leaned heavily upon the scholarship and interest of Louis Ginzberg, professor of Talmud at the Jewish Theological Seminary of America.

In its efforts to coordinate Jewish traditions with American civilization, the Rabbinical Assembly, in cooperation with the United Synagogue of America and the Jewish Theological Seminary, was, in 1943, compiling an edition of the traditional prayer-book, making changes, both by adding and omitting, which will maintain Jewish traditional religious content and fervor in terms of American ideals and the new idioms of expression in the United States. The Assembly continues its cooperation with the United Synagogue by a joint Commission on Education whose main concern is the development of a uniform and workable curriculum for religious schools attached to Conservative congregations. It had, up to 1943, published some texts for the teaching of the Hebrew language. In cooperation with other rabbinic bodies and lay synagogue organizations, it helped form the Synagogue Council of America, which is intended as a medium for expression of opinion on those phases of Jewish religious life in the United States to which all three main wings of American Jewry can subscribe. With the organized Orthodox rabbis and the Central Conference of American Rabbis, the Rabbinical Assembly is a part of the Religious Activities Committee of the Jewish Welfare Board.

In order to interpret Jewish religious traditions in terms of present-day social and economic problems in the United States, the Committee on Social Justice of the Assembly issued, from time to time, as economic and social conditions warranted, pronouncements which have become the fundamental views of the Rabbinical Assembly on these phases of American life. The following excerpts from some of its official pronouncements represent the views of the Rabbinical Assembly on some of the major problems confronting the country:

"In the light of the very nature of religion, we affirm that the discussion of problems of social and economic justice and the evaluation of movements to abolish exploitation, poverty, war and other social evils are not only legitimate but even necessary concerns of the synagogue. We therefore affirm that questions of politics and economics are legitimate and necessary subject matters for treatment from the pulpit by ministers of religion. Without claiming for rabbinical utterances on social problems any authority other than inheres in whatever truth they may convey, we insist that no arbitrary limit be placed on the freedom of speech of rabbis on those themes either in their individual or collective utterances. . . . For its general principles, historic Judaism is the sanction. Only its specific applications to contemporary social problems are their [the Rabbinical Assembly's] own. . . . Realistically interpreted, this means that Judaism is sympathetic to all legislation which has for its objective the enlargement of the economic, religious and social liberties of man; and that it calls upon society to protect the individual against economic and social oppression. As teachers of Jewish tradition, we urge the enactment of minimum wage laws and the limitation of hours of employment. We support all efforts to eliminate the labor of children in industry. We are in complete accord with all endeavors which tend to improve the conditions under which men labor. . . . Our faith in the divine character of man, in his right to the fulness of life, demands that each human being have complete opportunity for self-expression. We favor the enlargement of facilities for free education for all, the creation of additional means of making available the cultural treasures of mankind to millions who now have no access to them, especially in this age when technological abundance has expanded opportunities for leisure. . . . Our insistence on the sacredness of the human soul as a free moral agent in the service of God demands that the individual enjoy the maximum of personal liberty that is consistent with the equal liberty of all other individuals. We reaffirm our faith in the classic liberties of America—freedom of speech, freedom of press, freedom of religious conscience, freedom of assembly and petition. . . . As we claim the right to freedom for the individual, so we claim it for all groups of men united in voluntary association. Especially do we claim for social minorities the right to organize and express collectively their group aspirations, whether they be minorities of race, color, religion, political outlook or culture. We protest, however, against the abuse of these liberties by groups who take advantage of them to seek power with the view ultimately to curtailing for others the very liberties they demand for themselves. We condemn all discrimination in employment whether by open or devious methods on the basis of differentiation by national origin, creed or color. We protest against the political and social disfranchisement in America of the Negro, and the Oriental. . . . We affirm once more our faith in democracy as a method by which men may govern themselves. We contend that human experience has demonstrated that a democratic government alone encourages the freedom of the individual. . . . We believe that man can remake his society by the processes of education and peaceful reform. We are opposed to dictatorships of any kind—whether of the right or of the left. We deny that America at present must choose between the two extreme alternatives of a revolutionary Communism and a revolutionary Fascism. There is a third way and that is—the peaceful, progressive remaking of our order by democratic instruments. To this method of social reform we pledge ourselves."

To implement parts of its program on social justice, the Rabbinical Assembly joined with other Jewish organizations and with Christian religious bodies. This is particularly true of those activities which aim to help establish a lasting peace and those that look forward to post-war reconstruction.

Palestine played a vital role in the program of the Rabbinical Assembly of America. Here, again, its members looked to those official pronouncements, accepted by the Assembly at various conventions, to find its views on this subject: To quote from the official sources:

"The Zionist ideal to establish in Palestine a legally assured and publicly recognized national home for the Jewish people has been an integral part of the religious outlook as well as of the program of practical activities sponsored by the Rabbinical Assembly of America from its very inception. Though the Assembly as such has never officially identified itself with any group or party functioning within the framework of the World Zionist Organization, it has on more than one occasion given expression to its complete and wholehearted devotion to the Zionist ideal. Its members have zealously labored in the leadership and in the rank and file of the Zionist movement and have participated in all efforts to mold public opinion into sympathy with the Zionist program and to muster the means needed for its realization. . . . We desire to re-affirm our faith in our religious tradition which has always associated with Palestine the fulfillment of the Scriptural promise: 'In Thee shall all the nations of the earth be blessed.' This promise succinctly but adequately expresses our conception of the essence of Zionist aspiration and the national destiny of our people. . . . We re-affirm our historic claim to Palestine, as the land where for more than a thousand years our fathers lived a national life and built a religious civilization which has profoundly and beneficently influenced the course of history. . . . We desire to further re-affirm our faith that the Zionist ideal of establishing in Palestine a Jewish National Home is in its essence just and that the steps thus far taken towards its practical realization testify to a sincere effort to conform in letter and in spirit to the requirements of justice. . . . It was only an act of brute violence which drove

the Jews out of Zion. Only through an act of justice will they be restored. Firm in their faith that justice will ultimately and inevitably triumph in the world, the members of the Rabbinical Assembly re-assert their faith in the ultimate triumph of Zionism."

The Rabbinical Assembly maintains a Placement Bureau for the benefit of its members. Synagogues which wish to avail themselves of the services of Conservative rabbis turn to this Committee for recommendations. The officers of the Rabbinical Assembly in 1942 were: Louis M. Levitsky, president; Robert L. Gordis, vice-president; Harry E. Schwartz, treasurer; Lewis B. Grossman, recording secretary; Maxwell M. Farber, corresponding secretary. LOUIS M. LEVITSKY.

RABBINICAL ASSOCIATIONS. Rabbinical associations arose in various countries in the latter part of the 19th and the beginning of the 20th cent. as a means for exchange of ideas, plans for united action in communal affairs, and to improve the position of the rabbinate. They are of especial value in countries and communities where Jewish religious life is under no central control, and therefore have been most prevalent under such conditions. The chief of these associations in the past or still in existence (1943) are the following:

Germany. The chief organizations that functioned prior to the rise of the Nazis in 1933 were:

Allgemeiner Rabbinerverband in Deutschland. Founded in 1896 as an organization of all the rabbis in Germany, after previous attempts had failed. However, it did not succeed in bringing into its fold those Orthodox rabbis who refused to work with the less Orthodox members of the Jewish community. Its purpose was the promotion of Judaism and of the rabbinate.

Verband der Orthodoxen Rabbiner Deutschlands. Founded in 1906, it includes the Orthodox rabbis who refused to join the association above.

Vereinigung der Liberalen Rabbiner Deutschlands. Founded in 1898 for the discussion of problems affecting liberal Jewry.

England. Association of London Rabbis. Founded in 1933 to promote the welfare of Judaism and Jewish learning and to raise the status of the rabbi.

Agudas Harrabonim (Association of Rabbis of Great Britain).

Union of Anglo-Jewish Preachers. Founded in 1894.

Canada. Montreal Council of Orthodox Rabbis.

United States. The four chief rabbinical associations, the Central Conference of American Rabbis, the Rabbinical Assembly of America, the Rabbinical Council of America, and the Union of Orthodox Rabbis of the United States and Canada, are discussed in separate articles. Others are:

Association of Reform Rabbis of New York City and Vicinity. Meets monthly to discuss current topics of Jewish interest.

Board of Rabbis of Northern California. Founded in 1924 by Jacob Nieto. Name changed in 1931 to Board of Rabbis and Cantors of Northern California.

Brooklyn Jewish Ministers Association. Founded about 1928.

Chicago Rabbinical Association. Founded 1873.

Eastern Council of Reform Rabbis. Founded 1912, but created a storm of protest, and lasted only a short time.

Federation of Orthodox Rabbis of America. Founded 1926.

Jewish Ministers Cantors Association of America. Founded 1896.

Jewish Ministers Association of San Francisco and Vicinity. Founded by Jacob Voorsanger in 1894.

New York Board of Jewish Ministers.

Philadelphia Board of Jewish Ministers.

Rabbinical Council of Cleveland. Founded in 1933; membership Orthodox.

Texas Rabbinical Association. Founded in 1927; holds annual meetings called Kallah (the Kallah Convention of Texas Rabbis), devoted to the discussion of rabbinical and religious questions.

RABBINICAL CONFERENCES, *see* CONFERENCES, RABBINICAL.

RABBINICAL COUNCIL OF AMERICA. The Rabbinical Council of America was organized in 1924, and was then known as The Rabbinical Council of the Union of Orthodox Jewish Congregations of America. It was to function as the rabbinical authority for the Union. Its first president was Leo Jung.

About the same time there was organized by the late Bernard Revel, president of the Rabbi Isaac Elchanan Theological Seminary, an alumni association composed of the graduates of the Seminary who were serving in the practical rabbinate. This organization soon changed its name to the Rabbinical Association of the Rabbi Isaac Elchanan Theological Seminary, and elected as its first president Nachman Zevi Ebin.

It became evident that the Rabbinical Council of the Union and the Rabbinical Association of the Seminary had interlocking memberships, and a merger between the two organizations was arranged in 1930. The new organization assumed the name of the Rabbinical Council of America. It relinquished the narrow limits of an alumni association and began to admit into its membership all duly ordained Orthodox rabbis who were qualified in accordance with the constitution of the organization. In June, 1942, another merger was made, resulting in the absorption into the Rabbinical Council of America of the Rabbinical Association of the Hebrew Theological College of Chicago.

The organization in 1942 had a membership of over 300, composed principally of the rabbinical graduates of The Rabbi Isaac Elchanan Theological Seminary and of the Hebrew Theological College of Chicago. A goodly number, however, were privately ordained in accordance with the practice of Jewish tradition.

While membership in the Rabbinical Council is open to all Orthodox rabbis, the organization comprised in the main, in 1942, the younger element in the American rabbinate or the English-speaking Orthodox rabbis of the United States. A cordial relationship existed between the organization and the Union of Orthodox Rabbis of America, which is the organization of the older and Yiddish-speaking rabbis of the country.

The Rabbinical Council acts as the rabbinic authority for the Union of Orthodox Jewish Congregations of America. In that capacity it endorses and supervises the Kashruth of many food articles. By making available to the Jewish public a variety of foodstuffs from leading manufacturers produced under strict rabbinic supervision, it performs an important community service. Recently it prepared forms, policies, and procedures which will serve the war widow and will solve the Agunah problem that may result from the second World War. In 1942 it sponsored the planting of the Revel Forest on the soil of the Jewish National Fund in Palestine. It published (1941) a rabbinic registry of its membership. It helped materially in the raising of funds for the Rabbi Isaac Elchanan Theological Seminary. A number of its members, in 1941 and 1942, enlisted as chaplains in the United States Army.

The presidents of the organization since it assumed its present name were: J. M. Charlop, of the Bronx, N. Y.; Herbert S. Goldstein, of New York city; Samuel Levy, of Perth Amboy, N. J.; Joseph H. Lookstein, of New York city.

JOSEPH H. LOOKSTEIN.

RABBINICAL SEMINARIES. In the 19th cent., when the instruction given by the traditional Yeshivas, consisting of the study of the Talmud and the decisions

(Posekim), was regarded as insufficient from a modern viewpoint, rabbinical seminaries were founded in several countries, endeavoring to bring about a reconciliation between rabbinism and the modern scientific spirit. The Jewish communities wished their rabbis not only to possess Talmudic education, but also to be well-versed in secular knowledge. Equally, the governments of Austria, France and other European states demanded a certain degree of general education from candidates for rabbinical offices. Since the Yeshivas were gradually discontinued in Western Europe on account of lack of teachers and pupils, rabbinical students used to attend the universities, where they listened frequently to Christian theologians, privately acquiring the necessary amount of Jewish education. Receiving the Hattarath Horaah (ordination) from some outstanding rabbi was considered sufficient for rabbinical practice.

This way of preparation for the rabbinate, however, had considerable drawbacks, which were first pointed out by Isaac Samuel Reggio in *Riflessioni di un Israelita.* In Germany, Leopold Zunz, Abraham Geiger and Ludwig Philippson also demanded the establishment of modern rabbinical seminaries, while in the United States Isaac Mayer Wise realized that Judaism would die out unless its ministry were to consist of "American rabbis, men educated in America, men filled with the free spirit of America, men who combined a modern American education with a knowledge of Jewish lore." In Russia and in Poland rabbinical schools were forced upon the Jewish population by the government, which wanted these schools to spread Russian and Polish culture rather than Jewish education; however, its schemes did not work out well.

The following institutions are generally recognized as rabbinical seminaries:

(a) In the United States:

Hebrew Union College, founded in 1875 in Cincinnati, Ohio, through the efforts of Isaac Mayer Wise.

Jewish Theological Seminary of America, founded in New York city in 1886 by Sabato Morais and others.

Rabbi Isaac Elchanan Theological Seminary, founded in New York city in 1896.

Jewish Institute of Religion, founded in New York city in 1922 by Stephen S. Wise.

(b) In Europe:

Jüdisch-theologisches Seminar, founded in Breslau, Germany, in 1854 by Zacharias Frankel. It was closed by the Nazi government in 1938.

Hochschule für die Wissenschaft des Judentums, founded in Berlin in 1870 at the instance of Moritz Lazarus and Moritz Mayer. From 1883 to 1922 and again after 1934 it was called Lehranstalt für die Wissenschaft des Judentums. In 1941 it was still functioning.

Rabbinerseminar für das orthodoxe Judentum, founded in Berlin in 1873 by Israel Hildesheimer. It was closed by the Nazi government in 1938.

Israelitisch-theologische Lehranstalt, founded in Vienna in 1893 at the instance of Wilhelm and David von Guttmann. It was closed by the Nazi government in 1938.

École Rabbinique de France, formerly called Séminaire Israélite, founded at Metz, France, in 1830. It was moved to Paris in 1859.

Collegio Rabbinico Italiano, originally in Padua, Italy (1829-71), transferred to Rome in 1887, reestablished in Florence, Italy, in 1899, and brought back to Rome in 1932.

Jews' College, founded in London by Chief Rabbi Nathan Marcus Adler, opened in 1855.

Judith Lady Montefiore College, founded in Ramsgate, England, in 1869 by Sir Moses Montefiore.

Nederlandsch Israelietisch Seminarium (Saadath Bahurim), founded in Amsterdam in 1834 (Ashkenazic).

Portugeesch Israelietisch Seminarium Ets-Haim, founded in Amsterdam in 1637 (Sephardic).

Beth Midrash Larabbanim Bekusta, founded in Istanbul, Turkey, in 1898 by Abraham Danon.

Instytut nauk judaistycznych, founded in Warsaw, Poland, in 1928; it was closed by the Nazis in 1939.

Orszagos Rabbikepzo Intezet, founded in Budapest, Hungary, in 1877.

RABBINISM, a term sometimes applied to Judaism of the period from Ezra (middle of the 5th cent. B.C.E.) down to the modern period. It is derived from the fact that the chief religious leaders in Jewry were not the priests of the Temple, nor the priestly caste thereafter, but the teachers and rabbis (the term rabbis appears from the 1st cent. C.E. on). The characteristic features of rabbinism are the development of new codes of laws based on and supplementary to the Torah and the creation of an authority which is organized and uniform, but not centralized or hierarchical. As a result of this, the religious law of Judaism remained flexible for centuries, adjusting itself to meet the changed needs and conditions of the times.

The chief phases of rabbinism, as developed in Jewish history, are: 1) the Soferic teachings; 2) the Pharisaic movement; 3) the work of creating the Mishnah, Talmud and Midrash; 4) the religious philosophy of the Middle Ages; 5) the Bible exegesis of the Middle Ages; 6) the work of codifying the Jewish law, down to the *Shulhan Aruch* of Joseph Caro (1565). Subsequently a tendency to rigidity and fixity set in, as a result of which rabbinism tended to become mere intellectualism, and mysticism began to flourish.

In the 18th cent. Hasidism attacked rabbinism for lack of religiosity, substituting an emotional fervor for a dry casuistry; but after about fifty years a compromise was effected, and the Hasidim adopted the practices of rabbinism side by side with their own peculiar institutions. In the 19th cent. the early advocates of the Reform Movement likewise attacked rabbinism, asserting that it was full of superstitions and unnatural accretions, and declared for a return to the simple, natural religion of the Bible. In course of time, however, this attitude was modified, later Reform Jewish leaders appreciating the contribution that rabbinism had made to Judaism, and finding support for their own views in the words of the rabbis as well as those of the Bible. Reform Judaism of today considers rabbinism an essential phase in Judaism, though it reserves the right to reject those parts of it which it holds to be antiquated. Conservative and Orthodox Jews maintain the institutions of rabbinism in their entirety or to a large extent.

RABBINITES, name given by the Karaites (8th cent. on) to the rest of Jewry, thereby emphasizing the distinction between themselves, who followed the literal text (*mikra* or *kera*) of the Bible, and their opponents, who followed the interpretations of the rabbis. For about two centuries the opposing parties were so evenly balanced that the Karaites and Rabbinites could be regarded as two rival sects of Judaism. In Saadia (10th cent.) and his successors, the Rabbinites found able champions of the Oral Law, and from that time on the Karaites declined into a small isolated sect, while the Rabbinites became the main body of Jewry.

See also KARAITES.

RABBINOWICZ, ISRAEL MICHAEL, Talmudist, b. Horodetz, near Kobrin, province of Grodno, Russia, 1818; d. London, 1893. He studied philology and

medicine in Breslau, and moved to Paris in 1854; here he received his degree and practised as physician for several years. Subsequently he went to London. His most important works include *Législation civile du Talmud* (5 vols., Paris, 1873-80), a translation of that part of the Babylonian Talmud dealing with civil law, with introductions and commentaries; and *Législation criminelle du Talmud* (a critical translation of the tractates *Sanhedrin* and *Makkoth* and a part of *Eduyoth*, published by the French government, 1876).

Rabbinowicz wrote also: *La médecine du Talmud* and *Les principes talmudiques de Schehitah et de Terepha . . . au point de vue médical* (1877; German trans., Frankfort, 1886); *Mebo Hatalmud* (Vilna, 1894; German trans., Trèves, 1881); *Le rôle de Jésus et des apôtres* (1866); *La religion nationale des anciens hébreux* (1873); *Essai sur le judaïsme* (1877). Rabbinowicz translated Maimonides' treatise on poisons into French under the title of *Traité des poisons* (2nd ed., Paris, 1935).

Lit.: *Luah Ahiasaf* (1894); *Haasif* (1894); *Jewish Encyclopedia*, vol. 10, p. 298; *Otzar Yisrael*, vol. 9, p. 245; Schwab, Moïse, *Le docteur Israel Michael Rabbinowicz* (1903).

RABBINOWICZ, RAPHAEL NATHAN, Talmudist, b. Novo-Zhagory, Lithuania, 1835; d. Kiev, Russia, 1888. He is best-known through his valuable auxiliary work on the Talmud, *Dikduke Soferim*, which he published in Munich, financially assisted by Abraham Merzbacher, a Munich antiquarian who became a patron of Rabbinowicz and assisted him in his literary endeavors. This work gives all the discrepancies between the printed editions of the Talmud and the Hebrew Munich Codex 95, an uncensored manuscript of the Talmud of 1342; also the discrepancies in other printed texts and manuscripts and the citations by the earlier writers. The first fifteen volumes were published in Munich in 1867 to 1886; the sixteenth volume, during the preparation of which Rabbinowicz died, was completed and published by H. Ehrentreu (Przemysl, 1897; the divisions Nashim and Toharoth are missing in their entirety and Kodashim in part). In his "Maamar al Hadpasath Hatalmud," an extended and revised introduction to his *Dikduke Soferim*, he gives a critical survey of the complete and partial editions of the Babylonian Talmud since 1484.

In addition to his *Ohel Abraham*, a catalogue of Merzbacher's library (Munich, 1888), he edited several old manuscripts; *Geon Yaakob*, notes to the tractate *Erubin* by Jacob of Vienna (Lemberg, 1863); and the responsa of Meir of Rothenburg (Lemberg, 1860). The booksellers' catalogues which he published enjoyed great renown.

RABIN, *see* ABIN, RABBI.

RABIN, IOSIF, Russian and Yiddish writer, b. Grodno, Russia, 1900. His first literary work appeared in the Young Communist Yiddish magazine *Jungvold* and in the Yiddish Communist daily *Der Emes*. Subsequently Rabin became a contributor to the periodical *Shtrom*.

Himself a Communist of long standing, Rabin was effective in winning other young Yiddish writers over to the strict party line approach to literature. His own fiction followed this line. His first novel, *Shvesterkinder*, describes the Bundist (Socialist) movement from 1907 to 1917, and accuses the Bund of innumerable weaknesses, from the point of view of Communist party principles, picturing it as a hindrance to revolutionary activity. *Buzi Dubin* (1932) treats of Trotskyites in the same orthodox way.

Josef Rabinovich

A later novel, *Chto Budyet*, depicts the rise of Bolshevism among Jewish workers. This routine attitude, in which non-Communists are burlesqued as non-entities, serves to delineate Rabin's political ideas, but detracts from the artistic value of his work.

RABINOFF, MAX, impresario, b. Mogilev, Russia, 1880. In 1907 he formed the Chicago Philharmonic Orchestra. For a period he assisted Oscar Hammerstein in the presentation of opera. Then he became a manager in his own right and was responsible for bringing to the United States Anna Pavlova, the Ballet Russe, and other famous organizations. In 1910 he directed the National Opera Company in Mexico City, and in 1913 he directed an opera company in Canada. From 1914 to 1917 Rabinoff was manager of the Boston Opera Company. Thereafter he was the manager of several artists in Chicago.

RABINOVICH, JOSEF (Ossip Aronowitsch), writer, b. Kobelyaki, Russia, 1817; d. Meran, Italy (then Austria), 1869. In the newspaper *Odesski Vyestnik* he developed his life program, that of defending the Jews from attacks from without, and of fighting for reforms in Jewish life. He won general attention through his short story, published in German, "Der Bestrafte," describing a notorious episode (1859) in which the head of a community was compelled to serve in the army because he had failed to produce the required number of conscripts, though all the eighteen-year-old boys had already been called. In order to provide a permanent voice for the struggle for emancipation of the Russian Jews, he founded *Rassviet* (Dawn), the first Jewish newspaper in Russian (1860). Although it lasted only a year, it had great influence on Jewish development in Russia. In his last years Rabinovich was a member of the Odessa city council, and was greatly respected by the Jews. His works appeared in an edition of three volumes (St. Petersburg and Odessa, 1880-88).

Lit.: Gessen, Y. I., *O. A. Rabinowitsch* (1898); idem, in *Yevreiskaya Starina*, vol. 1 (1911).

RABINOWICZ, MORDECAI (pseudonym, Ben Ami), author, b. Podolia, Russia, 1854; d. Tel-Aviv, Palestine, 1932. From 1905 to 1925 he lived in Geneva, and subsequently in Palestine. He wrote a number of

stories of Jewish life in Russia, also travelogues, in Russian and Yiddish; some of these were translated into Hebrew and published in book form. Rabinowicz joined the Chovevei Zionist movement at an early period, and became a member of the Odessa Committee. His reminiscences of Mendele Mocher Seforim were published in *Hatekufah* (1929).

RABINOWITSCH, SCHOLEM, *see* SHOLEM ALEICHEM.

RABINOWITSCH-KEMPNER, LYDIA, bacteriologist and editor, one of the first women to teach in schools of higher learning, b. Kovno, Lithuania, 1871; d. Berlin, 1935. In 1896 she became assistant professor of bacteriology at Women's Medical College, Philadelphia. In 1898 she was attached to the Robert Koch Institute, Berlin, was Koch's associate in many of his important researches, and made discoveries concerning pasteurized and raw milk and the parasitic protozoa and trypanosoma. Upon her return to Germany after a series of lectures at the University of Pennsylvania in 1896, she founded the Institute of Bacteriology and taught there for a time. Subsequently she collaborated with Professor Orth in the Pathological Institute of Berlin University.

Lydia Rabinowitsch-Kempner was the first woman to receive the rank of professor in Prussia (1912). Her original works dealt with the development of bacteria in farm products and the part they play in tubercular diseases. She edited the *Zeitschrift für Tuberkulose,* and from 1920 on was director of the bacteriological laboratory of the state hospital at Berlin-Moabit.

RABINOWITZ, AARON, realtor and civic official, b. Russia, 1884. He was brought to the United States in his infancy. Entering the real estate field in 1903, he subsequently became affiliated with the investment securities exchange. In 1926 Rabinowitz was appointed commissioner of the Board of Housing of the State of New York. He retained this post for thirteen years, serving under Governors Alfred E. Smith, who appointed him, Franklin D. Roosevelt and Herbert H. Lehman. During his incumbency Rabinowitz was associated with many of the housing projects that marked government participation in housing improvement; among these projects was the construction, in 1929, of the first cooperative apartments on the lower East Side of New York city.

In 1933 Rabinowitz was appointed by President Roosevelt to the commission to advise the Public Works Administration on public buildings. He was a trustee of the Baron de Hirsch Fund and of the New York Association for Jewish Children.

RABINOWITZ, ALEXANDER SISKIND, Hebrew writer, b. Liady, Russia, 1854. He received a traditional Jewish education in his native city, and then, at the age of fifteen, was compelled to support himself by teaching Hebrew in various villages and towns. In 1888 he secured a position as instructor at a Hebrew school in Poltava; this position he held for seventeen years. In 1905 he settled in Palestine where, because of the socialist nature of his stories, novels and articles, he, Joseph Hayim Brenner and David Gordon were regarded as leaders of the Palestinian workers.

Rabinowitz was one of the first members of the Chovevei Zion (Lovers of Zion) movement, and at the same time a sympathizer with the folk-socialists (Narodniki). He supported his disciples Ber Borochow and Jacob Ben-Zebi, founders of the Poale Zion party in Russia, in their endeavors, and influenced the Russian writer Korolenko, who was his personal friend, to protest against the Kishinev pogroms.

Rabinowitz's first article, *For the Defense of the Melamedim* (Russian), was published in the *Russki Evrei* in 1882; his first feuilletons in Hebrew were printed in *Hamelitz* in 1899. His most important stories and collections of stories were: *Al Haperek* (On the Order of the Day; Warsaw, 1884); *Bath Heashir* (The Daughter of the Rich Man; Warsaw, 1891), the first socialist novel of modern Hebrew literature; *Tzilele Abar* (Shadows of the Past; Piotrków, 1900); *Bime Hmilnitzki* (In the Days of Chmielnicki; Cracow, 1907); *Sippurim Veaggadoth Libene Haneurim* (Stories and Tales for Youths; Jerusalem, 1907); *Kithebe A. Z. Rabinowitz* (The Works of A. Z. Rabinowitz; 3 vols., 1904, 1914 and 1922); and *Haftarah* (2 books, 1907 and 1925). He wrote also biographical, historical and pedagogical works, including *Jean Jacques Rousseau* (1901); *Toledoth Hapedagogiah* (History of Education; Leningrad, 1913); *Toledoth Hayehudim Beeretz Yisrael* (History of the Jews in Palestine; 1921 and 1936); *Toledoth Am Yisrael* (History of the People Israel; Warsaw, 1904); *Hayye L. N. Tolstoi* (1926); and *Maamarim* (Essays; Tel-Aviv, 1935). Six volumes of his collected works were issued in Hebrew at Tel-Aviv from 1934 to 1936, the fourth being a history of the Jews in Palestine from 3830 to 5618 A.M., and vols. 5 and 6 being translations.

Rabinowitz edited several Hebrew literary periodicals, including *Zimrath Haaretz, Izkor, Yisrael, Ashkoloth, Hagalil,* and *Sefer Hashanah Shel Eretz Yisrael* (the latter in collaboration with A. Zifroni and D. Shimonovitz), and translated into Hebrew some of the works of Tolstoi, Dostoyevsky, Turgeniev and Korolenko, as well as Wilhelm Bacher's two German works on the Tannaim and Amoraim. In 1924, at Tel-Aviv, under the direction of A. Zifroni, a volume of Hebrew essays on language and literature was issued in celebration of Rabinowitz's seventieth birthday. Rabinowitz was still living in Palestine in 1942. In 1941, at Tel-Aviv, a celebration was held on the occasion of his eighty-seventh birthday.

Lit.: Rabinowitz, Samuel, "Fifty Years Ago (Memoirs)," *Studies in History of the Yiddish Scientific Institute* (Yivo), vol. 3 (1939) 314-47; Meisel, N., in *Haint* (Warsaw), Jan. 26, 1934; Apotchinsky, P., in *Moment* (Warsaw), April 8, 1938; Halevi, S. A., in *Das Yiddishe Folk* (New York), Aug. 21, 1942, p. 6.

RABINOWITZ, HIRSH, popularizer of science and publicist, b. Linkuva, Lithuania, 1832; d. St. Petersburg, 1889. He early displayed a talent for natural science. In 1867 he started a series of publications on mechanics, acoustics, thermodynamics, magnetism, elementary mathematics and chemistry. In 1871 he published in *Kol Mebasser* a series of popular articles on hygiene. From 1879 to 1884 he was active on the editorial board of the weekly *Russki Yevrei,* and in 1885 he published, under the editorship of I. L. Cantor, the monthly, *Yevreyskoye Obozrenie.* Rabinowitz founded a Jewish technical school at Dvinsk, Latvia.

RABINOWITZ, JACOB, Hebrew writer, b. Wolkowicz, Poland, 1876. After receiving the traditional Jewish education, and studying at the University of Berne, Switzerland, he began his literary career in 1899. He settled in Palestine in 1910, becoming a contributor to the *Hapoel Hatzair,* organ of the Palestinian workers. In 1904 the first volume of his novels was published; in 1922 the second volume, *Or Vaed* (Eternal Light).

Others of his works include: *Sethav* (Autumn; Tel-Aviv, 1927), a volume of poems; *Nedude Amasai Hashomer* (The Wanderings of Amasai the Watchman; Jerusalem, 1930), a novel dealing with life in Palestine

and the problems of settlement there; *Neveh Kayitz* (Summer Dwelling; Tel-Aviv, 1934); and *Hassagoth* (Notions; Tel-Aviv, 1935), a collection of articles. Some of his novels were published in *Hatekufah* (vols. 14, 15 and 29).

Rabinowitz (with A. Barash) founded and edited a bimonthly literary magazine, *Hedim*. He also translated into Hebrew some of the works of Selma Lagerlöf, Dimitri S. Merezhkovski, Hermann Joachim Bang, and Gustave Flaubert.

RABINOWITZ, JOEL, minister, b. Lublin, Poland, 1828; d. Cape Town, South Africa, 1902. Educated at several rabbinical colleges near Lublin, at the age of twenty-four he went to England, where he was given employment for some months by two Jewish scholars, Adelman and Dukes, at the Bodleian Library, Oxford. He rapidly acquired a knowledge of English. From 1856 to 1858 he acted as minister to the principal Jewish congregation at Birmingham. When thirty years old he was, at the special recommendation of Chief Rabbi Nathan Marcus Adler, elected minister of the Cape Town Hebrew Congregation, which position he held for twenty-three years. In 1882 he returned to England, where he remained for four years. While in London he served on the Council of the Anglo-Jewish Association as well as that of the Jews' Deaf and Dumb Home.

Shortly after his arrival at Cape Town (1886) he left for the new gold fields on the Witwatersrand as an assayer, which subject he had studied under Dr. Hahn of the South African College, Cape Town. He did not remain long at Johannesburg, where he officiated at the first Jewish burial. His last years were spent at Cape Town.

Rabinowitz was highly esteemed in South Africa. He was popularly known as the "champion beggar," having raised thousands of pounds for the poor and sick of all denominations. He was particularly active in helping the victims of the 1881 Russian pogroms. Among others, he aided the relief fund for the Damaraland Trek Boers, the afflicted of the Franco-Prussian War (1870-71) and the British orphans of the First Anglo-Boer War.

He wrote a series of articles on "Jews in South Africa" for the *Jewish Chronicle* (London; June-August, 1895).

S. A. ROCHLIN.

Lit.: Jewish Chronicle, July 25, 1902; Herrman, Louis, *A History of the Jews in South Africa* (1930) 191 et seq.

RABINOWITZ, LOUIS MAYER, manufacturer and philanthropist, b. Rossane, Russia, 1887. He emigrated to the United States in 1901, and in 1916 established in New York his own firm for the manufacture of corsets and related products. This firm rose high in the industry; in 1934 he was made chairman of the corset industry, and in 1935 director of the Business Men's Council.

Rabinowitz participated in various welfare movements. In 1921 he was elected vice-president of the Hebrew National Orphan Home, and in 1935 became a director of the Federation for the Support of Jewish Philanthropic Societies of New York City. Later he assumed the vice-presidency of the Jewish Hospital of Brooklyn. To the hospital he donated the pediatric murals (covering fifteen rooms) planned by Max Abelman and executed by Albert Cugat, also murals for the rooms known as "Dining Through the Ages" and "Room of Sports." He created a surgical fellowship at the hospital. He was one of the earliest donors of an ambulance for Greece. In 1942 he donated to the National Jewish Hospital of Denver a valuable collection of over 300 specimens of classical and modern art reproductions.

RABINOWITZ, SAUL PHINEHAS, historian and Hebrew writer, b. Taurogen, province of Kovno, Lithuania, 1845; d. Frankfort, Germany, 1910. He studied the Talmud first under his father Samuel Mordecai Rashkes, rabbi at Shnipishock, a suburb of Vilna, and then under Jacob Barit. Later he attended the Yeshiva of Israel Lipkin at Kovno, supporting himself by private instruction. Here he became acquainted with a Protestant minister who taught him German. In 1868 he returned to Vilna and was ordained rabbi, but knowing that the Orthodox would not permit him to serve as rabbi, decided to become a teacher and writer. In 1874 he settled in Warsaw, and published his first essay in *Hamaggid*. From 1877 to 1882 (except for a few months when he worked for *Hamelitz*) he assisted Slonimsky with the publication of *Hatzefirah* as one of its chief contributors. In 1882 he became active in the Chovevei Zion movement, in which he played an important role as organizer of the Kattowitz conference and as secretary of the Warsaw committee of the organization.

In 1887 Rabinowitz began his most important work, the translation of Heinrich Graetz' history of the Jews into Hebrew, which appeared at Warsaw (1890-99) in eight volumes under the title *Dibre Hayamim Libene Yisrael*. Notes by A. Harkavy are added from vol. 3 on. The work contains many amplifications of the original text, references to comments on the original text by authorities and additions to the text, especially in treating the history of the Jews in Poland, Lithuania and Russia. The eleventh or last volume of the original text was not translated by Rabinowitz. This work became the standard Hebrew work on the history of the Jews written from a nationalistic point of view, and introduced Hebrew readers of Eastern Europe to the scientific methods of the German school.

Rabinowitz also wrote *Motzae Golah,* a history of the wanderings of the exiled Jews of Spain; a biography of Zunz (*R. Yom Tob Lipmann Zunz,* Warsaw, 1896); a monograph on Zacharias Frankel (Warsaw, 1898); and a biography of Joselmann of Rosheim (1914).

Lit.: Zitron, in *Hazeman* (1910), Nos. 261-64; Meisl, in *Wiener Morgenzeitung* (1920), No. 676.

RABN, *see* ABRAHAM BEN NATHAN HAYARHI.

RABN (also **RABeN**), *see* ELIEZER BEN NATHAN OF MAYENCE.

RABOY, ISAAC, Yiddish author, b. Zawabic, Poland, 1882. Part of his childhood was spent in Bessarabia. Although he had started to write while still in Europe, none of his work saw publication. In the United States, where he arrived in 1904, Raboy encountered further difficulties until he met David Pinski, then (1906) editing *Der Arbeiter,* which published a few of Raboy's stories. Raboy continued to earn his living, however, through various trades. In 1908 he went west, and worked on a ranch in North Dakota. While rounding up the horses in a sudden storm, he was severely chilled, and thereafter carried himself in a slightly sidewise fashion, as the result of stiffness. Returning to New York city in 1913, Raboy continued to work in factories and to write in his spare time. Raboy's prose is lyrical and picturesque; he introduced into American Yiddish literature the novel themes of love of nature and knowledge of American rural life.

His first book, *Herr Goldenbarg un andere Ertzailungen,* appeared in 1918. Later books were *Nei England* (1918); *Ich Dertzail* (1920); *Eigene Erd* (1928); *Eez gekummen a Yid kein Amerika;* and *Nein Brider* (1936). He wrote regularly for *Die Freiheit* and other Communist periodicals.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 1-8.

RABBI GEORGE WOLF

RAB-SHAKEH, title of the Assyrian official sent by Sennacherib to urge the surrender of Jerusalem, then under blockade (*II Kings* 18:17; *Isa.* 36:2). Insisting on speaking Hebrew, Rab-shakeh scoffed at the Hebrew God and at the possibility of saving Jerusalem, and advised the populace to surrender. They remained stubborn, however, supported by Hezekiah the king and Isaiah the prophet, and finally Sennacherib was forced to raise the blockade and to return home.

RACE, JEWISH. 1. Introduction. In zoology the designation race is given to groups of creatures which, by their community of determining physical and mental characteristics, give evidence of a common origin and blood relationship. Groups of human beings to which the zoological concept of race would apply are of very rare occurrence in those groups which have not as yet been affected by world history and by the intermixtures of nations which have occurred in its course. Because of the innumerable mixtures which have taken place in prehistoric and historic times, there is no pure race among the peoples of world history. Thus, for example, there exist the abstract concept "German," and countless individuals of this German stamp, but there is no larger ethnological group of Germans. The so-called Germanic peoples, like the Germans, English, Scandinavians, and the like, had their origin in countless blendings or mixtures of Germans, Slavs, Celts, Mediterranean peoples, Jews and others, and it was not until after the passage of many centuries, and as the result of inbreeding and adaptation (common climate, mode of life, language, education, form of state, religion and historical fate), that they were fused into peoples possessed of a certain unity and unified character, but which can not be characterized as races, but at the most as culture races (approximately identical with the concept nation). Within this nation the various types of the races which had a share in its formation sometimes appear in their pure form, but for the most part they evidence themselves in mixed form, and thus impart to that nation a certain "racial" stamp in contrast to other nations which are formed from other component parts. To take several examples: the German people is distinguished by the relative frequency of the Germanic type, the Russian by the relative frequency of the Slavic type, and the Italian nation by the relative frequency of the Mediterranean type; on the other hand, however, in these three peoples all other types of the races intermingled with them are often found in preponderant numbers, for example in Germany, in the eastern sections, the Slavic and in the southern parts the Alpine type, in Russia, in the western sections, the German and in the eastern part the Mongolian, and the like, so that no large nation belonging either to the European or to the Near East cultural region may be said to have a uniform or constant racial character.

2. The Jews as a Race. The Jews, too, are a historical cultural product which had its origin in a mixture of several races and cultural peoples. In its formation certain human groups of varying origin became joined together first into a religious, then into a cultural and finally into a political unity as well, and these then, as a result of a centuries-long process of inbreeding, mutual assimilation of physical and intellectual-mental qualities and characteristics and the leveling influences of a common abode and destiny, amalgamated into a human type possessed of a certain unity, the Jewish type. According to the historical data given in the Bible, and which, for the most part, are reliable, the following groups had a share in the formation of the Jewish people:

(a) The families of the Patriarchs, "the descendants of Terah," who came from southern Babylonia (Ur in Kasdim is equivalent to Chaldea), and emigrated to Canaan about 2200 B.C.E. by way of northern Babylonia (Haran in Paddan-aram). As Babylonians they presumably belonged, racially and biologically, to the Arabian-Iranian mixed group of the Mediterranean race.

(b) The Hittites, who, at the time of the entrance of the Patriarchs, formed the dominant upper stratum of the Canaanite population and who, since mixed marriages and the conversion of slaves were permitted by law, intermarried with the patriarchal families. The Hittites represent in antiquity the Armenian type, and as a result of the intermixture with the Jews which began here and which later, after the second settlement of Canaan, was continued to an intensive degree, introduced into the Jewish people that element which in Europe, especially in caricatures, is generally regarded as being specifically Jewish (small stature, smooth skull, arched aquiline nose, slight obliqueness and slit-like form of the eyes, tendency toward obesity, small, slightly arched limbs).

(c) Egyptians from the period of the "Egyptian bondage" (about 1200 B.C.E.), and by reason of the intermarriages, sales of slaves and conversions of slaves, attested by numerous passages in the Bible, as a result of which the Jews received negroid elements in addition to the Arabian elements (large eyes, dark complexion, black woolly hair, raised lips, and large teeth).

(d) Arabs, through the union of the patriarchal tribes which came forth from Egypt with the "Hebrews" (Israel tribes, about 1000 B.C.E.), who were nomadic Bedouins of the Arab type (this type is usually designated among the Jews of today as the "handsome oriental" type, and occurs especially among the Sephardic Jews of Spanish origin and of Northern Africa).

(e) Canaanites, a mixed population of Arab Semites belonging to an earlier cultural stratum (the so-called Amorite), and with later cultural contributors, Babylonian, Egyptian and Hittite in origin, who emigrated into Canaan for colonization or for conquest. The Canaanites were assimilated into the Judah-Israel tribes who invaded Canaan, first as a result of military activity (enslavement and the proselytization of those captured in war, and the taking as concubines of women Canaanites captured as booty), and later through peaceful assimilation and mixed marriages (1000 to 800 B.C.E.).

(f) Blond Germanic elements through assimilation extended over several centuries, first military (slavery) and then peaceful, with the Philistines, who were presumably of Nordic origin and belonged to the blond type (900 to 400 B.C.E.).

(g) Greeks and Romans, through mixed marriage and the acceptance of slaves in the centuries of Hellenism and of the Roman rule over Judea (300 B.C.E. to 70 C.E.).

(h) Proselytes from all the peoples of the civilized world extant at that time in the centuries of the decline of the ancient civilization, of the conversion of pagans and of the cessation of slavery (from 1 to 1000 C.E.), such as Arabs, Egyptians, Babylonians, Syrians, Persians, Armenians, Greeks, Romans, Mauretanians, Germans, Celts, Slavs, Hungarians and others.

3. Ashkenazim and Sephardim. After the destruction of Jerusalem (70 C.E.), the Jewish people was divided by its dispersal in the Diaspora into two groups, the one a northern and eastern one, which spread over Turkey, the Balkan countries, Northern Italy, Germany, Hungary, Austria, Poland, Galicia, and Southern and Western Russia; and a southern and western group, which settled in the area of Greater Arabian civilization, Northern Africa and Southern Europe, from the Bosporus to Spain. As the result of complete divergence of historical destiny and vicissitudes, of milieu, of intellectual and physical education, of mixed marriage and assimilation with two totally

different national and cultural spheres, and as the result of the different effect of the northern and the southern climate, these two groups developed into two types, the "German" (Ashkenazic) and the "Spanish" (Sephardic) Jews. The Ashkenazim are Germanicized and Slavized Jews; the Sephardim are Mediterranean Jews. The greatest part of the Sephardic Jews were annihilated or lost to Judaism, after the expulsion of the Jews from Spain in 1492, through persecution, compulsory baptism and later assimilation.

4. Foreign Tribes or Groups. From the component parts of the Jewish people thus far mentioned, who were completely incorporated into the Jewish national body through a process of centuries-long assimilation, mixed marriage and inbreeding, there must be rigidly distinguished those "Jews" who, perhaps as foreign tribes, accepted the Jewish faith and call themselves Jews, but who preserved their anthropological and ethnological distinctiveness and uniqueness as independent national groups without any essential connection through intermarriage. Such foreign tribes of Jewish faith are:

(a) The Yemenite Jews in Arabia, who are regarded as descendants of the South Arabian (Himyaritic) tribes which were converted to Judaism about 450 C.E.

(b) The Falashas in Abyssinia (Ethiopia), a mixed tribe living in the region of the Red Sea, and composed of whites and negroes (?) in the number of approximately 50,000.

(c) The Caucasian Jews on the Caspian Sea, Georgian (Grusinian) tribes of Iranian race, who later intermarried with Kirghizes (Mongols of the Volga plain), and were converted to Judaism probably through Jews coming from Persia. These latter then lost their peculiar identity as a result of mixed marriages with proselytes, so that the Grusinian Jews are composed of three racial and cultural elements, i.e. Semitic Jews, Aryan Iranians, and Mongolian Turanians.

(d) The Black Jews of the Kala Israel around Bombay (Beni Israel of Cochin and India), Hindus who were, presumably, converted by Spanish Jews and who today, together with the remnants of the "White Jews" (descendants of these Spanish Jews), live as "Black Jews" on the Malabar Coast.

(e) the Chinese Jews in the province of Honan.

(f) The Mawambu (Mawumbu) Negroes of the Loango Coast (western Africa), who live in accordance with Jewish ritual law.

(g) the Khazars.

These foreign tribes or groups, who became connected with Judaism by means of proselytization, but not with the Jewish people, today form a part of the Jewish religious community, but are not a component part of the Jewish people. Through their hitherto comparatively active share in the colonization of Palestine these racial elements, too, in the event of a new consolidation there, may in the future be joined to the body of the Jewish people as new component parts and thus influence the present type of the Jew.

5. Anthropology. On the basis of the above brief and general presentation of the origin of the civilized nations from various races, and in particular on the basis of the vicissitudinous racial history of the Jews, there may be explained the fact that all attempts to give an anthropological characterization to the present-day peoples have been unavailing. Even aside from the fact that the criteria of anthropology (cranial measurements, height, color of the skin and hair, form of hair, and the like) are in general unreliable and insufficient, and that statistical data are usually explained, interpreted and exploited in the most variegated ways, in view of the multiplicity of the component parts and of the great number of mixtures and interminglings which have taken place, no definite basic figures (indexes) may be determined for any people—least of all for the Jews, whose racial history is more multifarious and more beset with problems than that of any other people.

All the theories on "the Jews as a race" which have been advanced hitherto by the racial theoreticians have proved fruitless and untenable, since there still exists no expert scientific basis for the construction of theories. The few anthropological researches which have thus far been achieved on the subject of the Jews are to be regarded merely as preliminaries to the future study of the anthropology of the Jews, which will require an elaborate, systematic, and painstaking investigation and sifting of the material extending over fully a number of decades. The result of these investigations may be predicted with a moderate degree of certainty on the basis of the conclusions hitherto arrived at, and of theoretical expectations, as follows: there are considerable anthropological differences in accordance with the particular habitat of each of the groups investigated. Whether these differences must be interpreted as those of "race," i.e. of historic origin, or as secondary environmental influences, is something which will be difficult or impossible to decide, just as in general the interpretation of things which were once regarded as definitely established facts of anthropology has thus far been shown to be extremely problematical and as requiring the greatest caution and prudence for their investigation and acceptance.

A solution of the racial problem in the sense of a theory of race connecting the idea of cultural validity with that of race can not be expected of anthropology, since anthropology deals only with the somatic (corporeal) factor which possesses basically only an extremely conditional and limited value for the judging of psychic, moral and cultural qualities.

See also: AMORITES; TYPES, JEWISH. FRITZ KAHN.

6. Heredity. Down to comparatively recent times a greater force of heredity was attributed to those races which had lived for a long period of time in relative seclusion. It was believed, likewise, that "pure" races are more effective in heredity than mixed ones. For both these reasons it was generally assumed that the Jews transmitted their racial peculiarities by heredity very rigidly, and continued to do so upon intermarriage with other tribes or groups. Thus Reibmayr, in his *Inzucht und Vermischung beim Menschen,* cited the Jews as the model of rigid hereditary transmission of the specific cultural values received from certain races. However, Salaman showed to the contrary, in his studies of the mixed marriages of English Jews, that often in such cases racial heredity is of a different nature and evidences a different result than would be expected on the basis of this theory.

As in all questions of heredity, so in this problem as well there has been a great revolution in ideas ever since the publication of the Mendelian laws of heredity. No individual, and also no race, transmits his or its characteristics as a whole, but each and every "characteristic" is transmitted only in accordance with definite laws upon contact with other "characteristics," or it becomes recessive or is mutated. Hence to-day there can no longer be a question as to whether there is racial heredity among Jews, but solely as to which specific characteristics can be demonstrated to be hereditary and thus to be racial characteristics, and how such heredity works in the case of mixtures.

As regards the shape of the skull, which has been regarded for a long time as the most important racial characteristic, Professor Felix von Luschan, even in the period before Mendel, on the basis of observations made on two population types in Adalia, Asia Minor, which

were crossed with each other, stated that the forms of the skull are not mingled into a medial form, but that in the subsequent generations they always divide again into the two types, and that such a division often occurs in the same family. Other authorities, especially Zollschan among the Jewish ones, regard the cranial form as not hereditary, but as subject to mutation by reason of environmental and cultural influences. On the basis of studies made in accordance with the Mendelian laws, it is now quite probable that Luschan was right, but it has not as yet been determined with absolute accuracy and certainty just which component parts of the cranial form are individual characteristics of hereditary nature in the Mendelian sense.

Among Jews there is a characteristic cranial form demonstrable, which may be regarded as a hereditary racial characteristic: the great majority of the Jews are brachycephalous in moderate degree (index 80-85). Here this very characteristic variation of small groups as regards cranial form (Caucasian and Yemenite Jews) proves that there is a typical racial character as regards this characteristic.

This has been shown for quite some time to be true as regards the color of the eyes. The blue and light gray color of the eyes has its origin in the absence of the anterior pigment in the iris. In this connection, through Davenport, the Mendelian laws have now been definitely and unmistakably confirmed: the pigmentated eye (brown color) is dominant over the unpigmentated. There are numerous races among which blue eyes do not occur at all (thus, for example, also the Yemenites), whereas among the great majority of Jews both color types occur. However, the normal and strongly fixed distribution of these types among the Jews of the whole world shows that we are here concerned with a characteristic which has been maintained through heredity.

The same is true of the color of the hair. This, too, is probably connected with race in some way or other, for, as far as is known, there is in the entire world only a single group, a part of the population of northern Europe, in which blond hair occurs as a racial characteristic, and it appears that everywhere else this lack of pigmentation of the hair is to be traced back to intermarriage with this group. At any rate, however, the details of the method by which the various colors of the hair are inherited have not yet been clarified sufficiently despite the numerous works written on the subject. All pigmentations of the hair occur among Jews; however, there are indications that this does not take place without fixed rule, but that there operates a definite and fixed law of distribution of pigmentations (colors) of the hair as regards the majority of the Jews in all countries. In cases in which individual groups deviate from this law, it is demonstrable that they either do not belong to the Jewish stock or that they have been influenced by special intermixings.

The color of the hair, which represents a racial characteristic of the greatest importance in the large groups of mankind, can not safely as yet be incorporated into the laws of heredity as regards its finer distinctions and nuances, with the result that it is still unknown whether these shadings represent hereditary racial characteristics or may be traced back strongly to climatic influences.

The facial type, which is regarded by the instinct of the people as the most distinctive racial characteristic, can be determined from the scientific point of view only with the greatest of difficulty. Heredity may be regarded as certain by reason of one of its most essential elements, i.e. the nasal form. The hawk-nose or "Jewish nose" is not characteristic of Jews, but the majority of Jews show a straight nasal form.

The stature (size) of the body is too dependent on environmental and nutritive influences to be employed as a racial characteristic in individual cases. Yet it is quite certain that there is a hereditary racial component at its basis; there are large races and small races. The Jews are of medium size, an average of 164 to 165 centimeters (about 65 inches) tall.

In the same manner as bodily forms, bodily functions, too, show hereditary racial characteristics which are designated as physiological racial marks. With reference to Jews, the time of the first menstruation may be regarded as such. This period is inherited racially, since Jewesses throughout the entire world are distinguished by this same early beginning of menstruation (between the twelfth and thirteenth year of life) from the surrounding European and North American population. (For German women it occurs between the fifteenth and sixteenth year.) This is a true survival of their oriental origin which is found in similar manner among other oriental races.

Arthur Ruppin has called attention to a further physiological racial characteristic of the Jews, i.e. their behavior with reference to the most widespread drugs common to civilization. While the European races show preference for the paralyzing poisons (alcohol) as well as do the Mongolian (opium), the Jews favor the stimulating poisons (caffeine, theobromine, nicotine). This trait, too, is hereditary, and links them with other oriental races.

Also in their relations toward and reaction to certain diseases do the Jews evidence a clear racial heredity. There are diseases which occur almost exclusively among Jews, such as amaurotic idiocy of small children (cf. Singer, *Die Krankheiten der Juden*); but these are so rare that they do not enter into consideration as a racial characteristic. Of greater importance is the tendency of Jews toward glaucoma and toward intermittent limping (possibly the result of nicotine poisoning?). In connection with most of the diseases a special tendency toward which is attributed to Jews, Elias Auerbach showed that there is no reaction or conduct conditioned by racial considerations. This is especially true of diabetes, by which Jews are not affected more frequently than is in keeping with their occupational distribution. Similarly, their reaction to the nervous and mental diseases is conditioned by social considerations. On the contrary, however, there is one disease which apparently through racial heredity occurs surprisingly rarely among Jews: puerperal cancer (Auerbach and Theilhaber). In this respect, too, they resemble other oriental races. ELIAS AUERBACH.

RACE, *see* CASTES; GENEALOGY; HISTORIOGRAPHY.

RACHEL, younger daughter of Laban and wife of Jacob. According to the story as told in *Gen.* 29 to 35, Jacob first met her at the well of Haran, her native city, fell in love with her, and served Laban for seven years in order to marry her. Laban, however, deceived Jacob and gave him his elder daughter, Leah, instead; later Jacob married Rachel on the promise to serve seven more years. Since Jacob preferred Rachel to Leah, God took the side of the latter, who had many children, while Rachel was childless. After fruitlessly quarreling with Jacob on the subject, Rachel com-

Rachel Meets Jacob. From a painting by Raffaello Santi

Traditional tomb of Rachel in Palestine

promised by giving her handmaid Bilhah to Jacob as concubine, and thus became the vicarious mother of Dan and Naphtali. Eventually, however, she became the mother of Joseph. When Jacob and his family fled from Laban, Rachel took the household gods (Teraphim) which she successfully concealed from her father when he overtook Jacob and searched his tents. She died while on the road from Beth-el to Ephrathah, while giving birth to her second son, Benjamin. She was not buried in the cave of Machpelah, like the other wives of the patriarchs, but where she died; according to *Jer.* 31:15, this was near Ramah.

Rabbinical literature dwells on the story of Rachel, expanding it in details, and endeavoring to soften some of the harsher features. Rachel has always remained a favorite Biblical character with both Christians and Jews. Scenes from her life have been frequently portrayed by artists.

Lit.: The commentaries on *Genesis; Jewish Encyclopedia,* vol. 10, pp. 305-7.

RACHEL, TOMB OF. The Biblical narrative relates that Rachel, the wife of Jacob, died while journeying from Beth-el to Ephrath, and that she was buried by the road (*Gen.* 35:16-20; 48:7). It is clearly evident from *I Sam.* 10:2 that the location of the tomb of Rachel was somewhere north of Jerusalem, along the southern boundary of the territory of Benjamin. This is corroborated by *Jer.* 31:15, where the site of Rachel's grave is mentioned in connection with Ramah, a town which lay north of Jerusalem (cf. also *Jer.* 40:1). Hence the customary location of Rachel's tomb, south of Jerusalem and near Beth-lehem, is certainly erroneous, as was already noted by Nahmanides, in his commentary to *Gen.* 35:16. This location, moreover, is certainly of Christian origin, and is due partly to *Matt.* 2:18 and partly to a mistaken interpretation of the passages in *Genesis.* In the narrative of the death of Rachel, the words "in the way to Ephrath—the same is Beth-lehem" are intended merely to give the direction, and do not indicate that the tomb of Rachel was near Beth-lehem.

The present building close by the road to Beth-lehem, adorned with a cupola, was probably built in the Middle Ages; it was restored by Moses Montefiore. All three religions regard it as holy, and it is still the goal of Jewish pilgrims, who come there to pray. The Arabs call it Kubbet Rahil.

Lit.: Hastings, James, *Dictionary of the Bible* (1927) 781; Benjamin of Tudela, *Travels,* edit. Asher, p. 4, gives a description of the building as it was at the end of the 12th cent.

RADEK, KARL BERNGARDOVICH (originally named Sobelsohn), revolutionary and publicist, b. Lemberg, Galicia, 1885. Here he became active in the working class movement at the age of fourteen. By 1901 he was an important figure in the Galician Social Democratic Party. From 1904 to 1908 he was a factor in the Polish Social Democratic Party, and in 1908 he played a vital role in the left wing of the German Social Democratic movement.

When the first World War broke out, Radek took an internationalist (anti-imperialist) position and was a key figure in the Zimmerwald and Kintal party conferences. After the October Russian Revolution (1917) he went to Petrograd and actively participated in the construction of the new republic but took the "Left Communist" position advocated by Nicolai Bukharin. He was nevertheless given important positions in the Soviet government. After the peace of Brest-Litovsk he was put in charge of the Central European division of the Commissariat of Foreign Affairs. Following the German Revolution (November, 1918) Radek got into Germany illegally as a member of the Soviet delegation to the Soviet Congress. Here he helped organize the first congress of the Communist Party of Germany. On February 15, 1919, he was arrested but freed, in December of that year, and he returned to Russia.

In 1920 he became secretary of the executive committee of the Communist International. He was one of the principal reporters at the second and third congresses of the Communist International and at the Congress of the Toiling People of the East in Baku in 1920. From 1919 to 1924 Radek was a member of the Central Committee of the Communist Party of the Soviet Union (CPSU—B). In 1924, however, he joined the Trotskyite opposition against the then party and government position, and at the fifteenth congress of the CPSU (B) he was expelled from the party. In the summer of 1929 he asked to be readmitted, acknowledging (in a letter to the Central Committee) his errors and announcing his separation from the Trotskyite movement.

He now became influential as a journalist and speaker on international affairs. His articles appeared in *Pravda* and *Izvestia* regularly as well as in other journals, and he wrote many articles on literature and the theater as well. Several of his books on the history of the labor movement were published during this period.

But in 1937 Radek, as a member of the Trotskyite opposition, was again found guilty of complicity against the Soviet government. He had been tried in the famous case of the "Anti-Soviet Trotskyite Center" heard before the military collegium of the Supreme Court of the USSR (Moscow, January 23-30, 1937). Along with sixteen others, Radek was found culpable of being a member of an anti-Soviet Trotskyite organization. Moreover he, Pyatakov, Serebryakov and Sokolnikov were found to be members of the group which directed this organization and at the direct behest of Leon Trotsky, "the enemy of the people," then living abroad, "assisting foreign aggressors in seizing territory in the Soviet Union, overthrowing the Soviet power and restoring capitalism and the power of the bourgeoisie . . . with the object of expediting an armed attack on the Soviet Union."

Joseph E. Davies, then United States Ambassador to the Soviet Union, who was present at these trials, described Radek's attitude as that of one of the political leaders in the plot who, although not personally participating in the specific crimes enumerated, had knowledge of them and therefore did not seek to evade responsibility.

Although held responsible for the criminal activities of the "Anti-Soviet Trotskyite Center," Radek was saved from execution on the ground of not having directly participated in "the organization and execution of acts of a diversive, wrecking, espionage and terrorist nature." For his activity he was sentenced to ten years of imprisonment, five years' deprivation of political rights and confiscation of all personal property. This term he was still serving in 1943.

RADIN, ADOLPH MOSES, rabbi and communal worker, b. Neustadt-Schirwindt, Poland, 1845; d. New York city, 1909. He received a thorough rabbinic and secular education in his native country and in Germany, where he was awarded the degree of doctor of philosophy at Greifswald University. After serving as rabbi in Prussia and in Poland, he emigrated to the United States in 1886. Almost at once he became rabbi of the Jewish congregation at Elmira, New York. At the same time he was appointed visiting Jewish chaplain of the New York State Reformatory in that city, and this was the beginning of his pioneer work among Jewish prison inmates. He was then called to the congregation Gates of Hope in New York city. In 1890 he was designated chaplain of all penal institutions of New York and Brooklyn, a post he held until his death. In 1905 he had taken charge of the pulpit of the People's Synagogue of the Educational Alliance, and here too he remained until the end.

Thus, in addition to his life-long work in helping to rehabilitate Jewish criminal offenders, Radin labored as educator and minister to the underprivileged and crowded masses of New York's East Side immigrants. One of his outstanding educational achievements was the Russian American Hebrew Association. He served numerous and diverse philanthropic causes, winning exceptional repute for his ability in collecting funds. Much of his charitable work was done through intimate personal contact, and at his funeral his popularity was attested to by the forty thousand persons who followed his cortège.

His *Offener Brief eines polnischen Juden an Heinrich von Treitschke* appeared at Königsberg in 1879 under the pseudonym of Moses Aaron Nadyr; the third edition was published in the United States in 1885 under his real name.

Radin was throughout his career a champion of Zionism.

Lit.: Central Conference of American Rabbis Year Book, vol. 19 (1909) 424-31.

RADIN, MAX, jurist and historian, b. Kempen, Prussia, 1880. Son of Adolph Moses Radin, he was brought to the United States in 1884, and educated in New York city. In 1902 he was admitted to the New York bar. He taught first in the public schools of the city, and in 1917 was appointed lecturer in Roman and civil law at his alma mater, the College of the City of New York; the following year he became, as well, instructor at Columbia University. He then moved to California to join the staff of the University of California as professor of law, in 1919, and in 1940 was made John Henry Boalt professor, a chair he still held in 1943. He had been admitted to the California bar in 1920, and in 1939 was admitted to practice before the Supreme Court of the United States.

By this time, Radin had become one of the country's outstanding jurists and juridical writers, and his appointment in 1940 by Governor Culbert L. Olson to the State Supreme Court of California was a popular choice. But, in an unprecedented action, the California Judicial Qualifications Commission refused to confirm the appointment. Radin's rejection aroused public opinion, and created a clamor for the abolition of the commission.

An outstanding contributor to philological and legal periodicals, Radin published also a number of distinguished volumes on history and law. His writings include: *The Legislation of the Greeks and Romans on Corporations* (1909); *The Jews Among the Greeks and Romans* (1916); *Handbook of Roman Law* (1927); *Life of the People in Biblical Times* (1929); *The Lawful Pursuit of Gain* (1931); *The Trial of Jesus of Nazareth* (1931); *Handbook of Anglo-American Legal History* (1936); *The Law and Mr. Smith* (1938); *Marcus Brutus* (1939); *Manners and Morals of Business* (1939); *Law as Logic and Experience* (1940). In this last volume Radin clarified further the concept of Associate Justice Oliver Wendell Holmes: that the life of the law has been experience.

In 1940, Radin was awarded the Townsend Harris medal of the Alumni Association of the College of the City of New York.

RADIN, PAUL, anthropologist, b. Lodz, Poland, 1883. He was the brother of Max Radin. After receiving his B.A. degree from City College in New York city, he studied in Berlin and Munich, and returned to receive his Ph.D. from Columbia University in 1911. Radin's work with the American Indian, which was to become his specialty, was begun while he was in Berlin.

From 1910 to 1912 Radin was a member of the staff of the Bureau of American Ethnology; later he was field ethnologist for the Geological Survey of Canada. His subsequent research carried him into various Latin American countries. In addition to teaching at the University of California, Fisk University and the University of Chicago, Radin taught in Zurich, Switzerland, and lectured at Cambridge, England. In 1942 he was professor of anthropology at Black Mountain College, North Carolina.

In his published work Radin often broke away from an academic viewpoint, particularly in his ethnological studies. An example of his unorthodox approach was *The Racial Myth* (1934), in which he explained the Germanic racial theories of the period by the retarded —and therefore inferiority-conscious—unification of Germany.

Among Radin's other published works were: *The Sources and Authenticity of the History of the American Mexican; The Winnebago Tribes; Crashing Thunder,* the autobiography of an American Indian; *The Story of the American Indian; Social Anthropology; Method and Theory of Ethnology; Primitive Religion* (1937); *Indians of South America* (1942).

Lit.: Browne, Lewis, in *Opinion,* June, 1934, p. 21.

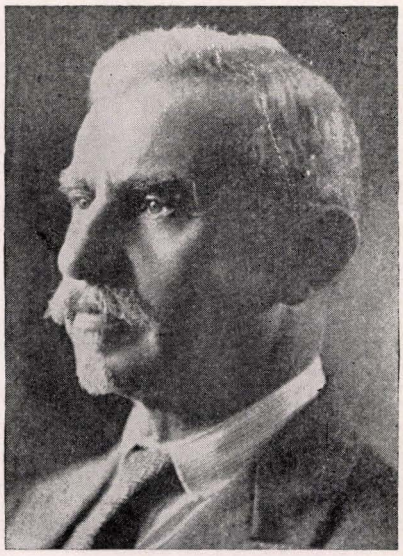
RADIO, *see* MUSICAL ORGANIZATIONS; THEATRE.

RADITZ, LAZAR, painter, b. Dvinsk, Russia, 1887. He came to the United States in 1903, and was educated in art in Philadelphia and Boston, studying under William M. Chase. In 1907 he was granted a traveling scholarship, and went to Europe to continue his studies. Later he was appointed instructor at the Graphic Sketch Club in Philadelphia. Among the several prizes awarded Raditz were the bronze medal at the Panama-Pacific Exposition in San Francisco (1915) and the second Hallgarten prize at the National Academy of Design in New York city (1919). Portraits executed by Raditz and acquired by various institutions in Philadelphia include those of Dr. I. M. Hays, at the American Philosophical Society; Judge Mayer Sulzberger, at Dropsie College; Dr. William J. Taylor, at the College of Physicians; Dr. Hobart M. Hare at the University of Penn-

sylvania; and a self-portrait in the Pennsylvania Academy of the Fine Arts. Many of his works were exhibited in other cities.

RADÓ, ANTAL, poet, esthete and translator, b. Mor, Hungary, 1862; he was reported to be no longer alive in 1942. He held a distinguished position in Hungarian letters, which he influenced through translations of the masterworks of world literature, such as Dante's ***Inferno,*** Ariosto's *Orlando Furioso,* Firdusi's *Shahname,* the sonnets of Petrarch, some plays of Shakespeare and Schiller, as well as selections from French, Italian, Greek and Latin poets. He held the honor of membership in the Kisfaludy Literary Society, rarely bestowed upon Jews; he was speaker of the Hungarian Shakespeare committee; editor of several serial publications of classics; founder and chairman of the Hungarian P.E.N. Club; member of the Venice Academy which published his work, *Per il centenario del romanziero ungherese Jókai* (1925); trustee of the IMIT (Jewish Hungarian literary society), to the year books of which he contributed poems and essays, including his memoirs of his father, the Jewish village teacher (IMIT year book, 1911).

At the outset of his career, Radó was a member and subsequently chairman of Hungarian parliamentary stenographers. He published several volumes of verses of his own, and among his books in Hungarian on esthetics is a history of Italian literature.



RADÓ, SÁMUEL, author and journalist, b. Petrőc, Hungary, 1857; d. Budapest, 1919. He studied law at the University of Vienna, and was a correspondent for various newspapers in Paris. From 1898 on he was head of the Hungarian telegraphic agency, and reorganized its news service. He contributed to the *Pester Lloyd* and several newspapers outside of Hungary.

Among his published works are (in German): *Tisza, seine Partei und seine Gegner; Die ungarische Verfassung; Das Deutschtum in Ungarn; Der Sturz des Zarismus;* (in Hungarian): *Politikai frázisok és jelszavak* (Catchwords and Slogans in Politics); *John Bull és Társai* (John Bull and Co.). He also wrote a play entitled *Ujságirók* (Journalists).

RADOS, GUSZTÁV, mathematician, b. Budapest, 1862. He studied at the Technical School and at the University of Budapest, as well as at the University of Leipzig. In 1885 he became lecturer at the Technical School of Budapest; in 1891, upon adoption of the Christian faith, he was named full professor. Rados was thrice dean and seven times head of the faculty at the Technical School; co-founder and vice-president of the Hungarian physical and mathematical society, as well as editor for several years of its publication.

His own numerous works appeared in the mathematical journals of Hungary and other countries. His published books include *A felsőbbfoku kongruenciák eleméletéhez* (On the Theory of Higher Congruences) and *Analysis és geometria.*

RAFFALOVICH, ARTHUR, economist, b. Odessa, Russia, 1853; d. Paris, 1921. He studied at the Universities of Bonn and Paris, and took up his domicile in the French capital. He became a regular contributor to the *Temps* and the *Journal des Débats,* and came into intimate contact with various leaders of the political parties of France and with virtually all the important journalists of Paris. Raffalovich published several books on social and economic problems, especially on trusts and commercial conventions; later on he concentrated on the economic condition of Russia. The Russian government charged Raffalovich with the defense of the

Isaiah Raffalovich

Russian public credit against attacks published in the French newspapers. Raffalovich executed that commission by writing articles and by advising the Russian embassy at Paris and the government at St. Petersburg as to what French papers had to be supported by advertising. It was a thorny task that exposed Raffalovich to the reproach of having bribed the French press.

After Raffalovich published (1919) an attack against Bolshevism, the communist paper *L'Humanité* at Paris, in order to accuse him of bribery, was provided by the Bolshevist government with confidential letters written by Raffalovich about the distribution of advertisements among the French papers. But most of the documents were far from conclusive, and it was difficult for Raffalovich to draw a sharp line between legitimate support of papers defending his country and the wrong use of the advertising business. The czarist government named Raffalovich a member of the imperial supreme council of industry and commerce. He gained the confidence of the Russian minister Witte, and was the principal adviser of Kokovtzev, later Russian minister of commerce and finance.

RAFFALOVICH, ISAIAH, chief rabbi of Brazil, b. Pohopol, Russia, 1870. He ministered to congregations in Manchester, Merthyr-Tydfil, and Liverpool, England, and in 1923 the Jewish Colonization Association sent him to Brazil to investigate possibilities of mass Jewish immigration into the country, and to organize the religious and educational life of the Jews already there. Raffalovich became chief rabbi of Brazil, serving until 1935. A foremost factor in charitable and educational work throughout the whole country, Raffalovich directed the coordinated efforts of HIAS, ICA, and Emigdirect.

His published writings include: *Anglo-Hebrew Modern Dictionary; Israel's Literary Record in Dispersion; Brazil, Land of Jewish Immigration* (in Yiddish and in English); *Our Inheritance: A Collection of Sermons and Addresses for All the Sabbaths and Festivals* (1932); and, in Portuguese, *Rudimentos do Judaismo* (2nd ed., 1926); and a translation from Paul Goodman, *Historia do povo de Israel* (1927).

RAGOLER, ELIJAH BEN JACOB (known also as **Elijah Kalisher**), rabbi and Cabalist, b. Neustadt

Rahab and the Spies. From a painting by F. R. Pikersgill

Sugind, Kovno, Lithuania, 1794; d. Kalisz, Poland, 1849. He was descended from famed rabbinical scholars, and received his early education under his father Rabbi Jacob of Neustadt, who was equally learned in the sciences and foreign languages, and in Jewish studies. Ragoler had no teacher for the Talmud, which he studied by himself with great zeal, but when he was twenty-one, to further his interest in Cabala, he traveled to Volozhin to study under Hayim Volozhiner. Financial reverses soon forced him to leave, however, to accept a small rabbinate at Shat in Kovno; subsequently he went to Eiragola, or Ragola, and in the three years he served there as rabbi his renown spread so that he came to be known as Elijah Ragoler. Then ensued a fruitful period in Williampol, Slobodka, where Ragoler established the flourishing Yeshiva which turned out a number of famous rabbis. In pedagogy Ragoler held decided convictions, among them that youths should not approach the study of Talmud until the age of about twenty, after they had been thoroughly versed in the Bible. In 1840 Ragoler accepted the rabbinate of Kalisz, where he remained until his death.

As Cabalist Ragoler was a scientist only, and abhorred the practice of mystical ritual. He was involved in the great Orthodox-Reform controversy of his day; in a letter written to Zevi Hirsch Lehren of Amsterdam, when the latter was organizing to attack the Reform rabbis assembled at the Brunswick conference of 1844, Ragoler, who was a strict follower of the law, outlined his arguments against Reform. He maintained that "philosophies" of the Reformers were based on "natural phenomena" and "in the accepted law we can not question even the unnatural." He warned the Reformers not to taint the people with their ideas. This letter appeared, together with other writings, fifty years after his death under the title *Yad Eliyahu* (1900). Ragoler left four sons and four daughters; his sons and sons-in-law became rabbis.

Lit.: Frumkin, A. L., *Toledoth Eliyahu* (1900).

RAHAB, woman of Jericho who protected and aided the spies sent by Joshua; for this reason she and her family were spared when the Israelites took the city (*Josh.* 2; 6:22-25). According to Josephus and the rabbis, the word *zonah* used to describe Rahab does not mean "harlot," but "inn-keeper." According to Jewish tradition Rahab became a proselyte and married Joshua, becoming ancestress of priests and prophets; according to *Matt.* 1:5 she was the wife of Salmon and the mother of Boaz.

RAHAB, a mythological monster to which there are six references in the Bible. As nearly as can be judged from these, Rahab was an evil monster which God had to overcome prior to creating the world, similar to the Tiamat of the Assyrian-Babylonian myths. Like Tiamat, Rahab apparently had allies, as *Job* 9:13 speaks of the helpers of Rahab as stooping low before Him. *Isa.* 51:9 praises God for His acts in the past when He smote Rahab and slew the dragon (*tannin*). In *Job* 26:12 and *Ps.* 89:10-11 Rahab is so closely connected with the idea of the sea that it is clear that it is thought of as a sea-monster, or sea-spirit. Finally, in two other passages Rahab is used for Egypt. *Isa.* 30:7, deriding the helplessness of Egypt, calls her Rahab that awaits destruction. In *Ps.* 87:4 Rahab actually occurs side by side with a number of other countries such as Babylonia, Tyre and Ethiopia; evidently the allusion was familiar to all.

Lit.: The Biblical commentaries to the passages cited; Gunkel, *Schöpfung und Chaos* (1895) 30-40.

RAHABI, a Jewish family of importance in Cochin. The first member of the family to come to Cochin was David Ezekiel Rahabi (b. Aleppo, Syria, 1646; d. Cochin, Malabar, 1725). It was during the regime of the Dutch (1664) that Rahabi came to Malabar and was appointed Commodore of Cochin. He was known as David Pardesi (foreigner). Rahabi was the trading agent of the Dutch East India Trading Company in Cochin.

Ezekiel David Rahabi (b. Cochin, 1694; d. Cochin, 1772) was a savant, author, and communal worker. He was the son of David Ezekiel Rahabi. Rahabi's scholarship included many sciences, among them astronomy, and his fame as a savant soon spread far and wide. He devoted his wealth to Jewish philanthropies, and supported the rabbinical seminaries of the Yemen Jews. Rahabi was the first to have the copper grants to Joseph Rabban (750 C.E.) translated. Adrian Moen, in *The Dutch in Malabar,* praises Rahabi's critical ability. In 1726 he took over the trade agency to the Dutch East India Trading Company. After peace was concluded (1748) between the Dutch and the king of Travancore, Rahabi built a synagogue at Tirtur (1754); this structure had floorings of Chinese slabs which he himself had supplied. He was the author of *Huppath Hathanim,* containing Singalese Jewish hymns, printed at Amsterdam in 5529 (1769). In addition, he was one of the earliest to investigate the history of the Beni Israel, of the Jews in China, and of the Yemen Jews.

David Ezekiel Rahabi II (b. Cochin, 1721; d. Cochin, 1791) was a calendarian. He was the grandson of David Ezekiel Rahabi and the son of Ezekiel David Rahabi. After the death of his father, Rahabi took over the management of the Dutch East India Trading Company, but his cultural activities were not neglected. He worked among the Beni Israel, instructing the youth in the Torah and in Jewish customs, observances and history, and thus bringing them back to Judaism. (Contrary to the erroneous and the traditional views, it was this 18th cent. David Ezekiel Rahabi II, and not the purely legendary or fictitious David Rahabi of the 10th and 11th centuries, who brought about the revival of Judaism among the Beni Israel.) On two of his pupils he conferred the title of "Kadi." Rahabi was the author of *Ohel David,* which deals with the origin of the He-

Rosa Raïsa

brew calendar and was printed at Amsterdam in 1791. His great-great-grandson N. E. Roby (Naphtali Elijah Rahabi, b. 1863) was a Hebrew scholar, and the author of the article "Cochin" in the *Otzar Yisrael.*

RAIN, PRAYER FOR, *see* PRAYERS, SPECIAL.

RAINBOW, according to the Flood story, the sign of the new covenant of God with Noah, by which He promised that He would never again send a flood to destroy the earth (*Gen.* 9:12-17). It is possible that this is the reworking of an ancient myth in which the rainbow is the bow of the deity who uses it to send arrows against his enemies. In this case the placing of the rainbow in the clouds would be the putting aside of a weapon of war as a sign of peaceful intentions. Ezekiel speaks of rainbow colors in his vision of God (*Ezek.* 1:28); in this case the use of the rainbow may indicate the attribute of mercy. The Talmud considers the rainbow as one of the six things created just before the seventh day of creation (*Pes.* 54a) and drew up a special benediction to be recited when one sees a rainbow in the sky (*Ber.* 59a).

RAINER, LUISE, actress, b. Vienna, 1912. She made her first appearance on the stage at the Dumont Theatre in Düsseldorf, Germany (1928), and subsequently appeared in *Saint Joan, An American Tragedy, Six Characters in Search of an Author* and other modern psychological plays. She was a member of the theater troupe of Max Reinhardt in Berlin. In 1935 she emigrated to the United States. Miss Rainer made her first appearance on the English stage at the Palace Theatre, Manchester, England (1939), and thereafter frequently played in London and New York (*A Kiss for Cinderella,* 1942).

She starred in many Hollywood motion pictures, among them *Escapade* (1935), *The Great Ziegfeld* (1936), *The Good Earth* (1936), *The Emperor's Candlesticks* (1937), *Dramatic School* and *The Great Waltz* (1938). She won the Motion Picture Academy Award for 1936 and 1937.

In 1942 she professed no adherence to the Jewish faith.

Lit.: Who's Who in the Theater (1939); *International Motion Picture Almanac* (1941-42).

RAÏSA, ROSA, dramatic soprano, b. Bialystok, Poland, 1893. As a child of fourteen she escaped from the pogroms in Poland, and came to Italy, where she entered the Conservatory San Pietro a Maiella in Naples. Her debut took place in Parma in 1913 in a revival of Verdi's *Oberto.* For several seasons she sang at the Teatro Costanzi in Rome, at Covent Garden, and in various opera houses of South America. In 1916 she was invited to reappear at the Chicago Opera, where she scored such a triumph in *Aida* that she was engaged as a permanent member of the company. For more than two decades she was one of the major artists of the Chicago Opera. During this period she appeared in numerous revivals and world premières, the last of which took place in Detroit in 1938 in Rocca's *Der Dybbuk.*

RAISIN, JACOB SALMON, rabbi and educator, b. Nieswizh, Poland, 1878. His father was Rabbi Aaron Shlomo Raisin, and the family of rabbis and communal workers, said to go back to Rashi, includes such scholars as Rabbi Solomon Zalman of Mir and Königsberg and Rabbi Meir Katzenellenbogen of Padua. Raisin emigrated to New York city in 1892. He was ordained by the Hebrew Union College (1900), and received the Ph.D. degree from Denver University (1911) and the D.D. degree from the Hebrew Union College (1913). After serving as rabbi of congregations in Butte, Mont., Las Vegas, N. M., Troy, N. Y., and Brooklyn, N. Y., he was elected minister of Congregation Beth Elohim, Charleston, S. C., in 1915; he was still the incumbent in 1943. In the city of Charleston he became a leader in educational and civic affairs, as well as in those of the Jewish community. He served for several years on the staff of the board of education as a lecturer; in 1924 he was made commissioner of education, serving until 1928, and was again appointed to this post in 1940. He served as a member of the local NRA and Federal Housing Committee, and was chairman of the city's Community Chest.

Raisin's published writings include: *Biography of George Eliot* (published in Hebrew, Warsaw, 1899); *Sect, Creed and Custom in Judaism* (1907); *The Haskalah Movement in Russia* (1913); *Twice-Told Talmud Tales* (1928); contributions to Hebrew periodicals on English literature, as well as articles in the *Jewish Encyclopedia,* the Hebrew encyclopedia, *Otzar Yisrael,* and this encyclopedia.

RAISIN, MAX, rabbi and writer, b. Nieswizh, Poland, 1881. The younger brother of Jacob S. Raisin, he came to the United States as a boy, and later pursued his rabbinical studies at the Hebrew Union College, where he was ordained in 1903. He studied at the University of Cincinnati, and received the LL.D. degree from the University of Mississippi (1912). After serving in congregations in Stockton, Cal. (1903-4), Philadelphia (1904-5), and Meridian, Miss. (1905-13), Raisin returned east and served in congregations in Brooklyn, N. Y. (1913-21). In the latter year he became rabbi of Congregation B'nai Jeshurun in Paterson, N. J.; he still occupied this pulpit in 1943. In 1941 he was elected president of the Association of Reform Rabbis of New York city and vicinity for a two-year term.

Writing in both English and Hebrew, Raisin contributed to numerous journals. He collaborated with Ahad Haam, who was his mentor in Hebrew letters, on *Hashiloah,* and was editor of the *American Jewish Chronicle* of New York from 1916 to 1918. His publications include: *The Jew and His Place in the World* (1913); *A History of the Jews in*

Abraham Jeremy Raisman

Modern Times (1919); *Djohn Milton, Haish, Hameshorer, Hanabi* (John Milton, the Man, the Poet, the Prophet; 1924); *Yisrael Beamerika* (Israel in America; Tel-Aviv, 1924); *Dappim Mipinkaso shel Rabbi* (Leaves From a Rabbi's Notebook; 1941).

RAISMAN, SIR ABRAHAM JEREMY, British civil servant, b. 1892. After being educated at Oxford, where he was an honor scholar, he joined the Indian civil service in 1916, and served in Bihar and Orissa until 1922 as assistant magistrate and under-secretary. He spent the next six years in the customs department in Bombay and Calcutta. Thereafter he was a commissioner of income tax until 1931, when he was appointed joint secretary of the commerce department of the Indian government. He assumed successively higher posts, and in 1939 was designated a finance member of the government, a post he still occupied in 1943. Raisman was created companion of the Order of the Indian Empire in 1934 and was made Knight Commander of the Indian Empire in 1941.

RAIZISS, GEORGE W., chemist, b. Odessa, Russia, 1884. He received his Ph.D. degree from the University of Freiburg (1909) and shortly thereafter came to the United States. In 1910-11 Raiziss was physiological chemist with the Montefiore Hospital in New York city; in 1911-12 he was connected with the Rockefeller Institute; in 1913-14 he was associate professor of physiological chemistry at the Philadelphia Polyclinic. Subsequently Raiziss began to divide his time between chemical and chemotherapeutic research and teaching; in 1943 he was director of Dermatological Research Laboratories, Philadelphia division of the Abbott Laboratories, and professor of chemotherapy at the graduate school of medicine of the University of Pennsylvania. He was also a cofounder of the Research Institute of Cutaneous Medicine in Philadelphia and on its staff.

Raiziss was the author of *Organic Arsenical Compounds* (1923) and the contributor of numerous articles to scientific and professional periodicals. He was editor of the *Journal of Chemotherapy and Advanced Therapeutics.*

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 342.

RAKOUS, VOJTECH (originally Ignaz Österreicher), author, b. Starý Brázdim, Bohemia, 1862; d. Prague, 1935. Originally Österreicher was a shoemaker who subsequently had a shoestore in Prague. In 1897 he published his first book, *Doma* (At Home), using the pen name Vojtech Rakous. His literary fame rests upon *Vojkovicti a prespolni* (People of Vojkovice and Surroundings; 1910), which was translated into several languages (German version: *Modche und Resi*). His narratives and sketches, depicting the conditions of vanishing Bohemian rural Judaism in the last decades of the 19th cent., were published in several volumes.

RAM (abbreviation), *see* IBN MIGAS, JOSEPH BEN MEIR HALEVI; MEIR BEN SAMUEL HAZAKEN.

RAMA, RAMATHAIM, RAMAT GAN, RAMAT RACHEL, *see* COLONIES, AGRICULTURAL.

RAMAH ("height"), a word originally used as an element in place-names, such as Ramath-mizpeh and Ramoth-gilead; it is sometimes used as a name by itself. There were several towns of that name in Palestine, the best-known being the Ramah north of Jerusalem, originally a fortress along the border between Judah and Israel. Later on, it was the place where the Jews who were to be exiled to Babylon were collected before their transportation (*Jer.* 40:1). According to *Jer.* 31:15, Rachel's tomb was situated near Ramah. The city was once more inhabited after the Exile (*Ezra* 2:26), and it is clear from several epitaphs that Jews lived there in later times.

Another Ramah, a city situated in the territory of the tribe of Ephraim and called also Ramathaim-Zophim, was the home of the prophet Samuel (*I Sam.* 1:1, 19; 2:11 and other passages).

Lit.: Klein, Samuel, *Jüdisch-Palästinisches Corpus Inscriptionum* (1920), vol. 1, nos. 167-69; Hastings, James, *Dictionary of the Bible* (1927) 782-83.

RAMHAL, *see* LUZZATTO, MOSES HAYIM.

RAMLEH, station on the railway line between Jerusalem and Jaffa, and an important Arab city since the time of Suleiman (first half of the 8th cent.). During the 11th cent. there were many Jews living in Ramleh, and it seems to have been the seat of the Palestinian Geonim for a time. The crusaders captured the city and built several churches and monasteries there. In 1943 Ramleh had 10,000 inhabitants, including a few Jews. There are rich orchards about the city, with olive-trees, palm trees, sycamores and carob-trees.

Lit.: Hartmann, *Palästina unter den Arabern* (1915).

RAMOTH-GILEAD, city of refuge to the east of the Jordan, in the territory of Gad. It was the residence of one of Solomon's officers, and the scene of many battles between Israel and Aram (Syria; *I Kings* 22:3; *II Kings* 8:28). According to *Tos. Mak.* 3(2):2, Ramoth-gilead lay opposite Shechem; hence its location may be the same as the present-day ruins of Jelud or Jelad south of the Jabbok river. Dalman and Albright, however, identify it with Husn Ajlun, which possesses an imposing ancient mound, and lies at the extreme northeast corner of Gilead, at the point which would be first exposed to Syrian attack.

See REFUGE, CITIES OF.

Lit.: Hastings, James, *Dictionary of the Bible* (1927) 783.

RAM'S HORN, *see* SHOFAR.

RAMSES II, ruler of Egypt from 1292 to 1225 B.C.E., and one of the most important kings of the Nineteenth Dynasty. He engaged in wars with the Hittites under King Mutallu who had invaded Syria. Ramses marched his army up the coast of Palestine, then eastward toward Kadesh on the Orontes river, where a fierce battle ensued. Ramses fought in the forefront of the battle, and while he seems to have done little more than to extricate his army from a perilous situation, he was so proud of his exploit that he later made an inscription about it in a temple. In the following years he was harassed by revolts in Syria and Palestine and it was not until fifteen years later that he succeeded in effecting peace with Hattusil, the successor of Mutallu; this treaty, drawn up in cuneiform and hieroglyphic letters, is the oldest state document extant. During the remainder of his reign Ramses appears to have remained at peace, devoting his time to adorning Egypt and his capital Tanis with magnificent buildings. His mummy is now in the museum at Cairo.

Ramses II is generally regarded as the Pharaoh of the oppression, principally on the basis of the name Raamses for one of the cities which the Israelites built. It is possible that the enslavement of the Hebrews in Egypt was a consequence of the necessity produced by the wars in Syria and the fear that they might rebel and join with related peoples to the north (cf. *Ex.* 1:9-11).

RANDAR (Arendar), *see* RUSSIA.

RANK, OTTO, psychoanalyst, b. Vienna, 1884; d. New York city, 1939. He received his Ph.D. degree from the University of Vienna, and in 1905 became associated with Sigmund Freud. During the two decades when he was a complete disciple of Freudian theories, Rank rose to literary leadership in the psychoanalytic field, serving as editor (1912-24) of the two important periodicals *Imago* and the *Internationale Zeitschrift für Psychoanalyse.* He was also founder of the International Psychoanalytic Institute in Vienna (1919), and remained its director until 1924.

A divergence of opinion regarding the role and the inherent quality of consciousness in the human being led, in 1925, to a professional break between Rank and Freud, although they remained personally on good terms. Rank became the originator of a new point of view of the conscious in the human psyche, crediting it with greater power than seemed implicit in Freud's concepts, which leaned toward the superior potency of the unconscious. Rank also considered the conscious a positive quality, the nucleus of potential happiness, and this again differed from Freud's essentially negativistic and stormy picture. Pragmatically applied, Rank's doctrines became known as "will therapy."

Colossal figure of Ramses II at Abu-Simbel

In 1926 Rank left Vienna for Paris. In 1935, after many visits to the United States, he decided to make his home there. He was a lecturer at the Graduate School of Jewish Social Work and also at the University of Pennsylvania. Rank was author of many books, some of which were translated into French, English and other languages.

Among his published works in English were *The Trauma of Birth,* one of his earlier books; *Art and Artists* (1932); *Modern Education* (1932), in which he pointed out the discrepancy between the individualistic tendencies of modern education and the environmental trends toward socialization; *Truth and Reality* (1936); and *Will Therapy* (1936).

RANSCHBURG, PÁL, neurologist and psychologist, b. Győr, Hungary, 1870. The son of the chief rabbi of Győr, Salamon Ranschburg, he received the M.D. degree (1894) from the University of Budapest and then worked under Wilhelm Wundt in Leipzig. In 1899 he established the first psycho-physiological

Ramses II

laboratory in the University of Budapest; this was followed by a medico-psychological laboratory. From 1909 on he was lecturer, from 1918 on assistant professor of neurology at the University of Budapest; from 1916 on he was physician-in-chief of the neurology division of the Apponyi Polyclinic of Budapest.

Ranschburg invented the mnemometer, for measuring the capacity of memory and performing other intelligence tests (1900); the inhibitions which he has found to be responsible for the major parts of mistakes were called after him "Ranschburg'sche Hemmungen." He was medical director of the secondary school for problem children; member of numerous medical and scientific societies; officer of the French Academy.

In addition to hundreds of articles on neuropsychology and psychopathology, on war psychology and war injuries of the nervous system, he published *Psychotherapie* (1900); *Der Geist des Kindes* (2nd ed., 1908); *Das kranke Gedächtnis* (1910); *Die Heilerfolge der Nervennaht* (1918); *Lese- und Schreibstörungen des Kindesalters* (1928). He was co-editor of *Psychological Abstracts* and *Psychological Register*.

RANSCHBURG, VIKTOR, publisher, b. Győr, Hungary, 1862; d. Budapest, 1930. He was an older brother of Pál Ranschburg. He prepared himself for the profession of publisher in Germany. He was director of the Hungarian publishing houses Révai Brothers and Athenaeum, and eventually became head of the Pantheon. He was vice-president of the Hungarian Association of Publishers and Booksellers (1906-19). His articles on copyright and publishers' right appeared in the periodical *Corvina*. From 1901 on he was an officer of the Académie Française.

Among his published works is *A szerzői jog védelmere alakitott berni egyezmény, vonatkozással Magyarországra* (The Bern Agreement for the Protection of Copyright, in its Relations to Hungary; 1901).

RANSOHOFF, JOSEPH, surgeon, b. Cincinnati, 1853; d. Cincinnati, 1921. He was one of the country's pioneer surgeons, and an outstanding medical teacher and administrator. After pursuing post-graduate studies abroad, he returned to Cincinnati to become professor of descriptive anatomy at the Medical College of Ohio, and professor of surgery there and at the University of Cincinnati. He was one of the foremost pioneers in gall bladder surgery; other original contributions were his operation in the disease of the pleura known as chronic empyema and his treatment of fractures. In the forty years of his career he contributed about 150 papers to medical literature, journals and classic reference works. He was a founder of the American College of Surgeons.

Ransohoff was, besides, a scholar and writer. His collection *Under the Northern Lights* (1932) contains anecdotes of the French-Canadians and half-breeds of the northern frontier country, where Ransohoff spent his vacations from surgery.

RANSOHOFF, JOSEPH LOUIS, surgeon, b. Cincinnati, 1880. He was the son of Joseph Ransohoff. Educated at Harvard University and the recipient of the M.D. degree from the University of Cincinnati (1904), he also studied surgery in European clinics from 1906 to 1908. He became one of the pioneers in surgery in the Middle West. With Dr. J. Heiman he was first to suggest the use of lipoidal in empyema. Ransohoff became professor of clinical surgery in the University of Cincinnati, director of surgical service at the Jewish Hospital and attending surgeon to the General Hospital of Cincinnati.

He contributed extensively to American surgical literature. During the first World War he served as a major in the Medical Corps of the United States Army. He was a fellow of the American College of Surgeons and a member of many medical societies.

RANSOHOFF, NICHOLAS SIGMUND, orthopedic surgeon, b. Salt Lake City, Utah, 1895. He was educated at Columbia University and received the degree of M.D. from its College of Physicians and Surgeons in 1919. He served as chief orthopedic surgeon at Monmouth Memorial Hospital, Long Branch, N. J., from 1929 on; as associate orthopedic surgeon at the Hospital for Joint Diseases, New York city, from 1932 on, and as consulting orthopedic surgeon at Paul Kimball Hospital, Lakewood, N. J., from 1936 on. He was chairman of the orthopedic section of the New York Academy of Medicine; a fellow of the American College of Surgeons and member of many medical societies.

Among his important published papers are: "Function of the Crucial Ligaments of the Knee Joint, a New Conception;" "Bactericidal Effect of Colloidal Silver;" "Gas Bacillus Infections in Amputation Stumps;" "Treatment of Fractured Neck of Femur by Axial Fixation with Steel Wires;" "Contribution to Physiological Method of Repair of Damaged Finger Tendons;" "Reconstruction of the Digital Tendon Sheath."

RANSOM (*pidyon*). The term ransom is used in connection with several usages in Jewish law and custom, of which the principal ones are:

1. Ransom of the First-Born. According to Biblical law, the first-born of everything that is born belongs to God. If it was a sacrificial animal, it was offered upon the altar; if not, it had to be ransomed by a substitute or by money. The first-born of an ass was to be redeemed by a lamb; the first-born of Israel were replaced by the tribe of Levi, and hence had to be ransomed through the sum of five shekels to be delivered to a Levite. For the ceremony of this type, called Pidyon Haben, see REDEMPTION OF THE FIRST-BORN.

2. Ransom of Captives (Pidyon Shebuyim). Since the Jews of ancient and medieval times were frequently subject to capture by enemies, communities had standing committees and organizations for the purpose of raising sums to ransom these unfortunates. For details, see CAPTIVES.

3. Ransom of the Soul (Pidyon Hanefesh). If the life of an individual was in danger, especially because of sickness, it was often customary to offer a "ransom" in the form of a sum of money given to the poor, either in secret or by public announcement in the synagogue, where a Mi Sheberach blessing was said for the individual who was sick. In Eastern Europe, where Cabalistic influence was strong, it was customary to give as "ransom" either eighteen units of currency (since the numerical value of the word *hai,* "living," is eighteen) or a number corresponding to the numerical value of the Hebrew letters of the name of the person in question. Still other combinations of letters raised the total of units of currency given to 160. The money was in all cases given to the poor.

4. Among the Hasidim it was customary to give a sum of money to the Zaddik or his assistant at the time of submitting a note (Quittel) on which a request was written; this was termed "ransom." Some of the Hasidic dynasties, such as that of Sadagora, retained these sums for their own use and thereby became very wealthy; others gave this money to the poor.

RAPAPORT, ABRAHAM HAKOHEN BEN ISRAEL JEHIEL SCHRENZEL, Talmudist, rabbi and president of the Council of Four Lands, b. Lem-

berg, Galicia, 1584; d. 1651. He was the author of a book of responsa, *Ethan Haezrahi,* which is an important source for the history of the times of the Chmielnicki Massacres (first published after his death, Ostrau, 1796). Rapaport was also, for almost half a century, director of a Yeshiva in Lemberg.

Lit.: Azulai, H. J. D., *Shem Hagedolim,* vol. 1 (1930), No. 17; Fünn, S. J., *Keneseth Yisrael,* 65; Michael, H. J., *Or Hahayim* (1860) 60, No. 159.

RAPAPORT, SAMUEL, minister, b. Cracow, Poland, 1837; d. London, 1923. The son of Rabbi Hershel Rapaport, acting Senior Dayan of Cracow, he came to England as a young man, and was in 1863 appointed junior minister to the Portsmouth Hebrew Congregation. In 1872 he was elected the first minister to the Hebrew Congregation at Port Elizabeth, South Africa, to which he was attached for twenty-three years.

During his residence in South Africa, he consecrated Port Elizabeth's first synagogue (1877). He was occasionally called upon to perform religious duties for Jews in the Orange Free State and in Natal before those places were provided with ministers. He officiated at the first Jewish wedding in Bloemfontein. He was present by invitation at the first meeting held by Jews on the Witwatersrand in July, 1887, initiating the first Hebrew Congregation of Johannesburg.

He returned to England in 1896 where he actively interested himself in the movement for establishing a synagogue in the Kilburn and Brondesbury district, London. Rapaport was the author of several popular works, which included *Stories and Sayings from the Talmud, Tales and Maxims from the Midrash,* and an almost completed work in manuscript on *Midrash Lamentations.*

RAPE. The penalty provided for rape in the Bible is the payment of fifty silver shekels to the father and the requirement that the raper must marry the woman, whom he may never divorce (*Deut.* 22:28-29). The Talmud limits such forced marriage to cases where the marriage would not be forbidden by the laws of incest, and further gives the father the right to forbid the marriage if he desires. At the same time the Mishnah (*Keth.* 3:4) permits the father further damages for insult, bodily pain and diminution in value. The penalty for rape differs from that of seduction in that in the latter case the seducer does not have to pay a fine and retains the privilege of divorce.

If a betrothed girl is raped, the crime is regarded as adultery and so punished according to Biblical law (*Deut.* 22:23-24). If the rape took place in a city, it is assumed that the girl could have cried for help and did not, and so consented; accordingly both are put to death by stoning. If it took place in the field, however, the man only is put to death, as it is assumed that the girl may have cried in vain for help. In these cases no fine is paid, according to the Talmudic principle that if two crimes are committed at the same time, the penalty for the greater annuls that for the lesser. The crime is regarded as rape only if actual physical violence is done to the girl, and not if she consented under threat of death or other consequences.

Since Jewish courts outside of Palestine did not inflict capital punishment, the teachers of the post-Talmudic period paid little attention to the subject.

Lit.: Maimonides, *Hilchoth Naarah Bethulah; Eben Haezer* 171. *See also:* MARRIAGE; VIRGIN.

RAPEE, ERNO, conductor, b. Budapest, 1891. He studied piano at the National Academy in Budapest. After his graduation he was appointed assistant conductor to Ernst von Schuch with the Dresden Philharmonic. He resigned this post to undertake an extensive concert tour. In 1912 he came to the United States and filled various minor posts as pianist and conductor. Through S. L. Rothafel (Roxy) he was given his first position as conductor of a motion picture theatre orchestra, at the Rivoli Theatre (New York city), where he was a pioneer in introducing good music into the cinema theatre. In his subsequent posts as conductor at the Capitol, the Roxy and the Radio City Music Hall theatres he was the greatest single influence in bringing great music to motion picture audiences. Besides this, in his weekly broadcasts with the Radio City Music Hall Orchestra, Rapee, over a period of many years, brought the greatest symphonic, operatic and chamber music to nationwide audiences, including cycles devoted to all the symphonies of Sibelius and Mahler, the piano concertos of Rachmaninoff, and the major music-dramas of Wagner. He served as guest conductor of the Los Angeles Philharmonic, the San Francisco Symphony and other major American orchestras.

In 1925 Rapee went to Germany to become director of a chain of 180 UFA theatres when he introduced American methods. For brief periods he served also as music director of the National Broadcasting Company and as a composer in Hollywood. He composed several songs which were nationwide hits.

RAPHAEL, one of the most important angels in Jewish and Christian angelology. He is not mentioned in the Bible, but in *Tobit* he is one of the seven angels who present prayers before God; he accompanies Tobias on his journey and aids him to bring it to a successful conclusion, after which he heals Tobit of his blindness. In *Enoch* he appears also as one of the seven chief angels and is apparently the chief of the departed spirits. Accordingly his name probably was originally connected with *refa'im,* "spirits"; later it was connected with *rafa,* "to heal." In other Jewish writings Raphael is mentioned as one of the four great angels in connection with Michael, Gabriel and Uriel (or Phanuel); since he was connected with the healing of diseases, his name frequently appears on both Jewish and Christian amulets. According to a late Midrash, Raphael was originally called Labiel, but received the name of Raphael when, in contrast to the other angels, he approved the plan of God to create man.

See also ANGELS.

Lit.: Kohut, *Jüdische Angelologie,* 35 et seq.; Ginzberg, *Legends of the Jews,* vols. 1 and 5.

RAPHAEL BEN JEKUTHIEL HAKOHEN, Talmudist and rabbi, b. Livonia, 1722; d. Altona, Germany, 1803. At the age of twenty he became director of the Yeshiva at Minsk, where he had studied under Aryeh Löb ben Asher. From 1744 to 1763 he was rabbi in various communities in Lithuania and White Russia, and in 1763 became rabbi of Pinsk, as well as head of its Yeshiva. During his occupancy of the post in Pinsk he was offered the rabbinate in Berlin, but refused it. He went to Posen in 1773, remaining there until 1776, when he became rabbi of the triple community of Altona, Hamburg and Wandsbeck. His renown here was so great that twenty-three years later, when he resigned, the king of Denmark, under whose jurisdiction the cities were, wrote him a letter of thanks for what he had done for the Jews of his community.

As judge, Raphael ben Jekuthiel Hakohen was known for his fairness and conservatism; he used excommunication frequently. He was hostile to Moses Mendels-

sohn's German translation of the Pentateuch, and wanted to put it under a ban; he also tried to win Solomon Maimon back to Jewish life.

Some of his published works were: *Torath Yekuthiel,* notes to *Shulhan Aruch, Yoreh Deah* (1772); *Veshab Hakohen,* responsa (1792); *Shaalath Hakohanim Torah,* explanations of several Talmudic tractates. Raphael was the grandfather of Gabriel Riesser.

Lit.: Katzenellenbogen-Riesser, Lazarus, *Zecher Tzaddik* (1805); Lowenthal, Marvin, *The Jews in Germany* (1936); Maimon, Solomon, *Lebensgeschichte,* vol. 2 (1920) 418.

RAPHAEL, AXEL FERDINAND, social economist, b. Sweden, 1850; d. Sweden, 1921. In 1875 he received the Ph.D. degree from the University of Upsala, and in 1884 he was awarded his law degree. Later he settled in Stockholm as a writer on social and economic subjects. From 1894 on he was secretary of the Swedish authors' association and was active in effecting Sweden's adherence to the Berne Convention which protects authors' rights.

Among Raphael's writings, which to a great extent advocate reforms, are: *Arbetsgifvare och arbetere. Förlikningsmetoder vid deras intressetvister* (1888); *Industrien* and *Den industriella arbeterfrågan,* which were printed in the publication *Det ökonomiske samhällslifvet* (1897-1902). Another work is *Blockad, bojkott och svarta listor* (1908).

Lit.: *Salmonsens Konversations Leksikon,* vol. 19, p. 932; *Nordisk Familjebok,* vol. 16, p. 483 et seq.

RAPHAEL, SIR HERBERT HENRY, banker and member of the British House of Commons, b. 1859; d. 1924 (place of birth and death unknown). He was a son of the banker Henry L. Raphael and became a senior partner in the banking house of R. Raphael and Sons. He was educated at Hannover, Vevey and Cambridge; it was the latter university that conferred on him the degree of LL.D. He was admitted to the bar in 1883 and later gave up his legal practice for public work.

Raphael was a member of the first London County Council; for three years a member of the London School Board; also a member of the Essex County Council. He sat in Parliament in the ranks of the Liberal Party from 1906 to 1918 as a deputy of South Derbyshire. Having enlisted in the Royal Fusiliers during the first World War, he was promoted to the rank of major and made second in command in the 18th and 23rd battalions. He was made a baronet in 1911. For some time he served as president of the Jewish Home for Incurables.

RAPHAEL, MARK, 16th cent. convert to Christianity. Renowned as a learned Halachist before he became converted, he was often consulted as an authority on Mosaic law by Christian princes and diplomats after his conversion. The most important controversy on which he was consulted was the divorce suit brought by King Henry VIII of England against his wife, Catherine of Aragon. In 1529, when Raphael was consulted, both parties acknowledged that only the Mosaic law could provide them with the decision. Both parties recognized the fact of the levirate marriage, because the king had married the wife of his defunct brother, Prince Arthur. The king intended to demonstrate that his union with his sister-in-law had to be declared invalid; the opponents of the divorce, led by Pope Clement VII and Emperor Charles V, stressed the statement that the Mosaic Law enjoined the levirate marriage and, consequently, upheld the legitimacy of the king's union with his brother's widow.

King Henry had already consulted many Jews, both Orthodox and baptized, but he attached the greatest weight to the opinion of Raphael, who resided at Venice, and invited him to England. As soon as news of Raphael's invitation reached the continent, the pope and the emperor sent emissaries to Raphael, inviting him to enter their service. When Raphael declined, they tried to capture him. But the plot failed, and in 1531 Raphael arrived safely in England.

His opinion was that the validity of the levirate marriage could not be denied, but he recommended that the king take another wife because, according to Jewish law, the offspring issuing from his brother's wife would be ascribed to the first husband, and it was to the king's legitimate interest to bequeath his kingdom to his own descendant. Although Raphael's statement did not satisfy Henry VIII, he remained in the king's favor. He accompanied Henry on his journey to France in 1532, and the state papers mention many rewards and privileges granted to Raphael.

Lit.: *Anglo-Jewish Historical Exhibition, Papers,* No. 1 (1887).

RAPHAEL, OTTO, police official, b. New York city, 1871; d. New York city, 1937. He came to public notice when he helped rescue the victims of a fire. Theodore Roosevelt, then New York's police commissioner, met young Raphael and, becoming interested in him, persuaded him to join the force in 1895; by 1917 he had risen to detective-lieutenant, retiring four years later. His friendship with Roosevelt, to whom he taught boxing, continued throughout his life, and Roosevelt's autobiography records his respect and affection for Raphael.

RAPHAELSON, SAMSON, playwright, b. New York city, 1896. Before launching into his successful playwright's career, he worked as a newspaper reporter, and contributed numerous articles and short stories to the magazines. One of these stories, a tale of Jewish life called "The Day of Atonement," originally published in *Everybody's Magazine,* was the basis for the Broadway hit that made his reputation, *The Jazz Singer,* produced in 1925 with George Jessel in the leading role. The play had the further distinction of being made into the first successful full-length sound picture (1927). Other successes followed: *Young Love* (1928), a hit in New York, Berlin, Vienna, and the Scandinavian countries; *Accent on Youth* (1934); *Skylark,* with the actress Gertrude Lawrence, and a hit of the season of 1939 (also published as a novel); *Jason* (1942), a "triangle" play involving a drama critic. These plays, in the category of serious social comedy, were characterized by their sophisticated characters and their witty, if at times, over-pat dialogue. They were published in book form.

In Hollywood, where Raphaelson became a staff writer for the Paramount company, he worked on a number of outstanding screen plays: *The Merry Widow* (1934); *The Gay Deception* (1935); *The Shop Around the Corner* (1939); *Suspicion* (1941). Several of his own original plays were made into motion pictures.

RAPHAELY, SIEGFRIED, lawyer and communal worker, b. Posen, Poland, 1878. When six years old he came to South Africa, and in 1903 began to practise law in Johannesburg. He was a founder and president of the Johannesburg Jewish Guild, and also president of the Johannesburg Hebrew Congregation. In the same capacity he was active for the Federation of Synagogues of the Witwatersrand. In 1927 he became president of the South African Jewish Board of Deputies, of which he had been vice-president and acting president for

many years. He remained president until 1935, serving also as South African representative for the extended Jewish Agency. In 1942 Raphaely was living in Johannesburg, but had practically retired from communal life.

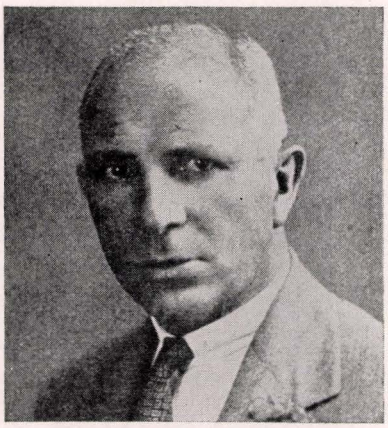
RAPHALL, MORRIS JACOB, rabbi and author, b. Stockholm, Sweden, 1798; d. New York city, 1868. His father, banker to the king of Sweden, had vowed to dedicate the boy to the rabbinate if he survived a serious illness, and young Raphall was taken to study in Copenhagen. He received his doctor's degree from the University of Erlangen, Germany. Later he moved to England. There he lectured on Hebrew poetry and post-Biblical history, and published the weekly *Hebrew Review* (1834-36), the first Jewish periodical to appear in Great Britain. In 1840 he was honorary secretary to Chief Rabbi Solomon Herschell.

The next year Raphall was elected rabbi of the Birmingham Hebrew Congregation, and head of its Hebrew National School. During the eight years of his incumbency at Birmingham his repute as rabbi, scholar and orator spread throughout Great Britain, and he became the foremost interpreter of Judaism to the non-Jew.

In 1849 Raphall left England for New York where, in December of that year, he was elected preacher of Congregation B'nai Jeshurun at the then munificent salary of $2,000 a year. Raphall introduced the preaching of sermons in English, and was the first rabbi to open the sessions of the House of Representatives, in 1860.

In 1861 he attracted wide notice by his defense of slavery as a "divinely ordained institution."

Raphall's writings include, in collaboration with Rabbi D. A. de Sola, translations of eighteen tractates of the Mishnah, done into English for the first time, and one volume of an unfinished translation of the Pentateuch, also in collaboration.



Lit.: Goldstein, Israel, *A Century of Judaism in New York* (1930) 110-13.

RAPOPORT (also **Rapaport, Rappaport, Rapa),** a Jewish family name. The bearers of it are accepted as Kohanim, on the assumption that they are descendants of Raffe (physician) Hakohen of Porto, Italy. The name Porto also is said to have been added through marriage between the Raffe Hakohen family and a family named Porto. Because of the resemblance between the "Rappa" part of the name and the word *Rabe* (raven), the German Rapoport family had a raven on its coat of arms.

RAPOPORT, DAVID HAKOHEN, scholar in Lublin, Poland, in the 17th cent. Later he went to Palestine and settled in Jerusalem, where he became rabbi. He was author of *Daath Kedoshim,* a catalogue of ceremonial procedures, arranged alphabetically, in which he cites the opinions of the commentators to *Keneseth Hagedolah.* The first part was published at Livorno in 1809.

Lit.: Fünn, S. J., *Keneseth Yisrael,* p. 256; Michael, H. J., *Or Hahayim* (1891) 337-38, No. 741.

RAPOPORT, HAYIM KOHEN, rabbi, b. about 1700; d. Lemberg, Galicia, 1771. He was the son of Simhah Rapoport, rabbi of Lemberg. Rapoport was rabbi and school director in Sitl (1729), then in Slutsk. He was appointed rabbi in Lemberg in 1741. When Canon de Mikulski, administrator of the archbishopric of Lemberg, arranged a debate (1759) between the Frankists and the Talmudists in the Lemberg cathedral, Rapoport was one of the leading speakers for the Orthodox party.

Siegfried Raphaely

The debate lasted three days, and its outcome remained in doubt. Prince Czartoryski, governor of Little Russia, subsequently made Rapoport chief rabbi of the territory.

Rapoport was the author of many responsa, which were printed long after his death. Published in 1861, the responsa appeared under the title *Responsen Rabbenu Haim Kohen.* A collection of his sermons was published in 1866 as *Zecher Hayim.* About 800 families in Galicia and Russia, many of them scholars, trace their lineage to Rapoport.

Lit.: Wininger, S., *Grosse Jüdische National-Biographie,* vol. 5 (1931) 130; Graetz, H., *History of the Jews,* vol. 5 (1927) 285-86; Buber, S., *Ansche Schem* (1895) 69 et seq.; Balaban, M. S., "Studien und Quellen zur Geschichte der Frankistischen Bewegung in Polen," *Poznanski-Gedenkbuch* (1927).

RAPOPORT, NICOLÁS, physician and writer, b. Bessarabia, 1884. He was taken to Argentina in 1890 by his parents, who were among the first Jewish colonists in Entre Rios. While he himself was still a student he taught Spanish and the history and geography of the Argentine to Jewish immigrants. After receiving his medical degree in 1909, he began immediately to specialize in skin and venereal diseases, and was given a state scholarship the following year to go to Germany and there study with Paul Ehrlich. In 1924 the Buenos Aires City Council again sponsored a journey to Europe, so that Rapoport could study the prophylaxis of venereal disease. Rapoport contributed papers on his work to the scientific press. He also published literary pieces.

Keenly interested in Jewish communal work, he was elected president of the Hebraica, the ORT-OSE and the Delegación de Asociaciones Israelitas Argentinas (DAIA). Rapoport founded the Jewish Hospital in Buenos Aires, and was elected its president about 1930, still serving in 1943.

RAPOPORT, SOLOMON JUDAH LÖB (SHIR), rabbi and leader of the Jewish enlightenment (Haskalah) movement, b. Lemberg, Galicia, 1790; d. Prague, 1867. Before the publication of his first work in the *Bikkure Haittim* (1828-31), the qualities which were to make him the object of attack from Hasidic and other strict elements in Jewish life had long been manifest. The work published in these annual anthologies consisted of biographical studies of Nathan of Rome, Saadia Gaon, Eliezer ben Kalbi, Hai Gaon, Hananel ben Hushiel and Nissim Gaon. But in the historiographical illumination which Rapoport gave to the lives of these men lay the influence of that scientific back-

ground which made him anathema to advocates of more miraculous interpretations.

As early as 1817 Rapoport and three other representatives of the enlightenment movement in Lemberg were put under a ban by Jacob Orenstein. Rapoport was at that time earning his livelihood as the manager of the Kosher tax in Lemberg. But life was made so uncomfortable for him that he craved the quietude of a rabbinate in a small town. Consequently some of his adherents obtained for him the post of rabbi in Tarnopol, Galicia, to which city he went in 1837. His attempt to escape hostility was unsuccessful here, but three years later he was made senior Dayan at Prague, and here he remained, in personal peace, until his death.

Despite the storm of his early years in Lemberg, however, they were the most fruitful of his career as thinker and intellectual leader. It was while here that he planned his encyclopedic dictionary, of which only the first volume was ever published, because the demands of communal leadership in Prague handicapped his literary production. This first volume, covering the letter Aleph, published as *Erech Millin* (1852), showed further Rapoport's profound, erudite and comprehensive approach as an interpreter of history, for whatever the subject he dealt with, he incorporated into his article the cultural and social backgrounds that surrounded it. While living in Lemberg, also, Rapoport was able to meet Nachman Krochmal frequently, for Krochmal lived only three miles away, and the two minds whetted each other by discussion. Throughout a great part of his life, Rapoport carried on a correspondence with Samuel David Luzzatto.

The correspondence covering the period from 1833 to 1860 was published in 1884. Rapoport's biographies—originally published in the *Bikkure Haittim*—were reprinted subsequently in a volume called *Toledoth*. A collection of his essays also appeared, and he wrote essays and treatises for various other compilations.

The influence which Rapoport exerted on the Science of Judaism, or the Jewish enlightenment movement of his time, can not be entirely appraised by the quantity of work which he left. All the cultural leaders of his time, including Leopold Zunz, were in one way or another affected by the methods he introduced, and acknowledged their debt to him. Although he was disliked by the extreme Conservatives, he was himself the upholder of traditional Judaism, seeking only to present it in its most vital form, fortified and explained by the historical realities of each period.

NATHAN RICARDO.

Rapoports," *Österreichische Wochenschrift* (1890); Bernfeld, Simon, *Dor Haham* (1896); *Jüdisches Literaturblatt* (1890), Nos. 24 and 26; Waxman, Meyer, *A History of Jewish Literature*, vol. 3 (1936); Balaban, Meyer S., "Aus der Korrespondenz Solomon Judah Rapoports," *Jewish Studies in Memory of George Alexander Kohut* (1935) 47-71.

RAPOPORT, SOLOMON SEINWIL (pseudonym, **S. An-Ski**), Russian and Yiddish author, b. Vitebsk, Russia, 1863; d. Warsaw, 1920. Although he received a Hasidic education, he familiarized himself with the literature of the Haskalah movement at an early age, as a result of which he became a revolutionary. In 1894 he was compelled to flee to Paris, where he supported himself by bookbinding. In 1905 he returned to Russia, where he began to write, in Yiddish, short stories, novels and even dramas dealing with scenes from Hasidic life. In contrast to Peretz, his writings are realistic.

Rapoport's novels are divided into three heads: tales

Solomon Judah Löb Rapoport

of former times, tales of Hasidim and tales of Mithnaggedim (anti-Hasidim). During the first World War he visited the devastated Eastern European countries and wrote a book descriptive of the sufferings of the Jews in Poland, Galicia and Bucovina, *Der jüdische Horban*. A contribution to contemporary Jewish history is his book *Zichronoth* (Recollections). His masterpiece is the dramatic legend *Tzvishen Tzvei Velten*, better known as the *Dibbuk;* it is mystical and symbolical, yet taken from actual Hasidic life. He died a few days after the play was presented for the first time in a theatre in Warsaw.

An-Ski's collected works appeared in Yiddish after his death in fifteen volumes (Warsaw, 1920-25). He was a unique figure in Yiddish literature and having spent many years in an alien atmosphere, he returned to be the foremost representative of romantic Yiddish writing. He rendered splendid service in the realm of Jewish folklore and in the collection of Jewish popular customs.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie*, cols. 125-41 (with literature); idem, biography of An-ski, in the fifteenth volume of his collected works; the An-Ski number of *Leben* (1921).

RAPPAPORT, RAPPEPORT, *see* under RAPOPORT.

RAPPAPORT, ANGELO SALOMON, author and scholar, b. Beturim, Ukraine, Russia, 1871. He became a British subject in 1898. In 1900 the Alliance Israélite Universelle commissioned him to go to Egypt and Abyssinia, to investigate the conditions of the Falashas. Subsequently he became instructor in modern literature at Birbeck College, London. Rappaport took an active part in the Zionist Movement, and before the first World War attended Zionist congresses.

As editor he worked on a number of important compilations, including *Historians' History of the World* (25 vols.); *Encyclopaedia Britannica* (1906); *The New Gresham Encyclopedia* (12 vols., 1918-24). From 1927 to 1929 he edited *Illustrated Palestine*. He wrote prolifically on history, politics and related subjects. His publications include: *History of Egypt* (with Maspéro, King and Hall; 13 vols., 1907); *History of European Nations* (1912); *Myths and Legends of*

Charles Rappoport

Ancient Israel (3 vols., 1928); *History of Palestine* (1931); *The Psalms in Life, Literature and Legend* (1935); *The Folklore of the Jews* (1937). Rappaport translated from German into English Count Heinrich Coudenhove-Kalergi's *Anti-Semitism Throughout the Ages* (1935), and Josué Yéhouda's *Fathers and Sons* (1938).

RAPPAPORT, MAX, painter, b. Vienna, 1884; d. Berlin, 1924. One of the most promising talents among the younger group of the Vienna and Berlin "Sezession," he died an early victim to tuberculosis. He studied painting in Vienna and (from 1906 on) in Paris, for some time in the studio of Henri Matisse, but mainly he was a student of Eugen Spiro who then lived at the French capital. Spiro's friendship was helpful when he first settled in Berlin in 1910; he also accompanied Spiro on several study trips. Rappaport painted still lifes and landscapes in colors full of natural brilliance and with excellent workmanship, also human figures, especially women's portraits of great charm. *Actress in Green Dress* (1913) and *Woman Asleep* (1914), his masterpieces, were always included in the group showings of Freie Sezession, Berlin. The latter painting was noticed especially for the masterly rendering of various shades of white in the sheets. Next to these his men's portraits, including those of many well-known men of Berlin economic life, and that of the music critic Adolf Weissmann, deserve mention. As a fashion designer for *Berliner Tageszeitung* and *Berliner Zeitung am Mittag,* Rappaport made an art of what had been a trade before. His illness caused him to undertake several trips to the South, especially to the Azores and to Sicily, from which he returned with paintings which were striking by their new vision of high coloring.

RAPPAPORT, MORITZ, poet and physician, b. Lemberg, Galicia (then Austria), 1808; d. Vienna, 1880. He received his medical degree from the University of Vienna (1832), and practised in Lemberg for forty years. Among his best-known works were a poem, *Moses* (1842); *Bojazzo* (1863); *Hebräische Gesänge;* and a drama called *Esterka.* He was also a translator from Hebrew and Polish.

RAPPOLD, MARIE (originally, **Marie Winteroth**), dramatic soprano, b. Brooklyn, N. Y., 1880. After study with Oscar Saenger, she was discovered by Heinrich Conried, who engaged her for the Metropolitan Opera House. She made her debut in 1905 in Goldmark's *Queen of Sheba,* and remained one of the major members of the company until 1919. During this period she was also a member of the Bucharest Opera, and at one time was decorated by Queen Carmen Sylva. After 1919 Rappold made guest appearances with several opera houses in America and Europe, and also toured extensively in recitals of Lieder. Subsequently she devoted herself to teaching voice in New York city.

RAPPOLDI, EDUARD, violinist and teacher, b. Vienna, 1831; d. Dresden, Germany, 1903. He was a pupil at the Vienna Conservatory. After serving as violinist in the Vienna Court Opera orchestra, he became concertmaster of orchestras in Rotterdam, Lübeck, Stettin, Prague and Dresden. From 1871 to 1877 he taught violin at the Berlin Hochschule, and from 1877 until his death he was professor at the Dresden Conservatory. For a period he also participated as a violinist in the world-famous Joachim Quartet. Rappoldi composed many symphonies, works for piano and chamber music groups, choral pieces and songs.

RAPPOPORT, CHARLES, socialist leader, b. Dumsky, Lithuania, 1865; d. Cahors, France, 1942. He attended the Gymnasium at Vilna, where he joined the social revolutionary movement in 1883. In 1887 he took part in a conspiracy against Czar Alexander III together with a brother of Lenin who was apprehended and hanged; Rappoport then fled to France, of which country he became a citizen in 1899. In France he followed the leadership of Jules Guesde, who represented the left wing of the French socialist party; although a friend of Jean Jaurès, Rappoport opposed the reformist tendencies and the idealistic theories of Jaurès. In Russia he had been opposed to Marxism; in France he became one of the foremost authorities on, and warmest advocates of Marxist thought and methods. From 1889 to 1901 he collaborated on *Revue Socialiste,* an organ of the Guesde faction, and on the socialist daily, *La Petite République.*

During the first World War Rappoport took part in the famous pacifist conferences at Kienthal and Zimmerwald, and during the Clemenceau administration (1917-18) he was arrested on the charge of making defeatist speeches. The court martial, however, sentenced him to three months of prison only. His self-defense, *Devant les juges militaires* (Before the Military Court), which he published in pamphlet form early in 1918, created a sensation. In 1921 he went over to the ranks of the communists and contributed greatly to their success at the Tours Congress (1922) where the communists were in the majority. From 1922 to 1924 he edited *Revue Communiste,* the first of its kind in France. In 1926 he visited Russia where he was received with great honors.

Rappoport collaborated on the daily newspaper, *Humanité,* which after the Tours Congress became the official organ of the French communist party, as editor of the column on Marxism. From 1921 to 1929 he was editor-in-chief of *Humanité* at Strasbourg. The evolution of communism in Russia, and especially the Moscow trials, caused him to recede step by step; he expounded the reasons for his resignation from the Communist Party in a letter published in 1930. In 1922 a Russian White Guardist made an attempt at Rappoport's life but missed him and hit his daughter.

Rappoport condemned the Munich pact, and as regards the Jewish question often stated that he wanted to have his share in the persecution to which the Jews were subjected. He regretted that he had not fought more often for the rights of the Jews. His self-chosen

epitaph was: "No liberty without socialism; no socialism without liberty." From 1930 to 1933 his autobiography was published in the Paris Yiddish newspaper, *Arbeiter Shtimme*. Among the many manuscripts which he left behind was one entitled "Anti-Nietzsche."

His last two articles dealt with the Jewish question (*Oifn Sheidveo*, vol. 1, 1939, pp. 112-19) and his life as revolutionary emigrant (*Historishe Shriftn*, vol. 3, 1939, pp. 283-313.

His published works, of considerable importance, include: *Die soziale Frage und die Ethik* (1895); *La philosophie sociale de Pierre Lavroff* (1901); *La philosophie de l'histoire de Proudhon* (1904); *Socialisme gouvernemental et socialisme révolutionnaire* (1910); *Jean Jaurès* (with a preface by Anatole France, 1916); *La révolution mondiale* (1923). In 1920 he published, in Yiddish, *Marx in die Diktatur fun Proletariat*. SANIEL LABIN.

Lit.: *Congress Weekly*, vol. 9 (1942) 10-11.

RAS SHAMRA INSCRIPTIONS, a collection of inscribed clay tablets discovered, between 1929 and 1939, by French archeologists at Ras Shamra (Fennel Head), on the north coast of Syria. The inscriptions emanate from the official archives of ancient Ugarit, a cosmopolitan seaport and trading center which flourished in the latter half of the 2nd millennium B.C.E. They are written in a hitherto unknown alphabet, the origin of which is disputed. Some scholars hold that it is nothing but a simplification of the elaborate syllabic script of Mesopotamia, while others regard it as a cuneiform adaptation of that early Canaanite writing traces of which have been found in Sinai and Palestine, and which is believed by many to be the prototype of Phoenician and hence of our own system (see vol. 1, p. 202, column 8).

The bulk of the documents are written in a Canaanite dialect resembling a primitive form of Hebrew. Apart from a few texts of secular character, including private letters, a veterinary treatise and a schoolboy's homework in grammar, the material consists of ritual tariffs, defining sacrifices to the gods, and a series of religious myths written in verse. The latter were evidently designed to be recited in connection with seasonal festivals or other cult ceremonies. In many, if not all, cases they are the *libretti* of such sacred dramas as later formed the basis of Greek tragedy and comedy and as survive in medieval and modern "mystery" and mummers' plays.

The principal texts are as follows: 1. *The Legend of Baal*, describing the battle between Baal, god of the rains, and Mot, god of drought; 2. *The Poem of Anat*, which relates how the war goddess Anat, sister and consort of Baal, avenges his defeat by Mot and restores him to supremacy over the earth; 3. *The Combat of Baal and the Waters*, dealing with a battle between Baal, god of the rains, and rivals called "the prince of the sea" and "the lord of the river"; 4. *The Poem of the Gods Gracious and Fair*, a ritual drama describing the marriage of the supreme god (El) and the birth to him of two sons named Shalim and Shahar, or Sunset and Dawn; 5. *The Poem of Keret*, an epic concerned with a marauding expedition; 6. *The Poem of Aqhat*, very probably an early Semitic form of the classical legend of Orion.

The Ras Shamra inscriptions possess a special interest because of their abundant points of relation to the literature and beliefs of Israel. Thus, the vocabulary of the sacrificial cult has several points of resemblance to that of the Bible, mention being made of such sacrifices as the *'asham*, or "trespass offering," the *shelem*, or "payment offering," and the *tenufah*, or "wave offering." There is also allusion to *kohanim*, or priests, and *kedeshim*, or "sacred acolytes." One text alludes to Leviathan in the very same terms as are employed in *Isa.* 27:1, while the phraseology of these documents finds many parallels in *Psalms* and other later portions of the Bible.

Besides the Semitic documents, Ras Shamra has yielded also a few tablets inscribed in the language of the Horites (Hurrians). Although as yet imperfectly understood, this material is of primary importance in elucidating that obscure tongue.

THEODOR H. GASTER.

Lit.: A complete bibliography of the extensive literature on Ras Shamra will be found in Schaeffer, Claude, *Ugaritica* (1939) 154-203. The texts have been edited in Hebrew by Ginsberg, H. L., *The Ugarit Texts* (1936), but this edition is not complete. See also Gaster, T. H., *Antiquity* (1939) 304-19.

RASHBAM (Samuel ben Meir), the most important Bible exegete of northern France, b. Rameru, about 1080; d. Rameru, after 1158. He was the son of Rashi's daughter Jochebed and the brother of Jacob ben Meir (Rabbenu Tam). The only facts known about his life are that he had religious discussions with Christian scholars and that he spent some time at Loudun (in Anjou), Paris and Caen; his son Joseph is named after the latter place.

Rashbam either supplemented or completed the Bible commentary of his grandfather in a number of places (cf. *B.B.* 29a), in some instances on the basis of oral instruction he had received from the latter. He wrote commentaries of his own (on *Pes.* 10, *Abodah Zarah, Niddah, Aboth* and other tractates) as well as Tosafoth to the Talmud and Alfasi's code, various decisions, and a short work on the Jewish calendar.

Rashbam's chief activity was that of a Bible exegete. He wrote notes on the Pentateuch, most of (and possibly all) the Prophets, on *Psalms, Job* and probably others of the Hagiographa. However, he was far ahead of his time and his commentaries were not widely circulated; even that on the Torah has not survived in its entirety. A critical edition of the extant part of the commentary on the Pentateuch was published by D. Rosin (1881).

In his exegesis Rashbam is the outstanding representative in northern France of the Peshat, the natural, simple, rational meaning of the text; in this he opposes even the Halachah and of course the Haggadah, and does not hesitate on occasion to disagree with Rashi, though with due reverence for the latter. He writes simply and to the point, without poetic adornment; the arguments advanced are convincing, clear and well reasoned. In this he was aided by an excellent knowledge in such secular fields as culture, politics, popular customs, science and poetry, as well as a rather extensive knowledge of the scientific bases for his field: the Targums, the Vulgate and the Midrashim. He also makes good use of the Talmud, making a skillful selection of citations from it to support his own views. The only grammarians with whom he was acquainted were Rashi, Menahem ben Saruk and Dunash ibn Labrat; yet his researches are so thorough that he actually comes near the views of Judah Hayyuj. For the same reason his interpretations often come close to those of his younger contemporary Abraham ibn Ezra. Rashbam did not argue against accepted Halachah when it disagreed with his own interpretation of the Bible; he accepted it, as he did the Haggadah as well, as a separate field with a validity of its own.

Although his works were not as popular as those of others in the field, two supercommentaries were written on them and several works were falsely ascribed to him. He was regarded as a "king of interpreters," although

Rashi's study, at Worms, which was set afire by the Nazis on the night of November 9, 1938

he is not the equal of the classic Spanish grammarians and exegetes. HUGO FUCHS.

RASHI (abbreviation of Rabbi Solomon ben Isaac), the most popular expounder of the Bible and the Talmud, b. Troyes, France, 1040; d. Troyes, 1105. He is sometimes erroneously given the surname Yarhi (from Lunel, as the Hebrew *yareah* is equivalent to the French *lune*) through confusion with a rabbi of the same name. Rashi's father received the surname of "holy"; his mother's brother was Simon ben Isaac ben Abun. Rashi studied in Worms and, although he was very poor, was married while still a student. When he was twenty-five years old he became rabbi at Troyes without pay, and founded a Yeshiva there, which soon became famous and well attended, especially since the better known teachers of "Lorraine" (the Rhine territory) had all died by 1070. It is probable that Rashi gained his livelihood by agriculture as well as by his vineyards and the manufacture of wine. Little is known about his life. He was known for his purity, and it was considered symbolic that his very last explanation (on *Mak.* 19b) dealt with the subject of Levitical purity. He was regarded as a model of modesty and unassuming behavior, and possessed a simple and earnest piety.

His life has been richly adorned with legends by those who admired his virtues and treasured his achievements. Thus we are told that his mother, during her pregnancy, was saved from being crushed in a narrow street because of a niche which miraculously appeared in the wall of the synagogue at Worms. Another story relates that Godfrey of Bouillon visited Rashi before setting out on his crusade, and that the latter predicted the defeat of the expedition. Other legends tell of extensive journeys made by Rashi, including one to Barcelona; still others declare that he was versed in Cabalistic arts. Worms has preserved many memorials of him, such as the Rashi gate and the Rashi chapel.

Rashi wrote commentaries on nearly all the books of the Bible. The exceptions are *Ezra, Nehemiah, Chronicles* and parts of *Ezekiel* and *Job,* where the notes ascribed to him are actually written by others. He also wrote a commentary on nearly the entire Talmud. There are three tractates which he certainly did not expound, and a few others where the commentary ascribed to him is probably not genuine. It is doubtful whether he wrote the commentary to *Midrash Genesis* that goes under his name. Rashi wrote a few Selihoth (penitential prayers), but these are not of very great importance. His was an immense productivity, remarkable for the industry displayed in achieving it and the memory required for its accomplishment.

In his commentary on the Torah, Rashi does not draw a strict line of distinction between literal interpretation (Peshat) and fanciful exposition (Derash). However, he usually arrives at the former by using his good sense, and for the latter makes that selection from the Midrash which comes nearest to the true sense of the words. The only grammarians whom he knew and used were Menahem ben Saruk and Dunash ibn Labrat, but he also draws new inferences of his own from their principles. He pays no attention to philosophical and critical considerations. On the other hand, he has given the French equivalents (Belaaz) for more than 3,000 words—a mine of information for the vocabulary of medieval French—as well as the German equivalents for about a dozen others. He makes use of the Targum Onkelos, of oral interpretations, and of the expositions written down by such older teachers as Saadia and Moses Hadarshan.

The most remarkable features of the commentary of Rashi are its simple and compact style which follows the idiom of the Talmud and its strong appreciation of the true meaning of the text. Rashi himself, at a later period, felt that the Midrashic explanations were disturbing to the reader, and with touching self-denial said that if he had the time he would revise his commentary so as to give only the pure Peshat (Rashbam to *Gen.* 37:2). As a matter of fact, Rashi actually owes the popularity of his commentary to the fact that it contains both Halachah and Haggadah, thus

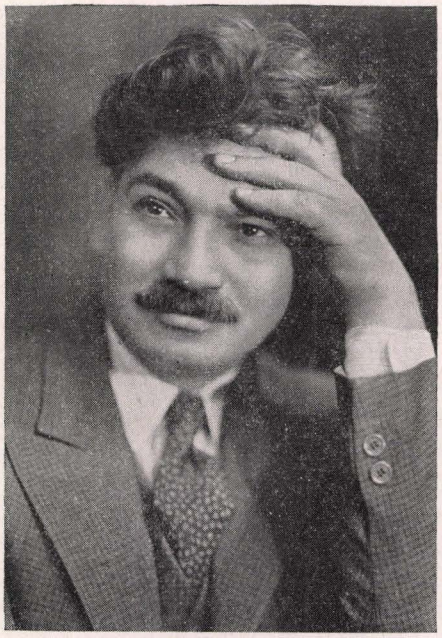
A Page from the first printed edition of Rashi's commentary on the Pentateuch, issued from the press of Abraham ben Garton at Reggio, Italy, in 1475. This is the earliest known Hebrew incunabulum

avoiding the dryness of a mere explanation of words, and at the same time serving as an introduction to the study of the Talmud.

It was because of the popularity enjoyed by the work that this commentary on the Torah was the first Hebrew book to be printed (1475). Up to the present time it has always been a favorite book for use in schools; it has been translated into Latin, German and English, and it has even been often illustrated; more than a hundred commentaries on it have been written. Rashi's commentary on the Prophets and the Hagiographa is less diffuse, but it also contains many valuable and original ideas. A critical edition was made by Isaac Maarsen (3 vols., 1930-36).

The commentary on the Talmud is a consummate masterpiece, a remarkable and gigantic work by reason of its compass, if nothing else. In this Rashi first presents, with sound criticism, a correct text; his readings have been frequently incorporated into the editions of the Talmud. For this purpose he made use of older manuscripts and commentaries (according to Zunz, to the number of eighty), which from that time on became superfluous, and for that reason mostly disappeared. Next he explains difficult words, the contents of the sentences and the connection of the discussion, anticipates objections, solves contradictions, and infers new Halachic decisions. Again and again the reader is amazed at his acuteness, the extent of his reading, his circumspection and the simple ideas, arranged carefully in degree of difficulty, which always remain sound, despite the bewildering completeness of his knowledge.

The most important service rendered by this commentary is its manner of presentation; the pedagogic genius of Rashi instinctively recognizes what the questions and objections of the students will be, and he answers these with touchingly modest brevity, often by a single word. In doing so, on the other hand, he keeps out all unnecessary secondary concerns, such as the philosophical interpretation of Haggadic passages. As a result of this, his work is still the best introduction to the Talmud for those who are learning it for the first time, and the best foundation for further work by the learned.



Of course, his views often met with opposition, especially on the part of the Tosafists; but no one can take away from his commentary its reputation for simplicity and clarity. Hence it was called Kontros or Kuntres (Latin *commentarius*), the commentary *par excellence*. It is so indispensable that it is printed with all editions of the Talmud, on the inner margin of the page. Posterity ingeniously gave Rashi the name Parshandatha (*Esther* 9:7), interpreting the word to mean expounder (*parish*) of the Law (*dath*). The type of Hebrew characters which was used by all subsequent commentaries is called the "Rashi (or cursive) script."

Rashi himself had no sons; but his work was continued by three sons of one of his daughters, Samuel ben Meir (RaSHBaM), Isaac ben Meir (RIBaM) and Jacob ben Meir Tam (Rabbenu Tam). Samuel ben Meir was the best representative of the tendency to use the literal interpretation (Peshat), while Jacob Tam was the most important Tosafist. The monk Nicholas of Lyra quoted the interpretations of Rashi so frequently that he was called "Rashi's ape." Since Martin Luther made much use of the writings of Nicholas of Lyra, there is a clear line of influence from Rashi to the first German and subsequent translations of the Bible. In the same way many of the Jewish and Christian interpreters of the Middle Ages are dependent on Rashi.

In 1940 the 900th anniversary of the birth of Rashi was celebrated by Jews all over the world.

RASHI SCRIPT, *see* PALEOGRAPHY.

RÁSKAI, DEZSŐ, urologist, b. Budapest, 1866. He studied at the Universities of Budapest and Vienna; became lecturer (Privatdozent) at the former University and physician-in-chief of the urology divisions of several hospitals in Budapest. His numerous works were published both in Hungarian and in German. They include: *Über Harnröhrenstrikturen* (1912); *"Die Rolle des Influenzabazillus bei Erkrankungen der Urogenitalapparate"* (in Virchow's *Archiv,* 1913); *Metschnikoff-tanulmány* (Metchnikoff Study, 1932); *Az urologia magyar úttörői* (Hungarian Pioneers of Urology, 1933). Ráskai embraced Christianity.

Saul Raskin

RASKIN, PHILIP M., poet, b. Shklov, Russia, 1880. He received both a secular and a traditional Hebrew education. Leaving Russia, he studied for a time in Zurich, Switzerland, and then went to England where he continued his studies. He worked with the Health Department of Leeds, in Yorkshire, until 1915, when he left to settle in the United States.

He began to publish poetry at an early age. In Leeds his first volume of Yiddish poems appeared, *Ghetto Lieder* (1910), with an introduction by Sholom Aleichem. His initial volume of English poems, *Songs of a Jew,* was issued in 1914 with an introduction by Israel Zangwill. In 1917 there appeared, in the United States, *Songs of a Wanderer,* which had an exceptionally large sale and was translated into other languages. Other volumes were: *Songs and Dreams* (1919); *Yiddishe Lieder* (Yiddish; 1919); *When a Soul Sings* (1921); *Poems for Young Israel* (1922); *Selected Poems* (2 vols., 1931); *Anthology of Modern Jewish Poetry* (1934); *Lanterns in the Wind* (1937); *Tzafririm* (Hebrew; 1939); *We Shall Not Die* (1941). Raskin's poetry expresses his sentiment both as an individual and as a Jew. Treating a wide range of subjects, he reasserts traditional Jewish values. He has been praised for his lyrical simplicity and profound insight.

Raskin was, from his boyhood, an adherent of the Jewish renaissance. Joining the Zionist movement, he became a propagandist for it in England, and later in the United States. Returning from a Palestinian journey in 1922, he published a series of articles in the New York press on Palestine; these first appeared in the *Evening Post,* and later, enlarged, in the *Jewish Forum.* He was editor of *Der Wecker* (Leeds; 1910) and of the *American Weekly Jewish News* (New York; 1917-19).

Lit.: American Hebrew, July 30, 1920, p. 279.

RASKIN, SAUL, artist, b. Nogaisk, Russia, 1878. Even as a child he evinced a strong interest in drawing, and his father took him to a neighboring town to be apprenticed in a lithographic print shop.

From there he went on to Odessa, where he attended his first art classes. Then, earning his living as a lithographer, he wandered through Europe, dividing his spare time between reading and drawing. He returned to Russia, and in 1904 left for the United States. In New York city he came into his first intimate contact with Jewish culture when he began to draw cartoons for the *Kibitzer* and *Die Groisse Kundes.* He contributed to the socialist and liberal Jewish press. In the first World War he worked with the Jewish Welfare Board. Finally he became a Poale Zionist, and in 1921 made the first of four journeys to Palestine. In Palestine he wandered afoot, drawing and painting; here he became convinced that painting was his true calling.

After returning to New York with about one hundred paintings and drawings, he held his first exhibit, at the age of forty-three. Subsequently he went back to Palestine in 1924, 1929 and 1937. *Palestine in Word and Picture* appeared in 1925.

His depictions in water colors, oils and graphics of life in Palestine's streets, synagogues, harbors and homes won wide acclaim. On his trip of 1929 he took with him lithograph plates and executed a series of twenty prints entitled *Jerusalem* and issued in portfolio. Raskin came to be known also for his portrayal of New York's East Side Jewish life. Subsequently he chose as his subjects the fisher folk of Provincetown and Gloucester, Mass. In 1941 a retrospective exhibition was held in New York city of Raskin's work over a period of twenty years. Critics commended his deep understanding of his subjects, and in his execution, the sensitive and pure line, eloquent color, and dramatic use of space in design.

Emil Rathenau

His work was acquired by the Metropolitan Museum of Art, the Brooklyn Museum, and the Public Library, of New York city; the Library of Congress, of Washington, D.C.; the Newark Museum and Library, of Newark, N.J.; the Museum of Fine Arts, of Houston, Texas, and by other institutions. As a teacher and lecturer, Raskin became a leading exponent of the movement for a self-cognizant Jewish art. In 1938 appeared the volume *Saul Raskin, Paintings and Drawings*. He also issued *Pirke Aboth with Etchings* (1940); *Haggadah for Passover* (1941); and *Book of Psalms Illustrated* (1942).

Lit.: Raskin, Saul, *Saul Raskin, Paintings and Drawings* (1938).

RATHAUS, KAROL, composer and teacher, b. Tarnopol, Poland, 1895. He was brought to Vienna as a boy, there studying music with Franz Schreker. He studied music also at the Hochschule für Musik, Berlin (1920-23), and received his Ph.D. degree from the University of Vienna. He first attracted attention as a composer when his orchestral compositions were performed by Erich Kleiber and Furtwängler, and his opera, *Der letzte Pierrot,* was successfully presented at the Berlin State Opera (1927). Strongly influenced by Schreker, Rathaus, as a modernist, employs a highly individual and radical musical speech. In 1931 he achieved the greatest success of his creative career when his opera *Fremde Erde* scored a triumph at the Berlin State Opera. After the rise of the Nazi government, Rathaus migrated to the United States, where he was serving (1943) as head of the music department at Queens College, New York.

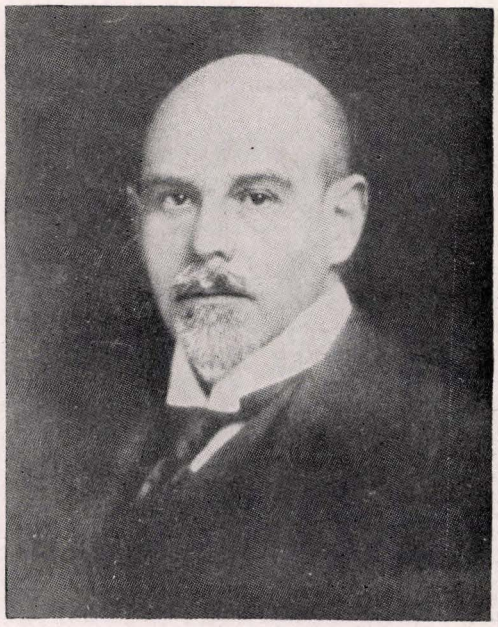
Besides the two operas mentioned above, Rathaus composed two symphonies, *Tanzstücke* (for orchestra), a concertino for piano and orchestra, many chamber music works, songs, and pieces for the piano. His music was published in Vienna, Paris, London and New York.

Rathaus was a member of the board of directors of the International Society for Contemporary Music and of the Composers' Committee of the American League of Composers. He was honorary vice-president of the Jewish Music World Center, of Palestine.

RATHENAU, EMIL, engineer and industrialist, b. Berlin, 1838; d. Berlin, 1915. During his visit to the United States, in 1876, he became acquainted with the latest inventions, the telephone and microphone. His attempt to set up a telephone exchange for Berlin was thwarted by the opposition of Postmaster General Stephan. Soon afterward, however, he commissioned Rathenau to introduce the telephone into the public postal service. At the Electric Exposition at Paris, in 1881, Rathenau saw Edison's incandescent lamp, and devoted himself to the improvement and practical application of this new lighting device. For this purpose he founded (1882) a research company from which, in the following years, the Deutsche Edison-Gesellschaft für Angewandte Electrizität emerged, capitalized at 5,000,000 marks. This in turn became (1887) the Allgemeine Electrizitäts-Gesellschaft (AEG).

Rathenau developed the AEG into one of the greatest electrical enterprises of Germany, ranking alongside of the Siemens-Werke. Together with its numerous ramifications and subsidiaries, it was one of the largest European concerns. He promoted the application of the Nernst and Wolfram lamps for lighting purposes, and developed the rotatory (multi-phased) current technique, so that high-tension current could be transmitted to any distance. To him belongs much of the credit for research and development in wireless telegraphy, rapid electric communications, steam-turbine, motor-car, avio-motor and great electrical machinery. He was also the first to show how aluminum could be economically used on an industrial scale, and he manufactured electro-steel. Rathenau was one of the few Jews who had connections with Kaiser William II and the ministers of the imperial Reich.

Lit.: Pinner, Felix, *Emil Rathenau und das elektrische Zeitalter* (1918).



RATHENAU, WALTHER, engineer, statesman and philosopher, b. Berlin, 1867; d. Berlin, 1922. The son of Emil Rathenau, he was a pre-eminent personality of his time. He studied at several universities, graduated with a doctoral thesis on light absorption by metals (1889)—an advanced and difficult subject—and became technical officer of the Aluminum Industry Company at Neuhausen, Switzerland, where he discovered a method for the production of chlorine and alkalies by electrolysis. In 1893 he took over the management of the Elektro-chemische Werke in Bitterfeld, Prussia, in 1899 joining the board of directors of his father's creation, the Allgemeine Elektrizitäts-Gesellschaft, and taking over the department for constructing power stations (he built stations in Manchester, Amsterdam, Buenos Aires, Baku and other cities). He left the company in 1902 to join the management of the great bank, Berliner Handelsgesellschaft, but later returned to the AEG, which he reorganized and expanded so that in 1915, when (after his father's death) he became its official head, the AEG was among the three leading concerns in Germany, employing nearly 70,000 workers and having a capital of 200,000,000 marks. Holding a leading position in the direction of eighty-six German and twenty-one foreign enterprises, Rathenau was so immensely wealthy that "neither he nor his advisers knew the exact size of the fortune." But Rathenau also cared for the welfare of his employees, building sanitary factory plants and homes for the workmen.

He entered politics when he accompanied (1907-08) the colonial secretary, Bernhard Dernburg, as an assistant on his inspection tour through the German colonies in Africa. Rathenau prepared the official report on their investigations. At the very beginning of the first World War he inaugurated and established the Raw Materials

Section of the War Office, an institution which formed the basis of the general war-compulsion economy and to which was due Germany's ability to carry on the war in defiance of her economic difficulties. Ousted from his office by anti-Semitic influences in 1915, he was sent by the government to Switzerland, there to found two companies for the supply of munitions to Germany. Given the portfolio of minister of reconstruction by the Catholic leader, Chancellor Joseph Wirth (May, 1921) he negotiated in October with Loucheur, the French minister for the devastated areas, the Agreement of Wiesbaden according to which part of the German gold indemnity was to be paid in materials and which was expected to pave the way for a peacable solution of the reparations question. Rathenau worked in the same spirit at the conference in Cannes (January, 1922). In the spring of 1922 he became foreign minister, in which capacity he signed the Treaty of Rapallo with Soviet Russia. While this pact, bound to readjust Russo-German relations, was attacked by the Rightists as an attempt to "Bolshevize" Germany, Rathenau's conviction that only through the payment of her reparations could Germany come to an agreement with the Allies and that only thus could the further occupation of German territory be prevented was assailed by the German chauvinists, since they preferred to use German resources for rearmament rather than for the fulfillment of a contract.

The fierce demagogic attacks against Rathenau by the conservative parties, organizations and newspapers were increased through anti-Semitic agitators who defamed Rathenau as representative and leader of the "Jew republic." A plot against his life was hatched by six members of a nationalist terrorist organization, and Rathenau was killed, on June 24, 1922, by pistol shots and hand grenades during an automobile ride to the foreign office, near his villa in Berlin-Grunewald. His murder aroused tremendous excitement; Rathenau was honored by the democratic parties as a martyr of the republic, and a memorial tablet was placed on the spot where he was assassinated. His foreign policies were continued by his successors, and finally appreciated even by the more moderate among his political adversaries. In 1933, however, the memorial tablet was removed by the Nazis, who decorated the graves of his murderers—two of the culprits had committed suicide to evade arrest—which were made the shrine of real pilgrimages.

Rathenau, a prolific philosophical and political writer, repeatedly discussed the Jewish problem. A "citizen of the second class," like every Jew in the Reich, he nevertheless admonished his coreligionists to discard those racial qualities which had proved repugnant to their fellow countrymen: "The goal of this process should not be imitation Germans, but Jews bred and educated as Germans" ("Hear, O Israel," in Harden's *Zukunft*, 1897). An ardent German patriot and advocate of full assimilation, he repudiated the thought of conversion (*Eine Streitschrift vom Glauben*, 1917) "because it would have been a contemptible thing to purchase a personal advantage at the cost of conversion" and because he did not like so to "countenance the wrong done to the Jews" (Kessler). Finally, he became a panegyrist of Israel's mission among the nation. Israel, he wrote to a non-Jewish friend, has a special task: "Do you know why we Jews were born into this world? In order to call every human being to Sinai. You don't want to go there? If I don't call you, Marx will call you. If Marx doesn't call you, Spinoza will call you. If Spinoza doesn't call you, Christ will call you." He remained opposed to Zionism until his death, although

Walther Rathenau

in 1921 he took a statesman's interest in Palestine and even planned to visit the country, but he became more and more attached to Jewish literature (Martin Buber's *Hasidic Books*) and to the Bible, regarding both the Old and the New Testament as documents of the same Jewish ethics.

Rathenau's own writings are embodiments of these ethics. He repudiated the mechanization and injustice of the era and advocated the establishment of a new society in which the reproduction of capital must so be organized as to leave the worker his soul. His works include: *Zur Kritik der Zeit* (1912); *Zur Mechanik des Geistes* (1913); *Von kommenden Dingen* (1917; English trans., *In Days to Come*); *Die neue Gesellschaft* (1919; English trans., *The New Society*). His collected works (5 vols.) and his correspondence were published posthumously, revealing a unique personality, combining subtle mysticism with an unillusioned realistic approach to life, a seer far ahead of his time.

ALFRED WERNER.

RATIONALISM. In a narrow, technical sense, rationalism is usually thought of as a mode of philosophic thinking that came into being with Descartes and was carried along by Spinoza and Leibnitz. It is generally regarded as the foe of British empiricism as well as of the classical authoritarian theologies. But, in a broader sense, any point of view may be termed rationalistic which places a higher value upon the logical reasoning process of the individual mind than it does upon appeals to tradition or to revelations fixed in time and place. It is in this more unconventional setting that the matter of the influence of the rationalistic spirit upon the history of Jewish ethical and religious thought must be considered.

There has been no period in the development of Judaism when the rationalistic tendency has been entirely absent. One may say further that none has made

a more determined effort than has the Jew to construct for himself a reasoned as well as a reasonable faith. It is true, of course, that at every critical stage in the evolution of Judaism there have been those who have sought to obstruct and to silence the rationalists. It is also true that, as the centuries rolled on, these obstructionist tactics invariably failed.

Rationalistic elements are present in the oldest Biblical documents. A writer of the 10th cent. B.C.E., whom Biblical scholars call *J*, maintained that man was not meant to be immortal (*Gen.* 3:19; 3:22; 6:3) but was merely a creature made of red clay (*Gen.* 2:7) who was put in the Garden of Eden to till it and to guard it (*Gen.* 2:15). Furthermore, believed *J*, acquisition of knowledge brings unhappiness (*Gen.* 2:17) and labor is not a privilege but a curse (*Gen.* 3:17-19).

Isaiah (8th cent. B.C.E.) satirized earthly rulers who deify themselves and emphasized that the grave is the final resting-place of king and commoner (*Isa.* 14:9-15). The comparative unimportance and impermanence of man, of nations, and of the entire world-order were stressed by Deutero-Isaiah (6th cent. B.C.E.; *Isa.* 40:15-26; 51:6-12). *Job* (5th cent. B.C.E.) rejected completely the doctrine of divine retribution. The words of Ecclesiastes (3rd cent. B.C.E.) speak for themselves: "Man has no advantage over the beast" (3:19); "The living know that they will die, but the dead know nothing at all" (9:5).

The book of *Psalms* is full of attempts to explain the meaning of life on a soundly rational basis. A good example is *Ps.* 90, whose message, briefly, is as follows: God is eternal. Man is but a moment in infinity. Before man came into being, he was part of God and, after his earthly moment is over, he will still exist in God. Earthly happiness is not man's goal. His life at best is "trouble and travail." But man's earthly efforts are part of a gradually unfolding divine plan. Therefore, the truly righteous man is not unduly concerned over his own personal fate. The feeling that he is helping to fulfill the will of God is sufficiently satisfying. Oh God, he prays, look with favor upon my efforts. Make them contribute, in some measure, to the attainment of the goal which has been decreed for humanity. "The work of our hands, establish Thou it."

While most of the early post-Biblical Jewish writings, influenced largely by Persian eschatology, fully deserve the criticism that they were mechanical rather than reasonable, there was at least one noteworthy exception, the Apocryphal book of *Sirach*. Its author, Ben Sirach, was a physician and, like most medical men, he was courageously and logically plain-spoken. The search for truth was his fixed aim: "Make little weeping for the dead, for he is at rest; but the life of the fool is worse than death (22:11)."

The force of tradition had such a firm hold upon the mediaeval Jewish mentality that, throughout the Middle Ages, it was extremely difficult and dangerous to pursue a line of reasoning that ran counter to the established tradition. Nevertheless, the determination to think independently and honestly was so deeply imbedded in the Jewish consciousness that there were many who braved the terrorism of excommunication and worse to state their heretical opinions either inferentially or plainly. From Antigonus of Socho (about 250 B.C.E.), who condemned the self-centered pietists "who serve their Master in order to receive a reward," to Baruch Spinoza, greatest rebel of them all, there runs a golden thread of heroic individual resistance to rubber-stamp morality and religion.

In the Tannaitic period, for instance, Judah ben Ilai and Resh Lakish boldly attacked the belief that the wicked are punished eternally (*Ned.* 8b; *Midrash Gen.* 26:6). The great Babylonian Amoras, Rab and Samuel, were thoroughly rationalistic in their opinions regarding the Messianic Age and the hereafter (*Erub.* 54a; *Sanh.* 97b and 99a; *Yeb.* 96b). One Midrashic writer (*Yalḳut Shimeoni* 874) declared that Abraham was not the least bit interested in personal immortality, while a number of medieval commentators repeated the Talmudic statement (*B.B.* 16a) that Job did not believe in bodily resurrection.

The most noteworthy advance in the direction of a dispassionate religious ethic occurred from the 12th to the 14th centuries when Jewish thinkers made an intensive study of Aristotelianism as it had been revived and developed by the brilliant Moslem philosophers of Arabia and Moorish Spain. From Abraham ibn Ezra (1092-1167) to Levi ben Gershon (1288-1344) a common rationalistic strain is found in the writings of the Sephardic Aristotelians: God's nature is unknowable and incomprehensible. Man's highest duty is to perfect himself mentally. The only part of man which is truly immortal is his knowledge of universals. The desire of the individual ego to persist eternally is selfish and illogical.

The most famous Jewish philosopher of this period, Moses ben Maimon or Maimonides (1135-1204), wrote a commentary on *Sanh.* 10:1, in which he lauded Antigonus of Socho as "the perfect man who attained the summit of wisdom" and in which he declared that those who serve God from hope of reward or fear of punishment are "fools and madmen."

This long struggle to attain a rational conception of the universe and all that is therein reached its climax in the mind and spirit of Baruch Spinoza (1632-1677). Spinoza, in his philosophy, hurdled all the bars of tradition. He cast aside all prejudice and all emotion and constructed his religious and ethical system on the foundations of pure logic and precise reasoning. Through Spinoza, Jewish rationalism has exerted and continues to exert an ever growing influence upon the life and thought of the modern world. The Spinozistic mood is plainly discernible in the systematic presentations of the overwhelming majority of contemporary philosophers as well as in the writings of many recent Jewish thinkers, such as Max Nordau, Israel Zangwill, Albert Einstein, Irwin Edman, and Harry Wolfson.

DAVID MAX EICHHORN.

RATISBONNE, Alsatian Jewish family some of whose members embraced Catholicism. AUGUSTE RATISBONNE was a banker at Strasbourg and president of the Jewish consistory of Alsace. He had many children, three of whom embraced Catholicism, while the others remained faithful to Judaism. His eldest son, MARIE-THÉODORE RATISBONNE (b. Strasbourg, 1802; d. Paris, 1884), studied law at Strasbourg. After his conversion he became curate at the Strasbourg Cathedral, and founded the congregation Notre-Dame de Sion, whose principal aim was to convert Jews. He published several religious and moral manuals and a biography of St. Bernard.

His younger brother, ALPHONSE RATISBONNE (b. Strasbourg, 1812; d. Jerusalem, 1884), was converted at Rome in 1841, and entered the Jesuit order, but left it a year later to enter congregation Notre-Dame de Sion, founded by his elder brother. After returning to Strasbourg, he tried to pass his conversion off as a miracle, and adjured the Jews of Strasbourg to believe in this miracle and to become converted also. But with the exception of one of his younger brothers, his attempt to convert the Jews of Strasbourg was a complete failure, and he was forced to leave his native town. He

went to Jerusalem, and there established congregation Notre-Dame de Sion.

LOUIS-FORTUNÉ-GUSTAV RATISBONNE, a nephew of the converts (b. Strasbourg, 1829; d. Paris, 1900), renounced his career as a member of the state council because he was vehemently opposed to the coup d'état of Napoleon III. He was editor of the *Journal des Débats,* which combatted the regime of Napoleon in favor of the dynasty of the house of Orleans, from the beginning to the end of Napoleon's empire. In 1871 Ratisbonne became librarian at Fontainebleau, and in 1875 was appointed assistant librarian of the senate.

Ratisbonne translated Dante's *Divina Commedia* into French, and published *Henri Heine* (1853); *La Pologne,* a pamphlet in favor of the Polish revolution (1863); and many plays and comedies which met with great applause. For some decades Ratisbonne was a popular French author; many of his humorous sketches, published under the pseudonym Trim, were also in vogue for a considerable time. As the executor of the poet Alfred de Vigny, Ratisbonne published de Vigny's posthumous works.

RATNER, BRET, pediatrician, b. New York city, 1893. He received his medical education in New York city, and in 1921 began to conduct original research in children's allergic diseases. In 1928 he was designated clinical professor of pediatrics at the New York University College of Medicine; he was named also to the staffs of Bellevue Hospital and French Hospital, and was still active in these posts in 1943.

Pursuing several lines of investigation in clinical and experimental work, Ratner and his co-workers greatly advanced the whole subject of allergy in children. Ratner described "congenital allergy," as opposed to "hereditary allergy," pointing out that allergic sensitivity to protein may be acquired in utero by the infant from a mother who overindulges in protein.

His reports of these studies include: "Diagnosis and Management of the Allergic Child" (*Journal of the American Medical Association,* Feb., 1931); "Treatment of Milk Allergy" (*ibid.,* Sept., 1935); "Immunity of the New Born" and "Hypersensitiveness" (chapters in Park and William's *Pathogenic Microorganisms* (1933); "Asthma and Hay Fever" (chapter in *Appleton's Practitioner's Library,* vol. 7, 1935). Other articles deal with maternity hospitals, transitory blindness after chicken pox, and infant pulmonary tuberculosis simulating asthma. His book *Fundamental Principles of Allergy, Immunotherapy and Sulfonamide Therapy* was in press in 1943.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 120-22.

RATNER, DOB BAER BEN ABRAHAM BEZALEL, Talmudist, b. Kalvaria, Poland, 1852; d. Vilna, Lithuania, 1916. The most important of his numerous works dealing with the Talmud are *Mebo Leseder Olam Rabbah* (1894) and *Ahabath Tziyyon Virushalayim,* variants to the Palestinian Talmud (1901-14, 12 sections). All his works are distinguished by sound knowledge of Talmudic and responsa literature and by critical method.

RATNER, PAYNE HARRY, governor of Kansas, b. Casey, Ill., 1896. Although partly of Jewish descent, Ratner was never affiliated with Jewish institutions. After being admitted to the Kansas state bar in 1921, he settled down to private law practice in Parsons, Kan.

From 1923 to 1927 he was county attorney for Labette County, and from 1932 to 1936 he was referee in bankruptcy in the Federal Court of the Third District. A protégé of the veteran liberal United States Senator Clyde M. Reed of Kansas, Ratner entered on his own liberal career in Republican politics when he won a seat as state senator from Labette County in 1929, serving then until 1933. He was reelected to this office for the term 1937 to 1941, but was destined instead to become chief executive of Kansas.

As a state senator, Ratner became the foremost debater of the Kansas legislature; he was, as well, the leading sponsor of every kind of progressive legislation, favoring the interests of labor, farm organizations, small merchants, war veterans, and Negroes. He carried the fight for more state aid to schools to a successful conclusion, and persistently fought for the Kansas ratification of the federal child labor amendment.

Early showing himself to be a political organizer of unusual ability, he waged a vigorous gubernatorial campaign in 1938. At the time the openly anti-Semitic Gerald Winrod was opposing Reed, Ratner's running mate, for the United States Senate. After the primary campaign, Ratner was subjected by his opponents to state-wide attack as a Jew. Ratner met the onslaught with characteristic frankness, and Kansans evidenced the fact that the issue failed to interest them. Ratner was elected for the term 1939 to 1940 inclusive. In 1940 he was reelected, by a close margin of absentee ballots, for the term to expire in January, 1943.

As governor, Ratner set up the principle of being in close touch with the needs of the people of Kansas, and the better to answer those needs he remodeled the cumbersome state machinery into an efficient organization. One of his earliest acts was the coordination of about forty separate tax collecting agencies into one department. The highways department, virtually bankrupt, was reorganized on a sound basis. Ratner established citizens' advisory councils on water conservation and drought control, on the development of state industries, on state penal institutions, and on the oil industry. As chief executive of one of the leading oil states, Ratner was constantly active in behalf of state interests in oil whenever these seemed threatened by dropping prices or federal legislation. One of the major events of his administration was the establishment of a merit system for appointing state employees. He also helped establish a retirement plan for public school teachers.

As chairman of the State Council of Defense, he effected the organization, in 1942, of more active local defense councils in the state than existed in any one of the other eight states which, together with Kansas, constituted a nine-state defense region.

Lit.: White, William L., "A New Republican Figure From Kansas," *New York Herald Tribune,* Dec. 7, 1938; Lawrence, Jack, in *Christian Science Monitor,* June 1, 1940.

RATSHESKY, ABRAHAM CAPTAIN, banker, and public servant, b. Boston, 1864; d. Boston, 1943. His father, Asher, was an immigrant who, starting as an itinerant peddler, became a leading Boston merchant. Young Ratshesky left school to enter his father's wholesale clothing business, and the firm A. Ratshesky and Sons prospered. At the same time, Abraham Ratshesky became active in Republican state politics, and in the post of chairman of the state committee was largely instrumental in reviving the party's power. It was he who persuaded the presidential candidate William McKinley to go into New England in order to stem the pro-Bryan tide. Ratshesky was a delegate to numerous party conventions, and was elected state senator. However, despite these early successes, in accordance with a promise made to his wife Edith (née Shuman), niece of the famed Boston merchant A. Shuman, Ratshesky dropped out of career politics and, becoming a highly successful banker, began to serve the people of Boston and Massachusetts in a wide range of matters concerned with public welfare. His work during the first World War was especially notable. He served as assistant executive manager of the Public Safety Committee and as Assistant Food Administrator of his state; in 1917

he was head of the Massachusetts relief train despatched to Halifax, Nova Scotia, to render aid after the disaster of the munitions ship explosion in that community.

In Boston philanthropy no man was more zealous. In 1916 he founded the A. C. Ratshesky Charity Foundation, out of which $10,000 was donated each year to various causes in or near Boston, regardless of race or creed. For fifteen years he acted as trustee of the State Board of Charity, and for ten years as chairman of the Massachusetts Department of Public Welfare. He founded a home for undernourished children, and in 1929 gave $100,000 to a Boy Scout camp. He also served as chairman of the Boston Red Cross. In 1939 he was appointed by the governor of Massachusetts to the Metropolitan Transit Commission.

His large and numerous gifts to Jewish charities included a building to the famous Beth Israel Hospital of Boston. The largest donor to the Federation of Jewish Charities, he was its president at one time. He helped organize the Association of Jewish Philanthropies in order to unify all activities, and served as a trustee of that organization. He was also a member of the national council of the Joint Distribution Committee, and on the executive committee of the American Jewish Committee.

Ratshesky, who was president of the United States Trust Company from 1895 to 1939, and thereafter its board chairman (as well as an executive in numerous other large financial institutions), was designated minister to Czechoslovakia in 1930 by President Herbert Hoover. Succeeding Lewis Einstein, he served until 1932, when he resigned. He was publicly commended for his work in Czechoslovakia.

Lit.: *American Hebrew,* Nov. 9, 1928, p. 899; Jan. 17, 1930, pp. 379, 389.

Abraham C. Ratshesky

RAU, PHIL, naturalist, b. St. Louis, 1885. Self-educated, he became an independent research worker on insect biology, ecology and psychology. He was made curator of the St. Louis Academy of Science in 1910, and served until 1915; from 1931 to 1935 he was treasurer. In 1928 he went to Barro Colorado Island in Panama as resident guest of the National Research Council's tropical laboratory. On the results of his researches there he published the highly-praised *Jungle Bees and Wasps of Barro Colorado Island* (1933). In 1918 he had published, in co-authorship with his wife, Nellie Rau, *Wasp Studies Afield.* In addition, he contributed prolifically to the various scientific journals in his field of work.

RAUH, BERTHA FLOERSHEIM (Mrs. Enoch Rauh), social worker and public official, b. Pittsburgh, 1865. Her husband, Enoch Rauh (d. Pittsburgh, 1919), was one of the city's leading merchants and an original appointee to the city council of Pittsburgh, serving for many years. Coming from a socially prominent family of her native city, Mrs. Rauh began early to take a vigorous interest in philanthropic and civic work of every kind. She helped establish such agencies as the Juvenile Court Association, the League of Women Voters, and the Pittsburgh Symphony Society (of which she was co-founder, with her son, Richard). In the first World War, Mrs. Rauh served on four national committees. Thus her appointment by the mayor of the city in 1922 as director of Pittsburgh's Department of Public Welfare (she was the first woman in the country to be made member of a mayoral cabinet) met with general approval; she held the post for twelve years, reappointed by two other mayors. In addition to the score of general civic activities in which Mrs. Rauh engaged, she was prominent in Jewish communal life. For nineteen years president of the Pittsburgh section of the Council of Jewish Women, she was at one time national president. She was on the advisory committee of the Federation of Jewish Philanthropies, and a board member of the National Jewish Welfare Board.

A noted public speaker, she also contributed articles to various journals. Her zealous public life earned her the title of Pittsburgh's "Most Useful Citizen," and the "Jane Addams of Pittsburgh."

In 1942, Mrs. Rauh was appointed by Governor Arthur H. James to be trustee of the State Mental Hospital.

Bertha Floersheim Rauh

RAUH, FRÉDÉRIC, philosopher, b. Saint-Martin-le-Vinoux, France, 1861; d. Paris, 1909. Excelling as a pupil of the École Normale Supérieure of Paris, Rauh was graduated from the Sorbonne by publishing a thesis on Spinoza's doctrine of religion and another thesis dealing with the fundamental problems of moral philosophy. He became professor at the colleges of Vendôme and Valenciennes, and in 1893 was appointed professor at the University of Toulouse. In 1901 he was appointed professor at the Sorbonne (replacing his coreligionist and philosophical antagonist Henri Bergson), and professor at the École Normale Supérieure.

Rauh was a brilliant and powerful lecturer who fascinated even rabid anti-Semites, and educated numerous disciples fervently devoted to him. The Jews of France were proud of Rauh, who was considered as one of a Jewish galaxy shining in the realm of philosophy at the turn of the 19th century. Outside of France, however, Rauh remained almost unknown because he was a difficult writer and repudiated striking formulas. Rauh's special domain was the philosophy of morals, the moral facts and values, and their relations to psychology, metaphysics, and sociology. He was a strong individualist, but combatted moral or political anarchism. Rauh followed Kant for many reasons, but he was opposed to Kant's "moral logicism." He was inclined toward relativism, but believed firmly in immediate moral certainty and in the possibility of establishing a common creed for modern humanity.

According to Rauh, man attains to reality by action, not by sophistication, but there are reality and action in every creative thought. His moral ideal is the "humble" person whose honest action is superior to speculative thinking. Man's true guide is neither instinct nor reflection, but reflection upon instinct. Rauh denied pure intuition as well as pure discursiveness. Contrary to pragmatism, he did not affirm the "élan vital"; his main problem was how to direct impulses. Opposed to any metaphysical or sociological determinism, Rauh tried to restore the importance of the individual conscience. It was his defense of this individual conscience which caused his impassioned activity in the Dreyfus case. Anatole France was deeply influenced by Rauh's moral philosophy, especially by Rauh's defense of the "humble man."

Rauh published many treatises and books. His standard work, *L'expérience morale,* was published in 1903 and reissued several times, even after his death.

RAVA, MAURIZIO, Italian colonial administrator and governor, b. Milan, Italy, 1878. From his early years he had a remarkable aptitude for painting, and studied under the well-known Italian painter G. Ferrari at the Accademia di Brera in Milan. However, in view of his poor health, he was advised to interrupt his studies and live for a time in a warm climate. He then traveled extensively in Africa and Asia, publishing his impressions in Italian magazines and geographic periodicals. Upon his return to Italy Rava became chief editor of the *Rassegna Italiana,* collaborated on *La Tribuna,* and in 1909 was one of the founders of *Il Carroccio,* a politico-literary publication. After the founding of the Italian Nationalist Party, of which he was one the most conspicuous adherents, he advocated Italian colonial expansion. He took part in the Libyan campaign and was decorated for valor.

In 1927 he was nominated secretary general of the Tripoli colony, and three years later was promoted to the post of vice-governor. From 1931 to 1935 he was governor of Italian Somaliland. Rava published numerous studies and monographs on problems relating to Italian administration in Libya, East Africa and Ethiopia.

RAVAGE (REVICI), MARCUS ELI, journalist, b. Berlad, Roumania, 1884. He came to New York city in 1900, and was at one time an instructor in Kansas State Agricultural College. As student of sociology and politics, he became a well-known contributor to various American and European periodicals. From 1920 to 1923 he was European correspondent for the New York *New Republic,* at the same time working for the London *Nation* and *Athenaeum;* in 1936 he was employed in the same capacity by the New York *Nation.*

His books include: *An American in the Making* (1917); *The Jew Pays* (1919); *Malady of Europe* (1923); *Five Men of Frankfort: the Story of the Rothschilds* (1928); *Empress of Innocence: The Life of Marie Louise of Austria* (1931).

RAVEN, *see* FAUNA OF PALESTINE.

RAVENNA, city in Italy, with a total population of 78,000, of whom only seven were Jews (1938). Ravenna was the seat of one of the oldest Jewish communities in the country. In 519 the populace, inflamed with anti-Jewish fanaticism, attacked the synagogue and set fire to it. When the Jews petitioned Emperor Theodoric to assist them in having their rights restored to them, he compelled the populace to rebuild the destroyed synagogue at its own expense.

The next reports regarding the Jewish community of Ravenna date from the year 1226, when the Jew Donfolino brought a law suit against the administration of the city. In the 14th cent. the Jews were money changers, and lived in the quarter San Pietro Maggiore. When, in 1442, Pope Eugene IV proclaimed a bull which greatly limited the rights of the Jews, the representatives of the Italian Jewish communities assembled in Ravenna for the purpose of having it cancelled; in this they were successful.

In 1491 Bernardino da Feltre preached in Ravenna against the Jews, with the result that some of them were banished. In 1535 Pope Paul III granted to the Jews of Ravenna the privileges which he had previously accorded to those of the province. In 1553, however, the Talmud was burned in Ravenna by order of Pope Julius III. When, in 1569, the Jews were banished from the Papal State, this brought the Jewish community of Ravenna to an end.

RAVENNA, CIRO, agricultural chemist, b. Ferrara, Italy, 1878. He began his scientific career as assistant at the University of Bologna (1903-6); he held the chair of agricultural chemistry until 1920. That year he was invited to teach at the Royal Superior School of Agriculture in Portici, one of the famed institutions in Europe, and remained there for three

years. From 1923 until the promulgation of anti-Semitic laws in Italy (October, 1938) Ravenna taught agricultural chemistry and was director of the Royal Institute of Agriculture in Pisa. He published more than eighty scientific works, the best-known of which is his *Trattato di Chimica Vegetale* (1926).

RAVENNA, FELICE, communal leader, b. Ferrara, Italy, 1870; d. Ferrara, 1937. A member of a family active in Jewish communal and cultural affairs, he was one of the first promoters of the Zionist idea among the Jews of Italy. He took part in the first Zionist congresses and received Theodor Herzl in his house, on January 19, 1904, during the latter's stay in Ferrara. Ravenna accompanied Herzl to Rome for his historic audience with the king of Italy, Victor Emmanuel III. As president of the Jewish community in Ferrara he sought to maintain the cultural traditions of this old community and to improve the conditions of its institutions. He founded the first Jewish summer camp for the poor children of the community, called Ospizio Marino Lazzaro Levi.

After the promulgation of the new law on Jewish communities in Italy (October 30, 1930), in the preparation of which he took a considerable part, Ravenna served, from March, 1931, to March, 1933, as governmental commissar of the newly created Union of Jewish Communities in Italy, and from 1933 until his death was president of this representative body of Italian Jewry. He was member of the Zionist Actions Committee, and for fifteen years president of the Italian Zionist Federation. As president of the Union of Jewish Communities in Italy he intervened on various occasions on behalf of the Jews of Libya, and flew to Tripoli, in January, 1937, to plead with Marshal Italo Balbo for the cancellation of his decree ordering local Jewish merchants to keep their stores open on Saturdays; this decree led to the flogging of five Jews of Tripoli.

RAVICH, ABRAHAM, urologist, b. Biten, Russia, 1888. He came to the United States in 1892. He was urologist at the Jewish Hospital in Brooklyn from 1924 to 1934, and in the latter year was appointed assistant clinical professor of urology at Long Island University College of Medicine. He was likewise urologist at several other medical institutions, and in 1943 was still director of urology at the Hebrew Home and Hospital for the Aged in Brooklyn, and attending physician at the Adelphi Hospital.

Ravich devised about ten important urological instruments, including the Ravich cystoscope and the Ravich lithotriptoscope, and contributed over thirty papers on various urological subjects to medical literature, some reporting unique cases never before described. He also contributed new clinical concepts of certain organic disturbances.

His writings include: "Critical Study of Ureteral Calculi" (*Journal of Urology,* 1933); "Management of Vesical Calculi: Visualized Litholapaxy" (*Annals of Surgery,* 1935); "Piccochrome: A New Urinary Antiseptic" (*Medical Records,* 1936). Ravich served on the editorial board of *Clinical Abstracts* from 1939 to 1941.

RAVID, JACOB MORDECAI, physician, b. Grayewo, Russian Poland, 1896. He was a descendant of Rabbi Shabbethai Ravidowitz, author of *Sifthe Yeshenim,* and was the brother of Simon Rawidowicz. Jacob Mordecai Ravid emigrated to Palestine with his family, and during the first World War he volunteered in the First Jewish Legion, serving with the British Army in the Dardanelles in 1915. In 1918 he helped organize the Second Jewish Legion, and served in Palestine until 1920; he was awarded two British medals. Later (1930-37) he was president of the Veterans of the American-Palestine Jewish Legion.

In the United States, to which he had come in 1915, Ravid studied medicine, receiving the M.D. degree from the Johns Hopkins Medical School (1926), and in 1927 joined the staff of the New York Post-Graduate Medical School and Hospital; there he became instructor in medicine in 1937, a post he still occupied in 1943; at the same time he was pathologist in several other New York hospitals. From 1939 on he was lecturer in post-graduate courses of the Medical Society of County of Kings.

Ravid contributed to medical literature in both Hebrew and English; his writings include: "Transient Insulin Hypoglycemic Hemiplegias" (*American Journal of Medical Sciences,* June, 1928); "A Reconstruction Study of the Follicles and Follicular Arteries of the Human Spleen" (*Archives of Pathology,* May, 1930); "Insulin" (*Harofe Haivri,* 1930); "Progress in Pediatrics" (*American Journal of Diseases of Children,* May, 1935); *Handbook of Gynecological and Obstetrical Pathology* (mimeographed; 1939); *Handbook of Surgical Pathology* (mimeographed; 1941). From 1930 to 1932 Ravid was president of the Ivrith Medical Society.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 579-80, 726.

RAWIDOWICZ, SIMON, Hebrew writer and editor, b. Grayewo, Russian Poland, 1897. He was the brother of Jacob Mordecai Ravid. Rawidowicz settled in Berlin, where he published a textbook edition of Maimonides' *Sefer Hamadda,* a monograph on Mordecai Zeeb Feierberg (1923) and an extensive treatise on Nachman Krochmal, whose writings he edited (with commentary, 1924). His writings include also *Ludwig Feuerbach und die deutsche Philosophie* (1930); *Moses Mendelssohn and His Philosophy* (Hebrew; 1930); *Knowledge of God* (English; 1936).

From 1927 to 1930 Rawidowicz was one of the editors of the Hebrew periodical *Hatekufah* (in Berlin), and in 1932 and 1933 librarian of the Jewish Community of Berlin. He was the founder and head of the Central Hebrew Organization, Brith Ivrith Olamith (1931-33). In 1943 he was living in Leeds, England, where he was appointed to the newly created chair of Modern Hebrew language and literature at Leeds University, and also edited *Yalkut,* the only Hebrew monthly in Europe.

Lit.: *Jüdische Rundschau,* Aug. 15, 1930; *Jewish Year Book* (London, 1940).

RAYNAL, DAVID, French public official, b. Paris, 1841; d. Paris, 1903. After finishing his studies, he entered trade and in 1862 founded the firm of Astruc and Raynal, in Bordeaux. There he became acquainted with Léon Gambetta. He became a deputy in 1879, general-secretary in 1880, and head of the ministry of public works under Gambetta in 1881. After his retirement from office in 1882, he resumed it under Jules Ferry in February, 1883, and kept it until 1885. In 1893 Raynal became minister of the interior, in 1897 senator, and subsequently president of the commission for the improvement of the merchant marine.

RAYNER, ISIDOR, United States Senator, son of William S. Rayner, b. Baltimore, 1850; d. Washington, 1912. Upon his graduation from the University of Virginia in 1871 he was admitted to the Baltimore bar. His political career began in 1878 when he was elected to the Maryland General Assembly, where he served as chairman of the judiciary committee. Seven years

later he was elected to the Maryland state senate, and in 1888 he was elected to Congress, as Representative of the Fourth District of Maryland. He was twice re-elected to the lower House in Congress.

In 1905 he was chosen by the Maryland legislature as United States Senator and was re-elected after the expiration of his first term. Previous to his first election to Congress he served for a short time as Attorney-General of Maryland. As a member of the Senate Rayner devoted himself to the domestic issues and to the problems of international law by which the Federal government was at that time confronted.

Rayner achieved national fame through his defense of Rear Admiral Schley in 1901 in the Schley-Sampson trial before a court of which Admiral George Dewey was president. Though a civil lawyer and, in the beginning wholly unfamiliar with naval technique, Rayner conducted a masterly defense of the naval officer. The rapidity with which he acquired a great knowledge of naval strategy and admiralty law, not to speak of such details as Gulf Stream currents and other related matters, was considered at the time as almost incredible. When Rayner presented his argument his appeal for justice, according to a historian of the period, "thrilled the country as have few orations in all our history."

In the House of Representatives and in the Senate Rayner achieved distinction as a constitutional lawyer. His studies were based upon an abiding faith and belief in the Constitution as an efficient guaranty of the rights and liberties of the people. He was regarded as one of the greatest orators in his day.

Rayner was throughout his life a member of Har Sinai Congregation of Baltimore.

CHARLES A. RUBENSTEIN.

RAYNER, WILLIAM SOLOMON, merchant and financier, b. Oberelsbach, Bavaria, Germany, 1822; d. Baltimore, 1899. He came to the United States in 1840. Declining an offer of the position of religious teacher in the old Henry Street Synagogue in New York city, he removed in 1841 to Baltimore where in a few years he became a prosperous merchant. At the close of the Civil War he was one of the chief figures in the financial development of Baltimore, serving as a director of the leading bank of the city and of the Western Maryland Railroad. During the Civil War he was active in the formation of the Union Relief Association, serving as its first vice-president.

In 1842 he helped organize the Har Sinai Verein (later the Har Sinai Congregation) and was chiefly instrumental in bringing David Einhorn from Germany in 1855 to become its rabbi. He was one of the founders of the Baltimore Hebrew Orphan Asylum, and was the first president of the Hebrew Benevolent Society (later the Jewish Family and Welfare Association). For many years he was president of Har Sinai Congregation and was instrumental in instituting Sunday services in its synagogue. He was an accomplished German scholar. When Bayard Taylor's translation of Goethe's *Faust* first appeared, Rayner suggested an important change in the English version, which was incorporated in the edition of 1898.

RAZIEL, name of an angel who, in Jewish mythology, was the first to approach mankind. According to the *Zohar,* Raziel was sent down to earth by God in order to deliver to Adam the Book of Secrets. In accordance with his mission, the angel's name is derived from the Hebrew *raz* (secret) and *el* (God). The name appears in the Slavonic Book of *Enoch* and also in the *Targum* to *Eccl.* 10:20, where the angel reveals heavenly secrets on earth. In the *Book of Raziel,* which was often regarded as a charm against evil, he is designated as the angel of good omen. Raziel is regarded also as a companion of the angel Metatron.

Lit.: *Zohar,* vol. 1, p. 55b; Schwab, M., *Vocabulaire de l'angélologie,* 246; Zunz, Leopold, *Gottesdienstliche Vorträge* (2nd ed., 1892) 167; *Jewish Encyclopedia,* vol. 10, p. 335; Bloch, *Geschichte der Entwicklung der Kabbala,* 32-34.

RAZIEL, BOOK OF, an ancient Cabalistic book composed of various parts. It was claimed to have been given by the angel Raziel to Adam after the Fall, in order to save him from sin and from the power of Samael, the evil one. Adam acquired so much wisdom from the book that the angels became envious, stole it and cast it into the sea, and it was only at the command of God that the sea restored it to Adam. After the latter's death the book disappeared, but it was revealed to Enoch and later to Noah, who built the Ark from its specifications. It was then transmitted successively through Shem, Abraham, Jacob, Levi, Moses and Joshua to Solomon. The book contains mystic lore on the letters of the alphabet, and extensive account of heaven and the angels, and various magic receipts and amulets. Zunz ascribed the nucleus of the book to Eliezer ben Judah of Worms, but Adolf Jellinek disputed this.

Lit.: Ginzberg, L., *Legends of the Jews,* vol. 1, pp. 154-57; vol. 5, pp. 117-18.

RAZOVSKY, CECILIA (Mrs. Morris Davidson), immigration expert, b. St. Louis, 1891. As a young girl she did volunteer work with the Jewish Educational Alliance of St. Louis, and taught English to foreigners; thus began that interest in the problems of the foreign-born which was to develop into one of the country's most distinguished careers of scientific social service to immigrants and refugees. Leaving St. Louis for Washington, D. C., in 1917, she worked for three years as inspector in the Children's Bureau. Throughout her career she was a zealous proponent of advanced social legislation for women and children. She then became secretary in the immigrant aid department of the National Council of Jewish Women, the organization with which her name and fame were linked, where, in 1932, she was made associate director.

Under her direction the Council extended its service to immigrants. Between the years 1923 and 1936 she conducted intensive surveys of conditions of Jewish refugees in European ports, in Cuba, Mexico, Canada, Brazil and the Argentine; she was especially interested in Cuba, setting up a social service program for the refugees and serving as secretary for the Jewish Committee from 1925 to 1935.

In the United States Cecilia Razovsky headed numerous immigration committees in national social service organizations, and was delegate to several international congresses. In 1933 she was head of the experts chosen to advise the committee of forty-eight appointed by Secretary of Labor Frances Perkins to study Ellis Island conditions. The year previously, her pamphlet *Handicaps in Naturalization* (*Congressional Record,* 1932) had influenced Congress to reduce the naturalization fees. After serving in several high posts of various refugee service organizations, she became assistant to the executive director of the National Refugee Service, Inc., the coordinating organization of all such aid to refugees, and was still active in that position in 1943.

She was editor of *The Immigrant* from 1921 to 1930, and wrote articles, plays, sketches and pamphlets on immigrant life and on the condition of the Jews in Latin America. Her *Making Americans* was published in 1938.

Temple Oheb Sholom at Reading, Pa.

RAZUMNI, SOLOMON (EPHRAIM ZALMEN), cantor, b. Nikolayev, province of Kherson, Russia, 1866; d. Odessa, Russia, 1904. At the age of nineteen he became cantor in his birthplace. It did not take long before the fame of his lyric tenor voice, his fine mezza voce, and extraordinary ability to improvise soul-stirring melodies penetrated every hamlet of Russia and Poland. As a result, Razumni was besought to accept positions, first in Kishinev, then in Odessa. In these cities, as well as on his many concert tours throughout Eastern Europe, he was idolized by the masses, and his renown assumed legendary proportions. In 1904, after a short illness, he died in the midst of a brief but glorious career in Odessa.

A volume of his recitatives was collected and edited by Samuel Alman, music director of Duke's Place Synagogue, London, and published at London in 1930.

Lit.: *Die Shul un Chazonim Velt,* March, 1934.

READING, a city and the county seat of Berks County in Pennsylvania, situated about fifty-eight miles northwest of Philadelphia. In its total population of 110,568 (census of 1940) there were, in 1943, approximately 2,500 Jews. Reading was surveyed and laid out as a town in 1748; records indicate the presence of Jews there by 1753. The earliest known Jews of Reading were Lyon Nathan and Meyer Josephson; but neither their origin, nor what became of them, is known.

Among documents published in 1920, relating to the history of Congregation Shearith Israel of New York, there appeared an item which indicated the existence of this first Jewish community at Reading. A receipt, written in Hebrew and dated September 8, 1761, acknowledged the loan of a Scroll of the Law by the New York congregation to the Jews of Reading. Evidently the scroll was to be used during the high holy days of that season, and its return was guaranteed by influential members of Congregation Mikveh Israel of Philadelphia.

The history of this earliest community comes to an abrupt halt. It is not until 1836, twelve years after the opening of the canal between Reading and Philadelphia, a transportation link which initiated Reading's industrial development, that Jews are again recorded there. At that time the community included Myer Arnold, Bernard Dreifoos, Alexander Heyman, John Spiegel, John Siegel, Myer Siegel, Abraham Speier and Aaron de Young, all of German origin.

In May, 1864, Jews of Reading organized Congregation Oheb Sholom (Reform). The congregation worshipped for two decades in rented rooms, and it was not until 1884 that it purchased a church and remodeled it into a synagogue, dedicated in 1885. A new synagogue was built in 1923, and was still in use in 1943. G. Levy, the first rabbi of the congregation, served from 1885 to 1890. Julius Frank became the incumbent in 1897, and retired as rabbi emeritus in 1927, when Sidney L. Regner was elected; Regner was still serving in 1943.

The Orthodox Congregation Shomre Habrith was founded in 1886. In 1942 Melech Schachter was called to its pulpit. Reading also maintained the Conservative Congregation Kesher Zion, established in 1930 by the merging of Congregation Bnai Zion (organized 1910) and Kesher Israel (organized 1913). Rabbis of Kesher Zion included Louis J. Haas (1924-30, when it was Kesher Israel) and Isadore Barnett (1930-32). Max J. Routtenberg, elected in 1932, was the incumbent in 1943, but on leave of absence as army chaplain.

Other communal organizations were a lodge of the B'nai B'rith, a Workmen's Circle, a post of the Jewish War Veterans, a district of the Zionist Organization, an A. Z. A., a Senior and Junior Hadassah. The Jewish Community Council functioned as the central representative organization, and conducted the annual United Jewish Campaign. Social welfare work was centralized in the Jewish Welfare League. The *Jewish Voice,* a monthly periodical in English, was established in Reading in 1922.

Jews of Reading were engaged in all fields of business, in the professions, and in manufacturing. A number of representative Jews were actively identified with civic endeavors in the larger community of the city of Reading. Outstanding was Sigmund S. Schweriner (d. 1940, at the age of eighty-five), who lived most of his life in Reading and was a leading figure in the general, as in the Jewish, community. Ben Austrian, a native of Reading (1870-1921), was an artist of distinction, noted both locally and abroad.

SIDNEY L. REGNER.

Lit.: Regner, Sidney L., "The Earliest Jews in Berks County," *Historical Review of Berks County,* Jan., 1942; *Publications of the American Jewish Historical Society,* No. 27 (1920) 21.

READING, FANNY, physician in Sydney, Australia. Her career began as assistant physician of the Community Hospital of New South Wales. Active in social medicine, she was on the advisory board of the Racial Hygiene Association of New South Wales, and a member of the Committee of Reduction of Maternal and Infantile Mortality, and was serving in these organizations in 1940. She rose to prominence in the affairs of the Jewish Community of Sydney.

In 1923 she founded the National Council of Jewish Women of Australia, and was still its president in 1940. Dr. Reading was elected life president of the Council of Jewish Women of New South Wales, and appointed

to the executive committee of the Australian Zionist Federation. She founded the Young Men's Hebrew Association of Australia in 1930.

READING, RUFUS DANIEL ISAACS, FIRST MARQUESS OF, jurist and statesman, b. London, 1860; d. London, 1935. The first of the Isaacs family to cross the channel from the Continent to England, in the last decade of the 17th cent., was the peddler Michael. An enterprising great-grandson, his namesake, established the family fruit business in London's Aldgate, and, from the Spanish and Portuguese community, took a wife Sarah, daughter of the Shohet Aaron Mendoza, and niece of England's boxing champion Daniel Mendoza. (The Mendozas were said to be related to Disraeli.) Of the two sons of Sarah and Michael Isaacs, the elder, Henry, became Lord Mayor of London in 1889; the second, Joseph, marrying Sarah, daughter of the London shopkeeper Daniel Davis, became the father of Rufus Isaacs.

Rufus grew up with eight brothers and sisters in a house in Finsbury Square; of all the high-spirited, engaging clan, he was the most restless. At five he was sent to a school in Brussels, where he excelled in mischief; then, after several years in a London Anglo-Jewish school, and less than a year at University College, his studies were over. But the boy's volatile temperament could not endure the routine of the family fruit business, and so one day, with full paternal consent (in contradiction to the widespread legend that he ran away), he signed up as ship's boy on the India-bound *Blair Athole*. Thus, as lowest of a ship's crew, he first saw the India which he was one day destined to rule.

The conventional-minded, looking in vain for the usual success virtues of obedience and diligence, could never have recognized the boy Rufus as father to the man Reading. After the India voyage, there followed again a futile attempt to pursue the fruit business; then a venture of several years on the Stock Exchange, distinguished more for hard play than hard work, and ending in 1884 in failure. The time, however, was far from a total loss: Rufus had become a proficient amateur boxer (and had his originally straight nose broken to aquiline); among the girls he was the "idol of Belsize"; and he had acquired a firm grasp of business facts and figures, a proficiency which was to serve him greatly in future. But, dispirited, he thought of going to Panama for a fresh start; at the moment of departure, the matriarchal Sarah Isaacs had her way: her favorite son had to stay in London and study for the law.

In Rufus Isaacs, law student, a conversion now took place: he became unswervingly serious. He was at a disadvantage: a Jew, for one thing (only two Jews had made a name in English law); for another, he was much older and with much less schooling than the usual student. But by 1887 he was admitted to the bar. The same year, in the West London Synagogue, he was married to Alice Cohen, who, despite her subsequent ill-health, remained to the end the intimate collaborator in her husband's career. (He said of her that she had done more to create amity between Britons and Indians than he.)

Rufus Isaacs had found his true calling: fame and fortune were soon his, for in a short span of years he stood at the head of England's common law bar. Important cases were given him. One of the earliest was the famous Chetwynd v. Durham, involving malpractices in fashionable horseracing. In the Commercial Court his early business experience made him an outstanding advocate, and he had, besides, a flair for favorable settlements. He was asked to brief the Allen v. Flood case which, involving rights of employers and workers, became a cause célèbre, and greatly enhanced his reputation. Thus, at thirty-seven, the youngest ever to do so, he applied for his "silk" and became Queen's Counsel. His success grew.

The first Marquess of Reading (Rufus Daniel Isaacs) in judicial robes

It was said that in the next twelve years, until he became an officer of the crown, his income reached unprecedented figures. At the very zenith of his career he appeared for the plaintiff in the sensational Whitaker Wright case, which ended in the suicide of the defendant Wright after cross-examination by Isaacs. The case involved hundreds of facts and figures, millions of dollars, and Isaacs (or Rufus, as he was generally called), demonstrated at its most brilliant his faculty for grasping a total situation in every minutest detail, and applying to it a profound legal understanding. Most brilliantly, too, did he exercise the type of formidable cross-examination which he had introduced as a substitute for dramatics or bullying in British court procedure, and in which, "suave and exciting, he led the victim to his doom with perfect taste."

Yet Isaacs was anything but hard; in 1907 he helped set up, in the interests of greater justice, the Court of Criminal Appeal. He was a vigorous proponent of probation for juvenile criminals, and later, as judge, noted for his humane administration.

In the meanwhile he had entered politics. He was, from the first, a Liberal Imperialist, and Free Trader. With his election to Parliament in 1904 from the borough of Reading, he began to participate in the stormy political scene which marked the rise of the Liberal party under the leadership of Herbert Asquith and David Lloyd George. This was the period of decisive struggle between Commons and Lords on constitutional questions. Isaacs did not have a dramatic career in open assembly. But behind the scenes, in party conference, his penetration into facts was invaluable. Nevertheless, he was a great favorite with his own

Reading constituents, and stayed in Commons steadily until he took his seat with the Lords.

Politics did not diminish Isaacs' law practice, which ceased only when, in 1910, he was appointed solicitor general. Shortly afterwards, he was elevated to attorney generalship, and as such, unprecedentedly, made a member of Asquith's cabinet. Then came the error in judgment which almost wrecked the career of Rufus Isaacs, for whose great good judgment clients had gladly paid enormous sums. Isaacs' younger brother Godfrey was head of the British Marconi company, which was then negotiating with the government through the postmaster general, Herbert Samuel, to establish a series of wireless stations in Great Britain. Godfrey Isaacs was also a head of the subsidiary American Marconi corporation, and Rufus Isaacs was persuaded into buying 10,000 shares in this latter corporation as a sound business venture. Part of these he sold to David Lloyd George and another fellow Liberal. Soon, in an atmosphere of political exploitation and anti-Semitism, charges of corruption were spread. In the end, a parliamentary investigation exonerated the Liberals. In the seething Commons, Isaacs made his greatest defending speech on behalf of himself and his friends; but he admitted to an error of judgment in exposing himself, however innocently, to the charges.

Shortly afterwards, in 1913, he was appointed Lord Chief Justice of England, and created Baron Reading of Erleigh. With the outbreak of the first World War in 1914, Reading's services were enlisted to avert the country's threatening financial crisis. As a member of the Anglo-French loan commission he went to the United States and succeeded in raising a loan of five hundred million dollars. He returned to the United States in 1917 as a special envoy (he was created earl that year), and in 1918 returned again as ambassador extraordinary. America hailed him as the world's greatest Jew.

Nor did he altogether neglect his duties of judge. One of the War trials in which he sat was that of the Irishman Roger Casement, accused of treason. The War over, Reading had hardly time to get restless in his routine as Lord Chief Justice when he was appointed viceroy of India, in 1921. India was in a crisis of economic depression, political struggle and moral hatred of the British. The Swaraj movement of independence was boycotting the meager British concessions to self-government; Mahatma Gandhi was at the height of his influence; the slaughter at Amritsar was not forgotten. Reading, mistrusted as a representative of the hated British, but welcomed as a Jew and thus as one who might understand an Eastern people, made persistent attempts at reconciliation on all problems. Yet before the end of his five-year rule, Gandhi was arrested, as were the two Mohammedan brothers Ali, autocratic government had to be reestablished in Bengal, and Reading had certified the hated salt tax. He did succeed in introducing some measures of social welfare, and his personal sympathy for the Indian people was genuinely evident, as was that of Lady Reading, who was actively engaged on behalf of Indian women and children.

To England Reading returned in a blaze of personal triumph, and was created Marquess of Reading. Greatest welcome came from the Jewish community. Reading was the first Jew to have been Lord Chief Justice, ambassador, and viceroy, and was known to be proud to share honors with his people. (Though he never practised Judaism, he left a request to be buried with a simple Jewish service.)

He had long been interested in Palestine rehabilitation, but for reasons of state could not take an official stand. In 1926 he was made president of the Palestine Electric Corporation. In the House of Lords he advocated the cause of Palestine, and when, in 1932, he made a trip to that country (in company with the second Lady Reading, whom he married after the death of the first in 1930), he associated himself with the various Zionist projects initiated by his son's father-in-law, the first Baron Melchett. After 1933 he turned his attention to the problems of the German Jews, and in this cause, too, appealed to the House of Lords. Active as chairman and director of various corporations, he was still engaged in party work. In 1927 he was appointed chairman of the United Newspapers Ltd., a group of Liberal papers; in 1930 he sat as party representative at the Indian Round Table Conference. In 1931 he served as Secretary of State for Foreign Affairs.

Lord Reading as Viceroy of India. From a contemporary painting presented to the British government in 1928

On a final trip to the United States in 1932 he represented the English bar at the laying of the foundation stone of the new United States Supreme Court building in Washington, D. C. Back in England, in 1934, he was installed as Lord Warden of the Cinque Ports, and saluted at Dover Castle by nineteen guns, the final honor of his career. Of that career his son Gerald wrote: "Yet he was at heart a man adventurous rather than ambitious, loving responsibility rather than power, whose unflagging zest was for the battle itself rather than for the spoils of victory."

STELLA, DOWAGER MARCHIONESS OF READING, daughter of Charles Charnaud, was private secretary to the first Marchioness of Reading during the viceroyalty in India, and was married to Reading in 1931. She served as a justice of the peace in England from 1932 to 1937.

In 1935 she was on the British Broadcasting Commission. She assumed her most important post in 1938 as leader of the million women enrolled in the Women's Voluntary Services for Civil Defense, and still occupied that post in 1943. In addition, she worked with the Factory and Welfare Board and the National Savings Central Committee. In 1941 she was created Dame Commander of the Order of the British Empire.

GERALD RUFUS ISAACS, SECOND MARQUESS OF READING (b. London, 1889), Reading's only son, was educated at Oxford and became a barrister; in 1936 he was made a bencher (member of the governing board) in Middle Temple. In 1929, as Liberal candidate, he contested the district of Blackburn. In the House of Lords, he was on the Select Committee for the Prevention of Road Accidents (1938-39), and chairman of the Central Valuation Board under the Coal Act. He served in the first World War and was awarded the Military Cross and the Croix de Guerre. In 1939, as lieutenant colonel, he was placed in command of the Auxiliary Military Pioneer Corps Training Center; in 1943 he was colonel on the staff. Reading was president of the London Jewish Hospital. Succeeding Lord Samuel, he was chairman of the Council for German Jewry (1938-39). He published *The South Sea Bubble* (1933).

EVA VIOLET, MARCHIONESS OF READING, daughter of the first Baron Melchett, was married to the Second Marquess of Reading in 1914. As a leader in British Zionism she toured the United States in 1939 on behalf of the United Jewish Appeal. At the same time, she made a study of the country's day nurseries, in connection wtih her own position as chairman of England's national association of day nurseries.

MICHAEL ALFRED RUFUS ISAACS, VISCOUNT ERLEIGH (b. 1916), son of the Second Marquess of Reading, was a second lieutenant in the armored corps of the Dragoon Guards. He was awarded the Military Cross in 1940. SHERRY ABEL.

REAL ESTATE (*ḳarḳa'oth,* literally "parcels of ground"). 1. **General.** Real estate law is dealt with in the Bible in the law of the jubilee, in which it is provided that at the expiration of fifty years all real estate returns to its former owners. However, this law did not apply with the same force to property that was held in cities.

The Talmud considers landed property as the highest economic security; it recommended that a third of one's property should be invested in real estate (land; *B.M.* 42a), and that even in Babylonia, a country under a foreign ruler. It is true that the Talmud occasionally mentions the forcible seizure of the landed property of a Jew; but the regard for landed property was so well developed in those parts of the Orient that every action of a Jew in favor of one who had taken the land of another was considered an injury and subject to the sentence of the court. A general legal principle states: *ḳarḳa 'en nigzeleth le'olam,* that is, whereas the theft of chattels may bring about a change in ownership, this can not be the case in regard to real estate (Maimonides, *Hilchoth Gezelah* 8:14; *Shulhan Aruch, Hoshen Mishpat* 371:1). Leasing of real estate was usually based on payment of rent in produce of the soil.

In the Middle Ages, when Jews no longer were permitted to own ground, the chief questions dealing with real estate had to do with the houses which the Jews occupied in the cities. The question of property rights in houses called for much attention on the part of the rabbis, and led to the promulgation of many regulations. There is also much discussion of these problems in the responsa literature.

2. Domain. Jewish law distinguishes between public (*reshuth harabbim*) and private domain (*reshuth hayahid*) in a number of questions dealing with the civil law of permitted acts. Public domain is defined as property that is open to the public, such as open places, roads or open courts. However, a footpath (*simta*) is generally reckoned as private property. Private domain is whatever real estate is solely under the control of an individual or a group of individuals. Certain utensils, such as a wagon, may be regarded as private domain even though they are in public domain.

The distinction between these two types of domain has a particular application in the law of the Sabbath, since objects may be carried in private domain, but not in public. The Erub on the Sabbath, as practised in cities and towns, had the effect of transferring the entire community from public to private domain, by means of forming a wall (real or fictitious) about it to shut off outsiders, preparing a communal eating-place, and the like.

Domain has influence in civil law in the following ways:

1. There is a difference in the degree of responsibility for damages to another according as the damage took place in public or in private domain (*B.K.* 3:1-8; 33a).

2. A homicide who had accidentally killed another need flee to a city of refuge only if the occurrence took place in public domain (*Mak.* 2:2; 8a et seq.).

3. The acquisition of chattels becomes valid as soon as they are brought to the private domain of the purchaser or donee. Accordingly, the bill of divorce, which must be delivered to the wife in such a way that she must receive it, is always placed in her possession when she is in her private domain.

3. Bererah. The concept of Bererah (literally, "choice") arose out of difficulties that grew out of the joint ownership of property, especially real estate. Joint property being neither public property in any sense nor private property in the original sense of being owned by an individual, the question often arose as to what to do in cases of disagreement among joint owners. Thus in *Ned.* 5 there is the case of partners who own a court in common and in anger each of them swears not to enter the domain of the other. Strictly enforced, this would prevent both of them from using the property; the principle of Bererah would permit each of them to consider it his own property solely at the time when he is using it. Some rabbis allowed Bererah, while others rejected it. The same question might arise if a field were jointly owned by a Jew and a non-Jew, and it were in a place where tithes were gathered; under Bererah the Jew would be expected to give tithes for the entire field. There are also discussions of the same sort in cases where the property of individuals has become mixed (as for instance heaps of grain) and some sort of division has to be decided. MARCUS COHN.

REBBE (Hasidic), *see* ZADDIK.

REBEKAH (Hebrew *Ribḳah*), wife of Isaac and mother of Esau and Jacob. She was closely related to her husband, as her father Bethuel was the son of Isaac's paternal uncle, Nahor. The story of her life appears in *Gen.* 24 to 28. She was chosen by the servant of Abraham as the wife of his master's son because of her kindness of disposition to both him and his camels. After having been childless for a long time, she gave birth to twins, Esau and Jacob. She preferred the latter to his brother, aided and encouraged him in obtaining

Rebekah at the Well. From a painting by Nicholas Poussin

his father's blessing by cunning, and sent him away for safety to her brother Laban (another account says that she sent him to Laban so that he might take a God-fearing wife.

There is no record of the death of Rebekah, but *Gen.* 49:31 states that she was buried in the Cave of Machpelah. Rabbinic accounts of Rebekah expand the Biblical story, and explain away her partiality for Jacob by dwelling upon the wickedness of Esau. The length of her life is given variously as 133 and 155 years.

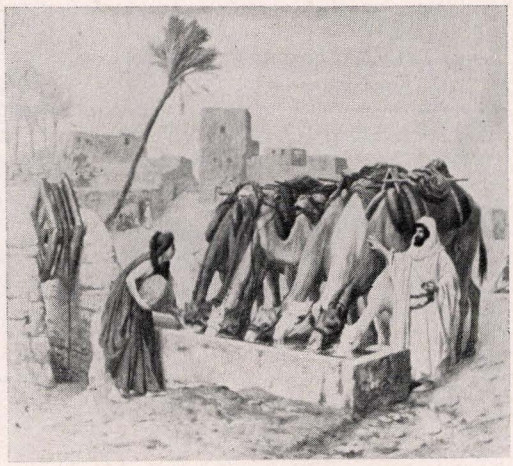
REBUKE, *see* ADMONITION.

REBUSH, ROMAN, motion picture producer, b. Pskov, Russia, 1895. He came to the United States in 1911. Rebush's first association with the motion picture industry was in the commercial end; he organized Amkino, a corporation which showed Soviet films in the United States. Subsequently he became interested in the production of motion pictures in Yiddish, aiming for an artistic quality which the few Yiddish films produced previously had not had. Rebush produced Perez Hirschbein's *Green Fields,* and later (1939) *Mirele Efros.*



RECANATI, city in Italy. Jews probably lived there as early as the 13th cent., chiefly as money lenders. When Pope Nicholas V issued an edict (1447) forbidding the Jews to engage in money trading, and when the Christian population in Rome and other Italian cities menaced the Jews, the Jewish community of Recanati took the initiative of calling a conference of representatives from all Jewish communities of Italy to discuss and adopt measures against the threatening danger. The correspondence between the communities of Ancona and Recanati, bearing on this necessary move, have been preserved. On Yom Kippur, 1558, a Jewish apostate named Filippo stole into the synagogue of Recanati and placed a cross on the Ark. The indignant Jews threw it out, whereupon Filippo brought charges against the Jews for insulting the Christian religion, as a consequence of which two Jewish leaders were publicly flogged. In 1569 the Jews were expelled from the Papal States, which thus brought to an end also the Jewish community of Recanati.

RECANATI, MENAHEM BEN BENJAMIN, rabbi and Cabalist, who lived in Italy at the end of the 13th cent., and possibly until the beginning of the 14th, although one source gives the year 1290 as the time of his death. He was the only Italian Cabalist of his time, and was the first scholar to cite the *Zohar.* He studied logic and philosophy in order to bring these sciences to the support of his beliefs. Recanati was influenced by both the Spanish and German schools of Cabala, and had such profound faith in the occult creed that he considered all Cabalistic writers the subject of heavenly inspiration.

Among his works are: *Perush Al Hatorah,* a mystical commentary on the Torah, first printed at Venice in 1523, and later translated into Latin; *Perush Hatefilloth* and *Taame Hamitzvoth,* Cabalistic interpretations of the laws and precepts, published together at Constantinople in 1544; *Sefer Hadinim,* decisions and responsa, published at Bologna in 1538, and reprinted at Sudylykov in 1836 under its subtitle *Piske Halachoth;* several other works which have remained in manuscript.

RECHABITES, a religious organization existing during the period of the First Temple, which had as its tenets a nomadic life and the prohibition of the drinking of wine; they were not to live in houses, sow seed or plant vineyards. Its founder was Jonadab ben Rechab, who was one of the partisans of Jehu when the

Rebekah at the Well. From a painting by Jean Leon Gerome

latter overthrew the dynasty of Omri and suppressed the worship of Baal (*II Kings* 10:15-27; 742 B.C.E.). They were still in existence as late as the time of Jehoiakim of Judah (608-597 B.C.E.) when, due to the invasion of the Babylonians, they were compelled to forsake their encampments and seek refuge in Jerusalem, where they were visited by Jeremiah, who praised them for their constancy (*Jer.* 35). The Rechabites appear to have been a group which rejected the civilization of Canaan, because of its idolatry and immorality, and sought a return to the simple, sober ways of the desert. They were particularly opposed to the agricultural Baal worship which was fostered by Ahab and his successors.

Their point of view is echoed by some of the early literary prophets, such as Amos, Hosea and Jeremiah, who contrast the purity of Israel in the wilderness with its corruption after it entered Canaan. The prohibition of wine is reminiscent of the Nazirite vow, and it is possible that the Rechabites may have aided in creating that institution, which lasted through the period of the Second Temple. Despite the favorable prophecy of Jeremiah (verses 18-19), there is no indication that the organization survived the Babylonian Exile.

Lit.: The commentaries on *Jer.* 35.

RECHT, CHARLES, lawyer, poet and novelist, b. Varvazov, Pisek county, Bohemia, 1887. His father, Marcus Recht, was for twelve years mayor of three contiguous communities: Varvazov, Paseka and Most.

Charles Recht attended the Gymnasium at Pisek and the Academic Gymnasium in Prague. He was brought to the United States in 1901, attended New York University Law School (LL.B., 1909) and acquired American citizenship in 1910. While serving as legal counsel for a variety of unpopular causes—such as those furthering the Irish Free State, the Soviet Government (from 1922 on), and the movement for Hindu independence—Recht contributed significant poetry and prose to numerous literary journals on two continents. He made the first renditions into English of published Czech literature soon after he arrived in America. He translated and adapted a number of foreign plays for the American stage.

From the early days of the first World War, Recht has been active in legal processes of public importance. He represented the defendants in numerous cases arising from wartime hysteria, notably in the prosecutions involving the right of free press (*New Masses* trial, 1917); the right of asylum (the "Red special" deportations and the Palmer raids, 1919); prosecutions against members of the Industrial Workers of the World (1919-20); the defense of Ludwig Martens, unrecognized first ambassador of the Soviet Union in the United States (1919). Recht also conducted various civil litigations on behalf of Soviet interests during the period of non-recognition, the most notable being the Russian Volunteer Fleet case, in the course of which he was instrumental in discrediting and exposing, on the witness stand, the notorious Czarist anti-Semite Boris Brasol.

Recht's first novel, *Rue With a Difference* (1924), was hailed as "a new departure in fiction" in its treatment of a psychoanalytical figure, a half-Jew. The book created considerable literary controversy, as did his later novel, *Babylon-on-Hudson* (published anonymously, 1932), which mirrors graphically the author's preoccupation with social issues and ideological dialectics. In the pamphlet *Right of Asylum* (1935), which had wide circulation, Recht dealt authoritatively with the basic problems affecting racial minorities and political dissenters who in periods of economic depression become the victims of harsh laws under pressure of alien-baiting. This followed an earlier valuable study on *American Exclusion and Deportation Laws.*

A collection of Recht's finest poems appeared as *Manhattan Made* (1931); one of his verses was included in the Oxford Anthology (1923) of best poetry. His literary translations were mainly from German, Czech and Polish, including August Strindberg's first play to be produced in English, *Countess Julie* (published 1910; staged 1915).

He also translated Ludwig Thoma's *Moral* (1927), Lajos Egri's *Rapid Transit* (adapted 1927), and others. In all his writings Recht reveals a keenly perceptive intellect, widely ramified cultural associations, and evocative beauty of style.

Recht's travels took him to many parts of the world and frequently back to his native land. In 1936 he was received in audience by President Eduard Benes of Czechoslovakia. On October 28, 1942, Recht broadcast by shortwave to his compatriots abroad (under the auspices of the U.S. Office of War Information) the message of democracy. As an authority on Russian affairs, devoted to the dissemination of truth about the Soviet Union since the days when he was virtually that country's sole legal spokesman in the United States (1919), Recht was made honorary member of the Institute of Soviet Law of the Moscow University.

Recht also engaged in theatrical ventures, including the management of a group producing plays for children.

His Jewish activities embraced participation, by juridical and published means, in battles against anti-Semitic manifestations, and a role in the councils of Ambijan. In 1936 he visited Biro Bidjan, then wrote and lectured extensively on the subject in the United States. He contributed extensively to the Jewish periodical press: *Menorah Journal, American Hebrew, Opinion,* and other magazines. At one time he engaged Ludwig Lewisohn in a debate on intermarriage (*American Hebrew,* April 16, 1928).

LAJOS UJLAKI.

RECIFE, seaport and capital of the state of Pernambuco, Brazil; in 1943 it had about 1,500 Jews. Recife is of especial historical interest as the seat of one of the earliest Jewish communities in America, and the source of migrations to other parts of the Western Hemisphere. In 1631, when the Dutch conquered Pernambuco from the Portuguese, they proclaimed the right of religious freedom for all.

The Marranos of Recife and the neighboring Olinda, who had hitherto maintained Judaism in secret, were now able to profess it openly. Marranos from all parts of Brazil flocked to Recife to become Jews again, and in a short time the community numbered several thousand. It was augmented by other arrivals from Holland, including Isaac Aboab da Fonseca and Raphael de Aguilar. The community worshipped in two large synagogues; owing to the opposition of the Calvinist clery, they were closed from 1638 to 1642, but were finally reopened after repeated appeals by the Jewish community to the Dutch West Indies Company.

In 1646 Recife was attacked by the Portuguese and the Jews participated valiantly in the successful defense. In 1654, however, a new attack by the Portuguese led to the surrender of the town and brought the flourishing Jewish community to an end.

They were allowed to depart peaceably; some went to Surinam and other Dutch settlements in South America and the West Indies, while a group set out for Nieuw Amsterdam (New York), where they became the first Jewish group in North America. Among the famous Jews born in Recife were Elijah Machorro and Jacob de Andrade Velosino. The modern community of Recife dates from about 1900.

RECKENDORF, HERMAN (Zvi Haim ben Solomon), Semitist and historian, b. Trebitsch, Moravia, 1825; d. 1875. He was a lecturer at the University of Heidelberg. Eugène Sue's *Les mystères de Paris* prompted Reckendorf to undertake the writing of a five-volume study, *Die Geheimnisse der Juden* (1856-57), in which he attempted to show the continuation of the House of David as far as the time of the Abravanels.

This was partly translated into Hebrew by Abraham Kaplan as *Mistere Hayehudim* (1865). A complete translation appeared in 1893 as *Zichronoth Lebeth David*. Reckendorf translated the Koran into Hebrew, under the title *Alkuran o Hamikra* (1857), with an introductory essay discussing pre-Mohammedan Arab history and the life of Mohammed. He was also the author of *Das Leben Moses* (1886).

RECONCILIATION. According to the Biblical conception, sin estranges man from God, and its evil effects can be removed only by reconciliation and a sacrifice. According to the view generally held by the Semitic peoples, sacrifice is a means of communion between God and man; it accordingly is also a means of reconciliation. This idea still appears in the Christian dogma of the reconciliatory power of the blood of Jesus. According to the prophets, however, sacrifice was not sufficient for reconciliation unless it was accompanied by repentance and a return from sin. Since man not only offends the holy God but estranges himself from Him, he must acquire "a new spirit and a new heart" before he can approach Him.

The divine love desires the return of man to Him and receives the repentant sinner with grace and mercy. "Let the wicked forsake his way, and the man of iniquity his thoughts; and let him return unto the Lord, and He will have compassion upon him, and to our God, for He will abundantly pardon" (*Isa.* 55:7). "The Lord, the Lord God, merciful and gracious, long-suffering, and abundant in goodness and truth, keeping mercy unto the thousandth generation, forgiving iniquity, transgression and sin" (*Ex.* 34:6-7).

Reconciliation is therefore not only dependent on the expression of man, but also upon the divine grace, which both forgives and aids man to attain to a moral rebirth. "A new heart also will I give you, and a new spirit will I put within you" (*Ezek.* 36:26). Man by his repentance makes reconciliation possible, God makes it actual. The prophetic teaching of repentance became universally accepted in the Jewish religion in the time of the Second Temple. However, the belief in the potency of sacrifice remained, and an elaborate ritual on Yom Kippur was devoted to the idea of atoning and reconciling sacrifice.

Other forces calculated to reconcile God and man were prayer, fasting, charity, the study of the Torah, service of parents, the Holy Land and even suffering and death. However, the greatest of all was repentance. "Great is repentance, for it reaches the divine throne" (*Yoma* 86a). But repentance must be sincere. "If one says, I will sin and repent, it will not be enough for him to repent" (*Yoma* 8:9). Since it is thus possible to reach God directly by repentance, Judaism requires no intermediary to reconcile its followers to God. Said Akiba, "Happy are you, O Israel! Before Whom do you purify yourselves and Who purifies you? Your Father in heaven!" (*Yoma* 8:9).

Lit.: See under ATONEMENT.

RECONSTRUCTIONISM, *see* JUDAISM; KAPLAN, MORDECAI MENAHEM.

RECORDING ANGEL. Although the Bible contains a number of references to a book in which the actions of men are recorded (*Ex.* 32:32; *Ps.* 69:29; *Mal.* 3:16 and others), there is no distinct mention of this record as being kept by any angelic being. However, it is probable that something of the sort was in the minds of the Biblical writers. The Talmud is somewhat more definite, speaking of angels that follow each man and record his deeds (*Taan.* 11a). The angel Gabriel is said to have made an entry in the book of records of Ahasuerus, replacing the record of Mordecai's service to the king after it had been erased by an enemy (*Meg.* 16a). Otherwise, no angels are mentioned specifically by name as recording angels.

RED HEIFER. According to the legislation in *Num.* 19, persons who had become unclean by reason of having come into contact with the dead were to be purified by a special "water of sprinkling." This water was to contain the ashes of cedar wood, hyssop, scarlet and "a red heifer, faultless, wherein is no blemish, and upon which never came yoke" (verse 2). Captives of war and certain spoils of conquest were also to be purified in this manner (*Num.* 31:21-24). The ashes of the red heifer were to be kept outside of the camp, and even the persons who performed the rite of cleansing were regarded as unclean until evening.

According to Bible critics, the above passages come from priestly sources in the Torah, although it is agreed that the regulation itself is of ancient origin. *Num.* 19 seems to consist of two different parts, verses 1-13, and 14-22; the latter is probably the older account. Its present place in *Numbers* is explained by Josephus (*Antiquities,* book 4, chap. 4, section 6) by the statement that it was instituted by Moses at the time of Miriam's death, which is recorded in chap. 20. Ibn Ezra, however, regards it as the conclusion of the enumeration of priestly duties, which was begun in chap. 18.

There has been much speculation as to the origin of the custom. In fact, the rabbis held that no good reason could be found for it, and that all discussion about it should be abandoned. "Satan asks questions about four different commandments of the Torah: those about the Levirate marriage, Shaatnez (the mixture of wool and linen), the scapegoat and the red heifer. Only in the world to come will we learn the reason for these commandments" (*Midrash Yelammedenu, Hukkath* 7). Many primitive peoples considered the body of the dead taboo, and believed that those of the living who came into contact with it were ritually defiled. Water mixed with ashes was a ritual cleansing instrument among nations as diversified and widespread as the Navaho Indians, the Zulus and the Tibetans. Since the violation of the taboo was a sin, and dirt and sin are synoynmous in a number of languages and folk concepts, it was natural that water, which removes dirt, should also be the agent for the removal of sin.

The expiatory function of the water was strengthened by the admixture of a symbol of life; for that, the Bible repeatedly chooses a female animal as the sacrificial object (*Lev.* 4:27-28; 5:6; 14:10; *Num.* 6:14; *Deut.* 21:3). The rabbis explained the redness of the heifer by the fact that red represents sin (cf. *Isa.* 1:18); in Egyptian rites red oxen were offered in a similar manner. The provision that the animal must not yet have come under the yoke finds its parallel in Greek and Roman customs. The hyssop and the other ingredients of the water of sprinkling were also symbols of healing and protection among many nations. This has led Scheftelowitz to conclude that this custom may have been a concession to pre-Israelite heathenism.

It is doubtful whether the provisions of the law in *Num.* 19 were ever carried out scrupulously over a long period of time, particularly in view of the fact

Crossing the Red Sea. From a painting by Hippolyte Flandrin

that the rabbis interpreted "faultless" (verse 2) to apply to the red color of the heifer (*Parah* 2:15 and Rashi to the passage; *Sifre Num.* 123), and that such an animal must have been extremely rare.

The Midrash estimates that a true red heifer was worth ten thousand pieces of gold (*Midrash of the Ten Commandments* 5). The ashes of the heifer were kept in the Temple (*Parah* 3:11), and the custom seems to have survived the destruction of the sanctuary by about fifty years. According to the rabbis, defilement might come from the body of any person, Jew or non-Jew (Ibn Ezra to *Yeb.* 61a). Detailed regulations as to the rites of sprinkling and the preparation of the ashes are contained in the Mishnah tractate *Parah.*

RED MAGEN DAVID, 1. a medical aid organization which was formed during the first World War. Like the Red Cross and the Red Crescent, it had as its purpose the providing of medical assistance. In Palestine it worked mainly among the members of the Jewish Legion; the financial support was derived to a great extent from contributions to the American branch of the organization. A similar organization also was formed in Lithuania. All the branches of this organization ceased functioning at the close of the War.

2. The American Red Magen David for Palestine was formed under the auspices of the Order Sons of Zion in 1941. It was supported entirely by funds contributed by and through the Order Sons of Zion, and functioned in Palestine, Libya and Egypt. In 1942 there were thirty-seven medical units in action, including two ambulances sent from the United States. The organization was non-sectarian in the administration of aid.

RED SEA (Hebrew, *yam suf,* Sea of Reeds; called also *yam mitzrayim,* Egyptian Sea, *Isa.* 11:15), arm of the ocean which separates the Arabian peninsula in Asia from Egypt in Africa and extends from the Strait of Bab el Mandeb to Suez. Its northern part is divided into two gulfs: the Gulf of Suez to the west, now joined to the Mediterranean Sea by the Suez Canal, and the Gulf of Akaba, otherwise known as the Elanitic Gulf, to the east. These two bodies of water wash the shores of the Sinai peninsula. It has been suggested that originally Asia and Africa were connected at this part and that the Red Sea was formed as the result of an irruption of the waters. The Red Sea is over 7,200 feet deep; its breadth is about 217 miles, and its length more than 1,240 miles. The coasts along the Red Sea are steep, and there are few good harbors; navigation is perilous because of the numerous coral reefs and the sudden onset of storms, and it is only in modern times, with the advent of steamships, that there has been a greater amount of marine traffic there. The two gulfs, Suez and Akaba, are also called Sea of Reeds.

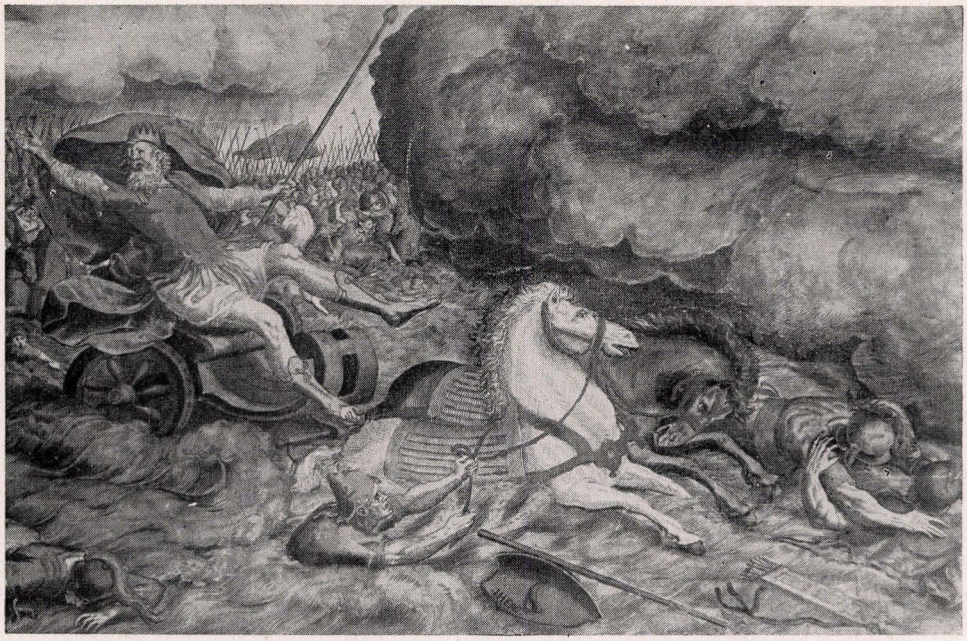
There has been an extended controversy on the question whether the Gulf of Suez, during the historical period, ever reached further north. Küthmann, Gardiner and others maintain that this gulf was never any larger than it is at the present time, while Guthe thinks that it once reached much further north. The Gulf of Akaba has the same nature as the Red Sea. For this reason the Exodus could not have taken place through the Sea of Reeds; in this locality the Israelites would have been confronted by an abyss. The more probable location for the journey through the Red Sea is the much shallower Gulf of Suez. At the time of the

Crossing the Red Sea (right), as depicted on the west wall of the Dura-Europos synagogue, showing also the Exodus

Exodus, it has been conjectured, this reached as far as Pithom (Heroonpolis), but was navigable only at flood-tide, when the water rose more than seven feet. At ebb-tide the sea was easily fordable. It is still an open question just where the passage of the Red Sea took place.

All the Biblical passages which refer to the Exodus mean the Gulf of Suez by *yam suf* (for instance, *Ex.* 10:19; *Josh.* 2:10); all others refer to the Gulf of Akaba. This formed the southern boundary of Palestine and was the base of the expeditions which Solomon sent out to Ophir; the best harbors were Elath and Ezion-geber (*Ex.* 23:31; *I Kings* 9:26-28; *II Chron.* 8:17-18). Jehoshaphat of Judah, in later times, attempted to revive the trade with Ophir, but his ships were wrecked in the gulf (*I Kings* 22:49-50). The Greeks and Romans used the term Red Sea (Mare Rubrum) to denote not only the Arabian and Persian gulfs, but also the Indian Ocean (Josephus, *Antiquities,* book 1, chap. 1, section 3); on the other hand, the Vulgate and the Septuagint understand the term as we do today.

It is difficult to explain why this body of water was called the Red Sea. The water is a bluish green, but the seaweed has a reddish color in some places. The mountains on the coast are mostly white, and only a very small portion is red. Ebers conjectured that the Red Sea derived its name from the Erythreans, a red-skinned people that lived on its shores. There is also no satisfactory reason why it should have been called Sea of Reeds. Latterly reeds were found only in the vicinity of the old gulf; however, they seem to have been more numerous in the Red Sea in former times, when the name arose.



The word *suf* is undoubtedly derived from an Egyptian word meaning "papyrus," "reed," as has been recognized by all Egyptologists. The name Sea of Reeds, may, therefore, originally have been applied to the marshy lakes to the north, the modern Bitter Lakes.

BERNHARD LEVY.

REDAK, *see* KIMHI, DAVID.

REDEEMER (*go'el*). In the long history of Israel the term "redeemer" has been used in a number of ways. With the passing of the centuries the term *go'el* has lost its original connotation, but this ancient usage is historically significant. Originally the *go'el* was the blood-avenger whose duty it was, when a kinsman was slain, to punish the offender. In connection with the legislation regarding the three cities of refuge (*Deut.* 19:11-13) it is decreed that "if any man hate his neigh-

Pharaoh overwhelmed in the Red Sea. From a representation by Gerard de Jode

bour, and lie in wait for him, and rise up against him, and smite him mortally that he die; and he flee into one of these cities; then the elders of his city shall send and fetch him thence, and deliver him into the hand of the avenger of blood (the *go'el*), that he may die."

This practice of blood revenge, which prevailed in the simple, nomadic society which predated Israel's entrance into Canaan, underwent modification when the Hebrew people were established on the land. In *Numbers* (chap. 35, part of the Priestly Code which reflects a more recent point of view than that of *Deuteronomy*) the avenger of blood is still permitted to take the life of the wilful murderer, but if the offender smote the victim accidentally, "then the congregation shall judge between the smiter and the avenger of blood according to these ordinances" (verse 24).

This advance in the meting out of justice did not minimize the importance of the next of kin. As the *go'el,* or "redeemer," he continued to serve his kinsmen. "If brethren dwell together, and one of them die, and have no child, the wife of the dead shall not be married abroad unto one not of his kin; her husband's brother shall go in unto her, and take her to him to wife, and perform the duty of a husband's brother unto her" (*Deut.* 25:5). In *Ruth,* Boaz is expected to perform this duty for his deceased kinsman; in this connection the word *go'el* is used (*Ruth* 3:12). It was also the duty of the *go'el* to buy back land sold by an impoverished kinsman (*Lev.* 25:25).

In prophetic literature, as well as in *Psalms,* the term *go'el* always refers to the Deity. He is the Redeemer of Israel. It was only natural that the redemptive power of God should have been stressed in days of national affliction. The Deity's redemptive power was Israel's assurance that his future would be secure. He has taken Israel from Egyptian bondage, bringing him from the darkness of slavery to the sunlight of freedom in his own land (*Ps.* 74:2). He will redeem Israel from the exile (*Isa.* 48:20). The people will return in joy to Zion; with their return the land itself will be redeemed (*Isa.* 51:9-11). This redemption, which at first meant the physical return of the Jewish people to their own land, underwent reinterpretation under the influence of the universalism of the prophets. It came to mean not only the physical return of Israel to Palestine but also his spiritual reawakening. "In the days to come I will implant My law in their minds and I shall write it in their hearts" (*Jer.* 31:31-44). This recognition of the truths of monotheism will spread to the nations of the world. This will be mankind's redemption. "The Holy One of Israel is thy redeemer, the God of the whole earth shall He be called" (*Isa.* 54:5).

It should be borne in mind that Israel has always considered God as the Redeemer. It is true that He chooses His agents through whom He will bring the redemption to Israel and mankind, but these agents are always only temporary instruments of the Most High. Deutero-Isaiah speaks of Cyrus as God's anointed, chosen to bring about Israel's redemption from the tyranny of Babylonia (*Isa.* 45). But his mission is of a temporary nature, while God is the everlasting Savior and Redeemer (verse 21).

A distinction must be drawn between this unchanging monotheism of Israel and the Christian conception of the Redeemer. Paul declares that by his blood Jesus obtained eternal redemption for mankind (*Hebrews* 9:12). In Christianity, redemption is forgiveness of sins, to which mankind could not attain without the blood of Jesus, the redeemer (*Col.* 1:14). "For all have sinned, and come short of the glory of God; being justified freely by His grace through the redemption that is in Christ Jesus" (*Romans* 3:23-24).

In Christian thought the redeemer thus becomes a permanent intermediary between God and man. No redemption is possible except through him. In Judaism there is no intermediary power. Forgiveness of sin is obtained by man in direct communion with God. Israel regards sin as a rebellion against God or as a perversion of man's way on earth. Sin is always something which man commits. Therefore, the call comes to Israel, "Return, ye backsliding children, I will heal your backslidings" (*Jer.* 3:22). Forgiveness is granted to any man who is truly repentant. In seeking it man approaches God without mediation. This point of view is reflected in the Atonement Day ritual. After confession of sin man receives the assurance, "And the Lord said, 'I have pardoned according to thy word'" (*Union Prayer Book,* vol. 2, p. 96).

Unlike the Christian, to whom redemption means primarily remission of sin, the Jew thinks of God as man's redeemer in a more positive sense. Through His power all men will become aware of the reality of the moral law which will be inscribed indelibly on their hearts. They shall all know God and understand His ways, from the least even unto the greatest of them (*Jer.* 31:34). As the result of this spiritual awakening, those evils which man has invented will disappear. War and strife will be no more (*Isa.* 2:3-4). This will be the redemption. The Redeemer is God, in whose light man must walk (verse 5).

ABRAHAM SHUSTERMAN.

REDEMPTION (*ge'ullah*). The term "redemption" has been used in Jewish life and literature in two main significations. The first, which prevailed during the time of the settlement in Palestine, was that of legal and material redemption, such as that of land and real estate which had been sold and was "redeemed" by being purchased again for the family (*Lev.* 25:24-54). The second, which became predominant after the loss of independence, was that of the deliverance of Israel from its afflictions; later it signified the hope for the end of all tyranny and violence on earth. The seventh of the Eighteen Benedictions and the doxology after the Shema prayer are known as Geullah in the liturgy, because they praise God as the redeemer of Israel and express the Jewish belief in the ultimate deliverance of both the Jews and the world with the coming of universal peace and brotherhood. In modern times the first meaning of the word has been revived as a term to indicate the recovery, through purchase, of land in Palestine for Jewish use.

These concepts of redemption differ from those in other religions, such as Buddhism and orthodox Christianity, in which redemption is a deliverance from the evils of life itself—life being conceived as being essentially afflicted by a burden of sin which is too great for man himself to overcome unless aided by divine intervention. This doctrine is totally contrary to the Jewish view, which regards man as capable of attaining his own spiritual salvation.

See also: CHRISTIANITY; ORIGINAL SIN; REDEEMER; SIN.

REDEMPTION OF THE FIRST-BORN (*pidyon haben*). According to the Bible (*Num.* 18), the first-born sons of all the people, who, like all other first-born things, belonged to God, were redeemed by God's taking the tribe of Levi instead; in return for this, every first-born Israelite was to be redeemed, at the end of a month after birth, by paying five shekels in silver to a Levite (*Num.* 18:1-19). This ceremony is still observed by Jews who are not priests or Levites even after the Levites have ceased to officiate as priests. It ordinarily takes place on the thirtieth day after birth; but if the thirtieth day happens to fall on a Sabbath or festival, it is postponed until the next weekday. It is the usual custom to summon a Cohen (Hebrew, *Kohen;* a descendant of the Aaronitic priesthood); the father then presents the child to the Cohen, announc-

Redemption of the first-born (Pidyon Haben), as depicted by Johann Christoph Georg Bodenschatz

ing that this is his first-born son, and offering the equivalent of five shillings (approximately $2.50) instead. The Cohen then asks the father whether he prefers to give the child or the money, and the father replies that he would rather keep his son and redeem him. Thereupon the Cohen takes the money, holds it over the head of the child, announces that the money is the child's ransom, and pronounces the priestly blessing and other words of benediction over him. The ceremony is performed over the first-born son who survives for thirty days; hence it may not actually be the first-born child of its parents.

The rabbis of the Middle Ages did not especially favor the continuation of the redemption of the first-born after the destruction of the Temple and the cessation of the priestly functions. They could not abolish it, but they

limited it by providing that the ceremony need not be performed if even the mother was the daughter of a Cohen or a Levite. Reform Jews no longer observe the ceremony.

REDLICH, HEINRICH, engraver, b. Lask, Poland, 1840; d. Berlin, 1884. Under the patronage of Prince Galizin he studied art at the Warsaw Academy, then went to Munich (1861), Dresden and Vienna (1866) in order to continue his studies. In 1876, after having won several prizes, he returned to Russia and became a member of the St. Petersburg Academy. In 1880, however, he left the country because, as a Jew, he could not receive a professorship, and proceeded to Paris, where he resided for three years. Stricken by illness, Redlich went to Berlin, where he died.

His best engravings include: *The Tempi Madonna,* from Raphael; *The Entrance of the Polish Army into Harthausen in 1659,* from Brandt; *Peter Skarg, the Preacher, before King Sigismund III,* from Matejko; *Copernicus Exposing his System of the World,* from Gerson. He also produced several portraits and Alpine scenes, and the well known etching, *Jew in the Library.*

REDLICH, JOSEF, jurist, historian and statesman, b. Göding, Moravia, 1869; d. Vienna, 1936. A full professor of the University of Vienna (1908), he served as a deputy of the Moravian Diet and of the Austrian Reichsrat from 1906 to 1918. In 1918 he became minister of finance in the last Austrian cabinet. An outstanding authority on the development of parliamentarianism and public administration in England and Austria and on the economic, social and political history of the Austro-Hungarian Monarchy, he was invited to deliver a series of lectures before the Institute of Politics at Williamstown, Mass. (1922), after he had already become known in the United States for his thorough study of American instruction in law, made in 1915 at the request of the Carnegie Foundation for the Advancement of Teaching. In 1929 Redlich was appointed Fairchild professor of comparative law at Harvard University and made head of Harvard's newly founded Institute of Comparative Law, but returned to Austria in 1931 to assume the portfolio of finance in the Buresch cabinet. One of the founders of the Österreichische Völkerbundliga and of the Österreichische Politische Gesellschaft, he was made an honorary citizen of Vienna in 1924 in recognition of his achievements. Redlich was baptized.

His works include: *Zur Theorie und Kritik der englischen Lokalverwaltung* (1903); *Recht und Technik des englischen Parlamentarismus* (1905); *The Procedure of the House of Commons* (London, 1908); *Das Wesen der österreichischen Kommunalverfassung* (1910); *The Common Law and the Case Method in American University Law Schools* (New York, 1914); *Das österreichische Staats- und Reichsproblem* (2 vols., 1920); *Die österreichische Regierung im Weltkrieg* (1925); *Kaiser Franz Joseph von Österreich* (1928); *Austrian War Government* (New Haven, 1929).

Lit.: *New York Times,* Feb. 3, 1929; *Kürschners Deutscher Gelehrten-Kalender* (1935); *Wer ist wer; Lexikon österreichischer Zeitgenossen* (1937).

RÉE, ANTON, German deputy, and educator, b. Hamburg, Germany, 1815; d. Hamburg, 1891. At the age of nineteen Rée was graduated from the University of Kiel. He intended to continue his academic career, but just then his father lost his fortune, aand Rée was compelled to earn a living.

In 1834 he became a teacher at the Israelitische Freischule at Hamburg. This school was founded in 1815, and was directed by Israel (Eduard) Kley; its principal purpose was "to divest its pupils of all Jewish peculiarities of customs, language, and behavior." As a teacher Rée replaced Immanuel Wohlwill, and in 1848 he became Kley's successor in the direction of the school. In 1844 he published *Die Sprachverhältnisse der heutigen Juden,* combatting the use of Judeo-German and showing a complete lack of historical and philological knowledge of this idiom.

In 1848 Rée entered political life. He was elected member of the constituent assembly of Hamburg, and subsequently member of the city council. Together with Gabriel Riesser, he struggled for equality of rights of the Jews, but in general political questions, especially educational matters, Rée became a leader of the radical leftists. He professed to consider "the promotion of democracy as much his sacred pledge as that of religion," and staunchly combatted the denominational schools.

The Israelitische Freischule changed its name to Stiftungsschule von 1815. From 1852 on Rée admitted Christian pupils, and these outnumbered the Jews beginning with 1869. Rée published two books on moral problems in defense of freedom of conscience, and, together with Isaak Wolffson, who later became a fellow member of the Reichstag, founded a federation for the defense of liberty of conscience. Because of the admission of Christian pupils to his school, Rée came into conflict with the Deutsch-Israelitische Gemeinde of Hamburg and withdrew from that community, but repudiated baptism. He represented Hamburg in the North German parliament from 1867 to 1871, and in the Reichstag from 1881 to 1884.

Lit.: Baasch, Ernst, *Geschichte Hamburgs* (1924).

RÉE, BERNHARD PHILIPP, Danish deputy, and journalist, b. Aarhus, Denmark, 1813; d. Aarhus, 1868. He was the son of Hartvig Philip Rée. He entered political life in 1830, inspired by the French revolutionary movement of that year, and in 1838 became editor of the newspaper of his native town, which he fashioned into the first important provincial paper of Denmark. In 1841 he was baptized. Rée was also a successful publisher and bookseller. From 1849 to 1854 and from 1864 to 1866 he was a member of the Danish parliament, closely associated with Meyer Aaron Goldschmidt in the struggle for a democratic fundamental law. He gained great influence with parliament, and more than once retention or overthrow of a cabinet depended on his decision. In 1867 Rée retired from political activity because of his grave illness.

RÉE, HARTVIG PHILIP, industrialist and philanthropist, b. Fredericia, Denmark, 1778; d. Copenhagen, Denmark, 1859. Rée, who lived in Aarhus, was engaged in the shipping trade as well as in export and import; he also had chocolate, chicory and cloth factories. His enormous industrial and philanthropic activities earned him the surname "King Rée." He was head of the small Jewish community of Aarhus, built a synagogue in his house, and reformed the liturgy by introducing choral singing, German psalms, and sermons in Danish. His bibliological contributions to the periodical *Orient* as well as his contributions to the press testify to his versatile knowledge.

Lit.: Fischer, Joseph, *Hartvig Philip Rée og hans Slaegt* (1912); *Dansk Biografisk Lexikon,* vol. 5, p. 293.

RÉE, JULIUS, merchant and philanthropist, b. Aarhus, Denmark, 1817; d. Copenhagen, Denmark, 1874. He was the younger son of Hartvig Philip Rée. A successful wholesale trader in his native town, he removed his business in 1842 to Randers, Denmark, near the Danish-German frontier. There he became a member of the town council and warden of the port. As a member of the board of directors of the Jewish

community of Randers, which at that time was the most important Jewish community of Denmark outside of Copenhagen, he interested himself in Jewish affairs. When he left Randers for Copenhagen in 1857, the Jewish community of Randers elected him an honorary member. In 1864 Rée was elected a member of the Danish Upper House. Rée was interested in historical research, and aided students of history. He published several treatises on commercial politics, tariff reform and food.

REE, PAUL, philosopher, b. Bartelshagen, Pomerania, Germany, 1849; d. Engadine, Switzerland, 1901. He belonged to the circle of Friedrich Nietzsche, upon whom his influence is particularly evident in *Zur Genealogie der Moral* (Berlin, 1885-87). Ree wrote *Der Ursprung der moralischen Empfindungen* (Berlin, 1877), in which he attempts to prove, on the basis of determination, that the moral perceptions and evaluations are products of evolution and can not be determined *a priori.*

In his work *Die Entstehung des Gewissens* (Berlin, 1885) he defines conscience as the awareness of socially harmful and useful actions, derived from the rule of social and religious authorities. His other works include *Psychologische Beobachtungen* (Berlin, 1875) and *Die Illusion der Willensfreiheit* (Berlin, 1885). His main work, *Philosophie,* appeared posthumously (Berlin, 1903).

Lit.: Lessing, Theodor, *Jüdischer Selbsthass* (1930).

REED, FLORENCE, actress, b. Philadelphia, 1883. She was of Jewish descent on her mother's side. She made her theatrical debut in 1901 in New York city. Subsequently she played in stock companies throughout the country, then she played Ophelia to E. H. Sothern's Hamlet, and also co-starred with Sothern in *If I Were King.* Her renown as a dramatic actress grew rapidly, and she was leading lady in *The Typhoon* (1912), *The Master of the House* (1913) and *The Yellow Ticket,* by Michael Morton (1915).

The Yellow Ticket, depicting the tragedy of Jewish girls in czarist Russia who were forced to register as prostitutes in order to be permitted to travel outside the pale, was one of her greatest successes. Afterward Florence Reed played in *Chu-Chin-Chow* (1918), *The Shanghai Gesture* (1928), *Macbeth* (1930), *Mourning Becomes Electra* (1932) and as the nurse in Katharine Cornell's production of *Romeo and Juliet* (1935). She also made several appearances in screen plays.

Lit.: Isaacson, Charles D., in *American Hebrew,* April 22, 1921, pp. 644, 689-90.

REEM, *see* ANIMALS, FABULOUS; UNICORN.

REESE, MICHAEL, philanthropist, b. 1815; d. en route to Europe, 1878. Although his fortune was made in California, where he became a realtor during the gold rush, Reese's name was perpetuated in Chicago, where six of his sisters lived. His will stipulated that $30,000 be given to nephews for use in charitable purposes in Chicago. The nephews, Henry L. and Joseph Frank, who were the sons of Reese's sister, Eliza Frank, decided to devote the money to the rebuilding of the Jewish hospital which had been destroyed in the Chicago fire, provided that the hospital was named after Reese.

With further contributions from members of Reese's family and other individuals, the hospital was built under the auspices of the United Hebrew Relief Association, and dedicated in 1881. The hospital is non-sectarian. Among Reese's other bequests were $50,000 to the University of California and $70,000 to various non-Jewish charities.

REFORM MOVEMENT. The history of the Reform Movement in Judaism reveals in its origin and development a definite departure from the mode of Jewish life and thought that prevailed among the Jews in Europe from the beginning of the Middle Ages to the close of the 18th cent. During the whole of that period the Jewish people, except for some centuries in Spain, were more or less isolated from the non-Jewish world, and the learned among them found no other outlet for their intellectual activity than in extended and repeated interpretations of the Law and the Prophets. This was the unremitting work of successive generations of rabbis who produced the vast literature of Mishnah, Talmud, Midrash, and the responsa with the view of determining all possible religious obligations of the observing Jew, codified in the *Shulhan Aruch.*

Because of their great devotion to the Law and their extreme piety, not to speak of their position as the heads of their respective communities, the rabbis achieved unquestioned authority, their rulings becoming the norm of Jewish belief and practice. They bound the Jewish conscience, and their dicta acquired the authority of a sacred tradition.

That was the background of the Jews in Germany when the Reform Movement began. This background must of necessity be taken into account if the Reform Movement is to be understood. The revolt against the authority of the rabbis of past generations was inevitable when the Jews were freed from the confining bounds of the ghetto, and their horizon was vastly widened. Long strangers to the outer world, they arose at a bound to the opportunities to master the German language and to take their share of the culture which the Enlightenment (*Aufklärung*) created. Many of them soon secured a rightful place in the high civilization that was fostered in Germany in the first half of the 19th cent.—a civilization into which they were, so to speak, suddenly thrust.

It was contact with the outer world and release from ghetto isolation that gave impetus to Jewish thinkers, laymen as well as rabbis, to adapt newer ideas in religion to their particular Jewish sphere. They were inevitably led to an analytical review of the bases of rabbinical authority and to a scientific review of the great mass of excrescences that had grown, through the centuries, around the Law. It was inevitable also that they would endeavor to cut away these abnormal growths in which the Judaism as revealed in the Pentateuch and the Prophets was almost hidden from view; that they would recast the religion of Israel and free it of obsolete customs and traditions; that they would make drastic changes in Jewish public worship with a liturgy which would be understandable as well as uplifting.

That was the beginning of the Reform Movement and that was its program. It was unlike the Reformation, which sought liberation from the sovereign spiritual and secular power of the Church and from the abuses thereby engendered. The Reform Movement in Judaism, while it operated against the great influence of the rabbis and denied the validity of many age-long traditions, was not averse in the main to rabbinic interpretation *per se* and never set at nought the spiritualizing force of tradition as a whole. There were no secular abuses to correct, there was no need to deprive rabbis of secular power, even though their authority in the Jewish world was unchallenged. Essentially the Judaism of the early reformers was that of the rabbis and tradition. What they endeavored to accomplish was, with due respect to the past, to fit the ancient faith within the framework of the modern day. The Reform Movement was, indeed, but a further evolution of Judaism, not a reformation.

Hence, at the outset, the leaders of the movement limited themselves only to a revision of public worship. Many prayers in tone and form had become obsolete. By the standard of modern taste, the spiritual and esthetic values of synagogue services had not always been given due recognition. Then, too, a tradition ruled that only Hebrew could be used in the synagogue; so that, since the ancient language among the laity became less and less intelligible, public worship was largely an artificial gesture, and the prayers, not being understood, were apt to be recited mechanically and by rote. To remedy this the leaders of the movement began not alone to stress greater dignity in synagogue worship, but also the use of prayers in the German vernacular as well as in Hebrew. And in order to make Judaism a vitalizing influence, sermons in German were substituted for ancient prayers which in the modern atmosphere had no longer any meaning.

These of necessity involved from the first certain departures from tradition. Later, as these modifications became more numerous and went more deeply into the accepted traditions, the leaders of the movement, in order to justify their course, began a critical study of Jewish sources and of the basic tenets and organic principles constituting the religion of Israel. Hence arose with Leopold Zunz the science of Judaism, and a new conception of the history and destiny of the Jewish people was evolved by Abraham Geiger, Samuel Holdheim, Israel Jacobson and others in Germany, and, later, by David Einhorn and Isaac M. Wise in the United States. The leader of this group was Geiger, recognized as the protagonist of Jewish Reform.

The Movement, modestly enough, began with Moses Mendelssohn with his translation into German of certain parts of the Bible. The most prominent Jew in Europe in his day, he took the first step toward the Reform Movement—although by indirection. While he personally adhered strictly to tradition and never questioned the authority of the rabbis, his translation gave to the acquisition of secular knowledge among German Jews an impetus which was thitherto most exceptional. Many of them in time achieved eminence in modern scholarship. On the basis of their newly acquired knowledge, their critical attitude toward rabbinic legislation, which formed the core of the Reform Movement, is understandable.

David Friedländer, a disciple of Mendelssohn, carried forward his master's work by helping to establish in Berlin, in 1778, the first school in the Jewish community where secular subjects were taught and by translating the prayer-book into German. But he vitiated the influence which he might have exerted when he gave formal notice that he and his associates were ready to embrace a modified form of Christianity. The translations had already met with opposition from the Orthodox Jews. With Friedländer's readiness to enter the Church this opposition became active antagonism. The conflict between Reform and Orthodoxy, thus begun, never ended, even when, with the Breslau conference in 1846, the progress of the liberal movement in Germany came to a definite halt. The struggle was carried over to the United States when the movement was transplanted thither.

Similar modern schools were established in Frankfort, Breslau, Cassel, Dessau, Wolfenbüttel and Seesen in Westphalia—all within twenty years after Friedländer had founded his school in Berlin. These schools became the laboratory of the Reform Movement. Innovations which would not have been tolerated in the synagogues were introduced into the religious services conducted in these schools. The students thus instructed became in their time advocates of Reform. This was especially the case in the Seesen school under the leadership of Israel Jacobson, generally regarded as the real pioneer of the Reform Movement. Besides establishing the school he built a synagogue, the first synagogue as a creation of the Reform Movement.

Jacobson's work in modernizing Jewish worship was of significance only in Westphalia, which at the time was a French possession. After the downfall of Napoleon, Westphalia came under German rule and all the institutions existing there were swept away. The liberal reign of William III gave the Jews of Prussia, who were sympathetic toward Reform, and especially their leaders, wider scope. Friedländer almost immediately set about reorganizing Jewish education and eliminating from the synagogue ritual, among other prayers, those particularly that dwelt on Jewish nationalism. This innovation was later prohibited by the government. Nothing daunted, Jacobson, who had taken up his residence in Berlin, established a private synagogue in his home. A similar synagogue was established in the home of Jacob Herz Beer, father of the composer, Meyerbeer, where services in the Reform manner were conducted by the noted rabbinical scholars Eduard Kley, Leopold Zunz and Isaac Noah Mannheimer. As some extremists attending these services altogether abandoned the Jewish faith, the Orthodox made strong complaints to the government, and the private synagogues were ordered closed. Later came the controversy between Geiger, who had been elected rabbi of the Reform congregation in Breslau, and Tiktin, chief rabbi of the Orthodox group—a controversy that created wide disturbance.

As a result of representations that Reform would lead to civil disorder the government henceforth took complete charge of all Jewish ecclesiastical affairs, ordering that synagogue worship be conducted along strictly traditional lines, without any modification. Through this reactionary policy the movement was abruptly checked, and many Jews, thwarted in their efforts at Reform and persecuted by the Orthodox, became converted to Christianity. To counteract this defection a society for the advancement of the science of Judaism was formed in Berlin under the leadership of Zunz and Geiger. It lived for only five years, but was mainly instrumental in holding the Reform gains intact, although under government control.

In the ensuing two or three decades Reform made little progress, except in the academic field. Leaders of the movement continued to develop the connection between Reform and modern education. The Heder was gradually being replaced by a school in which secular as well as Jewish subjects were taught according to advanced pedagogic methods. Such schools were now found in most of the large Jewish communities. Of these the Philanthropin in Frankfort, under the guidance of Michael Creizenach, became notable for its excellence.

These schools were vital to the movement, for in them lay the future of Reform. Many Jews had embraced Christianity, and the spectre of baptism always confronted Reform leaders. In the case of the older generation the departure from Orthodoxy was too recent and their approach to Reform too new. With the others there was lack of real understanding of the newer Jewish trends. In both cases adjustments were difficult. In their embarrassment—and not unaccompanied with social and economic advantages—many of them took the easiest way out, the Church. The situation was further aggravated by the spirit of individualism. There were widely divergent views in Reform ranks as to what constituted Judaism and the Jewish mode of life. The schools were to supply one remedy: the younger generation were to be grounded in the elementary principles of Reform so that they could take their place in the modern world and still remain loyal to their faith.

To provide the other remedy, namely, to bring about some uniformity in belief and practice and to obviate the confusion resulting from conflicting rabbinical opinion, efforts were made to establish a synod that would exercise some degree of authority. To this end various

Reform societies were founded, and several Jewish publications established, in which the basic principles of Reform and its problems were discussed.

Finally, synods, composed of rabbis and laymen, were convened in Leipzig in 1868 and in Augsburg in 1871. These assemblies exerted little influence. The courage shown by the early reformers was lacking, and the élan with which the movement was launched was no more. There was a spirit of defeatism in the Reform camp, and its leaders were content merely with holding their own.

The story of Jewish Reform in other European countries in its earlier development may be briefly told, since outside of Germany, with the exception perhaps of England, Reform was accorded little recognition. Everywhere it met with uncompromising Orthodox opposition. In Pest, Hungary, the liberal members of the community formed a Reform congregation with marked radical tendencies. In England the first steps toward liberal Judaism were taken by some members of the Spanish and Portuguese synagogue to make changes in the form of public worship. This being denied, a Reform congregation was organized in London in 1840, and a synagogue built which became known as the West London Synagogue of British Jews. A new prayerbook was adopted, and confirmation was introduced, as in Germany. Moses Montefiore, the greatest figure in Anglo-Jewry at the time, maintained a firm stand against all innovations. Owing to Orthodox opposition, the minister of that synagogue had no official position and could perform no marriage ceremonies until 1856. In 1838 a Reform congregation was formed in Manchester and, a few years later, in Bradford.

That the Reform movement in England, although to a modest extent, actually secured permanence in that country is shown by the fact that such men as Claude G. Montefiore and Israel Abrahams helped establish the Union of Liberal Jews. Later came the Union for the Advancement of Liberal Judaism, founded by Lily Montagu. This society erected a synagogue, dedicated in 1924, where the officiating rabbi (1943) was a graduate of the Hebrew Union College.

In France there was no Jewish Reform in evidence until recent years. In 1906 a union of "Liberal Israelites" was organized. It did not have its own synagogue as late as 1930, although Reform services on the Sabbath and holy days were held in its hall until the outbreak of the second World War. The assembly of representative Jews ordered by Napoleon in 1806 had no significance for the Reform Movement except insofar as it resolved that Talmudic legislation was no longer authoritative and the hope for a return to Palestine was disavowed.

In Holland a congregation had been organized as early as 1796 with the purpose of introducing some reforms in the ritual.

In the United States Reform Judaism, with its unchecked progress in every community and its profound effect through four generations in American Jewish life, forms too important a chapter in the history of American Israel to be briefly summarized. Only the fact need be recorded that at a time when the movement in Germany seemed almost spent it had in America a rebirth. It came about with the arrival in the United States of Isaac M. Wise of Steingrub, Bohemia, in 1846 to become rabbi in Albany, N. Y., and of David Einhorn, who was called from Mecklenburg-Schwerin in 1855 to be rabbi of Har Sinai Congregation in Baltimore. Reform rabbis from Germany preceded and followed them to the United States, among them Gustav Poznanski, Max Lilienthal and Samuel Adler, but it was Wise and Einhorn who made possible the uninterrupted progress of Reform and gave it definite direction, the former through his remarkable organizing ability, the latter through his deep philosophical insight and incisive eloquence. Both of them, possessed of great learning, had also vision and courage, besides unbounded enthusiasm. They realized that opportunity for the fullest expression of liberal Judaism existed under the free democratic institutions of the country, untrammeled by government interference. They frequently differed on doctrinal points and on methods of procedure, but together they exerted an influence that had telling effect on Jews throughout the country, and Reform congregations sprang up wherever Jews settled in appreciable numbers.

A congregation in Charleston, S. C., in existence from 1824 on, joined the Reform Movement in 1841 with the declaration: "This country is our Palestine, this city our Jerusalem, this house of God our Temple." The first congregation which started as Reform was Har Sinai in Baltimore, organized in 1842. It was steadily followed by the rise of numerous congregations east and west, so that by 1870 Wise saw the necessity of creating a common bond of union between them, with the view of making a united effort not alone in promulgating the principles of Reform, but also in promoting the best interests of all Israel. That was his first great achievement, the formation of the Union of American Hebrew Congregations in 1873, which in 1940 had a congregational membership of 302. His next signal work was the establishment, in 1875, of the Hebrew Union College in Cincinnati, for the training of Reform rabbis. In 1942 the number of rabbis graduated from this institution had reached 534. This was followed by the creation, in 1889, of the Central Conference of American Rabbis, which held annual assemblies in various parts of the country since that time.

REFUGE, CITIES OF, *see* CITIES OF REFUGE.

REFUGEE ECONOMIC CORPORATION, founded in 1939 "to promote and assist the economic reconstruction of émigrés from Germany and other countries and, to this end, to undertake and assist in the financing and management of enterprises of a banking, credit, industrial, or utility nature." It aimed further "to find suitable areas for settlement, develop feasible economic projects, select qualified refugees and assist them, as newcomers in strange lands, to reconstruct their lives on a socially useful and economically secure basis."

By 1942 refugee colonies had been established in Australia, Bolivia, Palestine, and the Philippine Islands. A loan fund was established for the purpose of enabling refugees to finance independent small enterprises. Finally, to secure reliable and adequate scientific information the Émigré Charitable Fund, an affiliate of the Refugee Economic Corporation, granted $25,000 for studies on the technical aspects of settlement to the Walter Hines Page School of International Relations at Johns Hopkins University and an equal amount for studies of settlement possibilities throughout the world.

REFUGEES. A refugee problem of unparalleled dimensions followed the first World War, so that aid for the immigrants on an international basis became evident as early as 1920. In that year Fridjof Nansen was appointed League of Nations High Commissioner, and in 1930 the autonomous Nansen Office was established. The problem of the refugees from Greece, Bulgaria, Turkey, Armenia, Assyria and Russia had not

yet found a final solution when the beginning of the National Socialist regime in Germany provoked a new wave of refugees, first from Germany proper and later also from the Saar, Austria, Czechoslovakia, Italy and other afflicted countries.

Only the Russian and the German refugee movements were similar in structure. Their members came from the upper middle class or belonged to the liberal professions. Since the whole Russian emigration happened before the depression, many of the Jewish refugees from Russia were able to settle in their countries of refuge or overseas with the help of Jewish organizations. In the case of the German Jewish refugees the situation was entirely different. When they reached the various countries extensive legislation against foreigners was already in existence and many overseas countries had barred mass emigration. For this reason the process of absorption for this kind of refugees has been extremely slow and always only in the nature of infiltration, rather than by planned emigration of whole groups.

In 1933, shortly after the first wave of German Jews had flooded the neighboring countries, the International Labor Conference at Geneva received a petition from the Belgian, Dutch and French workers calling attention to the disturbance of labor markets caused by this new refugee movement. The Conference decided to ask the International Labor Office to study the question of refugee settlement and to submit a resolution before the Council of the League of Nations. On October 26, 1933, the president of the Council of the League of Nations appointed an American, James G. McDonald, "High Commissioner for Refugees (Jewish and Others) Coming from Germany." His task as defined by the League was "to negotiate and direct the international collaboration necessary to solve the economic, financial and social problem of the refugees." The League of Nations decided to detach the newly created Office as far as possible from the League. Therefore, the High Commissioner had to report only to the Governing Body of the High Commission, but not to the League; funds had to be raised privately, and headquarters for the High Commission were not established in Geneva, but in Lausanne, and from there later transferred to London.

Furthermore, this High Commission had to act independently of the Nansen Office, although this latter organization had been asked to assume responsibility for the Saar refugees, including many German Jews who had previously taken refuge in Saar territory. At the same time the Nansen Office acted also on behalf of Russian Jews (and Armenians) formerly established in Germany but who, through current political events, had been deprived of their German citizenship and forced to emigrate again.

The ambiguous situation of the High Commission was very quickly realized by McDonald, and on December 27, 1935, he addressed his letter of resignation to the secretary general of the League of Nations. In his letter he pointed out that "the intensified persecution in Germany threatens the pauperisation or exile of hundreds of thousands of Germans—men, women and children—not only Jews but also 'non-Aryan' Christians treated as Jews. . . ." His letter was regarded as a last appeal to the conscience of the member states of the League. He felt very strongly that the compromising attitude of the League had to a great extent prevented any success of his mission. Only a High Commissioner with full League authority could hope to accomplish the difficult task. In consequence of McDonald's step, Sir Neill Malcolm was appointed High Commissioner. He became a League official with fees and grants from the League and directly responsible to it.

The program of the National Socialist Party for 1920 contained the following provision: "None but members of the nation may be citizens of the State; none but those of German blood, whatever their creed, may be members of the nation. No Jew, therefore, may be a member of the nation."

Shortly after the Nazis assumed power, they put this program into practice. In a panicky flight about 50,000 Jews and "non-Aryans" started the unorganized emigration into surrounding countries. Within Germany the Jewish communities, the Reichsvertretung der Juden in Deutschland, the Hilfsverein der Deutschen Juden and the Palästina-Amt tried to canalize and organize the exodus. Outside of Germany, in all the different European countries and in the United States, a number of old organizations, such as the American Jewish Joint Distribution Committee, the ORT Union, the OSE, the Jewish Colonization Association (ICA), the Hicem, and agencies especially established for this purpose, assumed the lion's share in financing and organizing the refugee movement.

According to countries, the main agencies were in:

Great Britain: The Council for German Jewry, London, established in 1936 with the aim of coordinating efforts to expatriate 100,000 Jews.

Belgium: Comité d'Aide et d'Assistance aux Victimes de l'Antisémitisme en Allemagne, Brussels.

Czechoslovakia: National Committee for Refugees coming from Germany, Prague.

France: Comité d'Assistance aux Refugiés, Paris. Congrès Juif Mondial, Paris.

Holland: Comite voor Bijzondere Joodsche Belangen, Amsterdam. Stichting Joodsche Arbeid, Wieringen.

Switzerland: Jüdischer Gemeindebund, Zurich.

United States: National Refugee Service (formerly the National Coordinating Committee for Refugees).

Special mention must be made of the organizations active on behalf of displaced foreign scholars, such as the Society for the Protection of Science and Learning (London; formerly Academic Assistance Council), the Notgemeinschaft Deutscher Wissenschaftler im Ausland (London), the Emergency Committee in Aid of Displaced Foreign Scholars (New York), the International Committee to Secure Employment for Professional Refugee Workers (Geneva; with correspondents in Sweden, Denmark, France and Bulgaria), and the International Student Service (with branches in England, Switzerland and the United States). All these committees were non-sectarian. The Carnegie Endowment for International Peace and the Rockefeller Foundation gave assistance to a number of displaced scholars.

France, always considered the traditional country of refuge, received a large proportion of every refugee wave. In the first year (1934) after the Nazis' accession to power about 25,000 Jews had entered France; in 1938 they probably did not exceed 11,000. Nevertheless, their uneven distribution and relatively heavy accumulation in Paris contributed to their plight after the collapse of France.

From the start Great Britain practised a policy of selection, and very strict entrance regulations limited the number of refugees after the start of the Nazi regime. Belgium and Switzerland regarded themselves mostly as transit countries, while Holland gave the most practical help by setting up well organized training camps in Wieringen.

Between 1933 and 1936 Palestine received the highest percentage of refugees, followed by the United States. The number of German refugees who entered Palestine from 1933 until March, 1937, was 31,390. Since only 12,000 Jewish immigrants per annum were allowed entrance into Palestine, this country alone could not offer a solution of the whole refugee problem.

In No Man's Land. Two of the 15,000 refugee Jews of Polish nationality who were stranded at the Polish-German frontier (in Zbaszyn) on October 28. 1938

The Council for German Jewry gave the following figures pertaining to the nationality of refugees:

70.6% Germans
10.2% Poles (part of the "Ostjuden"; an estimated number of 10,000 were repatriated to Poland in 1933).
4.7% Stateless
5.0% Non-Germans
9.5% Unknown nationality.

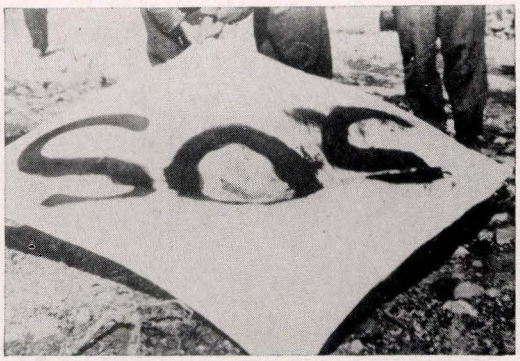
These figures refer only to the refugees from Germany. The following figures were given by the Royal Institute of International Affairs, London. They refer to Jews and non-Jews, and date from 1937:

Russians in European and Mediterranean countries	355,000
Russians in the Far East	95,000
Armenians	225,000
Assyrians, Assyro-Chaldeans, Turks	7,150
Assyrians of Iraq	9,000
Italians	30,000
Refugees from Germany	165,000
Refugees from the Saar	3,800

The number of refugees caused by the Nazi regime was larger in 1942, since shortly after the Anschluss Hitler demanded the liquidation of the Austrian Jewish population of 180,000 within four years, and the exodus of Austrian Jews was well under way when the second World War started; thus 32,000 Jews from Austria were estimated to have crossed the Czech border in the first days after the Nazis marched into Austria.

After 1933 great efforts were made in every European country which harbored refugees from Nazism to find overseas emigration possibilities. However, legal restrictions inside and outside of Germany made the work of the refugee organizations very difficult. Jews and "non-Aryans" were forbidden by German laws to take more than decreasingly small sums of money out of the country. Refugees, therefore, were unable to establish themselves on their own means or to pay for their overseas transportation. Moreover, their legal status was never uniformly settled. German, Austrian and Czech refugees never received identification papers issued by the High Commission. Although not all refugees were "stateless" when leaving their country of origin, they no longer enjoyed legal protection and, therefore, had no possibility for renewing old passports or of securing new ones to prove their nationality. Since in all countries persons without legal papers were not officially admitted, nor allowed to work, the refugees had to resort to an ever increasing clandestine crossing of borders. If apprehended, refugees were expelled and chased from one country to another. Black markets for all sorts of legal papers came into existence. There it was possible to buy proof of Christian religion to secure emigration to certain Latin American countries, or passports with and without nationality attached to them. Even so, all these possibilities were open only to persons with some means, and very often refugees paid their last penny for falsified documents. In addition, a passport or other travel document alone was not sufficient to secure entrance permission into another country. In most cases the refugee still had to establish his residence in order to procure a return visa. Without such "right to return" other governments refused to receive him because they were afraid he might become a public charge.

A series of conventions, worked out by the High Commission, recommended leniency in dealing with refugees, and countries like the United States, Great Britain, Sweden and Switzerland showed consideration within the limit of their legal machinery. In the different countries no provision or law existed for defining refugees as such and in 1938 a recommendation was made that ". . . countries which have not yet taken any steps of this kind should consider the institution of an advisory committee to examine the situation of refugees or should put into practice an appropriate method of cooperation with private organizations assisting refugees." Sweden, in 1937, promulgated a law defining the position of resident aliens, with a special provision "by which an alien, if refused a residence permit or threatened with deportation, could have his claim to be a refugee officially reviewed. According to this law, even if the decision for expulsion was upheld, a "refugee" may "not be deported to the country from which he had fled for political reasons, or to a country from which he may reasonably fear to be extradited to that country."



Private organizations, such as the Institute of International Law and the International Conference for the Right of Asylum, drafted models of conventions which were to refer to all groups of refugees. But the recommended laws and provisions were never generally adopted.

The whole refugee problem was treated on a charity basis. Private means, no matter how generously given throughout the world, could not cope with a political problem of such magnitude. It was President Franklin D. Roosevelt who took the initiative of inviting representatives of different states to the Conference at Evian in the summer of 1938 with the aim of asking for concerted international action on a broader basis. Over thirty nations accepted invitations to the Conference. Myron C. Taylor, formerly head of the United States Steel Corporation, acted as American representative. The scope of the Conference had not been outlined in advance. Its main intention was to establish an Inter-Governmental Committee which should be instrumental in assisting the emigration of refugees within the limits of existing immigration laws, while emigration and settlement were to be financed by private organizations. This Conference ended with the following resolution:

"The Inter-Governmental Committee, recognizing the value of the work of the existing refugee services of the League of Nations and of the studies on migration made by the International Labor Office, shall co-operate fully with these organizations, and the Inter-Governmental Committee in London shall consider the means by which the co-operation of the Committee and the Director with these organizations shall be established."

The Inter-Governmental Committee, first headed by an American, George Rublee, and later by Lord Winterton, continued its work until the outbreak of the second World War. The crisis in world politics was already too acute at that time to allow the Committee to achieve any practical results.

Although it had been decided previously by the League of Nations to discontinue the work of the Nansen Office and to liquidate the High Commission, the increased number of refugees demanded the appointment of a new High Commissioner. Sir Herbert Emerson was called to the task. His headquarters were in London. He sent several commissions of inquiry to a number of countries, for example British Guiana, Northern Rhodesia, the Philippines and the Dominican Republic, in order to explore settlement possibilities. The government of the Dominican Republic offered colonization land for 100,000 persons. Under the auspices of President Roosevelt's Advisory Committee, a special commission investigated the offer and recommended a preliminary settlement for about 29,000 Jewish families. In order to limit the risk and to adapt the settlers to their new life and the climate of the

Source: Releases of the Immigration and Naturalization Service, United States Department of Justice

country, training camps similar to those of the Civilian Conservation Corps in the United States were set up in the Dominican Republic.

The outbreak of the second World War interrupted this successful experiment and the exploitation of large-scale emigration schemes in general. Hostilities in Europe created a new problem for the emigrants who had taken refuge in European countries.

In 1936 most of the Jewish refugees living in France had voluntarily surrendered their passports to the French ministry of the interior in order to be given a French paper which defined them as "refugees." With the outbreak of the War, however, they were all interned in camps and only after individual investigation released. A great number of them volunteered in the French Army. When the Germans overran France in 1940, all the Jewish refugees were rounded up a second time and put into concentration camps.

At the beginning of the War, refugees living in Great Britain were individually investigated. They were divided into three groups, and enjoyed either complete freedom or controlled freedom, or, if found suspect, they were interned. Under the menace of a German invasion, however, all refugees were put into camps and were released only gradually later under the pressure of public opinion.

After the revocation of the civil rights of the Jews in France and the promulgation of the Jewish Statute in October, 1940, Jews in France and Jewish refugees from Fascist countries were deported or menaced with deportation. This resulted in a new wave of refugees crossing the Swiss border clandestinely. Switzerland in 1942 harbored about 13,000 of these refugees.

Mauritius, a British island in the Indian Ocean, off the coast of Madagascar, became a haven for a considerable number of Jewish refugees beginning with January, 1941, when 1,584 came there from Germany, Austria, Czechoslovakia and Danzig; these had been deported from Palestine and managed to reach Port Louis. These refugees were given a warm welcome by the existing Jewish community. Some of them were settled in camps, chiefly at Port Louis, the capital, and at Beau Bassin, and the rest in private homes. The British government assigned the sum of £3 monthly for their maintenance and permitted them to engage in trades; workshops were opened in the camps. Financial aid was sent to the Mauritius refugees by Jewish groups in Palestine and Great Britain, also by the Jewish community of Rhodesia. Scrolls of the Law were sent from Johannesburg, South Africa, whence arrangements were made to supply the new refugee colony with kosher meat. The Council for Refugee Settlement at Johannesburg undertook the task of aiding it. A rabbi of Johannesburg was appointed to attend to the religious needs of the new community, which became self-governing. Smaller further deportations of Jews to the island of Mauritius were reported during the year 1941.

The number of Jewish refugees brought to the Western Hemisphere and to Palestine from Europe with the aid of the American Jewish Joint Distribution Committee from the time of the Japanese attack on Pearl Harbor (December 7, 1941) to the end of 1942 was 7,300.

REGALIM, *see* PILGRIMAGE FESTIVALS.

REGENSBURG, a city on the Danube River, in Germany, the residence of the dukes of Bavaria from the 10th to the 14th centuries. At various periods it was an important place of trade and exchange between the west and east of Europe and between Venice and the German and Slav northeast of Europe. At an early period there were a Jewish community and a Jewish quarter at Regensburg, but Jews are mentioned for the first time in a document of 981. With the permission of Emperor Otto II, the St. Emmeram cloister had bought the estate Schierstadt, in the northern suburb of Regensburg, from the Jew Samuel; in 981 the emperor transferred the estate to the cloister. The Jewish quarter, within the old Roman wall, on the site of what was in the 20th cent. the Neupfarrplatz, was mentioned from 1006 to 1028. In 1096 the Crusaders compelled the Jews to accept baptism; in 1097 Emperor Henry IV granted them permission to return to Judaism.

The Jewish community was autonomous; it had jurisdiction in matters of common law if both parties were Jews; originally it appears to have had jurisdiction also in matters of capital offence. In matters of common law between Jew and Christian a mixed tribunal, presided over by a Christian judge with an equal number of Jews and Christians as associate judges, administered the law. The community owned a synagogue, a fine Romanesque building, believed to have been erected between 1210 and 1217; it has been represented in the wood engravings of Altdorfer.

Two of the oldest tombstones in the Regensburg cemetery

A hospital was in existence even before the synagogue, and in 1210 a cemetery was acquired. Up to about 1400 the community used a seal of its own.

Throughout the Middle Ages the Jewish community of Regensburg was under the protection of the German emperors. In 1182 Emperor Frederick I confirmed the Jews of Regensburg in their ancient privileges which entitled them to deal in gold, silver, metals and all kinds of commodities. This privilege was confirmed by Frederick II on January 3, 1216. In confirming the privilege on June 30, 1230, Henry VII added that the Jews were not to be summoned before a judge whom they had not elected; at least one Jewish witness had to be present; their ownership of properties which had been theirs for ten years was not to be questioned.

Up to the end of the medieval settlement the German emperors renewed the privileges of the Jews and tried to protect them in exchange for heavy taxes. Besides the emperors, beginning with the 13th cent. the dukes of Bavaria and the bishops and the city of Regensburg vied with each other for legal and fiscal claims upon the Jews. Emperor Frederick II conferred upon Bishop Siegfried the income of the imperial chamber from the Jews and jurisdiction over them; in 1233 Henry VII confirmed this donation to the bishop. Soon, however, the influence of the bishops was reduced to a mere yearly contribution from the Jews; on the other hand, the dukes of Bavaria assumed greater importance for them.

The city of Regensburg which, as part of its fight for independence, claimed and obtained the right of taxing and protecting the Jews and the Jewish quarter, greatly influenced the fate of the Jews. Its period of prosperity paralleled also that of the Jews, who carried on commerce with points far to the east, and then became bankers for the princes, nobility, church and city, reverting at times to commerce in goods in order finally to become money lenders to the common people. Thus the Jews of Regensburg avoided the catastrophes which affected the Jews in other parts of Germany in 1298, in 1336 and at the time of the Black Death.

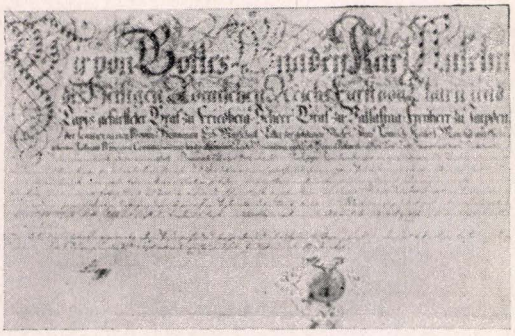
Following the Black Death, the city exercised the function of protector of the Jews for many decades, drawing large revenues from them. About 1400 there was a turning point in the history of the Jews of Regensburg. The economy of the city declined; many restrictions were imposed upon the Jews in the 15th cent. In the fifth decade of that century the Jews were practically impoverished by having to meet the excessive financial claims of emperor, duke and city. In addition to economic distress, which did not spare the Jews, there was religious fanaticism. The Trent blood accusation in 1475 was echoed by a blood libel at Regensburg in 1476. Although the Jews were acquitted (1479) and the city had to continue tolerating them by imperial order, this compulsion resulted in increased resentment against the Jews, inasmuch as it was fostered by Christian preachers.

In the interregnum following the death of Emperor Maximilian, in an atmosphere charged with the inciting sermons of one Balthasar Hubmaier, the city moved (1519) to solve its economic problems by expelling the Jews (800 out of a total population of 6,000 to 8,000) and seizing their property, which included thirty-two houses. The expelled Jews received a mere pittance in compensation. On the site of their synagogue the Neupfarrkirche was erected; the tombstones of their cemetery were used as foundations and building stones. Some of the Jews moved to the nearby "Stadtamhof," doing business from there with the citizens of Regensburg. After the expulsion of the Jews from Bavaria in 1551, many removed to South Tyrol and Italy.

During the Middle Ages Regensburg was a famed center of Jewish, especially Talmudic, learning. Outstanding scholars were: Menahem ben Machir (1180), a nephew of Rabbi Gershom; Moses Saltmann ben Joel; Ephraim ben Isaac, who, with Isaac ben Mordecai

and Moses ben Joel, formed the rabbinical collegium in the 12th cent.; the traveler, Pethahiah ben Jacob of Regensburg (prior to 1187); Baruch ben Isaac, author of *Sefer Haterumah;* Judah Hehasid; Aaron the Judenmeister (about 1225); Isaac Or Zarua (who lived there about 1180 to 1260); Maharil (about 1355 to 1427); Liva, translator of *Samuel* into German; Israel ben Hayim Bruna (about 1410-80). Jewish physicians, too, were mentioned on several occasions.

The Jewish community of Regensburg never again attained the importance it had during the Middle Ages. The resettlement of the Jews in Regensburg was due to the Reichstag, which was in permanent session in the free imperial city. In 1695 the imperial marshal, Count von Pappenheim, who exercised protection over the Jews, set the number of Jewish households tolerated in Regensburg at four. In 1783 forty-two of the eighty-eight Jews found in Regensburg were expelled; in 1800 twenty-four Jewish families numbered 110 persons; in 1810 there were eighteen families; in 1861 about 150 families; in 1871 about 430 persons; from that time on until 1933 the number of Jewish families averaged 150. In 1803 the right of protection of the Jews was transferred, together with the possession of the city, to the elector of Mayence, Cardinal Dalberg. In 1804 the Jewish poll tax was abolished at the instance of the famous Wolf Breidenbach of Offenbach, whose efforts were sustained by the court factor Philipp Reichenberger. In 1810 Regensburg became a Bavarian crown possession.



About the middle of the 19th cent. the Jews of Regensburg were still struggling against certain restrictions. They acquired a cemetery in 1822, founded a Jewish public school in 1832, erected a synagogue from 1839 to 1841 close to the old Steyrerhaus, founded a Hebrah Kaddisha in 1863, and dedicated a new synagogue in 1912. The first rabbi of modern times was Isaac Alexander (1722-1802), who, following the lead of Moses Mendelssohn, strove in his ministry and in his published works for the equalization of Jewish and secular culture. Between 1860 and 1882 the community belonged to the district rabbinate of Sulzberg. In 1881 S. Meyer, editor of the *Deutsch-Israelitische Zeitung,* was called to the pulpit; in 1897 Regensburg became a district rabbinate. Abraham Zebi Idelsohn, who later became professor of Jewish music at the Hebrew Union College, in Cincinnati, acted as cantor at Regensburg from 1903 to 1906.

As for the rest of the Jewish communities in Germany, the year 1933 marked also for that of Regensburg the beginning of total eradication.

REGGIO DI CALABRIA, city in Italy at the Strait of Messina. The earliest information concerning the Jews in Reggio di Calabria dates back to 1127. They were mostly money lenders, and some of them were in the dyeing business. In 1475 Abraham ben Isaac ben Garton printed in Reggio di Calabria the first printed work in Hebrew, Rashi's commentary on the Pentateuch. In 1492 to 1493 many Jews expelled from Spain and Sicily settled in the city. When the Jews were driven from the kingdom of Naples in 1510 to 1511, the community of Reggio di Calabria was dissolved.

A safe conduct permit issued to Hoffaktor Philipp Reichenberger, president of the Jewish community of Regensburg

REGGIO NELL'EMILIA, city in northern Italy. The history of the Jews there begins in 1413 with the settlement of Jewish money lenders, who had always enjoyed the protection of the reigning house of d'Este. In 1492 Count Alfonso d'Este permitted some Jewish families driven from Spain to settle in his country; this policy was continued by Alfonso's successors during the 16th and 17th centuries. Especially important was the charter granted the Jews in 1652.

Between 1652 and 1657 sixty Spanish and Portuguese Jewish families from Livorno, Venice, Amsterdam and Hamburg immigrated to Reggio nell'Emilia, mainly merchants and industrialists. They formed a separate community, independent of the Italian Jewish community. There was also a third community, the Ashkenazic Jews. Each of these three groups had its own synagogue. There were 885 Jews in the city in 1669. In 1671 they were forced to live in restricted quarters, and their condition became steadily worse. They were subjected to many exceptional rules, and often Jewish children were forcibly baptized.

In the second half of the 18th cent. the ghetto was enlarged and the condition of the Jews was improved. The Jewish bookseller Moses Benjamin Foa, who had been appointed by Count Francesco III to supply his library in Modena, was successful in having their condition bettered. But it was not until 1796 that they obtained full civic equality, when the Cisalpine Republic was formed by the French. Rabbi Jacob Israel Carmi of Reggio nell'Emilia attended the Assembly of Notables, called by Napoleon, and also the Sanhedrin in Paris.

After the reestablishment of the reign of the house of d'Este in 1814, the Jews were again confined to the ghetto, and subjected to strict exceptional rules until the house of d'Este was finally overthrown in 1859 and the Jews obtained civic equality. The community had many famous rabbis, especially in the 17th and 18th centuries, but decreased thereafter in the 19th cent. In 1942 there were no Jews living in the city.

REGGIO, ISAAC SAMUEL, scholar, mathematician and rabbi, b. Gorizia, province of Illyria, Italy, 1784; d. Gorizia, 1855. In 1810, when the French took over Illyria, Reggio was appointed professor at the Lyceum in Gorizia. For three years he taught history, geography and literature, resigning because of the existing anti-Jewish laws when the province was returned to Austria. Reggio then devoted himself to the

study of Jewish literature, including Talmud and Cabala; the latter study, however, he discarded because of its illogical and mystical content.

The establishment of the rabbinical college at Padua was mainly due to Reggio. In 1822 he published an appeal which supplemented the imperial decree that required all rabbis to have been graduated in philosophy. In it he claimed that Jews did not want rabbis devoid of rabbinical knowledge. Reggio drew up the statutes and educational requirements for the school.

In his endeavors to bring religion to the masses Reggio published an Italian translation of the Bible with commentaries. He made many enemies through this work because of his attempt to correct errors which had crept into the text of the Bible. In order further to emphasize the breach which existed between him and the conservative school of rabbis, he denounced casuistry as a form of argument and rejected the Haggadic interpretation of the Bible and the Pilpulistic interpretation of the Talmud. In 1846, upon the death of his father, Reggio was appointed rabbi of Gorizia by the community, despite the existing controversies. He held this post for ten years, during which he refused to accept any remuneration for his services.

Reggio was a voluminous writer. Among his most important works was *Hatorah Vehafilosofiah,* a religio-philosophical treatise in answer to the conservative rabbis who protested against the establishment of the school at Padua. He attempted to reconcile modern science with the Jewish religion, and to show the interdependency of the one upon the other. His *Mafteah el Megillath Esther* is an introduction to the book of *Esther,* in which he attempts to establish the fact that Mordecai was by no means a great Jew, and that he was vain and selfish as well as cruel.

In *Behinath Hakabbalah* he contends that the Talmudic ordinances were not intended for strict and continuous observance, and that they were practised only by the Pharisees. His other works include: *Maamar Torah min Hashamayim* (Vienna, 1818), on the divine authority of Jewish law; *Sefer Torath Holim* (1821), on the Pentateuch (in Italian, with Hebrew commentaries); a metrical Italian translation of *Isaiah* (1831).

S. Reggio e Isidore Busch," *Festschrift Armand Kaminka zum 70. Geburtstag* (1937) 119-24.

REGINA, capital city of the province of Saskatchewan, Canada, situated on the main transcontinental line of the Canadian Pacific Railway. Regina was established as the seat of government of the North West Territories in 1882, and became the capital of the province of Saskatchewan in 1905.

The population of Regina in 1931 was 53,209, of whom the Jewish population of 1,010 constituted 1.89% of the total. The Jews formed the ninth largest ethnic group in the city in 1936. Their group was exceeded by the English (33.87%), Scotch (18.39%), Irish (13.37%), German (15.02%), French (2.53%), Ukrainian (2.35%), Roumanian (2.20%) and Scandinavian (2.13%) groups.

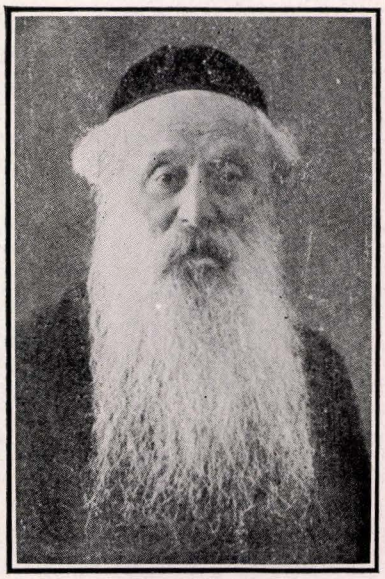
According to the government census, there were nine Jews living in Regina in 1891. The number increased to 130 in 1911, to 860 in 1921, to 1,010 in 1931, and declined to 902 in 1936. It was not until 1906 that a sufficient number of Jews gathered together for a Minyan on the high holy days. Weekly religious services were begun in 1910, and marked the establishment of Beth Jacob Congregation. A Shohet who acted also as cantor was engaged. A portion of the municipal cemetery was fenced off and consecrated for the use of the Jewish community in 1915. The Regina Hebrew School, founded in 1913 and attended by all Jewish children of elementary school age after public school hours had, in 1943, a modern school building erected in 1924. This building served also as a Jewish community center.

Regina had, in 1943, a branch of the Canadian Jewish Congress, a men's Zionist society, three Hadassah chapters, a Pioneer Women's group, a B'nai B'rith lodge, an A.Z.A. chapter, a Young Judaea club, a Jewish Co-operative Credit Union, a Ladies Hebrew Benevolent Society and a Hebrew Sick Benefit Society. The synagogue, Hebrah Kaddisha and Hebrew school were united in 1926, and were administered and financed by the Regina Hebrew Federated Community.

Louis Rosenberg was a member of the Regina Public Library Board (1936-40). He served as a member of the Regina Public School Board from 1937 to 1940, and was elected chairman of the Public School Board in 1938 and again in 1939. LOUIS ROSENBERG.

Lit.: Rosenberg, Louis, *History of the Regina Jewish Community* (1927); idem, *Canada's Jews* (1939), Sack, B., "History of the Jews in Canada," *The Jews in Canada* (1926); Wolff, Martin, "The Jews of Canada," *American Jewish Year Book* (1925).

REH, FRANK, educator, b. Austria, 1887. He was brought to the United States in 1888. He became principal of the Junior High School No. 20 of Manhattan in 1936; subsequently he was appointed principal of the Horace Greeley Junior High School in Queens, and was at that school in 1943. Astronomy came to be his chief interest, and he gained prominence as an amateur astronomer and a popularizer of that science through lectures and writing. Reh was a founder of the Amateur Astronomers Association, and wrote *Astronomy for the Layman* (1936). He published also *Science and Life* (1939), a series of six textbooks.



From 1909 to 1914 Reh was in architectural practice; he worked on the Lincoln Memorial in Washington, D. C., in 1913. He was principal of the religious school of the West End Synagogue, in New York city, from 1929 to 1934.

Lit.: *American Hebrew,* Dec. 25, 1936, p. 706.

REHFISCH, HANS JOSÉ, playwright, b. Berlin, 1891. Originally a lawyer, he turned to the writing of plays, which became popular on the German stage. In 1923 he was appointed director of the Zentraltheater in Berlin. His plays deal chiefly with ethical, social and religious problems.

There is the search for God in *Chauffeur Martin* (1920), the problem of happiness in *Wer weint um Juckenack?* (1925), the social problem in *Razzia* (1926), the victory of human solidarity over human rivalry in *Duell am Lido* (1926), and the much discussed question of the legalization of abortion in *Der Frauenarzt* (1928). His successful dramatization of the Dreyfus case, *Die Affäre Dreyfus* (with Wilhelm Herzog; 1929), led into the sphere of politics. His *Nichel und die sechsunddreissig Gerechten* is based on the Talmudic legend of the Lamed Vav Zaddikim (the thirty-six pious men). In 1943 Rehfisch was living in England.

REHOBOAM, son and successor of Solomon; he ruled from about 937 to 920 B.C.E. The death of his father found the united nation in a state of discontent because of the severe burdens of taxation required by the vigorous building program of the monarch and the splendor of his court. The chief center of this secret revolt was in the tribes of Ephraim and Manasseh; yet Rehoboam, either rashly or boldly, chose to go to Shechem, in the heart of the territory of the dissidents, to accept the homage of all the tribes. There he was approached by Jeroboam and other representatives of the tribes, and asked to reduce the taxes. Rehoboam took counsel before he replied; his old advisers counselled moderation, his younger comrades a policy of

Koppel Reich

aggression. Rehoboam adopted the advice of the latter, and made his reply in harsh language, ending with the words: "My father chastised you with whips, but I will chastise you with scorpions" (*I Kings* 12:1-15).

These insulting words led to the revolt of the greater part of the nation from Rehoboam. The assemblage at Shechem broke up without acknowledging Rehoboam as king; the latter's tax-collector was stoned to death when he tried to carry out his duties. Jeroboam was declared king by ten of the tribes, only Benjamin and Judah remaining faithful to Rehoboam. A state of civil war resulted, interrupted by a raid of Shishak (Sheshonk) of Egypt, who sacked the Temple and considerably weakened Rehoboam's diminished kingdom of Judah. The account in *II Chron.* 11 of how Rehoboam prepared to invade Jeroboam's kingdom of Israel, but was dissuaded by the prophet Shemaiah, is hardly historical.

Lit.: The commentaries on *I Kings*.

REHOVOTH, *see* COLONIES, AGRICULTURAL.

REICH, EMIL, author and historian, b. Eperjes (Prešov), Hungary, 1854; d. London, 1910. He studied at the Universities of Prague, Budapest and Vienna, receiving the LL.D. degree from the latter. Up to the age of thirty he studied in libraries. He spent five years in the United States, four years in France and several years in England (where he finally settled), studying the institutions of those countries. He lectured frequently at the Universities of London, Cambridge and Oxford on philosophy and history. He was employed by the British government in the preparation of the British case in the Venezuela boundary affair.

Reich's numerous published books include: *History of Civilization; Graeco-Roman Institutions* (Oxford lectures); *Hungarian Literature; Atlas of English History; Foundations of Modern Europe; Select Documents Illustrating Mediaeval and Modern History; Imperialism; The Failure of the Higher Criticism of the Bible; General History of Western Nations* (part 1, 3 vols., Antiquity); *Nights with the Gods* (1909). He was among the first to popularize the works of Henrik Ibsen in England.

REICH, IGNATZ, teacher and biographer, b. Zsámbék, Hungary, 1821; d. Budapest, 1887. At the age of thirteen he won the title of Haber with a Talmudic dissertation. He did not complete his studies in philosophy in the University of Pest for lack of funds. Reich took part in the movement of the Hungarian Jews for Magyarization; he published patriotic articles and a volume, *Honszerelmi dalok* (Songs of the Love of the Fatherland; 1848). From 1851 on he taught religious subjects in the schools of the Jewish community of Pest for thirty years; he was the first to teach those subjects in the Magyar tongue.

Reich published a Hungarian translation of *Genesis,* and a Hungarian Haggadah.

His great contribution to Jewish history was *Beth-El, Ehrentempel verdienter ungarischer Israeliten* (5 books, 1856-65; 2nd ed., 1878). It contains eighty-four biographies of prominent Hungarian Jews, with thirty portraits, and is a source work of lexicography. Reich advocated the return of the Jews to agriculture and handicrafts, and in his poems and in the year book *Beth-Lehem,* which he edited (2 vols., 1872-73), he tried to impress his coreligionists with the dignity of those occupations. He edited *Shevet Ahim,* a periodical in Judeo-German (1871-81).

Lit.: "Ignatz Reich," *Judaica* (1935), book 9-10, pp. 1-6; *Magyar Zsidó Lexikon* (1929) 737, 770.

REICH, KOPPEL, rabbi, member of the Hungarian Upper House, b. Verbó (Vrbove), Hungary, 1838; d. Budapest, 1929. He was a grandson of Rabbi Jacob Koppel Altenkunstadt, known as Koppel Charif. He served as rabbi of Sobotist from 1860 on, followed his father in the rabbinate of Verbó from 1872 on, and in 1890 was invited to Budapest, where he became chief rabbi of the autonomous Orthodox community. Emperor Francis Joseph I made him a royal councillor. Reich was the first rabbi to represent the Orthodox Jewish community of Hungary in the Upper House (1927 to his death). Four of his sons served as rabbis of Orthodox communities in Hungary and Czechoslovakia. The office of Orthodox chief rabbi of Budapest was not filled after his death.

REICH, LEON, Zionist leader and deputy, b. Drohobycz, Galicia, 1879; d. Lemberg, Galicia, 1929. He excelled at an early age as a Zionist leader, founded a number of Zionist student clubs, and edited (1907-14) *Voskhod,* leading organ of Galician Zionism. In 1913 he represented the Eastern Galician Zionists on the executive committee of the Zionist Organization. In Galicia itself he was prominent in national Jewish politics, especially in the elections to the Austrian Reichsrat. In 1918 to 1919 he took an active part in the work of the Comité des Délégations Juives as its vice-president, and edited a collection, *Le problème des minorités nationales en Europe orientale,* for the members of the peace conference.

After his return to Galicia Reich became president of the Eastern Galician Zionist Organization, and was elected a deputy of the first Polish Sejm (1921). As president of the Jewish Club in the Sejm, he came to an understanding with the Polish premier Grabski on political and economic concessions to the Jews (the *Ugoda;* 1925). Jewish opposition to this pact forced Reich to resign from the leadership of the Sejm Club in 1926; later he and the Jewish representatives from Eastern Galicia pursued a national policy different from that advocated in Congress Poland. Reich often participated in international minority congresses.

REICHARD, ZSIGMOND, Hungarian supreme court justice and author, b. Székesfehervár, Hungary, 1863; d. Budapest, 1916. He was admitted to the bar and practised law in Budapest from 1888 to 1893. In 1894 he entered the juridical career, and was named justice of the Hungarian supreme court in 1913.

Reichard was author of many works which reveal psy-

chological insight, humanitarian leanings and originality of thought. Among them *Az erkölcsi érzés* (The Moral Sense) is the most outstanding. Others include: *A feltételes elitélés* (On Conditional Conviction); *Pszychiatria és büntetőjog* (Psychiatry and Criminal Law); *A biró büntetésenyhitési joga* (The Discretion of the Judge to Alleviate Punishment); *Tervezet a büntetőtörvény módositásához* (Project for an Amendment of the Criminal Code).

REICHENHEIM, LEONOR, industrialist and Prussian deputy, b. Bernburg, Germany, 1814; d. Berlin, 1868. Aided by his brothers, he enhanced the importance of his father's business, which was transferred (1839) from Magdeburg to Berlin. Reichenheim became such a renowned specialist and leader of the Prussian cotton industry that the Prussian government, realizing its inability to render profitable the state-owned cotton mills at Wüste-Giersdorf, Silesia, sold them to him in 1846. Under Reichenheim's management the mills of Wüste-Giersdorf became one of the most flourishing enterprises of Germany. In 1858, when the reactionary regime in Prussia seemed about to expire, and the new ruler (later Emperor William I) promised a "New Era," Reichenheim was elected member of the Prussian Diet. The early years of his parliamentary activity were devoted mainly to economic matters; he opposed state-owned enterprises, especially railways.

In 1862 the Liberal majority of the Prussian Lower House was plunged into a grave constitutional conflict with the new prime minister, Prince Otto von Bismarck, and Reichenheim, a member of the budget committee, came to the fore. He took a leading part in the Liberal Party's decision to refuse all pecuniary resources to the government, and Bismarck was forced to govern without any budget. Reichenheim therefore became the target of Bismarck's acts of revenge. Workers employed by Reichenheim at Wüste-Giersdorf were incited by Bismarck's aide, Wagener, to complain against Reichenheim's alleged unfairness and lack of social feeling. Bismarck personally facilitated the propaganda by arranging a reception of the grumbling workers by the king of Prussia. It was the first time in modern history that a Jewish employer had been publicly accused by a government of anti-social management.

Reichenheim met Bismarck's attack resolutely. He dismissed the treacherous workers, who were provided by the Prussian government with the means to establish competitive factories. But a committee of inquiry set up by the government could not refrain from stating that all the imputations made against Reichenheim were unfounded, and Bismarck was forced to withdraw them in the Diet. Subsequently it became public knowledge that all the workers incited by Bismarck had criminal records. The money given them was wasted.

After the war of 1866 Bismarck and Reichenheim were reconciled. Reichenheim took an active part in settling the conflict between Bismarck and the Liberal Party. His resolution, proposed with Bismarck's consent, restored the regular army budget of Prussia.

HUGO BIEBER.

Lit.: Richter, Adolf, *Bismarck und die Arbeiterfrage* (1935).

REICHER, EMANUEL, actor, b. Bochnia, Galicia, 1849; d. Berlin, 1924. After attaining to adolescence, he acquired a mastery of elocution which later became greatly admired and almost proverbial. In 1873, after he had played in Munich and other cities, he was called to the Berlin Residenztheater, and became famous through his extraordinary histrionic art. He joined the Deutsches Theater in 1894, becoming one of the staunchest pioneers of the modernistic stage, and excelling in the portrayal of characters from the dramas of Ibsen, Hauptmann, Strindberg and Björnson. However, he attained to his greatest emotional effects when he abandoned "naturalism" for the pathos of Jewish suffering and affliction.

Reicher went to New York city in 1915, organized the Modern Stage and the Peoples Theater, gave several performances in the Garden Theater, and directed several plays of the Jewish Art Theater. He was appointed director of the Theatre Guild shortly after his arrival. In 1923 he returned to Germany. His first wife, Hedwig Reicher, was also a famous singer.

REICHERT, IRVING FREDERICK, rabbi, b. New York city, 1895. He received his rabbinical degree from the Hebrew Union College in 1921, and his M.A. degree from Columbia University in 1930. After two years as rabbi of Temple Israel in Jamaica, New York (1921-23), and seven years with Tremont Temple in the Bronx, New York (1923-30), Reichert was called to the pulpit of Temple Emanu-El in San Francisco, where he was still serving in 1943.

In San Francisco, Reichert was notably active in secular and Jewish communal work. President Franklin D. Roosevelt appointed him vice-chairman for the California State Recovery Board under the National Recovery Act. Reichert served also as vice-president of the California Conference of Social Work, as honorary president of the San Francisco section of the National Conference of Christians and Jews, as honorary president of the Temple of Religion at the Golden Gate International Exposition, and as president of the Board of Ministers of Northern California (1934-36). From 1930 to 1934 he was a member of the executive board of the Central Conference of American Rabbis. He was on the executive councils of general and Jewish welfare funds and community organizations in San Francisco and the nation. He also wrote numerous pamphlets on contemporary subjects, and served as a special radio preacher on both the Columbia and National Broadcasting systems. During the first World War he was director and chaplain for the Jewish Welfare Board in Camp Grant, Ill.

REICHLER, MAX, rabbi, b. Austria, 1885. He was brought to the United States in 1895, and received his rabbinical degree from the Hebrew Union College in 1906. After occupying pulpits in Helena, Ark., and Schenectady, N. Y., Reichler was commissioned by the Union of American Hebrew Congregations (1911) to organize a Reform Temple in the Bronx, New York city. Sinai Temple was organized, and Reichler was its rabbi for eleven years. In 1922 he was called to the Beth Sholom People's Temple in Brooklyn, and in 1943 still held this post. He was also commissioned by the Union of American Hebrew Congregations (1912) to prepare a series of Hebrew textbooks, and was supervisor for four years of three special extension religious schools held under the auspices of the Union in New York city.

Reichler was a member of the executive committee of the Central Conference of American Rabbis, and served as treasurer of the Association of Reform Rabbis and secretary of the New York Board of Jewish Ministers. In 1942 he became president of the Brooklyn Jewish Ministers Association. Among his published works were *Jewish Eugenics* (1916); *Hebrew Manual* (3 vols., 1920-22); and *What is the Talmud* (1938).

REICHSBUND JÜDISCHER FRONTSOLDATEN. The increasing aggressiveness of German anti-Semitism and especially the continuous accusation that the Jews of Germany had not done their military duty in the first World War led Leo Löwenstein, who had served as a captain in the German army, to establish a federation of all the Jewish veterans of Germany. Local groups of the veterans' federation sprang up im-

George Wolf

mediately after the end of the war (1918) in many cities of Germany; these were often called upon to defend the lives and property of Jews. The right of self-defense was adjudicated to the Reichsbund Jüdischer Frontsoldaten on the occasion of a court trial in Berlin, where they were accused of forming armed mobs.

The subsequent restoration of normal life in Germany enabled the federation to devote itself to internal organization and to vital tasks. It had in 1925 sixteen district associations with 500 local groups which numbered about 40,000 members. The association advocated the union of all Jewish athletic and gymnastic associations in Germany, and fostered the Jewish back-to-the-farm movement there. The Reichsbund für jüdische Siedlung and the Jüdische Landarbeit groups were founded for the accomplishment of this work. A list of names of all Jewish soldiers of the German army who fell during the first World War was published under the title *Die jüdischen Gefallenen des deutschen Heeres, der deutschen Marine und der deutschen Schutztruppen, 1914-1918* (2nd ed., 1932). It showed that out of 550,000 German Jews in 1914, a total of 100,000 served in the German army or navy, and that 12,000 fell on the field of battle. The Reichsbund Jüdischer Frontsoldaten had 30,000 members and a weekly organ, *Der Schild*, in 1935, but it was dissolved by the Nazi government in 1938.

Lit.: *Der Schild;* Theilhaber, Felix A., *Jüdische Flieger im Weltkriege; Kriegsbriefe gefallener deutscher Juden* (1935).

REICHSVERTRETUNG DER DEUTSCHEN JUDEN. No officially recognized and compulsory organization of the Jews in Germany was in existence before the establishment of the Nazi regime in 1933. The Deutsch-Israelitischer Gemeindebund (founded in 1869) vainly tried to establish this kind of organization, but merely succeeded in organizing all the Jewish communities in Germany in a voluntary union which, however, was denied official recognition by the state. This recognition was granted the Preussischer Landesverband Jüdischer Gemeinden (founded in 1921), which comprised all Jewish communities in Prussia. Similar officially recognized provincial organizations existed in Bavaria, Saxony, Württemberg and several other German states, thus strongly reducing the importance of the Deutsche-Israelitischer Gemeindebund. With the exception of three Orthodox Jewish Landesverbände, all the rest, totalling sixteen, united in 1928 to form a Reichsarbeitsgemeinschaft for joint communal endeavors, and in 1932 a voluntary Reichsvertretung was established. Justice Leo Wolff, president of the Preussischer Landesverband, the largest of all the provincial organizations, was president of the Reichsvertretung.

The Reichsvertretung achieved its major importance beginning with 1933, when it was recognized by the Nazi regime as the sole official spokesman in the relations of German Jewry with the German authorities. Rabbi Leo Baeck became its president; he was assisted by a board of fifteen and by an advisory council whose members were appointed by the individual Landesverbände. The Reichsvertretung established a central committee for help and reconstruction, and was in charge of the education of Jewish youths. It was responsible for relief work, and assumed control over funds sent in from abroad.

In 1939 the Reichsvertretung was transformed into the Reichsvereinigung, which replaced all Jewish organizations dissolved after the pogroms of November, 1938. The main task of the Reichsvereinigung consisted of supplying the most important needs of the Jews, promoting emigration and maintaining schools and institutions for vocational training. At the beginning of 1942 the Reichsvereinigung was still in existence. In September, 1942, it was reported that several chief officials of the Reichsvereinigung had been deported to Poland. In October of the same year its president, Leo Baeck, issued an appeal to the Jews remaining in Germany to help each other "now that they are isolated from the rest of the world and depend solely on one another."

Lit.: *Tätigkeitsbericht des Preussischen Landesverbandes jüdischer Gemeinden 1935-36: Informationsblätter,* published by the Reichsvertretung der Juden in Deutschland, vols. 1-6 (1933-38).

REIDER, JOSEPH, philologist, b. Rozyszcze, province of Volhynia, Russia, 1886. He studied at the University of Göttingen, Germany, and came to the United States in 1904. Here he received his A.B. degree from the College of the City of New York in 1910, and his Ph.D. degree from Dropsie College in 1913. Immediately after being awarded his degree by Dropsie College, Reider was made professor of Biblical philology at the college and was also appointed librarian; in 1943 he still held both these posts.

Among his published works were *Prolegomena to a Greek-Hebrew and Hebrew-Greek Index to Aquila* (1916) and *Commentary on Deuteronomy* (1937). Reider was also a contributor to Hebrew and English periodicals and encyclopedias, and served as a member of the publication committee of the Jewish Publication Society of America.

REIFENBERG, ADOLF, agricultural chemist, b. Berlin, 1899. From 1921 to 1924 he was assistant agricultural chemist in the Palestine government service. He received his Ph.D. degree from the University of Giessen (1926). In 1934 he was appointed lecturer in soil science at The Hebrew University, Jerusalem.

Reifenberg's books include: *The Soils of Palestine* (London, 1938); *Ancient Jewish Coins* (Hebrew; 1940); *Denkmäler der jüdischen Antike* (1937); *Palästinensische Kleinkunst* (1927).

Lit.: *The Hebrew University Jerusalem* (1939); *Jewish Chronicle* (London), Aug. 5, 1938, p. 13.

REIFMANN, JAKOB, Hebrew scholar and philologist, b. Lagow, near Radom, Poland, 1817; d. Szczebrzeszyn, province of Lublin, Poland, 1895. When only sixteen years old he wrote poems in Hebrew and Aramaic (published in a book entitled *Iggeroth Tushiah Umezimah*). Later he became a teacher, and devoted his spare time to studies in philology and the history of literature. He was a gifted poet and an authority on Biblical and Talmudic subjects, on which he wrote many essays in various Hebrew and German periodicals. His writings were esteemed by such distinguished Jewish scholars as Leopold Zunz, Solomon Judah Loeb Rapoport, Abraham Geiger, Moritz Steinschneider and Michael Sachs, with whom he was in regular correspondence.

Noteworthy among Reifman's works are: *Beth Yaakob,* on Biblical exegesis; *Pesher Dabar* (Warsaw, 1845), contributions to the history of the Talmud and Midrash; *Mishloah Manoth* (Prague, 1860), analects on Sabbath customs; *Moade Ereb* (Vilna, 1863), on Talmudic methodology; *Meshib Dabar* (Vilna, 1866), researches on the Bible hermeneutics of Eliezer ben Jose of Galilee; *Sanhedrin* (Berdichev, 1888), a critical study of the origins and meaning of the ancient Jewish highest court; a biography of Zerahiah Halevi entitled *Toledoth Rabbenu Zerahiah* (Prague, 1853); *Toledoth Abi Mishpahath Rapoport* (Vienna, 1872), a biography of the founder of the Rapoport family; a biography of Issachar Bermann Ashkenazi (Przemysl, 1889).

Lit.: Wininger, S., *Grosse Jüdische National-Biographie,* vol. 5 (1931) 167; *Sefer Zikkaron* (1889); Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana,* vol. 1 (1891); vol. 2 (1895).

REIK, THEODOR, psychoanalyst, b. Vienna, 1889. He received his Ph.D. degree from the University of Vienna, and became one of the earliest collab-

Joseph Reinach

orators of Sigmund Freud (1911). Until Freud's death, for more than thirty years, Reik was the most faithful of his followers. He was lecturer and training analyst at the Psychoanalytic Institute of Vienna, Berlin and The Hague. The prize for the best paper on applied analysis was awarded him in 1915. In 1929 he moved from Vienna to Berlin, and in 1943 he was living in New York city, where he was the director of the Society for Psychoanalytical Psychology.

Reik's works include: *Richard Beer-Hofmann* (1912); *Flaubert und seine Versuchung des Heiligen Antonius* (with an introduction by Alfred Kerr; 1912); *Arthur Schnitzler als Psychologe* (1913); *Das Ritual* (with an introduction by Freud; 1919; 2nd ed., 1927; English trans., *Ritual, Psycho-Analytical Studies,* 1931); *Der eigene und der fremde Gott* (1923); *Warum verliess Goethe Friederike?* (1930); *Der unbekannte Mörder* (1932; English trans., *The Unknown Murderer,* 1936); *Der überraschte Psychologe* (1935; English trans., *Surprise and the Psychoanalyst,* 1936); *From Thirty Years with Freud* (1940); *Masochism in Modern Man* (1941). In *Ritual* and *Gebetmantel und Gebetriemen der Juden* (1931) he delved into problems of the psychology of religion.

REINACH, ADOLF, philosopher, b. Mayence, Germany, 1883; killed in the first World War, 1916. He was instructor of philosophy at the University of Göttingen. An adherent of the school of Husserl, he endeavored to apply the latter's phenomenological method to philosophy of law.

Reinach wrote: *Über den Ursachenbegriff im geltenden Strafrecht* (1905); "Die aprioristischen Grundlagen des bürgerlichen Rechts" (*Jahrbuch für Philosophie und phänomenologische Forschung* (vol. 1, Halle, 1913); "Zur Theorie des negativen Urteils" (*Münchener philosophische Abhandlungen* (1911). His complete works were published by his students (1921).

Lit.: Überweg, Friedrich, *Grundriss der Geschichte der Philosophie,* 12th ed., vol. 4 (1923) 512, 515, 533, 715; the preface to Reinach's collected works (1921).

REINACH, JOSEPH, writer and French statesman, b. Paris, 1856; d. Paris, 1921. He was the brother of Salomon and Théodore Reinach. The Reinach family, which came originally from Frankfort, Germany, migrated to France at the beginning of the 19th cent. Reinach was chief of the premier's cabinet, under Gambetta, in 1881 to 1882, and worked on the project of the introduction of the "Scrutin de Liste" (voting for candidates in a group), which brought about the downfall of the Gambetta cabinet. Reinach dedicated to Gambetta several books, such as *Leon Gambetta* and *Le ministère Gambetta* (1884). He edited eleven volumes of *Discours de Gambetta* and two volumes of *Discours et dépêches de Gambetta pendant la guerre franco-allemande.* He was general secretary of the Ligue des Patriotes and co-editor of its organ, *Drapeau;* however, after the anti-Semite Paul Deroulede had affiliated the league with reactionary Boulangism, Reinach resigned (1887). As chief editor from 1886 on of the *République française,* founded by Gambetta, he waged war against Boulangism in this organ as well as in his articles issued, in 1889, in the collections *Le cheval noir* and *La foire Boulangiste.* In 1893 he was elected to the Chamber of Deputies from Digne (Basses Alpes).

Reinach was indirectly involved in the Panama scandal inasmuch as his uncle and father-in-law, Baron Jacques Reinach, had embezzled 3,000,000 francs of the company's money to bribe politicians and newspapermen. Upon the accusation, the baron ended his life, but his nephews were reported to have made good the company's loss.

Reinach became especially prominent during the Dreyfus affair, when he was in the front rank of those who demanded a new trial. He set forth his claims in the paper *Siècle,* supporting them with evidence of Henry's forgeries and Esterhazy's guilt. In connection with this case he wrote a history of the judicial murder of J. Raphael Levy, who was burned at Metz in 1670 on a ritual murder charge ("Une erreur judiciaire sous Louis XIV," in *Essais de politique et d'histoire,* 1899). Together with other adherents of Dreyfus, Reinach was defeated in the parliamentary elections of 1898, and was divested of his rank of officer in the territorial army. However, after Dreyfus' innocence had been proved, Reinach was reelected by his election district, which he represented until 1914.

His seven-volume *Histoire de l'affaire Dreyfus* is the best presentation of both the trial and the French state of mind in connection with it. This work drew strong opposition from the anti-Dreyfus party (Dutrait-Crozon, Henri, *Joseph Reinach, historien,* 1905). During the first World War Reinach conducted a war-topic column in the *Figaro* under the caption "Commentaires de Polybe." His articles, distinguished by their clarity, were afterwards published separately, in seventeen volumes. He wrote numerous articles for the *Revue des deux mondes* and *Grande revue,* as well as politico-historical works, including *Diderot, La politique opportuniste, La logique parlementaire* and *La France et l'Italie devant l'histoire.* ISAAC LEWIN.

Lit.: Bruchard, Henry de, "Emile Zola et Joseph Reinach," *Revue critique des idées et des livres,* vol. 14 (1911) 599-620; Launay, Robert, *Figures juives* (1921); Maurel, André, "Les écrivains de la guerre: Joseph Reinach," *Revue des nations latines* (1916) 185-201.

REINACH, SALOMON, archeologist and historian of religion and the arts, b. Saint-Germain-en-Laye, near Paris, France, 1858; d. Paris, 1932. He was the brother of Joseph and Théodore Reinach. His family resided at Reinach, a small town near Basel, Switzerland.

One of his ancestors went to Mayence in the first half of the 18th cent. His grandfather, Joseph Reinach, became a French citizen in 1793; he left Mayence for Frankfort in 1814, when the city of Mayence ceased to belong to France, and died in 1856. His son Hermann Joseph Reinach (b. Frankfort, 1814; d. Paris, 1899), a banker, moved to Paris in 1843. He retired from business in 1867, in order to devote his time mainly to the education of his children. Salomon, his second son, was a brilliant pupil at the École Normale Supérieure before he attended the École Poly-

Salomon Reinach

technique. As a student he translated Schopenhauer's *Über den Willen in der Natur.* It was the first French translation of Schopenhauer. He prepared his *Manuel de philologie classique* while he was a student.

From 1879 to 1882 Salomon Reinach was a member of the École Française d'Athènes. Tissot, French Minister to Greece, a renowned scholar, became aware of Reinach's talents, and sent him to Asia Minor, where Reinach made important archeological discoveries and copied inscriptions near Smyrna and on the islands of Delos, Imbros Thasos and Lesbos. When Tissot was appointed French Ambassador to Constantinople he obtained from the French government permission to take Reinach with him to the capital of Turkey, and in 1883 Tissot, as president of the Société archéologique de Tunisie, called Reinach to Tunis in order to direct the excavations at Carthage and other places. In 1885 Reinach returned to France, enriched in experiences in excavating monuments and deciphering inscriptions.

No archeologist, not even Montfaucon or Gerhard, wrote about as many monuments as Reinach did; nor did any of them do as much for the critical and historical interpretation of the discoveries. Subsequently Reinach became conservator of the National Museum of France, director of the Museum of Antiquities at St. Germain-en-Laye (1886), professor at the École du Louvre, and member of the Académie des Inscriptions (1896) and of the British Academy (1911). He published more than seventy volumes and about 5,000 articles on Greek and Gallic archeology, prehistoric, ancient and modern art, philosophy, sociology, history of religions and contemporary history. His *Apollo,* a general history of arts, was published in ninety-six French editions, and was translated, as were most of his other books, into many languages.

Although Reinach always took a strong interest in Jewish life and was a devoted member of the Alliance Israélite Universelle from 1885 on, he was not greatly concerned with religious affairs until 1900 when, irritated by the Dreyfus case and inspired by W. Robertson Smith and J. G. Frazer, he began to study religious problems.

He published *Cultes, mythes et religions* (5 vols., 1905-23); *Orpheus,* a general history of religions (1924); and *A Short History of Christianity* (1922). Reinach considered the history of Judaism a part of the ethical and social development of humanity. He therefore endeavored to study not so much the peculiarities of the Jewish religion as all the elements which relate it to other religions. He often succeeded in illustrating passages of the Old Testament which were incomprehensible as long as the commentators confined themselves to the realm of Judaism, but he remained, as a historian and philosopher of religion, an agnostic, consciously eliminating God or the infinite from the fundamental concept of religion. Keenly interested also in the origin of Christianity, Reinach depended, as to criticism of the Gospels, on Loisy, but by comparing the Christian canon of the New Testament with ancient non-Christian writers, inscriptions and other documents, he obtained new results which shed light upon facts incomprehensible until then and cleared up unknown connections.

Reinach also dealt with the "Aryan" question, the legend of "ritual murder" and the problems of racial discrimination. Always a defender of liberty and of Jewish interests, he incurred the enmity of many reactionaries, who seized every opportunity to calumniate him. Thus he was wrongly accused of having purchased the forged "Tiara of Saitapharnes" for the Louvre, whereas, in fact, he was the only member of the commission who denied its authenticity.

HUGO BIEBER.

Lit.: De Ricci, Seymour, in *Revue des études juives,* vol. 94 (1933); Pottier, E., in *Revue archéologique,* Nov.-Dec., 1932; Cagnat, R., in *Bulletin de l'Académie des inscriptions et belles-lettres,* Oct.-Dec., 1933.

REINACH, THÉODORE, jurist, philologist and historian, b. Saint-Germain-en-Laye, near Paris, France, 1860; d. Paris, 1928. He was the brother of Joseph and Salomon Reinach. A youthful prodigy, at the age of thirteen he wrote a general history and designed maps of all the countries of the world. His juridical thesis, dealing with the state of siege, was crowned by the faculty. Reinach was admitted to the bar of the Cour d'Appellation of Paris, but continued to enlarge his scientific domain. In 1889 he published *Trois royaumes de l'Asie mineure,* reconstructing periods of the history of Bithynia, Cappadocia and Pontus. Reinach's methods in utilizing the briefest or apparently most trivial indications of the documents for the establishment of the chronology or historical and mythological interpretation and deductions relating to the history of civilization combined imagination and scientific experience with the keenest criticism. As a philologist, epigraphist, and numismatist equal to Mommsen and Delisle, Reinach was also a well-informed papyrologist, and pioneered as a historian of ancient Greek music by deciphering Greek musical notation.

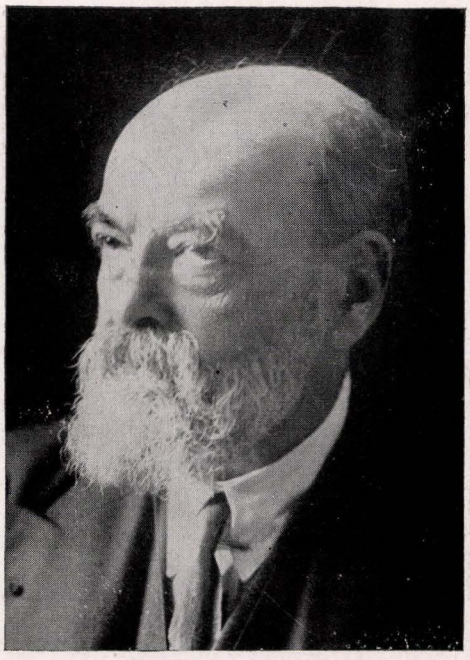
He was also a gifted musician, and a composer of no mean stature. His *Mithridates Eupator* casts new light upon the history of the ancient Near East. His collections of Greek inscriptions and his catalogue of Greek coins of Asia Minor remained standard works. From 1888 to 1906 Reinach edited the *Revue des études grecques.* He then became editor of the *Gazette des beaux-arts.* From 1894 to 1901 he was professor at the Faculty of Literature of Paris, and in 1903 was appointed professor at the École des Hautes Études.

In 1909 Reinach was elected a member of the French Academy. He was also a member of the Royal Academy of Belgium and president of the French Linguistic Society, and received an honorary degree from Trinity College, Dublin. He was a member of the Chambre des Députés from 1906 to 1914. During the first world war Reinach served as commander of artillery at Belfort until, in 1917, the French government sent him to America to lecture in behalf of the Allied Powers. Reinach was an ardent French patriot, a defender of human rights, and an avowed Jew, interested in the history, the present and future status of Judaism.

In 1884 he published *Histoire des Israélites depuis leur dispersion,* which was reedited many times, in 1887 *Les*

monnaies juives (English trans., 1903), in 1895 *Textes d'auteurs grecs et romains relatifs au Judaïsme,* and in 1903 *La fête de Pâques.* He contributed on Jewish subjects to almost all the great scientific encyclopedias and to publications devoted to the memory or the jubilee of such Jewish savants as Alexander Kohut, David Kaufmann, Henri Weil and Theodor Gomperz. At no time before Reinach was each available Greek and Latin text examined with such an acute criticism, and each papyrus which came to light was scrutinized by him whether or not it was able to offer new indications concerning Jewish history. Reinach directed and supervised each line of the French translation of Josephus, who preoccupied him during his life. He was one of the founders of the Société des Études Juives, and a regular contributor to the review edited by that society.

Reinach was no less active in studying the conditions under which his Jewish contemporaries were living and in defending their vital interests. He fought for the revision of the Dreyfus trial, and in 1904 published *Histoire sommaire de l'affaire Dreyfus.* Reinach at all times professed his firm belief in the future of Judaism. He was, however, convinced that liberal reforms were necessary to guarantee its continued existence. Although he endeavored to demonstrate that the former antagonism between Judaism and Christianity had to be replaced by an understanding of their common interests against barbarism, he repudiated any idea of a fusion of the two religions. He developed this point of view in *Du progrès en religion* (1903) and in many addresses delivered before the Union Libérale Israélite, which Reinach founded in order to realize his reformist ideas. HUGO BIEBER.



Lit.: De Ricci, Seymour, in *Revue des études juives,* vol. 86 (1928); Jamot, Paul, in *Gazette des beaux-arts* (1928); Cagnat, R., in *Bulletin de l'Académie des inscriptions et belles-lettres,* Oct.-Dec., 1931.

REINCARNATION, *see* SOULS, TRANSMIGRATION OF.

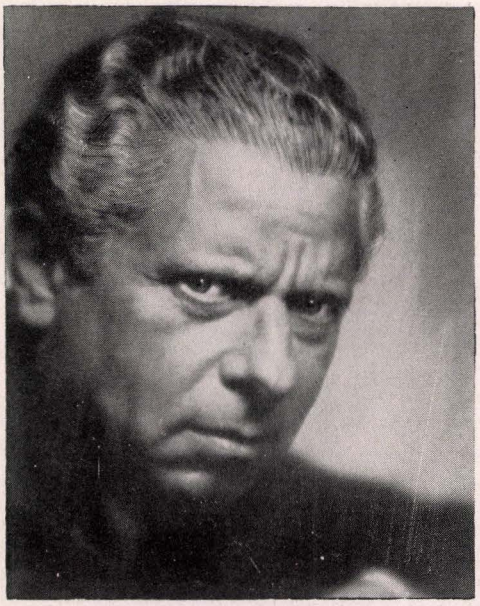
REINER, FRITZ, conductor, b. Budapest, 1888. He graduated from the National Academy in Budapest, and acquired his conducting apprenticeship at the Budapest Opera. In 1914 he was appointed conductor of the Dresden Royal Opera, where he first attracted attention. After the first World War he filled various conducting posts in Italy and Spain, distinguishing himself particularly as an interpreter of the Wagner music dramas and modern operas. In 1922 he was invited to become permanent conductor of the Cincinnati Symphony Orchestra, holding this post until 1931. In 1938 he became conductor of the reorganized Pittsburgh Symphony Orchestra. Reiner appeared extensively as a guest conductor throughout the world, conducting a cycle of Wagner music dramas at Covent Garden during the coronation festivities in London in 1936. Besides his conducting assignments, he filled (1943) the office of head of the orchestral department at the Curtis Institute of Music in Philadelphia.

REINER, IGNÁC, jurist, b. Gyulafehérvár (Alba Julia), Hungary, 1863; d. Budapest, 1917. He was a son of Zsigmond Reiner, who played an influential role during the national revolution (1848 to 1849) as army surgeon in the armies of Generals Perczel, Guyon and Bem. Reiner was admitted to the bar and served in the Hungarian ministry of justice, where he became chief of the penitentiary division and subsequently of the division of international law.

He published books on the system and regional division of the Hungarian courts of law, on the public notary law, on the body of Hungarian lawyers, and on the right of amnesty. He also wrote *Strafanstalten Ungarns* (French trans., *Les établissements pénitentiaires en Hongrie*).

Théodore Reinach

REINES, ISAAC JACOB, Talmudist and founder of the Mizrachi movement, b. Karlin, near Pinsk, Russia, 1839; d. Lida, province of Vilna, 1915. He lived and studied for a while in Hordok, where his father-in-law, Joseph Reisen, was rabbi, and then in Telsh. Reines became rabbi of Shukian in 1867, and of Shwentsian in 1869. In 1885 he became rabbi of Lida, and remained there until his death.



Reines was an advocate of a system of Talmud study which went contrary to accepted Orthodox custom. He tried, without success, to implement his plan in 1882, at the St. Petersburg meeting of rabbis and other leading Jews, where the advancement of the Jews of Russia was considered. Subsequently he tried to put his plan into practice in a Yeshiva which he himself founded and which offered both a secular and a rabbinical education. But the project failed after four years because of lack of support from the Jewish, not the government, groups.

First converted to Zionism during the Hibbath Zion movement, Reines later joined with Theodor Herzl in propagating political Zionism. Out of his desire to combine political Zionism with Orthodoxy grew the Mizrachi movement, which he founded in 1901. He summoned the first conference of the Mizrachi in Minsk in 1902. A participant in several Zionist Congresses, he was also a sponsor of the Uganda project at the Sixth Congress (1903).

The plan for Talmudic study which Reines advocated was embodied in his two-volume *Hothem Tochnith* (1880-81). Later he was author not only of studies and essays on Talmudic and other rabbinical subjects, but of several expositions of his Zionist attitude, including *Orah Vesimhah* (1898) and *Or Hadash al Tziyyon,* in which he replied to the anti-Zionist arguments of the ultra-Orthodox groups (1902). In collaboration with Zeeb Wolf Jawitz, Reines published the first Mizrachi periodical, *Hamizrach* (1903).

Lit.: Jewish Encyclopedia, vol. 10, p. 368; *Der Mizrachi Veg,* Tishri, 5701 (1940) 8.

REINFELD, FRED, chessmaster and author, b. New York city, 1910. He won the Marshall Chess Club

Max Reinhardt

Championship in 1935 and the New York State chess championship in 1931 and 1933.

Reinfeld wrote the following books on chess: *Colle's Chess Masterpieces* (1935); *Elements of Combination Play in Chess* (1935); *Elements of Modern Chess Strategy; Chess Strategy and Tactics* (with Irving Chernev; 1933); *Dr. Lasker's Chess Career* (with Reuben Fine; 1935); *Chess Combinations and Traps* (with V. I. Sozin; 1936); *Chess Mastery by Question and Answer* (1939); *Practical End-Game Play* (1940). In 1942 Reinfeld was preparing a volume on the model games of José R. Capablanca. He also prepared, together with Reuben Fine, the volume *A. Alekhine versus E. D. Bogoljubow*, dealing with the world championship chess games of 1934.

REINGANUM, MAXIMILIAN, lawyer and public official, b. Frankfort, Germany, 1798; d. Frankfort, 1878. Brought up in the Judengasse, Reinganum studied law at the Universities of Göttingen and Heidelberg, and graduated in 1819. After trying in vain for two years to be admitted to the bar without being baptized, Reinganum resigned himself to leaving Judaism by becoming apparently converted to Protestantism, but at heart remained loyal to Judaism. Admitted to the Frankfort bar immediately after his baptism, he struggled courageously and energetically for the rights of the Jews, especially in the town council of Frankfort, of which he was a member from 1830 to 1866. Reinganum was also a prominent defender of liberals or democrats accused by the public prosecutor.

From 1822 on he was an intimate friend of Ludwig Börne and Jeanette Strauss-Wohl. Reinganum was their counsel, and in that quality he entered into a conflict with Heinrich Heine. After Börne's death Reinganum edited the collected works and wrote a biography of Börne. For many years he was the leading counsel also of the Rothschilds at Frankfort, and enjoyed especially the confidence of old Mayer Amschel Rothschild, founder of that noted family. In 1832 Reinganum launched a vigorous protest against the press laws of the German Bundestag. When, in 1866, Prussia annexed Frankfort, which was until then a free imperial city, Reinganum retired to private life, but professed and supported democracy until his death.

REINHARDT, HEINRICH, composer, b. Pozsony (Pressburg), Hungary, 1865; d. Vienna, 1922. He studied music in Vienna and became music critic on several Viennese newspapers; he was also an editor of the *Wiener Zeitung*.

Reinhardt composed an opera, *Der Söldner;* a comic opera, *Die Minnekönigin;* and several operettas, including *Das süsse Mädel; Der Generalkonsul; Krieg im Frieden; Die süssen Grisetten;* and *Die erste Frau.*

REINHARDT, MAX, theatre director and producer, b. Baden, near Vienna, 1873. Although he began his career by working in a bank, Reinhardt at the age of twenty was already an actor in the State Theatre at Salzburg. There he was seen by Otto Brahm, the leading exponent of naturalistic acting, who gave Reinhardt a contract. In Berlin Reinhardt played character parts in Brahm's Deutsches Theater.

Reinhardt's interest in the theatre, however, led away from the limitations of an acting role. His first excursion into the directive field took the form of producing cabaret pieces. In 1905 he founded his own Deutsches Theater. The naturalistic school in which he had been trained by Brahm seemed inadequate to Reinhardt, and he became the originator of a new impressionistic and spectacular school of theatrical production. To provide the proper background for the various kinds of theatre which he envisioned, Reinhardt established also the Kammerspiele, an intimate theatre, and the Grosses Schauspielhaus, for spectacles of extraordinary grandeur.

In Vienna he acquired the Josefstadt Theater. Reinhardt's theory was to unleash the impressive possibilities of a play and to ramify its textual skeleton with excitations to the eye and the ear, as well as to the relationship that is set up between audience and actor. He chose for his productions plays which had been neglected or grown dated through repetitive presentations, but he also sponsored the specially written works of young playwrights. Many of them, like Ernst Toller, owed a great deal to his friendliness.

For *A Midsummer Night's Dream* Reinhardt introduced a revolving stage; he also gave *Hamlet* in modern dress. These innovations, however, were only the technical accompaniment to the revitalized concept of the theatre which marked the Reinhardt productions. Goethe, Schiller, Strindberg, Molière, Ibsen, Shaw, Tolstoi and Gorki were brought to the stage by Reinhardt, and always in a new form. During the twenty-five years that made up the greatest part of his activity, 23,375 performances were given of plays produced and directed by Reinhardt.

At Salzburg, in 1920, Reinhardt produced *Jedermann* (Everyman), an old morality play which became an annual event at the Salzburg Festivals until their degradation by the Nazis. His companies toured the European continent, and he also directed English performances in London and Oxford. In 1924 Reinhardt produced *Jedermann,* as well as *The Miracle,* a silent spectacle, in New York city. Subsequently, in 1936, he produced in New York *The Eternal Road,* a saga of the odyssey of the Jew. After 1934 Reinhardt spent most of his time in the United States, directing the Max Reinhardt Workshop in Hollywood. He had been awarded several honorary degrees, including that of doctor honoris causa by Oxford (1933).

REINHART, ALFRED SEYMOUR, medical hero, b. 1907; d. Boston, 1931. During his adolescence

Reinhart suffered an attack of rheumatism, which left his heart permanently injured. Although he knew that the disease would lead to subacute bacterial endocarditis, which was fatal, he graduated from Harvard summa cum laude, and entered the Harvard Medical School. After the end of his third year at the medical school, Reinhart observed the symptoms which indicated that he had only several more months of life. With the collaboration of Soma Weiss of the Harvard Medical School, a special room was set aside for Reinhart in the Boston City Hospital. Here, rejecting all drugs which might ease his pain but cloud his intelligence, Reinhart kept a record of his observations. He also left directions for the post mortem examination of his body which provided interesting clues to the study of the disease that had killed him.

Lit.: American Hebrew, Dec. 18, 1931, p. 156.

REINITZ, MAX, economist, b. Pápa, Hungary, 1851; place and date of death unknown. Having studied law at the University of Vienna, he was admitted to the bar and became editor of the economic division of the *Neue Freie Presse* and financial correspondent of the *Frankfurter Zeitung.* Between 1878 and 1910 he was attorney to the Österreichische Zentralbodenkreditbank. Reinitz contributed regularly to important journals of law and economy, including the *Vierteljahrsschrift für Volkswirtschaft, Politik und Kulturgeschichte.*

His major essays were included in the *Österreichisches Rechtslexikon.* Reinitz specialized in legal questions relating to state railways, and among his several volumes published in that field are *Eisenbahnwesen Österreich-Ungarns* (1881); *Rechtsverhältnisse zwischen Staat und Eisenbahn* (1884); and *Das österreichische Staatseisenbahnwesen von seinem Anfang bis zur Jetztzeit* (1913).

REIS, ANSHEL, Zionist labor leader, b. Galicia, Poland, 1888. He was educated at a Galician Gymnasium and a higher school of engineering. In the years around 1910 he organized, together with Solomon Kaplansky and Berl Locker, the Zionist labor party Poale Zion in Galicia, and became one of its leaders and creative powers, dedicating his entire life to the development of the movement and helping the Jewish Labor Party in Palestine. For a number of years Reis was general secretary of the world federation of the right wing of the Poale Zion Party. In 1932, when the Poale Zion united with the other wings of the Zionist Labor Party, Hithahduth and Zeire Zion, he joined the secretaryship together with Arieh Tartakower. In Poland Reis was the head of the Palestine emigration department, conducting its offices with skill and ability. He was a member of the Actions Committee of the World Zionist Orgnization, and after the outbreak of the second World War in 1939 lived in Palestine, where he helped direct the Histadruth, the Zionist Labor organization.

REIS, PHILIPP, inventor of the telephone, b. Gelnhausen, Germany, 1834; d. Friedrichsdorf, Germany, 1874. He was the first to use the term "telephony" in a lecture delivered before the Physical Society of Frankfort in 1861, in which he described the electrical apparatus he had devised to reproduce human speech. The lecture attracted world-wide attention, and the instrument was well known to physicists previous to Alexander Graham Bell's invention. Thus Reis' work, although unfinished and commercially unexploited, gave rise to the long-continued discussion as to priority in the invention of the telephone; in Europe especially Reis was considered the original inventor. Reis' Jewish origin, asserted in numerous publications, came into question in the 1930's; no definitive facts were established by 1943.

REISEN, ABRAHAM, Yiddish poet and author, b. Kaidanoff, province of Minsk, Russia, 1876. He had a traditional Jewish education and some secular training in his native city. His first poem was published in 1891 in *Der Yiddisher Bibliotek,* and his first volume of short stories was published a year later.

Until 1904, when Reisen went to Vienna for a short time, he lived in various Russian and Polish cities and wrote for numerous Yiddish periodicals. On his return from Vienna he settled in Cracow, where he published a weekly, *Dos Yiddishe Vort.* Later he was the editor of other periodicals.

After two previous visits (1908-09 and 1911), Reisen settled in the United States in 1914. By that time he had an international reputation as a poet and short-story writer, and much of his work had already been translated into other languages. Reisen's prolific pen had produced enough to enable the publication of fourteen volumes of poems and short stories in 1917. Subsequently additional volumes of his collected works were published. Much of his work appeared originally in the *Forward, Tzukunft* and other newspapers and periodicals with which he was affiliated.

Although some of Reisen's poems, like *Mai Ka Mashmalon* (which was set to music), approached the popularity of folk lyrics, it is nevertheless true that both in his prose and in his poetry Reisen is less a writer of the Jewish people than a writer who expresses the concerns of all literature in the Yiddish language. His subject matter does not usually have only the indigenous, characteristic touch of Jewish motivation; it uses the Jewish setting, as it uses the Yiddish vernacular, for the formulation of human material. The language of his poetry is simple, with words of German origin, rather than Hebrew, carrying the meaning. And Reisen's moods, from sentimentality through romantic realism to irony, only occasionally show the emotions that one recognizes as traditionally Jewish. Yet this very cosmopolitanism makes him a Jewish writer, for universals are expressed in particularly Jewish form. The same is true of his stories, which are Jewish in setting, but whose motivations are not derived from conflicts that are essentially Jewish.

Reisen's poetry and prose were translated into many languages. He wrote also in Russian and Hebrew, and used the pseudonyms of Ben-Kalman and A. Klemens.

NATHAN RICARDO.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 350-64; Minkoff, N. B., *Abraham Reisen* (1936).

REISEN, SARAH, Yiddish writer, b. Kaidanoff, Russia, 1885. She was the sister of Abraham Reisen and Zalman Reisen. Her first work, published in 1902, was in Russian, but she soon turned to translation into Yiddish and to the writing of original sketches and verse in Yiddish. For a time she lived in Minsk, and from 1908 until the outbreak of the first World War, in Warsaw. From 1916 to 1921 she taught in the Folkshulen in Minsk, and in 1921 settled in Vilna. Here she remained until 1933, when she came to the United States, where, in 1943, she was a contributor to the *Forward, Tzukunft* and other Yiddish periodicals.

Among her translations into Yiddish were works by Alexander Pushkin, Alexis Tolstoy, Ivan Turgenev, Oscar Wilde, Jack London and Rabindranath Tagore. A volume of her stories and short plays was published in 1912 as *Cholem un Vahr. Lieder,* a collection of her verse, appeared in 1924.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur Presse un Filologie,* vol. 4 (1929), cols. 368-72.

REISEN (REJZIN), ZALMAN, Yiddish writer and scholar, b. Koidanovo, district of Minsk, Russia, 1887. He studied in the Minsk city school, and later continued his own education particularly in the fields of Yiddish language and literature and linguistics in general. In 1915 he arrived in Vilna, where he became active in communal affairs, educational work and journalism. He was one of the editors of *Letzte Nayes* (1915-18), published during the German occupation of Vilna. From 1919 to 1939 he was editor-in-chief of the Yiddish daily *Vilner Tog*. He was one of the founders of the Jewish Historical-Ethnographic Society in Vilna and a member of the organization committee of the Yiddish Scientific Institute. From 1925 on he was a member of its executive board and one of its leading spirits. In September, 1939, when Vilna was occupied by the Soviets, he was placed under arrest; in 1943 his whereabouts were unknown.

Reisen contributed to many Yiddish literary and scholarly periodicals, such as *Bichervelt, Literarishe Bleter, Di Yiddishe Velt, Yivo Bleter,* and *Yiddish far Ale*. He was editor of the *Pinkas* of the above-mentioned Jewish Historical-Ethnographic Society, co-editor of the *Yivo Bleter* and the philological publications of the Yiddish Scientific Institute, and translator into Yiddish of the works of Dostoevsky, Tolstoy and others. Reisen was particularly interested in the problems of Yiddish grammar, and published two books in this field. His *Fulshtendike Yiddishe Grammatik* (Warsaw, 1908) is a pioneering study of Yiddish grammar written in Yiddish itself. Later he published the *Grammatik fun der Yiddisher Shprach* (Vilna, 1920), of which only the first part appeared in book form and which is still considered important in its field. Many sections of the second part were published in periodicals.

His contributions to literary history, such as his *Fun Mendelssohn biz Mendele* (Warsaw, 1923), which was not brought to completion, and his critical edition of Abraham Bär Gottlober's Yiddish works, in collaboration with A. Fridkin (Vilna, 1927), are valuable additions to our knowledge of the figures of early modern Yiddish literature and their endeavors.

In 1914 Reisen published the first edition of his *Lexikon fun der Yiddisher Literatur un Presse* in one volume (Warsaw). The second edition, under the title of *Lexikon fun der Yiddisher Literatur, Presse un Filologie* (Vilna, 1926-1930), appeared in four volumes. A fifth volume of additions and an index was set up in type when the second World War broke out. This lexicon summarized a score of years of work in all the fields that interested Reisen. It is to date (1943) the standard reference work for Yiddish literature. It is based on original, unpublished sources, as far as possible derived from the writers themselves and whenever that was not feasible from dozens of correspondents and from Reisen's own painstaking research of innumerable literary sources and his knowledge of the entire existent literature. Appraisals by authoritative critics are given and in some cases by Reisen himself, who had at his command his tremendous literary and journalistic erudition. Many of the biographies are independent studies of high caliber, as, for example, those on Mendele Mocher Sforim, An-ski, Borochov, Ettinger, Gordin, Naumberg, Peretz and Pinski. His bibliographies are excellent. The inclusion of countless new figures of young Yiddish writers who were still little known is a further asset.

Reisen occupies a unique position in Yiddish letters and research in the fields of linguistics, literary history, bibliography and biography. In most of his work he has presented for the first time in organized fashion the accumulated knowledge on a particular subject.

Reisen as writer and scholar should not be divorced from Reisen the man. The fact that much of his work has not been completed is a result of his continually being drawn into the social and communal functions connected with literature. His energy and vitality, his ability to attract people and group them about him gives his work impetus and personality. Above all, it is Reisen's overwhelming love for Yiddish literature that is evident in all his writings and that finds expression in his daily life and personality which gives color to all his achievements. LUCY SCHILDKRET.

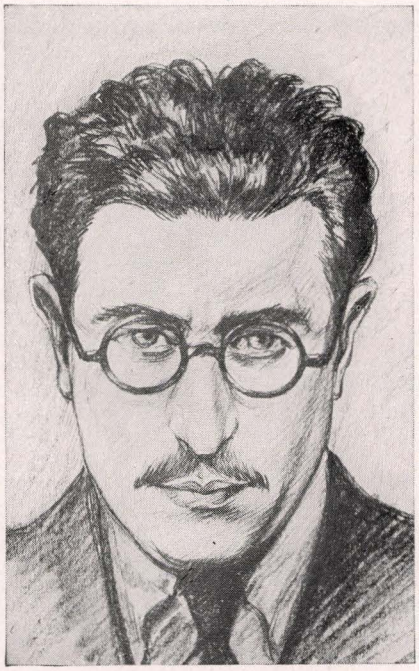
REISENBERG, NADIA, pianist, b. Russia, 1904. After studying at the St. Petersburg Conservatory, she toured Germany, Poland, Lithuania, and Latvia. In 1922 she came to the United States, where she continued her music study at the Curtis Institute with Josef Hofmann and Alexander Lambert. In 1924 she made her American debut, which was so successful that she was engaged to appear as soloist with many major orchestras. Thereafter her concert tours of Europe and the United States were extensive. She achieved fame also over the radio. In 1938 she inaugurated a piano concerto series over the Mutual network, and in 1939 she made radio history by performing for the first time anywhere a series devoted to all the piano concerts of Mozart. Nadia Reisenberg distinguished herself also as a teacher of piano at the Curtis Institute of Music.



REISS, LIONEL SAMSON, artist, b. Jaroslav, Galicia, 1894. He was brought to the United States in 1899, and was educated in New York city. After spending some years as a successful commercial artist and holding an important post with the advertising department of a motion picture production company, Reiss determined to make a record of vanishing ghetto life in Europe. He left his position and in 1921 started on the first of two trips to Europe and the Near East. Remaining abroad most of the time between 1921 and 1931, Reiss visited old Jewish settlements in Central

Eugene Relgis

and Eastern Europe, and sought out the remains of ancient ghettos in the larger cities of Western Europe. The drawings which he made of landmarks and of the people who lived among them constitute a document of a kind of life that was already disappearing when Reiss made it and that was almost entirely blasted away by the second World War. Many of these drawings and etchings were later incorporated into a collection of thirty works acquired by the Sinai Center in Chicago; thirty more are in the possession of the Jewish Theological Seminary of America, in New York city, and twenty-four are at Columbia University. Reproductions of some of the work were included in *My Models Were Jews,* published in 1938.

After his return to the United States, Reiss turned to work of a more general nature, devoting himself to landscapes and city scenes in water-colors and oils. One-man shows of his work were held in many American cities. In 1940 he won first prize in the "Artist as Reporter" contest conducted by the Museum of Arts.

Self-portrait of Lionel S. Reiss

REITMAN, BEN LOUIS, physician, b. St. Paul, Minn., 1879; d. Chicago, 1942. He studied medicine at the Chicago College of Medicine and Surgery (later the Loyola University School of Medicine) in 1904. Although he held various posts with civic health departments and was an instructor in pathology and bacteriology at medical schools, his flare for Bohemianism and its artistic connotations superimposed on his medical reputation renown as an eccentric character. In 1907 he founded Hobo College in Chicago, and was its director until his death. He was instrumental in establishing venereal clinics in jails and prisons in Chicago and other cities, and was secretary of the Friends of Prisoners Committee which tried to place discharged prisoners in jobs. He was for ten years manager of Emma Goldman.

Reitman was author of *Second Oldest Profession* (1933) and *Sister of the Road* (1937). In 1941 he founded a literary magazine, *Kapustkan.*

RELEASE, YEAR OF, *see* SABBATICAL YEAR.

RELGIS, EUGENE, poet, novelist and sociologist, b. Jassy, Roumania, 1895. He was known chiefly for his contribution to humanitarian and pacifist thought. His books, original in outlook and propounding many new ideas, were translated into several languages. His first published work (1913) was a literary fantasy entitled *Triumful Nefiintzii* (The Triumph of Non-Being). In 1920 he began publishing his review, *Umanitatea* (The Humanitarian), as well as a series of volumes which established his reputation in those circles of Europe and the United States which were animated by the same ideas. He published also some poetry, a novel in three volumes, *Petre Arbore* (1924), as well as translations and adaptations from the works of Friedrich Nietzsche, Stefan Zweig, Emil Ludwig and Jakob Wassermann. He collaborated actively on the Institutul Cultural Evreesc (Jewish Cultural Institute) which, founded in 1937 as an annex to Congregation Templul Coral of Bucharest, became a center of intellectual life for the Jews of Roumania under anti-Semitic rule (from 1938 on).

Among Relgis' published books were: *Umanitarismul si internationala intelectualilor* (The Humanitarian and International Intellectuality; 1922); *Umanitarism si socialism* (Humanitarianism and Socialism; 1925); *Umanitarism biblic* (Biblical Humanitarianism; 1926); *Internationala pacifista* (Pacifist International; 1929); *Umanitarism si eugenism* (Humanitarianism and Eugenism; 1934). His *Esseuri despre Judaism* (Essays on Judaism; 1936) centers around the thesis that the essence of Judaism is contained in modern humanitarianism.

RELICS, DESECRATION OF. During the Middle Ages the Jews were often charged with desecrating the relics of the Christian church. The chief cause of this false accusation was the fact that high dignitaries of the church who were in need of ready cash frequently pawned gold and silver church vessels with Jews, or even gave directions that they should be melted. The anti-pope Anacletus II (1130), who was of Jewish descent, was accused by his opponents of having handed holy vessels to Jews to be broken up, after Christians had refused to do this. Similarly, Bernhard of Clairvaux, in a letter written to Louis VI in 1146, complained that the Jews were buying up

sacred vessels, chalices and censers which had been stolen from the churches. It is certain that in such cases the Jews were merely concerned with such purchase as a business transaction and intended no sacrilege; nevertheless, the purchase of such church goods lent a certain weight to the accusation of desecration, and for that reason it was strictly forbidden later on.

Gregory of Tours asserted that the Jews had stolen a picture of Jesus from a church and had whipped it, whereupon blood had flowed from it, sprinkling the perpetrators of the act, who were thereby detected. Depping mentions another case in which a Jew of Paris, in order to escape the search for church vessels that had been pawned, hid a golden cross and a costly copy of the Gospels under his cloak. Mendacious compilations of the Bohemian chroniclers Hajek and Neplack declare that the Jews of Prague robbed churches in 1070 and 1071; but these reports bear the stamp of clumsy invention. Bishop Cosmas reported that in 1124 a Jew who had been converted to Christianity and had turned a synagogue into a church had returned to Judaism and desecrated this church. Subsequently the charge of desecration of relics disappeared; it was limited to the charge of host desecration, which still claimed its Jewish victims for centuries.

RELIGION. 1. Introduction. Religion may be regarded as man's birthright. Totally absent from the animal realm, it flowered forth in man at the very dawn of history and has persisted as a dominant force in all stages of his evolution. Not a tribe has been discovered thus far without some form of religion. Its fears have haunted man's conscious as well as subconscious life, and its hopes have buoyed him and served as the goals and incentives of his conduct. Its rites and calendars of feasts and fasts have formed his earliest and most effective schools of discipline and education, and have stimulated his many-sided creativity. Its fancies and ideas about nature and the supernatural constituted the substance of his thinking, and ripened into the cultural and intellectual achievements which crown humanity with glory. Religion has mothered the *arts* that give scope to genius, such as writing, poetry, drama, music, painting, sculpture and architecture, and the *sciences,* both abstract, like mathematics, logic and philosophy, and concrete, such as astronomy and medicine. It has also played a gigantic role in the formation of nations and states, and in the creation of the international mind that transcends the barriers of race and country.

As religion is inextricably interfused with the general complex of social relations and endeavors which constitute civilization, the line of demarcation between them sometimes becomes tenuous. Yet their differences must be recognized if justice is to be done to both. Civilization connotes the expression of the sum total of man's creative activity, the products of his hands and brain. It represents the humanization of man, his rise above the level of animality and savagery, his advance in thought and behavior, in skills, in knowledge and in morals, his improvement and progress in social, economic and political standards and organization. As part of the hierarchy of values that make for the higher life, religion forms an important part of civilization. However, it is definitely distinguished from all its other parts by its concern with the transcendant, by its direction of man's heart and mind toward the holy or the divine determiner of his destiny. Religion is a special phase of human culture or civilization, which frequently clashes with its other phases, seeking to curb and to subordinate them to its own values and standards. Not being confined to a watertight compartment, religion enters into every phase of civilization and functions as its motivating spirit and conscience.

2. Essence of Religion. This basic attribute of humanity has kept pace with the growth of society and with the evolution of its culture. In primitive society religion remained stagnant through long ages. Fluctuating as tribal life, its notions and forms constantly wavered and varied, and yet remained curiously monotonous and uniform. Individual feeling, chance occurrences, naive observation and experience sometimes affected the choice of gods or spirits and the forms of their worship. With the progress of tribal organization and the formation of nations and states religion advanced and grew into a cementing and stabilizing force, which strengthened the structure of custom, law and morality.

At its threshold religion appears in forms akin to magic or is expressed in worship of the dead, of souls and spirits, of animals, and of forces of nature. It translates itself into notions of strange "power" or *mana,* of fetishism and totemism, and of tabus and clean and unclean. These may stem naturally from naive fancies of primitive man in his reaction to the puzzling and bewildering phenomena of the external world. Religion in the proper sense of the term begins with the emergence of the rudimentary idea of deity or, to use the terminology of Rudolf Otto, of a *numen* or *daemon.* Vague and inchoate as the numen is, it is felt to be living, powerful and uncanny. It is begotten, not as certain schools of sociology maintain, as a "collective product of crowd imagination," and, therefore, has not its origin in group or folk psychology, but in the intuition of persons of innate spiritual or prophetic powers.

Born of the religious consciousness itself, the numinous feeling is *sui generis* and can not be derived from or reduced to any other state of consciousness. Like all primary elements in our psychical or mental life, like pleasure and pain, love and hate, the response to light and the sense of time and space, so the numinous feeling emerges in due course in the development of the human mind and spirit. It comes *a priori.* Like every absolutely primary datum, it can not be defined satisfactorily in terms of other experience. Its character can only be suggested by feelings akin to it, by way of analogy and contrast.

At the root of the religious experience is not merely the feeling of fear, love, expectation, or dependence, but—as Otto has pointed out—of *creaturehood,* i.e. of a creature overwhelmed by its own nothingness in contrast to the overpowering, mysterious and supreme Being. This complex creature feeling arises in the consciousness when the numinous object is felt to be present outside of the self. It is compounded of various feelings, of strange excitement, intoxicating frenzy, transport and ecstasy, or of hushed trembling and speechless humility. It evokes fear and awe before the eerie and uncanny or mysterious. Man feels himself overcome by the numinous being, which is "wholly other" from anything in natural experience and fills the mind with wonder and astonishment (cf. *Gen.* 18:27; 28:17-18; 32:25-30; *Ex.* 3:3 et seq.; *Judges* 13:18 et seq.; *Isa.* 6; *Job* 4:12-16). In one of its aspects the qualitative content of the numinous consists of awefulness and majesty, and in another it is something uniquely attractive and fascinating. The nonrational element of fascination has as its parallel on the rational side: love, mercy, pity, comfort, strength, joy, bliss, and peace. These "natural" elements of the common life appear here as absolute and complete. Although of supreme importance for the religious experience of bliss or felicity, they do not exhaust it.

The same applies to the opposite experience of infelicity—the wrath of God. Both contain fundamentally non-rational elements.

In the development of the holy two nearly simultaneous processes may be noted. The first, just described, is the numinous. It is purely psychological and non-rational. Daemonic dread rises to the fear of the gods and thence to the fear of God; daemonic power comes to be Divine power; and dread is transformed into worship. Out of the confusion of emotion and bewilderment of feeling grows "religio," and out of shudder, "reverence" and holy "awe." The numen becomes God. It is to God rendered absolute that the attribute holy (*ḳadosh, hagios, sanctus*) properly pertains. The other process, which is secondary and subsidiary to the numinous, is that of rationalization and moralization. The numinous attracts and appropriates meanings derived from social and individual value and obligation, justice and goodness. These come to be conceived as the will of the deity. The holy thus becomes the good, and the good, by that process, is identified with the holy.

It is the coalescence of these two elements in the teachings of the prophets that gives Judaism its chief distinction. "Who is like unto Thee, O Lord, among the gods? Who is like unto Thee, glorious in holiness, fearful in praises, doing wonders?" (*Ex.* 15:11). "The Lord of hosts is exalted through justice, and God the Holy One is sanctified through righteousness" (*Isa.* 5:16). "Righteousness and justice are the foundation of Thy throne; mercy and truth go before Thee" (*Ps.* 89:15). He wills goodness. The law which He reveals through His prophets is not only good and just but also holy. Merging with the moral and the rational, the holy comes to represent the consummation of perfect goodness and truth. As such it forms the divine pattern of behavior for man. "Ye shall be holy, for I the Lord your God am holy" (*Lev.* 19:2). The holy is set off from the ordinary or the common, and is guarded by restrictions and prohibitions. Unlike the secular, it serves not as an instrument to something else, but constitutes an end in itself, the supreme and unconditioned goal of human striving (see Otto, *Idea of the Holy,* 113 et seq.).

3. Unity and Diversity of Religion. Religion is a universal phenomenon. Like speech it is an endowment of human nature. And like speech it has expressed itself in an endless variety of dialects and forms. These diversities no less than the unities in religion belong to its very essence. It never exists in the abstract, but always in the concrete, conditioned by the life of its people, by such factors as geography, climate or economics. These specific elements give each religion its particular physiognomy and character as well as its power over the lives of men.

Wide are the differences between the religions of the aborigines of Australia, the primitives of Asia and Africa, the great religions of India, China and Japan, and the monotheistic faiths of Judaism, Christianity and Islam. Yet certain elements appear in all of them. They share a common essence. The sense of the holy forms the seed from which all religions grow. Hence features discovered in the lowest appear also in the noblest. In varying ways they all strive to awaken man's consciousness that he does not live by bread alone. They recognize a gulf between man and nature as well as between man and the gods or God, and set themselves to bridging it by uniting the human spirit with its divine source and thereby to integrating human life and to investing it with sanctity and worth. All of them operate in line with their distinctive traditions and modes of expression. The religions of advancing civilizations gradually acquire finer forms. Under the influence of prophetic and philosophic criticism, its primitive admixtures of magic and superstition are replaced with rites and practices in greater accord with the awakened moral and esthetic sense. Its outworn notions regarding the world and man are corrected by more accurate versions of reality. Man's baser emotions are purged, and blind custom and tabu are replaced by standards of right and duty based on reason and on conscience.

When the critical spirit separates itself from traditional religion and replaces its standards and demands with judgments of its own, friction arises between them. This is illustrated by the periodic conflicts between philosophy or science and religion. Progressive religions resolve these conflicts not by ignoring or decrying the new visions of truth, but by integrating them with their own texture and by deepening their traditional values and ideas in the light of the new teaching.

Touching the lives of all races of men, religion naturally came to take on different meanings for people of different temperaments and conditions. Building as it does the morale and spirit of each group, it often figured as a source of danger to hostile neighbors. This accounts for the different attitudes of men toward their own religion and toward the religions of others. Within the particular religious community itself, religion often has been utilized to strengthen the hands of the rulers and priests over the rest of the people. Thus in the dark hours of civilization, the light of religion, too, often is dimmed. It becomes infected with the poisons, passions, prejudices and hatreds of men, and is turned into an instrument of domination and persecution. The Crusades, the Inquisition, the bloody wars of different factions within the same religion represent the nightmare of civilization and compromise the fair name of religion. However, the moral element in religion comes to life in the consciences of prophetic figures and in the reformatory movements, which they initiate, restoring religion to its pristine purity, holding out salvation to the afflicted and admonishing the strong and charging them with duties and responsibilities.

4. The Term Religion. The philosophical analysis of this universal phenomenon came comparatively late in the intellectual development of humanity. The detachment and critical spirit necessary for such an effort were lacking in the ancient world. Thus in Israel, where, through prophetic inspiration, religion attained its profoundest expression, it continued to rest on a customary and pragmatic basis. Biblical literature shows little or no reflection regarding its nature, and no precise term for its designation. As among the Egyptians, Babylonians and other nations of antiquity, no conception of religion was evolved beyond that of the worship and propitiation of God and the performance of His will as a means of securing national and personal happiness. The idea of the holy assumed the form of a covenant relationship between the nation or individual and God, based on the principle of mutual reciprocity, and served as the ground of ceremonial purity, dietary laws, ritual practice and moral requirements. Entailing acts of worship, consisting of sacrifice and prayer, religion was designated as *'abodath 'elohim.* This term covered religion as a whole as well as the act of worship at the Temple. The psychological terms *yir'ah* (fear) and *'emunah* (faith) were also used occasionally for the whole of religion. In a few instances *da'ath 'elohim* (knowledge of God, i.e. of practical nature) and *torah* (divine doctrine, instruction or law) appear as approximations of religion in its pragmatic-intellectualistic aspect. Only in post-Biblical literature does the word *dath* (borrowed from the Persian *data,* and first used in *Ezra* and in *Esther* in the sense of decree, edict, and law) make its appearance as a general term for religion.

While the Western world received its philosophies and sciences from Greece and most of its religious ideas and standards from ancient Israel, it derived the term itself from the least spiritual of ancient peoples, the Romans. In his work *The Nature of the Gods* (book 2, chap. 18), Cicero places the explanation of the word *religio* in the mouth of a Stoic. He derives it from *re-legere,* to care, reread, or practice, a verb which represents the opposite of *negligere,* to neglect. Religion thus represents conscientiousness, scrupulousness, respect for what is sacred, i.e. a form of God-consciousness, devotion to the gods, expressed through the punctilious performance of the rites connected with their worship. The Roman Church Father Lactantius derived the word from *re-ligare,* to bind, i.e. forging a link between man and God (*Divinarum Institutionum,* book 7, chap. 4, section 28). Through Augustine this conception prevailed through the Middle Ages, proving particularly applicable to "the monastic life with its binding rules." Canon Liddon remarked that "Lactantius may be wrong in the etymology, but he has certainly seized the broad popular sense of the word when he connected it with the idea of an obligation by which man is bound to an invisible God" (*Some Elements of Religion,* 19; see also Cassel's Latin-English Dictionary, under *religio*). Both definitions correspond to vital phases of religious experience. In some religions ceremonial exactness predominates, while in others the inward conformity of feeling, thought and deed to the Divine ideal appears as the highest goal. Sometimes both formal and inner piety are combined in the same religion. Both definitions stress the idea of religion as a relationship between the worshipper and the object of his worship.

Religion, while rooted in the emotions, does not remain confined to them. It enters deeply into the social life of the group which professes it and transforms it into (1) a spiritual *community, congregation* or *church.* It develops into (2) a *cult* or body of ritual and ceremony, into (3) a *code* of morality or standards of law and discipline for the individual and the group and into (4) a *creed* or beliefs regarding God, the soul, and their interrelations. These four elements represent the basic substance of all religions and take on distinctive forms in each religion.

5. Social Nature of Religion. Growing and operating within the life of the community, religion everywhere assumes a social character. It has developed as a social force, like language and conceptual thought; and it has retained this characteristic all through history. As distinguished from magic, religion is not the affair of the isolated individual in disregard of others, but of men in groups, tribes, nations or communities. As a social possession, it is inseparably connected with the mores of peoples, and forms the lever of moral progress. Its faith in the unseen is also a faith in and loyalty to ideals and values that have proved themselves helpful to the best interests of the community. Rooted in temporary needs of its people, religion also transcends them. Conserving the values of former times and preserving the memories of past ages, it also turns the minds of men to distant futures. Linked with particular groups, nations or churches, religion has glimpsed the dawn of a united humanity, established as a universal Kingdom of God. Through its organized forms and institutions, it grows into power and effectiveness.

6. Personal Religion. Collective emotion ultimately derives from individual emotion. Like love, so religion, while social in significance, has its genesis in individual life. The "qualitatively unique feeling content" of religion is born within the individual soul. William James conceives of religion as representing "the feelings, acts and experiences of individual men in their solitude, so far as they apprehend themselves to stand in relation to whatever they may consider the divine" (*Varieties of Religious Experience,* 31). A. N. Whitehead, too, takes religion to be "what man does with his own solitariness" (*Religion in the Making,* 16).

Whichever be considered primary, neither the personal nor the social element can be absent from any vital religion. Religion means not only that we do justly and love mercy, but that we also walk humbly before God (*Micah* 6:8). In its true form it grows into a personal inspiration and possession, into inward sanctity, reverence, and humility before God, and into a deep love, trust and joy in Him. As a *torath ha'adam,* a law and an art of personal conduct, it figures as a self-discipline, on the one hand, and as an extra dimension of the soul, on the other. It is marked by moral probity and integrity and by singleness of purpose. It evokes a worship that is free from both vapid emotionalism and mechanical routine and that is alive with sincere devotion which comes from the heart, a consecration to God's will and purpose, and an earnest outreaching of the soul toward him. Religion rendered personal, through earnest prayer of praise and thanksgiving and supplication for His guidance, fortifies the human spirit, enables it to overcome sin and evil, and endows it with deathless glory.

RELIGION OF ISRAEL. 1. Definition. The term "religion of Israel" is used by scholars to denote that form of religious beliefs and observances which was prevalent among the ancient Israelites from the dawn of their history to the end of the Babylonian Exile (6th cent. B.C.E.), when it becomes an organized religion in the form of Judaism. This religion received definite characteristics in the period of the wilderness, was further modified through the settlement in Palestine, matured under the teachings of the prophets, and was purified of its older elements during the Exile. It furnishes the basis and the substance for the future development of Judaism.

2. Pre-Israelite Background. The Israelites belonged to that group of nations known as the Semites, who inhabited the regions in and around Palestine. The religion of the ancient Semites was a primitive one. In its earliest stage one finds traces of animism, a belief that many objects in nature, such as sacred stones, rustling trees, running water or notable mountains, possessed a life and will of their own which could affect human life; they were the abode of spirits who might be friendly and helpful to human beings if they were properly approached and worshipped. Some Bible scholars claim to find traces of animism in some of the older passages of the Bible.

Other early forms which may possibly have had influence in the pre-Israelitic religion are totemism, or the veneration of an animal regarded as protective of the group, and ancestor or hero worship, in which the spirits of the departed are invoked to aid their descendants or followers.

The early Semitic religions were as a rule polytheistic, having many types of deities, both male and female, corresponding to almost every aspect of nature or of human thought. A typical instance is the religion of the Assyrians and Babylonians.

3. Beginnings of the Religion of Israel. According to tradition, Abraham was the first to learn the error of polytheism. The story of his descendants, through Isaac, Jacob and the twelve tribes, is the history of the gradual revelation of the true nature of God. During this period of nomadic existence some of the first ritual observances took shape. Among these are the observance of the New Moon, with the lunar

calendar and possibly the Sabbath. There was also the observance of a spring festival of the first-born, on the full moon of the first month, and a thank-offering at shearing-time, both natural observances for a nomadic people.

It was, however, the experience of bondage in Egypt and the remarkable emancipation under the leadership of Moses that laid the foundations of a new and distinct religion. The Exodus from Egypt, and the unique circumstances surrounding it, brought to the Israelites a revelation of new truths in the realm of the spirit.

While dwelling with the Kenite tribe in the territory of the Midianites, Moses experienced a call from God bidding him to free the Israelites through the power of His name of Yahveh, which was thus first revealed. Once the redemption was won, Israel came to the sacred mountain of Yahveh and there entered upon a covenant, which implied not only worship but also obedience to a religious law, couched in the form of ten primary commandments and additional regulations. Thus the foundation for a new and individual religion of the Israelites was established.

This new religion differed in many respects from the primitive religion of the Semites. It eliminated the sex element from the description of the deity. By stressing the idea of the "jealous God" Who would not brook other gods, a monotheistic emphasis was stamped on the form of worship. Finally, the idea of a free covenant, entered into by Israel with a God originally revealed to the Kenites, made for discipline; Israel needed God, but God could dispense with Israel, and could punish them if they went astray. This paved the way for the concept of a universal God.

4. Yahvism versus Baalism. The conquest of Canaan on the part of the Israelites confirmed them in their belief in the rightness of their beliefs. Yet the very conquest led them to slip back into idolatrous ways. Dwelling in the midst of the Canaanites, who held that success in agriculture depended upon propitiating the local Baal, the "proprietor" of the land, the Israelites came to observe the rites of Baal together with those of Yahveh, and even to observe the two religions alternately. They took over the agricultural festivals of Baal worship: observances of the spring barley harvest, the summer wheat harvest, and the final autumn harvest; with this went an elaborate code of sacrifices, an organized priesthood, and ecstatic prophets.

Thus Israel fell more and more into the worship of Baal. But when peril threatened their existence, when enemies overcame them, they returned to their ancient God of the desert, and invoked Him in battle. The Song of Deborah (*Judges* 5) recounts a typical example of such a return to their ancient faith and the victory that was won thereby. Again and again, through the agency of such men as Samuel and David, it was demonstrated to the people that true inspiration both for the individual and for the nation could be found only in the One God, Yahveh.

Thus, despite a constant tendency to stray into ways of Baal-worship, there was always a group which insisted upon the purer religion of Yahveh. From time to time they succeeded in effecting sweeping reforms in the religion of the people. One of the first of these was in the time of Asa of Judah (9th cent. B.C.E.), when the people rededicated themselves to the worship of Yahveh, crystallizing this rededication in the form of a covenant. This covenant or code (*Ex.* 34) is, in the opinion of scholars, the first document of many which comprise the Torah and *Joshua*. Another reformation seems to have taken place through the influence of Elijah and his followers—a reformation which is dramatically depicted in the story of the contest between Yahveh and Baal at Mount Carmel (*I Kings* 18). Elijah, moreover, was more than a reformer of cult and ritual; he vigorously opposed injustice, inequality and immorality, and did not hesitate to confront King Ahab himself and denounce him for wrongdoing. Thus Elijah gave a new purpose to religion, and became the forerunner of the literary prophets.

5. The Literary Prophets. A new epoch in the evolution of the religion of Israel opened up with the appearance of the literary prophets—often called thus to differentiate them from the diviners or seers who preceded them. The first of these was Amos of Tekoa, in Judah, who lived about 760 B.C.E.

His call to prophecy was typical: "The Lord took me from following the flock, and the Lord said unto me; Go, prophesy unto My people Israel" (*Amos* 7:15). He had been a humble shepherd; he had not desired to play the part of a prophet. The sinfulness which he beheld—the greed and impoverishment, the injustice in affairs large and small—stirred him to the very core of his being. "The Lord God hath spoken, who can but prophesy?" (*Amos* 3:8). He called for justice and righteousness lest the inevitable doom of God's punishment sweep over the land. Yahveh was not merely the God of Israel; He was the One God of all the peoples, demanding obedience not only in ritual but also to His law of righteousness. This was the first enunciation of ethical monotheism.

Each prophet who followed Amos added new insight to these basic teachings. Hosea translated the tribulations of his private life into terms of relationship of God to man: God's justice is tempered by His love and mercy; man need but repent and return to God, Who in His lovingkindness will forgive his sins and receive him graciously. Isaiah of Jerusalem (whose writings are found in *Isa.* 1 to 39) sharply attacked the social ills of his day.

Through his observation of contemporary political crises he arrived at the realization that religion must establish standards in a nation, that "the work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever" (*Isa.* 32:17). The crown of Isaiah's achievement is his majestic picture of the ideal king who will bring into being a new era of truth and justice.

In 722 B.C.E. the Northern Kingdom of Israel—the bulk of the nation—was destroyed by the Assyrians. Only Judah remained, to survive for a century and a quarter before succumbing; but in this brief span of time the lessons of the prophets were intensified and reinforced. From time to time kings who were impressed by the teachings of the prophets brought about religious cleansings—although these were often followed in turn by a reaction.

Notable was the reformation during the reign of King Josiah. In 621 B.C.E. there came to light the Book of Deuteronomy (a portion of our present *Deuteronomy*), a very embodiment of the ideals of the prophets expressed in practical requirements of religion:

"Hear, O Israel: the Lord our God, the Lord is One. And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy might. And these words, which I command thee this day, shall be upon thy heart; and thou shalt teach them diligently unto thy children" (*Deut.* 6:4-7). As there is one God, so should there be but one sanctuary, Jerusalem. The priesthood was to be restricted to the descendants of the tribe of Levi. As God is just, universal, loving, so man must be righteous, must abolish idolatry, must love even the stranger.

This Deuteronomic Reformation was followed by a reaction after the death of Josiah. It was natural, then, for the deep-thinking prophets to ponder on the perplexing problem of religion—why do the righteous suffer, why is there so much disappointment in life?

Habakkuk answered: "The righteous shall live by his faith" (*Hab.* 2:4). Jeremiah pleaded for the inwardness of religion, the truth that God is in man, that religion is not

to be imposed from without but rather is the prompting of the heart from within: "I will put My law in their inward parts, and in their heart will I write it; and I will be their God, and they shall be My people" (*Jer.* 31:33). The strength of a personal religion such as this was exemplified in the tortured life of Jeremiah; despite the unpopularity of his prophecies, he spoke the word of God with conviction in the face of suffering and the threat of death.

6. Survival in Exile. By 586 B.C.E., when the kingdom of Judah came to an end, the Temple was burned and the nation exiled to Babylonia, the religion of Israel was strong enough to survive even these catastrophes. It had been shaped and molded in the crucible of life; it had evolved teachings as to the relation of God and man; it had given tangible expression to these ideals in laws and commandments which bore the sanction of God.

During the Exile the prophet Ezekiel brought comfort and once more stressed the doctrine of individual righteousness (*Ezek.* 18). The assemblies, later to become synagogues, took the place of the Temple. Deutero-Isaiah (*Isa.* 40 to 55) preached a new hope for the future, with Israel as the Servant of God, sanctified by its hardships for its place in history. As a suffering servant of God, "to be a light to the nations," Israel found hope for survival and sanctification for service.

The religion of Israel was now well founded. The formation of the Bible was progressing steadily; into its historic records was incorporated the viewpoint of the prophets, in its poetry was immortalized the prayers of Israel, in its wisdom literature was recorded the philosophy of its people. On these foundations the scribes and the sages, the rabbis and teachers, philosophers and poets, legalists and preachers, continued the uninterrupted unfolding of the Jewish way of life and reared the structure of Judaism. RELIGIOUS LIBERTY. The history of religious liberty is part of that struggle for liberty in general which includes political, social and other aspects of liberty; it is specifically the history of the struggle for liberty of conscience. To Americans of the 20th cent. this is assumed as a matter of course; it comes as something of a shock to the average person to learn that Jews were enfranchised in New Hampshire as late as 1877. The winning of religious liberty was a long and difficult effort in the face of psychological, social, political and philosophical opposition. Not only were many of the blind forces which control human society arrayed against religious liberty, but there still are, in the middle of the 20th cent., those who oppose religious liberty on principle.

The chief forces which make for religious intolerance may be summed up as follows: 1. the psychological fear of the unknown; 2. the social and political powers which refuse to be dislodged from what they consider to be their rights; 3. the specific situation in the western world which is controlled by the exclusive philosophy of the Christian scheme of salvation.

The granting of liberty of conscience, the acknowledgment that all men have the right to worship as they please or not to worship at all and peacefully to propagate their several notions of truth, depends on a high state of cultural attainment; it presupposes a willingness to recognize that others may hold opinions and views contrary to one's own and yet do this out of equally pure motives and keen insight. It is significant that a model controversialist is defined by Dean Kitchin in negative terms, as one who "does not try to blacken his adversary's character, to impute to him evil motives, to heap on him detestable epithets" (*Life of Bishop Browne,* 218). So rooted in human minds is the primitive fear of the unknown factor which may unsettle the precarious balance of life that men even today are afraid lest their hard won security, never too certain, be disturbed by novel, strange or heterodox ideas. Hence to be different is in itself a crime, and the gravamen against a stranger is his strangeness. The history of culture is characterized by the paradoxes which mark the clash between the old and the new, with the liberal steadily striving to overcome the stubborn resistance of the conservative to new and strange ideas.

This hatred of the different is further enhanced and complicated by the positive love for that which is, by the veneration of the old, the accepted, the orthodox. It is at this point that the psychological obstacles to granting liberty to dissidents become aggravated by the entrance of social and political factors. The powers that be look upon innovation as a threat to their vested interests; they are alarmed for their own very real property and prerogatives. An established church feels that it can not afford the infiltration of ideas which may weaken its own position. Its security, it feels, is threatened by the presence of other religious theories.

This phenomenon can be readily observed in the history of Europe in the Middle Ages. After the great controversies on the nature of God (Athanasius-Arius) and the nature of man (Augustine-Pelagius) had been settled by various councils, the church was so secure in its position and possessed so much power that it could afford to be lenient with Jews and heretics. But when, in the 13th cent., it felt a threat to its vested interests from the growing freedom of thought, it began to proceed vigorously, not only against its own dissidents, but also against the Jews.

A final and especially important factor in the struggle for religious liberty in the western world was the fact that Christianity stands apart from all other religious systems in that it claims the exclusive possession of the sole knowledge and means necessary to salvation. No non-baptized person, with few exceptions, can achieve eternal bliss. From this exclusiveness stems its intolerance of other religious ideas and forms. Moslems (except when they belonged to a fanatical sect), Buddhists and Brahmans were far superior in their tolerance. In their religions the stress is upon the effect of dogma on life; hence even the Mahayana religion, which alone of the religions of India sent out missionaries, was not intolerant (Kayserling, *Travel Diary of a Philosopher,* vol. 2, p. 314). But in Christianity, dogma itself embodies salvation. The Catholic church is frankly and avowedly intolerant; even so broad-minded a man as Leo XIII proclaims to the world that "it is not lawful for the State, any more than for the individual . . . to hold in equal favor different kinds of religion: that the unrestrained freedom of thinking and of openly making known one's thoughts is not inherent in the rights of citizens, and is by no means to be reckoned worthy of favor and support" (Encyclical letter, *Immortale Dei*). Monseigneur John A. Ryan, by no means an ecclesiastical obscurantist, but rather one of the freer spirits of the church in the United States, in commenting on the Encyclical, admits quite honestly that the Catholic view is intolerant, "the fact that the individual may in good faith think that his false religion is true gives no more right to propagate it than . . . the perverted ethical notions of the dealer in obscene literature confer upon him the right to corrupt the morals of the community"

(Ryan and Millar, *The State and the Church,* 1930, p. 36).

The results of this claim to exclusive possession of salvation and to suppress all other ideas appears again and again in the history of Europe: in Catholic attempts to suppress Protestants, in Protestant oppression of Catholics, in wars of sect against sect, in persecution and execution of heretics. A significant landmark in the struggle was the principle laid down in the Peace of Augsburg (1555) between Catholics and Lutherans: *cuius regio eius religio,* that the subjects of a ruler must follow his religion; of course, dissenters might emigrate. Here the professed concern for the welfare of the soul of the individual gives way to concern for apparent order within the state. Spinoza points out that the state by its unnecessary laws, and not freedom of religion, is the real cause of disturbance, and chides his Christian neighbors for having formally accepted the law of love, but still hating one another (*Tractatus Theologico-Politicus,* introduction and Chap. 20). It was only as this solution proved unworkable, and with the growing liberalism of the next centuries, that freedom of conscience began to be accepted as the best foundation of a state which would be strong by reason of freedom from dissension and development of the full powers of its component individuals.

The specific Jewish relation to religious liberty can be divided into two main aspects: the attitude of the non-Jew toward the Jew; the attitude of the Jew toward the non-Jew.

In ancient times, when the Jew lived in Judea, the attitude of non-Jew toward Jew was similar to the attitude of two foreign peoples toward one another, sometimes friendly, sometimes inimical, depending on the political and economic relations between the two governments.

During the days of the Second Commonwealth the first religious persecution recorded in history took place. In general the Greeks, and after them the Romans, let well enough alone, and did not interfere with the religious practices of the peoples with whom they came into contact. The priests were retained in their privileges in return for their loyalty and support. On the theoretical side, since they believed that all gods had some power, it was felt too dangerous an undertaking to interfere in the practices of the manifold religions that their soldiers observed. In time of need, it is true, they did occasionally plunder temples. Antiochus IV failed in his attempt to enter the rich Elamite temple of Nanaia; and in Judea he subjected the people to actual persecution. For reasons not altogether clear, he took it upon himself to destroy the religion of the Jews, forbidding them to observe the Sabbath and circumcision, defiling the Temple and setting up his statue in the holy place. The struggle and victory of the Maccabees ensued, revealing for the first time the self-sacrificing heroism of men who fought not for things material but for an ideal, in this case for religious liberty and the right to worship God in their own way.

This attempt of Antiochus to suppress Judaism was an exception to the generally tolerant attitude of the Greeks. The Jews of Egypt for the most part lived in peace. The Ptolemies granted them the right to build synagogues, to live in the delta district of Alexandria as well as in other parts of the city, and to enjoy the rights of citizens. In a cosmopolitan city like Alexandria, with its heterogeneous multitude, friction among the various groups was perhaps inevitable; but this arose out of economic and social reasons rather than from religious differences. An exception to this must be made in that it seems that aside from the "normal" friction between groups there was an especial antipathy between Jew and Egyptian, probably because of the peculiarly opposite character of the customs of the two peoples, as well as perhaps because of their mutual historic past.

When the Bible was translated into Greek, the Egyptian could read in *Deuteronomy,* "Thou shalt not abhor an Egyptian" (23:8); on the other hand, he might also find in the same book (28:68) a warning by God that He would lead them back to Egypt as punishment, which would probably not be pleasant reading for the patriotic Egyptian. The very observance of the Passover, with its unfriendly memories of Egypt, might well be objectionable to him. Egyptian historians (such as Manetho) actually attempted to rewrite Egyptian history in such a way that the Exodus appears as a defeat for the Israelites and their deliverance from Egypt as an expulsion. It was not until the 1st cent. C.E., however, that actual rioting between Egyptians and Jews is recorded, under Flaccus in the year 38, when statues of Caligula were actually placed in the synagogues. That this was a temporary aberration is clear from the fact that when Claudius became ruler of Rome the rights of the Jews were restored.

The Romans followed the tolerant policy of the Greeks, and for the same reason, toward the religions of their dependencies. We need not enter here into so-called literary anti-Semitism, nor need we discuss how far uncomplimentary remarks made by Greek and Roman writers about Jews point to hatred of the Jew as Jew or simply reflect the average man's aversion to customs not his own. The peripatetics Clearchus and Theophrastus, the latter the famous pupil of Aristotle, are distinctly favorable to the Jews, admiring them as a nation of philosophers; so, too, is Hecataeus of Abdera. That the Jews lost some of their popularity by the 2nd cent. is credible, since they refused to take part in idolatrous public festivals. Jewish life was so much above that of their neighbors that the Jews could not, in all conscience, live up to the demands of their own highly advanced religion and at the same time participate in the social life of the people about them. Polytheism, immorality and idolatry met them at every step, exposure of unwanted infants, homosexual practices, the loose morals of the Roman grandes dames; from all these the Jew withdraw in abhorrence.

The sources mention "expulsions" of Jews under Tiberius and Claudius; what caused them, how general they were, and how they were carried out remain moot points; that there were many Jews in Rome after the so-called expulsions seems to be a fact. It has also been suggested that it was the Christians and not the Jews who were expelled by Claudius. The Roman law permitted foreign rites; persecution is unknown in Rome except for specific crimes, such as types of acts which even in Roman eyes were considered immoral, as in the case of the Bacchanalian persecution or in the expulsion of the Isis worshippers. Christians were persecuted by Nero; the charge of atheism was leveled against them, as indeed it had been made against the Jews. But since, at the time of this Christian persecution, Judaism was a recognized religion in Rome, it is clear that the motive of the persecution was political rather than religious. Christians of the day were anticipating the end of the world; and what with their strong Messianic doctrine, and their refusal to participate in the affairs of this world and the state, it was not illogical for a Roman emperor to fear political repercussions from such a movement.

Before discussing religious liberty under the late empire and Christian Rome, we must look at the East, Babylonia and Mesopotamia, where Jews had dwelt since at least the 6th cent. B.C.E. The Resh Galutha, or exilarch, dwelt in Seleucia-Ctesiphon; he was the religious and civil head of the Jews, and his election had to be confirmed by the great king. Jews lived even in purely Iranian country. In the ruins of a synagogue in Dura inscriptions in Sassanian Pahlavi were found. What is probably the first recorded edict of toleration in history emanated from Shapur I, king of Sassanid Persia (241-72). It decrees that "Magi, Manichaean, Jew, Christian and all men of whatever

religion should be left undisturbed and at peace in their belief in the several provinces of Persia" (*Cambridge Ancient History,* vol. 12, p. 112). The government respected the practice of all religions with the understanding that they be loyal to its authority. The first persecutions of Christians under Shapur II were motivated by political reasons rather than by religious narrowness.

As was indicated above, pagan Rome practised toleration toward all religions, exacting only political loyalty; and even though all persons were expected to recognize the divinity of dead emperors, which both Jews and Christians could not do, yet Jews do not seem to have been affected by it, since they were obviously a peaceful and loyal people. Any friction between the Romans and the Jews was of a practical nature rather than a matter of principle or religion. With the Christians it was otherwise; they taught, or so it seemed to the emperors, seditious doctrine. Trajan made Christianity an illegal religion, but except for the persecutions under Decius, Diocletian and Galerius, Christians lived in peace and propagated their religion without hindrance.

Diocletian's persecution ended on his abdication; since it was unsuccessful, two edicts of toleration were published by the emperors who ruled in the different portions of the empire. In 311 an edict was issued in the eastern provinces by Galerius which permitted Christians "freely . . . to assemble in their conventicles, provided that they respect the laws." The second edict, or the Edict of Milan, was issued by Constantine in 313 to the same purpose. Since Christian martyrs died not for religious liberty but for the salvation of their souls, Christianity began to persecute pagans as soon as it had the power to do so. Constantine's sons gave some of the pagan temples to the Christians, and the others were ordered to be closed. By a series of decrees in the 4th and 5th centuries pagan sacrifice was barred and pagan altars were destroyed; by the middle of the 5th cent. all pagans had either become Catholics or were destroyed by ruthless persecution.

In theory, the church has supervision only of the conscience of its own children; once a person is baptized, he owes to it the duty of obedience in all matters of faith and morals. However, it is contrary to canon law to compel men to be baptized; it regards such compulsion as irrational since one can not be saved unless one has the will (at least the imputed will, as in infants) to do so. The long series of persecutions which the church carried on from the moment it was strong enough to do so was thus aimed in the first place at heretics and apostates within the fold. However, from the fatherly interest which the church has for the souls of its children arises its concern lest they be misguided by heterodox example; and since there were Jews in many Christian communities, some ecclesiastics felt it necessary to mark off Jew from non-Jew in very visible fashion.

In the case of the Jew there was the further complication that pope and peasant alike looked upon him as a deicide; it apparently did not occur even to the learned that the killing of the Christ was essential to the salvation of all men, and that if anything, Christians should be grateful to Jews for the proper implementation of the divine plan. The other objection to this accusation is that, despite the above argument, those Jews who purportedly had been instrumental in the death of Jesus actually are to be considered guilty, yet how can all Jews of that generation and of all later generations be held up to contumely for something in which they had had no hand? To tell the history of the Jew in the Middle Ages is to heap persecution upon persecution, to give an accounting of how many Jews had been killed here, and how many there, how often they had been exiled, and then for a price permitted to return.

A fairly typical pronouncement on the Jew comes from the pen of Innocent III: "As Cain was a wanderer and an outcast, not to be killed by anyone but marked with a sign of fear on his forehead, so the Jews . . . against whom the voice of the blood of Christ cries out . . . although they are not to be killed, they must always be dispersed as wanderers upon the face of the earth." In line with this policy, popes have frequently interceded in behalf of Jews, driven, killed and harassed by the fury and the greed of an ignorant mob.

In August, 1938, the Vatican newspaper, *Osservatore Romano,* recapitulated this view in these words: "If Christians were forbidden to force Jews to embrace the Catholic religion, to disturb their synagogues, their Sabbath and their festivals, the Jews, on the other hand, were forbidden to hold public office, civil or military, and this prohibition extended even to the children of converted Jews. The precautionary decrees concerned the professions, education and business positions" (see *Il Messagero,* August 17, 1938).

One can not understand the history of the Jews through the ages without a clear recognition that it is the very essence of traditional Christianity to be exclusive; as witness this warning clause in the Athanasian Creed: "Which faith except every one do keep whole and undefiled, without doubt he shall perish everlastingly." And Christianity interpreted the doctrine of love in such a way as to justify the burning of heretics for their own good, because first, their very pain might cause them to recant and thus die innocent, and secondly, the less they live the less time they will have in which to accumulate wrong and consequent punishment.

Christian leaders recognize the injustice done to the Jew through the ages, and as honest men they publicly proclaim such sentiments from time to time. One of the most remarkable statements ever made by Christian men was the Christmas message signed and issued in 1931 by the heads of the Federal Churches of Christ and of various Protestant denominations.

It says, inter alia, "We deplore the long record of wrongs from which the Jewish people have suffered in the past, often from the hands of those who professed the Christian faith and who have yet been guilty of acts utterly alien to the Christian teaching and spirit." Pope Pius XI, in September, 1938, made the profound statement that "spiritually, we (i.e. Christians) are all Semites."

"So firmly were the principles and practice of persecution woven into the fabric of law and social life that it must pass as one of the most astonishing revolutions that at last almost complete religious freedom has been won. The herd instinct for compelling uniformity has not been rooted out; but its objects have been changed and its violence tamed (Preserved Smith, *Modern Culture,* 481). Two classes of causes may be named as the reasons for this change in the temper of society, the material and the intellectual. In the Middle Ages persecution seemed of material benefit to society; the extirpation of the Albigenses brought peace to France and the church; with the elimination of the Lollards the cause of civil war was once again removed in England. "The persecution of the Jews may have impoverished the intolerant country in the long run, but it enriched the exchequer for the moment; for, as one king expressed it, the Jews were like sponges, which when they had sucked up the fluid wealth of the people, could be conveniently wrung into the capital treasury" (*ibid.,* 482).

The wars of religion which ensued on the Reformation, and the universal expulsions and massacres, however, far from proving materially profitable, ruined the economy of Europe. When persecution no longer paid, it ceased. As Catholic and Protestant became too strong to destroy each other, they made peace; witness the Edict of Nantes. As the various Protestant sects came to the realization that they could not kill off or exile all others, they established toleration. Intellectually, the new scientific spirit with its doubts of the validity of formal revelation, as well as the great phi-

losophers of the 17th and 18th centuries who developed the doctrines not only of religious but of political freedom, were instrumental in freeing the western world from the blight of persecution. It is significant that where the doctrine of the separation of church and state was implemented there religious freedom was quickly established, as, for example, in the colonies.

Just as the history of the Jew in the Middle Ages, apart from his own intellectual achievements, is the history of Christian persecution of him, so, too, is modern Jewish history the history of his gradual emancipation. Holland, France, England, one by one fell into the line of freedom and respect for the human conscience. Russia, not in the mainstream of developing European thought, did not achieve religious liberty until the revolutions in 1917. Under the Soviets, even as under pagan Rome, the molestation of the Jew in his religion is considered a crime. In the United States, the Constitution guaranteed that "Congress shall make no law . . . prohibiting the free exercise" of religion, and furthermore that "no religious test shall ever be required as a qualification to any office." The several states were left with the right to deal with religion as they pleased. New York has the honor to have been the first to grant full civil and political liberty to all religious groups in 1777. The history of the struggle for religious liberty in the United States is a separate chapter; one can but mention that Madison, improving on Jefferson, read into the Virginia Act of Toleration the doctrine that religious liberty is a matter of right and not of toleration.

Turning now to the final problem, namely, the attitude of the Jew toward the non-Jew, one finds a curious legend going the rounds of the western world, the legend that Jews and Judaism are intolerant, a legend accepted not only by pauper and prince, but also by the otherwise critical philosopher and the otherwise objective historian. The origin of this strange accusation is not far to seek; critical Christian scholars readily recognize that much of the interpretative element of the New Testament has an anti-Semitic motivation. The authors of the gospels and the Acts felt impelled to cast aspersions on the Jews, and this for two reasons; the only way they could explain the Jews' rejection of the claims that the church made for Jesus was by maintaining that they were hard of heart and intolerant, and secondly, in those days of Jewish disfavor in Roman eyes, Christians wanted to prove to the Romans that they were not Jews. Whatever the cause may have been, however, it is the fact that the average uncritical reader of the New Testament inevitably develops the sense that the Jew is an intolerant person. One of the most common errors extant in the western world is that Judaism is exclusive, narrow and legalistic. Jews know that this accusation is false; they know that Judaism is universal in its message and spiritual in its motifs. Whereas Christianity maintains that no man can be saved without accepting its dogmas, Judaism holds that no formal proselytism is essential in order to achieve communion with the Infinite. The Talmud teaches that all good men, regardless of race, color, creed or station, attain divine grace. When a non-Jew requests entrance into Judaism, the Jew points out to him the practical hardships involved in being a Jew; however, if he persists, and is ready to enter the Jewish fellowship with open eyes, the Jews, on their part, receive him with open arms. Judaism is not exclusive in both senses, then. On the one hand, Jews do not claim to have the sole depository of necessary truth, without which a person is doomed forever; and on the other hand, they gladly accept all honest and self-sacrificing persons who want to become Jews.

It is clear that in the attitude of the Jew toward the non-Jewish world Judaism is not only not intolerant, but is so broad and positive in its tolerance that it recognizes that the only criterion of acceptability to God is right living, and rejects the view that salvation can be attained only by belonging to a specific religious group. The righteous of all peoples share in eternal bliss. The emphasis in Judaism has been intellectual rather than formalistic; whereas other faiths demand verbal conformity to a creedal formula, Judaism makes no such demand. Judaism's demand, on the contrary, is study and understanding. If a Jew leads the good life, and refrains from violating the conscience of his people, he is recognized and accepted as a good Jew, regardless of lack of conformity in dogmatic and ritualistic matters. The spirit of Judaism is free, its message democratic, its motif universal, and its purpose is to bring peace, honor, dignity, justice and love into the life and heart of all men.

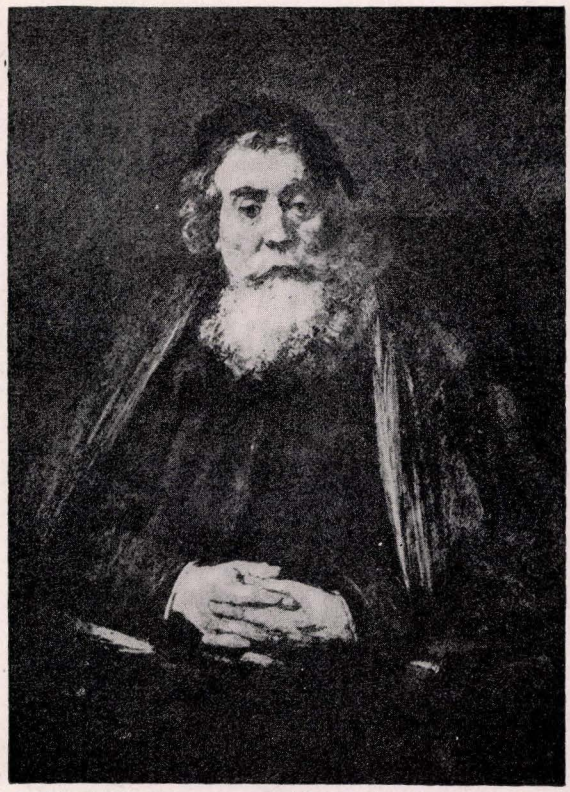
REMAK, *see* CORDOVERO, MOSES.



REMAK, ERNST JULIUS, neurologist, b. Berlin, 1849; d. Wiesbaden, Germany, 1911. The son of Robert Remak, he became (1902) assistant professor at the University of Berlin. His field was the pathology of the central nervous system, electro-diagnostics and electro-therapy.

Besides his work on the incongruence in time between stimulus and sensation (*Über zeitliche Inkongruenz der Berührung und Schmerzempfindung bei Tabes dorsalis,* 1874), he wrote *Grundriss der Electro-Diagnostik und Elektro-Therapie für praktische Ärtze* (1895) and *Neuritis und Polyneuritis* (1899).

REMAK, ROBERT, neurologist, b. Posen, Germany, 1815; d. Kissingen, Germany, 1865. By special order of King Frederick William IV, he became the first Jewish instructor at the University of Berlin (1847), and was promoted to the rank of assistant professor in 1859. He investigated nervous tissue, discovered the marrowless nerve filaments, worked on the evolution of vertebrate animals, and introduced direct current as a cure for nervous afflictions.

Remak wrote: *Diagnostische und pathogenetische Untersuchungen in der Klinik von Schönlein* (1845); *Über ein selbständiges Darmnervensystem* (1847); *Untersuchungen über die Entwicklung der Wirbeltiere* (1851-55); *Über methodische Elektrisierung gelähmter Muskeln* (1856); *Galvanotherapie der Nerven- und Muskelkrankheiten* (1858). Remak was the discoverer of the nerve cylinder and nerve fibres in the embryology of the three cotyledons.

Saul Levi Morteira, as portrayed by Rembrandt van Rijn (See reference under Spinoza, Baruch)

The Mendicant. From a painting by Rembrandt van Rijn

REMBRANDT HARMENSZ VAN RIJN, Dutch non-Jewish painter, b. Leyden, Holland, 1606; d. Amsterdam, Holland, 1669. He spent the most important part of this life (1639-56) in the very midst of the Jewish quarter of Amsterdam, where he owned a house. He had many Jewish friends, among them Manasseh ben Israel, whose portait he made in 1636 and to whose work, *La piedra gloriosa* (1655), he contributed with four illustrative etchings; also the Jewish physician Ephraim Bonus (Bueno), whom he also portrayed. Among his works dealing with Jewish topics are the etching *The Synagogue* and the disputing Jews on the *Hundred Gulden Sheet.* Noteworthy is the fact that the Jews in these works are not caricatured at all. Among his portraits of Jewish individuals are one called *Jewish Philosopher* and another entitled *Portrait of a Young Jew.* Many of his pictures purporting to portray rabbis are in reality pictures of Jewish laymen whom the artist had dressed up in fancy oriental costumes. Another type represented in his portraits is that of the Ashkenazic Jews, with their cruder and more pronounced proletarian traits.

Biblical figures are very frequent in Rembrandt's work. Among them are: *Isaac and Rebecca* (known also under the title of *The Jewish Bride*); *The Blessing of Jacob; The Sacrifice of Manoah; Haman in Disgrace; David before Saul; The Angels Visiting Abraham,* as well as many presentations of the Tobias legends. Rembrandt's preoccupation with Biblical and Jewish themes had its basis in a deep spiritual relationship with Judaism. Through his membership in a sect of Mennonites Rembrandt turned to the reading of Scriptures, and as a result he perceived in the Jewish people of his day, as did many of his contemporaries, the direct descendants of Biblical characters. His perception of and emphasis on the tragic element of the human soul made him regard the Jews of Spain particularly worthy of

Portrait of a Jew, by Rembrandt van Rijn, believed to be in the Kaiser-Friedrich Museum, Berlin

Portrait of a Jew, by Rembrandt van Rijn, in the erstwhile collection of Rudolf Kann, Paris

portrayal. Moreover, the philosophy of Rembrandt not only was associated with the Cabalistic mysticism of contemporary Jewry (Manasseh ben Israel and others), but there is a peculiar affinity between the mystical pantheism of Rembrandt's contemporary Baruch Spinoza and Rembrandt's belief that every being is embedded in a universal divinity. This is exemplified in his symbolic treatment of light and shadow.

REMÉNYI, ANTAL, lawyer and author, b. Miskolc, Hungary, 1825; d. Budapest, 1912. He was admitted to the bar in 1846, and practised law until the national revolution in 1848. As a volunteer in the revolutionary army he attained the rank of captain, and when the revolutionists' resistance was broken, he accompanied General György Klapka into exile. For twelve years he lived in England and the United States. In the latter country he took part in several expeditions, including one in 1858 to territory along the Mississippi River inhabited by Indians. After he had been pardoned, he returned in 1861 to Hungary, where he became a judge. From 1872 on he was attorney to the British Legation at Budapest.

Reményi contributed many articles to various newspapers and periodicals of Budapest, and agitated for the establishment of a Hungarian Adriatic fleet. In 1892 he was named attorney to the Austro-Hungarian yacht flotilla. Reményi embraced the Christian faith. His published books include: *Two Addresses* (1862); *Geschichte der Donau-Flotille von der Römerzeit bis zur Schlacht bei Mohács* (1888); *A szent-szövetseg hadjárata II. Szelim szultán ellen* (The Campaign of the Holy Alliance against Sultan Selim II; 1903); "Kolumbus származása és családja" ("Columbus' Descent and Family," in *Katolikus Szemle,* 1903); *Die Seeschlacht am Yalu* (a lecture; 1904).

REMÉNYI, EDUARD, violinist and composer, b. Miskolc, Hungary, 1830; d. New York city, 1898. He studied at the Vienna Conservatory under Böhm, and at the age of sixteen appeared in recitals at Pest. During the Hungarian Revolution he was made nominally adjutant, but actually personal violinist to the commander-in-chief Arthur Görgey. Banished from Austria and Hungary after the revolution, he began his many tours of the United States and Europe, in the course of which he lived for some time at Weimar under the patronage of Franz Liszt. In 1854 he was appointed court virtuoso to Queen Victoria; he was greatly acclaimed in England and France. In 1860, following a royal pardon, he returned to Hungary, and soon after was made solo violinist to Francis Joseph I.

For the following decade he made Pest his permanent home; from there he undertook some of his brilliant Continental tours; in Hungary, through his recitals, he raised funds for the statues of the poet-revolutionist Sándor Petőfi and the leader-reformer Count István Széchenyi. In 1870 he was made concertmaster of the National Theater at Budapest, but in 1871 he removed to Paris. From 1877 on he lived for ten years in the United States; he appeared also in Canada and Mexico. In 1886 he undertook a tour to the Far East and the Cape of Good Hope. He died during a recital at the Vaudeville Theatre, New York city.

Reményi's phenomenal technique, his fire and intensity, magnetized his audiences. He was acclaimed for his rendition of Hungarian music of his own composition, among which *Repülj, fecském* (Fly, My Swallow; 1860) became a classic. He also composed works for quartet and vocal pieces. His articles on music criticism and his travelogues on Italy and Turkey were published in the magazines of several countries. He arranged for violin waltzes and mazurkas by Chopin and transcriptions of Bach music under the title *Nouvelle école du violon.*

RENAN, JOSEPH ERNEST, non-Jewish Orientalist, philosopher and historian, b. Tréguier, Brittany, France, 1823; d. Paris, 1892. Renan's research in the field of Jewish and related subjects was both pioneering and diversified. Elected to membership in the French Académie des Inscriptions in 1856, Renan in 1860 went on a scientific expedition to Syria by commission of the French government. Upon his return to Paris in 1862 he was granted the professorship in Hebrew at the Collège de France.

Renan's work *Vie de Jésus* (2 vols., 1863), which strongly criticized the Gospels of the New Testament on the ground that they were partly legendary in origin, was translated into all European languages. It attracted general attention, and led to Renan's suspension from his teaching position. However, he declined a post in the Imperial Library, and undertook an expedition to Egypt. In 1878 he was elected a member of the French Academy and in 1884 he was appointed administrator of the Collège de France, a position which he held until his death.

Of prime importance is the *Corpus inscriptionum semiticarum,* which Renan founded and of which he edited vol. 1, entitled *Inscriptiones phoeniciae* (parts 1 and 2, Paris, 1881 and 1890). Other major works by Renan are: *Histoire des origines du christianisme* (8 vols., 1863-83), the first part of which consists of the *Vie de Jésus* mentioned above; *Histoire générale et système comparé des langues sémitiques* (1855; 4th ed., 1864); *Nouvelles observations d'épigraphie hébraique* (1867); *Le Livre de Job* (1858, consisting of an introduction and of a French translation; English trans., William M. Thomson, *The Book of Job,* London, 1889).

Significant, too, are *Le Cantique des Cantiques* (Paris, 1861 and 1869; English trans., William M. Thomson, Lon-

don, 1895, and Havelock Ellis, *The Song of Songs as a Drama,* Berkeley Heights, N. J., 1932); *L'Ecclésiaste* (Paris, 1882; English trans., *Cohelet, or The Preacher,* London, 1888); *Histoire du peuple d'Israël* (5 vols., Paris, 1877-93; English trans., *History of the People of Israel,* 3 vols., London, 1888-91; Boston, 1888-96). Renan edited Adolf Neubauer's *Les rabbins français du commencement du quatorzième siècle* (Paris, 1877) and his *Les écrivains juifs français du xivème siècle* (Paris, 1893) as vols. 27 and 31 of the series *Histoire littéraire de la France,* published by the French Academy, whose editor he was.

Renan* (1863); *Revue des études juives,* vol. 76, p. 1 et seq.; Hérenger, A., "Renan et les juifs," *Revue juive de Genève* (1936) 315-25; Pollock, F., "Some Recollections of Ernest Renan," *Nineteenth Century,* vol. 31 (1892) 711-19; Roback, A. A., "Renan's Contribution to Jewish History and Semitic Philology," *Jewish Forum,* vol. 6 (1923) 302-6; Girard, Henri, *Bibliographie des oeuvres de Ernest Renan* (1923).

RENAUD, MAURICE, opera singer, b. Bordeaux, France, 1861; d. Paris, 1933. After completing his studies at the Conservatories of Brussels and Paris, Renaud was engaged by the Théâtre de la Monnaie in Brussels in 1883. From 1891 to 1902 he was one of the leading baritones of the Paris Opéra. In 1906 he was engaged by the Manhattan Opera House, in New York city, where he was one of its most favored singers for four years. From 1910 to 1912 he was a member of the Metropolitan Opera House company, and after that, over a period of many years, he was guest artist at leading European opera houses. Renaud was extraordinarily versatile, mastering more than sixty roles both in the comic and the serious vein. He had an exquisite feeling for style and, at his prime, was one of the most cherishable artists of the opera stage.

REPENTANCE. Judaism teaches that man's duty is to obey and fulfill the law of God, and thus win the divine favor. But man's moral limitations prevent him from discharging this obligation: "For there is not a righteous man upon earth, that doeth good, and sinneth not" (*Eccl.* 7:20). Sin not only makes man liable to punishment, but separates him from God, depriving him of the bliss of God's presence (*Isa.* 59:2). Therefore God in His compassion for human weakness provided a means whereby man can find his way back to the divine source: the way of repentance.

The Bible has several words to express regret and remorse (*niham, harat*), but repentance in the religious sense is indicated chiefly by the verb *shub,* "to turn" or "to return" (*Deut.* 4:30; *Mal.* 3:7 and frequently). From this is derived the noun *teshubah,* the usual term in post-Biblical Hebrew for repentance. Thus repentance means to turn back to God, by turning from the ways of wrongdoing to the ways of righteousness. The ethical and the religious are inseparable and complement one another: by renouncing sin, man is restored to God's presence, and the yearning after God helps him to forsake the evil and choose the good.

Originally the concept of repentance was largely external. It was expressed by confession and the bringing of an animal sacrifice. The sin-offering, however, was deemed efficacious only for the atonement of inadvertent sins (*Lev.* 4). If the sin involved misappropriation of another's property, the sin-offering might be brought only if full restitution had been made, plus a twenty per cent indemnity (*Lev.* 5; this chapter seems to envisage deliberate sin also). The priestly ritual of the Day of Atonement was intended to cleanse the entire people from the stain of sin—and at first this process was understood in rather mechanical terms (*Lev.* 16).

Repentance. From a statue, by Miriam Gettelson, in the Covenant Club, Chicago

The idea of repentance was immensely deepened and spiritualized by the prophets. They insisted that sacrifice is not adequate to obtain God's forgiveness, that He calls for a change of heart which issues in better and nobler action. "Return, O Israel, unto the Lord thy God; for thou hast stumbled in thine iniquity" (*Hosea* 14:2). The means of return to God, then, is to forsake iniquity. In adding: "Take with you words, and return unto the Lord," Hosea does not mean that words alone are enough, but that sacrifice is unnecessary. Words are sufficient to affirm the inner regeneration, which will have to be demonstrated in conduct. Thus a later prophet says: "Let the wicked forsake his way, and the man of iniquity his thoughts; and let him return unto the Lord, and He will have compassion upon him" (*Isa.* 55:7). In the same spirit the author of *Ps.* 51, after voicing his contrition, prays: "Create me a clean heart, O God; and renew a stedfast spirit within me" (Verse 12).

The rabbis of the Talmud stress the same spiritual prophetic note. The external means of atonement, the sin-offering and the Yom Kippur ritual, continued in practice until the fall of the Temple; and even thereafter these still left some impress on the thinking of many Jews. But the rabbis emphasized the importance of spiritual and moral rebirth, insisting that repentance and good deeds are at least as efficacious as the old sacramental methods of obtaining God's favor. They denounce as self-deceived one who sins deliberately with the expectation of repenting later, or in the hope that the Day of Atonement will bring him absolution. They insist likewise that Atonement Day grants no remission for sins committed against a fellow man, unless amends are first made to the person wronged.

The period from Rosh Hashanah to Yom Kippur is designated as the special season of penitence; yet man is urged constantly to seek reconciliation with God: "Repent one day before thy death." It is sometimes stated that one who leads others to sin will find himself incapable of repentance; but as a rule the rabbis insist that God will reject no one whose contrition is genuine. The Haggadah contains many examples of hardened sinners whose ultimate repentance was accepted. Since repentance is essential to restore the relation between man and God which sin disrupts, the Midrash declares that repentance (like the Torah) had been established by God even before the creation of the world.

The philosophic, ethical and mystical writings abound

in discussions of this topic and in appeals for repentance. This was the regular theme of synagogue preachers on the Sabbath before Yom Kippur, known as Shabbath Shubah (the Sabbath of Repentance). The liturgy contains many expressions of the penitential mood, even in the daily prayers. During the Middle Ages, when persecution deepened the sense of inner guilt among Jews, numerous Selihoth (penitential hymns) were composed for private devotion, and for synagogue use during the Days of Penitence and on Yom Kippur.

Israelites were commanded in ancient times to "afflict their souls" on the Day of Atonement (*Lev.* 23:27), and fasting was always a common expression of contrition. But the practice of penance—that is, of religious exercises, chiefly ascetic, to neutralize the effect of sin—is comparatively rare in Judaism. It was most frequent during the Middle Ages, as a result of Christian influence. Ascetic practices were, however, neither as usual nor as extreme in Judaism as in Christianity. Characteristically Jewish was the recital of Tikkun Hatzoth (the midnight ritual) to beseech God for the redemption of all Israel and for purification from individual sins, as well as the acceptance of "exile." The latter practice, probably of Cabalistic origin, meant that an individual would leave his abode and, concealing his identity, endure the hardships of a homeless wanderer for a certain length of time. Common to Judaism and Christianity is the belief in charity as an antidote to sin (cf. *Dan.* 4:24). In reaction against an excess of penitential gloom, the Hasidic teachers insisted that even sorrow over one's sins must give way to the joy of God's presence.

It is clear that Judaism can not tolerate the pagan notion that one shows himself unmanly and "loses face" by admitting himself to be at fault. Likewise, Spinoza's view that an emotional sense of guilt and contrition is undesirable is alien to Judaism. Equally foreign to Jewish thought is the Pauline belief that man can do nothing to extricate himself from sin, and must rely on God's grace alone. Judaism indeed recognizes the need of divine grace, but it also declares that man can and must attempt his own moral regeneration: the doctrine of return is an affirmation of human freedom.

REPHAIM, a term used in the Bible in two distinct meanings. The first is that of a pre-historic race in Palestine prior to the invasion of the Canaanites. They are described as being of gigantic stature, hence in some passages, as in those referring to Og (*Deut.* 3:11) and the Philistine champions (*II Sam.* 21:22), the word Rephaim or its singular form Rapheh appears to mean "giant" and not a member of the race. There was a "valley of the Rephaim" in the southeastern part of Judah; this was the scene of two victories of David over the Philistines (*II Sam.* 5:17-25). According to *Deut.* 2:11, they were akin to the Emim and Anakim.

The second meaning is that of the shades of the departed, and is found only in the later books of the Bible (*Isa.* 14:9; *Ps.* 88:11; *Job.* 26:5 and other passages). The name seems to be connected with the verb *rafah,* "to be weak," and not to be related to the name of the people.

REPUDIATION OF DEBTS. During the Middle Ages, owing to the ban of the church which forbade a Christian to lend money on interest, the Jews of Occidental countries eventually acquired a virtual monopoly on money-lending, or "usury." As a result, they on the one hand acquired a great deal of property, but on the other hand they endangered their political situation and economic existence in almost every country. In the course of the centuries, especially after the Crusades, the Christian population was greatly in need of capital, and so their financial indebtedness to the Jews steadily grew.

Eventually the burden of these debts became so oppressive that all classes of the population sought for means of relief. The simplest way out was offered by the slaughter or expulsion of the Jews, and this method was only too frequently employed. As civilization advanced, a less cruel and presumably "legal" means of setting aside the claims of the Jews was found. Popes, emperors, and, later on, local princes made arbitrary and brutal encroachments on the properties of the Jews, by issuing a decree or making a mutual agreement that the Jews' claims on the Christians were simply annulled, i.e. "repudiating the debts." This practice first began at the time of the Second Crusade (1146-47), when Pope Eugene III issued a bull stating that the Crusaders need not pay interest on their debts to the Jews. However, as early as 1180 the French king Philip Augustus went much further, and completely annulled all claims of the Jews for debts, collecting only a fifth of these for the royal treasury.

On one occasion Louis VIII of France took the same step; in 1223 he declared that all debts which his vassals had been owing the Jews for more than five years were null and void, and that no interest need be paid on debts contracted after that time. His successor, Louis IX, released his subjects from a third part of their indebtedness to Jewish creditors. In 1278 in Spain the clergy attempted to abolish all debts owed to Jews by those who had participated in a crusade, and they appealed to the above-mentioned bull of Eugene III; however, they met with opposition on the part of Pedro III. At the Council of Zamora (1313) the pope issued a bull that all Christians were to be absolved from their debts to Jews on account of usury, but Donna de Molina, who conducted the government of Spain for the infante Alfonso, issued an edict forbidding Christians to repudiate their debts by appealing to a papal bull. One of the first acts of Alfonso XI on assuming the throne was to issue an order that all debts due to Jews were to be reduced by one-fourth and that the balance was to be payable within one year.

In England, Henry II (1154-89) frequently interfered in the business of the Jews; on several occasions he cancelled the debts of Christians to Jews in return for a lesser payment to himself. Whenever a Jewish money-lender died, the king became his real heir; thus many Christians allowed their debts to stand long beyond the agreed upon time, in the hope that the Jewish creditors would die and that they themselves would then settle with the crown on lesser terms. In the 13th cent. the English government compelled the Jews to announce in their synagogues their quittances of debts due them by Christians, on the basis of the view that Jews were chattels of the king.

In Germany these confiscatory measures reached their height under the reign of King Wenceslaus (1378-1400). In 1385 he concluded an agreement with the Swabian cities whereby all Christians were to be freed from the payment of interest on the debts due to Jews in return for the payment of 40,000 gulden by the cities. In addition, he cancelled a fourth part of all older debts, together with the interest. In 1390 the king proceeded in still more radical fashion. In agreement with the Nuremberg princes, he annulled all documents of indebtedness held by Jews and accepted from the debtors a fraction of their debts in settlement. The reason given for these confiscatory measures

Samuel Reshevsky

was that the Christians would become exiles if they had to pay the debts and interest. In 1450 Louis the Rich, the Bavarian duke, directed the Christian debtors not to pay their Jewish creditors more than the capital which they had originally borrowed, and to deduct therefrom the interest already paid.

The Jews, for their part, sought to protect themselves from such brutal application of the royal powers; from the 15th cent. on they constantly strove to obtain from the kings the granting of special privileges which would assure them that decrees for the cancellation of debts owed to them would not be issued during a certain specified period. The first privilege of this sort seems to have been granted by King Rupert to the Jews of Mayence, in 1401. On the other hand, there were some cities which were concerned lest their Jews might become incapable of paying taxes; accordingly, they sought to have the Jews living there exempted from the practice of cancelling debts.

RESHEVSKY, SAMUEL, chessmaster, b. Ozierkow, province of Kalisz, Poland, 1911. Reshevsky was a descendant in the seventh generation of Jonathan Eybeschütz (1690-1764), noted rabbi and Cabalist. He was the son of poor Orthodox parents. Much of his early chess history is wrapped in legend. He learned to play at the age of four. At six he is rumored to have given simultaneous exhibitions, and at that time grandmaster Akiba Rubinstein, the Polish expert, told him that he would one day become chess champion of the world. At the age of eight Reshevsky began his triumphal career as a chess "boy wonder," giving successful simultaneous displays in Germany and elsewhere on the continent of Europe. Then, when only nine, he first appeared in the United States, where his successes were many and impressive.

Julius Rosenwald, head of Sears, Roebuck and Co., took a lively interest in him and persuaded his parents to permit him to settle down and obtain a good education. Another patron, Morris Steinberg, president of the Detroit Chess and Checker Club, proved a helpful friend in his formative and later years. So Reshevsky dropped out of chess for ten years, and graduated from the Detroit High School and the University of Chicago, where he specialized in accounting.

He reentered the chess arena in 1931, creating somewhat of a sensation by capturing first prize in the strong Western Chess Association annual tournament at Tulsa, Okla. From that time on he enjoyed an almost unbroken series of triumphs, becoming the United States chess champion in 1936, a title which he held continuously from that time until 1942, when he and Isaac I. Kashdan tied for first place in the biennial United States Chess Championship Tournament. In October, 1942, he began a new series of fourteen games with Kashdan to determine the destiny of the title and won decisively; the deciding game took place on January 2, 1943.

A brief summary of his remarkable career follows:
1919 to 1922. Triumphant simultaneous exhibitions in Europe and the United States.
1922. New York Tournament (Edward Lasker, Charles Jaffe, Jacob Bernstein, Horace R. Bigelow, David Janowski and Samuel Reshevsky, then aged only eleven). Shared third to sixth prizes with Bernstein, Bigelow and Janowski.
1931. Western Chess Association at Tulsa. First.
1932. Pasadena International Tourney. Shared third to fifth prizes with A. W. Dake and H. Steiner.
1932. Western Chess Association at Minneapolis. Second.
1933. Western Chess Association at Detroit. Second.
1934. American Chess Federation at Chicago. Shared first and second prizes with Reuben Fine.
1934. Syracuse International Tournament. First.
1935. Margate, England. First (ahead of José R. Capablanca).
1935. Great Yarmouth, England. First.
1936. United States Championship Tournament, New York. First.
1936. Nottingham International Tournament. Shared third, fourth and fifth prizes with Dr. Max Euwe and Reuben Fine.
1937. Semmering-Baden International Tournament. Shared third and fourth prizes with Capablanca.
1937. Kemeri International Tourney. Shared first to third prizes with Flohr and Petrov.
1937. Represented the United States at Stockholm in the International Team Tournament, playing on the first board against the leading players of the world. Score: 9½-6½. At the conclusion of this event he gained first prize from fifty competitors, including some of the world's finest "lightning players", in the special Stockholm Rapid Transit Tourney (ten seconds a move).
1937. Stockholm. First.
1937. Hastings Christmas Tournament. First.
1938. United States Championship Tournament, New York. First.
1938. Avro International Tournament. Shared fourth to sixth prizes with Alexander Alekhine and Euwe. Both the latter have held the world's chess championship.
1939. American Chess Federation Tourney (North American Championship), New York. Second.
1939. Leningrad-Moscow International Tourney. Second.
1940. United States Chess Championship, New York. First.
1941. New York State Chess Championship. Shared second to fourth prizes with Denker and Kashdan.
1941. Match with Israel A. Horowitz for the United States title. Reshevsky won three games outright and drew the remaining thirteen.
1942. United States Chess Championship, New York. Shared first and second prizes with Kashdan. Won playoff.

Reshevsky has been one of the world's greatest si-

multaneous players and among the greatest rapid transit experts in the world. He was often mentioned in connection with a match for the world's chess championship, but the second World War prevented any serious negotiations. HORACE R. BIGELOW.

RESHUTH HAYAHID, RESHUTH HARABBIM, *see* REAL ESTATE.

RESIDENCE, LAWS CONCERNING. The question of residence is an important factor in a number of instances in Jewish law. Thus it is a standard principle that one should observe the local customs, and it becomes a point at what time a person's obligations change from those of his former locality to those of his new one. According to Talmudic law, one who stays in a locality for thirty days must pay certain communal taxes; he is not accounted a permanent resident and subject to all communal duties, however, until the expiration of a year (*B.B.* 1:5; 8a). Residence is an important factor in the Sabbath laws, as an individual is permitted to walk 2,000 cubits in every direction from his residence; he can establish a different residence for the Sabbath by means of an Erub and thus create a different permissible range of movement.

In marriage law a wife is obliged to make her husband's residence her own (*Keth.* 13:10-11). However, it is expressly stipulated that she is not obliged to follow him if he emigrates from Palestine. On the other hand, she must follow him if he migrates to Palestine, or from another city of Palestine to Jerusalem. A wife may also demand of her husband that he make his residence in Palestine or in Jerusalem (*Keth.* 110b et seq.).

During the Middle Ages many communities possessed the right of permitting other Jews to settle in their locality, and often imposed certain conditions on the newcomers before permitting them to stay. The older inhabitants were regarded as having a special presumptive right to live in the town (*hezkath yishub*).

For limitations on residence imposed by non-Jews, *see* RESIDENCE, RIGHTS AND LIMITATIONS OF.

Lit.: Maimonides, *Hilchoth Shechenim* 6:5; *Hilchoth Ishuth* 13:17 et seq.; *Hilchoth Shabbath* 27:1 et seq.

RESIDENCE, RIGHTS AND LIMITATIONS OF. The rights of the Jews as to residence in the countries in which they lived after the loss of their national independence and dispersion in the world were closely related to their general legal status and particularly to their right to acquire property. At first the Jews were free to come and go freely even in those countries where they were regarded as "strangers" and did not enjoy equal rights. In the later Middle Ages, however, the princes began to exercise especial rights over the Jews on the grounds of the *Kammerknechtschaft* relation, whereby the Jews were regarded as subject to the control of the prince; as a result of this, whole countries or provinces at times either prohibited the settlement of Jews, or imposed restrictions and difficulties upon it. In time the Jews came to be a constant source of revenue to the ruler, a source which he could mortgage or sell at his pleasure.

The consequence was that when the rise of towns and cities brought the non-Jewish citizens into economic competition with Jewish traders, the former could purchase a monopoly on trade by giving a sum of money to the ruler in return for the right of prohibiting Jews to settle in their locality (*privilegia de non tolerandis Judaeis*). In other cases, Jews were given the right to settle only in return for special taxes, or the numbers of Jewish families were limited. Beginning in the 13th cent. the residence of Jews within cities was limited to the special Jewish quarter (ghetto), which was maintained up to the middle of the 19th cent.

In Russia a Pale of Settlement was established, consisting of certain provinces in which Jews were allowed to settle; it was only with difficulty and often through payment of large sums that individual Jews were permitted to reside elsewhere. Expulsions of Jews for illegal residence continued from the end of the 19th cent. on until all such disabilities were removed by the Russian revolution of 1917.

The medieval restrictions upon the residence of the Jews were renewed by the Nazis from 1933, first in Germany, where in various cities Jews were forbidden to settle in certain districts, and in the course of the second World War, in which thousands of Jews were banished from places where they had resided for centuries and were shut up in newly created ghettos.

For regulations about residence in Jewish law, *see* RESIDENCE, LAWS CONCERNING. *See also:* GHETTO; PALE OF SETTLEMENT; the histories of the various countries.

RESIGNATION, *see* GOD; PIETY; SUFFERING.

RESNICK, SALOMON, journalist, b. Kherson, Russia, 1895. He was brought to Argentina in 1904. There he eventually became prominent in Jewish journalism, founding the weekly *El Mundo Israelita,* and assuming editorship of the monthly review *Judaica,* a post which he still occupied in 1943. His versatile literary pursuits included the translation into Spanish of the works of such writers as Isaac Loeb Peretz, Sholom Asch and Haim Zhitlovsky.

He rendered Simon Dubnow's historical writings into Spanish under the titles of *Historia contemporánea del pueblo judío* (co-author, 1925 and 1928) and *Manual de la historia judía* (two parts, 1932 and 1934). The most important of his own writings were: *Dos formas de nacionalismo espiritual judío, Ajad Haam y Dubnow* (1931); *La literatura judía de la post-guerra* (1931); *Esquema de la literatura judía* (1933). Resnick traveled extensively in the South American republics on behalf of the Jewish Scientific Institute of Vilna.

RESPONSA AND DECISIONS. The major part of Jewish law is contained in codes and compendiums, and in books of responsa, which are answers by rabbis to queries on points in the law.

These responsa often contain answers to questions in philosophy, ethics, history and chronology. As Jewish law covers almost all human actions, these responsa are valuable sources for a knowledge of the social, economic and political conditions of the Jews in various countries. The Jews of the Middle Ages did not write many histories, and therefore these responsa are often the only record of the history of the Jews in some community, their relations to the non-Jews, their sects, education, social life and folklore. These responsa also lay bare the sufferings of the Jews, and mirror their hopes and unquenchable faith, as for millennia they underwent cruel torture and brutal persecutions which would have engulfed any other people. Among those who have done valuable work in gleaning Jewish history from responsa are Moritz Güdemann, Israel Abrahams, Simhah Assaf and Isidore Epstein. In 1938 Hayim Bloch published in Vienna his *Otzar Hayim,* which is a 700-page index to the cultural history of the Jews as abstracted from over 600 responsa collections. While Bloch's books were in the hands of the binder, Austria was invaded by the Nazis, and the books were confiscated and destroyed. Just before this, however, a Nazi friend had saved five copies which were still (1943) in Austria, as they can not be shipped abroad, for this would be too dangerous.

Responsa are source material for codes, for while codes are static, representing the sifted wisdom of responsa, responsa are dynamic, as they are in immediate and constant touch with changing conditions.

Responsa and codes fall into three main periods:

1. From the Bible to the end of the Gaonic era in 1038 C.E.

2. From 1038 C.E. to the end of the 15th cent., which is known as the period of the "Rishonim" (early scholars).

3. From the end of the 15th cent. to the present, which is known as the period of the "Aharonim" (later scholars).

1. From the Bible to the End of the Gaonic Era in 1038 C.E. The Mishnah was the first attempt fully to codify Jewish law, but it was too brief to serve as a practical code until its commentary, the Babylonian and Palestinian Talmuds, were completed. Although the Talmud and the Halachic Midrashim cover the entire range of Jewish law, in many cases they fail to reach a final decision where there is a difference of opinion on some question. The Saboraim and the early Geonim evolved and set down methodological rules for arriving at a decision in case of a conflict of opinion. Some of these rules were incorporated by the Saboraim into the Talmud itself, while others were gathered into special booklets, such as the *Seder Tannaim Veamoraim.*

The earliest codes after the Talmud are the seven minor tractates which are appended to the Talmud, and the Palestinian *Maasim Libene Eretz Yisrael,* which seems to have been written in the 7th cent., and of which only fragments have been discovered. During the Gaonic period (about 589-1038), Babylonia was the center of Jewish learning, and with the rise of the Karaite sect a necessity was felt to codify rabbinic law. Among these codes are the early *Shimusha Rabba* and the 8th cent. codes of the Geonim Ahai and Jehudai. The 9th cent. saw the more detailed code of Simeon Kayyara, the liturgical code of Amram Gaon, and the ritual code *Pirḳe Ben Baboi.* In the 10th cent. two attempts were made at a compendium to the Talmud, one known as the *Baal Methiboth,* and the other by Hefetz ben Yatzliah, who wrote also a code of which only fragments have been found. The Geonim Saadia, Hai and Samuel ben Hophni were the authors of codes on various sections of the law.

Although the Talmud contains responsa of great scholars in answer to queries addressed to them by pupils, lesser scholars and foreign communities, the first separate collections of responsa are those by the Geonim. These responsa were gathered and published by many scholars, the foremost of whom were Abraham Harkavy and Joel Müller. The latter was the author of the *Mafteah Litheshuboth Hageonim,* which is an index and review of all collections of Gaonic responsa until his day. Among those who have discovered and published Gaonic responsa from the various Genizahs and manuscript collections are Simhah Assaf, Louis Ginzberg and Benjamin M. Levine. The latter was, in 1942, publishing his *Otzar Hageonim,* which is a collection of all Gaonic responsa arranged according to the tractates of the Talmud. This collection will be complete in approximately eighteen volumes, of which ten had already appeared by 1942. These Gaonic responsa are usually terse and to the point. They were written in Hebrew or Aramaic, and in Arabic when the question was addressed to them in Arabic. These responsa are important sources for the history of the Jews in Babylonia and its neighboring countries, and are of great value also in determining the correct text of the Talmud.

Toward the end of the 19th cent. great centers of learning arose in Western Europe. Responsa of the leaders of these centers, such as Moses ben Enoch, Samuel Hanagid, and Joseph ben Isaac Abitur in Spain; the Kalonymus family in Italy; Gershom ben Judah of Mayence; and Hushiel ben Elhanan of Kairwan, are preserved in the works of later authorities. At the beginning of the 11th cent. Hananel ben Hushiel wrote his *Sefer Hamiḳtzooth,* which seems to have been a compendium of the Talmud.

2. From 1038 to the End of the 15th Cent. In the middle of the 11th cent. Isaac Alfasi, in North Africa, composed his *Halachoth,* which is a codifying compendium to those parts of the Talmud which deal with laws that are in effect in the Diaspora. Alfasi uses the language of the Talmud, and quotes the opinion of the Geonim, with whom he does not hesitate to disagree when he feels that they are in the wrong. The deft addition of a word or two from his masterful pen is often sufficient to illumine an otherwise abstruse Talmudic legal statement. Two collections of Alfasi's responsa have been printed, and another is in manuscript. Alfasi introduced into Spain, where he settled in his old age, the North African system of Talmud study. Important Spanish codifiers of this period were Isaac ibn Giat and Judah ben Barzillai, at the beginning of the 12th cent. The latter and Joseph ibn Migas were authors of noted responsa.

In Franco-Germany at the end of the 11th cent. a great impetus to the study of the Talmud was furnished by the masterful commentary of Rashi. In addition to his responsa, Rashi's opinions are quoted in the various codes of his pupils. Jacob Tam and Abraham ben Isaac of Narbonne were authors of important responsa. The latter and Eliezer ben Nathan of Mayence were authors of outstanding codes.

Maimonides (1135-1204), a product of the Spanish-North African school, was the author of the *Mishneh Torah,* known also as the *Yad Hahazaḳah,* as it was divided into fourteen books. This brilliant code, which doubtlessly is the greatest Halachic work since the Talmud, differs from all previous and later codes inasmuch as the codes discuss only those laws which are in effect in the Diaspora, while Maimonides abstracted all rabbinic literature, including the great sections of Temple and sacrificial law, and the laws of cleanliness and uncleanliness which had ceased to be in operation after the destruction of the Temple. Each of these fourteen volumes was divided into books, which were divided into chapters and subdivided into paragraphs. The entire work contains 1,000 chapters and 14,909 paragraphs. Maimonides did not indicate his sources, and as he often differed with the Franco-German school in the interpretation of the Talmud, his work is to a certain extent a commentary on the Talmud. Maimonides also left a collection of responsa.

In Germany in this period Meir of Rothenburg was the author of approximately 1,500 responsa, and his two pupils, Asher ben Jehiel and Mordecai ben Hillel, wrote compendiums of the Talmud. In Italy, Zedekiah ben Abraham Anav was the author of an important code.

Franco-Germany of the 12th and 13th centuries was the scene of intense codification activity. Among the authors of prominent codes were Isaac ben Abba Mari, Abraham ben David of Posquières, Eliezer ben Joel Halevi, Eleazar of Worms, Baruch ben Isaac, Eliezer ben Samuel of Metz, Moses of Coucy, Isaac ben Moses of Vienna, and Isaac ben Joseph of Corbeil. Abraham ben Nathan Hayarhi wrote important responsa. In Spain of this period we have responsa from Meir Abulafia and Moses ben Nahman. In Italy, Isaiah di Trani the Elder was the author of codificatory notes.

The golden era of Jewish learning continued in Spain during the latter half of the 13th and the 14th centuries. We have approximately 3,000 responsa and a code from the pen of Solomon ibn Adret. In the 14th cent. Asher ben Jehiel introduced into Spain the Franco-German system of Talmud study, and we have from him a compendium to the Talmud and an important collection of responsa. Worthy of mention are

the responsa of Asher's son, Judah, and the codes of Samuel ben Isaac Hasardi, and Estori Hafarhi, who finally settled in Palestine.

The principal codifier of this period was Jacob ben Asher (1269-1340), whose code, *Sefer Haturim* (Book of the Rows), was divided into the following four "Turim" or volumes: (1) *Orah Hayim,* containing 697 sections, which discusses prayer, synagogue, Sabbath, and holiday laws; (2) *Yoreh Deah,* containing 403 sections, which deals with the dietary laws; the rules concerning Niddah, vows, reverence for parents, teachers and elders; study, charity, circumcision, servants, proselytes, Torah, Mezuzah, first-born, priestly dues, excommunication, sickness and death; and the prohibitions against idolatry, interest, following non-Jewish customs, superstitions, and forbidden mixtures; (3) *Eben Haezer,* containing 178 sections, which deals with domestic and family law; (4) *Hoshen Mishpat,* containing 428 sections, which concerns itself with civil and business laws. Although Jacob ben Asher based himself mainly on the code of Maimonides and on the compendium and works of his father, he also cited many other authorities. Later on in 14th cent. Spain, Isaac ben Shesheth and Nissim Gerondi wrote responsa, and David Abudraham was the author of a code.

In Franco-Germany of this period the following were important codifiers: Aaron ben Joseph Hakohen, Yeruham ben Meshullam, Menahem ben Aaron Zerah of Navarre, Isaac ben Reuben, and Alexander Susslein Hakohen. In addition to the earlier books of Minhagim (synagogue ritual) by the pupils of Meir of Rothenburg, Minhagim books were compiled by Abraham Klausner, Isaac of Tyrna, and Jacob Mölln (MaHaRIL), who was author also of responsa.

In Germany in the 15th cent. there are to be noted the codifiers Israel Isserlein and Jacob Landau, and the responsa of Jacob Weil, Israel Bruna and Israel Isserlein. In Algiers we have the important responsa of Simon ben Zemah Duran and his son Solomon. In Italy of the 15th cent. there are the responsa of David Ibn Abi Zimra and Elijah Mizrahi, while in Palestine we have responsa from Moses Alashkar, Jacob Berab, Levi Ibn Habib and Joseph Caro.

The greatest codifier of his time was Joseph Caro (1488-1575). His most scholarly work in this field was the *Beth Yosef,* which is an exhaustive commentary on the *Turim* of Jacob ben Asher. This work, on whose composition and revision he spent over thirty years, is more than a mere commentary; it is a history of the development of each law and a digest of the opinions of most of his predecessors. As this work was too bulky to be used by the average man, Caro prepared an abridgment of this work which he entitled *Shulhan Aruch* (Prepared Table), which was immediately recognized as authoritative. Although Caro followed the arrangement of the *Turim* in respect to volumes and sections, the length of the code made it necessary to divide the sections into paragraphs. Caro based his work mainly on the works of Alfasi, Maimonides and Asheri, and when there was a difference of opinion among them he followed the majority.

3. From the End of the 15th Cent. to the Present. This period coincides with the invention of printing, and thus many rabbis were encouraged to publish their responsa and their commentaries on the *Shulhan Aruch.* At first some scholars objected to the *Shulhan Aruch* because it did not pay sufficient attention to the opinions of the Franco-German school, but these objections were removed when Moses Isserles, in the 16th cent., annotated the *Shulhan Aruch* and included opinions of Franco-German and Polish rabbis.

Poland in the 16th cent. became a great center of Jewish learning. Among the responsa of Polish scholars of the 16th and early 17th centuries are those by Moses Isserles, Solomon Luria, Meir Lublin and Joel Sirkes. In Palestine there were responsa by Moses di Trani, Moses Alshech and Joseph Ibn Lev, and in Greece by Samuel di Modena.

Mordecai Jaffe, in 16th cent. Poland, wrote a five-volume code, the *Lebushim*, which was intended to be a compromise between the lengthy *Beth Yosef* and the brief *Shulhan Aruch.* Joel Sirkes wrote a large commentary on the *Turim,* and Joshua Falk wrote commentaries on both the *Turim* and the *Shulhan Aruch.*

With the important commentaries on the *Shulhan Aruch* by noted scholars of the 17th cent. such as Sabbatai Cohen, David ben Samuel Halevi, Abraham Gumbiner, Hezekiah da Silva, Moses Lima, Samuel ben Uri Feibush and Hayim Benveniste, the *Shulhan Aruch* became the recognized standard code for all Jewry. Among the outstanding responsa of the 17th cent. are those by Jair Hayim Bacharach, Zebi Hirsch Ashkenazi, and Meir Eisenstadt, whose work extended into the 18th cent.

Among the important 18th cent. commentators on the *Shulhan Aruch* were Elijah Gaon of Vilna, Joseph Teomim, Jonathan Eybeschütz, Isaac Taub (*Erech Hashulhan*), Ezekiel Landau, and Hayim Azulai. The latter two published also important responsa, as did Jacob Emden and Jacob Ettlinger. This century saw also two new codes, first, the reworking of portions of the *Shulhan Aruch* by Shneur Zalman ben Baruch of Liady, founder of a Hasidic sect, who included the opinions of later scholars, and secondly, the *Hayye Adam* and *Hochmath Adam* of Abraham Danzig, which are, respectively, abridgments of the *Orah Hayim* and *Yoreh Deah* volumes of the *Shulhan Aruch.*

Four great scholars flourished at the end of the 18th cent. and at the beginning of the 19th cent.: Akiba Eger, Moses Sofer, Ephraim Zalmen Margolis, and Jacob ben Jacob Moses of Lissa. These four wrote commentaries on the *Shulhan Aruch,* and all with the exception of the last were authors of large collections of responsa.

The 19th cent., with its changed standards of living caused by great advances in science and technical progress, called forth many important collections of responsa. Among these are the responsa of Menahem Mendel Schneirson, Hayim Halberstam, Joseph Saul Nathanson, Solomon Kluger, Isaac Shmelkes, Joshua Leib Diskin, Isaac Elhanan Spektor, Abraham of Sochatschev (*Abne Nezer*), Joseph Zechariah Stern, Sholem Mordecai Schwadron and Eliezer Deutsch. Besides two notable commentaries on the *Shulhan Aruch* by Abraham Zebi Eisenstadt and Zebi Hirsch Shapiro, Jehiel Michael Epstein published his *Aruch Hashulhan,* which is a complete reworking of the *Shulhan Aruch* to which he added many new laws from later commentaries, codes and responsa. In 1864 Solomon Ganzfried wrote his *Kitzur Shulhan Aruch,* which is a one-volume summary of the most frequently used laws of the *Shulhan Aruch.* This book achieved wide popularity, and was translated into English and other languages. Gerald Friedlander published in Hebrew and English his *Law and Customs of Israel,* which is based on the *Hayye Adam* and the *Kitzur Shulhan Aruch.* The eighteen parts of the *Sede Hemed* by Hayim Medina contain many important sections which may be considered as code commentaries in themselves.

Among the important responsa collections of scholars who flourished in the 19th and 20th centuries are those by David Hoffmann, Joseph Rosen, Hayim Ozer Grodzinsky, Judah Leb Zirelson and Abraham Duber Shapiro. Israel Meir Kahan, at the end of the 19th cent., wrote his *Mishnah Berurah,* which is a comprehensive commentary on the *Orah Hayim* volume of the *Shulhan Aruch.* In 1881 the same author wrote his *Mahneh Yisrael,* which contains instructions as to how Jews serving in the army might harmonize the dictates of Jewish law with their duties as soldiers. Although a number of rabbis in the United States have published books of responsa, none of them has gained undisputed authority.

In 1930 Boaz Cohen compiled a valuable bibliography of all responsa which have been published. Roughly estimated, the number of responsa in print total over half a million. A goodly number of these responsa have never been classified, and there now exists a very great need to arrange, classify and index these responsa to serve as a basis for a revision of the *Shulhan Aruch* to bring it up to date.

HIRSCHEL REVEL.

RESPONSES IN DIVINE SERVICE, words or verses which the congregation reads aloud during the divine service, thus interrupting the reader at stated points. Even in the Temple at Jerusalem there were such responses in the singing of the *Psalms*. The most frequently employed responses, the Amen and the Hallelujah, were taken over into the liturgy of the synagogue and of the church. In the later main prayers and Piyutim (liturgical poems) as well use was made of responsive singing. In Reform prayer-books considerable use has been made of responsive reading. Almost every service has two or three passages which are to be read responsively. Generally these passages are collections of verses from the *Psalms*.

See also DIVINE SERVICE.

RESPONSIBILITY. The degree of liability of a custodian for injury to an article in his care varies in Jewish law with different classes of guardianship. The Talmud recognizes three grades of responsibility for unintentional damage: gross negligence (*peshi'ah*), moderate negligence (*genebah va'abedah*) and accident (*'ones*). The measure of liability is dependent upon the nature of the particular judicial transaction and the possible benefit accruing to the custodian by reason of it. Damage caused with a conscious criminal intent is considered embezzlement (*shelihuth yad*), and its perpetrator is always responsible for the loss incurred. The following rules are applicable not only to chattels but also to real estate, slaves, legal documents and Temple property.

1. The three types of liability may be formulated as follows:

a. Gross Negligence. In this case the necessary and customary means of protection have been neglected, and as a result of this the article has been damaged or destroyed. The damage must be directly due to culpable negligence. The law provides that an object in custody should be carefully protected according to usage and need, "after the manner of keepers" (*B.M.* 3:10).

b. Moderate Negligence. In this case the custodian fails to take an additional safeguard, which is designated in the Talmud as "the obligation to take especially good care" (*Shulhan Aruch, Hoshen Mishpat* 303:11). Theft and loss are the typical damages that result from such negligence, hence their Hebrew equivalents become the generic term for this type of negligence.

c. Accident. This term includes all casualties and incidents which occur independently of man's will, whether the accidents happen to the man directly or to the objects under his care. He can not be reproached with the slightest carelessness. Sometimes a distinction is drawn between common and uncommon accidents.

2. The Mishnah (*B.M.* 7:8) divides those who have the property of others in charge into four classes: the unpaid bailee, the paid trustee, the hirer and the borrower. Their liability for damage is graded according to the benefit which they receive from taking charge of the property of others. The unpaid bailee, who receives no benefit whatsoever, has the least responsibility; the borrower, who derives all the advantage from the transaction, has the heaviest responsibility; the other two classes have a moderate benefit and a moderate responsibility. The general rules are as follows:

a. The unpaid bailee is liable for injuries resulting from gross negligence, and for no others. He does not have to pay damages if he can take an oath that he was not guilty of gross negligence.

b. The paid trustee and the borrower are responsible for damage in any case except pure accident, as they are supposed to take more than ordinary care of the property entrusted to them.

c. The borrower is responsible for all types of damage, even that caused by pure accident. However, he is not responsible for deterioration in ordinary legitimate use, or for the death of an animal that dies of natural causes.

If one partly borrows and partly hires objects, his responsibility for damage is determined according to the rules of evidence (*B.M.* 8:2). Furthermore, in accordance with *Ex.* 22:14, if the presence and services of the owner are obtained by the borrower, he is relieved of responsibility even in case of negligence (*B.M.* 8:1).

MARCUS COHN.

Lit.: Maimonides, *Hilchoth Sheelah Ufikkadon* and *Hilchoth Sechiruth; Shulhan Aruch, Hoshen Mishpat* 291 et seq., 303 et seq., 307 et seq., 340 et seq.; Bloch, Moses, *Der Vertrag nach mosaisch-talmudischem Rechte* (1893).

RESPONSIBILITY, COLLECTIVE (*'arebuth*), joint security according to Jewish law. In addition to security in the sense of an obligation as fellow-debtor toward the chief debtor (security for the debtor in his own name), which is a feature of civil law, Jewish law recognizes a mutual responsibility from the standpoint of religious law, which is firmly bound up with religious and ethical ideas and is equivalent to a moral legal obligation of all fellow Jews. It goes back to ancient sources (*Sifra* to *Lev.* 26:37), where the oft-quoted sentence is found: *kol yisra'el 'arebim zeh bazeh* ("All Israelites are surety [responsible] for one another"; cf. *Sanh.* 27b; *Shebu.* 39a; *R.H.* 29a and Rashi to the passage; *Yalkut* to *Prov.* 6:1; *Midrash Song of Songs* 1:3).

The Haggadists liked to employ the legal concept of responsibility or security in their characterization of the circumstances under which the covenant at Sinai was made. The patriarchal tribal and family organization in ancient Israel contributed at an early stage to the inculcation of the idea of responsibility. The family (*mishpahah,* equivalent to the Roman *gens*), represented by its elders, is responsible for the guilt of its members. The whole tribe is morally and materially responsible and forms a unit as regards criminal and civil law. The account of the giving of the Law at Sinai (*Ex.* 24:3-8) seems to contain legal ideas which resemble that of responsibility. God appears as the Lord to whom is due observance of His Law, and the children of Israel are, one and all, portrayed as joint debtors, so that each individual is debtor to God, and at the same time security for his fellow-Israelites in this obligation. In this sense the sentence "All Israelites are surety for one another" signifies a juristic joint security transferred to the religious sphere. Similar views are found in *Midrash Tanhuma* (to *Gen.* 44:18): "Abraham, Isaac and Jacob were security for Israel" and "Our children are our security"—ideas the basis of which is the conception that God as creditor looks for appropriate security for the fulfillment of the covenant at Sinai.

The effects of this idea of mutual moral responsibility, "All Israelites are surety for one another," are far-reaching and bear a clear Halachic stamp, especially in the law concerning the expiation to be made for an unsolved murder (Eglah Arufah, *Deut.* 21:1-9). The elders of the city, who act as the representatives of the community in the neighborhood of which a murder took place the perpetrator of which remained undiscovered, must bring a sacrifice and make a solemn declaration, as a protestation of their innocence, that they have not shed the blood of the slain.

The legal operation of tribal responsibility for the individual member is clearly demonstrated also in the narrative of the theft committeed by Achan (*Josh.* 7). For this deed, first all Israel, then the tribe, then the clan, and finally the family of the culprit was held responsible, until the legal conclusion was reached in the penalty of death inflicted upon the convicted criminal, and his family was

punished with him. Many teachers of the Talmud went so far as to regard this principle of responsibility not only as moral solidarity, but also as a legal responsibility or security of each individual for the others; this principle they found mentioned already in *Lev.* 26:37, which, departing from the literal meaning of the Biblical text, they render thus: "And they shall stumble, the one because of the other."

The idea of collective or joint responsibility occurs in a twofold sense in Jewish literature: in the sense that all the members of the Jewish community can be held responsible for the misdeed of a Jew, and in the sense of a Jew's obligation to keep all his co-religionists from wrongdoing and show them the right path. This idea has received an especially noteworthy Halachic expression in the responsa of the Gaon Isaac Elhanan Spektor of Kovno, one of the most important Halachic authorities of the 19th cent. (*En Yitzhak,* "Sheeloth Uteshuboth," *Eben Haezer* 1:2), who believed that this responsibility should be extended even to Jews who have embraced other religions.

The above-mentioned sentence—"All Israelites are surety for one another"—is often quoted as proof of the obligation of Jewish joint security and responsibility for all Jews suffering in the lands of the Diaspora, and it was chosen by the Alliance Israélite Universelle as the motto for its activities. In Palestine, where the great majority of Orthodox Jews subscribe to this view, the efforts for union and mutual responsibility found an outstanding advocate in the former Chief Rabbi Abraham Isaac Kook. The idea of collective responsibility forms the basis of the ideology and activity of the Mizrachi wing of the Zionist Movement.

RESSLER, BENJAMIN, Yiddish author and playwright, b. Kopyczynce, Poland, 1901. He studied in Lwów and Vienna, and came to New York city in 1928. Ressler's first published book was a novel, *Oif Alter Erd* (1927). This was followed by *Nochn Geretenish,* also a novel (1929). In New York, Ressler was affiliated with various newspapers, and wrote for Yiddish and Hebrew periodicals in other countries as well as in the United States. His best medium, however, seems to be the theatre, for in his plays a fine sense of dialogue and dramatic power are evident. His play *60,000 Giboirim* was produced by Maurice Schwartz in 1936, and *Fremde Velten* in 1940. Ressler also wrote serial novels, under pseudonyms, for *The Day,* of which he was a staff member.

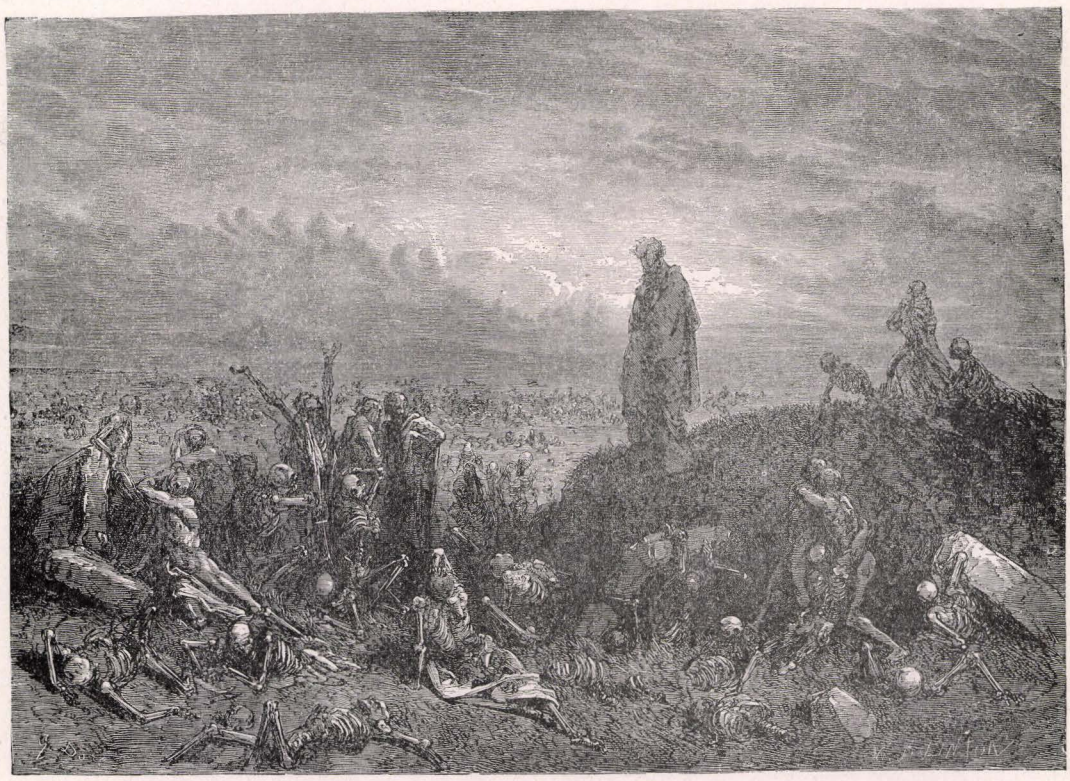
RESURRECTION (*tehiyyath hamethim*), the belief in the resurrection of the body, in contradistinction to the immortality of the soul, which latter is Greek in its origin. The earlier books of the Bible know nothing of resurrection. Job denies it, and Jesus the son of Sirach is not aware that there is such a doctrine. The earlier religion of Israel, being indissolubly associated with the nation, conceived of retribution in national terms, and the salvation of the individual after death originally found little place in it. Ezekiel insisted on individualizing the idea of reward and punishment; this gradually led to the idea of retribution after death and the doctrine of resurrection. The earliest definite reference is in *Isaiah* (chap. 26) and in *Daniel* (12:2).

As to its origin there is a difference of opinion. "The eschatology of Judaism has an unmistakable affinity to that of the Zoroastrian religion in the separation of the souls of



A page from Maimonides' "Treatise on Resurrection," in the Judeo-Arabic original in the possession of the library of the Jewish Theological Seminary of America

righteous and wicked at death, and their happy or miserable lot between death and the resurrection, and in the doctrine of a general resurrection and the last judgment with its issues. The resemblances are so striking that many scholars are convinced that this whole system of ideas was appropriated by the Jews from the Zoroastrians" (Moore, G. F., *Judaism in the First Centuries of the Christian Era,* vol. 2, p. 394). At the same time the same author goes on to say (*ibid.,* p. 395): "In the present case the primitive conception of a revivification of the dead, as it emerges in *Daniel* or in *Isa.* 26, appears to be indigenous; there is nothing like it in Zoroastrianism. This notion may have prepared the way for a wider extension of the idea of resurrection; but the Persian scheme must have been most strongly commended by the fact that it seemed to be the logical culmination of conceptions of retribution which were deeply rooted in Judaism itself."

The extension of the doctrine of resurrection is to be found particularly in the apocalyptic literature, such as *Enoch,* the *Testaments of the Twelve Patriarchs,* the *Psalms of Solomon* and *II Esdras,* not to mention the Christian gospels and *Revelation.* In the original form of the doctrine, resurrection was conceived as taking place at the time of the coming of the Messiah, and the righteous alone of Israel were to share in it, being restored to life in order to enjoy in the land of Israel the blessings of the Messianic era. Later on this was supplemented by the belief in a general resurrection of righteous and wicked at the time of the great judgment.

Resurrection became a fundamental doctrine of the Pharisees, so much so that a person was regarded as a heretic, forfeiting his share in the world to come, not merely if he denied the doctrine, but even if, believing in it, he denied that the Torah was authority for the belief. It was one of the important differences between the Pharisees and the Sadducees, the latter, as well as the Samaritans and the Minim (heretics), denying it.

The dead arising from their graves at the call to resurrection, as envisioned by Gustav Doré

In the resurrection, according to the orthodox doctrine, the soul and the body will be reunited, and both together, reconstituting the original person who conducted himself well or ill during life, will stand in judgment before God and suffer reward or punishment accordingly. This is the rationale of resurrection, i.e. to make the retribution conform to the individual's conduct, and since the deeds of the person were the component product of body and soul, it would be less than justice if either were rewarded or punished separately or either alone and to the exclusion of the other.

The Midrash declares that there is a small bone, from its shape called Luz (almond), the tip of the coccyx, which can not be destroyed by any means, hence this is the nucleus in the resurrection of the body. The dead will rise with all their defects and deformities, and will then be cured.

Throughout the Middle Ages the doctrine of the resurrection was firmly held by all Jews, by Karaites and Rabbinites alike, although there were differences of opinion as to who would rise, and as to the precise time of the resurrection, as well as its relation to the expressions Gan Eden (Garden of Eden), Olam Haba (World to Come), equivalent to Alma Deathe (Aramaic for World to Come). Maimonides included resurrection in the thirteen articles of his creed, and when he learned that his philosophical writings had misled the Jews of Yemen into denying resurrection, he wrote a special treatise on resurrection to set them right. Hasdai Crescas and Joseph Albo took the doctrine down from its pedestal as a fundamental principle of Judaism and included it among "true beliefs" (cf. Albo, Joseph, *Ikḳarim*, edit. Husik, vol. 1, chap. 23; vol. 4, part 2, chap. 35).

In modern times, Reform Judaism has given up the doctrine of resurrection, and the passages in the liturgy referring to resurrection have been paraphrased in the sense of immortality. ISAAC HUSIK.

Lit.: Charles, *A Critical History of the Doctrine of a Future Life in Israel, in Judaism and in Christianity* (1899); Albo, Joseph, *Ikḳarim* (edit. Husik, 1929-30), vol. 4, part 2, chaps. 29-35, especially chap. 35; "Maimonides' Treatise on Resurrection," edited with critical apparatus, notes and introduction by Joshua Finkel, *Proceedings of the American Academy for Jewish Research*, vol. 9 (1939) 42 and 105 (also separately reprinted).

RETALIATION, LAW OF (commonly known as the Lex Talionis), a law, or rather a legal principle, cited three times in the Pentateuch, each time in somewhat varying form, and usually referred to by the phrase recurring in each of the three versions, "an eye for an eye and a tooth for a tooth." This law has acquired particular significance from the fact that in one, and the most anti-Jewish, version of the Sermon on the Mount (*Matt.* 5:38-42; entirely missing in *Luke* 6) Jesus is represented as saying, "Ye have heard that it was said, An eye for an eye and a tooth for a tooth; but I say unto you, Resist not him that is evil; but whosoever smiteth thee on thy right cheek, turn to him the other also." From this passage Christian theologians have inferred that the Lex Talionis is a cardinal principle of Judaism, and that Judaism must be therefore a religion of vengeance, mechanical justice and cruelty, while, in significant contrast, Christianity is a religion of non-resistance, forgiveness, love, and the higher justice that is tempered by mercy. This Christian misinterpretation of Judaism has provided one of the most frequently treated themes of Jewish apologetics.

Actually there is little direct evidence anywhere in Jewish literature, even in the Bible itself, that the Lex Talionis was ever applied in literal, mechanical manner to any case whatsoever. The rabbis, conforming to established Pharisaic tradition, interpreted the Biblical law in such manner as to permit a money payment as damages in every case where the Biblical law, literally applied, would have required some form of

bodily mutilation comparable to that originally inflicted by the offending person (*B.K.* 83b-86a). But even more careful examination of the three Biblical passages in which the Lex Talionis is cited shows conclusively that the formula, "an eye for an eye and a tooth for a tooth," is in not a single one of the three passages an integral part of the main law under discussion, but is in every case a late addition to the law. In at least two of the three cases this addition proves to be one which gives to the law a meaning and application which it not only certainly did not possess originally, but which also would tend to make the original law altogether impossible of enforcement.

The first of these three passages is *Ex.* 21:23-25. The law, beginning with verse 22, reads: "And if men strive together, and hurt a woman with child, so that her fruit depart, and yet no harm follow (i.e. there is no permanent injury to the woman), he (the offender) shall be surely fined, according as the woman's husband shall lay upon him; and he shall pay as the judges determine. But if any harm (to the woman) follow, then thou shalt give life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe." Clearly the provision "burning for burning" could not result from a blow accidentally dealt a pregnant woman. Also, with the possible exception of the very first provision, "life for life," none of the other provisions here cited applies directly to this particular case. For certainly the permanent injury resulting from the miscarriage was not the loss by the woman of an eye, a tooth, a hand or a foot. These might result from the blow itself, but not at all from the miscarriage; but if it resulted from the blow, the law should then have applied not merely to the pregnant woman, but to any person whatsoever who might be injured in this manner. Unquestionably the Lex Talionis does not fit this particular case at all. Realizing this, Budde, followed by other scholars, would transpose verses 23-25 from their present unsatisfactory position to one following immediately upon the law about assault stated in verses 18-19. But the Lex Talionis, as stated in verses 23-25, actually applies not one whit better to the case presented in this law than it does to that dealt with in verse 22. Moreover, were verses 23-25 transferred to a position following immediately upon verse 19, then the law in verse 22 would be left decidedly incomplete. The only satisfactory solution of this problem is the assumption that either verses 23b-25 were substituted for some other, presumably milder, provision which stood here originally, or, and perhaps better, that verse 23 alone, providing life for life, i.e. blood vengeance, in case of the death of the woman, is original, and that verses 24-25, the "eye for eye and tooth for tooth" provision, are a late gloss, mistakenly added to the original, simple provision, "life for life," thus inadvertently distorting the real purpose and effect of the original law.

Certainly this same assumption alone will account for the presence of the Lex Talionis, in somewhat abbreviated form, in the second Biblical passage (*Deut.* 19:21). The law in verses 16-21 says: "If an unrighteous witness rise up against any man to bear perverted witness against him; then both the men, between whom the controversy is, shall stand before the Lord, before the priests and the judges that shall be in those days. And the judges shall inquire diligently; and, behold, if the witness be a false witness, and hath testified falsely against his brother; then shall ye do unto him, as he had purposed to do unto his brother; so shalt thou put away the evil from the midst of thee. And those that remain shall hear, and fear, and shall henceforth commit no more any such evil in the midst of thee. And thine eye shall not pity: life for life, eye for eye, tooth for tooth, hand for hand, foot for foot."

Here the Lex Talionis occurs only in the very last verse of this law. Manifestly it has little meaning in its present position. To have any positive import at all it should follow immediately after the words "then shall ye do unto him, as he had purposed to do unto his brother;" but from these it is separated by the intervening verses 19b-20. Moreover, the term "an unrighteous witness" seems to imply that the death of the accused person was the intention of the false witness, and that therefore the application of the law could contemplate in turn only the execution of the false witness. This is also the obvious implication of the term "those that remain," i.e. those who have witnessed the execution. But since this is undoubtedly the true meaning of the law, the provisions in the Lex Talionis here, i.e. "eye for eye, tooth for tooth," are altogether contradictory to the law itself. Unquestionably here, too, the Lex Talionis in verse 21 is a late and senseless addition to the original law.

In the third Biblical passage (*Lev.* 24:17-20), the Lex Talionis is broken up into two parts and occurs in conjunction with three other laws. The passage reads as follows: "And he that smiteth any man mortally shall surely be put to death. And he that smiteth a beast mortally shall make it good: life for life. And if a man maim his neighbour; as he hath done, so shall it be done to him: breach for breach, eye for eye, tooth for tooth; as he hath maimed a man, so shall it be rendered unto him." It is noteworthy that the first part of the Lex Talionis, i.e. "life for life," is here entirely out of place. Instead of following "And he that smiteth a beast mortally shall make it good," it should undoubtedly follow the preceding law, i.e. "And he that smiteth any man mortally shall surely be put to death: life for life." But it is equally clear that even with this transposition, this portion of the Lex Talionis adds nothing whatever to the meaning or force of the original law. Nor does the second part of the Lex Talionis here, "breach for breach, eye for eye, tooth for tooth," add anything at all to the meaning or force of the law which it follows. Moreover, the last part of verse 20 repeats unnecessarily and with weakening effect what has been sufficiently stated already in verse 19. Clearly, therefore, in this little group of three main laws the Lex Talionis is altogether secondary, redundant and superfluous. Unquestionably in this third Biblical passage, too, the Lex Talionis is not original, but is instead a late editorial and somewhat disturbing insertion.

These considerations establish conclusively that the so-called Biblical "law of retaliation" is not a law at all, but is rather merely a statement, presented in the Pentateuch in three varying forms, of the general principle basic to all judicial systems, that like should be compensated for by like. In primitive judicial systems this principle is apt to be applied in the most literal and cruel manner. This method of application may also persist in a few sporadic cases even in the legal systems of peoples comparatively advanced in culture, as, for example, the Babylonians (cf. *Hammurabi Code,* 195-196, 200, 210) and the Assyrians (cf. Jastrow, in *Journal of the American Oriental Society,* vol. 41, 1921, p. 49). Not impossibly nor even improbably in the earliest stages of Israel's cultural evolution, too, the "law of retaliation" may have been applied literally in certain cases. But the complete absence of any specific literal application of the principle, except in the ancient and long persistent practice of blood revenge and seemingly also in the single law in

Lev. 24:19, would indicate that the literal application of the principle had been almost completely outgrown quite early in the evolution of Biblical legislation. In its place the practice developed of prescribing a fine to be paid by the offender to the injured party (cf. *Ex.* 21:22, 30). Eventually this practice was extended even to the institution of blood revenge.

In the post-Exilic period, however (after 540 B.C.E.), because of certain peculiar theological concepts dominant at that time, a reaction set in toward extreme rigorism and particularly toward the imposition of the death penalty for various grave offenses of a social and religious character. Accordingly the former practice of accepting a fine as ransom money in case of murder was abrogated, and the old principle of "life for life" was reinstituted (*Num.* 35:30-34). Probably to this same period and as an expression of this same spirit of rigorism must be assigned the amplification of the three Pentateuchal laws by the addition to them of the "Lex Talionis." But there is not the slightest evidence that even in this period of rigorism this extreme and cruel principle was ever actually applied literally.

And before the beginning of the rabbinic period, a few centuries later, the principle, despite its specific Biblical sanction, was regularly and legally evaded. Certainly it was altogether out of accord with the spirit of Judaism. Manifestly the *Matthew* version of the Sermon on the Mount has misrepresented both the spirit of Judaism and its actual legal practice.

The rabbinical opinion (cf. *B.K.* 8:1), which manifestly was based on an old tradition, the Pharisaic opinion, although indeed contrary to that of the Sadducees, that the law of retaliation was regularly replaced by a corresponding atonement money, either by way of an agreement or by the legal direction of the court, is highly probable; cf. the medieval Jewish commentators to the individual passages. The only instance where it is applied is to false witnesses, who are put to death if they have made a false charge of a capital crime; even there the Pharisees limited it to cases where the innocent person had already been executed (*Mak.* 1:6). JULIAN MORGENSTERN.

Lit.: Blau, Joel, "Lex Talionis," *Central Conference of American Rabbis Year Book,* vol. 26 (1916) 336-66; Morgenstern, Julian, *The Book of the Covenant* (part 2), in *Hebrew Union College Annual,* vol. 7 (1930; also separately reprinted); Norden, *Auge um Auge, Zahn um Zahn* (1926); Weissmann, "Talion und öffentliche Strafe im mosaischen Rechte," *Wach-Festschrift* (1913).

RÉTHI, MÓR, mathematician and physicist, b. Nagykőrös, Hungary, 1846; d. Budapest, 1925. He studied at the technical schools of Budapest and Vienna, and became an assistant in the latter school. With a scholarship from the Hungarian government he worked in the Universities of Göttingen and Heidelberg, after which he was named professor of mathematics and physics at the University of Kolozsvár (1874) and professor of mathematics at the technical school of Budapest (1886), a position which he held until his death. Réthi was a member of the Hungarian Academy from 1900 on.

His treatises appeared in various periodicals and year books of mathematics and natural sciences of Hungary and Germany. He edited (with Gyula König) the *Tentamen* of Farkas Bólyai, and published several books in Hungarian on refraction, surfaces and other subjects. In German he published *Über schwere Flüssigstrahlen* (1898). He served on the board of directors of the IMIT (Jewish-Hungarian literary society).

RÉTHY, LEOPOLD LUDWIG, rhinolaryngologist, b. Abaujszina, Hungary, 1857; d. Vienna, 1924. He studied medicine at the University of Vienna, where he became lecturer and subsequently assistant professor of rhinolaryngology. He was specialist in that branch of medicine at the Allgemeines Krankenhaus of the Austrian capital.

In addition to treatises published in medical journals, Réthy wrote: *Die Krankheiten der Nase, ihrer Nebenhöhlen und des Rachens* (1892); *Die Krankheiten des Kehlkopfes* (1890-1900); *Die Motilitätsneurosen des weichen Gaumens* (1893); *Die polypoide Rhinitis und ihre Behandlung* (1894); *Die laryngealen Erscheinungen bei der multiplen Sklerose des Gehirns und des Rückenmarks* (1907).

RETI, RICHARD, chessmaster and writer on chess, b. Pezinck, Czechoslovakia, 1889; d. Prague, 1929. After a brief study of mathematics, Reti devoted himself to chess, which he played all over the world. He was considered one of the greatest masters of the game. He won first prize at tournaments held in Kaschau (1918), Göteborg (1920), Teplitz (1922), New York city (1924), and Pressburg (1927). Reti wrote *Über die neuen Ideen im Schachspiel* (1922) and *Meister des Schachbretts* (1928; English trans., *Masters of the Chessboard,* 1932). His main work, a comprehensive manual of chess, appeared posthumously.

RETRIBUTION, *see* REWARD AND PUNISHMENT.

REUBEN, 1. eldest of the twelve sons of Jacob, and traditional ancestor of the tribe of the same name. His mother was Leah, the first wife of Jacob, who is reported to have given him his name with the meaning of "The Lord hath looked upon my affliction" (*Gen.* 29:32). Reuben is mentioned in the stories of Jacob and Joseph as having found in a field the mandrakes which Leah later gave to Rachel (*Gen.* 30:14), and as having had relations with Bilhah, his father's concubine (*Gen.* 35:22), for which he was later denounced by his father (*Gen.* 49:3-4). When Joseph was seized by his brethren, Reuben persuaded them not to kill him, but to cast him into a pit, and he later offered his sons as hostages for the safety of Benjamin (*Gen.* 37; 21-29; 42:37; Bible scholars hold that these passages are part of the Elohist source).

Bible scholars regard these narratives as reflecting the attitude of the other tribes toward that of Reuben. In Jewish legal literature, Reuben and Simeon are used like the English John Doe and Richard Roe to indicate the parties in a case.

2. One of the twelve tribes of Israel, with a territory in the northern part of Transjordan, with the Arnon river as its southern boundary. According to the Bible, it settled there just before the death of Moses; historians regard the narrative as a condensation of a longer process in which Reuben may have been the leader of a group of Leah tribes which invaded Palestine from the northeast. Later on the tribe lost its leadership because of its vacillation, especially at the time of the great struggle with Sisera (cf. *Judges* 5:15-16). The tribe produced no leaders of importance in the period of the judges and the kings, suffered severely in the wars between Israel and Aram, and was finally taken away into captivity by Tiglath-pileser of Assyria about 732 B.C.E. (*II Kings* 15:29).

Lit.: The Biblical dictionaries and histories.

REUBENI, DAVID, Messianic visionary, b. probably Khaibar, Arabia, date of birth unknown; d. Spain, after 1532. According to his statements, he was the prince of a sovereign Jewish state, composed of the tribes of Reuben, Gad and half of the tribe of Manasseh. Reubeni entered the papal court riding upon a white steed, and planned, under the personal protection of Pope Clement VII and King João III of Portugal, a

sort of Jewish crusade against the Turks. His prestige among Jews was especially strengthened by his follower Solomon Molcho, a Portuguese Marrano who had returned to Judaism and who, after occupying himself with Cabala, announced the approach of the Messianic reign.

Reubeni appeared in Turkey and in Italy publicly as a prophet and wandering preacher, and in Rome even in the Messianic role. The new movement aroused ecstatic hopes, especially among the Marranos. Both men, however, lost the favor of the pope and of the Portuguese court because of defamation or perhaps because they preached against Christianity. When Molcho and Reubeni came to the Reichstag of Ratisbon (1532) with a Hebrew flag in order to win Emperor Charles V over personally to their plans, both were chained and brought to Mantua. Molcho, who could have saved himself only by embracing Christianity, suffered death at the stake, while Reubeni was brought to a prison in Spain, where he is said to have been poisoned.

Reubeni's diary, *Sefer Nesioth,* was edited in Hebrew by Abraham Kahane at Warsaw. Max Brod depicted the fate of Reubeni in the novel *Reubeni, Prince of the Jews* (1928).

REUCHLIN, JOHANN, humanist and forerunner of the Enlightenment, b. Pforzheim, Germany, 1455; d. Liebenzell, Germany, 1522. He was one of the first Hebrew scholars of eminence in Germany, and one of the first Christians to stimulate his coreligionists to study Hebrew. In 1490 in Italy he met Pico della Mirandola, through whom he became interested in the Cabalistic doctrines and subsequently in the Hebrew language. At the court of Emperor Frederick III in Linz, Austria, he studied Hebrew with the emperor's physician, Jacob ben Jehiel Loans (1492), and he continued his studies in Rome under Obadiah Sforno of Cesena.

Through his knowledge of Hebrew he was drawn into the controversy raging about the proposed burning of all Jewish books. Pfefferkorn, a converted Jew and a willing tool of the Dominicans, had obtained permission from the emperor to confiscate all Hebrew books from the Jews and to destroy those which seemed dangerous to him (1509). Reuchlin, as an authority on Hebrew, was asked to give expert opinion on the Jewish religious books. Originally prejudiced against the Jews as were his contemporaries, and regarding them as an utterly barbarous people, he did not, however, allow these prejudices to overpower his sense of justice, and his report, *Der Augenspiegel* (1510), was a vindication of the writings of the Jews. Moreover, from a defense of the Talmud it developed into a defense of the Jews themselves: "The baptized Jew," Reuchlin declared against Pfefferkorn, "writes that divine law forbids our holding communion with Jews; this is not true. Every Christian may go to law with them, buy from or make presents to them. Cases may occur where Christians inherit legacies together with Jews. It is allowed to converse with and learn from them, as Saint Jerome and Nicholas de Lyra did. And lastly, a Christian should love a Jew as his neighbor; all this is founded on the law."

The enemies of the Jews attempted to proceed against Reuchlin, and he was accused of heresy by the Dominicans and finally found guilty by Pope Leo X (1520). But public opinion was against this verdict. No new attacks were launched against Reuchlin, and what had begun as a dispute between the Dominicans and Reuchlin developed into a struggle between the humanists and the enemies of Enlightenment, thus paving the way for the Reformation.

Reuchlin, who was also an eminent Greek scholar, taught Hebrew at the University of Heidelberg and was the author of the Hebrew textbooks *Rudimenta Hebraica* (grammar and lexicon, based mainly on David Kimhi's works; 1506) and *De accentibus et orthographia linguae Hebraicae* (1518). He wrote also *De verbo mirifico* (1494) and *De arte Cabbalistica* (1507). In the former work, constructed as a series of discussions between an Epicurean philosopher, a Jewish sage and a Christian, a remarkable panegyric of the Hebrew language, he exclaimed: "The language of the Hebrews is simple, uncorrupted, holy, terse and vigorous. God confers in it directly with men, and men with angels, without interpreters, face to face . . . as one friend converses with another."

Among Reuchlin's outstanding pupils was Sebastian Münster, Hebrew grammarian and translator of works from the Hebrew language. ALFRED WERNER.

REUTER, BARON PAUL JULIUS VON (called also Israel Josephsthal), founder of the Reuter news agency, b. Cassel, Germany, 1821; d. Nice, France, 1899. A descendant of the Jewish family Josaphat, he founded in Berlin the publishing house of Stargard and Reuter, was active in the Paris Havas-Bureau, and founded there (1849) a news agency which maintained the fastest pigeon post service with Brussels and Aix-la-Chapelle. As his further plans were thwarted by the French government, he went, upon the advice of Werner von Siemens, to London (1851), and there established the Reuter Telegraph Agency. He laid his own cable between England and Cuxhaven, and in association with the Anglo-American Telegraph Company laid the first cable between America and France (1865). In 1871 he was raised to a baronetcy by the duke of Saxony-Coburg-Gotha. The Reuter Agency, under his direction, developed into the largest and most influential telegraph agency in the world. The impartiality and reliability of Reuter's dispatches in the time of Baron Reuter were noteworthy.

RÉVAI, MÓR JÁNOS, publisher and author, b. Eperjes (Presov), Hungary, 1860; d. Budapest, 1926. His father, Samuel Révai, had started as a bookbinder's apprentice, had become a bookseller, and founded the firm of Révai Testvérek (Révai Brothers), which published the best of contemporary Hungarian literature. Mór János Révai accepted the Christian faith. He studied at the Universities of Budapest and Leipzig, and worked in Leipzig publishing houses. From 1880 on he served in the firm of Révai Testvérek, becoming its director general in 1895.

Révai published the works of the novelist Mór Jókai on the fiftieth jubilee of his authorship in a hundred de luxe

George Wolf

volumes; he published the Hungarian encyclopedia *Révai Nagy Lexikona* (21 vols.), and several serials of classical fiction and of the best books of modern thought. He wrote a number of works, some of them in French, including: *La doctrine de Monroe appliquée à l'Europe* (1916); *Le militarisme allemand* (1916); *La voix de la paix* (1917); *L'idéal démocratique de l'entente et de la Hongrie* (1918). In Hungarian he wrote, among others, *Egy magyar ember nyilt levele Wilsonhoz* (Open Letter of a Hungarian to President Wilson; 1918) and *Magyarország integritása és a wilsoni elvek* (Hungary's Integrity and the Wilsonian Principles; 1920).

REVEL, BERNARD, scholar, college president and Orthodox Jewish leader, b. Pren, near Kaunas, Lithuania, 1885; d. New York city, 1940. His father, Nahum Sheraga Revel, the rabbi of several important Lithuanian communities, was his first teacher; at the age of seven Bernard Revel had already mastered many tractates of the Talmud.

He continued with his father until he was twelve, when the latter died, and then he pursued his studies independently, besides a short period at the Yeshiva of Telshi, where he was known as the "Prinner Illui" ("prodigy of Pren"). He studied also under Rabbi Isaac Blaser of Kelmy, a leader in the Musar movement. During the same time he completed his studies at the Gymnasium and became thoroughly versed in the Haskalah, studying the Hebrew language and literature, as well as Jewish history, subjects which were not taught in the Yeshivas.

When Revel came to the United States in 1906, his unusual combination of Jewish and general learning and his sterling character attracted the attention of such rabbis as M. S. Margolis and B. L. Levinthal, who urged him to prepare himself for a position of leadership in American Orthodox Jewry. After attending the University of Pennsylvania, Revel obtained the M.A. degree from New York University (1909) and the Ph.D. degree from Dropsie College (1912). He then entered upon a successful and prosperous career in the Oklahoma petroleum industry, being a pioneer in the refining of natural gas.

In 1915 Revel was requested by rabbinic and lay leaders in New York city to reorganize and head the Rabbi Isaac Elchanan Theological Seminary (later known as the Yeshiva). He divided his time between the institution and his business until 1921 when, at great personal sacrifice, he severed his business connections to devote all his energies to the realization of his dream—the development of an institution of higher learning which would embody the synthesis of Israel's age-old spiritual values with the findings of modern scientific knowledge.

In 1915 Revel founded the Talmudical academy high school in order that the Yeshiva students might obtain their secular education in the afternoon within the walls of the Yeshiva. In 1920 he incorporated into the Yeshiva the Mizrachi Teachers Institute. Under his guidance and administration the Yeshiva flourished, and as the result of his efforts and counsel many smaller Yeshivas were founded. In 1928, despite the bitter opposition of those who opposed secular studies and those who objected to a segregation of Jewish education, Revel founded and headed the Yeshiva College, the first college of liberal arts and sciences under Jewish auspices in the history of the Diaspora.

The founding of the college was in accordance with Revel's purpose of attracting non-professional students to the Yeshiva, for he realized that an educated Jewish laity was as important as well-trained rabbis and teachers. In 1937 Revel founded a graduate school for Jewish and Semitic studies, with courses leading to the degree of Doctor of Hebrew Literature; this was later named the Bernard Revel Graduate School in his memory. It was intended to supply facilities and inducements for rabbis to continue their education after their ordination.

Revel's manifold responsibilities and duties, coupled with the burden of securing adequate financial support for the institution during the depression of 1929 and after, undermined his health to such a degree that his physicians insisted that he sever his connection with the institution. However, he continued his labors unabated until two weeks before his death when, while in the act of delivering a Talmud lecture, for which he had gotten up from a sickbed, he suffered a stroke from which he never recovered.

Bernard Revel

Revel was regarded as the Nestor of Orthodox Judaism in the Western Hemisphere. From his addresses it appears that he foresaw, even before the Nazis' rise to power, the increasingly important role which America was to play in the activities of world Jewry. He showed great concern for the fate of the Jews of Latin America, especially during the last few years of his life. The neo-Orthodox movement had shown that it was possible to practise strict Orthodoxy even in the midst of modern Western civilization. Revel, however, went further, maintaining that it was possible to base Jewish life on the Torah as the hub from which all knowledge radiates and to treat scientific knowledge as one of the spokes of the Torah. His creation of Yeshiva College and his courses of study there were intended to show that Orthodox Jewry and modern science were not antagonistic but complementary, and that a dynamic and creative Torah life, clothed in the habiliments of science and humanistic learning, would prevent the slow dereligionization of the Orthodox Jewish community by a mechanistic, scientific environment.

Revel was a man of rare personal charm and possessed a scintillating sense of humor. He had a deep paternal affection for his thousands of students, and the latter would come to him for counsel and encouragement in their own problems. He spent much time encouraging various Orthodox Jewish organizations, and through the rabbinical graduates of the Yeshiva he played an important role in the communal life of many cities. He was an ardent lover of Palestine, being mainly affiliated with the work of the Mizrachi. He had many friends among non-Orthodox Jews and non-Jews who cooperated with him in his work. Revel was first president and then honorary

president of the Union of Orthodox Rabbis of America, and was vice-president of the Jewish Academy of Arts and Sciences.

Revel was associate editor of the Hebrew encyclopedia *Otzar Yisrael* in 1913, and was the author of comprehensive books dealing with the Karaite Halachah and with the origin and nature of the Targum Jonathan. He wrote many learned studies on the Halachah of Josephus, Philo, the Apocrypha, and the various sects, as well as articles on the differences between Babylonian and Palestinian customs during the Gaonic period. His articles in rabbinics showed an almost complete mastery of the field, and his public addresses were couched in striking Hebrew or English prose. Many of his works were still in manuscript at the time of his death.

A tribute was paid to his memory by Orthodox groups of the United States who, in 1942, raised a fund for the planting of a forest (Yaar Revel) on land owned by the Jewish National Fund in Palestine. JACOB I. HARTSTEIN.

Lit.: Eidenu (memorial volume by the students of the seminary, 1942); *Hedenu* (by the students of the seminary, 1936); *American Jewish Year Book,* vol. 43 (1941) 415-25; *Horeb,* vol. 6 (1941).

REVEL, HIRSCHEL E., librarian and author, b. Tulsa, Okla., 1913. He was the son of Bernard Revel. After graduating from the Teachers' Institute of the Rabbi Isaac Elchanan Theological Seminary, in New York city, in 1931, he graduated from Yeshiva College (B.A., 1933). Revel spent a few years in the petroleum industry, and in 1942 was appointed librarian of the Rabbi Isaac Elchanan Theological Seminary, and in the same year he obtained the D.H.L. degree from the Bernard Revel Graduate School of Yeshiva College.

From 1929 on Revel contributed many scholarly and rabbinic articles to *Horeb, Hedenu, Eidenu* and other periodicals. He published *Otzar Hasotah* on *Hilchoth Sotah* (1941), the first scientific edition of any part of Maimonides' *Mishneh Torah,* and *Hamassoreth Besifre Harambam* (1942). His *English Translations of Judaism's Classics* was scheduled for publication in 1943. In 1942 Revel became an associate editor of this encyclopedia in rabbinics, and was regarded as an authority on the Halachic works of Maimonides.

REVELATION. Revelation, the process by which God makes known His will to man, is affirmed by all Jewish religionists. Its acceptance is an axiom of Jewish religious thinking. Teachers of the several generations have advanced their own interpretations of the process and the content of revelation, but from earliest times to the latest pronouncements of Reform Judaism the belief in revelation has been constant.

In the Bible there are many references which reflect an extremely early, animistic stage of religion. These passages indicate clearly that the ancients believed that the divine will was revealed in the vicinity of special trees (*Gen.* 12:6-8), in burning bushes (*Ex.* 3:2-3), or near water (Lauterbach, J. Z., "Tashlich," *Hebrew Union College Annual,* vol. 11). In the successive documents of the Bible the process of revelation shows a gradual progression. In one document the Deity speaks directly to Moses (*Ex.* 33:18). In another the Ark is the medium of revelation; Samuel sleeps near it in order to be able to hear the speech of the Lord (*I Sam.* 3). In one section of Scripture God walks and talks with man (*Gen.* 3:8), and in another the device of dreams and visions is employed (*Gen.* 15:12). *Deuteronomy* adds the idea of a book as the source of divine truth. Thus God is very near to man.

In the early prophetic period revelation was induced by ecstasy, while the later prophets were "apperceptive," revealing truths already in their moral consciousness. "No psychosis of any kind is essential to the prophets. There is no trace of any ecstatic state." Buttenwieser speaks of the mystic agitation which always accompanied prophecy. He accounts for this apperceptive nature of prophecy in terms of the prophetic belief in the immanence of God. Because God is in man's heart, revealing Himself as his conscience, man can hear God's voice at all times.

In the Talmudic period (500 B.C.E. to 500 C.E.) the rabbis stressed the validity of the Sinaitic revelation. This is known in rabbinic literature as *mattan torah.* This, they held, was given to Israel in both oral and written form, the latter being rejected by the Sadducees (Josephus, *Antiquities,* book 18, chaps. 1 to 4). The rabbis believed that all subsequent prophecy is but a reflection of the great revelation at Sinai (Midrash *Num.* 1:15). To them Moses' prophecy was supreme and final (*Sanh.* 56a). Since all the truth that man can know is implicit in the Scriptures in which the Mosaic revelation is recorded, special rules of Biblical interpretation are needed properly to understand the content of sacred writings. The laws thus deduced by the rabbis from the Scriptures become an equally valid part of the totality of revelation. They make up the oral law, the Torah Shebeal Peh.

Under the influence of Aristotelian and Moslem philosophy (7th to 13th centuries) the necessity of treating formally the subject of reason was forced upon Jewish thinkers of the Middle Ages. As reflected in all philosophic writings, beginning with Saadia (892-942), Hebrew philosophers were faced with a twofold problem: first, of answering the question, "To what extent is reason a valid method of arriving at truth?"; second, if reason is a source of truth, dare Israel claim that God has given Moses a special revelation of truth? The philosophers could not deny the validity of the Mosaic law. How then could they remain true to both Judaism and the philosophic method?

Saadia declared that reason is a legitimate source of knowledge (*Emunoth Vedeoth,* p. 48). There are indeed four sources of knowledge: sense perception, intuition, logical reasoning and tradition. Even though reason is valid, it is a slow process (p. 51). Some men never complete the process, productive of truth. Therefore, tradition is needed. The proof of tradition's validity is the testimony of the whole house of Israel (p. 50). In the preface to his book Saadia used the analogy of the transfer of money. When coins are distributed we may know how much we have left by adding up the amounts given away and by subtracting this sum from the original amount. Or we may count the coins we have left. The former method is that of reason, the method of calculation. The latter method is more direct; our knowledge is immediate. Thus both philosophy and revelation are valid.

In the philosophy of Judah Halevi, truth revealed to Israel is regarded as of supreme value. The main fact of history is the revelation of the Law to all Israel at Sinai (*Kuzari,* p. 44). The whole people is potentially prophetic; Moses was of secondary importance, deriving his high estate from the people itself. If there had been no people of Israel, there would have been no Torah (p. 117). In the same way, Halevi maintains, Palestine is the favored place of revelation. "The glory of God benefits His people and His country" (p. 88). This point of view is important, for it persists in Jewish thinking to the present moment.

Maimonides takes issue with Halevi's ultra-nationalism, declaring that there are various degrees of prophecy and that Moses' revelation possesses a superior and unique quality (*Sefer Hamadda* 7:2; *Moreh Nebuchim,* p. 219, 225). Other prophets received revelations in dreams and visions, but only Moses spoke directly with God. His law is therefore immutable. In revelation, according to Maimonides, there are two necessary elements: the preparation of the prophet, and inspiration, which is an act of grace. But Moses' prophecy, being unique, could have come only through him. Declaring reason valid, Maimonides yet upholds the uniqueness of Moses' (and Israel's) prophetic power.

In the Middle Ages Jewish mysticism flourished. The main contribution of the mystics is the doctrine of emana-

tions. All the universe, they hold, is an emanation from God; thus God's spirit and man's soul are one. Man is the Shechinah Tatooh (the spirit of God in this mundane sphere; *Zohar,* vol. 2, p. 98 et seq.). The Scriptures are also an emanation from God; they existed before creation. He who expounds the Torah reveals the will of God. Every letter has special value (*Zohar,* vol. 5, p. 177; vol. 1, p. 12). The Bible has both esoteric and exoteric meanings; the former can be understood only by using such special methods of interpretation as Gematria, Notarikon or anagrams.

Mystics of the 14th cent. traced their doctrine to Simeon ben Yohai (of the 2nd cent.), who was regarded as the master of mystical truth, greater even than Moses. In addition to these doctrines, masters of Cabala speak of the following methods of determining the divine will: (a) immediate knowledge, involving revelation as self-knowledge (*Zohar,* vol. 5, p. 106) and as reminiscence; vol. 5, p. 14); (b) the study of the human body (vol. 2, p. 35). Solomon Luria, leader of the Safed school of mystics, was able to tell by studying a man's forehead what his past had been and what his future would be; (c) astrology (vol. 5, p. 131); (d) dreams (vol. 4, p. 25). By pursuing all these methods God's purpose, the mystics held, is revealed to man.

In the modern period new influences begin to play upon the Jewish mind. Among these influences are the study of comparative religions, deism and the evolutionary theory. Among the foremost deists was Moses Mendelssohn, whose attitude toward revelation was stated in this wise: "I believe that Judaism knows nothing of a revealed religion—supernatural legislation has been taken for supernatural revelation" (*Jerusalem,* p. 90). The eternal verities comprise the natural religion of all humanity and may be discovered by the rational process, but Israel's revelation was that of law. In Judaism faith is not commanded, but conduct is. Thus Mendelssohn remained true to deism and Judaism by assigning belief and practice to separate compartments of the mind.

With the rise of the Reform Movement in the early 19th cent., new views of revelation began to appear among Jewish thinkers. The Wissenschaft des Judentums (Science of Judaism) movement served only to convince the leaders of this movement that Judaism has never been static, that the forces of evolution have always been at work within Judaism. The whole history of Israel and of mankind are regarded as resonant with God's voice. Thus the leaders of Reform have always insisted that God makes His will known to man. "The essence and validity of religion depend upon the belief that there is a living and active relationship between God and man" (Montefiore, Claude G., *The Liberal Movement in English Jewry,* 23-27). "When a new truth instead of being sought for seeks its instrument, taking hold of a single person or people and impelling them to become its herald, this is revelation" (*Proceedings of the Pittsburgh Conference,* 24-26).

In keeping with modern scientific studies of the Bible, the Pentateuch is regarded as the product of many centuries. Thus Judaism is itself the product of a long and continuous development; the revelation of the divine will is progressive and evolutionary. "God still reveals His law; (revelation) never slackened." This evolutionary point of view is given expression in the Pittsburgh Platform (1885), which declares that Judaism is a progressive religion (Philipson, David, *The Reform Movement in Judaism,* 356), and in the latest pronouncement of Reform Judaism (the Columbus Platform, *Central Conference of American Rabbis Year Book,* vol. 47, p. 98), where it is said: "Revelation is a continuous process." (No other rabbinical body has formulated a definition of revelation from the modern point of view.) This interpretation of revelation is given liturgical expression also in the *Union Prayer Book* (vol. 1, revised ed., p. 32) in this form: "Open our eyes that we may see and welcome all truth, whether shining from the annals of ancient revelations or reaching us through the seers of our own time, for Thou hidest not Thy light from any generation of Thy children who feel after Thee and seek Thy guidance."

ABRAHAM SHUSTERMAN.

REVELATION, BOOK OF (called also the Apocalypse of Saint John the Divine, or simply the Apocalypse), last book of the New Testament. It consists of twenty-two chapters, which fall into two main parts: chaps. 1 to 3, and 4 to 22. The first three chapters contain letters written by John to the seven churches of Asia Minor. The remainder is the main apocalypse, depicting the end of the world. Successive calamities are represented as coming upon humanity, while fantastic symbolic images represent the war between the forces of good and evil. The chief evil-doer is "the great whore Babylon," that is, Rome. When the cup of calamity is full, Jesus comes to reign upon earth for a thousand years; at the end of this millennium, Satan is loosed for a spell, but is finally conquered, and a new heaven and a new earth are created. The book ends with the prediction that all these things will come to pass quickly.

Critical investigation of the Book of Revelation shows that while it was composed by a Christian author, it is based upon Jewish sources. There are indications of at least two Jewish apocalyptic writings upon which the author drew. The first is found in 1:1, 8, 12-19; 4:1 to 6:17; 8:1-13; 11:14; 14:1-7; 11:16-18. It starts out with an introduction, and gives an account of an angel who takes the writer up to heaven, where he sees twenty-four elders worshipping at the throne of God. He is then shown a book with seven seals, which only the Lion of the tribe of Judah, the Root of David (the Messiah; cf. *Isa.* 11:1; *Jer.* 23:5; *Zech.* 6:12) can open. Then follows the opening of the seven seals, with corresponding calamities upon mankind. This is followed by a brief statement of the bliss awaiting those who have been found righteous.

The second apocalypse is noted for the fact that the evil-doers are most distinctly symbolized, and that there is a definite note of hostility to Rome. This apocalypse is found in 10:2 to 11:13; 12:1 to 13:18; 14:6 to 22:6. It opens with directions similar to those in *Ezekiel* and *Zechariah,* and with an account of the destruction of Jerusalem by the beast, who is described much in the fashion of *Daniel.* There is an allusion to emperor worship in the symbol of the mark of the beast that must be on the hand of every individual (13:16-17), and the emperor is symbolized by the cryptic number 666 (other versions give 636). Thereupon angels arise for deliverance, and seven great plagues come upon the earth to destroy the evil-doers. There is a vision of a woman, who represents Babylon (Rome), who is denounced in Biblical language; a song of derision is sung over her fall. Then follow the triumph of God, the first resurrection, the millennium, the release of Satan, the final battle, the second and last resurrection, and the creation of a new heaven and earth.

The Christian author of the book apparently took these apocalypses and reworked them into a Christian form. In many cases evidence of these changes are apparent, as in the substitution of the term "Lamb of God" for "Lion of Judah" or "Messiah." The original sources were apparently written in Hebrew, and in some cases are wrongly rendered into Greek; thus in 10:14-15 the "four angels" are due to a misreading of the Hebrew *melachim* ("kings") as if it were *mal'achim,* and in 21:3 *skene* ("tent") points to an original Shekinah.

The exact date of the book and its sources can not be determined. Judging from their contents, the two Jewish apocalypses were written in the 1st cent. C.E.,

the first before the destruction of Jerusalem (70), the latter after. The number 666 has been interpreted as referring to Nero, but may possibly be Caligula. It is possible that the book assumed its present form in the time of the persecution of the Christians under Domitian (95 C.E.). It is noteworthy that there is no sharp differentiation anywhere between Jews and Christians; the enemies are practically always the idolators and, in the latter part of the book, Rome, while the figures are derived from the Hebrew Bible.

The John to whom the authorship of the book is assigned is neither the apostle nor the author of the book which bears his name. He was probably a Christian of Asia Minor, since he was well acquainted with conditions there. SIMON COHEN.

C., in Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 239-66; Vischer, E., *Die Offenbarung Johannes* (1895); rabbinical parallels are found in Strack, H. L., and Billerbeck, Paul, *Kommentar zum Neuen Testament aus Talmud und Midrasch,* vol. 3.

REVERE, a city in Massachusetts with an estimated Jewish population of 6,000 in 1943, out of a total population of 34,405 (census of 1940). In this resort city most of the Jewish population engaged in small retail enterprises. In 1943 there were three congregations, all Orthodox. Rabbi H. A. Landes in that year served Congregation Tifereth Israel and Congregation Ahavas Achim Anshe Sphard; Rabbi Morris Funk served Temple B'nai Israel. Revere also had, in 1943, local chapters of Hadassah, Young Israel, the Jewish War Veterans of the United States and the A.Z.A. Members of the community belonged to the B'nai B'rith lodge of adjacent Winthrop. The local charities were administered by the Revere Hebrew Ladies' Charitable Association and the Revere Free Loan Society. The community also supported the Revere Hebrew School Kadimah.

A large number of Jews participated in the local government as councilmen, members of the board of health, city physicians, city solicitors, city auditors and traffic commissioners. In 1943 Louis B. Glixman was commissioner of public welfare; Sidney Zukor, city solicitor; and Frank Sandler, city physician. Charles Dreyer was on the school board (appointed 1917), and Charles Freeman was a member of the city council. HENRY W. LEVY.

REVERE, GIUSEPPE PROSPERO, poet, b. Trieste, 1812; d. Rome, 1889. In his student days he was expelled from Milan because of his participation there in a political conspiracy. Subsequently he took part in the Italian struggle for freedom and in political action against Austria in Turin, Venice, Florence and Rome; he was a friend of a number of leading Italians.

Revere wrote poetry, historical essays and dramas; his outstanding works are *Nuovi Sonetti* (1846); *Persone ed Ombre* (1862); *Lorenzino de Medici;* and *I Piagnoni e gli Arrabiati.* His *Bozzetti Alpini* and *Marine e Paesi* enjoy greater popularity. His later works include *Osiride; Sgoccioli;* and *Trucioli.* In his last years he was entrusted by Minister Venosta in Rome with the editing of the *Bollettino Consolare* (consular reports.)

Lit.: Introduction to the collected works of Giuseppe Revere, vol. 1 (1896); Tamaro, Attilio, *Storia di Trieste,* vol. 2 (1924); Revere, Giuseppe, *Scritti varii a cura di Amedeo Revere* (1928).

RÉVÉSZ, BÉLA, Hungarian author and publicist, b. Esztergom, Hungary, 1876. Esztergom is the residence of the Primate of Hungary, and memories of the pious, somnolescent little town frequently recur in Révész' writings. *Esztergomi lélek* (Esztergom Soul; 1934) is the story of his childhood, made up of moods and reminiscences. Early in life he went to Budapest, where he threw in his lot with the daily newspaper of the social democratic workmen, *Népszava,* remaining true to his deeply humanitarian and social feeling throughout the meanderings of European thought. He soon won recognition, especially from literary men—for the first time when he carried away the main prize in a literary contest with a short story. Later, too, without being aware of it, Révész wrote with his fellow authors in mind; it is for them that he destined his solemn words and his sentences formed from the popular and Biblical languages. This style is not always suitable for the rendering of facts, therefore even the short stories of Révész often convey moods rather than action; his tone is best suited for such lyric contemplations as the brooding piece called *Beethoven* (German version, *Beethoven, eine Phantasie,* 1919) which, with self-controlled artistry, insinuates the motif of his own hardness of hearing.

Many of his books deal with the hard life of poor people; *Vonagló falvak* (Villages in Agony) portrays women running the villages while the men are trying to make good in America. Other books of his were: *Emberek arca* (Faces of Men); *A nagy börtön* (The Great Prison); *Velük—értük* (With Them—For Them); *Egyedül mindenkivel* (Alone with Everybody); *Magyar küzdelem* (Hungarian Struggle; 1937).

The great experience of Révész' life was his friendship with the greatest Hungarian lyricist and revolutionary poet, Endre Ady. Night after night, for many years, he sat with the poet at the Három Holló (Three Ravens) Tavern in the proximity of the Budapest Opera. With his impaired hearing, he was the ideal listener to the genius whose wine-inspired soliloquies needed understanding not of the rational kind which implies objection, but of the sympathetic kind, content to absorb.

The literary harvest of this friendship were (up to 1942) five volumes by Révész, including *Ady tragédiája* (The Tragedy of Ady), an analysis of the poet's life in two volumes; *Ady és Léda* (Ady and Leda; 1934); and *S lehullunk az őszi avaron* (And We Drop Dead Upon the Autumn Leaves; 1937), books devoted to the poet and to Leda, the Jewish woman who had a decisive influence upon his poetic evolution. His only major trip took Révész to the United States (1939), where he lectured to Hungarian Americans, trying to convey to them the literary resplendence of which he had been witness and especially his friendship with Ady.

He returned to Hungary with the feeling that he had failed to evoke a warm response among those whom he addressed, but not without taking back with him the incentive to write the life story of Max Nordau. Thus in 1940 appeared the first full-length published biography of the Zionist leader, *Max Nordau élete.* It is suffused with appreciative tenderness for the leader, for his captain, Theodor Herzl, and for the Jewish people awaking to a new sense of national pride. In 1943 nothing definite was known in the United States about the fate of this sincere Jew and socialist. He was believed to be living in Budapest. IGNOTUS.

RÉVÉSZ, GÉZA, psychologist, b. Siófok, Hungary, 1878. After obtaining the LL.D. degree from the University of Budapest (1901), he studied experimental psychology and philosophy at the Universities of Berlin, Munich and Göttingen. He became professor of experimental psychology at the University of Budapest. Révész also carried out the first attempt on European soil to provide military educators with a complete psychological and pedagogical training, by lecturing to teachers in the military academy of Budapest. He was deprived of his professorship by the anti-democratic government of 1920, and settled at Amsterdam, Hol-

land, where in 1932 he became professor of psychology and director of the psychological laboratory of the Municipal University. Up to the time of the invasion of the Netherlands by the Nazis in May, 1940, he was editor-in-chief of the journal *Acta Psychologica,* founded by him in 1937. Of his whereabouts in 1943 nothing was known.

The most important of the numerous books published by Révész in various languages are: *Das frühzeitige Auftreten der Begabung und ihre Erkennung* (1921); *The Psychology of a Musical Prodigy* (1925); *Experimental Study in Abstraction in Monkeys* (1925); *Musikgenuss bei Gehörlosen* (Katz, D., co-author, 1926); *Formenwelt des Tastsinnes* (1937).

REVOLUTION, AMERICAN, *see* SOLDIER, JEW AS; UNITED STATES; the Articles on the Eastern States.

REVUE DES ÉTUDES JUIVES, *see* SOCIÉTÉ DES ÉTUDES JUIVES.

REVUSKY, ABRAHAM, journalist, b. Smiela, Ukraine, Russia, 1889. He was taken to Palestine in his childhood, then back to Russia, and educated there and in Vienna, where he received his university degree. Revusky began his journalistic work while living in Vienna, writing in both Russian and Yiddish; subsequently he went to Odessa and was on the staff of the *Odesski Listok.*

In 1917 and 1918 Revusky was a member of the council of the Jewish community of Odessa. He was made assistant to the minister for Jewish affairs in the Ukraine in 1917; in 1919, when Wilhelm (Jacob Wulf) Latzky-Bertholdi, the minister, died, Revusky was appointed to the post. Later that year the changes produced by the civil war in Russia broke up the Ukraine government, and Revusky returned to Palestine, remaining there for three years, then going to Europe.

He came to the United States in 1924, joining the staff of the *Morning Journal,* with which he was connected in 1943 as editor of foreign news. He went to Palestine again in 1933.

Much of his writing dealt with Palestinian matters. Among his early studies was *From Balfour to Samuel* (1921), which appeared in both Yiddish and Hebrew. *In die Shvere Teg fun Ukrainie* (1924) is a survey of conditions in the Ukraine during the period when Revusky was connected with its government. He wrote also a study of the Histadruth Haobedim, the Palestine labor organization, and *Jews in Palestine* (English, 1935 and 1936; French and Yiddish, 1936).

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 405-8.

REWARD AND PUNISHMENT. Although the doctrine of retribution has undergone many changes in Jewish thinking, it has always remained a necessary part of Jewish theology because of the feeling that God, being just and righteous, can not but reward the good and punish the evil. The fundamental question of Abraham (*Gen.* 18:25), "Shall not the Judge of all the earth do justly?", is always answered in the affirmative. The earliest Biblical writers felt that such retribution would take place in terms of earthly success and punishment in this world. Man was admonished to honor his parents that "his days may be long upon the land" which the Lord has given him (*Ex.* 20:12). This principle is emphasized in *Deuteronomy,* which enforces its injunctions by such statements as "that it may be well with thee, and that ye may increase mightily" (*Deut.* 6:3). The history of the kings of Israel and Judah, recorded in *Kings* in the spirit of *Deuteronomy,* tries constantly to draw the lesson that punishment is meted out to the wicked while the righteous are rewarded for their virtue. This is retribution in its simplest and most direct form.

Yet the time came when this simple and direct hope in retribution was seen to be contrary to the facts of life. Jeremiah raised the question, "Wherefore doth the way of the wicked prosper?" (*Jer.* 12:1). The same theme is taken up in *Job,* "Wherefore do the wicked live, become old, yea, wax mighty in power?" (*Job* 21:7). By implication, the suffering of the righteous is regarded with astonishment. The revolutionary nature of such questioning becomes evident the moment the opinions of Job's friends are taken into consideration. Bildad asks (*Job* 8:8-12), "Can the rush shoot up without mire?" In other words, man's suffering proves that he has sinned. After a lengthy statement in amplification of this principle, he declares (verse 20), "Behold, God will not cast away an innocent man." An even stronger defense of the older view is made by Eliphaz, who insists, "The wicked man travaileth with pain all his days" (*Job* 15:20). The doubts expressed by *Jeremiah* and *Job* not only made a restatement of the doctrine of retribution necessary, but also put an end to the practice of deducing a man's character from the circumstances of his life. The sufferer could no longer be branded a sinner; the prosperous man could no longer be considered the favorite of God.

The problem of retribution was further intensified by the fact that in the meantime the prophets had developed the idea of individual responsibility. The pre-prophetic view had been that of communal responsibility; the entire community was punished, for instance, for the sin of Achan (*Josh.* 7) or David (II *Sam.* 24). The Decalogue speaks of the sins and the virtues of the parents as having an effect upon the lives of their descendants (*Ex.* 20:5-6). For those who accepted this point of view, individual suffering was no problem; it could be explained as the result of ancestral or communal transgression. But to the prophets this view was repugnant. To them "religion meant individual piety."

Jeremiah formulated the new idea of individual responsibility, in the words: "It shall no longer be said, 'The fathers have eaten sour grapes, and the teeth of the children are set on edge.' But every one will die for his own sin—he that eateth sour grapes, his teeth will be set on edge" (*Jer.* 31:29-30). Taking this declaration as his text, Ezekiel elaborates on the theme of individual responsibility (*Ezek.* 18). He adds the statement (verse 23): "For I have no pleasure in the death of him that dieth, saith the Lord God; wherefore turn yourselves and live." It was an appeal to the individual to repent in view of his individual responsibility. This prophetic attitude only served to make the problem of retribution more vexatious. Hence the question of *Job* and *Jeremiah.*

The first attempt to solve the problem of the suffering of the righteous and the prosperity of the wicked was to project the idea of reward and punishment into the future. If retribution was not immediately operative, it would be, sooner or later, in the lives of both guilty and innocent. "The righteous *shall be* requited on earth; how much more the wicked and the sinner!" (*Prov.* 11:31). *Ps.* 73 is a poetic treatise which has the same theme. After stating the problem, the Psalmist finds his answer in the *ultimate* punishment of the wicked. "It was wearisome in mine eyes, until I entered the sanctuary of God, and considered their end" (*Ps.* 73:16-17).

This solution, however, was only partial, since many wicked died unpunished and many righteous unrewarded. A second attempt was made to find an answer in the suggestion that rewards and punishments were to be meted out in the world beyond. This took the characteristic form of a Day of Judgment following the resurrection of the dead. "And many of them

that sleep in the dust of the earth shall awake, some to everlasting life, and some to reproaches and everlasting abhorrence. And they that are wise shall shine as the brightness of the firmament; and they that turn the many to righteousness as the stars forever and ever" (*Dan.* 12:2-3).

The same view is echoed in the opinion of the rabbis of the Talmudic period. This world is called merely an antechamber of the world to come (*Aboth* 4:16). Man is reminded that he must give an account to the Eternal Judge (*ibid.* 3:2). None will escape his punishment, and no virtue will be unrewarded (*ibid.* 2:7). "He who labors before the Sabbath (that is, in this world) will eat on the Sabbath (that is, in the world to come); but if a man does not labor before the Sabbath, how can he eat on the Sabbath day?" (*A.Z.* 3b).

While this solution satisfied the doubts of the majority, there were some who found a more spiritual answer. The writer of *Job,* for instance, declares that what man regards as an injustice in view of the suffering of the righteous and the prosperity of the wicked is merely apparent. It is not real. Man's mind is finite; God is infinite. Therefore, man can not comprehend the divine plan in its entirety. "The thunder of His mighty deeds who can understand?" (*Job* 26:14). "By thus emphasizing the immeasurable distance between the finite and the Infinite, Job implies that if a man could comprehend the mysterious, ultimate relations of all things—then those things which by reason of his finite point of view must now seem to him unjust would appear infinitely wise and just" (Buttenwieser, Moses, *Book of Job,* 59). Since man can not fathom the plan and purpose of God, it becomes his duty to serve without thought of reward (*Aboth* 1:3). Goodness must be regarded as its own reward. "The reward of a *mitzvah* (performance of a divine command) is the *mitzvah* itself, and the punishment for an *'aberah* (offense) is the *'aberah* itself" (*Aboth* 4:2). Out of every good deed something of inestimable value comes into man's life and into the universe itself. This must be regarded as the tangible reward of virtue (Baeck, Leo, *Essence of Judaism,* 184).

All the later Jewish thinkers have combined these points of view in the discussion of retribution. Although the greatest Jewish thinkers have preferred to consider goodness as sufficiently desirable in itself, regardless of consideration of material reward and punishment (Maimonides, *Hilchoth Teshubah* 7 to 9), the doctrine of retribution has a place in every creedal formulation; thus it forms the eleventh article of the creed of Maimonides. It finds constant expression in Jewish homiletics and in the liturgy. Thus the Memorial Service of the *Union Prayer Book* (vol. 2, p. 329) reads: "Surely there will be compensation for those who suffer innocently, reward for virtue thwarted and punishment for wickedness which triumphs but for a day." Thus, in one form or another, the idea of reward and punishment on the part of a righteous God has always remained a fundamental doctrine of Judaism. ABRAHAM SHUSTERMAN.

REYNER, HARRY, civic official and foreign consul, b. Newport News, Va., 1893. He entered business in Newport News in 1919, subsequently becoming a securities broker. Except for the year 1936, when he was associated with a New York securities firm, he remained in Newport News. In 1911 Reyner was made consul for the Dominican Republic in Newport News and Norfolk. Later he became also consul for Costa Rica (1913), for the Republic of Haiti (1924) and for the Republic of Guatemala (1924).

Reyner was a member of the city council of Newport News from 1922 to 1936; he was vice-mayor of the city from 1926 to 1930, and mayor from 1930 to 1932. He held also numerous communal posts, among them the presidency (1927-28) of the Associated Charities and the honorary chairmanship of the United Palestine Appeal. During the first World War he enlisted as a private, but had been advanced to a captaincy before his discharge, and he retained this rank in the Reserve Corps.

REZIN, last king of Aram (about 735 B.C.E.), ally of Pekah of Israel in a war against Tiglath-pileser of Assyria. He seems to have been the son of Tabeel, as *Isa.* 7:6 speaks of a plan to place a "son of Tabeel," probably a brother of Rezin, upon the throne of Judah. Rezin and Pekah attacked Ahaz to compel him to join their coalition, but were compelled to retire and face the advancing Assyrians, who overran Aram, killed Rezin and made the whole country an Assyrian province. Tiglath-pileser mentions the campaign in his annals, and gives the name of Rezin as Razunnu. This would suggest that the proper vocalization is Rezon, which makes the name the same as that of the founder of the Damascene dynasty, who revolted from Solomon (*I Kings* 11:23-25).

REZNIK, LIPE, poet and playwright, b. Russia, 1890. After the October Revolution in Russia (1917) he began teaching in Yiddish language schools in the Ukraine. From 1919 on he became active as a poet. His poetry reflects the mental anguish at first and the gradual adjustment to new conditions of the Jewish lower middle classes in the Soviet Union. In his early period (1919-25) he portrayed through Biblical figures the confusion and "Weltschmerz" of his class after the October Revolution. *Gulkie nochi* (Hollow Nights; (1922) is representative of this period. From 1925 on his poems, while continuing to convey his ideas symbolically, reveal his growing enthusiasm for young pioneers and young communists. They tell about his trips to the Caucasus and down the Volga, about Moscow and Lenin, and about the Red Army. "Bronevik" (Armored Car) and "Groza" (The Storm), on the recapture of Kiev by the Red Army in the civil war, were considered by Soviet critics his best poems of this period.

From 1927 to 1928 Reznik headed the Boi (Building) Jewish literary group in the Ukraine which was inspired by the ideas of nationalism and humanism. In 1929 this group broke up.

Reznik was the author of several successful plays produced by the Jewish state theatres. *Vosstanie* (The Uprising; 1927, Moscow Jewish state theatre) portrayed the struggle of a colonial people against its oppressors. *Poslednie* (The Last Ones) was the drama of the adjustment of a Jewish middle class family to Soviet life. *Rekruty* (Recruits; 1933), a play about a small Jewish town in the time of Czar Nicholas I, was successful on the White Russian and Ukrainian Jewish state theatre stages. His book of poems *Ganz fri* (Quite Early), as well as his poems published in the magazines during the 1930's, show a positive attitude toward Soviet life.

REZNIKOFF, CHARLES, writer, b. Brooklyn, N. Y., 1894. He studied at the School of Journalism of the University of Missouri (1910-11), and received the LL.B. degree from the New York University Law School in 1915.

In 1916 he was admitted to the bar of the State of New York. From 1928 to 1936 Reznikoff was a member of the editorial staff of *Corpus Juris,* an encyclopedia of law. He then went to California, where he was employed as an editorial assistant by Paramount Pictures until 1940. Subsequently he was for a time a member of the staff of the *Universal Jewish Encyclopedia.*

In both his verse and prose writings Reznikoff drew on Jewish themes, and in their use he was moved not by a spirit of nationalism or merely pride of race but by a desire to symbolize man's cruelty and man's courage. His publications in verse include: *Five Groups of Verse* (1927); *Nine Plays* (1927); *Jerusalem the Golden* (1934); *In Memoriam: 1933* (1934); *Separate Way* (1936); *Going To and Fro and Walking Up and Down* (1941). His verse play, "Uriel Acosta," is in *A Golden Treasury of Jewish Literature* (1937).

Reznikoff's first full-length novel was *By the Waters of Manhattan* (1930), with an introduction by Louis Untermeyer. It deals with the life of a Russian immigrant and her son. Later books were *Testimony* (1934), a series of short sketches of early American life based on law cases. He also wrote, with Nathan Reznikoff, his father (1871-1942), *Early History of a Sewing-Machine Operator* (1936). Reznikoff contributed, among other periodicals, to the *Jewish Frontier, The Menorah Journal,* and *Poetry.* From 1941 on he was a contributing editor of *The Menorah Journal.*

Lit.: Zukofsky, Louis, In *Poetry: A Magazine of Verse,* Feb., 1931, pp. 272-84; Benet, William Rose, in *The Saturday Review of Literature,* March 23, 1935, p. 571.

RHEINHOLD, HUGO, sculptor, b. Oberlahnstein, Prussia, 1853; d. Berlin, 1900. At first a merchant in Cologne, he later moved to Berlin and became a student of philosophy at the age of thirty-three, after the death of his wife. In 1886 he became treasurer of the Deutsch-Israelitischer Gemeindebund, and together with Gizycki, Förster, Kristeller and others founded the Berlin Society of Ethical Culture. In the same year he became a student of sculpture under Kruse, and in 1888 at the Berlin Academy.

His well-known original work, *Ye Shall Be As God* (*Gen.* 3:5), a chimpanzee holding a human skull, was exhibited at Berlin in 1895; it attracted much attention, and was copied many times. His creations include *On the Road,* acquired by the Berlin National Gallery; the monument to Alfred Nobel, erected in Hamburg; *The Reaper; The Fighter;* and busts of his mother, Bernhard Fränkel, Ludwig Bamberger and Moritz von Egidy.

RHEINSTEIN, ALFRED, engineer, b. Wilmington, N. C., 1889. He received his engineering degree from Princeton in 1911, and established himself in practice in New York city. In 1914 he founded his own firm, of which he became president in 1920. Rheinstein was construction engineer for many important buildings in Greater New York, including the Andrew Freedman Home for the Aged. Mayor Fiorello H. LaGuardia appointed him chairman of the New York City Housing Authority in 1937. He retained this post until 1939, and was also, in 1938 to 1939, commissioner of the department of housing and building for New York city.

Among Rheinstein's general communal affiliations were his trusteeship of the National Committee on the Housing Emergency and on the Citizens Budget Commission; among his Jewish communal affiliations were his trusteeship of the Jewish Agricultural Society, the Hebrew Sheltering and Guardian Society and the Hebrew Technical Institute. During the first World War Rheinstein was a reserve aviation officer and in charge of construction at Rockwell Field, Cal.

RHEINSTROM, HENRY, jurist, b. Kaiserslautern, Germany, 1884. In 1906 he graduated as a doctor of law and political sciences, and became a lawyer at Munich. From 1917 to 1933 he was professor at the Technical University of Munich. During the first world war Rheinstrom was promoted to the rank of officer and decorated by the Bavarian, Prussian and Austrian high commands. In 1933 he left Munich for Paris after the Nazis had plundered his home. In 1939 he went to New York city, where he became consultant in European law and financial advisor.

Rheinstrom published commentaries on the German tax laws (12 vols., 1910-31) and *Holding-Gesellschaften* (3 vols., 1936-39). From 1923 to 1926 he was a member of the board of the Jewish community of Munich.

RHINE, ABRAHAM BENEDICT, rabbi and author, b. Shavli, Lithuania, 1877; d. Hot Springs, Ark., 1941. He was brought to the United States in 1889, and received his rabbinical degree from the Hebrew Union College in 1902. In that same year he became rabbi of Congregation House of Israel in Hot Springs, Ark., and retained this post until his death. During his residence of four decades in Arkansas he became one of the state's best-known communal leaders, particularly in the field of education. From 1931 to 1933 and again in 1938 and 1939 he was president of the local Board of Education. He was the founder of the Arkansas State Association of School Boards, and its president from 1934 to 1939. In 1940 he was a member of the Governor's Advisory Committee on Education.

Rhine was the founder of the Arkansas Jewish Assembly, and served as its honorary president. He was also a director of the National Jewish Hospital. Among his literary works was a translation of Heinrich Graetz' *Popular History of the Jews,* in five volumes (1919); *The Essence of the Bible* (1930); *Leon Gordon* (1910); and *Tales from the Midrash* (1911). He was a contributor to the *Jewish Encyclopedia.* He received the honorary D.D. degree from the Hebrew Union College in 1910.

RHINEWINE, ABRAHAM, journalist, b. Poland, 1887; d. Toronto, Canada, 1932. He emigrated to Canada in 1908, and when the Toronto *Daily Hebrew Journal* was organized in 1913 joined its staff as city editor. Subsequently he became editor, a post which he held until 1931. Rhinewine was author of a number of Yiddish works, compilations, translations and original studies on Canada and Palestine.

These included: *Eretz Yisroel in Yiddishen Leben un Literatur* (1921); *Kanada, Ihr Geshichte un Entviklung* (1923); *Der Yid in Kanada: Fun der Frantzoizisher Periode biz der Moderner Tzeit* (2 vols., 1925-27). In English, in a second edition, there appeared posthumously (1932) *Looking Back a Century on the Centennial of Jewish Political Equality in Canada.*

RHODE ISLAND, the smallest state in the United States, having a total population of 713,346 (census of 1940), including about 27,850 Jews (1943). Rhode Island, from its founding, was destined as a haven of refuge for persons of all denominations. Its broad and tolerant religious policy was an expression of the spirit of the founder of the colony, Roger Williams. "I desire not the liberty to myself which I could not freely and impartially weigh out to all the consciences of the world beside."

Sephardic Jews settled in Newport in the 1650's, and in either 1656 or 1658 established Congregation Yeshuat Israel. In 1763 a synagogue building was constructed from a plan conceived by the colonial architect, Peter Harrison. This was built in the period of the greatest prosperity of Newport's Jewish community, when the names Lopez, Rivera and Rodriguez were written large in the maritime annals of the nation.

Jews participated actively in the life of the Rhode Island colony. They were among the patrons of the colonial artist Gilbert Stuart; they were active in the Masonic order; they held membership in the Philosophical Society and in the Redwood Library. With the advent of the American Revolution, the large majority of the Jewish population espoused the patriot cause, but even the wealthy Aaron Lopez, who owned thirty ships, was to experience the adverse circumstances which the fortunes of war had wrought. The war

through which American independence was won was also the occasion of the decline of Newport's commercial prosperity.

Consequently, when George Washington visited the Newport community in 1790, the Jewish population of the community was already on the decline, and at the beginning of the 19th cent. the synagogue was closed because most of the Jewish population had left the community.

In the colonial and early national period the Jewish community of Providence was of secondary importance to that of Newport. At that time many of the Newport Jewish community visited Providence. Aaron Lopez contributed 10,000 boards in 1770 for the building of Brown University. However, while the Jewish population of Newport declined, that of Providence steadily increased. In 1820 Dutch Jews came to this city, and in the 1840's German Jewish immigrants arrived. In 1845 the first Jewish congregation was founded in Providence; it was incorporated ten years later. In 1883 Newport began to experience an influx of Jewish immigrants from Eastern Europe, but the industrial center of Providence proved even more attractive to the immigrant tide.

In 1943 there were approximately 23,000 Jews in Providence. In Newport, the normal population of about 950 Jews had, in 1943, increased to about 1,500 or 2,000, due to the establishment of defense industries and military bases. The population discrepancy between the two cities was in accordance with the general population trend, as Newport had in 1940 a total population of 30,532, while that of Providence was 253,504.

Rhode Island is unique as regards consanguineous marriages, in that ever since the year 1764 there has been in every state code a provision to the effect that Jews may marry "within the degrees of affinity and consanguinity allowed by their religion" (*Code of Rhode Island,* 1909, chap. 243, section 4). Hence marriages between Jewish uncles and nieces (but not the parallel cases of marriages between Jewish nephews and aunts) are permitted by law if they are performed in Rhode Island, and they are valid everywhere under the "full faith and credit" clause of the United States Constitution (Article IV, Section 1).

The evolution of the Jewish communities of NEWPORT and PROVIDENCE is treated in greater detail in separate articles devoted to these communities elsewhere in this encyclopedia.

BRISTOL, in 1943, had a Jewish population of about 100 in a total population of 11,159 (1940). The Jewish community of Bristol, younger than that of either Providence or Newport, was organized about 1900. At that time Congregation Agudath Achim was founded. In 1943 the congregation had no permanent rabbi, and the services were conducted by laymen. Other Jewish institutions in the community included the Sunshine Club, which in 1943 assisted the Jewish Welfare Board's U.S.O. center at Newport in its program of providing recreation for service men.

PAWTUCKET had, in 1943, a Jewish population of about 1,100 and a total population of 75,797 (1940). Congregation Ahavat Shalom (Orthodox), organized in 1903, was the only congregation in the community in 1943. Its first rabbi was E. Shisgal, who served from 1920 to 1929; its rabbi in 1943 was Aaron Goldin, whose service began in 1939. Among other Jewish organizations in Pawtucket were a B'nai B'rith lodge, an A.Z.A., and an agency of the United Jewish Appeal.

Like that of Bristol, the Jewish community of Pawtucket dates back no further than the late 19th and early 20th centuries. Abraham Berick and L. Sandler were among those who came to Pawtucket from Russia between 1880 and 1890.

WESTERLY. In 1943 the Jewish community of Westerly, numbering about seventy-five families, maintained a synagogue, but with no regularly functioning rabbi. Several other organizations included a lodge of the B'nai B'rith and a section of the National Council of Jewish Women.

WOONSOCKET had a total population of 49,303 (census of 1940), and a Jewish population of about 900 (1943). The earliest Jewish settlers in Woonsocket arrived in the last two decades of the 19th cent. Among them were Harris Fellman, Bernard Goldenofsky, Philip Hopp, Michael Jacobson, Moses Kornstein, Solomon Lavine, Isaac Margolis, Samuel Schlansky and Solomon Treitel. In 1893 Congregation Lovers of Peace was organized; in 1943 it was known as B'nai Israel (Conservative). The first rabbi was Phineas Israeli, who served from 1919 to 1924. The rabbi in 1943 was Aaron J. Tofield, whose service began in 1940. There was a small Orthodox congregation in the community in 1943.

Other local Jewish agencies included the Woonsocket Hebrew School, Congregation B'nai Israel Library, Woonsocket Hebrew Ladies' Aid and Sisterhood, Chevra Kadisha and B'nai Israel cemetery, Hachnassas Orchin and the Woonsocket Jewish Community Center. Among the national organizations in the community were Hadassah, B'nai B'rith, A.Z.A., and Young Judea. Woonsocket Jewry contributed generously to communal charitable endeavors. In 1919 the relatively small Jewish community raised $32,000 for the war relief fund. In the campaign for a new Woonsocket hospital members of Congregation B'nai Israel contributed $10,000.

The approximately smaller Jewish populations found, in 1943, in other Rhode Island cities were: Central Falls (100), Cranston (200), East Greenwich (70), East Providence (25), Lincoln (15), Middletown (15), North Providence (50), South Kingstown (35), Warren (25), Warwick (15), West Warwick (95).

Among the Jews who held public office in Rhode Island were the following members of the state assembly: Isaac Hahn (1884), Jacob A. Eaton (1908-10, 1918-20), Harry Cutler (1908-12), Max Levy (1910-18), Philip C. Joslin (1915-26; speaker, 1923-26), Henry Hurwitz (1920-26), Maurice Robinson (1926-28), Charles Brown (1926-28). Jerome Hahn was a member of the Superior Court (1919-30) and of the Supreme Court (1930-35). Philip C. Joslin was a member of the Superior Court (1932-). Max Levy was a member of the state senate (1920-22) and of the state judicial council (1927-31). Robert M. Damim, member of the Representative Council in Newport (1929-35), was judge of the Probate Court (1935-).

Harry E. Miller was Eastman professor of political economy at Brown University; I. J. Saxl, physicist and Rabbi William G. Braude were also associated with Brown University.

RHODES, one of the Aegean Islands, situated northeast of the island of Crete, and directly south of the city of Smyrna, Turkey. A number of Jews are known to have lived in Rhodes as early as the year 140 B.C.E. In the year 656 Caliph Moaviah sold the ruins of the Colossus of Rhodes to a Jew of Emesus, Syria. Nothing is known about the Jews of Rhodes thereafter until 1170, when the renowned Jewish traveler Benjamin of Tudela visited the Aegean Islands and found 400 Jews living in Rhodes.

Jews fleeing from a Spanish persecution in 1280 left Tarragona and settled in Rhodes, over which the Saracens then held sway. The Hospitalers of St. John, after being driven from Palestine, became masters of Rhodes and of several other neighboring islands in

Gates to the Jewish quarter in Rhodes

1310. In 1502 a decree issued and enforced by Pierre d'Aubusson, grand master of the Knights Hospitaler, ordered all Jews of Rhodes who refused to accept baptism expelled from the island; on this occasion a number of Jews were converted to Christianity. When the city of Rhodes was captured by the Turks in 1522, several of the baptized Jews returned to their old faith. Those Jews who did not reembrace Judaism escaped to Italy, fearing persecution under the Turkish rule.

Many of the Jews of the island of Rhodes participated in the siege of the city by Sultan Suleiman II the Magnificent (1687-91), aiding the sultan's troops. After Rhodes had capitulated they settled there and, together with other Jews from Salonika and other places whom Suleiman had encouraged to settle in Rhodes, they were granted important privileges.

A blood accusation was levelled against the Jews of Rhodes in 1840; however, despite a false confession secured by means of torture, and leading to several attacks on the Jews of Rhodes, this accusation was easily disproved and the accused Jews were liberated.

In 1923 Rhodes came under the rule of Italy. In 1927 the Jews of Rhodes maintained two large synagogues, two smaller ones, as well as two schools. In 1928 the Jews of the city of Rhodes numbered 3,000, out of a general population of 15,000. The Jewish population of the whole island of Rhodes was estimated in 1942 as about 4,500, out of a total population of about 40,000. During the past three decades (1910-42) there has been a migratory movement of Jews away from Rhodes to the mainland of Asia, and to Palestine; this movement was still continuing on a small scale up to the time of the outbreak of the second World War. The Italian subjects of Jewish faith in the whole Aegean Islands, including Rhodes, were under the supervision of the chief rabbi of Rhodes.

Among the outstanding Jewish authors who lived in Rhodes in the past were: Hayim ben Menahem Algazi; Moses Israel, author of *Massath Mosheh;* Rabbi Ezra Malki, author of the three works *Mishpat, Hoshen Mishpat,* and *Peri Hadash;* and Rabbi Jedidiah Tarikah.

RHODES, SOLOMON A., professor and author, b. Rodi, Italy, 1895. He came to the United States in 1913, and received his Ph.D. degree from Cornell University in 1925. After serving as instructor in Romance languages at Cornell, at Rice Institute, in Houston, Texas, and at New York University, Rhodes joined the faculty of the College of the City of New York (1929). He was made associate professor in 1942.

Among the books published by Rhodes were: *The Jews in the Intellectual Life of France* (1927); *The Cult of Beauty in Charles Baudelaire* (1929); *Within a Cactus Grove* (1933); *Contemporary French Theatre* (1942).

RIAM, *see* IBN MIGAS, JOSEPH BEN MEIR HALEVI.

RIAZANOV, DAVID BORISOVICH, revolutionary and author, b. Russia, 1870. His original family name was Goldendakh. He did underground organizational work in Russia, joining first the Narodniks (populists) in Odessa, and was imprisoned from 1891 on for five years, spending three years in exile at Kishinev. In 1905 he took part in the work of the Social Democratic fraction in the State Duma, and he was imprisoned again in 1907 for a short time.

The periods following imprisonments he spent abroad, mostly in Germany. He edited *Borba* (The Struggle), the magazine of his own small Social Democratic group, engaged in extensive library work, and contributed to the German Social Democratic organ *Neue Zeit* as well as to Russian magazines on topics like Marxism, socialism and the history of the labor movement. He was commissioned to publish the works of Marx and Engels in behalf of the German Social Democratic Party, but the first World War interfered with his work, so that by 1916 he had issued only two volumes.

After the February, 1917, Revolution Riazanov returned to Russia and attached himself to an anti-Bolshevik group called Mezhraiontsi (The District-Wide), joining the Bolsheviks when this organization did, in July, 1917. After the October, 1917, Revolution Riazanov held a series of responsible Soviet posts. He established the Marx-Engels Institute with a rich library on Marxist questions, and published the works of Marx and Engels as well as other important Marxist works.

On several issues Riazanov took a stand in opposition to that of the government of the Soviets. In 1931 he was expelled from the Communist Party for giving assistance to former Mensheviks who had become anti-Bolsheviks. At the same time he was removed from the Marx-Engels Institute.

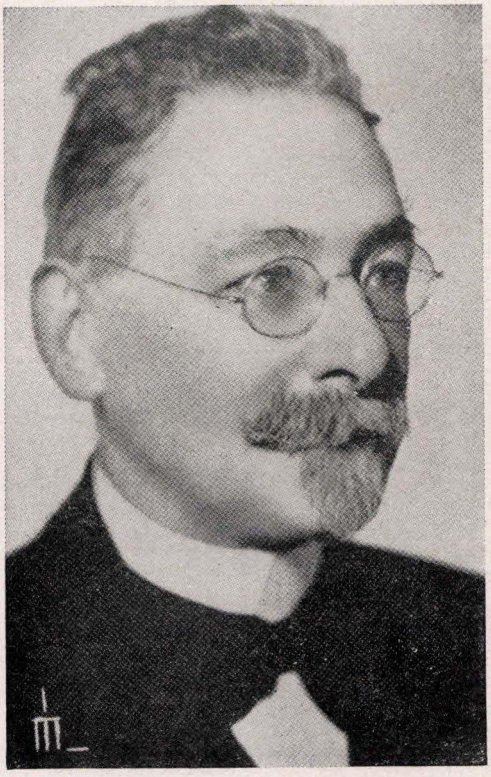
RIBAK, *see* JUDAH BEN KALONYMUS BEN MEIR.

RIBALOW, MENACHEM, Hebrew writer and editor, b. Chudnow, Russia, 1899. After obtaining a Hebrew education in a Yeshiva he attended the University of Moscow. Arriving in the United States in 1921, Ribalow at once became associated with the Histadruth Ivrith, and editor of the Hebrew weekly *Hadoar.* In 1922 to 1923 he was secretary of the Histadruth Ivrith; in 1928 he became vice-president, and still held this post in 1943. As editor and author, Ribalow was one of the most important figures in American Hebrew literature.

Among his own works were: *Sefer Hamassoth,* a book of essays (1928); *Soferim Veishim* (Writers and Personalities; 1936); *Dichter un Shetfer fun Nei-Hebraish* (Poets and Creators of Modern Hebrew; written in Yiddish; 1936); *Kethabim Umegilloth,* essays on ancient and modern Hebrew literature (1942). Ribalow was also editor of *Anthologia Shel Hashirah Haibrith Beamerikah,* an anthology of Hebrew poetry in America (1938); of six volumes of the *Sefer Hashanah Liyehude Amerikah,* an American Hebrew year book; and of several jubilee books and memorial volumes. He was a contributor to various periodicals in English, Hebrew and Yiddish.



David Ricardo

RIBAM, *see* ISAAC BEN MORDECAI.

RIBÁRY, GÉZA, lawyer and communal leader, b. Budapest, 1889; d. Budapest, 1942. During the first World War he served from 1915 to 1918 as first lieutenant in the Austro-Hungarian army, winning several distinctions. In 1918 he was admitted to the bar. He was counsel to IBUSZ, the official Hungarian travel agency, and editor-in-chief of *Ügyvédi Közlöny,* a law journal. From 1939 on, when the economic ruination of the Hungarian Jews was systematically sought by means of laws and ordinances, Ribary, together with György Polgár, assumed the leadership in organizing Jewish self-aid in Hungary.

He devoted much time and energy to aiding the large number of Hungarian Jewish authors and artists who were deprived of their livelihood. In 1940 Ribáry was elected vice-president of the Jewish Community of Pest, the largest and most authoritative body of Hungarian Jews.

RIBIERO, SAMUEL NUNEZ, *see* NUNEZ, SAMUEL.

RICARDO, BENJAMIN ISRAEL, rabbi and educator, chief rabbi of Amsterdam, b. Amsterdam, Holland, 1872. He was the son of David Israel Ricardo. His theological and classical studies were pursued under the most difficult circumstances.

Nevertheless he took the examination in the classic letters in 1899. Four years later he became a rabbi. In 1905 Ricardo was appointed head of a religious school, but his health began to fail and in 1906 he was forced to give up this position. For many years thereafter he pursued theological studies, obtaining his doctor's degree finally in 1917, at the age of forty-five.

In 1919 Ricardo was appointed acting rabbi in the Portuguese Jewish community of Amsterdam. Upon the death of the chief rabbi, Isaac Palache, Ricardo assumed his functions temporarily, and was appointed chief rabbi the next year (1928). At the same time he became rector of the Portuguese Israelite Seminary, of which he had been a teacher since 1900.

Ricardo was an ardent Zionist, and wrote many articles for the *Mizrachie,* a theological monthly issued by the Dutch branch of the Zionist League. He was also spiritual advisor of the Portuguese Israelite Youth Movement. Nothing was known in 1943 of his fate after the German invasion of The Netherlands in May, 1940.

RICARDO, DAVID, economist, b. London, 1772; d. 1823. He was the son of Abraham Ricardo, who came to England from Amsterdam, where the Ricardo family—Sephardim of Italian origin—had lived for several generations. Ricardo inherited the financial acumen that made his father wealthy, and might have remained his father's associate had not his marriage to a Quakeress severed the relations between him and the elder Ricardo. His financial talents remained unimpaired, however, by the separatiion, and the younger Ricardo won his own fortune on the stock exchange.

The reading of Adam Smith's *Wealth of Nations* in 1799 turned Ricardo to the examination of economic theory. His first work in the field was published anonymously in the *Morning Chronicle* in 1809. Later he amplified it into a pamphlet, *The High Price of Bullion.* Friendship and correspondence with Thomas Robert Malthus, James Mill and other scholars of the time provided part of the incentive for Ricardo's further studies in economic theory. He retired from the stock exchange, and in 1817 published his *Principles of Political Economy and Taxation.* This major work showed its origins in the same period of economic development that produced the theories of Karl Marx.

Ricardo established a coherent body of economic principles, and thus may be said to have founded the science of political economy. The so-called "Manchester" school of free trade, certain fiscal principles applied in currency and theoretical offshoots of the concept of value as embodied labor may be traced to Ricardo's ideas.

Ricardo was a member of Parliament from 1819 until his death. In Parliament he had occasion to speak on behalf of the religious toleration movement which English Jews were then fostering in the effort to rid themselves of the disability handicap. This was the only sign of Ricardo's affiliation with the Jewish

people. One of Ricardo's sons was also, for a time, a member of Parliament.

RICARDO, JOHN LEWIS, free trader, financier and member of the British Parliament, b. London, 1812; d. London, 1862. He was the son of Jacob Ricardo, a financier who was a brother of David Ricardo. In his early life Ricardo displayed great athletic prowess. He was a famous horseman, and had intended to enter the British army, but was induced, on his father's death, to continue the complicated financial business which his father left. In 1841 Ricardo emerged in the political arena by advocating repeal of the corn laws. He entered Parliament, and constantly demanded the revision of the navigation laws, which he had studied intensively. In 1847 he published *The Anatomy of the Navigation Laws.*

Ricardo took a leading part in the promotion of the electrical telegraph. In 1846 he established the Electrical Telegraph Company, whose chairman he was for ten years. It was due to his initiative that the telegraph system spread rapidly during the 1850's. Ricardo also promoted railroads in England and abroad, and inaugurated a great social revolution by introducing the employment of female clerks.

RICCHI (RAPHAEL), IMMANUEL HAI BEN ABRAHAM, rabbi, Cabalist and Talmudist, b. Ferrara, Italy, 1688 or 1693; d. near Cento, Italy, 1743. After occupying many positions as teacher and rabbi, he went (1718) to Safed, Palestine, where he was reordained rabbi by Hayim Abulafia. Following an epidemic in 1720, Ricchi left Palestine; he and his fellow travelers were captured by pirates, but later released. Until 1723 he was rabbi in Florence, and thereafter a merchant in Livorno. In 1735 he went back to the Orient, and spent two years in Aleppo and three in Jerusalem. While traveling in Italy in 1743 he was set upon by robbers near Cento and slain.

His most important work is the *Mishnath Hasidim* (Amsterdam, 1727), a popular transcription of the entire Cabala which, like the Mishnah, is arranged with partly allegoric use of the titles of the tractates. Ricchi wrote also a commentary on the Mishnah, responsa and other works.

Lit.: Fürst, Julius, *Bibliotheca Judaica,* vol. 3, p. 136 et seq.; Landshuth, Eliezer, *Ammude Haabodah* (1857) 302-3; Nepi, G., and Ghirondi, M., *Toledoth Gedole Yisrael* (1853) 289.

RICE, ELMER, playwright, b. New York city, 1892. He intended at first to practise law, and in 1912 received his LL.B. degree from the New York Law School, being admitted to the bar the following year. His law experience, however, went into the writing of his first play, *On Trial,* which was produced in 1914 and which was such a success that royalties from it and from its many recurrent amateur presentations helped Rice through the many years that followed, during which his persistent experimentation with dramatic form met only recalcitrant reception from a popular point of view. With *Street Scene* (1929), which won the Pulitzer Prize, the fusion between his own aims and public appreciation occurred, and his reputation was won in the popular sense, as it had

Elmer Rice

earlier been won among progressive theatrical groups. By 1942 Rice had seen twenty-two of his plays produced, in three of which he had collaborated with other authors; twelve of these plays had been produced after *Street Scene.*

As a dramatist Rice has spanned the whole period of what is usually reckoned the modern theatre in the United States. Beginning with *On Trial* in 1914, he was a successful playwright before Eugene O'Neill had been heard of, and he remained active in 1943. His contributions have been numerous and varied. Four plays, all different in tone and style, represent the peaks of his accomplishment. *On Trial* was a swift, effective and enormously successful murder play written in his youth. *The Adding Machine* (1923) is usually given top place among American impressionistic dramas. *Street Scene,* a slice of realistic tenement life, repeated the extraordinary success of *On Trial* and stands by itself as a documentary play drawing its materials from the back streets of New York city. *Counsellor-at-Law* (1931) was a study of legal ethics and Jewish character, brilliantly written and again extraordinarily successful. In a way Rice's reputation has suffered because of the versatility of his talent and his effectiveness in many fields, but his place is secure among the important playwrights of his time.

Rice was author also of two novels: *A Voyage to Purilia* (1930) and *Imperial City* (1937). His participation in the theatrical life of the country included the regional directorship for New York of the Federal Theatre Project, the presidency of the Dramatists' Guild and the directorship of the Playwrights Producing Company. In 1940 his *Two on an Island* was presented on the stage, and in 1942-43 there was a revival of *Counsellor-at-Law,* with Paul Muni again in the title role.

MAXWELL ANDERSON.

RICE, ISAAC LEOPOLD, lawyer and industrialist, b. Wachenheim, Bavaria, Germany, 1850; d. New York city, 1915. He was brought to the United States as a child and educated in Philadelphia. Later, from 1866 to 1869, he studied literature and music in Paris. On his return to the United States he settled in New York, and soon won recognition as a teacher of music and musical theory, and as a musical historian. Nevertheless, he turned away from a career in music and

entered the Columbia University Law School, graduating in 1880.

Between the year of his graduation and 1886 Rice lectured at Columbia and also practised law intermittently; from 1886 to 1889 he practised exclusively. During this period also he established *The Forum,* a literary magazine of high quality. In 1889 he left the practice of law and began the study of electrical inventions. Turning to the administration of corporations for the development and promotion of electrical equipment, Rice contributed to the development of the storage battery and to the establishment of electric automotive industries in the United States, as well as to submarine construction. This many-sided personality also won renown as a chess-player, and was known as the inventor of an opening called "the Rice gambit."

JULIA BARNETT RICE (b. New Orleans, La., 1859; d. Deal, N. J., 1929) was the wife of Isaac Leopold Rice. She was known for her philanthropies, having presented a $1,000,000 stadium and playground to Pelham Bay Park in New York city in memory of her husband. She also donated her husband's collection of 2,000 volumes of French memoirs to Bates College. Mrs. Rice was the founder and leader of the Society for the Suppression of Unnecessary Noise.

JOSEPH MAYER RICE (b. Philadelphia, 1857; d. Philadelphia, 1934), was the brother of Isaac Leopold Rice, and was known as physician, editor and author. He received his medical degree from the College of Physicians and Surgeons of Columbia University in 1881, and for the next seven years practised in New York. Then he chose to specialize in psychology and education. Following two years of study at the Universities of Jena and Leipzig, he returned to the United States, writing and lecturing. In 1897 he became editor of *The Forum,* which had been founded by his brother, and remained its editor for ten years. In 1903 Rice founded the Society of Educational Research. He was author of *The Public School System of the United States* (1893); *The Rational Spelling Book* (1898); *Scientific Management in Education* (1913); and *The People's Government* (1915). CLARENCE I. FREED.

Lit.: Lachman, Samson, in *Publications of the American Jewish Historical Society,* No. 25 (1917) 175-76; *American Jewish Year Book,* vol. 6, pp. 167-68.

RICHARDS, BERNARD GERSON, writer and communal worker, b. Keidan, Lithuania, 1877. He was brought to the United States in 1886. Richards was first a correspondent for various Yiddish newspapers in the United States, then editor of the *Boston Israelite,* published in Yiddish. Later he entered English journalism, writing for various newspapers in Boston and New York. He won critical praise as a creator and delineator of quaint and philosophical characters.

In 1915 Richards was one of the founders of the American Jewish Congress; until 1932 he served as its executive secretary. During the peace negotiations that followed the first World War Richards traveled to Europe as secretary to the American delegation to the Comité des Délégations Juives. He was also, for many years, a valued member of the executive committee of the Zionist Organization of America.

Richards joined the Democratic National Campaign Committee in 1932, holding an executive post on its foreign language staff. Nevertheless, his communal Jewish activities continued. In 1932 he founded the Jewish Information Bureau, and he wrote intermittently for Yiddish and English Jewish publications. Richards was the author of *Discourses of Keidansky* (1903) and *More Discourses of Keidansky* (1928). He was a contributor to the *Universal Jewish Encyclopedia.*

RICHARDSON, SIR LEWIS, industrialist, b. Birmingham, England, 1873; d. Cape Town, South Africa, 1934. The eldest son of K. Richardson, who in July, 1918, officially opened the Port Elizabeth Am Hasefer, Lewis Richardson migrated to South Africa in 1881. His name first came prominently before the public during the first World War (1914-18) when he made it possible for a large number of men in Port Elizabeth, where he carried on business for many years, to enlist by according financial assistance to their families and themselves. He also contributed to the South African Governor General's National War Fund on a handsome scale. Apart from £20,000 in contributions, he donated his large and valuable farm, "Yellowwoods," for the purpose of settling returned soldiers on the land. He was created a baronet in 1924.

Richardson, owner of 20,000 acres of land, was largely interested in developing the ostrich feather and Cape wool industries. In 1922, owing to a restricted European market, the mohair farmers of the Cape Province were faced with utter ruin and the industry with extinction. The government was not in a position to afford them any relief, and Richardson did his best to help them out of their difficulties. In 1922 he went to England. After a careful study of the situation, he decided upon the bold course of establishing a factory at Bradford to sort and work up mohair for trade requirements, and at the same time engaged travelers to push the sale of the products, both in England and on the Continent. By this successful action he saved the mohair farmers by obtaining for them a better market for the sale of their product.

He was also active in Port Elizabeth Jewish communal life. He was president of the Western Road Synagogue. Together with E. H. Cotton, he instituted a scholarship at Jews' College, London, for South African-born youths studying for the Jewish ministry. S. A. ROCHLIN.

Lit.: Eastern Province Herald (Port Elizabeth), April 4, 1934; *London Times,* April 3, 1934; *Zionist Record* (Johannesburg), April 5, 1934.

RICHE, AARON, realtor, publicist, and communal worker, b. Suwalki, Poland, 1885. He came to the United States in 1889, and first settled in Denver, Col., where he gained his early publishing experience. In 1907 he moved to New York city, and until 1924, when he returned west to Los Angeles, engaged chiefly as public relations counsellor. From 1908 to 1910 he was business manager of the *Jewish Daily News* and *Jewish Gazette.* During the first World War, among several jobs he held was that of assistant in charge of publicity to Secretary of War Newton D. Baker in the War Department News Bureau (1918).

In Los Angeles, where Riche entered the real estate business in 1925, he took an active role in the Jewish community, and especially in the affairs of Zionism. He was elected president of the district Zionist Organization and a member of the national administrative committee, as well as of the national council of the United Palestine Appeal. He was also a member of the national executive committee of the American Jewish Congress. He was, in addition, president of the Los Angeles B'nai B'rith lodge. Active in many departments of general civic life, he was given the public service award of the California Safety Council in 1942.

RICHES. While it is impossible to say that all Jewish thinkers are in absolute agreement on the origin and the value of material wealth, the general Jewish point of view has been wholesome and realistic. The possession of it is regarded as an opportunity to render service to one's fellow men. It is never an end in itself. Generally speaking, riches are considered as a gift from God. "The Lord maketh poor, and maketh rich" (*I Sam.* 2:7). The rabbis, who recognized that there

is no visible connection between virtue and prosperity, declared that life, children and wealth are not the result of virtue but of chance (Bialik, H. N., and Rabnitsky, J. H., *Sefer Ha-aggadah,* vol. 5, p. 187). In this connection they speak of Raba and Hisda, both of whom were saints. When either of them prayed, rain fell at his petition. Hisda lived for ninety-two years; Raba died at forty. In Hisda's home sixty marriages were performed, but Raba suffered an equal number of bereavements. In Hisda's home there was enough food even for the dogs, but in Raba's there was not enough even for the children. From this utterance the conclusion may be drawn that one's wealth is not a sign of his virtue nor is one's poverty the result of sin. Said Jannai: "It is not in our power to explain either the prosperity of the wicked or the affliction of the righteous" (*Aboth* 4:19).

Although wealth, like every gift of God, is not to be shunned, it is not the supreme blessing. Righteousness is far more important. It is better to be righteous in the midst of poverty than to be affluent in the midst of wickedness (*Ps.* 37:16). Indeed, the writer of *Proverbs* (30:7-8) prays; "Give me neither poverty nor riches." He recognized that wealth often leads to the denial of God, for he added: "Lest I be full, and deny, and say: 'Who is the Lord?' " In the same spirit he understood that extreme poverty frequently leads man to dishonesty, for he declared: "Or lest I be poor, and steal, and profane the name of my God." In general, the Jewish mind realized that while wealth itself is a blessing, the desire for it leads man astray. "He that loveth silver shall not be satisfied with silver" (*Eccl.* 5:9).

This general point of view was inherited by the rabbis and later Jewish thinkers. They regarded poverty as one of the greatest of all evils. A man might profane the Sabbath rather than become dependent on his fellow men (*Sab.* 118a). Yet the rabbis knew that wealth and anxiety always are commensurate (*Aboth* 2:8). Too great a desire for it is always indicative of a lack of faith in the Providence of God. "Anyone who has a portion of food in his basket and who asks, 'What shall I eat tomorrow?' is a man of little faith" (*Sotah* 48b). The rabbis regarded wealth as relative; the man who is truly rich is the one who is most content with what he has (*Aboth* 4:1). The possession of wealth always means great responsibility toward the poor.

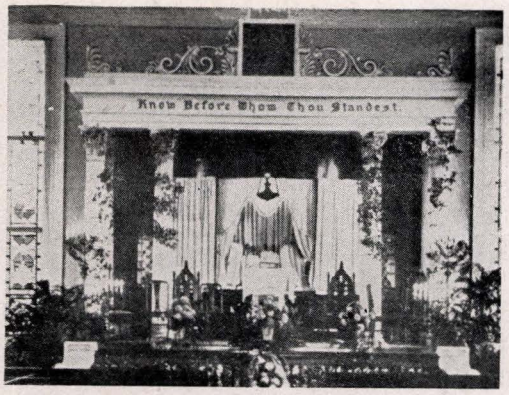
This is the classical Jewish point of view. The Essenes, by their manner of living, were advocates of a doctrine to which the great mass of Jews did not subscribe. Josephus (*Antiquities,* book 18, chap. 1, section 5) declares that the Essenes "will not suffer anything to hinder them from having all things in common, so that a rich man enjoys no more of his own wealth than he who hath nothing at all." They are further described by this historian (*Jewish War,* book 2, chap. 8, section 2) as men who are "despisers of riches—for there is a law among them that those who come to them must let what they have be common to the whole order—insomuch that among them all there is no appearance of poverty or excess of riches but everyone's possession are intermingled with every other's possessions."

The Essene disregard for personal property is a notable exception to the general principle accepted by the Jewish people. This principle is given liturgic expression in these statements (*Union Prayer Book,* revised ed., vol. 1, p. 91): "May our hearts never be so carried away by material success that we make idols of wealth;" "In prosperity may we not be tempted to say, 'My power and the might of my hand have gotten me this wealth'; but may we remember, O God, that it is Thou who givest strength to acquire substance." Finally, there is the liturgic declaration that man must regard whatever he possesses as an entrustment from God, to be shared with his fellow men (*Union Prayer Book,* vol. 1, newly revised ed., p. 45), "Let us then, O Lord, be just and great hearted in our dealings with our fellow men, sharing with them the fruit of our common labor, acknowledging before Thee that we are but stewards of whatever we possess."

ABRAHAM SHUSTERMAN.

Julia Richman

RICHMAN, ARTHUR, playwright, b. New York city, 1886. Primarily a writer of plays for the theatre, he was author of *Not So Long Ago* (1920); *Ambush* (1921); *The Serpent's Tooth* (1922); *The Awful Truth* (1922); *The Far Cry* (1924); *All Dressed Up* (1925); *A Proud Woman* (1927); *Heavy Traffic* (1928); and *The Season Changes* (1936). Adapted from foreign originals were *Isabel* (1924) and *Antonia* (1925). He likewise worked on a number of notable film plays, having been co-author of *The Laughing Lady* (1930); *Honor Among Lovers* (1931); *Only Yesterday* (1933); and *The Gay Deception* (1935). He wrote the story for the outstanding motion picture hit, *The Awful Truth* (1937).



Richman served as president of the Society of American Dramatists and Composers from 1925 to 1927. He was likewise president of the Authors' League of America (1929 and 1930), and was elected a board member of the American Theatre Wing War Service.

RICHMAN, JULIA, educator, b. New York city, 1855; d. Paris, 1912. She prepared for her career at Normal College (Hunter College), in New York city, and at New York University. After serving as teacher and principal in New York's public schools, she was appointed district superintendent, the first woman to hold that high post in Manhattan.

As a pioneer in educational reform in public school work, she instigated and helped to develop many of the methods of progressive pedagogy. To her goes credit for the first parents' associations. She made a study of defective children; it was then that classes for defectives become a part of New York's educational system, and it was she who organized these first classes. Through her influence, also, the eye examination of children was instituted, and arrangements were made for cor-

Beth Ahabah Temple, Richmond

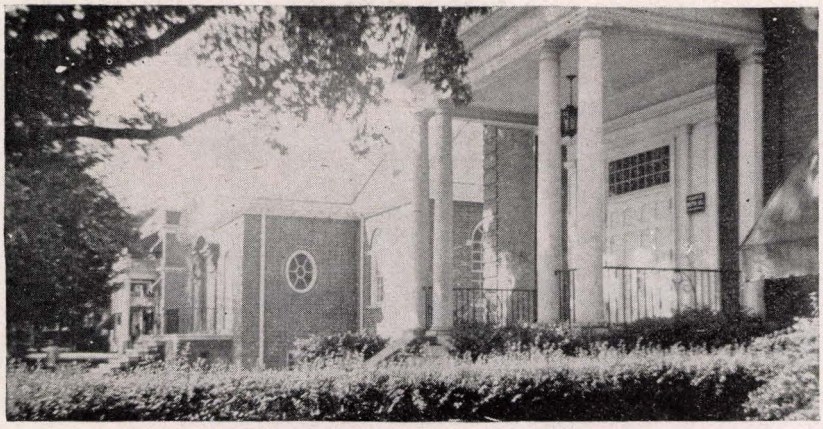
Beth Ahabah Temple decorated for the congregation's centennial celebration

rection of children's vision. She organized the consumptives' outdoor homes, and one of her last accomplishments was the establishment of an employment agency to look out for children forced to leave school and seek work. In Manhattan, the Julia Richman High School, one of the borough's largest, was named to commemorate her contribution to public school work.

Applying her wide experience to Jewish social and educational problems in New York, and in the country at large as well, she became a leading factor in the Jewish Chautauqua Society, a director of the Hebrew Free School Association of New York, a charter member of the National Council of Jewish Women and first chairman of its religious work committee, and first president of the Young Women's Hebrew Association. Much of her attention was given to the work of the Hebrew Educational Alliance of New York. A contributor on educational subjects to numerous journals, she was herself founder and editor of *Helpful Thoughts*.

RICHMOND, capital of the state of Virginia, having a total population of 193,042, including about 7,500 Jews (1942). Before 1769 Isaiah Isaacs was known to have settled in Richmond. In 1777 and in 1780 he engaged in real estate transactions. At the later date he was in partnership with Jacob Cohen, and the document which dissolved their partnership in 1792 was written in Hebrew. Jacob Cohen not only served in the Revolutionary War, but advanced a sum of money as a loan to James Madison in 1782.

Jacob Cohen and Marcus Elcan achieved prominent office in the local Masonic organization. Elcan, who was a resident of Richmond in 1782, operated a large store which carried a variety of merchandise. He possessed, in addition, a library which, considering the period, was of considerable size and scope. Joseph Darmstadt, who came to America as a sutler with Hessian troops in the service of King George III, renounced his foreign allegiance and settled in Richmond. A knowledge of German enabled him to attract the trade of the farmers of German origin who were situated in the valleys of the Blue Ridge mountains. He prospered and became a member of the Amicable Society.



Although the exact date of the founding of Congregation Beth Shalome is unknown, in 1791 there were twenty-nine heads of families listed as members of the congregation. Although the service was in accordance with the Sephardic ritual, at the beginning of the 19th cent. German and Dutch Jews were heavily represented in the membership. Beth Shalome was one of the congregations which congratulated George Washington on his inauguration as first president of the United States. In 1790, it is estimated, the Jewish element constituted about one-sixth of the population of Richmond. Most of the male Jewish population were merchants and, of course, interested in the movement for internal improvements in the Richmond area.

In 1815 a petition for improving the navigation of the James River contained the names of Abrm. Cardozo, Samuel Myers, M. Judah, Abram L. Hart, Moses M. Myers, Joseph Darmstadt, I. H. Judah, S. Jacobs, L. Joseph, Isaac Raphael, Mordecai Marks, J. B. Seixas, Abraham Block, Dav. Judah, Solomon Raphael, S. Solomon, and Benj. Wolfe. Samuel Marx, son of the prominent merchant Joseph Marx, was a director of the James River and Kanawaha Canal Company, and president of the Bank of Virginia.

Jews participated fully in almost all phases of Richmond's social, economic and political life. A large percentage of the Jewish element volunteered for service in the Richmond Light Infantry Blues, while the local Masonic organization counted not a few Jewish adherents. For a time Isaac Leeser lived in Richmond, where he wrote *The Jews and the Mosaic Law*. Gustavus A. Myers served on the Richmond city council (1827-55), and was its president for twelve of these years. This many-sided figure was author of a play, *Nature and Philosophy,* served in the Virginia legislature, was president of the Richmond Publishing Co., and a director of the Richmond, Fredericksburg and Potomac Railroad Co. and of the Mutual Assurance Society of Virginia. The cause of tolerance had been advanced to the extent that a Virginia statute exempted from prosecution under the Sunday Law those who "conscientiously believe that the seventh day of the week ought to be observed as Sabbath."

By 1839 the German Jewish community of Richmond was sufficiently numerous to organize a social and charitable society, Chebrah Ahabat Yisroel. In 1841 the society became Congregation Beth Ahabah, and in 1846 the Reverend M. J. Michelbacher was the first minister. Under his direction a congregational school was established which held daily sessions and gave instruction in secular studies as well as in Hebrew and Jewish culture. When the public school system of Richmond was organized (1871), the class rooms were turned over to the city and the first public school classes were located in the basement of the synagogue. Edward N. Calisch became rabbi of Beth Ahabah in 1891 and was still active in 1943, after fifty-two years of service. His golden jubilee and the centennial of the congregation were celebrated simultaneously in 1941.

More than one hundred of Richmond's Jewish population served the cause of the Confederacy during the American Civil War. The soldier section of Richmond's Jewish cemetery contains the graves of thirty-six Jewish soldiers from various southern states killed in action during the Civil War in the vicinity of Richmond. The Jewish community loyally supported the Confederate cause, played host to the soldiers quartered in Richmond, and invested heavily in Confederate bonds. During the war the Ladies' Hebrew Association used its funds exclusively for caring for sick and wounded soldiers. The Ladies' Hebrew Memorial Association was organized in 1866 for the purpose of taking care of the graves of Jewish soldiers in the

The new edifice of Temple Beth El, Richmond

soldiers' section of Beth Ahabah Congregation's cemetery.

In 1856 a Polish Orthodox congregation, Keneseth Israel, was organized. Moses L. Rosenberg was its rabbi from 1859 to 1862. Sir Moses Montefiore Congregation was founded in 1880. Both these congregations were strictly Orthodox in 1943, and drew their membership from among the Russian Jews who came to Richmond after 1880. In 1917 it was noted that none of the descendants of the founders of Keneseth Israel was then among the members of the congregation.

Temple Beth El, which was organized in 1931, is Conservative in ritual, and its rabbi in 1943 was Nathan Kollin. The rabbi of Sir Moses Montefiore congregation in 1943 was Ephraim Shimoff.

Richmond's oldest congregation, Beth Shalome, never recovered the position of influence held by it in pre-Civil War days. In 1867 a movement got under way for amalgamation with Keneseth Israel, but the refusal on the part of Beth Shalome's membership to give up the Portuguese Minhag proved to be a stumbling block. In 1878 the idea of consolidating with Beth Ahabah came to naught. On November 6, 1898, the last meeting of Congregation Beth Shalome was held. Its remaining members joined Beth Ahabah in a body, bringing with them the Torahs and equipment of their congregation.

Among the occupants of the pulpit of Beth Shalome were some of the most distinguished American rabbis of the 19th cent.: Isaac H. Judah, Jacques J. Lyons, Isaac Leeser, Isaac Mendez de Sola, Henry S. Jacobs and George Jacobs.

The following national organizations had branches in Richmond in 1943: B'nai B'rith, Hadassah, Brith Shalom, National Federation of Temple Sisterhoods, National Council of Jewish Women, and National Federation of Temple Brotherhoods.

Members of the Richmond City Council: Samuel Myers (1800); Benjamin Wolfe (1816); Joseph Darmstadt (1816); Gustavus Myers (1827-55); Alfred Moses and Jacob Levy (1871); Sol Bloomberg, president (1902); Max Gunst (1934-36); Lee A. Whitlock (1936-39). Jacob I. Cohen was city magistrate of Richmond (1790), city recorder (1805-13), member of the common council (1813-19) and acting mayor (1819). William Lovenstein was a member of the Richmond state assembly (1869-75) and of the state senate (1875-79). From 1930 to 1935, Theresa Pollak was an instructor in art at the University of Richmond.

EDWARD N. CALISCH.

Lit.: Huhner, Leon, "The Jews of Virginia from the Earliest Times to the Close of the Eighteenth Century," *Publications of the American Jewish Historical Society*, No. 20 (1911) 85-105; Ezekiel, Herbert T., and Lichtenstein, Gaston, *The History of the Jews of Richmond from 1769 to 1917* (1917); Calisch, Edward N., *History of Congregation Beth Ahabah* (1901).

RICHTER, RAOUL MICHAEL, philosopher, b. Berlin, 1871; d. Berlin, 1912. He was the son of the non-Jewish painter Gustav Richter and Carola, daughter of Giacomo Meyerbeer. Richter became professor of philosophy at the University of Leipzig in 1905. He was a protagonist of Wundt and Nietzsche, but became an independent thinker in his later years, especially as to his philosophy of religion. According to Richter, no positive religion is able to satisfy the demands of "pure religion." He was opposed to theism and atheism, and inclined toward pantheism, although he admitted that no pantheistic argument was conclusive, and he differed from the usual pantheistic conceptions of God by characterizing God as neither a personal nor an impersonal being, but as a "super-personal organism."

Richter published a history of skepticism (2 vols., 1903-8); a biography of Nietzsche (1903); several contributions to the philosophy of religion; and an introduction to philosophy, which was often reedited.

RIDDLE (*hidah*). The setting and solving of riddles has been a favorite amusement of the Jews from the earliest times. The oldest Hebrew riddles are found in the Bible. They include the riddle of Samson to the Philistines (*Judges* 14) as well as the questions and answers in the sayings of Agur (*Prov.* 30:15-31), which may have been originally cast in riddle form. The allegory in *Ezek.* 17:1-10 and the description in *Eccl.* 12:2-6 contain some of the elements of a riddle, as they involve the interpretation of enigmatic terms.

Torczyner thinks that there is a similar riddle in *Ps.* 19. Oracles and prophets among the ancient Hebrews seem to have made their utterances somewhat enigmatic; for it is expressly said of Moses (*Num.* 12:8) that God did not speak to him "in dark speeches" (*hidoth*). There is a reference to the riddles which the queen of Sheba put to Solomon (*I Kings* 10:3). Since the Bible does not go into detail, various riddles were suggested in later literature as having been answered by Solomon; specimens are in Josephus (*Antiquities,* book 8, chap. 5, section 3), in *Midrash Proverbs,* and in *Targum Sheni* to *Esther* 1:2. Riddles appear also in the sayings of Ahikar.

There are a number of riddles in the Talmud, such as the unexplained enigma of Bar Kappara which so offended Judah Hanasi that he refused to give the jester the privilege of ordination (*Yer. M.K.* 3:1). The stories of Antoninus and Rabbi sometimes turn on messages sent in the form of riddles, and a letter of Raba in the period of the persecutions of the Jews in the time of Constantius (4th cent. C.E.) is couched in the form of a riddle (*Sanh.* 12a).

The medieval Jewish writers made lively use of riddles. Solomon ibn Gabirol, Judah Halevi, Moses and Abraham ibn Ezra, Judah al-Harizi, Immanuel of

Rome and many others composed riddle poems. Grammatical riddles, such as are found frequently in the writings of Ibn Ezra, are the result of Arab influence. The well-known poem, Ehad Mi Yodea? (Who Knows One?), at the end of the Passover Haggadah, is a medieval number riddle. Sephardic Jewish poets in Turkey (such as I. Onceneyra, 1577) and in Yemen (Shibsi, 17th cent.) also wrote riddles in poetic form.

The country where Hebrew riddles were most developed was Italy in the 17th and 18th centuries. The favorite occasion for such riddles was at weddings, and the efforts of the poets were circulated in manuscripts or printed broadsides. Solomon de Oliveyra, David Franco-Mendes and other poets in Holland in the 18th cent. also were noted for their riddles. In the 19th cent. the use of the riddle in Jewish literature declined, and since that time it has been employed by only a few Jewish writers of repute, such as Isaac Baer Levinsohn (1788-1860). JEFIM SCHIRMANN.

Lit.: Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 270-72; Torczyner, Harry, "The Riddle in the Bible," *Hebrew Union College Annual,* vol. 1 (1924) 125-49; *Jewish Encyclopedia,* vol. 10, pp. 408-9; Abrahams, Israel, *Jewish Life in the Middle Ages* (1932) 384-85; Steinschneider, M., *Rangstreitliteratur* (1908); Schechter, S., in *Folklore,* vol. 1 (1890) 349-58.

RIDER, JOHN FRANCIS, radio engineer and publisher, b. New York city, 1900. After working as an engineer he undertook independent research, and became a writer and editor of radio publications. In 1931 he established the periodical *Service Magazine,* one of the leading trade journals in the field. Rider invented several radio devices, including phastrol, a phase-shifting device to stabilize receivers. In 1942 he entered the United States Army as a captain in the signal corps.

He began to publish the annual *Perpetual Trouble Shooter's Manual* in 1930, and was still issuing the volume in 1943. Other publications include: *The Cathode-Ray Tube at Work* (1935); *F M; Frequency Modulation* (1940); *The Meter at Work* (1941); *Aligning Philco Receivers* (1941).

RIDING, PROHIBITION OF ON SABBATH, *see* WORK PROHIBITED ON SABBATH.

RIEGELMAN, HAROLD, lawyer and public official, b. Des Moines, Iowa, 1892. Admitted to the New York bar in 1916, he became a member of the firm of Nordlinger and Riegelman, with which he was still associated in 1943. He early lent his legal experience to important civic organizations, becoming especially interested in the housing question in New York city. He helped draft the State Housing Law (1926) and the city's Multiple Dwelling Law (1929). As special assistant attorney general of New York state from 1929 to 1932, he was in charge of housing litigation involving constitutional questions.

Riegelman's numerous other civic interests included the United Neighborhood Houses of New York, for which he was counsel from 1919 to 1929, and the Citizens Budget Commission, in whose organization, in 1932, he participated, and whose counsel he became. In 1922 he was made a State Veteran Relief commissioner, and was still active as such in 1943. As a Republican delegate to the 1938 New York State Constitutional Convention, he was chairman of the committee on cities. He received, among other public acknowledgments of his work, the Columbia University Medal for Public Service (1938).

In Jewish affairs, Riegelman became particularly active in collegiate fraternity work. He was elected chairman of the New York council of the American Friends of the Hebrew University.

He saw action abroad in the first World War and was promoted to the rank of lieutenant colonel. In the second World War he returned to duty in the Chemical Warfare Service.

RIEGER, PAUL, rabbi and historian, b. Dresden, Germany, 1870; d. Stuttgart, Germany, 1939. From 1896 to 1902 he was rabbi in Potsdam, then served in Hamburg, and from 1922 to his death was a member of the supreme consistorial council of the Jews of Württemberg. Rieger was also inspector of Jewish education in Württemberg. From 1924 on he published the organ of the Jewish communities of Württemberg.

Rieger's most important literary work was *Geschichte der Juden in Rom,* written in collaboration with Hermann Vogelstein; 2 vols., Berlin, 1895-96). While the second volume of this work was written exclusively by Rieger, a revised and abridged English edition in one volume was published by Vogelstein at Philadelphia in 1940 under the title of *Rome;* it was dedicated to Rieger's memory.

Other works by Rieger included *Hillel und Jesus* (1904); *Ein Tag aus dem Leben eines babylonischen Grosskaufmanns* (1910); *Zur Jahrhundertfeier des Judenedikts* (1912); *Ein Vierteljahrhundert im Kampf um das Recht der deutschen Juden* (1918); *Vom Heimatsrecht der deutschen Juden* (2nd ed., 1924). Rieger wrote the descriptions to the illustrations in the pictorial volume *Jüdische Gotteshäuser und Friedhöfe in Württemberg* (Stuttgart, 1932), published by the Bilder Archive which was founded by the Oberrat der Israeliten Badens.

RIES, ELIAS ELKAN, inventor, b. Baden, Germany, 1862; d. New York city, 1928. He was brought to the United States in 1865. Self-educated, he became a patent lawyer and electrical engineer. Ries obtained more than 200 patents covering an unusual range of inventions. One of his principal devices was the modern alternating current or "converter," by means of which the electrical operation of city and suburban railway lines, as well as the electrification of long distance steam railroads, first became practicable. Priority of invention was finally awarded to Ries after an interference contest lasting twelve years.

Prominently identified with the advance of the electric light industry, Ries was credited with the invention of the first practical socket for "turning down" incandescent lamps. He was responsible also for the basic patents on electric elevator control. In addition, he was a pioneer in welding and riveting by electricity. Other important inventions by Ries included an apparatus for detecting submarines by means of sound, automatic telephone systems, and safety devices for railroads. Many of his patents were bought up by the Westinghouse-General Electric Co. at auction.

In March, 1923, Ries obtained patents on a device for adding sound to film; thus he was a pioneer in the talking motion picture field. These patents on methods and apparatus for sound on film, sold to Lee DeForest, became the subject of extensive patent litigations, carried on for many years after Ries' death. Ries was a fellow of the American Association for the Advancement of Science. The New York *Times* in 1929 listed him as one of the hundred greatest men in all fields and in all countries who had died the previous year. His life is the subject of a biography in preparation by his daughter, Estelle H. Ries, entitled *If I Stand Alone.* ESTELLE H. RIES.

RIES, LEOPOLD ABRAHAM, Dutch finance official, b. Groningen, Holland, 1893. The degree of Doctor of Law was conferred upon him by the University of Groningen in 1917. He entered government service in the province of South Holland in 1919, and in 1921 became chief of cabinet of Queen Wilhelmina's Commissary to that province. He was also first secretary of the state commission instructed to apportion the

proceeds of the first World War profits tax, amounting to 800 million guilders. From referendary of Holland's general treasury (1924) he was promoted deputy treasurer general (1925). In the latter capacity he became a close collaborator of Premier and Minister of Finance Hendrik Colijn. Ries drafted Holland's "budget of millions," and was instrumental in organizing a state loan of sixty million dollars which was placed in the United States.

Following the German moratorium (July 13, 1931), Ries was among the factors instrumental, after many conferences with the German government, in insuring continuation of interest payments on Dutch investments. As a result, a yearly national income of approximately thirty millions was secured. Throughout these conferences (1931-36) he remained a member of the financial delegation to Germany, it being an emphatic desire of the Netherlands government that no concession whatsoever be made to Nazi prejudices.

In 1937 Ries resigned his position for reasons of health, and traveled extensively in Europe studying international finance. When the second World War broke out he was in France, and thence traveled to Portugal. At the request of the Netherlands government in London, he came to the United States (1941) to head the project of daily broadcasts to occupied Holland and the Netherlands East Indies and West Indies. In October, 1942, he was still in that work.

Ries was a frequent contributor to the Dutch monthly *De Economist,* and wrote a large number of pamphlets on matters of economy, efficiency and kindred subjects.

RIES, TERESA FEODOROWNA, sculptress, b. Moscow, 1874. Beginning as a painter, she studied first at the Academy at Moscow. After she had spent one year at this institute, her *Portrait of a Russian Peasant* was awarded a gold medal at the yearly exhibition. She later abandoned painting, however, and turned to sculpture, continuing her studies at the Academy. From Moscow she proceeded to Vienna. There women were not yet admitted to attend the Academy, and she became a private pupil of Edmund von Hellmer. In 1896 her *Lucifer* won the Carl Ludwig gold medal. A portrait bust of her master dates from 1899. After one year under his artistic guidance, *The Witch,* a daringly naturalistic conception of this subject, was awarded another gold medal and gained wide popularity at the Vienna Spring Exhibition. In the Munich "Secession" of 1900 her individual concept of *Death* aroused interest for the brilliant young girl artist, who that same year won a gold medal in Paris with the *Unconquerable.* But Teresa Ries' chosen home was Vienna, where the Prince of Liechtenstein installed her in an atelier in the famous Liechtenstein palace (1906). At this distinguished place she had the opportunity of portraying many members of the aristocracy and other illustrious personalities. Mark Twain, coming from America, was one of her subjects. Other works were *The Lawgiver, The Kiss* and *Eva.* She was entrusted with the sculptural decoration of important buildings and sepulchral monuments. Her venture in literature, *Die Sprache des Steines* (1928), embodies her autobiography. She continued her activities in Vienna, where she lived until 1938. After the invasion of Austria by the Nazis in that year she left Vienna, and in 1940 was living, paralyzed, in the home of a friend in Passy, France.

Lit.: Deutsche Kunst und Dekoration (1899-1900) 278, 280; *The Studio,* vol. 23 (1901) 134; *Deutschösterreichisches Künstler- und Schriftstellerlexicon* (1902); *Kunst und Kunsthandwerk,* vol. 9 (1906); Jansa, *Deutsche bildende Künstler* (1912); *Kunst für Alle,* vol. 30 (1915); Thieme, U., and Becker, F., *Allgemeines Lexikon der bildenden Künstler.*

RIESMAN, DAVID, physician and writer, b. near Eisenach, Saxe-Weimar, Germany, 1867; d. Philadelphia, 1940. After receiving the M.D. degree from the University of Pennsylvania (1892), he entered private practice, and in 1908 was appointed to the staff of the university, serving as professor of clinical medicine from 1912 to 1933, when he was designated professor of the history of medicine. He was also professor at the Philadelphia Polyclinic (1900-18). Riesman was an outstanding investigator in several medical problems. He early called attention to intermittent claudication (lameness) and to chronic pneumonia. Among several important physical signs which he was the first to describe were the soft eyeball in diabetic coma, and the bruit over the eyeball in exophthalmic goiter, both known as Riesman's Sign. The medical profession of America and Europe followed with close attention his work in high blood pressure and myocardial disease, and in 1937 he published *High Blood Pressure and Longevity.* His *American Textbook of Pathology* was used for a number of years as a standard textbook in medical schools.

Deeply interested in medical history and philosophy, Riesman made a number of valuable contributions in this field. He investigated the medical culture of many ages and many peoples, and embodied his ofttimes original findings and interpretations in a series of articles and books written in a fluent style. Included were: *Life of Thomas Sydenham* (1926); *The Story of Medicine in the Middle Ages* (1935); *Medicine in Modern Society* (1938), a collection of historical, philosophical and sociological essays.

Riesman received numerous honors: in 1937 he was awarded the honorary L.L.D. degree by the University of Wisconsin, and in the same year he was elected to the board of managers of the museum of the University of Pennsylvania. The latter institution bestowed on him, *post obitum,* the honorary D.Sc. degree (1940). He was also a chevalier of the Order of the Crown of Italy, but he returned this decoration as a protest against the rise of Fascism in Italy.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 68-69, 417-18; *New York Times,* June 4, 1940.

RIESS, LUDWIG, historian, b. Deutsch-Krone, Poland (then Germany), 1861; d. Berlin, 1928. Riess received the Ph.D. degree in 1885; his thesis, dealing with the history of English electoral law in the Middle Ages, questioned the fundamental hypotheses on which the greatest authorities of English constitutional history, Stubbs in England and Gneist in Germany, had built their theories on the rise of English parliamentarism. Riess' critical examination caused Stubbs and Gneist to adopt the opinion of the young savant. Although the theory formulated by Riess was later repudiated, his first scientific work profoundly influenced the study of English constitutional history in England, France and Germany, and an English translation of that thesis was published as late as 1940. Notwithstanding this brilliant start, Riess could not obtain appointment as professor at a German university because of his Jewish origin. He therefore went to Japan, where he was professor at the University of Tokyo from 1887 to 1902. After returning to Germany, Riess became lecturer at the University of Berlin.

He published *Lectures on English Constitutional History* (1891); *Historik,* a methodology of historical science (1912); a popular general history; and several contributions to the knowledge of Japan and to modern European history.

RIESS, PETER THEOPHIL, physicist, b. Berlin, 1805; d. Berlin, 1883. A master of experimentation, he worked on friction electricity, induction and heat effect, and published several works on these subjects. His

Gabriel Riesser

election to the Prussian Academy of Sciences (1842) met with great opposition, inasmuch as he refused to be baptized. However, due to the energetic intervention of Alexander Von Humboldt, he was admitted to the Academy, thus being the first Jewish academician.

Riess' works include *Die Lehre von der Reibungselektrizität* (2 vols., 1853) and *Abhandlungen zur Lehre von der Reibungselektrizität* (1867).

RIESSER, GABRIEL, champion of Jewish emancipation, b. Hamburg, Germany, 1806; d. Hamburg, 1863. He was the grandson of Raphael ben Jekuthiel Hakohen. In 1826 he received the degree of doctor of jurisprudence from the University of Heidelberg. It was his desire to become a lecturer at Heidelberg, after he had studied philosophy at Munich, but he was rejected because he was a Jew. In Hamburg, where he tried to be admitted to the practice of law, he was barred for the same reason. These experiences forced him to take up the fight for the emancipation of the Jews. His first work, *Über die Stellung der Bekenner des mosaischen Glaubens in Deutschland. An die Deutschen aller Konfessionen,* caused a great sensation. He was attacked by the church councillor Paulus of Heidelberg, but he replied with an equally energetic attack in *Verteidigung der bürgerlichen Gleichstellung der Juden gegen die Einwürfe des Herrn E. G. Paulus* (Altona, 1831).

Emancipation of the Jews in Germany was now his task. In 1832 he founded the periodical *Der Jude. Periodische Blätter für Religion und Gewissensfreiheit.* In 1833 he became a member of the editorial staff of the *Hamburgische Abendzeitung,* and this was practically his first chance to earn a living. However, this position did not last long. In 1834 he addressed the *Denkschrift über die Verhältnisse der hamburgischen Israeliten* to the senate of Hamburg, and while the senate intended to grant Riesser's plea, an anti-Semitic attack launched at that time caused it to cancel the draft for the emancipation of the Hamburg Jews which had already been prepared. In 1836 Riesser went to Frankfort, where he was warmly welcomed. There he wrote *Einige Worte über Lessings Denkmal an die Israeliten Deutschlands gerichtet von G. Riesser* (1838). Four years later Riesser returned to Hamburg; in Hesse he had thought that he would be permitted to become a citizen, and was greatly disappointed when his application was denied.

In the meantime a law was passed in Hamburg permitting two Jewish notaries to practise. Riesser obtained the position as notary, but he kept on fighting for emancipation. In 1848 the cause which he championed was realized. He was elected to the preliminary Parliament of Frankfort. After his return from Frankfort he wrote *Ein Wort über die Zukunft Deutschlands.* Riesser was subsequently elected deputy of the dukedom of Lauenburg to the German National Assembly; in Lauenburg no Jew up to that time had even been permitted to stay overnight. He distinguished himself in the Assembly as an orator; he was appointed to several committees; and in October was elected second vice-president and conducted many important sessions. He was a member of the delegation which offered the imperial crown to King Frederick William IV of Prussia.

In 1849 the civic equality of the Jews became a fact; Riesser had become a citizen of Hamburg. In 1850 he was elected by Hamburg to the Erfurt Parliament, where he spoke but rarely. In 1856 he made a trip to North America, and in 1857 resigned his notarial post because of ill health. He was principal speaker at the Schiller celebration in 1859 in Hamburg; during the same year he was elected to the Hamburg magistracy, and eventually became its vice-president.

In 1860 the highest honor was bestowed upon him when he was appointed a member of the Hamburg high court and thus became the first Jewish judge in Germany. German Jewry honored Riesser as its most worthy representative. The Gabriel Riesser Foundation was established after his death. A street in Hamburg was named after him, but its name was changed by the Nazis in 1938. A collection of his writings, edited by Meyer Isler, appeared in 1867 to 1868 under the title of *Gabriel Riessers gesammelte Schriften.* ROSA DUKAS.

Lit.: *Gabriel Riessers gesammelte Schriften,* edit. Meyer Isler (4 vols., 1867-68); Graetz, H., *History of the Jews,* vol. 5 (1927) 570-71, 598-602, 672-76; Veit, Moritz, *Dem Andenken Gabriel Riessers* (1863); Feiner, *Gabriel Riessers Leben und Wirken* (1906); *Allgemeine Deutsche Biographie,* vol. 28, p. 586; Friedlander, F., *Das Leben Gabriel Riessers* (1926); Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 9 (1929); *Publications of the American Jewish Historical Society,* No. 28 (1922) 264.

RIESSER, JACOB, jurist, banker and German deputy, b. Frankfort, Germany, 1853; d. Berlin, 1932. He was a nephew of Gabriel Riesser. Jacob Riesser was baptized in his youth, and became a lawyer in his native town. From 1885 to 1905 he was director of the Darmstädter Bank, which owed to him its remarkable rise. In 1905 he was appointed professor of law at the University of Berlin. He published (1903) his standard work, *Die deutschen Grossbanken,* which was translated into English. From 1903 on he edited the *Bank-Archiv.* Riesser wrote commentaries on the laws concerning stock-jobbing, and vigorously advocated the revision of the German legislation of the stock exchange. In 1901 he created the great organization of German banks and bankers by founding the Zentralverband des deutschen Bank- und Bankiergewerbes. In 1909 he founded the Hansabund, which had as its task that of defending the interests of German industry and commerce against favors to agriculture.

From 1916 to 1928 Riesser was a member of the Reichstag. He belonged to the national liberal party which, after 1918, was called the Deutsche Volkspartei. Riesser belonged to the left wing of that party, and always strove to maintain friendly relations with the democratic party.

He edited Gabriel Riesser's *Einige Worte über Lessings Denkmal* (1881). His commemorative address, *Levin Goldschmidt* (1897), was translated into Italian.

RIETI, MOSES, *see* MOSES BEN ISAAC DI RIETI.

RIF, *see* ALFASI, ISAAC BEN JACOB.

RIFKIND, SIMON HIRSCH, judge, b. Meretz, Russia, 1901. He was brought to the United States in 1910, and became a citizen fourteen years later. In 1925 he received his L.L.B. degree from Columbia University. Admitted to the New York bar in 1926, he served as secretary to Senator Robert F. Wagner from 1927 to 1933; in 1930 he became a member of the law firm of Wagner, Quillinan and Rifkind, and there remained until 1941. In that year he was appointed United States district judge of the Southern District of New York. Rifkind wrote *Money As A Device for Measuring Value.*

RIGA, capital of Latvia, previously a part of the province of Livonia. **1. Early History.** Jews are first mentioned in Riga in a document of 1536. When Livonia passed over to Poland in 1561, the Jews were prohibited from trading and contracting. In 1593 King Sigismund III issued several decrees aimed at excluding the Jews from Livonia and from Riga in particular. As the purpose of this act failed, another act was issued in 1596 forbidding trade with the Jews. During the Swedish rule also (1621-1710) Jews and foreigners were not to be tolerated in Livonia. Jews, however, settled in Riga at that time; Joseph Solomon Delmedigo, of Crete, stayed for some time in Riga in 1623, and reported to a friend that Riga was isolated from Jewish learning.

A Jewish inn was established there, and it is mentioned for the first time in 1638. It was run by a certain Henrich Rosen against payment of a sum. In 1666 this inn was the object of a council ordinance (*Judenhaus-Ordinantze*). The inn was destroyed during the Northern War, and had to be rebuilt upon request of the citizens in 1722. In 1710, when Riga passed over to Russia, all existing ordinances concerning the Jews were maintained, and the Jews were allowed to reside there only temporarily. In 1725 they were allowed to bury their dead in Riga; previously they had been permitted to do this only in Courland. The Jews must have had relative freedom at that time, as a document of 1731 shows that the innkeeper of the Jewish inn complained that, contrary to the ordinance, the Jews were not living in the inn but in other houses.

When, in 1743, following Empress Elizabeth's decree of 1742 expelling all the Jews from Russia, all the Jews of Riga, with the exception of four, had to leave the city, the gubernatorial and civil authorities of the province and city of Riga directed to the senate a protest against their expulsion. However, not until after 1766 were they again allowed to enter the city for trading purposes only, and permitted to stay for no longer than six weeks. Their number increased steadily, and some privileged Jews had the right to reside outside of the Jewish inn, but only in the outskirts of the city. But they were obliged not to work as artisans and to trade only with citizens of Riga. In 1785 more extended settlement rights were given the Jews, and in 1811 there were 736 of them in Riga.

The Jews had two schools for children from 1835 on, and in 1839 they opened the Jewish community school, the first of its kind in Russia, under the direction of Max Lilienthal. Jews who had resided in the city of Riga up to then received, in 1841, a permanent right of domicile.

In 1893 an imperial decree gave the Jews who had settled in Riga before 1880 the further right of domicile, and included in this provision also the members of their families and their widows. In 1905 the Jewish community of Riga joined the Jewish communities of other Russian cities in sending a protest against their exclusion from the franchise.

See also Russia for the period up to 1917.

According to the 1897 census, there were 22,000 Jews living in Riga out of a total population of 278,000. In 1930 their number was 42,328, or 11.20 per cent of the total population. Isaac Lewin.

Lit.: Buchholz, A., *Geschichte der Juden in Riga* (1899); Ehrlich, A., *Entwicklungsgeschichte der israelitischen Gemeindeschule zu Riga* (1894); Joffe, I., *Regesten und Urkunden zur Geschichte der Juden in Riga and Kurland* (1910-12); sketch of the history of the Jews in Riga, in *Voskhod* (1885), Nos. 2-3 and 7-8.

2. After the First World War. After the proclamation of Latvia as an independent state (November, 1918), Riga became the capital. This was also of great importance to the Jews of this country, because since then the Jewish community of Riga has undergone basic changes. Together with the economic regeneration, cultural life became very intensive in connection with the enactment of minority rights and the establishment of new schools—from Kindergarten to high schools (Gymnasiums)—most of them conducted in the Hebrew and Yiddish languages. The municipality of Riga supported the majority of them. There were in Riga about twelve primary schools in Yiddish and Hebrew, the majority of which were of secular character. The largest Hebrew high school had almost 1,500 pupils. Established at first as a private school, and supported by the American Kurlanders Association in building its own home, it later became the leading Jewish high school. In addition, there was an artisan school and a school of agriculture for Jewish youths. One Yeshiva was also founded under the supervision of the Riga rabbinate. The municipality of Riga helped to finance clubs for adult education (Peretz Club and Bialik Club), evening schools, and the like. An outstanding achievement was the Jewish Minorities Theater of Riga, which also toured the provincial towns.

Among the institutions of social welfare the following are noteworthy: the Bikur Cholim Hospital (established by Ulrich Muehlmann), the Linas Hazedek Maternity Hospital (established by Abraham Sobolevich), and the Home for the Aged.

Jews were eminent in the municipal activities of Riga. On the average, the Jews were represented in the township by from six to eight councillors of various political parties. Dr. Rudolf Blumenfeld, a Jew, was for a number of years the head of the board of health. Among the councillors were the following: Mordecai Dubin, Benno Meyer, Meyer Weinberg, I. Zelkin, Israel Braun, Abraham Wulfson, Max M. Laserson and Ierachmiel Vinnik.

In the state university of Riga, which included eleven departments in the humanities and sciences, out of hundreds of professors and instructors only three were Jews: Paul Mintz (criminal law), Mieczyslav Zentnershver (chemistry), and N. Lebedinsky (biology). The Special University of Economics and Commerce had three Jewish professors: M. Feitelberg (private international law), Max M. Laserson (constitutional and administrative law), and Benjamin Siew (political economy). The State Conservatory of Music in Riga had one Jewish professor, the famous Adolf Metz (violin).

As to the Jewish press in Riga before the first World War, a few attempts were made to publish a daily newspaper. Only after the last war did Riga become the northernmost center of the Jewish press in Europe. Two and sometimes three dailies, of which *Dos Folk* and *Frimorgn* were the leading ones, were read not only in Riga but also abroad. A series of weeklies, one of which was the illustrated *Yiddishe Bilder,* had subscribers throughout Europe.

Outstanding Jews born or active in Riga included the famous cantor and religious composer Baruch (Banich) Rosovsky, and his son, the composer Salomon Rosovsky; the founder and director of the Moscow Jewish State Theater, Alexis Granowski (Asarch); the world-renowned sculptor Leopold Bernstamm, later resident in Paris; M. Yadlovker, singer of the Berlin State Opera; Leon S. Moisseiff, consulting engineer and famous bridge constructor (Triborough Bridge, New York city, Golden Gate Bridge, and many

others); Isral-Haim Tavyeff, Hebrew writer and playwright; Sergei Eisenstein, the world famous motion picture producer and director.

After the occupation of Riga by the Germans (July, 1941), a ghetto was established, for the first time in the history of the city, in one of the slum quarters of the so-called Moscow suburb. Some of the leaders of the Jewish intelligentsia, together with thousands of other refugees, fled or were deported to Asiatic Russia. An untold number had been killed, tortured, and persecuted, and the remainder attempted to survive in Nazified Latvia under the most horrible conditions.

MAX M. LASERSON.

RIGHTEOUSNESS. It is not easy to distinguish between Righteousness and Justice in Jewish thought. There are many points at which they obviously overlap. The Biblical use of parallelism suggests this identity of meaning. *Isaiah* (32:1) speaks of the king who shall reign in righteousness (*tzedeḳ*) and the princes who shall rule in justice (*mishpat*). The characterization of these rulers is identical in spirit. Other examples of parallelism clearly indicate that the Jewish mind has not attempted to draw a sharp line of distinction between the two concepts (*Jer.* 9:23; *Prov.* 21:3).

There is a commonly accepted distinction between justice and mercy. Not only in human conduct but also in the manner in which God controls the universe there is a way which is regarded as "just" in the strict sense and a way which is considered "merciful." The divine attributes are *middath hadin* (justice) and *middath harahamim* (mercy). By way of clarifying this truth the rabbis say that when God was about to create the world He realized that, if He made use of one of these attributes to the exclusion of the other, He would be like a man pouring extremely hot or cold liquid into a glass. The vessel would break. The liquids would have to be mixed together (*Midrash Gen.* 12:5). Similarly, in the creation of the world, God knew that the one attribute had to temper the other. It is possible to conclude that righteousness is to be identified neither with justice nor with mercy, but with that combination of the two which is a harmonious balance of the elements needed to stabilize the universe. Therefore it may be said that the righteousness of God is one of the pillars of the world. "Righteousness and justice are the foundation of Thy throne" (*Ps.* 89:15).

In human affairs righteousness is that way of life which combines harmoniously the elements of justice and mercy. If the expression is used to describe inanimate weights and measures it refers to objects which are exactly as they should be. "A perfect and just weight shalt thou have" (*Deut.* 25:15). When used to describe men it obviously refers to those persons whose righteousness corresponds to that of the divine. "Noah was in his generations a man righteous and whole-hearted; Noah walked with God" (*Gen.* 6:9). As an ideal by which men should live, righteousness embraces both justice and mercy. In this respect there is no real difference between them. "Love is justice. If my neighbor deserves my love it is his due. Love to be moral must be justifiable" (Joseph, Morris, *Judaism as Creed and Life,* 400). Righteousness therefore includes all those virtues of benevolence, charity, love and generosity, as well as that of justice, which meet with divine favor, add to the stability of the world and lead to the establishment of society as it should be.

RIGLER, LEO GEORGE, roentgenologist, b. Minneapolis, Minn., 1896. After engaging in general medical practice for a brief period, he became roentgenologist at the Minneapolis General Hospitals; in 1942 he was designated chief of the department there. At the University of Minneapolis, where he was appointed professor in 1929, he was named head of the department of radiology and physical therapy in 1936. He was likewise appointed consultant roentgenologist in several of the state medical institutions. His publications in medical literature include reports of original work on X-ray diagnosis of pleural effusions and heart disease, and roentgen studies of liver and spleen and of twins and triplets in determining monozygotic origin. In 1938 he published *Outline of Roentgen Diagnosis.* A prominent member of medical organizations, Rigler was elected to high posts in a number of them.

Actively interested in the Jewish Family Welfare Association of his native city for more than ten years, he was made its president in 1941. He also did work with the Refugee Committee of the city, and was instrumental in establishing the Harold Rypins Memorial Fund for research and refugee work.

RIJK, ESTHER DE BOER VAN, *see* VAN RIJK, ESTHER DE BOER.

RIK (Maharik), *see* COLON, JOSEPH.

RIMON (pseudonym of Joseph Zebi Granat), Hebrew poet, b. Jason, Poland, 1889. He received the usual traditional education in the Heder, and in the Yeshiva of Lida. In 1909 he settled in Palestine, earning a livelihood by teaching at Tahkemoni (1909-12) at Joppa and at Netzah Israel at Petach Tikvah. From his early youth he contributed articles and poems to various Hebrew publications.

His collections of poems, most of them of a religious character, are *Leḳet* (1910), *Debir* (1914) and *Bamahazeh* (1916). Rimon also published commentaries on the prophetical books of *Isaiah* (two editions), *Jeremiah, Ezekiel, Hosea* and *Amos,* and on *Ecclesiastes.*

RINDFLEISCH, Jew-baiter of aristocratic descent, who lived in Franconia, Germany, about 1300. Impelled by a wild fanaticism, he became the instigator and ringleader of one of the bloodiest persecutions of Jews in Germany. In 1298 a report was suddenly spread that Jews of Röttingen, in Franconia, had desecrated a host, and immediately Rindfleisch sprang to the fore, declaring that he had received a mission from heaven to exterminate the Jews in order to avenge this blasphemous deed. With a gang of ruffians gathered around himself he swept through the southern part of Germany, going from town to town, murdering and robbing the Jewish population that fell into his hands. He plundered and sacked more than 140 communities; in the course of these attacks, according to the chronicles, over 100,000 Jews lost their lives.

Among the victims was Mordecai ben Hillel with his wife and children. The communities of Regensburg and Augsburg were the only ones that escaped this slaughter, having received protection from the magistrates. This terrible period of persecution and slaughter terminated when Albrecht of Austria became Emperor of Germany and the civil war came to an end. The new ruler imposed a fine on the cities which failed to protect the Jewish population.

RING (*taba'ath*). Rings were favorite objects of adornment among the Oriental peoples of ancient times, and are frequently mentioned in the Bible. While most of these references are to rings upon the fingers, they also bear witness to the use of ear-rings and nose-rings, especially on the part of women. The seal ring was an important sign of office, being used to stamp official letters and objects belonging to the royal treasury, and serving as a warrant of authority if given by a king to his subject (*Gen.* 41:42; *Esther* 3:10; 8:2). Ear-rings seem to have been especially desirable presents (*Gen.* 24:22; *Job* 42:11). A more utilitarian use

Specimens of art in wedding rings of many lands

of rings was in the Tabernacle, where they were fastened to the small altar and other objects to serve for the insertion of staves by which these utensils were carried in marching (*Ex.* 26:24 and other passages).

Wedding rings are mentioned neither in the Bible nor in the Talmud, but may have been used by the Jews of Palestine in the early centuries of the Christian Era; the usage was borrowed from the Romans. Since one form of contracting marriage (*kiddushin*) was by the giving of a sum of money or an object of value to the bride by the groom, it was a natural transition to make this object a ring; eventually the custom became so common that the words "with this ring" (*betabba-'ath zo*) became part of the binding ceremony of the marriage.

According to the ruling of the rabbis, wedding rings were to be made of metal, without jewels; the reason given was that it was impossible to estimate the value of a jewel at a glance and so one could not tell if the ring were of the proper worth of money. However, they could be ornamented, and many elaborate ones are extant; while gold was the customary metal, others, such as silver gilt or bronze, or any in fact that had a real value, were permissible. The wedding ring was usually placed upon the first finger of the right hand of the bride.

The use of engagement rings did not develop until the Middle Ages. They were worn by both men and women, in some countries more frequently by men than by women. The ring worn by the prospective bridegroom would be presented to him by his prospective father-in-law. A number of such rings have been preserved, some of such size and manner of ornamentation that it is doubtful if they were actually worn on the fingers. Engagement rings often had inscriptions, the favorite being *mazal tob* ("good luck").

The fondness of many Jews for wearing numerous rings has been noticed since the Middle Ages. In fact, rabbis occasionally protested against the lavish display of rings, and rabbinical conventions now and then passed sumptuary laws restricting their use.

Lit.: Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 285-86; Wolf, A., in *Jewish Encyclopedia,* vol. 10, pp. 428-30 (with illustrations); Abrahams, I., *Jewish Life in the Middle Ages* (1896) 180-84.

Max Ring

RING, MAX, writer, b. Zauditz, Silesia, Germany, 1817; d. Berlin, 1901. As early as 1835 he wrote the stirring poem "Der Judenkirchhof." This was followed by an epic fragment, *Sabathai Zewi,* and the exalted *Apotheose Börnes.* During the revolution of 1848 he was forced to escape from Pless, where he was a practising physician, to Breslau. Here Ring wrote a number of entertaining novels, dramas, and comedies. After settling in Berlin, Ring described the struggle between the common people and the nobility in the novel *Der grosse Churfürst und der Schoppenmeister.*

About the same time he became a member of the staff of *Gartenlaube* (1863-65) and of the *Vossische Zeitung.* Berthold Auerbach's village tales inspired Ring to write *Berliner Stadtgeschichten* (1852) and *Neue Stadtgeschichten* (1858-76). He wrote other novels and popular dramas, such as *Ein verlorenes Geschlecht* and *Götter und Götzen.*

Lit.: Ring, Max, *Memoirs,* in Franzos' collection, *Aus dem neunzehnten Jahrhundert* (1898).

RINGEL, MICHAEL, Zionist leader and member of the Polish Senate, b. Boryslav, Poland, 1880; d. Lwów, Poland, 1939. Ringel, who was a lawyer by profession, entered Jewish communal activity early. From 1908 to 1918 he was president of the Galician Committee of Jews; subsequently he was president. As chairman of the national council of Eastern Galicia, Ringel was a member of the Comité des Délégations Juives at the Paris peace negotiations following the first World War. He was also a member of the Zionist executive of southern Poland.

In 1922 Ringel was elected to the Polish Senate, where he served until 1928. As vice-chairman of the Polish parliamentary codification committee, he was responsible for much of the system of criminal and civil law established by the Polish Republic. He was awarded a gold medal for his services to the country.

After his retirement from the Senate, Ringel returned to Lwów, where he practised law, continued his Jewish communal work, and edited the pro-Zionist Yiddish daily *Der Morgen.* He wrote for many Polish and German periodicals on Jewish subjects, and was author of numerous brochures on Zionism and anti-Semitism, particularly in their relation to Poland. He died as the result of a heart attack during the German attack on Lwów.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 394-96.

RINGER, ADOLPH IRVING, physician, b. Wirballen, Russia, 1883. He came to the United States in 1901, and as a scholar won several prizes, including the William T. Lusk Memorial science award in 1908. After teaching physiology, pharmacology, and physiological chemistry at several institutions, he was appointed professor of clinical medicine at Fordham University, in New York city, in 1917, remaining there until 1920. From 1915 to 1935 he was attending physician at Montefiore Hospital, in New York, and president of its medical board (1926-28).

A specialist in diseases of metabolism, Ringer contributed the chapters on chemistry and metabolism of carbohydrates and proteins to the volume *Endocrinology and Metabolism* (1922). Other medical problems which he studied and reported on were nephritis and diabetes; his monographs were published in biological and chemical journals, as well as in medical journals proper.

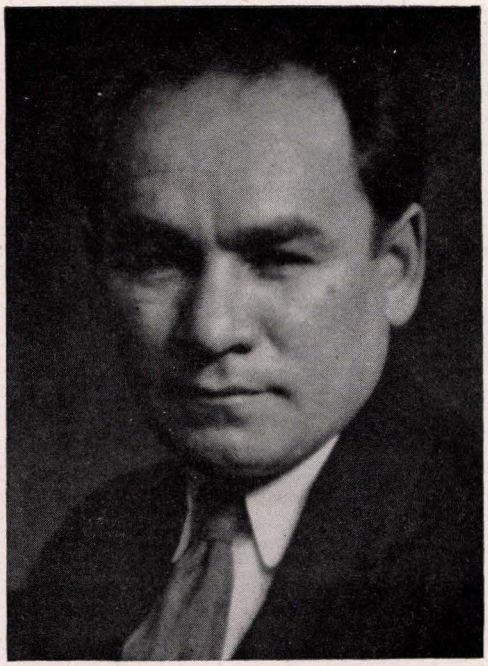
RITES AND CEREMONIES, BORROWED. The history of every organized religion furnishes numerous examples of how rites and customs develop out of similar rites and customs in neighboring religions. No system of ceremonies is created as a whole at a single time; it develops over the course of years in accordance with the feelings and desires of the communicants of a particular faith. Sometimes a rite or custom is taken over completely, but given a new interpretation; examples of this are the Christmas mistletoe and Yule log, both borrowed from pagan religions. In other cases the idea is retained but the symbol is changed; thus in modern times Jews have employed the Shield of David (Magen David) on ornaments, tombstones and religious buildings in the same manner as Christians use the cross, while Moslems have added similar new customs in connection with the crescent.

The rites and ceremonies of Judaism include a number that have been borrowed directly or indirectly from the customs of other peoples; it is noticeable, however, that in practically every case they have been given a new connotation and force. Thus the Sabbath day, in all probability, goes back to the Babylonian *sabbatum;* but whereas the Babylonian day was merely an unlucky period on which no work was to be done because it was certain to fail, the Jewish Sabbath became a day of great spiritual power, a rest from labor, the symbol of freedom from slavery, of a covenant with God and a perpetual memorial of creation. According to Biblical scholars, the three festivals of Passover, Shabuoth and Sukkoth owe their origin to the agricultural customs of the Canaanites, which were taken over by the Israelites after the latter had conquered the country; but again these were given a new connotation and connected with definite religious ideas and with the history of Israel. Such observances as sacrifice and circumcision trace back to the general stock of Semitic customs and are hardly direct borrowings; however, the development of the sacrifices and the shifting of the time of circumcision to the eighth day of life are unique with the Israelites.

The Bible narrative gives hints here and there of



foreign customs which were deliberately imported. Baal worship maintained itself for many centuries as part of the religion of Israel until it was energetically rooted out by the efforts of the prophets. The pillars of Jachin and Boaz in the Temple, the high places, the brazen serpent, the Assyrian altar borrowed by Ahaz (*II Kings* 16:10-16) and the chariots of the sun in the Temple (*II Kings* 23:11) are mentioned as importations which were eventually removed. On the other hand, the rite of offering a scapegoat to Azazel (*Lev.* 16) and the use of the ashes of the red heifer in purification (*Num.* 19) appear to be concessions to foreign rites which had become current. In the case of Azazel, the rite seems to have come out of local belief in demons (*se'irim*); in that of the red heifer, from the use of homeopathic magic, red being a color associated with sin.

As the Jews scattered among the various countries of the world, they now and then took over into their rites some of the customs which they saw in use among their neighbors. Thus the Jews took over the use of the wedding ring from the Romans even before the Christians did, and the custom became so common that the words "with this ring" became part of the marriage formula. In Babylonia they adopted the covering of the head on all occasions of prayer, and from Babylonia this custom spread to Jews all over the world. The shaking of the Lulab on Sukkoth seems to derive from an old rain-making ceremony, Sukkoth being the festival that ushers in the rainy season in Palestine. While the use of the special loaf on Sabbath is distinctly Jewish, the plaited twist that adorns it goes back to the rites of the Teutonic goddess Berchtha; the egg on the Seder plate, which is never mentioned in the earlier sources, is probably an Easter egg in Jewish guise. The Had Gadya of the Seder service is a folk song that has been given a religious meaning. The practice of slaughtering a chicken on Yom Kippur (Kappores) seems to be borrowed from the Mohammedan practice of an atonement offering; the ceremonial casting off of sins (Tashlich) into running waters is a similar borrowing from non-Jewish customs. The Holle Kreish ceremony of the naming of girls, prevalent in some parts of Germany, is directly derived from the worship of Frau Holle, a pagan deity. The frequent use of candles in the Catholic religion suggested to the Jews both the Yom Kippur Eve candle and the Yahrzeit light. Finally, such modern widespread customs as Bar Mitzvah and confirmation arose out of the feeling of the Jews of the Middle Ages and after that there was need for a ceremony to mark the period of religious responsibility similar to the Catholic first communion and the Protestant confirmation.

Just as Judaism has borrowed rites and ceremonies from other religions, so other religions have borrowed from it. Christianity and Islam have both taken over the ceremony of the Sabbath day and the ritual of prayers; in the latter case the very language of the prayers is often identical. Christian baptism is a modification of the Jewish ritual bath, given an additional significance. The church took over from the Jews the custom of kneeling in prayer, and made it so thoroughly its own that in later ages Jews refrained from kneeling because it was a non-Jewish custom (*hukkath hagoi*). The saying of grace at meals and the frequent thanksgiving services were borrowed by Christianity from Judaism, as well as the use of the priestly blessing (*Num.* 6:22-27). Moslem borrowings from Judaism include the fast of Ashura, in imitation of Yom Kippur, the use of a confession of faith, and the rite of facing toward Mecca in prayer, imitated from the Jewish custom of praying toward Jerusalem.

SIMON COHEN.

Lit.: See under the articles of the various rites and ceremonies mentioned in the article.

Henry R. Rittenberg

RITT, JOSEPH FELS, mathematician, b. New York city, 1893. He joined the teaching staff of Columbia University in New York as an instructor of mathematics in 1919; in 1931 he became a full professor, and was still serving in that capacity in 1943. In the year 1918 to 1919 Ritt was engaged as master computer in the ordnance department of the United States Army. He was a member of the National Academy of Sciences (elected 1933), the National Research Council (1938-41) and the American Mathematical Society (vice-president from 1938 to 1940).

Ritt contributed to mathematical journals, and was on the staff of the *American Journal of Mathematics* from 1936 to 1941. He published *Differential Equations from the Algebraic Standpoint* (1932).

RITTENBERG, HENRY R., painter, b. Libau, Latvia (then Russia), 1879. He was the son of a naturalized American. His life in the United States began at the age of six. He received his art education first at the Pennsylvania Academy of Fine Arts, and later at the Bavarian Academy in Munich. In 1904 he was awarded the first Cresson traveling scholarship, and in later years won prizes at the National Academy of Design and the Chicago Art Institute. Active in art circles, Rittenberg was, in 1943, secretary of the Allied Artists of America, an honorary member of the Beaux Arts Institute of Design, treasurer of the National Commission to Advance American Art, and a member of the council of the National Academy of Design.

Rittenberg is best known as a portraitist. He painted portraits of various presidents, including Rutherford B. Hayes, James A. Garfield and Herbert Hoover. Two of his favorite portraits are of Jonas Lie and F. Hopkinson Smith. At many institutions, including Columbia University, the University of Pennsylvania, the

University of Virginia, the Department of Justice at Washington, D. C., the New York Chamber of Commerce, and the Philadelphia Bar Association, Rittenberg is represented. His canvases are also in many private collections.

For years he was an instructor at the Beaux Arts Institute of Design and the Art Students League in New York. There he continued the tradition of painting which in America is associated with William M. Chase, the teacher to whom Rittenberg is most indebted. While his field has been mainly portraiture, he is an adept in still-life painting, his handling of ceramics, metals and textures showing the influence of Vollon. His *Chrysanthemums* is characteristic of his flower pictures, while his skill with interiors is well shown in the painting where the artist's daughter reclines on a sofa. GEORGE S. HELLMAN.

Lit.: Bye, Arthur Edison, *Pots and Pans: Studies in Still Life Painting.*

RITTENBERG, LOUIS, editor, author and translator, b. Tiszaujlak, Hungary, 1892. He received his early education at Yeshivas in Nagyszöllös and Nagyvárad (1902-06), being the youngest student at both of these institutions. In the latter city he also attended the Realschule, specializing in literature and languages.

Rittenberg came to the United States in 1906, his family settling in McKeesport, Pennsylvania, where he graduated from high school and attended the Commercial Academy. During the panic of 1917 he worked in a department store and continued his studies at night. He pursued advanced courses in economics and sociology at Pittsburgh and Chicago schools, taught English and Americanization to foreigners, lectured on these subjects, and served as court interpreter in Hungarian, German and Yiddish.

As administrative aide in the production centers of the Westinghouse Electric and Mfg. Co. (Pittsburgh, 1911-14), the Packard Automobile Co. (Detroit, 1914-15), and the Chicago Northwestern Railroad Co. (Chicago, 1915-17), Rittenberg studied inter-group relations by actual contact with thousands of men of diverse nationalities and creeds. In the first World War he served, until the Armistice, as non-commissioned officer and assistant editor of the servicemen's journal at Camp Humphries. Thereafter, he was accountant in the Federal Bureau of Aircraft at Pittsburgh. During these war and post-war years he also contributed articles on literature and the drama to Hungarian, English and Yiddish newspapers in New York city. Moving to New York city in 1918, he was associate editor there (1918-19) of an Hungarian health journal, entitled *Jó Egészség;* from 1919-21, associate editor of an illustrated Hungarian literary review. For a time he was co-owner of an advertising agency and of a translation bureau (1920-21).

Rittenberg helped organize and was treasurer of a national fund for the relief of victims of the Hungarian White terror (1918-20); concurrently he was co-founder of the Anti-Horthy League of America. He continued intensive explorations in the drama and published in Hungarian, among other full length studies and surveys, a series entitled *Shaw mint talány,* a psychological study of the baffling elements in the works of George Bernard Shaw. His translations into Magyar from the works of such Yiddish writers as Perez Hirschbein, Ossip Dymow and David Pinski appeared also during this period. He entered the field of Jewish journalism in 1921 and became successively assistant editor (1921-28), managing editor (1928-37), and editor-in-chief (1937-38) of *The American Hebrew* magazine. Rittenberg was editor of the Globus Press (1928) and of Messenger's Jewish Art Calendar (1939-41).

During the early 1930's, Rittenberg astutely gathered the documentary material for and published, in the columns of *The American Hebrew,* the first exposés of the Nazi menace in America, much of which received nation-wide attention in the general press and through a Congressional committee investigating un-American activities. Rittenberg's dissection of Hitler's *Mein Kampf* had a startling impact upon public opinion and resulted in a boycott against the first American translation of that notorious book. He was also first to unmask the Hitler youth movement in the United States, particularly its attempts to invade the public schools. Following this, he urged upon the school authorities of New York City to devise means of creating better understanding among children of various racial parentage. A kindred idea was subsequently adopted and furthered by the National Conference of Christians and Jews, in consequence of which many of the public schools in the metropolis came to engage in activities enabling children to know more about each other's racial, cultural and national backgrounds. In 1940 Rittenberg was co-founder of the Council of Parents, aiming to create closer cooperation between home and school, and of the Council for Human Rights.

From 1938 on he was editor in charge of the American Bureau of *The London Jewish Chronicle,* and from 1939 on executive and literary editor of *The Universal Jewish Encyclopedia.* In 1941 he became secretary of the American Jewish Press Club, and (in 1942) an active executive member of the Jewish Book Council of America, serving also (from 1943 on) as associate editor of its *Jewish Book Annual.* In 1943 he was appointed editor-in-chief of *Liberal Judaism,* a monthly journal sponsored by the Union of American Hebrew Congregations.

Rittenberg was honored (for services to Anglo-Jewish journalism and to inter-faith relations) at a testimonial dinner (1937) sponsored by a committee of distinguished Americans (Jews and non-Jews) including members of Congress, under the chairmanship of Mayor Fiorello H. LaGuardia.

Rittenberg was author of *Adolph S. Ochs* (1933), a spiritual estimate of the publisher of *The New York Times; Ferenc Molnár* (1929), a portrait of a Hungarian playwright; and numerous other biographical studies. He has contributed articles on a wide variety of subjects to *The New York Times; New York World-Telegram; Egyenlöség* (Budapest); *The National Jewish Monthly,* and numerous other publications in America and abroad. He contributed informatively to H. L. Mencken's popular *The American Language* on certain peculiarities of Magyar. Rittenberg helped prepare *Christian and Jew* (1929), the first book-length symposium on better understanding between Christians and Jews.

His translations of novels and plays from the Hungarian have won critical acclaim for their lucid and vividly idiomatic English; some reviewers have called attention to these renditions as being superior to the originals. As editor and executive during more than two decades, Rittenberg has shown keen perspicacity in the choice of essential, educative literary values. He has been persuasive in enlisting for inter-religious and progressive causes the collaboration of representative figures in statesmanship, literature, art and scholarship. He also gave stimulus to many fledgling writers, composers and artists on two continents.

Among Rittenberg's major translations are (novels) Emery Bálint's *Alpha* (1927); Ferenc Molnár's *Paul Street Boys* (1927), which was later made into the poignantly beautiful film, *No Greater Glory;* Sándor Bródy's *Rembrandt* (1928); Béla Zsolt's *It Ends in Marriage* (1931); and Molnár's plays, *The White Mountain, Prologue to King Lear, Violet,* and *Marshall* (1929). He adapted for the American stage Ernö Vajda's drama, *The Moreland Case.* He wrote the English lyrics for *My Soul Cries Out* (Paris), and for *The Peanut Vendor* (New York), which was a national best seller.

ISAAC LANDMAN.

RITTER, IMMANUEL HEINRICH, rabbi, b. Ratibor, Upper Silesia, Germany, 1825; d. Johannisbad, Germany, 1890. He entered the service of the Reform community of Berlin, and published his first ten sermons under the title of *Kanzelvorträge aus dem Gotteshaus der Jüdischen Reformgemeinde* (1856). His chief work was *Geschichte der Jüdischen Reform* (1858-1902). After the sudden death of Samuel Holdheim, Ritter succeeded him in the leadership of the community. Besides the above-mentioned writings, Ritter published Holdheim's *Fest- und Gelegenheitsreden* (1869).

Lit.: Levin, M., *Die Reform des Judentums, Festschrift zum 50-jährigen Bestehen der jüdischen Reformgemeinde in Berlin* (1895); Ritter, Immanuel Heinrich, *Die jüdische Reformgemeinde zu Berlin,* edit. S. Samuel (1902); *Publications of the American Jewish Historical Society,* No. 26 (1918) 47, note; No. 28 (1922) 91, note, 92, note, 93, note, 102, note.

RITTNER, EDWARD, professor of ecclesiastic law, b. Bursztyn, Galicia, Poland, 1845; place and date of death unknown. While a Jew he became known in Galicia and Austria as an expert on Catholic ecclesiastic law, and was appointed professor at the University of Lemberg.

After his baptism, he was made Secretary of State for Galicia (1896). Rittner's most important published works were *System Katolickiego Prawa Kościelnego* (Catholic System of Ecclesiastic Law, 1886) and *Österreichisches Eherecht* (1876).

RITUALS, term used to designate the several kinds of divine services employed by the various Jewish communities or in the various important countries with large Jewish populations; the corresponding Hebrew term is Minhag. Each Minhag displays the peculiarity of worship and prayers of the group which employs it. These various rituals, which developed particularly after the Piyutim, or liturgical poems, began to be admitted into the prayer-book, distinguished the individual communities and countries the one from the other, and impressed the divine services of that particular community or country with its own individual stamp even beginning with very early times. Two groups of rituals, or Minhagim, are to be distinguished, the Palestinian Minhag and the Babylonian Minhag.

1. The Palestinian group includes: (a) the German ritual; this is itself divided into two rituals, the Western, or Minhag Ashkenaz, and the eastern, or Minhag Polen. The Elbe River forms the boundary between these two. (b) the Italian Minhag, perhaps the oldest branch of the Palestinian ritual. (c) the Romanic Minhag, or, more accurately, the Rumelic or Greek ritual; this ritual of the Balkan countries has retained most features of the Palestinian Minhag.

2. The Babylonian ritual has been preserved, naturally with considerable and numerous changes, in the Sephardic ritual of the Spanish Jews. This Minhag Sephardi came to be called the Portuguese ritual after the Spanish Jews had been driven out of Spain in 1492 and most of them had found their way into Portugal. A transition between the two groups, the Palestinian and the Babylonian, is formed by the Provençal ritual employed in the Jewish communities of Avignon, Carpentras and Cavaillon. These differences and variations are evident not so much in the character of the main prayers as in the employment of the Piyutim.

Within each country individual communities had their own special rituals, which could not be retained and preserved, however, in periods of emigration and persecution. For wherever the exiles formed themselves into a new community in a place which already had a Jewish community, a compromise naturally had to be arrived at between the two conflicting and deviating rituals. In addition, the development of printing had the effect of smoothing over the differences between the various Minhagim and harmonizing between them, since the printers did not wish to print a separate prayer-book for each small group. Only a few extremely large Jewish communities, such as Prague, Posen, Worms and Frankfort, were able to preserve their particular traditions faithfully and intact.

In the modern period the distinction must be made between the Conservative ritual and the Reform ritual as regards the kind and form of divine worship. Of the early Reform prayer-books in America the most important were *Minhag America* (Cincinnati, 1857), by Isaac M. Wise; *Olat Tamid* (Baltimore, 1858), by David Einhorn; and *Kodesh Hillulim* (1862), by Benjamin Szold. This latter book was revised by Marcus Jastrow in collaboration with Benjamin Szold, and was then called *Abodath Yisrael* (1870). The *Minhag America* was published in Hebrew and English; the Einhorn and the Szold prayer-books were in Hebrew and German. Later, when the Szold prayer-book was revised and became the *Abodath Yisrael,* it was published in Hebrew and in English. All three prayer-books embodied the characteristic principle of Reform Judaism, i.e. the omission of reference to a personal Messiah, the restoration of the Temple and the resurrection of the dead. All three prayer-books had considerable vogue, the Einhorn and the Szold prayer-books in the eastern United States, and the *Minhag America* in the Middle West and wherever the disciples of Isaac M. Wise, the graduates of the Hebrew Union College which he founded, occupied the pulpit.

Two other Reform prayer-books were developed at a later date: Joseph Krauskopf's *Service Ritual* (Philadelphia, 1892) and J. Leonard Levy's *Book of Prayer* (Pittsburgh, 1902). Both these prayer-books were more radical than their predecessors. They departed considerably from the original liturgy and did not hesitate to omit almost all the Hebrew text. However, they had one advantage over the prayer-books which preceded them, in that they offered a variety of services for Sunday. There were thirty separate services usable for Sunday in Levy's *Book of Prayer,* and likewise thirty different services in Krauskopf's *Service Ritual.* However, in spite of this specific merit, these two books did not become popular beyond the congregations which these two rabbis served, although they were well-known prayer-books which were constantly discussed.

Einhorn's prayer-book, the *Olat Tamid,* was used by a number of congregations in the Middle West after Emil G. Hirsch, Einhorn's son-in-law, made his brilliant translation of the German text.

The *Union Prayer Book,* published by the Central Conference of American Rabbis (2 vols., Cincinnati, 1895), gradually supplanted all its predecessors. By 1905 it had been adopted by 183 Reform congregations. It has been revised twice, but the essential spirit of the prayer-book has not been changed. While it omits Musaf (Additional) prayers and expresses what has come to be the standard theology of Reform prayer-books everywhere, it follows consistently the traditional liturgical construction of the Jewish prayer-book. Almost all the best-known prayers have been retained in Hebrew, although in many cases the Hebrew text has been boldly revised. The *Union Prayer Book* may be described as traditional in structure and liberal in content.

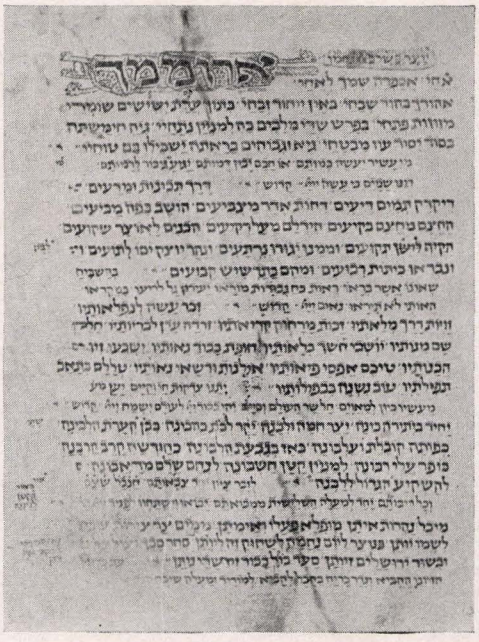
SOLOMON B. FREEHOF.

In general, the ritual in most Conservative congregations follows the traditional Jewish forms both as to ceremony and the content of the prayers. The American edition of the English *Standard Prayerbook* with translation by Singer

A page from a 16th cent. Siddur, in the possession of the British Museum

An illustrated page from a Mohel Book (18th cent.) owned by the Jewish Community of Prague

is the basis for all the variations used in almost all Conservative congregations. The following Sabbath prayer-books predominated in the 20th cent. in American Conservative congregations:



Szold-Jastrow (Philadelphia); Phillips (New York); Silberfeld (New York); Bosniak (New York); Silverman (Hartford); Bloch (New York); American edition of the *Standard Prayerbook* with translation by Singer and published by the Bloch Publishing Company, New York.

The holy day ritual of Conservative Jews is based in general upon the English edition edited and translated by Adler and Davis and reprinted in New York. Based upon this are other somewhat abbreviated editions edited by Bosniak and Silverman. The Szold-Jastrow high holy day prayer-book is the oldest used in Conservative congregations in the United States, and it antedates that of the Adler-Davis edition.

The only prayer-book issued specifically for Conservative congregations in the United States is the *Festival Prayerbook* issued by the United Synagogue of America and containing the service for Passover, Shabuoth and Sukkoth. Up to 1943 there was no official prayer-book under the imprint of the Rabbinical Assembly of America, the organization of the Conservative rabbis of the United States.

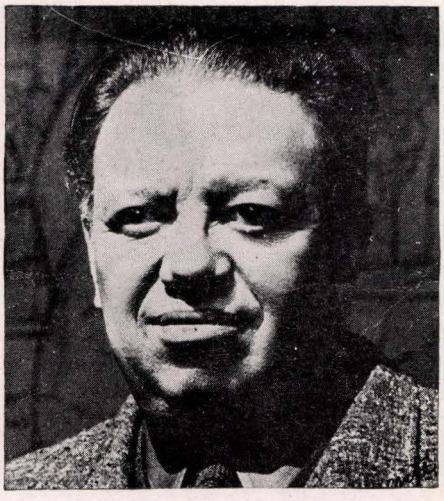
RIVERA (also **Ribera**), a family involved in a trial of the Inquisition in Mexico, from 1642 to 1645. The charges were first brought against Gabriel de Granada, thirteen and a half years old, a New Christian who in turn accused his mother, Maria de Rivera, and other members of his family of secretly practising and teaching the Mosaic law. Maria de Rivera and her sister Catalina died while in prison. The others implicated were Blanca Mendez de Rivera, Gabriel's grandmother, and Margarita, Clara and Isabel de Rivera, her other daughters. Gabriel's brother Raphael and various other Neo-Christians also were brought into Gabriel's confession. Gabriel de Granada was absolved, but barred from any ecclesiastical office; the other members of his family were reconciled.

Lit.: Fergusson, David, "Trial of Gabriel de Granada by the Inquisition in Mexico," *Publications of the American Jewish Historical Society,* No. 7 (1899) 1-127.

RIVERA, ABRAHAM RODRIGUES, American colonial merchant, b. Spain; d. Newport, R. I., 1765. He came of a distinguished family which flourished in Spain for many centuries, and which had, during the Inquisition, turned Marranos. As early as the 17th cent. some of the members of the family had emigrated to Mexico in a vain attempt to escape the auto-da-fé. In the early 18th cent. Abraham Rivera, his wife and three children fled their native land and, arriving in New York city, underwent the reconversion to Judaism which was customary among liberated Marranos: Abraham and his wife were remarried according to the Jewish custom, and the children were given the new names of Isaac, Jacob and Rebecca.



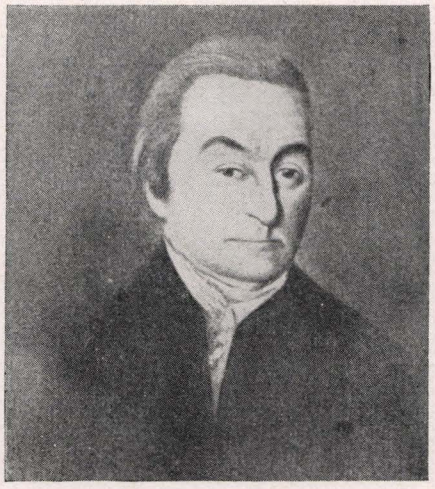
The Rivera family were intimately related, both by blood kinship and marriage to the famous Lopez family of Portugal and afterwards of Newport, R. I. Abraham's sister had married Diego José Lopez, father of Aaron Lopez, great Newport merchant. Abraham's daughter Rebecca was later married to Moses Lopez, elder half-brother of Aaron, and his granddaughter, Sarah, daughter of the son Jacob, was married to Aaron himself.

In New York, Abraham Rivera lost no time in engaging as a merchant, and, thus listed, acquired the rights of a freeman in 1726; in 1740 he became a citizen by virtue of the Act passed by the English Parliament granting naturalization to Jews and Protestants. While a resident of New York, Rivera was active in religious communal life, and served three terms as Parnas (president) of Congregation Shearith Israel, from 1729 on. He was one of the contributors to the building of the first Mill Street synagogue of that congregation, which was built in 1730. In that city, too, he married again, after the death of his second wife, "a lady named Lucena."

About 1748 the family moved to Newport, R. I., where Abraham Rivera continued to thrive as a merchant and an honored member of the Jewish community, living to a venerable old age. The eloquent eulogy inscribed on his tombstone extolled his benevolence in relieving "the woes of poor and needy, afflicted and bereaved."

Lit.: Publications of the American Jewish Historical Society, No. 2 (1894) 101 et seq., and index volume; Gutstein, Morris A., *The Story of the Jews of Newport* (1936) 70.

RIVERA, DIEGO, artist, b. Guanajuato, Mexico, 1886. From his paternal grandmother, named Inés Acosta, Rivera inherited a strain of blood from a Portuguese Jewish family that had arrived in Mexico in 1822 or 1823. In his Jewish ancestry Rivera takes pride, stating in a letter addressed to the Mexico City B'nai B'rith (October 22, 1942) that he considers it "an honor to have Jewish blood in his veins because



Diego Rivera

the Jews, in proportion to their number, have contributed intellectually more than any other ethnographic group toward the construction of what is actually called civilization." He also takes pride in another of his ancestors who, in 1838, took part in Spain's first Republican Revolution against decadent monarchy.

The antagonism towards the privileged classes and the social progressiveness of this son of a Mexican educator belong to his family tradition of liberalism. To the regret of some critics these elements, translated into propaganda, have now and then interfered with Rivera's art. His sympathy for the peons has introduced politics and class attack in paintings that thus became involved in that attempt at reform which does not belong to universal art. To this extent, Rivera has made himself subject to the criticism of lack of understanding of the largest purposes of art, and, in any event, of lack of good taste. The outstanding examples are the murals commissioned for the Rockefeller Center in New York, in which personal details led to the rejection of the frescoes now installed in the Palacio de Bellas Artes in Mexico City.

Nevertheless, Rivera, as a propagandist, has reached a position occupied by no other living painter. Considered purely as an artist, his stature is equally significant. For six years, in boyhood, he studied at the Mexican Academy, where the fundamentals of draughtsmanship were imparted to him by a pupil of Ingres. For another six years, in early manhood, he travelled abroad where he saw at first hand the works of the Cubists and of Cézanne in France. These, however, were lesser influences. It was in Italy, several years later, that the great Florentines, Giotto, Vecello and Masaccio—"the father of modern art"—cast their spell over the young Mexican. Seeing their frescoes, he was filled with the desire, later realized, of reviving large mural painting to narrate, not the saga of Christianity but of the Mexican race, and to further not religion but social revolution.

Another influence was that of the Byzantines. Their arrangements where squares and circles were brought into harmony, and more particularly the brilliancy of their mosaics, a glowing quality sometimes achieved by the use of colored glass, have affected Rivera's art which remains, however, essentially original. It has Indian and Aztec history and culture as background and, frequently, revolutionary idealism as motivation. Yet the firm structure of design, the daring use of

Jacob Rodrigues Rivera

color, the pervading and trenchant emotion are those of the artist of great talent and outstanding personality. Rivera combines primitiveness and sophistication as no other Mexican painter save Orozco has succeeded in doing. Ever since (1921) he began the frescoes of the Preparatory School in Mexico City, he has achieved murals for buildings in the United States as well as in his native land that are certain to hold an important place in the history of art: at the National Palace, his murals depicting the history of civilization from Toltec to modern times; at the Department of Health Building; at Gernaraca; a series of panels at the New York Workers' School; decorations in the Rockefeller Center, New York city, subsequently rejected in part by the builders. He illustrated Stuart Chase's *Mexico* (1931). His power in pictorial expression is magnificently made evident in his creations.

In some of his lesser works he is open to the criticism of too poster-like a quality. In his finer murals, as for example, *The Fall of the Aztec Empire, The Enslavement of Indians by Cortez, The Death of a Peon, Sugar Refiners* and *Going Down to the River,* Rivera reveals himself as a great painter who can with equal conviction express the epic and the emotional in human life. GEORGE S. HELLMAN.

RIVERA, JACOB RODRIGUES, manufacturer and merchant, b. 1717; d. Newport, R. I., 1789. He was the second son of Abraham Rodrigues Rivera. He left New York city, whither he had gone with his father from Spain in the early part of the 18th cent., to try his luck in Curaçao. There he lived for a time, marrying a widow originally of the Pimentel (or Pementel) family. He then returned to New York, where his child Sarah, later the wife of Aaron Lopez, was born. Rivera was naturalized in 1746; two years later he moved to Newport, R. I., where, among the city's Jewish entrepreneurs, he ranked second only to his son-in-law Aaron Lopez. Rivera was the first to introduce the sperm oil industry into America; by 1760 there were seventeen factories engaged in the preparation of the oil and the making of spermaceti candles. He thus contributed to the flourishing commerce and industry of prosperous 18th cent. Newport. His honor in business dealing was a byword in the community, and the story is told how, recouping his losses after being forced to take advantage of the bankruptcy law, he gave a banquet for his creditors, each of whom found underneath his napkin a check for the exact amount, plus interest, due him.

Rivera espoused the Colonial cause in the Revolution, and was among those who removed to Leicester, Mass., when the British came to Newport. After the peace, Rivera returned once more to Newport, and continued to prosper in manufacture and shipping. At his death he left a fortune of about $100,000.

Rivera was a leading factor in the Newport congregation. He was one of the three members chosen by the congregation to hold legal title to the land and buildings. He laid the second cornerstone of the synagogue (1759), and on his return from Leicester became the congregation's president (1760). Rivera was one of the original founders and members of that organization of Jewish citizens which may be designated the first Jewish men's club in America. At his death he was mourned as a devout Jew and honorable citizen by the whole Newport community, Jewish and non-Jewish alike. There survived his wife Hannah, who died at nearly a hundred years of age in New York city. His son Abraham left an only son Aaron, last of the Riveras, who settled in Wilmington, Del.

Lit.: Publications of the American Jewish Historical Society, No. 2 (1894) 101 et seq., and index volume; Gutstein, Morris A., *The Story of the Jews in Newport* (1936) 71.

RIVKIN, ALLEN ERWIN, scenarist and playwright, b. Hayward, Wis., 1903. His apprenticeship in writing for stage and screen was served with newspapers in Chicago and New York city, and for three years he worked in advertising and publicity.

Best-known of his screen works were *Dancing Lady* (1934); *Cheating Cheaters* (1935); *Champagne Charlie* (1936); *Love Under Fire* (1937); *Straight, Place and Show* (collaborator, 1938); *It Could Happen to You* (1939); and *Typhoon* (1940). Rivkin wrote the play *Knock on Wood* (1935); the biography *Wooden Empire* (1937); and, in collaboration with Leonard Spigelgass, the novel *I Wasn't Born Yesterday* (1938). He contributed articles and fiction to Jewish periodicals in English.

RIVKIN, B. (Boruch-Abraham Weinrib), Yiddish critic, b. Jakobstadt, Courland, Latvia, 1883. He was given a Hebrew education and studied in the government schools. From 1900 to 1904 he lived for short periods in Libau, Odessa and other cities, returning at the end of this time to serve in the Russian army. But he received a prison sentence of one year for alleged propaganda among the recruits. In 1905 Rivkin left Russia, and visited Berlin, Hamburg, Paris, London and Geneva.

His first literary work was done in Russian, for various revolutionary periodicals published in Paris and Geneva (1908-9). In 1911, while living in London, he began to write in Yiddish, for *Germinal* and *Arbeiter Freind.* Coming to New York city in 1911, he became affiliated with *Dos Neie Land,* and later, when its name was changed to *Die Literarishe Velt,* he was made its editor. From then on Rivkin was a regular contributor to literary and news periodicals on matters of literary and sociological interest. Except for several years following 1922, when he lived in Philadelphia, Rivkin spent most of his time in New York. In 1943 he was affiliated with the *Day.*

Among his longer critical studies of note were a monograph on the poet M. L. Halperin, "Halbveg zu Gaones," published in *Brikken* (February, 1934); a consideration of one of David Ignatov's characters, in *David Ignatovs Buch* (1936); and "Die Vegen fun David Pinski's Dramaturgie" (in the *Tzukunft,* 1942). Earlier, monographs on A. Liessin and H. Leivick had been published serially in the *Tzukunft.*

George Wolf

Rivkin was also the author of a study on the main tendencies of Yiddish literature in America, published in the *Samelbicher* edited by Leivick and Opatoshu (1937 and 1938), and for the Works Progress Administration volume on Landsmannschaften he wrote a history of Landsmannschaften.

Rivkin is an impressionist who believes that Yiddish literature has a Messianic mission, destined to reveal the most hidden forces of the Jewish people, the very essence of Jewish personality. This Messianism is associated with a sort of art ritual, a poetization of religious traditions through dramatic mysticism.

Lit.: Segal, J. I., in *Keneder Odler,* Dec. 12, 1941.

RIVKIND, ISAAC, librarian and writer, b. Lodz, Poland, 1895. He studied at the Yeshivas of Volozhin and Ponovieszc, and came to the United States in 1920. In 1923 he was made cataloguer at the Jewish Theological Seminary of America, a post which he held in 1942. Rivkind wrote widely on the history of Jewish culture and literature, and on bibliographical subjects. Among his published works were *Dapim Bodedim* (1928 and 1933); *Die Historishe Alegorie fun Reb Meir Shatz* (1929); *Early American Hebrew Documents* (1937); and *Leoth Ulzikkaron, Bar Mitzvah,* a study in Jewish cultural history (1942).

Rivkind wrote for various Hebrew, Yiddish and English periodicals in many countries. In 1919 to 1920 he was a member of the Provisional Jewish National Council in Poland. He was also an executive member and treasurer of the Hebrew P.E.N. Club in the United States (1939-42), national chairman of the League for Religious Labor in Palestine and a co-founder of the American branch of the Yiddish Scientific Institute, of which he was an executive member from 1926 to 1929.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Press un Filologie,* vol. 4 (1930), cols. 320-24.

RIZPAH, concubine of Saul, to whom she bore two sons. After the death of Saul she became, in accordance with the custom of the time, the concubine of his son and successor Ish-bosheth. Subsequently Ish-bosheth accused his chief general, Abner, of taking Rizpah to himself; it is not certain whether the charge was true or not, but it led to a breach between king and general (*II Sam.* 3:7-11). Later, on the occasion of a famine, David took seven descendants of Saul, including the two sons of Rizpah, and handed them over to the Gideonites, who had a blood feud with Saul. When the Gideonites killed the seven and exposed their bodies, Rizpah watched over the corpses of her two sons, driving away the birds of prey and the beasts; when David heard this, he was so moved that he provided for the interment of the seven, and of the bones of Saul and Jonathan as well (*II Sam.* 21:1-14). Tennyson's poem "Rizpah" takes its title from the similarity of its story to that of Rizpah.

ROBACK, A. A., author and psychologist, b. Russia, 1890. He was brought to the United States during his adolescence, and studied at McGill University, in Montreal, Canada, where he received his M.A. degree in 1913. In 1917 he received his Ph.D. degree from Harvard. After a period of teaching at various colleges throughout the United States, including three years as an instructor at Harvard (1920-23), Roback became associated with the extension division of the Massachusetts State Department of Education in 1926. Roback was the inventor of aptitude and mental measurement tests, a popular lecturer and the author of several larger studies on psychology. Among these were: *Psychology of Character* (1927); *Popular Psychology* (1928); *Business Psychology* (1930). In 1942 he published *William James—His Marginalia, Personality and Contribution.*

Rizpah, watching over the bodies of her murdered sons, drives off the wild beasts. From a 19th cent. painting by Frederick Leighton

The general history of and specialized studies in Jewish literature interested him as much as his professional field of psychology, and to these subjects Roback contributed *Jewish Influence in Modern Thought* (1929); *Curiosities in Jewish Literature* (1933); *I. L. Perotz; The Story of Yiddish Literature* (1940); and *Psychorama* (1942). Roback organized the Yiddish collection at the Harvard University Library. Before coming to the United States he was associated with the *Keneder Adler* and the Canadian *Jewish Chronicle.* He was on the board of governors of the Jewish Academy of Arts and Sciences.

ROBBERY (*gezelah*). Robbery is defined in Jewish law as the open and forcible seizure of the property of another. It is denounced in the Bible in connection with other oppressions and with deceit (*Lev.* 19:13), and he who obtains the property of others through oppression or refusal to surrender it to its rightful owners is stigmatized as a robber (*gazlan*). Robbery is not specifically mentioned in the Ten Commandments; the rabbis refer the commandment, "Thou shalt not steal" (*Ex.* 20:13; *Deut.* 5:17), to kidnapping for slavery, which was punished by death.

There is no special punishment for robbery as such in Jewish law. It is solely concerned with seeing that the robber returns the stolen property to its rightful owner; if he has not done this and has not repented of his action, he is deprived of all honors as a citizen. If the object stolen is no longer in his possession or has been destroyed, he must repay its value to the owner. If he at first falsely denies that he has forcibly stolen some chattel or real estate, he must pay the penalty for the false oath by paying an additional fifth of its value and bringing a sin-offering (*Lev.* 5:2-7). In the Talmud special emphasis is laid on the fact that the robber must not only return the stolen property, but win the forgiveness of the rightful owner. Thus Akiba once decided in the case of a robber who did not know which of five people he had robbed of a certain object, that he had to make restitution to all five, in order to be certain of the forgiveness of the one whom he had actually robbed (*B.K.* 103b).

It is striking that robbery is not punished as severely as theft, for which restitution has to be double, fourfold or fivefold. This is explained by the opinion that the robber, who does wrong openly, is less dangerous

to society than the thief, who acts in secret and betrays those with whom he is apparently living in peace.

One who takes something in self-defence or who borrows an object without the knowledge of the owner is also called a robber; Maimonides even gives this title to dice-players.

A number of ordinances in the Mishnah and Talmud were designed to render it easier for the robber to make restitution. Thus it was decreed that the robbed person should relinquish the payment of the value of an object if it could no longer be returned (*B.K.* 94b). According to the strict letter of the Torah, the object stolen had to be returned *in natura;* but in order to make it easier for repentance, the Talmudic rabbis ordained that the robber might keep an object which he had improved and repay its value at the time it was stolen (*B.K.* 9:1). However, there was no change as to real estate; the owner could always demand that the robber return it, even though it had passed through several hands in the meantime (*B.K.* 117b). It was further decreed that the article stolen might be delivered to the court, instead of directly to the owner, since the latter might have gone a considerable distance away (*B.K.* 95).

Lit.: Maimonides, *Hilchoth Gezelah* 1 to 10; *Shulhan Aruch, Hoshen Mishpat* 359-77; Tschernowitz, Chaim, in *Zeitschrift für vergleichende Rechtskunde,* vol. 27; Dembitz, L. N., in *Jewish Encyclopedia,* vol. 10, pp. 434-37.

ROBERT, EMANUEL (real name, Magyar), actor, b. Budapest, 1847; d. Würzburg, Germany, 1899. He was taken to Vienna at the age of nine, when his artistic talents first became obvious.

Against his parents' wishes he became a student of Joseph Lewinsky. Robert made his debut, in 1865, at the Actientheater in Zurich as Ferdinand in Goethe's *Egmont;* in 1866 he played the role of Franz in Goethe's *Goetz von Berlichingen* at the Hoftheater in Stuttgart. A. E. Brachvogel and Heinrich Marr then engaged him for the Royal Theatre in Berlin, where in 1868 he had his first brilliant success as Romeo.

In 1872 Robert returned for guest performances to Laube in Vienna, playing Schiller's *Demetrius.* In quick succession he embodied various roles in Vienna, on guest tours throughout Germany, and as member of the famous Meiningen Group. His talents embraced many characters, ranging from plays by Sophocles to Ibsen and from Shakespeare to Schnitzler. In 1878 Robert achieved his goal when the Burgtheater in Vienna engaged him as a regular member.

In 1882 he married Natalie Kübeck of Kübau; in 1880 he wrote his memoirs under the title of *Dekameron des Burgtheaters.* He also embraced Christianity. His last role was that of Paracelsus in Arthur Schnitzler's play of the same name. Paul Schlenther and Adolf von Sonnenthal eulogized Robert at his grave.

ROBERT, LUDWIG, author, b. Berlin, 1778; d. Baden-Baden, Germany, 1832. His father was Levin Marcus, who assumed the name of Robert-Tornow. His sister was Rahel Levin, who married Varnhagen von Ense. Robert became a businessman at Breslau and Hamburg, then studied at several universities. In 1804 he published his first poems.

Robert went to Paris, but returned to Berlin when Napoleon defeated Prussia in 1806. In Berlin he made the acquaintance of the philosopher Fichte, who influenced him deeply. It was due to Fichte that Robert was baptized. During the war of 1813 to 1814 he was assistant clerk of Golowkin, Russian minister to Stuttgart. At the same time he wrote philosophical poems, *Kämpfe der Zeit,* whose rhythmical form later inspired Heine to use similar rhythms in his *Nordsee.* Robert wrote also the tragedy *Die Tochter Jephthas,* which was performed at Prague in 1813 and printed in 1820.

In 1819 Robert completed his drama *Die Macht der Verhältnisse,* vindicating the honor in which the nobility was held by the middle classes. This play, although not successful and did not even satisfy artistic demands, was the precursor of the modern social drama in Germany. Robert married Friderike Braun, a poetess who was famous for her beauty and character. Heine, who became a friend of the Roberts while staying at Berlin, dedicated several poems to them. In the 1820's Robert wrote several satirical comedies which met with Heine's applause but had no lasting success.

ROBERT-TORNOW, WALTER, philologist and historian, b. Ruhnow, Germany, 1852; d. Berlin, 1897. He was the son of Moritz Robert-Tornow, general agent of the nobility of the land of Posen, who was a brother of Rahel Varnhagen and Ludwig Robert. Robert-Tornow was deeply versed in history and philology, and was the outstanding authority on the derivation of German family names.

In 1876 he published his German translation of Michelangelo's poems, and in 1877 a collection of his own poems. In 1883 he wrote *Goethe in Heines Werken,* and in the following years he edited his departed friend Georg Buchmann's *Geflügelte Worte,* the most important German dictionary of quotations, highly esteemed by specialists. It was due to Robert-Tornow's learned studies that the name of Buchmann became famous. The reviser's work was far more substantial than that of the original author who had left it to his friend to provide quotations collected from the literature of the world and the history of all times.

In 1888 Emperor Frederick III, who was a friend of the Robert-Tornow family, appointed him imperial private librarian, and Emperor William II retained him in the same function. Residing in the imperial palace, Robert-Tornow had to provide the emperor with books and literary information often needed instantly. Many of William II's famous quotations came from his private librarian.

ROBINSON, CHARLES PHINEAS, South African Member of Parliament, b. Liverpool, England, 1867; d. Durban, Union of South Africa, 1938. He was educated in Liverpool, and came to South Africa in 1897. In 1906 Robinson was elected to his first public office in the council of Durban; in 1910 he was chosen from Durban for the first Parliament of the Union of South Africa. He was reelected to Parliament in 1915. Subsequently, after failing of reelection in 1920, he was appointed senator for Natal. But in 1921 Robinson was returned to Parliament for the Durban Central Division, and reelected in 1924 and 1933. In 1937 he was appointed to represent South Africa at the 150th anniversary celebration of the founding of Australia.

ROBINSON, EDWARD G., actor, b. Bucharest, Roumania, 1893. He was brought to the United States in 1903 and educated in New York city, attending City College, Columbia University and the American Academy of Dramatic Arts.

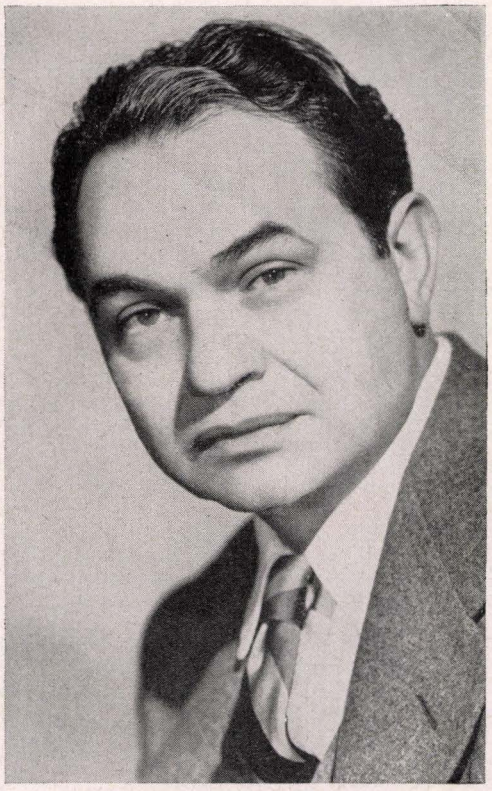
After making his debut in the theatre in 1913 at Binghamton, N. Y., Robinson appeared for the first time in New York city in 1915 in *Under Fire.* From then until 1929 he played regularly on the legitimate stage; among his vehicles during this period were *Night Lodging* (1919); *Samson and Delilah* (1920); *The Idle Inn* (1922); *Peer Gynt; The Adding Machine* (1923); *The Firebrand* (1924); *The Goat Song* (1926); and *Kibitzer,* a play of which he was the co-author and in which he starred (1929).

In 1929 Robinson went over to the motion pictures, and here he became internationally prominent as the

creator of gangster parts or of cognate hard-boiled roles. Although his departures from this type, as in the leading role of *The Life of Dr. Ehrlich,* won encomiums for his restrained emotional portrayal, Robinson had to return again and again to the "mug" characterizations. To these he contributed a mordant grasp of human frailty; his success was based not so much on mime as on mind. In 1941 he was awarded the American Humane Association's gold medal for his "humanitarian interest in children and animals."

Some of Robinson's best pictures were *Outside the Law; Little Caesar; Five-Star Final; Brother Orchid;* and *The Sea-Wolf* (1941). During the first World War Robinson served in the United States Navy. In 1941 he contributed $100,000 to the United Service Organizations' campaign for $10,765,000 "as a small down payment on the privilege of being an American." In 1942 he made a notable sequence in *Tales of Manhattan;* he acted as narrator for the Russian film *Moscow Strikes Back* and for the elaborate mass meeting staged at New York city in March, 1943, at the initiative of non-Jewish groups, to protest against the slaughter of the Jews in Europe.

ROBINSON, JACOB, communal leader, b. Seirijai, Lithuania, 1889. He received his LL.D. degree from the Suwalki Law School, University of Warsaw (1914), served in the Russian army from 1914 to 1918, and was awarded the St. George Cross. He was a member of the Jewish fraction in the Seimas (parliament) of Lithuania from 1922 to its dissolution in 1926, legal adviser to the Lithuanian Foreign Office (1931-33), and a member of the Council for the Lithuanian Government in the Lithuanian-German Committee of Conciliation (September, 1931) and of the Permanent Court of International Justice (June-August, 1922).



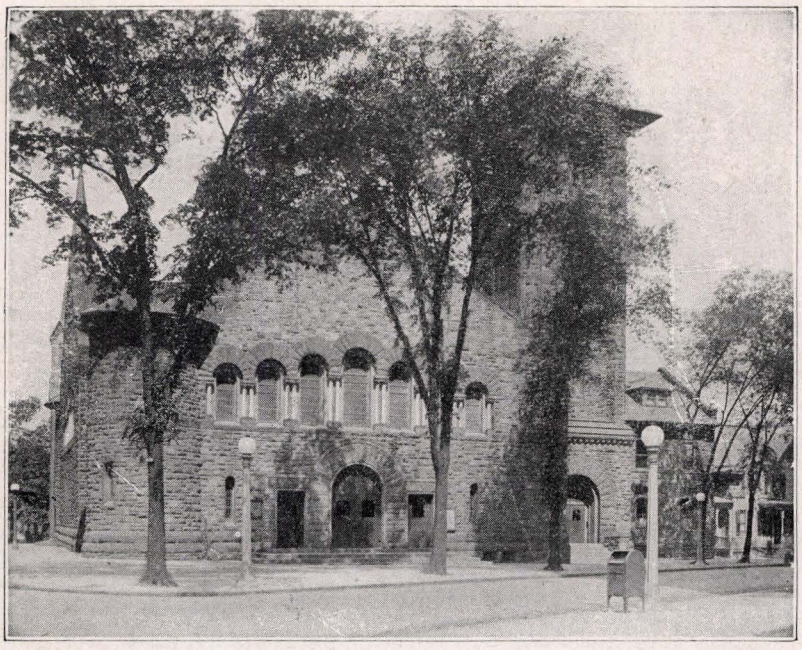
He served also on the Jewish National Council of Lithuania (1919-22), and was chairman of the Jewish Political Committee (1938-40) and of the Committee to Help Polish Refugees from Poland (1939-40). Robinson arrived in the United States in 1940, and became director of the Institute of Jewish Affairs, New York city, in 1941.

Robinson's writings include: *Achsanya shel Torah* (1921); *Yediath Ammenu* (1922); *Das Minoritätenproblem und seine Literatur* (1928); *Commentaries on the Memel Convention* (1934); *The Baltic Legal Union* (Russian; 1938).

Lit.: *Jewish Times,* April 24, 1941; *Day,* March 24, 1941; *Morning Journal,* March 20, 1941.

ROBINSON, LEONARD GEORGE, lawyer and welfare official, b. Russia, 1875. He came to the United States in 1890, and after receiving his A.B. degree from Harvard in 1902 graduated from the New York Law School in 1906. In the following year he became general manager of the Jewish Agricultural Society. During the period he retained this post (until 1917) Robinson was responsible for the establishment of agricultural credit unions in America and for sponsoring the farm credits movement. He was a consultant for the Joint Congressional Committee on Rural Credits; out of the work of this committee grew the Federal Farm Loan Act (1916). Subsequently Robinson was president (1917-19) of the Federal Land Bank of the 1st District (Springfield, Mass.) and still later he was president of the Cosmopolitan Bank in New York.

From 1922 to 1924 Robinson was general director of reconstruction work in Europe for the Joint Distribution Committee, and again, in addition to the rebuilding of homes destroyed in the first World War, he supervised the establishment of cooperative banks and other self-aid enterprises. In 1943 he was affiliated with the Farm Credit Administration in Washington. He wrote for various specialized periodicals, and was the author of *Agricultural Activities of the Jews in America.* He was co-author of the *Credit Union Primer* and a consulting financial editor of the New York *Times* and Philadelphia *Public Ledger.*



Edward G. Robinson

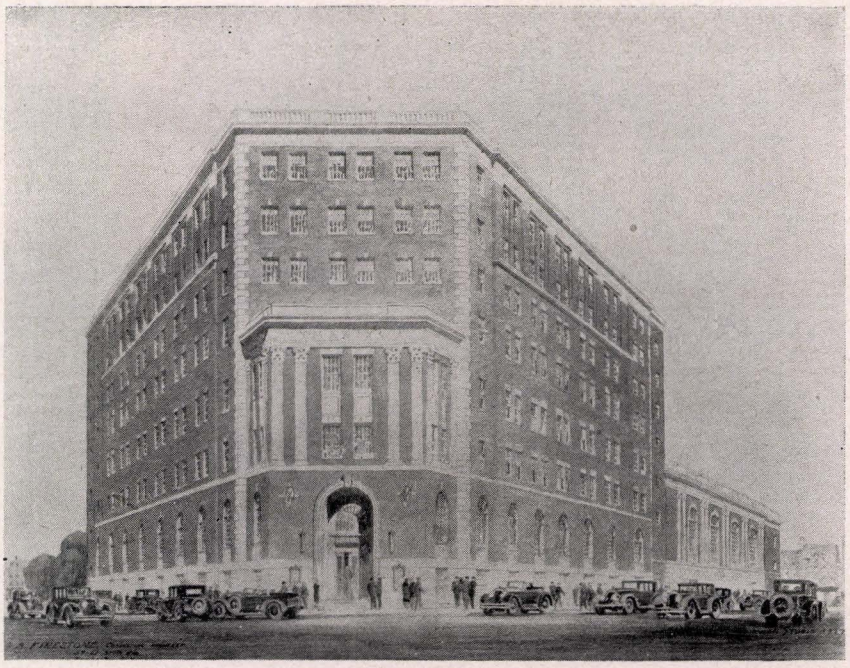
ROBINSON, VICTOR, physician and medical historian, b. Ukraine, Russia, 1886. He was brought to the United States at the age of three, and later studied law, then pharmacy and finally medicine, graduating from the Chicago College of Medicine and Surgery (Loyola University) in 1917. In 1912, however, the first edition of *Pathfinders in Medicine* had appeared; a second edition was published in 1929. Robinson was well on his way to recognition as a pioneer in the field of medical history. When a department of the history of medicine was established at the Temple University School of Medicine, in Philadelphia (1929), Robinson was given the professorship, a post he retained in 1943. He was also (1937) made a lecturer on the history of nursing at the Temple University School of Nursing. Robinson's work as editor and historian was voluminous and significant in the development of American medical history.

He was the editor of *Historia Medicinae* (22 vols.); of the *Modern Home Physician,* an encyclopedia of medical knowledge (1934-39); of *The New People's Physician* (8 vols., 1941); and of the American editions of Paolo Mantegazza as well as of Richard von Krafft-Ebing's *Psychopathia Sexualis* (1939) and of *Encyclopedia Sexualis* (1936). His original work included *Essay on Hasheesh* (1912 and 1925); *Pioneers of Birth Control* (1919); *Don Quixote of Psychiatry* (1919); *Life of Jacob Henle* (1921); *Story of Medicine,* first published in 1931 and frequently reprinted; *Syllabus of Medical History* (1933); and *The Way of Life of a Physician* (1941). He wrote for many scientific periodicals, and was president of the New York Society for Medical History (1940-41).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 421-22.

Temple B'rith Kodesh Rochester

ROCAMORA, ISAAC DE, Marrano, b. Valencia, Spain, 1601; d. Amsterdam, Holland, 1684. Under the name of Fray Vincente de Rocamora he lived for many years in Valencia as a Marrano and an eminent Dominican monk. He became the confessor of the Spanish princess the infanta Maria, who later became Austrian empress. In 1643 he fled from Spain to Amsterdam, where he reverted publicly to Judaism; he performed circumcision upon himself with his own hands. In his forties he studied medicine and became a leader of the Amsterdam Jewish community and president of several Jewish welfare institutions, such as Maskil El Dal and Abi Yethomim. He was a contemporary and friend of Orobio de Castro. Rocamora wrote admirable Spanish and Latin verses.



ROCCA, ENRICO, publicist and literary critic, b. Gorizia, Italy, 1895. He began his career by contributing articles to Italian literary magazines, advocating Italy's intervention in the first World War on the side of the Allied powers. He founded (1919) the literary review *Roma Futurista,* which became one of the chief organs of the Futurist movement, created and promoted by the Italian poet F. T. Marinetti. Rocca was correspondent of the *Popolo d'Italia* in Germany, Austria and Czechoslovakia. In 1927 he returned to Italy and became theatrical and literary critic of *Lavoro Fascista,* organ of the Fascist workers' organizations. He gained a reputation also as a fine translator, mainly of works of German literature into Italian; he translated, among others, the principal works of Stephan Zweig. In 1927 he traveled in South America, and published a book of impressions called *Avventure Sud-Americane.* Although an early collaborator of Mussolini's chief organ *Popolo d'Italia,* he lost his position as literary theatrical critic with the introduction into Italy of racial discriminatory laws.

ROCHESTER, county seat of Monroe County, New York state; it had a population (1943) of approximately 325,000, of whom it was estimated that 20,000 were Jews. Although it is believed that Jews lived in Rochester in 1840, the earliest record of their presence is the City Directory of 1844, in which appear the names of Mire Greentree (clothier), Sigmund Rosenberg (lace merchant), Joseph Altman (dry goods merchant), Henry Cone (tailor), Mary A. Noah (actress).

The first religious services were held on Rosh Hashanah, 1848, in the home of Henry Levi at the corner of North Clinton and Bowery (now Cumberland) Streets. On October 7, 1848, the congregation was formally organized by the following members, all of them natives of Germany: A. Adler, Jacob Altman, Joseph Altman, Jacob Ganz, Joseph Katz, Henry Levi, Samuel Marks, Meyer Rothschild, Abram Weinburg, Gabriel Wile, Joseph Wile, Elias Wolf. Joseph Stieffel officiated as Hazan. Shortly thereafter the name B'rith Kodesh (Holy Covenant) was chosen. In 1849 quarters for the congregation were procured at 2 Front Street, and a rabbi, Marcus Tuska, was engaged. In 1856 the former Baptist church on St. Paul Street was purchased as the permanent home of the congregation. The spacious building at the corner of Gibbs and Grove Streets was erected in 1893.

Tuska was succeeded by Isaac Mayer, who officiated from 1856 to 1859. Aaron Ginsburg served from 1863 to 1868. Max Landsberg was called to the congregation in 1870, and ministered actively until 1915. He organized and successfully carried out a policy of radical Reform, and was honored by the general community for his rational interpretation of Judaism. Horace J. Wolf, who was rabbi from 1915 to 1927, helped to unify the various elements in the community, and was a courageous champion of social justice. Philip S. Bernstein, a native of Rochester, Wolf's successor, was the incumbent in 1943. He was president of the Rochester City Club, the Citizens' Planning and Housing Council, and the Jewish Community Council of Rochester. In November, 1942, he was granted leave of absence to serve as executive director of the Committee on Army and Navy Religious Activities of the Jewish Welfare Board.

The heavy influx of Jews from Russia and other East European countries began in 1880, and continued until the restriction of immigration. Within a short time the following synagogues were organized: Beth Israel, Beth Hakneseth Hochodesh, Ben David, Wa'ad Hakolel, and the Congregation of Tailors. In 1943 there were sixteen Orthodox synagogues in Rochester, and

The Young Men's Hebrew Association, Rochester

five accredited Orthodox rabbis, of whom the outstanding one in length of service and recognized leadership was Solomon Sadowsky. Two modern, Orthodox synagogues were established—Beth Joseph Center and Beth Sholom Congregation. In 1916 Temple Beth El, a Conservative congregation, was organized. Its rabbis were Joel Blau, Jacob Minkin, Jeremiah Berman, and Henry Fisher (the incumbent in 1943).

In order to meet the needs of the new immigrants the Men's Benevolent Society (organized in 1850) and the Jewish Women's Aid Society (organized in 1865) of Temple B'rith Kodesh were merged into the United Jewish Charities in 1882. The Jewish Orphan Asylum Association of Western New York was founded in 1879, and established in Rochester a home for orphans, which was continued until 1929, when it was abandoned in favor of foster homes, an activity conducted by the Jewish Children's Bureau.

Owing to differences concerning methods, the Orthodox members of the community established in 1908 the Associated Hebrew Charities, and in 1912 the Jewish Children's Home. The Jewish Young Men's Association was organized in 1906. Tobias Roth was its executive secretary from 1920 on. Inspired by a $300,000 contribution by Simon N. Stein, construction of a million-dollar building was started in January, 1931. Sol Heumann was president, and was succeeded by Joseph Goldstein.

Among the other institutions established for the benefit of the Jewish community were the Baden Street Settlement, the Jewish Home for the Aged, the Vacation Home, the Rochester Hebrew School, and the *Jewish Ledger*. In 1924 the United Jewish Charities and the Associated Hebrew Charities combined into the Jewish Welfare Council. In 1942 the Jewish Welfare Council and the Jewish Children's Bureau effected a merger of their activities. In 1938 a Jewish Community Council, representing all elements in the city, was formed. The Bureau of Jewish Education, embracing the educational program of the entire community, was established in December, 1939. In 1937 all fund-raising activities were federated in the United Jewish Welfare Fund. The influx of large numbers of German émigrés led to the establishment of the Rochester Refugee Service in 1937.

The Rochester Jewish community enjoyed excellent relations with other faiths. On January 20, 1859, a great interfaith mass meeting was conducted to express public indignation over the abduction of Edgar Mortara. Immediately following the first Nazi pogroms, the Inter-Faith Good Will Committee of Rochester was organized in 1933, under the leadership of the Catholic bishop, John Francis O'Hern; it carried on a program both of protest against anti-Semitism and of constructive interfaith education. Exceptional was the fund-raising campaign of 1935 to complete the Jewish Young Men's and Women's Association building, in which the chairman was a Protestant, the treasurer a Catholic, and half the campaign workers were non-Jews.

A small community of 150 Sephardic families from Turkey settled in Rochester in the 1930's, and established a synagogue, a Hebrew school, and a young men's association.

Among the Jews who served the general community prominently were Common Council President Simon Hays, Acting Mayor Isaac Adler, Congressman Meyer Jacobstein, Federal Judge Simon Adler, City Court Judge Harry Rosenberg, City Court Judge Jacob Gitelman, Assistant District Attorney Jacob Ark, who subsequently became New York State Commander of the American Legion, School Commissioners Marcus Michaels and Isaac Wile, City Treasurer Haskell H. Marks, Assemblymen Abraham Schulman, Myer Braiman and Louis Lazarus, United States Federal Attorney Goodman A. Sarachan, Vice-Mayor Joseph E. Silverstein, Mayor Samuel B. Dicker.

Among the noted Jews who sprang from the Rochester community were: Samuel H. Goldenson, rabbi of Temple Emanu-El, New York; Emma Goldman, anarchist leader; Louis Lipsky, outstanding Zionist. PHILIP S. BERNSTEIN.

Lit.: Wile and Brickner, *The Jews of Rochester, an Historical Summary of their Progress and Status as Citizens of Rochester from Early Days to the Year 1912* (1912) 1-138.

ROCK (*tzur*), a frequent Biblical designation for God, either by itself (as in *II Sam.* 22:32) or in connection with Israel (*Isa.* 30:29) or various adjectives. The most famous passage is *Deut.* 32:4, *hatzur tamim po'alo* ("The Rock, His work is perfect"), which is used in the Jewish funeral service.

There are two possible explanations for the fre-

quency of this designation. The first is the natural one: the rock, by reason of its use as a place of refuge, its firmness and its impregnability, is a symbol of the protection of God that would naturally occur to the inhabitants of Palestine. The other is based on the history of religion: it suggests that the name Rock for God harks back to the time when the deity was supposed to dwell in the rocks, and points out that in the religion of Israel many objects of stone, such as altars, the Tables of the Law, and knives, were vested with a special sanctity. It is hardly likely that Tzur was actually a divine name, although the Septuagint always translates the word, when referring to God, as *theos* ("God").

Lit.: Hastings, James, *Dictionary of the Bible,* vol. 4, pp. 289-90.

ROCK OF AGES, *see* MAOZ TZUR.

ROCK ISLAND, a city of Illinois with a Jewish population estimated to be from about 1,200 to 1,500 in 1943, in a total population of 42,775 (census of 1940). The city received its charter in 1849, and the first Jews probably came in about that period. Berthold Loewenthal was in the city council from 1853 to 1855. As early as 1875 the charitable Deborah Society was formed by the women of the community. The first congregation to be organized was B'nai Jacob, which built a synagogue in 1910; then came Beth Israel, which built a synagogue in 1900. Solomon Levitan was rabbi of both congregations in 1943. Early settlers included Meyer Brody, Herschel Gellerman, M. I. Morris, L. Cohen, Simon Lewis and Isaac Meyer. The Conservative congregation of Tri-City Jewish Center was organized much later, in 1936. Its first rabbi was Albert S. Goldstein. He was succeeded by E. Louis Neimand, and in 1941 by Irving B. Faden, who was the incumbent in 1943. The Tri-City Jewish Center served as the community center not only of Rock Island, but also of Moline, Ill., and Davenport, Iowa, which, adjacent to each other, constitute a commercial and social unit.

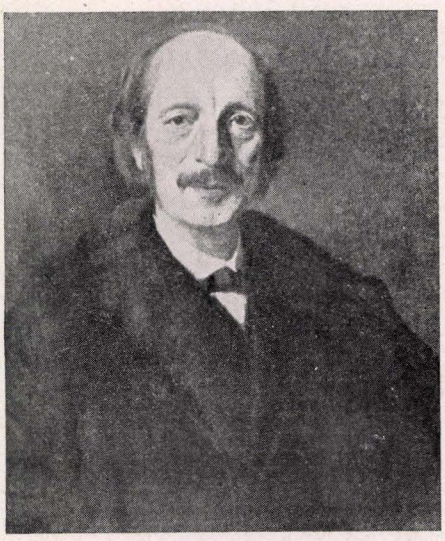
The Tri-City Jewish Center housed the central office of the United Jewish Charities of Rock Island and Moline. Other organizations supported in common in 1943 included a lodge of the B'nai B'rith, the A. Z. A., the Histadruth, and the various Zionist groups: Zionist Organization of America, Senior and Junior Hadassah, Poale Zion, Mizrachi, and Pioneer Women's Organization.

Rock Island Jews were mainly engaged in small business. Some few were employed in industry, and in 1943, in the defense work of the Rock Island arsenal. About fifty in the three cities were in the various professions. Walter A. Rosenfield was mayor of Rock Island from 1923 to 1927.

ROCK, LILLIAN, lawyer and communal leader, b. New York city, 1896. She was admitted to the bar in 1925 and established herself in practice in New York city the same year. Among her communal activities were the establishment in her own office of a free legal aid clinic. She was founder of the League for Women for President and Other Public Office (1934), and was its national chairman; she held executive offices in other feminist organizations. Miss Rock was national secretary in 1933 to 1934 and national vice-president in 1934 to 1935 of the National Association of Women Lawyers, and served as president of the New York Council of the Association. She was active in Jewish communal affairs.

ROCKER, LOUIS P., stock broker, b. Austria, 1894. He was brought to New York city as an infant, and was educated at Townsend Harris Hall, Rhoades Prep School and the Pace and Pace Institute. His career on Wall Street began when he obtained a place as errand boy at De Planque and Stern in 1912. He subsequently took charge of the personal affairs of Edwin H. Stern and became manager of the firm of E. H. Stern and Co., which was established in 1915. In 1926 he purchased a seat on the New York Stock Exchange, becoming a partner in the firm. From 1928 on he was partner in Adler, Coleman and Co.

Rocker was active in the Zionist Movement, serving at various times as member of the administrative committee of the Jewish National Fund of America and the Palestine Foundation Fund, chairman of the finance committee of the United Palestine Appeal, member of the executive committee and administrative council of the Zionist Organization of America, and chairman of the finance committee of that organization. In 1940 he became treasurer of the Z.O.A. He served as national president of Young Judaea (1934-40), and was a director of the Society for the Advancement of Judaism and of the Jewish Educational Association, honorary president of the Inwood Hebrew Congregation, and a director of the Eastern Life Insurance Co.



RODA RODA, ALEXANDER FRIEDRICH (real name, Ladislaus Rosenfeld), writer, humorist and satirist, b. Puszta Zdenci, Slovenia, 1872. He was the son of the landowner Leopold Rosenfeld and his non-Jewish wife. Roda Roda started an Austrian army officer's career at first, joining the artillery in Graz. At the age of thirty he was first lieutenant in the reserve. In 1903 he was deprived of his rank because of lèse-majesté.

In the meantime he had become correspondent of several Austrian papers. He traveled throughout Europe, especially in the Balkans, France and Spain. He became a contributor to the famous satirical periodicals *Simplicissimus* (Munich) and *Jugend* (Berlin). During the first World War he worked as war correspondent, and after the War as correspondent in Soviet Russia, among other countries. He arrived in the United States in 1939, settling in New York city.

Roda Roda—the man with the red vest and the monocle—became famous through his collections of masterfully pointed anecdotes and through the play *Der Feldherrnhügel* (1910), which he wrote in collaboration with Carl Roessler, and which was suppressed in Austria-Hungary at the time. He wrote a large number of other comedies in collaboration with either Gustav Meyrink or his sister Marie Roda Roda (Marie Liebermann). In 1924 he published an autobiography entitled *Roda Roda's Roman.*

His other publications include: *Der Schnaps, der Rauchtabak und die verfluchte Liebe* (1908; the 40,000th copy was issued in 1925); *Schummler, Bummler, Rossetummler* (1909); *Bienen, Drohnen und Baronen* (1908); *So jung und schon—* (1918); *Weisheit des Morgenlandes* (1910); *Ein Frühling in Amerika* (1924); *Roda Roda erzählt* (1925); *Gift und Galle* (1927); *Donner und Doria* (1928); *Der Schlangenbiss* (1931). In collaboration with Theodor Ehrt, he edited the collection *Welthumor* (6 vols., 1910-11).

RÖDELHEIM, originally a separate community near Frankfort, Germany, but in the 20th cent. incorporated into the city of Frankfort. In 1925 it had more than one hundred Jews among its 12,000 inhabitants. The existence of a Jewish community in Rödelheim dates back to the middle of the 13th cent. The town was famous for its Hebrew printing house. In the middle of the 18th cent. Karl Reich, with the aid of the typesetter Moses ben Jacob Levi, printed a number of Hebrew books there. About the beginning of the 19th cent. the famous Orientalische und Occi-

Julius Rodenberg

dentalische Buchdrückerei was established there by Wolf Heidenheim and Baruch Baschwitz.

Here Heidenheim at first printed his own works, including a Mahzor with German translation and commentaries (1800) and the grammar *Mebo Halashon* (1806). He printed also an edition of the Pentateuch (1818-21), a Passover Haggadah (1822), and many liturgical works. The products of his press were neatly and tastefully done, and were highly esteemed.

Under the Nazi regime, from 1933 on, the Rödelheim Jewish community shared the fate of the Jews of Frankfort, which was reported to have been made *judenrein* in 1942.

Lit.: Steinschneider and Cassel, "Jüdische Typographie," in Ersch and Gruber, *Allgemeine Enzyklopädie der Wissenschaften und Künste,* section 2, vol. 28, p. 81; Carmoly, in *Mitteilungen des Vereins für Geschichte und Altertum in Frankfurt am Main,* vol. 2, p. 346 et seq.; Lewin, Louis, in *Monatsschrift für Geschichte und Wissenschaft des Judentums,* vol. 44, pp. 127-38; vol. 45, pp. 422-32, 549-58.

RODENBERG, JULIUS (originally Levy), writer, b. Rodenberg, Hesse, Germany, 1831; d. Berlin, 1914. He was editor of the *Deutsche Rundschau,* which acquired a certain classic importance as a literary organ and through which Rodenberg championed the cause of young authors of naturalism. He was noted also as a lyricist (*Lieder,* 1853 and 1881) and as a librettist. He wrote a great number of excellent travel accounts, especially about England and France, and reminiscences of life in Berlin, including:

Erinnerungen aus der Jugendzeit (1899); *Aus der Kindheit* (1907); and *Aus meinen Tagebüchern* (1919). In his novels and tales of old Berlin Rodenberg is comparable to Fontaine and Raabe. The most important of these novels were *Herrn Schellbogens Abenteuer* (1890); *Klostermanns Grundstück* (1891); and the widely read *Grandidiers* (1879).

Lit.: Leixner, Otto, *Geschichte der deutschen Literatur;* Spiro, Heinrich, *Julius Rodenberg* (1921); *Publications of the American Jewish Historical Society,* No. 25 (1917) 63.

RÖDER, MARTIN, conductor and teacher, b. Berlin, 1851; d. Boston, 1895. His musical apprenticeship took place in Italy, where he served as chorusmaster at the Teatro del Verme (Milan) from 1873 to 1880, and where, in 1875, he organized and directed an admirable choral group, Società del Quartetto Corale. He returned to Berlin in 1880 and for several years taught at the Scharwenka Conservatory. He then went to Dublin to become professor at the Royal Academy of Music.

In 1892 he went to the United States, and from that time until his death served as director of the vocal department of the New England Conservatory in Boston. Röder wrote two critical volumes about music, and a diary, and contributed authoritative articles on singing to outstanding music journals.

RODGERS, RICHARD, composer, b. New York city, 1902. He studied at Columbia University and at the Institute of Musical Art. With the collaboration of the lyricist, Lorenz Hart, he wrote numerous musical comedies, beginning with the *Garrick Gaieties* (which first brought him fame), which were outstandingly successful. Principal among his successes were *A Connecticut Yankee; Babes In Arms; I'd Rather Be Right;* and *I Married An Angel.* His songs, many of them nationwide hits, are outstanding for unusual melodic construction as well as rhythmic and harmonic ingenuity.

RODGES, *see* COLONIES, AGRICULTURAL.

RODKINSON (originally **FRUMKIN), MICHAEL LEVI,** writer and translator, b. Dubrovna, Mogilev, Russia, 1845; d. New York city, 1904. He was the brother of Rabbi Israel Frumkin, editor of *Habatzeleth* (Jerusalem). Rodkinson was a stock speculator in St. Petersburg, was sought by the police and escaped to Königsberg, Germany. There he edited the Hebrew weekly *Hakol* (1876-80), and succeeded in having the best contemporary Hebrew writers contribute to it. He also edited a Yiddish weekly, *Kol Leam.* In 1888 he migrated to the United States, where he endeavored to resuscitate the *Hakol* (New York, 1889-90; Chicago, 1893) and founded the short-lived periodical *Techunath Ruah Hayisraeli.* He was the first to attempt rendition of the Talmud into English, but only the translation of the tractates *Moed, Shekalim* and *Rosh Hashanah* was completed; it appeared in four volumes (Hebrew and English, 1895-97).

A prolific writer, Rodkinson published also *Sippure Tzaddikim* (Hasidic legends; 1873); *Toledoth Baal Shem Tob* (the story of the Baal Shem Tob, Israel Besht; 1873); *Matzath Mitzvah* (against the blood accusation); *Tefillah Lemosheh* (on the phylacteries; 1883); *Abne Milluim* (on religious reform; 1884); *Lebeker Mishpat* (polemical articles; 1884); *Iggeroth Pethuhoth* (open letters to rabbis; 1885); and *Barkai* (a collection of scholarly articles; 1886). His English writings include *History of Amulets, Charms and Talismans* (1893); *The Pentateuch: Its Language and its Characters. A Treatise Upon the Early Translations . . . into Greek and Aramaic* (1894); and *History of the Talmud from the Time of the Formation . . . up to the Present Time* (vols. 1 and 2, 1903).

L., *Die Geshichte fun der Yiddisher Presse;* Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 70-77; *American Hebrew,* Jan. 15, 1904; *Publications of the American Jewish Historical Society,* No. 33 (1934) 137-38; Deinard, Ephraim, *Tzelem Behechal,* last chapter.

RODOLF, SAMUEL, merchant and communal worker, b. Germany, about 1812; d. Cape Town, South Africa, 1882. He left Germany at the age of fifteen, and finally settled in the United States. About 1840 he arrived in Cape Town, and there set up as a merchant, becoming a naturalized British subject. He was one of the original group of seventeen Jews who, constituting the first recorded congregation in South Africa, met in 1841 to hold high holy day services in the home of Benjamin Norden, and then organized

into the Tikvath Israel Society. From then on until his death Rodolf was one of the leading factors in the communal life of Cape Town, and later of Algoa Bay.

He acted as reader of the Society while it was without a minister, and also served as marriage officer. When the Bouquet Street Synagogue was established in 1849, he became "gabbay" of the congregation. Throughout the first precarious years of the congregation's existence he remained one of its most active members. In 1864, on his return from a visit abroad, he settled at Algoa Bay, where he helped establish a synagogue. Subsequently he became once more resident in Cape Town, and in 1881 was again elected president of the congregation, serving until his death.

Lit.: Herrman, Louis, *A History of the Jews in South Africa* (1935).

RODRIGUES, BENJAMIN OLINDE, economist, b. Bordeaux, France, 1795; d. Paris, 1851. At the age of eighteen he became tutor at the Collège Napoléon of Bordeaux, but he was not admitted to the École Normale Supérieure because of his Jewish origin. He went to Paris, and in 1825 made the acquaintance of Count Saint-Simon, famous prophet of socialism, who was delivered by Rodrigues from misery and from an urge to commit suicide. On his death-bed Saint-Simon named Rodrigues his spiritual heir and successor.

In 1825, after Saint-Simon's funeral, Rodrigues founded *Le Producteur* to propagate his master's ideas, but in 1826 the journal ceased publication because of lack of funds. In 1829 Rodrigues yielded leadership of the Saint-Simonian sect to Bazard and Enfantin, but remained chief of the cult, and initiated new adepts. At this time Heinrich Heine came to Paris and was influenced by the doctrine of Saint-Simon, but in spite of his enthusiasm Heine could not refrain from scoffing at Rodrigues and Enfantin, who tried to establish a new "church" and to imitate the manners of the apostles of the founder of the Christian church. In 1832 the French government proceeded against the sect, and Rodrigues was fined fifty francs.

After the dispersion of the Saint-Simonists Rodrigues endeavored to finance the industrial enterprises of Enfantin, but he did not follow him to Egypt, and from 1840 on renounced extravagance. After the revolution of 1848 Rodrigues believed that the opportunity to revive Saint-Simon's ideas had come. But he was soon disappointed. As the ideas of Saint-Simon deeply influenced the intellectual evolution of France, Rodrigues played an important part in the cultural life of his country. He represented a strange mixture of financial adroitness and idealistic enthusiasm, but was always sincere and benevolent. He endeavored to reconcile capitalists and workers, and anticipated important industrial innovations. HUGO BIEBER.

Lit.: Weill, Georges, *L'école Saint-Simonienne* (1896); Charlety, Sebastien, *Histoire du Saint-Simonisme* (1931); D'Allemagne, Henry-René, *Les Saint-Simoniens* (1930); *Revue philomatique de Bordeaux* (1925) 152-66.

RODRIGUES, JACOB HIPPOLYTE, financier, philosopher of religion and musician, b. Bordeaux, France, 1812; d. Paris, 1898. Having made a fortune as agent de change, Rodrigues devoted much of his time to music and to theological studies. He was a brother-in-law of Jacques Fromental Halévy, and wrote the text and music of the opera *David Rizzio,* which was published in 1873.

But he was mainly interested in religious questions. Proceeding from the hypothesis that many religious documents of Judaism were destroyed or lost in the troubled times after the destruction of the First Temple (586 B.C.E.), Rodrigues endeavored to discover traces of the lost texts both in the existing religious literature of Judaism and in the documents of early Christianity and Islam. On the other hand, he stressed the dependence of Christianity and Islam upon Judaism.

In 1867 Rodrigues addressed an open letter to Dupuy, French minister of public education, showing the agreement of the Sermon on the Mount with passages from the Old Testament and Talmud. He developed his view in his *Origine du sermon de la montagne* (1868). In 1869 he published *Histoire des Judéo-Chrétiens,* and in 1873 *Histoire des premiers chrétiens,* always applying critical methods which he learned from Renan and Havet. In 1893 he published *Papiers de famille,* relating the history of the Rodrigues family which, according to its tradition, emigrated from Palestine at the time of Bar Kochba (130-35 C.E.).

RODRIGUES PEREIRA, SALOMON, chief rabbi of The Hague, Holland, b. The Hague, 1887. He was the son of A. Rodrigues Pereira, chief rabbi of the Portuguese Jewish community at The Hague, who was also rabbi of the Portuguese Jewish community at Amsterdam. Salomon Rodrigues Pereira was educated at the Portuguese Jewish Seminary Ets Hayim, Amsterdam, and at Amsterdam University, where he studied the classic languages. He obtained his doctor's degree in 1917. He was a teacher in the Gymnasium of Winschoten. After his father's death he was nominated chief rabbi of the Portuguese Jewish community at The Hague (1924); at the same time he became teacher at the Latin school of Hilversum, near Amsterdam.

When the Germans invaded The Netherlands (1940) Rodrigues Pereira was still chief rabbi, although by the general Nazi decree he lost his position in the Hilversum school. In 1942 he emigrated to Buenos Aires, Argentina.

RODRIGUEZ, noted Marrano family, many members of which were persecuted, imprisoned for life, executed or exiled by the Spanish and Portuguese Inquisition for loyalty to Judaism. Antona Rodriguez and his wife were burned at the stake in Saragossa in 1486 for slaughtering poultry according to the Jewish ritual, and in the same year Maria Rodriguez was the victim of an auto-da-fé for attending Jewish ceremonies. In 1487 Juan Rodriguez, a merchant, and Maria Rodriguez were burned for heresy. In 1664 Violante Rodriguez was arrested, and after a trial lasting three years was sentenced to two years' prison. Catalina Rodriguez (La Paquina) died in prison in 1680 and was burned in effigy. Francisco Rodriguez da Almeida, his son Pedro and his daughter Maria were burned in the auto-da-fé of Cordova in 1655. In 1721 a ninety-year-old woman, Maria Maria Roddriguez, and her daughter were burned at the stake in Granada. In 1722 the Rodriguez family of Cuenca was condemned to life imprisonment.

Lit.: Kayserling, M., *Sephardim* (1859) 202-10; Lea, H. C., *History of the Spanish Inquisition,* vol. I (1906) 592-611; Roth, Cecil, *History of the Marranos* (1932) 135, 245-388.

RODRIGUEZ (or **RODRIGO**; first name unknown), noted Jewish physician who lived in Portugal about 1500. He was personal physician of Don Juan II (1481-95), who was a friend of the Jews. Rodriguez, together with another physician, Master Joseph, and the bishop of Canta, Don Diego Ortez, was among the nautical authorities who examined Christopher Columbus' claim for the support of his plans to discover India. Rodriguez was called the "poetically gifted one," and his poetical work is included in a manuscript, *Canzoniero,* of the end of the 15th cent.

Lit.: Kayserling, M., *Geschichte der Juden in Portugal* (1867) 87; idem, *Christopher Columbus and the Participa-*

tion of the Jews in the Spanish and Portuguese Discoveries (2nd ed., 1928).

RODRIGUEZ, AMATUS (HABIB) LUSITANUS, *see* AMATUS LUSITANUS.

RODZINSKI, ARTUR, conductor, b. Spalato, Dalmatia, 1894. He studied law at the University of Vienna, graduating with the degree of Doctor of Law. At the same time he studied music with Franz Schalk, Sauer, and Schreker. During the first World War he served in the Polish army, being wounded in action.

Shortly after the War he received his first musical assignment, to conduct choral music and opera in Lemberg. From here he went to the Warsaw Opera, where he distinguished himself for his energetic performances. While conducting a performance of *Die Meistersinger* in Warsaw he was discovered by Leopold Stokowski, who brought him to the United States as his assistant with the Philadelphia Orchestra. For a period Rodzinski served as guest of many of the leading American orchestras.

In 1929 he was appointed permanent conductor of the Los Angeles Philharmonic, and from 1933 on was principal conductor of the Cleveland Symphony Orchestra. In Cleveland he reorganized the orchestra so that it became one of the great symphonic ensembles of the country. He also revitalized the repertoire, performing numerous new works, and introducing concert performances of such operas as *Tristan und Isolde, Der Rosenkavalier, Parsifal* and *Elektra.* In 1935 he gave the American première of Shostakovitch's *Lady Macbeth.* In 1937, at the invitation of Arturo Toscanini, he went to New York city to organize and whip into shape the N.B.C. Orchestra. Two years after this he directed a Polish program in conjunction with the New York World Fair. In 1942 Rodzinski declared himself to be not of the Jewish faith.

In December, 1942, he was appointed musical director of the New York Philharmonic Symphony Orchestra for 1943-44.

Besides his numerous conducting assignments in the United States, he directed with extraordinary success in Paris and Salzburg. He was one of the most brilliant conductors of his time, with a mastery of the orchestra, profound interpretative gifts and a compelling personality.

Lit.: Ewen, David, *Living Musicians* (1940).

ROGERS, BERNARD, composer, b. New York city, 1893. His music study took place at the Institute of Musical Art, and subsequently with Ernest Bloch in Cleveland. For many years he was a critic on *Musical America.* In 1921 he won a Pulitzer Scholarship, and a Guggenheim Fellowship for 1927 to 1929. His opera, *Marriage of Aude,* was awarded the David Bispham medal in 1931. Many of his orchestral compositions—including *Prelude to Hamlet, Five Fairy Tales,* and *Adonais*—were extensively performed by many leading American symphony orchestras.

He composed works for chamber orchestra and for chorus, and a string quartet. Rogers has a splendid sense for form, and consummate technical mastery. From 1929 on he taught composition at the Eastman School of Music in Rochester.

ROGOFF, HARRY (HILLEL), writer and editor, b. Berezina, Russia, 1882. He was brought to the United States in 1890 and was educated at Isaac Elchanan Yeshiva and at the College of the City of New York, where he received the B.S. degree in 1906. That same year he joined the staff of the *Forward.* Except for a short period (1908), when he was editor of the *Yiddishe Arbeiter Velt* in Chicago, and a second short period (1921) when he joined the left wing of the Jewish labor movement after the split of that year, Rogoff's association with the *Forward* was unbroken.

He was made managing editor in 1919, deputizing editorially for the editor, Abraham Cahan. His writing for the newspaper included also the fields of English and Yiddish literature. As one of the few Yiddish writers in America who had been in the United States since childhood, he was equipped to serve as interpreter of the American background to the Yiddish-reading immigrant masses.

Rogoff's longer works, in Yiddish, largely represent his function as mentor in Americanization processes: *How the United States Is Governed* (1914); *History of the United States,* in five volumes (1926-30); and *Nine Yiddish Writers,* in English (1931). His *Life of Meyer London* was also published in English (1930). His long association with the Jewish working-class movement made him one of its most popular leaders.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929) cols. 53-55; *Forward,* Dec. 20, 1942, section 2, p. 5.

ROGOFF, JULIUS MOSES, endocrinologist, b. Riga, Latvia, 1884. He was brought to the United States in infancy. After being in medical practice in Cleveland for a number of years he was appointed to an associate professorship at Western Reserve University (1915-35). The next five years he taught physiology at the University of Chicago, and in 1939 was given the chair of endocrinology at the University of Pittsburgh's School of Medicine, a position he still held in 1943.

Rogoff discovered the hormone of the adrenal gland that is essential to life. He undertook to disprove the concept prevailing among psychologists that emotional reactions are dependent on the adrenal gland. One of his outstanding contributions was the development of new therapy in Addison's disease. Pursuing his original researches in experimental medicine, physiology and endocrinology, he submitted more than 150 articles to the medical and scientific press, and chapters on his special subjects in authoritative medical compilations. He organized the Rogoff Foundation for the promotion and support of medical research.

While resident in Cleveland, Rogoff participated in Jewish activities. From 1931 to 1934 he was president of the League for Labor Palestine. He was onetime president of the city's hebrew schools and institute.

RÓHEIM, GÉZA, ethnologist, b. Budapest, 1891. He studied geography at the University of Budapest and ethnology at the Universities of Leipzig, Berlin and Liverpool. For some time he served in the ethnographic division of the Hungarian national museum, publishing books in Hungarian, mostly on subjects connected with Magyar popular beliefs. In 1919 he published *Spiegelzauber* and in 1921 *Das Selbst* and *Primitive Man and Environment,* winning the international prize for the best work of the year in the field of applied psychoanalysis.

Róheim then turned to the study of Australian totemism, and published *Australian Totemism* (1925); *Mondmythologie und Mondreligion* (1927); and *Social Anthropology* (1926). In 1928 he went to Central Australia and New Guinea, where he studied the native population. The results of his research were published in *Animism, Magic and the Divine King* (1930) and *The Riddle of the Sphinx* (1934), and in the articles "Psychoanalysis of Primitive Cultural Types" (in *International Journal of Psychoanalysis,* 1932) and "Primitive High Gods" (in *Psychoanalytic Quarterly,* 1934).

ROHLING, AUGUST, anti-Semitic author, b. Neukirchen, Hanover, Germany, 1839; d. Salzburg, Austria, 1931. He was professor of theology in Münster

and at the German University of Prague. His anti-Semitic book *Der Talmudjude* (1871) was circulated in tens of thousands of copies. In it he attempted to prove "scientifically" that, at the command of their religion, Jews are ordered to harm physically or morally, either openly or in secret, persons of different faiths.

The halo of "science" was soon removed from Rohling. Joseph Samuel Bloch, then rabbi in Florisdorf, near Vienna, publicly charged that Rohling was not able to translate a single page of the Talmud and that he had made fraudulent statements. Thereupon Rohling announced that he intended to swear before the court in Lemberg that ritual murder was prescribed by the Jewish religion. Bloch continuously attacked Rohling in the daily press for falsehood and perjury. A trial took place at which the prominent orientalists Theodor Nöldecke, August Wünsche and Franz Delitzsch rendered their expert opinion and accused Rohling of ignorance and deceit. Just before the last session of the trial, which lasted for over two years, Rohling withdrew his charges and was then branded as an ignoramus and perjurer. Thereupon the ministry of education asked Rohling to resign his professorship. Despite the outcome of the Rohling trial, his works are still used by anti-Semites as "scientific" material against the Jews.

Lit.: Delitzsch, Franz, *Rohlings Talmudjude* (1881); idem, *Was Doctor August Rohling beschworen hat und beschwören will* (1883); idem, *Schachmatt den Blutlügnern Rohling und Justus* (1883); *Blochs Österreichische Wochenschrift;* Bloch, Joseph Samuel, *Erinnerungen aus meinem Leben* (1922); idem, *Israel and the Nations* (1927).

ROHONC (in German, **Rechnitz**), town in Vas county, Hungary. An important Jewish community, considered the Jewish center of Transdanubia, flourished there from the 17th to the second half of the 19th centuries.

A Torah curtain dating from 1649 was used in the prayer house of the community. Later the landlord and protector of the Jews, Count Batthyany, built a synagogue which he rented to the Jews until (1707) they bought it for 500 gulden. When this became too small, they bought a plot and building for a new synagogue next to the Catholic church for 600 gulden in 1727. For being protected and tolerated the Jews of Rohonc paid annually for protection fees, various consumption taxes and miscellaneous fees totalling 3,011 gulden; besides, it was stipulated that they had to offer gratuities on New Year's Day to the landlord, his stewards and employes, the two clergymen of the town, the market bailiffs, the sheriff and the masters of the guild. From 1743 to 1846 they had to pay heavy taxes (toleration tax) also to the king.

The community was still important at the middle of the 19th cent. when the Enlightenment and economic opportunities wrought great changes in the Jews' life. Rohonc engaged the famous Mayer Zipser, author of *The Sermon on the Mount* (London, 1852), as their rabbi; he ministered to the community from 1854 to his death in 1869. At the same time the community established a public school which it maintained until 1923. However, when emancipation came, the Jews of Rohonc moved to the more important economic and cultural centers, and the community lost its importance. Many Jews called Rechnitz or Rechnitzer are of Rohonc origin.

The Jewish population of Rohonc was: thirty-six families in 1687; over 200 families (including those living around Rohonc) about the middle of the 18th cent.; 209 families in Rohonc alone in 1848; fifty-six families (170 persons) in 1927.

In 1921 Rohonc was incorporated into Austria, and in 1938 was annexed by Germany. The Jewish community was then dissolved; its valuable ceremonial objects and documents dating from the 17th to the 20th centuries were probably lost irretrievably.

ROITMAN, DAVID, cantor, b. Dorozhinke, province of Podolia, Russia, 1884. In 1943 he was living in New York city. As a young boy he sang in the choirs of Cantors Yankel Soroker, Leib Shapiro, Moshe Huberman and Zeidel Rovner.

His first position was in Yelisavetgrad, Russia (1904). After occupying other positions of short duration, he was engaged as chief cantor in Vilna (1909), and after staying there for three years went to St. Petersburg. The Russian Revolution, however, destroyed his congregation, and after six years in St. Petersburg Roitman went to Odessa, which was still comparatively free of the "new revolutionary spirit." But after three years, finding it difficult to live under the Soviet regime, he left for Bessarabia, and finally, in 1921, came to the United States.

Roitman was among the foremost cantors of the 20th cent. His compositions, many of them recorded by means of the phonograph, are in the best style of East European Hazanuth, and are permeated with the sad fate of his people. In his later compositions a more dramatic and prophetic idiom replaces the earlier plaintive chant. His "Ashamnu" is known wherever Jewish music is heard, but his only published composition (up to 1943) was "Rachel Mevakkah Al Baneha" (Rachel Weeping for her Children), written in his early style. His voice was a flexible lyric tenor, mellow in quality. In 1943 he was with Congregation Shaare Zedek, in New York city.

MAX WOHLBERG.

Lit.: *Die Chazanim Velt* (Warsaw), Jan. 1935; *Hazanuth* (1924) 190.

ROIZMAN, MATVEI DAVYDOVICH, author and poet, b. Russia, 1896. His first ventures into print (from 1921 on) were as a poet of the imagist school. His lyrics "Khevronskoe Vino" (Hebron Wine) and "Palma" (The Palm) are typical for this period of imagism. The motifs and portrayals of these and similar poems are from the Bible, the Talmud and the history of the Jewish people. At the same time he occasionally gave realistic pictures of contemporary life —the life of Jewish tailors, shoemakers and other small Jewish people. Later he turned to prose. In 1928 he wrote what is considered his most important novel, *Minus Shest* (Minus Six), which portrays members of the Jewish middle classes adapting themselves to the new Soviet life.

Roizman's deep knowledge of the everyday life of the Jewish middle classes made it possible for him to depict in dialogue and in asides the typical reactions, hopes and despairs, the very being of Jewish family and business life. *Eti Gospoda* (These Gentlemen; 1932) was directed against anti-Semitism. Critics charged it with lack of balance and objectivity; it was felt that the coarse type of anti-Semitism reflected by this novel was exaggerated and Jewish characters overly idealized.

From the 1930's on Roizman devoted himself to newspaper work, writing feature articles for newspapers and magazines.

ROJAS, FERNANDO DE, lawyer and writer, b. Puebla de Montalbán, Spain; d. Talavera de la Reina, Spain, 1541. He was a converted Jew, who seems to have served as *alcalde mayor* of Talavera, and it is established that he was author of at least the larger portion of *La Celestina,* a celebrated novel-drama in prose dialogue which ranks in Spanish literature as second only to Cervantes' *Don Quixote.* In Jewish references, Rojas has been generally overlooked, although the fact that he was a Jew by birth came to light as

Title page of "La Celestina" by Fernando de Rojas

early as 1902; *La Celestina* had, however, been ascribed to Rodrigo Cota de Maguaque, likewise a converted Jew, who, in the theory of dual authorship which some critics maintain, would seem to be the most genuine candidate to share credit with Rojas.

Documents published in 1902, dated 1525, report that the aged Marrano, Alvaro de Montalbán, being tried by the Toledo Inquisition, named his daughter Leonor as wife of the lawyer Fernando de Rojas, an inhabitant of Talavera who composed *Melibea* (that is, *Celestina*), and who, being a *converso,* could not act as Alvaro's attorney. In 1925 and 1929 further revealing documents were published; these included Rojas' will, which named four sons and three daughters as well as the wife, Leonor Alvares. Rojas requested that his wife's dowry of 80,000 maravedis revert to her before division of the estate. He also made her executrix and heiress of his general library, which he listed in an inventory. In addition to the will and inventory, a third document represents a petition of a grandson, laying claim to a title of nobility in 1584. By implication, Rojas himself was therefore of noble and pure Christian blood; thus the petition cast doubt on the Jewish birth of the author of *La Celestina.* But such claims to nobility were then much in vogue, obviously often motivated by considerations of expediency, and the dubious circumstances surrounding this particular claim would not seem to outweigh the stronger evidence of Rojas' Jewishness.

La Celestina, which was the popular title in general use after 1519, seems to have been composed shortly before or shortly after 1492. The oldest known editions are those of 1499 and 1501, the latter entitled *Comedia de Calisto y Melibea.* Both are composed of sixteen acts of the drama-novel, and the edition of 1501 contains the acrostic poem which reveals Rojas as the author of the last fifteen acts, in any case. The authorship of the first act, and of the new ones added in the subsequent editions of twenty-one acts, remains in doubt; as before mentioned, some authorities ascribe these to Cota, who was famous for his poem *Dialogo entre el amor y un viejo.*

It is generally agreed, however, that the shorter editions are superior to the others. It is likewise generally thought that Rojas' desire for anonymity or partial anonymity was induced by fear of the Inquisition. For *La Celestina,* although professing moral purposes, is filled with unorthodox and even anti-clerical satire. Only its great popularity kept it from being completely banned until the late date of 1793. *La Celestina* was the most popular Spanish book both in Spain and outside, until the advent of *Don Quixote.* Recognized as a great contribution to European literature, it was translated into numerous languages; in 1631 James Mabbe rendered it into an excellent English text. In Spain, more than a score of later literary works were derived directly from it. In masterly style and on a grandiose scale, Rojas dramatizes the lives and emotions of his many diverse characters, drawn from every social class and category.

Lit.: Zelson, Louis G., "The *Celestina* and Its Jewish Authorship," *Jewish Forum,* Dec., 1930, pp. 459-66.

ROKACH, ISRAEL, mayor of Tel-Aviv, Palestine, b. Jaffa, Palestine, 1896. He attended the polytechnic institutes in Lausanne and Zurich, Switzerland. In 1920 he entered upon his career of electrical engineer, working in England and in Palestine. Soon he became prominent in numerous Tel-Aviv activities. In 1922 he was elected to the city council, and was there made director of several departments. He served as a member of the executive committee of the city planning commission, director of the land redemption organization Geulah, member of the Orange Syndicate, and president of the building committee of the Habimah theatre building. In 1927 he became vice-mayor, and in 1936, by appointment of the High Commissioner, succeeded Meier Dizengoff as mayor of Tel-Aviv, a public office which he still held in 1943. In 1938 he was awarded the decoration of the Order of the British Empire.

Rokach was, in addition, on the council of the Federation of General Zionists in Palestine, on the board of directors of the newspaper *Haboker,* a member of the executive committee on education of Keneseth Yisrael, a member of the Ashrai bank, president of the Zebulun Seafaring Association, and president of the Association of Engineers and Architects in Palestine. He was president also of the Council of the Maccabi (athletic association), and director of the first Jewish olympics, the Maccabiad.

ROKEACH, ELIEZER BEN JUDAH, one of the founders of the Chovevei Zion movement in Roumania, b. Jerusalem, 1853; d. Galicia, 1918. He married at the age of thirteen, and after losing his fortune came to Roumania. Together with Karpel Lippe of Jassy and Samuel Pineles of Galatz, he worked with some success for the establishment of agricultural colonies in Palestine. At various periods of his life he lived in Roumania, in Palestine, in Odessa and in Galicia, and everywhere advocated colonization in the Holy Land.

For several years he contributed articles on this subject to the Bucharest Yiddish newspaper *Hayoetz* (1880-85). At Galatz he founded a triweekly newspaper in Yiddish, *Die Hoffnung,* of which he was sole editor until after 1900. He published *Matzab Sefath Uleshon Haashkenazim.*

ROKEACH, SHALOM, rabbi and Zaddik in Belz, Galicia, b. Brody, Galicia, 1779; d. Belz, 1855. He was the founder of the Belzer dynasty of Zaddikim and of the Belzer tendency in Hasidism, which called for a Talmudic-rabbinical foundation instead of Cabala and mysticism. Rokeach stressed the importance of Talmudic study to all his pupils and established the Yoshevim, groups of young men—married and unmarried—who study the Talmud and are supported by the Zaddik.

Rokeach was extremely conservative in his views, and excluded all non-Jewish culture and civilization. Although not a follower of asceticism, and demanding cheerfulness in religious observance, Rokeach was an advocate of temperance and moderation. He is said to

have healed the sick merely by laying hands on them. Rokeach had numerous followers in Galicia, Poland, the Ukraine, Podolia and northern Hungary, and much of the same fidelity was accorded also to his successors.

ROLLAND, ROMAIN, non-Jewish author, and Nobel Prize winner, b. Clamecy, France, 1866. Since 1900 Rolland has been considered one of the greatest figures of contemporary French literature, although his success was by no means undisputed. He became even more popular in England and the United States. This vogue was due to the moralistic strain which distinguished his novels as well as his political and biographical works, and was deemed contrary to French ideas by a number of outstanding critics of his native country. Nearly all the works written by Rolland were translated into English. Some of them (his studies on Beethoven, Tolstoi and Gandhi) were translated into Yiddish and Hebrew.

Rolland constantly professed revolutionary internationalism, and combatted nationalistic claims and the cult of military power. He proceeded from the idealistic revolutionarism represented by his friend Malvida von Meysenburg to the defense of Lenin's Bolshevism, but the rise of Nazism led him back to the struggle for individual freedom without any party color. From his early manhood to the present day he was opposed to anti-Semitism. He struggled for the revision of the Dreyfus trial, and in 1898 published a drama, *Les Loups,* which transposed the problem of the Dreyfus case into a remote period of French history.

Although the influence of Wagner and Tolstoi were by far the most decisive in Rolland's mental evolution, the study of Spinoza also became very important for the formation of his mind. He acknowledged this fact in his essay *L'eclair de Spinoza* (1930). He delved into the Jewish question by discussing it and creating Jewish characters in his great novel *Jean Christophe,* which he began to write in 1892 and published from 1904 to 1912. The hero, who in large measure expresses Rolland's own ideas, meets Jews at every crossway of his life. Sylvain Kohn, his mentor, is a Jew; his bitterest foe, Lucien Lévy-Coeur, representative of the ironical spirit of analysis and decomposition, is also a Jew. The Jews Weil and Moos are helpful friends. The Jewess Judith Mannheim disappoints the hero because of her cold intellect. It is not unfair to the author to note that all his Jewish characters are constructed in the abstract rather than the results of realistic observation. As to his general idea of Judaism, the author says: "The Jews yielded ready obedience to their sacred mission to remain strangers among the other races; they are the people who weave, on all sides, the network of human unity. They demolish the intellectual barriers between the nations in order to make the field open to Divine Reason."

In his preface to the American edition of Jean-Richard Bloch's novel *& Co.,* Rolland said: "The problem is complex and thorny, changing its form with each country. North and South, in the Orient and in the Occident, ethnical factors vary: any contact with Israel gives rise to strongly diversified chemical reactions."

Rolland combatted Fascism in his novel *L'âme enchantée.* He exalted individual independence in *Clérambault.* He protested vigorously against the Nazis' persecution of the Jews in 1933, and continued to denounce racism as a scientific error and a dangerous threat to human civilization. HUGO BIEBER.

ROLNIK, JOSEPH, Yiddish poet, b. Zhuchovitch, Poland, 1879. He came to the United States first in 1899, but after a few years went to England. In 1904 he returned to Russia, living mostly in Minsk, until 1908, when he came once again to the United States. Rolnik's first published poem appeared in the *Forward* in 1901. Subsequently his work appeared in many other periodicals and anthologies.

He is primarily a simple, lucid lyricist, with a strong undertone of melancholy and resignation in his poetry. His career in the United States ran parallel to the development of the group known as the Yunge, who believed that the relation of the individual to his own conflicts and experiences should be the source of poetic inspiration.

Much of Rolnik's poetry harks back to the loneliness of his childhood in the Polish village. His published volumes include: *Oifn Zamdign Veg* (1911); *Lieder* (1915); *Zum Shteren Noid* (1922); *Lieder* (1926); *Neie Lieder* (1935). Rolnik was employed as a proofreader on the *Day.*

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 203-6; Olgin, M., *In der Velt fun Gesangen,* 258-66; Nadir, Moishe, "Rolnik Impressionen," *Literatur un Leben,* Jan., 1916.

ROMAN WRITERS ON JEWS. The prevailing tone which runs through the whole estimate of Judaism as given by the Roman writers is that of the profound contempt of the proud Roman for a despised people who so boldly and obstinately upheld their monotheistic principles.

1. Horace (about 65-8 B.C.E.) alludes in his fourth Satire to the proselytizing activities of the Jews, where he threatens to "convert his opponents if he is not granted poetic privileges." This illustrates the efforts of the Jews of that age to diminish the influence of their oppressors.

In Satire Five he utters the words *credat Judaeus Apella*—"tell it to the Jew Apella, not to me," when told of an altar miracle. Similarly, Horace represents an encounter with his friend Fuscus. The latter hesitates to communicate something because it is a day of high solemnity for the Jews. "This is the thirtieth Sabbath," says Fuscus, averse to offending the religion of the Jews. When Horace retorts that he has no scruples about it, Fuscus avers his reverence for the Jewish holiday. It is apparent that in Horace's days it was not uncommon to respect the holy days of the Jews.

2. Ovid, the poet (43 B.C.E.-17 C.E.), refers to the Jewish Sabbath in his *Art of Love,* where he advises the youth who is seeking an object for his affection not to forget the Temple of Venus where the Roman women, following the custom of the Syrian Jews, bewail Adonis, or the place where the Jew performs his rite each seventh day. He also recommends that a lover pay court to his girl on a Sabbath day, when she is not likely to be occupied with other affairs. In his palinode *The Cure for Love* he advises the brokenhearted lover to disregard "imported Sabbaths" and to repair to distant lands.

3. Petronius Arbiter, proconsul and satirist (about 60 C.E.), ridicules the supposed worship of the pig by the Jews, mocks their habit of lifting their eyes heavenward in prayer and their rigorous enforcement of the law of circumcision.

4. Pliny the Elder (23-79 C.E.), historian, officer of Titus in the Jewish War, describes Judea and its neighboring countries and refers to the Jews in his *Natural History* as *gens contumelia numinum insignis,* "a race famous for its contempt of the gods."

5. Martial (44-104), the epigrammatist, characterizes the Jew by his national mark (circumcision), hits at his anxiety to conceal it, and ridicules the poor Jewish boy brought up by his mother to beg. He mentions as the most offensive odor "the fasting breath of the Sabbath-keepers," and vents his scorn upon the hawker on the Tiber who sells matches for broken glass. A number of Roman Jews were engaged in the glass industry.

6. Suetonius, historian, cabinet minister under Hadrian, points out in his *Lives of the Emperors* the grief of the

Jews at Caesar's death, which shows that he must have been their patron. Suetonius gives an account of the expulsion of Jews from Rome under Tiberius in order to check the spread of foreign rites and of the measures taken to remove foreign Jews under Claudius because they fomented disorders. Jews who were Roman citizens do not seem to have been affected by these decrees. He describes the capture of Jerusalem by Titus, and refers to the burdensome taxes levied upon the Jews under Domitian.

7. Tacitus (85-120), the great historian, mentions the expulsion of 4,000 Jews under the rule of Tiberius in 19 C.E., and gives a short history of the Jews and of Palestine. He traces the origin of the Jews to various sources, one of which is the island of Crete and its mountain, Ida, from which they derived their name. He agrees with the Greek writers, who tinged their compositions with fables, that the Jews paid divine honors to an ass, and relates that they are descendants of lepers and therefore outcasts from Egypt. He reports their tribulations under Moses in the desert and that the Mosaic religion is opposed to all other forms of worship among men in order to secure the allegiance of the Jews in time to come. He attributes their abstention from the flesh of swine to the disease common to this animal, with which malady they were formerly afflicted. He maintains that Jewish rites date back to antiquity, but that their other institutions were cunning devices. He attributes the growth of Jewish power to the fact that the scum of other nations, having renounced their religion, brought gifts to Jerusalem. He declares that while they aid each other in distress they manifest an intense hatred toward strangers and as a religious community they maintain their exclusiveness with uncompromising rigor; they practise circumcision in order to be known by a distinctive mark. The Jews believe in one God only and conceive of Him by the mind alone. Tacitus remarks that the ox which the Jews slew was worshipped in Egypt, thus confirming the Egyptians in their attestations to the steadfastness of the Jews in their religion. Tacitus mentions the frequent fasts of the Jews, their use of leaven, and the seventh day.

8. Cicero (106-43 B.C.E.), the great orator, characterizes the Jews as a nation born to slavery. In his defense of Flaccus, governor of Asia, against charges of seizure of sacred funds collected in the provinces for the Temple, Cicero delivered his famous speech, *Pro Flacco*. In it he declared that the senate had often prohibited the export of gold and that it was in the interest of the state "to treat with disdain the rabble of Jews who show violence in the assemblies." He maintains that the religion of the Jews was repugnant to the splendor of the Roman empire and is more so now because of their armed resistance. The very fact that the Jews have been conquered and enslaved shows that it was the will of the gods. It is evident from his statements that the Roman Jews had great influence in the political affairs of the state.

9. Juvenal (67-155 C.E.), the satirist, rages at a Rome where foreign characteristics predominate. With contempt he refers to the Jewish hawkers and fortune-tellers, who sell potent spells for cash. He satirizes Jewish reverence for the laws of Moses, such as observance of the Sabbath, practice of circumcision, and worship of a deity in heaven, and ridicules the indulgence of the Jews toward the swine, permitting it to reach a good old age. He decries Jewish lack of hospitality toward strangers and their indifference toward Roman laws.

10. Seneca (b. 7 B.C.E.), the philosopher, attacks the religious constitutions of the Jews. He maintains that in observing the Sabbath the Jews lose a seventh part of their life in inactivity. He terms the Jews "the most outrageous nation," and regards the universal adoption of their customs as an instance in which the conquered have declared that the Jews could assign no reason for their religious practices.

11. Livy (59 B.C.E.-17 C.E.), the famous historian, gives an account of the capture of the Temple by Pompey.

12. Florus, a historian who lived at the end of the reign of Trajan, describes Pompey's conquest of Jerusalem and refers to the secret rights of the "irreligious race" and to the quarrel between Hyrcanus and Aristobulus.

13. Justin (about 160), the historian, gives an erroneous and confused history of the Jews and professes to have derived his materials from Trogus Pompeius, a Latin historian in the time of Augustine. The latter followed the Greek writers of his own time, who spiced their compositions with fables.

14. Ammianus Marcelinus, a soldier-historian of the 4th cent., takes up the history of Rome from the point at which Tacitus ends to his own time. He describes Palestine upon its capture by Pompey. He states that when Julian passed Judea on his way to Egypt, he voiced his indignation at the "noisy disgusting Jews."

15. Pomponius Mella (about 48 C.E.), the Roman geographer, mentions Judea and Palestine in his work *De situ orbis*, and refers to the cities of Gaza, Joppa and Ascalon.

16. Persius (b. 34 C.E.), the aristocratic satirist, attacks the vices of his time. He depicts Jewish life on the eve of the Sabbath in a squalid suburb inhabited by a brawling class of men of oriental origin. He portrays that strange and nameless God of the Jews by whom the ordinary Roman was overawed.

17. Rutilius Numatianus (about 400) is the most bitter of all writers on the Jews. In a poem produced in 417 C.E. during the reign of Honorius, he rages against their unsocial habits, their great frugality, their practice of circumcision and their Sabbaths, which are "the essence of folly." He winds up with the wish that Judea had never been conquered, for although the growth has been cut off, the virus creeps through the veins and the conquered nation overcomes the conqueror.

18. Claudius Claudianus, the last of the Latin classic poets, belongs to the end of the 4th cent. He refers to the mysterious practices of the Jews in the line: "India, which is painted on Jewish veils."

Lit.: Schürer, E., *A History of the Jewish People in the Time of Jesus Christ*, vol. 2, division 2, pp. 291-97; Giles, *Heathen Records to the Jewish Scripture History* (1856); Gill, *Notices of the Jews and their Country* (1872); Radin, Max, *The Jews among the Greeks and Romans* (1915) 210 et seq.; Hudson, *History of the Jews in Rome*, 394 et seq.; Hindekoper, *Judaism at Rome*, 36 et seq.

ROMANELLI, SAMUEL AARON, Hebrew poet and traveler, b. Mantua, Italy, 1757; d. Casale Monferrato, Italy, 1817. He traveled in North Africa, stayed four years in Morocco, subsequently visited the main cities of Europe, and returned to Italy in 1800. In his *Massa Baarab* (Berlin, 1792) he describes his travels. This book was translated into English by Schiller-Szinessy as *Romanelli's Travels in Morocco* (Cambridge, 1886). Besides a Hebrew translation of Metastasio's tragedy *Themistocles* and Pope's *Essays on Man*, Romanelli published a number of poems, including "Hakoloth Yehdalun" (Berlin, 1791), an allegoric play in verse; "Ruah Nachon" (Berlin, 1792), a philosophical poem; and "Zimrath Aritzim" (Mantua, 1807), hymns to Napoleon with an Italian translation. He also translated the prayer-book into Italian.

Lit.: Torre, L. della, *Scritti sparsi*, vol. 2 (1908) 171 et seq.; Schiller-Szinessy, in the introduction to the English edition of *Massa Baarab* (1886); Waxman, Meyer, *A History of Jewish Literature*, vol. 3 (1936) 135 et seq.

ROMANIN, JACUR LEONE, Italian deputy, b. 1847; d. 1928. An engineer by calling, he served as representative of the district of Piove di Sacco from 1880 to 1919. He devoted himself mostly to industrial and agricultural problems, and was a strong advocate of the restoration of inland navigation in Italy. As secretary of state he was continuously a member of the cabinet, and he held the senatorial office after 1920. Romanin was an active participant in the affairs of the Jewish community of Padua as well as in those of the Collegio Rabbinico Italiano.

ROMBERG, MORITZ HEINRICH, physician, b. Meiningen, Germany, 1795; d. Berlin, 1873. In 1820 he was made physician to the poor, and from 1830 to 1867 taught special pathology and therapeutics at the

Sigmund Romberg

University of Berlin. In 1845 he was appointed full professor, and in 1851 he received the title of privy councillor. Romberg was the founder of pathological physiology and neurology.

His works include *Neuralgiae nervi quinti specimen* (1840); *De paralysi respiratoria commentario* (1845); and *Lehrbuch der Nervenkrankheiten* (1840-46). He was the first scientist who succeeded in delineating the ailments of the nervous system, especially in regard to tabes dorsalis.

Lit.: Hirsch, *Biographisches Lexikon der hervorragenden Ärzte;* Pagel, *Biographisches Lexikon hervorragender Ärzte des neunzehnten Jahrhunderts.*

ROMBERG, SIGMUND, composer, b. Nagykanizsa, Hungary, 1887. He studied at the University of Vienna, and at the same time also received a musical education. In 1909 he came to the United States to fill an engineering post, but soon thereafter turned exclusively to the composition of light music. Romberg composed infectious music for an operetta, *The Midnight Girl,* which scored an immediate success in 1913. During the first World War he served in the United States Army. After that he composed the music for a wealth of operettas and reviews, some of which were extraordinarily successful, including *Maytime; Blossom Time; The Student Prince; The Desert Song;* and *New Moon.*

Romberg had an engaging flair for melody, and was able to produce numerous lilting songs which caught the fancy of the entire country. Later he lived in Hollywood where, from time to time, he composed music for the screen. Romberg was president of the Song Writers' Protective Association. He was a member of the B'nai B'rith of Beverley Hills, Cal.

ROMBRO, JACOB (Philip Krantz), Yiddish author and editor, b. Zupran, Russia, 1858; d. New York city, 1922. After early training in the Zhitomir Yeshiva, he studied at the high school and subsequently at the St. Petersburg Institute of Technology. He was converted to radicalism while at school, and spent a year (1877) in prison. After the assassination of Alexander II (1881), Rombro had to flee from Russia because of his association with the terrorists who had provoked the act. In Paris he wrote for Russian émigré periodicals, and became affiliated with political agitation among Jewish workers.

Rombro left Paris for London in 1883, and here he eventually learned how to write Yiddish, becoming the editor (1885) of the first Yiddish socialist newspaper in the world, *Der Arbeiter Fraind.* In 1890 he was called to New York city to edit the weekly *Arbeiter Tzeitung,* which became the daily *Abendblatt* in 1894. He was the first editor of the *Tzukunft* (1892). Soon after 1900 Rombro joined the staff of *Die Yiddishe Velt,* a non-socialist newspaper. But later he was called to Warsaw, to edit a projected Socialist daily. Government prosecution, however, forced a change of plans, and he seems to have become, instead, the editor of a monthly published in Vilna (1907). During this period he acted as correspondent for the *Morgen Zhurnal* in New York. When he returned to New York, not long afterward, he joined the staff of the *Forward,* where he remained until his death.

Writing as Philip Krantz, and using several other pseudonyms, Rombro was an important factor in the development of political thought among the Yiddish-speaking public. His own orientation changed from an almost bellicose radicalism (he began by participating in Yom Kippur balls and other activities of the anti-Orthodox Jews) to quiet exegetic writing. He remained an assimilationist, but changed his revolutionary attitude for one of evolutionary convictions. Rombro's pamphlets, brochures, educational books and newspaper series touched on numerous historical, economic and social subjects.

Among his works were *Kultur Geshichte* (1900); *Geshichte fun der Frantzezisher Revolutzion* (1903); *Aristotle, der Printz fun Filozofen* (1903); *Gott, Religion un Moral* (1906); *Lessing un Mendelssohn* (1906); *Geshichte fun Gantz Amerika* (Warsaw, 1905; New York, 2 vols., 1929); and *Geshichte fun Sotzialism* (1920). NATHAN RICARDO.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 3 (1929), cols. 728-40; Cahan, Abraham, *Bletter fun Mein Leben* (1926-31).

ROME. Rome was the capital in ancient times of the Roman Republic and of the Roman Empire; in modern times it has been the capital of the papal dominions and of the kingdom of Italy.

1. The Roman Republic and the Imperial Period. Rome is one of the oldest Jewish communities in Europe. The religious propaganda carried on by the Jews in Rome prompted the praetor Hispalus, as early as 139 B.C.E., to banish all Jews who were not Roman citizens. This banishment, however, did not extend to the Jewish settlements on the right bank of the Tiber. This edict was in force for only one year, the usual term of the praetor's civil service. Through their number and active participation in Roman politics, with which they identified themselves, the Jews exerted, as early as 59 B.C.E., a considerable influence on the public life of Rome. The petition to dethrone the royal house of the Idumeans, introduced by a Palestinian deputation, was joined in by 8,000 Jewish residents of Rome (3 C.E.).

They owed their rights within the Roman Empire to Julius Caesar; these rights permitted them to hold public devotional exercises, otherwise not allowed in the city, for which the Jews were grateful to him. They possessed in the city ten houses of prayer (*proseuche*), including the synagogues of the Augustesians, Agrippesians and the Volumnesians which were founded by members of the Familia, i.e. the Jews emancipated by Augustus, by the Jewish King Agrippa, and by the Roman procurator Volumnius. There

was also the synagogue of the Vernaculean or Vernaclesian Jews (*vernaculi*) who were emancipated by Imperial decree. Most of the city Jews were emancipated by prominent Roman families, and for that reason they used, together with their own names, the family names of their emancipators, such as Flavius, Severus, Julianus, Aurelius, Tullius and Sempronius. The synagogues were under the supervision of the Archontes, whose chief was called the Gerusiarch. The leader of the community was called the Archisynagogus, and he was assisted by the Hyperetes, who served as his adviser. The spiritual head of the community was the Rabbenu (Rabbinou), who was assisted by the rabbinical collegium (*talmide hachamim;* known also by the Greek title of *mathetai sophon*) and by the secretary (*sofer;* called also *grammateus*).

The religious propaganda carried on by the city's Jewry was extensive. The expulsion of the Jews under Tiberius (in 19 C.E.) was the consequence of this missionary activity. Nevertheless, in 31 the return of the Jews to Rome was again permitted. Emperor Claudius forbade the Jews' religious worship on account of the disturbances caused by the appearance of a Messianic visionary in the city. On the other hand, the period of the reign of Nero, whose wife Poppaea Sabina was inclined toward Judaism, was favorable to the Jews.

The unfortunate conclusion of the war in Palestine (70 C.E.) and the conquest of Jerusalem had little if any influence on their situation. Judaism in Rome was now put on the footing of a privileged religion instead of its adherents being treated as members of a separate nation. A small number of Palestinian families settled in Rome, creating or increasing the community of the "Hebrews." The only tangible difference was the Fiscus Judaicus which was levied for the benefit of the temple of Jupiter Capitolinus and which replaced the tax paid to the Temple of Jerusalem. Emperor Domitian severely punished all attempts to evade payment of this exceptionally humiliating tax. His successor, Nerva, apparently put an end to certain abuses connected with this tax, as a medal testifies. However, it appears that the strict measures taken after the suppression of the Jewish uprisings under Trajan and Hadrian did not affect the Jews of the city. During their stay in Rome Gamaliel, Eleazar and Akiba, and later Simeon ben Yohai and Eleazar ben Jose, preached in the synagogues of Rome, the spiritual leader of which at that time was the distinguished physician Theudas (Theodosius); following him, Mattithiah ben Heresh was rabbi.

2. The Period of the Earlier Papacy. The first bishops of Rome appear to have been unprejudiced against the Jews. In the 5th cent. the Jew Telesinus was in the service of Pope Gelasius. Beginning with the 6th cent. the popes became the actual rulers of the city. The just and mild Gregory I (590-604), through his tolerance, exercised especial influence upon his successors. About the year 1000 the custom was introduced that the Jews of Rome were to pay homage on the occasion of the public entrance of an emperor or a newly elected pope into the city; this homage consisted in their handing over a Scroll of the Law to the officials of the city, as a petition for their further right of domicile in Rome. In 1021, for the first time, there was a persecution of the Jews in Rome.

The Roman rabbinate, during the period in which Nathan ben Jehiel (1035-1101), author of the great Talmudic dictionary *Aruch,* carried on his labors there, enjoyed the highest respect even outside of the Roman Empire. The "wise men of Rome" were regarded as authorities even by far distant Jewish communities. The etymologist and Bible commentator Abraham ibn Ezra, in the course of his wanderings, lived in Rome for a long period (1140 on) as a teacher, and was actively engaged in literary work there.

The resolutions of the Third and Fourth Lateran Councils (1179 and 1215), which were inimically disposed toward the Jews, were hardly heeded in Rome itself, nor were the oppressive decrees of the church councils held even in Rome ever applied. In 1268 one of the oldest synagogues in the Trastevere was destroyed by fire, and not long afterward the Jewish cemetery of the same community was desecrated by a mob in the course of a riot.

The sojourn in Rome of the pseudo-Messianic enthusiast Abraham Abulafia (1240-92), who endeavored to convert Pope Nicholas III to Judaism in 1280, had no effect upon the history of the Jewish community. Pope Nicholas IV took the Jews under his special protection, perhaps as a result of the influence of his Jewish personal physician, Maestro Gaio, a friend of the philosopher Hillel ben Samuel of Verona. On the other hand, Boniface VIII was a pronounced enemy of the Jews. The rabbi of the community of Rome, Elijah de Pomis, was burned at the stake under his rule in 1298. During the Jew-baiting which took place in 1322, instigated by Sanctia, wife of Robert of Naples, copies of the Talmud were burned publicly on the festival of Shabuoth, and a number of prominent members of the community were murdered by the mob.

3. Internal Conditions. During these troubled times there lived in Rome a great number of scholars who, like Judah Romano (b. 1292), created works of importance in the field of philosophy. Such poets as Immanuel ben Solomon (b. 1270), imitator of Dante, and Kalonymus ben Kalonymus (b. 1286), and such Bible investigators as Shemariah ben Elijah Hakriti wrote important works. Friendly intercourse between cultured Jews and Christians was of common occurrence. The will of Menahem of Rimini, who in 1392 left part of his property for the restoration of the walls of Rome, evidences the attachment of the Jews of Rome to their city.

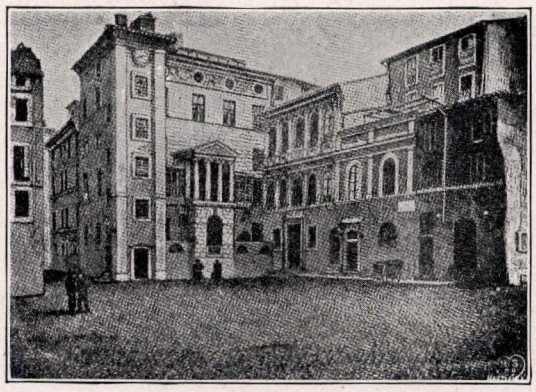
The papal bulls issued in 1309, 1345 and 1402 indicate in which parts of the city the Jews lived at all these periods. Their quarter extended from the Piazza Giudea to the Piazza dei Savelli, and included the entire Rua Judaeorum (Jews' street) and the Platea Judaeorum (Jews' Square) as far as the Platea in the Templo Judaeorum (Jewish Temple Square), from which their street ran as far as the palace of Lucretius Cecchus de lo Mastro.

Some Jews resided in that part of Rome known as the Regio Ripa, but the greater number lived in the district of Trastevere, with its gate, Porta Judaeorum. The whole district inhabited by them was called the "Convicinum." The principal synagogue was situated in the neighborhood of the Church of St. Thomas, while most of the Jewish physicians lived in the Trastevere district, where the public medical and grammar schools were located.

At a meeting of the Italian Jewish communities held in Bologna (1416), in which the leaders of the Jewish community of Rome also participated, it was resolved to collect money for the protection of the Jewish communities against further attacks, and to send a delegation to the new pope, Martin V. Soon after his accession Martin V confirmed the Roman Jews in all their legal rights, as given by the charter of Calixtus II contained in the bull *Sicut Judaeis non,* in which he took the Jews under his own fatherly protection. He was, personally, on friendly terms with the Jews, and allowed the scholar Aaron ben Gershon Abulrabi to lecture in the Vatican on the cherubim; another scholar, Elijah Giudeo, was appointed his personal physician, and remained in that position until his death. Especially noteworthy was the bull of February 14, 1429, by which Martin V placed the Jews under the jurisdiction of the civil law, allowed them to attend the public schools and exempted Jewish tradesmen from

wearing the Jew badge, thus evidencing a very rare example of freedom from prejudice.

4. The Centuries of Disfranchisement. Hence the Roman Jews experienced all the more painfully the strict execution of the bull of Eugenius IV (1442) which was inimical to the Jews, with the result that a number of prominent members of the Jewish community were forced to emigrate to Mantua, where they settled by permission of Francisco Gonzaga.



His first bull, issued on February 8, 1433, forbade the beating of Jews on their holy days, the levying of special taxes, disinterment of Jewish corpses, and resort to violence in the collection of taxes. But his bull of the latter part of 1442, which he was probably induced to issue by the Council of Basel, and which comprises forty-two articles, forbade Jews to study civil law or engage in handicrafts, and ordered the abolition of Jewish courts. However, the leaders of several congregations of Rome met in Tivoli and Ravenna, and by the speedy collection of enormous sums of money succeeded in having this bull withdrawn, although the clause which taxed the Roman Jewish community in the sum of 1,000 scudi remained in force. But the community was impoverished to such an extent that Moses ben Isaac, later physician to Pius II, had to turn for aid in its behalf to other Italian communities. In addition, the inciting speeches of John Capistrano endangered their position and created such a state of unrest in Rome that the Jews were compelled to barricade themselves in their houses. The general political situation fortunately prevented the carrying out of the anti-Jewish measures planned by Calixtus III.

Pope Paul II enjoys the doubtful fame of having introduced contests for Jews during carnival week which annually led to brutal excesses of the mob against the Jews, who had also to pay a carnival game tax of 1,100 florins annually. The appearance of the Marranos, who fled from the Spanish Inquisition to Italy, became a constant danger to the security of the Roman Jewish community. The severe bull of Innocent VIII (July, 1487) against the Marranos disclosed the dangerous situation into which the Jews of Rome were drawn by their former coreligionists who had been forcibly baptized.

This explains the repelling attitude of the city's Jews against the admission to Rome of the Jews expelled from Spain in 1492. Very soon these Spanish immigrants founded a fourth house of prayer, in addition to the three already existing, and came to form the main community of Roman Jewry. Its first rabbi was Bonet de Lattes, of the Provence, papal physician and astronomer, to whom Johann Reuchlin later, in the course of the dispute over the Talmud, appealed for a recommendation to Pope Leo X. Further additions to the Roman community were caused by the admission of a number of Jews expelled from Naples and the settlement of

An ancient tombstone inscription (in Greek) in the old Jewish cemetery of Rome

The five synagogues in Rome

ransomed Jews from the Barbary States under Julius II and Paul III. The influx of so many homeless Jews made a new constitution for the community indispensable. With the express approval of Pope Clement VII, this new organization was created under the leadership and direction of Daniel ben Jehiel of Pisa; in 1524 it was confirmed by the pope, and remained in force into the 19th cent.

When David Reubeni and his disciple Solomon Molcho came to the papal court (1524), Clement VII offered them protection and gave them letters of recommendation. After his successful audience with the pope, the Jewish community hailed him with great hopes and enthusiasm. Reubeni, however, aroused suspicion among various members of the community; this resulted in the formation of two parties which remained at variance with each other until he left the city in March, 1525. His shameful end was a heavy blow for the Jews of Rome.

In May, 1527, the Spanish-German troops of Charles IV advanced against Rome and pillaged the city; the Jews also suffered severely. Paul III granted permission in 1545 to establish a Hebrew printing press in Rome—such a press had previously existed in Rome in 1518, perhaps even as early as 1480—thus evidencing his tolerance.

The establishment of a loan house "to curb Jewish usury" (1543) and the introduction of a tax on synagogues to be applied toward the maintenance of the Casa dei Neofiti ("the house of the newly baptized") marked the beginning of an era of reaction. The public burning of the Talmud on the Jewish New Year on the Campo dei Fiori (September, 1553) was the signal for an open attack on the Jewish community. Imminent bloodshed was averted at the last minute through the intervention of Cardinal Alexandro Farnese, who succeeded in proving that an alleged ritual murder was actually the murderous act of a Spanish Christian.

The reaction came into full force with the accession of Paul IV (1555-59) to the papacy. The Jewish quarter was transformed into a ghetto by the erection of a wall, the wearing of the Jew badge was enforced, consulting Jewish physicians was prohibited, the Jews were forced to sell all their property situated outside of the walls of the Jewish quarter, and all synagogues except two were closed. In 1556 the burning at the stake of the Marranos of Ancona terrified the Jewish community. The joy of the Jews when the death of this "Haman" became known in Rome is easily understandable. His successor, Pius IV (1559-66), revoked all his predecessor's anti-Jewish regulations. Although the ghetto was not abolished, the Jews were at least permitted to carry on their businesses in any part of the city. Even the printing of the Talmud was permitted in 1564.

However, Pope Pius V not only renewed the decrees of

Paul IV, but expelled the Jews from the entire papal states, with the exception of Rome and Ancona. In 1577 a new income tax was imposed upon the Jews, and in the same year the pope issued a decree that from then on, on every Sabbath, the Jews were to attend conversionist sermons. This regulation proved for the Jews a source of unbearable slighting and humiliation. A special bull issued in 1581 extended the jurisdiction of the Inquisition to apply to cases in which Jews were accused of blasphemy or of defection from Christianity. Indeed, in 1583 Diego Lopez and Gabriele Enriquez, converts to Judaism, were burned at the stake in Rome.

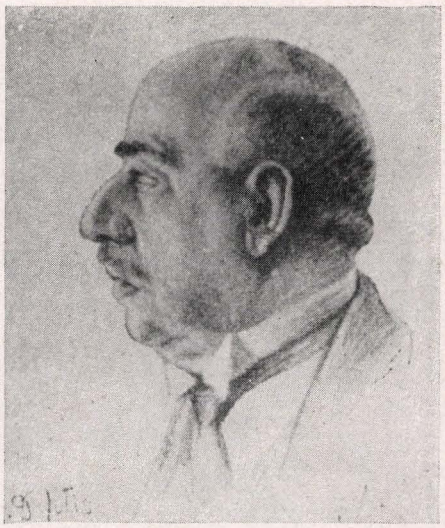
Pope Gregory XIII (1572-85) proved more friendly toward the Jews. However, in 1572 the ghetto was attacked during the Passover by troops assembled in Rome, but the Jews successfully defended themselves. Although the pope ordered the soldiers to leave the city, the Jews found it necessary to establish a patrol (September 21, 1573) to guard the ghetto against the mob. On January 10, 1577, Gregory XIII approved the organization set up by Clement VII, and the community was taxed according to the income of its members (*per aes et libram*).

On September 1, 1577, the pope issued a decree that on every Sabbath the Jews should attend conversionist sermons. The first such preacher was Josephus Florentia; the second, and more important, was the apostate Joseph Zarfati of Fez, whose sermons were characterized by his thorough knowledge of rabbinic literature. A second bull, issued on September 1, 1584, ordered that these sermons were to be attended by at least one hundred Jewish men and fifty women. The result was that several Jews submitted to baptism, among them the wealthy Samuel Corcos. The sermons of Domenico Gerosolomitano, who succeeded Joseph Zarfati, are extant in Hebrew and Italian.

The first bull which actually affected the internal affairs of the ghetto was issued on June 1, 1581; it granted the Inquisition the right to proceed against Jews in cases of blasphemy, demon worship and heresy. As a result, Joseph Sanalbo, a convert to Judaism, was burned at the stake in 1583. Abtalion ben Mordecai of Modena conducted at Rome in 1583, in the presence of the pope, a disputation in Latin as the result of which the decree for the confiscation of the Talmud was repealed.

Under Pope Sixtus V (1585-90) the situation of the Jews changed slightly for the better. But in 1593 Clement VIII caused a further expulsion of the Jews from all the papal territories, with the exception of Rome, Ancona and Avignon, and in 1601 again ordered the Talmud burned at Rome. In 1603 new police regulations for the ghetto were issued, and shortly thereafter it was prescribed that the Jews should pay a yearly tax of 800 scudi to make up for the loss in taxes formerly received from the Jews who had been expelled from the papal states.

Paul V, in 1611, deprived the Jews of the civil jurisdiction which they had heretofore been permitted to exercise, and thus the last remnant of their autonomy was taken away from them. In 1668 the Jews were required to pay an annual tax of 300 scudi in return for the abolition by Clement X of their compulsory participation in the carnival games; this was regarded by the Jews as an alleviation of their lot. In 1625 two decrees forbade the erection of tombstones by Jews; those already in existence were removed, and were used in the construction of the city walls. The detailed account of the pestilence in Rome in 1656 by the physician Jacob Zahalon presents a vivid picture of the inner life of the Jewish community of those times.



The 18th cent. did not bring about any favorable change in the lot of the community. Petty persecutions and vexations of all sorts harassed it, and only too often endangered its very existence. Especially painful were the repeated confiscations of Hebrew books in the papal states (1731, 1738, 1748 and 1753.) On the other hand, the edict of Pope Benedict XIV against the ritual murder accusation, an edict drawn up in 1758 by Cardinal Lorenzo Ganganelli, who later became Pope Clement XIV, incurred their deepest gratitude. As early as 1705 their rabbi, Tranquillo Vita Corcos, published a polemic in Italian against the charge of ritual murder.

A glimpse of the erstwhile Roman ghetto

5. The Nineteenth Century up to 1870. The condition of the community changed suddenly when the French General Berthier entered Rome in 1798. The Jews received the rights of citizenship and were accepted into the national guard. A Jew named Baraffael was appointed a major of the guard, and Ezekiel Morpurgo was named a senator. However, the Jews were forced to pay heavy taxes. The entrance of the Neapolitans into Rome put an end to this brief period of freedom, which recommenced in June, 1809, with the departure of Pope Pius VII from Rome but was finally and suddenly brought to an end with the collapse of French rule.

The consistory established at Rome in 1811, under the leadership of Rabbi Leone di Leone and after the French model, was dissolved, the Inquisition was reintroduced, the gates of the ghetto which had been opened by the French were closed again, and the community was deprived of all the privileges granted it. Conditions became still worse under Leo XII and Pius VIII, when all the medieval restrictions against the Jews were renewed. For that reason the election to the papacy of the mild Pius IX (1846) and the evidence of his humane feelings were accepted with grateful appreciation by the Jews, especially since an attitude of friendliness toward the Jews on the part of the non-Jewish citizens was successfully fostered by Ciceruacchio, a man of the people. On April 17, 1848, the pope decided to have the ghetto walls removed, and on February 9, 1849, the revolutionary Assemblea proclaimed the full civic equality of the Jews. However, as early as June 30th of that year the new government was overthrown and was replaced by an extremely reactionary government. Compulsory baptisms and the searching of houses of Jews suspected of having church property in their possession were of daily occurrence.

Angelo Sereni, former president of the Jewish Community of Rome

The principal synagogue, Tempio Israelitico, of Rome

Not until Victor Emmanuel II conquered Rome did the ignominious disfranchisement of the Jews come to an abrupt end on September 20, 1870. The ghetto walls were torn down. The Jews left their miserable quarters reluctantly, because they could not afford the high rents in other parts of the city. PAUL RIEGER.

6. From 1870 to 1942. The end of the secular power of the popes and of the pontifical state in Rome opened new horizons for that ancient Jewish community, secluded within the walls of a ghetto for a period of more than 300 years. The entrance of General Cadorna's troops into Rome on September 20, 1870, was greeted with fervor by the Jewish inhabitants of the ghetto, who were reduced from 12,700 persons in 1842 to less than 9,000 at the time of their emancipation from papal servitude. They gave expression to their overwhelming joy in an address of homage which they presented on October 3, 1870, to King Victor Emmanuel II. In this address the Jews of Rome, interpreting the sentiments also of their coreligionists in other parts of the finally achieved Italian United Kingdom, expressed their desire to be considered citizens of the new realm, to share the duties and responsibilities of all other Italians and to devote their energies to the upbuilding of a liberal Italian state.

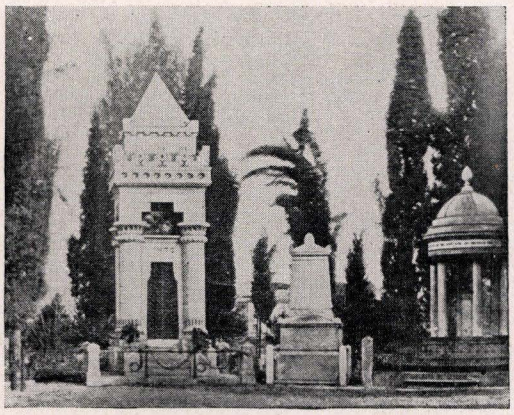
Although the Jews of Rome only reluctantly left their old dwellings within the abolished gates of the ghetto section, due partly to the lower rents which were fixed in accordance with the *jus hazagga* for the houses situated in the ghetto, the new emancipation era did not fail to have its far-reaching repercussions on the internal life of the Roman Jewish community. The tendency to become assimilated with the rest of the population, to forget a humiliating past, the desire fully to enjoy the benefits and advantages of unlimited civil equality, considerably loosened the traditional ties which bound the inhabitants of the ghetto to their community and to its institutions, schools and charitable organizations.

The first effects of the new situation were felt by the Talmud Torahs of Rome, which had before been the center of Jewish education and tradition in the ghetto. Roman Jewish youths were now attracted by and to the general institutions of culture and education. The Jewish community itself soon went through a severe crisis which was part of a strong wave of indifference for the internal matters of Jewish communal life, provoked by the new opportunities of the emancipation era and its strong assimilationist tendencies. The efforts of the most enlightened Roman Jews who were most closely attached to the old Jewish communal and cultural values, such as Settimio Esdra, Giuseppe Pontecorvo, Lazzaro De Rossi, Simone Toscano, Crescenzo Alatri and, last but not least, Samuele Alatri, to revive interest in the Talmud Torah schools and to maintain them met with but little response.

Equally unsuccessful were the attempts of Rabbi Angelo Fornari and of the secretary of the community of Rome, Sabato Scazzocchio, to reorganize the community and to arouse a more lively interest for it among the inhabitants of the former papal ghetto. Along with the efforts of several representative Roman Jews to maintain the integrity of the old community there was evident also a desire to promote a sounder economic basis of life for those hundreds of Jew-

The Levantine synagogue of Rome

ish families which, during the long years of ghetto existence, had been compelled to engage in the lowest occupations and were reduced mostly to peddling with used clothes and scrap metals. Thanks to the initiative of Vittore Rava, Marco Alatri, Mose G. Ascarelli, Pellegrino Pontecorvo and other communal-minded Jews of Rome, there was created in 1874 the Societa di fratellanza pel progresso civile degli israeliti poveri di Roma (Brotherhood for the Civil Progress of the Poor Jews of Rome). This new organization sought to promote manual labor among the Jews of Rome, organizing professional courses, placing young Jews in factories and trade-shops, and publishing and distributing pamphlets and books of instructional and cultural value. In the same year there was established also in Rome the Societa degli asili infantili ebraici (Society for Jewish Children's Homes), with the purpose of revitalizing the existing but decadent institutions of this kind, and of creating new and better equipped schools for Jewish children.



In 1877 the old traditional "Talmud Torah" was reopened, due mainly to the untiring efforts of Rabbi Angelo Fornari. At that time it became evident likewise that the Jewish community of Rome, now the capital of United Italy, needed urgent organizational reforms, so as to serve eventually as an example to and as an influence upon the other communities of the Italian peninsula.

The Jewish community of Rome, at the time of the fall of the papal government, was divided into five autonomous organizations, according to the various "rites" or "scuole" which existed in the ghetto. There was the ancient "Scuola del Tempio," the "Scuola Nuova," "The Scuola Siciliana," "La Castigliana" and "La Catalana," each forming separate units, with its own administration, income, functionaries, schools and charities. The Jewish community of Rome exercised over those five cultural units merely the right of general control or vigilance. The promoters of the reorganization of the Jewish community of Rome sought to put an end to this situation, to reunite the various "schools" or local rites into one communal unit, under one administration and leadership. In November, 1880, after many discussions and the final elimination of age-old customs and attachments, a general assembly was convoked for the purpose of establishing a mixed commission for the reorganization of the community, the elaboration of its new statute, and the definition of its scope and functions. The chairman of the newly created extraordinary council was Samuele Alatri, who directed all his devotion for the community of Rome to the task of creating a unified and authoritative community on the Tiber river. The new Statute of the Roman Jewish Community finally was prepared and received governmental approval with the royal decree of September 20, 1883. It remained in force until 1930, the year when the new Statute for the Jewish Communities in Italy became effective. During this period of almost fifty years the Roman Jewish community was governed by a council composed of forty-two members, elected by the contributing member of the community. One-third of its members were replaced by new elections each year. The community council elected a president and a presidential council, composed of two vice-presidents and four deputies who were in charge of the particular functions and tasks of communal life.

Symbolically enough, at the time of the approval of the new Statute of the Jewish Community in Rome, in September, 1883, there began also the demolition of the most antiquated and dilapidated structures of the old ghetto, situated on the left bank of the Tiber between the Ponte Quattro Capi and La Regola. The new community council, together with the Brotherhood for the Civil Progress of the Poor Jews of Rome, then sought to locate in new and more hygienic and comfortable dwellings those inhabitants of the ghetto who remained homeless after the razing of their miserable and unsanitary houses. These efforts were, however, only partially successful, since the inhabitants of the Ghetto quarter, for atavistic reasons, clung to that neighborhood. In fact, after the demolition of the major part of the ghetto structures, they moved to the adjacent streets, such as Via Arenula, Via del Pianto and la Reginella, which in the following years became the Jewish quarter of Rome. The last vestiges of what was once the ghetto of Rome disappeared in 1929 when, following his program of what he called giving Rome an "imperial" aspect, Benito Mussolini ordered the final pulling down of the structures around the ancient Teatro Marcello where Jewish habitations and stores of Jewish merchants were located.

The extraordinary council which was formed for the elaboration of a statute for a new unified Jewish community was dissolved in 1885, and in the next year the first regular community council of the Roman Jewish community was installed. One of the major aims of the new council and of its president, Samuele Alatri, was to lay plans for the construction of a new Temple in Rome and for the transferring to the capital of the realm of the famous Italian rabbinical college in Padua. In 1887 the college was transferred to Rome, and three years later its rector, Rabbi Moses Levi Ehrenreich, was appointed chief rabbi of Rome. Aided by Moses Sorani and Leone Racca, Chief Rabbi Ehrenreich gave the rabbinical college, in its new seat in the capital of Italy, a new and major impulse as an institution of learning and of the training of spiritual heads for the small and scattered Jewish communities of the kingdom.

In 1896, after the death of Tranquillo Ascarelli, president of the community, he was succeeded by a young man of thirty-three, Angelo Sereni, who for over forty-five years, without interruption, guided the destinies of this ancient community. He brought to its final conclusion the project for the construction of Rome's great Tempio Israelitico situated on Lungotevere Cenci, according to the architectural plans of Vincenzo Costa and Osvaldo Armanni. Four years later, in 1900, the first stone was laid for this imposing structure, and on July 2, 1904, King Victor Emanuel III officially visited the new Temple. It was dedicated on July 28, 1904, by a solemn ceremony in the presence of the highest authorities of the Italian state and of the municipality of Rome. The religious ceremony was performed by Rabbi Vittorio Castiglioni, who as chief rabbi of Rome greatly contributed to the revival of the community organizations and to the

A section of the Jewish cemetery of Rome

promotion of Hebrew and religious teaching among the younger generation of Roman Jews.

In 1912, after the death of Vittorio Castiglioni, the rabbinical chair of Rome was offered to Angelo Sacerdoti. The Roman Jewish community at that time, through its numerous institutions of social and charitable character, its acquired prestige, and the fact that the mayor of the city, Ernesto Nathan, was a Jew, attained a most enviable position in Italy, and served as an example of the undisputed and complete civic emancipation enjoyed by the Jews of Italy. The Jews of Rome answered in great numbers the call of their country when Italy entered the first World War on the side of the Allies in 1915; the names of the fallen were inscribed in a tablet carved out on the outside wall of the Tempio Israelitico. Chief Rabbi Sacerdoti strove to meet the increasing educational and religious needs of the Jewish population in Rome, particularly after the Fascist government decreed that the entire teaching in Italy's elementary schools should be imbued and pervaded with Catholic doctrine and spirit. Together with Senator Vittorio Polacco, he organized the Scuola Elementare Israelitica, which began to function in October, 1924. The school later was transferred to new premises, enlarged, and after the death of Senator Polacco, in July, 1927, assumed the name of this courageous defender of religious liberty in Italy.

The death of Angelo Sacerdoti in February, 1935, rendered still more acute the crisis which existed within the Jewish community of Rome between extreme assimilationists, anti-Zionists and the "traditional" (Orthodox) group. These dissensions became stronger with the growing tide of official anti-Semitism, in the wake of the Axis consolidation between Rome and Berlin and the Italo-British conflict in the Mediterranean. The long vacancy which followed Sacerdoti's death was finally filled in February, 1937, with the appointment to the chief rabbinate of Rome of David Prato, formerly chief rabbi of Alexandria, Egypt. However, his rabbinate in Rome, which coincided with the mounting tempo of the Fascist anti-Semitic and anti-Zionist propaganda, was clouded by grave internal dissensions and by the final adoption by the Fascist Grand Council, in the fall of 1938, of anti-Jewish and racial legislation, modelled along the pattern of the Nazi German "Nuremberg Laws." Prato left Rome in December, 1939, for Tel-Aviv, Palestine, and his chair was assumed by Ignazio Zoller-Zolli, chief rabbi of Trieste.

The material decadence and impoverishment of the Jewish community of Rome, as a result of the application of the discriminatory racial laws, of emigration and of the anti-Jewish attitude of the governmental agencies, put a grave strain upon the existence of Jewish communal institutions. Among these institutions the most notable were the Asili Infantili Ebraici, which were attended in 1938 by 250 children, the Scuola Israelitica Vittorio Polacco, which had five classes and more than 500 pupils, mostly of the poor elements of the Roman Jewish population, the Orfanotrofio Israelitico Italiano, and the Jewish Hospital and Old Age Home. The Jewish Cultural Club in Rome (Convegno di Studi Ebraici), which had developed a rich cultural program in the decade preceding the anti-Semitic course of Mussolini's government, was among the first victims of the new Fascist policy, since all public cultural manifestations of the Italian Jews were prohibited.

ROME, HAROLD JACOB, composer and lyricist, b. Hartford, Conn., 1908. At Yale University he studied a miscellany of subjects, including law, architecture, drama and music.

He received, in addition to the A.B. degree (1929), a bachelor of fine arts degree from the Yale School of Architecture (1934). He played with the Yale Band, and went with them to Europe. In New York city, unable to earn a living at architecture, Rome concentrated on song-writing.

But his real debut came with the musical *Pins and Needles,* produced by Labor Stage theatre group of the International Ladies' Garment Workers' Union, in 1937. The "class-conscious" labor musical was an overnight Broadway hit, and to Rome's lyrics and music went much of the popular and critical acclaim. Rome wrote new songs for the two new editions of the musical staged in 1939 and 1940.

After *Pins and Needles,* Rome collaborated with Charles Friedman, who had directed the Labor Stage success, on a musical for Max Gordon, *Sing Out the News.* One of the songs of the review, "Franklin D. Roosevelt Jones," was a nationally popular hit. For this and for the song "Sunday in the Park" from *Pins and Needles,* Rome received prizes of $1,250 each from the American Society of Composers, Authors, and Publishers.

Rome also collaborated on the show *The Little Dog Laughed* (1939), and worked on *Caleb Catlum's America* (1942). He wrote a suite for piano, *Opus New York.*

Lit.: *Current Biography,* April, 1942.

RÓNA, JÓZSEF, sculptor, b. Lovasberény, Hungary, 1861; d. Budapest, 1940. He studied at Budapest and at the Academy of Vienna. For three years he studied with Zumbusch. At Berlin, in 1885, he won a scholarship for Rome with his *Saint Sebastian* and *Olympic Champion.* Róna excelled in the treatment of Biblical subjects. His *Adam and Eve, Judith and Holophernes, Saul and David,* as well as *Lot's Wife,* are marked by majesty and grace. His *Deborah's Song,* in relief, adorns the Girls' Gymnasium of the Jewish

Sir Landon Ronald

Community of Pest. His *Joseph and Potiphar's Wife,* carved in wood, won a large gold medal in Budapest. Other gold medals were awarded him at Antwerp and Paris, and a grand prix at London. He also treated classical subjects, such as *Anacreon* and *Faun Giving a Music Lesson.*

Róna created the statue on horseback of *Eugene of Savoy* which is a landmark of Budapest. Among scores of monuments of outstanding Hungarians are his statue of *Empress-Queen Elisabeth* at Gödöllő and his three statues of *Louis Kossuth* at Szeged, Miskolc and Rozsnyo. Several of his statues and groups are in the Museum of Fine Arts in Budapest. He was president of the Hungarian Society of Graphic and Plastic Arts and of the Union of Hungarian Sculptors. His memoirs, *Egy magyar művész élete* (The Life of a Hungarian Artist; 2 vols., 1929), offer an interesting background of Jewish life in Hungary in the second half of the 19th cent.

RÓNA, SÁMUEL, dermatologist, b. Halas, Hungary, 1857; d. Budapest, 1910. He studied medicine at the University of Budapest, and became an assistant to the eminent dermatologist Moriz Kaposi at Vienna. In 1886 he founded at Budapest a dispensary for the treatment of the diseases of the skin for the sick poor. From 1899 on assistant professor at the University of Budapest. He was also head of the skin department of the Szent István city hospital of Budapest. Róna was a recognized authority in his field; his articles were published in medical journals of England and Germany.

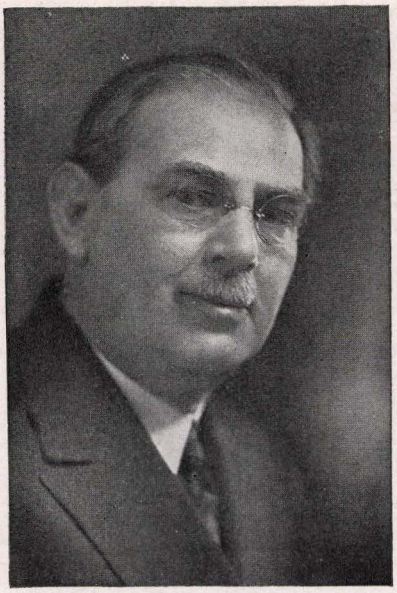
In addition, he published many volumes in Hungarian on venereal diseases, lupus erythematosus, the pathology of rhinoscleroma, eczema, nosocomial gangrene and tuberculosis of the skin and mucuous membrane. His handbook of dermatology and syphilology was published in Hungarian and German (1909).

RONALD, SIR LANDON, conductor and teacher, b. London, 1873; d. London, 1938. He was the son of Henry Russell, well-known song composer, and brother of the impresario Henry Russell.

After a successful debut as pianist (1890) he entered the field of conducting, directing comic operas in the provinces. From 1891 to 1894 he was assistant conductor at Covent Garden, and in 1894 he visited the United States as accompanist to Melba. For the next few years he was a successful conductor at Covent Garden and the Lyric Theatre, of the London Symphony Orchestra, and of successful summer concerts in Blackpool. He also assisted in state concerts at the royal palaces of the king and queen. In 1908 he toured Europe extensively, directing most of its famous orchestras.

Following this, he became the permanent conductor of the New Symphony Orchestra (later renamed the Royal Albert Hall Orchestra), which he was responsible in developing into one of the greatest of England's symphonic ensembles. In 1910 he was appointed principal of the Guildhall School of Music, a post which he held with distinction for twenty-seven years. During this period he appeared frequently as a guest conductor of most of the great English orchestras. For his outstanding services to music he was knighted in 1922.

As a composer Ronald produced several operettas, ballets and orchestral works which were performed in England. But his principal contributions were as conductor and teacher. He was a critic on several leading London newspapers, and wrote an engaging autobiography, *Variations On a Personal Theme.*



RONETTI-ROMAN, author, b. Galicia, 1853; d. Jassy, Roumania, 1908. His place of birth was never identified, nor is his original name known. He adopted the name Ronetti-Roman after he had lived at Roman, an important Jewish center in Moldavia.

His Talmudic treatises published in *Hamaggid* (1872-74) over the signature Moses Roman bear proof that he received a thorough Talmudic education. His first work written in the Roumanian language was the satirical *Domnul Kanivertstan* (Mr. Kanivertstan; 1877). Two years later appeared *Radu,* a poem in three cantos, which won him the admiration and friendship of Roumania's most respected literary critic, Titu Maiorescu, and brought him in contact with Eminescu and Carageale, the two greatest names in Roumanian letters.

Ronetti-Roman's principal work was *Manasse,* a four-act play (1900). In his *Istoria Literaturii Romane* (1934) Nicolae Jorga said: "Manasse was received not only with appreciation but with enthusiasm and, according to the Shakespearean pattern, two figures are in the limelight—the rigidly honest Manasse, the Jew of profound Biblical tradition, and the intermediate agent, the clever and cynical buffoon of the drama, Zelig Schor." Demonstrations by anti-Semitic students caused performances of the drama at the National Theatre of Bucharest to be stopped after it had been played before the royal family, and it was sponsored by other Roumanian theatres. Translated into Yiddish, German, French, Italian and English, it was performed in the latter language, previous to the first World War, under the title *New Lamps and Old.*

Ronetti-Roman published (1893) *Doue Masuri* (Two Measures), aiming to prove that the Roumanian people was the first to suffer from the anti-Jewish policy. A farmer himself, Ronetti-Roman lived among the peasants. He presented their problem in *Latifundiile* (On the Large Landed Estates), one among his many manuscripts published posthumously.

RONGY, ABRAHAM JACOB, surgeon and gynecologist, b. Vilna, Lithuania, 1878. He came to the United States in 1893, and received his medical degree from the Long Island College Hospital in 1899. Choosing gynecology as his field, Rongy entered practice at a time when crude methods of obstetrics still were used in the heavily populated East Side sections of New York city. To combat the dangers of improper treatment, Rongy organized the Jewish Maternity Hospital, which initiated out-patient service in 1906 and in-patient service in 1909. He was attending gynecologist at the Hospital for Joint Diseases and Lebanon Hospital, as well as consultant gynecologist at several other hospitals in the metropolis. Throughout his

Abraham Jacob Rongy

career Rongy has been a courageous innovator of new methods of treatment and surgery in gynecology, and the originator of new theories in connection with sterility and the process of birth. He was chairman (1928-34) of the Greater New York Periodic Health Examination Committee.

In the medical field, Rongy was author of *Abortion—Legal or Illegal?* (1933); *Childbirth Yesterday and Today* (1937); *Safely Through Childbirth* (1937); *The Contribution of the German Jew to Medicine* (1933); *Half a Century of Jewish Medical Activities in New York City* (1937); *The Palatal Arch and the Pelvis* (1940). From 1929 to 1940 he was a member of the editorial board of *Preventive Medicine*. *Abortion—Legal or Illegal?* was regarded as a classic on the subject, and was included in many selected, recommended lists of books in 1933. It also evoked considerable controversy, particularly in Catholic religious circles. Thus the *Linacre Quarterly* assailed Rongy's book editorially on the ground that it tended to "break down Christian morale." This journal called upon Catholic and Protestant physicians to "serve notice on this militant group that they will not be allowed to succeed in their propaganda." In contrast with this, the *Medical Mentor,* an authoritative mouthpiece of medical writers, extolled the efforts of Rongy, placing him "in that rare class which thinks constructively. No one can read the book without being impressed with the sound logic and saneness of the author's contention and his sincerity."

Rongy has been a vital participant in diverse Jewish scientific and philanthropic activities. He also fostered Jewish literary endeavor. He was vice-president of the American Jewish Congress (1925-26), chairman of the national council of the Zionist Organization of America (1935-36), on the board of directors of the Conference of Jewish Relations, and a member of the national council as well as a director of the Joint Distribution Committee. Rongy served as chairman of the American section of the Jewish Health Committee. He wrote also "Collation Chats," "Medical Pickwick," and numerous other articles on health and communal problems.

LOUIS RITTENBERG.

ROOSEVELT, FRANKLIN DELANO, 32nd president of the United States, b. Hyde Park, N. Y., 1882. He was educated at Harvard, graduating in 1904, and then studied law at Columbia. He passed the bar in 1907 and entered the firm of Carter, Ledyard and Milburn.

In 1910 Roosevelt was elected to the New York State Senate, on the Democratic ticket, from his home county, and he was reelected in 1912. But the following year he joined the Federal Government as Assistant Secretary of the Navy in the administration of Woodrow Wilson, for whom he had campaigned at the Democratic presidential convention. The assistant secretaryship of the Navy became a vital post during the second Wilson term, with the entry of the United States into the first World War. Nomination for the vice-presidency in the 1920 elections, as running-mate to James M. Cox, followed, but the Republicans came into office with Warren Gamaliel Harding. Roosevelt returned to private life, and soon afterward was stricken with infantile paralysis.

The long convalescence, in addition to tempering the character of the man, served also for study. When he reentered political life finally (1928), winning the election to the governorship of New York state, he had already reached some conclusions about modern international relations that seemed foreign to the complacency and the prosperity of the period. In his first inaugural address as governor, Roosevelt said:

> "Our civilization cannot endure unless we, as individuals, realize our personal responsibility to and dependence on the rest of the world. For it is literally true that the self-supporting man or woman has become as extinct as the man of the stone age."

His inauguration as 32nd President of the United States (March 4, 1933) took place within the same weekend during which the German Reichstag passed an Enabling Act giving Adolf Hitler absolute power. Within that narrow span of time the two men rose to confront one another, and ultimately to struggle against one another. Although Roosevelt was far from being the only exponent of the democratic philosophy that was to challenge the Hitlerian tyranny, although European leaders stood geographically closer to the conflict, and although the power of Roosevelt's speech—simple and moving as it was—did not reach the profundity and the eloquence achieved by some of the others, it was his very simplicity, and the very geographical distance from the source of attack that made him a significant spokesman for the allied democratic forces.

Because of his role in history, Roosevelt's connection with Jewish life was great. Yet it was not a direct connection with Jewish affairs or Jewish problems; its prominence was an outgrowth—and only a very minor one—of the beliefs he defended and signified. Circumstance had made the Jews the immediate butt of tyrannical attacks. In formulating the shield for civilization against these attacks, Roosevelt could not but shield the Jews with seeming primacy, since they had been persecuted with flagrant primacy.

The Roosevelt administration was from the outset unhesitant in condemning the special Nazi excesses against the Jews, as it condemned Nazi cruelties against religious and political liberalism, but international amenities restricted action. In 1933, Roosevelt's orders to William E. Dodd, Ambassador to Germany, were that whatever could be done to moderate the general persecution by unofficial and personal influence ought to be done. But not until 1938 was Hugh R. Wilson, who had succeeded Dodd, recalled from his post, in protest against the pogroms that occurred in November of that year.

Earlier in 1938 (June), Roosevelt had called a 28-Power refugee parley at Evian-les-Bains, France, to discuss possible resettlement opportunities for refugees of all kinds. The one positive result of the parley was the offer by President Rafael Trujillo of the Dominican Republic to settle 100,000 refugees on the rich soil of that country. Anti-immigrant and anti-refugee sentiment was not entirely absent in the United States, even apart from its utilization by pro-Nazi elements. Roosevelt was outspoken in his condemnation of such attitudes, as for instance in his speech to the Daughters of the American Revolution (1938):

> "All of us, and you and I especially, are descended from immigrants and revolutionaries."

With the progressive continuation of persecution in Germany, Roosevelt suggested to the State Department that the many refugees who were in the United States on six-month visitors' visas be granted an indefinite number of extensions of these visas. Their status did not permit them to work, but it saved them from being thrown back to the area of persecution. Roosevelt, making this suggestion, pointed out that a large percentage of refugees were not Jews.

Another anti-democratic undertone, affecting the Jews as well as other minority groups, which Roosevelt combatted was discrimination in industrial employment. In June, 1941, when the country—not yet at war—was under emergency routine, he sent a memorandum to William S. Knudsen and Sidney Hillman, the co-administrators of emergency production, stating:

> "No nation combatting the increasing threat of totalitarianism can afford arbitrarily to exclude large segments of its population from its defense industries. American workers, both organized and unorganized, must be prepared to welcome the general and much-needed employment of fellow-workers of all racial and nationality origins in defense industries."

In January, 1942, several weeks after the United States entered the war, Roosevelt, in an official statement, deplored the dismissal of aliens from industry, and his message to the 77th Congress warned against racial discrimination and its use as a technique to create division within a democracy. Later (May, 1942), in a message to the conference of the American Committee for the Protection of the Foreign-Born, Roosevelt said:

> "Our country expects those who are known as its foreign-born to be accorded the right to go on as a free people precisely as it has been and will be accorded to all Americans."

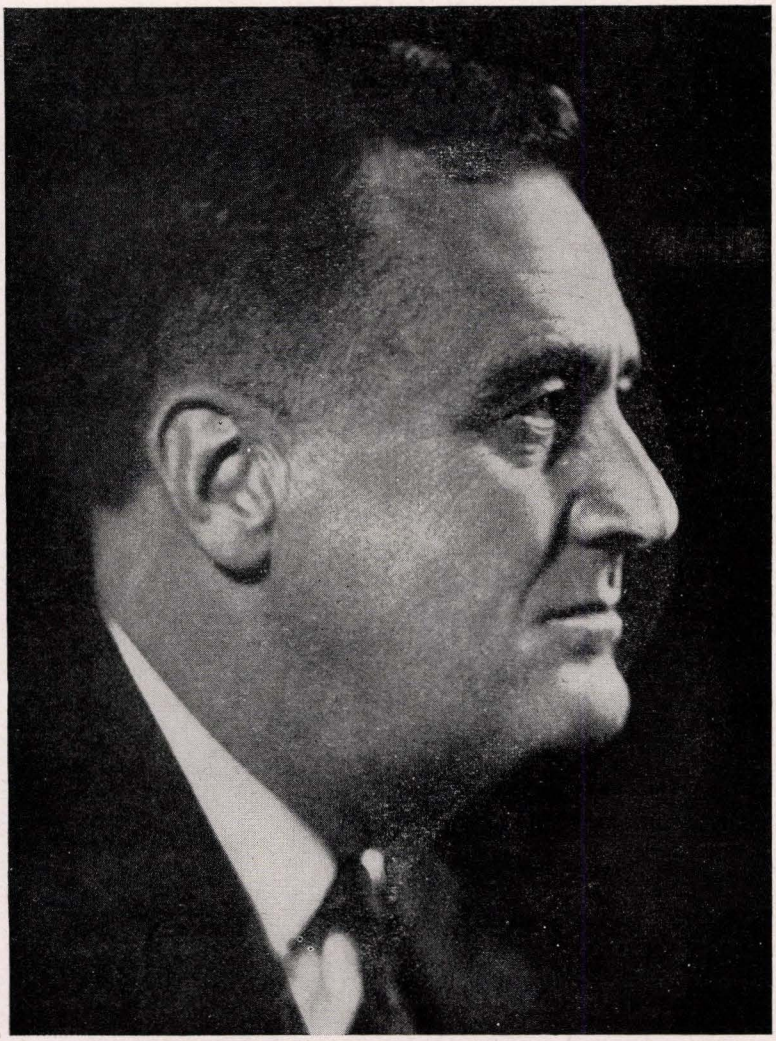
Toward inter-faith movements as well as to Jewish activities, Roosevelt frequently voiced support that showed familiarity with Biblical precepts of religious living. In 1939, he was awarded the *American Hebrew* medal for outstanding service in promoting better understanding between Christians and Jews. Acknowledging the award, Roosevelt said:

> "After all, the majority of Americans, whether they adhere to the ancient teaching of Israel or accept the tenets of the Christian religion, have a common source and inspiration in the Old Testament. In a spirit of brotherhood we should, therefore, seek to emphasize all the many essential things in which we find unity in our common Biblical heritage."

Roosevelt repeatedly expressed his interest in the establishment of a Jewish national home in Palestine and reiterated that the United States had an interest in the handling of the British Mandate over Palestine. In 1940 he was presented with a replica of the Jewish National Fund Golden Book, inscribed in tribute to Roosevelt by nearly 1,000 Jewish organizations in the United States.

Roosevelt was a democrat, schooled in the tenets of the doctrine, and endowed with both the character and the sense of basic security that made him unafraid of challenge and enabled him not only to meet, but to anticipate, subversive wedges in the democratic creed. To him, the problems affecting Jews everywhere in the 20th cent. were only one phase of the larger question: how the democratic ideal was to be reinforced to meet new economic and social conditions. The attacks on the Jews were masks under which the emancipation of all peoples was threatened. Roosevelt was not misled; he distinguished the direction of the attack and he refused to give it the slightest quarter.

Roosevelt's prolonged term of office, covering a span between national crisis and international struggle, required the introduction of political and intellectual leaders of all kinds into official circles. Roosevelt's approach—stubborn, fearless and democratic to the roots—disregarded any considerations except those of effectiveness. Consequently, the names of Jews figure among his associates, not out of proportion to the contribution they were able to make, but somewhat more plainly than during other periods. Among these was Herbert H. Lehman, who, at Roosevelt's urging, had first accepted the lieutenant-governorship of New York state and who, near the end of his ten years in office as governor (1942), was appointed by Roosevelt director of Relief and Rehabilitation. Another old friend and neighbor was Henry Morgenthau, Jr., who served as Secretary of the Treasury from almost the beginning of Roosevelt's incumbency. Bernard M. Baruch, a life-long Democrat, first called into war service by Woodrow Wilson, was summoned again by Roosevelt to aid in the coordination and concentration of effort during the second World War. Samuel Irving Rosenman, an associate of Roosevelt from his days as governor, remained a trusted adviser while Roosevelt was in the White House.



The opportunities which were found by Jews in the Federal government, during the stress of the post-depression and later of the international emergency, were naturally misinterpreted as favoritism, and roused a barrage from Nazi sources. Nazi propaganda also alleged that Roosevelt was of Jewish ancestry. Mrs. Roosevelt (Anna Eleanor Roosevelt) answered one such query in the *Ladies Home Journal* of October, 1941:

> "As far as I know there is no Jewish blood on either side in my husband's ancestry. I do not think he favors any nationality particularly, and neither does he have any prejudice. He looks upon people as people, regardless of their race, religion or color, and when he is trying to find the right person to do a job, I think he tries to think exclusively about the qualities of mind and character which are essential for that job, and I doubt whether any other consideration enters into his decision."

Philip Slomovitz, editor of the *Detroit Jewish Chronicle,* wrote Roosevelt in 1935, asking for an authentic reply to the rumor of his Jewish ancestry. Roosevelt, in his answer, said that all the branches of the Roosevelt family were descended from Claes Martenssen van Roosevelt, who came from Holland to America before 1648. In the almost three hundred years of their American residence, there had been no intermarriage with Jews:

> "In the dim distant past they may have been Jews or Catholics or Protestants. What I am more interested in is whether they were good citizens and believers in God. I hope they were both."

With the precedent-breaking election, to a third term, of Roosevelt in 1940, the struggle that was begun in 1933, when he and Adolf Hitler assumed power on

Franklin Delano Roosevelt as President of the United States

almost the same day, was already in manifest and bloody progress. It did not reach the United States officially for about another year. By that time the attitudes that had motivated Roosevelt's demeanor toward matters in which Jews were concerned—that Jews were human beings, but peculiarly designated as the first victims by elements whose aim was tyranny and destruction for all mankind—these attitudes became recognized as the basis of the contest between freedom and slavery. It was in accord with his frequently enunciated principles that one of the first consequences of the American occupation of Northern Africa, late in 1942, was Roosevelt's demand for the abolition of anti-Semitic laws imposed by the Vichy government (see also VICHY FRANCE).

On December 3, 1942, President Roosevelt received a delegation of representatives of leading Jewish organizations in the United States, composed of Maurice Wertheim, president of the American Jewish Committee; Stephen S. Wise, president of the American Jewish Congress; Henry Monsky, president of B'nai B'rith; Adolph Held, president of the Jewish Labor Committee; Israel Goldstein, president of the Synagogue Council of America, and Israel Rosenberg, chairman of the Union of Orthodox Rabbis of the United States.

This delegation, the first of its kind to be received in audience by Roosevelt since the outbreak of the second World War, received assurance that he was profoundly shocked to learn that two million Jews had perished as a result of Nazi rule and crime. The American people more than ever will feel, he thought, that the conscience of the United Nations and of free men everywhere was revolted by those deeds of savagery and attempted extermination. Roosevelt reminded the delegation that when the American Jewish organizations which they represented met in Madison Square Garden (July, 1942), to protest against the savagery of the Nazis against their victims, he made clear that all Americans without regard to religious allegiance would share in the sorrow of American Jews.

At that time, Roosevelt recalled having said: "The American people not only sympathize with all victims of Nazi crime but will hold the perpetrators of these crimes to strict accountability in a day of reckoning which will surely come."

As for the proposal submitted by the delegation that a commission be named by the United States, which in conjunction with the United Nations shall promptly collect and examine all evidence bearing upon such criminal acts, Roosevelt gave assurance that the American government would give it full consideration and that he did not doubt that the United Nations will be prepared, as the American government would be, to take every step which will end these crimes against the

Jews and against all other civilian population of the Hitler-ruled countries and to save those who may yet be saved. Reiterating what he had previously said, Roosevelt remarked: "The mills of the gods grind slowly but they grind exceeding small. We are doing everything possible to ascertain who are personally guilty."

ANNA ELEANOR ROOSEVELT (b. New York city, 1884), Roosevelt's wife, was his distant cousin and a niece of Theodore Roosevelt. They were married in 1905. Mrs. Roosevelt did not enter public life until 1924, when she became finance chairman of the woman's division of the New York State Democratic Committee. Later, and particularly after Roosevelt's election to the presidency, Mrs. Roosevelt's activities increased in scope and number until she was acknowledged as the first president's wife to occupy her own position in the life of the nation. Her interests went far beyond the mere political, and included various aspects of social welfare, particularly those dealing with young people. She was also the author of a daily syndicated column for the newspapers and of several books. Her personal affiliations, like those of the president, were chosen for their human value, and therefore she also was charged with favoritism towards Jews, radicals and other groups who were classified together by reactionaries who sought every means of overthrowing the democratic system. Her unofficial position, however, allowed her to be even more outspoken than was the president in her defense of civil rights and equality.

SARA DELANO ROOSEVELT (b. 1855; d. 1941), Roosevelt's mother, was often the guest of and advisor to Jewish institutions. After her death, the Roosevelt New York city home was bought by a group of organizations, of which the B'nai B'rith Hillel Foundation was one, and converted into the Sara Delano Roosevelt Inter-Faith House for the students of Hunter College. The three honorary chairmen of this institution were (1943) John S. Burke, president of the Altman Foundation; Henry Monsky, president of B'nai B'rith, and Charles Tuttle, a director of the Greater New York Federation of Churches. A children's hostel in England was also named for her by the Jewish division of the Inter-faith Association for British War Relief.

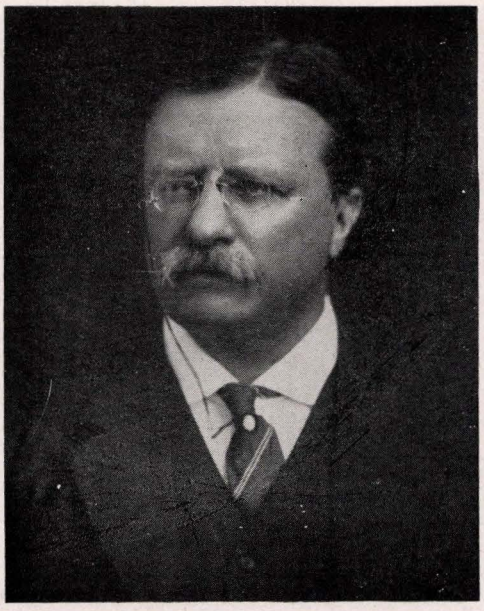
ROOSEVELT, THEODORE, twenty-sixth president of the United States, b. New York city, 1858; d. Oyster Bay, N. Y., 1919. Roosevelt was descended from Claes Martenssen van Rosenvelt (or Klaes Martensen van Roosevelt, as his *Autobiography* has it) of Zeeland, Holland, who migrated to the United States between 1649 and 1650. Theodore Roosevelt was elected governor of New York state (1898), vice-president of the United States (1900), became president in 1901 on William McKinley's assassination, and was elected president in 1904.

Theodore Roosevelt undoubtedly thought well of American types "who like myself are of the old stock but mainly of English stock." He was, however, aware of the contributions which more recent immigrants were making to American civilization. He invariably characterized nationality as a condition of the mind and not of blood. In an essay entitled "Race Decadence" he lamented the failure of the old American stock to reproduce its kind. Yet he ventured to predict that should his warnings about their "race suicide" go unheeded, the traditions, purposes and principles of the founders of the Republic would find their believers among their descendants by adoption. "And in such a case," he added, "I, for one, would heartily throw in my fate with the men of alien stock who were true to the old American principles."

Roosevelt was outspoken against hyphenated Americanism, and insisted that a basic tenet of the American creed was the renunciation of Old World political allegiances. He denounced partisan appeals to recently naturalized Europeans made in terms of their Old World political and cultural traditions, but was equally opposed to similar appeals to peoples of longer standing in the United States. "Know-nothingism (American nativism of the 1850's) in any form is as utterly un-American as foreignism. It is a base outrage to oppose a man because of his religion or birthplace, and all good citizens will hold any such effort in abhorrence."



During the years of his presidency, Theodore Roosevelt had ample opportunity to manifest his humanitarianism in a series of protests directed at countries where minority peoples were less fairly treated than in his own. With the able assistance of John Hay as Secretary of State, a type of international action was inaugurated which was in keeping with the broadest extension of democratic principles.

In 1902 the State Department intervened for the purpose of protecting Jewish rights in Roumania. This was accomplished by addressing a circular note to the American ambassadors at the capitals of those European nations who were signatories of the Berlin Treaty (1878), Article 44 of which protected the rights of minority peoples in Roumania. Action was urged on the powers who were supposed to guarantee the sanctity of the treaty by Roosevelt's Secretary of State John Hay, author of the Roumanian note (August 11, 1902). This document stated in effect that a section of the Treaty of Berlin was being violated; that the violation was not without effect upon the United States because of the forced emigration of numbers of Roumanian Jews; that the powers addressed should "persuade the Government of Roumania to reconsider the subject of the grievances in question." The European powers declined to act on the proposal.

On April 19 and 20, 1903, there occurred the tragic Kishinev pogrom. On June 15, 1903, a select committee representative of the B'nai B'rith, and including Simon Wolf and Leo N. Levi, called at the State Department. They were received by Hay, to whom they presented a tentative draft of a petition of protest to the Russian government which had been approved by the executive committee of the order. The secretary replied formally and then spoke cautiously about the subject at hand. The sentiments of the President, said Hay, were clear.

> "No one hates more energetically than he does such acts of cruelty and injustice as those we deplore. But he must carefully consider all the circumstances and then decide whether any official action can be taken in addition to the impressive and most effective expression of public opinion in this country during the last month."

Then the President himself addressed the committee. He recalled the admirable service which Jews had rendered the American republic; that the old Jewish cemetery at Newport had been the inspiration for a poem by Longfellow; that Jews had been effective in the struggle for American independence and in the various wars of the Republic; that he himself had a high regard for the Jewish people. He spoke of the time when, as police commissioner of New York city, he had appointed Jewish policemen to serve as bodyguard for a visiting European anti-Semite, Rector Hermann Ahlwardt. About Kishinev the president said: "I have felt

Theodore Roosevelt as President of the United States

a degree of personal sympathy and personal horror of this dreadful tragedy, as great as can exist in the minds of any of you gentlemen yourselves."

Roosevelt went on to state that he had been visited by the Russian ambassador, who informed him that the governor of Kishinev had been removed; that between three and four hundred arrests had been made; and that the perpetrators of the outrage would be punished. Roosevelt promised to consider the proposals submitted by the B'nai B'rith, and the committee departed. On June 24, 1903, Hay wrote to Simon Wolf that the president had decided that it would be in the interests of "your persecuted and outraged co-religionists in Russia" to submit the B'nai B'rith petition to the Russian government. Hay asked that the petition be forwarded to the president in due form.

On July 14, 1903, after a luncheon at which Oscar S. Straus, Leo N. Levi and Simon Wolf were among those present, the president framed a letter of instructions to American Chargé d'Affaires Riddle at St. Petersburg. He used as a basis a tentative draft of instructions which had been previously prepared by Hay, who had been of the opinion that the petition previously submitted to the president should not be forwarded to Russia. Roosevelt was compelled to modify considerably the note which Hay had originally prepared, and to the final draft he attached a printed copy of the petition. Riddle was instructed to ask an audience of the minister of foreign affairs; to communicate to him the substance of the petition and amount of support behind it in America; and to inquire whether or not the petition would be received by the minister for submission to the czar.

Although the petition was not received, this much was accomplished: the American government and the American people, due to the wide circulation afforded the petition, had expressed their views on the Kishinev horror in no uncertain terms. Russia's failure to respect the American passport when in the hands of American Jews became an issue during the Roosevelt administration as it had been earlier in the history of the Republic. Roosevelt, on November 18, 1903, promised the membership of the Board of Delegates on Civil Rights of the Union of American Hebrew Congregations that his administration would do all in its power to obtain recognition for the validity of the American passport. Yet in 1908, when the American Jewish Committee became convinced that the normal course of diplomatic negotiation would be of no avail against the Russian government, it found the administration most unwilling to adopt stronger measures. In a letter of May 18, 1908, addressed to the president and signed by Judge Mayer Sulzberger, it was suggested that the United States denounce existing treaties with Russia and draw up new ones which would guarantee the end of discriminatory practices. This letter was acknowledged by the State Department, but no further reply was received from the president.

That Roosevelt, and particularly the State Department, should be reluctant to take up with the Russian government the issue of its failure to recognize the validity of the American passport may be interpreted in terms of an unwillingness to antagonize Russia and thereby make the United States a loser in the game of power politics which the great nations of the world were playing in the Far East.

During his administrations, Roosevelt named a special committee to investigate the treatment of immigrants on Ellis Island. He appointed Oscar S. Straus Secretary of Commerce and Labor; Louis Sulzbacher and Adolf G. Wolf justices of the Supreme Court of Puerto Rico; and corresponded frequently with Jacob H. Schiff, whose advice he frequently sought on matters affecting the economic life of the nation.

ROSALES, IMMANUEL (Jacob Hebraeus Frances Bocarro Rosales), physician and astronomer, b. Lisbon, Portugal, 1593; d. Italy, 1668. The son of a Marrano, he became an eminent physician in his native country upon completing his medical and mathematical studies at the University of Montpellier. In order to escape the Inquisition he fled to Rome in 1625, entering into friendly relationship with Galileo. After a short stay in Amsterdam, where he professed Judaism, he established himself as a physician in Hamburg in 1932, but returned to Amsterdam in 1647. His essay on the comets which were observed in November, 1618, was the fruit of his diligent studies in the astrological field, and were published at Lisbon in 1619 under the title of *Tratado das cometas que aparecerão em novembro pasado de 1618.* Five years later he issued his then epoch-making work *Status astrologicus sive anacephalacosis de monarchia lusitana,* in which he glorified Portugal's kings, counts and scientists.

Rosales dedicated his *Poculum poeticum,* written in Latin hexameters, to his friend Abraham Zacuto Lusitano, whose famous work, *De medicorum principum historia,* he completed with the *Armatura medica.* Rosales' great work, *Regnum astrorum reformatum,* which he created through the inspiration of Galilei, was published at Hamburg in 1664. Emperor Ferdinand III appointed him count palatine (Comes palatinus) in 1647, by which title he acquired the right of conferring academic degrees.

Lit.: Kayserling, M., *Sephardim* (1859) 209 et seq.; idem, *Geschichte der Juden in Portugal* (1867) 299 et seq.; Landau, R., *Geschichte der jüdischen Ärzte,* 113 et seq.

ROSALSKY, JOSEPH S., judge, b. New York city, 1877; d. New York city, 1937. He received his law degree from New York University in 1899, and became associated with his brother, Otto A. Rosalsky,

Otto A. Rosalsky

in law practice. In 1905 to 1906 Rosalsky was deputy attorney general; in 1927 he was elected to a ten-year term as general sessions judge. During his incumbency he was appointed referee in several important cases, including the investigation of profiteering and intimidation in the New York city poultry industry.

ROSALSKY, OTTO A., judge, b. New York city, 1873; d. New York city, 1936. He received his law degree from the New York University Law School in 1894, and was admitted to the bar the following year. Entering the practice of criminal law (with his brother Joseph S.) Rosalsky chose the field that was eventually to bring him to the deanship of the New York Court of General Sessions and to recognition as one of the outstanding jurists in the field of criminal law in the history of the United States.

Rosalsky's first official post was that of assistant district attorney, to which he was appointed in 1897. In 1905 Governor Frank W. Higgins appointed him to a vacancy in the Court of General Sessions, but Rosalsky, running on the Republican ticket, failed to win the seat permanently in the elections that followed soon thereafter. In 1906 the governor again appointed Rosalsky to a vacancy, and in November of that year he was elected to the full fourteen-year term, despite the fact that he was still in his early thirties and every other candidate on the Republican judiciary ticket was defeated. Subsequently Rosalsky was reelected in 1920 and again in 1934.

As a judge, Rosalsky had no patience with the pampering of hardened criminals, but he was ready to accept innovations in criminology, both from a scientific and a psychological point of view. His unyielding treatment of certain gangsters who came before him for sentence resulted in the sending of two bombs to him in 1911, from both of which Rosalsky escaped injury. He was the recipient also of numerous threats from the Mafia and other lawless groups. But it was Rosalsky who introduced the probation system into the criminal courts. He was instrumental in establishing the acceptance of finger prints as evidence of identification. Rosalsky's concept of premeditation, in which he stated that premeditation did not necessarily involve a lapse of time, but might be almost simultaneous with the deed, was accepted as precedent in criminal law throughout the United States.

An Orthodox Jew, Rosalsky was identified with numerous Jewish activities. He was vice-president of the committee which raised the funds for the building of the Yeshiva College, and was a trustee of the college. On his fiftieth birthday the Jewish Education Association raised a $500,000 fund in honor of Rosalsky's service to Jewish youth, and devoted the fund to further educational undertakings. Rosalsky was several times head of the New York Committee of the United Palestine Appeal, head of the Jewish Communal Survey of New York, and was affiliated in directive capacities with many philanthropic institutions in New York city. NATHAN RICARDO.

ROSANES, noted Sephardic family which derived its name from the small seaport of Rosanes near Barcelona, Spain. After the expulsion of the Jews from Spain (1492), members of this family migrated to Turkey and other countries. Among its most prominent members were:

ABRAHAM ROSANES, THE ELDER, Talmudist, rabbi in Constantinople in the 17th cent., and author of responsa and commentaries, of which the most important is *Pene Mosheh* (1738). Some of his responsa are found in Samuel Primo's *Kehunnath Olam.*

ABRAHAM ROSANES, THE YOUNGER (b. Constantinople, 1685; d. 1756), prominent rabbi in Constantinople, who was for a time in Smyrna, where he won great popularity for his spirited opposition to Sabbatai Zevi.

JACOB ROSANES, mathematician (b. Brody, Galicia, 1842; d. Breslau, Germany, 1922), who became assistant professor in 1873 and associate professor in 1876 at the University of Berlin. In 1897 he was given the title of Geheimer Regierungsrat, and in 1903 to 1904 was rector of the university. His treatises on algebra and geometry appeared chiefly in the *Crellesches Journal für die reine und angewandte Mathematik.*

Lit.: On Abraham Rosanes the Elder: Azulai, H. J. D., *Shem Hagedolim,* vol. 1; Buber, *Anshe Shem,* 198; Fürst, Julius, *Bibliotheca Judaica,* vol. 3, pp. 167-68; Wininger, S., *Grosse Jüdische National-Biographie.* On Abraham Rosanes the Younger: Fünn, S. J., *Keneseth Yisrael* (1886-90) 63, 271; Buber, *Anshe Shem,* 198. On Jacob Rosanes: Poggendorff, J. C., *Biographisch-literarisches Handwörterbuch zur Geschichte der exacten Wissenschaften;* Frankel, M., in *Allgemeine Zeitung des Judentums,* vol. 86, No. 3.

ROSANES, JUDAH, Hacham Bashi (chief rabbi) of Turkey, and Talmudist, b. 1657; d. Constantinople, 1729. He was one of the most ardent antagonists of Sabbatai Zevi, and is known through his missive to the German rabbis. After his death his sermons, comments and other writings were carefully collected and edited by his disciple Jacob Kuli and published in two volumes.

The first, *Parashath Derachim* (Constantinople, 1728), contains twenty-six sermons preached at various times, and a criticism of the commandments by Maimonides and Nahmanides. The other, *Mishneh Lamelech,* contains notes to Maimonides' *Mishneh Torah,* and is printed together with it.

Lit.: Prefaces of Jacob Kuli to Judah Rosanes' works; Azulai, H. J. D., *Shem Hagedolim.*

ROSANES, SOLOMON ABRAHAM, historian, b. Ruschuk, Bulgaria, 1862; d. Sofia, Bulgaria, 1938. He made a thorough study of the Jewish archives of the Balkans, and published his findings in numerous historical treatises. These are of great value because they include documents which theretofore had never

been published. Rosanes was considered the best historian of the Balkan Sephardim, although some of his theses are not accepted by other scholars. He held high Bulgarian orders, among them the National Order of Merit.

The writings of Rosanes, who mastered many languages, include *A Short History of the Jews in Bulgaria* (Roumanian; 1888); *Dibre Yeme Yisrael Betogarmah* (3 vols., 1909-12; new ed., Tel-Aviv, 1930); *Shekel Yisrael* (on Jewish coins); and biographies of Joseph Caro and Theodora, the Jewish-born queen of Bulgaria.

ROSANOFF, MARTIN ANDRÉ, chemist, b. Nicolaev, Russia, 1874. He studied in Nicolaev, and migrated to the United States in 1891. After receiving a degree from New York University in 1895, he returned to Europe for four years of study, then became a research fellow at New York University (1899-1900).

From 1900 to 1903 Rosanoff was editor of exact sciences for the *New International Encyclopedia.* The next year he worked as research assistant with Thomas A. Edison, then joined the faculty of New York University, where he was made assistant professor in 1905. In 1907 Rosanoff was called to Clark University, where he became chief of the department of chemistry and head of the laboratories. He retained this post until 1914, after which he spent five years as professor in chemical research at the Mellon Institute of the University of Pittsburgh, then retired for a long period. In 1933 he was made professor of chemical research at Duquesne University; in 1934 he became dean of the graduate school, and held both positions until 1940.

Rosanoff was local research administrator for the office of education of the United States Department of Interior in 1936 to 1937. His "Reminiscences of Edison," which originally appeared in *Harpers Magazine,* was subsequently included in Durling and Watt's *Biography* (1941).

AARON JOSHUA ROSANOFF, psychiatrist (b. Pinsk, Russia, 1878; d. Los Angeles, 1943), was the brother of Martin André Rosanoff, and came to the United States in 1891. Rosanoff received his medical degree from Cornell University Medical College in 1900. Until 1922 he practised in the East, then moved to California. In 1924 he was made California state director of institutions in his special field of psychiatry. He became a lecturer in psychiatry at the University of Southern California in 1926. Rosanoff was a member of the editorial board of the *Journal of American Psychiatry* and the translator and editor (1905) of Rogues de Sursac's *Manual of Psychiatry,* which in later editions was further revised and supplemented under Rosanoff's editorship.

Martin Andre Rosanoff

ROSÉ, ARNOLD JOSEF, violinist and teacher, b. Jassy, Roumania, 1863. After completing his studies at the Vienna Conservatory he made his debut at the Leipzig Gewandhaus (1879). In 1881 he was appointed concertmaster of the Vienna Court Opera orchestra, retaining this post until his retirement in 1938. During these many years he was one of the most dynamic musical figures of Austria. In 1882 he founded the Arnold Rosé Quartet, which became world-famous particularly for its espousal of modern music; the Rosé Quartet toured the United States in 1928.

In 1881, Rosé was concertmaster of the orchestra at Bayreuth. From 1909 to 1924 he was professor of violin at the Vienna Conservatory. Rosé was married to Justine Mahler, sister of the world-famous composer, in 1902.

ROSE, BILLY, theatrical producer, b. New York city, 1899. After a public school education in New York, Rose, whose parental name was Rosenberg, found himself a shorthand champion.

In 1918 he acted as stenographer for Bernard M. Baruch at the War Industries Board in Washington. A versatility of talent, however, and a diversity of interests prompted him to forfeit the profits which his shorthand netted him and, after a trip West, to try song writing. He was successful in this as well, turning out *Barney Google, Follow the Swallow, Would You Like to Take a Walk?* and other hits.

Next he turned to the theatre, and the scope of his concepts was as colossal as his own physical stature was small. *Crazy Quilt* (1930) was a variety show which toured the country. Subsequently Rose inaugurated a theatre restaurant in New York (Casino de Paree), produced *Jumbo,* a theatre-circus, directed the performances at the Fort Worth, Texas, exposition (1936-

37), and directed the Aquacade at the Great Lakes Exposition in Cleveland in 1937, at the New York World's Fair in 1939 to 1940, and at the San Francisco Fair in 1940.

After that he directed Billy Rose's Diamond Horseshoe in New York city, and was the president of several theatrical corporations.

Lit.: Current Biography (1940) 694-96.

ROSE, ERNESTINE L. (POTOSKI), suffragist, b. Piotrków, Poland, 1810; d. Brighton, England, 1892. She was the daughter of an Orthodox rabbi, but revolted against the religious fanaticism of her environment and left home at the age of seventeen. As a disciple of Robert Owen, whom she met in 1832, she was banished from Austria. She became the wife of an English army officer, and in 1836 went to London, where she circulated the first petition for property rights of married women. A frequent lecturer throughout Europe and the United States, she was a United States delegate from the National Women's Suffrage Association to the Women's Industrial Congress in Berlin (1869), and was a delegate to all the women's rights conventions from 1850 to her death in 1892. Much of her time was spent in the United States, where she collaborated with Susan B. Anthony. She began woman suffrage agitation in the West, and was largely responsible for the adoption of woman suffrage by Wyoming in 1869.

Lit.: American Hebrew, Dec. 27, 1929, p. 285; Stanton, Anthony Gage, *History of Woman Suffrage,* vol. 1 (1881), 95-100; Remy, Nahida, *The Jewish Woman,* 221.

ROSE, SAMUEL, government expert, b. Stuchin, Poland, 1895. He came to the United States in 1905. After working in an executive capacity with the Bureau of War Risk Insurance (later the Veterans Administration) in 1917 to 1918, he resigned to enlist in military service in the first World War. He was detailed back to the Bureau for special work and promoted to regimental sergeant major. Attaining successively higher posts, he was (1936) appointed assistant to the chief of the contact in the Veterans Administration, and the following year was made chief of the contact service, which post he still occupied in 1943.

Active in several veterans' associations, Rose was representative of the Administrator of Veteran Affairs at the national encampments of Jewish War Veterans in 1934 to 1936. In 1935 this latter organization awarded Rose the Distinguished Service Medal and Certificate of Honor. Previously, for 1930 and 1932, he was awarded the Watson B. Miller trophy by the District of Columbia department of the American Legion, for outstanding service.

ROSEBERRY, HANNA (Countess), *see* ROTHSCHILD FAMILY.

ROSEN, JOSEPH A., agronomist and outstanding expert in the field of Jewish colonization and resettlement, b. Moscow, 1876. At seventeen young Rosen was one of a group of students to be exiled to Siberia by the czarist government for "revolutionary activity." He escaped after six months of exile to the university city of Heidelberg, Germany, after traversing European Russia.

Rosen studied for two years at Heidelberg, and then emigrated to the United States in 1903. For two years after he arrived in the United States Rosen was a farm worker. From 1905 to 1908 he added scholastic knowledge to his experience by attending the Michigan Agricultural College, graduating with the degree of Master of Agriculture. Later he received his doctorate in agricultural chemistry from the University of Minnesota. Rosen's rise as an agronomist came quickly. While still in Michigan he had written a series of articles for Russian agricultural magazines on the subject of American farming methods as applicable to Russian conditions. In these articles he projected the idea of establishing an agricultural bureau in the United States which would study American methods of agriculture with a view toward introducing them into Russia.

Joseph A. Rosen

The articles attracted the attention of prominent agriculturists in Russia, and in 1908 the provisional government of the Russian province of Ekaterinoslav established the bureau which Rosen had proposed, appointing him its chief. The bureau was later transferred to the Kharkov Agricultural Society, with Rosen as its head from 1908 to 1915 in Minneapolis, Minn. It was during this period that Rosen discovered a new variety of winter rye, named after him. "Rosen rye," which for ten consecutive years was the winner of all prizes at the Chicago grain exhibit, is now grown all over the United States, particularly in Michigan, Minnesota and Wisconsin. Rosen also introduced into Russia a great many American varieties of corn and fodder crops, following a study of farmland of similar physiographic conditions in both countries.

During the period from 1915 to 1918 Rosen was for a year director of the Baron de Hirsch Agricultural School in Woodbine, N. J., and for three years head of the agricultural department of the New York office of the International Bank of Commerce of Petrograd. Rosen's rounded experience led to his outstanding contribution to the rehabilitation of Jewish life overseas. In 1921, after a meeting with the late Felix M. Warburg and with James N. Rosenberg, he joined the staff of the American Relief Administration, which was then operating in Russia, as the representative of the American Jewish Joint Distribution Committee.

Three years later he was actively engaged on a project which was his in conception and development —the settling of Russian Jews, who had been deprived of the means of earning a livelihood by the Revolution of 1917, on farms in the Ukraine and Crimea. For this purpose the Joint Distribution Committee organized the American Jewish Joint Agricultural Corporation (Agro-Joint), which in 1928 became the agency for the American Society for Jewish Farm Settlements in Russia, Inc.

Rosen's initial plan called for the resettlement of some 1,000 Jewish families, but as the need rose to greater and greater proportions the project grew correspondingly. By the time the Agro-Joint wound up its activities in 1938 some 250,000 Jews had been settled on nearly 3,000,000 acres of land in the Ukraine and Crimea. In the course of Agro-Joint (and later American Society for Jewish Farm Settlements in Russia) activities, Rosen supervised the administration of $16,000,000. As a result of this project, which also included industrial training for those unsuited to agriculture, the number of "lishentzy" (Jews deprived of citizenship rights) was reduced from 70 per cent in 1924 to about 5 per cent in 1935. When, in 1937, it was found that Russian Jews no longer required the assistance of outside organizations, the Agro-Joint liquidated its affairs in Russia.

Rosen's knowledge and services were again utilized in 1939 when he joined a special commission, appointed jointly by the British government and President Roosevelt's Advisory Committee on Political Refugees, to survey the possibilities of refugee settlement in British Guiana. That same year he made a similar survey in conjunction with the American Friends Service Committee (Quakers) in Mexico.

In 1940 Rosen embarked on another significant undertaking, that of directing the settlement of refugees in the Dominican Republic, a project which had been initiated by James N. Rosenberg of New York. As vice-president of the Dominican Republic Settlement Association, Inc. (Dorsa), Rosen made several trips to the colony at Sosua.

At every step of his career Rosen's success was due to unusual personal qualities of forthrightness, patience and administrative ability which not only endeared him to his associates but also earned the respect and confidence of governmental officials with whom he had to deal, of philanthropic laymen who backed his projects, and of the colonists who were the beneficiaries of his labors.

Lit.: Werner, M. R., *Julius Rosenwald* (1939) 245-49, 251, 253, 259; *American Hebrew*, Dec. 8, 1922, p. 146; the files of the American Jewish Joint Distribution Committee.

ROSEN, LIA, actress and diseuse, b. Braila, Bucovina, 1893. During her childhood she won the attention of the directors of the Burgtheater in Vienna by her dramatic ability. At the age of fifteen she was leading lady for Josef Kainz, one of Austria's greatest actors. She was particularly renowned for her performances as Hannele in Hauptmann's *Himmelfahrt*, as Hedwig Ekdal in Ibsen's *The Wild Duck* and as the Jewess of Toledo in Grillparzer's *Jüdin von Toledo*.

In 1910 she was called to Berlin by Max Reinhardt, and in 1925 she came to New York. In addition to her performances on the stage, she was excellent in dramatic recitations. After moving to Palestine in 1928 she retired from the stage.

ROSEN, THEODORE, judge and American war hero, b. Millsville Township, N. J., 1885; d. Philadelphia, 1940. He was graduated from Rutgers College with the B.S. degree in 1916.

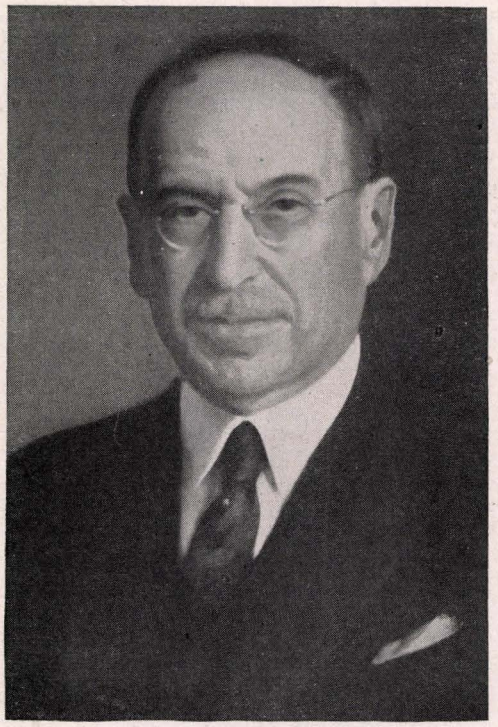
On the entry of the United States into the first World War in 1917, Rosen left his position as manager of the Hopewell State Farms in Hopewell, N. J., and enlisted. After completing his officers' training course, he was commissioned a second lieutenant; subsequently he was promoted to a first lieutenancy.

On November 4, 1918, exactly one week before the armistice, Rosen, who had once before been wounded and returned to action, volunteered for dangerous reconnaissance duty, in a sector north of Verdun. Caught by an unseen German machine gun nest, he was wounded in the right arm; but in order to protect several fellow officers in the line of fire, he used his automatic. This resulted in his being attacked by hand grenades. When Rosen regained consciousness, he was in a German hospital in Belgium; he had lost his right arm at the shoulder and the thumb of his left hand, his left wrist was fractured, he lost seven teeth and had severe head and body wounds, and was affected both in sight and in hearing.

His courage and loyalty won for him the Distinguished Service Cross and the Order of the Purple Heart. During the course of his rehabilitation in Walter Reed Hospital, in Washington, D. C., Rosen entered the University of Pennsylvania Law School, and in 1922 received his degree. He had already passed his bar examinations and been admitted to practice in 1921. From 1922 to 1926 he served as civilian aid to Secretary of War John W. Weeks, and in 1926 was appointed assistant district attorney of Philadelphia County.

Governor Gifford Pinchot appointed Rosen judge of the municipal court in 1931, commending him for the "fearlessness, impartiality and extraordinary ability" which he had shown in his services as public prosecutor and public defender. He had been appointed to fill a vacancy; later the same year he was elected to the ten-year term in the municipal judgeship. In 1937 he was elected to the court of common pleas, and was serving in this court at the time of his death.

Rosen was an active participant in the Jewish affairs of the Philadelphia community. He was chairman of the Combined Jewish Campaign in 1931, vice-president of the National Farm School, and a director of several Jewish and non-sectarian welfare organizations. The Pennsylvania state senate, in 1941, adopted a resolution requesting the department of military affairs to erect a memorial in Philadelphia in Rosen's honor. NATHAN RICARDO.



Lit.: Galter, David J., "Theodore Rosen," *American Jewish Year Book*, vol. 43 (1941-42) 425-30.

ROSENAK, LEOPOLD, rabbi, b. Pozsonynádas, Hungary, 1869; d. at sea, 1923. He studied under his uncle, Eliezer Rosner, at the Yeshiva of Nitra, and was a student also in that of Pressburg.

He received the Ph.D. degree from the University of Bern. In 1896 he was called to the rabbinate of Bremen, Germany. As a member of the board of the Hilfsverein der Deutschen Juden and president of its Bremen branch Rosenak aided thousands of Jewish refugees from Russia and Poland who embarked at Bremen for the United States.

A chaplain in the army corps of General Eric von Ludendorff during the first World War, he was stationed (1915-18) at Kovno (Kaunas) after its occupation by the German army, and acted as an advisor to the German administration on matters of Jewish religion and culture. In that capacity he reopened the Yeshiva at Slobodka and founded (1916) a Jewish Gymnasium at Kovno. His charitable activities on behalf of the occupied territories were many; at Kovno he opened a soup kitchen (1916), and in 1917 went on a special mission to Holland where he obtained grain for the civilian population. After the War Rosenak combatted anti-Semitic agitation in Germany. In 1923 he visited the United States to solicit aid for thousands of Jewish orphans from the Ukraine. He succumbed to the sustained strain and died at sea on his way back to Germany.

Among his published works the most important are *Der Fortschritt der hebräischen Sprachwissenschaft vom zehnten bis zum dreizehnten Jahrhundert* (1898) and *Maamar Mordecai* (1915), interpretations of the eighth tractate of the Talmud. Several scholarly works of his remained in manuscript.

Milton Joseph Rosenau

ROSENAU, MILTON JOSEPH, sanitarian, b. Philadelphia, 1869. He received his medical degree from the University of Pennsylvania in 1889.

Although he did some work in hygiene in Berlin (1892-93), at the Pasteur Institute in Paris (1900) and in other European cities, he was, from 1890 to 1909, a surgeon with the United States Public Health and Marine Hospital Service. From 1899 to 1909 he was director of the Hygienic Laboratories of the Service. During his period of affiliation with the government bureau Rosenau was stationed in various key cities, and was thus responsible for the protection of American citizenry through the control of immigration. He was in Hamburg and Antwerp while the cholera epidemic of 1893 raged; later he was in Texas during a smallpox epidemic, in San Francisco, where he fought the plague, and (after the end of the Spanish-American War) in Santiago, Cuba, where he had to clean up one of the most virulent pest cities in the world.

While in charge of the laboratories in Washington, Rosenau succeeded in mastering the problem of anaphylaxis, or sensitivity to toxin proteins; he standardized the diphtheria anti-toxin and worked with Joseph Goldberger and others on the conquest of yellow fever. In 1909 Rosenau left the United States Public Health Service to become professor of preventive medicine and hygiene at the Harvard Medical School; in 1922 he was also made professor of epidemiology at the Harvard School of Public Health. The twenty-fifth anniversary of his association with Harvard (1935) was celebrated by a public testimonial, tendered by his fellow-scientists, and by the presentation of his portrait to the Harvard Medical School. In 1935 Rosenau became professor emeritus at Harvard and was made director of the division of public health at the University of North Carolina (1936-). He became dean of the School of Public Health of the university in 1940, and director in 1941.

Of Rosenau's many published works in the field of medicine, his *Preventive Medicine and Hygiene,* which first appeared in 1913 and had gone into a sixth edition in 1935, was recognized as the textbook which had more influence on the advancement of public health throughout the world than any one other factor. It is found in the libraries of every medical school in the world, and is known to practitioners and hygienists in the most remote centers of civilization.

Rosenau held advisory posts with many scientific organizations; among these were his membership on the advisory committee of the National Health Council of the United States Public Health Service and of the National Research Council. NATHAN RICARDO.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 387-89, 764-65; *American Hebrew,* July 7, 1935, p. 71.

ROSENAU, WILLIAM, rabbi and scholar, b. Wollstein, Posen, Germany, 1865. He was brought to the United States at the age of eleven by his father, Rabbi Nathan Rosenau, who served in various communities in the east, the last being Trenton, N. J. William Rosenau studied at the University of Cincinnati (B.A., 1888) and the Hebrew Union College (rabbi, 1889), and later at Johns Hopkins University (Ph.D., 1900). After serving at Omaha, Neb., from 1889 to 1892, he received a call from Baltimore to become rabbi of Oheb Shalom Congregation. He served as active rabbi of that congregation until 1939, when he became rabbi emeritus; in 1942 he completed his fiftieth consecutive year as rabbi of the congregation, one of the longest terms in the history of the American rabbinate. During this period the congregation completed the change from German prayers and German sermon to English prayers and sermon, the compulsory wearing of hats during services was abolished, a late Friday evening service was instituted, and a community house acquired. During the same period, from 1902 to 1932, he was on the faculty of Johns Hopkins University in the department of Semitics.

Rosenau was an active force in the Jewish and general community of Baltimore. Although modern in his principles, he possessed a thorough knowledge of rabbinical literature and a conservatism in temperament which enabled him to preserve the traditional values of Judaism and, although a Reform rabbi, to win the respect of the Orthodox.

He took an active part in all the affairs of the Jewish community, especially in the work of the Mt. Pleasant Sanitorium and the Associated Jewish Charities. He served the general community as a member of the city's board of education (1900-10), of the executive boards of the Maryland Society for the Study and Prevention of Tuberculosis and the Maryland Prisoners' Aid Society, and as a member of Governor Albert C. Ritchie's commission on state-aided colleges and Governor Harry Nice's commission for the higher education of negroes.

He was prominent in nation-wide Jewish affairs. He was an active member of the Central Conference of American Rabbis, serving as its president from 1916 to 1918. These were the years of military action, and under his administration the Conference arranged for services and a prayer-book for Jewish soldiers; he himself, in conjunction with Isaac Landman, compiled *A Ritual for Jewish Soldiers.* He was one of the founders of the Jewish Welfare Board, of which he was still a director in 1943. He cooperated closely with Henry Berkowitz in the work of the Jewish Chautauqua Society, and for several years served as its chancellor. In 1917 he was appointed to the Board of Governors of the Hebrew Union College, and was still serving in 1943. A unique feature of his service to the American Jewish community was the fact that he gave

personal training to thirty Jewish students for the rabbinate, to whom he acted as mentor during their rabbinical careers.

In addition to numerous articles in periodicals, Rosenau wrote: *Hebraisms in the Authorized Version of the Bible* (1901); *Jewish Ceremonial Institutions and Customs* (1903; revised ed., 1925; it is one of the few works of American rabbis to be translated into German, *Jüdische Sitten und gottesdienstliche Gebräuche,* Berlin, 1929); *Jewish Biblical Commentators* (1904); *The Seder Haggada* (1905); *Jewish Education* (1912); *Book of Consolation* (1914); *The Rabbi in Action* (1937). He contributed a number of articles to the *Jewish Encyclopedia,* and translated *Esther* for the Jewish Publication Society of America.

In 1923 he received the honorary degree of Doctor of Hebrew Law from the Hebrew Union College.

ROSENBACH, ABRAHAM S. WOLF, writer and bibliographer, b. Philadelphia, 1876. He received his Ph.D. degree from the University of Pennsylvania in 1901.

Rosenbach's interest in books, which was to make him perhaps the leading book-dealer in the world, came to him by inheritance, since the Rosenbachs had been in the book business since 1785. As secretary of the Rosenbach Company, Rosenbach became a renowned figure at book sales in the capitals of all countries. His daring bids put a new value on book rarities and oddities. There were times when $10,000,000 a year passed through his hands for the purchase of literary items, either for his own investment or in his capacity as agent for collectors.

By inheritance, too, came Rosenbach's devotion to Jewish matters. His family on both sides belonged to the group of old Philadelphia Jewish settlers, who had been important in the history of the country and in helping to establish Jewish life and culture in the new world. Rosenbach was for many years president of the American Jewish Historical Society, for which he wrote many studies on Jewish aspects of Americana. In 1931 he gave to the Society, in memory of his mother, Isabella H. Rosenbach, a collection of items valued at $150,000. The collection included published material, letters and manuscripts dealing not only with events in the history of the United States, but also with the Jews in Mexico during the period of the Inquisition. Rosenbach was president of Gratz College, a member of the board of governors of Dropsie College and president of the American Friends of the Hebrew University. He was author of *The Unpublishable Memoirs* (1917); *An American Jewish Bibliography* (1926); *Books and Bidders* (1927); *The All-Embracing Doctor Franklin* (1932); *A Book Hunter's Holiday* (1936) and of other studies, as well as editor and compiler of various volumes of bibliographical material.

William Rosenau

Abraham S. W. Rosenbach

ISABELLA H. ROSENBACH (b. Philadelphia, 1834; d. Philadelphia, 1906), mother of Abraham S. Wolf Rosenbach, was the daughter of Hyman Polock, an early Jewish communal worker in Philadelphia, and the great-grandniece of Aaron Levy, Philadelphia pioneer. She taught for many years at the Hebrew Sunday School, of which she was made a director in 1863. From 1887 to 1899 she was president of the school. Mrs. Rosenbach was also secretary of the Associated Board of the United Hebrew Charities and a manager of the Jewish Foster Home. She collaborated with Abraham S. Wolf Rosenbach in some of his studies for the American Jewish Historical Society.

HYMAN POLOCK ROSENBACH (b. Philadelphia, 1858; d. Philadelphia, 1892) was another son of Isabella H. Rosenbach. He wrote for various Philadelphia newspapers, and was author of *The Jews of Philadelphia Prior to 1800* (1893).

See also POLOCK, MOSES. NATHAN RICARDO.

Lit.: American Hebrew, Dec. 5, 1924, p. 143; Feb. 19, 1926, p. 175; June 26, 1931, p. 102; April 6, 1928, p. 774; *Publications of the American Jewish Historical Society,* No. 17 (1909) 217-18.

ROSENBACH, JOSEPH BERNHARDT, mathematician, b. New York city, 1897. He received his M.S. degree from the University of Illinois in 1919. After serving as instructor in mathematics at the University of New Mexico and the University of Illinois, Rosenbach became associated with the Carnegie Institute of Technology in Pittsburgh (1920). In 1935, when he was made full professor, he was the youngest professor in the history of the Carnegie Institute.

Rosenbach, in charge of the evening courses in mathematics at the College of Engineering, was also author of *College Algebra* (1933 and 1939); *Plane Trigonometry and Plane and Spherical Trigonometry* (1937); and *Mathematical Tables* (1937).

ROSENBACH, OTTOMAR, physician, b. Kreppitz, Silesia, 1851; d. Berlin, 1907. He was assistant professor of internal medicine at the University of Breslau from 1888 to 1896. Rosenbach was the creator of the theory of functional diseases, especially in regard to the nervous system.

Some of his outstanding works were: *Über die Bedeutung der Reflexe* (1876-80); *Studie über den nervus vagus* (1877); *Über funktionelle Diagnose und die Diagnose der Insufficienz des Verdauungsapparates* (1890); *Grundlagen der Lehre vom Kreislaufe* (1894); *Energetik und Medizin* (1897). He wrote numerous treatises on physics, especially on tests with the radiometer and variometer and on the theory of colors and the wave theory.

ROSENBAUM, LEWIS NEWMAN, financing and business organizer, b. Homak, Hungary, 1881. He was brought to the United States in 1888, and was admitted to the bar of Tennessee in 1901, and to the bar of Washington state in 1905. Rosenbaum's business financing operations included the organization of chain stores, chains of office buildings, and publishing enterprises, throughout the country. He was an honorary trustee of the Columbia Basin Irrigation League, which preceded the construction of Grand Coulee Dam.

After settling in New York city Rosenbaum was a self-effacing potent figure in endeavors to foster improved Christian-Jewish relations in America. As such he was chairman of the ways and means committee of Religion and Welfare Recovery and during the second World War he aided the Jewish Welfare Board in its cultural program for U. S. O. centers. From 1911 to 1914 he was the representative of the state of Washington on the American Jewish Committee.

Rosenbaum presented (under the auspices of the Herzl Conservative Congregation) a chapel in memory of his mother, Fani Rosenbaum, to Herzl Memorial Park in Seattle.

ROSENBAUM, MORRIS, rabbi and author, b. London, 1871. From 1894 to 1905 he was rabbi at Newcastle-on-Tyne and later at the Borough Synagogue in London, of which he eventually became rabbi emeritus. Rosenbaum was author of *Masonic Lectures* (2nd ed., 1909), and co-editor of an English translation of Rashi's commentary on the Pentateuch, in five volumes (1929-34).

ROSENBAUM, SAMUEL RAWLINS, lawyer, b. Philadelphia, 1888. After receiving his LL.B. degree from the University of Pennsylvania in 1913 and being admitted to the Pennsylvania bar the same year, he studied law at the Inns of Court in London (1913-15). In addition to practising law in Philadelphia, Rosenbaum had various other professional interests, and was president of the WFIL Broadcasting Company. In 1919 to 1920 he was assistant United States attorney in Philadelphia; from 1920 to 1924 he was assistant city solicitor.

Rosenbaum was vice-president of the Philadelphia Orchestra Association, and a member of the banking board of Pennsylvania. He was author of: *The English County Courts* (1916); *Commercial Arbitration in England* (1916); *The Rule-Making Authority in the English Supreme Court* (1917).

ROSENBAUM, SIMON, communal worker, b. Cassel, Germany, 1846; d. Cumberland, Md., 1922. He came to Cumberland at the age of nineteen, but in 1868 went to Montgomery, Ala. After three years there he returned to Cumberland and eventually, with his brother Sussman, built up a merchandising firm known as Rosenbaum Bros., the largest retail house in western Maryland. He was known throughout the community for his support of philanthropic enterprises, both general and Jewish. On the day of his funeral there was a stoppage of all work, including that of municipal offices and courts, for an hour.

ROSENBAUM, SIMON (SEMYON), lawyer and statesman, b. Pinsk, Poland, 1859; d. Tel-Aviv, Palestine, 1935. He received his early education in a Heder and in the Yeshivas of Russia and Galicia. From 1883 to 1887 he studied at Odessa University, and after his graduation settled in Minsk, where he became prominent as a lawyer, social worker, lecturer and contributor to the periodical *Haor.*

While still a student, Rosenbaum was active in the Palestinophile movement. With the advent of political Zionism he became one of its most indefatigable workers, and at the Fourth Zionist Congress he was elected a member of the Actions Committee and director of the Colonial Bank. In 1902 he helped found a branch of the Poale Zion, and in 1906 became head of the Zionist organization in Russia. A year later he was elected by the state of Minsk as representative to the first Imperial Duma, where he ardently advocated equal rights for Jews. Upon the dissolution of the Duma, Rosenbaum signed the so-called Viborg Manifesto, and together with other signatories of the document served a prison sentence. Later he appeared as defense attorney in many pogrom trials and in cases against Zionists.

From 1915 to 1918 he lived in Vilna, where he served as legal advisor for the Jewish community and as head of the Zionist organization. The latter year found him the leader of a delegation which discussed questions concerning Zionism with the Grand Vizier Talaat Bey in Constantinople, and with committees in Copenhagen and Stockholm.

At the end of the first World War Rosenbaum took an active interest in the formation of an autonomous Lithuanian state and in the safeguarding of Jewish rights there. In 1919, having moved to Kaunas (Kovno) with the Lithuanian government, he was elected a delegate to the Peace Conference in Paris. At the beginning of 1920 he was elected to the Lithuanian Vaad Haleumi, and later in that year he was instrumental in concluding a peace treaty with the Bolsheviks for the Lithuanian government.

Rosenbaum drafted the constitution of the Lithuanian Republic in collaboration with Minister Soloveichik. For five years he was president of the Jewish National Council, and for more than a year minister of Jewish affairs in the cabinet of the Lithuanian Republic. After the dissolution of both bodies he went to Palestine (1924), where as president of the Mishpat Hashalom he worked for the theoretical and practical development of Jewish law. In 1929 he was named Lithuanian consul general in Palestine, serving until 1933. He wrote essays and studies on law, as well as personal reminiscences, for Russian, Austrian, Lithuanian and Palestinian periodicals, as well as a work on the concept of sovereignty (1932).

LEON SHUBITZ.

ROSENBAUM, SOLOMON GUEDALIA, merchant and communal worker, b. Raleigh, N. C., 1868; d. New York city, 1937. From 1906 on he was trustee and from 1923 to 1933 president of the Baron de Hirsch Fund. From 1920 to 1930 he served as president of the Montefiore Hospital in New York city. Rosenbaum wrote *The Causes for the Loss of the Battle of Waterloo* (1923).

ROSENBERG, ANNA M., government executive, b. Budapest, 1900. She was educated in Budapest and in New York city. During the first World War she

Anna M. Rosenberg

volunteered for public service as a Liberty Bond salesman and as a nurse. In the decade and a half that followed she played an increasingly larger role in public affairs, and in 1934 was named New York state director of the National Recovery Administration. She was executive assistant of the National Emergency Council, member of the New York State Minimum Wage Commission and member of the New York City Industrial Relations Board. In 1935 she was appointed regional director of the Social Security Board. In 1938 she was a member of the Commission of Industrial Relations in Great Britain and Sweden.

During the second World War she assumed additional responsibilities, becoming regional director of the Office of Defense Health and Welfare Services, board member of the State Defense Council, and board member of the Policy Committee of the Office of Coordinator of Inter-American Affairs. Because of her record as a labor arbitrator she was named by President Franklin D. Roosevelt in 1942 non-partisan alternate to the National War Labor Board, and later was appointed by him secretary of the President's Combined War Labor Board. In that same year she was named New York state regional director of the War Man-Power Commission by its director, Paul V. McNutt.

She participated actively in numerous Jewish causes, including the United Palestine Appeal, serving as director of the Women's Division in New York, the women's division of the Joint Distribution Committee, and the Federation for the Support of Jewish Philanthropic Societies of New York City.

Lit.: Current Biography, Jan. 1943, pp. 36-39.

ROSENBERG, ARTHUR, historian, b. Berlin, 1889; d. Brooklyn, 1943. He received his Ph.D. degree from the University of Berlin in 1911, and served as instructor (1914-30) and assistant professor of history (1930-33) there. He was a member of the German Reichstag from 1924 to 1928. After the Nazis came to power in 1933 he left Germany for England, where he was visiting professor at the University of Liverpool (1934-37). In 1937 he arrived in the United States, where until his death he served on the faculty of Brooklyn College.

Rosenberg was active in the Jewish youth and student movement in Germany, vice-president of the Jewish Students' Federation of Great Britain, and faculty adviser of the Avukah Zionist Students' Federation of America.

He wrote: *Die Entstehung der deutschen Republik 1871-1918* (1928; English trans., *Birth of the German Republic,* 1931); *Geschichte des Bolschewismus von Marx bis zur Gegenwart* (1932; English trans., *History of Bolshevism,* 1934); *Geschichte der deutschen Republik* (1935; English trans., *History of the German Republic,* 1936); *Demokratie und Sozialismus* (1938; English trans., *Democracy and Socialism*).

ROSENBERG, ISRAEL, rabbi, b. Lomza, Poland, 1875. He was educated in the various Polish Yeshivas and was ordained in 1899. In 1902 he came to the United States, and subsequently held rabbinical posts in several Eastern states. Rosenberg was elected chairman of the praesidium of the Union of Orthodox Rabbis in 1926. He held this post until 1928 and was reelected to it in 1940; in 1943 he was still serving in this capacity. From 1928 to 1930 he was president of the Union and from 1930 to 1939 he was first honorary president. As a representative of the Union, he was a member of the delegation that presented to President Franklin Delano Roosevelt, in December, 1942, a detailed account of the Nazi slaughter of the Jews of Europe and elicited from the President a promise that the culprits would be sought out and punished.

Rosenberg was also active in Zionist work, through the Mizrachi agencies, and he was for many years affiliated in directive capacities with the Central Relief Committee. He was a contributor to numerous rabbinical publications.

ROSENBERG, JACOB, art historian, b. Berlin, 1893. He was assistant, then curator of engravings at the Berlin Museum, whose director was then Max J. Friedländer. Rosenberg specialized in the 15th to 17th cent. art of The Netherlands and Germany. His work on Jacob van Ruisdael (1928) won acclaim from the profession mainly for its scientific attitude.

This study was followed, in 1930, by *Die niederländischen Meister,* written in collaboration with Elfried Bock—a descriptive index of the Netherlands collections in the sections on engraving of the Berlin Museum. The book is an exemplary piece of work. Together with Friedländer, Rosenberg was commissioned by the Deutscher Verein für Kunstwissenschaft to write *Die Gemälde von Lucas Cranach* (1932). In the following year he wrote a study of the drawings of Martin Schongauer. In the *Jahrbuch der preussischen Kunstsammlungen* Rosenberg published essays on Hobbema (1927) and Cornelis Hendricksz Broon (1928), and the pen and ink drawings of Rubens (1926 and 1929).

In 1937 Rosenberg came to the United States, and was appointed professor of the history of art at Harvard, and also director of engravings at the Boston Museum.

Lit.: Kürschner, Joseph, *Deutsches Gelehrten-Lexikon* (1931 and 1935); New York Public Library Catalogue.

ROSENBERG, JAMES NAUMBURG, lawyer and communal worker, b. Allegheny City, Pa., 1874. He received his law degree from Columbia University in 1898, and was admitted to the New York bar the same year. Rosenberg became associated with Jewish welfare work during the first World War; in 1921 to 1922 he was in Europe as director of the American Jewish Joint Distribution Committee activities. Subsequently he aided in the formation of the Central Bank of Cooperative Institutions in Palestine. He organized and became chairman of the Agro-Joint, and in 1943 was still its chairman as well as honorary chairman of the executive committee of the Joint Distribution Committee. It was under his direction that the American

Society for Jewish Farm Settlements in Russia, which supervised the Jewish colonization of Biro-Bidjan, was incorporated in 1926.

Rosenberg was president of the Dominican Republic Settlement Association, organized as the result of the offer made by President Rafael L. Trujillo of the Dominican Republic at the Evian Conference (1938), promising accommodation for the settlement of 100,000 refugees. The contract was signed in 1940, and in 1943 progressive colonization was under way.

Among Rosenberg's other communal posts were his membership on the board of directors of the Council for Democracy, of the National Conference of Christians and Jews and the American Jewish Committee.

Interested in art and literature, Rosenberg was both a patron and participant. He exhibited in several museums, and was chairman of the American section of the Bezalel Art School. His published works include *Pastel Expressions* (1920); *Corporate Reorganizations and the Federal Courts* (1924); and *On the Steppes* (1927). His play, *Wall Street,* was produced in 1927.

Lit.: *American Hebrew,* May 25, 1923, pp. 25, 28; *ibid.,* Nov. 1, 1940, p. 4; *Jewish Tribune,* May 6, 1927, p. 2; *Judaean Addresses,* vol. 3 (1927) 164-67.

ROSENBERG, JOSIAH (pseudonym, Karl Vornberg), Yiddish writer, b. Slobodka, near Kovno, Lithuania, 1872; d. New York city, 1937. His first work was as German correspondent with a bank in Kovno. Later he began to write for Russian periodicals, including *Voskhod.* In 1900 he made his debut as a Yiddish writer in *Die Velt* (Vienna). Rosenberg received his Ph.D. degree from the University of Bern in 1902, and in the following year he came to the United States. In the United States he was best known under the pseudonym of Karl Vornberg, although he used many other pseudonyms. He was associated with the *Tzukunft,* which he edited in 1906, the *Forward,* the *Wahrheit,* and from 1906 until his death with the *Day.*

From 1910 to 1913 he lived in Chicago, editing *Die Yiddishe Arbeiter Velt.* Later he was editor also of *Literatur un Leben,* a literary periodical, and in 1924 he founded the *Yiddishe Shtimme (Jewish Voice),* a Yiddish and English newspaper published in Newark, N. J.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 3 (1929), cols. 20-25.

ROSENBERG, LOUIS, sociologist and author, b. Goniendz, Poland, 1893. He was brought to England in 1896 and educated in Leeds, attending the university there.

From 1913 until 1915, when Rosenberg came to Canada, he taught in England. In Canada he continued to teach for several years, but in 1919 joined the Canadian staff of the Jewish Colonization Association as organizer of cooperative credit unions. Until 1940 he continued to serve as manager of the farm settlements of the Jewish Colonization Association in Western Canada.

Rosenberg was an active citizen in the community of Regina, Saskatchewan, where he lived. He was treasurer of the Regina People's Forum (1925-34), member of the Regina public school board (1937-40), chairman of the board in 1938 to 1939, chairman of the housing committee of the Social Service Council of Saskatchewan, and chairman of the Regina Consumers Council (1938-39). He was also (1941) secretary of the Canadian Unity Council, representing thirty-five ethnic groups in Western Canada. As a leader in the Canadian Jewish community, Rosenberg was vice-president of the western division of the Canadian Jewish Congress (1938-40) and executive director of the western division of the Canadian Jewish Congress and United Jewish Refugee and War Relief Agencies (1940-). He was also chairman of the bureau of social and economic research of the Canadian Jewish Congress (1934-).

Rosenberg wrote a great deal for English Jewish periodicals throughout North America and for Hebrew and Yiddish publications elsewhere. Among his special studies were *Jews in Agriculture in Western Canada* (1931); *Die Yiddishe Bafelkerung fun Canada* (1932); and *Canada's Jews,* a comprehensive social and economic study of the Jews in Canada (1939). Rosenberg was a contributor on Canadian subjects to the *Universal Jewish Encyclopedia.*

ROSENBERG, LOUIS JAMES, lawyer and American consul, b. Riga, Latvia, 1876. He came to the United States in 1890 and received his LL.B. degree from the Detroit College of Law in 1900. He was the American consul at Seville, Spain (1906-9), then served as consul at Pernambuco, Brazil (1909-10), and as honorary consul of Panama (1923-).

The king of Spain made Rosenberg a Knight of the Order of Isabella la Catolica (1924). Made honorary legal advisor to the Michigan State Board of Escheats in 1935, he was active in this capacity in 1943. Rosenberg, who advocated legislation against the spread of tuberculosis and the establishment of a juvenile court in his home state, Michigan, was also (1943) a board member of the Society of Prevention of Cruelty to Children. In 1929 he was made national legal advisor of the Civil Legion of the United States.

A member of the B'nai B'rith and active in its anti-defamation work, he was also chairman of the Committee of Two Hundred in Detroit in the first nation-wide campaign of the Zionist Organization of America (1919). From 1919 to 1922 he served as a trustee of the Jewish Publication Society of America.

His published works include *Sociologic Studies* (in collaboration with N. E. Aronstam, 1902); *Mazzini: the Prophet of the Religion of Humanity* (1903); *The Medical Expert and Other Papers* (1911) and *Scraps and Bits* (1916).

Lit.: "An Intellectual Diplomat," *The Jewish Tribune,* June 1, 1928; *The Legal Record* (Detroit), Sept. 12, 1938; *The Herald* (Miami, Florida), Dec. 19, 1940.

ROSENBERG, MARC, historian of art and expert on goldsmithing, b. Kamienetz, Russia, 1852; d. Baden-Baden, Germany, 1930. He published several monographs on the art treasures in the castles of Karlsruhe, Dessau and Weimar. His main work was *Der Goldschmiede Merkzeichen* (vols. 1 to 3, 1890; vol. 4, 1928). Rosenberg was professor of the history of the fine arts at the Polytechnic Institute of Karlsruhe, and internationally known collector of rare specimens of goldsmithery.

ROSENBERG, MOISÉS, editor, b. Warsaw, Poland, 1904; d. Mexico City, Mexico, 1942. He studied law in Warsaw, and migrated to Mexico in 1929. While in Warsaw he had been editor (1924) of a literary periodical in Yiddish, *Shprotzungen.* In Mexico he became editor of the Young Men's Hebrew Association journal, *Nuestra Palabra,* and in 1930 founded a Yiddish newspaper, *Der Veg (El Camino),* of which he was publisher and editor. Subsequently (1937) Rosenberg became editor also of a Spanish newspaper, *La Verdad.*

Rosenberg was active in Mexican Jewish affairs, participating not only in cultural and Zionist movements, but also in the struggle to keep German Nazi propaganda from successful infiltration into the country. Graetz's *History of the Jews* appeared in its first Spanish translation under the auspices of the Verdad publishing house founded by Rosenberg. He was president of the Union de Escritores Israelitas.

Pauline Hanauer Rosenberg

ROSENBERG, PAULINE HANAUER (Mrs. Hugo Rosenberg), communal worker, b. Pittsburgh, 1863; d. New York city, 1940. She studied at the University of Pittsburgh and later at Barnard College. From 1903 to 1908 Mrs. Rosenberg was national president of the National Council of Jewish Women. At the tercentennial exhibition held in Jamestown, Va., in 1907, during her incumbency, the Council was awarded a gold medal. Later she served on various committees and on the executive of numerous local and national organizations of a general and Jewish nature.

She was an early advocate of flood control, did much work for the blind and for the aid of immigrant women and girls, and was active in movements for alleviating the hardships of the deaf and other physically handicapped groups. She was author of several papers on philanthropy and civics, and the recipient of the Diplôme d'Honneur from the International Jury in Social Economy.

ROSENBERG, ROSE, communal worker, b. London. She became affiliated with the Labor movement during her childhood, and joined the Labor Party officially in 1918. In 1923 she became secretary to Ramsay MacDonald, Labor Party leader. In the following year, when he became prime minister, he established a new precedent by retaining a woman secretary. Again from 1929 to 1935 Miss Rosenberg was with MacDonald in Whitehall. She visited the United States and Canada in 1929 as a member of the official delegation which accompanied MacDonald.

Subsequently she became legal adviser to the National Council for Civil Liberties and a member of the Home Office Women's Advisory Council of Women's Voluntary Services for Civil Defense.

ROSENBERG, SAMUEL, "patriarch of Chinatown," and communal worker, b. Kolo, Poland, 1830; d. New York city, 1936.

On his arrival in the United States in 1853 he started to manufacture bow-ties. In 1907 he gave up this business, and began the manufacture of canvas and flannel iron-holders, which came to be used not only by the Chinese laundrymen of his own district but throughout the United States and Mexico. At the age of ninety-eight he retired from active business, but remained a participant in political and communal activities.

Rosenberg's first vote was cast in 1864, for the re-election of Abraham Lincoln; in order to cast his last vote he had to be driven to the polling-place in an ambulance. Among his services to the Jewish community were his organization of the Elihu Meizel Society of German and Austrian Jews (1875) and later of Congregation Kolo.

Lit.: New York Times, Dec. 2, 1936; *New York Herald Tribune,* Dec. 2, 1936.

ROSENBERG, SAMUEL, painter, b. Philadelphia, 1896. He studied at the National Academy of Design in New York city, and in 1926 received his B.A. degree from the Carnegie Institute of Technology in Pittsburgh. That same year he was made assistant professor of drawing and painting at the Institute. In 1937 Rosenberg also joined the faculty of the Pennsylvania College for Women. Rosenberg, who devoted himself mainly to portrait paintings, exhibited in the leading galleries throughout the United States.

He was awarded a second prize in 1917, a first prize in 1920, and a portrait prize in 1921 by the Associated Artists of Pittsburgh. Rosenberg also won the Bakewell prize in 1930, the Carnegie Institute award for the 1935 exhibit and a first prize in 1936.

ROSENBERG, WILHELM, lawyer and banker, d. Vienna, 1923. As a student at the University of Vienna he excelled in law and economics. He found no pleasure in making money, and scorned political life under the Habsburg monarchy. Nevertheless he won esteem as jurist and economist. By 1914 Rosenberg, having gained the confidence of British and other foreign bankers, was regarded as an outstanding financial expert in Vienna. He figured prominently in the independent constitution of the Anglo-Austrian bank after the collapse of Austria in 1918. In 1921 he became financial adviser of the Austrian government. Most of the post-War reconstruction in Austria was upon the advice of Rosenberg. Grief over the death of his son led him to suicide.

ROSENBLAT, JOSEPH MICHAEL, law historian, b. Cracow, Poland, 1853; place and date of death unknown. He was for years professor of law at the University of Cracow. Rosenblat's best known published works were: *O procesach przeciw czarownicom w Polsce* (Lawsuits against Witches in Poland, 1882); *O udziale w przestepstwach* (Participation in Crime, an interpretation of the code, 1874).

He also wrote *O konkurencji karnej* (Penal Competition, 1877); *Wykład procesu karnego* (Exposition of Penal Lawsuits, 1889) and *O Rewizji procesu karnego* (Revision of Penal Lawsuits, 1903).

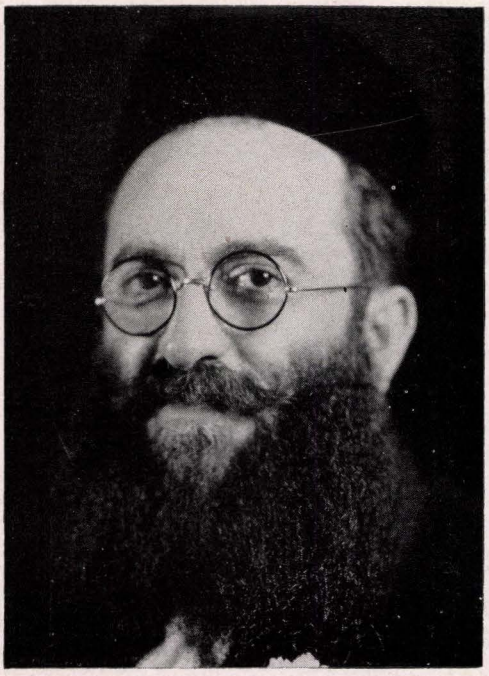
ROSENBLATT, BERNARD A., judge and Zionist leader, b. Grodek, near Bialystok, Poland, 1886. He was brought to the United States in 1892, and educated at Columbia University (M.A., 1908; LL.B., 1909). He was a Democratic candidate for the United States Congress in 1916, and in 1921 was appointed justice in the Magistrate's Court of the City of New York. The first American representative in the Palestine Zionist Executive (1921-23), Rosenblatt originated the bonds of the city of Tel-Aviv, Palestine, the first Jewish municipal bonds in history, an issue of which was successfully floated in the United States (1923).

From 1925 to 1927 he served as president of the Jewish National Fund of America. In 1929 Rosenblatt was appointed a Zionist member of the council of the new Jewish Agency. In 1943 he was serving as chairman of the board of the Palestine Foundation Fund (Keren Hayesod). He published: *The Social Commonwealth* (1914); *Social Zionism* (1919); *Federated Palestine and the Jewish Commonwealth* (1941). Rosenblatt's family claimed descent from Rashi.

ROSENBLATT, HENRY (pseudonym, Hey Roisenblatt), Yiddish poet, b. Ladishow, province of Podolia, Russia, 1878. His early education was traditionally Orthodox. Because of the oppressive decrees issued by the czarist regime against Jews dwelling in villages his father, a miller, immigrated with his family to the United States. Hey Rosenblatt (known at the time as Chaim Rosenblitt), then thirteen, immediately began to work in sweatshops. Financial difficulties forced him to abandon his studies at Jamaica Normal College, Brooklyn, N. Y., before he had completed the course.

His first poems were published in *Jewish Daily Forward* in 1900; thereafter he contributed to important Yiddish periodicals. He was a member of the group of young poets known as Yiddishe Yugnt, which published four issues of the magazine *Yugnt* (Youth), protested against the attitude of the existing press toward new poets, and bridged the gap between the social school of the 1880's and 1890's and the impressionist school in modern Yiddish literature. Rosenblatt seems to have been the most outstanding member of this group of belated naturalists and romantic individualists.

His poetry evolved along a most diverse path, touching upon almost every stage peculiar to the development of modern Yiddish literature. From his first book of poetry, *Lieder* (1910), through *Gezamelte Gedichte un Lieder* (1905-15), *Unter Gotts Himlen* (1920), *Bloye Flamen* (1925) and *Hrudes* (1930), to *Leim* (1935), he merged his naturalism and folkism with tender and authentic sentimentalism.



An earnest student and admirer of English literature, Rosenblatt translated into Yiddish Edgar Allan Poe's "The Raven" (published in *Tzukunft,* 1904) and Oscar Wilde's "Ballad of Reading Gaol" (London, 1908). He was editor of the *Detroiter Vochnblatt* (1917), and in 1943 was editor of *Kalifornier Shtimme.* N. B. MINKOFF.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 299-303; Niger, S., in *Tzukunft,* Feb., 1931; Rivkin, B., *ibid.,* Feb., 1937.

ROSENBLATT, JOSEF, cantor, b. Biela Cherkov, Southern Russia, 1880; d. Tel-Aviv, Palestine, 1933. When he was seven his father, a learned Baal Tefillah (reader of prayers in the synagogue), moved to Sadagora, Bucovina. Here in the Hasidic atmosphere the young boy "Yosele" absorbed the plaintive, wistful songs of the Hasidim as well as the traditional chants of the synagogue.

At nine, accompanied by a brother seven years old, Josef, chaperoned by his father, began his travels and concertizing which ultimately led to his becoming the most popular cantor of his age. At seventeen, his father having passed away, Josef went to Vienna to study for six months at the conservatory and to listen to the local cantors. His first position was in the ultra-Orthodox community of Munkács, Hungary. He then went to Pressburg, which was famed for its Yeshiva. Here Rosenblatt remained for five years, and from here the fame of "Yosele Pressburger" began to spread over the continent. The Orthodox congregation of Hamburg claimed him for the next six years. Throughout this period Rosenblatt continued to study and began to compose. In Hamburg he published his *Zemiroth Yosef* in two volumes (synagogue songs for cantor and choir).

The Hungarian Congregation Ohab Zedek of New York city, then in quest of a cantor, sent a committee to Hamburg to engage him. From here, through his many public appearances for Liberty Bonds and various

Josef Rosenblatt

charity institutions, and especially through his numerous recordings, the name of Yosele Rosenblatt became as well-known as that of Caruso. Indeed, the opera impresario C. Campanini offered him $2,000 for an appearance with the Chicago Opera Company. The pious cantor declined the invitation.

In 1921 he published *Psalm 113* for mixed choir, dedicated to Warren G. Harding, and in 1922 *Psalm 114* for mixed choir and *Uvnucho Yomar* for male chorus, also *Tefilos Yosef* (New York, 1927), recitatives for cantor.

Although some of his compositions are banal and entirely unworthy of the synagogue and their creator, most of them are imbued with the Jewish spirit and the traditional modes.

He possessed definite intuition for natural and graceful melody and even the less worthy of his compositions appeared as gems when sung by him with unparalleled sweetness and inimitable technique. His coloratura was amazingly smooth and effortless; his voice, though difficult to classify, had the quality of lyric baritone with a tenor-like upper register. There is hardly a city in the United States or a metropolis on the continent which was not visited by Rosenblatt on his many tours.

Due to unwise business ventures, Rosenblatt lost a great deal of money, and was even threatened with bankruptcy. In order to clear his name he was forced to accept a national tour on Loew's vaudeville circuit. In 1933 he was engaged to sing in a Jewish film, *The Dream of My People.* For this purpose he went to Palestine. A heart attack cut this venture short, and this sweet singer of Israel found his final resting place on the Mount of Olives in Jerusalem.

MAX WOHLBERG.

Lit.: *Hazanuth* (1924) 188; *Die Chazanim Velt,* Nos. 8, 29 and 36 (1934-36); Goldstein, Israel, *Toward a Solution* (1940) 335.

ROSENBLATT, SAMUEL, rabbi and author, b. Pressburg, Hungary, 1902. He was the son of Cantor Josef Rosenblatt. Rosenblatt was brought to the United States in 1912, and graduated from the College of the City of New York in 1921. He received his rabbinical degree from the Jewish Theological Seminary of Amer-

ica, and in the following year, while a Hazard fellow at the American School of Oriental Research, he was ordained also in Jerusalem. In 1927 he received his Ph.D. degree from Columbia University.

Rosenblatt became rabbi of Beth Tfiloh Congregation in Baltimore in 1927, and in 1943 still held this post, as well as that of lecturer in Jewish literature at Johns Hopkins University, to which he was appointed in 1930. He was author of *The High Ways to Perfection of Abraham Maimonides* (vol. 1, 1927; vol. 2, 1938); *Interpretation of the Bible in the Mishnah* (1935); *Our Heritage* (1940); and *This is the Land* (1940). He contributed to various Jewish and scientific periodicals. From 1926 to 1928 Rosenblatt was Gustav Gottheil Lecturer in Semitics at Columbia University.

ROSENBLATT, SOL ARIAH, lawyer, b. Omaha, Neb., 1900. He received his law degree from Harvard in 1924, and was admitted to the New York bar the following year. In 1932 he became affiliated with the Democratic party, in the motion picture division of the National Campaign Committee. For the next national campaign (1936) he was director of the motion picture committee, and in 1940 was made general counsel of the Democratic National Committee. With the establishment of the National Recovery Act in 1933 Rosenblatt was made divisional administrator. He became national director of compliance and enforcement of the Act in 1934.

From 1935 to 1940 he was impartial chairman of the cloak and suit industry. In 1939 he was also made impartial chairman of the Joint Board of Cloak Unions and of the New York and Brooklyn Cloak Trucking Association. He was a major in the Specialists' Reserve of the United States Army.

ROSENBLOOM, BENJAMIN LOUIS, attorney and American Congressman, b. Braddock, Pa., 1880. He studied law at the University of West Virginia, and was elected to the senate of West Virginia, serving there from 1915 to 1919. Rosenbloom was elected on a Republican ticket to the House of Representatives from the first West Virginia District, and served there from 1921 to 1924. He was the first Jew to be a member of the West Virginia senate and also the first Jew to represent the state in Congress. In 1933 he was a delegate to the West Virginia convention to ratify the 21st Amendment to the United States Constitution. In 1935 he was made vice-mayor and in 1939 mayor of Wheeling.

ROSENBLOOM, JACOB, biochemist, b. Braddock, Pa., 1884; d. Pittsburgh, 1923. He received both a medical degree and a Ph.D. degree from Columbia University. For a time Rosenbloom was an associate in chemistry at the College of Physicians and Surgeons of Columbia University; subsequently he was made associate professor of biological chemistry at the University of Pittsburgh. Rosenbloom was one of the first physicians to emphasize the consequences of disorders in metabolism. His researches into this and other biochemical problems made him one of the country's prominent scientists in his field. The promise, however, was nullified by his early death. Rosenbloom was author of *1,000 Problems in Biochemical Research,* and a member of the staff of *Medical Life.*

ROSENBLOOM, SOL, philanthropist and communal leader, b. Grodno, Russia, 1866; d. New York city, 1925. He came to the United States in 1889 where, with his wife, he became one of the outstanding supporters of the Palestine movement. Rosenbloom donated $250,000 for the establishment of an Institute of Jewish Studies in The Hebrew University, Jerusalem (1922). He was a member of the board of trustees of the Palestine Development Council, and a leader in the movement to erect a synagogue center in Jerusalem.

CELIA NEUMARK ROSENBLOOM (b. Lyck, Germany), wife of Sol Rosenbloom, was his associate in local and other philanthropic work. She donated the funds for a building to house the Institute of Jewish Studies at The Hebrew University, as a memorial to her husband. Mrs. Rosenbloom was a member of the executive board of the American Friends of the Hebrew University, organizer (1927) and honorary president of the Women's Division of the American Jewish Congress, and a member of the administrative committee of the Congress.

ROSENBLOOM, SYDNEY, composer and teacher, b. Edinburgh, Scotland, 1889. He studied at the Royal Academy of Music in London where, from 1907 to 1910, he served as assistant teacher of piano. In 1911 his concert debut as pianist took place in London. For several years he taught piano at the Blackheath Conservatory. In 1920 he toured South Africa extensively, settling permanently in Johannesburg in 1921 to become professor of piano at the Harrison Conservatory. Rosenbloom composed several works for chamber music groups, but is best known for his songs, some of which achieved great popularity because of their charm.

ROSENBLUM, WILLIAM FRANKLIN, rabbi, b. Grodno, Poland, 1892. He was brought to the United States as a child. In 1916 he received two law degrees from Tulane University in New Orleans—a degree in common law and one in civil law.

Rosenblum became executive secretary of the Young Men's Hebrew Association in Nashville, Tenn., in 1917; and, at the death of Isidore Lewinthal, served for eight months as acting rabbi of the Vine Street Temple in that city. In 1923 he entered the Hebrew Union College, although his choice of a rabbinical career had involved rejecting the offer of a nomination to a city judgeship. Ordained in 1926, Rosenblum became assistant to Rabbi Abram Simon at Washington Hebrew Congregation in Washington. While in Washington he organized the Jewish Welfare Federation and helped organize the Washington Community Chest.

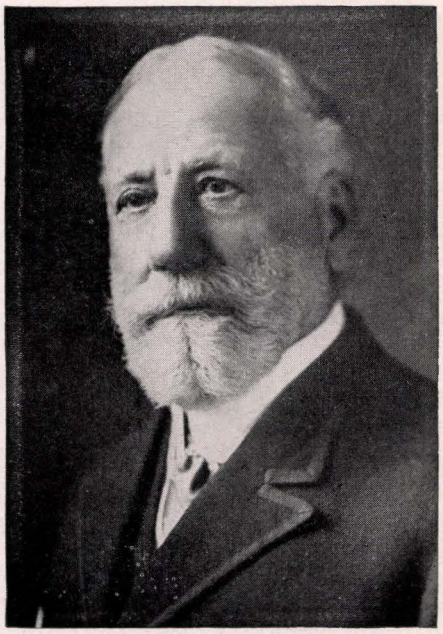
In 1930 Rosenblum was called to serve as co-rabbi with Maurice H. Harris, at Temple Israel in New York, and succeeded Harris when the latter died (1930). Rosenblum succeeded S. Parkes Cadman as grand chaplain of Masons of the Grand Lodge of the State of New York. In 1941 he served as civilian chaplain at Camp Edwards, Mass., and in 1942 as civilian aide chaplain in the office of the United States 3rd Naval District. During the first World War Rosenblum was in the United States Navy.

ROSENBLUTH CASE, an American trial that lasted for several years and terminated in October, 1924, when the United States District Court at Tacoma, Wash., dismissed a murder indictment against Captain Robert Rosenbluth. The sudden death of Major Alexander P. Cronkhite occurred on October 25, 1918. According to the testimony, it happened while Cronkhite and one Sergeant Pothier were engaged in the frivolous pastime of firing revolver shots at a tobacco can. The tragic incident took place at Camp Lewis, in the state of Washington. Rosenbluth and others, who were not far off, rushed to the scene. After an autopsy was made, a board of inquiry declared that Cronkhite's death was due to a self-inflicted wound. More than two years later Rosenbluth and Pothier were arrested on federal warrants, but the case was turned over to the state of Washington when it was

shown that it did not come under the jurisdiction of the federal government. Despite the decision of the county prosecutor, who after investigation exonerated Rosenbluth and Pothier, a federal grand jury indicted them. About seventy witnesses from all parts of the country were called to testify. The case against Captain Rosenbluth ended in an honorable dismissal, following the acquittal of Sergeant Pothier. The prosecution of this trial is said to have cost the federal government nearly $200,000.

Lit.: Marshall, Louis, in *American Jewish Year Book,* vol. 27 (1925-26) 451-59; idem, in *American Hebrew,* Oct. 24, 1924, p. 754.

ROSENCRANTZ, ESTHER, physician, b. San Francisco, 1876. She received the A.B. degree from Stanford University in 1899 and a medical degree from Johns Hopkins University in 1904. Subsequently she worked in hospitals in England, France, Germany and other European countries. Specializing in pulmonary diseases, she was affiliated with various sanatoriums, both in the west and the east. In 1913 she was appointed instructor in the University of California Medical School, and eventually became associate professor. She contributed to medical journals and textbooks. In recognition of her services with the Red Cross Tuberculosis Commission to Italy, she was decorated by the Italian government (1919).



ROSENDALE, SIMON W., lawyer and public official, b. Albany, N. Y., 1842; d. Albany, 1937. He started to study law at a private law office at the age of sixteen, then supplemented his general education at the Barre Academy in Vermont. In 1868 Rosendale was elected on the Democratic ticket to the post of city recorder for a four-year term. In 1878 he was made corporation counsel of Albany, but in 1881 retired to enter private practice. Among his partners at this time was Rufus W. Peckham, who later became a justice of the United States Supreme Court. Rosendale served as attorney-general of New York state from 1892 to 1894.

Educational and communal activities of many kinds had Rosendale's guidance. He was president of the board of trustees of Albany Medical College, president of the board of governors of Union College and vice-president of the State Board of Charities. He was vice-president of the American Jewish Historical Society from 1899 to 1917, for many years president of the court of appeals of the Independent Order B'nai B'rith, and also active in Albany Jewish affairs.

ROSENFELD, HIRSCH, Yiddish writer and translator, b. Rohatchav, Volhynia, Russia, 1884. He was given an Orthodox Jewish education, but as early as 1902 he became involved in the Socialist movement and subsequently spent a short time in prison for revolutionary activity. Rosenfeld came to the United States in 1906, where he studied chemistry at Cooper Union, in New York city. His first literary efforts did not appear until 1919 when, at the suggestion of Moissaye Olgin, he began to do translations for publication.

Among these were renditions from the Russian novelists and other writers, including Jack London, Rosa Luxembourg and Karl Kautsky. He wrote for various Yiddish literary periodicals. In 1943 he was on the staff of the Joint Distribution Committee in New York.

ROSENFELD, JONAH, Yiddish novelist, b. Rafalovka, Russia, 1882. Orphaned in his childhood, Rosenfeld became apprenticed to a turner in Odessa. His first story, *Dos Lernyingel* (The Apprentice), was published by Isaac Loeb Peretz in his periodical *Freind* in 1904. This and further excursions into the life of Jewish workers attracted so much attention that from 1905

Simon W. Rosendale

on Rosenfeld devoted all his time to writing. His story *Konkurenten* (Competitors), afterward dramatized, was subsequently produced by the Yiddish Art Theatre in New York city. His first full length novel, *In der Shtil,* was published serially in Odessa in 1912. In 1921 Rosenfeld came to New York and joined the staff of the *Forward,* with which he was associated in 1943.

Rosenfeld's work deals largely with the morbid subconscious; fear, lunacy, eroticism and other pathological phenomena provide his material. Often the narrative is lost in a maze of somber detail, but Rosenfeld always strives to clarify the human riddle with which he is preoccupied. In 1927 *Er un Zei,* a novel, was published. His earlier published works were collected in eight volumes of short stories, which appeared in Vilna in 1932. *Ainer Alain,* an autobiographical novel, appeared in 1940.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 130-39; Mukdoni, A., in *Morgen Zhurnal,* Dec. 26, 1927.

ROSENFELD, KURT, lawyer and German statesman, b. Marienwerder, East Prussia, 1877. He joined the German Social Democratic party, served in the army (1914-18) and was minister of justice in Prussia (1918-19) and councillor of the city of Berlin (1910-20). As minister of justice and as a member of the Social Democratic fraction in the German Reichstag (1919-32) he was the sponsor of many law reforms. Rosenfeld was particularly opposed to capital punishment, and wrote a book against it (*Gegen die Todesstrafe,* 1929).

A noted lawyer, Rosenfeld was called "the Clarence Darrow of Germany" because on numerous occasions he lent his legal talents to the defense of unpopular causes. As a lawyer in Munich it fell to his lot in 1932 to cross-examine Adolf Hitler, who, however, declined to answer the questions of a Jew. Rosenfeld compelled him to pay a fine of 1,000 marks to the court, thereby incurring his personal hostility.

Rosenfeld escaped from Germany after the Nazis came to power (1933), and arrived in the United States in 1934. He became an American citizen in 1939, and in 1943 was

Morris Rosenfeld

active as a lawyer and as a lecturer on modern politics. An interesting sidelight is the fact that American Nazis, seeking to discredit Rosenfeld, were advised by Berlin that, "apart from his Jewishness," there was nothing reprehensible in his career.

ROSENFELD, LEO, see KAMENEV, LEO.

ROSENFELD, MAURICE BERNARD, music critic and pianist, b. Vienna, 1865; d. Chicago, 1939. He came to the United States as a child, settling in Chicago, where he studied at the Chicago Musical College. From 1888 to 1911 he taught the piano at the College, and from 1912 to 1916 he was a member of its board of directors. He distinguished himself as a music critic because of his independence, tolerance, and keen analytical intellect. From 1907 to 1915 he was the critic on the Chicago *Daily Examiner;* from 1917 to 1931 he served in a similar post with the *Daily News.*

In 1916 he founded his piano school in Chicago, which he directed until 1931. He appeared extensively as a lecturer on music history and esthetics, and composed several undistinguished works for orchestra and chamber-music groups.

ROSENFELD, MAX, Polish deputy, b. Drohobycz, Galicia, 1884; d. Vienna, 1919. The head of the Austrian Poale Zion, he became well-known as an advocate of national autonomy for the Jews of Austria. His chief work, *Die polnische Judenfrage* (Vienna, 1919), sets forth the principles of national autonomy. After the first World War Rosenfeld was the only Jewish Socialist to be elected to the Polish Constituent Assembly; however, he died shortly afterward, his mandate being taken over by Ignatz Schipper.

After the revolution Rosenfeld for some time was president of the Jewish community of Przemysl. There he tried to put into practice his idea of Jewish national autonomy within his own community. The political situation, however, forced him to leave the country. He was active in the Jewish national council of Vienna. In his pamphlet *Soziale Steintafeln* he applied Mosaic social legislation to modern Zionist problems.

Lit.: Rosenfeld memorial number of *Arbeiterzeitung,* Warsaw, March, 1918.

ROSENFELD, MORRIS (MOISHE-YANKEV ALTER), Yiddish poet, b. Boshko, province of Suvalki, Russia, 1862; d. New York city, 1923. He came of a family of fishermen. His early education in Bible and Talmud was followed by studies in German and Polish.

His early literary education was highlighted by memorizing the poetry of such forerunners as Eliakim Zunser, Michel Gordon, Abraham Goldfaden, and others. At the age of fifteen Rosenfeld wrote his first poem in Yiddish. In 1882 Rosenfeld emigrated from Russia. For a few months he lived in Amsterdam, where he was engaged as a diamond-cutter. His visit to the United States was of short duration; he returned to his native country only to emigrate again, this time to London. There he became a tailor. For two and a half years Rosenfeld and his family lived in London in great poverty. Toward the autumn of 1886 they emigrated to the United States. In New York Rosenfeld worked as a tailor in the sweatshops whose inferno he so tragically immortalized in his famous poems of the shop.

Rosenfeld's earliest published verse was "Dos Yor 1886" (*Yiddishe Folkstzeitung,* December 17, 1886). Many others appeared in the London *Arbeiter Freind* (1888-89). So moving was the pathos in his verse that he was immediately acclaimed as a great singer of the toiling masses.

Die Gloke (The Bell; 1889), his first book of verse, blended satire with pure poetic elements and described the oppressive life of the worker; it delineated types in the same genre as Vintchevsky, who was the pioneer of this poetic form in Yiddish. *Die Blumen-Kette* (The Flower Wreath), his second book of verse, evidenced a more mature personality of definite poetic physiognomy. It was during this period that Rosenfeld was also contributor to several newspapers: *Die Varheit; Der Morgnshtern; Dos Yiddishe Folksblatt* of St. Petersburg; and the *Arbeiter Tzeitung,* launched in 1890, of which he became the official poet. It was the latter that published his remarkable poems dedicated to labor which were widely recited and sung in shops, in tenement houses, at workers' meetings and at workers' concerts. Yet, despite such fame, he suffered dire need. In 1894 Rosenfeld and the poet A. M. Sharkansky edited the satiric weekly, *Der Ashmodai.* Herein Rosenfeld published most of his biting satires. One of these, "Latutis," served as a direct reply to all who spoke disparagingly of his occupation as a tailor.

Dos Liederbuch (1897) attracted the attention of Leo Wiener, professor at Harvard, who became an enthusiastic admirer of Rosenfeld's rare talent. Wiener published a number of Rosenfeld's poems (in English transliteration with an English translation). In 1898 Professor Wiener published (Boston) a complete translation of Rosenfeld's verse, under the title of *Songs of the Ghetto.* Thus the Yiddish poet now gained international renown. He was invited to read his verse at Harvard (1898), at Chicago University (1900), at Wellesley and Radcliffe Colleges (1900). He went on tour through Western Europe and Galicia (Austria), where he was rapturously acclaimed in Cracow, Czernowitz, Vienna, Budapest, and London. As a contributor to the *Jewish Daily Forward* (up to 1913) he revealed himself also to be a versatile prose writer, especially of striking feuilletons.

Rosenfeld's collected works were not issued prior to 1943. The most important of his works are contained in six volumes of *Shriftn* (publisher, Internatzionale Bibliotek); three volumes of *Geveilte Verk* (*Naiste Shafungen,* 1912; *Dos Buch Fun Liebe,* in two parts, Ferlag M. Gurevitch); and two biographies of Judah Halevi and Heinrich Heine (publisher, Internatzionale Bibliotek). Rosenfeld's verse was translated into French, German, Czech, Roumanian, Polish, Russian, Hebrew, Hungarian, Japanese, and other tongues.

Rosenfeld is considered one of the most significant, perhaps the most dynamic, among the Yiddish poets, for within the confines of realistic description he created a classic and vigorous tonality of boundless scope. In an

atmosphere of toil and sweatshops, where esthetic values were almost unknown, this remarkable poet, by dint of a volcanic subjectivity, sublimated his creative personality, employing a forthright and realistic method of approach. His direct cadence, his vigorous tempo with its pronounced musical rhythms, his poetic temperament—these filled his verse with freshness and passionate simplicity. It was as though a throbbing well had burst into tragic and heroic eloquence. Rosenfeld attained perfect classic expression wherever his primitive impetuosity did not weaken the dynamic force; indeed he succeeded in retaining the spark of the poet's original inspiration to the very end of such poems. Pathos and ecstasy were blended with dynamicism, thus achieving extraordinary completeness. He created an impression of spontaneity when, in the course of a poem, he brought about an abrupt change of tempo, leaving with the reader an awareness of intense emotional upsurge. Rosenfeld's verse sometimes reflected pure lyricism and poetic contemplation, particularly when he was able to maintain a balance between his natural massiveness and his meditative mood.

N. B. MINKOFF.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930), cols. 167-69; Shtarkman, M., Marmor, K., and Merrison, I. A., in *Pinkes,* vol. 1 (1927-28); Shatzki, J., in *Zamlbicher,* vol. 1 (edit. J. Opatoshu and H. Leivik, May, 1936); Minkoff, N. B., in *Yiddishe Klassiker Poetn* (1936) 65-98; Bialostotsky, B. I., in *Undzer Tzeit* (Sept., 1942).

ROSENFELD, PAUL, music critic, b. New York city, 1890. He received his B.A. degree from Yale University, following which he attended the Columbia University School of Journalism. He first distinguished himself as a music critic on the literary journal, *The Dial,* where from 1920 to 1927 he conducted a music chronicle which championed the modern composer and ultra-modern tendencies in music. Some of his best essays from *The Dial* were collected into books, namely, *Musical Portraits* (1920) and *Musical Chronicle* (1923). From 1927 on he contributed essays on music to *The New Republic* and various other literary and musical journals. Besides the books mentioned above, he wrote also a novel, *The Boy In the Sun,* two volumes of personal and critical portraits of personalities in the world of literature, music, and art; *Port of New York; Men Seen;* and a critical study of modern tendencies in art, *By Way of Art.* His more recent musical criticisms were collected into a book called *Discoveries of a Music Critic* (1936).

ROSENFELD, SAMUEL, Yiddish journalist and author, b. Chruskoye, province of Kherson, Russia, 1869. His first literary work was in Hebrew, and began with the publication of an article in *Hamelitz* in 1889. In 1894 he became a regular contributor to the periodical. Rosenfeld's debut in Yiddish occurred later, in *Der Yud.*

His conversion to political Zionism at the very inception of the movement led him to the editorship, for three months, of the Zionist weekly, *Die Welt,* which Theodor Herzl founded in Vienna (1900). In 1903 Rosenfeld was called to St. Petersburg, to work for *Hazeman* and *Der Freind.* A short time later he severed his connection with *Hazeman,* remaining with *Der Freind,* of which he became editor in 1908, and with which he moved to Warsaw in 1908; here he retained his editorship until the first World War brought the publication to an end. In 1917 he was in Petrograd, as editor of the *Petrograder Tageblatt.* After the October revolution Rosenfeld remained in Russia and for some time cooperated with the commissariat for Yiddish literature.

In 1919 he returned to Warsaw, where he worked with the *Haint* and other periodicals. In 1923 he came to the United States, joining the staff of the *Tog,* with which he was affiliated in 1943. Rosenfeld was one of the outstanding publicists of his generation, drawing on a many-faceted knowledge of general and Jewish culture for illuminating studies of contemporary as well as historical subjects. Among his larger studies were *Rebbe Yisrael Salanter,* which appeared also in Hebrew and Russian (1910); *Rebbe Menashe Ilier* (1913); *Moishe Leib Lilienblum* (1919); *Die Haskoleh Bevegung bei Yidden* (1909; 1920); and *Yiddishe Geshichte,* written in biographical form (1927).

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 169-76.

ROSENFELD, SYDNEY, playwright and theatrical manager, b. Richmond, Va., 1855; d. New York city, 1931. The Civil War ruined his father's merchandising business, and with two other boys young Sydney ran the northern blockade and came to New York. At the age of fifteen he was writing boys' stories. He began to write for the theatre in 1874, starting with burlesques of popular plays. Later he did many translations and adaptations from the German, and wrote the librettos for musical comedies. Rosenfeld was the first editor of *Puck,* which had been established in 1877, and later edited *The Rambler,* a theatrical journal.

Among Rosenfeld's own plays were *The Club Friend, or A Fashionable Physician* (1897); *Children of Destiny* (1910); *A House of Cards; The Lady or the Tiger; The Mocking Bird;* and *Virginia Runs Away,* his last play (1923).

Lit.: Rosenfeld, Sydney, "Confessions of a Playwright," *Theatre Magazine,* Feb., 1925; Locke Collection, New York Public Library.

ROSENGARTEN, ALBRECHT, architect, b. Cassel, Germany, 1809; d. Wiesbaden, Germany, 1893. In 1827 he was apprenticed to the Board of Buildings of Cassel; in 1839 a scholarship from the Academy of Cassel enabled him to go to Paris. Here he studied with Henri Labrouste. Rosengarten went to Rome in 1841 and to Hamburg, where he settled, in 1842. He specialized partly in synagogue design, and was responsible for the Temple in Cassel (1839) and for three synagogues in Hamburg, including the synagogue of the old Hamburg Sephardic community. Among other edifices designed by him in Hamburg, all of which were done in the eclectic style of the 19th cent., were the Gast- und Krankenhaus, the Schroeder-Stift and the Schroeder memorial chapel on the Petrikirchhof.

Rosengarten was also a water colorist and the author of several studies on architecture; among his published works were *Die architektonischen Stilarten* (1857); *Architekturbilder aus London und Paris* (1860) and, with L. Runge, *Architektonische Mitteilungen über Italien* (1847).

Lit.: *Hamburg und seine Bauten* (1890); Horwitz, *Die Kasseler Synagoge und ihr Erbauer* (1907); *Geschichte der jüdischen Gemeinde Kassel* (1931) 43-66.

ROSENGARTEN, ISAAC, editor, b. near Zagar, Lithuania, 1886. He arrived in the United States in 1888, received his B.A. degree from the College of the City of New York, and did post-graduate work at Columbia University. Rosengarten was instructor in history in the high school department of Yeshiva College (1915-19), principal of the English department of Yeshiva Etz Haim (1915-19), and general supervisor of the English department of the Jewish Day Schools of New York city (1916-18). He edited the *Jewish Forum,* a monthly, from 1918 on, and in 1937 founded the Jewish Forum Association, for the discussion of Jewish questions.

ROSENHAIN, JOHANN GEORG, mathematician, b. Königsberg, Germany, 1816; d. Königsberg, 1887. He studied mathematics at the University of Königsberg, and belonged to the school of Jacobi and Von Richelot. In 1844, upon publication of a paper on the Abel theorem, he was appointed lecturer at the University of Breslau. In 1846 he received the grand prize from the Academy of Paris for his findings on the inversions of the hyper-elliptic integrals of $p = 2$ which were first published in *Mémoires des savants étrangers* (1851). In 1848 he moved to Vienna, where he became interested in politics while lecturing on mathematics at the University of Vienna. Returning to his native city in 1857, he was appointed associate professor of mathematics at the University of Königsberg, with which he remained until 1885, when he retired.

Rosenhain's works include: *Exercitationes analyticae in theorema Abelianum de integralibus functionum algebraicarum 4°* (1844); *Neue Darstellungen der Resultate der Elimination von aus zwei algebraischen Gleichungen fz = o und φz = o etc.* (1846); *Sur les fonctions de deux variables et à quatre périodes qui sont les inverses des intégrales ultra-elliptiques de la première class* (1851).

Lit.: *Allgemeine Deutsche Biographie,* vol. 29, p. 209; Poggendorff, J. C., *Biographisch-literarisches Handwörterbuch zur Geschichte der exacten Wissenschaften,* vol. 2, p. 695.

ROSENHAIN, WALTER, metallurgist, b. Melbourne, Australia, 1875; d. Kingston Hill, Surrey, England, 1934. After receiving a civil engineering degree from the University of Melbourne, Rosenhain went to England to study at Cambridge, and remained in England. For a time he was affiliated with a Birmingham firm manufacturing optical glass and lighthouse apparatus; later, from 1906 to 1931, he was superintendent of the metallurgy department of the National Physical Laboratory. Rosenhain was for a time president of the Optical Society of London and of the Institute of Metals. He was the Carnegie Medallist of the Iron and Steel Institute in 1906 and Bessemer Medallist of the Institute in 1930. He married the sister of Sir John Monash. Rosenhain was author of *Glass Manufacture* (1907; 1920) and *Introduction to the Study of Physical Metallurgy* (1914).

ROSENHAUPT, MORITZ, cantor, b. Jesberg, near Cassel, Germany, 1841; d. 1900. He received his elementary Hebrew education from his father, who served as preacher, cantor and teacher.

His musical talents were evident at an early age. His fine soprano voice as well as his dexterity on the violin were sources of admiration. In training for the cantorate he was aided by the well-known cantor Lowe of Strasbourg. In 1861 he received his first position as cantor and teacher with the Hebrew congregation in Kochem on Mosel. After three years he heeded the call of the larger congregation in Speyer; here he stayed for seventeen years and pursued his studies in harmony, composition and orchestration with Professor Wiss and Dr. Benz.

The last nineteen years of his fruitful life were spent in Nuremberg as successor to Cantor Josef Singer, who succeeded Salomon Sulzer in Vienna. His magnum opus is *Schirei Ohel Yakov* in three volumes for Friday night (1879), Sabbath morning (1887) and the weekday service (1895). Rosenhaupt also composed a great deal of secular music for orchestra, mixed choir, male chorus, piano and organ, and set to music, for solo voice, some German poems. MAX WOHLBERG.

ROSENHEAD, LOUIS, mathematician, b. Leeds, England, 1906. He received the Ph.D. degree from the Universities of Leeds and Cambridge, and became lecturer on applied mathematics at the University College of Swansea, Wales (1931). In 1933 he was appointed professor of applied mathematics at the University of Liverpool. Rosenhead was honorary president of the Liverpool Mathematical Society and honorary vice president of the Jewish Students' Society at the University of Liverpool. He published scientific articles in *Proceedings of the Royal Society* and in *Proceedings of the Cambridge Philosophical Society.*

Jacob Rosenheim

ROSENHEIM, JACOB, leader of Orthodox Jewry, b. Frankfort, Germany, 1871. He headed the Israelitische Religionsgesellschaft at Frankfort, and was one of the leaders of the Agudath Israel. From 1905 to 1935, in which year he moved to England, he edited the *Israelit,* the weekly of the Agudath Israel in Germany. In 1929 he was elected president of the Agudath Israel World Organization.

His works include *Beiträge zur Orientierung im jüdischen Geistesleben der Gegenwart* (1920), polemics against Hermann Cohen, Martin Buber and Jacob Klatzkin, and *Abrahamitisches oder mosaisches Judentume.* In 1930 he published his collected essays and addresses, *Ohole Jacob* (2 vols.). He emigrated to the United States in 1941, and was living in New York city in 1943.

Lit.: Schwab, H., *Jacob Rosenheim* (1925); *Festschrift für Jacob Rosenheim* (on the occasion of his sixtieth birthday, 1931).

ROSENMAN, SAMUEL IRVING, judge, b. San Antonio, Texas, 1896. He was the son of immigrants from Poland. At the age of nine, Rosenman was brought to New York city, where he was educated. In 1915 he received his A.B. and in 1919 his law degree from Columbia University. In 1920 he was admitted to the bar, after having enlisted during the first World War and won promotion to a first lieutenancy. For a short time he was a partner of Susan Brandeis.

Rosenman's entry into political life, which was to lead him to a position as presidential advisor during a period of international war and national stress, came (1922) with his election to the New York State Assembly on the Democratic ticket. Although the auspices were Tammany's, Rosenman later showed as much independence of the New York political machine as did Franklin Delano Roosevelt himself. While in the Assembly, Rosenman sponsored, among other bills,

the Rosenman rent laws, which protected tenants' interests in such matters as repairs, dispossesses and rent increases. While in the Assembly, he was often closely associated with Belle L. Moskowitz.

In 1920 Rosenman was made the Democratic member of the New York State Bill Drafting Commission. His familiarity with the technicalities of state government brought his name, in 1928, to the attention of Roosevelt, then carrying on a gubernatorial campaign. They met on a boat taking Roosevelt across the Hudson for a campaign trip, and the parallelism of their ideas and ideals seems to have been immediately recognized by both. After Roosevelt's election to the governorship, Rosenman was asked to become Roosevelt's legal counsel. Four years later the country fell into the nadir of depression. By the time that Roosevelt's candidacy for the presidency began to seem probable, the companionship between him and Rosenman in Albany had touched new depths of seriousness and wider political spheres. Roosevelt's "Brain Trust," his first presidential essay into the intellectualization of Federal councils, was the outgrowth of a suggestion made by Rosenman while Roosevelt was still governor.

But when Roosevelt went to Washington in 1933, Rosenman did not join any of the official Federal branches. He had, in 1932, been appointed to fill a vacancy in the New York State Supreme Court. Tammany Hall, however, was not pleased with his loyalty to Governor Roosevelt, and he was not nominated to stand for election. In 1933 Rosenman was again named by Governor Herbert H. Lehman to fill a vacancy, and later that year he won both the nomination and election to the full fourteen-year term.

Serving as a state judge, Rosenman was better able to go with the President into the intricate contingencies the darkening years produced. His role was not only that of advisor, but often that of impartial mediator in the disagreements that arose between the various emergency departments set up by the government. The scope of Rosenman's private guidance was generally centered on national issues; in the international field Roosevelt had other collaborators. Rosenman was known for his forthrightness in offering his own views to the President, but it was a forthrightness ruled always by loyalty. Consequently, such discrepancies as there were between their respective points of view never became public, and Rosenman remained not so much a power behind the scenes as a guide and confidant. What his part was in the creation of the presidential messages to the country at large was never determined; that he, with Robert Sherwood, the playwright, was often a guest in the White House for several days before a message was delivered, was known. But the formulation and the style of the speech, as well as the spirit, were apt to be the President's own; the suggestions of his friends were interwoven into the body of the message.

In his open role as investigator and mediator, Rosenman's activities were more specific. His study of the difficulties between the Office of Production Management and the Office of Price Administration and Civilian Supply was one of the steps that led to the eventual establishment of the War Production Board, after the national emergency became a war emergency. Rosenman, whose mind moved invariably toward clarification and simplification of functions, was also instrumental in the establishment of other coordinating agencies, such as the National Housing Agency and the Office of War Information.

Rosenman edited and compiled *Public Papers and Addresses of Franklin D. Roosevelt* (9 vols., 1928-41).

Samuel I. Rosenman

First elected president of the Jewish Religious Education Committee of New York in 1939, Rosenman was in 1942 elected for the third time. Under his directorship, the merger of the Jewish Education Association, the Bureau of Jewish Education, and the educational interests of the Brooklyn and New York city Federations was effected. Until the entry of the United States into the second World War, Rosenman devoted a great deal of time to the work of the Jewish Education Committee. He advocated home study groups for children who did not attend any formal Jewish schools or classes and also favored the preparation of some approach to Jewish education for those persons who could not affiliate themselves with any specific division of Jewish religious life. Rosenman was a trustee of the Federation for the Support of Jewish Philanthropic Societies and a member of the executive of the American Jewish Committee. But his significance to American Jewish life went beyond his own participation in its organizations.

Rosenman's wife, DOROTHY REUBEN ROSENMAN, was a housing expert and chairman (1943) of the National Committee on the Housing Emergency.

LIBBY BENEDICT.

Lit.: American Hebrew, March 25, 1932, p. 483; July 28, 1933, p. 167; *Current Biography* (1942); *New York Times Magazine,* March 29, 1942; *PM,* Sept. 20, 1942; *Saturday Evening Post,* Dec. 5, 1942, p. 18 et seq.

ROSENSOHN, ETTA LASKER, communal worker, b. Galveston, Texas, 1885. She was the sister of Albert David Lasker, Florina Lasker and Loula Davis Lasker, and the wife of Samuel Julian Rosensohn (b. Russia, 1879; d. New York city, 1939), lawyer and communal worker. Mrs. Rosensohn studied at the University of Texas and later at the New York School for Social Work. She was a director of the National Association for Travelers and Transients, and a member of the national committee on transients and homeless. Like her husband, she was a participant in Zionist work. From 1927 to 1937 she served as treasurer of Hadassah, and resumed the post in 1941.

ROSENSTEIN, FILBERT L., lawyer and judge, b. Lafayette, La., 1891. He had his early schooling in Paterson, N. J., and received his J.D. degree from the New York University School of Law in 1915. That

same year he was admitted to the New Jersey bar. Appointed judge of the second district court of Paterson in 1931, Rosenstein served until 1942, when he reentered the private practice of law. Rosenstein was affiliated with various general and Jewish communal activities in Paterson. He was vice-president of the Paterson Anti-Tuberculosis League (1922-24) and secretary of the Passaic County Planning Association.

ROSENSTOCK, JOSEF, conductor, b. Cracow, Poland, 1895. He graduated from the Vienna Academy of Music in 1920, and in 1922 was appointed conductor of the Darmstadt Opera, rising to the post of general music director in 1925. From 1925 to 1927 he was general music director of the Wiesebaden Opera. For a brief period, during the 1929 to 1930 season, he was conductor of German operas at the Metropolitan Opera House.

For several years, after 1933, he conducted operatic performances for the Jewish Kulturbund in Berlin. In 1938 he settled in Tokyo, where he became conductor of the Imperial Symphony Orchestra and professor at the Conservatory. He composed several smaller works for orchestra, a piano concerto, and various pieces for piano and for chorus.

ROSENSTOCK-HÜSSY, EUGEN, historian of law and sociologist, b. Steglitz, near Berlin, 1888. In 1921 he was appointed director of the Akademie der Arbeit in Frankfort. From 1926 to 1933 he was associate professor of law at the University of Breslau.

Rosenstock wrote several works on the history of German law and constitution, including *Herzogsgewalt und Friedensschutz* (1910); *Ostfalens Rechtsliteratur unter Friedrich II* (1912); and *Königshaus und Stämme in Deutschland von 911-1250* (1914). His sociological and juridical writings include *Industrievolk* (1923); *Industrierecht* (1926); and *Soziologie* (1925). Together with Josef Wittig, he published *Das Alter der Kirche.*

After the rise of the Nazi regime Rosenstock-Hüssy went to the United States (1933), where he lectured at Harvard University (1933-36) and was appointed professor of social philosophy at Dartmouth in 1935. In the United States he published *Out of Revolution, Autobiography of Western Man* (1938). Rosenstock-Hüssy embraced Christianity.

ROSENTHAL, noted family of Hungarian Jewish scholars and philanthropists in the 18th and 19th centuries.

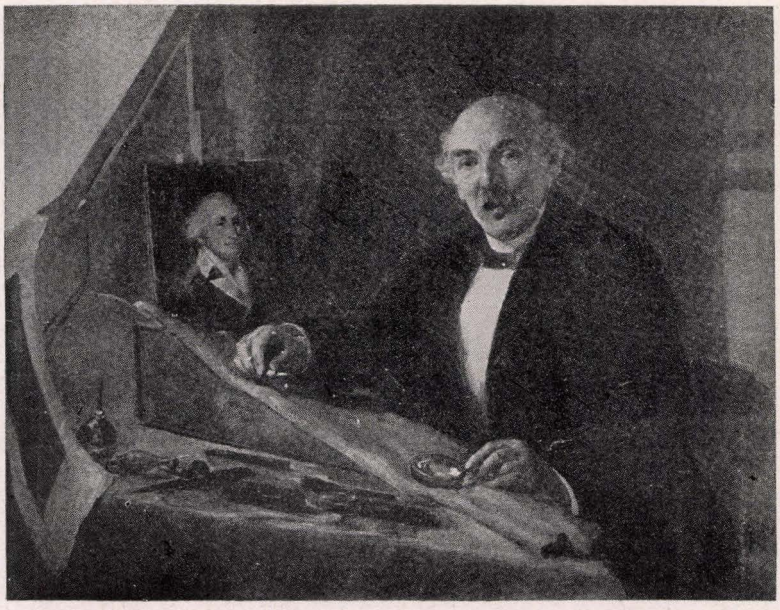
NAFTALI ROSENTHAL (b. Györ, Hungary, 1727; d. Mór, Hungary, 1796), was a scholar and philanthropist. He was a student in the Yeshiva of David Fränkel of Berlin, and became a friend of Moses Mendelssohn. After living for some time at Prague, he settled at Mór, in Fejér county, Hungary, where he conducted a Yeshiva. Among his pupils was Mordecai Benet, subsequently chief rabbi of Moravia. Rosenthal's charitable works and his efforts on behalf of his fellow Jews made him noted throughout Hungary. He had influence with the government, and was a spokesman for the Jewish community of Hungary.

ELIAS ROSENTHAL (b. Mór, Hungary, 1758; d. Pest, Hungary, 1833), book collector and philanthropist, was a son of Naftali Rosenthal. After completing his studies at the Yeshiva of Pressburg, he engaged in business and settled at Komárom, devoting his leisure to studies on Jewish law and the progress of humanity.

His personality and charitable deeds won him the sympathy of many, and at a time when the Jews had no civil rights he was made a citizen of Komárom. For twenty years Rosenthal, influenced by the ideas of the French Revolution, submitted memoranda and petitions concerning the emancipation of the Jews to the government, with which his father had been in good standing. From 1804 on he lived at Pest. His library there, according to Leopold Zunz, was one of the most outstanding privately owned collections. At Pest, as at Komárom, Rosenthal was held in high public esteem for his untiring efforts on behalf of the underprivileged. His eulogy was published in the *Vereinigte Ofner-Pester Zeitung.*

Self-portrait of Albert Rosenthal (See article on next page)

SALOMON ROSENTHAL (b. Mór, Hungary, 1764; d. Pest, Hungary, 1845), scholar, was another son of Naftali Rosenthal. He studied under Mordecai Benet of Nikolsburg, at one time a pupil of his father, and under Meir Barby of Pressburg. Like his brother Elias, Salomon Rosenthal engaged in business at Mór and pursued Jewish studies in his leisure time.



He removed in 1819 to Pest, where he published *Beth Aven* (1839), assailing Creizenach, Luzzatto and Reggio. In addition to scholarly contributions to *Hameassef, Orient* and *Zion,* Rosenthal published Leon da Modena's Cabalistic work *Ari Nohem,* with a preface and notes of his own. He corresponded with Wolfgang Wessely and Isaac Euchel, and left behind the manuscript of his complete Hebrew translation of Mendelssohn's *Phädon.*

Lit.: Reich, Ignác, *Beth El,* vol. 2 (1878); Büchler, Sándor, *A zsidók története Budapesten* (1901); Grünwald (Greenwald), Yekuthiel Judah (Leopold), *Toledoth Mishpahath Rosenthal* (1920).

ROSENTHAL, family of American artists in the 19th and 20th cent.

MAX ROSENTHAL (b. Turek, near Kalisz, Russian Poland, 1833; d. Philadelphia, 1918) was a painter, lithographer, etcher and engraver in mezzotint. The youngest son of the chemist Wolf Rosenthal, he was sent to Paris at the age of thirteen and was indentured there to one of the best lithographers of the time, Martin Thurwanger. When his employer, under contract with a lithographic firm of Philadelphia, came to the United States (1849), Rosenthal, then in his seventeenth year, accompanied him as his first assistant. Rosenthal studied at the Pennsylvania Academy of Fine Arts, and produced numerous portraits and compositions in oil as well as portraits in miniature.

His great accomplishment, however, was the introduction of chromo-lithography into the United States. Rosenthal made the chromo-lithographic plates for what is considered the first book furnished with a set of chromo-illustrations in the country (*Wild Scenes*

Max Rosenthal. From a painting by his son, Albert Rosenthal

and Wild Hunters). In 1854 he produced the largest chromo-lithograph which had been made in the country up to that time (*Interior of the Old Masonic Temple in Philadelphia,* after his own drawing).

Another outstanding contribution to lithographic art in the United States was *The House of the Bishops of the Episcopal Church of America* (after a design by Christian Schuessele, 1860). In 1857 he was awarded a diploma, for his achievements in lithographic art, by the Massachusetts Institute for Arts and Science, and in the following year a diploma by the Historical Society of Pennsylvania for the first facsimile of water-colors reproduced in the United States.

During the Civil War he was attached to the Grand Army of the Potomac as official illustrator for the United States Military Commission, and he drew sketches of every camp up to the time of the battle of Gettysburg. About 1870 he made color plates of the medical and surgical history of the Civil War and for scientific works by Dr. Joseph Leidy and other scientists. He also started a lithographic series of American notables, the members of the Federal Convention, the chief and associate justices of the Supreme Court, the attorney-generals, the governors of Pennsylvania, and British officers of the Revolutionary War. Rosenthal presented a group of his drawings to the Historical Society of Pennsylvania, and an extensive collection is kept in the Smithsonian Institute, in Washington, D. C. In his later years he turned to engravings in mezzo-tint, taking as his guide early English mezzo-tint engravers. Among his technical achievements his invention of the sand-blast process of decorating glass deserves mention.

Two of his brothers were also artists; one of them founded the Philadelphia wet printing firm of Louis N. Rosenthal and Co.

ALBERT ROSENTHAL (b. Philadelphia, 1863; d. New York city, 1939), his son and collaborator, studied at the Pennsylvania Academy of Fine Arts, at the École des Beaux Arts, Paris, and in Munich. He copied for the reception room at the City Hall, Philadelphia, the portraits of the first ten mayors of that city; his portraits of all the chief justices of the Supreme Court of Pennsylvania also hang in the Philadelphia City Hall as well as in the capitol at Harrisburg. Rosenthal lithographed life-size portraits of Thomas Jefferson, Robert Fulton, Gilbert Stuart, Louis Pasteur, John Paul Jones and others. He was considered an expert on the American artists of the 18th and 19th centuries, and was untiring in his efforts to make the United States conscious of its own art and artistic achievements. Serving as an art expert for American museums and private collections, he won (1930) a verdict of $5,000 when a jury in the Supreme Court upheld his opinion that a Gilbert Stuart portrait of Washington was genuine. ALFRED WERNER.

Lit.: Rosenthal, Albert, *Max Rosenthal* (1921); *List of Portraits, Lithographs, Etchings and Mezzotints by Max and Albert Rosenthal; American Hebrew,* Aug. 16, 1918; *American Jewish Year Book* (1904-5) 174; *Dictionary of American Painters, Sculptors and Engravers,* vol. 2; *New York Times,* Dec. 21, 1939.

ROSENTHAL, BENJAMIN JEFFERSON, merchant and philanthropist, b. Chicago, 1867; d. 1936. He first entered the millinery business, then went into real estate and other branches of commerce. From 1894 to 1897 he was a member of the Chicago board of education, and later served on the Civil Service Commission. In 1931 Rosenthal established the Benjamin J. Rosenthal Foundation for the support of Chicago philanthropies.

The Foundation also awards a medal annually to the person most conspicuous in the furtherance of civic projects. Rosenthal was made a member of the French Legion of Honor in recognition of his establishment of a preventorium for tubercular children in Argonne, France.

ROSENTHAL, SIR CHARLES, Australian major general, b. Berrima, New South Wales, 1875. He became an architect and resided at Sydney, Australia. From 1926 to 1930 he was president of the Federal Council of the Australian Institute of Architecture.

In 1903 he joined the Australian military forces, and continued to serve in the army until he was promoted to the rank of lieutenant-colonel. During the first World War Rosenthal served in Gallipoli, Syria, and France. He became commander of the 3rd Australian field artillery brigade, and for a long time commanded the whole artillery of the Anzacs. In 1918, when General John Monash took command of the Australian forces, Rosenthal commanded the second Australian division under the supreme command of Monash.

Rosenthal excelled in the battle of Paschendaele and in the great offensive of August, 1918, especially in the battle at Villers Bretonneux and in the recapture of Saint-Quentin.

He was characterized as "always a man of force and an optimist," but also as a "thrusting personality," a cautious and responsible commander who, however, was a daring leader when circumstances demanded decision.

Promoted to general on the battlefield in 1918, Rosenthal commanded the Australian forces after the War from 1921 to 1926 and from 1932 to 1937. He was elected member of the New South Wales legislative assembly. In 1937 he was appointed administrator of Norfolk Island.

Lit.: Monash, Sir John, *War Letters* (1934); idem, *The Australian Victories in France* (1936); *The Official History of Australia in the War 1914-1918,* vols. 1 to 4.

ROSENTHAL, CONSTANTIN DANIEL, painter and revolutionary, b. Bucharest, Roumania, 1797; d. Pest (Budapest), Hungary, 1852. He was well-known in Roumania as one of the Jews who took an active part in the revolutionary movement of 1848 together with such other Jews as George Isopescu, also a painter, and Davicion Bally, whose biography was published at Bucharest (1939). The name of Rosenthal is closely associated with that of C. A. Rosetti, one of the best-known chiefs of the Roumanian revolutionary movement of 1848, whose life Rosenthal saved in the days of the Bucharest insurrection (June, 1848), while he himself was wounded.

In his memoirs Rosetti speaks of Rosenthal with deep affection. Rosenthal was sent by the Roumanian revolutionaries on a secret mission to Pest, Hungary, where he died in prison in 1852. Later Rosetti, as a member of the government, was one of the most stubborn enemies of the emancipation of the Jews. He who in 1848 had demanded political rights for the Jews issued in 1880, in his capacity as minister of interior, an order for their expulsion from the villages.

ROSENTHAL, DAVID AUGUST, physician, botanist and biographer, b. Neisse, Silesia, Germany, 1821; d. Breslau, Germany, 1875. He was graduated in 1845, and practised medicine in the Silesian towns of Kempen, Landsberg, Ohlau and Breslau. Converted to Catholicism, he became an ardent champion of his church although he advocated tolerance and remained on friendly terms with his Jewish relatives and acquaintances. He edited the poems of Angelus Silesius, a convert from Protestantism, in 1862, and *Konvertitenbilder des 19. Jahrhunderts* (1868), a collection of biographies of converts from Protestantism, Judaism and Islam to Catholicism.

By publishing this work Rosenthal intended to enhance the glory of the Catholic church in general, and to justify all and sundry conversion. He was also a botanist, interested in plants of practical use. His *Synopsis plantarum diaphoricarum* (1862) describes plants useful for food, medicine and industry, and especially those able to serve as substitutes for rare or unavailable materials.

ROSENTHAL, EDUARD, jurist and statesman, b. Würzburg, Germany, 1853; d. Jena, Germany, 1926. In 1881 he became lecturer and in 1896 professor of law at the University of Jena. Interested in justice, history and the problems and practice of administration, he was equally esteemed as a juridical logician and historical scholar possessed of an unsurpassed knowledge of medieval documents.

Rosenthal's studies on the laws of the Bavarian towns in the Middle Ages (1879-83) and his history of the courts and the administration of Bavaria (1898-1906) shed illuminating light on the genesis of modern administration in Germany. Another great scientific problem with which he dealt was that of the introduction into Germany of professional judges educated by Roman law. From 1909 on he represented the University of Jena in the diet. In 1911 he published a study on modern German government compared with the governments of England and the United States.

Herman Rosenthal

In 1919 he became the creator of the constitution of Thuringia; Rosenthal succeeded in obtaining general assent to his ideas without any important alteration while at the same time Hugo Preuss, creator of the constitution of the German republic, was forced to concede alterations of many important items to the leaders of the German political parties. From 1919 to 1925 Rosenthal's authority in the diet of Thuringia was generally acknowledged, although the democratic party, whose leader he was, did not have many adherents. The rise of the Nazis and Communists embittered political discussion, and Rosenthal retired from political activity a year before he died.

ROSENTHAL, FRANZ, orientalist, b. Berlin, 1914. After receiving the Ph.D. degree from the University of Berlin (1935), he taught at the Lehranstalt (1937-38) and the Hebrew Union College (1940-). He published a Palmyrenean grammar, *Die Sprache der palmyrenischen Inschriften* (1936), wrote *Arabische Autobiographie* (1937), a study of Arabic autobiographical literature, and *Die aramaistische Forschung* (awarded the Lidzbarski Prize by the International Congress of Orientalists, 1938), a history of Aramaic studies in the past twenty years.

In addition to collaborating on the *Corpus Platonicum Medii Aevi,* Arabic section (1942), Rosenthal also contributed to the *Hebrew Union College Annual* and *Orientalia.*

ROSENTHAL, HERMAN, librarian, editor and author, b. Friedrichstadt, province of Courland, Russia, 1843; d. New York city, 1917.

He first chose printing as his profession, and established a business in Kremenchug in 1869. Except for the interval of the Russo-Turkish war (1877-78), when Rosenthal served in the Russian Red Cross and was awarded a medal for his assistance, he remained in the printing business in Russia until 1881. He had in the meantime, in addition to carrying on various literary activities, become the head of a society called Am Olam. In this capacity he came to the United States in 1881, leading a group of Russian Jews who planned to settle on the land.

Aided by the Alliance Israélite Universelle, a colony was set up in Louisiana, only to be swept away by a

Mississippi flood. Some of the original settlers founded another colony in South Dakota in 1882, but this, too, had to be abandoned after several years because of insuperable natural obstacles. Rosenthal's interest in agriculture continued, however, and he was a prominent figure in the management of the Jewish farming colony in Woodbine, N. J., in 1891.

In 1892 he went to the Far East on behalf of the Great Northern Railroad Company, on a tour of economic and social investigation. Subsequently he held several communal and civic posts, including that of chief of the discharging department of the immigration bureau at Ellis Island (1894-96). He became head of the Slavonic department of the New York Public Library in 1898, and retained this post until his death.

Rosenthal's literary activities began in Russia, with the publication of a volume of poems, *Gedichte* (1870). He was one of the founders of *Zarya* (Dawn), a daily newspaper which appeared in Kiev in 1878. He translated *Ecclesiastes* (1885) and *Song of Songs* (1893) into German verse, and translated from German into English. While in Russia he was a contributor to *Hamelitz* and other Hebrew periodicals, and in the United States he collaborated with Abraham Hayim Rosenberg in editing a Hebrew monthly, *Hamodia Lahadashim* (1901). He was editor of the Russian department of the *Jewish Encyclopedia.*

MAX ROSENTHAL (b. Kremenchug, Russia, 1865; d. New York city, 1937), physician and author, was the son of Herman Rosenthal. He was connected with various New York city hospitals. Specializing in gynecology, he wrote several books and articles on the subject. NATHAN RICARDO.

Lit.: Jewish Encyclopedia, vol. 10, pp. 478-79; Wiernik, Peter, *History of the Jews in America* (1912) 266-69, 340; Masserman, Paul, and Baker, Max, *The Jews Come to America* (1932) 245-47.

ROSENTHAL, ISIDOR, physiologist, b. Laboschin, Posen, Germany, 1836; d. Erlangen, Germany, 1915. He became instructor (1862), assistant professor (1867) and associate professor of physiology and hygiene (1872) at the University of Erlangen. His chief field of activity was general muscle and nerve physiology.

Rosenthal's published works include: *Elektrizitätslehre und Elektrotherapie* (1883); *Zur Kenntnis der Wärmeregulierung bei den warmblütigen Tieren* (1872); *Allgemeine Physiologie der Muskeln und Nerven* (1877); *Lehrbuch der allgemeinen Physiologie* (1901). He was editor of the *Biologisches Zentralblatt.* Rosenthal was one of the most prominent physiologists of Germany.

ROSENTHAL, JONAS, merchant and government official, b. Oberlauterbach, Alsace, 1843; date of death unknown. He came to the United States in 1860, and settled in Louisiana. During the Civil War he fought in the Confederate Army. Later Rosenthal was a member of the city council of Alexandria, La. for a total of about fourteen years. He was also made a member of the Parish Rapides School in 1879, and served into the 20th cent. He was appointed postmaster of Alexandria by President Grover M. Cleveland, and later served in the same capacity under President Woodrow Wilson.

ROSENTHAL, JOSEPH, subway contractor, b. Eperjes, Hungary, 1866; d. Brooklyn, N. Y., 1938. He came to the United States in 1882, and was the founder of the Rosenthal Engineering Contracting Company, Inc., serving as its president from 1914 on. His contracting projects included the New York State Arsenal Building, Brooklyn, the 101st to 111th Street link of the Independent Subway System (a $5,000,000 contract), the Smith Street link from Willoughby Street to Baltic Street (a $4,800,000 contract), and the Broadway to Fort Washington link of the Independent Subway System (a $1,250,000 contract) in New York city. He was a director of the Brooklyn Hebrew Orphan Asylum.

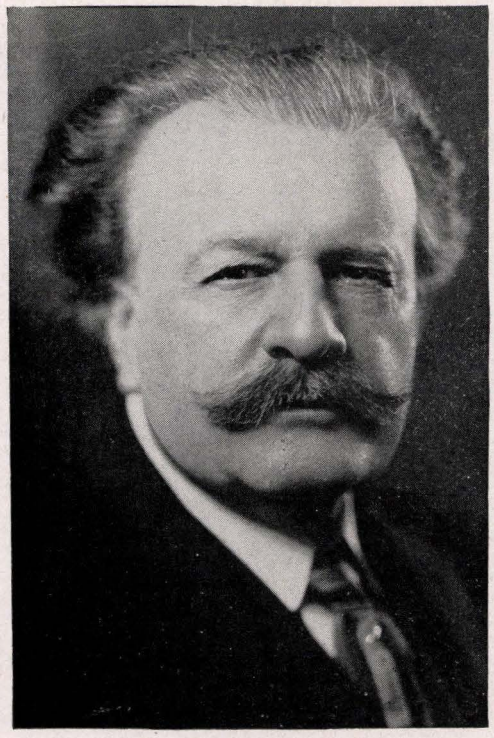
ROSENTHAL, JULIUS, lawyer and communal leader, b. Liedolsheim, Baden, Germany, 1828; d. Chicago, 1905. He came to the United States in 1854 and almost at once settled in Chicago. In 1859 Rosenthal was appointed public administrator of Cook County, and held this post until 1884. Admitted to the bar in 1860, he eventually became one of the leading lawyers in Chicago. He had studied jurisprudence in Germany, and his knowledge of the law of other countries supplemented his precise knowledge of American law; he specialized in real estate, wills and probate.

From 1867 to 1877 Rosenthal was librarian of the Chicago Law Institute. His efforts toward building up the library were temporarily thwarted by the Chicago fire of 1871, but Rosenthal managed to start anew. He was again librarian from 1888 to 1903. He was instrumental in having the standards for admission to the Illinois bar raised, and became secretary of the first state board of law examiners.

Jewish communal activities were part of his interest throughout his whole life. He was a director of the United Hebrew Relief Society and active in the Russian Relief Society. Various general and German philanthropies also had his support and guidance.

LESSING ROSENTHAL (b. Chicago, 1868) was the only son of Julius Rosenthal, and like his father, a lawyer. After receiving his law degree from Northwestern University in 1891 he was admitted to the bar, and joined his father's law firm in 1894, when the name of the firm became Julius and Lessing Rosenthal. After the elder Rosenthal's death the son became head of his own firm, with various partners.

Rosenthal was a participant in numerous civic and communal activities. He was president of the Civil Service Reform Association of Chicago from 1906 to 1908, and of the Municipal Voters League from 1910 to 1915; he was also chairman of one of the committees of the Chicago Charter Convention (1905-9), and active in improving the lake front. Rosenthal was made a trustee of the Brookings Institution in Washington in 1931 and of Johns Hopkins University (where he had obtained an A.B. degree in 1888) in 1938. He was awarded an honorary LL.D. degree by Northwestern University in 1931.



Lit.: Publications of the American Jewish Historical Society, No. 16 (1907) 198-200; Meites, Hyman L., *History of the Jews of Chicago* (1924) 102.

ROSENTHAL, LEON, philanthropist, b. Vilna, Lithuania, 1817; d. Locarno, Switzerland, 1887. After a period of association with the Günzburg firm in St. Petersburg, where he settled in 1850, Rosenthal entered banking on his own account, and became very wealthy. A follower of the Haskalah movement, he strove for the cultural improvement, on a modern basis, of the Russian Jewish masses.

He was one of the founders of the Society for the Promotion of Culture among the Jews of Russia, serving as its treasurer until his death. His *Toledoth Hebrath Marbe Haskalah Beyisrael Beeretz Russia* (2 vols., 1885-90) is a record of the work of this society. Rosenthal was leader of the St. Petersburg group of the Society of the Friends of the Hebrew Language.

Lit.: Kantor, J. L., in the introduction to vol. 2 of *Toledoth Hebrath Marbe Haskalah; Yevreiskaya Entziklopedia,* vol. 13, cols. 584-85.

ROSENTHAL, LOUIS, sculptor, b. Plungian, Lithuania, 1888. In boyhood his talent attracted the

Moriz Rosenthal

attention of Professor Turak of Vienna, through whose interest he came under the instruction of Professor Lilien of Berlin.

At the age of nineteen he arrived in the United States. The well-known American sculptor, Ephraim Keyser, impressed by two plaster groups of the young man, was instrumental in obtaining for him a four-year scholarship at the Rinehart School of Sculpture in Baltimore, of which Keyser was the director. Rosenthal received the first prize on graduation, and he was the recipient also of a three-year scholarship at the Maryland Institute. In 1918, after obtaining a commission from a jeweler to design a small work in gold, Rosenthal first entered the field where he was to win very special distinction. Modelling in wax, he achieved single figures and little groups which, through a special process of his own, were then cast in bronze or other metals, without loss of their original delicacy. These figures and compositions vary from a fraction of an inch to three inches in height, and yet have as much feeling of action and vitality as large works of sculpture possess.

In this regard Rosenthal may be compared with Jacques Callot, the first great etcher, and with Francesco Guardi, finest of 18th cent. Venetian painters, artists consummate in their ability to instil life into the most diminutive of figures. Whether in such imaginative allegorical or symbolic pieces as *Spirit of Test, The Blind Bacchante, Invocation, Industry, Science* and *Hercules and Centaur* or in such portrait sculptures as the Balfour, Beethoven and Steinmetz group, Rosenthal, showing in the charm and general quality of his work the influence of the great Italian artist of the Renaissance, displayed the originality of individual temperament. His work places this exquisite artist in the first rank of living sculptors who have succeeded in giving large-scale animation, with grace and sensitiveness, to miniature pieces.

Rosenthal was a member of the National Sculpture Society, New York, and of the Royal Society of Miniature Painters and Sculptors, London. For more detailed comment as to his art, see *Immigrant Gifts to American Life*, published by the Russell Sage Foundation, and the October 5, 1928, issue of the *American Hebrew;* for an excellent study of Rosenthal's technique, see the paper by Ralph Flint in the August, 1925, issue of the *International Studio.*

GEORGE S. HELLMAN.

ROSENTHAL, LUDWIG and JACQUES, learned booksellers. LUDWIG ROSENTHAL (b. Fellheim, Bavaria, 1840; d. Munich, 1928), founded (1859) his firm, which was removed to Munich in 1867. His catalogues were considered scientific works for the specialists. He discovered many valuable documents, among others the *Missale Speciale,* Gutenberg's earliest print. In 1912 he published a catalogue containing a collection of Hebrew incunabula. He reproduced a papal bull against the ritual murder accusation. In 1922 he retired from business. His son, Norbert Rosenthal (b. Munich, 1874), was his successor.

JACQUES ROSENTHAL (b. 1854; d. Munich, 1937) founded his firm at Munich in 1872. He discovered many single copies and collected manuscripts. He published *Beiträge zur Forschung,* assisted by his son, Erwin Rosenthal (b. 1889), who published studies on early book illustration and a monograph on Giotto.

ROSENTHAL, LUDWIG A., Talmudist, b. Putzig, West Prussia, Germany, 1855; d. Berlin, 1928. He was rabbi in Köthen-Anhalt, in Rogaren, Posen, in Preussisch-Stargard and in Berlin, where he was also lecturer at the Hochschule für die Wissenschaft des Judentums. His chief contribution was his research into the origin of the Mishnah, *Über den Zusammenhang, die Quellen und die Entstehung der Mischna* (3 vols., Berlin, 1918). Rosenthal's other scientific and popular works were published under the title of *Gesammelte Schriften L. A. Rosenthals* (1926).

ROSENTHAL, MORITZ, neurologist, b. Nagyvárad (Grosswardein), Hungary, 1833; d. Vienna, 1889. He studied medicine at the University of Vienna, and in 1863 became lecturer there; from 1875 on he was assistant professor. He published over seventy treatises in medical journals. His *Klinik der Nervenkrankheiten* (1875), a standard work of the time, was translated into English, French, Italian and Russian.

Other books published by Rosenthal dealt with brain tumors, cervical paraplegy, the cortical centers of the brain, post-luetic myelitis and tabes, the affections of the stomach, stammering and apparent death. He was one of the founders of electrotherapy; his book on electrotherapy in the diseases of the nerves and muscles appeared in 1865.

ROSENTHAL, MORIZ, pianist, b. Lemberg, Galicia, 1862. He studied with Joseffy in Vienna, following which he gave a successful concert which was a prelude to a European tour. In 1877 Rosenthal played for Liszt, who was so impressed that he accepted him as a pupil. After a three-year period of study with Liszt, Rosenthal went into temporary retirement from all concert activity to devote himself primarily to the study of philosophy at the University of Vienna. In 1886 he emerged from this retirement to give a concert in Vienna which was a sensation; from this time on his world fame began. In 1888 he made his triumphant American debut. For the next fifty years his concerts took him to every part of the civilized world, winning acclaim everywhere. Besides an extraordinary technique and touch, he possessed scholarship which made him an inimitable interpreter of Chopin, Liszt and Brahms. He played in the grand manner—he was, indeed, the last of the great pianistic Titans of yesteryear—his interpretations always built along spacious designs.

Toby Edward Rosenthal

In 1912 Rosenthal was named *Kammervirtuoso,* the highest honor bestowed upon a musician by the Austrian government. In 1938 the golden jubilee of his American career was celebrated in Carnegie Hall, New York city, at which time he played on a golden piano built expressly for him for that occasion. Despite his age he played magnificently, and gave proof that his incomparable art was deathless.

Lit.: Ewen, David, *Living Musicians.*

ROSENTHAL, PHILIPP, industrialist, founder of the famous Rosenthal porcelain manufacturing company in Selb, b. Werb, Westphalia, 1855; d. Berlin, 1937. In his youth Rosenthal was engaged in the porcelain trade. He studied American economic life and returned to Germany in 1879. There he began (1891) to manufacture porcelain. His brother, Max, became his partner in the new venture at the same time. The brothers erected their first factory in Asch, Bohemia, the second—which was destined to become world-famous—in Selb. In 1897 the establishment was given the name of Philipp Rosenthal and Co. At the time of Rosenthal's death more than 2,000 workers were employed in manufacturing various porcelain objects —from luxury designs of art to technical articles for the chemical and electrical industries.

Rosenthal renounced Judaism. He was a member of the board of the Reichsverband der deutschen Industrie, an honorary doctor of the University of Berlin, and had been given the freedom of the city of Innsbruck.

ROSENTHAL, ROY GILBERT, publisher and public official, b. Seattle, Wash., 1896. He graduated from the University of Washington in 1919. From 1922 to 1927 he was editor and publisher of the Montesano, Wash., *Vidette,* and in 1925 to 1926 he was mayor of Montesano. Rosenthal became vice-president of the University Publishing Company in 1927, and from 1933 to 1937 was also publicity director of the University of Washington.

ROSENTHAL, TOBY EDWARD, painter, b. New Haven, Conn., 1848; d. Munich, Germany, 1917. He was the son of a poor immigrant from Western Prussia and, at the age of ten, had to earn a livelihood as a newsboy.

His father, a tailor in San Francisco, brought heavy sacrifices to give him an education, and at fourteen he attended the drawing school of a French-born sculptor, Henri Bacon. Subsequently he studied art under the Spaniard Fortunato Arviola, and in 1865 he left San Francisco for Munich, where he studied under Karl von Piloty at the Royal Academy until 1876. He returned to San Francisco, but after a few years he again left for Europe, and spent most of his later years in Munich or on study trips through the Austrian Alps and Italy. In his last years sickness prevented him from working.

Rosenthal was one of the most famous genre painters of his day. Some of his best works were purchased by German galleries, such as *Morning Prayers in Bach's Family* (Leipzig, 1871) and *Cloister Library* (Munich, 1873) while *Maternal Love* (1900) was acquired by Prince Regent Luitpold of Bavaria. Noteworthy among his paintings placed in American museums are *Elaine* (after Tennyson; Art Institute, Chicago, 1874), *The Trial of Constance de Beverley* (San Francisco, 1880), and *His Madonna* (California Palace of the Legion of Honor). His well-known canvas, *A Seminary Alarm* (1877), was presented by Alfred J. Rich to the De Young Memorial Museum of Chicago in 1928. Rosenthal's memoirs, leading up to 1880, were published in Germany under the title of *Erinnerungen eines Malers* (1927). He received several medals (Munich, 1870 and 1883; Philadelphia, 1876).

JOHN HERBERT ROSENTHAL (b. Munich, 1881), the son of Toby Edward Rosenthal, was a noted architect. Among his works was the planning of the Mozarteum at Salzburg, Austria.

Lit.: *American Hebrew,* April 6, 1928; Hartmann, S., *A History of American Arts* (1901); *American Art Annual* (1918); Fielding, M., *Dictionary of American Painters.*

ROSENTHALIANA, Jewish library in Amsterdam, Holland. Its founder was Leiser Rosenthal (1794-1868), rabbi in Hannover, Germany. His son, Georg Rosenthal, a banker in Amsterdam, who was raised to the nobility, donated his father's library to the city of Amsterdam. Meyer (Marcus) Roest (1821-90), who had edited the catalogue of the Hebraica and Judaica in Rosenthal's library (2 vols., 1875), was appointed director of the Rosenthaliana in 1880. He was succeeded by Jeremias M. Hillesum, an important historian of literature and bibliographer who from 1888 to 1930 was instrumental in the reorganization and expansion of the Rosenthaliana, regarded as one of the largest Jewish libraries in the world. Despite the Nazi occupation of Holland, it was still in existence in 1941. A systematic catalogue of the library was compiled under the title of *Systematische Catalogus van de Judaica de Bibliotheca Rosenthaliana* (5 vols., 1936-40).

Lit.: Hillesum, Jeremias M., *Een Keur uit de Handschriften in boeken der Bibliotheca Rosenthaliana* (1913); Lamm, *Die Rosenthaliana in Amsterdam. Zum 40 jährigen Amtsjubiläum Jeremias Hillesums* (1930).

ROSENWALD, JULIUS, merchant and philanthropist, b. Springfield, Ill., 1862; d. Chicago, 1932. His father, Samuel Rosenwald, came to the United States from Germany in 1854, and his mother, Augusta Hammerslough, in 1853. From both sides of the family Rosenwald acquired an interest in merchandising which, in the late 19th cent. period of expansion, could produce amazing profits. With his brother Morris, Rosenwald first went into the clothing business in 1884 in New York city, where from 1879 on he had been serving an apprenticeship in a store owned by one of his mother's brothers. But, in 1885, the realization that the midwestern sections of the country needed more men's lightweight garments than the East could supply sent Rosenwald to Chicago, where the firm of Rosenwald and Weil was established.

In 1893 Richard Warren Sears and Alvah Curtis

Roebuck founded the watch firm of Sears, Roebuck and Company in Minneapolis, doing business through the mails. Other items were gradually added to the stock. In the following year the firm moved to Chicago. An order for 10,000 suits which Sears, Roebuck and Company wanted to place led to a meeting with Aaron Nusbaum, Rosenwald's brother-in-law (the brother of Rosenwald's wife, Augusta Nusbaum). The result was that Nusbaum and Rosenwald each invested $37,500 in a quarter interest in the Sears, Roebuck mail order business (1895). Rosenwald became vice-president.

The development of the mail order business in the United States from that time on, as exemplified by the Sears, Roebuck firm, is a saga of the modernization of rural life. Hardly any item for personal or general use was omitted from the huge catalogues which the firm sent out—catalogues which were known, both jocularly and seriously, as the basic reading matter of America's farming population. Some forty million copies of Sears, Roebuck catalogues and pamphlets came to be distributed annually. Local merchants attempted to combat the influence of the mail order house, but its sales grew enormously. By 1900 the company was doing eleven million dollars worth of business annually; in 1906, when it became a public stock-holding corporation, its annual net sales totalled more than fifty million; by 1914 they were more than one hundred million, and in 1937 the total had risen to $537,242,400. A share of stock which sold for $50 in 1906 brought $2,820.58 in 1928. From about 450 employees when Rosenwald entered the firm in 1895, the personnel roster grew to 9,290 in 1906, and in 1938 approximately 50,000 were employed in the various plants in several cities. The cost of the new plant into which the Chicago headquarters moved in 1906 was about $5,600,000. Rosenwald became president of the firm in 1909, on Sears' retirement, and remained president until 1925, when he became chairman of the board.

Rosenwald was best known throughout the United States for his benefactions to the negro population, although, like many public reputations, this was inaccurate because it by no means indicated the scope of his humanitarianism. His contributions to the welfare of the colored sections of American citizenry were nevertheless so great that in many negro homes a photograph of Abraham Lincoln and one of Julius Rosenwald were the only adornments.

Rosenwald became an advocate of Booker T. Washington's aspirations to provide manual, agricultural and general cultural training for the negro. His first notable offer was made in 1910, when he promised to give $25,000 toward the construction of a Y. M. C. A. building for colored people in every city where $75,000 was raised among the colored and white populations. By 1920 thirteen cities had taken advantage of the offer, and three additional buildings had been built for women; subsequently twenty-five cities had Y. M. C. A.'s for colored people as the result of Rosenwald's subventions.

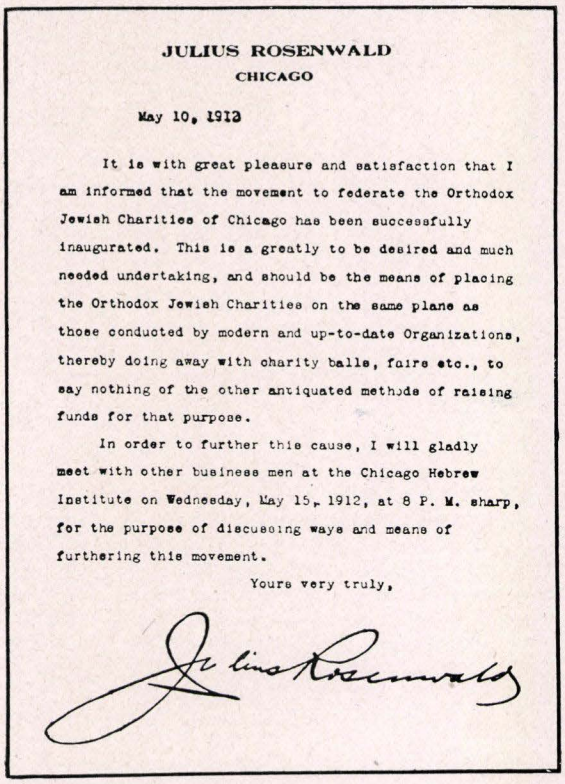
In 1912 Rosenwald was made a trustee of Tuskegee Institute, and served until his death. Through the extension department of Tuskegee Institute, which undertook the provision of elementary schooling for the rural colored populations of the South, Rosenwald gave substantially to the construction of public schools. Of a total of $28,408,520 expended on educational services for the colored populations of fifteen states, Rosenwald had contributed, before his death, $4,366,519, or about 15 per cent.

Julius Rosenwald

In 1917 he established the Julius Rosenwald Fund, which was to supervise most of his contributions to negro welfare; it was through a branch of the Fund, set up in Nashville, Tenn., in 1920, that much of the educational work was carried on. At the time of its reorganization (1929) the capital of the Fund totalled about $30,000,000; Rosenwald stipulated that both capital and interest were to be entirely expended within twenty-five years after his death, but it was estimated in 1942 that the rate of disbursement would exhaust the resources of the Fund about ten years earlier. The injunction to spend the capital as well as the interest on the endowment was in keeping with Rosenwald's belief that it was unwise to establish funds in perpetuity, or even for long periods. In two articles, published in the *Atlantic Monthly* (May, 1929, and December, 1930), he expatiated on his ideas, pointing out that political and economic changes, both in the United States and elsewhere, might make the application of the original terms of a bequest impossible after a long interval. Apart from the educational and welfare work undertaken by the Fund, Rosenwald set aside $2,700,000 for use in the building of model housing for the colored population of Chicago.

Rosenwald's contributions to Jewish causes extended from Chicago to the stretches of the Ukraine, but did not, except for isolated instances, include Palestine. During his lifetime he gave a total of $1,888,645 to the Associated Jewish Charities of Chicago, of which he was president in 1907 and honorary president later. During the first World War he was among the first to make a substantial contribution ($250,000) to Jewish relief. Later (1917) he offered to give 10 per cent of every million dollars raised throughout the country for Jewish war relief. The national campaign fell short of its $10,000,000 goal, but Rosenwald paid 10

per cent of the amount raised: his contribution amounted to $778,925.78. In addition, he had made a special pledge of $150,000, and he gave more than $212,000 to the fund raised in Chicago.



He had long been a convert to the idea of fostering agricultural activity among the Jews, and was a director of the Jewish Agricultural Aid Society. In 1910 he became president of the Jewish Agricultural Experiment Station in Athlit, Palestine, where Aaron Aaronsohn was experimenting with wild wheat. Among Rosenwald's other contributions to Palestinian enterprises were his donation of $75,000 toward the building of a Hebrew Teachers' College in Jerusalem, and considerable aid to Shemarya Levin in founding a publishing house in Tel-Aviv. He also contributed to the establishment of the Jewish Institute of Technology in Haifa.

Despite his association with men like Aaron Aaronsohn and Shemarya Levin, and despite his friendship for Julian W. Mack and Mrs. Rosenwald's friendship for Henrietta Szold, Rosenwald would not become converted to the idea that the large-scale settlement of Jews in Palestine was feasible and desirable. His interest in agriculture led him finally to become the largest individual contributor to the large-scale colonization of Jews in the Ukraine and in the Crimea under an agreement between the Soviet government and the Agro-Joint. Although Rosenwald had pledged $6,000,000 to the project, only about $3,000,000 of it was actually applied before a change of plan curtailed the scope of the experiment.

The benefactions for general education and welfare included large sums, totalling about $5,000,000, to the University of Chicago, of which he was made a trustee in 1912. He had refused, and continued to refuse, all other affiliations with or honors from educational institutions, no matter what his contributions toward them were, pointing out that he had not even finished high school, and that an honorary university degree would therefore be inappropriate. The trusteeship of the University of Chicago he accepted finally because of its association with Chicago. The Rosenwald building, in the department of geography, was endowed by him and named for him. In 1923 Rosenwald refused an honorary degree of Doctor of Hebrew Law from the Hebrew Union College in Cincinnati, to which he had given $50,000 for a new library in 1909 and to which he later (1928) gave $500,000. Another large contribution to Chicago was $3,000,000 for a museum of science and industry. On his fiftieth birthday Rosenwald made gifts totalling $687,500. Later he gave half a million dollars for the aid of German war widows, orphans and prisoners. Shortly before his death the Rosenwald Family Association was incorporated in Chicago, to carry on the interests manifested by Rosenwald. At the time of his death it was estimated that he had distributed about $70,000,000.

Although the wage scale at Sears, Roebuck and Company was never higher than elsewhere, the organization was among the first (1916) to establish a profit-sharing plan for employees. Twice, during the minor economic crash of 1921 and the major disaster of 1929, Rosenwald personally guaranteed the accounts held by his employees, pledging a large part of his personal fortune to the purpose. His attitude toward labor was paternalistic, and therefore was regarded as conservative.

Yet in 1929 he lent $50,000 to the International Ladies' Garment Workers' Union to combat sweatshops. And while rejecting the political viewpoints held by women like Jane Addams and Grace Abbott, he nevertheless remained their supporter in their welfare projects. His participation in civic life was occasionally spectacular, because he was outspoken and inept, but he was invariably allied with the progressive forces in government as against those elements represented by Big Bill Thompson and other Chicago political figures.

JULIUS ROSENWALD
CHICAGO

May 10, 1912

It is with great pleasure and satisfaction that I am informed that the movement to federate the Orthodox Jewish Charities of Chicago has been successfully inaugurated. This is a greatly to be desired and much needed undertaking, and should be the means of placing the Orthodox Jewish Charities on the same plane as those conducted by modern and up-to-date Organizations, thereby doing away with charity balls, faire etc., to say nothing of the other antiquated methods of raising funds for that purpose.

In order to further this cause, I will gladly meet with other business men at the Chicago Hebrew Institute on Wednesday, May 15, 1912, at 8 P. M. sharp, for the purpose of discussing ways and means of furthering this movement.

Yours very truly,

Julius Rosenwald

A letter by Julius Rosenwald indicative of his interest in all phases of Jewish life

In 1916 President Woodrow Wilson made Rosenwald a member of the advisory commission of the Council of National Defense, and later he became chairman of the committee on supplies, a post which he held until the absorption of the department by the Quartermaster Corps of the United States Army. Subsequently he went to France on a semi-official mission for the Secretary of War. Actually his work consisted of talking to the American soldiers in the Expeditionary Force, and giving them a sense of simple, downright Americanism. For this undertaking he was well-suited; there had been few wealthy men who were so little disposed to claim that their wealth was the perquisite of their own astuteness or cleverness. On the contrary, Rosenwald on several occasions declared that his wealth was the result of luck, and that he was ashamed of having so much money. He attributed the success of Sears, Roebuck and Company to the development of the American farming communities. This was probably true, but it was equally true that the rectitude and the sympathy with which the firm, under Rosenwald's guidance, met the needs of American rural communities were the supports on which the achievements of the company, Rosenwald's personal fortune, and its ultimate application to public welfare were set. NATHAN RICARDO.

Lessing J. Rosenwald

ROSENWALD, LESSING JULIUS, merchant and philanthropist, b. Chicago, 1891. The eldest son of Julius Rosenwald, he studied at Cornell University, and (1911) entered the firm of Sears, Roebuck and Company. According to his father's directions, he had to work his way up from the bottom rung of the ladder, and no special favors were bestowed upon the heir-apparent. During the first World War he served as a seaman second class at the Great Lakes Naval Training Station. He became associated with the Philadelphia mail-order house of Sears, Roebuck and Company in the year of its establishment (1920), and soon took complete charge of it. At his father's death in 1932 Lessing J. Rosenwald succeeded him in the capacity of chairman of the board of directors, a position which he held until his retirement in 1939. In 1934 he was appointed representative of industry on the Regional Labor Board of Philadelphia. In 1942 he served his country's war effort as director of the conservation division of the War Production Board, but resigned in January, 1943, in protest against the proposed regrouping of his bureau. Chairman Donald M. Nelson of the Board praised Rosenwald for his effective work in the scrap collection campaign.

Lessing J. Rosenwald's name became connected with all philanthropic and cultural endeavors in Philadelphia. He was one of the leaders of the Community Fund, and president of the Federation of Jewish Charities. He was a director on the Board of Jefferson Medical College, and secretary of Dropsie College. As Chairman of the Board of the Julius Rosenwald Fund he entered upon the heritage of his father's widespread philanthropic interests. In 1937 he established the Lessing J. Rosenwald Foundation, which contributed to causes charitable, civic and educational. He was credited with having taken the initiative in the action which resulted in Julius Rosenwald's taking over his employees' stock market accounts in the economic crash of 1929.

ROSENWALD, WILLIAM, philanthropic leader, b. Chicago, 1903. He was the son of Julius Rosenwald and the brother of Lessing Rosenwald. After receiving his B.S. degree from the Massachusetts Institute of Technology in 1924, Rosenwald subsequently studied at Harvard and at the London School of Economics.

Rosenwald was especially interested in refugee work and Jewish philanthropies in the United States. As president of the National Refugee Service, Inc., he gave much of his time to the furtherance of resettlement within the United States, as well as to other aspects of refugee care in the country. He was also vice-chairman of the American Jewish Joint Distribution Committee and a director of the Refugee Economic Corporation. In 1942 he served as a chairman for the national campaign and as associate chairman of the New York city campaign of the United Jewish Appeal. Among Rosenwald's posts in local Jewish welfare and philanthropic enterprises were the vice-presidency of the Council of Jewish Federations and Welfare Funds, and membership on the executive committee of the Federation for the Support of Jewish Philanthropic Societies of New York City and of the American Jewish Committee.

He maintained the family association with Negro welfare in serving as a trustee of Tuskegee Institute, and he was a trustee of the Chicago Museum of Science and Industry, which his father had established. Rosenwald was also a member of the board of directors of the Philharmonic Symphony Society of New York.

ROSENZWEIG, ADOLF, rabbi and author, b. Turdossin, Hungary, 1850; d. Kolberg, Germany, 1918. He studied at the Gymnasium of Pest, at the Yeshiva of Pressburg, and at the university and rabbinical seminary of Berlin. He received his Ph.D. degree from the University of Leipzig. After serving as rabbi in Pasewalk, Birnbaum, Posen and Teplitz, he served in Berlin from 1887 until his death. His works deal mostly with historical and archeological subjects.

Rosenzweig wrote: *Das Jahrhundert nach dem babylonischen Exile mit besonderer Rücksicht auf die religiöse Entwicklung des Judentums* (1885); *Der politische und religiöse Charakter des Flavius Josephus* (1889); *Das Auge in Bibel und Talmud* (1905); *Die Al-Tikri Deutungen* (1911); *Geselligkeit und Geselligkeitsfreunde in Bibel und Talmud* (1895); *Kleidung und Schmuck im biblischen und talmudischen Schrifttum* (1905).

ROSENZWEIG, FRANZ, philosopher, b. Cassel, Germany, 1886; d. Frankfort, Germany, 1929. He was one of the most original Jewish thinkers of the 20th cent. As a child of a well-to-do and assimilated family, and a student of Hegelianism, he was almost lost to Judaism, and at one time was close to conversion. Being, however, a man of remarkable intellectual honesty and deep emotions, he decided to ferret out the basis of Jewish belief before forsaking it. He soon became immersed in the acquisition of Jewish knowledge, and decided not only to remain Jewish, but to become a Jew in the complete sense of the word. He went to Berlin to study with Hermann Cohen, and a lasting friendship developed between them.

During the first World War Rosenzweig was at the Balkan front, and in the trenches conceived of and executed his principal philosophical work, *Stern der Erlösung.* He wrote it on government post cards sent home to his family, and considered it his definitive pronouncement which needed practical rather than theoretical amplification. During the War, too, he began to advocate a reform of Jewish adult education. Through his efforts the Akademie für die Wissenschaft des Judentums came into being, and in Frankfort, where he had settled after the War, he opened, in association with Rabbi Nehemiah Anton Nobel, the Freies Jüdisches Lehrhaus. This institution brought thousands of assimilated Jews, like himself, into intimate contact with the spirit of Jewish tradition.

Rosenzweig was stricken, in 1922, with amyotrophic lateral sclerosis, a slowly extending paralysis, but managed, nevertheless, to continue his researches and, through the devotion of his wife, to keep in contact with an ever widening circle of scholars and thinkers. During the years of his illness he collaborated with Martin Buber on a retranslation of the Bible. They aimed at a more direct rendition of the original Hebrew words and roots, and thus departed radically from other translations.

There is little doubt that, but for the destruction of German Jewry, Rosenzweig, through his intense devotion, his hold on many of the youths, the magic attraction of his personality and the legend of his fight for life, would have become a lasting source of Jewish revitalization. As it was, his influence was cut short, his disciples scattered, and the setting of his work and effort was destroyed.

Rosenzweig's philosophical writings, as yet untranslated and little known abroad, show traces of Schelling's thought. From the Jewish point of view, they form an original revaluation of tradition, of revelation, of the relationship of God to man, with an emphasis on the role of the word as reality, or, as he calls it, "the actual."

Particularly noteworthy are his supplementary notes to his *Stern der Erlösung,* contained in the essay *Das neue Denken;* of his introduction to Hermann Cohen's *Jüdische Schriften;* and of his two-volume treatise *Hegel und der Staat.* His letters, published posthumously, throw a fascinating light on the struggles and triumphs of this unusual and intensely Jewish personality.

A complete bibliography of his writings published up to 1930 is found in *Franz Rosenzweig, Eine Gedenkschrift* (published in 1930 by the Frankfort Jewish Community and edited by Eugen Mayer) 58-62.

Posthumous publications: *Stern der Erlösung,* 2nd ed. (1930); *Briefe,* edit. Ernst Simon and Edith Rosenzweig (1935); Buber and Rosenzweig, *Die Schrift und ihre Verdeutschung* (1936); others of his writings were republished by the Schocken Verlag. W. GUNTHER PLAUT.

Lit.: Agus, Jacob, *Modern Philosophies of Judaism* (1941) 131-209; Badt-Strauss, Bertha, and others, *Franz Rosenzweig, Ein Gedenkbuch* (1930); Freund, Else, *Die Existenzphilosophie Franz Rosenzweigs* (1933); Maybaum, Ignaz, *Parteibefreites Judentum* (1935); Bergmann, Hugo, "Franz Rosenzweig Vesifro Kochab Hageulah," *Sefer Bialik* (1934), part 3, p. 39 et seq.; "Fragmente aus dem Nachlass," *Almanach des Schockenverlags 5699* (1938) 54-61; Bernstein, Simon, in *Sefer Hashanah Liyehude Amerikah 5699* (1939) 236-53.

ROSENZWEIG, GERSON, editor and writer, b. Karotschin, province of Grodno, Russia, 1861; d. New York city, 1914. For a time he conducted a Hebrew school in Suwalki, and in 1888 he came to New York city. Rosenzweig was made editor of the Hebrew weekly *Haibri,* when it began publication in 1891. Seven years later, after *Haibri* ceased to appear, he was for four years editor of a Hebrew monthly, *Kadimah.* Subsequently (1911) he founded a satirical weekly, *Hadeborah.* Rosenzweig was the author of *Massecheth Amerikah* (1891), a parody written in the Talmudic style, one of the classic parodies of Hebrew literature. Some of these were translated into English.

Among his other books were *Shirim Umeshalim* (1893) and *Hamishah Veelef* (1903), a collection of 1,005 epigrams. *Mizimrath Haaretz* was a volume containing the translations into Hebrew of American national songs. In addition to writing in Hebrew, Rosenzweig employed Yiddish, and was one of the editors of the *Yiddishes Tageblatt, Yiddishe Gazetten* and *Yiddishe Velt.*

ROSETTA STONE, *see* EXCAVATIONS.

ROSEWATER, a family active in the development of Nebraska. The first member of the family to arrive in the state was EDWARD ROSEWATER (b. Bukoven, Bohemia, 1841; d. Omaha, Neb., 1906), founder of the Omaha *Bee.* He was brought to the United States in 1854, and subsequently studied telegraphy. When the Civil War broke out Rosewater had been working for two years as a telegraph operator. He enlisted in the telegraph corps, and served as telegrapher at the second Battle of Bull Run (1862). Then he was transferred to the War Department Office in Washington, and while on duty there he was the operator who clicked out to the country the words of President Abraham Lincoln's Emancipation Proclamation (1863). Later that year he was sent to Omaha, where he became manager of the Western Union, Atlantic and Pacific and Great Western lines. He combined his telegraphy with work as correspondent for newspapers in the East and for news agencies.

In 1870 Rosewater was elected to the Nebraska legislature, as a Republican, as the result of his sponsorship of a bill for the establishment of public schools in Omaha. He served in the legislature until 1872. His activity on behalf of educational measures met with objections on the part of the existing newspapers, and this finally prompted him, in 1871, to establish the Omaha *Bee,* which became one of the most important newspapers in the Middle West. His career as editor, and his unflinching support of progressive measures (except woman suffrage), during the period of pioneer territorial development, involved Rosewater in controversies and even subjected him to physical assault. Not only did he advocate civic progressiveness, but he also instituted modern methods of news-gathering and news-printing in his newspaper. Rosewater supported the immigration of German and Bohemian farmers into Nebraska—a move that aided the growth of the state as an agricultural center—and established a Bohemian as well as a German newspaper in 1871. Edward Rosewater School in Omaha was named for him.

ANDREW ROSEWATER (b. Bohemia, 1848; d. Omaha, Neb., 1909) was a younger brother of Edward Rosewater, and city engineer of Omaha. He was brought to the United States in 1854, with the rest of his family, and in 1864 joined his brother Edward in Omaha. After traveling across the Rocky Mountains with the Union Pacific surveying party, Rosewater returned to Omaha in 1868, and became assistant city engineer. In 1870 he was made city engineer, and in this capacity he planned and supervised the Omaha water works system, an improvement for which his brother had agitated. President Benjamin Harrison appointed Rosewater (1891) to membership on a committee of three engineers who constituted an electrical commission for the District of Columbia. Here he was one of the first to urge municipal ownership of public utilities. Rosewater was on the Omaha school board.

CHARLES ROSEWATER (b. Cleveland; d. Omaha, 1922), the youngest brother of Edward Rosewater, was a physician. He studied in Cleveland, then in Europe, receiving his medical degree from the University of Würzburg, Bavaria. After practising in Cleveland and New York, he settled in Omaha in 1886. Rosewater was professor emeritus of obstretics at Creighton Medical College, and served as secretary of the United States Board of Examining Surgeons for pensions.

VICTOR ROSEWATER (b. Omaha, 1871; d. Philadelphia, 1940) was the elder son of Edward Rosewater and, like him, editor of the Omaha *Bee.* He graduated from Columbia University in 1891, and in 1893 joined the

staff of the *Bee*. He became editor of the *Bee* in 1917, and retained this post until the paper was sold in 1922. Rosewater was active politically in the Republican Party, and in 1912 was chairman of the Republican National Convention in Chicago. During the first World War he served on the Advisory Labor Committee of the National Council of Defense. He was chairman of the Nebraska Constitutional Convention Survey Committee in 1919. Rosewater was author of *Special Assessments* (2nd ed., 1898); *History of the Liberty Bell* (1926); and *History of Cooperative News Gathering in the United States* (1930). He was a member of the Nebraska Board of Regents. In 1924 he came to Philadelphia as publicity director of the Sesquicentennial Exposition, and lived in Philadelphia until his death.

CHARLES COLMAN ROSEWATER (b. Omaha, 1874) was the younger son of Edward Rosewater. He received his M.A. degree from Columbia University in 1895, and became business manager of the Omaha *Bee* the same year. From 1905 to 1917, after five years in other publishing ventures, Rosewater was again with the *Bee,* as general manager and vice-president. Subsequently he was affiliated in various capacities with other periodicals; among his posts were the presidency of the Kansas City (Mo.) Journal Company (1919-21) and the vice-presidency of the Seattle *Post-Intelligencer* (1922-24). In 1943 he was living in New York.

ROSH GOLAH, *see* EXILARCH.

ROSH HASHANAH ("the beginning of the year"), 1. the festival of the New Year. It is celebrated at the beginning of the autumn, on the 1st and 2nd (originally only on the 1st) of the seventh Hebrew month Tishri, and is the first of the "Ten Days of Penitence," which, forming the central point and most important period of the Jewish religious year, conclude with the Day of Atonement, or Yom Kippur, on the 10th of Tishri.

On Rosh Hashanah, which is traditionally regarded as the day of the creation of the world, God remembers all His creatures (*yom hazikkaron,* "The Day of Remembrance") and determines the lot of human beings during the coming year. He passes judgment on Rosh Hashanah (*yom hadin,* "The Day of Judgment") on all persons, who are thus summoned to earnest self-judgment, to atonement and to self-improvement by means of the sounds of the blowing of the Shofar, or ram's horn (*yom teru'ah,* "The Day of the Blowing of the ram's horn").

These basic ideas of the festival, as well as everything connected therewith, are developed in the Additional Service (Musaf) for the holiday, in the *teki'atha debe Rab* ("the blowings [of the ram's horn] of the house of Rab"), and in the Malchuyoth, Zichronoth, and Shofaroth which originated in the school of Abba Aricha (Rab) in the 3rd cent.

The New Year's Days are intended to be devoted to prayer and to festive joy. Jews greet each other with the holiday formula *leshanah tobah tikkatheb* (*tikkathebu*) ("May you be written down [in the book of life] for a good year"), frequently abbreviated to *leshanah tobah* ("For a good year"), in keeping with the notion that the destinies of men are written down by God in a book. The names of the good, it is believed, are written down immediately for good and for life, while those of the bad are blotted out forthwith from the book of life; however, the decision of God as regards those who are in-between, neither good nor bad, is reserved until the Day of Atonement, on which day the lot and fate of each are determined in accordance with each one's repentance. The putting on of a white garment on Rosh Hashanah is a sign of the confidence which Israel has as it comes before God for judgment. The sacred penitential period is announced by the sounds of the Shofar at the conclusion of the daily devotions beginning with the 1st of Elul. In the week of the New Year festival, beginning with Sunday before the morning prayer, while it is still night, penitential prayers (Selihoth) are recited. If the New Year festival begins on an earlier day of the week than Thursday, the recitation of these penitential prayers is begun on the Sunday of the preceding week. Penitential devotions are recited also on the days between the festival of the New Year and the Day of Atonement. The Sephardim recite these Selihoth all through the month of Elul.

Among the Jews in the pre-Exilic period the New Year began in the fall, since the old harvest year concluded at that time and the new one began. During the Babylonian Exile the Jews adopted from the Babylonians, in addition to the New Year on the 1st of Tishri, (the new year occurring in the spring month of Nisan). Nevertheless, the celebration of the new year took place in the autumn, in accordance with the old chronology, at first, as it appears, on the 10th of Tishri, later on the 1st of Tishri. The transferring of the celebration of the New Year to the 1st of Tishri and the ascription of an augmented solemnity and sacredness to the 1st of Tishri may have been due in part to the remembrance that it was on the 1st of Tishri that the Jews who had returned from the Babylonian Exile brought the first offerings on the newly erected altar, as well as to the recollection that Ezra's important and impressive reading of the Torah at the assembly of the people took place on this date.

In keeping with the entire mood in the post-Exilic period, the celebration of the New Year evidenced from the very beginning the characteristics of atonement and expiation, which became strengthened the more the festival of the New Year evolved into a sort of solemn prelude or introduction to the Day of Atonement. Ever since then the New Year festival, like the Day of Atonement, has been preserved and observed as a source of religious and moral quickening.

The Scriptural readings from the Torah are as follows: on the first day, *Gen.* 21:1-34; on the second day, *Gen.* 22; on both days, as a supplemental reading, *Num.* 29:1-6. The prophetical portions are: on the first day, *I Sam.* 1:1 to 2:10; on the second day, *Jer.* 31:2-20.

2. eighth tractate of Moed, the second division of the Mishnah and Talmud. It contains four chapters, and deals especially with the regulations concerning the calendar. It opens with the enumeration of the four New Years observed by the Israelites during the time of the Second Temple. It then discusses the method of proclaiming the new moon by taking the testimony of witnesses, and sending out messengers through the land. There is a description of a significant controversy on the calendar between Gamaliel II and Joshua. The last two chapters deal with the blowing of the Shofar and the prayers to be recited on Rosh Hashanah.

The Tosefta contains much that is supplementary to the Mishnah. The Babylonian Talmud contains much

Blowing of the Shofar in the synagogue on Rosh Hashanah. From an 18th cent. etching of the Portuguese synagogue at Amsterdam

Haggadic material, especially about repentance and the forgiveness of sin (17ab).

ROSIN, DAVID, author and lecturer, b. Rosenberg, Upper Silesia, Germany, 1823; d. Breslau, Germany, 1894. He was ordained rabbi by Solomon Judah Rapoport of Prague. He received his Ph.D. degree in 1851, and in 1854 became director of the newly-opened school for religion in Berlin, as well as instructor in the teachers' seminary there. From 1866 until his death Rosin was a lecturer in the Jewish theological seminary in Breslau. Rosin's philological works were examples of method and dependability, and these same qualities were apparent in his book, *Samuel ben Meir als Schrifterklärer* (1880) and in his Pentateuch commentaries (1881).

His lectures on the history of Jewish literature resulted in a study of Abraham ibn Ezra. *Reime und Gedichte* (1885-94) included a German adaptation and a critical study of Ibn Ezra's work.

ROSIN, HEINRICH, jurist, b. Breslau, Germany, 1855; d. Freiburg, Germany, 1927. In 1880 he became lecturer at the University of Breslau, and in 1883 he went to the University of Freiburg, where he was appointed professor of law in 1888. In 1919 he retired from the faculty, but continued, as honorary professor, to lecture on constitutional law. Rosin was a great authority on German law, constitutional law and the science of public administration. His studies on the sources of medieval German law and legal institutions were highly esteemed by jurists and historians. Later on he pioneered in the science of the law of associations and social insurance, and was successful in defining the legal status of the police.

An admirer of Prince Otto von Bismarck, and an ardent German patriot, Rosin was interested also in Jewish communal work and Jewish rights. From 1889 to 1908 he was member of the supreme council of the Jews of Baden. He resigned because the majority of the Jewish communities of Baden repudiated the new Jewish prayerbook advocated by Rosin. As a member of the council he drafted the law concerning the legal status of the Jewish communities in Baden. He also fostered the education of Jewish children, and created a union of Jewish craftsmen.

ROSING, VLADIMIR, tenor and impresario, b. St. Petersburg, Russia, 1890. His teachers included Jean de Reszke, who prepared him for an operatic career. In 1912 Rosing made his debut in St. Petersburg in *Eugen Onegin.* One year later he made his first London appearance, where he soon became a great favorite both as an operatic performer and as an interpreter of Lieder. In 1921 he gave his one hundredth song recital in London. Besides his great success in England, Rosing toured Europe extensively, and made his American deput in 1923. While on tour in America he met George Eastman, who financed the American Opera Company, which for seven years presented grand opera in English, of which Rosing was the general director.

In 1940 Rosing was appointed director of a new opera company organized in Los Angeles. For several years he was also head of the opera department at the Eastman School of Music in Rochester.

ROSMER, ERNST (pseudonym), *see* BERNSTEIN, ELSA PORGES.

ROSNOSKY, ISAAC, government official, b. Wollstein, Germany, 1846; d. Boston, 1907. He came to the United States in 1861. In 1878 he was elected to the Boston Common Council, and in 1880 to the Massachusetts state legislature. In each instance he was the first Jew to serve in this capacity. Rosnosky was subsequently reelected to one or the other legislative body over a long period of years, serving a total of seven years in the Common Council and five years in the state legislature.

He was also for a time assistant water commissioner of Boston. Rosnosky was active in Jewish and non-sectarian philanthropies in Boston.

ROSS (ROZOVSKY), BARNEY, boxing champion, b. New York city, 1909. He was taken to Chicago during his infancy. For three years he worked as a bookkeeper in a jewelry firm, but spent most of his spare time in gymnasiums. When he turned finally to amateur boxing he was defeated only once in the hundred bouts he fought during 1928 and 1929. He won in the 126 pound division that year in the Golden Gloves Tournament between New York and Chicago.

In 1929 Ross entered the professional ranks and advanced rapidly. In 1933 he beat several topnotchers of the lightweight class, including Ray Miller, Bat Battalino and Goldie Hess. A year later he was crowned world lightweight champion, defeating Tony Canzoneri. He defeated Canzoneri again in a return bout. Ross climbed still higher in the pugilistic record when he annexed his third title (1934) by defeating the welterweight champion, Jimmy McLarnin. This title he retained until 1938, when he lost it to Henry Armstrong, and retired from boxing. In 1943 Ross was serving in the United States Marine Corps.

He won distinction at Guadalcanal Island when, on the night of November 19, 1942, wounded and suffering from shock and fever, he successfully fought off the attack of a large Japanese force and saved the lives of three wounded comrades. He was promoted to corporal, recommended for a service cross and later unanimously awarded the Edward J. Neil Memorial Trophy of the Boxing Writers Association of New York as boxing's "man of the year." Ross was returned to the United States for hospitalization (February, 1943), and received the plaque in the following month.

ROSSDALE, ALBERT BERGER, American Congressman, b. New York city, 1878. He served as a clerk in the New York Post Office from 1900 to 1910, and was president of the New York Federation of Post Office Clerks from 1906 to 1907. Rossdale was instrumental in organizing a national organization of postal employees, of which he was vice-president from 1908 to 1909. He was elected as a Republican to Congress from New York for one term, serving from 1921 to 1923. He secured many reforms for postal and other federal employees, and was active in behalf of Jewish causes, fighting immigration restriction. In 1943 he was engaged in the wholesale jewelry business in New York city.

Lit.: Biographical Dictionary of the American Congress (1928) 1480.

ROSSELLI, CARLO, leader of the Italian anti-Fascist movement, b. Rome, 1899; d. Bagnoles de l'Orne, France, 1937. He was a scion of a patriotic and wealthy Italian Jewish family with a great tradition of struggle for Italy's unity and of intimate friendship with Giuseppe Mazzini. He early joined the Italian

socialist movement and together with the noted Italian socialist Pietro Nenni, founded the political review *Quatro Stato*. He was also one of the most active collaborators of the anti-Fascist publication *La rivoluzione liberale*.

The assassination of Giacomo Matteotti spurred him to fierce opposition to Mussolini's regime. He was arrested for helping the Socialist deputy Filippo Turati to escape to France in 1926, and was imprisoned first on the mainland and later on the penal islands. His trial in Savona became memorable for his shattering denunciation of the Fascist regime and ideology. On the penal island of Lipari he wrote his work, *Socialismo liberale,* a profound analysis of his points of view and of his conceptions of a liberal Socialism. On July 27, 1929, together with two other prominent anti-Fascists, F. F. Nitti and Lussu, he escaped from his confinement and reached France, where he began his struggle for Italy's liberation from the Fascist regime. His wife, Maria Cave Rosselli, was arrested after his escape, but her British citizenship caused pressure to be brought which effectuated her release.

In France Rosselli organized the movement of "Giustizia e Libertà" which proposed that "anti-Fascists should agree on a minimum program of reforms acceptable to all, from the Socialist or Communist workman to the anti-Fascist members of the middle class. To all classes must be restored political liberty." This movement became the most articulate opposition to Fascist Italy abroad and within Italy itself, since it founded a net of underground units which operated in the principal cities and industrial centers of Italy. In 1930 he organized and took part in an air flight over Milan, launching from the air propaganda leaflets denouncing Fascism and its oppressive methods. This flight was later followed by two others.

After the outbreak of the civil war in Spain in 1936, Rosselli helped to organize the Italian anti-Fascist volunteers, and as commander of the Italian Legion took part in the fight against the Franco rebellion.

In 1937 his brother, Nello Rosselli (b. 1900; scholar and historian, author of a remarkable study on Mazzini and Bakunin), made a trip to France to see Carlo, who was recuperating in a nursing home from wounds he had sustained in Spain. On June 9, 1937, the car in which they were returning from Bagnoles de l'Orne to Paris was attacked near that locality, and the two brothers were killed. They were buried at the Père Lachaise cemetery in Paris. DAVID KLEINLERER.

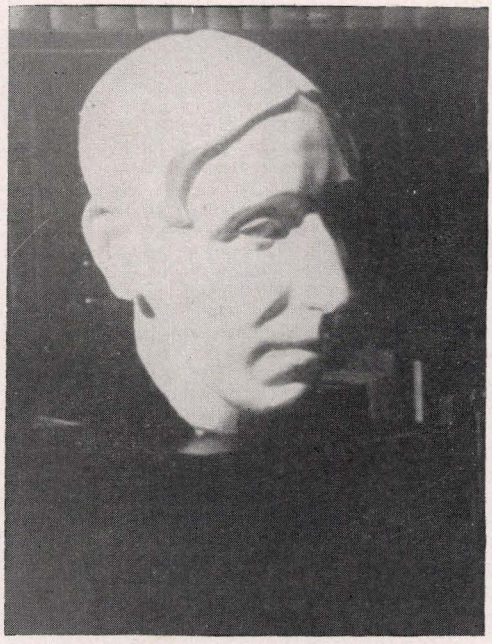
ROSSHEIM, IRVING DAVID, stock broker and lawyer, b. New York city, 1887. After receiving his B.S. degree in economics from the Wharton School of the University of Pennsylvania in 1908, he joined the faculty of the school, and taught there until 1918. In 1911 he received also a law degree from the University of Pennsylvania, and entered practice in Philadelphia. Subsequently, becoming affiliated with the motion picture industry, Rossheim was president of First National Pictures in 1928 to 1929, and was also a director of Warner Bros. Pictures for the same period. In 1930 he became a stock broker in Philadelphia. He was co-author of *First Year Bookkeeping and Accounting* (1912).

ROSSI, AZARIAH BEN MOSES DEI (known among non-Jews also as Bonaiuto), author and physician, b. Mantua, Italy, 1513 or 1514; d. Mantua, 1578. He was the descendant of a Jewish family which traced its lineage back to the days of the Second Temple. Rossi studied medicine and languages, and was otherwise well-grounded in secular as well as religious knowledge. His greatest work was *Meor Enayim,* in three parts, first published in Mantua between 1573 and 1575.

The first part consists of Rossi's translation of the *Letter of Aristeas,* which introduced this document into Hebrew. The second part, "Kol Elohim," describes the earthquake of Ferrara in 1571, which Rossi had lived through and which he saw as an act of God. In the third part of *Meor Enayim*—"Imre Binah" (itself divided into four parts)—history, Talmudic subjects and science were subjected to investigation. Without renouncing his belief in the uniqueness of the Jewish people, Rossi tried to incorporate various scientific findings of his time within the scope of Jewish interpretation, and attempted a synthesis between the Jewish world and the Christian world, as it was expressed by certain of the Church Fathers. Rossi's attitude was deemed heretical. Joseph Caro's death forestalled a decree ordering *Meor Enayim* burned. Reading the book was subsequently forbidden before the age of twenty-five, and then only with the consent of the local rabbinate.



Lit.: Baron, Salo W., "Azariah de Rossi's Attitude to Life," *Jewish Studies in Memory of Israel Abrahams* (1927) 11-52; idem, "La méthode historique d'Azariah de Rossi," *Revue des études juives,* vol. 86 (1928) 151-75; vol. 87 (1929) 43-78.

ROSSI, BRUNO, physicist, b. Venice, Italy, 1905. He received the Ph.D. degree in 1927, and was associate professor of physics at the University of Florence from 1928 to 1932. In that year he was appointed to teach physics at the University of Padua, one of Italy's most ancient seats of learning. He remained there until the promulgation of the Fascist anti-Semitic laws (October, 1938).

Thereafter he lectured at the University of Manchester (1939) and the University of Chicago (1939-40). In 1941 he became a member of the faculty of Cornell University, at Ithaca, N. Y. Reputed one of Italy's outstanding researchers on cosmic ray phenomena, Rossi published numerous studies on subjects of physics, mainly on cosmic rays. He married a granddaughter of the famous criminologist Cesare Lombroso.

ROSSI, GIOVANNI BERNARDO DE, famous Christian Hebraist, b. Castelnuovo, Italy, 1742; d. Parma, Italy, 1831. He became professor of oriental languages at the University of Parma in 1769. His studies on Hebrew typography and Hebrew bibliography and in the textual criticism of the Bible are still of great importance. His chief works are: *Annales hebraeo-typographici ab 1475 ad 1500* (Parma, 1795); *Annales hebraeo-typographici ab 1507 ad 1540* (Parma, 1799); *Dizionario storico degli autori ebrei e delle loro opere* (2 vols., Parma, 1802); *Variae lectiones Veteris Testamenti* (Parma, 1784-88), the best collection of variants of the Bible manuscripts and Bible editions; *Bibliotheca judaica antichristiana* (Parma, 1810), an index of polemic Jewish works against Christianity. Rossi owned an extensive collection of Hebrew manuscripts, the catalogue of which he published, and of rare Hebrew books, which are now in the state library of Parma.

ROSSI, SALAMONE (he often affixed "Ebreo" to his name), composer, b. Mantua, Italy, 1587; d. Mantua, 1628. From 1587 to 1628 he was attached to the court of Mantua as composer. He was one of the major creative personalities in the early history of music, and an influence of inestimable significance. His four volumes of sonatas represent the earliest successful efforts at instrumental writing, and were powerful forces in developing the art of instrumental

Cecil Roth. From a sculptured bust by Hermann Wald

music. His trio-sonatas laid the groundwork for chamber music. Besides this, he produced some of the most exquisite examples of madrigal writing.

His works included also an interesting example of early opera, *Maddalena.* A two-volume edition of representative works by Rossi was prepared by Vincent D'Indy (in collaboration with S. Naumbourg) in Paris in 1877. An exhaustive edition of all Rossi's works was launched by the Hebrew University, Jerusalem, in 1936, but up to the present time (1942) it had not been fully realized.

Lit.: Birnbuam, Eduard, *Jüdische Musiker am Hofe zu Mantua von 1542-1628* (1893); Lang, Paul Henry, *Music in Western Civilization* (1941).

RÖSSLER, CARL, playwright and novelist, b. Vienna, 1864. For some years Rössler was an actor, but in 1900, realizing that he would never become a great performer, he made up his mind to create tragedies. However, his drama *Der reiche Jüngling,* whose original performance took place in 1906, did not meet with public favor, whereupon he decided to write comedies, and for this purpose he at first joined the playwright Leo Heller in writing the comedy *Im Clubsessel,* which was a considerable success (1909). Then, together with Roda Roda, he wrote the comedy *Der Feldherrhügel,* which met with even greater applause in 1910, and he became a world-renowned author by publishing (1911) the comedy *Die fünf Frankfurter,* in which he portrayed the Orthodox Jewish life of the Rothschild family and the resistance of a granddaughter of old Gudula Rothschild to the courting of a sovereign prince. This comedy was acted with great success in many parts of the world. The great performer Lugné-Poe adapted it to the French stage in 1914, immediately before the outbreak of the first World War. The English version appeared in 1913.

Within three years Rössler became famous and wealthy. His later works, however, did not achieve the success of 1909 to 1911. He continued to write comedies (*Die beiden Seehunde,* 1917; *Ehelei,* 1919; *Der pathetische Hut,* 1921), but he was not content with or ready to concentrate upon comic effects, and he endeavored to secure added prestige as a tragic novelist. His novels *Die drei Niemandskinder* (1926) and *Wellen des Eros* (1927) were only moderate successes. From 1908 to 1933 he resided at Munich. After the Nazis came to power (1933), Rössler returned to Vienna. After 1938 no news concerning him was available.

ROSTEN, LEO CALVIN, author, b. Lodz, Poland, 1908. He was brought to the United States in 1911. Rosten received the Ph.D. degree from the University of Chicago in 1937, and studied also at the London School of Economics.

As an author Rosten has practised in two widely different, irreconcilable fields; he works and writes as a political scientist, and at the same time, under the pseudonym of Leonard Q. Ross, turns out satirical and humorous pieces. Rosten was, in 1936, a member of the research staff of the President's Committee on Administrative Management. Subsequently, after a year of writing for the motion pictures, he undertook the direction of a motion picture research project for the Carnegie Corporation. In 1940 he made a study of Hollywood for the Rockefeller Foundation. Rosten joined the Office for Emergency Management in Washington in 1941. In 1942 he was serving as chief of the motion picture division of the Office of Facts and Figures, as special assistant coordinator of government films and as expert consultant in the Office for Emergency Management and the National Defense Commission.

Rosten's first published book was a series of humorous dialect sketches, written under the name of Ross: *The Education of H*y*m*a*n K*a*p*l*a*n* (1937). The sketches, which described the tribulations of a New York immigrant Jew with the English language, appeared originally in the *New Yorker.* The same year *The Washington Correspondents,* a study of the press representatives in the capital, was published.

Rosten's later books were *Dateline: Europe,* a fanciful international romance (1938); *The Strangest Places,* a collection of sketches (1939); *Adventure in Washington* (1939) and *Hollywood; the Movie Colony; the Movie Makers,* a lengthy analytical study of the motion picture center (1942). Rosen also wrote for various periodicals and lectured at several colleges in the United States.

Lit.: *Current Biography,* Oct., 1942; *American Magazine,* Oct., 1939.

ROTH, CECIL, historian, b. London, 1899. After serving in Flanders during the first World War, he graduated from Oxford (1924). He became a fellow of the Royal Historical Society, member of the Società Columbiana at Florence, and of the royal Italian deputation of national history at Venice. He renounced his Italian honors when Mussolini adopted anti-Semitism. From 1936 to 1938 Roth was president of the Jewish Historical Society of England. From 1939 on he was reader in post-Biblical Jewish studies at Oxford. He visited New York several times to give history courses at the Jewish Institute of Religion and the Menorah Summer School. He also lectured in many other American cities.

Roth contributed on Jewish subjects to the *Encyclopaedia Britannica,* and *The Cambridge Mediaeval History,* and was a regular contributor to the *Encyclopaedia Judaica, The Universal Jewish Encyclopedia, Menorah Journal, American Hebrew,* and a number of scientific periodicals in England, Germany and Italy. His most important studies concerned the history of the Jews in England and Italy during the Middle Ages and the 16th and 17th centuries.

In 1925 he published *The Last Florentine Republic,* in 1930 *The History of the Jews in Venice,* in 1938 *The History of the Marranos,* in 1934 *The Life of Menasseh ben Israel,* which is not only a biography but also an account of the resettlement of the Jews in England, in 1937 *The Spanish Inquisition,* and in 1941 *A History of the Jews in England.*

Roth conducted extensive researches in neglected and documentary sources, and brought many facts to light on subjects generally regarded as exhaustively explored. But he also regards history as capable of influencing the thinking of the rising generation and thus of the whole nation. Since the basis of attacks against Judaism had been transformed from the religious into the historical, Roth demanded that Jewish history be thrust into the forefront of the struggle. He was convinced that the stark facts, viewed without any bias, would refute and confound the adversaries of Judaism.

Proceeding from this premise, he published (1939) his history of the Rothschild family, that of the Sassoon dynasty (1941), which he ironically dedicated to Hitler, and his illuminating survey on *The Jewish Contribution to Civilisation* (1938). He stressed the belief that "the Jews are a European people—more truly than any of the people of the Western world." Although he regarded the Jew as "essentially a child of Western civilization," Roth was finally disappointed with the results of the emancipation of Jewry which, to him, seemed to sap the vitality of Judaism. Roth edited Lucien Wolf's *Essays in Jewish History,* the *Archives of the United Synagogue,* the *Soncino Press Haggadah,* and a collection of *Anglo-Jewish Letters.* In 1941 he began to write a history of the London *Jewish Chronicle* on the occasion of the centenary of that publication.

ROTH, JOSEPH, writer, b. Schwabendorf, Volhynia, Russia, 1894; d. Paris, 1939. He studied Germanic philology at the University of Vienna, volunteered in the Austrian army during the first World War, was made an officer, was imprisoned by the Ukrainians, but after an adventurous flight he succeeded in returning to Vienna. There he worked first on odd jobs, then covered the aftermath of the Hungarian revolution for Austrian papers and contributed travel reports to the *Frankfurter Zeitung.* He lived mostly in Berlin; after the rise of the Nazi regime (1933) he moved to Vienna, and after the Nazi annexation of Austria he emigrated to Paris.

Roth drew the material for his essays and novels chiefly from the political and social upheaval caused by the first World War as well as from the reminiscences of his youth, spent mainly in an Eastern Jewish milieu. *Hotel Savoy* (1924) describes life in a large Jewish provincial hotel in Galicia; *Flucht ohne Ende* (1927; English trans., *Flight without End,* 1930) tells the story of an Austrian lieutenant who escaped from Russian imprisonment and crossed chaotic post-War Europe in search of his war-time fiancee; *Zipper und sein Vater* (1928) depicts the disintegration of present-day family life, while *Rechts und Links* (1929) gives a picture of the inflation time and terrible political confusion in post-War Berlin. In all these books he fought against the hollowness of the present civilization.

His principal work is the novel *Hiob, die Geschichte eines einfachen Mannes* (1930; English trans., Dorothy Thompson, *Job, The Story of a Simple Man*). It describes the fate of the ghetto Jew Mendel Singer, a "pious, God-fearing, and ordinary man, an entirely commonplace Jew" who, after many trials and tribulations, goes to America and there finds his son now become a celebrated violinist. Stefan Zweig praised the novel—which was selected by the Book of the Month Club—as "a tale which holds good for any age and which is clear to anyone who understands with his heart."

Radetzky Marsch (1931; English trans., *Radetzky March,* 1933) narrates the story of father, son and grandson, Austrian officers who lived and died during the long reign of Emperor Francis Joseph I, a song of the glamour and pathos of old Austria. *Die Kapuzinergruft* (1939), a kind of sequel, endeavors to depict the end of Austria as an independent state, but does not reach the artistry of *Radetzky March.*

Among the books which Roth published after 1933, *Der Antichrist* (1934; English trans., *The Antichrist,* 1935) aroused wide comment. A philosophical treatise in the form of a novel, it is a study of the evil in this world which reveals itself in the motion picture industry, in the manufacture of munitions, and in race prejudices. His other novels include *Tarabbas, ein Gast der Erde* (1934; English trans., *Tarabas, A Guest on Earth,* 1935), the story of a self-styled dictator and pogromist in the Ukraine, and *The Ballad of the Hundred Days* (1936), a girl's eye view of the heroic events intervening between Elba and Waterloo.

Roth prided himself on being an Eastern European Jew. In a book of essays, *Juden auf Wanderschaft* (1927), describing the various "Shtedtels" in Eastern Europe and in the Jewish quarters of Vienna, Berlin and Paris, he rebuked those Western European Jews who despise their Eastern European coreligionists because their squalid houses lack elevators and bathrooms. Assailing renegades and apostates who refuse to mix with "Easterners," he could not foresee then that at the end of his life he himself, ruined by alcohol, would come near being a renegade. Turning monarchist and Austrian chauvinist, he developed also a strong predilection for Catholicism. Certainly his Hasidic strain blending with his Catholic mysticism produced some very strange and lovely narrative works, such as his posthumous novel, *Die Legende vom heiligen Trinker* (1939). At the same time Roth continued to be an ardent Zionist, failing to see why his Catholicism should prevent him from loving Israel. ALFRED WERNER.

Lit.: Natonek, Hans, "Joseph Roth," *Die neue Weltbühne,* June 1, 1939; Sola, Emma, "Joseph Roth," *Cultura* (1933); autobiographical postscript to *Flight without End* (1930); Werner, Alfred, "Four Tragic Jews," *Jewish Outlook,* Feb., 1942.

ROTH, LEON, philosopher, b. London, 1896. He was the brother of Cecil Roth. From 1916 to 1918 he served in the British Army in France. After the War he was granted several important scholarships, and received the M.A. and Ph.D. degrees from Oxford. From 1923 to 1928 he was lecturer in philosophy at the University of Manchester. In 1928 he was appointed professor of philosophy at the Hebrew University, Jerusalem, holding the Ahad Haam Chair, and in 1940 he was elected rector of the university. In 1935 Roth represented the Hebrew University and Palestinian Jewry at the celebration in Spain of the 800th anniversary of the birth of Maimonides, and delivered a Hebrew address which was the first Hebrew speech heard publicly in Spain since the expulsion of 1492.

Roth contributed to the knowledge of Spinoza, Descartes and Aristotle by publishing *Spinoza, Descartes and Maimonides* (1924) and several special studies in periodicals.

He edited a series of translations into Hebrew of philosophical classics, and wrote in Hebrew a guide to the study of Greek philosophy. He expressed his own point of view in *Science of Morals* (1928), an attempt to discuss the value of the method employed in the physical sciences in the study of human character and conduct. According to Roth, physical and moral sciences do not seem so irrevocably different as most modern thinkers assume. Metaphysical defense of the individual, confirmed by physical science, is allowed to draw encouragement for the study of the human character from the success of the physical sciences. More than mere "encouragement" is deemed unavailable. Roth regards an "ultimate skepticism" as inevitable as far as a purely scientific foundation of morals is concerned.

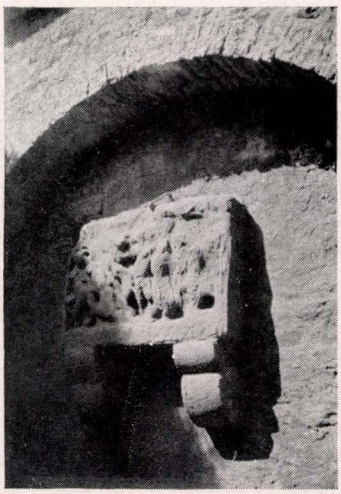
ROTH, LESTER WILLIAM, lawyer and judge, b. New York city, 1895. He received his law degree in 1916 from the University of Southern California, and entered practice the same year. From 1931 to 1936 Roth was a judge of the California state superior court;

Morris Rothenberg

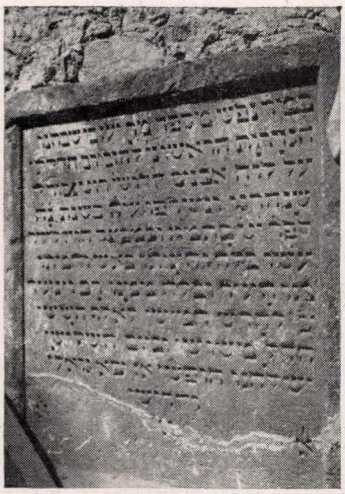
in 1935 and 1936 he was also justice pro tem of the district court of appeals. Roth was active in various Jewish movements; he was president of the Los Angeles Sanatorium and Ex-Patients Home (1932-33) and a director of various other organizations. In 1942 he was appointed to the National Council of the American Friends of the Hebrew University. During the first World War Roth served as a second lieutenant in the United States Marine Corps.

ROTHAFEL, SAMUEL L. (known as "Roxy"), impresario, b. Stillwater, Minn., 1882; d. New York city, 1936. He was a major influence in good music in the motion picture theatre. As the manager of the Strand Theatre in New York he introduced a symphony orchestra into a motion picture theatre for the first time. In his subsequent posts as director of the Rialto, Capitol, and Roxy theatres (the last of which was built for him, and named after him) he consistently improved the standard of music until, at times, it approached symphony hall standards. In 1932 he became manager of Radio City Music Hall, which he had planned as the home of international vaudeville.

Samuel L. Rothafel ("Roxy")



He remained only two weeks at this post.



Rothafel's passing from this position marked his decline as an impresario. He made several attempts to return to the theatrical business, in London and in Philadelphia, but without success. He was also a pioneer in radio broadcasting, introducing a weekly radio hour from the Capitol Theatre in 1922 which achieved nationwide fame.

ROTHBAND, SIR HENRY LESSER, communal leader. He was known as the originator of the scheme which produced the King's National Roll for finding employment for disabled sailors and soldiers after the first World War. Rothband suggested the plan that a call be issued by the king for a register of all employers ready to employ disabled veterans. Issued from Rothband's own home, in Pendleton, near Manchester, in 1915, the plan was adopted by various newspapers and parliamentary leaders, and subsequently put into action. Rothband was made a baronet in 1923. In 1943 he was living in London.

ROTHENBERG, MORRIS, judge and Zionist leader, b. Dorpat, Estonia, 1885. He came to the United States at the age of eight, was educated in New York city, and received his law degree from the New York University Law School in 1905, entering upon the practice of law in that year. He early became interested in the Zionist Movement, and took an active part in the organization, becoming chairman of the Zionist Council of Greater New York (1916-18). He was a delegate to the International Conference of the Jewish Delegations Committee and to the International Relief Conference, both meeting in Carlsbad in 1923. He was a delegate to half a dozen Zionist Congresses. In 1932 Rothenberg became president of the Zionist Organization of America, serving for four consecutive terms. He traveled widely throughout the United States, speaking for the Zionist cause. He had a large part also in guiding and heading Palestine fund-raising institutions in the United States. He organized the first joint campaign in the United States of the Joint Distribution Committee and the American Palestine Campaign. On numerous occasions he served alternately as national chairman of the Palestine Foundation Fund (Keren Hayesod), the American Palestine Campaign and the United Palestine Appeal. He was also (1943) national co-chairman of the United Jewish Appeal and an honorary vice-president of the Jewish National Fund. Rothenberg was also one of the founding members of the National Jewish Welfare Board and served on its executive committee from its inception. He was, in 1943, a member of the Board of Directors of the National Refugee Service. Rothenberg was one of the incorporators of the Joint Distribution Committee in 1914, together with Louis Marshall, Felix M. Warburg and Herbert H. Lehman, and helped to organize also the People's Relief Committee during the first World War. For some time he served as chairman of the executive committee of the American Jewish Congress.

He also played a prominent role in the World Zionist Organization. Together with Chaim Weizmann, Louis Marshall, Felix M. Warburg and others, he col-

(Left) Stone relic at Rothenburg ob der Tauber, recording anti-Jewish persecutions in the 13th cent.; (right) an ancient stone tablet containing further evidence of the oppression of the Jews at Rothenburg

laborated in the creation of the enlarged Jewish Agency for Palestine in 1929, and together with Lord Melchett he was elected co-chairman of the International Council of the Agency. He was a member of the International Board of Governors of the Palestine Foundation Fund, and a member of the Actions Committee of the World Zionist Organization.

During the first World War Rothenberg was member of a federal commission to fix the price of bread. He acquired a national reputation in the field of labor law and acted as counsel in numerous cases involving labor disputes. Because of his reputation for impartiality and objectivity he was frequently called upon to arbitrate industrial disputes. He also lectured widely on labor laws.

In July, 1937, he was appointed to the bench of the magistrates courts of the city of New York for a full ten-year term.

ROTHENBURG OB DER TAUBER, city in Bavaria, Germany, which had one of the oldest Jewish communities in Germany. Jews settled in Rothenburg at the beginning of the 12th cent., and thereafter increased rapidly in number and importance. Their prominence is evident from the fact that the great Meir ben Baruch was rabbi in the city from about the middle of the 13th cent. on. In 1298 the Jewish community of about 450 persons was burned alive. Later a new Jewish community was formed in the city, but it, too, was annihilated during the Black Death persecutions (1348-49). However, a number of Jews again came to the city shortly thereafter, but they did not attain to so important a position as had the members of the earlier Jewish settlements. They were at all times subjected to petty annoyances and restrictions, and compelled to pay various kinds of unjust taxes in large or small amounts.

The city council of Rothenburg repeatedly protected the Jews, mainly in order to retain a source of revenue and to maintain its independence. However, the council had no scruples against putting all the Jews of the city in jail in order to extort from them the payment of various imposts. The most severe oppressions and persecutions to which the Jews of Rothenburg were subjected took place in the 16th cent. In 1511 they were ordered to wear the Jew badge, and eight years later they were banished from the city.

The Jewish cemetery, synagogue and school building were confiscated. No Jews resettled in Rothenburg until the 19th cent. In 1925 there were about seventy Jews among the city's 9,000 inhabitants, but in 1943, as a result of the oppressive laws and expulsions of the Nazi regime, Rothenburg had no Jewish inhabitants.

ROTHENSTEIN, a family of British artists. SIR WILLIAM ROTHENSTEIN, painter and graphic artist, b. Bradford, Yorkshire, England, 1872, entered Slade School in London in 1888, where he studied with Alphonse Legros for a year. Then he left for Paris to study at the Julien Academy, where Benjamin Constant and Jules Lefebvre were his masters.

Returning to England in 1893, he went to Oxford first and finally settled in London in 1895. He became professor of art at Sheffield University in 1917, and was president of the Royal College of Art from 1920 to 1935, when he retired from official life. During the first World War he was official painter of an Indian cavalry regiment, later joined the Fifth British Army in the same capacity and finally the Canadian Army. During his travels he visited the United States and also India, where his prolonged stay left its mark on his career.

The young artist's first impression was the academic exactitude of his teacher Legros, a pupil of Ingres. Rothenstein's clarity of form and color and the beauty of his line connect him with this artistic ancestor, whereas the directness of his approach to subject matter links him to the English tradition. "Art for art's sake," the watchword of the period during which he studied in Paris, had but a passing influence on him; the idea of contemporaneity, however, corresponds with his whole personality. Sharp insight and power of observation distinguish his first attempt along this line, a collection of lithographs *Oxford Characters* (1893-96). His career as a painter started with *The Doll's House* (1899), a painting awarded a medal in Paris and later acquired by the Tate Gallery. A year later appeared his *Life of Goya,* a literary essay which revealed his artistic understanding. In the first decade of the 20th cent. the artist became interested in Jewish subjects. The first of a series of such paintings was *The Talmud School* (1904); others are *The Carrying of the Law* and *The Kissing of the Law* (1909), in the Johannesburg Gallery, and *Jews Mourning in the Synagogue* (1906), in the Tate Gallery. In these pictures psychological depth of expression in the figures

Mayer Amschel Rothschild

was united with sober clarity in the composition. The same clarity characterized his landscapes and his large mural in St. Stephens Hall, in the House of Commons, representing *The Audience given to Sir Thomas Roe, the first English Ambassador to the Mughel Court by the Emperor Jehangir* (1924).

The most authentic field of Rothenstein's art was portraiture; he portrayed most of the great personalities of his period—outstanding in art, literature, science and politics—such as Auguste Rodin, Rabindranath Tagore, his friend, Albert Einstein, Lord Arthur Balfour and Jan Smuts. More than 900 names were catalogued by 1926. Rothenstein was an outstanding intellect, and his eye concentrated on the intellectual expression of his models. His developing simplicity of form paralleled his growing concentration in this respect.

Three amply illustrated volumes, entitled *Men and Memories,* give evidence of his intellectual power of observation. They embrace the periods of 1872 to 1900 (vol. 1, 1931); 1900 to 1922 (vol. 2, 1932); and 1922 to 1938 (vol. 3, 1939). An essay written in 1934, entitled *Form and Content in English Painting,* expounds the artistic views of his maturity. In 1943 Rothenstein was still pursuing his activities in London. In that year his *Men of the R.A.F.,* written with Lord David Cecil, was published in New York.

JOHN KNEWSTUB MAURICE ROTHENSTEIN (b. London, 1901), art historian, was the eldest son of William Rothenstein. He studied at Worcester College, Oxford and at University College in London. He was an assistant professor of art history when he was called to Kentucky University, Lexington, Ky., and later to the University of Pittsburgh. After his return to England he was appointed director to the Leeds Art Gallery (1932), and two years later to the Galleries at Sheffield. In 1938 he was appointed director and keeper of the Tate Gallery. John Rothenstein's literary activity was influenced by his family background.

The Artists of 1890 (1928) embraced the problems of his father's youth. *The Life and Death of Condor* (1938) revived the figure of a friend of his father's seen from the viewpoint of the next generation but including the rich documentation of a contemporary. *British Artists and the War* (1931), *Nineteenth Century Painting* (1932) and *An Introduction to English Painting* (1933) were others of his publications, besides numerous articles in periodicals. John Rothenstein fulfilled the difficult tasks of a museum director in London during the second World War.

ALBERT DANIEL RUTHERSTON (b. Bradford, Yorkshire, 1881), painter and graphic artist, was a brother of William Rothenstein. He went to Slade School in 1899, where he studied with Fred Brown. Innes, who was one of his schoolmates, became his friend. He became a Slade scholar in 1902, and was awarded a gold medal in a Paris exhibition in 1926. He was a Ruskin Master of Drawing in Oxford from 1929. Rutherston was artistically different from his brother. After impressionistic beginnings, his poetic trend came to the fore and his art fitted into the tradition of English illustration. His fine taste for delicate lineament and color found an adequate technic in painting on silk; *Clöe* is one of his important works executed on this material. *Sixteen Designs for the Theater* (1928), a publication of Rutherston's work for the stage consisting of figurine decorations for the scenery, is of a highly cultured vision. Paintings by Rutherston are in the Tate Gallery, Victoria and Albert Museum, and in the British Museum. ELISABETH GUTMAN.

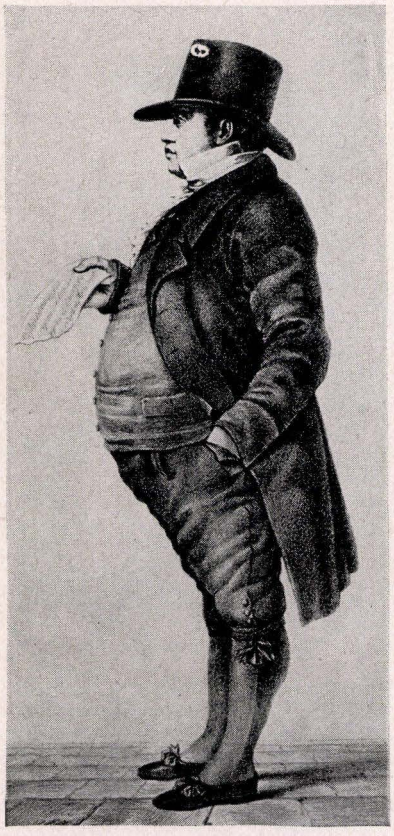
Y., *Contemporary British Artists,* "Albert Rutherston" (1925); Casson, Stanley, *Artists at Work* (1933).

ROTHSCHILD, a family of bankers and financiers, which became prominent during the 18th cent. The Rothschilds are descended from Isaac, son of Elchanan "zum Hahn" (at the sign of the cock), who came to Frankfort, Germany, in 1530 with his wife, Fogele Worms. Isaac, in 1567, moved into a house at the south end of the Judengasse in Frankfort; the house was identified by a red shield, and thus the family name was derived. The 17th cent. record of the family contains the names of several rabbis, but with AMSCHEL MOSES ROTHSCHILD (d. 1754) the entry into finance was made, though only on a small scale.

Characterized first primarily by natural business acumen and enterprise, the steadily ramified Rothschild family, in the unfolding capitalistic scene, eventually acquired the reputation of cultural and communal leaders as well. The deportment of its representatives has been marked by certain, hardly altered, rules throughout the generations. Elemental charitableness grew into large-scale philanthropy. An early interest and sponsorship of art produced broad cultural beneficence. And adherence to the Jewish forms of life within the community almost invariably meant the participation of at least one Rothschild, of each generation in every country, in organized Jewish activity.

Amschel Moses Rothschild was a merchant and money-changer. His son, MAYER AMSCHEL ROTHSCHILD (b. Frankfort, 1743; d. 1812) began to work on a larger scale. While running errands for his father he had developed not only a sufficient interest in finance to reject a paternal suggestion that he prepare for the rabbinate, but an interest in coins from a numismatic point of view. The two interests eventually combined to establish him, and the consequent Rothschild line, in their position in finance. He had studied in Fürth and later in Hannover, and founded his own banking house in Frankfort in 1760. Through his knowledge of numismatics he became friendly with Wilhelm, landgrave—and subsequently elector—of Hesse-Cassel. Although Rothschild's first negotiations with the prince were in cooperation with other bankers, he became his court agent in 1801. In 1802 Rothschild arranged a loan of ten million thalers for the Danish government.

When the prince had to flee before the Napoleonic invasion of 1806, Rothschild was left in charge of his fortune. His genius enabled Rothschild to guard the royal funds so expertly that the prince, on his return, was able to realize a 5 per cent interest. Rothschild left a fortune of about 200,000 gulden.

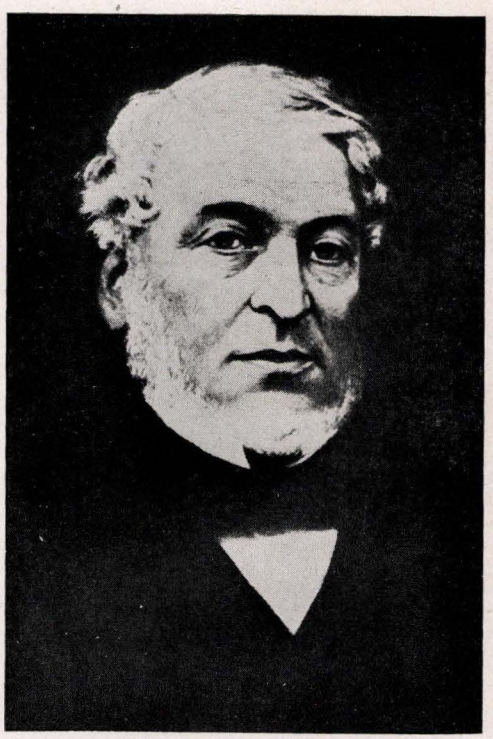


Gudule (Güttele; née Schnapper) Rothschild (b. 1753; d. 1849) was the wife of Mayer Amschel Rothschild. Their marriage took place in August, 1770, in Frankfort. To the end of her life she refused to leave the family home in the Frankfort Judengasse where the family had experienced its first prosperity, and remained attached to Orthodoxy.

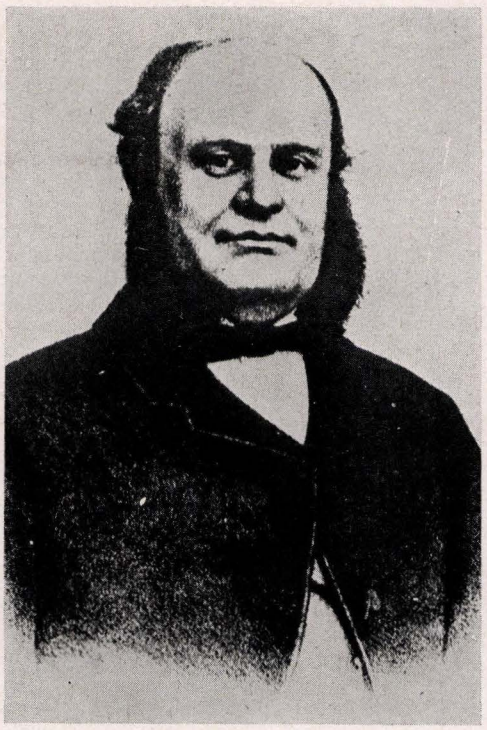
Mayer Amschel Rothschild's five sons, each settled in a different financial capital of Europe, established the linked system of finance which was to help Europe emerge as a continent of flourishing capitalism. The most gifted of that first generation of dispersed Rothschilds was NATHAN MAYER ROTHSCHILD (b. Frankfort, 1777; d. London, 1836), the third son of Mayer Amschel. He had gone to Manchester in 1798, on behalf of his father's interest in Manchester goods. There he eliminated the chance for a repetition of the unfair treatment which the firm had been accorded by himself arranging for the various steps of manufacture required by the goods in which they were interested. Rothschild became a British subject in 1804, and moved to London the following year, founding the London branch of the Rothschild firm. In 1806 he married Hannah Barent Cohen, sister of Judith, wife of Moses Montefiore. This alliance brought him into the circle of England's Sephardic Jewish community.

In the transactions Rothschild sponsored in London he was bold and enterprising, so that he was at first looked on skeptically. But when his skill led to invariable triumph, the attitude changed. Like his father, he had faith in Napoleon's eventual defeat. In 1810 he bought, at a discount, some drafts made by Wellington which the English government could not then meet. Then he renewed them to the government; this was one of the steps that won him the trust of officialdom. Rothschild's carrier pigeons and fast sailing-boats gave him advance private intelligence of continental events, and this advance intelligence was especially significant after the battle of Waterloo. He was the first to communicate the news of Napoleon's final defeat to the British government. For him, personally, it meant the fulfilment of the hopes on which he had staked everything. By this time Rothschild's standing was high in all the modern countries, and his banking house was made agent for many of them.

In 1824 Rothschild, with Montefiore, established the Alliance Insurance Company. Montefiore's brother-in-law, Benjamin Gompertz, a leading mathematician and actuary, had failed to receive an appointment with the Guardian Insurance Company because he was a Jew. The Alliance Insurance Company was founded, and Gompertz was made actuary. Rothschild and his brothers were made barons of the Austrian Empire in 1822.



The Rothschild interests were taken over, on Nathan Mayer's death in 1836, by his eldest son LIONEL NATHAN ROTHSCHILD (b. London, 1806; d. London, 1879), who not only carried on the expanding transactions of the London house, but was for more than thirty years the leader of the British Jewish community. Among his financial operations were the negotiations of a £16,000,000 loan for carrying on the Crimean War, and the provision of the funds for purchasing the Suez Canal shares. With the French and Austrian branches of the Rothschild firm, he cooperated in railroad construction and financing activities of the respective countries. The Irish Famine Loan of 1847 was raised by Rothschild in cooperation with



Nathan Mayer Rothschild

Baron Lionel de Rothschild

Baron Carl Meyer von Rothschild

Salomon von Rothschild

Sir Anthony de Rothschild

the competitive house of Baring, both firms acting without profit. Later Rothschild was effective in helping to reestablish the Baring firm, which had met adversity. Rothschild was a friend of Disraeli and also of Disraeli's political opponent, Gladstone. In 1847 Rothschild was elected to Parliament for the City of London. He was returned in 1849 and 1852, but could not take his seat until 1858, when the passage of the Jews' Disabilities Bill allowed him to forego the required Christian oath, which he had repeatedly rejected, insisting that he be sworn in on the Old Testament. Rothschild remained in Parliament until 1874. In addition to being a member of the Board of Deputies, Rothschild was president of the Great Synagogue for many years, and was on the council of the United Synagogue. With his uncle, Sir Moses Montefiore, he cooperated in various efforts to alleviate the unabatingly difficult situation of the Jews in Eastern Europe.

SIR ANTHONY DE ROTHSCHILD (b. London, 1810; d. Woolston, England, 1876) was the younger son of Nathan Mayer Rothschild. Although he was a member of the banking firm, he was not its leader, deferring to his older brother. Rothschild, who was made a baronet in 1846, was president of the Jews' Free School and of the United Synagogue. In 1858 he was Austrian consul general in London.

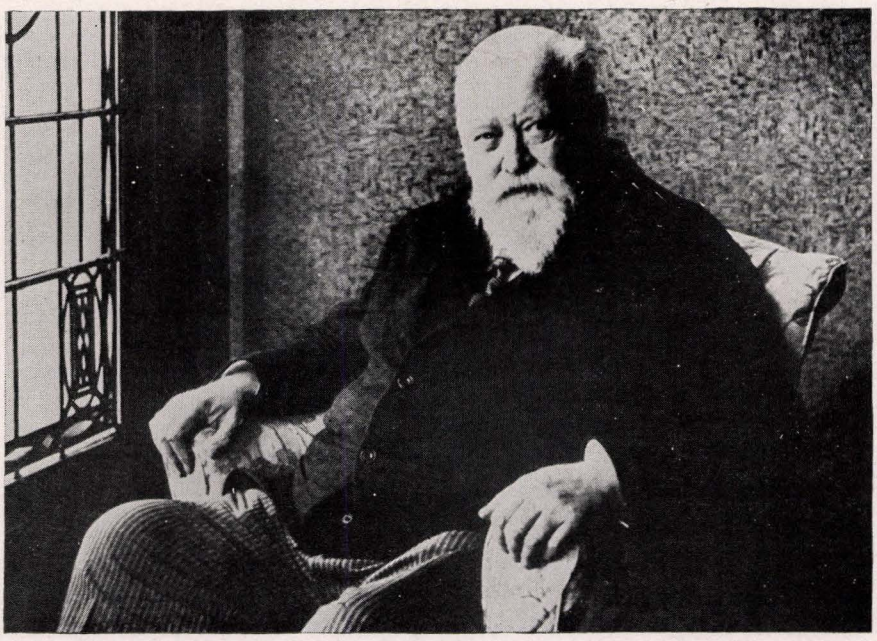
MAYER NATHAN DE ROTHSCHILD (b. London, 1818; d. London, 1874) was the youngest son of Nathan Mayer Rothschild. He was affiliated with the family banking firm, and was also known for his stud-farm and his prize-winning race horses. His daughter HANNAH ROTHSCHILD (b. 1851; d. 1890) married the Earl of Rosebery, at a ceremony attended by the Prince of Wales and the Duke of Cambridge. Lord Beaconsfield gave the bride away.

The Countess Rosebery remained devotedly attached to Judaism. She was a member of Central Synagogue of London, and continued to support Jewish charitable institutions as her mother did. She founded a club for Jewish working girls in Whitechapel. But most of her charitable work was done secretly. Notwithstanding her friendly relations with Disraeli, she joined her husband in supporting Gladstone and the Liberal Party. Gladstone thought a great deal of Lady Rosebery's political mind, as did Queen Victoria. Even Prince Otto von Bismarck and his eldest son, Count Herbert Bismarck, were great admirers of Lady Rosebery. Herbert Bismarck attended her funeral. By special request of Queen Victoria, a copy of the burial service, which was conducted in strict accordance with Jewish law, was sent to Windsor. Gladstone also took a copy of the service away with him.

At the death of Lionel Nathan Rothschild, his son NATHANIEL MAYER ROTHSCHILD (b. 1840; d. 1915), who became the first Lord Rothschild, took over the leadership of the English family. In 1876 he succeeded to the baronetcy of his uncle, Sir Anthony de Rothschild, and he was created a peer in 1885. From 1865 until 1885, when he entered the House of Lords, he was a member of the House of Commons. Rothschild was the first Jew to be raised to the peerage and consequently the first professing Jew to sit in the House of Lords. In his concern with Jewish affairs he went even further than his father. The elder Rothschild had collaborated in efforts to alleviate the persecution of the Jews in Russia, but had for twenty years represented the Russian government. Lord Rothschild, in protest against the Czarist treatment of the Jews, refused to arrange loans for Russia, despite the profit they would have brought to his banking house. Nor would he represent Roumania, for the same reason. Rothschild was president of the United Synagogue. Earlier he had favored Theodor Herzl's resettlement projects. Rothschild was a pioneer in providing modern housing, erecting model tenements in London's East End.

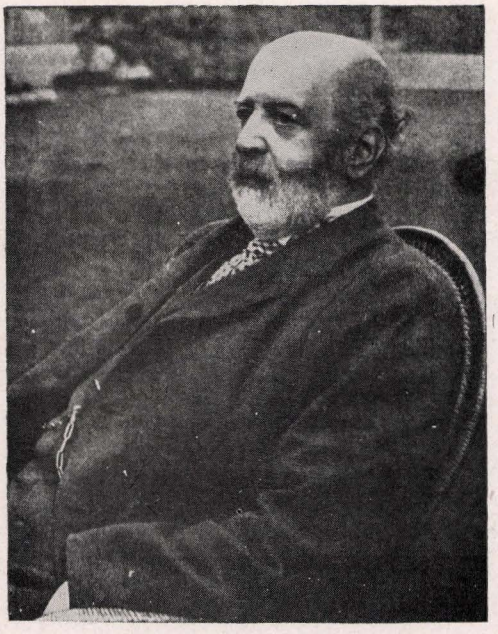
ALFRED CHARLES DE ROTHSCHILD (b. 1842; d. 1918) was a younger brother of Nathaniel Mayer Rothschild. He was the only Jew to serve as a director of the Bank of England, and also held directive posts in the National Gallery and other art museums. He was known to have been instrumental in keeping alive the British-German rapprochement that obtained before the outbreak of the first World War. Socially and politically (though not officially) he was a significant figure. During the early days of the first World War, when a timber shortage hampered the fortification of trenches and pits for the British Expeditionary Force, Rothschild turned over a magnificent beechwood forest he owned to the government for lumber.

LEOPOLD DE ROTHSCHILD (b. 1845; d. 1917), the youngest brother of Nathaniel Mayer Rothschild, was active both as a Jewish communal worker and as a sportsman.



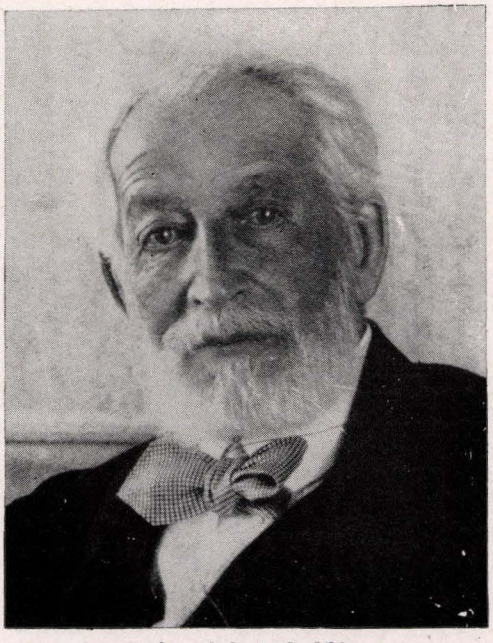
CONSTANCE ROTHSCHILD (b. 1843; d. 1931), the daughter of Sir Anthony de Rothschild, became Lady Battersea through her marriage (1877) to Cyril Flower, later Baron Battersea. She remained a member of the Jewish faith; together with her younger sister Annie, she had previously written the *History and Literature of the Israelites* (1869). Her later *Reminiscences* (1922) is not only a comprehensive source of Rothschildiana, but an informative commentary on the English political and social history of Lady Battersea's long lifetime. Lady Battersea was a founder of the Jewish Association for the Protection of Girls and Women, and was a leader in other social welfare and Jewish activities.

LIONEL WALTER ROTHSCHILD (b. 1868; d. Tring Park, Hertfordshire, 1937) was the son and heir of the first Lord Rothschild. He deserted banking for a life of science, and became known as a naturalist, and as the possessor of a rare collection of birds and butterflies. The contents of Lord Rothschild's bird museum in Tring Park, which had cost more than $1,000,000 to assemble and had taken him more than forty years, were bought by the American Museum of Natural History in 1932. It contained about 280,000 skins. His collection of butterflies and moths numbered 1,500,000 specimens; most of it went to the British Museum after his death.



Rothschild was joint editor of *Novitates Zoologicae,* published at Tring Park, and author of *Avifauna of Laysan,* which was issued in a limited edition of 300 copies, costing more than $100,000 to print. Rothschild was a member of the House of Commons from 1899 to 1910. He was vice-president of the Board of Deputies and of the Anglo-Jewish Association. The Balfour Declaration (1917), declaring that the British Government was in favor of the establishment of a Jewish national homeland in Palestine, was addressed to Lord Rothschild.

NATHANIEL CHARLES ROTHSCHILD (b. 1877; d. 1923) was the younger brother of Lord Rothschild. In addition to his banking interests, he held the chairmanship of the Alliance Insurance Company. Like his brother, he was interested in science, particularly in entomology.



On the death of the second Lord Rothschild, who was unmarried, the title passed to his nephew, NATHANIEL MAYER VICTOR ROTHSCHILD (b. 1910), the son of Nathaniel Charles Rothschild. The family interest in science was inherited by him; he worked in the field of biology, and was for a time a research fellow at Trinity College, Cambridge. He also wrote on bibliographical subjects. He was president of the Brit-

Lord Lionel Walter Rothschild

Lord Nathaniel Mayer Rothschild

ish Ort-Ose Committee and a member of the Committee for German Jewry.

Leopold de Rothschild left three sons. One, EVELYN ACHILLE ROTHSCHILD (b. 1886), was killed in Palestine in 1917, on active service with the British armies. LIONEL NATHAN DE ROTHSCHILD (b. 1882; d. London, 1942) was the eldest son of Leopold de Rothschild. He was a member of Parliament from Aylesbury division from 1910 to 1923. Rothschild was president of the United Synagogue for more than twenty years, treasurer of the Jewish Board of Guardians, and chairman of the League of British Jews, an anti-Zionist group. He was chairman of the Alliance Insurance Company. His brother, ANTHONY GUSTAV DE ROTHSCHILD (b. 1887), was president of the Jewish Orphanage and Jews' Free School. He served as a major during the first World War.

In 1942 the famous Rothschild home on Piccadilly was turned over to the military services of the United Nations, for use as a clubhouse for army and navy men.

In addition to the Rothschilds who were the direct descendants of Nathan Mayer Rothschild, several other representatives, heirs of Continental branches of the family, at various times settled in England.

One of these was FERDINAND JAMES DE ROTHSCHILD (b. Paris, 1839; d. Wallesden Manor, England, 1898), the son of Anselm von Rothschild. Like many of the Rothschild sons, he married a cousin—Evelina, a sister of the first Lord Rothschild. Rothschild was a member of the House of Commons from 1885, when he succeeded to the seat vacated by his brother-in-law's elevation to the peerage, until his death. Rothschild was an art collector, and left many of his best possessions, examples of medieval and Renaissance art, to the British Museum. He was also a lecturer and writer, and the author of *Personal Characters from French History* (1896). Rothschild was affiliated with Jewish religious and educational undertakings, and was treasurer of the Board of Guardians. Among his general philanthropies was the conversion of Waddesdon, in Buckinghamshire, into a "model village."

A son of Edmond de Rothschild of Paris, JAMES EDMOND ARMAND DE ROTHSCHILD (b. Paris, 1878), also settled in England. He served in the British Army, in France and Palestine, during the first World War. In 1929 he was elected to the House of Commons for the Isle of Ely, and was serving in 1943. He followed his father in specific Palestinian interests, was president of the Palestine Jewish Colonization Association (PICA —Edmond de Rothschild Fund), a director of other Palestine enterprises, and a governor of the Hebrew University. Rothschild was the author of *Shakespeare and His Day* (1906) and co-editor of *A Miscellany of Studies in Romance Languages* (1932).

The French branch of the Rothschild family was founded by JAMES MAYER DE ROTHSCHILD (b. Frankfort, 1792; d. Paris, 1868), when he established the firm of Rothschild Frères in Paris in 1812. At first the firm supported the Bourbons, and was thereby endangered during the revolt of 1830. But it survived, and Rothschild (who, with his brothers, had been made an Austrian baron in 1822) remained to negotiate important loans for the French government. In 1846 he received a concession to build the Chemin de Fer du Nord, which remained largely in the possession of the Rothschild family until 1940. Although Rothschild was a member of the generation of Rothschilds which had not yet managed to obtain a general education, he was a patron of Hebrew literature and a curio collector. He also used his influence to bring about the repeal of laws which were directed against the Jews. In 1852 he gave a hospital to the consistory of Paris, for use as an asylum for aged Jews. His wife, who was his cousin Betty von Rothschild (d. 1886), was also a benefactress of hospitals and the donor of an orphanage. She left a fund of 600,000 francs, to be devoted toward aiding poor laborers in paying their rent. During her lifetime she was a friend and sponsor of Heinrich Heine, whose financial advisor her husband had tried to be, without much success.

MAYER ALPHONSE JAMES DE ROTHSCHILD (b. Paris, 1827; d. 1905) was the son and heir of James Mayer de Rothschild. He was a director of the Chemin de Fer du Nord, and a member of the board of directors of the Banque de France. In 1871, after the defeat of France in the Franco-Prussian war, he assumed part of the guaranty for the war debt of 5,000,000,000 francs and thus made possible its prompt payment. Bismarck was annoyed by the patriotism of the French Rothschilds. Earlier in his career he had been treated warmly by the German-speaking branches of the family, and this pro-French attitude seemed to him to be a reversal. Rothschild became a member of the Paris consistory in 1851, and was its president for many years. He was known for his personal philanthropies and for his humanitarianism; with his brothers, he gave 10,000,000 francs (1904) for a housing project, and for other aid to low-income families. More than 600 paintings were given by him to various museums.

EDMOND JAMES DE ROTHSCHILD (b. Paris, 1845; d. Paris, 1934) was the younger brother of Mayer Alphonse James de Rothschild. Although he was a member of the Rothschild firm and eventually its head, and was also, by virtue of his longevity (he was the last surviving grandson of Mayer Amschel Rothschild), the head of the House of Rothschild, it was through his art collections and his philanthropy that Edmond de Rothschild was known. His private art collection was reputed to be the third largest in the world. He bequeathed about 20,000 engravings and 7,000 drawings to the Louvre. Among his general philanthropies was the establishment, in 1921, of the Edmond de Rothschild Foundation for scientific research, with an initial gift of 10,000,000 francs. In 1927 he gave an additional 30,000,000 francs to the Foundation.

In Jewish life, Edmond de Rothschild's name is identified with the development of the Palestinian wine industry and other Palestinian enterprises. He first became associated with the constructive effort of the Palestinian agricultural colonies in the 1880's, when he saved the young settlements from financial disaster. His subsequent assistance (after 1900 administered through the Jewish Colonization Association) totalled more than 70,000,000 gold francs. At first he was not a collaborator with political Zionism, and his aid, essentially a form of personal patronage, evoked displeasure as well as praise. But when it became clear that the colonies of Petach Tikvah, Rehovoth and Rishon Le Zion were thriving and modern communities largely as the result of his subsidies, Rothschild was recognized as the "father of the Yishub," and the attitude toward him changed to one of unalloyed veneration. In 1920 Rothschild supported a project to settle 25,000 Jewish war orphans from Eastern Galicia in Palestine. In 1929 he was made honorary president of the Jewish Agency Council. He made several trips to Palestine, the last one when he was almost eighty years old (1925). GUSTAV SAMUEL JAMES DE ROTHSCHILD, a brother of Mayer Alphonse James and Edmond James de Rothschild, tried, in 1853, to arrange for the transportation of Jews from Italy to the United States, where they might earn a livelihood more easily.

CHARLOTTE ROTHSCHILD (b. 1825; d. 1899), a sister of Mayer Alphonse de Rothschild and of Edmond de

Leonard de Rothschild

Gudule (Güttele), wife of Mayer Amschel Rothschild

Lady Louisa de Rothschild, mother of Lady Battersea

Hannah de Rothschild

Rothschild, married her cousin Nathaniel (b. 1812; d. 1870), the son of Nathan Mayer Rothschild of London. Their son was James Edouard de Rothschild (b. Paris, 1844; d. Paris, 1881). He married Thérèse von Rothschild (b. Frankfort, 1840; d. Paris, 1931), of Frankfort. They made their home in Paris, where Rothschild was a lawyer and writer. He was the author of *L'introduction aux mystères du Vieux Testament,* and the founder and president of several bibliographical societies, including La Société des Études Juives. His wife, the Baroness Thérèse, devoted her long widowhood to philanthropy, particularly to hospitals. She helped found the Rothschild Hospital in Paris and in Tangier, Morocco. During the first World War her hospitals at Berck-sur-Mer and at Gouvieux were turned over, under her direction, for the use of wounded soldiers. Her experiences were told in her *Souvenirs de la Grande Guerre* (1927).

Henri de Rothschild (b. Paris, 1872), son of James Edouard de Rothschild and Thérèse de Rothschild, was well-known both as physician and playwright. He received his medical degree in 1898. Subsequently he devoted himself particularly to infant welfare, writing a three-volume study on nursing, *Bibliographia Lactaria.* Rothschild was also editor of the *Revue d'Hygiène de la Pathologie Infantile,* and the donor of a fund for distributing free milk to children throughout France. He also established a free clinic in Paris, at which he was himself in attendance. One of his minor philanthropies was the distribution of free wine to the poor of Paris.

Rothschild's plays were written under the pseudonyms of André Pascal and Charles des Fontaines. Several of them were produced with great success in French and other languages, including *La Rampe* (1909); *La Caducée* (1921); *Le Moulin de la Galette* (1923); *Héritage* (1924); *La Vocation* (1926); *Circé* (1929); and *Grand Patron* (1931). In addition, he wrote essays and literary studies, and gave a large collection of autographs and letters to the Bibliothèque Nationale (1933). During the first World War, Rothschild turned over his house on the Faubourg St. Honoré for use as a club for officers, and after the end of the War it continued as the headquarters of the Cercle Interallié. With the surrender of France to Germany in 1940, much of Rothschild's property was confiscated. Together with all the members of the French Rothschild family, he was deprived of French citizenship and of all honors. Rothschild went to South America.

Edouard de Rothschild (b. 1868) was the son of Mayer Alphonse James de Rothschild. He was head of the French banking house, regent of the Banque de France and president of the administrative council of the Chemin de Fer du Nord. In 1940 his property was confiscated, and he came to the United States with his family. His daughter Jacqueline was married to Gregory Piatagorsky, concert cellist. His son, Guy de Rothschild, came to the United States in 1941.

Robert Philippe de Rothschild (b. 1880) was the son of Gustav Samuel James de Rothschild. He was president of the Paris Jewish Council and active in relief work in France, serving as president of the French Central Relief Committee. When he arrived in the United States in 1941 he continued his interest in relief and rehabilitation, and associated himself with the work of the ORT.

Of Edmond de Rothschild's two sons, one, James Edmond Rothschild, moved to England (see the English section). The other, Maurice Edmond de Rothschild (b. 1881), was a member of the French Senate. He was the author of *Voyage in Ethiopie* (3 vols., 1904-5). After the collapse of France in 1940 he went to Lisbon, then to Scotland.

Henri de Rothschild and the other members of the French family all had sons in the French Army. They —including those serving in the army—were nevertheless deprived of their citizenship and honors, and in some cases arrested. The bank was taken over by the government.

Amschel Mayer von Rothschild (b. Frankfort, 1773; d. Frankfort, 1855), the eldest son of Mayer Amschel Rothschild, took over the Frankfort house. During the Congress of Vienna (1814-15) Rothschild was influenced in obtaining the support of Metternich for Jewish rights. He was made a Bavarian consul in Frankfort in 1820, and was also court banker. Together with his brothers, he was ennobled in 1822. Rothschild was a collector of art and curios; in 1840, after the sequestration of numerous Spanish cloisters, he tried to obtain those documents which touched on Jewish history. Since he died childless, the sons of his brother Carl Mayer Rothschild followed him in the directorship of the Frankfort bank.

Carl Mayer Rothschild (b. Frankfort, 1788; d. Naples, Italy, 1855) was the founder of the Naples branch of the Rothschild firm. He was banker to Sicily, Sardinia, Naples, the Papal States, and Parma and Tuscany. In 1829 Rothschild was made consul general of Sicily in Frankfort. The Naples banking house was the least important of the branches, and was closed in 1861. Yet during the short period of its existence, it had offered a microcosmic view of the significance of Rothschild operations. The separate Italian states had been saved from financial difficulties, including the Papal State itself. One of the decorations won by Rothschild was bestowed on him by the Pope.

Mayer Carl de Rothschild (b. Naples, 1820; d. Frankfort, 1886), the eldest son of Carl Mayer Rothschild, took over the management of the Frankfort house, founded by his uncle, in 1855. He had been affiliated with it from 1842. He was elected to the North German Reichstag in 1867, and was appointed to the Prussian House of Lords in 1870. Here he was the only unbaptized member. It was evidently Rothschild who expressed his assurances to the American Consul in Frankfort during the Civil War that his—and most of the other banking interests owned by Jews—would not aid a slave-holding government. The house of Erlanger, which had taken over a Confederate loan, dared not offer it to the Frankfort Bourse, said Rothschild. Weakened hearing forced Rothschild's retirement from public life in 1876; after this he devoted himself entirely to his art collections.

His younger brother, Wilhelm Carl de Rothschild (b. Naples, 1828; d. Frankfort, 1901), succeeded to the supervision of the Frankfort house in 1886, although he had been associated with his brother in its directorship from 1855. He was very Orthodox and, outside of his philanthropies, devoted himself mainly to study of the Talmud. Neither of the brothers left sons, and the Frankfort house was closed after the death of Wilhelm Carl de Rothschild.

The Vienna Rothschild firm was established by Salomon Mayer von Rothschild (b. Frankfort, 1774; d. Paris, 1855). He moved to Vienna in 1816, and subsequently was identified with the most important financing enterprises of the Austrian Empire, assisting Metternich in overcoming numerous financial crisis. Rothschild's own travels, and the family letters, made him a valuable informant to Metternich in European politics. Rothschild backed the Kaiser Ferdinand Nordbahn in 1836, and aided in the development of the Witkowitz salt mines and the Dalmatian asphalt lake. Various government loans were also floated through his firm. Rothschild's importance to the state won him the honorary freedom of Vienna, before Jews were granted citizenship rights, and later of Brünn, which he had made the terminus of a railroad line from Vienna, but he also won Metternich to the support of

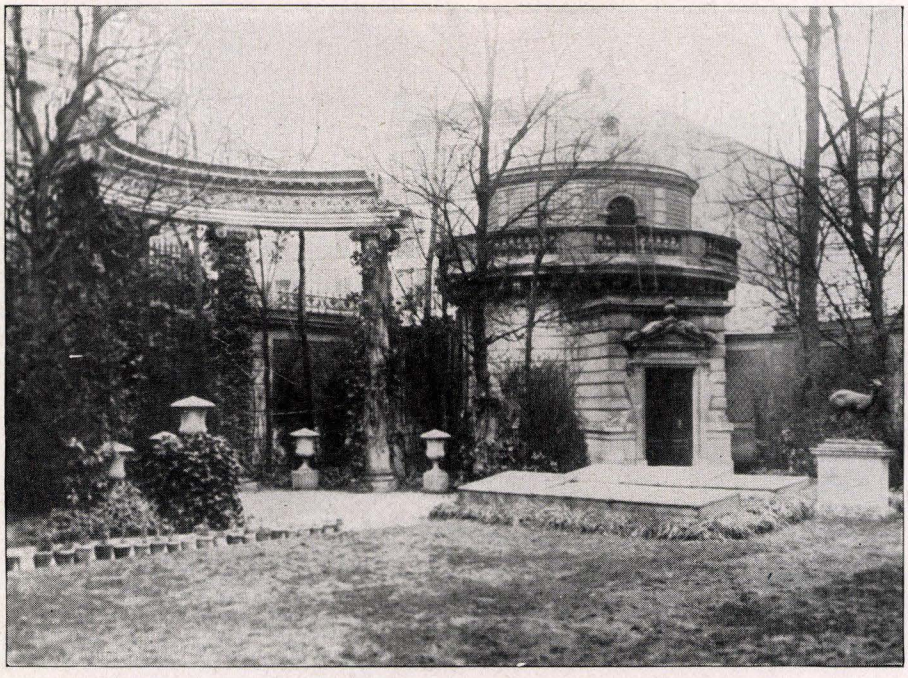
Jewish efforts to obtain rights outside of Austria. In 1833, for instance, Metternich's intervention prevented the establishment of a ghetto in the Papal States. Rothschild established a substantial fund to enable the sons of Viennese citizens to be educated in the Vienna Polytechnic Institute, and for Brünn he provided a special welfare fund and hospital.

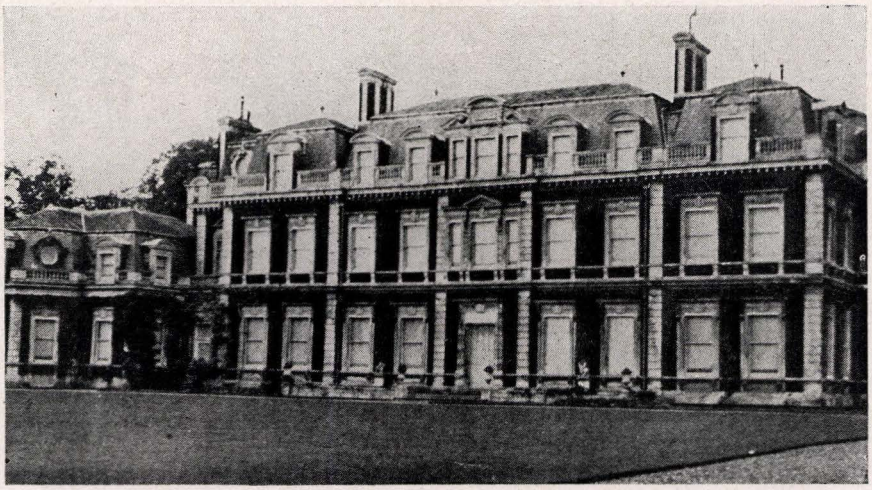
ANSELM VON ROTHSCHILD (b. Frankfort, 1803; d. Ober-Döbling, near Vienna, 1874) was the only son and heir of Salomon Mayer von Rothschild. He received his banking training in various cities, was associated with the Frankfort Rothschild firm from 1848 to 1855, and then took over the management of the Vienna house. Rothschild was appointed to the Austrian House of Lords in 1861, under a life appointment. Among his Jewish philanthropies was the establishment of a Jewish hospital in Vienna in 1869. Like most of the Rothschilds, he was an art collector.

ALBERT ANSELM SALOMON VON ROTHSCHILD (b. Vienna, 1844; d. Vienna, 1911), the youngest son of Anselm von Rothschild, followed his father the directorship of the Vienna firm in 1874. He built a hospital in memory of his wife, Bettina (b. 1858; d. 1892), the daughter of James de Rothschild of Paris, and also aided Jewish orphan asylums and cultural undertakings in Vienna.



ALPHONSE DE ROTHSCHILD (b. Vienna, 1878; d. Bar Harbor, Me., 1942), son of Albert Anselm Salomon von Rothschild, was head of the Vienna firm until its confiscation in 1938 by the Nazi invaders. The various economic upsets that shook Central Europe after the depression of 1929 had eaten deeply into the Rothschild resources even before 1938, and the scale of living of the family had been cut down. Alphonse de Rothschild came to the United States in 1940.

LOUIS DE ROTHSCHILD (b. 1882), the younger brother of Alphonse de Rothschild, was the most acute sufferer from the upheavals which culminated in the Nazi invasion of Austria. He was president of the Kreditanstalt, which went bankrupt in 1931. Both he and his brother Alphonse ceded much of their property to the government as payment. But Louis de Rothschild was arrested when the Nazis entered Vienna, and was held prisoner in the Hotel Metropole for more than a year. Reports indicated that the Nazis exacted a ransom of more than $20,000,000 from the Rothschild family for his release, but these were never verified. Subsequently Rothschild came to the United States.



Alfred de Rothschild

EUGENE DANIEL DE ROTHSCHILD (b. 1884) was the third surviving son of Albert Anselm Salomon von Rothschild. He attracted a great deal of attention in 1937, when Edward VIII of England, after his abdication and the assumption of the title of the Duke of

The erstwhile Parisian mansion and art gallery of the Baroness Salomon de Rothschild, which was presented to the French nation (many years before the Nazi invasion) for conversion into a playground for children

The Rothschild Mansion at Tring Park, London, which was presented to the British government during the second World War

Windsor, spent several months in Enzesfeld Castle, the Rothschild estate, in Austria, leaving there only when he and Wallis Warfield Simpson could marry, her divorce having become final.

Eugene de Rothschild also lost his fortune to the Nazis, and came to the United States in 1940. His marriage to the former Katherine Wolff of Philadelphia (1925) brought into the Rothschild history the first Christian bride. The Rothschild daughters had married Christians, but in some instances had themselves remained Jewish. Lord Nathaniel Mayer Victor Rothschild, the head of the English house of Rothschild in 1943, had married (1933) Barbara Hutchinson, who became Jewish prior to the marriage.

With only the members of the British house of Rothschild secure in their homes and positions in 1943, the saga of the family seems to have turned toward the inevitable reorganization which the whole social structure of the world must undergo in the 20th cent. The importance of the Rothschilds in stabilizing the European world during the 19th cent. touched on the financial and governmental network that bound the Continent together.

They remained essentially a European family, refusing to invest in American enterprises. This European point of view may have been only another aspect of their family steadfastness, and their family steadfastness was one of the strongest elements in their power. Until 1914, when the family was divided by the first World War, they had remained at one another's service in whatever enterprise any one of them undertook. Occasionally the lack of foresight of one branch was turned to the experience of the other; this happened, for instance, in the case of railroads. In England, where railroads first developed, the family was too skeptical of their success to invest in their construction. But having seen their success in England, the English branch communicated the suggestion to the Rothschilds on the Continent, and the Rothschild financing of the Chemin de Fer du Nord and of the Kaiser Ferdinand Nordbahn was the result.

Even those objective students of the Rothschild finances who approach the subject with an unfriendly attitude can not deny the moral basis that served as the foundation for their transactions. The Rothschilds were, without exception, anxious to avert wars. Their profits, the profits that built their fortune for them, were the perquisites of enterprise and courage, and not of shady dealings. They came to the fore at a time when a continent was being formed out of swift events; more than once, in the series of revolutions that exploded in the various countries where they lived, they were in danger of being destroyed. A Napoleonic victory would have left the British Rothschilds broken, but then, as in later events, the family interests were staked on the more vital of the opposing forces, and therefore survived victoriously.

The family integrity, displayed to an amazing degree in a series of interrelated marriages (Rothschilds married Rothschilds whenever possible, until the 20th cent.), was also expressed in the persistent affiliation with Jewish life. Until after the end of the first World War, the head of the

"Rothschild Row" (148 Piccadilly, at left), London

James de Rothschild

British house of Rothschild was always assumed to be the lay leader of British Jewry, which accounted for the fact that the Balfour Declaration of 1917 was addressed to Lord Rothschild. The family continued to play some part in the Jewish life of their respective countries of domicile, and in 1943 was still doing so in England. The days when a Rothschild could, by his refusal to take the Christian oath on the three successive occasions when he was elected to Parliament, become the symbol of the finally successful struggle against Jewish disabilities in England, had passed with the various other spectacular possibilities of the 19th cent. The grandeur of Edmond de Rothschild, and the monument he left of a thriving wine-industry in Palestine, were also part of an era that had come to an end. But some member of the family was always associated with Jewish life, in almost every country where they lived.

With the waning of the power of individual wealth inaugurated by the beginning of the second World War, the Rothschild family, as a group of financiers, must necessarily approach a turning point that may lead to the disintegration of the body, with whatever aspects of entirety it still retained in the 20th cent. Separately, its members were prominent in as many fields as modern life provides: finance, sport, art, literature, science, society. Not always was the original Rothschild piety apparent in everything every member of the Rothschild family did. On the other hand, some members of the family, like Lionel Walter, in science, and Henri, in medicine and literature, brought new accomplishments into the family history. The time when a Rothschild could bring to the British government the first notification of a military victory in France, or consult with an Austrian minister about the succession in Spain, is gone, not only for the Rothschilds, but for any representative of a private financial dynasty. Genius that was devoted to the accumulation of wealth, through daring and foresight, must, in its transmuted form, find creative fulfillment in other spheres.

NATHAN RICARDO.

L., in *Menorah Journal,* vol. 11 (1925) 347-60; Cohen, Lucy, *Lady de Rothschild and her Daughters* (1935); *Publications of the American Jewish Historical Society,* No. 29 (1925) 125; *ibid.,* No. 27 (1920) 512.

ROTHSCHILD, ALONZO, author, b. New York city, 1862; d. East Foxboro, Mass., 1915. After a period of study at the College of the City of New York, followed by several years of newspaper experience, he went into the jewelry business.

He founded the publication *Jewelers' Weekly,* and made it one of the pioneer class trade magazines. An exposé in the paper of malpractice in pawnbroking was largely responsible for the enactment of a New York law forbidding a pawnbroker to accept a pledge from anyone under the age of sixteen. Later Rothschild became one of the founders of the Good Government movement (Goo-Goos), and prominent in the Society for Ethical Culture.

After six years of publishing his trade journal, Rothschild was able to retire with enough money to live on. At twenty-eight he once again took up his studies, this time at Harvard as a special student for a year. He then moved to East Foxboro, where for the remainder of his life he devoted himself to literary work, which was mainly the study of the life of Abraham Lincoln. He planned a cycle of books dealing with Lincoln's character. The first of these, *Lincoln, Master of Men,* was published in 1906. He died before he could finish the second, *Honest Abe,* which appeared posthumously in 1917.

Rothschild was vice-president of the Lincoln Fellowship, director of the Free Religious Association, and a member of the Anti-Imperialist League and the Massachusetts Peace Society. He was also active in the civic affairs of East Foxboro.

Lit.: Rothschild, John, memoir of Alonzo Rothschild, in *Honest Abe* (1917) 285-306.

ROTHSCHILD, MARCUS ADOLPHUS, physician, b. Woodville, Miss., 1887; d. New York city, 1936. He received his medical degree from Columbia University (1911), and later continued his studies in Germany and England.

He began a life-long association with Mt. Sinai Hospital when he entered there as interne; later he was appointed associate physician (1925) and cardiographer. He was also on the staff of Beth Israel Hospital, and at the time of his death president of its medical board. In addition, he was clinical professor of medicine at New York University and Bellevue Hospital Medical College.

In the field of internal medicine, Rothschild was especially interested in cardiac disorders, coronary artery disease, and rheumatic fever. His pioneer work advanced the science of cardiology. With Dr. Milton Kissin, he was the first to study the effect of anoxemia (condition of deficient aeration of the blood) on the electrocardiogram. He showed that it was possible to reproduce the pain of angina pectoris by inducing general anoxemia. He demonstrated that in the absence of other signs, the electrocardiographic signs can serve to establish the presence of cardiac invasion. Other studies dealt with metabolism, arthritis, adrenal glands, and the physiology of the heart.

Active in medical circles, Rothschild was, at the time of his death, president-elect of the New York County Medical Society; in 1935 he had first been appointed president of that body to fill a vacancy. He was also a director of the American Jewish Physicians Committee and on the executive committee of the Health Service for Jews. The Marcus A. Rothschild Memorial Laboratory at the Medical College of The Hebrew University, Jerusalem, was named for him, in recognition of his services to the university.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939).

ROTHSCHILD, WALTER NATHAN, business executive, b. New York city, 1892. His father, Simon F. Rothschild, became president of Abraham & Straus Inc., department store of Brooklyn, N. Y., in 1925. The younger Rothschild joined the firm in 1913; by 1929 he was vice-president and general manager, and in 1937 he became president. He was likewise a director of other leading mercantile concerns, and active in associations of merchandisers. As a leading citizen of Brooklyn he was in 1941 that borough's chairman of

the Greater New York Fund of the Welfare Council; he had served as a director of the Council from 1930 on. He served also as an executive member in the councils of the Boy Scouts of America and Girl Scouts, Inc. In Jewish philanthropy, Rothschild became a trustee of the Federation for the Support of Jewish Philanthropic Societies of New York City and vice-president and director of the Brooklyn Federation of Jewish Charities (1929). In 1937 he headed the joint campaign of these organizations.

ROTHWELL, WALTER HENRY, conductor, b. London, 1872; d. Santa Monica, Cal., 1927. After studying at the Vienna Conservatory with Bruckner and Epstein, and at Munich with Thuille, he toured Germany and Austria as concert pianist. In 1895 Mahler appointed him assistant conductor at the Hamburg Opera. In 1903 to 1904 Rothwell was first conductor of German opera at the Amsterdam Opera.

In 1904 he was brought to the United States by William Savage to direct *Parsifal* (in English). Until 1908 Rothwell remained principal conductor of the Savage Opera Company. The American première of Puccini's *Madame Butterfly* was directed by him in 1906. From 1908 to 1914 Rothwell was conductor of the St. Paul Symphony Orchestra. In 1921 he organized the Los Angeles Philharmonic, which he directed successfully until his death.

ROTTENSTREICH, FISHEL, Zionist leader and Polish deputy, b. Galicia, 1875; d. Jerusalem, 1938. Attending a Galician high school and university, he studied economics and general sciences and received the Ph.D. degree. He then obtained a position as professor in the Gymnasium at Sambor, East Galicia. After several years of teaching he devoted himself to the merchandising of wheat products, with substantial financial success. At the same time he studied the cooperative movement, becoming an expert in this field. He wrote numerous articles on this subject, as well as on general economics.

Actively engaged in Zionism and in other Jewish social movements, Rottenstreich was elected (1922) by the Jews of Galicia a member of the Polish Senate, where he served for four years with distinction. In 1926 he was elected a member of the Polish Sejm (parliament), and was chosen by all the Jewish members of the Sejm as chairman of their club (Kolo). During his residence in Warsaw (1922-31) he figured prominently in many national and local Jewish movements, distinguishing himself as a leader of integrity and executive ability. In 1931 he was elected a delegate to the World Zionist Congress in Basel, where he was chosen a member of the executive of the Jewish Agency. In Jerusalem the Jewish Agency appointed him head of the commercial and industrial department; he served in that capacity until his death.

ROUKHOMOVSKY, ISRAEL, engraver and chaser, b. Mosyr, Russia, 1866; d. Paris, 1934. Destined by his father for the rabbinate, he taught himself the art of engraving and produced in his native city several works of goldsmithery, chiefly of sacral character, until he moved to Odessa, where he made further studies.

On assignment he produced the *Tiara of Saitapharnes,* a marvelous piece of miniature work in silver; his employer, a dealer in antiquities, sold it as a genuine piece of ancient art to the Louvre Museum for 200,000 francs ($40,000). While some scholars claimed that the work was genuine, others, among them Salomon Reinach, asserted that it was a falsification. The dealer, imprisoned for a number of falsifications, admitted his guilt. When a friend of Roukhomovsky learned of the scandal, he notified the French minister of education, who sent for the artist; Roukhomovsky, whose innocence was soon established, repeated part of his work before a commission in order to prove his authorship.

Roukhomovsky settled in Paris, where he produced many Jewish ceremonial objects, such as Torah shields, pointers and crowns as well as amulets ("Shaddais"). A golden skeleton, resting on a silver sarcophagus, barely the length of a finger, and consisting of 167 parts, won a gold medal at the Paris Salon des Artistes Français. Another notable work of his was a silver plaque, dedicated by the organization Mevaseret Zion to Max Nordau after the attempt on his life.

His two sons, Jacob and Salomon, were also gifted artists.

ROUMANIA. 1. From the Earliest Settlements to 1848. For over a century the historians of southeastern Europe have been debating as to the exact time when the Roumanian people settled in the territory which it occupied in the 20th cent. This problem in many ways is likened to the question of the earliest settlement of the Jews in Roumania. There are contradictory theories as to the region where the Roumanian people came into existence. Dacia (what is known as Roumania today) was conquered by the Roman Emperor Trajan in 107 and abandoned by Emperor Aurelius in 274. During the 167 years of Roman domination, government officials delegated by Rome, merchants and legionaries settled in Dacia and mixed with the native population. Most of the Roumanians believe—it is what they have been told for a long time—that they are the direct descendants of men of the Latin race who were sent from Italy to Dacia as colonists after the conquest of the latter country. However, even Constantin Greceanu, a historian of nationalist tendencies, in *Istoria Romanilor* (The History of the Roumanians; 1936-40, vol. 1, p. 187), says: "The colonists who were brought to Dacia by Rome were not of Roman blood, but Thracians, Illyrians, Pannonians, people of the East who spoke Latin which, from the racial point of view, is an altogether different matter."

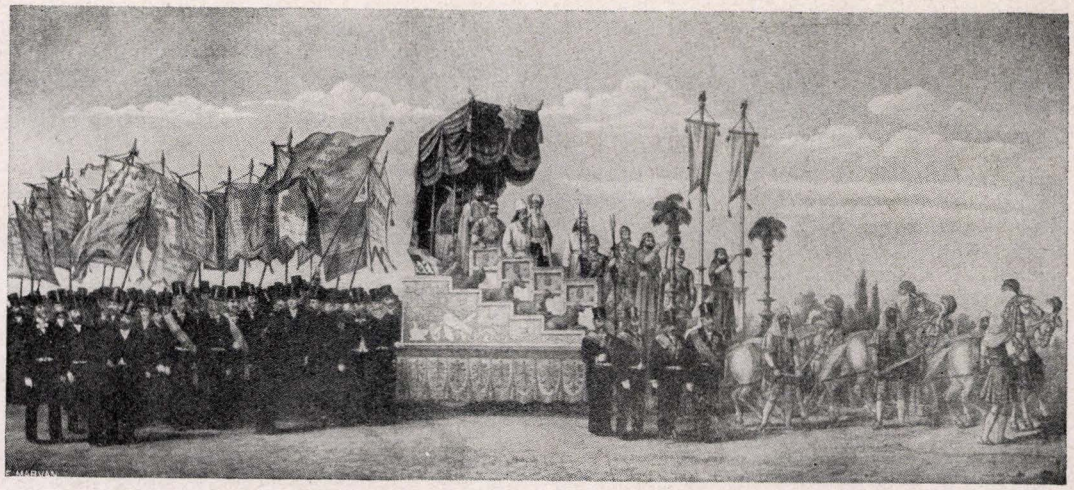
It is generally admitted nowadays that the Slavs, who from the point of view of racial nobility were not considered the equals of the Latins, to a very large extent influenced the formation of the Roumanian people and language. Greceanu (*ibid.,* vol. 1, p. 252) quotes the opinion of the Roumanian historian Ion Bogdan that what is known as the Roumanian people today came into being only after having been thoroughly intermingled with persons of Slavic blood, and that the influence of the Slavs penetrated into the race, language, social and state structure, church and culture of the Roumanian people. For a long time, it was a point of contention whether the Latinized population of Dacia stayed behind when the Roman armies were withdrawn to the right bank of the Danube (what is today the Balkans). What is known with certainty is that, following the retreat of 274, numerous barbaric peoples invaded and conquered Dacia: Goths, Huns, Petchenegs, Cumanians, Slavs, Bulgars and others, and that not until a thousand years later was the name "vlah," the equivalent of "Roumanian," found in a document of 1247. And not until toward the middle of the 14th cent. did the two main Roumanian principalities, Wallachia and Moldavia, come into existence.

This mystery of a thousand years without recorded history was made a subject of ardent debate between Hungarians and Roumanians in their claim for Transylvania. The Roumanians contend that the Latinized Dacians remained in Transylvania from 274 on without interruption, and that they were therefore settled in the country when the Hun-

garians came thither about 1000 C.E. This is the historical foundation of the Roumanians' claim to Transylvania. On the other hand, the Hungarian historians (Olay, F., *Un nationalisme exaspéré dans le Sud-Est de l'Europe,* 1935; Zarek, O., *The History of the Hungarians*) affirm that the Roumanian people came into being in the Balkans, and that they did not come to what is known as Roumania today until the 13th cent., almost three centuries after the arrival of the Magyars.

The Jews of Roumania were also the subject of debate as to the number of centuries during which they have been settled on Roumanian soil. The Roumanian historians, all of them biased against the Jews, contend that the masses of the Jews in Roumania, especially in Moldavia, "invaded" the country in the period from the late 18th cent. to 1860. Irrefutable documents, however, point to the fact that Jews were living in Roumania in very ancient times. There were Jews in present-day Roumania even before the conquest of Dacia by Trajan, and there certainly were some during the Roman period, it being an established fact that Jews were present in every settlement of the Roman empire. According to Bluntschli, "the Judeo-Dacian families lived side by side with the autochthonous elements." When Wallachia and Moldavia, the two principalities which, under the name of Roumania, were united in 1859, first appeared in history in the 14th cent., they had Jews living on their soil.

According to the *Encyclopaedia Britannica* (edition of 1919-20), "Wallachia (known as Muntenia) and Moldavia were occupied by a mixed population composed partly of Vlachs, but mainly of Slavs and Tartars with an admixture of Petchenegs and Cumans." Necessarily, there were also Jews, for Roumania extends along the main commercial highway connecting Poland and the north with Turkey, and because especially Moldavia was adjacent to countries where Jews lived in great numbers. According to the testimony of numerous documents, during the 15th and 16th centuries the Wallachian and Moldavian princes were constantly in touch with Jews. One of these documents reports a massacre of the Jews (and Turks) at Bucharest in 1594 by Michael the Brave, and recounts that a similar action was ordered in the same year at Jassy by Aron Voda (prince). The codes of Matei Basarab in Wallachia (1640) and of Vasile Lupu in Moldavia (1657) contain numerous regulations concerning the Jews.

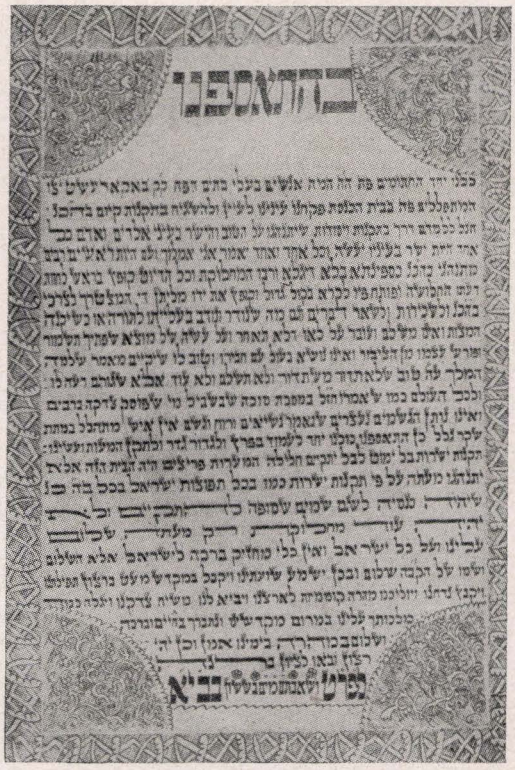


Even Nicolae Iorga, a violent anti-Semite, in his *Istoria Evreilor in Romania* (A History of the Jews in Roumania; 1912), has to admit the presence of Jews in Roumania in the late 17th and early 18th centuries. He mentions a Jewish synagogue and cemetery at Jassy in 1678, and records the blood accusation, in 1726, in the village of Onitzcani (Neamtz county), "by which certain boyars and the Prince profited to extort money from them (the Jews)." The Moldavian Prince Dimitrie Cantemir says (*Descrierea Moldovei* [The Description of Moldavia]): "In the 17th cent. the Jews had the right of building synagogues with wood, but not with stone."

From the second half of the 17th cent. on, lawfully constituted Jewish communities, recognized by the princes, came into being. The communities were under the spiritual jurisdiction of a Hahambasha (chief rabbi) and under the secular supervision of so-called Starostes who were responsible to the voivod (prince) for the taxes due from the Jews. The chrysobull (voivodal decree) of Prince Grigori Ghica of 1717 confirms the election of a Hahambasha in the following terms: ". . . We name Marco Bash-Haham over the Jews in Jassy as well as in the towns and villages of the principality such as were the preceding Hahambashas now dead and who were confirmed by chrysobulls issued by the Princes, our predecessors." A decree of Stefan Mihail Racovitza, Prince of Wallachia, of May, 1764, notifies "the Staroste of the Jews in Bucharest and other towns as well as all Jewish notables and all the Jewish population (of Wallachia)" that he has named as Hahambasha "Isaac Haham, son of Bitzal Haham," and that they (the Staroste) should act and proceed "according to the ancient customs." The decree of 1717, mentioning the decrees issued by the predecessors, which therefore should be not later than the 17th cent., and that of 1764 which refers to the ancient customs of the Jews are proofs, among many others, of the early settlement of Jews in the Moldovo-Wallachian territories. One must not dismiss without further ado the fact that the two principalities, founded about the middle of the 14th cent. (Moldavia in 1353), were not consolidated until some time in the 15th cent., and that the establishment of the Jews in the country, as far as the point of time is concerned, is almost identical with the coming into existence of the Roumanian states. The fact of there being Jewish communities organized on the basis of the gabella (meat tax) and cemeteries testifies to the presence of Jews there in large numbers. In the cemetery of Jassy there are tombstones of the year 1722 and before.

For anti-Jewish reasons the Roumanian historians show the situation in a very different light. Without taking pains to base their statements upon any actual proofs (as, for instance, Iorga in his quoted work), but by grouping facts and figures which they interpret in an arbitrary manner (Verax [Radu Rossetti], *La Roumanie et les Juifs,* 1903), they affirm that the Jews who lived in Roumania in the 20th cent. were not the descendants of those who lived there in the 15th, 16th and 17th centuries, but of those who "invaded" the Roumanian territories in the period mentioned, from the late 18th cent. until about 1860.

Roumanian anti-Semitism in modern times always was directed from the top. The successive governments adopted it as part of their policies; it was advocated by the upper middle classes, by a notable part of the intellectuals and by the college students. The Roumanian peasants, who constituted 80 per cent of the population of Roumania prior to 1914 and 75 per cent after the first World War, had nothing to gain from anti-Semitism. The only regions where peasants manifested anti-Semitism were those where they were promised exemption from taxes and the distribution of Jewish wealth among them. Nor did workmen, of whom there were few, show any prejudice against the Jews. Reasons for the governments' making anti-Semitism part of their policies and a perpetual means of diversion may be found in the social, economic and political conditions of Roumania. The two principalities, as mentioned before, were founded in the 14th cent. From the beginnings of their existence down to 1880 the principalities never enjoyed independence, except in matters of internal administration. They were also free to develop their own institutions, but they were always dependent upon or under the protection of outside powers: Hungary, Poland, Austria, Russia and Turkey; the latter power lorded it over them from the 15th cent. to 1879. Foreign influences always played a very great part in Roumanian life, and they were not limited to politics. Culture, all through the centuries down to the beginning of the 19th, was foreign; at first Slavic, next Greek, and latterly French. Not until the 19th cent., with the awakening of national feeling and consciousness, did the Roumanian language and literature begin to develop; "up to 1880," according to G. Ibraileanu (*Spiritul critic in cultura Romana,* 1922), "a Roumanian literature worthy of criticism did not exist."



The two principalities were also very backward in their economic and social system. The voivods, as the princes

were called, wielded absolute power and misused it. The boyars, in their turn, misused their privileged situation to oppress the peasants as much as possible. T. W. Ryker (*The Making of Roumania,* 1931) quotes the British consul general Wilkinson on the state of affairs in the two principalities in the early 19th cent.: "There does not perhaps exist a people laboring under a greater degree of oppression from the effect of despotic power and more heavily burdened with impositions and taxes than the peasants of Moldavia and Wallachia, nor any who would bear half their weight with the same patience and seeming resignation. Accustomed to that state of servitude which to others may appear intolerable, they are unable to form hopes for the future, for a better condition."

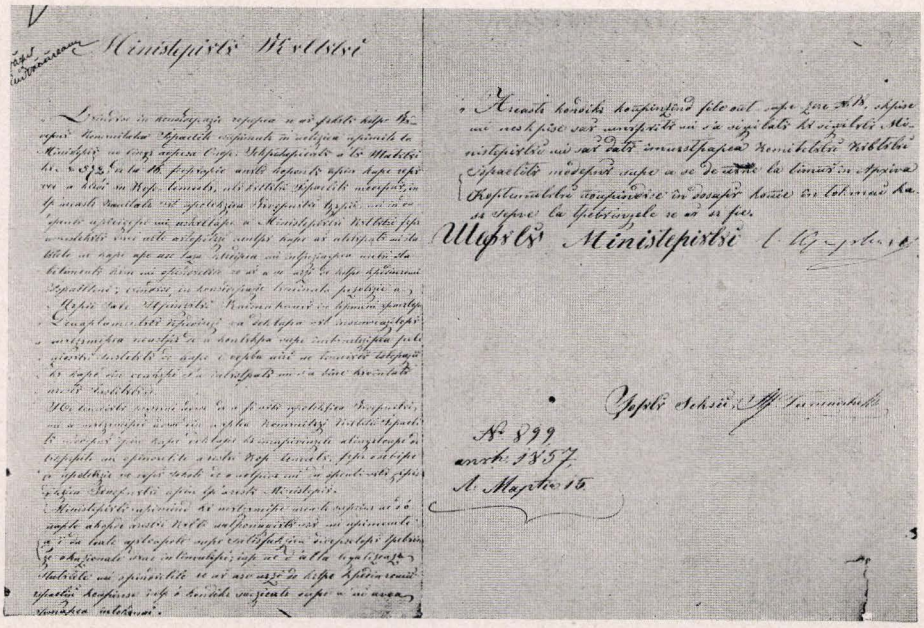
This state of affairs with some, not very extensive, improvements, prevailed throughout the 19th and the first decades of the 20th cent. The two principalities, very rich countries, which were referred to by the Turks as the "gardens of Stambul," had an utterly poor peasantry which labored under excessive oppression. But the agrarian problem was not the only one. The Treaty of Adrianople (1829), proclaiming freedom of shipping on the Danube and freedom

for all countries to trade with Moldavia and Wallachia (up to that time commerce with the two principalities was the monopoly of Turkey), opened up a new era.

Moreover it had far reaching consequences also from the Jewish point of view. The two feudal countries, as they entered European economic and political interchange, had to solve numerous problems of adjustment. Everything was still in a medieval state —economy, instruction, public life—and all had to be reformed as soon as possible in a frantic effort at adaptation to Western European civilization. Indeed, from the second half of the 19th cent. on, Roumania made remarkable progress in general. But many of the bad social and economic conditions with which she had entered contemporary life still subsisted: the absolute power of those governing, the serfdom of the peasants, graft in the administration, and widespread discontent. As in czarist Russia, and for almost identical reasons, the ruling classes constantly felt the need for a diversion, which they sought in blaming the Jews. No heed was given to the fact that at a time when, as Iorga states, everything was changing: housing, clothing, implementation, and when everything had to be created, from the late 18th throughout the first half of the 19th cent. the Jews had played in many fields, especially in that of economy, a truly creative role. Iorga had to admit that they were artisans; that "those who settled in the towns were selling things of prime necessity to the peasants: spun cotton, iron, rice, ropes, salt, tobacco, earthenware, boots," and that they had also founded numerous small industries necessitated by the economic development of the period. At the same time, in contradiction to his own pet theory and that of the other Roumanian historians that there were hardly any Jews in Roumania before the "great invasion," which took place from the end of the 18th cent. to 1860, he has to record the existence of important Jewish communities in 1740 at Galatz, Bacau, Berlad and Roman.

All the documents extant from the period prove the main argument of anti-Semitic Roumanian propaganda, the "invasion," to be false. The historical facts are entirely different. Towards the middle of the 18th cent. the two Roumanian principalities were thinly populated. Due to oppression, the Roumanian peasants had fled in masses, and the boyars derived inadequate returns from their vast lands. Thus they felt impelled to entice peasants from other countries to settle in the principalities, and later, toward the end of the 18th and in the first half of the 19th cent., they called also persons belonging to other classes, i.e., merchants and tradesmen. In that period they called, among others, also Jews from Poland and Russia so that they should found towns and give an impulse to commerce.

Jews followed the call in large numbers. In order to attract Jews en masse, the boyars secured from the princes hrisovs (decrees) which gave the Jews certain privileges: exemption from taxes for several years, and free land for their synagogues, schools, baths and cemeteries. The Jews who were thus inveigled into settling in Roumania were called *hrisovelitzi,* after the hrisovs. "That is," says Iorga, "the classical epoch (the beginning and middle of the 19th cent.) when upon the lands of the boyars, who had fallen a prey to the luxury and comforts of the West, a large number of Jews settled who were called to found towns of an entirely Jewish character." He accuses Prince Mihail Sturdza (1843-48) of having lived on money supplied by the Jews so that they might continue to immigrate into the country and found new towns; he sharply criticizes this policy of Jewish colonization of the boyars. The fact, however, remains, proved by the hrisovs published.

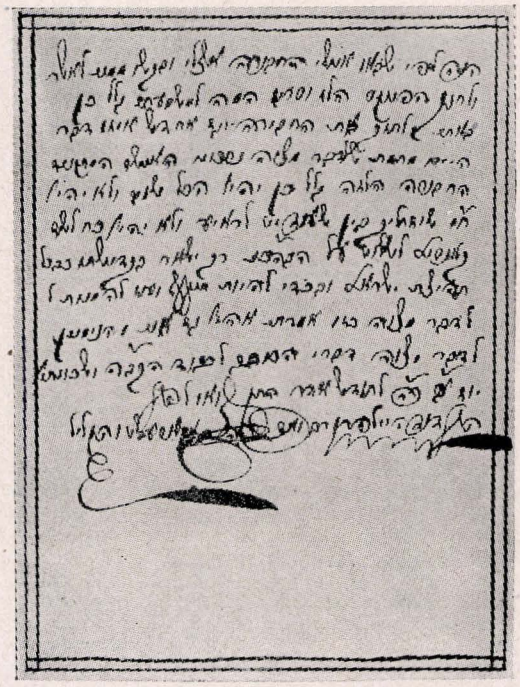


The town of Falticeni, in Northern Moldavia, was founded in 1798 by Jews who had been called by princely hrisovs. The same thing, at the same time, happened with part of the town of Focshani. Over sixty-three towns and villages were founded in Moldavia under identical conditions, and by developing the commerce and the trades, they contributed greatly to the progress of the country. In an excellent essay based on documents Elias Schwarzfeld explained the historical circumstances under which the little Jewish towns of Moldavia came into being. He also published the texts of the hrisovs which induced the Jews to settle in the principality. One of the oldest hrisovs among those discovered up to 1942 dates from 1612. It was issued by the Moldavian Prince Stefan Tomsha, and invites merchants of Poland, whatever their religion, nationality or language, to settle in his territories. The major part of those hrisovs, which had in view the founding of towns and villages by Jews, were issued between 1780 and 1850. The hrisovelit immigrational movement slackened off about 1850 and stopped in 1860.

Another movement of Jewish immigration, not based on hrisovs, took place after the Treaty of Adrianople. The two principalities were then in urgent need of more craftsmen, new industries and new capital, for there was little money circulating within their borders. This state of affairs attracted Jews from the neighboring countries, also a number of Christian foreigners.

At this point the attempt may well be made to give a more accurate picture, from the historical point of view, of the Jewish population in Roumania after 1860, when immigration had ceased. There were three groups. The first consisted of Jews who had been living in the country for centuries. The communities formed by them were recognized by the ruling princes and by the authorities, at Bucharest in Wallachia, and at Jassy, Botoshani, Galatz, Berlad, Bacau, Roman and other old settlements in Moldavia. They were an integral part of the nation. The historian Brociner shows that up to the 19th cent. all laws or official documents referring to ovrei (Hebrews) or breasla ovreiasca (the Hebrew community), denoted an indigenous element of the population distinct from the rest only in regard to its religious belief. This first group of Jews therefore were, politically, subjects of Wallachia and Moldavia. The second group was that of the hrisovelits, and the third that of the Jews who came on their own initiative.

The proportionate size of these distinct groups is not known. The indigenous Jews who were called by their first names and the first names of their fathers (such as Bercu sin Hayim), in the same way as the non-Jews, came to be called by Roumanian names and to dress after the Roumanian fashion. But immigration wrought a deepgoing change in this way of life. The hrisovelits and the immigrants of the third group, who wore the garb of the Eastern European Jews, persuaded their coreligionists whom they found residing in the country to adopt the caftan and shtreimel together with the earlocks. Thus at the beginning of the 19th cent. the whole of the Jewish population, dressed in the same attire, speaking the same language (Yiddish), and having the same ways of life, appeared as a uniform mass and did not show the marks of any gradation according to the length of time it had been living on Roumanian soil.



In view of this situation, the Roumanian historians, Bogdan Petriceicu-Hajdeu, Iorga, Verax, Bogdan-Duica, Ion Lahovary and others, affirmed that the Jews of Roumania were all foreigners who had settled in the country but recently and who, in their way of life, had nothing in common with the nation. In practice, however, the government, for administrative reasons, was compelled to differentiate between the Jews according to their place of birth and their political allegiance. From the end of the 18th cent. on the government began to give the name of "pamánteni" (indigens) to the category of Jews who, born in the country, were not subject to foreign protection, while immigrant

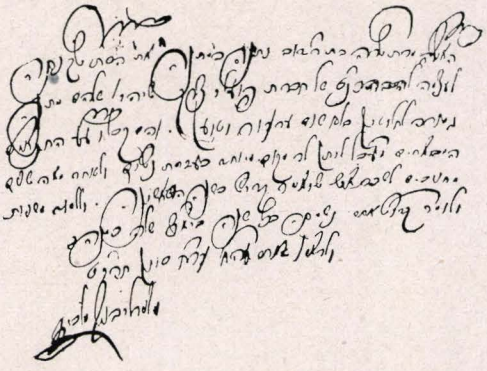
Jews were called "Suditzi" (foreign subjects). These were under the jurisdiction of their consuls, who in the principalities, which were vassals of Turkey, enjoyed capitulation rights (extraterritoriality).

The category of the "Suditzi" played an important role in Roumanian Jewish history. In the period under discussion many indigenous Jews, especially the wealthy, made themselves Suditzi so as to enjoy the protection of a great power, such as Austria or Russia. The phenomenon of the Suditzi is easily explained by the social and political conditions of the period. The brutality and corruption of government officials were boundless. Laws were not respected, and there was no appeal from the arbitrary tyranny of the authorities. A Sudit, however, protected by his own consul, had more security and the means to defend himself. But the indigenous Jews were not the only ones to become Suditzi; non-Jewish Roumanians, even boyars, sought the protection of foreign powers. The anti-Semitic theory that there have never been any other Jews than Suditzi in Roumania is refuted by existing documents. A decree of Prince Alexander Constantin Moruzi of January 9, 1794, in a criminal matter, reflects the distinction made between Suditzi and indigenous Jews. A Sudit Jew guilty of offense was referred to his consul for punishment. A government memorandum to the Wallachian Prince Ion Gheorghe Caragea of July, 1817, refers to the rights of indigenous Jews as distinct from those of Sudit Jews. A hrisov of the Moldavian Prince Ion Sandu Sturdza, dated Jassy, February 1, 1821, has the same import. An official census in Moldavia (1831) indicates the number of Jewish heads of families in towns and cities (exclusive of the villages) to have been 33,906; of these, 30,740 are stated to have been "pamánteni" (native Jews), and only 3,166 foreign Jews, i.e. 91 per cent indigenous and only 9 per cent foreign Jews. Brociner reprints many official documents proving that until about 1880 indigenous Jews were mentioned.

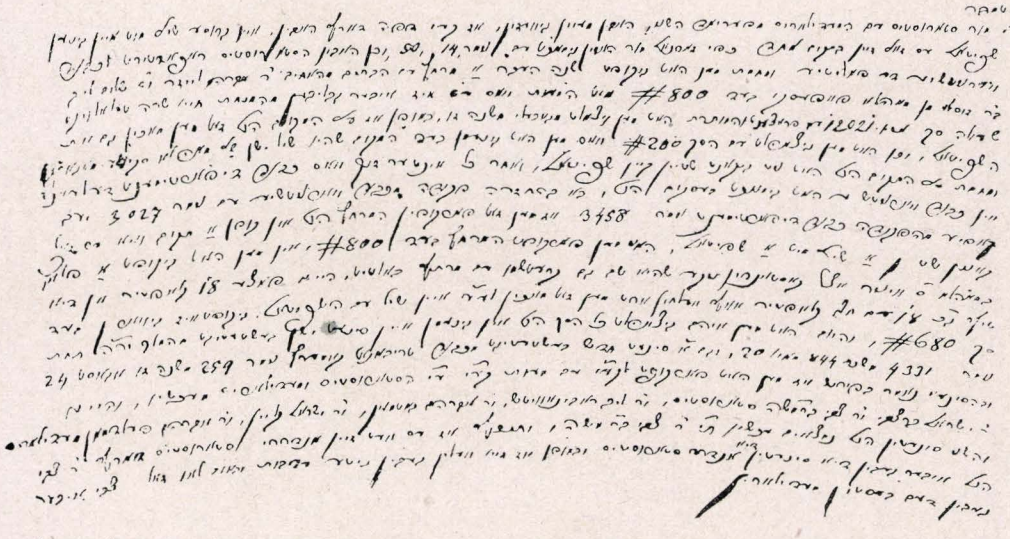
It has been shown that the hrisovelite Jews and those of the third group merged with the indigenous Jews, becoming a uniform element of the population, allowing for differences from the point of view of allegiance. But that difference, too, disappeared in the three-quarters of a century from the late 18th cent. to about 1850. During that period the hrisovelite Jews and those who came to Roumania on their own ceased to be Suditzi. This is true mainly of their children who, born in the country, were no longer registered at the consulates and did not enjoy the protection of foreign powers. This process of merging with the native Jews was an important factor in the history of the Jews in Roumania, for from 1850 on they became in fact almost entirely indigenous and as such were made liable to military service by the recruiting law of 1854.

Furthermore, the hrisovelits could not rightfully be called foreigners. Called into the country, they had come without intention of returning to their former homelands, and subsequently foregoing foreign protection, they themselves, and especially their children born in the country, had become, politically, Moldavian subjects. We have seen that the census of 1831 indicated only 9 per cent of foreign Jews. The political status of the Jews, however, was not clearly defined. The major part of the Jews did not give attention to their legal and political status, and the question of allegiance was also in a state of confusion as regards non-Jews as well. Civil administration offices, whose business it was to register births, marriages and deaths, either did not exist or were conducted in a haphazard fashion. Often the mayor's offices, where such records were kept, burned down and the records were destroyed. Police archives and the demographic books kept by the rabbis often shared this fate. In the second half of the 19th cent. the various governments profited from the indifference with which these matters had been handled during the first five decades of the century in order to withhold from the whole Jewish population, which they arbitrarily declared to be foreign, those rights which they would have necessarily had to grant to an autochthonous element. Faced, however, in various connections, with situations where they could not treat the Jews as actual foreigners, the governments created for them an intermediate status which made them neither effective foreigners nor citizens. In order to describe their status, it was necessary to resort to paradoxical terms, such as "foreigners to whom Roumanian passports are issued if they go abroad."



The Organic Law. It is possible to determine approximately the date when the Jews began to be considered foreigners: the occupation by Russia of the principalities from 1828 to 1831. In the preceding centuries all regulations concerning the Jews were based on the difference in religion; their spirit was that of similar measures throughout Europe. In 1741 the Jews of Moldavia were forbidden to employ servants, male or female, under the age of thirty; but this decree was soon forgotten. The morals of civil administration were such that regulations in the two principalities weighed heavily only upon the poor Jews. There were never any ghettos. Of their own volition the Jews concentrated in certain parts of the towns or in certain villages, as was their custom everywhere. Sometimes they were compelled to clear out of certain streets, but they later returned. They were still living in peace at the beginning of the 19th cent. This was the period of immigration, but it was also the time when national consciousness and the economic and intellectual Roumanian middle class were born, when anti-Semitism raised its head and gradually grew in extent and vigor. The principalities were still an object of contention between Russia, Austria and Turkey, and they were regularly occupied by Russian armies in the course of their wars against Turkey. In these wars Moldavia lost Bucovina (1775), which was annexed by Austria; in 1812 Bessarabia was incorporated into the Russian Empire.

The most important occupation by the Russians, marking an event both in Roumanian history and in the history of the Jews, was that of 1828 to 1834. During these six years the principalities were governed by the Russian General Paul Kisseleff, and for the first time obtained a system of laws, the "Organic Law." The law system was worked out by two commissions of boyars, seated at Bucharest and Jassy, under Kisseleff's control. In 1834 the Sublime Porte ratified the Organic Law, and it was applied in the same year. It enacted the serfdom of the peasants, and was extremely harsh as regards the Jews. Paragraph 94 stipulated that Jews "who have no useful trade" or "vagabond" Jews may be expelled from the country. This law became a source of untold misery for thousands of poor Jews. The terms "without useful trade" or "vagabonds" were arbitrarily interpreted at their expense.



Later laws against vagabonds were decreed which were directed solely against the Jews. The expulsions from towns and villages which were based on these laws and on others regulating the right of residing in the rural communities fill some of the blackest pages in the history of the Jews in Roumania. They took place throughout the 19th cent., and did not cease until 1916, when Roumania entered the first World War. The *Manuel Administratif,* which elaborated upon the Organic Law and had the force of law, made Paragraph 94 more stringent, ruling (1855) that "all Jews, foreign or native, may be expelled if they do not fulfill the stipulated requirements." The requirements, in addition to a useful trade, were possession of 5,000 lei (a considerable amount of money at that time) and the obtaining of a pass from the authorities. Jews could travel from one place to another only when provided with this pass. The *Manuel Administratif* excluded Jews from living in certain streets in the villages; they were not to rent stores in the neighborhood of churches, or trade in vegetables or leeches. Jewish book-

sellers were permitted to sell only to Jews. They were required (Paragraphs 17 and 23), to carry an identification paper indicating, among other data, their place of birth. The Organic Law puts all Jews, foreign and native, in the same category. It refers to them by the term of "Jewish nation," and rules that only individuals of the Orthodox Christian faith may be naturalized. Paragraph 50 forbids Jews to farm on inhabited land. Although the Organic Law has been called a sort of extremely reactionary constitution, it meant order. It provided for instruction, and admitted Jewish children to the state schools provided that they did not come to school in Polish garb. In practice the many hostile regulations of the *Manuel Administratif* were applied only against those Jews who could not afford to buy the good will of the officials. Contemporary documents show how the stringencies imposed upon the Jews were a source of illegal income for the officials in charge of their execution.

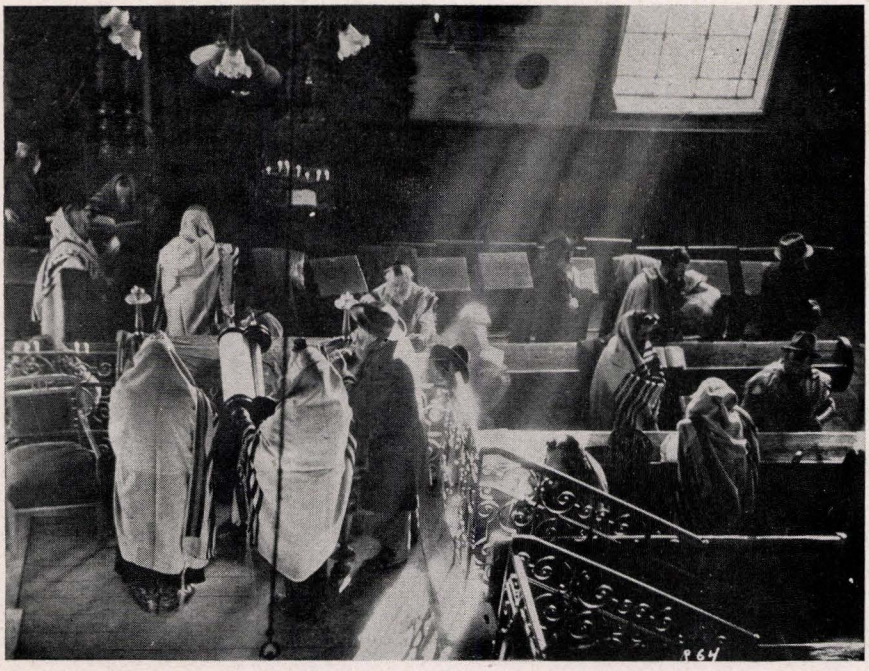
In analyzing the period from 1834 to 1848, under the Moldavian Prince Mihai Sturdza, Elias Schwarzfeld in his *Din istoria Evreilor in Roumania* (On the History of the Jews in Roumania, 1896-97), says: "A glance at the collection of laws, at decrees and ordinances issued in that time, when combined with what we know about the dispositions and spirit of the boyars and officials, will be sufficient to give us a picture of the sufferings especially of the poor Jewish classes upon which weighed, like a mountain, all this tangle of inhumane and arbitrary measures."

2. The Revolution of 1848, and the Congress of Paris (1858). Cuza Voda. The Organic Law was very unpopular among Roumanians, who looked upon it as a foreign fabrication, although it was the work of the boyars. Part of the minor nobility and a few great boyars, influenced by the ideas of the French Revolution, adopted some of its democratic slogans.

The leaders of this movement in Wallachia, Ion and Dumitru Bratianu, C. A. Rossetti and Golescu, made friends with the leading French revolutionists while studying in Paris, including Lamartine, Michelet, Quinet, Louis Blanc and Bérenger, who gave them support (1840-48). In Moldavia the head of the National (Liberal) Party was Mihai Cogalniceanu. When the revolution broke out in Paris (1848), the Bratianu brothers, Rossetti and others, who had returned to Wallachia, proclaimed a state of revolution also at Islaz, whose program contained (Paragraph 21) "the emancipation of the Jews and the granting of citizenship rights to all compatriots, whatever faith they may profess." The Moldavian Liberals promised a gradual emancipation of the Jews. Turkish troops quelled the insurrection, and there were but few victims. Three Jews who took part in it were the painter Constantin Daniel Rosenthal, Barbu Iscovescu, and Davicion Bally.

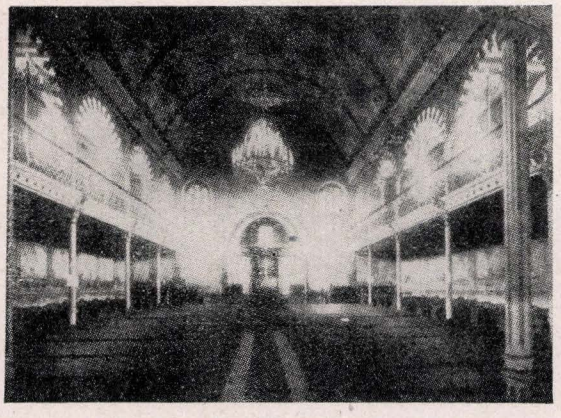
Czar Nicholas I, incensed at the audacity of the revolutionists in deposing rulers whom he had approved, sent a Russian army of occupation after that of the Turks. The Russian troops remained until 1851; the Russian protectorate continued until 1856, when it was abolished after the Russians were defeated in the Crimean War.

The Paris Congress of 1858 placed Roumania under the collective protection of the European powers, while maintaining Turkish suzerainty. The principalities were given a sort of constitution like the Organic Law. It granted them full autonomy in matters of internal government; they were to have representative parliaments at Bucharest and at Jassy. The Congress of Paris also accepted a paragraph (No. 46) concerning the Jewish population, providing that "Moldavians and Wallachians of all Christian denominations will enjoy political rights. Political rights may be extended to other elements of the population by legislation." While the Organic Law limited naturalization to Orthodox Christians, the Congress of Paris extended it to all Christian denominations. The Congress therefore made naturalization a matter of religious affiliation, and barred Jews therefrom. The stipulation of Paragraph 46 providing for an extension by legislation of political rights to other religious groups (meaning thereby the Jews) was never put into practice.



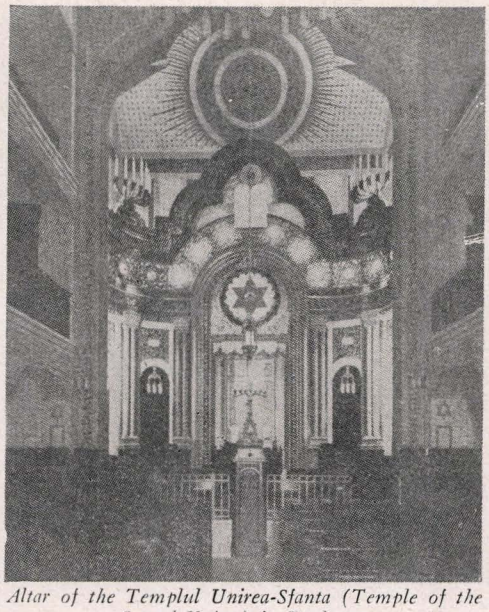
The leaders who fled after the insurrection of 1848 had been put down soon returned to Roumania and founded a party which styled itself liberal and was opposed to the conservative agrarian group. But the main concern of the political groups was the union of the two principalities under a foreign ruler. This union was brought about in January, 1859, after the assemblies of Bucharest and Jassy elected a common prince, Cuza Voda. Thus modern Roumania was constituted, the capital of which became Bucharest. Cuza ruled for only six years, being compelled to abdicate in 1866 due to the hatred of the ruling classes which he had incurred. His place was taken by a foreign prince, Karl (Carol) von Hohenzollern-Sigmaringen, founder of the dynasty which, in 1943, still ruled in Roumania. In 1864 Mihai Cogalniceanu, when prime minister, with the approval of Cuza, abolished serfdom by decree, allowing the peasants to acquire land.

The Liberal era in Roumania was short-lived, as were the benefits which the Jews derived from it. The Organic Law was applied until the Congress of Paris, with some alleviations. In 1850 a decree of the Moldavian Prince Grigorie Ghica eased the requirements of the sum of money which Jews had to possess and of a useful trade. Expulsion was not to be enforced except in the case of Jews recently immigrated who could not prove that they had the required capital and a trade. But the decree added that Jews who belonged to the indigenous class and who "could prove it were not to be expelled even though having no capital or trade." Ghica cancelled an ordinance of Mihai Sturdza which forbade the Jews to keep inns in the villages, and he also permitted them to own vineyards.



The best years for the Jews, however, with the exception of those following their emancipation in 1918, were those under Cuza. To a delegation of Jews come to address him on New Year's Day, 1864, he said: "I wanted to give you all, but I could not. You will be emancipated gradually. Wherever I have been, I have liked you, and I have never discriminated between religions." He kept his word; in the same year the government introduced a bill on the municipalities, Paragraph 26 of which, under certain conditions, granted suffrage to indigenous Jews. This was called "little naturalization." In the discussions in the Chambers a great number of members, including former prime minister Manolache Costache Epureanu and former minister Gheorghe Costaforu, spoke in favor of Paragraph 26, which was adopted.

3. The Treaty of Berlin (1878). After Cuza's abdication anti-Semitism became a doctrine of the Roumanian state. The ideology of 1848 soon vanished, and Roumanian authors of note began to write against the Jews.



The national poet Vasile Alexandri produced a play, *The Leeches of the Village,* in which one of the villains was the Jew Moise. In 1865 the historian Hajdeu published a pamphlet, *Trei Ovrei: Shylock, Gobseck si Moise* (Three Jews: Shylock, Gobseck and Moise); by the latter two he meant Balzac's Gobseck and Alexandri's Moise. The Liberal party, with Ion Bratianu as its leader, soon gained extensive influence in the country, but its ideas were far from liberal. Anxious to create a Roumanian middle class, it looked upon the Jews as an obstacle which had to be destroyed. Although the country abounded in natural resources and there was from the very beginning room for a middle class comprising both Roumanians and Jews, all the governments (with the exception of those which held office during the period of emancipation, from 1919 to 1936) acted on the principle that the Roumanian middle class could not exist alongside of Jews.

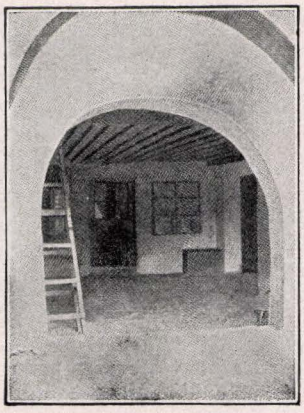
Upon forming a government in 1866, Bratianu began by persecuting the so-called "vagabond" Jews. In the same year, when the constitution of the country was to be voted on, he hesitated concerning the status of the Jews. Article 6 of the bill declared that "religion can not be an obstacle in qualifying an individual as a Roumanian citizen." Adolphe Crémieux, former member of the provisional French government during the revolution of 1848, and president of the Alliance Israélite Universelle, came to Bucharest to plead for the adoption of Article 6. A friend of Bratianu and Rossetti, he was introduced into the Chamber. While his address there was greatly applauded, no sooner had he left the country than violent anti-Semitic agitation, directed against Article 6, started. A mob went to the Jewish quarter, where they destroyed the newly completed Temple.



At once Bratianu made a volte-face. In his address in the Chamber on June 21, 1866, he called the Jews a "social wound," and affirmed that government action was necessary to save Roumania from what he termed "that leprosy." In consequence, Article 6 was suppressed, and the following was inserted by vote into the text of Article 7: "Only foreigners of Christian rite may obtain the quality of Roumanian." Thus for the third time since the Organic Law the profession of the Christian religion was made a prerequisite for naturalization, and Jews were kept in the class of foreigners. Although in January, 1867, Prince Carol's emissary assured the Alliance Israélite Universelle that the Roumanian government was determined to embrace the first opportunity of ensuring the emancipation of the Jews, this occasion did not arise until after the end of the first World War (1919).

In 1867 Bratianu issued a decree instructing the authorities to forbid Jews to settle in the rural districts or villages and to expel "vagabond" Jews. As a result, large numbers of Jews were forcibly deported to the other side of the Danube river. In the same year the notorious Galatz incident took place. Turkish border guards, not wishing to admit the Jewish "vagabonds" whom the Roumanians had driven across the Danube in order to get rid of them, sent them back to Roumanian territory at Galatz. The Roumanian border guards, too, were unwilling to receive them, and while the barge carrying the Jews was shunted about from bank to bank, two of the Jews fell into the river and were drowned. Great indignation was, as a result, aroused throughout Europe. As a result of a personal appeal by Crémieux, Emperor Napoleon III of France telegraphed Prince Carol, and the governments of France and England intervened. Bratianu was forced to resign, but various laws and ordinances still barred the Jews from living in the rural districts and provided for the expulsion of "vagabonds." The government kept constantly denying the mass arrests of and acts of violence against the Jews. The consuls of France, England, Prussia and Russia, meeting at Jassy in 1868, then issued an official statement to the effect that "the categorical denials made to the agents and consuls general at Bucharest are in flagrant contradiction to the facts which they had occasion to state."

In 1868 Mihai Cogalniceanu came to power. Under him, too, anti-Jewish ordinances followed closely upon one another in the following year. One such refers to the Jews as the "scourge of the peasants." Expulsions of Jews from the Bacau district in December, 1869, were followed, early in 1870, by expulsions from the city of Ploesti and from the districts of Botoshani, Vaslui and Tecuciu. Protest meetings were held in London, and the British and French governments intervened. In 1870 Cogalniceanu himself was forced to resign his premiership, but the same situation continued.

In 1872 the American representative in Paris, Washburn, in a letter addressed to Remusat, foreign minister of France, declared that "the government of the United States would receive with the utmost satisfaction whatever the French republican government may do in order to put an end to the unrelenting persecutions [in Roumania] which are a disgrace to Christian civilization." Shortly before that, President Ulysses S.

(Left) The Jewish hospital at Jassy, Roumania; (right) entrance to one of the smaller synagogues at Jassy

Grant had appointed Benjamin Franklin Peixotto American consul general at Bucharest, in order to intervene on the Jews' behalf. Yet these interventions, useful as they were, did not effect any real change. Since Jews were not allowed to reside in rural districts, urban communities were arbitrarily converted into rural ones in order to permit the expulsion of the Jews. Violent anti-Jewish excesses occurred at Ismail, in southern Bessarabia, on the occasion of a theft and act of vandalism committed in a church by a renegade Jew, and those responsible for the riots were tried and acquitted. In 1873 the Russian chancellor, Gortchakoff, refused to participate in a collective intervention proposed by the powers, alleging that the measures taken by the Roumanian government were to protect the peasants from exploitation by Jews.

In Bucharest, in 1874, the supreme court ruled that, in accordance with Article 7 of the constitution, Jews could not exercise any political rights, and therefore had no voice in communal elections, thus cancelling the communal law promulgated under Cuza (1864). On July 27, 1875, Bratianu, who had in the interim been restored to power, decreed that "individuals harmful to society" were to be sent beyond the boundaries of the country. Because of protests by the foreign powers, the Roumanian government resorted to various expedients in an attempt to prove that such decree of expulsion was justified. The most wretched-looking and poorest Jews, wearing torn caftans and with long beards and earlocks, were picked out and photographed; these pictures were then sent abroad in order to illustrate the kind of Jews with whom Roumania had to deal. Despite the vigilance of the government, some of the village authorities were not strict in carrying out the decree of expulsion, and sometimes the peasants intervened on behalf of the Jews.

After the Russo-Roumanian-Turkish war of 1877 to 1878 the question of the Jews in Roumania was again taken up at the Congress of Berlin which followed. The European powers at that time, determined to settle the question definitively, stipulated in Article 44 of the treaty that "in Roumania, distinction of religious faith and confession shall not be a hindrance to anyone or be regarded as a reason for exclusion or inability to acquire civil and political rights, to hold public office or honorary functions or to engage in the various industries and professions, wherever they may be." The powers were convinced that by means of this article they were ensuring the full emancipation of the Jews.

The Roumanians, however, were of a different opinion. A nation-wide agitation began, and finally, on October 13, 1879, Article 7 of the constitution of 1866 was changed and, in direct opposition to the spirit of the Treaty of Berlin, Roumanian naturalization, through the new Article 7, was made available to aliens only through an individual law which in each case had to be voted by both the Chamber and the Senate, signed by the sovereign and published in the official publication, *Monitorul Oficial*. A total of 885 Jewish soldiers who had served in the war were made citizens. Before the new Article 7 was voted, Roumania, through the foreign minister, Vasile Boerescu, in a memorandum of August 31, 1879, addressed to the powers, assumed integrally important obligations. She promised not to regard Jews as aliens in all matters of civil government, to allow them "freedom in adopting whatever profession or trade" they desired, and to speed their naturalization. This promise was made in order to induce the powers to recognize Roumanian independence.

At first the powers were reluctant to accept the Boerescu proposals as well as the amended Article 7, but their opposition gradually dwindled, especially after the German chancellor, Otto von Bismarck, obtained from the Roumanian government important concessions with reference to the building of railroads in which many Prussian shareholders were interested. Previously, Russia, Turkey and Italy had recognized Roumanian independence. On February 20, 1880, Great Britain, France and Germany joined these powers, but their recognition was not unreserved. In their note these three powers declared that "Article 7 does not quite conform to the views of the Berlin Congress," but that the powers were "confident that Roumania will get closer to the spirit of liberalism which was that of the powers," and recognize the independence of Roumania. Thereupon, in March, 1880, the parliament declared Roumania a kingdom, and Prince Carol, as Carol I, became its first king.

As a result of the war between Turkey and the Roumano-Russian forces, Russia regained the three districts of southern Bessarabia which the powers had given to Moldavia after the Crimean War, and Roumania received the Dobruja in exchange. The Dobrujan Jews became Roumanian citizens by virtue of international law. According to statistics of 1899, their number was 3,085. The promises contained in the Boerescu note were never kept, and down to 1919 the Jews continued to have the status of aliens. The number of Jews who were naturalized was very small (about 400 up to 1916).

4. From 1880 to 1916. Between the year 1880 and August, 1916, when Roumania entered the first World War, there was considerable economic development and improvement in many fields. The oil, timber and textile industries were founded, and a modern press appeared. But the peasants, who formed 80 per cent of the population, still lived under extremely unfavorable hygienic and economic conditions. There was great abuse of power. The situation of the Jews in this period varied according to the social stratum to which they belonged. According to the census of 1889, their number was 266,652 (4.48 per cent of the total population). About 200,000 of them lived in Moldavia, most of whose cities had from 38 to 44 per cent of Jews. In five Moldavian communities the percentage of Jews was 55, and in one case as high as 66. Despite the

A glimpse of pre-Nazi Jewish life in the Roumanian hinterland

expulsions, about 53,000 Jews were still left in the Moldavian villages.

The numerous anti-Jewish laws and regulations issued between 1880 and 1916 did not affect all the Jews. As in earlier periods, the wealthy Jews and those belonging to the upper stratum of the middle class did not have to suffer economically or physically from the anti-Semitic legislation and practices. But upon the large mass of the poor Jewish population the anti-Semitic measures had a disastrous effect. Due to restrictive regulations, they could not move out of the overpopulated cities and go to the rural districts to live, which were inhabited by 80 per cent of the population. In the urban districts they were barred from many professions and trades by laws which reserved the practice of such trades or professions to citizens of the country.

Thus the Jews were excluded from all public service, including state, community and district. They were not admitted to the legal profession, or as college professors, justices or pharmacists. The right to sell tobacco, act as brokers on the exchange, distil alcohol or to hold membership in the chambers of commerce was denied them. In bidding for the performance or the erection of public works, corporations of Roumanian artisans were preferred to those of alien artisans even if the bid of the former was 5 per cent higher than that of the latter (Laws of March 12, 1902, and January 27, 1912). The right to keep an inn in a rural community was elevated to the rank of a political dignity, the law of March 7, 1908, decreeing that "the innkeeper has to be a citizen of Roumania." Citizenship was a prerequisite also for the conduct of many of the small trades, such as the gauging of wine casks, which was the occupation of many of the Moldavian Jews (Law of April 20, 1912), or the gauging of weights and measures (Law of April 16, 1910).

In 1913 the Union of Native Jews published a table of the laws and regulations which barred Jews from various occupations and thus prevented them from earning a living. These numbered about 200. One law especially detrimental to the Jews was that of April 18, 1881, authorizing the government to expel from the country aliens of whom it disapproved without having to give an account of its action. In 1885 a large number of Jewish authors and journalists were expelled. There was anti-Jewish discrimination in the schools as well. Although between 1830 and 1870 the government actually encouraged the Jews to send their children to the state schools, after 1880 chauvinistic anti-Semitism more and more kept Jewish children and youths away from the schools. The law of May 23, 1893, states that "aliens will be received in the elementary schools only if there are vacant places, and only upon payment of a tax." For Roumanians, instruction was free. The same rule was subsequently applied to the trade and high schools.

Anti-Jewish nationalism was preached throughout the entire country. In 1887 the first international anti-Semitic congress was held at Bucharest. The government newspaper *Vointa Nationala* (Will of the Nation), in greeting the congress on September 2nd of that year, deplored the absence of Adolf Stöcker (notorious German anti-Semite) and of Edouard Drumont (French anti-Semite), and declared: "The anti-Semitic movement will serve our cause."

This situation, continuing for many years, explains the extensive emigration which took place in 1900 when an economic crisis hit Roumania. Many Jewish artisans and the lower stratum of the middle class, without work and having no hope for a better future in the country, decided to leave. The first group of migrants, numbering 4,000 persons and traveling on foot, caused an uproar throughout the whole of Europe; it was formed in Berlad, Moldavia, and its members marched to Hamburg, Germany, where they embarked for the United States. Soon similar groups were formed in other towns and villages, and even in Bucharest, by men, women and children who set out on foot; each group was called after the name of the journal which it published. Thus there were the Drumetii (walkers), Pietonii (pedestrians), Disperatii (the despairing), Ecoul Pribegilor (wandering echo), Jidovul Ratacitor (wandering Jew), and many others.

The Roumanian government, impressed by the sensation aroused abroad by the marchers, forbade emigration on foot. The masses then traveled by boat or railroad. Tens of thousands of Jewish artisans, small tradespeople, peddlers and professional men set out from Roumania in 1900 and in the following years. More than 70,000 Jews left the country between 1900 and 1906. On August 11, 1902, the American government, through the famous Hay Note, protested to the European powers which were the signatories of the Treaty of Berlin against the anti-Semitic policy of Roumania which pauperized the Jews and forced them to emigrate. The note, possessing all the qualities of a formal indictment, refers to "the accumulative effects of successive restrictions" by which "the Jews of Roumania have become reduced to a state of wretched misery." Although the Hay Note created a great sensation, no change was effected as a result thereof.

As a result of the war between Bulgaria and Roumania, declared by the latter (June 20, 1913), Roumania gained a portion of southern Dobrujan territory amounting to about 2,150 square miles and containing a population of some 300,000 persons. Many Roumanian Jews were mobilized or volunteered for service in this war (their number amounted to between 20,000 and 25,000), and from statements made in the course of the war by several of the Roumanian ministers and deputies they were led to believe that they would be granted equal political rights. Noted men of other countries, including Georges Clemenceau of France and Luigi Luzzatti of Italy, advocated such a measure both in the press and through personal intervention, as well as, in general, the emancipation of the Jews. However, vigorous counter-propaganda opposed the granting of any concessions to Jews.

5. The Period of Emancipation (1918 to 1937). Roumania emerged from the first World War with its area increased from 53,489 to 122,282 square miles, and its population from 7,500,000 to 16,000,000. It retained southern Dobruja and annexed Transylvania, Bucovina and Bessarabia. Ionel Bratianu, head of the government at the end of 1918 and up to the end of 1919, foreseeing the making of a treaty providing for minority rights, tried to forestall it by according civil rights to the Jews of Old Roumania before the peace conference assembled. On December 28, 1918, he published a decree-law to that effect, but the stipulations necessary for the granting of citizenship were such that most of the Jewish population refused to accept them. Therefore, on May 22, 1919, he issued a second decree, stipulating that Jews, in order to become Rou-

Jewish children in the Carpathian mountains of northern Roumania

manian citizens, had to declare before a law court that they had been born in the country and that their parents had never been under the protection of a foreign power. The great majority of the Jews made such declaration and became Roumanian citizens. However, an estimated 25 per cent, being too ignorant or too poor, never went before the court and remained, as before, persons without a country. Despite this decree, at the peace conference Bratianu could not prevent adoption of the treaty for the protection of minorities (he was reminded by Clemenceau of Article 44 of the Treaty of Berlin), and resigned when he refused to accept it.

The Vaida-Voevod government, which succeeded him, signed the treaty at Paris on December 9, 1919, and it became valid on September 20, 1920. Article 7 states: "Roumania undertakes to recognize as fully privileged Roumanian subjects without any formality the Jews living in all the Roumanian territories and who have no other nationality." Article 8 stipulates that "all Roumanian subjects are equal before the law and are in possession of the same civil and political rights without any distinction in race, language or religion." Article 133 of the constitution of 1923 ratified the decree-laws of December 28, 1918, and May 22, 1919, which granted emancipation to the Jews of Old Roumania. The suggestion for the inclusion of Article 7 of the peace treaty in the constitution was rejected. Thus emancipation for the Jews of Old Roumania was enacted in both the constitution and the treaty of peace, whereas for the Jews of Transylvania, Bucovina and Bessarabia it was enacted only in the peace treaty.

The number of Jews living in Roumania during the period of emancipation varied, according to official statistics, between a maximum of 850,000 in 1923 and a total of 760,000 in 1930 (both these figures are those of the Bucharest statistical bureau). In the latter year the total population of the country was 18,053,000, the Jews thus forming 4.2 per cent. The state security (police) took a census of the minorities in 1924, and obtained the figure of 796,000 Jews; of these, according to that census, 230,000 lived in Old Roumania, 238,000 in Bessarabia, 128,000 in Bucovina, and 200,000 in Transylvania. However, during the same period the census of the statistical bureau gave the Jewish population of Bessarabia as 270,000 and that of Transylvania as only 182,000. The divergences being unimportant, it is safe to assume that the number of Jews in Greater Roumania in this period was between 760,000 and 800,000. These figures were confirmed by the demographic figures of those years.

Emancipation wrought changes in the lives of the Jews. In their capacity as citizens they participated in political life as well as in the economic upsurge and the industrialization of the country. But it soon became evident that their emancipation was not based on strong foundations. During the War, under the influence of the Communist revolution, the Roumanian ruling classes were compelled to concede the expropriation of large estates and to grant universal suffrage. However, as in 1864, the land reform was poorly executed. The peasants, who formed 75 per cent of the total population, receiving plots of land but no credits, were obliged to incur debts and soon relapsed into poverty. This situation was aggravated by the steady decline in agricultural products and the successive economic crises. Universal suffrage was quickly revoked. A fascist bill was passed in 1926 giving the majority of seats in parliament to the party able to obtain 40 per cent of the total number of votes. Of the two governing parties, the Liberal became increasingly reactionary, being in office most of the time, while the National Peasant Party, of more democratic tendencies and under the leadership of Juliu Maniu, opposed the Liberal Party. Nationalism became the pivot of governmental action. The anti-Semitic movement which had its roots in it began immediately after the first World War, with the universities as centers of agitation.

In 1920 the National Christian League was founded by students of the University of Jassy; Professor Alexander Cuza was its guiding spirit. One of its most rabid members, Corneliu Codreanu, later leader of the violently anti-Semitic Iron Guard, in his *The Iron Guard* (the Roumanian equivalent of Hitler's *Mein Kampf;* it was translated into German from the original Roumanian under the title of *Die Eiserne Garde,* 1939), recounted how he succeeded in having Jewish students excluded from the student congress held in 1920 at Cluj, Transylvania. From 1920 on, anti-Semitic students clamored incessantly for a numerus clausus in the universities, and demanded that Jewish medical students be prohibited to dissect corpses of non-Jews. Since a general strike was proclaimed on December 10, 1922, to enforce these demands, that day was thereafter celebrated annually as a national student holiday, with congresses followed by anti-Jewish rioting. In 1925 the university authorities ruled that Jewish medical students would be permitted to dissect corpses "only if the Jewish hospitals supplied them in sufficient numbers."

In 1922 and 1923 anti-Jewish agitation increased. Windows of Jewish-owned houses and shops were broken, performances of Jewish theatrical troupes were disturbed, synagogues profaned, and Jewish passengers, including women

and young girls, were pushed from moving trains. A Lieutenant Morarescu who had killed several Jews seeking to cross the Dniester in an attempt to escape from the Ukrainian massacres was acquitted of the charge of murder and honored as a national hero. In 1923 Codreanu founded the Legion of Archangel Mihai, whose avowed purpose was the extermination of the Jews through terrorism. In October, 1925, Codreanu assassinated Manciu, police prefect of Jassy, who had attempted to curb rioting anti-Semitic students. Codreanu was later acquitted, and an important section of the Roumanian middle class joined the anti-Semites.

On June 6, 1930, Prince Carol, son of King Ferdinand (who had died in July, 1927), ascended the throne as King Carol II. A grave economic crisis gripped the country. Both the Liberal and the National Peasant parties respected the emancipation, concluding electoral pacts with the Jews, and with their assistance Jewish senators and deputies were elected. A state subsidy was granted to the Jewish religion; the chief rabbi elected by the Jewish communities of Old Roumania became senator for life. Jews were appointed to positions at the universities and at the polytechnic school, and sat in the municipal councils and chambers of commerce. However, these two parties showed little resolution in combatting anti-Semitism, and, being nationalistic, they appointed very few Jews to public office and tolerated anti-Jewish actions. From 1932 to 1936 the Cuza and Codreanu movements were actually given support in order to weaken the democratic trend and in the blind assumption that the adherents of neither Cuza nor Codreanu could ever attain to power.

The Jews were harmed, even if only indirectly, by the spread of nationalism. They suffered from the Roumanian policy toward non-Jewish nationalities. The examinations for admission to universities discriminated against all national minorities, including Jews, in order to prevent them from entering in great numbers. The law of February 23, 1924, on the acquisition and loss of Roumanian citizenship was actually a law on revision of citizenship acquired under the peace treaty by residents of Transylvania, Bucovina and Bessarabia. Following such revision, a large number of Jews in these three provinces were deprived of their political rights. Rioting in the streets, on trains and at the universities were overlooked by the authorities. A pogrom occurred at Nagyvarad (Oradea Mare) in 1929, in the course of which synagogues, stores and dwellings of Jews were wrecked or burned, and many Jews beaten.

In 1930 the Legion of Archangel Mihai became the Iron Guard. Codreanu created the so-called "gangs of death." Violence and assassinations became rampant, and as a rule their perpetrators were acquitted. In 1933 the Liberal Ion G. Duca government issued a decree dissolving the Iron Guard; this led to his assassination in December of that year. The Iron Guard was then converted into a political party having the slogan "Everything for the country." The National Christian League became the National Christian Party, under the leadership of Cuza and Octavian Goga. Early in 1932 the Iron Guard, with 34,000 "nests" (sections) throughout the country, had become a political power. Officers, justices, public officials, clergymen, teachers, industrialists and merchants joined its ranks in great numbers. The coming of the Nazis to power in Germany greatly strengthened the movement. Codreanu, Goga and Cuza established close relations with the Nazi organization at Berlin. Anti-Semitic propaganda increased. Not a city in Roumania, not a town of any importance, was without an anti-Jewish publication, and the anti-Semitic organizations were well provided with funds. On November 30, 1937, Codreanu published the following decision: "Forty-eight hours after victory is ours the legionaries will have Roumania enter into a close alliance with Germany and Italy." The attempts of the Iron Guard to attain to power menaced King Carol II, and at this point began the struggle between it and the king.

6. The Hitlerian Period (1937 to 1940). By the end of 1937 the position of the nationalist anti-Semitic parties had become extremely favorable. Hitler and Mussolini had scored impressive successes in the Ethiopian war and the Spanish civil war. In Roumania the slogan of the day was: elimination of Jews from economic and cultural spheres, and their replacement by "ethnic" Roumanians. When, after the elections of December 27, 1937, the Tatarescu government, which had the king's support, did not secure sufficient votes to form a government, and the Iron Guard had piled up a total of 450,000 votes and secured seventy seats in parliament, Carol II entrusted Octavian Goga with the formation of a cabinet.

This was the beginning of the Hitlerian era in Roumania. Goga suppressed the democratic newspapers published by Jews, and began a drive against the alleged "500,000 vagabond Jews who had entered the country illegally after the War and fraudulently obtained the status of Roumanian citizens." In this he had the support of King Carol, who in an interview for the London *Daily Herald* on January 10, 1938, declared: "Galician and Russian Jews have invaded the country in latter years. . . . These Jews are not a good element and . . . their number amounted to 250,000." In actuality, however, these assertions were altogether untrue, since there was no immigration into Roumania after 1918 and therefore no certificates of citizenship could possibly have been obtained fraudulently, but they served to prepare the ground for the disfranchisement of as many Jews as possible.

On January 23, 1938, Goga decreed the revision of Jews' citizenship. They were therefore required to submit a variety of documents to the tribunals and justices of the peace. The results of this procedure, which took two years, were published on December 24, 1939. Out of 203,424 adult Jews, heads of families, representing 617,396 individuals, or 80 per cent of the Jewish population, who had submitted their papers, a total of 73,253, representing 225,225 individuals, or 36 per cent of the Jewish population, were declared non-citizens. The additional number of 44,848 Jews who did not figure in the list of voters made a total of 270,070 Jews stateless. These Jews, thus having become aliens, were subjected to special taxation and deprived of the right to work. However, "official" statistics showed that the percentage of Jews who had been deprived of their citizenship because of fraud was barely one.

Goga was premier for only six weeks. On February 10, 1938, Carol II appointed in his place the Patriarch Miron Cristea, who previously had said: "The Jews are sucking the marrow from the bones of the nation." Cristea on several occasions, jointly with Poland, submitted to the British government a plea for the emigration of masses of Jews from Roumania and their settlement in a British colony. On February 18, 1938, he suppressed the Yiddish and Hebrew press. The professional associations of physicians, lawyers, engineers, architects, and pharmacists began the elimination of their Jewish members. A law requiring employment of from 75 to 80 per cent of Roumanians in the various branches of industry was interpreted as referring to "ethnic" Roumanians, and Jews were accordingly excluded.

On November 30, 1938, Codreanu, who had previously been convicted of treason, was shot, together with thirteen of his legionary followers, on his way from one prison to another one. But his movement continued to grow under the new leader, Horia Sima. In December of that same year Carol II, who had previously (February 12th), by a coup d'état, abolished the constitution and set up one based on the fascist system of corporatism, founded the Front of the Renascence, and introduced the fascist salute. All political parties were dissolved, and Jews were the only minority excluded from admission to the new front. In Cernauti the use of Yiddish was prohibited in the stores and on the streets. The growing economic crisis increased the necessity for an anti-Semitic diversion.

In 1939 Jews' licenses to sell liquor were revoked; 40,000 Jewish employers and employees, including waiters, of the restaurants, cafes and inns involved were deprived of their livelihood. The government brought increased pressure on industrialists, even Jewish, to replace their Jewish employees with "ethnic" Roumanians.

After the fall of France in the second World War (June, 1940), Carol repudiated his alliance with France and Great Britain, released all imprisoned legionaries, dissolved the Front of the Renascence, and created the "Party of the Nation, Christian, national and racial." Jews were excluded from it. However, Carol was unable to save Roumania from dismemberment. In rapid succession it lost Bessarabia and northern Bucovina to Russia (June 29, 1940), southern Dobruja to Bulgaria (August 21, 1940), and northern Transylvania to Hungary (August 31, 1940). There was left in Roumania a territory of about 70,000 square miles, with a population of from twelve to thirteen million, including between 450,000 and 475,000 Jews.

The loss of Bessarabia led to many massacres of Jews, who were declared responsible for it. Jews were killed at Dorohoi, Arad and Galatz. The DNB, the official Nazi news agency, reported that 500 Jews about to flee to Russia were killed at Galatz.

Ordinances which were issued in July, 1940, by the new government, under Ion Gigurtu, imposed the following restrictions on Jews: they were forbidden to serve in the army, and had to pay, in exchange, a heavy tax and serve in the labor camps; they were prohibited to marry non-Jews so as to "preserve the purity of the Roumanian race"; Jewish ritual slaughtering of animals was forbidden; Jews were forbidden to embrace Christianity; they were not permitted to edit Roumanian newspapers, direct publishing houses, or appear as actors or musicians in Roumanian theatres. All Jews occupying state offices, and all physicians, teachers and engineers in the service of the state were dismissed. It was decreed that Jewish-owned property, real estate and securities were not to be sold without governmental permission. Jews were forbidden to serve on the boards of industrial or commercial corporations. The subvention of one million lei annually which had been granted to the Jewish community in the last year was abolished. Later, the Jews were ordered to liquidate their tobacco shops within thirty days, and were expelled from all sports organizations.

On August 5, 1940, Premier Ion Gigurtu published the "Statute of the Jews," which divided them into three groups. The total of from 5,000 to 6,000 Jews who formed the first class were to have rights equal to those of non-Jews, except that they were not allowed to own land or hold state office. The second class comprised the great majority of Jews who lived in Old Roumania before December 31, 1918, and the third class those who became residents of the country after that date, i.e. the Jews in the annexed provinces. Jews of the second class were barred from the army, civil service, press, boards of directors, from holding cafe, restaurant or tobacco shop licenses, and from trading in the villages. Jews of the third class were deprived of all political rights, and lost all means of livelihood since the right to exercise a profession or trade was made dependent on political rights. During the two years following the publication of this statute, the entire Jewish population, irrespective of class difference, was subjected to the same procedure of expropriation and persecution.

7. The Iron Guard Regime. The loss of northern Transylvania and the ensuing acute political crisis led to the fall of the Gigurtu government. Carol II was forced to abdicate on September 6, 1940, and General Ion Antonescu formed a legionary government, although not a member of the Iron Guard, with Horia Sima as deputy premier. Three days later Antonescu requested the Nazis to send a military mission to Roumania, and the Iron Guard had come into power. There began an era of horrors for the Jews which far surpassed all that had gone before. On September 8th, Sima proclaimed his intention of forever breaking "the power and influence of the Jews." He appointed legionaries supervisors of Jewish businesses; however, this measure, as Antonescu himself afterward stated, led only to illegal benefits for the legionaries.

Many anti-Jewish measures followed. That same month the Syndicate of Roumanian Journalists and the Association of Professional Journalists (the latter founded by Jews) expelled all Jewish members. In October, 1940, Jewish physicians were forbidden to treat non-Jewish patients after the end of the year. Jewish pupils and students were excluded without notice from elementary and high schools and from the universities. In December it was announced that certificates enabling Jewish artisans to work would not be renewed. All contracts between Jewish employers and apprentices were ordered cancelled. All Jewish-owned shipping was ordered transferred to the state within thirty days.

In October, 1940, a considerable German army entered Roumania, and in the following month the Roumanian government signed the tripartite pact. Sima's legionaries carried on a clandestine fight against Antonescu, whom they wished to overthrow. That same month, in addition to sixty-four high dignitaries and former political leaders, generals and prefects whom they assassinated in the Jilava prison, they killed Jews in several cities and pillaged their homes and stores. The Ploesti Jews suffered most severely. On January 21, 1941, led by Sima, the legionaries revolted against Antonescu, and fought in the streets against the troops faithful to the latter. During the three days in which they were masters of Bucharest they organized one of the most brutal anti-Jewish pogroms in history. They burned or wrecked houses in the Jewish quarters, first stealing whatever they found there; they pillaged Jewish-owned stores, arrested and beat and tortured hundreds of Jews, and slaughtered a whole group of Jews in the slaughterhouse in a satiric and malicious imitation of the Jewish method of ritual slaughtering of animals.

Antonescu with the aid of the German Nazis gained the victory over Sima's forces, and proclaimed himself leader of the Iron Guard in place of Sima, who had disappeared. Antonescu's promised "sincere Iron Guard (legionary) regime" represented for the Jews a complete adoption of the Nazi policies: countless decrees eliminating Jews from the country's economic and cultural life, arrests of hundreds of Jews and their detention in concentration or forced labor camps and, after the Nazi attack on Soviet Russia in June, 1941, in which the Roumanian armies took part, massacres of Jews and expulsions from cities, towns and provincial regions.

During the first few months of the Nazi-Soviet Russia war, Roumania recovered Bessarabia and northern Bucovina and gained a strip of the Ukraine, including Odessa, which was called Transnistria. At the very outset of the war the Roumanian government issued a statement on the shooting at Jassy of 500 "Judeo-Communists" who had "attacked the German-Roumanian troops." The truth, as related in an authentic report dated January 25, 1942, and received at New York city, was that several thousand Jews were shot to death at Jassy by Roumanian and Nazi German soldiers. Transnistria was converted into a vast concentration camp for the Jews of Bessarabia, Bucovina and Moldavia. Many Jews possessed of means succeeded in escaping to the United States or South America. Those of the poorer and middle classes who ventured to leave the country suffered in some cases untold hardships. Some were forced to live for weeks on small boats which were not allowed to land in any port. On February 24, 1942, the sinking of the *Struma* in the Black Sea took the lives of 768 Roumanian Jews, including 281 women and seventy-eight children.

The measures of elimination and expropriation proclaimed by the Nazi-supported Antonescu government

Anti-Jewish decrees in Roumania during the early 1940's

during 1941 and 1942 barred most of the Roumanian Jews from all means of earning a living. The most important ordinances published in those years were: Jews employed in private enterprise were to be dismissed by December 31, 1941; rural and urban Jewish-owned property was expropriated, as well as Jewish-owned liquor and drug factories, wineries, and forests and mines. Motion picture operating licenses issued to Jews were revoked. Jews were forbidden to own radio sets. On September 30, 1941, the Jews of Bessarabia and northern Bucovina were expropriated, and the discriminatory laws were applied to these provinces. A later order drafted all Jewish men from eighteen to fifty years of age for forced labor service in camps. A so-called "Law of the Jews" required all Jews to turn in clothes, shirts, underwear, blankets and the like in good condition and in quantities commensurate with the taxes paid by the Jews in the previous year, when many of them still had jobs and homes and had not yet been expropriated. The decree of December 29, 1941, provided for the creation of a Central Jewish office which all Roumanian Jews were required to join, under penalty of ten years' imprisonment and a fine of 200,000 lei. Under this law, all persons with one Jewish grandparent were considered Jews, and all Jewish communities, associations and organizations were dissolved.

In 1942 strict orders were issued that all Jews between eighteen and fifty years of age be sent without fail to the labor camps. On July 24, 1942, all Jewish schools, primary and secondary, and all Jewish hospitals were confiscated by the government. All Jewish-owned property was placed at government disposal. On August 23, 1942, all Jewish-owned businesses were ordered liquidated by September 1st. Anxious to avoid the reproach of employing Bolshevist methods of expropriation, Antonescu decreed that Jews would receive the equivalent of their confiscated property in 3 per cent government bonds. The property was, however, to be evaluated by government commissions, and the government bonds and the income received therefrom by the Jews were to be frozen.

It is not known exactly how the laws concerning the removal or discharge of Jewish owners or employees of commercial and industrial organizations were executed. According to reliable information from Bucharest, dated January 25, 1942, half of the Jewish employees who, under the provisions of those laws, were required to have been dismissed from their positions by December 31, 1941, were still holding them. During the first half of 1942 there appear to have been some ways and means for the Jews to accommodate themselves to these regulations, especially in Bucharest, where the general situation was more favorable than in the rest of the country. In July, 1942, necessity compelled the government to order a "civilian mobilization" for ninety days of all Jewish physicians, pharmacists, engineers and architects. However, for the great masses of the Jews the economic and unemployment situation grew worse than it had been in 1941 and in the first half of 1942. Toward the end of August Swiss newspapers, taking their clue from the Bucharest German press, reported another mass deportation of Roumanian Jews to Transnistria. "Within one year's time there will not be a single Jew in Roumania," the German press predicted. One of the Bucharest Nazi newspapers declared that there were still 270,000 Jews left in Roumania after the deportation of 185,000 to Transnistria.

However, it could not be ascertained whether these figures, as well as the frequent reports in the Swiss, London and Ankara press telling of the massacre of tens of thousands of Jews in Roumania, were correct. An eyewitness, Miguel A. Rivera, formerly Chilean minister to Roumania, said on his arrival at Santiago (*The Record,* September 20, 1942):

"It is hard to describe what Nazi bands and Roumanian hooligans have done to the Jews in Roumania. Human language is too poor to tell it in words. Jews in Roumania have been robbed of their possessions, blackmailed, brutally attacked and many of them massacred under most horrible circumstances. What my eyes have seen should not be passed over in silence. It cries out to heaven."

8. Communal and Cultural Institutions. Until about the middle of the 19th cent. the Jewish communities, which were responsible to the princes for the taxes which had to be paid by the Jews, had the right of imposing taxation upon individuals. Religious and charitable institutions were maintained from the tax on kosher meat and poultry (the Gabella). The epitrops (members of the governing board, which was called Epitropia) had jurisdiction in matters of common law and of religious observance; Jews found guilty of committing religious offenses were whipped in front of the synagogues (according to Dr. Iuliu Barasch, reporting on his journey through Galicia, Bucovina and Moldavia in 1840 [this report was published in the *Anuarul Pentru Israeliti,* 1893 to 1895]).

The great masses of the Jews were ignorant and superstitious. They were adherents of Hasidism in the crude form of the worship of the Rebbe who, in ex-

change for money, was, through his prayers, to give them life, health and the means of subsistence. The *roife* (barber; from the Hebrew *rofe,* physician) played an important role as healer.

After 1850 the bonds between the state and the Jewish communities became loosened. On July 3, 1862, the *Monitorul Oficial* published a decision of the cabinet in accordance wherewith "the state is no longer to concern itself with matters touching on the Mosaic cult and Jewish institutions, and is to leave to the Jews the organizing of their religious life and charitable activities in whatever way they choose, without the majority being enabled to impose their ways upon the minority, or vice versa." The 1864 law code abolished the quality of the Jewish communities as juristic persons. The result was anarchy among the Jewish communities, many of which could no longer maintain their institutions due to the lack of the Gabella. Other communities split, and in certain places where there had been only one there now were two or three Jewish communities. Deprived of the right to own property and to receive donations through the loss of their juristic personality, the communities were compelled to register their properties (hospitals, asylums, schools and other buildings) in the name of private individuals. This led to great abuse.

Up to the years 1865 to 1870 the Heder (one-room Hebrew school or class) was the center of instruction. The Heder existed despite the opposition of the progressive elements. Jews were free to attend the state schools, for not even the Organic Law, with its generally anti-Jewish tendency, barred Jewish children from instruction in the elementary schools. On the contrary, public instruction was made attractive to the Jews through the exemption from military service (between the years 1854 and 1860) which was held out to those Jews who had attended four classes of the elementary school. The tendency toward assimilation through the school and the army existed side by side with an aggressive anti-Semitism which manifested itself in expulsions of Jews from villages and the hunting down of the "vagabonds." The government was anxious to have the Jews adopt the Roumanian language and discard the Polish Jewish garb. After the law of November 25, 1864, introduced compulsory elementary education, the minister of public instruction sent a circular letter to the Jewish communities inviting them to have their children attend the state schools. From 1870 on they did so in great numbers.

The progressive Jews, however, wanted schools of their own which would afford their children the opportunity of studying Hebrew and German together with Roumanian, which was the only language taught in the state schools. The first two modern Jewish schools, one for boys and the other for girls, were founded by the Bucharest community in 1850; a third followed in 1852. But these schools were compelled to maintain themselves against the bitter attacks by the rabbis and the reactionary members of the Jewish community.

At Jassy, the first modern Jewish school, founded in 1853, was the occasion for a violent controversy. "The Hasidim and fanatics were in an uproar. Rabbi Taubes, on Passover of 1853, pronounced a curse upon the modernists in the synagogue, and declared that they were apostates from Judaism and not worthy of having their children circumcised" (*Anuar Pentru Israeliti,* 1897-99). Under these circumstances the schools could not exist. But the progressive Jews were supported by Liberal politicians who favored assimilation, and with their aid Israelito-Roumanian schools came into existence in large numbers from 1860 on, and especially from 1865 on. In the school year 1882 to 1883, according to figures cited by Elias Schwarzfeld in his *Les juifs en Roumanie,* the Jewish pupils, both boys and girls, formed 15 per cent of the total number of pupils in the urban state schools. In certain communities of Moldavia the percentage of Jewish pupils varied between 30 and 75.

But there was a change from the year 1885 on, when nationalist anti-Semitism began to agitate the country. A circular letter issued by the ministry of public instruction in 1887 ordered school principals to admit Jewish pupils only to fill places left after all non-Jewish applicants had been considered. This measure was rendered still more stringent through the imposition of a school tax upon the Jews, enacted in the law of 1893 and repeated in all succeeding legislation. This school tax applied to Jewish students attending high schools, vocational schools and colleges. The Jewish communities were then compelled to establish a large number of Israelito-Roumanian elementary schools, with the result that soon all towns and large villages throughout the country had such schools.

From 1880 on the Alliance Israélite Universelle granted subsidies to the poorer communities for the founding of schools. Beginning with 1900 the Jewish Colonization Association assumed this burden, contributing funds for the erection of fine school buildings. Many schools were endowed by Jewish philanthropists, whose names they bore. In Bucharest, Jassy and other cities commercial and vocational schools and high schools for boys and girls were organized by the communities or by private individuals; however, the number of such schools was not sufficient to provide for the educational needs of the Jewish masses. There were few scholarships for poor students. Jewish students of the middle classes succeeded in gaining admittance to state elementary, commercial and high schools despite restriction of admission and the tax. In 1896 there were 8,924 Jewish children in the public elementary schools. Jewish youths whose parents were better off went abroad to study.

At Bucharest a Sephardic community had been in existence for about a hundred years, in addition to the more important community of the Ashkenazic Jews. It maintained a school, two synagogues (the more modern one was burned down during the pogrom of January 21 to 23, 1941), several philanthropic institutions, and a cemetery.

In 1857 Templul Coral (The Choir Temple) was founded at Bucharest as a place of worship for a modern Jewish community. Nearly destroyed by the anti-Semitic mob at its completion in 1866, the building was reconstructed and dedicated in the following year. Its recognition, many years before the first World War, by the supreme court as a juristic person helped toward its being considered as the Jewish community in Bucharest, and it administered several schools and hospitals. Even when merged into the organized Jewish community of Bucharest (after 1919) it retained its autonomous board. Through the efforts of its president, Micu S. Zentler, a building harboring a Jewish library, museum and historical archive was erected in the precincts of the Temple in 1933. Another affiliated institution, the Institutul Cultural (Cultural Institute), under the direction of the philosopher J. Brucar, served as a focus for the activities of all Jewish intellectuals under the anti-Semitic governments from 1937 on. In 1941 Templul Coral was expropriated by the Nazis.

In 1872 Benjamin Franklin Peixotto had founded the organization Infratirea Zion (Brotherhood of Zion), which became the basis for the Roumanian B'nai B'rith which was founded in 1887. This organization did pioneer work in the field of education and social service.

As a result of the emancipation, elementary and secondary education was made free for the Jewish population. There were in Transylvania, at the time of its annexation to Roumania in 1919, two Jewish secondary and thirty-eight elementary schools. The

great majority of the Jewish children, however, attended the Hungarian schools. In Bessarabia there were high schools and many elementary schools under the control of the Tarbuth (Jewish education) organization. By the law of December 22, 1925, the language of instruction in the Jewish schools had to be either Roumanian or Hebrew. According to official statistics, in the school year 1934 to 1935 there were in Greater Roumania 56,821 Jewish pupils in the public elementary schools and 17,761 in the private elementary schools. Despite the absence of figures, it is known that the number of Jewish students in the high schools was considerable.

As regards the Jewish students in the universities, the ceaseless attacks and acts of violence committed against them by their non-Jewish fellow students had caused their number to decline so drastically that hardly any were left. Jewish students who possessed the means studied in foreign universities. In October, 1940, a state ordinance barred Jews from all branches of public education. Between 1936 and 1940 there were at Bucharest three Jewish vocational schools with a total of 5,000 students.

The communities regained their capacity as juristic entities after 1919, and were able to reorganize themselves on a solid basis. The number of schools, philanthropic institutions, hospitals, asylums and libraries grew. In 1927 there was formed a union of Jewish communities of the Old Kingdom (Uniunea Comunitatilor Evreesti Din Vechiu Regat) which was recognized by the government as the representative body of citizens professing the Mosaic cult.

Although the number of the Jewish population would have entitled the Union to an annual subsidy of sixty million lei for religious and cultural purposes, the government fixed such subsidy at ten million lei in 1929, and in subsequent years this sum was still further reduced. In 1941 the Union was dissolved and all the real estate and buildings owned by the communities, including schools and hospitals, were seized by the government.

9. Economic Life. The Jews of the Roumanian countries played an active role in transforming the old feudal system into a modern capitalistic economy. The Jewish banker Michael Daniel of Jassy was called "the Rothschild of Moldavia," and almost all the Moldavian boyars, land tenants and merchants depended on the Jews for loans and credits. Among other outstanding important Jewish bankers of Jassy in the first and second halves of the 19th cent. besides the Daniel family were Leiba Cahane and his son-in-law Baron Waldberg, Jacob Neuschotz, Mayer Weisengrün, Joseph Unter and J. Olivenbaum. In the 20th cent. the bank of Moritz Wachtel at Jassy was famous. All these banks were financed by foreign banks. There were other Jewish banking families, such as the Moskowitz family in Botoshani, and the Blanks and Berkovici brothers at Bucharest. In all the centers of Moldavia and in some of the cities of Wallachia there were banks owned by Jews. At Bucharest the Marmorosch, Blank and Company bank controlled 40 per cent of Roumania's economy at the beginning of the 20th cent. In other big banks Jews played a leading role as directors.

The economic crisis which gravely affected the country from 1929 on caused the bankruptcy of many private banks, including most of those owned and operated by Jews. Furthermore, in the course of the process of "Roumanization" Jews were ousted from leading positions in banks not owned by Jews.

Prior to 1914 there was in Moldavia a class of large land tenants. The best-known of these were the Fischer brothers. A violent anti-Jewish campaign was launched against them and against other Jewish land tenants who were accused of exploiting the peasants; the northern and central parts of Moldavia were called by the derisive name of "Fischerland." The agrarian revolt of the peasants in 1907, which led to the shooting of thousands of them, started on one of the lands leased by Fischer, but reached its apex in Wallachia, where there were no Jewish land tenants.

From the early 19th cent. up to the time of the expropriation by the legionary government in 1941 and 1942 an important part of petty, middle and wholesale trade was in the hands of Jews. In the period of intensive industrialization, which set in after 1919, Jews filled prominent places in the metallurgical industries. Large fortunes were accumulated by individual Jews in the money market, commerce, industry and real estate. Numerous apartment houses were built at Bucharest by Jewish real estate owners; these were provided with modern appliances and conveniences surpassing those of Paris, London and New York. The upper brackets of the Jewish middle classes—merchants, industrialists, lawyers, engineers, physicians, dentists, owners of publishing houses and bankers—also were able to attain satisfactory economic positions. Neither they nor the moneyed Jewish class were affected by anti-Semitism until the advent of the Hitlerian era. Of 266,652 Jews who, according to the 1899 census, lived in Old Roumania (250,000, according to the census of 1911), more than 30,000 heads of families and single men were artisans and 23,000 were merchants who paid for their licenses. There were many small merchants among the latter. The full weight of the anti-Semitic policy and legislation always affected the artisans (tailors, cobblers and tinsmiths), the small merchants (full-fledged proletarians), those without occupations and the lower strata of the middle classes.

In Bessarabia about 12,000 Jewish peasants had received plots of land in the course of the agrarian reform of 1922 to 1925. They were settled in a number of flourishing agricultural colonies.

In 1941, however, they were dispossessed. There were Jewish peasants also in Bucovina and Maramuresh. But perhaps 200,000 Jews lived in the most abject poverty in Moldavia, Bucovina and Maramuresh, as well as in the slums of Jassy and Bucharest.

10. Jews in Roumanian Cultural and Political Life. Prior to and after the emancipation, Jews played an active part in developing the cultural and intellectual standards of Roumania. They gave the nation men of science, authors, journalists, poets and playwrights in large numbers. A number of wealthy Jews gave endowments to the Roumanian Academy; one such, presented by Jacques Elias, reached the extraordinary figure of 900,000,000 lei in 1934.

Ronetti-Roman was author of one of the best plays in the Roumanian language, *Manasse*. C. Dobrogenau-Gherea was a great literary critic and sociologist. Among the eminent Roumanian Jewish poets were A. Steuerman-Rodion, B. Nemtzeanu, A. Toma and Adrian Verea; among the novelists were I. Ludo, I. Peltz and M. Sebastian; among the critics, essayists and authors were Henric Sanilievici, Barbu Lazarenu, Ion Trivale and Aurel Weiss; among the scholars were Iuliu Barasch, Moses Gaster, Lazar Saineanu, Henry Tiktin and Candrea; among the journalists were Constantin Graur, B. Branisteanu, I. Hussar, Emil Fagure, Saniel Labin, Simon and Emil Paucker, and Scrutator-Blumenfeld; among the historians were the Schwarzfeld brothers, Moses and Elias. Many other Roumanian Jews rendered outstanding service in the cultural and intellectual life of the Roumanian people.

After the emancipation only a small minority of the Jewish population joined the Roumanian political parties. The great masses voted according to guidance received from two major Jewish organizations: the Union of Roumanian Jews and the Jewish National Party. In 1927 two representatives of the Union were elected to parliament as the result of an electioneering pact concluded with the governing Liberal Party. The Jewish National Party, which, aside from Old Rou-

mania, had adherents in Transylvania, Bessarabia and Bucovina, had an agreement with the National Peasant Party, and regularly succeeded in electing four or five deputies to the Chamber and Senate. However, due to the anti-Semitic atmosphere prevailing in parliament the Jewish legislators did not play an important part.

11. Statistics. Throughout almost the whole of the 19th cent. the birth rate among the Jews in Roumania was high, and far in excess of the death rate.

Between 1870 and 1892, according to official statistics, the annual surplus averaged 3,380. Thereafter the birth rate began to decline; in 1932 it was 12,586 for Greater Roumania and 10,039 in 1938, whereas the death rate for the corresponding years was 9,891 and 10,250. Thus from a surplus of 2,695 in 1932 there was a deficit of 213 in 1938. The birth rate steadily declined. Mixed marriages in Old Roumania prior to 1900 barely amounted to 1 per cent of the total of Jewish marriages. Subsequently, especially following the emancipation, and among Jews of the wealthy and middle classes, there was an increase in intermarriage, but no figures are available.

On the basis of the census of 1930 and with the addition of the average annual populational increase up to 1937, the Jewish population of Roumania in 1939 was about 800,000. This element of the population has, since 1939, been systematically destroyed economically, morally and politically. At the end of 1942, isolated in ghettos, in concentration camps and in Transnistria, those who survived the sanguinary pogroms were in constant fear of complete extermination as long as the Hitlerian regime existed.

ROUMANIAN JEWS OF AMERICA, UNITED. A Federation of Roumanian Jews of America was organized in New York city in March, 1909; its aim was "to further, defend and protect the interests of the Jews of Roumania, to work for their civic and political emancipation and for their economic reconstruction and rehabilitation." It was later renamed United Roumanian Jews of America and aimed to publicize the condition of the Jews in Roumania, to champion their rights, and to enlist the sympathy and assistance of Americans on their behalf. It maintained cordial relations with the Roumanian government and its representative in Washington, although at times the organization was militant in its demands and in its effort to demonstrate that, in discriminating against the Jews, Roumania was hurting, to a vital degree, its economic, cultural and social status.

The United Roumanian Jews received hospitably and feted Roumanian statesmen, deputies, professors and other prominent Roumanians visiting the United States, including the ministers Constantin Angelescu, Prince Anton Bibescu, Nicholas Titulescu, Nicholas Iorga, Nicholas Lupu, Charles Davila and others. By thus exemplifying the interest of Roumanian Jewry in their native country, the United Roumanian Jews of America gained the goodwill of the liberal-minded statesmen in Roumania.

The organization enlisted the aid of President Theodore Roosevelt and a number of other influential persons in the United States on behalf of the Jews of Roumania. During the first World War it succeeded in interesting President Woodrow Wilson in their plight, and it is credited with a share in bringing about their emancipation.

During the Hitlerian regime and the second World War, the United Roumanian Jews of America secured the aid of the State Department of the United States in helping many Jews fleeing from Roumania to find a haven in Turkey and Palestine. It also served as a medium in assisting refugees from Roumania in the United States.

The organization was instrumental in establishing in New York the Menorah Home for the Aged and Infirm and the Jewish Home for Convalescents. It took part in the establishment of the Kehillah and of the American Jewish Congress. The organization was successively headed by P. A. Siegelstein, Solomon Sufrin and Leo Wolfson, presidents. In 1943 Charles Sonnenreich was serving as president. Among its executive secretaries was Herman Speier, who devoted the last years of his life to the work of the organization.

ROUSSEAU, JEAN JACQUES, noted non-Jewish French writer, b. Geneva, Switzerland, 1712; d. Ermenonville, France, 1778. He was one of the most important forerunners of the French Revolution, and as such was idolized by the revolutionaries, had an enormous intellectual, political and moral influence over his own generation and the early part of the 19th cent., and contributed much to the dissemination of liberal ideas. Like the Encyclopedists of his time, he was not well informed about the Jews, but, unlike Voltaire, he had no hate for them and did not write passionately against them. Léon Berman (*Histoire des juifs de France depuis les origines à nos jours,* 326 et seq.) observes: "The Jews known to Rousseau were unlearned men, almost illiterate. But he stated openly that the situation of the Jews was anomalous and that Christian theorists are wrong in believing that their arguments against the Jews are of any value." In one of his most famous writings, *Professions de foi du vicaire savoyard,* Rousseau asks: "Do you know many Christians who ever took the trouble to analyze carefully what the Jews have to say against them? If some one among us Christians would have the courage to publish a book in favor of the Jews he would be put on trial—he, his publisher and his library. Under such conditions it is easy to be always right against the Jews, and it should afford (to Christians) a real pleasure to fight against people who dare not answer."

A sincere and convinced republican, Rousseau was

a staunch admirer of Moses as legislator and statesman. He pointed out that Moses had succeeded in transforming a wandering horde of Jewish tribes into a political body, a free people. While the tribes were wandering in the wilderness, without a roof over their heads, he had bestowed upon them institutions which five thousand years had not succeeded in destroying (see *Considérations sur le gouvernement de Pologne,* chap. 2, in vol. 2 of Rousseau's collected works).

It is interesting to note that, during the Reign of Terror (1792-93), the French Revolutionists changed the name of the St. Esprit quarter of Bayonne, in which the Jewish ghetto was located, to Jean Jacques Rousseau. This was done because Rousseau was the symbol of tolerance and freedom.

In religion, Rousseau was a nebulous deist. Abraham Wolfson (*Spinoza, A Life of Reason,* 323-24) says: "When Rousseau, revolted by the sorry aspect of unalterable 'human nature,' the eighteenth century alibi for social injustice, cruelty and corruption, expressed in the *Réveries d'un promeneur solitaire* the longing to throw himself with closed eyes into the vast, pure ocean of nature, to find in 'the noble savage' an anodyne for the ills of a hideous civilization, one almost hears a romanticized version of Spinoza's 'God or Nature.' Furthermore, in his *Lettres écrites de la montagne,* Rousseau employed all of Spinoza's arguments against miracles found in the *Tractatus Theologico-Politicus.* It goes without saying that many ideas in the *Contrat social* were also bodily lifted from the same source."

Rousseau, however, was also an original thinker, and his ideas exerted a strong influence on many later Jewish writers, such as Moses Mendelssohn. His ideas can also be seen as a ferment and a guide in the early endeavors of the Haskalah Movement in Judaism.

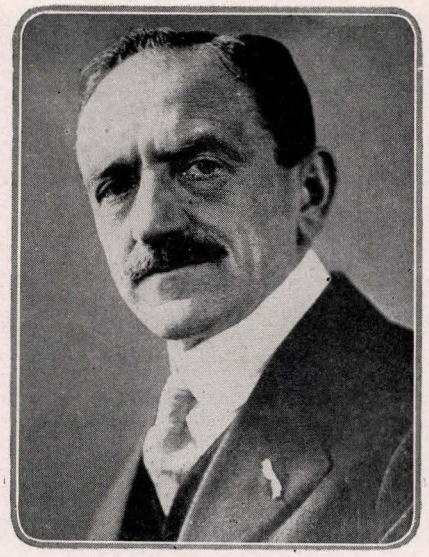
On the one hand, his theory of the "social contract," with its implied rejection of the contemporary social stratification, as well as his insistence on the natural rights of man, stirred in the Jewish people the desire to break the bonds of the ghetto and to participate in contemporary culture. On the other, his educational proposals played a part in the shaping of the new educational forms in Jewish life—the breaking away from the traditional Talmudic teaching and the emphasis on secular, practical knowledge.

ROUSSILLON, old province of France, in the southeastern part of the country, roughly bounded by Gascony, Aragon, Catalonia and the Mediterranean Sea; it is the modern department of Pyrénées Orientales, with Perpignan as capital. Lying as it did on the border between France and Spain, Roussillon often changed masters. At first a province of Aragon, it was French for a few years in the 15th cent. and was finally annexed to France in 1659. The neighboring county of Cerdagne, under the same rulership as Roussillon and always named with it, shared its fate.

In the 13th cent. there were Jewish communities in Roussillon in the following localities: Villefranche-de-Confluent, Ille, Thuir, Céret, Collioure, Millas, Elne, Toreilles, Clayra, Salses, Le Boulou and, most considerable of all, Perpignan. The history of the Jews in Roussillon and Cerdagne was not different from that of other Jews of the same period in Western Europe. In Perpignan they were confined in a ghetto known as the Call'. In 1392 there was an attack of the mob on the Call' and many of the Jews were killed; the synagogue, mentioned as early as 1303, was desecrated and destroyed.

The Jews of the region were dependent upon the whims and, in particular, subject to the financial demands of the kings and local bailiffs. The various sovereigns under whom they lived in the 13th to 15th centuries sometimes protected them and at other times cruelly persecuted them. Thus King Martin, in 1396, after receiving from the Jews of Perpignan a gift of 4,000 florins when he ascended the throne, accorded them his protection. Accustomed to the wearing of the Jew-badge and to being shut up in ghettos, they were grateful for every little favor or protection from ill-treatment. They were forbidden to employ Christian servants, to hold public office or to charge excessive interest on loans they granted to Christians. But they could travel into France for business purposes without wearing the Jew-badge (decree of 1372).

In the 15th cent. the situation of the Jews became much worse. In 1415 Ferdinand I issued a decree that Jews had to attend Christian sermons three times a year. Another Ferdinand forbade the Jews (1457) to receive or pawn ecclesiastical objects, under the penalty of a public flogging, or to practice medicine and surgery among Christians. The same decree forbade Christians to buy food from Jews. When the Jews were expelled from Spain in 1492, many fled to Roussillon, which at that time was under French dominion. But when the country was returned to the Spanish crown in 1493, the Jews—there were only thirty-nine families of them remaining—were expelled. The communities never were reestablished.



The communities of Roussillon and Cerdagne were administered by an Aljama, or community organization. Many of the Jews in the area were tailors, dyers and bookbinders. Perpignan was regarded as a center of Talmudic learning and of the cultivation of Jewish philosophy. Pierre Vidal has listed the names of the most noted Jewish scholars, of whom the best known were: Joseph ben Nathan Ezobi, Abraham Bedaresi, Don Crescas Vidal and Nissim ben Reuben, the Talmud commentator. Levi ben Abraham ben Hayim, who played a part in the dispute over philosophical studies, was born in Perpignan in 1250. Moses of Narbonne, who wrote a commentary on Averroes, lived for some time in Perpignan.

ROWE, LEO STANTON, economist and publicist, b. McGregor, Iowa, 1871. His family settled in Philadelphia, and there he was educated, receiving his degree in law from the University of Pennsylvania; he also studied in Germany. Returning, Rowe had hardly begun the practice of law when he became, instead, an instructor in political science at the University of Pennsylvania (1895); by 1904 he was head professor of the department, remaining until 1917.

It was in 1900, when President William McKinley appointed him member of a commission to revise and compile the laws of Puerto Rico, that Rowe became decisively attracted to the problems of Latin America and pan-Americanism. The results of the commission's work were issued in a two-volume report by Rowe, Daly and Hernandez-Lopez (1901). Then, as chairman of the Insular Code Commission, Rowe issued, together with J. M. Keedy, the eight-volume report (1902) which became the basis for the governing laws of Puerto Rico. Thus, trained in political and social sciences, in literature, languages and the law, Rowe came to the forefront as chief single publicist in the countries of Central and South America for the United States, and vice versa.

In 1906 he was delegate to the Third International Conference of American States at Rio de Janeiro, and two years later acted as chairman of the United States delegation at the First Pan-American Scientific Congress held in Chile. He was appointed to the United States-Panama Mixed Claims Commission in 1913, and was secretary general to the Pan-

Leo S. Rowe

American Financial Conference in Washington, D. C., in 1915; he held the same post in the Inter-American High Commission until 1917. That year he was appointed Assistant Secretary of the Treasury, but in 1919 was transferred to the State Department, heading the Latin American division.

This post he relinquished in 1920 when, succeeding John Barrett, he became director general of the Pan American Union, the administrative organization maintained by twenty-one republics to function for the International Conferences of the American States, in magnificent headquarters at Washington, D. C. In this role Rowe became increasingly the fosterer of numerous measures for closer relations between the United States and the republics of Latin America; under his directorship the Union extended its propaganda and educational activities. Rowe added the weight of his experience and understanding to every important political and scientific conference held on inter-American affairs. In 1939 he attended the first meeting of the ministers of foreign affairs of the American republics, held at Panama.

In addition to honorary degrees from numerous institutions, Rowe received awards of merit from such countries as Venezuela, Peru, Cuba, Chile, Colombia, Bolivia, Ecuador, the Dominican Republic and Haiti. In 1940 the University of Pennsylvania, his alma mater, bestowed on him the Alumni Award of Merit; the same year the Pan American Society decorated him with its gold insignia, an honor previously given only to Herbert Hoover, Franklin D. Roosevelt, Cordell Hull and Sumner Welles.

Active member of numerous scientific societies, Rowe served as president of the American Academy of Political and Social Sciences from 1902 to 1930, and contributed many reports to its *Annals*. From 1921 to 1926 he presided at the Latin American Round Table in the Williamstown, Mass., Institute of Politics. In addition to the reports, monographs and articles published in magazines and the abovementioned *Annals*, Rowe wrote: *The United States and Puerto Rico* (1904); *Problems of City Government* (1908); *Problemas americanos, conferencias* (1915); *The Early Effects of the European War Upon the Finance, Commerce and Industry of Chile* (1918); *Early Effects of the War Upon the Finance, Commerce and Industry of Peru* (1920); *The Federal Systems of the Argentine Republic* (1921).

Lit.: American Hebrew, Dec. 7, 1923, p. 104 et seq.

ROWNER, ZEIDEL, *see* MARAGOWSKY, JACOB SAMUEL.

ROXBURY, *see* MASSACHUSETTS.

ROZENGOLTS, ARKADII PAVLOVICH, revolutionary and Soviet functionary, b. Russia, 1889; executed at Moscow, 1938. He joined the social revolutionaries in 1905; two years later he was arrested at Vitebsk; subsequently he was active in underground political work at Moscow. From the days of the October Revolution on, Rozengolts was among the leaders in the Soviet government. In 1917 he was a member of the Military Revolutionary Committee; during the civil war (1918-21) he was a member of the military council of the Soviet Republic, and headed its air fleet (1923-24).

From 1918 on he was an alternate member in the presidium of the Central Executive Committee. Being a trained economist, he was next placed in key positions of economic government, serving at first in the collegium of the commissariat of finance (1922). After an important diplomatic assignment as counsellor and acting ambassador of the Soviet Union in London (1925-27) until the temporary breaking off of Anglo-Soviet diplomatic relations, he was, on his return to Russia, appointed to the central control commission of the Party and elected a member to the collegium of Workers' and Peasants' Inspection (1928). Later he was assistant commissar in the same department.

Rozengolts was people's commissar of foreign trade when, in 1937, he was arrested on the charge of plotting against the Soviet government. He was tried (March 2 to 13, 1938) as a member of the "right-Trotskyite bloc" (the Bukharin-Rykov group). After confessing to illegal contact with Leon Trotsky and to having handed over secret information to Germany, he was among those sentenced to be shot.

Lit.: Malaia Entziklopedia, vol. 7 (1931); Davies, Joseph E., *Mission to Moscow* (1941) 61-62, 65-67, 153, 169-70, 262, 266, 270, 278, 403.

ROZMARIN, HENRY, member of the Polish Sejm (Parliament), and leading Zionist, b. Galicia, 1886. Rozmarin was educated at high school, and studied law at the University of Vienna. From early youth he participated in Zionist and other leading Jewish movements, and was delegated by the Zionist organization in Galicia to attend numerous world Zionist congresses. In Lemberg he published a daily paper, *Chwila* (organized in 1919), a Polish language newspaper dedicated to Jewish life and interests. In this paper, for more than twenty years, the most important organ of Zionism and Jewish nationalism in Galicia, he contributed a series of articles on current Jewish events.

When Poland became an independent republic after the first World War, in 1918, Rozmarin was elected a member of the Polish Sejm by the Jews in Galicia, and was reelected thereafter for a period of fifteen years. As a member of the Sejm he discharged his mission with distinction. A noted speaker, he participated in numerous debates in the Sejm, not only on matters concerning Jewry, but frequently on the problems of Poland generally. He was considered an authority on the judicial as well as the industrial affairs of Poland, and was elected to many important committees.

Rozmarin conducted a private practice of law and at the same time was a leading industrialist in Poland, owning shares in several oil fields in Galicia. When the Nazis invaded Poland in 1939 and its government-in-exile reorganized the various departments, he was appointed consul general in Tel-Aviv, Palestine, where he was living in 1943.

ROZOWSKI, BORUCH LEIB, cantor, b. Nalibak, province of Vilna, Lithuania, 1841; d. Riga, Latvia, 1919. Already a father of three children and a failure in business, Rozowski began a serious study of music, and through the enthusiastic recommendation of the

great pianist-composer Anton Rubinstein, entered the Conservatory of St. Petersburg as the first, and for a while the only Jew thus privileged.

His fellow students, including Peter Tchaikovsky, all showed great respect to the religiously observant and Zhupice-clad Rozowski. His main subjects were voice and composition. In order thoroughly to prepare himself for the cantorate Rozowski studied with Sulzer in Vienna and with Weintraub in Königsberg (1870). He devoted his energies especially to mastering the style of Weintraub. So successful was he in this that the latter declared Rozowski to be a better interpreter of his compositions than he himself, their author.

In 1871 Rozowski began his forty-eight years of service in the great synagogue in Riga. In addition to his activities in the field of synagogal music (his *Shirei Tefiloh* for the high holy days was edited by his son Solomon, who in 1943 was professor of music at The Hebrew University, Jerusalem, and published at Berlin in 1924), Rozowski was a Hebrew scholar, amateur chemist and astronomer. His compositions are marked by dignity and conciseness, the melodies being pleasant, and the harmonies conservatively effective.

MAX WOHLBERG.

Lit.: Biographical sketch in the *Shirei Tefiloh,* by Paul Mandelstam; *Die Chazanim Velt* (Warsaw), Aug., 1934; Friedmann, Aron, *Lebensbilder berühmter Kantoren,* vol. 3 (1927) 28; Zaludkowsky, F., *Kulturtrager fun der Yiddisher Liturgie* (1930) 148.

RÓZSA, DEZSŐ, esthete and author, b. Budapest, 1885. He studied at the Universities of Budapest, Paris and Oxford, and received the Ph.D. degree from that of Budapest. He taught English language and literature in several secondary schools and at the University of Budapest, where he was an instructor. Rózsa published translations of the dramas of Christopher Marlowe. His essays on Shakespeare appeared in the publications of Hungarian Shakespeare archives, and his studies in pseudo-Shakespearean plays were issued by the Hungarian Academy. He was a member of the Shakespeare Committee of the Kisfaludy Society. In addition to a large number of text books for the study of the English language, used regularly in the schools of Budapest, Rózsa published an anthology of translations from English poets, as well as books on Emerson, Thomson and the Elizabethan dramatists.

RÓZSAHEGYI, KÁLMÁN, actor, b. Endrőd, Hungary, 1873. From 1897 on he appeared on Budapest stages. From 1910 on he was a member of the Budapest National Theatre, being made life member in 1923. Rózsahegyi appeared in classical comedies; his portrayals of the common man were highlights of such performances. His great powers of mimicry and observation were revealed in the variety of comical mannerisms, in the portrayal of which he excelled; his comic interpretations were aglow with human dignity. None succeeded in rendering the Hungarian peasant, canny and imperturbable, truer to life than this Jewish artist. In 1930, when the economic crisis precipitated anti-Semitism, Rózsahegyi, who had become a symbol of Hungarian cultural life, solved the psychological dilemma by accepting the Catholic faith. Among his great roles were the gravedigger of *Hamlet,* Grumio in *The Taming of the Shrew,* and Scapin in the comedies of Molière.

Rózsahegyi founded and directed a dramatic school of his own. In 1926 he toured the United States and was received with great enthusiasm by Hungarian-born Americans in various cities. He was president of the Americo-Hungarian Theatre Association. In 1943 he was believed to be living in Budapest.

RÓZSAVÖLGYI, GYULA, vice-mayor of Budapest, b. Nagykanizsa, Hungary, 1851; d. Budapest, 1924. He studied in the academy of law at Győr. Following the emancipation of the Jews, he entered civil service in the honvéd (defense) ministry; later he served in the city administration of Budapest where, in 1891, he was elected councillor and in 1897 vice-mayor. Rózsavölgyi accepted Christianity. He rendered signal service, especially in expanding and improving the school system of Budapest. He retired from office in 1915 and was appointed a councillor of the court by Emperor Francis Joseph.

RÓZSAY, JÓZSEF, physician, b. Lakompak, Hungary, 1815; d. Balatonfüred, Hungary, 1885. His father (named Rosenfeld) was a physician in the employ of Count Festetich. Rózsay studied medicine at Vienna, and after receiving the M.D. degree he was on the staff of the medical schools of several Germany universities. He served in the Hungarian Revolution (1848 to 1849) as a physician in a field hospital; subsequently he held several posts in the public health service, becoming health officer-in-chief of Budapest and of Pest county. In 1864 he was made a member of the Hungarian Academy and knighted with permission to use the prefix "murakőzi" in his name. Rózsay was active in the movement of the Hungarian Jews for Magyarization in the 1840's. He took part also in Jewish communal endeavors.

Rózsay published two books on medicine as practised by the ancient Jews, *A gyógyászat a héberéknél és zsidó orvosok a középkorban* (Medicine among the Hebrews and the Jewish Physicians in the Middle Ages; 1863) and *Tanulmány a régi zsidók orvostanához* (Essay on the Medicine of the Ancient Jews; 1875); also several works on senescence, the prevention of epidemics, cremation and penitentiaries.

RUAH HAKODESH ("holy spirit"). The term Ruah Hakodesh first appears in *Isa.* 63:10-11 (ascribed by scholars to the post-Exilic period), as the personification of God Himself, Who is grieved at the disloyalty of the people. Moses is said to have brought this spirit into the midst of Israel. *Ps.* 51:13 prays that God will not take away His "holy spirit" from the sinner. The term is therefore approximately equivalent to "presence of God," "divine blessing." The term "spirit" (*ruah*) occurs frequently in the Bible in the sense of the divine inspiration which enters the body of the prophets and causes them to enounce the will of God. There is no indication, however, that the "holy spirit" was regarded as a separate entity. Christian theology developed from the term its doctrine of the Holy Ghost as a member of the Trinity.

In rabbinic literature Ruah Hakodesh is practically always the spirit of inspiration. It is described as the author of certain passages in the Bible, such as *Song of Songs* 8:5 or the passages in which God Himself is represented as speaking. In other cases it is the spirit of inspiration which comes upon the prophets, generally as the result of a life of purity. It is not limited to any group. "The heathen as well as the Israelite, the man as well as the woman, the manservant as well as the maidservant, may come into the possession of the Ruah Hakodesh in accordance with their actions" (*Sefer Eliyahu Rabbah* 10).

RUBASHOV, SHNEUR ZALMAN, historian, journalist, and Poale Zionist leader, b. Mir, province of Minsk, Russia, 1889. He pursued Jewish and secular

Robert Rubenson

studies in languages, history and philosophy, first at St. Petersburg and later in German universities. At one time he was a pupil of Simon Dubnow. The Zionist movement attracted him in his youth, and before he was twenty he was helping Ber Borochov edit a Poale Zion paper in Vilna. He then removed to Berlin, where for a time he was co-editor of the *Jüdische Rundschau,* and later became active in Vienna. As a representative of the Poale Zionists, he attended the Zionist Congresses of the years 1912 to 1919, and in 1920 was a delegate to the London Conference. In that year was published the report *Die Eretz Yisroel Arbeit,* which Rubashov, a member of the council of the World Confederation of Poale Zion, helped to prepare. In 1921 he was elected to the Zionist Actions Committee, and, in Vienna, became editor of the party organ *Unser Wort.* While residing in Vienna he also lectured on Jewish history at the private school of Chief Rabbi Zebi Perez Chajes.

In 1924 Rubashov went to live in Palestine, where he was still active in 1943. There he became a leader in the Histadruth Haobedim. In the interest of labor Zionism he made visits to Europe and the United States, and together with Victor Hayim Arlosoroff edited the monthly organ *Ahduth Haabodah.* In 1925 he was appointed co-editor of the daily paper *Dawar.* In 1933 he founded *Dos Wort,* party organ in Warsaw.

A prolific writer in Hebrew, Yiddish, Russian and German, Rubashov published, in addition to his contributions in Zionist and labor periodicals, a monograph on David Conforte and the books: *Die Selbstverwaltung der Juden im selbständigen Polen* (Berlin, 1916); *Marx über Judentum* (Berlin, 1919); *Toledoth Bikkoreth Hamikra,* a critical history of the Bible (in collaboration with Dr. M. Soloweitschik; 1925; German trans., *Geschichte der Bibelkritik*).

The Jewish Cultural Institute published his compilation *Materialien zur wirtschaftlichen und politischen Geschichte der Juden in Polen im 15-17 Jahrhundert im Auftrag der historisch-ethnographischen Gesellschaft von Petersburg.* Among the Yiddish collections which he edited was *Oif der Shvell* (1923). Also, he published *Al Tille Beth Frank* (Hebrew; Berlin, 1923) and *Privatwirtschaftliche und genossenschaftliche Kolonisation in Palästina* (Berlin, 1922).

Lit.: Reisen, Zalman, *Lexikon fun der Yiddishen Literatur, Presse un Filologie,* vol. 4 (1929), cols. 262-67; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 5 (1931) 283.

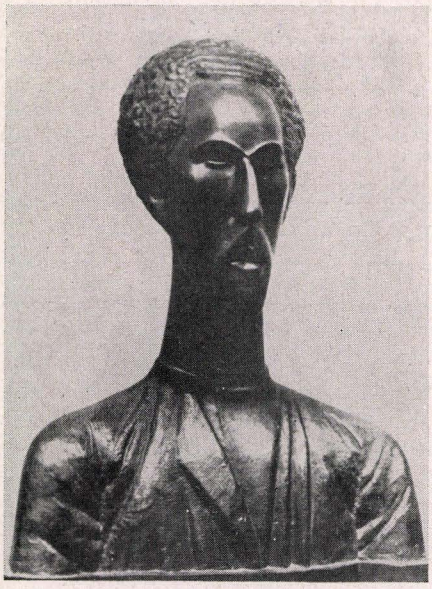
RUBEN, DAVID HARRY, surgeon, b. Washington, Pa., 1893. After receiving the B.S. degree in 1917, he served as a private in the Medical Corps of the United States Army during the first World War. The M.D. degree was conferred upon him by the Johns Hopkins University School of Medicine in 1921. After serving as an interne in Sinai Hospital, Baltimore (1921-23), Ruben established himself as a practitioner in urology at his native city, at the same time working in his special field at the Pennsylvania State Clinic, Washington. From 1925 on he was chief genitourinary surgeon at the Washington General Hospital.

Results of his research on the treatment of gonorrhea and in the field of urology appeared, among others, in the publications of the Pennsylvania State Medical Society and the Washington County Medical Society, of which he was a member. He was a fellow of the American Medical Association and of the American College of Surgeons, as well as a member of the Johns Hopkins Surgical Society. In 1943 he was living at Washington, Pa.

RUBENOVITZ, HERMANN H., rabbi, b. Kaunas, Lithuania, 1883. He was brought to the United States in 1890, educated at the College of the City of New York (B.A., 1905) and at the Jewish Theological Seminary of America and was ordained in 1908. Rubenovitz served with the congregations Adath Jeshurun, Louisville, Ky. (1908-10), and Mishkan Tefila, Boston (1910-). He was founder and president of the Rabbinical Association of Greater Boston, being reelected president for his eighth term in 1942.

In 1913 he was a delegate to the Zionist Congress in Vienna. He was until 1943 the only Jew to serve on the Massachusetts Committee for Public Safety. The city of Boston, officially and otherwise, celebrated (1941) Rubenovitz's thirtieth anniversary with Temple Mishkan Tefila.

RUBENSON, ALBERT, critic and teacher, b. Stockholm, Sweden, 1826; d. Stockholm, 1901. He studied at the Leipzig Conservatory and with Gade in Copenhagen. From 1852 to 1859 he was music critic on *Ny Tidning för Musik.* Appointed inspector of the Stockholm Conservatory in 1872, he rose to the post of director in 1888; under his guidance this became one of the major music schools in Europe. He composed many works for orchestra and for chamber music organizations, as well as songs and piano pieces.



RUBENSON, ROBERT, meteorologist, b. Stockholm, Sweden, 1829; d. Stockholm, 1902. In 1870 he was appointed professor at the University of Upsala, in 1873 head of the central bureau of meteorology, and subsequently a member of the Swedish Academy of Science. He established the first observatory in Upsala, and is considered the founder of modern Swedish meteorology. Many worthwhile scientific works in Swedish and French were published by him.

Lit.: Nordisk Familjebok, vol. 16.

RUBENSTEIN, E. IVAN, supreme court justice, b. Brooklyn, N. Y., 1895. He graduated from Brooklyn Law School of St. Lawrence University, and served as clerk to Algernon I. Nova. In 1925 he entered partnership in the law firm of Nova, Rubenstein and Rosling. From 1940 to 1942 he was counsel to the Kings County Clerk, and in January, 1942, he was appointed by Governor Herbert H. Lehman to the supreme court bench of the 2nd Judicial District of New York and at the November elections of 1942 he was elected for a fourteen-year term.

Rubenstein was a trustee of the New York and Brooklyn Federations for the Support of Jewish Philanthropic Societies of New York City.

RUBENSTEIN, LOUIS, manufacturer, b. Montreal, Canada, 1862; d. Montreal, 1931. Rubenstein,

Reuben Rubin

who achieved fame by his prowess as an amateur athlete, was a member of an old Montreal Jewish family.

He was educated in his native city and later joined the firm of Rubenstein Brothers, silver platers and manufacturers. He early took to amateur sports and for his skilful performances obtained many laurels. He won the world's figure skating championship at St. Petersburg in 1890 and was the holder of other trophies and prizes.

For nearly half a century Rubenstein was looked upon as an outstanding personality in the realm of Canadian sports. He held the presidency in numerous sporting clubs and organizations and was generally regarded as one of the most widely respected Jewish citizens in Montreal. In 1914 he was elected by acclamation alderman and, in the same manner, reelected for every subsequent term, continuing in that office until his death. He was also president of the Young Men's Hebrew Association, vice-president of the Eagle Publishing Company, and a life-long member of the Spanish and Portuguese synagogue. As a public tribute to Rubenstein's memory, and in recognition of the part he played in Montreal's civic affairs, a monument was dedicated to him in 1939.

Lit.: Morgan, J. H., *Canadian Men and Women of the Time* (2nd ed., 1912); *The Jew in Canada* (1926); *Montreal Star,* Jan. 3, 1931; *Canadian Jewish Chronicle,* Jan. 9, 1931.

RUBIN, ISADOR C., gynecologist, b. 1883. A graduate of the College of Physicians and Surgeons of Columbia University (1905), he was attending gynecologist at Montefiore Hospital, adjunct gynecologist at Mount Sinai and Beth Israel Hospitals, and associate in pathology at Beth Israel Hospital, all New York.

The results of his researches on sterility in women have been internationally recognized and employed. Rubin described the physiology and pathology of the fallopian tubes by devising various ingenious methods. Of decisive importance was his method for determining the potency of the fallopian tubes; this was called the Rubin Test (1920). The same method (tubal insufflation) was also successfully used by him in the therapy of tubal sterility. He is author of the comprehensive work, *Symptoms in Gynecology.*

RUBIN, MARCUS, economist, historian and public servant, b. Copenhagen, Denmark, 1854; d. Copenhagen, 1923. He was the son of David Rubin, a bookseller who went to Denmark from Gnesen, Poland.

In 1875 Marcus Rubin became secretary to the municipal council of Copenhagen. In that function he revised the statistical methods of his office, and published important statistical works. He was thus generally acknowledged the creator of scientific statistics in Denmark. In 1883 he was appointed chief of the statistical bureau of Copenhagen, which was founded at Rubin's recommendation, and in 1895 he was charged with the direction of national statistics.

In 1902 Rubin became director general of the treasury department, and achieved important reforms in the field of direct and indirect taxation. In 1913 he was elected director of the National Bank of Denmark. Due to Rubin's skill in finance and economics, the National Bank and the country of Denmark easily endured the great difficulties caused by the first World War and the post-War crisis. Rubin published also historical works, especially on the history of Denmark in the 18th cent. and on European history from 1848 on. In 1914 he published *Nogle Erindringer.*

In politics and economics Rubin professed liberalism. He adhered to the fundamental ideas enunciated by John Stuart Mill, although he was well informed on modern economic theory and the changes of economic conditions. Combining logic with a vast knowledge of historical facts and practice in business, Rubin was at once an outstanding theorist and a public servant. He was interested also in Jewish history, and contributed to the *Joedisk Almanach.* Rubin was an honorary member of numerous learned societies, both Danish and foreign.

Lit.: *Nationaloekonomisk Tidsskrift* (1924).

RUBIN, REUBEN, artist, b. Galatz, Roumania, 1893. After receiving a traditional Jewish education, he turned to art. He studied in France and Italy, and then emigrated to Palestine, where he entered the Bezalel School of Industrial Art, at Jerusalem. There Rubin's ideas clashed with the more conservative attitudes of the director, Boris Schatz; Rubin left, and entered on a period of wandering. In 1921, even before his definite identification with the Palestine art colony, he held his first New York city exhibit under the sponsorship of Alfred Stieglitz.

In 1924 he held his first exhibition in Jerusalem, at the Tower of David, and from then on became an increasingly outstanding figure in the Palestine art colony, considered by some to be its leading exponent. His absorption in the Palestinian scene produced a prolific output of lyrical landscape and figure paintings, marked in technique by a decorative brilliance of color closely reflecting the country's characteristic light and atmosphere, and in subject matter, indicative of a great love for the land and its people.

Rubin figured in the important group exhibitions in Palestine and had, in addition, numerous one-man shows. Also, he exhibited in Paris, London, Bucharest and several times in New York city, where his American scenes attracted favorable attention. Among his paintings were: *Road to Galilee; Nazareth; The Flute Player; Washington Bridge Spans Harlem River.* Examples of his work were acquired by the governments of France and of Palestine and by the museums and galleries of Tel-Aviv, Manchester, London, Newark, N. J., and Brooklyn, N. Y. His paintings were also bought for noted private collections. Rubin published a volume of woodcuts entitled *Seekers of God.* In 1943 Rubin was residing in Palestine.

Lit.: Hellman, George S., "Rubin, the Palestinian," *American Hebrew,* Nov. 7, 1930; Newman, Elias, *Art in Palestine* (1939).

RUBIN, SALOMON, scholar and Hebrew writer, b. Dolina, Galicia, 1823; d. Cracow, Poland, 1910. Instead of entering the rabbinical career for which he had been originally educated, he became one of Eastern

Salomon Rubin

Europe's leaders in the Haskalah enlightenment movement, and eventually stood in the front ranks of the Hebrew writers which that movement bred in Russia, Poland and Austria.

To make his living, he went into business, and later, more successfully, into tutoring and teaching, all the while zealously pursuing his studies in Jewish and secular sciences. In the course of his career he traveled extensively, living, teaching and writing in Germany, Roumania, Italy, Russia and Austria, until, in 1895, he settled for good in Cracow, where he kept up a lively literary output to the end of his days. In Vienna, in 1865, he became one of the chief collaborators on Peretz Smolenskin's *Hashahar*. Rubin had already published a Hebrew translation, *Ben Oli* (1851), of Friedrich von Schiller's *Philosophische Briefe,* and a rendition of Karl Gutzkow's *Uriel Akosta* (1856).

Now he proceeded to dedicate himself assiduously to the task of breaking down the superstitious beliefs and practices of the Jews in Eastern Europe's ghettos. He had personally suffered from the fanaticism bred by such superstition when he was driven from a Lemberg school by those who could not tolerate his advanced views; and at an early age he wrote a banned pamphlet attacking the obscurantism of religious authorities in Galicia. Rubin introduced into the literature of enlightenment a unique method: he did not directly attack the store of superstition that he wanted his fellow-Jews to be rid of, but wrote instead about so-called "savage" peoples, describing and exposing the bases of their blind beliefs, and indicating the analogy between these and the practices of fanatical Jews. Outstanding in the prolific production of material on this subject were his *Maase Taatuim* (1887), translated in German as *Geschichte des Aberglaubens* (1888), and *Yesod Mistere Haakkum Vesod Hochmath Hakabbalah* (1888), translated into German as *Heidenthum und Kabbala* (1892). But chief of Rubin's contributions to Hebrew letters was his translation, the first to be made into Hebrew, of the *Ethics* of Spinoza, *Heker Eloah im Torath Haadam,* which he published in 1885 with notes and introduction. From his earliest study of Spinoza, Rubin had become a passionate defender of that philosopher's system.

Against the attacks of Samuel David Luzzatto he wrote *Teshubah Nizzahath* (1859). Earlier he had published a compilation of Spinoza's writings, *Moreh Nebuchim Hehadash* (1856-57), and in 1869 he won his Ph.D. degree from the University of Göttingen with the essay, written in German, *Spinoza und Maimonides, ein psychologisch-philosophisches Antitheton.* Rubin not only admired the personality and thought of Spinoza, but strove to demonstrate the relationship between Spinozism and Judaism.

Lit.: Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana* (1891-95); Stern, Jakob, *Dr. Salomon Rubin, sein Leben und seine Schriften* (1908).

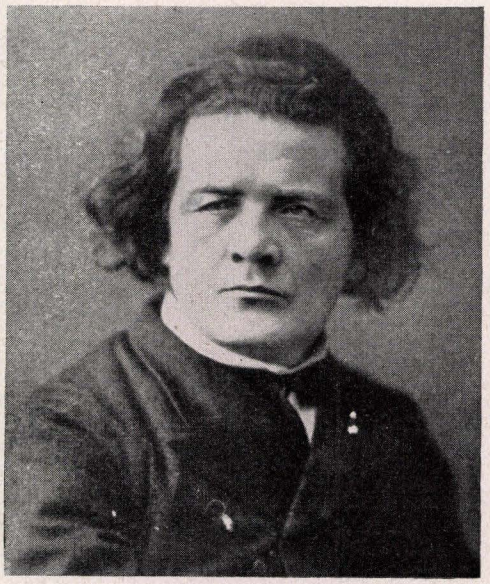
RUBINER, CHARLES, judge, b. Traverse City, Mich., 1898. He interrupted his studies in law to serve for five months in the United States Navy, in 1918. After obtaining the LL.B. degree from the University of Detroit (1919), he practised law. In 1928 he was elected assistant attorney general of the state of Michigan, and from 1931 to 1939 he served as judge of the Detroit common pleas court.

In 1939 he retired to private law practice. Rubiner served as president of the Jewish Community Center of Detroit, as vice-president of the Detroit branch of the Zionist Organization of America, and as director of the Jewish Welfare Federation of Detroit. He was a member of the board of the Detroit Round Table of Catholics, Jews and Protestants.

RUBINO, JOSEF (Karl Friedrich), historian of law, b. Fritzlar, Germany, 1797; d. Marburg, Germany, 1864. The son of the tradesman Ruben Mose, he was one of the first Jewish-born academic teachers in Germany. He graduated "summa cum laude" in Marburg (1821) as doctor of philosophy, but not until 1832 did he became a lecturer (with the title of professor) on ancient history and classical philology at the University of Marburg, although, because of his Jewish faith, he could not become a member of the faculty staff. Not until he had been baptized (in 1842, after his mother's death) was he appointed professor (1843).

His distinction as a scholar is based upon his treatise on the ancient Roman constitution, *Über den Entwicklungsgang der römischen Verfassung bis zum Höhepunkt der Republik* (1839). Rubino is considered a forerunner of the historian of ancient Rome, Theodor Mommsen, who was much influenced by Rubino's work.

Lit.: *Allgemeine Deutsche Biographie,* vol. 55.



RUBINOW, ISAAC MAX, economist, statistician and Zionist leader, b. Grodno, Russia, 1875; d. New York city, 1936. He arrived in the United States in 1893, and received the M.D. degree from the New York University Medical College (1898).

Simultaneously he began to work as a correspondent for the Russian press, and in 1903 abandoned medicine for economics as a profession. In 1914 he received the Ph.D. degree from Columbia University. Employed by the United States government as an economic expert, he served in the Bureau of Statistics, Department of Agriculture (1904-7) and in the Department of Commerce and Labor (1908-11). After 1911 he worked for a private company on accident statistics. From 1918 to 1922 he headed the Hadassah medical unit in Palestine, which under his direction rendered effective aid in the anti-malaria campaign in that area.

In 1923 he was made director of the Jewish Welfare Society of Philadelphia; in 1928 he became executive director of the Zionist Organization of America, and in 1929 secretary of the Independent Order B'nai B'rith. The B'nai B'rith named a memorial forest in Palestine after him.

Rubinow was recognized as an authority on social insurance, and his book *Social Insurance* (New York, 1913) as a standard work. In 1934 he was a consultant to President Franklin D. Roosevelt's committee on social security legislation. He frequently appeared as a social insurance expert before Congressional hearings. With the advent of the Nazi regime in Germany, he became a leader in the movement to aid German Jews.

Among his books, those of earlier date deal with Russian economics. They include: *Russia's Wheat Surplus* (1906);

Anton Rubinstein

The Economic Condition of the Jews of Russia (Boston, 1908); *Russia, Spain* (1911); *Was Marx Wrong?* (New York, 1914); *Standard Accident Table* (1915); *Standard of Health Insurance* (1916).

RUBINSTEIN, ANTON, pianist and composer, b. Volhynia, Russia, 1829; d. Peterhof, Russia, 1894. He was taught piano by his mother and by Villoing, making his deput as a prodigy in 1839.

An extended concert tour took him as far as Paris and London. Famous musicians became interested in him, including Chopin and Liszt. It was on Liszt's advice that Rubinstein decided to resume his musical studies, selecting Germany for this purpose. He returned to Russia in 1848 and enjoyed the patronage of Grand Duchess Helen, under whose sponsorship he wrote and produced three operas.

Following another period of travel in Germany, he was appointed court pianist and conductor of court concerts at St. Petersburg. In 1862 he help to found the St. Petersburg Conservatory, which he directed for five years. Shortly after 1865 he undertook an extensive tour as concert pianist, and from this time on his reputation as a world-famous pianist was established. In 1872 he toured America in a series of 215 concerts. His fabulous technique, his phenomenal command of dynamics, his remarkable capacity to penetrate into the very heart of the music he was playing placed him in the magisterial line of great pianists. He was aptly referred to as a Titan of the keyboard. Between 1885 and 1887 he gave a series of farewell concerts with which he bade farewell to the concert platform. In 1887 he returned to the direction of the St. Petersburg Conservatory.

Although he achieved the honors and plaudits of an appreciative world for his mastery of the piano, Rubinstein died a bitter man because he felt that he was not fully appreciated as a composer. He wrote prolifically in every field of musical composition. In his best works he has a certain charm. A few of his songs have a Mendelssohnian grace; the Fourth Piano Concerto is a highly serviceable virtuoso piece. But it must be added that he lacked the capacity for self-criticism, for fastidiously editing his works to delete them of superfluities and repetitions. Many of his symphonic works are prolix. His operas, except for a few random arias, are windy and dull. Warmth, feeling, a wealth of lyrical invention his music possesses to a great degree. But he was too easily satisfied with what he put down on paper. The unevenness of most of his music has relegated it to obscurity.

Rubinstein was the recipient of the Order of Vladimir, conferred on him by the czar, which brought with it the rank of nobility. He was given also the title of Imperial Russian State Councillor and Knight of the Prussian Order of Merit.

Besides writing a book of memoirs (1889), Rubinstein was author of several books on music, including a technical study of pedal (1896) and a study of masters of the piano (1899). DAVID EWEN.

Lit.: Bowen, Catherine D., *"Free Artist"—The Story of Anton and Nicholas Rubinstein* (1939); Glebov, I., *Rubinstein, the Musician and the Critic* (1929).

RUBINSTEIN, ARTUR, pianist, b. Lodz, Poland, 1886. He was discovered by Joseph Joachim, who assumed personal responsibility for his future.

Joachim sent him to Berlin to study with Barth, Bruch and Kahn. In his eleventh year Rubinstein made his debut, performing the Mozart A-major concerto, with Joachim conducting the accompaniment. Other concerts followed which highlighted his outstanding talent. In 1906 Rubinstein came to the United States, gave seventy-five concerts, and was acclaimed a virtuoso of major significance. Following this he went into temporary retirement to devote himself to study.

He emerged from his retirement one of the truly great artists of the time, and the greatest Polish pianist since Paderewski. In 1919 he returned to the United States and was a sensation. In 1932, after another prolonged absence, he again visited the United States, and was again welcomed magnificently. Thereafter he performed uninterruptedly throughout the country, as well as in practically every major music center in the world. He possessed a fabulous technique and combined it with extraordinary artistry. A specialist in Chopin and Brahms, he nevertheless played every school and style with consummate mastery and impeccable taste. Distinctions were bestowed on him by all European monarchs and by his native Poland. He was an officer of the French Legion of Honor, a member of the jury of the Paris Conservatory, and an honorary member of the Brussels Conservatory. His recordings of the Tschaikowsky and Grieg piano concertos became very popular.

RUBINSTEIN, BERYL, pianist and composer, b. Athens, Ga., 1898. From 1905 to 1911 he toured the United States as a child prodigy.

After an extended period of study in Europe with Ferruccio Busoni and José Vianna da Motta, he made his professional debut as mature artist in New York city in 1916. A successful career as concert pianist followed, during which he appeared extensively in recitals and as soloist with most of the major American orchestras.

In 1921 he joined the faculty of the Cleveland Institute of Music, becoming head of the piano department in 1925, dean of the faculty in 1929, and in 1932 director. Rubinstein composed many admirable works, including two piano concertos, the second of which was introduced by the Cleveland Orchestra under Rodzinski, with the composer as soloist (1936). Other major works include an opera, *The Sleeping Beauty,* smaller works for orchestra, and numerous pieces for piano. He wrote *The Outline of Piano Pedagogy.*

RUBINSTEIN, HAROLD FREDERICK, playwright, b. London, 1891. He was a grandson of Samuel Joseph Rubinstein, who escaped from Russia to England in 1829 (and was vice-president of Dublin Hebrew

Ida Rubinstein

Congregation), and of Sophie Dyte, whose father frustrated an attempt on the life of King George III of England, and the son of J. S. Rubinstein, solicitor.

Harold Frederick Rubinstein studied law, and became a solicitor. Beginning with 1913, however, he published numerous comedies and tragedies, most of them one-acters, dealing with facts of British history, historic characters such as Marlborough, Johnson and Dickens, and problems of his own time. He was considered a daring pioneer endeavoring to express new ideas by creating new dramatic forms. Many of Rubinstein's plays concern Jewish history and the Jewish question, as for instance *Consequences* (1913); *Exodus* (co-author Halcott Glover); and *Israel Set Free,* five one-acters (1936), sketching episodes of Jewish history, from 1221 to 1935.

Rubinstein, who in his teens had discussed the Jewish question with G. K. Chesterton, studied the historical background of his Jewish plays by reading the works of Lucien Wolf, Cecil Roth and others, and drew some of his themes from his own family tradition. He developed his dramatic theory in *What Isn't Wrong with the Drama?* (1927), and wrote a short history of the English drama (1928). He edited *Great English Plays* (1928), and became secretary of the League of British Dramatists.

RUBINSTEIN, HYMAN SOLOMON, physician, b. Leeds, England, 1904. He was brought to the United States in his infancy. Rubinstein received his degrees from the University of Maryland (M.D., 1928; Ph.D., 1934), and served as assistant in medicine at Sinai Hospital, Baltimore (1929-30), and as chief of the Neurological Clinic at the University of Maryland (1933-35). He was appointed consultant in psychiatry, United States Public Health Service (Baltimore, 1937), and associate examiner on the American Board of Psychiatry and Neurology (1938), and still held these positions in 1943. One of the founders of the Laboratory for Neuroendocrine Research of the Surgical Division of Sinai Hospital (1935), he was its director in 1943.

He was a recipient of a Weaver Fellowship at the University of Maryland (1932-35), and in 1936 was awarded a specialist's diploma in neurology and psychiatry by the American Board of Psychiatrists and Neurologists. Rubinstein published *Laboratory Manual of Neuroanatomy* (with C. L. Davis; 1933), and contributed a chapter on "The Effect of the Pituitary Gland on Brain-Body Relations" to *The Pituitary Gland* (1938).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 635-36; *Biographical Directory of the American Psychiatric Association; American Men of Science.*

RUBINSTEIN, IDA, actress and dancer, b. Russia. She studied dramatic art, and first played in the Paris theatre in minor roles. As a member of the Russian Ballet she appeared at Paris in *Cleopatra* in 1909. She then decided to form her own ballet company and, enlisting the talents of such famous artists and musicians as Leon Bakst, Claude Debussy, Henri Sanguet and Maurice Ravel, she emulated the famous Russian ballet of Serge de Diaghilev, attempting a complete fusion of all arts in her grand presentations. She herself was the première danseuse of her company, and sometimes added to the dance her vocal declamations. She appeared in *Schéhérazade, Amphion, Nocturne, David, La princesse Eugène, Diane de Poitiers, Semiramis,* and *Les noces de Psyche et de l'Amour.* In the tradition of beauty and commanding glamor set by Sarah Bernhardt, Rubinstein became for a time the foremost theatrical personality of France, an acknowledged inspiration of writers, artists and musicians.

Most romantic of her personal involvements was that with the Italian playwright and poet Gabriel D'Annunzio, whose *Le Martyre de Saint-Sebastian* she presented in Paris, and subsequently on tour with her own company in the more important European cities. This was her first London presentation, at Covent Garden, in 1931. She also presented *La princesse cygne, La valse, Le bien-aimé* and *Le baiser de la fée.*

Before that she had quit the ballet for a period and, turning to serious drama, appeared in the leading roles of such classical French productions as *Phèdre* and *La dame aux camélias.* She produced *Orphée* in 1926. In 1934, at a dance festival in Paris, she introduced Maurice Ravel's *Boléro,* written expressly for her.

Though she was acclaimed by her admiring public and a number of critics to be a great artist of drama and dance, her elaborate ventures in ballet maintained influence and prestige only for a comparatively short period of years; it was rather as a personality, a patron and an artiste, that she continued to be remembered than as a creator of an advanced dance art.

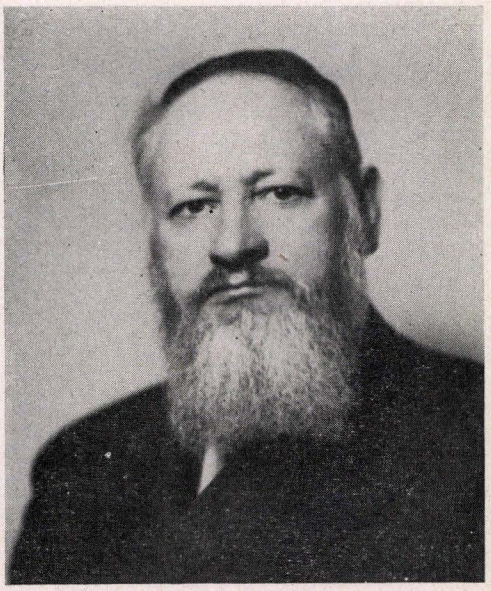
Lit.: Ewen, David, "Ida Rubinstein: Genius of Many Arts," *American Hebrew,* Aug. 2, 1935.

RUBINSTEIN, ISAAC, rabbi and Mizrachi leader, b. Dutnovo, province of Kovno, Lithuania, 1880. He studied at the Yeshivas of Kovno, Slutzk and Volozhin, where he was known as the "Dutnover Illui" (prodigy), and graduated with honors from the law school of the University of Moscow. He was first appointed rabbi at Ganzirk, Crimea, became rabbi in Vilna in 1906, and was chosen chief rabbi of the Vilna community in 1928. During the first World War Rubinstein was president of the Central Welfare Committee formed to assist the Jews in the German-occupied Ober-Ost district (Russian Poland). He was instrumental in warding off starvation from the Jews of Vilna and the neighboring cities, and managed to save the population from many a cruel decree. When, in 1919, Henry Morgenthau, Sr., was sent by President Woodrow Wilson to Poland to investigate the alarming conditions of Polish Jewry, he also conferred with Rubinstein, whom he described as follows:

"Though he had been flogged for refusing to sign a paper charging the Bolsheviki with the Vilna outrages, he was still defiant towards the Poles. Learned in more than Jewish scholarship, he had a grasp of the economic laws involved in the present difficulties and a keen understanding of world

politics that was touched with statesmanship. But, above all, he was the shepherd pleading for his sheep; he displayed a pathetic faith that here at last was a tribunal anxious to dispense justice."

In 1920 Rubinstein became minister for Jewish affairs in the Lithuanian plenipotentiary government in Vilna. When the city was ceded to Poland in 1922, he was made senator of the Polish republic, which office he held until the Nazi conquest of Poland (September 1939), fighting in defense of Jewish rights (including Shehitah) in the Polish parliament. Representing Eastern European Jewry, he was a member of the International Conference for Peace through Religion (1929-33) and of the Advisory Council of Refugee Affairs of the League of Nations (1934).



Rubinstein was president of the Mizrachi and of the central educational committee "Javne" in Poland, member of the administrative committee of the Jewish Agency for Palestine and of the executive committee of the World Jewish Congress; he was one of the founders of the Tahkemoni school system in Vilna. He carried on his duties as leader of Vilna Jewry even when, after the dismemberment of Poland, the city was handed over to Lithuania (1939), but resigned from his post in 1940 when Lithuania was annexed by Soviet Russia. Rescued by the joint efforts of the American Zionist Emergency Committee and the Mizrachi Organization of America, Rubinstein arrived in New York city in 1941, where in 1943 he was lecturer at the Rabbi Isaac Elchanan Rabbinical Seminary.

Lit.: Morgenthau, Henry, Sr., *All in a Life-Time* (1925); Kerstein, Solomon, "Senator Rubinstein of Poland," *Jewish Outlook*, March, 1941; Werner, Alfred, "Refugee Zionists in America," *The New Palestine*, April 24, 1942; *Jewish Morning Journal*, March 27, 1942.

RUBINSTEIN, MICHAEL A., physiologist, b. Vilna, Lithuania, 1911. He was living in New York city in 1943. He was the son of Rabbi Isaac Rubinstein (member of the Polish Senate) and of Esther Rubinstein, well-known Hebrew author and lecturer and Zionist leader. He received doctorates in medicine and science afer studying in the Universities of Vienna and Paris; for three years he continued postgraduate work in those universities as well as in that of Strasbourg. He was called to the post of assistant professor of physiology in the University of Vilna, a rare distinction for a Jewish scientist in Poland. In January, 1940, after the Nazi invasion of Poland, Rubinstein came to the United States at the invitation of Yeshiva College, New York city, to serve as member of the faculty. He became a member of the medical staff and hematologist of Montefiore Hospital and one of the staff of Mount Sinai Hospital, New York. The Polish Academy of Art and Science in America elected him a member.

In addition to over forty articles in his field, Rubinstein published (in Polish) books on blood regeneration, water metabolism and other subjects. His book on metabolism and the autonomous nervous system appeared also in French. Erudite in Talmudic and Hebrew literature, Rubinstein contributed articles to Hebrew periodicals in Poland. He was co-founder of the Hebrew Scientific Society of Vilna, and on the board of the Hebrew Teachers' Seminary there.

RUBINSTEIN, NICHOLAS, pianist and teacher, b. Moscow, Russia, 1835; d. Paris, 1881. He was the brother of Anton Rubinstein and studied piano in Berlin with Kullak and Dehn. In 1859 he founded the Moscow Musical Society, which he directed with outstanding success. A year later he founded the world-famous Moscow Conservatory, which he directed until his death. During this period he distinguished himself also as a conductor by directing orchestral concerts of the Musical Society in Moscow, annual concerts in St. Petersburg and (1878) four concerts of Russian music at the Paris Expedition. He was an excellent pianist,

Isaac Rubinstein

and it was for him that Tschaikowsky wrote his famous concerto. He was, however, most famous as a teacher, his pupils including Sauer, Siloti and Taneiev.

Lit.: Bowen, Catherine D., *"Free Artist"—The Story of Anton and Nicholas Rubinstein* (1939).

RUBINYI, MÓZES, linguist and esthete, b. Debrecen, Hungary, 1881. He studied philosophy at the Universities of Budapest and Leipzig, receiving the Ph.D. degree from the former. From 1901 to 1903 he traveled in Roumania and Bucovina, studying the language of the Csángó people on behalf of the Hungarian academy. The results of his research were published in several volumes between 1901 and 1906. In addition, Rubinyi wrote books on various other problems of linguistics. His work on the question of a world language was translated into German (1914). Rubinyi became a teacher in the secondary school system of Budapest. He published numerous monographs on various poets and authors, including two volumes on the Jewish poet József Kiss. He edited the works of the great non-Jewish novelist Kálmán Mikszáth (17

Nicholas Rubinstein

vols.). In 1927 he was comptroller and in 1934 member of the board of the Hungarian PEN club. In 1943 he was believed to be living in Budapest.

RUBO, ERNST TRAUGOTT, jurist, b. Berlin, 1834; d. Berlin, 1895. He was graduated with the LL.D. degree from the University of Heidelberg in 1857; his thesis, *Quare sit doli natura,* was highly esteemed by leading contemporary savants. He then became court assessor at Berlin, serving for some years without salary. In 1870 he was appointed municipal judge at Berlin, and from 1879 until his death he was judge of the district court at Berlin. Notwithstanding this modest career, which was at that time within reach for an unbaptized Jewish jurist in Prussia, the government entrusted Rubo with legislative work of the highest importance. He played an especially important part in the drafting of a new penal code for the Norddeutscher Bund (1868).

He continued this activity after the founding of the German Empire, and contributed considerably to the preparation of a general German military penal law. Drawing upon his legislative experience, Rubo published (1870) his commentary on the German penal law. He published studies on the juridical doctrine of calumniation (1861) and on the refusal and compulsion to give evidence (1878). In 1870 Rubo became lecturer on law at the University of Berlin and in 1876 assistant professor, but as a Jew he could not advance any further.

RUBO, JULIUS, jurist, b. Halberstadt, Germany, 1794; d. Berlin, 1866. He studied law and graduated in 1817, after serving as a volunteer in the Prussian ministry of war (1813).

Although Rubo published no extensive juridical works, his reputation as a learned jurist was great, and due to his example the attempt to exclude any Jew from the study of law in Prussia was frustrated. Nevertheless he sought in vain admission to the bar, and his efforts to enter an academic career, as lecturer at the University of Halle, proved futile when (1822) the Prussian government excluded unbaptized Jews from academic positions.

Declining conversion, Rubo was appointed (1824) syndic of the Jewish community of Berlin through the intermediation of Israel Jacobson, whose relative he was. For twenty-five years he bore practically the entire burden of administrative business. He defended the interests of the Jewish community of Berlin, and on several occasions those of all the Jews of Prussia, against attempts, both official and unofficial, to worsen the legal conditions of the Jews, and he succeeded in making the reluctant Prussian government cognizant of the peculiar needs of the Jewish communities.

Skeptical of empty formalities, Rubo was convinced that it would be impolitic to elude governmental regulations, and he was always ready to face political difficulties in order to obtain favorable decisions instead of avoiding discussion, as some timid members of the board advocated. His book on the legal condition of the Jewish communities (1844) influenced the regulation of the Jews in Prussia (1847). In 1849 the newly elected directorate of the Jewish community of Berlin suddenly dismissed Rubo. He protested, and instituted a law suit, which he won in 1855. Subsequently Rubo was not formally reappointed, but he was consulted in important matters. Before his appointment as syndic he was an active member of the Verein für Kultur und Wissenschaft der Juden and a teacher at the school established by the Verein. He was a friend of Heine, who admired Rubo's character.

Lit.: Geiger, Ludwig, *Geschichte der Juden in Berlin* (1871); Heine, Heinrich, *Confessio Judaica,* edit. Hugo Bieber (1925); idem, *Gespräche,* edit. Hugo Bieber (1926).

RUBY, ISRAEL, judge, b. Boston, 1888. He entered private practice of law in Boston in 1913. In 1926 he was elected to the Boston city council, and served until 1934. Under the governorship of James M. Curley he was appointed associate judge of the district court of Williamstown, Mass., in 1937. Subsequently, under Governor Charles F. Hurley, he was made presiding justice of that court, a post he still occupied in 1943. Up to that time no Jew had held office as presiding justice of a district court in the state of Massachusetts. Ruby was president of the Dorchester Community Service.

Active in the affairs of the Jewish community, he served as a director of the Boston Y. M. H. A., the Beth El Hebrew School, and the Dorchester-Mattapan Hebrew School. In 1942 he was chairman of the North Adams (Mass.) United Palestine Appeal, and president of the Hebrew Men's Club at North Adams.

RUCHAMA, *see* COLONIES, AGRICULTURAL.

RUEDENBERG, REINHOLD, physicist, b. Hannover, Germany, 1883. He specialized in high voltage electricity. After completing his studies he worked for the Siemens-Schuckert Works, whose chief electrician he became. He was instructor at the Technische Hochschule in Berlin-Charlottenburg (1913), and from 1917 to 1927 professor at the same institute, which awarded him the honorary degree of doctor. After the Nazis' rise to power Ruedenberg went to England and worked at the General Electric Co. research station in Wembley, Middlesex. He came to the United States in 1939 to teach at Harvard University.

Ruedenberg's most important writings include: *Energie der Wirbelströme* (1906); *Theorie der Kommutation* (1907); *Elektrische Schlatvorgänge* (1923); *Aussendung und Empfang elektrischer Wellen* (1926); *Relais und Schutzschaltungen in elektrischen Kraftwerken* (1929); *Elektrische Hochleistungsübertragungen auf weite Entfernung* (1932); *Die Influenzwirkung von Blitzschlägen auf benachbarte Freileitungen* (Bucharest, 1934).

RUKEYSER, MERRYLE STANLEY, journalist and financial expert, b. Chicago, 1897. After receiving his degree from the School of Journalism at Columbia University (1917), he joined the staff of the New York *Tribune* as a reporter. He had already worked with the New York *Morning Telegraph* (1915-17), and in 1920 he was made financial editor of the *Tribune,* a post he held until 1923. Concurrently he wrote for the magazine *Vanity Fair.* At this time he attracted the attention of William Randolph Hearst, who offered him the position of financial editor with the New York *Evening Journal,* where he remained until 1926. Thereafter, from 1927 on, he contributed a daily financial column to the Hearst Newspapers and the International News Service; in 1931 he became an editorial writer for the Hearst press. In 1943 he was still engaged in these capacities.

In addition to his writing, Rukeyser was on the teaching staff of the Columbia University School of Journalism from 1918 to 1935. Trained in economics, he came to have a reputation as an expert with an encyclopedic knowledge of all phases of finance, which he could interpret in simple language for laymen, thus guiding the latter in the investment and management of money. In addition to his newspaper columns, he wrote: *The Common Sense of Money and Investments* (1924); *Financial Advice to a Young Man* (1927); *Investment and Speculation* (1930); *The Doctor and His Investments* (1931); *The Diary of a Prudent Investor* (1937); *Financial Security in a Changing World* (1940).

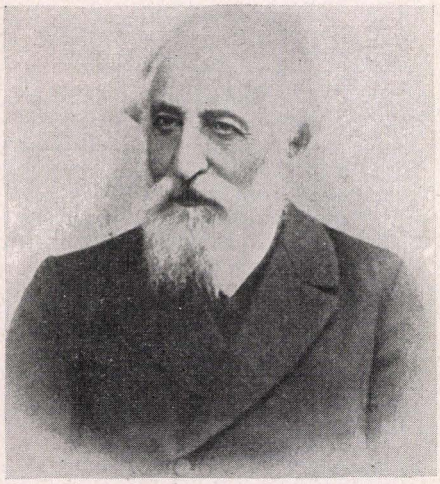
Lit.: American Hebrew, July 30, 1926.

RUKEYSER, MURIEL, poetess, b. New York city, 1913. She studied at Vassar College and Columbia

University. Her first volume of poetry, *Theory of Flight* (1935), attracted much favorable critical attention and was made the selection in the Yale Series. This volume symbolized, in terms of aviation, the desperate escape from the imperfections of daily life, and the eventual landing in order to recreate that life more perfectly. *U. S. 1,* published in 1938 as part of a larger project "to produce an evaluation of the Atlantic coast," further established her as one of the more subtle and complicated of the "class-conscious" poets. In this book a series of poems on the death by silicosis of West Virginia tunnel workers was particularly noted. There followed: *A Turning Wind* (1939); *The Soul and Body of John Brown* (1940); *Wake Island* (1942); *Willard Gibbs* (1942).

Acclaimed for her forceful realism combined with authentic poetic imagery, she was also criticized for a recurring obscurity in much of her verse. In addition to these volumes, Muriel Rukeyser wrote for numerous periodicals, and collaborated on the films *Stop Japan* (1936) and *A Place to Live* (1941). In 1941 she was recipient of the Harriet Monroe Award, and in the following year won the $1,000 prize given jointly by the American Academy of Arts and Letters and the National Institute of Arts and Letters.

RULES OF HILLEL, THE SEVEN, *see* HERMENEUTICS, TALMUDIC.



RÜLF, ISAAC, rabbi and Zionist, b. Rauisch-Holzhausen, Hesse, Germany, 1831; d. Bonn, Germany, 1902. He became rabbi in 1857, and from 1865 on officiated in Memel, where he edited the political daily *Memeler Dampfboot.* He displayed there a wide activity in relief for needy East European Jews and Jewish emigrants. Under the influence of these experiences Rülf wrote *Meine Reise nach Kowno* (1869); *Drei Tage in Jüdisch-Russland* (1882); and his most famous book, *Aruchat bat ammi* (Help for My People; 1883). This latter book anticipates the ideas of Zionism. After Theodor Herzl's emergence, Rülf joined the Zionist Movement immediately, and until his death participated in all Zionist congresses.

He expressed his philosophic system in a five-volume work, the sections of which bear the titles: *Wissenschaft des Weltgedankens, Wissenschaft der Gedankenwelt, Wissenschaft der Krafteinheit, Wissenschaft der Geisteseinheit* and *Wissenschaft der Gotteseinheit.* His *Das Erbrecht als Erbübel* is of social tendency. As a Zionist Rülf distinguished himself by the rebuttal of the "Protest Rabbis." Rülf devoted the last years of his life, which he spent in Bonn on Rhine, entirely to the propagation of the Zionist idea in Germany.

Lit.: Die Welt (1901), No. 6, p. 1; *ibid.* (1902), No. 39, p. 1; Zitron, S. L., *Lexikon Zioni* (1924).

RUMPLER, EDUARD, aeroplane and automobile constructor, b. Vienna, 1872; d. at his summer estate in Mecklenburg, near Berlin, 1940. A pioneer of aviation, he became known through the construction of the so-called "Rumplertaube" (1908), which was famous throughout the first World War as an observation plane and because of its ability to rise (up to 8,000 metres). The German army had more than 1,400 planes of this type built during the last year of the War (1918). Rumpler later built planes of the types Ru CI, Ru CIV, Ru CVII and Ru DI. When the Treaty of Versailles cut Germany's plane production, Rumpler became interested in automobile construction. He constructed the so-called "Rumplertropfenauto," employing for the first time in the automotive industry what later became known as streamline.

His life's goal was the construction of large transatlantic planes. Even at the time of Charles A. Lindbergh's epochal flight, he had blueprints of gigantic planes ready in his factory. These plans foresaw planes which would cross the Atlantic in sixteen to twenty hours with more than 150 passengers seated comfortably in the wings. In many interviews Rumpler pointed out that only lack of money and the prohibitions of the Versailles Treaty impeded the fulfillment of his plans.

Isaac Rülf

After the Nazis' ascent to power (1933) Rumpler had to retire. His writings include: *Die Flugmaschine* (1900); *1000-Ps-Flugmotor* (1921); two magazine articles, "Quo Vadis," on the future of the car, and "Das Auto im Luftstrom," on streamlined construction.

RUMSEY, *see* COLONIES, AGRICULTURAL.

RUPPIN, ARTHUR, agronomist and sociologist, b. Rawitsch, Prussia, 1876; d. Jerusalem, 1943. His early schooling was meager, and at fifteen he was already engaged in business. Despite success in that field he left his position, and in 1899 began the study of law and political economy in Berlin and Halle. In 1902 he graduated from the University of Halle with the degree of Doctor of Political Science. In the following year he received international renown by winning the Haeckel Award for his work *Darwinismus und Soziologie.*

He determined to apply scientific sociological methods to the study of the Jewish problem, and in 1905 founded the Bureau for Jewish Statistics in Berlin, and began publication of the *Zeitschrift für Demographie und Statistik der Juden.* The periodical continued in existence until the advent of the Nazi regime (1933).

Ruppin continued his legal studies, and in 1907 passed the Prussian state examination for judge. However, his interest in Zionism turned his attention to Palestine, and in that same year he went to Palestine on what was intended to be a short trip. He remained for nine years, during which he established and served as head of the Palästina-Amt (Palestine Office) at Jaffa, and became an important figure in early colonization projects. He felt that modern business methods should be applied to the reconstruction of Palestine, and accordingly established the Palestine Land Development Company and the Palestine Real Estate Company, through the medium of which he was enabled to purchase and develop large tracts of land, much of it in cooperation with the Jewish National Fund.

The first World War put an end to his activities, however, and in 1916 he was ordered by the Turks to leave Palestine. He spent some time in Damascus, and then proceeded to

Arthur Ruppin

Constantinople, where he became the representative of the Zionist Organization. Just before the close of the War he went to Berlin, and thence to Copenhagen, where he participated in the work of the Copenhagen Office of the Zionist Organization, which functioned as an international bureau.

Ruppin returned to Palestine in 1920, and immediately resumed his activities, taking a prominent role in the purchase of Emek Jezreel and other areas. He helped to establish the Workers' Bank in Tel-Aviv, and was its first director, and was the first chairman of the board of the General Mortgage Bank of Palestine. Upon the opening of The Hebrew University, Jerusalem (1925) he became lecturer, and later professor of sociology. He made visits to the United States in 1922, to Russia in 1927, where he studied agricultural colonization, and to South America in 1935, where he studied the position of the Jews. He served for many years on the executive of the Jewish Agency for Palestine, in charge of the department of agricultural colonization, was chairman of the board of the Rural and Suburban Settlement Company, director of the Palestine Agricultural Settlement Association, Ltd., and active in all phases of national colonization in Palestine.

His works include: *Die Juden der Gegenwart* (1904; 3rd ed., 1918; English trans., *The Jews of To-day*, 1913); *Syrien als Wirtschaftsgebiet* (1917; English trans., *Syria: An Economic Survey*, 1918); *Der Aufbau des Landes Israel* (1919); *Die landwirtschaftliche Kolonisation der Zionistischen Organisation in Palästina* (1925); *Soziologie der Juden* (2 vols., 1930-31); *The Jews in the Modern World* (1934; an abridged English translation of the *Soziologie der Juden*); *Dreissig Jahre Aufbau in Palästina* (1937); *The Jewish Fate and Future* (1940). CARL ALPERT.

Lit.: Meltzer, Julian L., in *The New Palestine*, Feb. 28, 1936, p. 3; Lestschinsky, J., in *Aufbau*, vol. 9 (1943), No. 3, pp. 15-16.

RUSSELL, CHARLES EDWARD, non-Jewish author and humanitarian, b. Davenport, Ia., 1861; d. Washington, D. C., 1941. In addition to making notable contributions to American letters, he distinguished himself as a lecturer on sociology and literature. In the last twenty years of his life he lectured often on Zionism and human rights, talking to Christian as well as Jewish audiences about the plight of the Jewish people from the viewpoint of liberalism and humanitarianism. He was an eminent biographer, and from his pen came sketches of Charlemagne, Thomas Chatterton, Wendell Phillips and Julia Marlowe. In 1927 his biography *The American Orchestra and Theodore Thomas* won the Pulitzer prize. In 1930 he published *Haym Salomon and the Revolution,* which, written with a fresh point of view, exerted much influence in America. It attracted serious attention and helped considerably to place Haym Salomon among the outstanding heroes of the American Revolution.

Russell was the founder and honorary president of the Pro-Palestine Federation (organized in 1931), a non-Jewish body whose purpose was to spread the ideas of political Zionism among American Christians and to seek their help in the practical solution for the establishment of a national home for the Jewish people in Palestine. He was also one of the editors of the Federation's monthly publication *The Pro-Palestine Herald,* and contributed numerous articles in it on Zionism and on general Jewish topics. Z. TYGEL.

RUSSELL, HENRY, impresario, b. London, 1871; d. London, 1937. He was the brother of the famous conductor Sir Landon Ronald, and the son of Henry Russell, a well-known song composer. Henry Russell was first destined for medicine, but severe illness diverted him to music. At the Royal College of Music he specialized in singing. Following his studies, he perfected a vocal method, based upon his anatomical studies, which was highly praised by Melba, and which brought him a successful career as voice teacher. He helped to restore the voice of Eleonora Duse and to train a long line of singers. In 1903 he became manager of Covent Garden. In 1905 he brought an opera company to the United States, where his success resulted in the formation of the Boston Opera Company (1909), of which he was general manager.

During its existence it was one of the major opera companies in the United States. The first World War brought its activity to an end. In 1921 Russell returned to the United States as a lecturer. He was the author of an autobiography called *The Passing Show* (1926).

RUSSELL, PHILIP MOSES, American Revolutionary army surgeon's mate, b. 1745; d. Philadelphia, 1830. When the Revolutionary War broke out he was residing in Germantown, Pa. In the spring of 1776 he enlisted as surgeon's mate, and served for about ten months under the command of General Charles Lee. After the British occupation of Philadelphia (1777) Russell became mate to Surgeon Norman of the Second Virginia Regiment. Russell shared in the hardships at Valley Forge in the winter of 1777 to 1778; he was present at the Battle of Monmouth in 1778. He resigned from service in 1780 after an attack of illness had impaired his sight and hearing. From General George Washington he received a letter of commendation for his "assiduous and faithful attention to the sick and wounded." Aside from a Dr. Moses Bloomfield who was hospital surgeon at Woodbridge, N. J., in 1777, Russell was the one definitely known Jew engaged in medical service in the Revolution.

There is, however, no evidence that he practised medicine in civil life. The Philadelphia *Directory and Strangers' Guide for 1825* listed him as a merchant on St. John Street. He was evidently prominent in the Jewish community of Philadelphia, and one of the original members of Congregation Mikveh Israel. In 1776, in a ceremony performed

at the home of Jonas Phillips of Philadelphia, he was married to Esther, daughter of the Reverend Mordecai M. Mordecai of New York. Russell's daughter, Judith, married Isaiah Nathans, and the Nathans family continued to be active in the affairs of Mikveh Israel down into the 20th cent.

RUSSIA. 1. From the Earliest Times to the First Partition of Poland (1772). It is probable that at a very remote date Jewish merchants from Byzantium and from Khazar territory, particularly the Crimea, commenced to make their way into the valley of the Dnieper, the seat of the earliest Russian civilization. According to the oldest Russian chronicle, Jews from Khazaria took part in the religious disputation which was held in 986 in the presence of Prince Vladimir of Kiev (972-1015), prior to his conversion to Christianity. From the first the goal of Jewish immigrants was the city of Kiev, a trading center which linked the Black Sea zone and Asia with Western Europe, but they settled in other towns as well. They had to contend with the hostility of the clergy of this newly-Christianized land. High churchmen preached and wrote against them, and Theodosius (1057-74), the abbot of the celebrated Monastery of the Caves at Kiev, instructed the faithful to live in peace with all save Jews and heretics.

Nevertheless, no attempts were made to restrict their freedom of occupation. In the middle of the 12th cent. there are frequent references in the annals to a "Jewish Gate" in Kiev, presumably located near the Jewish quarter. This was looted by the populace in 1113, in the course of an uprising precipitated by the death of Grand Duke Vyatopolk II. Russia owed at least some of its Jewish population to refugees fleeing before the hosts of the Crusaders. In the 12th cent. students from Russia are found in the Talmudical schools of Western Europe. As yet there was little scholarship among the Russian Jews, and they addressed their queries on doubtful points of religious law to German rabbinical authorities.

The decline of Kiev and the conquest of Russia by the Tatars (1237-40) did not altogether check the growth of the Jewish communities. As the Tatars were masters also of the Crimea, the members of the ancient Jewish settlements there were now able to get in touch with coreligionists who maintained themselves on Russian territory north of the peninsula. Commercial relations between Kiev and Kaffa (the modern Theodosia) were the result. When, in 1340, Prince Gedimin of Lithuania occupied southern Russia, he found a considerable Jewish population there.

The Jews were practically unknown in the principalities which arose in central and northern Russia and which in the 14th cent. came to be dominated by Moscow. Occasionally the records for this period mention a Jewish court physician or a diplomatic agent. Anti-Jewish sentiment was therefore slow in developing here. At the end of the 15th cent. a "Judaizing sect" arose in Novgorod and rapidly spread to Moscow, gaining a foothold among the nobility and even in the family of the grand duke. Its success argues that in those days no opprobrium attached to the Jewish religion. The Russian chroniclers ascribe the origin of the heresy to the proselytizing zeal of a Jew named Zechariah who had come to Novgorod from Kiev in the train of Prince Michael Alexandrovich Olelkovich. It is now believed, however, that no Jews were involved in this religious movement. The heresy was suppressed with the aid of an auto-da-fé in 1504. It impressed the popular mind with a superstitious fear of the Jews as enemies of Christianity.

The Jews could not find hospitality in a country like Muscovy, where people of alien faith and stock were dreaded and despised. Like other foreigners, they were denied permanent residence there. Nevertheless, in the first half of the 16th cent. Jewish merchants from the Polish-Lithuanian state not infrequently visited Russia on business, since the commercial treaties between the two countries regarding the reciprocal admission of traders contained no restriction against Jews. They entered by way of Novgorod and Smolensk, which after 1514 was under Russia.

Ivan the Terrible (1533-84) was the first to pronounce himself in favor of the complete exclusion of Jews from his realm. In 1550 King Sigismund II of Poland wrote to the czar to obtain permission for Jewish merchants from Lithuania to visit Russia on business. "It is not convenient," the czar replied, "to allow Jews to come to Russia with their goods, since many evils result from them. For they import poisonous herbs into the realm and lead Russians astray from Christianity." The czar's fanaticism was exceeded only by his brutality. In 1563, when his troops took the Polish town of Polotzk, he ordered all the local Jews to submit to baptism on penalty of being drowned.

In spite of the czar's attitude, Jewish merchants continued to make their way into Muscovy. During the Time of Troubles (1598-1613), an interregnum in the course of which a Polish prince was put on the throne in the midst of a civil war, and which was brought to a close by the election of the first czar of the Romanov dynasty, a considerable number of Jews came in the wake of the Polish invasion. That the Russians resented this may be seen from the fact that when the boyars came to make terms with Sigismund III of Poland regarding the election of his son Ladislaus to the Russian throne, they stipulated, among other things, that under no circumstance should Jews be allowed to enter Muscovy. The manifesto proclaiming the election of Czar Michael in 1613 stigmatized Pseudo-Demetrius I (1604-6), the usurper of the throne, for having brought with him from Poland not only heretics, but even "Jews, the God-killers," and cast odium on Pseudo-Demetrius II (1608-10), proclaiming officially that he was "a Jew by birth."

The Time of Troubles left a deep resentment against the Poles, and as a result merchants from Poland were allowed to visit only the border towns. Naturally, Polish Jews shared this disability. Under Czar Alexis Mikhailovich (1645-76) the rights of merchants from Poland to visit the country were further restricted, while under Czar Fyodor (1676-82) Jewish traders were entirely debarred from Muscovy (by the treaty with Poland of 1678). Nevertheless, a few managed to secure permission to stay in Moscow, and some even acted as court purveyors. Certain Jewish physicians, too, found their way into the forbidden land of the czars. Furthermore, Moscow and other cities of the interior held small Jewish contingents consisting chiefly of former war prisoners: the Jews carried off as captives when the Muscovite troops invaded Lithuania in 1632 to 1634 and again in 1654 to 1656 were given the choice, when peace was concluded, of repatriating themselves or remaining in Russia.

Of those who stayed in Muscovy some had submitted to baptism, although among them there were not a few who continued to practise Judaism in secret. To this group of Marranos of the east belonged the court physician Stephen Gaden (or Haden) and his son. When both of them were murdered in the course of a revolt of the Streltzy in Moscow in 1682, they were buried by their fellow Judeo-Christians. Eventually these people became completely assimilated, some of them being the founders of noble lines. There were Jews among the financial agents employed by Emperor Peter I the Great (1682-1725), and his favorite court jester was a Marrano. Moreover, during the war with Sweden he did not allow his troops to commit atrocities against the Jewish population in the military zone.

Yet during his reign his empire continued to be largely barred to Jews. There was a small Jewish community in the

province of Smolensk, where its members traded and leased tolls and the liquor excise. In 1722 the holy synod ordered them deprived of the leases, their prayer house destroyed and their books burned. A considerable Jewish population had grown up in little Russia (Eastern Ukraine), which had been ceded to Muscovy by the terms of the Peace of Andrusovo (1667). The Jews there brought their wares to the fairs and leased the inns and pot-houses belonging to the gentry. In the early years of the 18th cent. attempts were started to restrict their activities. In 1708 they were forbidden to travel beyond Kiev and were allowed to sell their goods only wholesale. Hetman Skoropadski made repeated efforts to banish them from the Ukraine, finally securing the emperor's approval of a decree, dated June 15, 1721, whereby all Jews refusing to submit to baptism were to leave the region by October 1st. The hetman's order proved largely ineffective, and in 1727 it was reiterated by Catherine I (1725-27). Her ukase also permanently banished the Jews from all Russian cities, and obliged them to exchange their gold and silver coins for Russian copper ones. The expulsion of the Jews from the Ukraine went counter to the interests of the powerful magnates, and therefore was not strictly enforced.

In the following year the senate, in response to a petition of Hetman Apostol, granted Jewish merchants the right to visit the fairs in Little Russia, on condition that they sold their goods wholesale and bought local goods with the proceeds. Empress Anna (1730-40) extended this privilege to the province of Smolensk, and allowed the Jewish traders to sell their goods at retail. In her reign an untoward accident put an end to all official leniency. Boruch Leibov (or Glebov), a wealthy tax-farmer of Smolensk, on one of his visits to Moscow converted to Judaism a certain retired naval officer. The Russian's apostasy having been discovered, both he and the Jew were burned publicly in St. Petersburg (July 15, 1738). This occurrence initiated a new anti-Jewish campaign on the part of the government. An official investigation established the fact that the ukase of 1727 had not been scrupulously carried out, and the remaining 573 persons of Jewish faith were ordered deported from the Ukraine. It is doubtful, however, if this order was executed.

Elizabeth (1741-62), a zealous supporter of the Orthodox faith, confirmed the order of 1727, insisting on the expulsion of unconverted Jews from all the Russias (ukase of December 2, 1742). Representations to the senate on the part of interested authorities regarding the ruinous consequences of the measure were futile, the response of the empress being: "From the enemies of Christ I desire no gain." In 1744 she repeated her previous order, ruling that Jews should not under any condition be admitted to Russia even for a brief visit. She actually succeeded in excluding all Jews from the country. It has been estimated that 35,000 Jews were expelled by 1753.

In her manifesto of December 4, 1762, Catherine II (1762-96) announced that all foreigners "save Jews" were permitted to travel and reside in Russia. Thereupon petitions began to come in from Little Russian nobles, from the Riga magistracy and from other interested groups asking that the Jews be allowed temporary sojourn in the empire for commercial purposes, on the ground that this would stimulate trade. The empress was deaf to these representations. Although aware of their justice, she chose not to break with the past. Without openly committing herself to a departure from her predecessor's bigoted policy, she managed, however, to admit a number of Jewish traders to Riga and St. Petersburg, and she took several practical steps to attract Jewish settlers to the undeveloped southern province of New Russia, which was badly in need of an active industrial and commercial class.

Then, suddenly, by a turn of fortune, the country for which a few hundred Jews constituted a menace found itself possessed of a slice of Poland housing a large Jewish population. AVRAHM YARMOLINSKY.

2. From the First Partition of Poland to the Death of Alexander I (1772 to 1825). The partition of Poland was a turning point in the history of the Jews in Russia. Until then they had been dealt with in more or less episodic manner; now more than 100,000 Jews of White Russia became Russian subjects at a single stroke. The tendency to separate the Jews from the rest of the population was abandoned in 1778, when the wealthy Jews were permitted to join the merchant class, while those whose possessions were worth less than 500 rubles were granted the status of burghers. In 1783 all the Jews who were not merchants were allowed to become members of the burgher class. Both merchants and burghers enjoyed the right to elect and be elected to the organs of municipal self-government. In White Russia a considerable number of Jews lived in rural districts as innkeepers and leaseholders. Since Russian merchants and burghers were required to reside in the towns and were forbidden to engage in the distilling and sale of spirituous liquors, an attempt was made to deprive the Jews of that occupation and to transfer them from the villages to the cities. A ukase of 1782, ordering them to be removed to the cities, was suspended as overhasty while in the very process of execution, and the Jews were allowed to lease inns in the cities (ukase of 1786).

Internal Jewish autonomy was regulated by a similar compromise. The Russian law sanctioned the existence of the Kahal organization, the government regarding it as a convenient fiscal agent. In addition to the individual communities there were also district and provincial Kahals, the chief functions of which were to apportion the lump sum assessed for taxes among the communities. At first the Kahals were granted certain judicial powers, district and provincial Kahals trying cases which involved Jews only. In 1786 such cases were handed over to the general municipal courts, and the Kahal boards were confined to religious matters. Although this course showed a certain advance in position, it was soon nullified by the retrograde movement that set in when the number of Jews increased in Russia because of the new partitions of Poland. New attempts were made to drive the Jews into the cities. New complaints arose in the country, especially from Christian merchants, about the danger of competition.

A number of Jewish traders having established themselves in Smolensk and Moscow, a complaint against them was lodged by the association of Moscow merchants. As a result, the Jews were permitted to register as merchants and burghers exclusively in White Russia (governments of Mogilev and Polotzk [later Vitebsk]) and in the provinces of Yekaterinoslav and Tavrida, which formed New Russia (ukase of December 23, 1791, Old Style). This measure established the Pale of Settlement. Its territory was soon extended to include the governments of Kiev, Chernigov and Novgorod-Seversk (later Poltava). In 1793, after the second partition, the province of Minsk, as well as Volhynia and Podolia, were included in the Pale. The Lithuanian provinces of Vilna and Grodno were added in 1795, Courland in 1799, the Caucasus and the province of Astrakhan in 1804, and Bessarabia in 1818. The Kahal system was allowed to function in all the newly annexed regions.

In 1794 the government ruled that the Jews had to pay double the taxes imposed upon Christian merchants and burghers and that, if they preferred to emigrate, they could leave the country only after paying into the treasury a sum equivalent to a three years' tax. In addition, they were

liable to a special impost in lieu of personal military service. The Karaites alone were exempted from the double tax. This had been imposed upon the Jews in order to force them to emigrate to New Russia, where new settlers paid no taxes. At the same time the local authorities were instructed to endeavor to transfer the Jews from the villages to the cities. Owing to the hostility of the non-Jewish burghers, the right of the Jews to be elected to municipal posts was abolished in the Lithuanian provinces and curtailed everywhere else. It should be noted that in the last years of the reign of Catherine II the term *yevrey* (Hebrew) replaced the contemptuous *zhid* in official documents.

The reign of Paul I (1796-1801) was not marked by any legislative acts affecting the status of the Jews, but in its course an official investigation was undertaken which was to be used as a basis for such legislation. The question of granting rights to the Jews in Lithuania, where they had possessed privileges from the times of the Polish sovereignty, and in Courland, where equality had been theoretically granted them, was an especially burning one. Of vital importance was also the status of the Jews in rural localities. When a famine broke out in the province of Minsk in 1797, the government sought a scapegoat and found it—in the Jews. Since they were the innkeepers and lessees from the magnates, they were accused of corrupting the peasants and seducing them into drunkenness. Various officials gave similar opinions, and all these were laid before the investigator appointed, Senator G. R. Derzhavin. The measures which he proceeded to order were too few to have much effect on conditions; but his written remarks ("Opinion of Senator Derzhavin, etc.") were a formal indictment of the Jews. They culminated in a series of proposals for the forceful Russification of the Jews.

In the meantime, Alexander I (1801-25) had ascended the throne. A committee was formed in 1802 to deal with the complaints raised against the Jews in White Russia and to devise means of improving the situation of the Jews. It was before this committee that the proposals of Derzhavin and others were laid. The opening of the sessions of the committee caused great excitement among the Jews. An effort was made to allay it by convoking an assembly of the provincial Kahals (1803). At this time there appeared the first Jewish apologetic writing in Russian, *Vopl dshcheri yudeiskoi* (Plaint of the Daughter of Judah), by Leib Nevakhovich.

The result of the deliberations of the committee was a victory for the adherents of compulsory reform over advocates of milder measures. The statute of December 9, 1804, limited the Pale of Settlement to the previously mentioned provinces. The province of Astrakhan and the Caucasus were eventually to harbor Jewish agricultural settlers. Jewish manufacturers, merchants and artisans were allowed to leave the Pale on business.

The Jews were to disappear from the rural settlements by January 1, 1807, and in some provinces by January 1, 1808. This was according to the recipe of Derzhavin that they should be taken away from leaseholding and innkeeping in order to lead them to agriculture and productive labor. Further limitations were placed upon the Kahal, and the regulation of the Jewish religion and worship was transferred from it to the rabbis who were to be chosen independently of it. Nothing was left to the Kahal but the apportionment and collection of the taxes, and, later on, the taking of the census. There was to be only one Kahal in each city, but sectarians were permitted to have their own synagogues and rabbis. This provision improved the position of the Hasidic sect. All the government schools were thrown open to Jewish children, and it was stipulated that should the Jews fail to send their young to the public schools, special Jewish schools would be opened at the expense of the Jewish communities. Knowledge of Polish, Russian or German was a prerequisite for the rabbinate, for a municipal public office or for membership on a Kahal board. Traditional Jewish garb and earlocks were proscribed. This law aimed at the compulsory assimilation of the Jews to their environment. The most decisive stipulation of the law, the transplantation of the Jews to the cities, could not be executed immediately; the government, for political and economic reasons, had to consent to a postponement. In December, 1808, deportations from the villages were suspended. Even later attempts to bring about expulsions had practically no success.

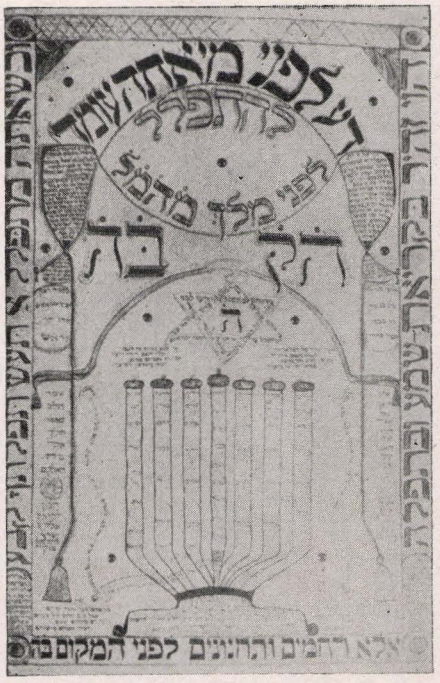
The Napoleonic wars affected the Jews of Russia, especially since the main events of 1812 took place in White Russia and Lithuania, where there was a large Jewish population. The overwhelming majority of the Jews were opposed to Napoleon; they regarded him as the enemy of religion and a dangerous modern. During the campaign in Russia they were active on the side of the Russians as army purveyors, as spies, and in philanthropic work; some of them even fought in the Russian army. On occasion they were forced to act as spies by the enemy. A favorable feeling for the Jews arose, and this was utilized by the army purveyors and the "deputies of the Jewish people," i.e. representatives of the Kahals, Zundel Sonnenberg and Leizer Dillon (Nesvizhski), to intervene at the military headquarters and in the capital in behalf of their coreligionists. Thus they succeeded in securing the remission of a rather large arrears of taxes. Prince Golitzyn, who took over the administration of Jewish affairs in 1817, created the institution of "deputies." The eleven provinces of the Pale of Settlement chose Sonnenberg, Dillon and four others as the "deputation," and this seemed to be a promising beginning for a better position for the Jews. It thwarted many attacks planned on the Jews; later, however, it lost its importance with the growth of reaction, and vanished entirely in 1825.

The first years of Alexander's reign had been liberal, but now a reaction set in. To be sure, a prohibition was issued in 1817 against accusations of ritual murder, and a legal investigation with proof by witnesses was required in every case. But in general the course of the government was outspokenly anti-Jewish. Despite his apparently tolerant attitude, Golitzyn was an ardent supporter of the Bible Society which, founded in England for missionary purposes, had spread to Russia, where he was its president. Lewis Way, president of the Bible Society in England, took an interest in the Russian Jews, and in 1818 tried to persuade the emperor to grant equality to the Jews as a means of winning them over. Alexander and Golitzyn, both strongly inclined toward mysticism, desired the conversion of the Jews to Christianity.

The Society of Israelite Christians, founded in 1817, was under the patronage of the emperor. These efforts to convert the Jews had little or no practical results. On the other hand, the surprising growth of the sectarians, especially the Subbotniki, gave new support for the mistrust against the Jews, which resulted in various new severe measures. The most decisive of these was the resumption of the expulsion of the Jews from the open country. At the beginning of 1824 about 20,000 Jews of the provinces of Mogilev and Vitebsk had to leave their residences, and this economic catastrophe lasted for an entire year.

An oppressive prohibition was that forbidding Jews to reside within fifty versts of the boundary, the only exceptions being owners of real estate, and these might sell their property to Christians only. The Jews' freedom of residence and occupation was curtailed in other ways. There were also forbidden to employ Christian domestics. Finally, the reactionary tendency expressed itself in the blood accusation at Velizh, in the province of Vitebsk.

The statute of 1804 contained provisions intended to encourage the Jews to become tillers of the soil. The prospective farmers were to receive free land, a government loan, and exemption from taxes for ten years. They were also given assurance that they would not be degraded to serfdom. A number of families



evicted from the villages or threatened with eviction took advantage of this opportunity and were transported to the province of Kherson, where in 1807 four Jewish agricultural colonies were formed. By 1812 there were some 600 Jewish families in these settlements. Many other would-be pioneers had either perished of hunger or disease or had escaped to neighboring towns. In the early 1820's evictions from villages were resumed and the population of the colonies was swelled by new arrivals. The settlers, unprepared for their new mode of living, receiving but little help from the authorities and preyed upon by local officials, dragged out a miserable existence. Thus the movement to the land brought no solution of the Jewish problem. The main occupations of the Jews continued to be commerce, handicrafts and leaseholding.

Although the situation of the Jews was by no means happy under Alexander, it was better than under his successor, and long afterwards numerous legends about Alexander, praising his benevolent deeds, circulated among the Jewish masses.

3. From the Period of Reaction under Nicholas I (1825) to the Pogroms of 1881. The policy under which the Jews were treated during the reign of Nicholas I (1825-55) was essentially ruled by the thought that the Jews were a noxious element. The great importance assigned to the Jewish question is shown by the fact that of the 1,200 laws issued with reference to the Jews of Russia from 1649 to 1881, more than half belong to the reign of Nicholas I.

The first point treated was that of the military duty of the Jews. Up to 1827 the Jews had merely paid a tax, in return for which they were excused from personal service. Despite many scruples, military duty was introduced for the Jews very suddenly under the ukase of August 26, 1827 (Old Style), the reason given being that it was necessary for all classes of the population to have the same treatment. It was shown to be really a repressive measure by the fact that the regulations for Jews were more severe than those for Christians. The latter had to furnish only seven recruits per thousand of population; the Jews, ten per thousand. The recruits were taken in between the ages of twelve and twenty-five. Those who were found fit were distributed among the other soldiers; the minors, i.e. those under eighteen, were placed in the Cantonist schools. It was the obligation of the Kahals to see that recruits were forthcoming. The communities were responsible as a whole, and could proceed with executive power; the recruiting officers of the Kahal who did not deliver the required number of recruits were liable to be drafted into the army. A voluntary substitute might be accepted only in case he were also a Jew. Certain categories of merchants, artisans and intellectuals were exempted from military service, and these had to pay 1,000 rubles for their release. The solemn ceremonial of the oath was to impress the Jewish soldiers with the fact that they had completely broken with their past.

The practice was even worse than the theory. Jewish soldiers were looked upon as rebels from the very start; hence they were strictly watched, and every endeavor was made to convert them to Christianity and to make life a hell for those who clung to Judaism. Efforts were made to intimidate them by violence, by beatings, by forcing them to run the gauntlet, by making them sit naked upon ice until they collapsed in a faint. They were forbidden to observe any Jewish ceremony, and were compelled to eat swine's flesh. Parents were forbidden to have intercourse with their children, and boys heavy with sleep were pressed to consent to conversion. The baptized and the unbaptized were strictly separated from one another. The fearful impressions of these times are mirrored in countless contemporary accounts and tales, in which an especial part is taken by the kidnapping of children by "catchers" (*chappers*) and informers. After a service of twenty-five years, during which they had generally left their families in great misery, the soldiers of Nicholas returned, broken in body and spirit. Of course the Jews sought to evade this service in every way possible. The greatest damage was caused by the fact that most of the youths were already fathers of families when they were conscripted. When the report spread that it would not be long before early marriages of Jews would be prohibited, thousands hastened to marry off their children. This "time of terror" (Behalah) led to a quite unnatural and sudden increase of the number of Jewish families. Later laws brought the Cantonists further hardships and exclusion from certain ranks in the army. Nevertheless, most of the Jews fulfilled their hard duties with indefatigable zeal, and many even distinguished themselves.

A Mizrah in the synagogue at Korostyshev, Russia

In all this there was no question of giving the Jews a modicum of equality in return for their heavy obligations. The expulsions from the villages continued in a steady stream and ceased only when the Polish insurrection of the 1830's aroused the fear that the Jews might join it.

The statute of 1835, which followed after lengthy discussions of the status of the Jews, was essentially the same as that of 1804, with a few additions which were not in the nature of alleviations. The Pale of Settlement was defined therein as consisting of the provinces of Grodno, Vilna, Volhynia, Podolia, Minsk and Yekaterinoslav; the provinces of Bessarabia and Bialystok; the province of Kiev except the city of Kiev; the province of Kherson except the city of Nikolayev; Taurida outside of Sebastopol; the provinces of Mogilev and Vitebsk with the exception of the villages; the provinces of Chernigov and Poltava; the crown and Cossack settlements from which the Jews had been deported; Courland and Livonia, save the city of Riga and the town of Shlok. The right of residence in the two provinces mentioned last was enjoyed only by those Jews who had been registered there in the previous census, and no new immigrants from other provinces were to be admitted. Jews were completely debarred from settling in the open country in a fifty-verst strip along the western boundary. They were allowed to stay in the interior up to six weeks only for the discharge of business, and in case they wore Russian dress; merchants of the first guild could stay six months, and those of the second guild three.

A nook in the old Jewish cemetery in Moscow

The law contained also limitations as to the employment of Christian domestics, early marriages of Jews, the use of Yiddish and Hebrew, and the choice of vocations; it contained certain privileges for those who would follow agriculture. The Kahal was to remain in existence, with the obligation of raising the public taxes and seeing that the magisterial prescriptions were carried out. Synagogues might be built only at a respectful distance from churches. The rabbis were treated as officials. Admission to the public schools was made open to Jews. The most burdensome of these regulations was the continuation of the Pale of Settlement, even though this, as in all times, was violated in practice. The censorship of Jewish books was instituted in 1836. The spirit of the Russian bureaucracy was plainly revealed in the previously mentioned ritual murder trial of Velizh, which was concluded in 1835. It ended with the acquittal of the Jewish defendants for lack of proof and in the condemnation of the Christian calumniators; but in the course of it the czar made the characteristic observation to the effect that he had no inner conviction that the murder had not been committed by Jewish fanatics who considered Christian blood necessary for their ritual.

The violent reforms of the first years of Nicholas' reign had failed, and more civilized measures were now tried. The education of the Jews was now to do what oppression had failed to accomplish. The main representative of this view was Uvarov, minister of education. The new principle of the government was that the "Talmudic spirit" was the basic evil which had to be eradicated; therefore new schools had to be created in a different spirit. Many Jews held similar views. Isaac Baer Levinsohn's *Teudah Beyisrael* (Instruction in Israel; 1828) contained a copy of that scheme which was the basis for the efforts at enlightenment in Western Europe. Many enlighteners believed that the Jewish masses could not be educated without compulsory measures on the part of the government. These ideas as well as suggestions derived from memoranda submitted by provincial governors were urged upon the government. The general consensus was that while it was hardly possible to turn the Jews away from their faith by enlightenment alone, the damage caused by false or fanatical interpretation of tradition had to be repaired by enlightening measures.

The main question was that of schools, and Uvarov attempted to solve this phase of the problem. In 1841 Max Lilienthal, a German Jew, who had successfully headed a secular Jewish school in Riga, was called to the capital and entrusted with a tour of inspection through the Pale of Settlement. He recommended that the antiquated Heders be abolished, the Melammedim forbidden to teach, and a teaching staff imported for a network of modern Jewish schools. Accordingly, he got in touch with Abraham Geiger, Leopold Zunz, Ludwig Philippson, Isaak Markus Jost and others. On his first journey through the Pale of Settlement Lilienthal was received with respectful curiosity and sceptical reserve. The second journey had indeed better external success, but Lilienthal could soon perceive that the agreement of larger groups of the Jews to his plans was more or less due to the fear of compulsory measures. The people had quickly recognized the true intention of the government, which was to make the conversion of Jews to Christianity as easy as possible through the means of the schools. When Lilienthal eventually saw through the real purposes of the government, he left the country in disillusionment and went to the United States. However, the Jewish government schools which he had started still continued in existence, and became a still further object of distrust on the part of the Jewish masses.

The government attempted reforms in other directions. In 1844 the Kahal was abolished and its economic and fiscal functions were transferred to the municipal administrations, its administrative powers to the police. However, recruiting officers elected by the communities were retained, and so were the tax collectors, the latter functioning under the municipal councils. The Jewish communities continued to maintain hospitals and poorhouses and dispense charity. They were supported chiefly by private donations. The proceeds of the Basket Tax, which used to be levied for the benefit of the Kahals, were now placed at the disposal of the provincial administration with instructions to apply them to pay up tax arrears of the Jews. The proceeds of the tax levied on Sabbath candles were turned over to the minister of education and were to be used for the support of Jewish government schools.

A great influence was exerted upon Jewish communal affairs by those "prosperous and resident Jews" who were consulted as "experts" by the authorities, without regard as to whether they were sufficiently acquainted with and interested in Jewish affairs or not. The Statute of 1835 imposed upon the rabbi the task of guiding his flock not only in religious but also in ethical matters and in the discharge of their civic duties. In 1840, in connection with the general effort at compulsory enlightenment, it was decided to open government colleges for the training of rabbis who would carry out the official policies. The project fell through because the congregations failed to engage the alumni of these schools. An attempt was made also to prohibit by law the traditional Jewish garb.

In the latter part of Nicholas' reign expulsions from the fifty-verst zone were renewed, and a futile attempt was made to divide the Jews into two groups: "useful" citizens and "useless" ones, termed "second-class burghers." The latter were to be singled out for various special restrictions, including compulsory labor. About that time the idea appeared of asking the emancipated Jews of Western Europe to act as intermediaries between the government and the Jews, and Moses Montefiore actually took a journey to Russia in 1846 for this purpose. He was greeted by the Jews with enthusiasm, and composed a memorial at the request of the government; but even this intervention led to a few minor alleviations only. The evil conditions persisted, and the regulations about the Jews gradually became an intolerable torture through the abuses practised by the bureaucracy, who saw in them a new field for extortion.

Nicholas I, like his predecessor, sought to induce the Jews to turn from "unproductive" occupations to farming. Exemption from military service was a powerful inducement, and as a result new Jewish agricultural settlements sprang up in the south. The law of 1847 made it possible for Jews to enter the agricultural class. By the middle of the century there were four-

teen colonies in the province of Kherson, as many in the neighboring province of Yekaterinoslav, forty-five villages in the province of Kiev, also some rural settlements in Bessarabia and in the White Russian and Lithuanian provinces, in all an agricultural population of some 65,000. The exodus to the land was not, however, sufficiently large to affect the economic position of the Jewish people as a whole. Toward the end of the reign the masses were in a greatly impoverished condition. But the government would not confess that its policy was mistaken, and continued its oppressions indefatigably.

The liberal regime which began under Alexander II (1855-81) did not affect Jewish affairs for some time. This was due not only to the after-effects of the previous era of reaction, but also to the state of public feeling, which had been strongly aroused by the ritual murder trial of Saratov, in 1852 and 1853. The reforms first began with the recruiting law. In 1856 all the discriminations and extra penalties as to Jewish recruits were abolished, and the Jews were placed on the same plane as the rest of the population. If the Jews were not explicitly granted equal rights, their position was substantially improved.

The "Jewish committees," which had now become traditional, resumed their deliberations, and although they were futile, the complete revision of the legislation relating to the Jews continued to be under consideration. The division of the group into "useful" and "useless" elements again came to the fore, but this time with a view to rewarding the former with special privileges. Soon, however, the idea was abandoned as opposed to the objective of the authorities, which was to bring about "a fusion" of the Jews with the natives "as far as their moral status may render it possible." Certain officials, such as the governor general of New Russia, Count Stroganov, even advocated a complete emancipation of the Jews; but the committee took the stand that equality could be granted only after "measures of preparation," and this viewpoint was shared by the czar.

Some of the more prosperous Jews petitioned the czar, pleading for the removal of the disabilities from those groups which had distinguished themselves for their industry. The plea did not fall upon deaf ears. In 1859 Jewish merchants who belonged to the first guild were permitted to reside in all cities of Russia, together with their families and a number of Jewish domestics. In 1861 university graduates were permitted to reside outside of the Pale and to hold government posts, and in 1865 Jewish mechanics, distillers, brewers, and all artisans, as well as apprentices, were granted freedom of residence, with certain restrictions. On the other hand, it was not until 1867 that Jewish soldiers whose term had expired received the right to settle outside of the Pale. In 1868 the Jews residing in the Pale were permitted to settle in Congress Poland and vice versa. It was not until 1879 that apothecaries, nurses, midwives and dentists were permitted to reside outside of the Pale. In addition, the Pale was extended to include various cities, and the prohibition of settling within fifty versts of the boundary was abrogated. The Zemstvo law of 1864 did not exclude Jews, and the reform of the courts in the same year was also liberal toward them. Finally, entrance to public offices was made somewhat easier for them. The law of 1874, introducing universal military service, was a step toward Jewish emancipation in that it imposed on the Jews the same obligation as on non-Jews.

In the educational field the government endeavored to establish the prestige of the government schools for the Jews. But neither the law passed in 1855 that after the lapse of twenty years no one should serve as rabbi or teacher of Jewish subjects who had not graduated from a rabbinical seminary or had not attended a secular school, nor other later measures aiming at compulsory education had the desired result. On the contrary, in 1873 the Jewish government schools were closed, except for about a hundred of them, which were turned into elementary schools, and the rabbinical seminaries in Vilna and Zhitomir were transformed into teachers' institutes. The authorities now relied on the general schools as an instrument of Russification.

Tombstone of Mark Antokolski in the Jewish cemetery of Leningrad (formerly St. Petersburg)

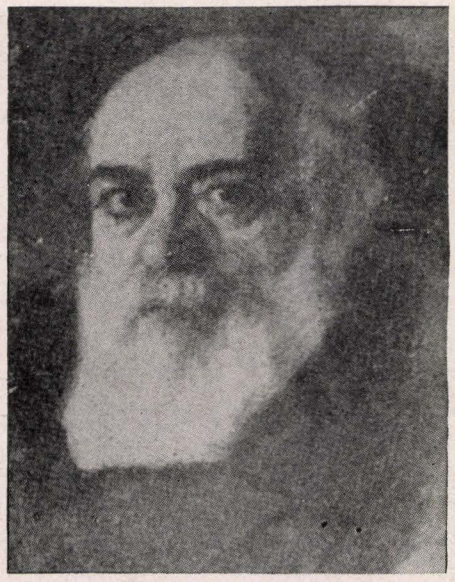
George Wolf

The reform era of Alexander II had an effect on the economic position of the Jews. The freeing of the serfs led to the driving of the Jews out of many occupations which they had nearly monopolized. This set free capital which was now used for commerce and industry. Although the business undertakings of the Jews were of a microscopic nature, this period marks the time when Jews began to take more and more interest in manufacturing; on the other hand, more and more Jews became proletarians.

During the last years of Alexander II the coming reaction was already casting its shadow before it, especially in literature and in the press. The calumniatory work of the renegade Jacob Brafman, *The Book of the Kahal* (1869), contributed not a little to the increase of feeling against the Jews. The Odessa pogrom of March, 1871, was a plain indication of the anti-Jewish feeling in reactionary circles; it was stirred up by the watchword "Fight Jewish exploitation!" At the Berlin Congress of 1878 Gorchakov could declare, in reference to the Jewish question, that the protection of the interests of the Russian population justified the inferior position of the Jews. The sharp attacks by the monk, Ippolit Lutostanski and others and the ritual murder trial at Kutais, in the Caucasus, in 1878, although it ended in the acquittal of the defendants, showed the attitude of wide circles toward the Jews at that time.

4. From 1881 to the First World War. The reaction which set in with Alexander III (1881-96) naturally had its effect on Jewish affairs, especially since the assassination of Alexander II, in which a Jewess had played a part, was blamed on the Jews. The new czar had been educated in an arch-reactionary spirit by

Pobiedonostzev, later procurator of the holy synod. The czar's attitude toward the Jews was revealed by the fact that as the heir apparent he had Lutostanski rewarded for his pamphlet on the use of Christian blood and that his councillors were nearly all enemies of the Jews. The long series of pogroms which began soon after he ascended the throne was not accidental, but the appearance of a systematic policy of destruction.



The riots first broke out during Easter of 1881, in Yelizavetgrad (now Kirovo), in the province of Kherson. From there they spread to neighboring towns and eventually to Kiev and Odessa. There were pogroms in forty-eight towns and villages in the province of Kiev alone and also in a considerable number of populated centers in the adjacent provinces of Volhynia, Podolia, Chernigov and Poltava. The epidemic of rioting died down toward the end of the year. The total damages caused by these excesses of 1881 were estimated as between nine and ten million rubles, and about 60,000 Jews were directly affected. The most dangerous thing about these excesses was the fact that they were deliberately planned and systematically carried out. The press, especially the reactionary and nationalistic newspapers, some of them subsidized by the government, did everything to stir up anti-Jewish feelings and led demagogues to declare that the pogroms were to take place by order of the government, in order to protect the Russian population from exploitation by the Jews. The emperor, for his part, condemned the excesses as such, but was inclined to lay the greater part of the blame on the Jews themselves. The Jewish deputations that appeared before him and the authorities could do nothing in the face of the pronounced anti-Jewish feeling.

In June, 1881, Count Kutaysov was sent to South Russia to investigate the cause of the pogroms. He laid the greater part of the blame on the Jews themselves, who had made themselves hated by the people through their economic activities; however, he admitted that the conduct of the police and the military had not been free from reproach. It was with satisfaction that the government seized upon this proof of the injurious nature of the Jews. In all the provinces where Jews formed a considerable part of the population commissions, consisting of representatives of the various classes, including the Jews, were created for the purpose of collecting material for a solution of the Jewish problem. The bureaucratic and anti-Jewish feeling prevailed, and the material collected by it, even the statistics, was such as could be used to bolster up the views of the government.

The opinions of the governors and governor generals were obviously colored by partisan views. Nevertheless, all this material was laid before the "Committee for the Revision of the Jewish Question," created in October, 1881. The committee did not succeed in elaborating a satisfactory plan, and its proposals were only a repetition of the earlier measures, especially that of the expulsion of the Jews, which had been previously tried without success. The minister of the interior, Count Ignatiev, little satisfied with these, brought about the issuing of the "Provisional Rules" of May 3, 1882. These regulations, which were enacted by administrative order as an extraordinary measure which applied exclusively to the Pale of Settlement, were based on the theory that the Jews were unwanted aliens and that they had to be segregated from the peasants to protect the latter from exploitation. The chief effect of the Rules was to confine the group to the narrow limits of the cities and towns within the Pale. In spite of their temporary character, the Rules were in force for more than twenty years.

In the meantime, another pogrom had broken out in Warsaw in December, 1881; it was probably instigated by the Russians and was denounced by the Polish public. Other pogroms followed, the climax being reached in the excesses at Balta. The ensuing pogroms in the 1880's were only local in nature.

Within the country itself but few voices were raised

Jacob Masé, crown rabbi of Moscow (1893-1924). See article in vol. 7, p. 394

in favor of the Jews. In other lands meetings of protest were held, and an interpellation was made in the British House of Commons as to the conditions in Russia, but no one was able to help the Jews. The chief result of the pogroms was a panic among the Jews of Russia; the stream of emigrants was especially large on the Galician border and could be handled only by the industrious help of the Alliance Israélite Universelle and of some leaders of Jewish society. The execution of the "Provisional Rules" met with all sorts of difficulties. There were always doubtful cases which had to be settled by the judiciary, and there were all sorts of economic difficulties.

In 1883 a new commission was formed for a revision of the laws about the Jews. It was headed by Count K. Pahlen, and its deliberations lasted until 1888. The majority of the members of the commission favored the abolition of Jewish disabilities, but its moderately liberal recommendations had no practical results. The entire policy of the Russian government was more and more dominated by a reactionary course. Expulsions and new limitations of rights of all sorts in the cities and in the country, and debarrings from various vocations were the order of the day. The climax was reached in the great expulsion from Moscow in the winter of 1891. Hand in hand with such expulsions went the limiting of education, the introduction of a percentage norm for the admission of Jews to the high schools and universities, the restriction of freedom of choice of a vocation for members of the professions, and limitations as to the Zemstvo and the city administration and in the army.

The Russian policy became no better after Nicholas II ascended the throne in 1896. A few attempts to improve the condition of the Jews had only temporary results or were foredoomed to failure. Hostility to the Jews grew in governmental circles, in the press, and in society. There were pogroms at Shpola in 1897 and at Nikolayev in 1899, and a ritual murder trial took place at Vilna in 1900.

The disastrous end of the Russo-Japanese War brought the high point of the persecutions of the Jews in Russia. In Bessarabia the agitations against the Jews had led to a fearful pogrom in Kishinev on Easter, 1903, in which forty-five Jews were killed, many hundreds wounded, and a number of women raped; about

1,500 Jewish shops and houses were destroyed and some synagogues looted; damages of several million rubles were caused. There were frequent "mobilization pogroms" or attacks upon the Jews at the beginning of the war, and an equally bloody pogrom occurred in Homel, in the province of Mogilev, at the end of the summer of 1903.

The blame for these excesses was undoubtedly due to the policy of Minister Plehve. The guilt of the authorities is shown by the results of the trials after the pogroms in Kishinev and Homel. From that time on the authorities threatened the Jews with pogroms if they joined the revolutionaries. But the matter did not rest there; on Easter, 1905, there were excesses in Zhitomir and in the nearby Troyanov, and the proclamation of the constitution was followed by the fearful October pogroms instigated by the bureaucracy. All countries hastened to come to the relief of the Jews, but the funds placed at their disposal were not sufficient to make good the damages that had been sustained.

The elections to the First Imperial Duma, in February to April, 1906, were influenced, among other things, by the agitation of the "black hundreds" organized in the "League of the Russian People," which threatened the Jews with bloody revenge if their participation in the elections resulted in liberalizing the state. On the other hand, the "League for the Attainment of Equal Rights for the Jewish People in Russia," founded in March, 1905, at Vilna by Jewish leaders, energetically pushed the participation of Jews in the elections. Twelve Jewish deputies were elected. The Jewish question was discussed at different times in the Duma; the pogroms were also spoken about, especially during the time of the Bialystok pogrom of June 7 and 14, 1906.

The First Duma was dissolved in July. All the Jewish deputies signed the opposition's Viborg Manifesto calling upon the people to refuse to pay taxes or discharge military service. A new wave of Red and White terrorism swept the country. A violent pogrom occurred at Siedlce (Sedletz) in Poland. A moderately liberal bill for improving the legal status of the Jews submitted to the czar by the Council of Ministers was rejected by him. The elections to the Second Duma were hampered by the activities of the Black Hundreds. The assembly, which opened on February 20 to March 5, 1907, comprised only four Jewish deputies, including one Social Democrat. Under a convenient pretext it was dissolved three months later, and therewith the electoral law was arbitrarily altered so as to give the government a conservative majority.

The reaction was now in full swing, the Black Hundreds having become the power behind the throne. The Jews experienced new indignities, restrictions and attacks; also the Zionist organization was outlawed. In the Third Duma, which met on November 1 to 14, 1907, the Jews were represented by only two deputies: Naftali Markovich Friedman, from the province of Kovno, and Leopold Nikolayevich Nisselovich, from Courland. The temper of the majority, which was made up of members of the reactionary League of the Russian People and of the conservative "Octobrists," was anti-Semitic. Under these circumstances, the removal of the disabilities was out of the question. In fact, new restrictions were enacted.

In 1910 Nisselovich obtained the signatures of 166 deputies to a petition urging the abolition of the Pale of Settlement. The petition was laid before the Duma, but no action ensued. The attitude prevailing in Russian society at that time was reflected in the Beilis trial of 1911 to 1913, in which a charge of ritual murder was involved. The reaction continued until well into the preparations for the election to the Fourth Duma, in the spring of 1912. The Jews in this Duma were Naftali Markovich Friedman from Kovno, Meyer Haimovich Bomash from Lodz and Ezekiel Bentzionovich Gurevich from Courland. At this time, just before the first World War, the government avoided taking a definite stand about the Jews, but continued its oppressive measures. A significant expression of the reactionary spirit was the trial, in June, 1914, of twenty-five members of the St. Petersburg Bar Association who had criticized the conduct of the minister of justice in the Beilis trial.

Just before the first World War the economic situation of the Jews was as follows: in 1913 the Jewish population of Russia amounted to 6,946,000, or 4.07 per cent of the total. According to the census of 1897, four out of every five Jews lived in cities and towns, and since then the crowding in the urban centers had increased. A small number gained a living from the soil: in 1897 the percentage of economically active Jews in agriculture was 2.4; later it increased somewhat. In the professions the Jews were strongly represented. Seven times as many Jews as non-Jews were in that field. Transportation and communication, domestic service and miscellaneous occupations accounted for some 20 per cent of those gainfully employed. Over one-third (37.5 per cent) of the population belonged to the commercial class (including inn- and saloon-keepers). Nearly half of the Jewish merchants in the Pale were dealers in agricultural products and cattle. The Jews also carried on retail commerce. A very large number of them owned small stores or were peddlers. About a third of those gainfully employed were engaged in industry, chiefly in handicrafts as master artisans and workers in small shops. In 1898 more than one-third of all the factories within the Pale were in the hands of Jews, but they were mostly small.

On the religious and social movements among the Jews of Russia, *see:* COMMUNISM; FRANK, JACOB LEIBOVICZ; HASIDISM; HASKALAH; SOCIALISM; ZIONISM.

5. From the Beginning of the First World War to the Revolution of 1917. The first World War suddenly made the situation of the Jews in Russia a great deal worse. The border provinces which were thickly settled by Jews became the scene of the fighting.

Attempts were made to blame the defeat of the Russian arms on the traitorous attitude of the Jewish population. As early as the first months of the War accusations were current in Russia that the Jews were cowards, deserters and spies, that they gave the Germans reports about the movements of Russian troops through secret telegraph and telephone wires, and the like. The Jews were also accused of speculation, of raising the prices of necessities, and of withdrawing money from circulation. Often the soldiery would attack the Jews, the outbreaks sometimes assuming the proportions of a military pogrom. The military authorities soon took the step of seizing a number of prominent Jews as hostages and transporting them to the interior of Siberia. The Jewish deputy Friedman, in a speech in the Duma (1915), cited a number of cities from which Jewish hostages were taken in this fashion. For reasons of military necessity or because of accusations of wholesale espionage, Jews were evacuated at short notice from hundreds of towns. In all, nearly half a million Jews were forced to leave their homes in the military zone.

In May, 1915, the supreme command expelled all the Jews from the province of Kovno and large portions of the provinces of Courland and Grodno, in the course of a few days; there were no exceptions, even for Jewish inmates of insane asylums. Meanwhile, some 300,000 Jewish soldiers were serving in the Russian army, a proportionately larger number than that furnished by the non-Jewish population.

On January 9, 1916, the police department sent out a secret circular in which the Jews were blamed for all the misfortunes that had befallen Russia as a result of the War. At first, because of the residential disability, the Jewish refugees and evacuees remained within the Pale and became a charge on the Jewish communities there. Then the situation changed. In

August, 1915, the Jews were provisionally permitted to settle in all the cities of the empire, with the exception of the two capitals and the regions under the control of the ministry of war and of the ministry of the imperial court. This measure had a far-reaching effect. The refugees were transported into the interior and as far east as Central Asia. As most of the Jewish communities were situated in the battle zone, they suffered heavily from the effects of the War. The condition of the Jews in the occupied territory also was desperate. By the time of the armistice 1,500,000 of them were living on charity. Much distress was alleviated by the Yekopo (Jewish Committee for the Relief of War Sufferers) and the ORT. The funds at the disposal of these organizations came from local sources of a private nature, from the Russian government, and from abroad, the American Jewish Joint Distribution Committee having disbursed over $4,000,000 prior to 1920.

RUSSIAN LITERATURE ON AND BY JEWS, *see* LITERATURE ON AND BY JEWS.

RUTENBERG, PINCHAS, industrialist, b. Rommy, province of Poltava, Russia, 1879; d. Jerusalem, 1942. An active member of the Russian social revolutionary party, he played an important part on "bloody Sunday" (January 22, 1905), during which he saved the life of the priest Gapon. When Gapon's role as agent provocateur was proved, and the revolutionary movement condemned him to death, Rutenberg was assigned to prepare the execution.

He later went to Italy, where he worked as engineer in hydraulic construction. It was during this period that his interest in Zionism was aroused, and upon the outbreak of the first World War he championed the Jewish Legion movement in a pamphlet, *Tehiyyath Haam.* He went to the United States to help further this cause, and participated actively as well in the Jewish Congress movement, publishing a weekly, *Der jüdische Kongress.*

The Russian revolution of 1917 brought him back to Russia. He became leader of the North Russian civil administration, and during the October revolution was one of the three men (Kishkin, Paltshinsky and Rutenberg) who obtained full powers from the provisional government, and fought until the last against the Bolsheviks. He was arrested, but later released from prison when the German troops advanced on Petrograd. At Odessa he held various official positions in General Schwarz's government during the French occupation, went to Paris, and thence to Palestine.

Here he studied the water resources of the country for hydro-electric purposes and planned the famous

Pinchas Rutenberg

Rutenberg scheme to harness the falls of the Jordan River below the Sea of Galilee. In 1921 he obtained a concession from the British government for such development, and in 1923 founded the Palestine Electric Corporation. The project was one which required the consummate skill of a financier to obtain the necessary capital, the training of an engineer to translate blue-prints into realities, and the techniques of a managing wizard to put the whole proposition into operation. Rutenberg combined all these qualities.

Because of his reputation for integrity and the role which he had played in helping to develop Palestine, he was prevailed upon in 1927 to become a member of the Vaad Leumi, the Jewish National Council of Palestine, and in 1929 became its head, serving for several years. In 1939 he was drafted again for this responsible post, and was looked to by all elements to harmonize conflicting partisan elements. A year later, however, he resigned in disappointment, and issued a statement calling for the abandonment of party controversies. His death in January, 1942, occasioned widespread mourning in Palestine and throughout the Jewish world. In accordance with his last request, he was buried among the graves of the working people on the Mount of Olives.

In his will Rutenberg established an endowment fund for the education of youth in "the spirit of unity and brotherhood." The will contained also an appeal for unity which characterized the efforts of his final years in that direction. It read: "The division of our people and communities into parties and sects has always been our disaster. Civil strife has brought us to the brink of the abyss. If it does not cease, ruin confronts us. Therefore it is my desire and will to the Yishuv and the Jewish youth growing up in its midst always to remember that it is not this or that Jewish sect or party which is persecuted and downtrodden by others, but the Jewish people as a whole. Whether or not we want it, we are brothers in distress. Let us realize this and be brethren in life, in creative endeavor, in action and in upbuilding."

Representation of the Biblical Ruth gleaning in the fields

RUTH, fifth book of the third section, the Hagiographa (Kethubim), of the Bible, and the second of the five Megilloth (scrolls), standing in the Masoretic text between the *Song of Songs* and *Lamentations*. It contains four chapters.

Its story is set in the time of the Judges. A family from Beth-lehem in Judah left the land because of famine and went to Moab. There the two sons married Moabite women, one of whom, Ruth, chose to return with her mother-in-law, Naomi, after all the men in the family had died. Ruth, by severing her connections with Moab, joined herself to Israel and its God, and in time gained Boaz, a wealthy Beth-lehemite, as her husband. The book describes in detail the gathering of the harvest and its customs, and the circumstances which effected the match. It closes by stating that David was the great-grandson of Ruth and Boaz.

While modern scholarship has been unanimous in denying contemporary authorship, it has by no means been able to agree upon the time for the composition of the book. Abraham Geiger and many others have assumed that Ruth represents a subtle polemic in favor of intermarriage, since it states that David himself was descended from such wedlock. It has therefore been suggested that the book originated at the time of Ezra and Nehemiah and served as a protest against their stringent laws of exclusion. Reasons to support this argument are mainly these:

That the very setting of the book, "in the days when the judges judged" (1:1), presupposes a much later time of composition;

That the fact that Ruth appears in the Hagiographa indicates its lateness;

That the book contains a number of Aramaisms which would not appear in a pre-Exilic narrative, for example *vayise'u* (1:4) instead of *vayikehu*, and *lekayyem* (4:7);

That the genealogy in 4:17-22 shows definite influence of the priestly school;

That the expression "in former time" (4:7) implies that the custom of the shoe ceremony and the redemption of land and women was a thing of the long forgotten past.

These arguments, however, are not unchallenged. While it must be admitted that "the time when the judges judged" was long past, this interval need not have been six or more centuries. That the book of Ruth appears in the Hagiographa is no valid argument for its lateness; for the fixation of the canon in its present form may be an emphasis on the idyllic rather than the historic character of the story. As to the supposed Aramaisms, detailed studies have shown that some of these words occur in other pre-Exilic texts; and other passages containing such expressions are likely to be later additions (for example *lekayyem*, in 4:7). While it is conceded that 4:18-22 are of late origin, this does not seem to be true of 4:17, which reads like a genealogical statement, and comes at the expected climax of the story. On the other hand, 4:7 is a late passage, added to explain the redemption ceremony to an audience obviously no longer familiar with it. 4:7 interrupts a perfectly smooth narrative and may be an interpolation by a copyist centuries afterwards.

It must further be pointed out that a book consciously opposed to the Nehemian laws would not have been given a place in the canon. But, in fact, it is altogether unlikely that any polemic was intended, for it would have been far too subtle to have been of any practical value.

Further reasons for assuming pre-Exilic authorship are that a sentence like 1:15 would not have been possible in post-Exilic times; that the Shabuoth festival, the time of which 1:22 seems to indicate, was seemingly unknown to the writer; and that since Ruth treats the marriages of Mahlon, Chilion and Boaz as a matter of course intermarriage must have been little objected to in the author's age (which points to pre-Exilic times). Also, the book describes neither a Levirate ceremony (*Gen.* 38; *Deut.* 25:5-10) nor that of a redemption of property (*Lev.* 25:25), but a combination of both. According to 4:5, woman and land are inseparable parts of one legal act, doubtlessly an old idea according to which Ruth was acquired with the estate. Consequently 4:10 uses the word *ḳanithi* ("I have purchased") to describe Boaz' winning of Ruth. Finally, Ruth's nightly visit to Boaz, and the comparison of her union with him to the extra-marital relation between Tamar and Judah (4:12), have been interpreted by Alfred Jeremias as hinting at hierodulic practices, under the influence of the Ishtar cult, which features the ear of corn (2:2) and the veil (cf. 3:3). Whether this parallel was purposeful or an unintentional remnant of old practices is uncertain, but it, too, seems to suggest the antiquity of the book. To fix a more definite time for its composition than to say that it is pre-Exilic appears impossible.

If, then, the book contains no polemic and is likely to be of pre-Exilic origin, it may be assumed, as Louis B. Wolfenson suggests, that it was a part of the larger story which dealt with the antecedents of David and Beth-lehem, his native city. It may have formed a portion of what later became the David saga, and may have become separated because of its unique character as an idyllic novelette. Later ages forgot this origin of the book and stressed its religious character: the story of the alien Ruth who, because of her faith and her loyalty, was worthy of becoming the ancestress of David.

Traditionally, Ruth is read on Shabuoth, the time of the year indicated by 1:22. The reading takes place on the second day, between the Hallel and the Torah service. In certain congregations the book is read in two parts, together with the *Song of Songs*, on Pesach and on Shabuoth. In the Sephardic ritual the verses are chanted alternately by the minister and the congregation; up to 3:7 on the first day, and the rest of the book on the second day.

RUTH RABBAH, *see* MIDRASH RUTH.

RUTHENIA (Carpatho-Ukraine), easternmost part of Czechoslovakia (1918-39). Until 1918 it belonged to Hungary, and in 1939 it was again occupied by that country. Geographically isolated from the rest of Czechoslovakia, with which it was connected by a narrow strip of land only, and shut off by customs barriers from its natural market, Hungary, it consisted mostly of mountainous land yielding very poor crops. Its population, therefore, including 15 per cent of Jews (93,000 in 1921 and 105,000 in 1930), was very poor. During the period when Ruthenia belonged to Czechoslovakia it was often called Carpathia or Carpathorussia (Podkarpatsko Rus).

Only in some parts where grapes grew were Jews economically prominent as vine growers. According to an inquiry made by the Joint Distribution Committee in 1926, bearing on 66% of the Jewish population of Ruthenia, 12.5% of those investigated were farmers or agricultural laborers, 17.5% were artisans, 6% carters, 16.5% petty traders and innkeepers, 7.9% merchants, professionals, landowners and industrialists, 6% rabbis, teachers and slaughterers, and 33.6% had no definite occupation. Culturally the Jews of Ruthenia were on a level with those of the neighboring Galicia; they were swayed by Hasidic rabbis of tremendous authority; among these the Rebbe of Munkács (Mukačevo) was prominent. Only a small percentage of the city Jews were urbanized and assumed a role in non-Jewish communal endeavor as well as in city administration.

In the census of 1921 a total of 85.7 per cent of the Jews of Ruthenia and in that of 1930 a total of 92.6 per cent declared themselves to be of Jewish nationality. Only part of these Jews, however, were Zionists, Hasidim and Orthodox being in the majority. Zionism made many recruits among the younger generation through the excellent Hebrew school system of Ruthenia. Among the existing ten schools were the Gymnasia of Munkács and Ungvár (Užhorod), the former of Zionist, the latter of Orthodox trend. Hayim Kugel, principal of the Hebrew Gymnasium of Munkács, was also deputy of the Jewish minority in the Prague parliament. The great majority of the Jewish children visited the Heders, of which there were 125 in the country, and received secondary education at one of the fifteen Yeshivas.

During the two decades of Czechoslovakian rule the Joint Distribution Committee and its affiliated organization, the American Joint Reconstruction Foundation, greatly contributed to the economic rehabilitation of the Jews of Ruthenia through the establishment of ten non-profit banks and five vocational schools which were also workshops at the same time. More than 300 orphans found a home in the orphan asylum founded by this American relief organization. The Jewish Colonization Agency helped in extending and intensifying farming among the Jews of Ruthenia.

After the reannexation of Ruthenia by Hungary the occupying forces and local authorities went even beyond the provisions of the discriminatory laws in cancelling professional licenses immediately and withdrawing business and artisans' licenses gradually. Jewish laborers were unlawfully barred from employment after the Hungarian government monopolized forestry and road construction. Hebrew schools were closed down by the Hungarian government. Jews born in Poland, or Jews who had settled in the province during the Czechoslovakian era, were expelled or deported.

Upon the outbreak of hostilities between Hungary and the Soviet Union 20,000 Jews living along the border had to leave their homes and were moved inside of Hungary. The Jews of Ruthenia were, for the greater part, dependent on aid from the Joint Distribution Committee prior to December, 1941, and from the Jewish community of Hungary. In the first half of 1942 several thousand Jews in Ruthenia were still acting as managers of the businesses which they formerly owned pending their final "Aryanization."

ANNA BETTELHEIM.

RUTHERSTON, A. D., *see* ROTHENSTEIN, WILLIAM.

RUTTKAY-ROTHAUSER, MIKSA (pen name, György Ruttkay), editor and playwright, b. Vác, Hungary, 1863; d. Budapest, 1913. He was feuilletonist of the *Neues Pester Journal* (1888-89), and afterwards of the *Pester Lloyd*, where he became art and theatre editor in 1899. He was author of the plays *Peking rózsája* (The Rose of Peking; music by Jenő Stojanovits; 1889) and *Moharózsa* (Moss Rose; music by Jenő Hubay; 1901). His dramas *Sötétség* (Darkness; 1903) and *Az első és a második* (The First and the Second; 1913) were performed by the state National Theatre in Budapest, on whose jury he served for several years. He adopted the pen name Ruttkay as his family name by royal grant.

GYÖRGY (GEORG) RUTTKAY (b. Budapest, 1890), editor and playwright, was a son of Miksa Ruttkay-Rothauser. Educated in various European universities and a recipient of the LL.D. degree from that of Budapest (1913), he was war correspondent of *Az Est* (The Evening) during the first World War. Afterward he became Vienna editor for the Az Est syndicate. His plays *A nagy cél* (The Great Goal; 1909); *Keringő* (Valse); *Nagyvilági hölgy* (Woman of the World; 1920); and *Cserkészek* (Boy Scouts; 1921) were performed on Continental stages.

He contributed to leading European newspapers, and was vice-president of the Association of Foreign Newspapermen (Vienna) and a member of the board of the Association de la Press Étrangère (Paris). He was awarded the Austrian Middle Cross of Honor and the Isabella Order of Spain. In 1940 he came to the United States.

RUZHINER, ISRAEL (family name, Friedman), progenitor of the Hasidic dynasty of Sadagora, b. Pogrebishtshe, Ukraine, Russia, about 1797; d. Sadagora, Bucovina, about 1851. According to legend, he was the reincarnation of Israel Baal Shem Tob. He descended from a dynasty of Hasidic rabbis and was a great-grandson of Baer of Meseritz. At sixteen he succeeded his father as Zaddik, his elder brother having died childless.

Although he was no scholar, a fact admitted even by his Hasidic admirers, he possessed an extraordinarily penetrating mind and a fascinating personality. His ardent followers were convinced of his exceptional nature, which transcended all precepts and regulations controlling ordinary mortals. From 1815 on he held a veritable court at Ruzhin. His gaudy deportment aroused the suspicion of the Russian authorities, and in the twenty-fifth year of his office he was arrested. After twenty-two months spent in prison he was released and kept under strict police surveillance.

He moved to Kishinev but, realizing the necessity of avoiding all contact with the Russian authorities, he escaped to Jassy, Roumania, and from there to Sadagora, Bucovina, Austria. There the authorities, believing that his residence would bring prosperity to the province, promised him protection. However, the Russian government demanded his extradition, and to save himself he claimed to be identical with a certain Israel Donnerfeld who had disappeared shortly before. He bought the town of Patik in order to acquire Austrian citizenship in his capacity of landowner. In Sadagora he again inaugurated a life of luxurious display, still favored by numerous disciples and followers. His teachings were incorporated into *Irim Kaddishim* (1880) and other Hasidic works.

One of Ruzhiner's successors was his son, Abraham Jacob of Sadagora (d. 1883), who further emphasized the importance of the Zaddik, maintaining that belief in God could be attained only by belief in the Zaddik.

Lit.: Horodezky, S. A., *Hahasiduth Vehahasidim*

(2nd ed., 1928); idem, *Leaders of Hassidism;* Dubnow, Simon, *Toledoth Hahasiduth* (1930-32).

RYPINS, STANLEY ISRAEL, educator, b. Evansville, Ind., 1891. He received the M.A. degree from the University of Minnesota (1913), studied at Oxford University as a Rhodes Scholar (1914-17), and received the Ph.D. degree from Harvard University in 1918. During the first World War he served as sergeant on the Intelligence Staff (Provisional Depot Corps and Army Troops). He was professor in English at the University of Minnesota (1922-27) and chairman of the department of English and dean of academic subjects (1927-30) at State Teachers College, San Francisco. In 1931 Rypins was appointed professor of English at Brooklyn College, where he was still active in 1943. He wrote *Three Old English Prose Texts in MS. Cotton Vitellius A XV* (1924).

RYSKIND, MORRIE, writer, b. New York city, 1895. He was graduated from the Columbia School of Journalism in 1917. Through the media of light verse, the musical play and the motion picture Ryskind became a pleasant though caustic commentator on the contemporary scene. He has the Jewish gift of tragic laughter. His is a vision of world dislocations in terms not only of human suffering but of human incongruities. Like several other masters of satirical verse, he had his apprenticeship in the journalistic columns of Franklin P. Adams (F.P.A.), to which he was a frequent contributor. His poem "Klan Song," published when this organization was guilty of sponsoring lynchings of Negroes in the South and of systematically spreading hatred against Catholics and Jews, first appeared in one of F.P.A.'s daily Conning Towers. It is an excellent blend of alluring rhythm and searing ridicule. Best-known of his stage productions is, perhaps, the Pulitzer Prize winner for 1932, *Of Thee I Sing,* which he wrote in collaboration with George S. Kaufman. It spoofs at the inanities of American politics in their well-known ballyhoo and publicity phases.

Like others who have made their careers in Hollywood, Ryskind has had to tailor his talent in accordance with accepted contemporary patterns. Thus a good deal of his work, like the scripts intended to suit the comic antics of the Marx Brothers, is gag writing at its best but, in the nature of the case, ephemeral. There is keen social satire in *My Man Godfrey,* and pathos, springing from man's frailties, in *Penny Serenade.*

Among Ryskind's plays were also *Animal Crackers* (1928); *Let 'Em Eat Cake* (1933); and *Louisiana Purchase* (1940). For the screen he wrote, among others, *The Coconuts* (1928) and *Stage Door* (1938). He was author also of a volume of verse, *Unaccustomed as I Am* (1921), and of *Diary of an Ex-President,* a novel (1932). His provocative "Open Epistle to Jehovah" appeared in *The American Spectator Year Book.*

ELIAS LIEBERMAN.

S

SAADIA BEN JOSEPH, Gaon, philosopher, Bible translator, and Talmudist, b. Dilaz, a village in Fayyum, Egypt, 882; d. Sura, Babylonia, 942. His father was of humble origin, but possessed a reputation as a scholar. Some documents declare that Saadia was a descendant of proselytes; but since this tradition is repeated of many Jewish worthies, it is not to be accepted at face value. In his native land he received a broad education in all phases of Arabic culture, at the same time acquiring a profound knowledge of Biblical and Talmudic learning, which he later supplemented by years of study in Palestine, to which he came in 915. He was scarcely more than a boy when he began his literary work, which characteristically combined original scholarship with responsiveness to live issues. His earliest works include the *Agron,* the first Hebrew dictionary known, intended to help poets with their rhymes, and thus a pioneering work of great value, and also a series of polemics against the Karaites, who were very influential in Egypt. His fame had spread beyond his native land, and when he came to Babylonia he was given the post of Alluf, or Resh Kallah, on the staff of the academy of Sura. He thereby became one of the seven leading scholars of the institution, although he was not a product of the Babylonian schools.

The time in which he arose to prominence was a dark one for Judaism. The great outburst of intellectual power which had produced the two Talmuds and an abundance of rabbinic literature had spent its force. The Geonim, the heads of the academy, were worthy and often talented men, but none seemed to possess the commanding personality and creative genius necessary to meet the challenge of a new age. A new great religion, Islam, had swept across Asia and Africa and had released new energies for the study of mathematics, astronomy, philosophy, poetry and history, in which many Jews were participating. Many of these Jews, enthralled by the new horizons that beckoned, abandoned Judaism as outmoded and unnecessary. Some adopted the faith of Islam; others became sceptics, undermining the foundations of Judaism with the newly forged weapons of philosophy and logic.

Worst of all, Judaism was itself divided by the formation, in the second half of the 8th cent., of the new sect of the Karaites, who attacked rabbinic Judaism with the cry of a return to the Scriptures. In the face of this challenge, traditional Jewish leadership seemed to lack the energy to defend itself. It was at this stage that Saadia stepped into the breach. In a life-long series of polemics, he attacked the Karaites, with such energy and success that all succeeding generations of Karaite writers continued to regard him as their most redoubtable antagonist. More than any other individual, Saadia is to be credited with having prevented the Karaite schism from proving fatal to traditional Judaism.

The second peril which he had to meet arose within the camp of rabbinic Judaism itself. A Palestinian scholar, Aaron ben Meir, sensing the weakness of the Babylonian academies, and ambitious for his native land, tried to reassert the authority of the schools of Palestine. In 921 he announced that the accepted calendar year which had been promulgated in Babylonia was wrong and therefore all the Jewish holidays should be celebrated two days earlier. World Jewry was divided into two camps by this new proposal; in fact, for two years the major festivals were celebrated on different days in both Palestine and Babylonia, and doubtless elsewhere, wherever the winds of contro-

versy had swept. Saadia saw the grave danger of a new schism even as he was convinced of Ben Meir's error. Drawing upon his extensive store of Jewish learning and his equally wide knowledge of astronomy and chronology, he attacked the innovation so successfully that the entire project collapsed and the peril was averted.

The chronology of Saadia's manifold writings is obscure, but somewhere in his busy career he found time also to polemize vigorously against the sceptics. Against one such hyper-rationalistic critic of Scriptures, Hiwi al-Balkhi, Saadia wrote a devastating reply in verse.

Saadia's brilliant services to traditional Judaism, particularly in the Ben Meir controversy, had attracted world-wide attention, and when a vacancy occurred in the Gaonate of Sura, the exilarch David ben Zakkai at once considered appointing Saadia to the post. He asked the advice of an aged, blind scholar of the highest repute, Nissi Nahrwani, who praised Saadia's attainments, but warned the exilarch that the scholar's uncompromising integrity and strong sense of self-confidence would sooner or later bring him into collision with the commanding personality of the exilarch. Despite this advice, and the fact that Saadia was not a native Babylonian, David ben Zakkai appointed Saadia to the Gaonate of Sura in 928. Under his guidance the academy experienced a rebirth of vitality. Students began flocking to the school in order to sit at the feet of its illustrious master, and its income from contributions doubtless showed a corresponding rise.

Before long, however, Nissi's fears were realized, and Saadia's high character brought him into conflict with the exilarch. Two years after Saadia's installation the exilarch had probated a will, according to which he himself was to receive 10 per cent of a large estate of some 70,000 pieces of gold. In accordance with the accepted procedure in such instances, the exilarch sent his son to secure the Gaon's signature to the papers. Saadia at first tactfully sought to avoid signing them. When he was pressed by the emissary, he characteristically replied: "Tell your father the Torah commands, 'You shall not respect persons in judgment.'" When the young prince angrily raised his hand against Saadia, the Gaon's servants unceremoniously threw him out of the house.

Again Saadia found himself embroiled in a bitter controversy. David deposed him and filled his place with a non-entity, Joseph ben Jacob; Saadia countered by declaring the exilarchate vacant and appointing Josiah Hasan, a younger brother of David, as the latter's successor. Saadia commanded the support of most of the wealthy and scholarly elements, but the exilarch, abetted by some scholars who were envious of Saadia's distinction, possessed superior power and the capacity to bribe the court. As a result Saadia was finally forced into retirement, and for four or five years, until 937, he lived in Baghdad, supported by the bounty of friends and disciples.

These years were difficult for Saadia, but proved to be a blessing to Judaism. His enforced freedom from teaching and administration gave him the leisure to produce his great philosophic masterpiece, called *Kitab al-Amanat wal-I'tikadat* (Beliefs and Opinions). He wrote it in Arabic, for his purpose was to make it possible for intelligent, educated Jews of the time to remain loyal to Judaism by presenting a rational interpretation of the Jewish religion. It seems probable that a secondary aim was to present the tenets of Judaism to the cultured Mohammedan world. In its Hebrew translation, *Emunoth Vedeoth,* the work exerted an extraordinary influence upon all later Judaism. It was the first important attempt to synthesize the ideas of Greek and Arabic philosophy with Judaism.

Scattered through the pages of Saadia's masterpiece are valuable insights into the nature of religion, the meaning of God, the character of man and the universe, as well as the basic doctrines of Judaism, which remain stimulating even today. The entire work is permeated by the profound conviction that Judaism is hospitable to all truth whatever its source, for truth is the seal of the God of Israel. This devotion to truth, coupled with love for Judaism, this courage in meeting the new intellectual and spiritual trends and utilizing them to enrich Jewish life and thought, became part of the Jewish mentality, due in large measure to the luminous example of Saadia himself.

It is likely, too, that during these years of retirement he was able to complete also his second great masterpiece, the *Tafsir,* a superb translation of the Bible into Arabic, accompanied by an original and brilliant commentary, still consulted with profit. Through this work and other writings Saadia became the father of rational Biblical interpretation and laid the foundation for the scientific study of the Bible.

The period of estrangement came to an end in 937, when mutual friends of Saadia and the exilarch brought about a reconciliation and Saadia was restored to his post. Shortly afterward the exilarch died, and a few months later his son Judah, who had raised his hand against Saadia, also passed away. He left a young orphan, whom Saadia took into his home and raised with loving care as his own son, until his own death in 942. Uniquely, the exact day and hour of his death —Sunday night, Iyar 26, at the end of the second watch (about 2 A.M.)—is known from a memoir written eleven years later by two of his sons.

In addition to the works already cited, Saadia wrote an immense number of others, distinguished by great originality on the one hand and breath-taking variety on the other. He eminently deserves the epithet bestowed upon him by Abraham ibn Ezra, *rosh hamedabberim bechol makom* ("the first of authorities in every field"). He deals with apologetics, astronomy, Biblical interpretation, history and metaphysics. His writings in the field of rabbinics contain responsa, Talmudic commentaries, treatises on specific legal topics, and the first known methodology, or introduction, to the Talmud. He wrote verse for the synagogue, though with more ardor than talent; however, a few of his *Bakkashoth* ("petitions"), which are free from the artificial forms of Arabic poetry, possess simple and moving power. He prepared also a Siddur, or order of the service. Malter, Saadia's most painstaking bibliographer, lists about one hundred Hebrew and two hundred Arabic titles of known writings by Saadia.

His scientific approach is apparent in all these works, but especially in his Bible translation and works on philosophy. He rendered the Hebrew text literally, but avoided anthropomorphic expressions about God which might confuse his readers. He prefaced each Biblical book with an introduction dealing with its contents and structure. In his philosophy he showed how to reconcile the science of the time with Judaism, thus opening up a line which was followed by his successors, through Ibn Ezra, Maimonides and Crescas. Practically every subsequent Jewish writer, whatever his field of activity, utilized the work of Saadia as a foundation for his own.

For Saadia, divine revelation was a source of truth independent of man's intellect; but—significantly—the truth revealed by one had to square with the truth revealed by the other. Saadia had no sympathy for those who cleaved either to "faith" or "reason," for he was profoundly convinced that the truth was one. One of his most fruitful insights is his division of the commandments of Judaism into two classes, those dictated by human reason and those originating in divine revelation. These two categories may be stated in modern times as (a) *ethical,* and hence universal for all men, and (b) *ceremonial,* and therefore rooted in the unique historical experience of Israel. However,

Adolph J. Sabath

Saadia emphasizes the fact that the commandments in the latter category, aside from their disciplinary function, are not irrational. Characteristic, too, is his emphasis on the ethical. Thus he argues that belief in the message of Moses is not based on the miracles associated with his name, but on the intrinsic ethical value of his teaching. He believed with fervor and conviction in the coming triumph of justice and the redemption of his people. For him there was no dichotomy between learning and life, between thought and action.

The greatness of Saadia's thought is enhanced by his personality. He was a fighter, not a recluse, a flame giving off warmth as well as light. He struggled against reactionary Karaism as well as against the skeptical, superficial "modernism" of his day by creating a truly modern, enriched yet reverent interpretation of Judaism. He underlined his sincerity by unflinching personal integrity, maintained at the cost of sacrifice in the face of privilege and power. He thus exemplified the highest qualities of leadership and earned the encomium of Maimonides: "Were it not for Saadia, the Torah would almost have disappeared from the midst of Israel; for it was he who made manifest what was obscure therein, made strong what had been weakened, and made it known far and wide by word of mouth and in writing." ROBERT GORDIS.

Lit.: Dérenbourg, Joseph and Hartwig, and others, *Oeuvres complètes de R. Saadia* (5 vols., but uncompleted; 1893-99); Bacher, W., in *Jewish Encyclopedia,* vol. 10, pp. 579-82; Malter, H., *Saadia Gaon—His Life and Works* (with extensive bibliography; 1921); Weiss, I. SAALSCHÜTZ, JOSEPH LEWIN, archeologist, b. Königsberg, East Prussia, Germany, 1801; d. Königsberg, 1863. In 1835 he became preacher and religious instructor in his native city, and in 1847 instructor of Hebrew archeology at the University of Königsberg. In spite of great accomplishments he did not succeed in securing a professorship.

Saalschütz's first work was *Von der Form der hebräischen Poesie* (1825). His *Die Geschichte und Würdigung der Musik bei den Hebräern* (1829) was incorporated into his archeological chief work, *Die Archäologie der Hebräer* (2 parts, 1855-56). His *Das mosaische Recht mit Berücksichtigung des späteren Jüdischen* (2 parts, 1848 and 1853) contains such a wealth of valuable material that it became a classic. The first part of this work deals with common law, the second with civic law.

Lit.: Siegfried, C., in *Allgemeine Deutsche Biographie,* vol. 30, p. 103.

SABA, UMBERTO, poet, b. Trieste, 1883. One of Italy's foremost poets, he published the first collection of his poems, *Il Canzoniere,* in 1921. His lyricism was greatly inspired by motives of Trieste, his native town, and recollections of his youth. Fifteen sonnets of his *Autobiography* are included in the volume *Figure e Canti* (Milan, 1926). He achieved fame beyond the boundaries of Italy through the translation of some of his best lyrical works into many foreign languages. *A mia moglie, La Capra* and *Favoletta* are among those most widely known.

In 1933 he published *Composizioni;* a collection of his selected poetry, *Parole,* appeared in 1935. Saba contributed poetical essays to the principal Italian literary publications.

Lit.: Benedetti, G. D., *Saggi critici* (1929); Consiglio, A., *Studi di poesia* (1934).

SABATH, ADOLPH JOACHIM, American Congressman, b. Zabori, Bohemia, 1866. After emigrating to the United States in 1881, he settled in Chicago, where he studied law and was admitted to the bar in 1891. He entered private practice, but in 1895 the famous liberal governor of Illinois, Peter Altgeld, started Sabath on his political career by appointing him justice of the peace. He served until 1897, when he became police magistrate. In 1907 he was elected as a Democrat from the Fifth Illinois District to the Congress of the United States; in 1943 he was still in the House of Representatives (for the term ending 1944), having served continuously from the 60th to the 78th Congress. Thus, the dean of the House, he was a member for a longer period than any other Congressman in American history. He became a national as well as local Democratic leader, serving on the central and executive committees of the party, and active in its conventions.

In the House Sabath's long career was marked by steady and unspectacular activity in behalf of measures which he deemed progressive. In his first term he fought for the passage of the Pure Food and Drug Act. He was a member of the Committee on Immigration and Naturalization, and throughout his career a vigorous advocate of liberal legislation for immigrants. Under President Woodrow Wilson he was a member of the House Foreign Affairs Committee, and in the first World War he was a factor in rallying the Central European national groups in America to the Allied cause. He advocated entrance into the League of Nations in 1920. In general he was a confirmed antimilitarist until 1938 when, predicting in congressional speeches the successive stages of Nazi domination in Europe, he called for American unity and all-out preparedness to stem Nazi aggression. As chairman of the powerful House Rules Committee, Sabath came to be one of the Congressmen close to President Franklin D. Roosevelt.

Sabath was interested in the Jewish community, and particularly active in the B'nai B'rith. Among his extra-legislative interests was a farm of 1,200 acres

lying in the delta lowland of the San Joaquin Valley in California. Sabath was the first to succeed in reclaiming this land for cultivation, and introduced modern farming methods which set a precedent in that district.

Lit.: Jewish Review, Oct. 2, 1941.

SABATH, JOSEPH, judge, b. Zabori, Bohemia, 1870. He followed his brother, Adolph Joachim Sabath, to the United States in 1885. A graduate of the Chicago College of Law, he was admitted to the Illinois Bar in 1897. In 1910 he was elected judge of the municipal court, and from 1916 on he served as judge of the Cook County Superior Court. He was regarded as Chicago's foremost divorce judge, having tried more than 45,000 cases. He was well-known for his often successful efforts to bring about a reconciliation of the parties.

From 1916 on Sabath lectured at the Chicago Law School on theory and practice. He took part in many humanitarian and civic endeavors, being president of the American Theatrical Hospital Association and of the Citizens' Traffic and Safety Commission of Chicago. The Société Académique d'Histoire Internationale and the Ligue Française d'Entreaide Sociale et Philanthropique awarded him diplomas and elected him an honorary member.

SABBADINI, SALVATORE, philologist, educator and communal worker, b. Trieste, 1873. One of the pioneers of Hebrew teaching and Jewish schools in Trieste, where he fostered several institutions of educational character, he became (1902) professor of classical languages in the Liceo Dante in Trieste, where he remained until October, 1938, the date of the promulgation of anti-Semitic decrees excluding Jewish professors from Italian universities and institutions of learning.

Sabbadini published numerous articles on pedagogy in *La voce degli insegnanti* and *Rassegna scolastica,* and was one of the founders of the committee Atene e Roma for the study of the civilizations of Athens and Rome and for a better understanding of ancient and modern Greece.

SABBATAI ZEVI, Cabalist and pseudo-Messiah, b. Smyrna, Turkey, 1626; d. Dulcigno, Albania, 1676. He was the son of poor parents who later acquired a fortune. Inclined to mysticism from his earliest years, he was well acquainted with Talmudic and rabbinic literature at the age of fifteen, and soon became familiar with the *Zohar* and the writings of the Cabalists Isaac Luria and Hayim Vital. Distinguished by a superior physique and a lively temperament, he gathered about himself a steadily increasing group of like-minded persons, with whom he carried out devotional exercises in the open air. For some time he lived an entirely ascetic existence, and for this reason he successively divorced both of his first two wives.

The effect of the personality of Sabbatai Zevi upon the group which was nearest to him was to a large extent due to the circumstances of the time. The Cabalist groups, on the basis of a passage in the *Zohar,* expected the Messiah to come in 1648; the Christians, interpreting the verses of *Revelation,* believed that in the year 1666 there would be a revolution within Jewry, either by the conversion of the Jews to Christianity or by the institution of the Messianic kingdom. These views impressed Sabbatai Zevi; when he heard of the massacres of the Jews in the Ukraine by Chmielnicki and his followers (1648), he declared that these were the "birth-pangs of the Messiah," and believed that the time had come for active political intervention in the history of the Jews. In order to give a symbolic expression to this belief, he dared publicly to pronounce the four-lettered name of God (YHVH)—an utterance which had been hitherto made only by the high priest in the Temple at Jerusalem on Yom Kippur. The reason he gave for doing this was that the Messiah, which he regarded himself to be, had come, and therefore all the old prohibitions against pronouncing the Name of God were abolished.

Joseph Sabath. From an etching by Doctoroff

The first results of this bold move were unfavorable. The rabbis drew away from him and his teacher Joseph Escapa placed him under the ban (1651). Thereupon Sabbatai left Smyrna and went first to Salonika, an older center for Cabalists; when he was unfavorably received there, he migrated to Constantinople. Here he was joined by Abraham Yakini, known as a mystic and copyist of manuscripts, and the group around Sabbatai became ever more convinced that the time was favorable for political action for the Jews. Sabbatai's belief in his own Messianic mission was strengthened, while he was at Constantinople, by an old apocryphal manuscript that had presumably been discovered by Abraham Yakini, which contained the prediction that in 1626 a son would be born to Mordecai Zevi who would be called Sabbatai and who would bring redemption to Israel. Leaving Constantinople, Sabbatai went first to Palestine and then to Cairo, where he made the home of Raphael Joseph Chelebi, a philanthropist and treasurer of the Turkish governor, a center of Cabalists. Here he met Samuel Primo, who later became his secretary. His most important follower, however, was Nathan Benjamin Halevi, an Ashkenazic Jew of Gaza (generally known as Nathan Ghazzati), whom the Sabbatians held to be the reincarnation of the prophet Elijah who, according to tradition, would accompany the Messiah.

Sabbatai now sought to gain the attention of the entire world for himself by transferring the center of

the growing movement to Jerusalem. There he and his followers passed nights by the graves of the forefathers in songs and pious exercises. A happy circumstance increased the esteem in which his followers held him. The local pasha demanded a large sum of money from the Jerusalem community, and Sabbatai persuaded Raphael Joseph Chelebi to pay it; this naturally increased his reputation with ever larger groups of Jews. Shortly afterwards, when he returned to Cairo, he was greeted as Messiah in the house of Chelebi. There he married a girl named Sarah, who had previously announced that she was the destined bride of the Messiah. This girl, whose parents had perished in the Cossack riots, had been taken to a convent, where an attempt had been made to convert her to Christianity. She succeeded in escaping and fled to Amsterdam, where she met her brother who she believed was lost, and who had been miraculously rescued. As a result of these experiences the somewhat eccentric girl had come to the conclusion that she was destined to greater things. From Amsterdam she went to Livorno (Leghorn), where she led a life of frivolity; but when she heard the reports about Sabbatai Zevi, she hastily left for Cairo to marry him.

Nathan Ghazzati, indefatigable by nature, who dominated all the others of the group, including Sabbatai himself, was working out a plan for the organization of Jewry. Pamphlets and flaming proclamations, written either by Nathan or by Samuel Primo, were sent all over the world in order to arouse Jews and convince them that the Messiah had come. Yet it soon became evident that the community of Jerusalem, which was completely dependent upon the contributions of the European Diaspora, was not the most suitable place for further propaganda. The rabbis of Jerusalem were afraid that the appearance of Sabbatai would endanger the status of the Jews of Palestine; therefore in 1665 the Messianic pretender returned to his native city of Smyrna, where the former ban against him had been forgotten. The populace there, well prepared for his coming, welcomed him with open arms; he could venture the step of replacing the old hostile chief rabbi, Aaron de la Papa, by the noted Talmudist Hayim Benveniste, who had openly come over to the camp of the Sabbatians.

On Rosh Hashanah, 1665, the Sabbatians made an imposing demonstration, in which they loudly hailed Sabbatai Zevi as king and Messiah; delegates from various countries participated in the celebration. This first demonstration was followed by others, to which the authorities paid no attention, and the people willingly followed the severe orders of Sabbatai to fast and to chastise themselves. About 700 minor boys and girls were married, in order to hasten the advent of the Messianic redemption; for the Cabalists held that this could not arrive until the birth of all the souls who were destined to enter the flesh before the end of the present age. Prophets and prophetesses appeared in many places, speaking in a state of rapture, and proclaiming Sabbatai Zevi as Messiah. The people were deeply impressed by these events, the skeptics were silenced, and the way was clear for Sabbatai to dare still more. He began to issue decrees which were in deliberate defiance of rabbinical law; among them was the abolition of the fast on the 10th of Tebeth.

In the meanwhile the Messianic movement had become more and more popular among the communities of the Diaspora. The political situation of the Jews prepared the soil for the belief in the coming of the Messiah. The prosperity of many communities had been destroyed by the devastation of the Thirty Years' War (1618-48), the persecutions instituted in Austria by the Jesuits, the threatened expulsion of the Jews from the dependencies of Spain, and the annihilation of the Polish Jewish center. Messianic hopes were in the air, fostered both by Jews, such as Manasseh ben Israel, and by Christian theologians. In Amsterdam, which was full of Marranos who had fled from Portugal, the news of the appearance of Sabbatai Zevi was greeted with enthusiasm. The masses assembled in the Portuguese synagogue, the scrolls of the Torah were removed from the Ark, and dancing took place to the sound of music. Jews told Christians that the Messiah had come and that they would no longer be their slaves. Even such scholars as Isaac Aboab, Raphael d'Aguilar, who was the head of the Yeshiva, Isaac Naar, and the physician and philosopher, Benjamin Mussafia, joined the movement. The news was greeted with equal enthusiasm in Hamburg, with Jacob Sasportas as the solitary dissenter; here the interest taken in these events by the Christians was regarded as a confirmation of the correctness of the prophecies. Similar scenes took place in Venice, Livorno, Avignon, London, and the cities of Morocco, Bohemia, Moravia, Hungary and Eastern Europe, where the attention of the Christian clergy was drawn to the Sabbatian agitation. The Russian divine, J. Goliatovski, even found it necessary to write a special book in which he attempted to deny the reports about the advent of the Jewish Messiah.

These newly won adherents of the movement received from Nathan Ghazzati new prescriptions requiring fasting and self-chastisement; they were told to adopt Cabalistic prayer formulas (Tikkunim), and the followers of Sabbatai even dared to insert his name in the liturgical prayer for the government. Above all, the Sabbatians sought to convince the multitude that Sabbatai was not only the Messiah ben Joseph, but the final deliverer, the Messiah ben David. The only one who energetically resisted their propaganda was the above-mentioned Jacob Sasportas; most of the opponents of Sabbatianism did not dare to attack the movement openly. Sasportas sought in vain to enlist the aid of the rabbis of Constantinople, Smyrna and Jerusalem to suppress the growing agitation, which had exceeded all the expectations of Sabbatai himself. As the apocalyptic year, 1666, grew nearer and nearer, the belief of the people in the final victory of the "Messiah" increased.

Before Sabbatai Zevi left for his final goal, Constantinople, he made a division of the kingdoms of the world among twenty-six of his followers. In the meantime, however, the Turkish government began to consider the movement as more than mere visionary speculation, and decided to take action. When Sabbatai attempted to land at Constantinople, he was arrested by order of the grand vizier Ahmed Koprili and cast into prison; later he was sent in chains to Abydos, where he was confined in the fortress. Yet this setback did not have the slightest effect upon the prestige of the pseudo-Messiah. His followers were able to convince the people that it was a proof of the divinity of Sabbatai Zevi that the grand vizier, who was very well informed of the revolutionary intentions of the self-styled Messiah, had not condemned him to death, but merely sent him to prison. Sabbatai himself explained his unfortunate situation by saying that the sins of the people had not been sufficiently atoned as yet, and accordingly the Messiah had to suffer for them. In prison, in a fortress which his followers called Migdal Oz (Tower of Strength), Sabbatai Zevi was able to live like a king with the aid of funds that flowed to him in great abundance. He held formal court in a suite of rooms, and even received delegates from foreign lands.

At the same time new messengers were sent to all parts of the world by the "suffering Messiah"; these announced the speedy deliverance of the Messiah, further bewildered the minds of Jews everywhere, and frustrated all the efforts of Jacob Sasportas to take action against the movement. An especial impression was made upon the Jews by Sabbatai's reception of a delegation from the Council of the Four Lands, consisting of Isaiah, son of David ben Samuel Halevi

Sabbatai Zevi. From an old etching formerly in the art collection of the Berlin Jewish Community

(TaZ), rabbi of Lemberg, and his stepbrother Löb Herz. When these delegates wanted to tell Sabbatai about the distress in their native land, the latter pointed to a book lying before him; it was *Tzok Haittim* (Distress of the Times; published in 1650), and contained a description of the horrors of the time of Chmielnicki. He told them that this book never left his table; that in memory of these horrors he had put on a blood-red garment and had decked the Scroll of the Torah in red; that the day of vengeance was near and the year of redemption had come.

From Poland also came the famous Cabalist Nehemiah Cohen to Abydos. He spent three days and nights in discussion with Sabbatai Zevi, and came to the conclusion that the latter was not the Messiah. In order to escape the threatened vengeance of the masses, Nehemiah pretended to embrace Mohammedanism, and thus gained access to the grand vizier. He told the latter about Sabbatai's revolutionary intentions. Immediately afterwards Sabbatai was brought before the sultan at Adrianople, and it was only by the intervention of Guidon, the physician to the sultan who was himself a convert to Islam, that Sabbatai escaped the death penalty, on condition that he become a Moslem. Sabbatai accepted the offer; he became a Moslem, received the name of Mehmed Effendi and was appointed to the post of doorkeeper to the sultan (September, 1666). Sarah and a few close friends of Sabbatai became converted to Islam at the same time.

The news of the apostasy of Sabbatai trickled very slowly to the rest of the world, and for many weeks thereafter Sabbatai Zevi was still honored in the Diaspora. Some of his followers abandoned him as soon as they learned of his conversion to Islam; but many more could not be satisfied with this result of the movement, and preferred to believe a report that it was not Sabbatai himself, but a delusory image of him, that had gone over to Islam, while the real Sabbatai had ascended to heaven. Nathan Ghazzati used every means to revivify the partly drooping movement. He issued a circular signed by Sabbatai with his own hand, in which the latter acknowledged his act and which contained a decree to abandon the changes in the ritual which he had previously ordered. A new agitation was stirred up by Joseph Philosoph, whose daughter Sabbatai had married after the death of Sarah; for Joseph remained an adherent of the movement even after the exposure of Sabbatai. The cession of a part of the Ukraine and Podolia to Turkey by the Peace of Buczacz (1672) opened up a new and fruitful soil for the followers of the movement in the Polish provinces. Sabbatai secretly maintained his contacts with Judaism even after his conversion to Islam and attended the synagogues; the sultan, becoming aware of this, exiled him to Dulcigno, where he died in 1676 on Yom Kippur. Nathan Ghazzati survived him four years, dying at Sofia, while Samuel Primo did not die until 1708, in Adrianople.

After the death of its founder the movement, which had been a combination of visionary ideas and the hope of a national Jewish renascence in Palestine, abandoned the latter idea completely, and became more and more sheer mysticism. It took on the form of a sect. Soon there arose various systems of interpretation of Sabbatianism. The former Marrano Abraham Miguel Cardozo (1630-1706) went through Italy and Northern Africa, preaching a dualistic doctrine. He based his Judaism upon the "First Cause" (*sibbah rishonah*) and the "Holy Father" (*'abba kaddisha*), identical with the God of Israel, incarnate in Sabbatai Zevi; he attempted to show that the "First Cause" and the "Holy Father" were not identical. In Moravia and Hungary, his pupil and co-worker, Mordecai Mochiah, developed this doctrine still further. He preached that there were divine sparks within the impure husks of the souls of the Moslems, who derived their origin from Ishmael, the son of Abraham, that these sparks sought to be delivered, and that it was to effect this liberation that Sabbatai Zevi had gone over to Islam. Another prophet, Daniel Israel Bonafoux, predicted the coming resurrection of Sabbatai Zevi.

The group headed by the wife of Sabbatai, his father-in-law and their friends in Salonika and Adrianople proclaimed as successor to Sabbatai the younger brother of his widow, Jacob Querido, who took the name of Jacob Zevi and actually gained numerous followers. Many hundreds of Sabbatians, headed by Jacob Querido, adopted Islam, but for the most part because of the pressure of the Turkish government and the denunciation of the rabbis. Jacob Querido himself died in 1695 at Adrianople, on his way back from a pilgrimage

Sabbatai Zevi in prison (1666). From a 17th cent. etching

to Mecca, and his place was taken by his son Berechiah. Mordecai Mochiah traveled through Germany, Bohemia, Moravia and Italy, and settled in Reggio, from which place he continued to issue his Messianic predictions. He then went to Poland, where he was met by Hayim Malach and many other apostles. The leader of the Cabalists was the ascetic Judah Hasid; he was joined by other, new apostles who combined the protest against contemporary rituals with the desire for a renascence in Judaism. The rabbis of Cracow, who had already suffered from these movements and were uncertain what to do, sent an inquiry to the Amsterdam rabbi Zebi Hirsch Ashkenazi (Hacham Zebi), a vigorous opponent of the sectarians. He answered that the case seemed to be one of dealing with Sabbatians, and that they had to be vigorously fought. Judah Hasid, persecuted by the rabbis, undertook a pilgrimage to Palestine with his followers. They traveled through the country by way of Italy, and passed some time in the larger communities, to whom they preached the love of Zion and repentance. About 500 of the pilgrims died on the journey; Judah Hasid himself died three days after he entered Jerusalem. The survivors had to suffer the enmity of the Jerusalem rabbis. Many of them later joined the Turkish Sabbatians, while others on their return became converted to Christianity.

The Sabbatian movement took a new turn with Nehemiah Hayyun (1650-1733), who expanded the teachings of Cardozo by adding the doctrine of a secret Trinity. Born in Safed or Bosnia Serai, Hayyun left his rabbinical post in the Turkish city of Uskub to lead an irregular, wandering life. He was able to convert many scholars to his mystic views. The most important personages with whom he came into contact were Joseph Ergas, Naphtali Cohen, Jonathan Eybeschütz, Joseph and David Oppenheimer of Prague, Rabbi Aaron of Berlin and the popular adventurer Löbele Prossnitz. In Amsterdam Hayyun was denounced as a Sabbatian by Hacham Zebi and Moses Hagiz and was placed under the ban. He then went to Turkey by way of Livorno, and the Jerusalem rabbis offered to lift the ban if he would swear to renounce Cabala. He died in poverty just as he was undertaking to form connections in Poland, where the Sabbatian movement was then gaining more and more adherents.

The fight against Sabbatianism continued. The rabbis of Poland and Germany more than once pronounced a ban against the Sabbatians (Shabetzvinikes or Shepsen), but they could not entirely control the movement, which eventually took its own form in Poland as the Frankist Movement. In Germany the world-famous dispute between Emden and Eybeschütz was an epilogue to the Sabbatian movement.

SABBATH (Hebrew *Shabbath*), the weekly day of rest, observed by Jews from sunset of Friday to sunset of Saturday, by Christians on Sunday and by Mohammedans on Friday. The Jewish festivals are also known as Sabbaths, and Yom Kippur, the Day of Atonement, is called the "Sabbath of Sabbaths."

1. The Day. The origin of the Sabbath is obscure. Some believe that it is connected with the four phases of the moon, others with the seven planets. The Babylonians celebrated the 7th, 14th, 21st and 28th of Elul, and probably of every month, in addition to the 19th (the seven times seventh or forty-ninth day after the beginning of the preceding month), as well as observing a day called *sabattu* regarding which, however, there is some uncertainty as to whether or not it was a periodically recurring day of rest. The Babylonian *sabattu,* however, was an evil day, a "day for the quieting of the hearts" (of the gods), on which it was considered necessary to leave work of many kinds undone and to propitiate the gods through sacrifices. Despite the tremendous difference between the Babylonian and the Jewish Sabbath, it is clear that ancient and as yet unexplained connections existed between them. As in the entire province of the religious and ethical, Israel was skilled in transmuting base metal into pure gold. All the blessings which the world possesses in its weekly day of rest and observance it owes exclusively to Israel, not to Babylonia.

As the Sabbath developed among the Jews in the course of the centuries, its purpose was to consecrate and to render its observers happy; to allow the divine peace to enter the human heart and to purify the will morally in keeping with the basic nature of the Jewish religion; and, proceeding equally from religious and moral motives, to breathe forth the spirit of fervent joy in God.

The general regulations regarding the Sabbath (*Ex.* 20:10; *Deut.* 5:14): "But the seventh day is a Sabbath unto the Lord thy God," contain the nucleus of the two different effects and purposes of the Sabbath ("day of rest and of sanctification"), that is, the Sabbath, consecrated to God, the "Holy One of Israel," Who is unchangeably attached to His people by means of an inner love. While pious Jews believe that they are always in God's presence, on the Sabbath they feel that they are doubly near to Him. For this reason, each week they prepare to receive the Sabbath as an exalted, lofty and welcome guest in every possible way. The Sabbath (sometimes feminine in Hebrew, as in *Ex.* 31:14; *Lev.* 25:6) is regarded by the pious Jew as the "queen" or as the gracious "bride" whose nearness lifts him above the drab everyday existence and above the oft-harrowing seriousness of reality. Hence the fancy of the Sabbath soul (*neshamah yetherah*), an additional soul for the Sabbath day.

Thus the Sabbath is a "fountain of blessing," a "precious pearl." God said to Moses: "There is a magnificent gift in my treasure-chamber; the Sabbath is its name, and I shall give it to Israel." The joy of the Sabbath permeates everything, not only the Jew's soul but also his home, his clothing, even his sensual enjoyment, which is ennobled and uplifted thereby. The Midrash relates that once the Roman emperor Antoninus was dining on the Sabbath at the home of the patriarch Judah Hanasi. Cold viands were set before him, and they pleased him very much. When warm viands were set before him on another occasion on a weekday, he declared vigorously that the former viands were preferable. The patriarch remarked that the warm food lacked a spice, and when the emperor asked its name, Judah Hanasi replied: the Sabbath.

Friday evening, the beginning of the Sabbath, in particular partakes of the character of religious fervor and warmth and of joyous peace of soul. The eve of the Sabbath at the same time has developed into a family evening devoted to inwardness of feeling and family consecration.

However, the Sabbath is not merely a "day of rest" and a "day of blessing," but also a "day of sanctification." As such it has been associated with three ideas: the idea of creation, the social idea, and the exodus of Israel from Egypt. Just as God rested after the labors of six days of creation, so man must rest on the seventh day after the labor of the first six days of the week. Man is required to pattern his actions after those of God, to walk in His ways, and thus the Sabbath was to consecrate him as the joyful instrument of the divine will. The association of the Sabbath with the social idea has its roots in the Jewish heart with its warm feelings, which has led to a strong communal sense, charity, benevolence, the protection of the weak, the poor, the oppressed and the enslaved, and the demand for a social justice conceived along profound

and thoroughgoing lines. For this reason, just as the Jew deems himself admonished on his holiday to be mindful also of his man-servant, his maid-servant, of the stranger, widow and orphan, in the midst of his festal joy, so his God, too, commands him to celebrate the Sabbath and to rest thereon "that thy man-servant and thy maid-servant may rest as well as thou" (*Deut.* 5:14), and, to a still further extent, "that thine ox and thine ass may have rest, and the son of thy handmaid, and the stranger, may be refreshed" (*Ex.* 23:12).

However, this social idea is most closely connected with the redemptive idea of the Sabbath, that dealing with the liberation of the people and with their gratitude toward God, the Liberator. "And thou shalt remember that thou wast a servant in the land of Egypt, and the Lord thy God brought thee out thence by a mighty hand and by an outstretched arm; therefore the Lord thy God commanded thee to keep the sabbath day" (*Deut.* 5:15), that is, just as the Israelites experienced release from the oppressive burden of labor in those days, so the Sabbath was to bring to all the oppressed in Israel rest and release, and the lightening of their lot. The Sabbath became a "memorial of the going out of Egypt," presenting to the picture of the redemption expected in the future the counter-piece of the release achieved in the past.

The prohibition of labor on the Sabbath enacted in the Torah led in subsequent times to far-reaching and detailed discussions as to the concept and extent of the prohibited forms and kinds of work and to a diffuse network of casuistry. In addition, in view of the emphasis with which the prohibition of labor on the Sabbath was enjoined upon the Israelites, it led to many kinds of restrictions and additional prohibitions of a precautionary nature which the Reform Movement of the 19th cent. sought to modify and moderate. In more recent times the change in political and economic conditions, as well as the extraordinary sharpening of the struggle for existence, have tended to weaken the observance of the Sabbath among Jews. Less and less a day of rest because of the demands of modern life, it has tended to become rather a day of worship, and its most important stress has been shifted to Friday evening. In Palestine, however, the revival of the Sabbath festivities in the Oneg Shabbat movement on Saturday afternoons has given the day once more a sort of spiritual recreation and exaltation. Proposals to shift the Jewish Sabbath to the Christian Sunday have met with little or no success, even among Reform Jews.

MAX JOSEPH.

2. The Sabbath Light. Jews throughout the world have ushered in the coming of the Sabbath by the kindling of special lights to do honor to the day. The kindling of the Sabbath lights is one of the three special commandments incumbent upon Jewish women (although if there is no woman in the household, the Sabbath lights may be lit by a man). The usual Sabbath lights are two candles. These are kindled just before sunset on Friday evening, the hands are spread over the lights and the following blessing is recited: "Praised be Thou, O Lord our God, King of the Universe, Who hast sanctified us by Thy commandments and commanded us to kindle the Sabbath light."

In various districts a hanging lamp of bronze is used to hold the little lights that are kindled on the Sabbath. These Sabbath lamps usually have six branches arranged in the form of a star, which taper off at the end into little pockets for the wicks; at the lower end there is frequently a saucer-shaped receptacle to catch the dripping oil. An attachment in the shape of a saw permits the lowering or raising of the lamp in order to fill and clean it. The Jewish community of Offenbach, Germany, had in its possession an especially magnificent Sabbath lamp, richly adorned with figures; the pictures of Oppenheim display manifold variations in the form and use of the Sabbath lamp.

The Sabbath as queen, as envisioned by E. M. Lilien

There is no law against extinguishing the Sabbath lights at night, although the general custom has been to let the Sabbath candles burn to the very end. So strong has this feeling been that some Jews have even protested against putting out Sabbath lights as being a violation of Judaism. In 1942 President Louis Finkelstein of the Jewish Theological Seminary of America found it necessary to issue a statement permitting Jews to extinguish Sabbath candles in case of a blackout, although advising that they should be shaded by blackout curtains in order that such a step should not be necessary, or else that the candles kindled should be small enough to burn out before nightfall. ALFRED GROTTE.

3. Sabbath Services. As early as in the period of the kings it was customary to visit the Temple (*Isa.* 1:13) or a prophet (*II Kings* 4:23) on the Sabbath. During the Babylonian Exile the "elders of Judah" used to visit Ezekiel frequently, and it is possible that it was on the day of rest that these assemblages took place. It is certain that the Sabbath was the day on which regular divine service first took place; praying on the Sabbath was so usual that the synagogues were called "Sabbath houses." Divine service was at first held only in the day-time, not in the evening, for the evening was utilized by the religious societies for domestic and household celebrations.

The Sabbath day was filled out chiefly with readings from the Scriptures and with their interpretation, as is stated both by Philo and the Talmudic teachers. Only a very modest place was assigned to prayers. It is possible that the original Sabbath prayers consisted of hymns, perhaps like the one uttered by Zadok about the year 70: "In Thy love, O Eternal our God, with which Thou didst love Thy people Israel, and in Thy mercy, our King, with which Thou didst give us in love, O Eternal our God, this great and holy Sabbath day" (*Tos. Ber.* 3:7).

When a fixed liturgy developed, the Sabbath services took on the form of an abridged daily service plus certain especial additions for the day. The Eighteen Benedictions were shortened to seven by taking the first and last three

A model Sabbath chamber exhibited (1926) at the Exposition for Health and Social Hygiene in Düsseldorf

Lighting the Sabbath candles. From a painting by Isidor Kaufman

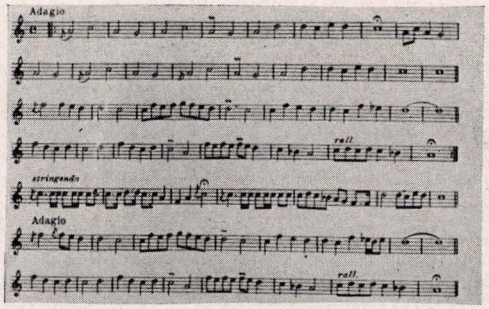
The Sabbath afternoon

and connecting them. As on all festivals, an additional (Musaf) Service was added. A series of weekly readings from the Torah and Prophets (Haftarah) was established, and the Sabbath was distinguished as being the only day on which as many as seven (plus the Maftir for the Haftarah) were called to the reading desk. The evening service was given a special series of psalms by way of ushering in the day. Later on it became customary to say Kiddush over a cup of wine during the services, and under Cabalistic influence the Lechah Dodi hymn became a part of the service. Prayers were composed for the special Sabbaths of the year, especially those which fell during or near the festivals and joyous occasions.

Home services on Sabbath Eve were observed as far back as the time of the Second Temple and continued even after public services were introduced. Table songs, Zemiroth and other Sabbath hymns heightened the Sabbath mood. Under Lurian and Hasidic influences (16th cent. and after), particularly, the Sabbath meals and the Zemiroth came to form the climax of the Sabbath celebration in Hasidic and Cabalistic Jewish circles.

The Reform Movement shortened and modified the Sabbath services, but preserved a large part of their essential features. Revisions of the *Union Prayerbook* of the Central Conference of American Rabbis in the years after 1930 provided for a series of services for the Sabbath which might be read in turn. Many congregations began to hold late Friday evening services, and this in turn led to a provision for the reading of the Torah on Friday evening if the congregation desired it. Provision was also made for a service in English in the home for the consecration (Kiddush) of the Sabbath Eve. ISMAR ELBOGEN.

4. The Jewish Sabbath and Sunday Legislation. The Christian Sabbath on Sunday arose out of a desire to have a separate day of rest from the Jews and to have a day distinguished for worship rather than by cessation of work. During most of the period when the Jews were subject to disabilities of a civic nature no interference was made with the observance of the Sabbath by the Jews on their own day, or their right of working on the other six days of the week. In modern times, with the growing influence of governments over religious affairs and the tendency to establish uniform regulations, there has been an increasing amount of legislation, from the 19th cent. and after, requiring all citizens to abstain from labor on Sunday. This has worked a great hardship upon pious Jews, who are thus compelled to observe both their own and another day of rest. In fact, in some countries of Eastern Europe, Sunday legislation was advanced as a deliberate harassing of Jews.



In countries or states which have constitutions guaranteeing religious liberty, Jews have attempted to have exceptions made in behalf of those who observe another Sabbath, holding that these laws are unconstitutional if universally applied. The courts have generally held, however, that such Sunday laws are a legitimate exercise of police power, as they merely establish a uniform day of rest and do not interfere with Jews observing their own Sabbath; the argument of their inconvenience is brushed aside. However, some countries do make provision for permitting those who observe the Jews' Sabbath to work on Sunday. Thus England and Holland allow observing Jews to trade on the Sabbath, as does the state of New York. In Eastern Europe Bulgaria exempted Jews from the Sunday laws, and Yugoslavia permitted a two-hour opening of retail stores. Some of the states of the United States, such as California and Oregon, have no Sunday laws at all; in the Soviet Union a weekly rest day on Thursday was established in 1923, and later other regulations were introduced which did not interfere with the Jewish Sabbath. In many industrial countries there is a movement for a five-day week which would permit both Saturday and Sunday to become rest days.

FRITZ LAMM.

5. Observance of the Jewish Sabbath by Non-Jews. The observance of the Jewish Sabbath was not and is not limited to Jews. A substantial proportion, perhaps the majority, of early Christians continued to observe the Biblical Sabbath until they were definitely released from all obligation in this regard by the Council of Laodicea (366). Even after this dispensation minority groups and individual non-Jews continued to observe the Jewish Sabbath, holding that Christians were obliged to obey the plain command of the Biblical law.

The close of Sabbath, with the Habdalah ceremony

The Sabbath Song. From the composition by Aaron of Karlin

The largest group in the 20th cent. which still observes the Jewish Sabbath is that of the followers of the Ethiopian Church, which retains other Jewish observances as well.

In Russia the Subbotniki (Sabbatarians) who, according to the traveler Ephraim Deinard, number more than two million, derive their name from their strict observance of the Jewish Sabbath. Though nominally Christians, they are so close to Judaism in their faith and practice that they might almost be given the status of proselytes. The sect arose about the 15th cent. in consequence of the efforts of Jewish missionaries, and, despite occasional persecutions by the government, has managed to preserve its existence. About 1880 they began to emigrate to Palestine and the United States. About forty families were living in Los Angeles (1943); they give their children Hebrew names, visit the synagogues on the high holy days, and use the services of Jewish functionaries for marriages, burials and other ceremonies.

A similar sect is that of the Sabbatarians in Transylvania, who at one time numbered as many as 20,000. It arose in the 16th cent. in opposition to Roman Catholicism and accepted the Torah as its guiding principle in life. Many of the nobility joined them, but they were broken by the opposition of the Hungarian government, and the mass of them were compelled to accept baptism. The Sabbatarian faith was secretly preserved by a handful of peasants who, after the emancipation of the Hungarian Jews, founded a Jewish community in 1869 in the village of Bőződujfalu. In 1930 this community consisted of about seventy families, among whom thirty-two were of purely Sabbatarian origin. In 1940 the "non-racial" Jews of Transylvania were exempted from the legislation affecting the Jews of Hungary, but subsequently this exemption was removed in an effort to force these peasants to abandon their faith.

In the United States branches of the Adventist and Baptist churches maintain the Biblical Sabbath. The most important of these groups is that of the Seventh Day Adventists. Established in 1845 in New Hampshire, Seventh Day Adventism has spread to all parts of the United States and Canada; in 1941 it had 2,326 churches, 992 ministers and over 150,000 communicants. In addition to observing the Sabbath, they abstain from eating the flesh of swine. The Church of God is a subsidiary body of the Seventh Day Adventists, and agrees with them in most of its doctrines, including the day of the observance of the Sabbath.

The Seventh Day Baptists are a branch of the Baptist church, but differing from it in regard to the observance of the Sabbath on the seventh day of the week, as commanded in the Bible. It was established in 1671 in Newport, R. I. It is not a numerous denomination, embracing only sixty-seven churches and 6,793 enrolled members in 1941, but it is very active. It has a publishing house at Plainfield, N. J., an academy at Salem, W. Va., and colleges at Alfred Center, N. Y., and Milton, Wis. Towns in which there are strong groups of non-Jewish observers of the Jewish Sabbath are Westerly, R. I., Plainfield, N. J., and Battle Creek, Mich.

SABBATH (Hebrew, *Shabbath*), first tractate of Moed, the second division of the Mishnah and Talmud. Its twenty-four chapters deal mainly with the laws of Sabbath observance, as follows:

Chap. 1. Transfer of objects from public to private domain and vice versa on the Sabbath; what may not be done in the time immediately prior to the Sabbath. Chap. 2. Lighting of the Sabbath lights and other duties to be performed on Friday at twilight. Chaps. 3 to 4. Prohibited and permitted methods of warming food and keeping it warm; objects which may not be touched on the Sabbath. Chap. 5. Objects which may be placed upon or tied to an animal when it is led out on the Sabbath. Chap. 6. Personal adornments which may be worn on the Sabbath. Chap. 7. The number of sin-offerings that may have to be brought for inadvertent violations of the Sabbath; enumeration of the thirty-nine categories of labor prohibited on the Sabbath. Chaps. 8 to 10. Regulations concerning the amounts and manner of carrying objects on the Sabbath. Chap. 11. Laws concerning throwing objects from one place to another. Chap. 12. Laws of building, hammering, weeding, writing, and the gathering of wood and grass. Chap. 13. Laws of weaving, spinning, sewing, tearing, and hunting. Chap. 14. Hunting, and the preparation of medicines. Chap. 15. Laws of tying knots, folding garments and sheets; special garments for the Sabbath. Chap. 16. Objects which may be saved from a conflagration; work which a non-Jew may do for a Jew on the Sabbath. Chaps. 17 to 18. Utensils and objects which may be touched, carried and removed on the Sabbath; assistance at childbirth in the case of women and animals. Chap. 19. Circumcision on the Sabbath. Chap. 20. Laws of straining wine and feeding cattle. Chap. 21. How touchable objects, attached to non-touchable objects, may be moved on the Sabbath; clearing and wiping the table used at a meal. Chap. 22. Preparation of food, bathing and anointing on the Sabbath. Chap. 23. Borrowing, casting lots, business calculations, and preparation of corpses for burial. Chap. 24. Regulations for one overtaken on the road by the Sabbath; feeding of animals; annulment of vows.

The eighteen chapters of the Tosefta parallel and amplify the contents of the Mishnah. Especially interesting is the enumeration in chaps. 6 to 7 (7 to 8) of folk customs and superstitions, some of which were permitted by the rabbis while others were prohibited as being heathen customs (*midarche ha'emori*). The Palestinian Gemara to the last four chapters of the tractate is no longer extant, but quotations from the writings of medieval scholars indicate that it was originally in existence.

The Babylonian Gemara to Sabbath and that to *Baba*

Bathra, of approximately equal size, are the largest tractates in this Talmud. Among the important historical accounts contained in it are the descriptions of the violent meeting of the Shammaites and Hillelites (probably before the revolt in 66 C. E.) when eighteen ordinances against non-Jews were forced through by the Shammaites (13b; 17a; *Yer. Sab.* 1:4, 3c), and of the origin of Hanukah (21b).

Both Babylonian and Palestinian Talmuds contain descriptions of various articles used in the home and in commercial and industrial life; these are important sources for a knowledge of the life of the Jews during the first five centuries of the Common Era. HIRSCHEL REVEL.

SABBATH SOUL (*neshamah yetherah,* "additional soul"), a higher soul which, according to a statement in the Talmud (*Betz.* 16a), comes to every Jew at the entrance of the Sabbath and remains with him until the close of the Sabbath day. This Sabbath soul is symbolic of the additional joy which the Jew feels on the Sabbath, the joy of freedom from the toil and care of the days of work. It may possibly be connected with the idea of decorating the Sabbath evening table with branches of myrtle, since myrtle was regarded as the vehicle of the soul. The idea was expanded in the Cabala, the *Zohar* (*Pikkude,* Lublin, 1872, p. 511) adding the statement that four angels accompany each individual Sabbath soul, which is adjusted to the capacity of the man who is to receive it. The Cabalistic song Shalom Alechem ("Peace be unto you, O ministering angels") is devoted to this idea. The concept of the Sabbath soul did much to give the Sabbath a heightened sanctity and a mystic splendor.

SABBATHS, SPECIAL, term applied to those Sabbaths which are connected with holidays, half-holidays (Hol Hamoed) or fast days and days of mourning either from the point of view of time or that of inner association, whether the special Sabbaths precede them or follow them or occur during their course. Almost all these special Sabbaths are distinguished by an addition to the current reading from the Torah or through an appropriate reading from the Prophets or even through both; at times also the usual Sidra order is interrupted and a special portion from the Torah or the Prophets is read in its stead.

Practically all the special Sabbaths derive their name from the Torah or prophetical portion which is read on them. Thus Shabbath Bereshith, the Sabbath after Simhath Torah, is named after the first Torah portion, which begins with the Hebrew word *bereshith* ("In the beginning"); Shabbath Shirah (the fourth Sidra of *Exodus*) after the Song of Moses (Shirath Hayam or Shirath Mosheh, *Ex.* 15). Shabbath Shekalim, the Sabbath occurring before or on the 1st of Adar, is named after the additional reading from the Torah, which treats of the offering of the shekel (*Ex.* 30:11-16). The Sabbath before Purim is called Shabbath Zachor, after the additional Torah reading beginning with the word *zachor* ("Remember [what Amalek did unto thee]," *Deut.* 25:17-19); the Sabbath after Purim is called Shabbath Parah, after the additional Torah reading dealing with the preparation of the waters of purification from sin from the ashes of the red heifer (Parah Adummah; *Num.* 19:1-22). The Shabbath Hahodesh ("Sabbath of the month"), the Sabbath before or on the 1st of Nisan, derives its name from the additional Torah reading which fixes the month of Nisan, the month of deliverance, as the first or beginning of the months of the year (*Ex.* 12:1-20).

Those special Sabbaths which derive their name from the prophetical readings are: Shabbath Hazon, the Sabbath before the Ninth of Ab (Tishah Beab), on which *Isa.* 1, beginning with the word *hazon* ("vision"), is read; Shabbath Nahamu, the Sabbath after the Ninth of Ab, on which there is read *Isa.* 40, beginning with the word *nahamu* ("Comfort ye"); Shabbath Shubah or Shabbath Teshubah (Sabbath of Repentance), the Sabbath between Rosh Hashanah and Yom Kippur, on which *Hosea* 14:2-10, beginning with the word *shubah* ("Return, O Israel, unto the Lord thy God"), is read.

A Sabbath which occurs on the New Moon (Rosh Hodesh) is called Sabbath Rosh Hodesh. The Sabbath occurring during the middle days of the festival of Pesach or of the festival of Sukkoth is called Shabbath Hol Hamoed. The Sabbath which falls during Hanukah is named Shabbath Hanukah. The Sabbath occurring immediately before Pesach is called Shabbath Hagadol, "The Great Sabbath," because the 10th of Nisan, on which the first Passover sacrifice was prepared before the night of the deliverance from Egpyt (*Ex.* 12:3), is believed to have fallen on the Sabbath (*Sab.* 87b).

In certain parts of Eastern and Central Europe a Sabbath on which the Ninth of Ab falls is called "Schwarz Shabbes" (Black Sabbath). Popularly, too, in these sections the name "Weisse Shabbes" (White Sabbath) is given to the Sabbath on which Yom Kippur falls; for on this day each Jew is clad in a white mantle and in a white prayer-shawl (Tallith).

The three Sabbaths between the 17th of Tammuz and the Ninth of Ab, i.e. the three weeks which are devoted to mourning for the destruction of Jerusalem and of the Temple and which are intended to arouse the spirit of repentance as well as of mourning, have as their prophetical readings passages containing sermons dealing with punishment; these three prophetical portions, *Jer.* 1:1 to 2:3; 2:4-28, with the addition of 3:4; and *Isa.* 1:1-28, are called Telatha Depuranutha ("The Three [Haftaroth] of Punishment") or Telatha Detheyubtha ("The Three [Haftaroth] of Repentance").

The seven Sabbaths after Tishah Beab, the important fast day of the Jewish year, the day of remembrance of the destruction of Jerusalem, are called Shibah Denehemta ("The Seven [Haftaroth] of Comfort [or Consolation]"). On these seven Sabbaths the prophetical reading consists of comforting and elevating promises for the future redemption and exaltation of Israel; the Haftarah always is a portion taken from *Isa.* 40 to 66, in which chapters the prophet predicts to his people its return from the Babylonian captivity into the land of its fathers and the reestablishment of his people there. MAX JOSEPH.

SABBATICAL YEAR (*shemittah*). There are three passages in the Torah (*Ex.* 23:10-11; *Lev.* 25:2-7; *Deut.* 15:1-6) which speak of a Sabbatical year in the sense of a seventh year which acts so as to bring about a cessation of various activities. The traditional interpretation treats these passages as part of one uniform law, by which every seventh year in the calendar was a year on which all agriculture was forbidden and on which all outstanding debts were cancelled. There is the further evidence that such a Sabbatical year was observed during the period of the Second Temple; Josephus reports three such Sabbatical years in the course of his narration: 164-163 B.C.E., 38-37 B.C.E. and 68-69 C.E.

According to Bible critics, however, the Sabbatical year underwent a period of development before it reached the form prevalent in the time of the Second

Temple. The passage in *Ex.* 23:10-11 (assigned to the Book of the Covenant) is regarded by them as not establishing a universal Sabbatical year. It is rather a direction to the farmer to let his field lie fallow for a year after it has yielded produce for six successive years—a sort of rotation of crops similar to that practised in many countries. If a farmer had more than one field, the period of their being fallow might not be the same; nor would all the fields in the country be fallow at the same time. This interpretation of the passage is strengthened by the fact that in the same portion of the Torah (*Ex.* 21:2-6) the provision is made that a Hebrew slave is to be set free in the seventh year after his purchase, an institution to which a later passage (*Jer.* 34:8-15) bears witness as having existed in the time of the First Temple and even earlier. It is obvious that the seventh year of release for slaves was not a general, but an individual one, depending upon the beginning of their term of service; it is highly probable, therefore, that the same method was used in determining the year of lying fallow for fields.

The legislation in *Deuteronomy,* the critics point out, establishes a different kind of Sabbatical year. It makes no mention of agriculture and introduces a different type of Sabbath—in the form of the cancellation of debts. This is apparently a part of the social legislation introduced within the Deuteronomic Code for the purpose of improving the condition of the impoverished lower classes who, during the latter part of the period of the kings, had sunk more and more into debt.

Finally, the legislation in *Leviticus,* argue the critics, goes back to the agricultural form of the Sabbatical year and further develops it by combining it with the new institution of the fiftieth year as the Jubilee in which (instead of at the individual seventh year of *Exodus*) all slaves were to be set free. This type of Sabbatical year is consistent with the great emphasis laid upon the Sabbath by the authors of the Priestly Code, to which this passage is assigned.

The Sabbatical year as ordained in *Leviticus* and *Deuteronomy* was certainly observed from the 5th cent. B.C.E. on. It caused great hardships because of the scarcity of food and the stoppage of money credit. In fact, the latter restriction of commerce eventually became so oppressive that Hillel (1st cent. C.E.) created the Prosbul as a means of circumventing it. The Sabbatical year laws, however, continued to be observed, and a whole tractate of the Talmud (*Shebiith*) is devoted to them. According to rabbinical law, the lying fallow of fields was required only in Palestine, while the law cancelling debts in the seventh year was to be observed everywhere. In course of time, with the extension of the use of credit in business, the custom of cancelling debts gradually became obsolete. However, as late as 1888 the question as to whether the Sabbatical year for fields applied to the new Jewish colonies in Palestine led to a lively argument among the Jews there. In the 20th cent. practically all Jews had ceased to observe any sort of Sabbatical year.

SIMON COHEN.

Lit.: The Biblical commentaries to the passages cited; *Jewish Encyclopedia,* vol. 10, pp. 605-8; Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 323-26.

SABEANS, a Semitic people who lived in the southwestern part of Arabia; according to *Gen.* 10:7, they were descendants of Cush, according to 10:28 of Eber, and according to 25:3 of Keturah. Their country was known to the Romans as Arabia Felix ("Arabia the happy"), and they were the most important Arab group of ancient times. They are mentioned frequently in the Bible, which stresses their importance as merchants and traders. They transported the products of India to Tyre, Mesopotamia and Egypt, and exported from their own country such products as gold, jewels, incense, myrrh, balsam, calamus and cinnamon. They were second only to the Phoenicians as a trading people of Asia Minor, and the extent of their activity must have been very large. They were ruled by priest kings; their chief city was Mariaba, the ruins of which (Marib) still bear witness to their grandeur and might.

Up to the conquests of Islam in the 7th cent. Sabea was an independent kingdom which extended its sway to the north, conquered Yemen, and overthrew the Himyarites. Although it was in continuous trade with other countries, it prohibited all foreigners from entering the country, with the exception of the numerous male and female slaves that the Sabeans made. In 25 B.C.E. the Romans made an unsuccessful attempt to conquer the country.

The religion of the Sabeans was a sort of astral worship, the chief deity being Attar, the masculine counterpart of the Babylonian Ishtar. After the destruction of the Temple (70 C.E.) Judaism won some converts. Under Islam the kingdom was united with the rest of Arabia and constituted a part of the caliphate of Baghdad.

SABER, SAMUEL ARNOLD LOUIS, South African pioneer, b. Salisbury, South Africa; d. Kimberley, South Africa, 1919. Like other members of his family, Saber participated in the Matabele War and the expedition to overthrow the Matabele ruler Lobengula in 1893. He settled at Bulawayo, and in 1896 took an active part in suppressing the Matabele rebellion. Then he went to Kimberley, and became well-known in the diamond fields. At the beginning of the South African War Kimberley was besieged by the Boers, and Saber cooperated with his fellow citizens in the defense of the town.

Saber interested himself in varied public affairs. He was at all times an ardent British imperialist, and his pet hobby was the British Navy. He was considered an authority in naval matters, and founded the Kimberley branch of the British Naval League. The League awarded him a special decoration for his services during the first World War on behalf of naval charities. Saber was in charge of a street collection at Kimberley for the League a few days before he was brought to the hospital where he died.

SABIN, WALLACE ARTHUR, organist, b. Culworth, London, 1860; d. Berkeley, Cal., 1937. After his studies at Oxford he became a Fellow of the Royal College of Organists (1890). In 1894 he came to the United States, settling in San Francisco where, beginning with 1895, he served as organist at Temple Emanu-El. He gave many recitals, including one at the St. Louis Exposition of 1904, and another at the San Francisco Exposition of 1915. He set many Hebrew prayers to music, some of which were included in Stark's *Service Book.*

SABORAIM ("reasoners"; singular, Sabora), designation of the Babylonian teachers who gave the last touches to the almost completed Babylonian Talmud after the death of Rabina. They made decisions in matters which were left unsettled, corrected irregularities in the text and sometimes continued the discussions. Their activity lasted for only a few decades, and was carried on only by the sages who were themselves co-workers or at least younger contemporaries

of the last Amoraim. However, other scholars up to the time of the Gaonate also bore the title of Sabora. The epistle of Sherira Gaon mentions a number of Saboraim, the most important of whom was Ahai ben Huna of Be Hattim (d. 506), who is frequently mentioned in the Gemara.

Lit.: Strack, H. L., *Introduction to the Talmud and Midrash* (1931).

SABSOVICH, HIRSCH LEIB, agricultural expert, b. Rodovka, Kharkov, Russia, 1860; d. New York city, 1915. He studied at the University of Odessa and at Zurich, Switzerland, in the Agricultural School of the Federal Polytechnicum.

In Odessa he was agricultural chemist at the University (1885-86), and then managed private landed estates in the Caucasus until 1888, when he emigrated to New York city. There he taught for a year, then went to Colorado to take a post as chemist at the Experiment Station of the State Agricultural College, where he remained until 1891. While in Denver he organized the United States Humane Society, for the purpose of freeing political exiles from Siberia. In Russia he had already engaged himself in behalf of Jewish interests: in 1881 he organized the Committee of Safety in Odessa to help cope with the pogroms, and in the following year he established one of the Am-Olam societies which helped Jews emigrate to the United States.

When, in 1891, the Woodbine Land and Improvement Company was organized by the trustees of the Baron de Hirsch Fund, Sabsovich was made superintendent of the colony established on the 5,300 acres bought at Woodbine, N. J. From then until his death he was leader of the agricultural project, which he guided through the first difficult years. In 1894 he opened the first classes of what was to be the Agricultural and Industrial School, and he acted as superintendent of the school until 1905, when he was made general agent of the Baron de Hirsch Fund in America, retaining that post until his death. The School was considered Sabsovich's contribution to Jewish agricultural education in the United States. In it he surrounded himself with highly qualified teachers, many of whom attained prominence as agronomists, as did several students brought up in the school. Sabsovich was, in addition, secretary of the Cape May County board of agriculture, and trustee of the New Jersey State Agricultural College and Experiment Station.

In 1903, when Woodbine was incorporated as a borough of New Jersey, thus becoming the first all-Jewish political unit in America and in the world, Sabsovich was elected mayor.

His entire career at Woodbine was one of uninterrupted action for the social welfare of the colonists. One of his major objectives and accomplishments was the Americanization of the immigrants and their children. Sabsovich's interests were, on the other hand, not limited to Woodbine. As president of the Jewish Social Workers of Greater New York he was among the first to promote the creation of special courses for Jewish social workers and to urge the need for pension and retirement plans among the social workers.

Lit.: Sabsovich, Katherine, *Adventures in Idealism* (1922).

SACERDOTI, ANGELO, chief rabbi of Rome, b. Florence, Italy, 1886; d. Rome, 1935. He studied at the Italian rabbinical college in Florence, and received his doctor's degree from the Royal Institute of Superior Studies in that city. At the age of twenty-two he became rabbi in Reggio Emilia, where he remained until 1912, when he was called to assume the chief rabbinate of Rome, succeeding the late Vittorio Castiglioni. He remained in this post uninterruptedly until his sudden death on February 18, 1935. Upon Italy's entry into the

Angelo Sacerdoti

first World War on the side of the Allies Sacerdoti, in June, 1915, became chief rabbi of an army corps with the grade of captain, and at the beginning of 1917 chief of the military rabbinate.

After the War Sacerdoti devoted his energies to the revitalizing of the charitable, social and cultural institutions of the Jewish community of Rome, and took a deep interest in Zionist activities. He was instrumental in obtaining Italy's adherence to the Balfour Declaration, and in 1925 was official delegate of the Italian government to the inauguration ceremonies of The Hebrew University, Jerusalem, together with Professor Dante Lattes, secretary of the Italian Zionist Federation. He was also member of the Italian geographic mission for the study of Palestine headed by General Vacchelli. His was a prominent role in the preparation of the new Law for the Jewish Communities in Italy which became effective on October 30, 1930. Sacerdoti intervened with Benito Mussolini and Fascist government officials, before and immediately after the Nazis' rise to power in Germany (1933), on behalf of the German Jews, for the protection of the Jews in the Saar region and in various other matters of vital Jewish interest. He was the director of the Italian rabbinical college after its transfer to Rome from Florence in 1934. The second volume of the *Annuario di studi ebraici* (1938) was dedicated to his memory.

SACHAR, ABRAM LEON, author and communal worker, b. New York city, 1899. He received his A.M. degree from Harvard in 1920 and his Ph.D. degree from Cambridge University, England, in 1923. That same year he became instructor in history at the University of Illinois, retaining this post until 1929. From 1929 to 1933 he was director of the B'nai B'rith Hillel Foundation at the University of Illinois, and in 1933 he was made national director of the Hillel Foundations. He was still serving in this capacity in 1943.

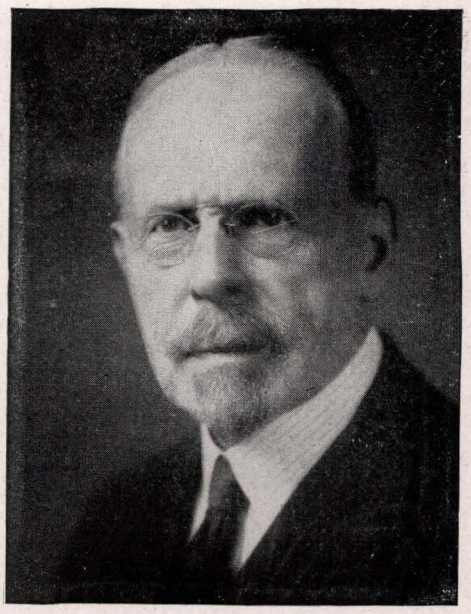
Sachar's *A History of the Jews,* first published in 1929, had gone into an eighth edition in 1940. Written at a time when the lack of self-knowledge among American Jews was just beginning to be felt by them as an obstacle toward their adjustment to the revival of brutal anti-Semitic propaganda, the book helped them to an acquisition of some information. In *Sufferance is the Badge* (1939) Sachar undertook to show the connection between the persecution imposed on the Jews and the general regression exemplified by the persecutors. He pointed out how the perpetrators of mod-

ern anti-Semitism used the doctrine as the instrument with which they weakened the democratic governments which had been set up at the end of the first World War. By the time the second World War was in full fury, this connection had become generally apparent, but the identity between the badge of sufferance worn by the Jews and the badge of perpetual struggle against sub-humanity worn by the entire human race was not yet as clear as it should have been, and as Sachar's book made it.

Among Sachar's other published works were *The Religion of A Modern Liberal,* which he edited (1929), and *Factors in Modern History* (1927). He also contributed to numerous secular periodicals on literary subjects. In connection with his Hillel Foundation activities, he was one of the initiators of the idea to purchase President Franklin D. Roosevelt's New York city home as an Interfaith Center for the students of Hunter College, to be named for Roosevelt's mother, Sara Delano Roosevelt. Sachar also lectured throughout the United States, at the Hillel Foundations in seventy colleges and universities.

SACHER, HARRY, Zionist executive, barrister and editor, b. London, 1881. He was called to the Bar in England in 1909. Ten years later, in Palestine, he became one of the leading practitioners in that country, acting as attorney for numerous important business houses and, in addition, rendering legal service to the Zionist organizations. He returned to London in 1930; there, in 1943, he was still director of Marks & Spencer, Ltd., England's largest chain store company. He also served as a director of the Palestine Potash Company and the Agricultural Mortgage Company of Palestine.

Sacher became interested in Zionism as a young man, and helped found the first student Zionist organization of England. Together with Chaim Weizmann and others, he was active in the negotiations which led to the Balfour Declaration of 1917. In 1927, at the Fifteenth Zionist Congress, Sacher was elected a member of the Executive of the World Zionist Organization, and served until 1931.



Sacher also pursued an active career as a journalist. He first joined the editorial staff of the *Manchester Guardian* in 1905, and when he terminated that connection went to the London *Daily News,* where he remained until 1915. He was back with the *Manchester Guardian* from 1915 to 1919. He helped edit the *Palestine Weekly,* the *Zionist* and the *Jewish Review* (1932-34). Sacher published numerous pamphlets on Zionism, and was editor and contributor of the collection of essays entitled *Zionism and the Jewish Future* (1916).

Lit.: *Palestine and Near East Economic Magazine,* Sept. 30, 1927, p. 381.

SACHS, ABRAHAM SHIMCHO, author, b. Lithuania, 1879; d. Hoboken, N. J., 1931. He was educated at the University of Berlin, and came to the United States in 1908. Sachs was the editor of *Tzukunft* and *Freind* (labor organ), and from 1926 to his death was associated with *Der Tog.*

His writings include a number of books on labor topics in German and Yiddish, and *A History of Political Economy* (1911); *Basic Principles of Scientific Socialism;* and other works on economics and the history of socialism.

SACHS, BERNARD, neurologist, b. Baltimore, 1858. He studied at Harvard University (A.B., 1878) and the University of Strasbourg (M.D., 1882). From 1889 to 1905 Sachs was professor of neurology at the New York Polytechnic Hospital. Subsequently he was connected with several New York hospitals as consulting neurologist. He discovered a disease of children, known as Tay-Sachs disease, and did pioneer work in neuropsychiatry. He was author of the pioneer American work *A Treatise on the Nervous Diseases of Children* (1895); this was translated into German and Italian.

Bernard Sachs

His other writings include: *Nervous and Mental Disorders from Birth through Adolescence* (with L. Hausmann; 1926); *The Normal Child and How to Keep it Normal* (1926); *Keeping Your Child Normal* (1936); "Puberty and Adolescence" in *Brennemann's Practice of Pediatrics* (1936). Sachs was president of the first international neurological congress (Bern, Switzerland, 1931) and of the Association of Physicians at the New York Academy of Medicine (1933-34).

In 1942, when he had completed sixty years of medical practice, he was honored by a special number of *The Journal of Mount Sinai Hospital,* containing eighty-two research articles.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 171-72.

SACHS, EDWIN O., architect and fire prevention expert, b. London, 1870; d. 1919. He studied at the University College School in London. His specialty was the building of theatres and stage construction, and his attention was focused on the problem of making theatres fireproof. Sachs was the first to employ electrical power for stage lighting at Drury Lane Theatre (1898). In 1897 he founded the British Fire Prevention Committee, which was followed by the establishment of the first fire-testing station in Europe. Sachs traveled extensively to study the fire problem in practice. During the first World War Sachs was commissioner of the Special Fire Survey Force which he had organized.

Among his books published on this subject were: *Fires and Public Entertainments* (1897); *The Iroquois Theatre Fire* (1903); *The Baltimore Fire* (1904); *The Brussels Exhibition Fire* (1910); *Fire Protection in Paris* (1911); *Fire Protection in Russia* (1913). He was decorated by various European states.

SACHS, ERNEST, surgeon, b. New York city, 1879. He graduated from Johns Hopkins University (M.D., 1904), and did post-graduate work in Berlin, Vienna and London. In 1914 he became associate professor of surgery and in 1919 professor of clinical neurological surgery at the Washington University School of Medicine, holding the first professorship of

neurological surgery established in an American university.

He was affiliated with numerous hospitals, and president of the American Neurological Association. Sachs wrote *Diagnosis and Treatment of Brain Tumors* (1931).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 232-33.

SACHS, HANS, physician, b. Kattowitz, Silesia, Germany, 1877. In 1914 he was appointed assistant professor at the University of Frankfort, and in 1920 associate professor of immunology and serology and also director of the research department of the institute for cancer research at Heidelberg. Sachs was one of the most outstanding assistants of Paul Ehrlich.

His work dealt chiefly with anti-toxins, haemolysine and other anti-bodies; besides, he devised (together with Georgi) a method for the detection of syphilis from the blood serum. In 1930 he received the Ludwig-Darmstädter prize for his research on immunization. Ousted from his office by the Nazis, Sachs emigrated to Ireland in 1936.

His writings include: *Die Haemolysine und die cytotoxischen Sera* (Wiesbaden, 1907); *Über die Beziehungen des Kobragiftes zu den roten Blutzellen* (Munich, 1908); "Zur Serodiagnostik der Syphilis mittels Ausflockung durch choleoterinierte Extrakte" (in *Medizinische Klinik,* vol. 15, 1918, pp. 805-9); "Biologische Methoden zur Unterschiedung von Bakterien—Antigenen" (in *Handbuch der mikrobiologischen Technik,* vol. 2, 1923, pp. 1335-83); "Die Flockungsreaktionen zum serologischen Luesnachweis" (in *Handbuch der Haut- und Geschlechtskrankheiten,* vol. 15, part 2, 1929, pp. 264-415); "Fragen der Krebsforschung" (in *Medizinische Klinik,* vol. 2, 1931, supplement, pp. 37-66).

Lit.: *Biographisches Lexikon hervorragender Ärzte,* supplement, vol. 2, pp. 1349-50.

SACHS, JULIUS, educator, b. Baltimore, 1849; d. New York city, 1934. He studied at Columbia University and in several European universities, receiving the Ph.D. degree from the University of Rostock (1871). In the following year he founded, in New York city, the Sachs School for Boys, of which he was principal; he established the Sachs School for Girls in 1891. Among his pupils were Herbert H. Lehman, Irving Lehman, Walter Lippmann and Hans Zinsser.

In 1902 he was appointed professor of secondary education at Teachers' College, Columbia University, a position which he retained until 1917. The preparatory schools founded by him were soon discontinued. Sachs, who introduced and tested many new ideas in teaching, was equally influential as a theorist and practical educator. He retired with the title of professor emeritus.

His writings embrace the fields of education, philology and archeology. He was president of the American Philological Association (1891), of the New York Society of the Archeological Institute of America (1900-3), of the Schoolmasters' Association of New York (1889), and of the Association of Colleges and Secondary Schools of the Middle States, Headmasters Association of the United States (1899). He was also the secondary school representative on the College Entrance Examining Board (1900-7). On his fiftieth anniversary he established at Columbia University the Julius and Rosa Sachs Endowment Fund, designed to promote scholarship in the field of secondary education.

SACHS, JULIUS, botanist, b. Breslau, Germany, 1832; d. Würzburg, Germany, 1897. In 1861 he became professor of botany at the University of Bonn, in 1867 at the University of Freiburg, and in 1868 at the University of Würzburg, where he founded the institute for plant physiology. His major field of endeavor was plant physiology and the influence of light, especially ultra-violet rays, and of heat on the vitality of plants.

Results of his researches were published in *Arbeiten des botanischen Instituts,* which he edited. Sachs wrote: *Handbuch der Experimentalphysiologie der Pflanzen* (1865); *Lehrbuch der Botanik* (4th ed., 1874); *Vorlesungen über Pflanzenphysiologie* (1876; 3rd ed., 1882).

SACHS, KURT, musicologist, b. Berlin, 1881. He studied musicology with Kretzschmar and Wolf, receiving his doctorate from the University of Berlin. He held the post of professor of musicology at the University of Berlin with great distinction for many years. An authority on the origin and evolution of musical instruments, Sachs wrote many valuable treatises on that subject, and for several years was curator of the state collection of instruments at Berlin, and the Chargé de Mission au Musée d'Ethnographie in Paris. In 1934 he was compelled by the Nazi regime to leave Germany. For a period he settled in Paris, where he served as visiting professor at the Sorbonne University. In 1937 he came to the United States, where he became professor at New York University, still occupying that post in 1943. He edited a valuable collection of phonograph records called *Anthologie Sonore,* devoted to rare old music. He wrote some twenty books on music, two of which were published in the United States: *A World History of the Dance* (1937) and *A History of Musical Instruments* (1940).

Lit.: *Musical Quarterly,* July, 1941.

SACHS, MICHAEL JEHIEL, rabbi and poet, b. Glogau, Silesia, Germany, 1808; d. Berlin, 1864. In 1836 he was called as preacher to Prague, where he became a close friend of Chief Rabbi Salomo Judah Löb Rapoport. In 1837 he supplied the translation of fifteen Biblical books for Leopold Zunz' rendition of the Holy Scriptures. Called to Berlin as assistant rabbi and preacher in 1844, he soon won, through his eloquence, the heart of the community and brought it about that the newly founded oppositional Jewish Reform congregation was limited to a small number. An advocate of moderate reform, he was bitterly opposed to the radical reformer, Samuel Holdheim, and resigned his office when the board of trustees of the Jewish community granted the latter a special funeral and a special plot in the cemetery. Sachs' first book was a translation of *Psalms* (with comments; 1835).

In 1845 he published *Die religiöse Poesie der Juden in Spanien,* which later inspired Heine to write the poem *Jehuda ben Halevy.* His works include: *Beiträge zur Sprach- und Altertumsforschung* (1852-54); *Stimmen vom Jordan und Euphrat* (1853); *Die Festgebete der Israeliten,* a poetical translation of the Mahzor (1855-56); a translation of the daily prayer-book (*Siddur,* 1858), which, like his other translations, became popular. Two volumes of his sermons were published posthumously (1866-69).

Lit.: *Otzar Yisrael,* vol. 4 (1910) 238; Bernfeld, S., *Michael Sachs; Allgemeine Zeitung des Judentums,* 1864, p. 143; *Monatsschrift für Geschichte und Wissenschaft des Judentums* (1908); Eschelbacher, J., *Michael Sachs* (1908).

SACHS, SENIOR, historian of literature and bibliographer, b. Keidany, Lithuania, 1816; d. Paris, 1892. During his study at the University of Berlin he supported himself by acting as a watcher of the dead. Sachs was author of many essays on the history of Hebrew literature. Especially important was his edition of Solomon ibn Gabirol's poems (1868).

He issued the collections *Hayonah* (1851) and *Hatehiyyah* (1857), revised and annotated the catalogue of Hebrew manuscripts published by Leopold Zunz, and, after the death of Samuel Löb Goldenberg, edited the eighth and ninth volumes of the Hebrew periodical *Kerem Hemed.* In 1856

he was appointed custodian of Baron Horace Günzburg's library in Paris, and gave a detailed description of its Hebrew manuscripts. Sachs was a friend of Samuel David Luzzatto, Adolf Jellinek, Abraham Geiger, Leopold Zunz, and other Jewish scholars.

Lit.: *Otzar Hasafruth,* vol. 2; *Yevreiskaya Entziklopedia,* vol. 6; Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana* (1891 and 1895); the literature in *Studies in Jewish Bibliography and Related Subjects in Memory of Abraham Solomon Freidus* (1929), Hebrew section, p. 44; *Die hebräische Publizistik in Wien* (1930) 193 et seq.

SACHS, THEODORE BERNARD, tuberculosis specialist and public health worker, b. Dvinsk, Russia, 1868; d. Chicago, 1916. He was exiled by the Russian government and escaped to the United States at the age of twenty-one. He received his medical degree from the University of Illinois in 1895, and immediately interested himself in the study of pulmonary tuberculosis from a sociological as well as medical point of view. In 1900 he established at the Jewish Aid Dispensary of Chicago the first tuberculosis clinic in that city. Together with his wife, Sena L. Wilson, he conducted two extensive investigations, in 1902 and 1903, of the incidence of tuberculosis in the congested districts of the city and of the problem of children of tuberculous parents. For this work he was honored at the International Tuberculosis Congress, in 1908, at Washington, D. C.

Among other numerous institutions, public and private, for the study and cure of tuberculosis with which Sachs was prominently identified were the Robert Koch Society, of which he was founder and first president; the National Association for the Study and Prevention of Tuberculosis (president, 1915-16); the Chicago Municipal Tuberculosis Sanitarium, which he helped build, and which he served as director (1909-13) and president (1913-16).

Lit.: *Illinois Medical Journal,* April, 1916, pp. 317-18; Kelly and Burrage, *Dictionary of American Medical Biography* (1928) 1071-73.

SACK, ERNA, opera singer, b. Spandau, Germany, 1908. She made her debut at the Charlottenburg Opera in Berlin, following which she was engaged by the Bielefeld Opera. The extraordinary range of her voice made her an immediate favorite and resulted in guest appearances in Wiesbaden and Breslau. It was said that no one since Jenny Lind could duplicate her high register. In 1935 she was appointed principal soprano of the Dresden Opera which, combined with her guest appearances in leading opera houses of Europe, made her internationally famous. In 1937 she came to the United States, and thereafter appeared extensively in that country as soloist with orchestras, in recitals and over the radio.

SACK, LEO R., American diplomat and journalist, b. Tupelo, Miss., 1889. At the University of Missouri he was one of the student founders of the School of Journalism, the first of its kind in the United States. He became a reporter with the Natchez, Miss., *News* in 1909, and by 1915 he was in Washington, D. C., as correspondent for several Texas newspapers. On his return from service abroad in the first World War he became Washington correspondent of the Scripps-Howard newspapers. He acted also as correspondent for the *American Hebrew.* His political writings attracted attention in the capital; at one time a series published by him in the Pittsburgh *Press* led to the exposure of irregularity in senate elections in Illinois and Pennsylvania. Sack was one of Franklin D. Roosevelt's earliest supporters, and when Roosevelt took office he appointed Sack Envoy Extraordinary and Minister Plenipotentiary to Costa Rica.

In this post Sack remained from 1933 to 1937, rendering special service in effecting a closer understanding between Costa Rica and the United States. He negotiated the Reciprocal Trade Agreement in 1936. On his retirement he joined the Schenley Products Company of New York as public relations executive. In 1939 he settled in Washington, D. C., as a public relations consultant, and was active in that capacity in 1943.

Lit.: *American Hebrew,* March 26, 1937, p. 1061.

SACKÉ, HENRY, South African pioneer, b. Lithuania, 1856; d. Willesden, England, 1933. In his early twenties Sacké went to Kimberley, and became closely identified with the mining industry of South Africa. After acting as manager of the Victoria Diamond Mines, he went to Johannesburg in 1886, where he erected the Sacké Building, a landmark of the city. In 1887 he was called by Cecil Rhodes to Barberton, and engaged in mining investigation. Sacké examined the Barberton occurrences, and took an active part in the development of Barberton, which at that time astonished not only President Paul Krueger but the whole world. Sacké retired from business at the beginning of the 20th cent. He died on a visit to England.

SACKLER, HARRY, Yiddish, Hebrew and English playwright and novelist, b. Bohorodczany, Galicia, 1883. His father having died young, Sackler was brought up by his maternal grandfather, Feivel Shreyer, who was for more than half a century rabbi of Bradzhin and the first of the Galician rabbis to accept Zionism.

Sackler came to the United States in 1902, and studied at the New York University Law School from 1906 to 1908. At the age of fourteen he began to write Hebrew verse, but his debut as a published writer came in 1907, with a Yiddish story, *In Goldene Kaiten,* published in the *Forward.* It was the monologue of a lunatic. Yiddish literature at that time was devoting a great deal of space to the underworld, and Sackler, who was later to write mystical and legendary dramas, now turned out many underworld stories. Two of his one-act plays, *Yokel Ganev* (1908) and *Untervelt* (1909), were until the outbreak of the first World War popular with Yiddish dramatic clubs as well as the legitimate theatre.

Beginning with 1909, and for seventeen years thereafter, Sackler devoted himself to communal work. Among the posts he occupied during this period was the general secretaryship (1917-18) of the New York City Kehillah; under his supervision appeared *The Jewish Communal Register of New York City* (1918). From 1918 to 1923 he was secretary of the organization department of the Zionist Organization of America, except for several months during 1920 when he made his first trip (as correspondent for the *Day* and the *Hatoren*) to Palestine. From 1923 to 1926 Sackler was secretary of the Jewish Education Association.

Sackler's first drama on a large scale was *Jose of Yokrath* (The Saintly Tyrant), built on the legend of an Amora in Palestine whose dogmatic piety caused him to curse his only son and his only daughter with death because they had come under Hellenist influence. It was produced in Yiddish in 1923, at the Irving Place Theatre in New York. His second well-known drama, *Yizkor,* the story of a Jewish hero who is loved by a Polish princess and who chooses death, was very successfully produced by Maurice Schwartz in 1923. *The Tzaddik's Journey* is a playful narrative of Hasidic legend, telling of the conquest of a Hasidic rabbi over Satan and Lilith who, in the guise of an old gypsy and his daughter, are luring the Tzaddik's heir from the spiritual to a mundane existence. It was produced both by Maurice Schwartz (1923) and later by the Palestinian Ohel Theatre. Among his other dramatic productions were *Major Noah* (Yiddish Art Theatre, 1928) and *Rahab* (Habimah, Palestine, 1932). *Yizkor* was produced also by the Palestine

Ohel Theatre and made into a film (Vienna, 1924). In 1929 Sackler won first prize for Yiddish literature in America. In 1935 *Festival at Meron,* a novel in English, was published. It is based on an imaginary exposition of the character of Simeon ben Yohai, one of Akiba's five students.

Through all of Sackler's work the Book is felt, the intellectual tradition. Simeon ben Yohai spends thirteen years as a fugitive in a cave, because the defense of the Torah is involved. But once he has emerged, he resumes his practical role of compromise with Rome. Yet it is to him that history has ascribed the creation of the *Zohar,* the source of Cabala. Simeon may be Sackler himself, a rationalist and mystic, a clear-headed thinker who listens to the secrets of a friendly demon, an extremist and revolutionary in his Jewish ideas, but practically a careful social worker, moving step by step toward his goal: in short, an Americanized East European. B. RIVKIN.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1929), cols. 678-84; Zilberzweig, Z., *Lexikon fun Yiddishen Theater,* vol. 2 (1934) cols. 1519-22; Waxman, Meyer, *A History of Jewish Literature,* vol. 4 (1941) 984-87, 1060; Epstein, A., in *Sefer Hashanah* (1940).

SACKS, LEON, American Congressman, b. Philadelphia, 1902. He was admitted to the Pennsylvania bar in 1926, and established his practice in Philadelphia. Entering politics, he became a member of the Philadelphia Democratic City Committee in 1934, and two years later of the State Committee. In 1935 he was appointed deputy attorney general of the state, and held that office until 1937, when he was elected a member of the United States House of Representatives. He was reelected three times, his last term to expire in 1944. Sacks became active in the Jewish community and in the Zionist Movement.

SACKUR, OTTO, chemist, b. Breslau, Germany, 1880; d. Berlin, 1914. In 1905 he became instructor and in 1911 professor of physical chemistry at the University of Breslau. In 1914 he was made head of a department of the Kaiser Wilhelm Institute in Berlin-Dahlem. He worked on caseine, electrical smelting, osmotic pressure and passivity phenomena.

In 1908 his work *Die chemische Affinität und ihre Messungen* and in 1912 his well-known textbook, *Lehrbuch der Thermochemie und der Thermodynamik* (2nd ed., 1928), appeared.

Lit.: Chemische Zeitung (1915) 13; *Berichte der deutschen chemischen Gesellschaft,* vol. 48, p. 1.

SACRAMENTO, a city in California, having a population of 105,958 (census of 1940), including about 1,200 Jews (1943). Jews appear early in the communal life of Sacramento. As early as 1849 high holy day services were held in the then pioneer community, and in 1850 the Hebrew Benevolent Society was founded.

The Sacramento city directory of 1851 contains many names which seem to be Jewish; among them Lewis Abrams, A. W. Alexander, H. Arents and Co., William Arents, Ben Oppenheimer, Zinser and Kremer, clothiers; Herman Bloom, M. A. Blumenthal, M. A. Bransky, William Breitenstein, Cohan and Green, clothiers; A. Dubroski, Jacob Feidler, W. and A. Gallant, E. Golstein, M. Golstein, G. Haines, A. Hirsfelter, clothier; P. Hirshfeld, Isaac Lewis, J. Isaacs, Lewis Jaretsky, J. B. Jacobs, Klopstine and Co., Kohen and Co., Slomowsky and Co., clothiers; L. Sloss, L. Solomon, Julius Unger, and S. Weil.

In 1849 congregation B'nai Israel was organized. In 1850 a cemetery was purchased. Its Temple was dedicated in 1852, and the first rabbi is referred to in the congregational minutes as the Reverend Mr. Wolf, who served from 1852 to 1857. A B'nai B'rith lodge was organized in 1856, and a year later the Ladies' Hebrew Society. In 1900 the Mosaic Law Congregation (Orthodox) was formed, with Alfred Arndt as rabbi. A free loan society was constituted in 1924, and two years later the Jewish Consumptive Relief Society. In 1934 the united Jewish welfare campaign was launched, in the interests of European and American Jewish relief.

Among the prominent Jews of Sacramento were Lewis Elkus, county supervisor (about 1865); Albert Elkus, mayor of Sacramento (1921-25); David Lubin, founder of the International Institute of Agriculture and earliest promulgator of the United States parcel post; Simon Lubin, state commissioner of immigration and housing (1913-23), and president of the Pan-American Reciprocal Trade Conference (1930); Harris Weinstock, member of the Industrial Relations Commission (1913); Mitchell W. Nathan, member of the Sacramento Civil Service Board (1921).

In 1943 the rabbi of B'nai Israel (Reform) was Norman M. Goldburg, who was on leave as chaplain with the United States Army. Serving the congregation in his absence was Alexander Feinsilver. The rabbi of Mosaic Law Congregation in 1943 was Percy Pinchos Katz. ALEXANDER FEINSILVER.

SACRIFICE. The sacrificial cult is a prominent part of all ancient religions, especially those of the Semitic peoples. Since the religion of the Israelites was based on older Semitic forms, and evolved out of them, an understanding of these earlier rites which lie at the basis of the Biblical worship of God is vital for an understanding of the latter.

Sacrifice, as evolved by the Israelites at an early period in their history, was a gift made to the deity in order to show the worshipper's obedience to the true Lord and Giver of all good. For the ancient Semites, however, sacrifice was primarily a means of establishing a contact and close relationship with the deity by means of a sacramental act. It is because of this original purpose of the sacrificial act that blood plays such an important part even in the later ritual. The blood of the sacrificial animals was sprinkled upon the altar to the very end of the sacrificial cult in Judaism; the shedding of their own blood by the priests by making incisions in their flesh was a widespread mourning custom, which was strictly forbidden by the laws of *Lev.* 19:27-28; *Deut.* 14:1-2. The cutting of the sacrificial animal into two parts, the setting of these on the ground, and the walking between these bleeding halves by the sacrificer—this and the other customs show that blood, which was regarded as the seat of life, served for the sacramental uniting of man and the deity. It was for the same reason that both man and the deity (through the fire on the altar) shared in the consumption of the flesh of the sacrifice, thus making it a sacramental meal; for this reason salt, which seasons human food, was always a part of the ritual.

The same feeling that sacrifice is a bond between god and man explains the institution of human sacrifice. In this case, usually in time of the most urgent need, the blood of a member of the clan was used as the strongest tie to reunite the bond between the clan and its god, which had apparently become loosened. It is true that the Torah strictly forbids such human sacrifices as an abomination of the heathen (*Lev.* 18:21, 20:2; *Deut.* 12:31; 18:10), and that the story of the sacrifice of Isaac is intended to show that God does not desire human victims. Nevertheless, the story of the actual sacrifice of the daughter of Jephthah (*Judges*

11), as well as the reports of the evil practices of Ahaz, Manasseh and others, show that there were human sacrifices in ancient Israel, although these were for the most part a result of the influence of the cult of Moloch. Such sacrifices were frequent among the neighboring peoples, such as the Moabites (*II Kings* 3:27) and the Phoenicians. The valley of Hinnom, near Jerusalem, became a name of infamy (Gehinnom, Gehenna) because it was the place where children had been "passed through the fire."

It appears to have taken some time before the Israelites freed themselves from the idea of sacrifice as a sacramental union with God and made it a symbol of service. In the time of the early prophets the sacrifice was still permeated with the older conception. Accordingly, both Amos (*Amos* 5:25) and Jeremiah (*Jer.* 7:21) denounce the sacrifice as an institution which is foreign to Israel, declaring that they had never made sacrifices in the wilderness and that God had never commanded them to do so. As it is very unlikely ancient Israel ceased to perform sacrifices, it is probable that these prophets, who bitterly rejected the sacrificial cult of their time and sought a worship of God based on genuine devotion and righteous acts, projected their idealism into the wilderness period. It is far more probable that in ancient Israel sacrifice was at first a private institution, performed by families and clans; that it was only in Palestine, and after the consolidation of the nation, that the cult acquired a national character and was applied to the entire people. *Ex.* 24:5-8 (regarded by Bible critics as one of the oldest portions of the Torah) describes a covenant between God and Israel which was ratified by having half of the blood of the sacrificial animal sprinkled upon the altar and half upon the people; this points to a very ancient form of communion through blood between deity and people.

In the early period of Biblical history, sacrifices could be offered anywhere; later this was limited to the Temple at Jerusalem. The older Biblical books give but little detail of the material, manner and form of the offering. The most general term for sacrifice was *korban*. There is also mention of the *minhah* ("meal-offering") of meal or unleavened bread, in connection with the *nesech* ("libation") of wine. The sacrifice of an animal was called *zebah;* the blood and the fat were offered upon the altar, while the flesh was eaten by the one who brought the offering. Another ancient form of sacrifice was the holocaust (*'olah* or *kalil*), in which the entire animal was burnt upon the altar, and the one who offered it received no share of it; another form was the *todah* ("thank-offering"), which was offered as a rule on the occasion of the fulfilment of a vow. One type of *zebah* was the so-called "peace-offering" (*shelamin*), perhaps better translated as "covenant-offering," which established or restored peace between God and man.

There is an express and minutely detailed set of sacrifices in that portion of the Torah which is ascribed by Bible scholars to the Priestly Code of the post-Exilic period, and which seems to be based on a late theory of the purpose of the sacrificial cult. The details of it are found in *Lev.* 1 to 7.

The sacrificial animals are the same as in the earlier period: cattle, sheep, goats and doves. The products of the soil that might form part of the sacrifice were grain, wine and oil, as well as incense. The old distinction between the holocaust and those forms of the sacrifice in which the offerer and the priest receive their portions was retained. Strict regulations provided that only animals without blemish and more than eight days old might be sacrificed; as a rule the smaller animals were sacrificed at the age of a year, the larger at the age of three years. Fine flour replaced coarse meal in the offering. With the exception of doves, only male animals might be offered as holocausts. Every morning and evening there was a perpetual holocaust (*tamid*), to which were added especially rich sacrifices on the Sabbaths and festivals, as well as the consecration sacrifices when the priests enter upon their offices (*Ex.* 29; *Lev.* 8).

Especial attention was paid to the sin-offerings, which were to restore the bond between God and man which the latter's sin had disrupted. There were two forms: the sin-offering proper (*hattath*), for unrighteous conduct toward God, and the guilt-offering (*'asham*), for wrongs committed against man, as an additional expression of penitence after the wrong had been righted by proper compensation to the injured party. There was a graduated series of such offerings for various social classes, such as the high priest, princes, and ordinary people of various degrees of wealth. In this development the laws laid down in *Ezekiel* represent a step in the evolution of this new concept of sacrifice.

The sin-offering replaced ransom money to bring about the forgiveness of God. The offerer placed his hand on the head of the animal, as a sign of dedication, and stated that he brought the offering for this specific purpose. The sprinkling of blood was still retained, and the old idea of communion was thus still preserved. Even sins committed in ignorance required a sin-offering, since it was felt that any weakness of man can arouse the anger of God and therefore needs forgiveness. Yet there were sin-offerings which had to be brought after entirely accidental contact with things that are regarded as unclean, as after childbirth, an issue of blood, or the like.

The Biblical theory of sacrifice is the basis for the Talmudic treatment of the subject. Despite the fact that the Temple had already been destroyed and the sacrificial cult in Judaism had already come to an end, the sacrifices were elaborately and minutely discussed; for it was felt that at any time they might be restored. Later, as this hope vanished, the feeling grew that prayer, fasting and suffering take the place of offerings upon the altar.

SACRIFICE OF ISAAC, *see* AKEDAH; ISAAC.

SADAGORA, a small market town in the district of Czernowitz, Bucovina, founded during the Russian-Turkish war in 1769. It had a Jewish population of 3,000 out of 4,500 inhabitants (1930). Sadagora was the residence of the descendants of the wonder rabbi Israel Ruzhyner, founder of the Friedmann dynasty. The first Austrian administrator of Bucovina, General Gabriel Spleny, encouraged Jewish settlement in Sadagora and endeavored to secure for it the status of a free city. While Jews were forbidden to dwell in the open country, Sadagora was declared a free residential district in 1790. Thus there was founded a secondary Jewish community which was subordinate to the main Jewish community in Czernowitz; after the latter and Succava, Sadagora soon became the largest Jewish settlement in Bucovina.

The presence of this great number of Jews and their outspoken inclination toward Hasidism caused Israel Ruzhyner, the Hasidic rabbi, a refugee from Russia, to choose Sadagora as his residence, instead of going to Galicia, whither he had been ordered to proceed by the Austrian government. After four years of negotiations he was granted the right of permanent residence in Sadagora, and immediately the city made great progress. When in his fifties Ruzhyner built there a magnificent palace in the Arabic-Moorish style.

George Wolf

Very soon the community severed itself from the Czernowitz head community, and due to the continuous influx of Jews its members, greatly increased in numbers, soon comprised the majority of the total population of the city (80 per cent in 1910). Accordingly, ever since the issuing of a municipal decree for Bucovina in 1863, the mayor of the city was always a Jew, and after the introduction of universal suffrage in Austria (1907) Sadagora and Czernowitz constituted a combined voting district in the parliamentary elections in order to insure for the Jews of Bucovina representation in parliament.

Owing to the rift (1886) which split the Hasidic movement into Bojan and Sadagora Hasidim, Sadagora lost much of its prominence. As a result of the Russian invasion during the first World War, the majority of the Sadagora Jews went to Czernowitz, and the two heads of the Friedmann dynasty emigrated to Vienna.

SADDUCEES. This name was borne by a party or sect of Jews during much the same period as that in which their chief opponents were called Pharisees, i.e. about the 1st cent. before and the one after the beginning of the Common Era.

The origin of the name is a mere matter of conjecture, as in the case of the name Pharisee; and in neither the one case nor the other does the name indicate the principles of those who were so called. Beyond the fact that the name Sadducee, *Tzadduki,* is evidently closely akin to the personal name Zadok, there is nothing to determine the reference. Zadok was a not unusual name. The explanation most generally favored is that the Zadok from whom the Sadducees got their name was the high priest of the time of Solomon, the Sadducees being more or less closely connected with the high priests and the dignitaries of the Temple. That there was such a close connection is scarcely open to question, and the reference to the name of the Solomonic high priest is certainly plausible. But the only explanation of the name Sadducee put forward in rabbinical literature gives no support to that reference.

The story that Antigonus of Socho had two disciples, Boethos and Zadok, from the latter of whom the Sadducees derived their name, may be quite unhistorical, and few scholars attach any weight to it. But at least it shows that the author of the story, who must have lived not earlier than the reign of Herod, knew nothing about the connection of the Sadducees with the Solomonic Zadok. If that connection had been generally accepted in common usage, it could scarcely have been contradicted without a word of explanation. The name Sadducee must be regarded as a still unsolved riddle.

The doctrines of the Sadducees are less obscure; and although it may be impossible to give a full and exact account of them, yet it is possible to understand, with a fair amount of accuracy, who they were. It should be remembered that whatever is said about them in rabbinical literature is the evidence of hostile witnesses. In fact, the Sadducees are known, historically, mainly as the opponents of the Pharisees, although the principles of the Sadducees were certainly older than those of the Pharisees.

The fundamental difference between the two parties was their respective attitude toward the Torah, to which, ever since the time of Ezra (444 B.C.E.), the allegiance of the Jewish people had been pledged. No one disputed the authority of the Torah; and, probably for some considerable time, no one inquired into the nature and scope of that authority. Presumably, what happened in the times soon after Ezra was that the Torah was administered by the priests, who gave such explanations of its contents as seemed to them to be adequate, and, where the Torah contained no clear guidance, such directions as they thought fit. The priests had always been the instructors of the people, in regard to their religious duties. When Ezra proclaimed the Torah and bound the people to its acceptance by a solemn oath, he gave a more detailed code of instruction for the performance of religious duties than had even been available before; but that made no difference to the function of the priests as the persons who should, by ancient right, explain the contents of that code, and supply what it did not contain.

Now the Torah was binding on the people because of the oath which had been taken by their representatives in the time of Ezra. That solemn oath gave it all the authority it had. Naturally, the promise to obey it extended to what was expressly written in it and no further. This view was in accordance with the immemorial practice in regard to religious instruction of the people by the priests, and for some time there would not seem to have been any reason for challenging it. The Torah held an important place in the estimation of those who were responsible for the direction of the public affairs of the Jewish people, but it did not hold the supreme place. The high priest and the leading men naturally associated with him in political and social matters would pay careful heed to the Torah so far as it was relevant.

But obviously on many public questions the Torah had nothing to say; and the statesmen of the time, including of course the high priest and his chief colleagues, did what seemed to them best in the interests of their country. The gradual effect of this line of policy was that the Torah receded into the background; its place was more and more taken by the ordinances of the governing body, mainly the priests. Its authority was not questioned, but the scope of its authority grew less year by year.

The challenge to this whole policy was given by the Pharisees (or those who came to be known as the Pharisees) when they insisted that the Torah was given in order to be the supreme authority for the guidance of the whole of life. It was binding not because (or not only because) the people had solemnly sworn to obey it, but because it was the declared will of God. Its authority was His authority; and only so far as any alleged religious duty, custom, law, for which obedience was claimed, could be brought within the Torah or deduced therefrom, only so far was it binding on the people. The challenge thus given to the older view of the Torah was expressed in the conception of the Unwritten Torah, the Oral Tradition, which became the vital element in Pharisaism. The challenge thus given put the upholders of the older view on the defensive; and that was, from first to last, the attitude of the Sadducees toward the Pharisees.

The Sadducees were guardians and adherents of the ancient order, the time honored custom, the prescriptive rights; the Pharisees appeared to them as annoying innovators, interfering with what did not concern them, and making difficult, if not impossible, much that was necessary in carrying out the public business of the country. Obviously, therefore, the Sadducees fastened on the conception of the Unwritten Torah, the Oral Tradition, as the key to the danger of the Pharisaic attack; and throughout their existence they flatly denied the validity of the Unwritten Torah.

All that is stated in rabbinical literature, in Josephus and in the New Testament is in keeping with this view of the position held by the Sadducees against the Pharisees. It is true that in these various sources no special stress is laid upon the point which has been regarded above as the real

ground of difference. But it is nowhere denied. And from an attitude toward the Torah such as that indicated above, it is easy to understand why it should have been said of them that they denied the belief in a future life, in the existence of angels and spirits, etc., and why they differed from the Pharisees on some purely legal questions mentioned in the Talmud.

It will now be possible to indicate with some accuracy the position of the Sadducees as an element in the Jewish people. They were not a political party, and certainly not a school of philosophy as Josephus calls them. They were not a definite society as the Pharisees were. They were such of the leading men, high priests, nobles and so forth, who, in regard to religion, were faithful to what they considered to be the good old way, and whose conception of the allegiance which they owed and admitted toward the Torah allowed them to make a free use of their own intelligence in conducting the public affairs of the people. The Oral Tradition, which was of vital importance to the Pharisees, was literally nothing to the Sadducees; and thus, while it formed the ground of contention between the two parties, it does not serve to indicate, except negatively, what the Sadducees were in themselves. It is clear that power, privilege and vested interests played a much larger part in the life of the Sadducees than in any other section of the nation. In one way or another they held control of the Temple; and, unless in the last few years of its existence, the services conducted there were performed in accordance with their views. So closely were they associated with the Temple that after its destruction in 70 C.E. the Sadducees, as a group or party, are no more heard of. Sadducees continued to exist, to the extent at all events that the Sadducean view in regard to the Unwritten Torah was known and combatted by the Pharisaic teachers for a considerable time after the party as a party had passed away. And such later indications serve to show how fierce the opposition had been, and how great the danger which, in the view of the Pharisees, had threatened the Jewish religion, a danger which to some extent revived centuries later in the attack of the champions of Karaism.

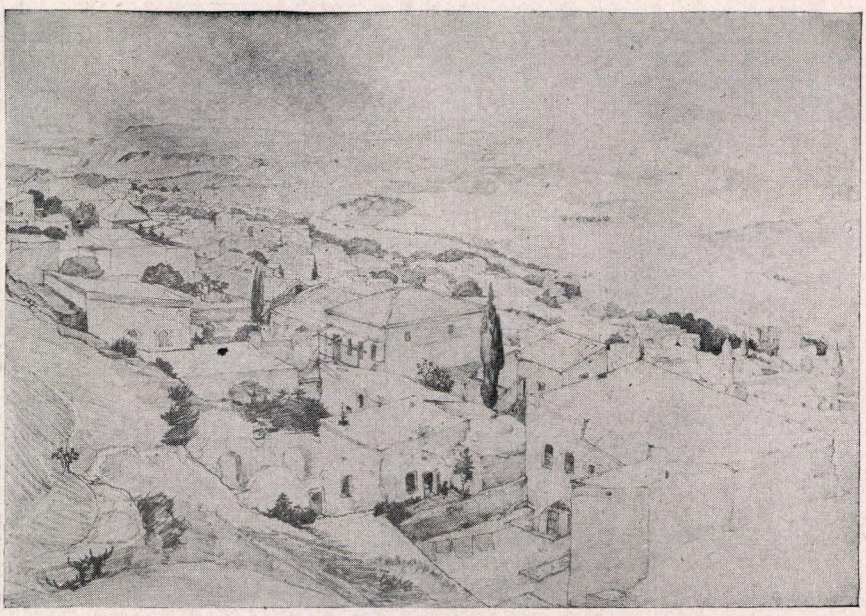
SAENGER, MAX, physician, b. Bayreuth, Germany, 1853; d. Prague, 1903. In 1890 he became assistant professor of gynecology and obstetrics at the University of Leipzig, and in 1899 was promoted to a professorship. Saenger was a pioneer in the field of gynecological operations as well as obstetrics.

His published works include: *Die Tripperansteckung beim weiblichen Geschlecht* (1889); *Asepsis in der Geburtshilfe und Gynäcologie* (1894); *Die Neubildungen der Eileiter* (1895); *Die klinischen Verhältnisse der Ovarial-Embryonen* (1890). In collaboration with A. Martin, he edited a periodical on obstetrics and gynecology.

SAENGER, SAMUEL, writer and diplomat, b. Saagar, Lithuania, 1864. He studied at the Universities of Berlin and Freiburg, and also in England and France. An article of his, published in Maximilian Harden's *Die Zukunft* (1900), refuting Houston Stewart Chamberlain's claim that Jesus was of non-Jewish origin, attracted much attention. Saenger was the first to introduce John Ruskin into Germany (*John Ruskin, sein Leben und Lebenswerk,* Stuttgart, 1900). In recognition of his book on John Stuart Mill (*John Stuart Mill, sein Leben und Lebenswerk,* Stuttgart, 1901) he was appointed royal professor by the king of Prussia.

The synagogue at Safed



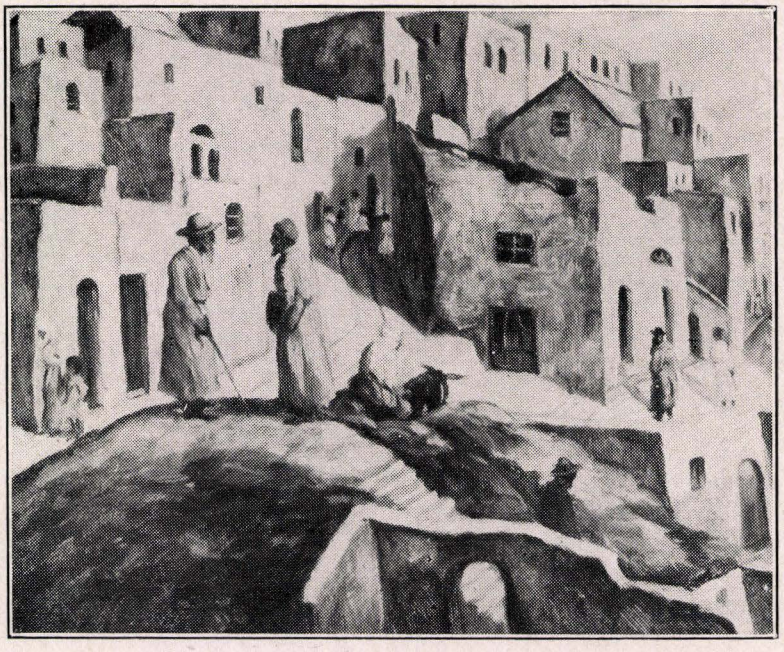
In 1908 Saenger became editor of *Die neue Rundschau,* Germany's leading liberal literary monthly, published by the S. Fischer publishing house, and he contributed the political chronicles to it under the pen-name of Junius. Saenger was also chief of the sociological and political department of the S. Fischer firm. His other writings include *Die wirtschaftlichen Aussichten des britischen Imperialismus* (1906) and *Englische Humanisten* (1908).

From April, 1919, to October, 1920, he represented the German Reich in Prague, the first Jew to represent the Reich as chief of a foreign mission and the first German diplomat to conclude a commercial treaty with Czechoslovakia. Subsequently he was made privy councilor in the state department, and was active there until 1929.

In 1933 he was ousted by the Nazis from his position as editor of *Die neue Rundschau,* and in 1941 he arrived in the United States, where he was living in 1943.

SAFED (Hebrew, *Tzefath*), city in Upper Galilee, Palestine, with a population of 10,800, including about 4,000 Jews (1941). The place is not mentioned in the Bible (it is not identical with the Zephath of *Judges* 1:17), but it appeared in the writings of Josephus Flavius as a fortress by the name of Sepphis, in the Midrash probably Tzof or Tzefiyah, and is once mentioned in the Palestinian Talmud (*Yer. R.H.* ii, 58a) as a place of the fire signals announcing the New Moon (Rosh Hodesh); moreover, it was listed as one of the priestly residences of Galilee under the name of Tzefath, which is used also today. The place seems to have been unimportant in Talmudic times, but under the Arabs it became an important fortress which was destroyed several times by the Crusaders. Remnants of the fort are still to be seen.

The large Jewish community which existed at Safed in the 14th cent. was increased after 1492 by the settlement of refugees from Spain. At Safed, which had about 1,000 Jewish families in the 15th cent., a peculiar mystical religiousness developed and valuable contribu-



A view of Safed. From an etching by Saul Raskin

tions to Jewish learning were made in the city which, for a time, was the residence of some of the most important scholars of the era.

Among them were Jacob Berab, who proposed the reintroduction of the ancient rite of ordination (Semichah) in order to pave the way for the Messianic era; Joseph Caro, head of a Yeshiva; the Cabalist Isaac ben Solomon Luria and his disciple, Hayim Vital; and many other scholars, Cabalists and poets. Many of them practised agriculture besides studying. The influence of this center of Jewish spiritual life upon world Jewry in the 16th cent. was very deep. Up to modern times it is noticeable especially in the Hebrew liturgy (for instance, Yom Kippur Katan, Hoshana Rabbah and Lechah Dodi). The Halachic literature was enriched by the commentaries written in Safed and by Caro's *Shulhan Aruch*. The first printing plant of Palestine was established in the village of Biri in the vicinity of Safed, and through it the works which originated in Safed were disseminated all over the world.

Various misfortunes and the cruel reign of the Turkish governors ended the flourishing Jewish intellectual life of Safed in the 17th cent. The Jewish community was frequently plagued by earthquakes, and there was inner decay. In the 19th cent. Safed was a center of the Halukkah, and it resembled the small Jewish cities of Eastern Europe. Not until the 20th cent., due to the efforts made by the Zionist administration, did Safed recover. In August, 1929, it was the scene of anti-Jewish riots staged by the Arab population, in the course of which twenty-three Jews were killed. The city is beautifully situated, and on account of its mountain climate popular as a summer and vacation resort. It has good automobile connections. Meron, with the grave of Simeon ben Yohai, place of pilgrimage on Lag Beomer, is situated nearby. In 1942 the Jewish National Fund purchased the land and buildings of the Scottish Mission at Safed, and the government in-

A corner of Safed. From an impression by Lionel Reiss

tended to include within the town planning area of Safed an area of 4,000 dunams (about 1,000 acres), thus extending opportunities for modern construction.

SAFETY LEGISLATION. The enactment of safety legislation on the part of various governments began about the middle of the 19th cent., due to the mechanization of industry and the resulting physical hazards to workers. It is interesting to note, however, that Jewish law contained provisions for safety as far back as ancient times.

The Bible prescribes among its laws: "When thou buildest a new house, then thou shalt make a parapet for thy roof, that thou bring not blood upon thy house, if any man fall from thence" (*Deut.* 22:8). Rabbinic literature interprets this passage, not as an individual law, but as a general principle which makes it a positive commandment to remove any object which may cause injury or accident, or at least to built a protection about it; it states that one who neglects to do so transgresses a negative commandment (*Sifre* and *Pesikta Zutrathi* to *Deut.* 22:8).

The Talmud mentions such instances of neglect of safety as leaving insecure ladders leaning against walls or allowing vicious dogs to roam at large (*B.K.* 15b). Anyone neglecting to remove such hazards was excommunicated by the court until he removed the obstacle (*Keth.* 41b). An individual is liable for damages if he left on public property any object that constituted a hazard, even though the object was originally not a hazard when it was first placed there and did not become so until later.

SAFIR, SHELLEY RAY, biologist and educator, b. New York city, 1890. He studied at the College of the City of New York and at Columbia University, which conferred upon him the Ph.D. degree (1920). He was research fellow at the Marine Biological Laboratory, Woods Hole, Mass., during the summers from 1915 to 1917 and from 1921 to 1922. The scholarly rank which he attained in rabbinical Judaism made him eligible for the post of principal of the Talmudical Academy (high school) of the Rabbi Isaac Elchanan Theological Seminary, which he occupied in 1918 and was still holding in 1943. In 1926 he was appointed as lecturer in the College of the City of New York, from which he was called in 1928 as professor of biology to Yeshiva College. He served also as dean of the faculty from 1928 to 1936.

Safir acted as supervisor of Jewish parochial schools from 1923 to 1925 and from 1941 to 1942. Having been instrumental in founding the Jewish Academy of Arts and Sciences, he became one of its fellows and a member of its board of directors. He was a fellow also of the American Association for the Advancement of Science. In addition to numerous articles in the scientific press, Safir was the author of *Biology Experiment Sheets* (1929).

SAFRAN, ZEEV BEZALEL, rabbi and scholar, b. Stefanesti, district of Botoshani, Roumania, 1856; d. Bacau, Roumania, 1929. He was active at Bacau as chief rabbi for twenty-four years. He was known as the Roumanian Gaon, and his scientific work consists of responses, Talmudic commentaries and philosophical dissertations. Only part of his rabbinical responses was published in a volume, *Sheeloth Uteshuboth Herbaz* (1930). "His reputation as a rabbinical authority of the first class was established in the whole Jewish world interested in the science of Judaism" (Niemirower, Jacob I., in *Curierul Israelit,* 1932). Safran was active in promoting the Rabbinical Union of Old Roumania, connected with the Union of Jewish Communities of Old Roumania. In the last years of his life he was assisted, and in 1930 succeeded, in the rabbinate of Bacau, by his son, Alexander.

ALEXANDER SAFRAN (b. Bacau, 1910) was the son of Zeev Bezalel Safran. In 1940 he was elected chief rabbi of Roumania. He studied in Roumania and at the university and rabbinical seminary of Vienna. He contributed many articles to Hebrew magazines and to Roumanian newspapers. Like his father, he was active in the Zionist Movement, and founded a Mizrachi group in Roumania. He was appointed senator for life after his election to the position of chief rabbi, in April, 1940; his parliamentary career, however, came to a sudden end by the coming to power of the Iron Guard late in the same year. According to rumors circulated late in 1942, Safran, together with other noted Jews in Bucharest, was taken as a hostage by the Roumanian government.

SAGGI NAHOR, *see* EUPHEMISM.

SAHL BEN MAZLIAH, ABU AL-SURRI (or **AL-SARI),** Karaite author and propagandist, who flourished in the second half of the 10th cent. He was a resident of Jerusalem, and seems to have embarked on missionary journeys to other lands to seek converts to Karaism. He was a talented and facile writer, but his missionary zeal naturally colored his works with prejudice and a verbal violence akin to that of Solomon ben Jeroham.

Among Sahl's published works are: *Sefer* (or *Iggereth*) *Tochahath,* a polemical tract, in Hebrew, addressed to a certain Jacob ben Samuel, an influential Rabbinite divine, presumably resident at Cairo, who strongly opposed Sahl's Karaite propaganda; *Sefer Hamitzvoth,* a work on the precepts, in Arabic, with a Hebrew introduction containing also valuable data on Karaite life in Jerusalem in Sahl's time; a lost polemical treatise against the Gaon Saadia; an Arabic commentary on the Pentateuch, of which only fragments have thus far been found.

Lit.: Poznanski, S., "Karaite Literary Opponents of Saadiah Gaon," *Jewish Quarterly Review,* vol. 18 (1905-6) 238-49 (also issued separately); Mann, Jacob, *Texts and Studies,* vol. 2 (1935) 22-29.

SAHULA, ISAAC BEN SOLOMON, poet, b. probably Guadalajara, Spain, 1244; d. after 1281. He is known by his *Meshal Hakadmoni* (The Fable of the Ancient), a compilation of fables and parables written in rhymed prose. It was first published at Soncino, Italy, in 1480. A later edition appeared at Constantinople in 1506, and another at Venice in 1547; adorned with numerous woodcuts in the style of the illustrations of Aesop's Fables, this edition was one of the few examples of illustrated Hebrew books. In 1749 the *Meshal Hakadmoni* was translated into Judeo-German. Sahula also wrote commentaries on *Song of Songs* and *Job,* and a commentary on *Psalms* was attributed to him; none of these writings was printed.

Lit.: Fünn, S. J., *Keneseth Yisrael* (1890) 645; Roest, Marcus, *Catalogue* (1867) 486; Benjacob, I., *Otzar Hasefarim,* 377; Winter, Jacob, and Wünsche, August, *Die jüdische Literatur seit Abschluss des Kanons,* vol. 3 (1892) 182 et seq.

SAINEANU, LAZAR (originally Eliezer Schein), philologist and folklorist, b. Ploesti, Roumania, 1850; d. Paris, 1929. He was educated in Roumania, Leipzig and Paris, and received the Ph.D. degree from the University of Paris for his thesis *Les jours d'emprunt et les jours de la vieille* (1889), which also won him an award from the French Academy. At Bucharest his *Sematologia limbii romane* (Semasiology of the Roumanian Language) and a comparative study of Roumanian fairy tales (in manuscript) were awarded prizes, the latter by the Roumanian Academy. Saineanu was appointed lecturer and subsequently professor of Roumanian language and literature at the University of Bucharest, but he was unable to obtain Roumanian citizenship, although he embraced Christianity in a supreme effort to become a member of the nation to whose culture he made important contributions. Discouraged at the end of twelve years of futile struggle, he left Roumania for good in 1901 and settled at Paris, where he adopted the name of Senean. He soon became known as an authority on French philology, and was made a lecturer at the Collège de France. His great work, *La langue de Rabelais* (1922-23), offered solutions for many a problem which had kept French philologists puzzled.

A most prolific and versatile scholar over a period of fifty years, Saineanu made important contributions to Roumanian Jewish history as well as to Yiddish philology. His main works in this field were *Studiul dialectologic asupra graiului evreo-german* (Dialectological Study of the Judeo-German Language; 1899) and *Sur le judéo-allemand et spécialement sur le dialecte parlé en valachie* (1902).

In the field of French philology his standard works were: *L'argot ancien (1445-1850) et moderne* (1901; it received the award of the French Academy); *Le langage parisien au 19e siècle* (award of the Institut de France); *L'influence de Rabelais* (1928); *Cultes, mythes et religions* (with an introduction by Salomon Reinach; 1902). Roumanian philology is indebted to him for monumental works on Oriental influences in Roumanian culture and language (3 vols., 1900); on Roumanianism from the points of view of ethnography, linguistics and psychology (3 vols.); a four-volume dictionary of the Roumanian language (1895); and a history of Roumanian philology (1892-95).

ST. JOSEPH, a city of Missouri, including approximately 2,600 Jews in 1943, in its total population of 75,711 (census of 1940). The town, laid out in 1843, received its city charter in 1851. The first Jews were probably attracted there in the gold rush period of the late 1840's, when the place became an outfitting center for parties on their way to the gold fields of California. By 1858 a Jewish Burying Ground Association was formed, which two years later merged into the newly organized Congregation Adath ("Adatch") Joseph. The score of members, with one M. Lehman as their Hazan, met for services, initially strictly Orthodox, in a rented hall on Felix Street. Later a church on Sixth and Edmond streets was remodeled into a synagogue and used until it was destroyed by fire. A new synagogue was then erected and dedicated in 1868 on Sixth and Jule streets, and M. Kaufman was elected as the first rabbi.

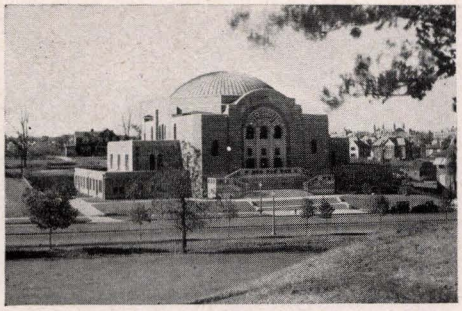
By 1877 the congregation had doubled its original membership, and that year it was incorporated. Signed to the petition for incorporation were the names Isaac Wiell, Israel Kohn, Julius Meyer, Fred Bearman, B. Steiner, A. Hamburger, David Siegel, Isaac Hass, Samuel Hess, C. Straus, F. Westheimer and S. Westheimer. In 1877 the Jewish Ladies' Benevolent Society was also formed.

In course of time Congregation Adath Joseph became Reform. Rabbis who succeeded Kaufman were Isaac Schwab (1879-1906), Louis Bernstein (1907-21), Garry J. August (1921-26) and Myron M. Meyer who, elected in 1927, was still the incumbent in 1943. In that year the worshippers were still using the synagogue built in 1910.

Temple Adath Joseph of St. Joseph

In the 1880's the wave of Jewish immigration from Eastern Europe brought to the St. Joseph community a new element of Orthodox Jewry, counterbalancing the movement toward Reform in the older section. By 1905 the Orthodox East European Jews were in the majority of the then estimated Jewish population of 1,200. Congregation Shaare Sholom was organized in 1885, and a synagogue erected in 1900. The leading Orthodox group in 1943, it then had as its rabbi Iser Israel Levin. Another Orthodox congregation supported by the community was B'nai Yaakob. The Conservative Congregation Ahavas Emunah ceased to function about 1930. The Orthodox Jews supported also a Talmud Torah. Adath Joseph, Shaare Sholom and B'nai Yaakob had their own cemeteries.

In addition to the congregations and their auxiliary groups, St. Joseph Jewry instituted other communal organizations. A lodge of the B'nai B'rith was founded as early as 1866. In 1943 the community supported also an A. Z. A. and a B'nai B'rith Auxiliary, a Senior and Junior Hadassah, the Judaeans, and a local branch of the American Jewish Congress. The Lollie Siegle Block Memorial Home had been converted into a center for the use of the whole community. City-wide was the Federated Jewish Charities, which was headed in 1943 by Samuel Hassenbusch. There was an active Jewish National Fund Council.



Engaged mainly in business, with about 1 per cent of their number represented in the professions, and a few employed in industry, St. Joseph Jews contributed importantly to the commercial upbuilding of the city, and participated in its civic development. As early as 1872 Samuel Westheimer served in the city council. Samuel Alberts was a city councilman from 1936 to 1942, when he became city assessor. Louis Silverman was made a constable in 1936. In 1941 the home of A. J. August was given to the St. Joseph Museum by his daughter, Mrs. Clarence Strouss.

MYRON M. MEYER.

SAINT LOUIS, chief city of Missouri, having a population of 816,048 (census of 1940), including (1943) about 51,000 Jews. Incorporated as a town in 1808, St. Louis was one of the oldest Jewish settlements in the Mississippi Valley. Records would seem to indicate that the frontier community had as its first Jewish resident one Wolf Bloch, who arrived there from Schwihau, Bohemia, some time before 1816. But it was not until the autumn of 1836, thirteen years after St. Louis had achieved the status of a city, that the traditional Minyan of ten men held Rosh Hashanah services

Temple Israel of St. Louis

United Hebrew Temple of St. Louis

in a small rented room above a grocery store at Second and Spruce streets.

The following year these ten men—Abraham Weigel, Simon Latz, Adolph Latz, Joseph Kohn, Henry Marks, Ephraim Gustraff, Samuel Jacks, Nathan Abeles, Isaac Flatau and Hiram H. Cohen—organized themselves into the United Hebrew Congregation, electing as their president Abraham Weigel. To begin with, the congregation met in a room above a store on Fifth Street near Lucas Avenue (then Green Street), and later it worshipped in a synagogue on Broadway and Lucas (then Fifth Street and Christy Avenue). In 1859 it dedicated its Temple on Sixth Street between Locust and St. Charles, and there worshipped for a score of years. Early records point to financial troubles, and no spiritual leader was elected until 1844, when M. Hirschfeld became Hazan and Shohet. Others followed, each serving briefly. As Shohets, they were required to slaughter animals in conformity with "the customs and laws of German and Polish Jews." By 1850 the congregation listed forty-three contributors and "gifts from strangers." At that time it had assumed responsibility for making Matzoth and fixing their price for the Jews of St. Louis.

In 1863 the congregation advertised for a "moderate Reform" rabbi who could "preach extemporaneously in the best of English and German." The following year it elected Henry Vidaver as answering to these specifications. It was during Vidaver's incumbency that the congregation went into mourning for Abraham Lincoln's death: the synagogue was draped, and the members wore the customary badge of mourning for thirty days. Vidaver served until 1868; then, for the succeeding decade, the congregation was again without any regularly serving rabbi. Finally, in 1878, Henry J. Messing, a native of Gostyn, Germany, was elected rabbi, and remained the incumbent until 1912, assisted for a period by Mendel Silber, who was subsequently called to New Orleans. It was during Messing's incumbency that the growing congregation (in 1888 it had a membership of eighty-one persons) definitely adopted the Reform ritual. Succeeding Messing was Goodman Lipkind. In 1913 Samuel Thurman was elected rabbi, and in 1941 he was reelected for life. At the same time, there was created the position of assistant rabbi, filled in 1943 by James A. Wax. In that year the congregation was worshipping in the impressive edifice erected in 1926 on Skinker Boulevard.

Meanwhile the Jewish population of St. Louis, estimated at about 1,000 in 1850, was growing. Jews moved in from southern cities to escape the scourge of yellow fever. The great Chicago fire of 1871 led to an exodus of Chicago Jews to St. Louis. A continual stream of immigrants from Germany and Bohemia came to the Mississippi city. Thus by 1880 the Jewish population of the city numbered 10,000. Then began the influx of pogrom-harried Eastern European Jews, many coming especially from Volhynia, in southern Russia. By the first decade of the 19th cent. the Jewish population had reached, according to one estimate, about 40,000.

To answer the needs of the expanding community, new congregations were established.

Shortly after 1850 there was formed, out of the merging of two earlier organizations, the B'nai El Congregation, which twenty years later was to have the distinction of becoming one of the charter members of the Union of American Hebrew Congregations (1873). A gift of $3,000 from Judah Touro constituted the nucleus of the building fund of the B'nai El Temple, which was dedicated in 1855; the Temple was the first of modern style and Reform spirit in the Mississippi Valley. L. Schwartzkopf was called to be the first rabbi; he was followed by Henry Kuttner (1859-68), Samuel S. Wolfenstein (d. 1872), and Moritz Spitz, who remained the incumbent for forty years. In 1919 Julian H. Miller was called to the pulpit of B'nai El, and was elected for life in 1942. That year the members were worshipping in the Temple erected in 1931 at Delmar and Clara avenues.

In 1869 a new Reform congregation, Shaare Emeth, organized by sixty-three seceding members of B'nai El, dedicated its first synagogue. Rabbis who served the congregation included N. Tuholski, Solomon H. Sonneschein (1869-85), Isaac Epstein (1885-87) and Samuel Sale (1887-1930). During the last decade of Sale's ministry the congregation was served also by Louis Witt (1920-28). In 1929 Julius Gordon became its minister, and was still serving in 1943, when the congregation was worshipping in the Temple erected (1935) at Delmar and Trinity avenues.

Certain differences developing among the members of Congregation Shaare Emeth had caused Sonneschein's resignation, and in 1886 he, together with fifty former members of Shaare Emeth, organized Temple Israel. Sonneschein, who was one of the committee of five to draft (1885) the celebrated pronouncement of Reform Judaism known as the "Pittsburgh Platform," was Temple Israel's first rabbi. He served until 1890, when Leon Harrison came to the pulpit. Harrison served for thirty-seven years. In 1929 Ferdinand M. Isserman was elected rabbi, and was the incumbent in 1943. Temple Israel's second synagogue was erected in 1907, and was still being used by the worshippers in 1943.

With the arrival of Eastern European Jews in the metropolis of the Mississippi came the establishment of Conservative and Orthodox synagogues. By 1905 there were in the city at least six Orthodox synagogues. Perhaps the oldest Orthodox congregation still extant in 1942 was Beth Hamedrash Hogodol, established in 1878. The oldest and largest of the city's Conservative congregations, regarded likewise as one of the leading

The Y.M.H.A. building of St. Louis

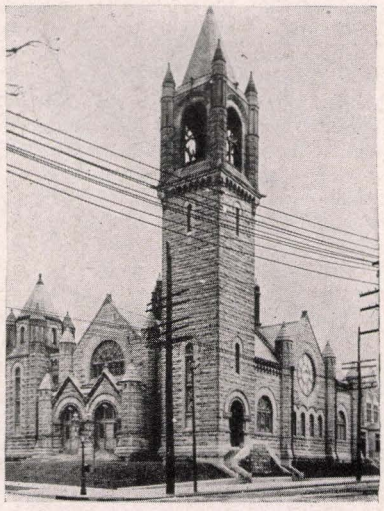
Conservative organizations west of the Mississippi, was founded in 1882: B'nai Amoona Congregation (Krakower Schul). In its formation Moritz Schuchat, who had settled in St. Louis in 1877, was a leading factor. Adolph Rosentreter, the first rabbi, served from 1885 until 1910; Abraham E. Halpern, who came to the pulpit in 1917, was rabbi in 1943. By that year the congregation had already purchased a site for a new synagogue to be built farther west in the city, in consonance with the general movement of the Jewish population in that direction.

B'rith Sholom Congregation, also Conservative, was established in 1908, and the synagogue in use in 1943 was built in 1927. Situated in a thickly populated Jewish district, it had a large membership in 1943, which was then served by Rabbi Jacob R. Mazur, who had come to the pulpit in 1930.

Largest of St. Louis' Orthodox organizations in 1943 was the Chesed Shel Emeth Society, organized in 1888 by a handful of Jewish immigrants from South Russia, with Moses Sherman as the first president. Its function was originally that of an Orthodox burial society; but with the increase in the Orthodox population the Society took a leading part in communal life. It raised funds for various charitable causes, and contributed importantly to Orthodox institutions, both local and out-of-town. In 1919 the Society purchased a synagogue on Euclid and Page avenues. Morris Shapiro was president of the Chesed Shel Emeth Society in 1943. In all, there were approximately twenty-five Orthodox congregations in St. Louis in 1943; for the most part, these were comparatively young, and had modest memberships. The chief rabbi of St. Louis Orthodox Jewry from 1930 on, and president in 1930 of the Union of Orthodox Rabbis, was Haim F. Epstein (d. 1942).

Of these congregations two, the Reform Shaare Emeth and the Conservative B'nai Amoona, were located within the boundaries of the suburb of University City, generally regarded as actually part of St. Louis. The main movement of Jews into the populous suburb took place between 1920 and 1925. In 1943 the locality maintained also the Orthodox congregation Tpheris Israel, of which Louis Levy was rabbi.

The exceptionally active Jewish community of St. Louis began early to establish numerous institutions answering needs other than those of religious worship. The city was outstandingly progressive in its social service. It is noteworthy that the first National Conference of Jewish Charities was held at St. Louis in 1885, with Marcus Bernheimer and Albert Arnstein as leading figures. The United Jewish Charities was originally formed in 1897 out of the merging of previous smaller societies, and had the outstanding philanthropist Moses Fraley as its first president. It ceased to exist as such, and in 1942 the numerous charitable agencies of the city were federated in the Jewish Federation of St. Louis (established 1900), which was administering the Jewish Welfare Fund. The Jewish Social Service Bureau, established as early as 1871, was rendering skilled case work service to dependent families. The Jewish Aid Association was instituted in 1912 to make small loans to members of the community.



Three important organizations maintained by the Jews of St. Louis were the Jewish Hospital, the Jewish Sanatorium, and the Jewish Old Folks' Home. The Hospital was founded in 1900, and the first building erected two years later. The early difficult years had the invaluable support of August Frank and Julius Lesser, the first presidents. In 1925 the old plant of the hospital was abandoned in favor of an impressive new structure at Kingshighway and Forest Park boulevards.

The Sanatorium, located at Robertson, Mo., was opened in 1914. The early building of the Jewish Orthodox Old Folks' Home was dedicated in 1907; in 1943 the organization had additional modern facilities to house its inmates and those of the Home for Aged and Infirm Israelites (established 1885), which had, in 1940, merged with the Old Folks' Home.

Among the earliest of the communal organizations in St. Louis were the lodges of the B'nai B'rith; in 1943 there were three of these, and their auxiliaries. The oldest, Missouri Lodge 22, was founded in 1855.

In 1877 the Hebrew Young Men's Literary Association and Pioneers Ladies' Literary Society (the latter said to be the first of its kind in the country) were founded. The former, which did outstanding service in aiding the refugee victims of yellow fever in 1878, became the Y.M.H.A., and was reorganized in 1896. In 1943 the Y.M.H.A.-Y.W.H.A. was engaged in an extensive program, carried on in a modern structure at Union and Enright streets. The two earliest Jewish schools (non-congregational) of St. Louis, one sponsored by the Hebrew Free and Industrial School Society for the Jewish and religious education of children, and the other established by Elias Michael for immigrants, eventually ceased to exist; but in 1943 the Associated Hebrew Schools of the city had a total daily attendance of 1,000 Jewish children. The Council House, with William H. Riback as director in 1943, grew into a vital community center, offering an extensive program to Jews residing in the low-income area of the city.

Zionism and its institutions flourished early in St. Louis. In 1906 the Poale Zionists established their organization; in 1913 the Mizrachi and a chapter of Hadassah were instituted, and in 1921 a branch of the Palestine Foundation Fund was founded. Zionist groups and their membership increased rapidly. In

Shaare Emeth synagogue of St. Louis

1943 there was also a district of the Zionist Organization of America. A distinguished representative of the movement in the city was Professor Gustave Klausner, of St. Louis University.

To correlate the activities of St. Louis Jewish communal groups, the Jewish Coordinating Council was founded, and in 1943 encompassed more than fifty Jewish agencies; yet this number was much below that of the total of such agencies.

The two surviving Jewish papers of St. Louis in 1943 were the *Modern View* (in English), and the *Jewish Record* (in Yiddish and English), both weeklies. Earlier, the *Jewish Tribune* had been established and in 1876 was reorganized as the *Jewish Voice,* which lasted for about fifty years. At one period Rabbis Solomon H. Sonneschein and Moritz Spitz were joint owners and editors. The *Modern View* was founded in 1901 by Abraham Rosenthal, who edited the paper until his death in 1929. Joe B. Cohn was editor from 1932 on. The *Jewish Record* was established in 1913 by the Zionist leader Leon Gellman. In 1943 Noah W. Salz was its editor.

While St. Louis was yet a frontier village, Jews began to participate in the life of the larger community. During the Civil War Isidor Busch, a wine merchant, was politically active, and served as a delegate on the "Unconditional Union Ticket" to the convention which decided that Missouri should remain in the Union. As early as 1889 Nathan Frank, publisher of the daily St. Louis *Star,* was sent to the Congress of the United States, and served until 1891. In the state legislature Joseph Pulitzer, famed in publishing, leads the list; he was elected in 1869, and served until 1871. Others were David Pareira (1900-4), Alfred Metzger (1904), Julius A. Razovsky (1918), Jules Brinkman (1936), Maurice Shechter (1936-40), David Hess (1936-). Justices of the St. Louis circuit court included Moses N. Sale (1903-11, 1928-30), Irving Barth (1912-18); Abraham B. Frey (1918-28), Moses Hartman (1918-37), Robert L. Aronson (1938), Maximilian G. Baron (1932-40; presiding judge, 1937). Harry Raskin was a municipal judge (1925). Moses Fraley was a member of the city council (1877-79), as was Albert Arnstein (1891). Louis P. Aloe was in the city council (1916-24) and president of that body, as well as vice-mayor of St. Louis (1917); the city named a plaza for him.

In addition to those Jews who took part in political life, many contributed to the development of commerce, science and the arts in the city. On the board of the Louisiana Purchase Exposition Company, sponsors of the World's Fair of 1904, were Charles A. Stix, Elias Michael, Nathan Frank, Jacob J. Wertheimer, Isaac Schwab and Jonathan Rice. Elias Michael (d. 1913) and William Stix (d. 1914) each had a school named for him. Aaron Waldheim became a leading philanthropist.

In medical circles numerous Jews achieved distinction. Major G. Seelig contributed importantly to cancer research. Meyer Weiner became prominent in the field of diseases of the eye, as did Henry L. Wolfner (d. 1935). In 1933 Max A. Goldstein, founder (1914) and director of the Central Institute for the Deaf, was voted the outstanding citizen of St. Louis.

Mrs. David Kriegshaber, musician, was named one of the city's ten outstanding women in 1931. In 1930 Vladimir Golschmann was made conductor of the St. Louis Orchestra.

The May Company, owners of a national chain of department stores, had its headquarters in St. Louis in 1943, and the May family resided in the city.

JAMES A. WAX.

EAST SAINT LOUIS, a city in Illinois across the river from St. Louis, had a total population of 75,609 (census of 1940), including about 1,150 Jews (1943). Jews first came to this community about 1886 as immigrants from Russia and Poland. Congregation Agudas Achim (Orthodox) was organized in 1909, and a Temple erected in 1916. Abel Hirsch was the first rabbi. In 1943 Harry Z. Schectman, elected in 1940, was rabbi. Other Jewish institutions established by the community included Agudas Achim Hebrew School and Sunday School (1916), the Jewish Ladies' Aid Society (1908), the Jewish Community Center (1925), and the Jewish Community Council (1941). A lodge of the B'nai B'rith was formed in 1916, and a district of the Zionist Organization in 1936.

Mt. Zion Hebrew Temple of St. Paul

Lit.: Rosenkranz, Samuel, *Golden Jubilee History of Temple Israel, 1886-1936* (1936).

SAINT PAUL, capital of the state of Minnesota, and the second largest city of the state, having total population of 287,736 (census of 1940), and a Jewish population of about 12,200 in 1943. It is the oldest Jewish community in the state, having been settled by a number of German Jewish émigrés between the years 1848 and 1852. Although the first Jewish organization of St. Paul—the Reform Mount Zion Hebrew Congregation—was not organized until February 26, 1857, there is reason to believe that a few Jewish families, mostly fur traders, were established in the city by 1850.

Among the early settlers were Julius Austrian, who originally had a trading post "on the bend made by what is known as the Fond de Luck River and a neck of the Lake"; T. N. Cardozo, who was appointed United States commissioner in 1855; Joseph Oppenheimer, who later served two terms in the state legislature; Henry Marks; and Henry Cali, who was the first president of Mount Zion Hebrew Congregation. Then in 1857 six men became the incorporators of Mount Zion Hebrew Association (the name was changed to Mount Zion Hebrew Congregation in 1872). They were S. E. Becket, Henry Cali, Abraham Greenwald, S. Josephs, Henry Marks and Julius Mendelsohn. The congregation did not have a religious functionary until 1862, when the Reverend E. Marcusson was called to be cantor, rabbi, Shohet, Mohel and teacher. Services were held in private homes and halls prior to 1871, in which year the Congregation dedicated its first house of worship. In 1872, it engaged its first ordained rabbi, Leopold Wintner. From 1899 to 1943 its ministers were graduates of the Hebrew Union College, and the incumbent in 1943 was Harry S. Margolis, who came to the pulpit in 1925.

In 1873 the first Orthodox congregation was founded under the name of B'nai Yaakov Society (Sons of Jacob). Other congregations sprang up later and in 1943 there were in all thirteen Jewish congregations in St. Paul. That year Rabbi J. Hurvitz was serving the congregations Capitol City Synagogue, Adath Yeshurun, Sons of Abraham, Sons of Jacob and Sons of Moses. Herman Simon was rabbi of Chevra Askinas, Russian Brotherhood Congregation, Sons of David, Sons of Israel and Sons of Zion. The Conservative Temple of Aaron Congregation had as its leader in 1943 Rabbi Herman M. Cohen. Temple Sharei Shomayim had no regularly serving rabbi.

With the rapid growth of the St. Paul Jewish community there arose numerous communal agencies. Prior to 1880, when the Jewish Benevolent Aid Society came into existence, Jewish charity was administered by several private groups.

By 1892 there were several organizations acting as relief agencies in the Jewish community: the Bikur Cholim Society, Hebrew Ladies' Aid, Sisters of Peace, and the Jewish Relief Society. An attempt was made in 1911 to coordinate and combine the many relief agencies in the Jewish community by founding the Jewish Charities. It was to serve as a clearing house for all relief, and as a quasi-federation for allocating funds to the local Neighborhood House, the Cleveland Jewish Orphan Asylum, the National Farm School and other national Jewish organizations. Its objective was not achieved until 1914, when the work of the smaller relief agencies was combined with the Jewish Charities. In some instances these smaller organizations continued to function in other social service areas. In 1920 the name Jewish Charities was changed to the Jewish Welfare Association, and the organization became a beneficiary of the Community Chest.

Other communal organizations that grew up during the same period were the Neighborhood House (later becoming non-sectarian), the Central Community House and the Jewish Educational Center. In 1931 thirty Jewish organizations united to form a clearing house for all Jewish communal problems and founded the Council of Jewish Agencies. Its first president was Harry S. Margolis. Among its major accomplishments were the creation of the United Jewish Fund (1935); the St. Paul Refugee Service; and the St. Paul Anti-Defamation Council. In 1943 the Council of Jewish Agencies was recognized as the social planning group in the Jewish community, just as the United Jewish Fund was the official fund-raising and fund-allocating agency.

The first fraternal organization to be founded in St. Paul was Minnesota Lodge 157 I.O.B.B. (1871). Other Jewish organizations with fraternal, cultural, religious and philanthropic objectives included the National Council of Jewish Women, which supports the Sophie Wirth Camp for the underprivileged, the St. Paul Chapter of Hadassah, the Brith Sholem Lodge, Bikur Cholim Society, Chesed Shel Emes, St. Paul District Z.O.A., and many auxiliary groups to the various Temples and synagogues in the community. The Northwest Jewish Home for the Aged, located in St. Paul, was supported largely by the Community Chests of the Twin Cities, and had facilities for sixty inmates. It was founded in 1907.

Until 1873 Mount Zion Temple was the only Jewish organization providing some type of Hebrew education. After 1873, when the Sons of Jacob Congregation was founded, a Heder for young children was instituted. No attempt was made to create a Talmud Torah until 1910, when the first organization of this kind was launched by the Sons of Jacob Congregation. Later, it became known as the Capital City Hebrew School. In 1943 there were two other Hebrew schools in the city, the Jewish Educational Center, and the St. Paul Hebrew Institute. A Bureau of Jewish Education was in existence in 1943 maintaining and directing several of the Hebrew schools which received their funds largely from the United Jewish Fund.

St. Paul Jewry always played an active and important role in the civil life of the community. Prominent Jews in the earlier community were Joseph Elsinger, S. W. Dittenhofer, L. R. Frankel, Isaac Summerfield, David W. Aberle and Bernard Marx. In 1943 Milton P. Firestone was chairman of the Ramsey County Board of Public Welfare; Gustavus Loevinger was judge of the Ramsey County District Court; Milton Rosen was commissioner of public works, and had been a member of the St. Paul City Council for nearly ten years. Andrew Bratter was assistant county attorney; Harry S. Margolis was president of the St. Paul Council of Agencies, and a member of the Board of the St. Paul Community Chest. Others active in various civic undertakings in 1943 were Howard Seesel, Albert Heller, Jr., William Ginsberg, Mrs. M. P. Firestone, T. L. Birnberg and Mrs. David Aberle.

The professions in St. Paul came to be represented by a large number of Jews. Some were on the faculty of the University of Minnesota. A large number of Jews were engaged in the retail mercantile business, as well as the jobbing and manufacturing enterprises. Quite a number were to be found in the fur and textile industry. It is notable that many young people were to be found in positions of responsibility and leadership.

SAINTS AND SAINTLINESS. The idea of saintliness in Judaism is that of the highest state of purity, morality and virtue. In the enumeration of the various degrees to which humanity can attain (*Sotah* 9:15) it is higher than purity, holiness or humility, and is surpassed only by the gift of prophecy and the ability to raise the dead. The Jewish saint was not content merely to do his duty; he felt it necessary to act beyond the proper measure of duty (*lifnim mishurath hadin*). He was not satisfied to obey the commandments of God; he had to prepare himself to live in the consciously recognized presence of God. He did not care whether he had little or much, but was willing to give freely to help the needs of others; "He who says, thine is thine, and mine is thine, is a saint" (*Aboth* 5:13). He was a man of learning, for the ignorant can not be truly saintly; yet he must combine his learning with noble conduct (*ibid.* 2:6; 5:17).

Many stories were told of how Jewish saints succeeded in accomplishing miracles by reason of their favor with God. Yet these cases dealt with the needs of the community rather than with the petitions of individuals. They never became intermediaries between God and man. Nor was the appellation of sainthood conferred upon them, after death, by any ecclesiastical body. It was the tribute of their contemporaries to the scrupulousness of their conduct. A saint might be an ascetic, but asceticism alone did not make a saint; it was rather the avoidance of the least appearance of evil and the fervent desire to serve God, even at the cost of one's wealth and comfort, or even of one's life.

The usual terms for saint and saintliness in Jewish literature are *hasid* (plural, *hasidim*) and *hasiduth,* respectively. These terms vary in exact connotation with the varying concepts of saintliness. The first Hasidim were that group which, in the 2nd cent. B.C.E., led the revolt against Hellenism and became martyrs rather than submit to idolatry; yet their saintliness went so far that they let themselves be slaughtered rather than fight on the Sabbath, and blindly followed the treacherous high priest Alcimus. The Mishnah, at a later period, speaks of saints who laid great stress on earnestness of prayer, devoting one hour to meditation before the time of their prayers in order to put themselves in the proper mood (*Ber.* 5:1). In the same period there is a tendency to criticize the "saints" of the time, who seem to have been inclined to parade their virtues. Thus there is reference to the "foolish saint" who is harmful to mankind (*Sotah* 3:4); the Gemara to the passage gives an example of such: a saint who is so determined not to look upon women that he will let a woman drown when he could save her. The same idea is expressed by Judah when he defines a saint as one who is careful about injuries to others, that is, who is saintly in conduct rather than in abstinence.

This idea of moral saintliness appears again and again in the Middle Ages. It is stressed in the works of the moralist writers, who preach temperance and

honesty rather than asceticism and the shunning of the world. The chief of these writers was Judah of Regensburg, who was surnamed "saint" (Hehasid), author of *Sefer Hasidim* (Book of the Saints).

Many of the legends and tales of the time dwell upon the virtues of the righteous who are called saints because of their unselfishness. The sect founded by Israel Baal Shemtob in the 18th cent. called themselves Hasidim because they stressed right conduct rather than fixed ritual or intellectualism, and their earlier leaders went to extremes of unselfishness. Unfortunately, this original impulse did not last, but it had the effect of bringing new attention to the moral values of Judaism. In modern times there has been less tendency to describe noted Jewish leaders as saints, not so much because of a weakening of ideals as to avoid confusion with the sect of Hasidim and the Christian saints; but the ideal of saintliness, in a more general form of individual righteousness, has been generally stressed in modern Judaism. SIMON COHEN.

SAITSCHIK, ROBERT (RUBEN), writer and lecturer, b. Lithuania, 1868; d. Ascona, Switzerland, between 1936 and April, 1938. From 1889 to 1895 he was lecturer at the Universities of Bern and Neuchâtel, and from 1895 to 1914 lecturer of modern literature and Slavonic languages at the Technical University of Zurich. Then he was for some years lecturer at the Commercial University of Cologne. By 1921 he went to Switzerland where he had acquired citizenship in 1899, and resided at Ascona near Locarno, after having sold his great collection of books. At the beginning of his career, Saitschik became interested in Judaism. He published, in 1890, *Beiträge zur Geschichte der rechtlichen Stellung der Juden, namentlich im Gebiet des heutigen Österreich-Ungarn,* and he was a collaborator on the Russian Jewish periodical *Voskhod.*

By 1906 he embraced Christianity, and then he professed the conviction that only Christianity offers the possibility of mastering the cultural crisis of the present age. He published *Quid est veritas?* (1907), *Wirklichkeit und Vollendung* (1911), *Die geistige Krise der europäischen Menschheit* (1924), *Paulus* (1926), *Die innere Welt Jesu* (1928), *Symphonie der drei Wirklichkeiten* (1929), and *Brücke zum Menschen* and *Franziskus von Assisi* (1931). Saitschik's endeavors to analyze psychologically great poets and artists as he did in *Dostojewski und Tolstoi* (1890), *Genie und Character* (1903), and *Menschen und Kunst der italienischen Renaissance* (1903), lacked reliability.

SAK, or **SACK,** a family name well known in Europe as far back as the 15th cent. It is an abbreviation of *zera ḳodesh* (descendants of martyrs). Among the famous bearers of the name were several scholars and philanthropists.

JACOB BEN BENJAMIN SAK, who is known to have lived in Vilna during the early part of the 17th cent., was a Talmudist. Forced to flee the persecutions of the Jews, he eventually became a rabbi in Altona and finally reached Jerusalem, where he died.

ABRAHAM SACK (d. Bobruisk, Russia, 1893) was a financier, whose advice was often sought by the Russian government but who refused ministerial honors because they would have meant renouncing Judaism. He was a philanthropist who supported the arts as well as charities.

ISRAEL SAK (b. 1831; d. 1904), brother of Abraham Sack, was a scholar and writer. He was author of *Die Religion Altisraels* (1885); *Die Altjüdische Religion* (1889); *Monistische Gottes- und Weltanschauung* (1899); and of other studies.

SAKALL, S. Z., film comedian, b. Budapest, 1885. He studied engineering at the Technical School of Budapest, but took up writing for the stage as a profession. Next he began to act the main roles in the humorous sketches and brief farces which he wrote for the Budapest variety and cabaret stages. He also tried his hand at film stories, and appeared with great success in film comedies.

Sakall came to the United States, where he appeared in Joseph Pasternak's *It's a Date* in 1940. His art appealed to the public by the illusion it gave of being perfectly natural and unstudied. He moved with the greatest ease along the film band, providing a foil of the kindly and philosophical onlooker to the young protagonists in the throes of action.

The genial kindliness and love of one's fellow being which his personality suggested provided incentive for his producers to feature him also in the cast of *Florian; My Love Came Back; Spring Parade* (1940); *The Man Who Lost Himself; That Night in Rio; The Devil and Miss Jones; Ball of Fire* (1941). In 1942 he appeared in the Metro-Goldwyn-Mayer picture *Seven Sweethearts.*

SAKEL, MANFRED, physician, b. Nadworna, Galicia, 1900. He received the M.D. degree from the University of Vienna (1925). While psychiatrist-in-chief at the Lichterfelde Hospital, Berlin, Sakel began his experiments to influence favorably various mental and emotional disorders by the use of drugs, primarily insulin and other convulsant drugs. After initial success in treating alcoholics and drug addicts by this method, he proceeded to the treatment of more profound mental and emotional disorders, notably schizophrenia and the affective psychoses. Administering large doses (shock doses), heretofore considered dangerous, he achieved the desired result, the remission of the psychosis. The success of this treatment definitely proved that even illnesses of the mind have a physiological basis and can be cured by physiological means.

Sakel came to the United States in 1936 and, on the invitation of Commissioner Frederick Parsons of New York city, introduced and taught his method to doctors from various hospitals in the United States. In 1937 the first International Psychiatric Conference, held in Bern, Switzerland, was devoted to this new physiological shock treatment. In the United States Sakel endeavored to perfect the original treatment so as to cover a wider range of mental diseases.

He was awarded the honorary D.Sc. degree by Colgate University, Hamilton, N. Y. His books include *The Pharmacological Shock Treatment of Mental Diseases; The Results of the Shock Therapy;* and *The Origin of the Shock Therapy.*

Lit.: Forum, Feb., 1938; *Life,* March 14, 1938; De Kruif, Paul, "Man against Insanity," *Country Gentleman,* July, 1939; *Time,* Nov. 20, 1939; *Reader's Digest,* Nov., 1939; *New York Times,* May 20, 1942.

SAKHEIM, ARTHUR, writer and stage director, b. Libau, Latvia, 1887; d. Berlin, 1931. After studying philosophy, history and philology, he first became a theatrical critic, then stage director of the Hamburger Kammerspiele. In this capacity he was with the Frankfort Schauspielhaus from 1926 on.

He wrote a study on the German novelist E. T. A. Hoffmann (1908); the volumes of poetry *Magnificat* and *Patmos and Kythera;* the novels *Marion in Rot* and *Der Kopf zwischen den Bergen;* and several dramas, of which *Der Zaddik* (1929) and *Die Heiligung des Namens* deal with Jewish topics. He also published a series of seven lectures under the title of *Das jüdische Element in der Weltliteratur* (1924). Sakheim translated several works of English and American contemporaries for the German stage.

SAKOLSKI, AARON M., economist, statistician and author, b. Baltimore, 1880. He studied at the University of Syracuse and at Johns Hopkins University, from which he received (1905) the Ph.D. degree. He was instructor in finance at New York University (1910-24), an examiner at the Federal Trade Commission (1917-19) and financial statistician to business organizations. From 1930 on he was associate professor of finance at the College of the City of New York. During the first World War, in 1916, he was a member of the Plattsburgh Officers' Training Camp.

Sakolski analyzed American economics and questions of finance in a number of volumes which include: *Finances of American Trade Unions* (1906); *American Railroad Economics* (1913); *Elements of Bond Investments* (1921); *The Analysis of Financial Statements* (1925). He contributed chapters to *American Business Practice* (1931) and *The Great American Land Bubble* (1932). Together with Myron L. Hoch, he wrote *Evolution of American Economic Life* (1935) and *American Economic Development* (1936).

SALADIN, sultan of Egypt, Syria and Palestine, b. Tekrit, Mesopotamia, 1137; d. Damascus, Syria, 1193. Because of his piety, justice and benevolence he was depicted by Lessing in *Nathan der Weise* as the prototype of humanitarianism. Saladin's rule was a period of happiness and prosperity for thousands of Jewish refugees who had been persecuted by Christian or Mohammedan fanaticism and had found an asylum in Saladin's empire. After the recapture of Palestine in 1190, Saladin allowed the Jews to return to Jerusalem. He entertained the most cordial relations with the Jews and invested them with high offices at his court. Thus Nathaniel, chief rabbi of the Egyptian Jews, was Saladin's court physician.

Lit.: Graetz, H., *History of the Jews,* vol. 3 (1927) 405, 431, 443, 461, 472, 474, 488; Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 4 (1926) 459 et seq.

SALAMAN, CHARLES KENSINGTON, composer, b. London, 1814; d. London, 1901. After making his debut as pianist in 1828, he went to Paris to study with Henri Herz. In 1831 he settled in London as a teacher of piano, giving annual concerts. He helped to found the Concerti da Camera in London in 1853, and an amateur choral society in 1849.

For various periods he served as secretary of the Musical Society of London and of the Musical Association. Besides composing a comic opera, *Pickwick,* which was successfully produced in London in 1889, Salaman wrote numerous choral works, many of them for use in the synagogue.

SALAMAN, MALCOLM CHARLES, drama and art critic, b. London, 1855; d. London, 1940. He was the eldest son of the well-known composer Charles Kensington Salaman. He studied mechanical engineering, but turned instead to journalism. From 1883 to 1894 he was dramatic and art critic of the *Sunday Times,* and from 1890 to 1899 he was on the staff of the *Daily Graphic.* In the art world he was considered the country's outstanding authority on color prints and woodcuts.

Among his numerous publications on prints were: *The Old Engravers of England* (1906); *Old English Colour Prints* (1909); *Old English Mezzotints* (1910); *The Great Painter-Etchers from Rembrandt to Whistler* (1913); *Modern Woodcuts and Lithographs by British and French Artists* (1919); the series *Masters of Etching* and *Masters of the Colour Print; The Woodcut of Today at Home and Abroad* (1930); *The New Woodcut* (1930). He published an annual review, *Fine Prints of the Year,* from 1923 to 1938. Salaman wrote a number of plays, several of which were acted: *Deceivers Ever* (1883); *Dimity's Dilemma* (1894); *A Modern Eve* (1894). He edited the plays of Sir Arthur Wing Pinero (1891-1900).

SALAMAN, REDCLIFFE NATHAN, scientist, b. London, 1874. He received his scientific and medical education at Cambridge and London Hospital, where from 1901 to 1904 he was director of the Pathological Institute. His chief line of research became the study of the potato, and at Barley, Hertfordshire, in the years 1906 to 1926, he conducted investigations into the genetics of the potato and allied subjects. In 1926 he published *Potato Varieties;* later he contributed important articles on the history, genetics and virus disease of potatoes to leading scientific journals. He was one-time director of the Potato Virus Research Station at the University of Cambridge, and he was made chairman of the Potato Committee of the National Institute of Agricultural Botany. In 1935 Salaman was made a fellow of the Royal Society. He was elected president of the Jewish Health Organisation of Great Britain, a post which he still held in 1943, and was president of the Jewish Historical Society of England (1922).

To the *Transactions* of the latter and to other journals as well he contributed articles on the anthropology of the Jews. He was made a trustee of Jews' College, and was elected a governor of The Hebrew University, Jerusalem. During the first World War Salaman served in Palestine as a captain in the Royal Army Medical Corps. In 1920 he published *Palestine Reclaimed.*

His wife, the poetess Nina Ruth (Davis) Salaman (1877-1925), published: *Jehudah Halevi. Selected Poems* (1925); *Songs of Exile* (1901), both translations; *Rahel Morpurgo* (1924); *Apples and Honey* (1921; 2nd ed., 1927); and other works.

SALAMON of Székesfehérvár, Hungary, the first deputy of the Hungarian Jews to the king, who lived during the reign of King Zsigmond (1387-1437). Elected by a convention of Jewish communal leaders at a time when the legal status of the Jews was not defined, he appeared before the king in 1396, asking for the renewal of the forgotten privileges of 1251. It is assumed that the Jews of Hungary offered a heavy tribute to the king, who instructed the chapter of Székesfehérvár to produce the ancient document from its archives and issue a copy of it to Salamon. The practice of electing deputies to the kings was maintained among Hungarian Jews for the next hundred years.

SALAMON, NAHUM, industrialist and financier, b. London, 1828; d. London, 1900. Salamon was a man of great enterprise and perseverance. He early foresaw the future possibilities of the sewing machine, and introduced the Howe machine into England. He thus became the founder of British trade in sewing machines. Soon after the invention of the spider-wheel Salamon discovered the possibilities of developing the modern bicycle, and he was a leader in the movement to create and distribute popular conveyances. He was also the first Englishman to erect a plant for the manufacture of bicycles at Coventry. The Prince of Wales, afterward King Edward VII, thought highly of Salamon's commercial and industrial pioneership, and regretted Salamon's death, which prevented the prince from decorating or knighting Salamon after his accession to the throne. Salamon also acquired the English patents of saccharin, and introduced it into England, working together with his son, Sir Alfred Gordon Salamon (1858-1921), inventor of several successful processes in connection with industrial chemistry. Salamon was keenly interested in Jewish learning and letters. He was one of the first subscribers to the Society of Hebrew Literature.

SALANT, WILLIAM, pharmacologist, b. Russia, 1870. He came to New York city in 1884, and studied

at Cornell and Columbia Universities, being awarded the M.D. degree by the latter in 1899. He was engaged in medical research at Rockefeller Institute from 1901 to 1906, after which he was chief pharmacologist in the laboratory of the Bureau of Chemistry from 1908 to 1918. He lectured at the University of Wisconsin (1918-19) as acting professor of physiological chemistry; at the University of Georgia (1919-29) as professor of physiology and pharmacology; and at New York Medical College (from 1935 on) as guest professor. Salant was also in charge (1929-32) of pharmacological investigation at the Biological Laboratory, Cold Spring Harbor, Long Island, N. Y. His most important contributions to medical science are findings regarding the effect of the kidneys on the elimination of various drugs, the effect of various factors on muscle physiology and the secretion and toxicity of bile. From 1932 on he was chiefly engaged in study and writing on the history of science.

SALANTER, ISRAEL, *see* LIPKIN, ISRAEL.

SALE, *see* BARTER AND SALE; PROPERTY, SALE AND TRANSFER OF.

SALE, MOSES N., judge, b. Louisville, Ky., 1857; d. St. Louis, 1930. Following his graduation from the Universities of Louisville and Illinois, he practised law in his native Louisville as a partner of James Speed, and subsequently in St. Louis. In 1903 he was appointed judge of the circuit court of St. Louis by Governor Dockery; in 1904 he was elected for the same office for a six-year term as the only Democrat and served until 1911. In 1928 he again ran for office, and was one of three Democrats to be elected.

SAMUEL SALE (1854-1937), the brother of Moses N. Sale, was rabbi for forty-two years at Baltimore, Chicago and St. Louis. He was the first American-born rabbi to occupy a Jewish pulpit in the United States. A third brother, Lee Sale, was a prominent lawyer at St. Louis.

SALEM, a city in Massachusetts, with an estimated Jewish population (in 1943) of 1,500 out of a total population of 41,213 (census of 1940). Salem was first settled by Jews from Eastern Europe, principally Russia, in 1885. In 1894, the Orthodox congregation Sons of Jacob was organized, and in 1903 remodeled a Baptist church into a synagogue. The congregants were worshipping in that same synagogue in 1943, and then had as their rabbi Herbert I. Simckes.

A Hebrew Ladies' Aid Society was founded in 1902; a Hebrew School and Sunday School in 1907, and a Hebrew Free Loan association in 1916. Sometimes considered a part of Greater Boston, Salem nevertheless operated completely as a self-sufficient community. In 1943 it supported a very active Community Center which was built in 1937, and which sponsored a Hebrew School, Y.M.H.A., and other community activities. A library was established in 1938. The community also conducted an annual United Jewish Appeal campaign. Salem joined with nearby Peabody in supporting the Salem-Peabody B'nai B'rith Lodge No. 894. Jews of Salem engaged mainly in small commercial enterprises, with a sprinkling in such professional fields as law, medicine and dentistry.

Prominent in local communal affairs were Joseph Newmark, elected president of the Chamber of Commerce in 1941; Max Shridman, chairman of the Board of the City Park Department in 1942; and Lewis Baker, a member of the City Planning Board (1939-).

HENRY W. LEVY.

SALEM, A. B., communal and political leader (date and place of birth could not be determined). A lawyer by profession, he was appointed special officer for the investigation of the Cochin State fisheries (1907-9). Salem represented the Jews as a member of the legislative council of Cochin State, and he was also a whip of the Progressive Party of Cochin (1925-31). From 1928 to 1929 he served as president of the Executive Committee of the Indian States People's Conference and from 1937 to 1938 he was president of the Postal Union of Cochin. He was an advocate at the High Court of Cochin.

Salem was a prominent spokesman for a constitution and responsible government for Cochin and the other Indian states. Outstanding in Jewish affairs, he headed the Malabar Jews' Association from 1932, and was member of the board of studies for Hebrew and Syriac at the University of Madras, British India. He wrote a book on the synagogue of Jews' Town, Cochin.

SALFELD, SIEGMUND, rabbi and historian, b. Stadthagen, Schaumburg-Lippe, Germany, 1843; d. Mayence, Germany, 1926. He became rabbi in Dessau-Anhalt in 1870, and served in Mayence from 1880 to 1918. His numerous writings, mostly historical, deal chiefly with the history of the Jews in Mayence and its vicinity, as studied from the sources. They appeared partly as independent publications, partly in periodicals and festival volumes.

His chief work, *Das Martyrologium des Nürnberger Memorbuchs,* appeared at Berlin in 1898. Salfeld's theory that the *Memorbuch,* which he edited, belonged to the Nuremberg community, although it was found in Mayence, was challenged by Magnus Weinberg, who decided that its contents applied to Mayence. Salfeld wrote also *Das Hohelied Salomos bei den jüdischen Erklärern des Mittelalters* (1879).

See also MEMORBUCH.

Lit.: *Allgemeine Zeitung des Judentums* (1912), No. 39, p. 466; No. 40, pp. 473-74; *Hamburger Israelitisches Familienblatt,* May, 1926; Weinberg, Magnus, *Die Memorbücher der jüdischen Gemeinden in Bayern* (1937-38).

SALKINSON, ISAAC EDWARD, convert to Christianity and missionary to the Jews, b. Vilna, Lithuania, 1822; d. Vienna, 1883. He was a son of the Hebrew writer Solomon Salkind. As a youth he set out for the United States with the intention of entering a rabbinical seminary. While in London, however, he met agents of the London Missionary Society and was persuaded to forsake Judaism.

Baptized soon afterward, he entered (1849) the college of that society, where he studied for four years. His first appointment was as missionary to the Jews at Edinburgh, where he became a student at Divinity Hall. He was ordained a minister of the Presbyterian Church at Glasgow in 1859. Salkinson served his church as a missionary in various cities, including Pressburg, Slovakia, and finally settled in Vienna in 1876. He translated into Hebrew Milton's *Paradise Lost,* Shakespeare's *Othello* and *Romeo and Juliet,* and the New Testament.

Lit.: Dunlop, J., *Memoirs of Gospel Triumphs* (1894) 372 et seq.

SALMON, ALEXANDER, sailor, merchant and royal councillor, b. London, 1822; d. Tahiti, an island in the South Pacific Ocean, 1866. He was the son of a Jewish banker of London, and became a sailor.

For many years he was on board a whaler. While still a young man, he came to Tahiti and married Arii Taimai, chieftainess of the Teva clan, who was Queen Pomare's equal if not her superior because her family was nobler than that of the sovereigns of Tahiti. Salmon's wife was a famous author, the historian of Tahiti. Her memoirs, which are

mainly a history of her native country, were edited in part by Henry Adams (1901).

Salmon became principal adviser of the rulers of Tahiti, and performed meritorious service for the island. There were various political and religious conflicts and difficulties. French missionaries endeavored to convert the natives who were Protestants, and combatted English missionaries. A French navy established French sovereignty in 1841, but the Frenchmen were incapable of maintaining peace and public order, and religious and civil wars raged in 1844 to 1845. Under these circumstances Salmon was welcomed by both natives and French authorities; he was acknowledged an impartial justice, and succeeded in settling the differences. Although an Englishman, he dissuaded the natives from resistance to France, realizing that the British government was not at all interested in the independence of Tahiti. Salmon continued to look after Tahiti's welfare. In the late 1850's he went to Paris to call to the attention of Napoleon III some grievances which the French governor of Tahiti constantly disregarded, but he was not admitted to an audience. He therefore went to London, where he published his *Lettre concernant l'état actuel de Tahiti* (1858).

Salmon's wife died in 1897. His daughter, JOANNA MARAN TAAROA, married Pomare V, the last king of Tahiti. His son Tati became an intimate friend of Robert Louis Stevenson, who, in a letter to Sidney Colvin of January 14, 1889, called Tati "my chief, for I am now a Teva."

HUGO BIEBER.

Lit.: Australian Jewish Historical Society, Proceedings, vol. I (1940).

SALMON, SIR ISIDORE, caterer, public servant and Jewish communal worker, b. London, 1876; d. London, 1941. He began his career as a kitchen apprentice at the Hotel Bristol in London, and later served at Olympia, where J. Lyons and Company were the catering contractors.

When the first Barnum and Bailey Circus came to Olympia, Salmon, at the age of seventeen, was entrusted with buying from the markets. Eleven years later he became a director of Lyons, and in 1929 chairman. During his forty-nine-year association with that firm, Salmon exerted a decisive influence in its development into an organization which, before the outbreak of the second World War, provided employment for 43,000 persons. He founded the Westminster Technical School, for the training of waiters and cooks, and was on the board of the National Training College of Domestic Subjects.

In 1919 and from 1921 until his death Salmon was chairman of the City of London Labor Exchange. He took an active part in the reforming of the municipal administration of the city of London. From 1907 to 1925 he was a member of the City Council, where he served as a member of various committees, especially as chairman of the Special Reorganization Committee, whose vice-chairman he was in 1924 to 1925. In 1925 he entered Parliament as a conservative member for Harrow. He was considered a conscientious, painstaking and moderate representative who never sought the limelight but always commanded the respect of the house because of his solid knowledge. He was a member of numerous committees dealing with housing, transport, prison, hospital and other problems, and was especially useful as chairman of the Estimates Committee, which supervised expenditures.

In the first World War, Salmon organized the Navy and Army Canteen Board, and revolutionized army catering methods. He was given the rank of major.

Isidore Salmon

In the second World War he rendered valuable service as honorary adviser on catering to the British Army. In 1920 he was made a Commander of the Order of the British Empire, and was knighted in 1933.

Salmon was keenly interested in Jewish communal work. He was vice-president of the Jewish Orphanage, West Norwood, and president of the South London Jewish Schools and of the Highbury Home for Friendless Children. He was president of Wembley Congregation, and on the board of the Bayswater Synagogue. For nine years he was chairman of the building committee of the United Synagogue, and from 1925 to 1934 its treasurer. He was then elected its vice-president, and in the same year became vice-president of the Board of Deputies.

SALMONY, ALFRED, art historian, b. Cologne, Germany, 1890. He turned to specialization in Chinese and cognate arts while still a student at the Universities of Vienna and of Bonn, where he received the Ph.D. degree in 1920. That same year Salmony became curator of the Museum of Far Eastern Art at Cologne, and in 1925 was made assistant director of the Museum. In collaboration with the director, Frieda Fischer-Wieruschowski, he organized the Cologne Exhibition of Asiatic Art (1926). Salmony held exchange professorships in the United States in 1926 to 1927 and again in 1932; further travels took him on a series of trips to the Soviet Union (1927-31) and to China (1929-30).

Returning to the United States in 1934, as the result of the advent of the Nazi government in Germany, he lectured at Mills College (1934-37), at the University of Washington (1937) and at New York University (1938-).

Salmony's published work deals largely with his specialized subjects of study. One of his most important contributions was his doctorate thesis, *Europa-Ostasien* (1922), a general comparison of plastics in the two hemispheres. Among his studies of Chinese art were *Chinesische Landschaftsmalerei* (1921); *Chinesische Plastik* (1925); and *Die Stellung der Beinschnitzerei in der chinesischen Kunst.* He wrote also many monographs on Siberian art in French and German periodicals, and was author of *Carved Jades of Ancient China* (1938).

SALOMAN, GESKEL, painter, b. Tondern, Schleswig, 1821; d. Bestad, Sweden, 1902. Until 1871 he directed the school of drawing at the Gotenburg museum; then he moved to Stockholm, where he became professor at the academy of arts (1874). He won great renown as a painter.

His notable canvases are *News from the Crimean War* (1855); *Girl with a Letter in her Hand* (1871); *Return of the Conqueror* (1880); and two Jewish paintings, *The Blessing of the Sabbath Lights* and *Talmud Study*. Saloman wrote several works on the history of art.

Lit.: *Nordisk Familjebok;* Kohut, Adolph, *Berühmte Israelitische Männer und Frauen* (1900-1); Raphael-Linden, Olga, "Geskel Saloman," *Die Heimat* (1925), No. 3.

SALOME, daughter of the Idumean Antipater; she lived in Palestine at the end of the 1st cent., B.C.E. She was the favorite of her brother Herod the Great, and mainly responsible for his cruel family policies. Because of her slanders against the Hasmonean Queen Mariamne, whom she hated, the latter was sentenced to death. With equal hate Salome later persecuted Mariamne's sons, one of whom was Aristobulus, husband of her daughter Berenice, and she participated in the legal proceedings that resulted in their being condemned to death (7 B.C.E.). Salome was married three times. Her first two husbands were executed by Herod, not without her aid. Herod bequeathed to her several towns and considerable revenues, which she, on her part, later bequeathed to her patroness, the Empress Livia.

Lit.: Schürer, Emil, *A History of the Jewish People in the Time of Jesus Christ,* part 1, vols. 1 and 2; Graetz, H., *History of the Jews,* vol. 2 (1927); Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 2 (1925) 265, 286; Minkin, Jacob S., *Herod* (1936).

SALOME, daughter of Herodias and wife of the tetrarch Herod Antipas, who lived in Palestine in the 1st cent. According to Christian tradition, Antipas had John the Baptist beheaded by request of his stepdaughter Salome. Heinrich Graetz declared this tale to be an interpolation. Salome is the leading role in Oscar Wilde's last work, the drama *Salome,* which was set to music by Richard Strauss.

Lit.: Schürer, Emil, *A History of the Jewish People in the Time of Jesus Christ,* part 1; Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 2 (1925); Minkin, Jacob S., *Herod* (1936).
