SALOME ALEXANDRA, queen of Judea from 76 to 67 B.C.E. She was the wife of the Hasmonean King Aristobulus I, and after his death married his brother and successor Alexander Jannaeus. The latter, on his deathbed, made her his successor, whereupon she reigned with energy and circumspection. To restore the peace among her people that was disturbed by party squabbles, she summoned the Pharisees to the government and thereby incurred the hostility of the Sadducees, who, however, behaved quietly. She protected the boundaries of the Jewish kingdom, which had been considerably enlarged by her predecessors, and was able to live in peace with the neighboring countries, refraining from further conquests. Once only she sent an army against Damascus, but avoided war with the Armenians. Her reign marks the culmination of the Hasmonean state. Immediately after her death conflict between her sons Hyrcanus and Aristobulus started, as a result of which the nation came to its end.

SALOMO D'ITALIA, *see* ITALIA, SHALOM.

SALOMON, ADOLF, industrialist and philanthropist, b. Bucharest, Roumania, 1848; d. Bucharest, 1920. He was a pioneer in the metallurgical industry of Roumania. In 1900, the year of the great emigration of Roumanian Jews, Salomon was asked by the Jewish Colonization Association at Paris to act as chairman of the committee which was to organize the exodus on a rational basis. "The committee was headed by one of the most distinguished Jews of Bucharest: Adolf Salomon" (Leven, Narcisse, *Cinquante ans d'histoire: L'Alliance Israélite Universelle, 1860-1910*). Salomon founded the first professional school for Jews in Roumania, Ciocanul (The Hammer), which trained mechanics, carpenters and electricians. He personally directed the school, which was recognized by the Roumanian authorities as the best in the country. Its graduates were noted as well-trained, skilled workers, and readily found work throughout Roumania and abroad. Integrity, wisdom and devotion to the welfare of the Jewish people won Salomon the esteem of wide circles. In the political field he participated in the fight for emancipation as one of the leaders of the Union of Roumanian Jews. He took an active part also in communal life.

SALOMON, ALICE, women's leader and social worker, b. Berlin, 1872. She organized (1899) the first annual course for professional social workers, which later developed into the first German school for social work, which she headed until 1925, when ill health forced her retirement.

She was a delegate to the quinquennial meeting of the International Council of Women in London (1899), and helped organize the International Congress of Women in Berlin (1904). She embraced Christianity in 1916. In 1906 she was among the first women to obtain the Ph.D. degree from the University of Berlin; her thesis dealt with the causes of unequal pay for equal work for men and women.

She founded the Konferenz der Sozialen Frauenschulen in Germany. Elected vice-president of the International Council of Women in 1920, she was forced to resign after the establishment of the Nazi regime (1933). On the occasion of her sixtieth birthday (1932) she was awarded the honorary M.D. degree by the University of Berlin in recognition of her health and research work. She was also recipient of the German government's silver medal for services to the state, and the school for social work she had founded was renamed the Alice Salomon School (1932).

Alice Salomon, who was known as "Germany's Jane Addams," published several textbooks on economics, civics and social welfare problems. Expelled from Germany in 1937, she was living in 1943 in New York city, where her seventieth birthday was celebrated by numerous prominent women's organizations. The International Club of the Y.M.C.A. in New York awarded her its first annual bronze medal for distinguished service to humanity (1939).

Lit.: Kern, Elga, *Führende Frauen Europas* (1927); *New York Times,* July 13, 1937.

SALOMON, GOTTFRIED, sociologist, b. Frankfort, Germany, 1892. He was descended from an old rabbinic family in Worms, and on the maternal side from a Huguenot family in Coblenz. He was assistant professor of sociology at the University of Frankfort (1924-33), and lecturer at the Institut Germanique of the Sorbonne, Paris (1933-40). He arrived in the United States in 1941, and in 1943 was lecturer at the New School of Social Research (Rockefeller fellowship).

Salomon, a pupil of Georg Simmel and Franz Oppenheimer, wrote many volumes on sociology, including *Allgemeine Staatslehre* (1930) and *Politik als Wissenschaft* (1930). He was editor of the *Jahrbuch für Soziologie* and organizer of the post-graduate international courses at Davos, Switzerland.

SALOMON, GOTTHOLD, Reform preacher, b. Sandersleben, Anhalt, Germany, 1784; d. Hamburg, Germany, 1862. In 1818 he became preacher in the newly founded congregation of Hamburg, where he worked together with Eduard Kley. He composed a modernistic prayer-book which caused the outbreak of the so-called second "Tempelstreit" (controversy about the synagogue). Salomon participated in the rabbinical conferences of Leipzig, Brunswick, Frankfort and Breslau.

The best-known of his writings is *Deutsche Volks- und Schulbibel für Israeliten,* prepared with the aid of Isaac Noah Mannheimer (1837). Salomon was an impressive preacher who spoke in many communities.

SALOMON, HAYM, a financier of the American Revolution, b. Lissa, Poland, 1740; d. Philadelphia, 1785. He received a liberal education in his native country and was well-versed in French, Russian, Italian, German and English.

When he was in his thirties, Poland was engaged in a death struggle for her independence. His direct participation in Poland's fight for freedom is not certain, but it is known from the records of the American Congress that he was a close friend and associate of the foremost Polish patriots. When Poland's cause was lost and the country was dismembered (1772) by the aggressors (Russia, Austria and Prussia), Salomon left for America at the same time that Tadeusz Kosciusko and Casimir Pulaski did, and they later met in America as old friends.

Salomon came to New York at the age of thirty-two, by way of England. There is reason to believe that prior to his journey to America he also visited and perhaps lived in Holland and France. Shortly after settling in New York, he opened a brokerage and commission merchant's office in Broad Street. It seems that prior to his arrival in the American colonies he made business connections with financial leaders in France and Holland; these later contributed to his successful transactions involving foreign securities in behalf of the colonies. However, the unrest in the little city's life drew him closer to those groups of Colonials who, in secrecy, were preparing the Revolution for America's independence. New York was still in the hands of the British Royalists with whom a considerable part of the population was dissatisfied, and Salomon, having run away from a country which had lost its independence, allied himself with members of the then discredited freedom-loving organization, the Sons of Liberty.

The man who brought Salomon into the sphere of revolutionary activity was Alexander MacDougall, with whom, through business association, he established an intimate friendship. He neglected his business and cast his lot with the Sons of Liberty. On September 26, 1776, he was arrested after a fire had burned one quarter of the city. It was the time when General Sir William Howe, driven out of Boston, concentrated British hopes and power upon New York, which was more loyal than any other city in the Colonies.

Salomon was first confined at the citadel, known as the Old Sugar House, and then transferred to the Provost Prison. There he was appointed jail interpreter, and after a short term of imprisonment was released. A year later, on January 2, 1777, he married Rachel Franks, whose brother Isaac was subsequently an aide to George Washington with the rank of lieutenant colonel. Salomon was arrested a second time as a spy at the beginning of 1778. This time, however, he was court-martialed and sentenced to be hanged. He managed, however, to escape, and he must have been helped in this by the Sons of Liberty, who knew all about his peril and in some way managed to get word of it to his old friend MacDougall, who at that time had risen to important commands of certain American forces. In the papers of the Continental Congress, in the Library of Congress, is

Haym Salomon came respecting Bills &c this Broker has been useful to the
public Interest and requested leave to Publish himself as Broker to this Office to which I
have Consented as I do not see that any Disadvantage can possibly arise to the Public Service
but the Reverse and he expects individual Benefits therefrom —

A contemporary document bearing on the public services of Haym Salomon

The monument (in Chicago) erected by public contributions as a joint memorial to Haym Salomon (left), George Washington and Robert Morris

Salomon's original petition, dated August 25, 1778, setting forth that he had been imprisoned by the British for his known sympathy with the patriot cause and for his friendliness with Hessian officers who were lukewarm in prosecuting the war.

From New York Salomon fled to Philadelphia, leaving behind his wife and his first-born child, whom he later rescued. In Philadelphia he again started to deal in French and Dutch securities, and rapidly became one of the most eminent financiers of his time. This was the most crucial period in American history. Washington was leading his army against the Royalists, fighting inch by inch for American independence, but the records from the Revolutionary period reveal that without financial assistance the war could not have been won, and to this cause he contributed to such an extent that he has been regarded by the most eminent historians the Financier of the American Revolution. The various reports of the committees on Revolutionary War Claims of the United States Congress, ranging from the 30th to the 39th Congresses, unfold a glorious page of Salomon's distinct help toward winning the War of Independence. Evidence is there presented that Salomon assisted the Department of Finance of the Continental Congress between the years 1782 and 1784, when Robert Morris was at its head. Records were found in the ledgers and day books of the Bank of North America, extracted therefrom and sworn to by Hockley, the cashier of that bank, on May 1, 1846, receipts having been produced to show that Morris received from him a total of $211,678. The Committee of the House reported its careful examination of a mass of documentary evidence and satisfied itself of the authenticity of the record. His financial activities in this direction are clearly delineated in Morris' *Diary* —a most profitable source of information—in which he recorded his transactions in seventy-five entries mentioning Salomon's name from August, 1781, to April, 1784.

While the notations are curt and businesslike, they sufficiently indicate the value of his services and his patriotism. Of particular interest in the Morris *Diary* is the fact that Salomon was appointed as Official Broker to the Office of Finance but, prior to this, he was already the trusted agent of the French embassy and French military establishment, and helped to promote the Franco-American alliance in every way in his power. In addition, Salomon handled large sums in the complicated transactions for the Dutch government attending the transfer of the proceeds of the Dutch loans, part of which were negotiated by John Adams. He also helped the Spanish representative in the United States, Don Francisco Rendon, who wrote to the governor of Havana that, but for Salomon he would not have been able to maintain his majesty's mission in the style and credit demanded.

In the time of the Revolution a considerable number of public men were in distress. The treasury was so much in arrears to the servants in public office that many of them could not without payment perform their duties, and many were threatened with jail for debts which they had contracted in order to enable them to live. Historical records show that Salomon helped a large number of these persons, among them James Madison, who was to become fourth president of the United States; Thomas Jefferson, third president of the United States; Arthur Lee, Baron von Steuben, General Thomas Mifflin, General Arthur St. Clair, Edmund Randolph, Colonel Theodoric Bland, James Wilson, Joseph Reed, James Monroe, fifth president of the United States; Major William McPherson, and Joseph Jones. Of special interest is also the fact that he helped finance Armand's Legion, when the Marquis de la Rouarie was seeking to replete his shattered troops after the disastrous battle at Camden.

In addition to his deep interest and concern in American affairs, Salomon devoted a very considerable part of his energy to matters of Jewish importance. He helped to build the first synagogue, Mickve Israel, in Philadelphia, contributing one-fourth of its expenses, and was one of its trustees. He contributed various sums to those who needed it, without regard to religion or race, and considerably helped his parents, relatives and friends whom he left in Poland. Salomon was generally known as "The Good Jew."

One of his important deeds to Jewry at large was a petition which he submitted on December 23, 1783, to the Council of Censors, calling their attention to the fact that in spite of the clause in the constitution of the state of Pennsylvania exempting civic employees from passing a test in religion, they were compelled, on assuming office, to take an oath to the effect that they believed in both the Old and the New Testament. Because, owing to this oath, no Jew true to his religion could accept an office with the government, the petition requested that this practice be abolished. This petition later on proved to be instrumental in the revision of the Pennsylvania state constitution in such a manner as to abolish the religious test.

Salomon was a Mason, a member of Solomon Lodge No. 2, A.F. and A.M., Philadelphia. He was never a healthy person, as he had contacted a chronic cold as a result of his incarceration in the roofless Sugar House Prison, and he died on Thursday, January 6, 1785, when he was only forty-five years old.

From 1860 on many attempts were made to memorialize his deeds for his country and to perpetuate his name in the annals of American history for generations to come. Presidents Theodore Roosevelt, William Howard Taft, Woodrow Wilson, Calvin Coolidge, Herbert Hoover and Franklin D. Roosevelt spoke about his contributions to the American Revolution in various addresses in the most glorifying terms. Finally, in 1936, both Houses of Congress unanimously adopted a bill to erect a monument to him on government soil in Washington. On December 15, 1941, a monument was unveiled in Chicago as a joint memorial to George Washington, Robert Morris and Haym Salomon, the funds having been contributed by Americans of all religions and ancestries.

SALOMON, JULIUS, historian, b. Copenhagen, Denmark, 1853; d. Copenhagen, 1922. In 1870 he began to study at the University of Copenhagen, and at the same time earned his living as a stenographer in the Danish parliament. In 1877 he became an associate of Marcus Rubin as statistician of the city of Copenhagen. In 1897 Salomon was appointed librarian of the newly founded municipal library of Copenhagen, and within a short time succeeded in creating a collection of books, manuscripts and pictures which was highly regarded as the basis for scientific research into the history of the capital of Denmark.

From 1907 to 1917 he was also assistant secretary to the Danish upper house. Salomon was esteemed as an authority on Danish history, especially of the history of the Jews in Denmark. He edited Meyer Aaron Goldschmidt's works (1908-10), and was co-editor of the *Tidsskrift for Joedisk History og Literature,* to which he contributed many valuable studies.

SALOMON, OTTO ARON, pedagogue, b. Gothenburg, Sweden, 1849; d. 1907. He was interested in manual training, and established at Nääs a handicraft (*slojd*) school for boys. To this school, which became internationally known, a teachers' seminary was added some years later. Through his efforts, manual training became part of the curriculum of Sweden's public schools.

Salomon furthered manual training not only through direct instruction, but also through writings, including: *Slöjdskolan och folkskolan* (1876-84); *Om Slöjden såsom uppfostringsmedel* (1884); *Den pedagogiska Slöjden* (1895); *Handbok i pedagogisk Snickersslöjd* (1890). Some of his works were translated into English and other foreign languages.

Lit.: *Salmonsens Konversations Leksikon,* vol. 20 (1926) 843; *Nordisk Familjebok,* vol. 17 (1932) 230.

SALOMON (SALOMON-CALVI), WILHELM, geologist and mineralogist, b. Berlin, 1868. Graduated from the University of Pavia in 1894, in 1899 he became assistant professor at the University of Heidelberg, where he was appointed director of the Geologico-Paleontological Institute (1908) and was professor from 1912 to 1933. During this period he wrote several works on geology and mineralogy, and edited *Grundzüge der Geologie.* Until 1933 he was a member of the Heidelberg Academy of Science, a privy aulic councillor, and an honorary citizen of the city. In 1934 he was appointed professor at the University of Ankara, Turkey, where he was living in 1943.

SALOMONE, WALTER L., British-Maltese statesman, b. Malta; d. Malta, 1939. He was descended from an old Italian Jewish family which settled at Malta soon after the British occupied the island. One of his brothers was captain in the Royal Maltese Artillery. Salomone was keenly interested in politics and loyal to Britain even while a considerable part of the Maltese population was claiming independence or even seeking incorporation into Italy. When, in 1921, the Maltese legislative assembly was created which superseded the former council of government, Salomone was elected member of the new parliament, and was reelected as long as the parliamentary constitution existed. He was a leader of the Maltese Constitutionalist Party and was highly esteemed even by his political adversaries because of his economic knowledge. From 1927 to 1931 Salomone was minister of trade and customs. He was a member of the cabinet which was supported by a coalition of the Constitutionalist and Labor parties and was presided over by Sir Gerald Strickland.

As minister, Salomone was generally considered "a busy and encouraging person," and he took vigorous measures to deal with the unemployment problem. In 1930 a political crisis arose because the prime minister came into a grave conflict with the bishops of Malta and Gozo, who issued a pastoral letter forbidding Roman Catholics to vote for Strickland and his cabinet. This crisis became much more acute when the Papal See took the bishops' side, and in 1932 Strickland's cabinet was defeated. Salomone, who loyally supported Strickland, became a leader of the opposition to the new government formed by the Nationalist Party until, in 1933, the British government abrogated the Maltese constitution. In 1936 Salomone represented the Government of Malta Section at the British Industry Fair in London.

SALOMONS, SIR DAVID, merchant, British member of Parliament, and writer, b. London, 1797; d. London, 1873. He was the son of Levy Salomons. As a youth he entered business, and became one of the founders of the London and Westminster Bank (1832). His claim to distinction rests on the courageous efforts he made to have Jewish disabilities removed. In 1835 he was elected sheriff for London and Middlesex, his election being afterward confirmed by special act of Parliament. In the same year he was chosen alderman, but refused the position on account of the oath which he was required to take. He was subsequently chosen for various other offices. In 1845, through the assistance of Sir Robert Peel, he procured the passage of a law which opened municipal offices to Jews. He was accordingly admitted as alderman of Cordwainers' ward, and in 1855 became the first Jewish Lord Mayor of London.

Salomons aimed at a seat in Parliament from 1837 on, and in 1851 was elected as a Liberal for Greenwich. He declined, however, to take the oath "on the true faith of a Christian." In 1858 the parliamentary oath was changed, mainly through the efforts of Lord John Russell, Gladstone, and Lionel Nathan de Rothschild, and it thus became possible for Salomons to take his seat in the House of Commons, where he remained until his death. In 1869 he was created a baronet.

Salomons took an active part in communal affairs, presiding over many Jewish organizations. He was an authority on commercial and financial questions. He wrote: *A Defense of Joint-Stock Banks* (1837); *The Monetary Difficulties of America* (1837); *An Account of the Persecution of the Jews at Damascus* (1840); *Parliamentary Oaths* (1850); *Alterations of Oaths* (1853).

Lit.: Hyamson, Albert M., *David Salomons* (1939).

SALOMONS, SIR DAVID LIONEL (GOLDSMID-STERN-), second baronet, scientist and engineer, b. London, 1851; d. London, 1925. He was the son of Philip Salomons and the nephew of Sir David Salomons, and it was from the latter, who had no male heir, that he received the baronetcy by special remainder in 1873. His wife, Laura, was a daughter of Baron Herman de Stern. Salomons was an authority in the field of electrical engineering, and contributed importantly to the literature of that subject; he published *Electric Light Installations* (3 vols., 8th ed., 1894-98). He had, besides, a variety of other scientific interests, and was one of the pioneers in the movement for "horseless carriages."

Among the science societies in which he was active were the Institution of Electrical Engineers, where he was vice-president and treasurer, the Royal Astronomical Society, the Geological Society and the Physical Society of London. He was, in addition, a figure in local politics. As magistrate he served for Kent, Sussex, Middlesex, Westminster and London. In 1881 he was high sheriff of Kent, and he was county councillor of Kent for the Tonbridge Division. In the town of Tunbridge Wells he was alderman and mayor (1894-95).

SALOMONS, SIR JULIAN EMANUEL, jurist and statesman, b. Birmingham, England, 1835; d. Sydney, Australia, 1909. He emigrated to Australia as a boy, and first entered a bookseller's, then a stock-jobber's business. For some time he was secretary of the Great Synagogue at Sydney, which sent him to England to study law. He returned in 1861 to Sydney, where he was admitted to the bar and practised successfully before the supreme court. He was counsel for the crown in many important cases.

In 1869 Salomons was nominated a member of the legislative council of New South Wales, but resigned in 1871. Reappointed in 1887, Salomons took an important part in the debates of the chamber until he was sent to England (1899). From 1869 to 1871 he was, as solicitor general, a member of the cabinets headed by Robertson and Cowper, and represented the government in the upper house. From 1887 to 1889 he was vice-president of the cabinet of Sir Henry Parkes, and represented it in the legislative council. From 1891 to 1893 he was a member of Sir George Dibbs' cabinet.

In 1881 Salomons was appointed royal commissioner to inquire into the Milburn Creek Copper Mining scandal. Although appointed chief justice (1886), he resigned because of the hostile attitude of some members of the court before he was sworn in.

Salomons took a prominent part in the federation campaign, but opposed the commonwealth enabling bill. In 1899 and 1900 he was agent-general for the colony of New South Wales in London. After his return to Sydney, he intended to retire to private life, but was appointed (1903) standing counsel to the commonwealth government. Salomons was knighted in 1891. He was a trustee of the Sydney National Art Gallery and the National Park of New South Wales, Queen's Counsel, and bencher, Gray's Inn, London.

SALOMONS, LEVY, financier and communal worker, b. London, 1774; d. London, 1843. He was the son of Solomon Salomons, and the grandson of Juda Leib Zelig, who went to England from Holland at the beginning of the 18th cent. Like his father and grandfather, Levy Salomons took a prominent part in the management of the Hambro Synagogue of London. He joined its governing committee in 1795, when he was only twenty-one years old, and in 1801 became treasurer (Gubbay) and in 1804 president.

But in 1806 he came into sharp conflict with his congregation, whose members, embittered, prevented intermediaries from attempting a reconciliation. Salomons became a member of the New Synagogue, and in 1812 was elected representative of this congregation. In his will Salomons, however, bequeathed to the Hambro Synagogue a greater sum than to other synagogues. He left the further sum of £2,000 for the benefit of poor Jews of Jerusalem, Tiberias, Hebron and Safed. In his financial enterprises Salomons was closely connected with Dutch Jewish bankers.

He was recognized as one of the most substantial citizens of London at this time. Salomons played an important part in the development of Lloyd's, and supported the company during critical times. His son, David Salomons, was the first Jew to serve as Lord Mayor of London.

SALOMONSEN, ISAK SALOMON, banker and philanthropist, b. Copenhagen, Denmark, 1830; d. Copenhagen, 1916. In 1856 he founded a money-changing business, and within a year became the leading money-changer of Denmark. For many decades Salomonsen was one of the foremost personalities at the Bourse of Copenhagen, respected by Danish and foreign bankers and by his government. In 1912 he retired from business. Upon retirement Salomonsen, a wealthy man, gave lavishly to charitable causes. He secretly supported many poor families, and was a patron of arts and music. He helped considerably to improve the housing and schools of the workers of Copenhagen. The largest part of Salomonsen's philanthropies was devoted to the Jewish community of Copenhagen, and as a member of its directorate he fostered improvement of the cultural and political conditions of the Jews in Denmark.

Lit.: Fischer, Josef, *Slaegten Salomonsen.*

SALOMONSOHN, family of bankers in Germany. The family goes back to Gedaliah Levin (1727-93), who was called from Poland to Copenhagen, Denmark, as chief rabbi. His son, Abraham Gedaliah (1751-1827), became his successor, and his grandson, Salomon Abraham Gedaliah (1776-1844), was also rabbi in the Danish capital. Gedaliah Salomonsohn (1799-1837), son of Salomon (whence the family surname) Abraham Gedaliah and great-grandson of Gedaliah Levin, became the first of the family of bankers.

Important members of the family were:

ADOLPH SALOMONSOHN (b. Inowrazlaw, Posen, 1831; d. Berlin, 1919), co-owner of the Disconto Gesellschaft, in Berlin. His mother, Ernestine Levy (1800-67), traced her descent back to the famous Cabalist Solomon Luria (1510-73). Salomonsohn studied law, and one of the theses which he prepared for the counsel of the Disconto Gesellschaft was brought to the attention of the founder of the banking house, the former Prussian minister of finance, David Hansemann, who invited the young lawyer to enter the firm. However, since Salomonsohn had already decided to enter the civil service, he soon became a notary in Ratibor. Following an anti-Semitic attack upon him by the then Prussian minister of justice, Count von der Lippe, Salomonsohn quit the civil service, and accepted the position previously offered by Hansemann. In 1863 he became counsellor, in 1866 manager and in 1869 partner of the banking firm, later the greatest banking institute in Germany.

As banker and jurist Salomonsohn became a pioneer in the stock and bond business. Prussian, Bavarian and Baden state issues of bonds were placed by him. He played a decisive role also in the financing of the then flourishing railroad business, and in connection therewith in the settlement of the Bethel Henry Strousberg scandal. The construction and completion of the Gotthard Railroad in Switzerland, of whose board he was a member until its acquisition by the Swiss state in 1909, were due to his farsightedness.

After the Franco-Prussian War (1870-71), which he helped to finance, a close friendship developed between Salomonsohn and Emil Kirdorf, and thus with the then incipient German heavy industry. Salomonsohn and Kirdorf were convinced monarchists, but they were just as certain that Emperor William II would cause the downfall of the German Reich. Salomonsohn coined the sentence: "Jewry has given monotheism to the world; it will yet teach the world tolerance."

He retired in 1888, devoting himself to the study of the great philosophers, especially Kant, and the natural sciences. He participated in the establishment of the adult educational project known as Urania, in Berlin. Throughout his life he consistently opposed conversion.

ARTHUR SALOMONSOHN (b. Inowrazlaw, Posen, 1859; d. Berlin, 1930), co-owner of the Disconto Gesellschaft, was a nephew of Adolf Salomonsohn and, like his uncle, at first a jurist. He, too, began his career as counsellor of the Disconto Gesellschaft, becoming manager in 1893 and partner in 1896. His interests were

connected mainly with the mining industry (potash) and the floating of South American bond issues. He carried on negotiations with the governments of Argentina (1891) and Venezuela, traveled to all the European capitals, and was a frequent visitor in the United States. In 1903 he was appointed Reich government expert to the conference held in Washington, D. C. In 1912 he established the Neu-Guinea Co., a corporation for the development of the then German colony of New Guinea. He played an active role in the financing of Russian railroads and the Roumanian oil industry.

In 1929 he consummated, as his last act, the merging of the Disconto Gesellschaft with the Deutsche Bank; this was one of the most decisive transactions within German economic life as a consequence of the inflation. Salomonsohn was a member of the central board of the Reichsbank, the Berlin Chamber of Industry and Commerce, and the Reich Economic Council.

GEORG SALOMONSOHN (SOLMSSEN) (b. Berlin, 1869), co-owner of the Deutsche Bank and Disconto Gesellschaft, of Berlin, was the son of Adolph Salomonsohn. He attended the Friedrich Werdersches Gymnasium in Berlin, studied law, and in 1898, at the request of the Prussian ministry of justice, went to the United States to collect material relating to the construction trades. He was deeply shocked when he met with anti-Semitism in the country of liberty. He saw in it proof of "the indigestibility of Jewry by the surrounding world even in the melting-pot of America." Forced to choose between Zionism and absolute assimilation, he accepted baptism (his father had remained a believing Jew), and changed his name to Solmssen.

In order to make his motives clear, however, he published the results of his American studies, *Der gesetzliche Schutz der Begläubiger in den Vereinigten Staaten von Nordamerika* (Berlin, 1900), under his real name of Georg Salomonsohn. Later he wrote an article, "Aktienrecht," for the *Handwörterbuch der Staatswissenschaften,* in 1926 *Probleme des Aktienrechts,* and in 1929 *Youngplan und Agrarpolitik.*

Salomonsohn entered the Disconto Gesellschaft in 1900. His special fields were the oil and the cable industries. In 1911 he became a partner in the firm, and in 1930 partner with Oskar Wassermann in Germany's greatest banking institute, the Deutsche Bank und Disconto Gesellschaft, created by his cousin, Arthur Salomonsohn. Politically he was a conservative, but his knowledge of international economics convinced him that the crises which followed the first World War would bring about changes in the world's economic structure. Salomonsohn was a foe of the Weimar Republic, and strove to prevent Germany from fulfilling its obligations under the Treaty of Versailles.

He was a foe not only of Communism but also of economic individualism and of the high tariff policy. He believed that the solution would be found in "surmounting economic frontiers." In 1921, as president of the Deutsch-Atlantische Telegraphen-Gesellschaft, he cooperated with the American banker A. W. Harriman in establishing a cable between Emden, Germany, and New York. Shortly after the Nazis' accession to power (1933) he retired; however, under the Nazi regime he published his collection of political and economic writings under the title of *Beiträge zur deutschen Politik und Wirtschaft,* in which he showed his sympathy with the principles of German National Socialism, with the exception of its anti-Semitism. From 1933 to 1939 Salomonsohn spent considerable time in England seeking, with some success, to defend the policies of the Nazi regime. In 1943 he was living in Zurich, Switzerland.

HUGO BIEBER and JOHN F. OPPENHEIMER.

SALOMONSON, HERMAN, writer and journalist, b. Amsterdam, Holland, 1892; d. in the concentration camp at Dachau, Germany, 1942. He was editor of the weekly newspaper *Groene Amsterdammer* (1915-1923) and of the daily *Javabode* of Batavia (1923-1927). In 1927 he became European director of the Netherlands Indies News Agency Aneta; in 1935 director in the Indies. Salomonson returned to Holland in 1936 and became Aneta director at The Hague. This post he occupied until the Germans invaded the Netherlands (May, 1940).

Under the pen name of Melis Stoke he wrote numerous essays and articles, and the novels *Zoutwaterliefde* (English trans. *Love at Sea*); *Luchtvacantie* (Vacation in the air); and *De Razende Berg* (The Furious Mountain).

SALONIKA (Greek, Thessalonike), seaport in Macedonia, with 60,000 Jews among its approximately 240,000 inhabitants (1934). It is not known when the first Jews settled in Salonika. The apostle Paul found a large Jewish community when he came to Salonika in 53 C.E. (*Acts* 17:1). Nothing is known regarding the fate of the Jews in the city during the next centuries. Jews from Salonika, however, were scattered all over the Balkan peninsula in the 9th cent. In Salonika itself the Jews rendered great services at this period in the development of commerce and trade; therefore they were exempt, at the time of the First Crusade (1096) from every tax.

The number of Jews in Salonika in 1173, according to reports by the noted Jewish traveler Benjamin of Tudela, was only 500. On account of the frequent expulsion of Jews from France, Italy, Sicily, Calabria and Poland during the 13th and 14th centuries, the Jews in Salonika, who were organized in several congregations, according to their homelands, increased considerably. However, the highest prosperity of the Jews in this city was not reached until the Turkish rule. The first Turkish Sultans offered them considerable privileges which opened great possibilities for their development. A new Jewish community was established in Salonika around 1470 under the name of "Frank" or "Frankfort"; it consisted of fugitives from Bavaria, who had fled from the country under the reign of Louis IX. It is evidenced by the great scholars who lived at that time in Salonika that the city was then already a center of Jewish knowledge and education; among them were the astronomer Solomon ben Elijah, author of *Sharbit Hazahab,* and Sabbatai Hakohen.

A great change in the Jewish life of the city took place with the mass immigration of Jews from Spain and Portugal in 1493 and 1496. The influx of the Sephardic Jews brought new powers and created a new community organization. The older Jewish inhabitants soon became accustomed to the new conditions, adopted the language and customs of their Sephardic coreligionists, and were, in the course of time, absorbed entirely by them. Among the most prominent Sephardic refugees who settled in Salonika during this period were Ephraim Caro and his son Joseph, author of the *Shulhan Aruch;* the physician Solomon ben Habib; Abraham Hazan; Don Judah Benveniste, who presented his ample library to the city; and Jacob ibn Habib, author of the *En Yaaḳob.* Salonika soon had great Yeshivas and other places of study. Joseph Taytazak, one of whose pupils was Solomon Molcho, was one of the most prominent adherents of the Cabala.

But the flourishing life of the Jews of Salonika was soon threatened through the pressure of excessive taxes which the Sultans imposed upon them. Merchants especially had to pay no fewer than nineteen kinds of taxes; therefore many of them left the city. Great fires destroyed the Jewish quarters in 1545 and 1620. In addition, serious conflicts within the Jewry of Salonika hampered the internal development of the community. Especially the residence of Sabbatai Zevi in Salonika (1659) divided Jewry there into two factions. Salonika was, next to Smyrna, the most

Sabbath guests in the synagogue courtyard of the "Wonder Rabbi" at Salonika

prominent center of this movement. Jacob Frank, too, lived in Salonika. More than 3,000 Jews (Dönmeh) embraced Islam at that time.

The community in Salonika made great progress after 1890, especially after the rise of the Young Turk movement, and this development continued under the Greek rule, under which the city came after the first Balkan War (1912). The Jews represented the majority of the municipal population under the reign of the Turks; therefore their Sabbath was the general day of rest, on which the banks were closed and all work in the port ceased. However, a complete change took place as a result of the exchange of population between Turkey and Greece, when numerous Balkan Greeks immigrated into Salonika, and the political and economic situation of the Salonika Jews took a turn for the worse.

Before the conquest by the Nazis (April, 1941), Salonika had more than thirty synagogues, which were under the jurisdiction of the Jewish communal authorities; it had also a first class Jewish hospital (Hospital Baron Hirsch) and several Jewish apothecaries. There existed a strong Zionist movement and much interest in the revival of Hebrew. There were also a lodge of the B'nai B'rith and a committee which labored for a rapprochement between Jews and Greeks. The Jewish school system in Salonika was highly developed. There were the Talmud Torah Hagadol, the great Jewish public school, which was founded in 1663 and had about 1,500 pupils; the public school at Vardar; the small Talmud Torah School (Talmud Torah Hakatan in Calamaria), and a great number of Jewish public schools which were foundations partly of the Alliance Israélite Universelle and partly of the Hilfsverein der Deutschen Juden.

Jews of Salonika doing penance during the agitation that attended the career of Sabbatai Zevi

The Jewish printing industry, established in Salonika in 1515, produced numerous works, and the newspaper industry was early developed. The city had, furthermore, a great Jewish library and a number of Yeshivas. After the first World War the Jews of Salonika united to preserve the Sabbath when a law was passed compelling Sunday rest and brought them considerable economic loss.

The Jews of Salonika were known everywhere for their business acumen. They were leaders in commerce and industry, and active also in trade and in the free professions. The Jewish freight carriers in the port of Salonika are especially well known. The Jews were very active in the Young Turk movement, which had its center of support in Salonika. Among the four Jews elected to the Turkish Parliament in 1908 there was a representative from Salonika.

The Jews were active in public political life under the Greek rule also. The Greek Parliament had four Jewish deputies from Salonika, and Peppo Malach was finance minister during the reign of King Constantin.

The plight of Salonika Jewry started with the beginning of Italian-Greek hostilities, in the fall of 1940. Chief Rabbi Zvi Hirsch Koretz of Salonika publicly protested against the bombardment of the civilian population of Salonika by the Italian air force which wrought havoc on a district mostly inhabited by poor Jews. Many Salonika Jews were prominent in the defense of Greece. When, in April, 1941, the city was conquered by the Germans, virtually all the Jews fell into the hands of the invaders. A collective fine of one million drachmas was imposed on the Jewish community, and thousands of Jews were sent to labor camps or to Roumanian ports. The economic situation of the Jews was so grave that in 1943 at least fifty Jews were dying from hunger in Salonika every day. The Salonika municipality attempted to distribute what relief was available to Jews and Christians alike without discrimination, but the Nazis intervened.

SALONS. From the 1780's through the 1830's the salons of Jewish women in Berlin were centers of intellectual exchange having a decisive influence on the formation of philosophical and literary trends in Germany. The origin of the Jewish salons of Berlin can be traced back to economic conditions resulting from the Seven Years' War (1756-63). In this war, which necessitated financial operations of great skill and magnitude, Frederick the Great assigned war contracts to Berlin Jews who were often best able to meet his lack of sufficient war materials. The Jewish war contractors, having risen to eminence both through their increased wealth and through privileges granted them for furthering the welfare of the Prussian fatherland, before long received their Christian clientele of aristocratic rank not only in their offices but also in their drawing-rooms. The atmosphere of culture, informality and warmth which reigned in the homes presided over by Jewish women favorably compared with the stiffness and conventionality of feudal society, and admission to the Jewish salons by the end of the 18th cent. came to be regarded as a valued favor. Here diplomats and actresses, bankers and poets, Protestants and freethinkers, Catholics and Jews conversed on terms of equality and influenced each other's religious, philosophic and esthetic expression.

It was in the home of Moses Mendelssohn that Jewish and non-Jewish intellectuals first gathered. The most famous Jewish salons of Berlin were those of Henriette Herz and of Rahel Varnhagen von Ense. They were visited by Mirabeau, August Wilhelm and Friedrich Schlegel, Schelling, Tieck, Nicolai, Jean Paul Richter, Schleiermacher, Prince Louis Ferdinand of Prussia, Alexander and Wilhelm von Humboldt, Börne, Heine, Fichte, Hegel, De la Motte Fouqué, and Achim and Bettina von Arnim. It was Rahel Varnhagen von Ense, generally acknowledged to be the greatest woman that German Jewry produced, who opened the eyes of her contemporaries to the unique genius of Goethe. The Jewish salons were rallying points for the Romantic movement and subsequently for "Jung Deutschland."

The Jewish salons not only gave women for the first time an eminent role in the literary life of Germany, but they impressed with the sublime role of the Jewish people in history such authors as Karl August Varnhagen von Ense and Bettina von Arnim. Friedrich von Gentz and Wilhelm von Humboldt, advocates of political rights for the Jews, belonged to the Herz and Varnhagen circles.

During the Congress of Vienna (1814-15) the homes of the Jewish baronesses Fanny von Arnstein and Cäcilie von Eskeles were rallying places for the representatives of Prussia. The balls of Madame von Arnstein and the dinner parties at the house of the Jewish banker Leopold Herz were attended by Wellington, Metternich, Talleyrand, Hardenberg, Castlereagh, Liechtenstein, Cardinal Consalvi and many other statesmen and potentates. The house of Dorothea Mendelssohn, who was married to Friedrich von Schlegel, was a social and intellectual center at Vienna between 1809 and 1829. Other brilliant Jewish salons were those of Mesdames Pereyra, Ephraim and Levy. Sara Meyer von Grotthus, a friend of Baroness von Arnstein, was greatly admired by Goethe. All this social influence had no little bearing on the deliberations of the Congress concerning the civil rights of the Jews in the Confederated States.

On the other hand, the salons went beyond furthering the movement of enlightenment among German Jews, and became a definite influence toward the breaking down of Jewish tradition. With the exception of Rahel Varnhagen who, late in her life, came to take great pride in her Jewish origin, the Jewish social leaders became forgetful of the magnificence of their own spiritual heritage and wished to be submerged in German culture, in German life. Their passionate hankering for complete assimilation, which found an expression in the fact that either they or their children accepted the Christian faith, was emulated by large sections of Jews in Central Europe a hundred years after the salons had ceased to exist.

SALT LAKE CITY, capital of Utah, known as "the city of the Saints," being the headquarters of the Mormon Church. Its population was 149,934 (census of 1940), of whom about 1,600 were Jews (1940). There are records of a number of Jews residing temporarily in Salt Lake City in the period from 1847 to 1850.

Among the early settlers was Alexander Neibur who, educated in Germany as a rabbi, had gone to London and there embraced Mormonism, married, immigrated to Nauvoo, Ill., and then crossed the plains to Salt Lake City in 1848. One of his daughters married the presiding bishop of the Mormon church, C. S. Nibley. Another early comer was S. N. Carvalho, originally from South Carolina, and topographer of Fremont's last expedition. He arrived in Salt Lake City in 1851, and while there painted the portraits of many Mormon dignitaries.

In the period 1852 to 1866 a number of Jews became residents of Salt Lake City. Some came from California after the gold rush boom had been deflated, others from Nevada after the flush days of Virginia City were spent and the riches of Comstock Lode exhausted. Salt Lake City, until the advent of the transcontinental railroad, was a stopping off place for emigrants to California and, as such, a thriving trading center; both Mormons and "gentiles" (non-believers in Mormonism) shared in this lucrative traffic.

Julius Gerson Brooks and his wife came by wagon from Galena, Ill., to Salt Lake City, arriving there on July 9, 1854. Among other early settlers were Eli and Nelson Ransohoff, Ichel and Abraham Watters, Samuel and Emanuel Kahn, Isidor Morris, Frederick and Samuel Auerbach, and Louis Cohn.

Services on the high holy days were held here in the period from the late 1850's until March 21, 1881, when Congregation B'nai Israel was incorporated and a synagogue erected. A few years thereafter the Reform ritual was adopted and Rabbi Leon Strauss was engaged in the fall of 1884 at a salary of "$62.50 per month, payable in advance." The present synagogue was erected in 1890; it is a reduced replica of the Berlin synagogue, and is dedicated to the memory of Ichel and Augusta Watters. From 1925 on Samuel H. Gordon was its rabbi. Congregation Montefiore (Orthodox) was founded in 1899 and incorporated in 1903;

its rabbi in 1943 was O. Goldman. Congregation Shaarey Tzedek (Orthodox) was founded in 1916 and incorporated in 1919; its rabbi (1943) was Reubin Kaplan.

Many of the Jewish citizens of the city occupied positions of responsibility in both the city and state government. Simon Bamberger was a state senator from 1903 to 1907, and governor of Utah from 1914 to 1921. Louis Cohn was a member of the city council in 1874; Louis Marcus was mayor of Salt Lake City from 1931 to 1935. Harry S. Joseph was a member of the state assembly from 1902 to 1910, and its speaker in 1908. Other members of that body were Herbert S. Auerbach (1924-36), Clarence Bamberger (1908-10), Murray K. Jacobs (1926-30) and Irving Aronovitz (1932-34). Herbert M. Schiller served as a justice of the district court, and Ernest Bamberger was a member of the Republican National Committee (1920-28).

LEON L. WATTERS.

SALTEN, FELIX (originally Salzmann), author, b. Budapest, 1869. The son of a businessman, he came to Vienna as a boy, attended the Gymnasium, but owing to the financial reverses of his family he had to abandon his plan of studying philology at the University of Vienna.

At an early age he started writing for newspapers, and became famous overnight through a brilliant necrology on the French novelist, Émile Zola (1902). Salten became theatre critic of the *Wiener Allgemeine Zeitung,* column editor of *Die Zeit* (Vienna), editor of the *Morgenpost* (Berlin), and finally theatre critic of one of the largest Viennese dailies, the *Neue Freie Presse.* After the annexation of Austria by the Nazis (1938) he moved to Zurich, Switzerland, where he was living in 1943.

Salten was one of Vienna's most admired and most influential critics who continued the literary tradition of Ludwig Speidel, Theodor Herzl and other Viennese feuilletonists. As a writer of fiction he belonged, with Peter Altenberg and Arthur Schnitzler, to the so-called "Wiener Schule" (Viennese school) which combined the naturalism of Berlin with the romanticism and softness of the Austrian spirit. His drama, *Der Gemeine* (1899), the tragedy of a private soldier, was, because of its social criticism, not permitted on the stage before the Austrian revolution of 1918. However, he achieved marked success with his three one-act plays, *Vom anderen Ufer* (1908) which, dramatizing the conflicts of persons separated by class differentiations, were presented for the first time at the Lessing Theatre, Berlin.

More important than his dramatic works, which dealt with Schnitzler's problems in the technique of Courteline, were his novels and short stories. Many of them touched the social problem (*Die kleine Veronika,* 1903; *Olga Frohgemuth,* 1910; *Die klingende Schelle,* 1914). In *Martin Overbeck* (1927), the story of a young industrialist who falls in love with a working-girl, he endeavored to show a peaceable solution of the social question.

The erotic problem was discussed in very frank and unconventional manner in his modern novels, *Die Gedenktafel der Prinzessin Anna* (1901) and *Der Schrei der Liebe* (1904). *Herr Wenzel auf Rehberg* (1906) and *Der Hund von Florenz* (1923; English transl., *The Hound of Florence,* 1930), regarded by some critics as his most mature works, have a historical setting.

In the 1920's Salten, a passionate hunter, started writing a series of animal stories which became very popular. *Bambi* (1923; English transl., 1928), the story of a deer, was hailed as a masterpiece by John Galsworthy. In 1942 it was made into a motion picture by Walt Disney. To the same class belong *Fünfzehn Hasen* (1929; English transl., *Fifteen Rabbits,* 1929) and *Florian, das Pferd des Kaisers* (1933; English transl., *Florian, the Emperor's Stallion,* 1934). His creation of Perry, a squirrel (*Perry,* 1938), is considered as good and original as Riki-tiki-tavi, Moby Dick, Black Beauty or Peter Rabbit.

As though referring to the problem of the Jew in a hostile world, Perry says of the squawking jay: "He thinks he's the best singer in the forest. He's hated me ever since I told him his voice was ugly." He receives the "comforting" answer from the magpie: "Child, he would have hated you anyway." Salten evinced a deep interest in the Jewish problem from the days of his friendship with Theodor Herzl. After a visit to the thriving Jewish colonies in Palestine he published an enthusiastic travel report, *Neue Menschen auf alter Erde* (1925). In his novel *Simson* (1928) he gave an original presentation of the Jewish idea of God and a new interpretation of the myth of Samson and Delilah.

Felix Salten

Salten collected his essays in several volumes, of which especially *Das österreichische Antlitz* (1909), dealing with Austrian personalities and problems, exercised considerable influence. *Schauen und Sehen* (1921) contains essays on theatre and actors, and *Geister der Zeit* (1924) pen-sketches of outstanding 20th cent. personalities (among them a pen-portrait of Herzl). Salten described his visit to the United States in *Fünfzehn Minuten Amerika* (1931). His *A Forest World* appeared in 1942; it was similar to *Bambi,* but not a sequel.

SALTING (of food), *see* COOKING; DIETARY LAWS.

SALUS, HUGO, lyric poet, b. Böhmisch-Leipa, Bohemia, 1866; d. Prague, 1929. A physician by profession, he published numerous volumes of tender and humorous poetry, such as *Ehefrühling* (1890); *Gedichte* (1898); *Reigen* (1900); *Klarer Klang* (1922); and *Die Harfe Gottes* (1928). His stories in verse are collected in *Novellen des Lyrikers.* Although he abandoned Judaism, several of his poems, such as "Ahnenlied" and "Lied des Blutes" strongly emphasize the poet's sympathy with the Jews.

SALUTATION, *see* GREETING AND WISH FORMULAS.

SALVADOR (República de El Salvador), a country in Central America, with a total population of

1,744,535 (1940), including about 160 Jews (1943). Mestizos and Indians formed about two-thirds of the population of Salvador. In 1917 there were reported to have been not more than sixty Jews in the country, about 90 per cent of whom were in the capital city, San Salvador. They engaged mainly in commerce and finance, and French Jews not only were a distinct majority, but they owned most of the largest stores. There were, in addition, American Jewish families of Russian descent, some Dutch, and a few Oriental Jews. The most prominent Jew at that time was David Bloom, who came to Salvador from San Francisco. Another Jewish firm, Rosenblum Brothers, was originally situated in San Francisco.

In 1936 Charles Dreyfus was elected mayor of San Salvador. His father had settled in Salvador about 1895 and there established the firm of Lazaro Dreyfus Hermanos. Charles Dreyfus had been active in social and philanthropic work.

There were only forty Jewish refugees in the tiny republic in 1943, and the requirements of these were met locally by the Salvadorean Jewish community.

SALVADOR, FRANCIS, prominent patriot of South Carolina at the outbreak of the American Revolution, b. London, 1747; d. South Carolina, 1776. He was the son of Jacob Salvador. He belonged to a distinguished family of Portuguese Jews, living in London, whose family name had been changed from Jesurum Rodriguez to Salvador.

As a child two years of age Francis Salvador lost his father; but the family fortune, which came to him, was more than sufficient to provide for the boy's liberal education. On arriving at maturity Francis Salvador came into an inheritance of £60,000, which sum was augmented by the dowry of £13,000 which he received when he married his cousin Sarah, daughter of his uncle Joseph Salvador. But the family wealth was suddenly swept away by misprised ventures, the failure of the Dutch East India Company and losses incurred on account of the Lisbon earthquake. Bent on recouping his losses, Salvador decided to try his fortune in America. His decision to settle in South Carolina was prompted by the fact that he owned a claim to a large plantation which his uncle Joseph had transferred to him.

Arriving in America in December, 1773, Salvador set to work to establish himself as a planter and landowner. In this undertaking he was quite successful, for within a year of his arrival he owned a plantation of nearly 7,000 acres of land. He embraced the patriotic cause with passionate intensity, allying himself with the most prominent rebels of South Carolina—among whom were Pinckney, Rutledge, Drayton, Hammond and Laurens. He became their trusted friend and they sought his counsel in affairs of state—to judge by the correspondence that passed between them and which has come down to us.

Salvador was one of the first Jews in America to become a representative in a popular assembly. On December 19, 1774, he was elected member of the first Provincial Congress of South Carolina which held its first session at Charleston on January 11, 1775. As an active and influential member of the Assembly, representing the Ninety-sixth District, he was placed on important committees and was conspicuous in debates. Salvador was also a member of the second Provincial Congress, which convened at Charleston in November, 1775, wherein he likewise took a prominent part. By one of the provisions of the new constitution, adopted on March 26, 1776, the Provincial Congress of South Carolina became the General Assembly of the new state, in the proceedings of which Salvador participated until its adjournment on April 11, 1776. Thus Salvador became one of the members of the first General Assembly of the new independent state.

During the outbreak of the Revolutionary War, Francis Salvador met with a tragic death in a heated engagement with the Tories and Indians. When a report spread on July 1, 1776, that the British fleet was descending upon Charleston, it encouraged a ruthless band of Indians to overrun the frontiers and start a wholesale massacre. The dire news was brought to Salvador, who immediately mounted his horse with the object of checking the disaster. A series of skirmishes followed in which Salvador played a heroic role. But the end came in a battle which took place on the morning of August 1, 1776, during which Salvador was shot and killed. His untimely death was much lamented, and his name appears in practically every history of the state of South Carolina. CLARENCE I. FREED.

Lit.: Elzas, Barnett A., *The Jews of South Carolina* (1905) 68-77; Huhner, Leon, in *Publications of the American Jewish Historical Society,* No. 9 (1901) 107-22; Drayton, *Memoirs of the American Revolution,* 339-50; *American Hebrew,* vol. 119, p. 574; Lesser, Allen, *Weave a Wreath of Laurel* (1938).

SALVADOR, JOSEPH, philanthropist, b. London, 1716; d. Charleston, S. C., 1786. He held high rank as a merchant, and was director of the Dutch East India Company. He engaged in the brokerage business and negotiated loans for the British government. In 1755 he purchased a tract of 100,000 acres of land in South Carolina. Twenty years later he sold a large portion of this land to a group of London Jews, and the property became known as "the Jews' land." Joseph Salvador transferred a large tract of his South Carolina land to his nephew and son-in-law, Francis Salvador (d. 1776). In his prime Joseph Salvador was a man of considerable wealth and social position. He owned a magnificent country home in White Hart Court and a country seat at Tooting, a suburb of London. He was president of the London synagogue and active in Jewish affairs and general philanthropy.

In later years he met with heavy losses, especially through the failure of the Dutch East India Company, which brought about his financial ruin. His last days were spent in comparative obscurity; two years before his death he came to South Carolina to live.

Lit.: Elzas, Barnett A., *The Jews of South Carolina* (1905) 108-18; Huhner, Leon, in *Publications of the American Jewish Historical Society,* No. 9 (1901) 108-9; No. 12 (1904) 57-58.

SALVADOR, JOSEPH, historian of religion, b. Montpellier, France, 1796; d. Versailles, France, 1873. He came from an extremely rich old Spanish family which had fled from the Inquisition. His mother was a Catholic. Salvador studied medicine, and when he had finished his studies he devoted himself to the study of Judaism. He was, in a certain sense, considered a forerunner of Moses Hess and of other writers of a later period. On the other hand, Salvador's work quite obviously bears the stamp of his time. He perceived in Mosaism the struggle for constitutional reforms and against a reactionary royalty and the power of a clerical priesthood. In the political struggles, which occurred about the year 1830, his views were considered important by the republicans.

Salvador always saw in Jesus the Jew, and was the first to treat this subject in accordance with the methods of historical research, thus anticipating the methods of Ernest Renan and David Friedrich Strauss. He regarded the destruction of the Temple as a necessity because it forced Judaism to be disseminated among the nations under the guise of Christianity. He was convinced of the great future and revival which awaited the Jewish religion.

Salvador's writings were greatly esteemed in France during his lifetime, and he was always considered a spiritual

leader of French Jewry. His principal works were: *La loi de Moïse* (1822); *Jésus-Christ et sa doctrine* (1838); *Histoire de la domination romaine en Judée* (1846); *Paris, Rome, Jerusalem ou la question religieuse au 19. siècle* (1860).

Lit.: Salvador, Gabriel, *Joseph Salvador* (1881); *Revue des études juives,* vol. 3, p. 137 et seq.; Darmesteter, James, *Prophètes d'Israël* (1892).

SALVATION. Because of the evolutionary principle, which is evident in the entire history of Judaism, the concept of salvation has undergone a constant transformation. Originally it meant the victory of Israel over his enemies, whose defeat was a vindication not only of God's people but also of God Himself. Thus the Psalmist cries: "Help us, O God of our Salvation, . . . and deliver us, . . . wherefore should the nations say: 'Where is their God?' " (*Ps.* 79:9). David's prayer, as recorded in *I Chronicles* (16:35), is addressed to the "God of our salvation" Whose answer will mean deliverance from Israel's enemies. Salvation was the tangible, almost immediate, victory of the people over their adversaries and, in the personal sense, it was the release of the individual from the troubles which beset him (*Ps.* 34:7).

With the Babylonian Exile (586 B.C.E.) and the developing monotheism of the Jewish people the idea of salvation was interpreted in a different sense. Of necessity it began to mean the survival of the Judeans and their eventual restoration to their pre-Exilic life. In the prophecies of Deutero-Isaiah, delivered in the period of exile, God speaks of Himself as the only Savior (*Isa.* 43:11; 45:15, 21). In God's name Zechariah declares (*Zech.* 8:7): "Behold, I will *save* my people from the east country, and from the west country; and I will bring them, and they shall dwell in the midst of Jerusalem; and they shall be My people, and I will be their God, in truth and in righteousness." It is apparent that many of these prophecies were delivered with only the needs and the destiny of Israel in mind. Babylonia had none to save her, but salvation would come to the exiled people of Judea (*Isa.* 47:15).

Partly as the result of this conviction that salvation for Israel was a certainty, the belief in resurrection took hold of the Jewish heart. Written in the hope of redemption, *Ezek.* 37 combines the two points of view into a harmonious picture of the resurrection of the dead and of Israel's return to his own land. "I will open your graves, and cause you to come out of your graves, and I will bring you into the land of Israel" (verse 12).

Generations later, especially during the Maccabean period (about 200 B.C.E.), the time of salvation was placed in an even more distant future (*Dan.* 12). *Daniel* pictures the arrogant and tyrannical rule of a king who will deal high-handedly with all that is sacred in Jewish life, magnifying himself even above the God of gods. The salvation that will come to the people will be brought about miraculously; "at that time shall Michael stand up . . . and at that time thy people shall be delivered" (verses 1-2). "And many of them that sleep in the dust shall awake, some to everlasting life" (verse 3).

This conception of salvation has persisted in popular Jewish theology. It is reflected in the Apocrypha (*II Macc.* 7:23), where it is said: "The Creator of the world . . . in mercy giveth back to you again both your spirit and your life." In commenting on the statement: "All Israel has a place in the world to come" (*Sanh.* 10:1), Bertinoro says: "This refers to the world to come, following their literal resurrection unto eternal life." Among those, says this Mishnah, who will have no place in the world to come are they who deny resurrection. The Thirteen Articles of Faith of Maimonides (1135-1204), as well as all other formulated creeds, include the doctrine of resurrection, which is the prelude to salvation. The popular mind held so tenaciously to this identification of resurrection and salvation that the first blessing in the "Amidah" (Singer's prayer-book, p. 44), which declares that God will bring a redeemer, is followed immediately by the benediction, "Blessed art Thou, O Lord, who quickenest the dead."

For many Jews this eschatological view of salvation has given way to a strikingly different attitude toward mankind's redemption. It is based upon the conviction that salvation for the individual, for Israel and for mankind as a whole is inherent in the higher life itself. The time was foreseen by the prophet (*Jer.* 31:31-34) when God's law will be implanted on the minds and hearts of all men, when everyone, "from the least of them unto the greatest of them," will know the Lord. In this religious awakening the prophet foresaw salvation for the individual and for society. It was not dependent upon a miraculous resurrection or the advent of a special redeemer. A reflection of the intrinsic value of the religious life is seen in the statement of Johanan that if Israel observed two Sabbaths properly redemption would come (*Sab.* 118b).

When Maimonides (*Mak.* 3:16) declared that a man who performs even one commandment perfectly will attain salvation, he undoubtedly had reference to this same inherent value. Similarly, Hasdai Crescas (*Or Adonai* II, 6:1) said that salvation is not attained by acceptance of dogmas but by love of God that fulfils itself in action. In this spirit Shneor Zalman, the 18th cent. mystic and scholar, declared: "I desire not Thy paradise nor Thy world to come. I want Thee, O God, only Thee Thyself" (Cahana, *Sefer Hahasiduth,* 203). In fine, man, in communion with God, is destined more and more to realize the good within himself. "Salvation is not a ready-made possession, a miraculous treasure presented to man by Divine grace, in order that he may be saved and become blessed. In Judaism salvation is a duty imposed by God, which man has to fulfil" (Baeck, Leo, *The Essence of Judaism,* 83). Thus, in modern Jewish thinking, salvation is attained by man through the performance of his duty and through his serving as co-worker of God in perfecting the world. Complete salvation will not be possible until righteousness is established in the world and all men live by the standard of holiness.

The Jewish concept of salvation can not be properly understood without considering these significant facts:

(1) The gates of salvation are open to all men. It is not limited to members of the house of Israel. The righteous among the non-Jews have a place in the world to come (Maimonides, *Hilchoth Teshubah* 3:5). For this reason the seven laws of the sons of Noah were given to mankind (Moore, G. F., *Judaism in the First Centuries of the Christian Era,* vol. 1, p. 274). While Jews are required to observe 613 commandments, non-Jews can attain salvation merely by observing the seven Noachian commandments, prohibiting idolatry, blasphemy, the cursing of judges, murder, incest and adultery, robbery and the eating of flesh with the blood of life in it. "To us, Universalism does not stop short before the redemption of every human soul" (Joseph, Morris, *Judaism as Creed and Life,* 154).

(2) In keeping with this universalism, certain Jewish thinkers have declared that Christianity and Islam, as Judaism's daughter-religions, have their part to play in the scheme of salvation. They help to prepare the soil for the messianic kingdom (*Hilchoth Melachim* 11:4). Adopting this Maimonidean point of view, the formulators of the Pittsburgh Platform of Reform Judaism declared: "Christianity and Islam . . . we appreciate their mission to aid in the spread of monotheistic and moral truth" (Cohon, Sam-

The Jewish ideal of the salvation of mankind: beating swords into plowshares in the day of universal peace

uel S., *Christianity and Judaism Compare Notes,* 95). "For the Jew there is salvation in Judaism, but for the gentile the means of redemption are given in his own moral and religious ideas" (Joseph, *ibid.,* 272). It is understood that these ideas have their origin in Jewish monotheism.

(3) Thus there is no salvation in Judaism by faith alone or by the mere acceptance of a creed (Kohler, Kaufmann, *Jewish Theology,* 5). Nor is there salvation attained through mediation. God freely remits the sin of the penitent (Moore, *ibid.,* vol. 1, p. 500). As the result of each man's awareness of the manner of life required by God (*Micah* 6:8), the whole world will awaken to the demands of the higher life. Salvation will be complete when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea" (*Isa.* 11:9). ABRAHAM SHUSTERMAN.

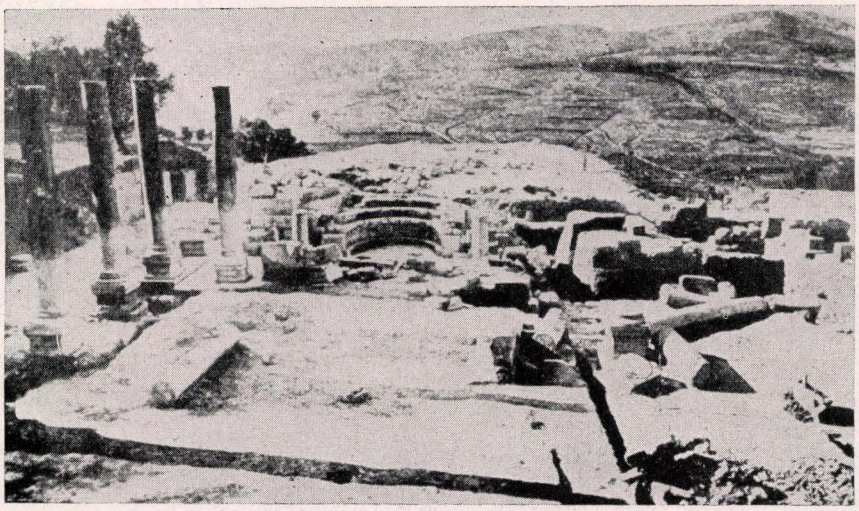
SALZ, ARTHUR, political economist and sociologist, b. Staab, Bohemia, 1881. He studied political economy at the Universities of Berlin and Munich, from which he graduated. In 1907 he became lecturer at the University of Heidelberg, and in 1917 assistant professor. He lectured also at the commercial university of Mannheim. In 1933 he emigrated to Cambridge, England. From 1934 on he was professor at Ohio State University, Columbus, Ohio. Salz excelled both in describing exactly economic and historical facts and in theory and methodology.



He published *Beiträge zur Geschichte und Kritik der Lohnfondstheorie* (1905) and *Geschichte der böhmischen Industrie in der Neuzeit* (1913). He contributed also to the founding of a general theory of science and knowledge, especially when he wrote *Für die Wissenschaft gegen die Gebildeten unter ihren Verächtern,* addressed to Erich von Kahler, who had asserted that historical methods founded upon logic and criticism were out of date. Salz published also a study on economic laws, *Macht und Wirtschaftsgesetz* (1930), and *Das Wesen des Imperialismus* (1931). He translated Alfred Marshall's *Principles* into German, and edited several treatises of Adam Müller. He contributed to many scientific periodicals and to the *Encyclopaedia of the Social Sciences* (New York, 1930-35). In 1943 he was preparing a study on the Greek historian Thucydides.

SALZBURG, one of the confederated states of Austria, with a capital of the same name. After the annexation of Austria by the Nazis in 1938 it became a part of Nazi Germany. In that year it had about 400 Jews in a total population of 230,000. The state of Salzburg was formerly a sovereign archbishopric and duchy, and for some time it was a Bavarian province. Jews lived there as early as the 9th cent. They resided in Hallein, Friesach and Mühldorf in the 13th cent.

The situation of the Jews of Salzburg was comparatively favorable until the middle of the 14th cent., although they, too, like the Jews everywhere in Germany, were subjected to restrictions and oppressions. The archbishop gave letters of protection to individual Jews upon payment of considerable sums of money. However, the Jews of Salzburg did not escape the widespread persecutions at the time of the Black Death (1348-49). In 1404 Jews were burned to death in Salzburg and Hallein on a charge of having desecrated the host. However, the real reason for these excesses was the fact that the bishop became hostile toward the Jews because they refused to give him a Mezuzah.

In 1418 the Salzburg provincial council decreed that Jews had to wear the Jewish hat (*Judenhut*) and that Jewish women had to attach tinkling bells to their garments. The antagonism of the populace toward the Jews became increasingly intensified. In 1487 the *Judensau,* a wooden image of a pig suckling Jewish children, was erected at the city hall of Salzburg. Finally, in 1498, by order of Bishop Leon-

George Wolf

The Samarian Basilica

hard, the Jews were banished from the city of Salzburg. For the following three centuries Jews were forbidden to settle in Salzburg. They were not even allowed to stay in the city for more than one hour during the day, and were prohibited to remain in the city overnight.

It was not until the beginning of the 19th cent. that Jews again settled in Salzburg, and they did not obtain equal rights there until 1867, when Austria was granted a new, liberal constitution. The first member of the new Jewish settlement was the court antiquarian A. Pollak, who was given the title of imperial councillor (*Kaiserlicher Rat*).

In 1911 an actual Jewish community was established in Salzburg. Its first official rabbi was Adolf Altmann. In 1938, however, the entire Jewish community, comprising about 400 persons, was expelled by the Nazis and the synagogue demolished.

Among the outstanding Jews of Salzburg were Stefan Zweig and Max Reinhardt. The latter, in collaboration with the poet Hugo von Hofmannsthal, who was of Jewish descent, and with the conductor Bruno Walter, established the Salzburger Festspiele, annual festivals of music and art which, started in the early 1920's, attracted to Salzburg music-lovers from all parts of the world until the Nazi accession to power.

SAMAEL ("venom of God"), name given to the angel of death, also to the angel of evil. He is regarded as the prince of the demons and the destroyer of man. In various legends he appears as the tempter; thus he strove to dissuade Isaac from willingly sacrificing himself (*Midrash Gen.* 66:4), and is the accuser of Israel (*Midrash Ex.* 18:5). He is the celestial patron of the sinful empire of Rome; he descended from heaven to seduce Adam and Eve (*Pirke de Rabbi Eliezer* 13), and caused the martyrdom of Isaiah. He is thus a character very similar to Satan, with whom he was identified, and by whom he was later replaced in Jewish angelology. In other passages he is simply the angel of death, represented as bearing a sword with a drop of poison, which he casts into the mouth of the dying person to bring about the end (*A.Z.* 3b). His constant opponent is Michael, the defender of Israel.

SAMARIA, important Palestinian city and capital of the Northern Kingdom. Built by Omri, king of Israel, about 875 B.C.E., it was officially named Beth-Omri, "House of Omri," but retained its earlier local name, Shomeron, Grecized as Samaria. Excavations conducted there by Harvard University in 1908 to 1910 (with a generous gift of $60,000 from Jacob H. Schiff), and in 1931 to 1935 (when the Hebrew University collaborated in the work) brought to light extensive remains of the Israelite city, particularly well-constructed fortifications and palace foundations, as well as some eighty short Hebrew inscriptions and many beautifully carved pieces of ivory inlay.

In the first months of 721 B.C.E. Samaria was captured and destroyed by the Assyrian king Sargon, who tells in his inscriptions that he deported 27,290 persons from it for resettlement elsewhere in the Assyrian Empire. Samaria then became successively capital of an Assyrian, Babylonian and Persian province, several of whose governors are known from contemporary inscriptions. In the second half of the 5th cent. B.C.E. Sanballat I was Persian governor of Samaria. Although he was already well-known from his conflict with Nehemiah, the fact that he was himself Jewish remained unknown until the discovery of the Elephantine Papyri demonstrated that he was followed by his two sons, Delaiah and Shelemiah, both of whom bore good Jewish names. After Alexander's conquest Samaria became a center of Greek culture, until its destruction by the Hasmonean prince John Hyrcanus, about 129 B.C.E. It was rebuilt by Herod the Great a century later under the name Sebaste, given in honor of the Roman emperor Augustus. The name given by Herod to the city has continued in use unchanged until the present day. At the end of the 2nd cent. C.E. the city was officially raised to the rank of a Roman colony. The ruins of the Roman city are both extensive and architecturally impressive.

From Samaria the Jewish sect of the Samaritans received its name—probably from the fact that the nucleus of this sect was composed of descendants of colonists from the eastern provinces of the Assyrian Empire, who were settled there by Sargon and his successors. The most important contingent of these colonists came from the Babylonian city of Cuthah, whence came the Jewish term Kuthim (Cutheans), contemptuously applied to the Samaritans. In Tal-

Samaritan Jews roasting the Paschal lamb, sole survival of the ancient practice

mudic literature the province of Samaria is generally called "the land of the Kuthim."

SAMARITANS, a schismatic sect claiming to be a remnant of the House of Israel and surviving as a small community at Nablus, site of the ancient Shechem, in Samaria, Palestine.

1. Origin. In the Old Testament (*II Kings* 17:29) the term "Samaritans" means simply "inhabitants of Samaria," and bears no reference to any distinctive group or faction. It is not improbable, however, that it was the ethnic heterogeneity of these people that originally inspired their break with the Jews and the creation of a separate sect. In 722 B.C.E., when the Kingdom of Israel fell, some 30,000 of them were deported by the Assyrian king Sargon, their place being taken by colonists introduced from the Mesopotamian cities of Babylon and Cuthah and from other foreign centers (*II Kings* 17:24). The population thus became mixed, and was therefore regarded by the Jews as a mongrel stock. Accordingly, when, in 539, Cyrus sanctioned the rebuilding of the Temple at Jerusalem, the proffered cooperation of the Samaritans was brusquely rejected, being viewed as a potential threat to the religious revival and political rejuvenation of Judah which were alike envisaged. This virtual exclusion from the renascent community of Israel may well have sown the seeds for a later schism. At any rate, within a century the Samaritans had their own rival temple on Mount Gerizim, and had established themselves as a distinctive sect.

When exactly this temple was built is uncertain. According to Josephus, Manasseh, a member of the priestly house, contracted an opportune marriage with Nikaso, daughter of a certain Sanballat, a native of Cuthah who had been sent by the Persian emperor as governor of Samaria. The Jews, incensed at this, gave him the choice of renouncing his priestly rights or divorcing his wife. The unfortunate bridegroom thereupon appealed to his father-in-law, who promised to make him future high priest and governor of Samaria, and to build a temple for him on Mount Gerizim, as soon as the emperor's permission could be obtained. When, however, the latter was defeated by Alexander at Issus, Sanballat switched his allegiance to the conqueror and procured from him the necessary permit. The temple was then built. The account is unreliable because it confuses dates. It is known from

Samaritan Jews selling Sabbath loaves

other sources that Sanballat was a contemporary of Nehemiah (who actually alludes to the scandal, *Neh.* 13:28-29), not of Alexander, who lived a century later. The story, however, need not be entirely false. It may well be that the Samaritan temple was indeed built in the time of Alexander, but that Josephus, Jewish priest that he was, sought to decry the Samaritan priesthood by deriving it, naively and anachronistically, from Manasseh's apostatic marriage.

Quite different is the Samaritans' own account of their origin. Disclaiming any association of their name with Samaria, they call themselves the *shamerim*, or "observant," asserting that they are the descendants of those Israelites who remained loyal to the faith when Eli seduced the mass of their brethren into constructing an apostatic shrine at Shiloh, instead of on Gerizim, the true "chosen place" of God. This account is, of course, nothing but an *ex post facto* concoction.

2. History. If their origin is thus obscure, the later history of the Samaritans is better known. During the Hellenistic and Roman periods their city was repeatedly destroyed and they themselves were grievously oppressed. A revolt against Alexander led to the sack of Shechem and the destruction of the temple, to be followed later by a further invasion under Demetrius Poliorcetes (296-295 B.C.E.). Under Ptolemy I, many Samaritans were deported to Egypt, and there are records of at least one important disputation between them and the Jews before Ptolemy Philometer. They suffered severely under Antiochus IV Epiphanes, being obliged to introduce the cult of Zeus Xenios (*II Macc.* 6:2) or Hellenios (Zonaras 4:19) on Mount Gerizim. In 129 B.C.E. their territory was invaded and their temple destroyed by the Hasmonean monarch John Hyrcanus, while twenty years later their capital was razed by his sons Antigonus and Aristobulus. Rebuilt, about 56 B.C.E., by Gabinius, a governor of Syria, it became a favorite resort of Herod, to whom it was awarded after the battle of Actium (31 B.C.E.). That monarch greatly beautified it and renamed it Sebaste (the August), after Augustus. During the reign of Vespasian (79-81), the Samaritans attempted a revolt against Rome, but the rising was quelled by the mass slaughter of 11,600 persons under the captain Cerealis. The old city was devastated, and a new one erected with the name Neapolis (New City), whence the modern Nablus. Hadrian (117-38), too, greatly afflicted the tribe, ordering the burning of most of its literature.

Final disaster overtook the Samaritans under the Christian dispensation of Justinian (527-65). A revolt which broke out in 529 was brutally quelled by the massacre of some 20,000 men. Subsequent risings were likewise put down, and a series of repressive measures culminated in an edict of Justin II, in 572, depriving the Samaritans of all privileges and virtually outlawing them.

With the Moslem conquest of Palestine in 634, Nablus fell under Arab rule, and during the war between Hadi and Harun-al-Rashid (786) the Samaritans were all but starved out. Under the fanatical Abbasides they likewise suffered severely, in common with all who refused Islam, but peace was eventually imposed by Abdallah ibn Tahir, general of Caliph Maimun (813-33). In succeeding centuries, however, Nablus was frequently overrun by Moslem zealots. The Fatimids were, on the whole, well-disposed toward the Samaritans, although occasional excesses occurred. Little more is heard of the sect until the time of the Crusades. According to William of Tyre, Nablus was occupied by Tancred in 1099 at the request of its citizens, and it was one of the few cities which composed Godfrey of Bouillon's actual kingdom. Sacked by the Saracens in 1184 and 1187, it was recaptured by the Christians in 1242. Two years later, however, it fell to the invading Charesmians, and in 1259 was in turn seized by the Mongols. The latter, however, were themselves expelled by the Mamluks until these were driven out by the Muslims. Under Turkish rule the Samaritans declined steadily. In 1541 the leading dignitaries of their once flourishing community of Damascus were repatriated to Shechem, and in 1624 the demise of the Aaronid line of priests led to the eventual collapse of many ancient congregations in the neighborhood of Shechem and in other parts. Under Mohammed IV (1648-87) the property of the Samaritans was confiscated and many were forcibly converted to Islam, but a century later their leader Ibrahim ibn Yakub managed to acquire a plot of land on Gerizim for sacred purposes. The Turks, however, repeatedly prevented access to it, until the good offices of the British government, to whom the Samaritans appealed in 1854, relieved the situation.

The Samaritans were first brought to the notice of Europeans in 1616 when they were visited by the famous scholar Pietro della Valle, who acquired a copy of their Pentateuch. They subsequently entered into correspondence with many generations of scholars, including Scaliger, de Sacy, and Huntingdon in the 17th cent., and Petermann, Kautzsch and Kahle in more recent times. An unbroken exchange of letters was maintained for forty years between the Samaritans and the late Moses Gaster (1856-1939), and representatives of the Samaritans visited London in 1903 and 1913.

At the census of 1931 the community numbered 182 persons (ninety-three men and eighty-nine women). The high priest in 1943 was Mazliah ben Phinehas (b. 1870), elected on December 2, 1932. The secretary of the community in that year was Amram, son of the former high priest Isaac, and its two most noted contemporary scholars were Abisha (Naji) ben Phinehas, brother of the high priest, and Ab Hasda (Abu-'l-Hasan), son of the later high priest Jacob ben Aaron. The majority of the Samaritans are engaged in petty trading, but they are desperately poor, the average individual income rarely exceeding fifty dollars a year. The priestly household ekes out a living by the exaction of tithes and by selling copies of ancient manuscripts. In December, 1941, a schism in the tribe was reported.

3. Religion. Samaritan religion is based on the Pentateuch, no other portion of the Bible being recognized. It is summarized, in Moslem fashion, in five articles of faith, declaring belief in (1) God, (2) Moses, (3) the Torah, (4) the sanctity of Mount Gerizim, and (5) future reward and punishment. God is one and unique, without associate or demiurge. Hypostases, however, are recognized in the form of the divine Glory which gave the Law, and the Word of God which created the world. An earlier belief in angels has now degenerated into pure folklore, while evil spirits are denied on the basis of *Num.* 23:23 ("For there is no enchantment with Jacob, neither is there any divination with Israel").

Moses is a being *sui generis,* the incarnation of primordial light and of the divine image (*tzelem*) transmitted by a series of patriarchal saints (*zaḳḳaim*) going back to Adam. He is the Paraclete who will intercede for the penitent on the Day of Judgment, and is often identified with the future Messiah.

The Law is an emanation of God, the Two Tables being a fragment of the divine essence. Not only the Decalogue but the whole Pentateuch was written by God. In ritual, the Law is divided into sections read in an annual cycle. In the exposition of it the Samaritans often agree with the Karaites. They insist, for instance, that every third year a third of the fruits and crops must be eaten in Jerusalem (cf. *Deut.* 14:23), and that the fat tail of a sheep belongs to the priest alone (*Lev.* 3:9). Similarly, like the Karaites, they refer the law of levirate marriage in *Deut.* 25:5 to a kinsman rather than to a blood brother. Like the Jews, the Samaritans recognize 613 Pentateuchal precepts (248 positive, 365 negative).

Gerizim is God's abode on earth, the Mount of Blessing, and is identified with several incidents in Scripture. The patriarchs are said to be buried upon it, and regular pilgrimages are made to their graves. It was the scene also of Jacob's dream, Noah's altar, and the would-be sacrifice of Isaac, and is believed to be the navel of the earth. An addition to the Ten Commandments in *Deuteronomy* ordains its sanctity. Belief in the Last Day is based on *Deut.* 32:35, which the Samaritans read *"on the day of* vengeance and recompense," instead of *"Mine is* vengeance, and recompense," as in the Jewish recension. Idolators will be cast into fire, but the pious will be granted admission to the paradisal Garden of Eden.

The Samaritans believe in a Messiah, called *Taheb* or *Shaheb* (Restorer), who will be made manifest by certain signs, and who will restore the Divine Presence to the midst of men. It is their belief that the history of the world can be divided into two periods of *Rahuta* (favor) and *Fanuta* (divine aversion), the latter commencing with the apostasy of Eli.

Isaac ben Amram, erstwhile high priest of the Samaritans, standing beside their famous Pentateuch. (See color frontispiece of volume 2)

The sacred year is determined by a special calendar (*Hushban Qushta*), fixed twice annually by the priests. The principle of *'ibbur,* or transference, is rejected. Passover is dated by a combination of the solar and lunar months, falling on the 14th day of that lunar month whose new moon falls in April (Abib). The festival, however, is distinguished from that of the Unleavened Bread (Matzoth) which immediately follows. Pentecost is always on a Sunday, being calculated from the day following the Sabbath of Matzoth. Each of the three seasonal festivals is celebrated by a pilgrimage to Mount Gerizim, and the paschal sacrifice is still slaughtered there. Sabbath is observed rigorously, no one leaving his house, except for the synagogue. In addition to the Biblical festivals, the Samaritans celebrate two feasts called *Zimmuth,* or conjunction, sixty days before Passover and Sukkoth respectively.

Phylacteries are not worn, *Deut.* 6:8 being interpreted symbolically. The Tallith (prayer-shawl) is donned only by the priests when the sacred scroll is exhibited. It has no fringes. Boys marry at fifteen or sixteen, girls at twelve. Alliances are arranged by parents or guardians, but the bride must agree. Divorce is granted by the high priest. Burial rites are performed by friends, and the whole Law is read at a funeral.

4. Relations with the Jews. In Jewish literature the Samaritans are called Kuthim, or men of Cuthah, a term designed to stigmatize them as non-Israelites. Laws concerning relations with them are summarized

in a special tractate attached to the fourth division of the Babylonian Talmud, the material being culled from other Talmudic sources and from the Baraithas. Samaritans may not present votive or freewill offerings at Jerusalem; large cattle and immovable property may not be sold to them. Marriage with them is forbidden and, according to some authorities, a Samaritan may not circumcise a Jew. In many other respects Samaritans are regarded as non-Jews, although it must be remembered that in the age of censorship "Samaritan" was often conveniently substituted in Talmudic passages originally dealing with non-Jews and heathens. The hostility between Jews and Samaritans continued, but in the 1920's a Hebrew school for Samaritan children was established at Nablus upon Zionist initiative. This, however, was later closed.

5. Literature. The literature of the Samaritans, still largely unpublished, is bilingual. Until the Moslem conquest (632 C.E.) the common language was Samaritan, a form of Western Aramaic, but after that date Arabic became the vernacular. Apart from a few annalistic chronicles, the extant writings of the Samaritans are exclusively *religious,* consisting of liturgies, commentaries on the Pentateuch, ritual compendia, homilies and apologetic treatises.

BIBLE. The earliest monument of Samaritan literature, apparently as old as the sect itself, is a special recension of the Hebrew Pentateuch, agreeing generally with the Jewish (Masoretic) text, but artfully manipulated to accord with Samaritan doctrines. An ancient scroll of this Pentateuch, fancifully ascribed to Abisha, the great-grandson of Aaron, is the most prized possession of the Nablus community, and is ceremonially exhibited at certain sacred seasons.

There are two important translations of the Pentateuch. The first is the Samaritan Targum, a composite work the final form of which dates probably from the 4th cent. C.E. Its characteristics are its slavish literalness and its strange correspondence with the contemporary Jewish version of Onkelos, suggesting to some scholars that it was deliberately revised therefrom. The other translation is an Arabic version which has likewise passed through several hands. Especially associated with its composition are the two scholars Abu Said and Abu'-l-Barakat of the 11th and 12th centuries respectively.

A Samaritan recension of *Joshua,* interpolated with apocryphal matter, was discovered in 1902, but its authenticity, stoutly championed by Moses Gaster, has been questioned.

Of Biblical commentaries, the oldest is the Arabic work of Abu Said, composed in 1053, and of especial interest because it quotes from later books of the Bible, otherwise unknown to the Samaritans, and from the Mishnah. Scarcely less important is the voluminous exposition written by Muslim ben Murjan in the 17th cent. and revised, some hundred years later, by Ibrahim ibn Yakub. There are also several lesser treatises on particular passages of the Scriptures.

MIDRASH. The twin fountainheads of Samaritan Midrash are the *Memar Markah* (Disquisition of Markah) and the *Sefer El-Asatir* (Book of Legends), both written in the Samaritan dialect. The former dates from the 4th cent. C.E., and is the work of the poet and theologian Markah (Mark), the earliest known Samaritan author. It is in actuality a series of somewhat Gnostic and Cabalistic dissertations on the Pentateuch, devoting especial attention to the miracles of the Exodus and the career of Moses. The latter, traditionally attributed to Moses, presents a connected legendary narrative from Adam to the death of the Lawgiver, concluding with a prophecy allegedly delivered by him in his last hours. The present recension of the book is clearly post-Islamic, but the work itself is probably far older, many of its constituent elements being traceable to the 2nd cent. B.C.E. Two Arabic paraphrases of the work are extant. The one (anonymous) dates from the 10th cent., and was composed probably in Egypt, since it contains an otherwise inexplicable diatribe against Maimonides, the leading contemporary Jewish philosopher, who was then living in the country. The other, known as *Pitron* (Explanation), was composed in the late 19th cent. by Shalmah, son of the high priest Amram (b. 1863).

Based largely on the *Memar Markah* and the *Sefer El-Asatir* is a corpus of poetic legends about Moses known collectively as the *Molad Mosheh* (Nativity Cycle), recited annually on his birthday and on other special occasions. The nucleus of the collection is a versified Midrash composed in the 14th cent. by Abdallah ben Shalmah. Elaborated, in 1537, in an Arabic prose version by Ismail ibn Rumaih, and further developed in the 19th cent. by Phinehas ben Isaac, the corpus presents the most complete extant account of Samaritan doctrines about the Lawgiver. It is today embellished by several later hymns and laudations, including a poem by the present high priest, Mazliah ben Phinehas.

HALACHAH. In the field of Halachah, the most important works are the *Kafi* (Compendium) and the *Tabah* (Potpourri). The former, written in 1042 by Joseph ben Solomon of Askar (a village near Nablus), is a digest of ritual usage, covering such diverse topics as the priests and their tithes, purification and ablutions, prayers, dietary laws, leprosy, ritual impurity, pilgrimages, marriage and divorce, slavery, usury, trade and commerce, and the Sabbath. *The Tabah,* of the same general content, was composed in the early 12th cent. by Abu-'l-Hasan (or Ab Hasda, or Yefet) al-Zuri. It includes, however, several chapters on matters of dogma, rather than ritual, and indulges especially in polemics against the Jews. Both works are today preserved in Arabic, but there are indications that their original language may have been Samaritan.

Likewise of Halachic interest is the *Kitab al Hilaf* (Treatise on the Differences between Samaritans and Jews), composed about 1150 by Munajja ben Zadaka Abu-'l-Farraj. The author engages in dispute with Saadia Gaon. Important also is the *Dalil* (Guide; in Samaritan, *Hilluk*), a manual of usage and dogma, compiled from earlier sources in 1886 to 1888. It is variously attributed to Jacob ben Aaron and Phinehas ben Isaac, and its especial interest lies in its exhaustive discussion of the resurrection of the dead.

Among lesser works are a treatise on forbidden marriages by Abu-'l-Barakat and a collection of traditional responsa (*Sefer Hahalatah*) on matrimonial law in general.

THEOLOGY. The most important general works of theology are the *Sirr al-Qalb* (Secrets of the Heart), written in 1532 by Abraham Kabazi of Damascus, and the *Malif* (Instructor), a formal catechism drawn up by Phinehas ben Isaac at the end of the 19th cent. The latter, which is incomplete, covers the entire field of Samaritan legend and ritual and dogma. Among lesser treatises on specific subjects, two of especial significance are the *Kitab al Mi'ad* (Treatise on the Last Day), by Abu-'l-Hasan al-Zuri (1070), and the *Ten Proofs of the Second Kingdom,* by Ghazzal al Duwaik (d. 1787).

CHRONICLES. The historical literature of the Samaritans consists of the *Taulida,* the *Book of Joshua,* the *Shalsheleth* (Chain of the High Priests), the *Chronicle of Abu-'l-Fath,* and a few subsidiary records.

The *Taulida* is a perpetual chronicle commenced by Eleazar ben Amram in 1149 and continued by successive priests to the present day. Based upon it and upon other sources now lost is the *Book of Joshua,* written originally in Samaritan, probably in the 11th cent., but now extant only in the 13th cent. Arabic version of Abdallah ben Shalmah. This is a composite work presenting a legendary history from Balaam to Constantine. The title is really a misnomer, applying only to the first section, which may once have existed independently.

The *Shalsheleth,* really a summary of the *Taulida,* is a chronological catalogue of high priests from Adam to the present day, together with brief references to contemporary events, including the appearance and crucifixion of Jesus. The *Chronicle of Abu'l-Fath,* composed in Egypt in 1355, is the first attempt among the Samaritans at a narrative rather than an annalistic record. It draws largely from the

Taulida and the *Book of Joshua,* as well as from the other writings no longer extant. Stemming from it is a long history of the Samaritans redacted about 1890 by the late high priest Jacob ben Aaron (1840-1918) and Murjan ben As'ad. Of the minor chronicles the most interesting is that of Ibrahim ben Yakub the Danafite, dealing with events in the latter half of the 18th cent.

LITURGY. The Samaritan liturgy embraces several distinct collections. The earliest is the *Defter* (Codex) containing especially some twelve hymns by Markah and a series of poems, called *Durran* (String of Pearls), by Amram Darah. Embellished by later compositions by Tebiah ben Darta, Ab Geluga, Joseph the Rabban (of Damascus) and others, it remained the standard *corpus liturgicum* until the 14th cent., since when it has been greatly expanded. Besides the daily and festival liturgies, the Samaritans possess also two large collections known as the *Book of Rejoicing* and the *Book of Mourning.* There are also special services for marriage and circumcision.

The leading collection of Samaritan manuscripts is that of Moses Gaster, a large portion of which passsed, in 1918, to the British Museum. Other important collections are those of David Sassoon, in London, of the Academy of Sciences in Leningrad, and the John Rylands' Library in Manchester, England. The Jewish Theological Seminary of America now houses the holdings of Elkan Adler, but these are mainly late copies.

THEODOR H. GASTER.

Lit.: I. General: Montgomery, J. A., *The Samaritans* (1907); Gaster, Moses, *The Samaritans* (1925); Ben Zwi, I., *Sefer Hashomronim* (1935); Genna, G. E., *I Samaritani* (anthropology; 1938); Mills, J., *Three Months Residence at Nablus, and an Account of the Modern Samaritans* (1864).

II. Religion: Gaster, Moses, *Samaritan Eschatology* (1932; gives translated extracts from most of the religious texts). The same author rendered the *Molad Mosheh* in *The Quest* (London, 1930) 358-72; the *Shalsheleth* in *Journal of the Royal Asiatic Society* (1909) 395-420; and the 613 commandments in *Festschrift zum 75-jährigen Bestehen des Jüdisch-theologischen Seminars Fraenckelscher Stiftung,* vol. 2 (1929) 393 et seq., besides leaving an almost complete series of manuscript translations of Samaritan literature.

III. Literature: Nutt, J. W., *A Sketch of Samaritan History, Dogma and Literature* (1874); Gaster, Moses, *The Samaritan Literature,* supplement to the *Encyclopaedia of Islam* (1925); idem, *The Asatir* (1927); Cowley, A., *The Samaritan Liturgy* (2 vols., 1909); Heidenheim, M., in *Deutsche Vierteljahrschrift,* vols. 2 to 4. Most of the published texts are listed in Montgomery, J. A., *The Samaritans* (1907) 323-46 (Bibliography). Important additions are: Ben-Haim, Z., "Samaritan Poems for Joyous Occasions," *Tarbiz* (1939) 190-200, 333-74 (Hebrew); Robertson, E., "Notes and Extracts from Semitic MSS. in the John Rylands Library, Manchester," *Bulletin of the John Rylands Library,* 1934 to 1938; Swarsensky, M., *Die Begräbnis- und Trauerliteratur der Samaritaner* (1930); Szuster, I., *Marka Hymnen* (1936).

IV. Language: Petermann, J. H., *Brevis linguae Samaritanae grammatica* (1873); Rosenberg, J., *Lehrbuch der samaritanischen Sprache und Literatur* (1901); Diening, F., *Das Hebräische bei den Samaritanern* (1938).

SAMBATION, a legendary river, in which water flowed for six days of the week, but ceased on the Sabbath; in a later legend, the water is replaced by sand and stones. The sources of the legend seem to have been the Biblical story of the manna, which fell in the wilderness on the six days of work, but not on the Sabbath, and the fact that there was a river in Syria which had a name resembling the word Sabbath. This stream is now called Fauvar ad-Der by the Arabs; but as early as the 15th cent. B.C.E. the name Shabbaton was applied both to the stream and to a locality near by. Josephus calls it the Sabbatical river, and declares that it remained dry for six days and flowed on the seventh (*Jewish War,* book 7, chap. 5); Pliny, on the other hand, says that it was only on the Sabbath that the river was dry (*Natural History,* book 30, section 11). Modern scholars derive the name from the Syrian *sabita,* "wolf." The Talmud declares that Akiba used the phenomenon of the river Sambation as proof that the Sabbath was indeed the command of God (*Sanh.* 65a).

In subsequent centuries, the story of the Sambation began to be connected with that of the Lost Ten Tribes, which became a subject of speculation after the persecution of the Jews by the Romans; these tribes were said to live near the river Sambation. Non-Jewish writers also took up the legend, and it appears in the narratives of Ibn Abbas, a nephew of Mohammed, in the cosmography of Ibn Fagid Kazwini, in the legends about Alexander the Great, and in various works about the wonders of the world.

The appearance of the adventurer Eldad Hadani, who claimed to bring news from the Ten Lost Tribes and about the Sambation, caused the legend to be widely believed. In almost every century up to the middle of the 19th cent. travelers' tales appeared which either directly or indirectly referred to the Sambation and the Ten Lost Tribes. Among these are the stories of Pethathiah of Regensburg, Elijah of Ferrara (1435), Obadiah of Bertinoro, Gershom ben Eliezer (1624) and Baruch Gad (1646). Even Manasseh ben Israel naively mentions credulous legends about the Sambation. As late as 1817, 1831 and 1857 messengers were sent from Jerusalem to the Ten Tribes at the Sambation.

At first travelers sought for the Sambation in the region which had been described by Josephus; later, when it had become connected with the legend of the Ten Lost Tribes, they endeavored to reach it in Mesopotamia, India, East Africa, China, by the Caspian Sea, in Spain and other places. The poet Mordecai bar Isaac (12th cent.), in his Sabbath poem, *Mah Yafith,* compares Israel to the Sambation, since both work six days and rest on the Sabbath.

SAMECH, *see* ALPHABET.

SAMFIELD, MAX, rabbi, b. Markstift, Bavaria, 1844 (or 1846); d. Memphis, Tenn., 1915. He received the Ph.D. degree from the University of Würzburg and his rabbinical diploma from Rabbi Seligmann Baer Bamberger. In 1867 he came to the United States, where he was rabbi of B'nai Zion Congregation, of Shreveport, La., until 1871, when he accepted a call to B'nai Israel of Memphis. He did splendid work during the yellow fever epidemic two years later, and was respected by the entire community. Samfield was president of the Southern Rabbinical Association. In 1885 he founded *The Jewish Spectator,* and was its editor for many years.

Lit.: Central Conference of American Rabbis Year Book, vol. 26 (1916) 211-12.

SAMINSKY, LAZARE, composer and conductor, b. Vale-Gotzulovo, Russia, 1882. On his paternal grandmother's side he was related to the noted Hasidic Rabbi Shneor Zalman of Liubavich. At the University of St. Petersburg he specialized in mathematics and philosophy. Determined to adopt music as a career, he entered the class of Rimsky-Korsakoff in 1906. In 1909 he directed one of his own works at the St. Petersburg Conservatory. A year later he joined a group of young, progressive Russian musicians in the formation of the Society of Hebrew Folk Music, which became world-

famous because of its epoch-making researches into Jewish folk songs, and its encouragement to young composers to adopt a Hebrew idiom for their composition.

In 1913 he went to Georgia to study its religious music on a Baron Horace de Günzburg expedition. In the same year he directed his own *Vigiliae* in Moscow with the Koussevitzky Orchestra. He left Russia in 1919, lived for a while in Palestine, Paris and London, then settled permanently in New York city. In 1924 he was appointed musical director of Temple Emanu-El, whose choir he directed in annual spring festivals from 1935 on. He also directed symphony orchestras in concerts of modern music in New York, Paris and leading cities in South America.

In the field of composition Saminsky produced many works of outstanding artistic distinction. His works for orchestra were performed by orchestras in practically every music center in Europe and the United States, and include five symphonies, *Ausonia, Three Shadows, Pueblo,* and *Chassidic Suite.* He also wrote the music for the operas *The Daughter of Jephta, Julian, the Apostate,* and *Caesar,* as well as for the ballet *The Lament of Rachel* and others. His numerous choral compositions include many works for the synagogue.

Saminsky's music reveals a consummate mastery of form, imagination, deep poetic feeling and a tender lyric vein. Saminsky wrote several books on mathematics, and two on music, *Music of Our Day* (1932) and *Music of the Ghetto and the Bible* (1934). He founded the New York Polyhymnia, and was co-founder of the League of Composers.

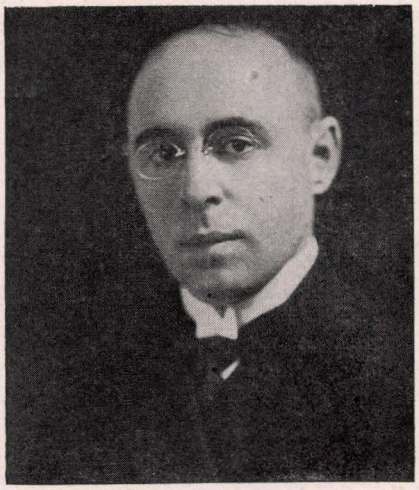
Lit.: De Paoli, Domenico, *Lazare Saminsky* (1930); Howard, John Tasker, *Our Contemporary Composers* (1941).

SAMMTER, ASCHER, Talmudist, b. Derenburg, near Halberstadt, Germany, 1807; d. Berlin, 1887. He first taught in the Hebrew school of the Jewish community of Halberstadt, founded by Rabbi Hirsch Köslin. From 1837 to 1854 he was rabbi of Liegnitz; thereafter he devoted himself exclusively to literary publications. He lived in Berlin from 1869 on, becoming a member of the Adass Jisroel and devoting himself to scholarship and literary work. Sammter's works include: *Die Unsterblichkeit unserer Person wissenschaftlich beleuchtet* (Liegnitz, 1843); *Chronik der Stadt Liegnitz* (1861-68); *Der Rabbi von Liegnitz,* a historical narrative of the Hussite period (Berlin, 1887 and 1891); *Talmud Babli* and *Traktat Baba Mezia* (with German translation and commentaries, Berlin, 1876); *Mischnajot,* the six divisions of the Mishnah (Hebrew text with vocalization, German translation and explanations); *Seraim* (Berlin, 1887). The edition of *Moed* was started by Sammter and continued by Eduard Baneth.

SAMOILOVICH, RUDOLPH LAZAREVICH, geographer and explorer, b. Azov on Don, Russia, 1881. He graduated from the Academy of Mining Engineering in Freiberg, Germany, as well as from the law school of the University of St. Petersburg. Revolutionary activities against the czarist regime resulted in his exile, in 1908, to Archangel, and in 1910 to Pinegu. From the latter point he was able to carry on some sea exploration. Subsequently he participated in an expedition to Spitzbergen, where he discovered important coal deposits.

In 1918 Samoilovich helped organize the Academy of Sciences commission for the study of the natural resources of the Arctic. When the commission was reorganized to become the Scientific Research Institute for the Study of the Arctic, Samoilovich became its director. From 1925 to 1926 he conducted research on Novaia Zemlia. But his most spectacular undertaking

Rudolph L. Samoilovich (center) with his shipmates of the ice-breaker Krassin



was his directorship of the expedition of the ice-breaker *Krassin* in 1928 for the rescue of Umberto Nobile, the Italian explorer, and his dirigible crew, who had been forced down in their attempt to reach the North Pole. For this exploit, which won the attention and sympathy of the whole world, Samoilovich was awarded the Order of the Red Banner of Labor. Later he conducted an expedition to Franz Josef Land and other unexplored territories. Samoilovich published many reports and studies of his work. In 1943 he was associated with the Arctic Institute in Leningrad.

Lit.: Samoilovich, Rudolph, in *American Hebrew,* July 5, 1929; July 12, 1929; July 19, 1929; July 26, 1929; Smolka, H. P., *40,000 Against the Arctic.*

SAMOSCZ, DAVID, pedagogical writer and poet, b. Kempen, Germany, 1789; d. Breslau, Germany, 1864. He settled in Breslau at the age of thirteen. Samoscz translated into Hebrew numerous children's books written by non-Jewish authors. He was a friend of the non-Jewish Orientalist Heinrich Friedrich Wilhelm Gesenius and of David Friedländer and Julius Fürst. He was president of the Jewish community of Breslau for many years until his death.

His writings include: *Heharutz Veheatzel,* a dramatic poem (Breslau, 1817); *Halichoth Olam,* a one-act play (Breslau, 1829); *Esh Dath,* a textbook for youth (3 parts, Breslau, 1834); *Nahar Meeden,* Biblical stories (Breslau, 1836).

Lit.: *Allgemeine Zeitung des Judentums* (1864) 353.

Lazare Saminsky

SAMPSON, JOHN JACOB, internist and cardiologist, b. Galveston, Texas, 1898. He began medical practice in San Francisco in 1923, and became one of the city's outstanding physicians, active in numerous health organizations and hospitals. He was appointed chief of medical service at Mt. Zion Hospital (1942), and chief of the Cardiac School Diagnostic Center of the city's Bureau of Child Hygiene. Sampson joined (1923) the teaching staff of the University of California Medical School; in 1943 he was associate clinical professor. He was president of the California Heart Association from 1938 to 1940.

Among the numerous medical studies which Sampson published on his researches were: (with M. Eliaser, Jr.) "Diagnosis of Impending Acute Coronary Artery Occlusion" (in *American Heart Journal,* June, 1937); (with A. Christie and J. C. Geiger) "Incidence and Type of Heart Disease in San Francisco School Children" (*ibid.,* June, 1938); (with J. B. de C. M. Saunders and C. S. Capp) "Compression of Subclavian Vein by First Rib and Clavicle" (*ibid.,* March, 1940); "Changing Conception of Coronary Artery Disease" (in *California and Western Medicine,* January, 1941).

Arthur Fichell Sampson (b. Georgetown, S. C., 1855; d. 1934), father of John Jacob Sampson, received his medical degree from the University of Virginia in 1878, and pursued post-graduate work at the University of Pennsylvania and at New York University. He also studied under Simon Baruch. In 1884 he began to practise medicine in Galveston, Texas, where he became prominent as a public health officer. Following the Galveston hurricane, in 1900, plenary powers were conferred on him by the mayor of Galveston and the adjutant general of the state.

In 1901 Sampson moved his practice to San Francisco. He was especially interested in the study and treatment of the various types of colitis, and contributed to the medical press on the subject. As a pioneer in the field of dysentery, he suggested the use of new therapeutic measures.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 8, 603-4.

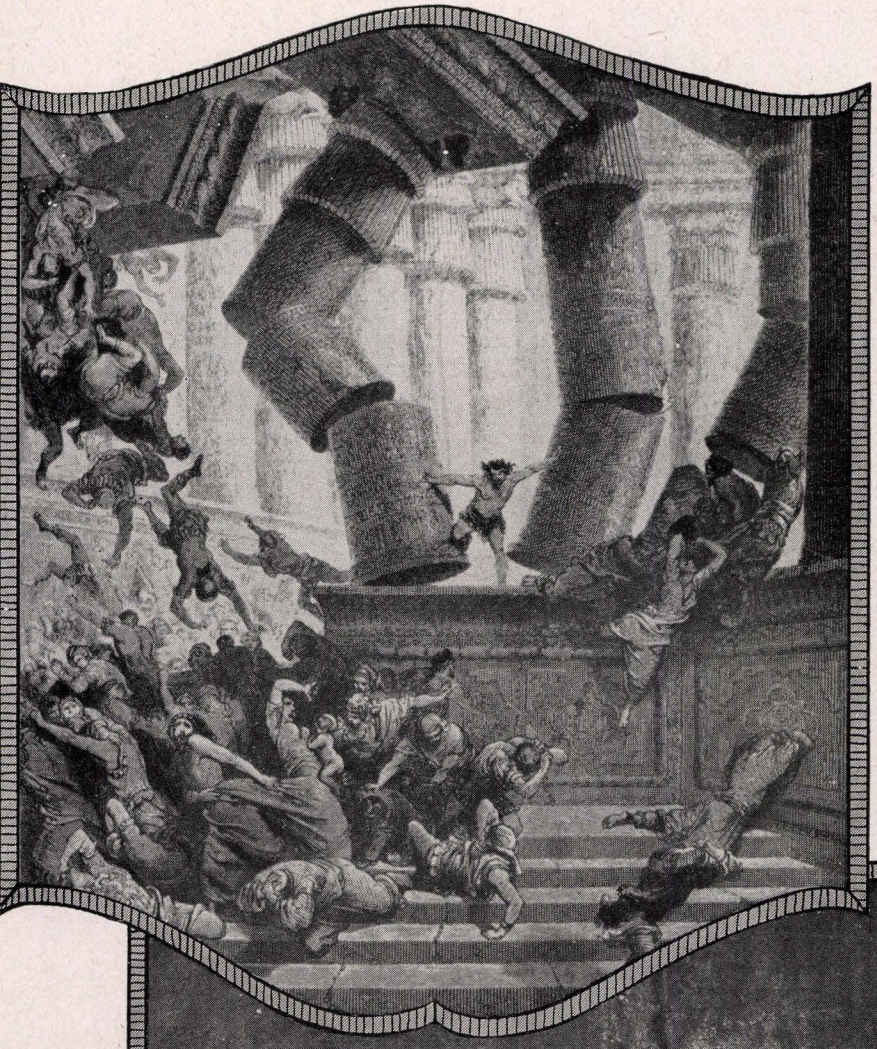
SAMPTER, JESSIE ETHEL, author and poet, b. New York city, 1883; d. Givath Brenner, Palestine, 1938. Subject to a home influence which was not immediately associated with Jewish life (her father being one of the founders of the Ethical Culture movement in the United States), Miss Sampter at first became attracted to the Unitarian Church. Her study of Old Testament teachings under these auspices, however, brought her back to the Jewish people, and she soon began to observe Jewish ritual, while studying Jewish history and the Hebrew language. She was a graduate of Columbia University.

Jessie Sampter met Henrietta Szold and became active in Hadassah during its early days, particularly preparing much of the early Hadassah educational material. In 1919, despite her semi-invalid condition (the result of a childhood attack of infantile paralysis), she went to Palestine and took up permanent residence there. From 1924 to 1934 she was active in relief work among the Yemenite Jews in Palestine, and then settled in Givath Brenner, a Kibbutz where, using her own funds, she built a convalescent home. Here she lived in close touch with the Jewish pioneers until her death in 1938.

She wrote *The Great Adventurer; The Book of the Nations* (1917); *Guide to Zionism* (1920); *The Emek* (1927); *Modern Palestine* (1933); *Brand Plucked from the Fire* (1937), and contributed articles and poems to numerous publications.

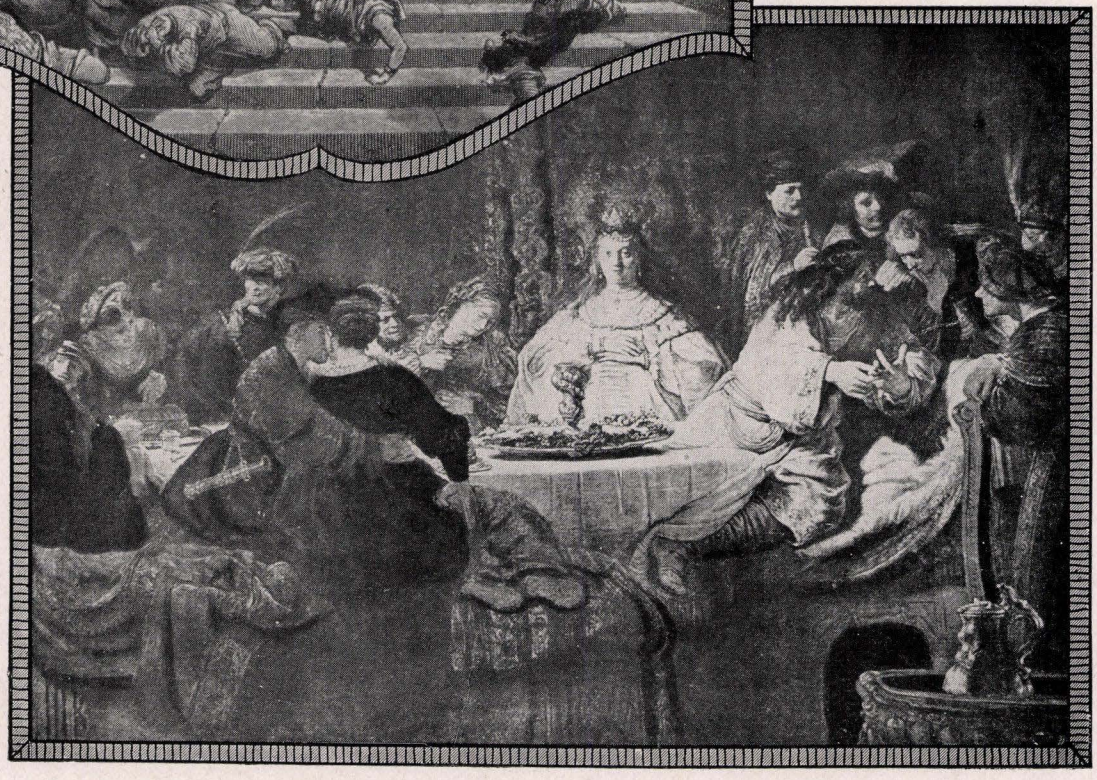
Jessie Ethel Sampter

SAMSON (Hebrew *Shimshon*), the last of the judges of Israel. The account of his life is given in *Judges* 13 to 16. His birth was previously announced to his parents by an angel, who directed that the son to be born to them should be reared as a Nazirite, that is, that he should never permit his hair to be shorn, or drink wine or strong drink. Samson grew up to possess great strength, which enabled him to perform such feats as killing a lion with his bare hands, carrying the gates of a city up a steep hill, and slaying a thousand enemies with the jawbone of an ass. He was at times friendly with the Philistines, the enemies of Israel, but became quickly enraged at some slight or injury, which led him to make ferocious attacks upon them. He finally was entrapped by a woman named Delilah, who succeeded in wheedling him into revealing that the secret of his strength lay in his hair. Once his hair was shorn, he was impotent against the Philistines, who blinded him and forced him to labor in a mill. Later, however, his strength returned as his hair grew, and when he was called out at a festival to make sport for the people, he threw his weight on two of the pillars and brought down the roof of the house, thus killing more in his death than in his life. The story is told with broad strokes of humor and in the style of a folk-tale.



The career of Samson was very different from that of the other judges. He was not the leader of the people, but an individual warrior who pursued his own interests and avenged his own injuries; and the Israelites, far from following him, actually helped the Philistines to take him on one occasion (*Judges* 15:9-13). Nor did his exploits accomplish a deliverance; it was not until many years later that the Philistine menace was removed. In fact, Samson hardly deserves a place among the judges, and his inclusion in the narrative seems merely to complete the number of twelve judges. From the style and manner of his biography it appears to have originated from other sources than the previous chapters of *Judges.*

A number of features in the Samson story have a mythological air, which have led some scholars to class the entire narrative as a solar myth. Thus his name is connected with *shemesh,* "sun"; when his hair ("the solar rays") is cut



(Left) Samson's battle with the lion. From a painting by D. Mestrojani; (below) the binding of Samson. From a painting by Solomon J. Solomon

off, he is blinded ("the sun is darkened"). There are also resemblances to the stories of the heroes Melkarth of Tyre and Hercules and Orion of the Greeks; thus the story of the combat with the lion, the conquest by a woman, and the association with two pillars are all found in the Hercules myth. Nevertheless, the probability is that, while the story of Samson has absorbed certain mythological features or has borrowed from other hero tales, it is based on the life of a real person.

The rabbinical stories elaborate on the Biblical account, drawing from it the lesson that the punishment is such as to fit the crime. There is a hint in the Talmud that some of the teachers regarded Samson as a legendary character.

The story of Samson has been a favorite with artists, writers and musicians. The most noted of such creations are those of Rembrandt and Rubens, Milton's *Samson Agonistes,* Saint-Saëns' opera *Samson et Dalila* and Handel's oratorio (see vol. 2, p. 311). SIMON COHEN.

Lit.: The commentaries on *Judges;* Kalt, *Samson, eine Untersuchung des historischen Charakters;* Budde, in Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 377-81.

SAMSON BEN ABRAHAM OF SENS, Talmudic scholar who lived from about 1150 to 1230. He founded a seminary in Sens, in northern France, and ardently fostered the study of the Talmud in France and Germany in the 13th cent. He wrote a commentary on the Talmud entitled *Tosafoth Sens,* a commentary on the Mishnah divisions Zeraim and Toharoth, and on the *Sifra.* His responsa were highly regarded. He declared that the Karaites were not Jews. He was opposed to the philosophy of Maimonides, but "would not fight the lion after his death." As a result of the persecutions by Pope Innocent III, Samson went to Jerusalem about 1211, and lived there until his death. He was buried on Mount Carmel.

SAMSON, family whose pedigree is considered the most extensive in Jewish genealogy. Its ancestor was Samson Gumpel (d. Wolffenbüttel, Germany, 1767), the second son of Meyer Gumpel Moses Fulda, who went to Wolfenbüttel in 1697, and died there in 1733.

GUMPEL SAMSON (b. Wolffenbüttel, 1733; d. Amsterdam, Holland, 1800), Samson Gumpel's eldest son, emigrated to Holland. Three of his sons, Herz, Selig, and Samson, assumed the family name Sterk. Herz Sterk was the ancestor of the well-known Dutch jurist Jacob Wertheim (1827-80). Another son of Gumpel Samson, Levy Gumpel Samson, had many descendants, including the Kaulla family; Frederick Salomonson (1860-1911), who went to Tampa, Fla.; the Gernsheim family; and Frans Wertheim, who settled in Denver, Col.

HANNA GUMPEL (1754-90), Samson Gumpel's daughter, married Ruben Rudolf Goldschmidt (d. 1790), a banker at Cassel, Germany. Among their descendants were Nathan Weinthal, South African pioneer; Philipp Samuel Goldschmidt, banker at Cassel (1807-47), whose son, Siegfried Goldschmidt (1844-88), was professor of Sanskrit at the University of Strasbourg; members of the Fould, Königswarter and Ladenburg families; Eduard Beit von Speyer; Johanna Arnhold, wife of the great German industrialist Eduard Arnhold; Baron von Hirsch; Julie Ladenburg, who married Ernst Bassermann, leader of the German National Liberal Party; Felix Aschrott, director of a provincial court at Berlin; the Wolfkehl family at Darmstadt, Germany; the barons of Boschan, von Preuschen and von Lengerke.

ROSINE GUMPEL (1736-1803), another daughter of Samson Gumpel, married Zacharias Veitel Ephraim (d. Berlin, 1779). Their grandson, Zacharias Fraenkel, was baptized, and assumed the name Wilhelm Friebe. He was the ancestor of the barons von Quadt, von Thielmann, von Vincke, von Platen, von Heintze-Weisserode, and Tortilowicz von Batocki, who was food dictator in Germany during the first World War.

HERZ SAMSON (1738-94), Samson Gumpel's second son, was chief rabbi of Brunswick and financial agent of the duke of Brunswick. His daughter Rosine married Wolff Levin Norden de Lima at Amsterdam. His daughter Frommet (1766-1825) married Levy Gumpel Samson in the same city. His daughter Blümchen married Samson Gumpel Sterk, also at Amsterdam. His daughter Minna (1766-1809) married the reformer Israel Jacobson.

HERSCHEL (HIRSCH) SAMSON (1770-1831), Herz Samson's son, was court factor of Brunswick. Among his descendants were M. A. Stern, professor at the University of Göttingen; Alfred Stern, professor of history at the University of Zürich; Ernst and Alexander Oppler, well-known artists; Friedrich Lippmann, director of the collection of engravings of the Museum of Berlin and favorite of Emperor Frederick III; Ludwig Speyer; the Hahlo family; Moritz Warburg, jurist at Hamburg (1810-66); the Strassmann family at Berlin, whose members were mostly well-reputed physicians; the barons of Harbou; and the von Holten family.

MEYER H. SAMSON (1783-1862), another son of Herz Samson, became the ancestor of the Roskill family at Manchester.

ISAAC HERZ SAMSON (b. Brunswick, Germany, 1778; d. Berlin, 1849), a third son of Herz Samson, was a great banker. He transformed the two schools called

Beth Hamidrash which were founded by his father's brother Philipp Samson (d. 1805) in 1786 and by himself after his father's death into the Samsonsche Freischule in 1807. He established the Samson Foundation by uniting the various family foundations and creating an endowment which was granted the rights of a corporation by the government of Brunswick. His daughter Minna married Julius Magnus (1804-82). His grandson Henry Samson settled at Manchester and founded a widespread family of British merchants.

There are Samson families descended from Isaac Herz Samson also in Denmark, Sweden and the United States. One of his great-granddaughters married Admiral Albrecht von Stosch, founder of the German fleet and confidant of Emperor Frederick III. Others married the counts of Seydlitz and Münster. Another female descendant of Isaac Herz Samson married the artist Ephraim Moses Lilien.

HUGO BIEBER.

Lit.: Stammbaum der Familie Samson (1910).

SAMSON, ISAIAH JOSEPH, judge and leader of the Beni Israel in India, b. Poona, India. He was the youngest son of Joseph Samson, Bahadar and Major in the Indian army, and was educated at Bishops High School, Poona.

In 1893 Isaiah Joseph Samson won his B.A. degree from the Wilson College, Bombay. In 1901 Samson received his LL.B. degree and a year later he became Vakil (lawyer) at the Court of Bombay, where he was successful, although theretofore practice had been monopolized by Parsis and Hindus, so that a Beni Israel could not have commercial backing. From 1908 on, Samson confined his practice to the Small Causes Court.

He was elected a member of the Council of the Bombay Vakils' Association and appointed (1926) judge at the Small Causes Court of Bombay. He was the first Beni Israel to be appointed a judge in India.

From 1906 on Samson devoted himself to the communal life of the Beni Israel. For some years he was president of the Jamat of the Gate of Mercy Synagogue at Bombay. He was for some time president of the Israelitic School in the same city.

From 1922 to 1926 he edited the periodical *The Israelite.* Afterwards—as late as 1942—he was an active member of the All India Israelite League. He wrote many articles condemning polygamy among the Beni Israel, and offered resolutions supporting his endeavors in the annual meetings of the League. At the same time he advocated a reform of the divorce legislation of the Beni Israel.

SAMTER, ADOLF, banker and political economist, b. Königsberg, Germany, 1840; d. Franzensbad, Bohemia, 1883. After a commercial training in a banking house of his native town and in an overseas trading concern at Hamburg, Samter entered his father's banking business (1845), whose leader and owner he became in 1854. He directed also a printing and publishing house, and in 1848 edited the *Neue Königsberger Zeitung,* a liberal paper which, highly valued in political circles, even at the court of King Frederick William IV, was a financial failure and ceased publication in 1849. In the following years Samter turned his interest from political to economic and social problems.

He studied Marx, Lassalle, Rodbertus and Adolf Wagner, and advocated a kind of liberal socialism, stressing society's obligation to take care of the welfare of the workers, but declining collectivism. He published numerous treatises on the problem of property, the reform of currency and tariff reform. He showed practical understanding of economic facts and vast knowledge, but lacked historical and juridical criticism.

SAMTER, ERNST, philologist, folklorist and historian of religion, b. Posen, Prussian Poland, 1868; d. Berlin, 1926. He studied philology and archeology, and graduated from the University of Berlin (1891). His thesis, *Quaestiones Varronianae,* was highly regarded as a contribution to one of the most important problems of philology at that time, and the Prussian government sent him to Rome for a year to work at the German Archeological Institute. Then Samter became assistant teacher at a classical school at Berlin. Despite the appreciation he received from scientific and pedagogical authorities, since he declined baptism he had to wait for seven years before being appointed professor at the Sophiengymnasium in Berlin. In 1925 he received a call to the "Grey Cloister," the best classical school of Berlin.

Samter was considered one of the most inspiring teachers of classical languages. He was a student of educational methodology, and contributed to pedagogics essays and books which reformed the teaching of classical languages. Even more important were Samter's contributions to the science of comparative history of religions.

As a trained philologist he endeavored to combine interpretation of the literary sources of the history of religions and study of folklore. In doing so he was particularly interested in the customs and rituals of family ceremonials. He published *Familienfeste der Griechen und Römer* (1901); *Geburt, Hochzeit und Tod* (1911); *Die Religion der Griechen* (1924); and *Die Götter der Griechen* (1926). Samter was an active member of the Reformgemeinde. He contributed to Jewish history by criticizing Bousset's studies on Jesus and Judaism, and by publishing studies on anti-Semitism in Greek and Roman antiquity.

Lit.: Biographisches Jahrbuch für Altertumskunde, vol. 49 (1929) 22-31.

SAMUDA, family of Marrano descent which emigrated to Holland to escape the Inquisition in Spain.

ISAAC SEQUEIRA SAMUDA (d. 1743), physician, went to England at the beginning of the 18th cent., and became a fellow of the Royal Society of London in 1723, under the presidency of Sir Isaac Newton. The lists of the Society mentioned that Samuda was graduated with the M.D. degree, but took no notice of any participation of Samuda in the proceedings of the Society, except his reception on October 24, 1724. Samuda contributed to Daniel Israel Lopez Laguna's editions of *Psalms* (1720).

JACOB SAMUDA was the first of another branch of the Samuda family to come to England. His eldest son, ABRAHAM SAMUDA, an East Indian merchant, married Joy d' Aguilar. Their sons, Jacob and Joseph Samuda, were well-known engineers. JACOB SAMUDA (b. London, 1811; d. London, 1844) was the first Jewish engineer in England. He invented the atmospheric railway, and in 1843 was occupied with shipbuilding. He was killed by an explosion, after inventing an improved marine engine.

JOSEPH SAMUDA D' AGUILAR (1813-85), the brother of Jacob Samuda, was his partner in the engineering business. After Jacob's death Joseph excelled in building British warships and merchant ships. He was the first to construct armor-plated iron vessels. In 1865 he was elected member of parliament, and was reelected until, in 1880, he left the Liberal Party and supported Benjamin Disraeli. For some years he was warden of the Sephardic congregation, but later seceded from the Jewish community. In 1860 he established the Institute of Naval Architects, whose treasurer and vice-president he was, and contributed to its *Transactions.*

SAMUEL (Hebrew, *Shemuel*), 1. priest, seer and one of the greatest personages in ancient Israel, who

Hannah, Eli, and the infant Samuel. From a painting by F. W. W. Topham

lived in the 11th cent. B.C.E. The story of his life is recorded in *I Sam.* 1 to 25. He was consecrated to the service of the shrine at Shiloh by his mother Hannah, who made a vow that she would dedicate him to God if her childlessness were removed. Brought to the sanctuary as soon as he was weaned, he was reared by the high priest Eli. There he received the call of God and a message predicting the fall of the sanctuary because of the wickedness of its priests. This prophecy was fulfilled when the Philistines defeated the Israelites and captured the Ark of the Covenant; Eli died from a fall when he heard the news. Samuel removed to Ramah, where he was for the next twenty years a seer to the people.

At this point the Bible narrative gives two different and even contradictory stories. According to the one that seems to be older and more authentic, Samuel was concerned with the loss of national independence and used his disciples as a means of spreading the spirit of revolt. He sought a leader to be the king of the nation, and found him in Saul, of the tribe of Benjamin. He secretly anointed him as king, and told him that the spirit of the Lord would come upon him. As a result of this Saul began to take the leadership of the people and succeeded in throwing off the Philistine yoke.

According to the other, later account, Samuel himself overthrew the Philistines at Eben-ezer, near Mizpah. However, since his sons were inferior to himself, the people demanded that he choose a king. Samuel rebuked them severely for this presumption, but finally consented and Saul was chosen king by lot. Samuel invoked a great thunderstorm which terrified the people, but he calmed them by assuring them that all would be well if they were faithful to God.

The reign of Saul was soon marked by a breach between the ruler and Samuel. One story tells how Saul refused to wait for Samuel and was told that his kingdom would not continue (*I Sam.* 13:8-14); another, that he disobeyed him about the Amalekites and was therefore rejected as king (*I Sam.* 15); the two may be different versions of the same incident. It is clear that Samuel no longer supported Saul, although the story of his anointing David to be the latter's successor (*I Sam.* 16), selecting him in preference to his seven older brothers because of his intuition that this was the chosen of God, is probably legendary. However, he seems to have sheltered David when the latter

Samuel anointing Saul. From a painting by Jean Joseph Benjamin Constant

was pursued by Saul (*I Sam.* 19:18-24). After that the life of Samuel is obscured by the conflicts of Saul and David, and there is only a brief reference to his death (*I Sam.* 25:1). According to *I Sam.* 28, Saul invoked the shade of Samuel in time of peril, only to be rebuked by the latter and told of his approaching doom.

Samuel was undoubtedly one of the most important leaders of the Israelites. His spiritual encouragement and his farsightedness undoubtedly preserved the existence of the nation. Jeremiah did not hesitate to rank him with Moses as an intercessor for the people (*Jer.* 15:1), and the fact that one of the books of the Bible is named after him, although it includes events long after his death, reveals the potency of his influence. Rabbinical literature loved to dwell upon his life and deeds, and ascribed to him the authorship of *Judges* and *Ruth.*

2. a book of the Earlier Prophets, which for convenience is divided into *I Samuel* and *II Samuel,* of thirty-one and twenty-four chapters respectively. These chapters contain the history of Israel from the birth of Samuel to near the close of the reign of David, the point of division being at the death of Saul. According to rabbinic tradition (*B.B.* 14b-15a), the first twenty-four chapters were written by Samuel himself, and the remainder by the prophets Gad and Nathan. According to Bible scholars, however, the book is a loose compilation of a number of sources which have been fitted in together, probably during the period of the First Temple or the Babylonian Exile.

The oldest parts of the book are the poems, such as the dirges over Saul and Jonathan (*II Sam.* 1:19-27) and Abner (3:33-34) and the last words of David (23:1-7). On the other hand, the psalm in *II Sam.* 22 (almost identical with *Ps.* 18) appears to be late. The lists, such as those of David's officers in *II Sam.* 8 and 20 and of the exploits of his heroes in 21 and 23, appear to be contemporaneous records or nearly so. The section in *II Sam.* 9 to 20, giving a history of the intrigues in David's court and the revolt of Absalom, seem to come from the pen of a fine historian who lived very near the time of the events he depicted, possibly in the reign of Solomon, as *I Kings* 1 and 2 seem to be derived from the same source. The story of the

Samuel rebuking the victorious King Saul. From a fresco by Hans Holbein the younger in the Art Museum at Basel

miracles wrought by the Ark of the Covenant in the land of the Philistines and of its return (*I Sam.* 5 and 6; *II Sam.* 7) are akin in thought to the Book of the Covenant in the Pentateuch (10th cent. B.C.E.). The bulk of the narrative, with its stories of the consecration of Samuel, the Philistine rule, the anointing and rule of Saul and the career of David, is probably the work of historians of the same school of ideas as the *J* and *E* writers (9th and 8th centuries B.C.E.). On the other hand, those chapters which exalt Samuel as leader and castigate Israel for desiring a king (*I Sam.* 7, 8 and 12) are probably written by followers of the Deuteronomist school (7th to 5th centuries B.C.E.). There is no trace of Priestly revision of the book, as is apparent from the fact that the role of Samuel as priest contradicts the favorite theme of the Priestly writers—that of a hereditary priesthood descended from Aaron.

The book of Samuel may therefore have taken its present form as early as the Exile and therefore have been one of the earliest historical books of the Bible to be completed. The text is defective in a number of places; emendations have been made on the basis of parallel passages in *Chronicles* and the testimony of the ancient versions.

SAMUEL BEN AVIGDOR (ben Samuel), rabbi, b. about 1720; d. 1790. Originally rabbi in Wolkowysk, Poland, he was called in 1750 to Vilna, where he became prominent. After the death of his father-in-law certain members of the community charged him and his wife with not observing a truly Orthodox life. However, the true reason for this accusation lay in the fact that he meddled unduly in communal affairs. Bishop Massalski came to Samuel's defense, while the voyevode Radziwill took the side of his opponents. Simon Wolff, a partisan of Samuel, was falsely accused and confined in the castle. There he wrote an essay on Kahal administration which brought about the intervention of King Stanislaus Augustus.

During the strife Samuel was offered a post in Königsberg, Germany, which he did not accept. He wrote occasionally, yet nothing of special importance. The prestige of the rabbinate of the community of Vilna diminished after his death; because of this he became immortal in Hebrew literature as *'ab beth din ha'aharon* ("the last head of the court").

Lit.: Maggid, H. N., *Ir Vilna* (1900 et seq.).

SAMUEL BEN HOPHNI, Gaon of Sura, d. 1034. He was the father-in-law of Hai Gaon of Pumbeditha. He was a comprehensive scholar and the author of numerous systematic essays on Talmudic jurisprudence, most of which have been lost. He was an even greater authority in Bible exegesis. He wrote an Arabic commentary on the Pentateuch and some of the prophetic books, giving the direct meaning of the text and supplying philosophic excursuses. His son, Israel, was also Gaon of Sura (1017-33).

SAMUEL HALEVI, *see* ABULAFIA, SAMUEL BEN MEIR HALEVI.

SAMUEL HANAGID (Samuel ben Joseph ibn Nagdela), Spanish statesman, poet, grammarian and Talmudist, b. Cordova, Spain, 993; d. Granada, Spain, 1066. In his youth he received a thorough training in Talmud under Enoch ben Moses, the Babylonian who established a school in Cordova. He became well-versed also in the Arabic, Latin and Berber languages, in philosophy and in the mathematical sciences. He excelled especially in Arabic literature and penmanship, an art greatly esteemed in those days, which brought about a momentous change in his fortune.

With the sack of Cordova by the Berbers in 1012, Samuel was compelled, together with many other Jews, to leave the city. He settled in the port of Malaga, where he kept a small spice-shop near the castle of the vizier of the Berber king, Habbus. Some of the inmates of the palace, being illiterate, availed themselves of the services of the Jewish shopkeeper to write their letters to their master. The vizier, enchanted by the beautiful handwriting as well as by the style, sought out the writer and appointed him his secretary. Samuel came to Granada, where he won the esteem of the minister by his political insight and his sound advice upon matters of state. On his deathbed the minister commended Samuel to the king, who appointed him vizier in 1027.

The Jewish statesman governed the land wisely. Samuel conducted the diplomatic affairs of state, and personally directed military operations from his headquarters close to the battlefield. On several occasions he narrowly escaped death, and once he was captured by the enemy. When King Habbus died in 1037 and his elder son Badis succeeded to the throne, Samuel became the actual king of Granada, as the pleasure-loving Badis gave but little attention to affairs of government.

Despite his onerous state duties at the Alhambra, Samuel remained a pious and modest scholar, and acted as head of the Jewish community of Granada, which bestowed upon him the title Nagid (prince of Israel). He presided over the Talmudic academy and exercised the functions of rabbi. He strove, in his diplomatic relations, to ameliorate the condition of the Jews in other lands. His bounty extended to poor scholars not only in Spain, but also in Africa, Sicily, Jerusalem and Baghdad. He spent enormous sums for copies of the Bible, Mishnah and Talmud which he presented to needy scholars. Among the recipients of his bounty was the greatest poet of his time, Solomon ibn Gabirol, who composed numerous poems in honor of the Nagid. Many Mohammedans also were his staunch friends and admirers.

Samuel was the author of Talmudic works which show his mastery in this field: *Mebo Hatalmud* (Introduction to the Talmud; frequently printed at the end of the treatise *Berachoth*), in which the Talmudic form of discussion is explained and a list of the bearers of tradition down to his teacher Enoch is given; *Hilchatha Gibratha* (Mighty Halachoth), a commentary on the entire Talmud for religious practice, of which several fragments have recently come to light. Among his works on grammar is *Sefer Haosher* (Book of Riches), a dictionary of Biblical Hebrew in which he anticipated numerous modern discoveries. In it he follows the grammatical rules laid down by Judah Hayyuj.

As a poet Samuel ranks below his friend Solomon ibn Gabirol. Yet his poems, in the form of the *Psalms* (*Ben Tehillim*), are full of religious depth and sublime faith, and intense affection and solicitude for his children. His aphorisms and maxims (*Ben Mishle*) are the fruit of deep observation of men and manners. His philosophic reflections (*Ben Koheleth*) are modelled after the sayings of *Ecclesiastes* (Koheleth). Most of these maxims and reflections were exhortations to his son Joseph.

Samuel had three sons and one daughter, the latter dying in his lifetime. His eldest son, Joseph, who married the daughter of Rabbi Nissim of Kairwan, succeeded his father to the office of vizier.

The historians said of Samuel that he wore four crowns: of Torah, of high station, of Levitical descent and, above all, the crown of good deeds.

SAMUEL IBN ADIYA, Arabian Jewish poet, b. about 500; d. about 560. He inherited from his father a castle in the vicinity of Taima. In this castle he guaranteed safety and protection to every persecuted person. Imru 'al-Kais, poet laureate of the Arabs, also took refuge here. On his departure he left arms behind that proved unlucky for Adiya, for Adiya paid with his son's life for refusing to deliver them over to the commander of the Persian army. Thus originated the proverb "more loyal than Samuel." Up to recent times Samuel ibn Adiya's reputation as a poet rested solely upon two poems, one in the famous Hamasa anthology and the other in a compilation by the grammarian Asmai. In 1905, however, Hirschfield published a third poem, and in 1909 there was published in Beirut the diwan of Samuel ibn Adiya which had been discovered in Damascus, containing nine odes and fragments. Samuel sings of courage and fortitude, boasts of the superiority of his tribe over others, extols the Jewish people and enumerates their glories. The first ode is of considerable celebrity; the sixth is autobiographical. Nothing is known of the last years of his life.

SAMUEL YARHINAAH, *see* MAR SAMUEL.

SAMUEL, ARTHUR MICHAEL (d. 1942), *see* MANCROFT, BARON.

SAMUEL, BARON DENIS DE, financier, b. England, 1782; d. London, 1860. He was the second son of Moses Samuel (1742-1839), who claimed descent from Saul Wahl, the legendary Jewish king of Poland. Samuel emigrated in his early manhood to Brazil, and there gained the confidence of the imperial court. He rose to a high position as merchant, and was highly respected by all political parties and personalities of the country. In 1821 he was instrumental in gaining permission for the English to erect a church at Rio de Janeiro and publicly to conduct Protestant worship there, which theretofore had been strictly prohibited. The letter of thanks written to Samuel was read in 1848 in Parliament, bearing, as the document did, an honorable testimony to Jewish liberality of sentiment. After residing for seventeen years in Rio de Janeiro, Samuel returned to England. He was made a baron by the king of Portugal. At London, Samuel managed his great property which was invested in Brazil, Greece, Turkey and East India. He was a warden of the Great Synagogue, and supported Jewish and non-Jewish charitable work. His son Arthur assumed the name Baron de Vahl. His daughter Amelie married George de Worms.

SAMUEL, FREDERICK DUDLEY, merchant banker and British soldier, b. London, 1877. The son of Joseph Samuel, and married to a daughter of Meyer Salaman, he became a director of M. Samuel and Company. He served in the South African war in 1901 to 1902, receiving the medal with three clasps. In the first World War he was repeatedly mentioned in despatches, and received the Distinguished Service Order with bar. He commanded the Jewish battalion of the Royal Fusiliers in 1918, and rose to the rank of colonel. Samuel was a treasurer of the Jewish Board of Guardians (1929-38) and of the Central British Fund for German Jewry. He was created Commander of the Order of the British Empire in 1938.

Harold Samuel

SAMUEL, HAEEM, Indian communal worker, b. Alibag, a village near Bombay, India, 1830; d. Bombay, 1908. He was educated at the Robert Money Institution and served the British government for twenty-seven years as assistant to the inspector-general of ordnance at Poona. In 1853 he founded the Bombay Beni Israel Benevolent Society, and in 1881 the Israelite High School of the Anglo-Jewish Association.

The thirty years of his life that he spent in retirement from service he devoted to conducting and supplementing with a prayer hall the Israelite High School despite the many obstacles which presented themselves. Because of his indefatigable labors he merited the encomiums of the Council of the Anglo-Jewish Association.

SAMUEL, HAROLD, pianist and teacher, b. London, 1879; d. London, 1937. He studied at the Royal College of Music. Following his debut in 1894, he toured Europe extensively. In 1921 he launched in London a series of six concerts devoted exclusively to the piano music of Bach, which was so successful that he repeated this venture many times, establishing his reputation everywhere as one of the leading interpreters of Bach's music. He was professor of the piano at the Royal College of Music for many years, and an examiner at the Royal Academy of Music.

In 1930 Samuel gave a special course at Yale University. From 1924 until his death he performed frequently in the United States. He was the composer of a musical comedy, *Hon'able Phil,* piano pieces, and songs.

SAMUEL, SIR HARRY (SIMON), Member of Parliament, b. London, 1853; d. Monte Carlo, Monaco, 1934. He was the oldest son of Horatio Simon Samuel and Henrietta Montefiore. Retiring from his partnership in the firm of Montefiore Company in 1884, he entered politics. He unsuccessfully contested several divisions for Parliament, until, in 1895, he won a seat as a Conservative from the Limehouse Division, Tower Hamlets, serving until 1906. Subsequently he was the successful Unionist candidate for the Norwood Division Lambeth, and served from 1910 to 1922. In 1916 he became also a member of the Privy Council. Samuel was created a knight in 1903.

Viscountess Samuel

Sir Herbert Samuel

SAMUEL, 1ST VISCOUNT (HERBERT LOUIS SAMUEL), English statesman, b. Liverpool, England, 1870. He was educated at Balliol College, Oxford, where he was an honor student and achieved considerable reputation as an orator. He first ran for Parliament as a Liberal in 1895, but twice failed of election. Elected in 1902, he embarked on a distinguished career of public service in that body which led him eventually to the British cabinet. He was hardly thirty-five when he became parliamentary undersecretary to the Home Office; four years later he became a member of the Privy Council, and chancellor of the duchy of Lancaster. In 1910 he became postmaster-general, and a full-fledged member of the cabinet, the first unbaptized Jew to be so honored.

During his period of early service in the House of Commons he won distinction as a true liberal by fathering several laws for the welfare of children and by standing in the forefront of liberal labor legislation. Though publicly identified as a Jew, Samuel at first displayed little active interest in Jewish affairs. In 1911 his appointment to undertake a special mission to Russia on behalf of the government aroused protest on the part of the czar's anti-Semitic counsellors. Although the Russian ambassador to England assured Samuel that there would be no further embarrassment, the latter refused to accept special privileges at the hands of a government which denied equality to the Jew. Shortly thereafter he was further affected by the news of the Mendel Beilis case, and he participated in a public controversy over the matter with the Russian ambassador in the columns of the London *Times*.

He rose rapidly in official circles. In 1916 he was secretary for home affairs and British special commissioner to Belgium in 1919. From 1918 to 1920 he was president of the Royal Statistical Society, and in the latter year was created a Knight Grand Cross of the British Empire, followed in 1926 by Knight Grand Cross of the Bath. He came under the influence of Moses Gaster, and through him met Nahum Sokolow, who interested him deeply in the Zionist Movement.

From 1920 to 1925 Samuel served as the first British High Commissioner to Palestine. His appointment to this position was the occasion for great rejoicing among the Jews, who found something symbolic in the fact that a Jew was to be the governor of Palestine for the first time in almost 2,000 years. Taking over the office at a time when the mandate over Palestine had not yet been conferred on Great Britain, and the precise nature and scope of the civil administration had not yet been defined, Samuel was compelled to set his own precedents. He sought to administer his difficult post objectively, as between the Jews and the Arabs, but both groups found cause for complaint in his policies. Many Zionists charged that he leaned over backwards trying to be fair.

He served as chairman of the Royal Commission on the Coal Industry in 1925, and again was secretary for home affairs in 1931 and 1932. In 1927 he became chairman of the Liberal Party organization, serving for two years, and again headed the party from 1931 to 1935, succeeding Lloyd George as titular head of the party. However, in the parliamentary elections of that year he failed of reelection for the first time since 1902. In 1937 King George VI bestowed upon him the title of viscount.

Samuel had numerous other interests outside of his political activities. He was chairman of the Palestine Electric Corporation, chairman of the Council for German Jewry, and president for many years of the British Institute of Philosophy. His writings include: *Liberalism* (1902); *War and Liberty* (1917); *Philosophy and the Ordinary Man* (1932); *The Tree of Good and Evil* (1933); *Practical Ethics* (1935); *Belief and Action* (1937).

EDWIN H. SAMUEL, the son of Herbert Louis Samuel, was also educated at Oxford, and served as a second lieutenant in the Royal Field Artillery in the first World War. He held the position of deputy commissioner in the Department of Migration of the Palestine government.

VISCOUNTESS SAMUEL, Lord Samuel's wife, was president of the Palestine Women's Council, honorary president of the Women's International Zionist Organiza-

Sir Herbert Samuel as High Commissioner of Palestine

tion, and president of the Jewish Women's Union of Great Britain and Ireland. CARL ALPERT.

Lit.: Yaari-Poleskin, *Sir Herbert Samuel* (1926); Agronsky, Gershon, "Sir Herbert Samuel's Administration," *Menorah,* 1925, pp. 361-68; *Opinion,* Feb., 1936, pp. 10-15; *Publications of the American Jewish Historical Society,* No. 31 (1928) 263; *American Hebrew,* June 26, 1925, p. 229; May 28, 1926, p. 73; Aug. 3, 1934, p. 214; Jan. 10, 1936, p. 253; *Jewish Chronicle* (London), Dec. 15, 1939, p. 10.

SAMUEL, HORACE BARNETT, barrister, journalist and financial expert, b. Birmingham, England, 1883. He was at one time president of the Court of the First Instance of Galilee, Haifa and Jerusalem, Palestine. Among his publications were: *Modernities,* a volume of essays (1912); *The Quisto Box,* a novel (1926); *Unholy Memories of the Holy Land* (1930); *The French Default* (1931); *Shareholders' Money* (1933).

SAMUEL, MARCUS; SAMUEL, WALTER HORACE, *see* BEARSTED, VISCOUNT.

SAMUEL, MAURICE, writer, translator and lecturer, b. Macin, Roumania, 1895. He was educated in Manchester, England, where he attended the university. In 1914 he came to the United States, where he engaged in various kinds of writing and lecturing, mainly on behalf of the Zionist movement. Samuel served in the United States Army (1917-19) during the first World War.

The resumption of his literary career after the War brought him serious recognition. In fiction as well as in theoretical studies Samuel took up the subject of the Jew in the world as a whole, examining both the inner moods of the Jew and the demeanor of the outside world. His work anticipated the self-study to which Jews were later driven when events in Germany, during the Nazi regime, stirred an awareness that emancipation had broken down somewhere. *The Outsider,* Samuel's first published book, appeared in 1921. It was followed by *Whatever Gods* (1922); *You Gentiles* (1924); and *I, the Jew* (1926). Retaining his Zionist interests and connections, Samuel wrote *What Happened in Palestine* (1929).

Samuel Samuel

Among his later books were *Jews on Approval* (1931) and *The Great Hatred* (1940), in which Samuel approached anti-Semitism as an affliction of the anti-Semite, instead of accepting the more prevalent view—even among Jews and philo-Semites—that it was traceable to some economic or social condition found among Jews. Samuel brought out the fact that morality, as established and exemplified by ethics which were avowedly jewish or of Jewish origin, was a hard tenet to live by, and that hatred against the Jews was due to resentment against them for having established this morality.

Samuel became known also as a brilliant translator from Hebrew, German and Yiddish. He prepared translations of much of the poetry of Hayim Nahman Bialik. From German he translated, among other books, Emil Ludwig's *Roosevelt* (1938) and *The Nazarene,* by Sholom Asch (1939). Samuel was a stirring lecturer and a courageous, often mordant, publicist.

SAMUEL, SAMUEL, merchant, banker and Member of Parliament, b. London, 1855; d. London, 1934. Together with his elder brother, Viscount Bearsted (Marcus Samuel), he founded the Shell Transport and Trading Company, Limited, and was a partner in the firm of M. Samuel and Company, bankers and merchants, as well as a director of other important companies. From 1913 until his death he was a member

of Parliament, representing Wandsworth until 1919 and then the Putney Division of Wandsworth.

It was his practice in the House of Commons to give an annual dinner for the leading bankers and merchants of the city of London in order that they might meet the Chancellor of the Exchequer on the night of the budget speech. Samuel was interested in the promotion of trade relations between the various countries, and presided over the twelfth international Parliamentary Commercial Conference, held at London in 1926. His contributions to charity were large, and he served for many years as president of the Jewish Soup Kitchen.

Lit.: *London Times,* Oct. 24, 1934, p. 19; *Jewish Chronicle* (London), Oct. 26, 1934, p. 10.

SAMUEL, SIR SAUL, Australian statesman, b. London, 1820; d. London, 1900. At the age of twelve he went with his parents to Sydney, Australia. After a brief commercial training he joined his brother in the management of a sheep station in the western part of New South Wales. When, in 1851, gold was discovered there, Samuel entered the mining industry, and thus became interested in politics. In 1854 he became member of the legislative council of New South Wales, and after the establishment of a responsible government (1859) represented Orange, Wellington and East Sydney. From 1859 to 1860 he was treasurer of the colony, and effected the financial arrangement necessary for separation from Queensland. From 1865 to 1866 and from 1868 to 1870 he was again treasurer. As postmaster general Samuel established (1872) a subsidized mail service between England and Australia via San Francisco. In 1880 he became general agent for New South Wales, residing in London. He represented New South Wales at the Colonial Conference (1887) and at several international exhibitions. In 1897 he retired from office, and in the following year he was created baronet.

SAMUEL, SIR STUART MONTAGU, Member of Parliament and communal worker, b. Liverpool, England, 1856; d. London, 1926. The brother of Sir Herbert Samuel, he succeeded his uncle and business associate, Sir Samuel Montagu (later the first Baron Swaythling), as Liberal Member of Parliament for Whitechapel, serving from 1900 to 1916. *See also* MONTAGU, SIR SAMUEL STUART.

SAMUEL, WILFRED SAMPSON, historian and communal worker, b. London, 1886. He published *The First London Synagogue of the Resettlement* (1924) and *A Review of the Jewish Colonists in Barbados in the Year 1680* (1936), in addition to numerous special studies on the history of the Jews in England which were printed in Jewish and non-Jewish periodicals. Although Samuel characterized himself at several times as an amateur, he was in fact one of the most critical, exact and conscientious historians who contributed to Jewish history. Samuel defrayed the expenses of a mission of inquiry to Portugal on the part of Lucien Wolf which was very important for the knowledge of the Marranos. He was one of the founders of the Jewish Museum, whose chairman he was in 1943.

He was (1943) director of the Mocatta Library, member of the Portuguese Marranos Committee, Executive of the Jewish Refugee Committee and the Jewish Lads Brigade, member of the Advisory Committee for the Admission of Jewish Ecclesiastical Officers, and of several other Jewish organizations. He took effective measures against Nazi propaganda in England before the second World War.

SAMUELS, JOSEPH, merchant and philanthropist, b. Washington, D. C., 1865; d. Boston, 1939. He started

Joseph Samuels

in business with his father at Philadelphia, and subsequently, in association with his brother Leon, established a clothes sales business, traveling with his stock from place to place. In 1894 he settled in Providence, R. I., where he founded the Outlet Company, one of the largest department stores in New England.

His establishment (1914) of dental clinics in two schools of Cranston, R. I., was followed (1929) by the founding of the Joseph Samuels Dental Clinic for Children at the Rhode Island Hospital, with an initial endowment of $300,000 and subsequent gifts. Samuels served as aide-de-camp to Governor R. L. Beekman, with the rank of lieutenant-colonel.

SAMUELS, SAUL S., surgeon, b. Brooklyn, N. Y., 1895. He received the M.D. degree from Columbia University (1920). Samuels became chief of the peripheral arterial clinic of Bellevue Hospital, New York city, in 1935. He introduced and popularized in the United States the oscillometer, a precision instrument for measuring circulation in the extremities (1927).

In 1931 and 1934 he published a new method of treating gangrene due to thrombo-angiitis obliterans (Buerger's disease), and in 1939 introduced a new method of treating diabetic gangrene, thereby obviating unnecessary amputations of legs in this disease. Samuels wrote *The Diagnosis and Treatment of Diseases of the Peripheral Arteries* (1936; 2nd ed., 1940; Spanish trans., *Enfermedades de las arterias periféricas,* 1941).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 666-67.

SAMUELSON, SIR BERNARD, ironmaster, educationist and Member of Parliament, b. Hamburg, Germany (where his mother was on a visit), 1820; d. London, 1905. He was the son of Samuel Henry Samuelson (1789-1863) and Sarah Hertz, and the grandson of Henry Samuelson (1764-1813), merchant at London. At the age of fourteen, Samuelson entered the business of his father, who resided at this time at Hull. He was then for six years a commercial clerk at Liverpool, and in 1837 was sent to Warrington to purchase locomotive engines for export to Prussia.

He thus acquired expert knowledge of engineering, so that, when he returned to his firm at Liverpool he was able to make suggestions for considerable technical improvements in locomotive engines. In 1842 he became manager of an

export business at Manchester, and from 1846 to 1848 he carried on railway works which he established at Tours, France. In 1848 he purchased a small agricultural implement factory at Banbury, England, which, under his direction, became one of the largest of its kind within a short time.

Interested in practical applications of scientific discoveries and experiments, Samuelson endeavored to exploit Cleveland ore, and erected blast furnaces of unheard of capacity for the production of pig iron. In 1870 he founded the Britannia Iron Works at Middlesborough, which had the largest plant up to that time. Samuelson was considered one of the leading ironmasters of Victorian England, and from 1867 on fostered the technical education of British engineers and irontraders. In 1870 he became a member of the royal commission on scientific instruction, and in 1881 fellow of the Royal Society. In 1884 he presented a technical institute to the town of Banbury, which remained the center of his commercial enterprises. From 1859 to 1895 Samuelson was a Member of Parliament, belonging to the Liberal Party, and a faithful supporter of William E. Gladstone.

He was a firm free-trader. He advocated home rule for Ireland, but did not approve of the policy of the radical wing of his party. In 1895, when he retired from Parliament, he became privy councillor.

SAMUELY, NATHAN (pen name, Veritas), Hebrew poet, b. Stryj, Galicia, 1848; d. Baden, near Vienna, 1921. In 1864 he published in *Ibri Anochi* a short story, "Sefath Neemanim." A collection of his poems, *Kenaf Renanim,* appeared in Lemberg in 1868. In 1891 his short stories were collected under the titles of *Min Hahayim* (Warsaw, 1891) and *Partzufim* (2 vols., Warsaw, 1897-98).

Samuely published Hebrew translations from Goethe, Schiller, Heine and Hugo. In German he published: *Zwischen Licht und Finsternis* (1870; 2nd ed., 1880); *Kulturbilder; Nur ein bisschen Wasser,* a novel in three volumes.

SAN ANTONIO, third largest city of Texas, with a population of 253,143 (1940), including (1943) a Jewish population of approximately 5,000. The city was founded by the Spaniards in 1718, and although it is probably true that Jews lived in the community from very early times, the first Jewish name officially recorded in connection with the city is that of Moses Albert Levy, surgeon-general with Sam Houston's army, who served throughout the Texas-Mexican War, and received "warmest praise" for "unremitting attention and assiduity."

Among the heroes of the Alamo who perished on March 6, 1836, was Aaron Wolf, whose name is recorded upon the monument erected in Austin, Texas. An early Jew of prominence who resided for a time in San Antonio was Henry Castro, founder of Castroville and other nearby settlements. Probably the first contingent of Jewish settlers in San Antonio appeared after the fall of the Alamo, when the city was regularly opened to immigrants of all nations.

The Jewish cemetery was established in 1854; the first organization of which there is record was the Hebrew Benevolent Association, founded in 1856. In 1885 the name was changed to the Montefiore Benevolent Society. As early as 1855 religious services were held in a room over a store; but it was not until 1872 that an attempt was made to erect a synagogue. The Reform Congregation Beth-El was organized in 1874, and the new Temple was dedicated on September 10, 1875. The first minister of Temple Beth-El was B. E. Jacobs, who served for one year. He was succeeded by I. Lewinthal (1879-89), M. R. Jacobson (1889-92),

Temple Beth-El at San Antonio

H. J. Elkin (1892-97), Samuel Marks (1897-1920; from 1920 until his death in 1934 he was rabbi emeritus), Sidney S. Tedesche (1920-23) and Ephraim Frisch (1923-42, when he retired as rabbi emeritus). David S. Jacobson (associate rabbi, 1938-42) was rabbi in 1943.

A new synagogue building was erected on the site of the old one in 1903. The rapid growth of the congregation made it necessary to move into a more spacious building, and the third Temple and Community Center were dedicated on April 29, 1927, and were still in use in 1943.

Congregation Agudas Achim held its first holy day religious services in 1888 in rented quarters; earlier, services had been conducted at the home of Max Karotkin. J. Corb officiated and served as Shohet. In 1890 the congregation engaged its first ordained rabbi, Moses Sadovsky, who served until his death in 1899. It was during this period that the first Talmud Torah was organized. In 1900 the first synagogue of the congregation was built on Aubrey and Gilbeau streets. Later, in 1923, Agudas Achim moved to a new location on Main and Quincy streets, where it was still worshipping in 1943. Ministers who served the congregation were, besides Sadovsky: S. Solomon, N. Gerstein, G. Feigenbaum, A. Bengus, S. T. Phillips and A. Dubin. In 1943 David Tamarkin was minister of Agudas Achim, which was then Conservative.

The strictly Orthodox congregation, Rodfe Shalom, was organized in 1908 by Samuel Kleban, who served as the first president, and by Nathan Sadovsky. Its initial membership was fifteen, and it met in rented quarters. H. Lubel was engaged in 1909 to serve as minister, cantor and Shohet. Another congregation, Benay Israel, combined with Rodfe Shalom in 1915. In 1918 their synagogue building was erected at 216 Wyoming Street. Adrian Skydell was rabbi in 1943.

Besides the Montefiore Benevolent Society, which was supported by men of the community, there were organized for philanthropic purposes also the Ladies' Hebrew Benevolent Society (1870) and the Hebrew Ladies' Relief Society (1911). These organizations consolidated in 1924 to form the Jewish Social Service Federation, whose first president was Dr. F. G. Oppenheimer. The Federation joined the Community Chest of San Antonio in 1941.

The first lodge of the B'nai B'rith was founded in 1874. The B'nai B'rith was an important factor in Jewish communal life, conducting many social and philanthropic activities which were later taken over by specialized societies. In 1943 the San Antonio lodge had a membership of over 350.

In 1879 the Young Men's Hebrew Association was organized, but later dissolved. The San Antonio section of the National Council of Jewish Women was established in 1907, the Ladies' Auxiliary of Agudas

Achim Congregation in 1919, the Temple Beth-El Sisterhood in 1920, and the Hadassah in 1918. The Men's Club of Temple Beth-El was founded in 1929 and reorganized in 1941. San Antonio maintained a number of other organizations, including the Temple League of Temple Beth-El and the Young People's League of Congregation Agudas Achim; the Junior Hadassah and a Zionist Organization; the Jewish Juniors, A. Z. A., Pi Tau Pi Fraternity, Young Judea; and the Workmen's Circle.

The *Jewish Record* was established in 1923 as a weekly, and its publication continued in 1935 as the *Texas Jewish Press* under the new editorship of Jacob Riklin.

In the second World War, as in the first, a large number of Jewish men were among those stationed in the various army camps in and about San Antonio. Morris Stern, in 1943 chairman for the Eighth Corps Area of the Jewish Welfare Board and president of the local Jewish Welfare Board Council, headed the local committee which provided hospitality and service for the officers and men. The Jewish Welfare Board then had two representatives and one area supervisor stationed in San Antonio.

The Jewish community of San Antonio always provided a large number of civic leaders, outstanding in philanthropy and social and civic service. From the earliest times on the relations between the Jews of San Antonio and their Christian neighbors continued to be of the best. One of the leaders of the early colony was Louis Zork, an alderman and a charter member of the San Antonio Masonic Lodge established in 1847. Other aldermen were H. Silva Heimann, A. Lewy and Alexander Michael. Alexander Nordhaus was a justice of the peace. John Rosenheimer was a county judge. S. C. Eldridge, who was still active in communal affairs in 1943, served at one time as secretary of the Democratic Executive Committee. Among other prominent members of the community were Alexander Joske and Anna Hertzberg. Nat M. Washer was onetime chairman of the State Board of Education, and in 1905, when he was president of Congregation Beth-El, was chosen to make the city's presentation address on the occasion of President Theodore Roosevelt's visit to San Antonio. Eugene Nordhaus was in the state assembly (1915-19), and Harry Hertzberg was a state senator (1930-34).

In the field of journalism M. M. Harris was prominent. He became editor in 1918 of the San Antonio *Express* and the San Antonio *Evening News,* and was still in those posts in 1943. Jack Pitluk achieved national prominence in the related field of advertising, and G. A. C. Halff was president in 1943 of the Southland Industries, operating the radio station WOAI, largest in the southwest.

Dr. Frederic G. Oppenheimer, recognized as an authority on art, owned, in 1943, one of the finest private museums in the United States, specializing in representative works of the Gothic period. J. D. Oppenheimer, president of the D. and A. Oppenheimer Bank, was the leader of Jewish communal activities in 1943, and for many years had been turned to for counsel in all Jewish undertakings.

In 1943, among the many Jewish communal and philanthropic leaders of San Antonio, were the following: N. D. Dreeben, M. L. Dubinski, Nat Goldsmith, G. A. C. Halff, Hannah Hirshberg, Jake Karotkin, Gilbert Lang, Sylvan Lang, Dr. L. J. Manhoff, Dan Oppenheimer, Dr. and Mrs. Frederic G. Oppenheimer, J. D. Oppenheimer, Morris Stern, and Walter Wulff. The local rabbis were always closely identified with the major civic causes of San Antonio.

DAVID S. JACOBSON.

Lit.: Cohen, Henry, "Settlement of the Jews in Texas," *Publications of the American Jewish Historical Society,* No. 2 (1894) 139-56.

SAN DIEGO, a city of California having a total population of 204,341 (census of 1940), including, in 1943, about 6,000 Jews. Louis Rose is believed to have been the first Jew to settle in San Diego, where he arrived in 1850, the very year that the settlement was first chartered as a city. Rose played a prominent part in the pioneer community of adobe huts. He established the first brick yard in Rose Canyon, named for him, was interested in the tract of land which later became one of the city's fine residential districts, known as Roseville, and was an important railroad executive. He served as a trustee of the community, and was on its first grand jury. Shortly after Rose's arrival Joseph Menasse and Marcus Schiller, both originally from Prussia, came to San Diego. They opened the city's first lumber yard, engaged in stock raising, and laid out an early addition to the city known as the Schiller and Menasse addition. Schiller, like Rose, was involved in early California railroad projects. Both Schiller and Menasse served as municipal trustees. Schiller was, in addition, superintendent of schools. He was, too, a prominent Mason, and held the chair of Worshipful Master of the San Diego Lodge No. 35, one of the oldest in California, from 1861 to 1864. Later, other Jews in high Masonic office were Simon Levi, E. B. Levi, E. J. Lewis, Isaac T. Davidson, Charles L. Marks and E. Crolick.

According to a report in the contemporary Anglo-Jewish *Occident,* religious services were first held in San Diego as early as 1851, when three families met for high holy day worship. A decade later, the *Occident* reports, a congregation was formed. By 1888, when the Jewish population had considerably increased, the Reform Congregation Beth Israel was incorporated with fifty-five members, and in the following year erected its Temple. Among the first organizers of the congregation were Marcus Schiller, Joseph Menasse, Lewis Franklin, Jacob Marke and E. Lowenstein. In 1943 Moise Bergman, elected in 1934, was the incumbent rabbi of Beth Israel.

Increase in the Orthodox element of the community led to the founding of Congregation Tifereth Israel in 1905. A Talmud Torah was established at the same time. The first rabbi to serve the congregation was Jonah Rottenberg. H. Firestone was Shohet and Hebrew teacher from 1927 to 1934. Baruch Lebovitz was rabbi from 1934 to 1936, and was succeeded by Ephraim Siegel, who was the incumbent in 1943.

The Conservative Congregation Beth Jacob was founded in 1935.

In addition to the congregations and their auxiliaries, the Jewish community of San Diego founded a lodge of the B'nai B'rith (1887), and its auxiliary; a section of the National Council of Jewish Women; a chapter of the Hadassah; a branch of the Pioneer Women of Palestine, and a unit of the American Jewish Congress. The Jewish Federated Charities was also established, and in 1935 the United Jewish Fund, central agency of the community, was set up for the support of non-local causes and special Jewish local services. Sol Stone was appointed executive director of the Fund. In 1943 San Diego Jewry supported also the Jewish Consumptives Relief Association.

In addition to the earliest settlers already mentioned, other San Diego Jews became prominent in the city's commercial and civic life. Abraham Klauber was president of the Chamber of Commerce (1880), and Simon Levi was its secretary. The latter was also a city councilman. Julius Wangenheim was president of the Bank of Commerce, established in 1887. Another banking house, later succeeded by the Security Commercial and Savings Bank of San Diego, was first established in 1893 by A. Blochman and his son Lucian Blochman. Both served in the city council. Isaac I. Irwin founded the California Savings and Commercial Bank. Samuel I. Fox, who came to San Diego in 1886, founded the merchants' association and was director of the Chamber of Commerce, of which Melville Klauber was president in 1915 to 1916. Laurence M. Klauber, prom-

The new Temple Emanu-El at San Francisco, erected in 1925

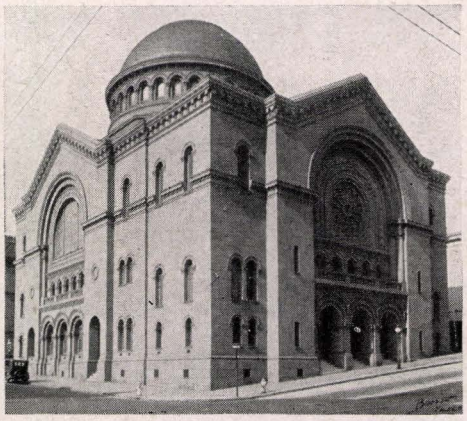
inent in scientific circles, was president of the Pacific Coast Electrical Association (1923-24) and of the Pacific Coast Gas Association (1927-28), and curator of reptiles at the San Diego Zoological Society.

Abraham P. Nasatir was, in 1943, professor of history at the San Diego State College, and vice consul of Paraguay (appointed in 1935). Jacob Weinberger was, in 1943, city attorney and president of the United Jewish Fund, as well as active head of several other local Jewish organizations. Nathan F. Baranov and Irving Freedman were directors (1943) of the Chamber of Commerce.

The *Southwestern Jewish Press,* a consolidation of the *Southwestern Review* (founded in 1914) and of the *San Diego Jewish Press* (founded in 1940), was established in 1942, with Lewis Solomon as editor and publisher.

SHERRY ABEL.

SAN FRANCISCO, city in California, the largest and most important port and financial center of the Pacific Coast, with a population (1940) of 634,536 (United States Census) and a Jewish population of approximately 42,000 (the official figure of a survey taken by the Conference of Jewish Relations in 1938 was 40,910). A few Jews resided in San Francisco before the gold rush days, but the first substantial settlement occurred about 1849.



In 1850 the San Francisco directory included the names of many Jews, of whom the majority were engaged in the clothing and dry goods business. Among them were Joseph Goldstein, H. M. Cohen, Mannie Cohen, Louis Cohen, Michael Hart, William Hart, Morris Heller, Julius Kaufman, Theodora Kaufman, Moses Levy, Jacob Lehman, Isaac Rosenbaum, Benjamin Rosensweig and Max Lasky. Other early settlers were Ben Davidson, California agent for the Rothschilds; David Hirsch, who was a prosperous Indian trader; Philip Solomon, who operated a number of coast-wise steamers; Jessie Seligman and the Lazard Brothers, who later became bankers; Isaac Friedlander, a prominent grain merchant. Still others among the early Jewish families who settled in California, and achieved prominence in the industries of the state, were Lachman, Jacobi and Dreyfus in wine; Jastro in cattle; Koshland in wool; Castle, Guggenhime and Rosenberg in dried fruit; Hellman, Wormser, Glazier and Meyer in banking; Heller and Dinkelspiel in dry goods. Such records of pioneer days as were not destroyed in the series of enormous fires which ravaged considerable areas of San Francisco indicate that Jews were represented in every field of activity, and distinguished in many.

Among the founders of the San Francisco Stock Exchange were Isaac Strassburger, Edward Politz, Harry Berle, Gustav Sutro, August Helbing, Charles S. Sutro, Mathias Meyer and Philip Barth.

George Washington Bartlett, whose mother was a Jewess, arrived in California in 1843. He was mayor of San Francisco in 1849 and governor of California in 1887. Abraham C. Labatt was a member of the first San Francisco board of aldermen, and Elkan and Solomon Heydenfeldt served in the first California legislature. Solomon Heydenfeldt was a justice of the supreme court in 1852, and chief justice in 1853; Henry A. Lyons was a justice of the supreme court in 1851, one of the first three to be named to this position. Isaac Cardoza was a member of the state assembly in 1852, and Samuel Marx was United States appraiser of

The old Temple Emanu-El, built in 1866, and reconstructed after the San Francisco fire of 1906. It was in use until 1925

Temple Sherith Israel at San Francisco

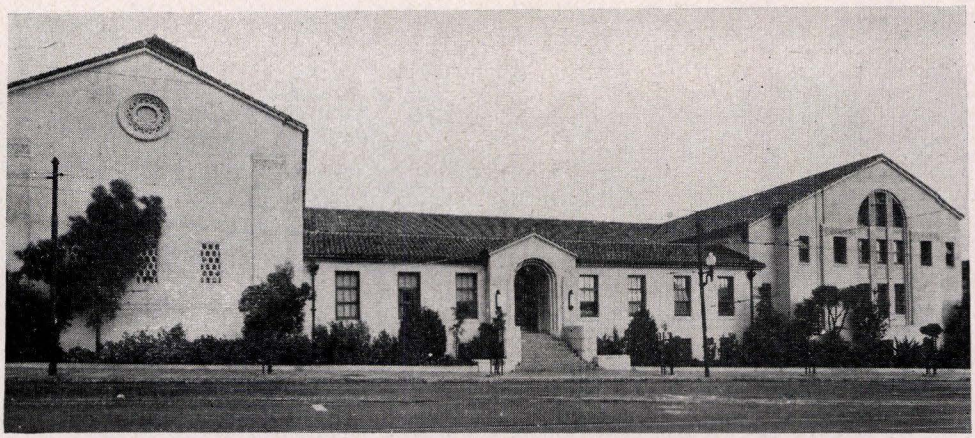
the port of San Francisco at about this time. The Jews of San Francisco have a long and distinguished tradition of service and achievement in the civic, political, cultural, industrial, educational, religious and philanthropic life of the community and state.

Adolph Sutro came to San Francisco in 1850. In 1859 he left for Nevada, and returned twenty years afterward as one of the richest men on the West Coast. His investments in real estate made him the owner of about one-tenth of the area of San Francisco. He built a fine public park on his own grounds at Sutro Heights which, after his death, became the property of the city. The Sutro Baths, as well as several statues, an aquarium and fountains, were also among his gifts to the public. In 1894 he was elected mayor, and served for several years.

During the gold rush days San Francisco was a rough-and-tumble seaport and trading center. The cosmopolitan character of the community was definitely established by the hordes of treasure-hunters who flocked to the Golden Gate from all parts of the country, as well as from Europe and Asia. Prices were fantastically high, criminal elements were at large; disease and danger were ubiquitous. The earliest Jewish social service organizations were created to deal with the difficult problems arising out of these conditions. A committee was formed to meet every ship that sailed around the Horn and entered the Golden Gate. Jewish passengers were welcomed and assisted to find homes and employment in the mushroom community. Decent lodgings and kosher food were made available for the newcomers. In 1850 these hospitality committees were formally organized as the Eureka Benevolent Association, the first Jewish philanthropic society in the West. The charter of the incorporation read as follows:

"To extend aid and relief to indigent, sick and infirm Jews; to bury the poor dead; and in general to relieve and aid their co-religionists who might be in poverty and distress."

Members of the organization paid dues of one dollar per month. Additional funds were collected to assist special cases requiring unusual expenditures.



The first organized Jewish worship was conducted for the fall holy days in 1849 in a tent on the old Embarcadero near the water front. A printed Pentateuch was used for the reading of the Law, and Leon Dyer, a recent arrival from Baltimore, officiated as reader. The heterogeneous character of the Jewish community resulted inevitably in disagreement regarding the ritual and synagogue organization which all agreed should be established. The very earliest settlers had come largely from Germany, Alsace-Lorraine and France. About half of the later arrivals were drawn from Eastern Europe.

Each group naturally preferred the ritual in which it had been reared, and the question was eventually solved by the creation of two congregations, Emanu-El and Sherith Israel. When news of the discovery of gold and the influx of Jewish settlers into San Francisco reached England, Sir Moses Montefiore offered a gift of a Torah to the first congregation to be organized in San Francisco. Subsequently this gift was presented to Congregation Emanu-El.

Emanu-El was formally incorporated in 1851, with an original membership of approximately forty families. This number had increased to 147 when the cornerstone of the first synagogue was laid in 1854, during the ministry of Rabbi Julius Eckman. Shortly thereafter Eckman went over to Sherith Israel, where he remained until 1856. Congregation Emanu-El, many of whose members had close ties in the East, felt the impact of the Reform Movement very early. In 1860 Elkan Cohn assumed the pulpit, and introduced many innovations in the traditional service. This led to the secession of a considerable minority, who organized Congregation Ohabai Shalome (The Bush Street Synagogue), the membership of which was again augmented in 1865 when Emanu-El abolished the Minhag Ashkenaz and introduced the order of service of Temple Emanu-El of New York. Sherith Israel was incorporated on April 13, 1850, but as has been stated, there is evidence that Congregation Emanu-El, although unincorporated, was in existence at this time. While Emanu-El adhered to the Minhag in use among the German Jews at the time of its establishment, Sherith Israel employed the Anglo-Polish Minhag. In 1857 H. A. Henry succeeded Eckman as rabbi, and served until 1869. In 1866 a new synagogue was erected on Sutter Street.

While rabbi of Emanu-El, Eckman organized the Young Men's Literary and Benevolent Society (1855). The preceding year he had organized the first religious school at Emanu-El. Among the early teachers of this school was Mary Prag, mother of Congresswoman Florence Kahn. For many years Mrs. Prag served as a member of the San Francisco school board. Finding insufficient Jewish textbooks available for instruction, Mrs. Prag used Christian Sunday School texts, carefully deleted and annotated to conform to the Jewish faith. Eckman founded also the first Jewish periodical on the Pacific Coast, *The Gleaner* (1855). A B'nai B'rith lodge was founded in 1855 by Lewis Abraham. In 1857 the Chevra Bikkur Cholim and Kaddisha was established for the purpose of helping the needy sick.

Jews were active in the volunteer fire squads and vigilance committees in the early days of San Francisco. During the American Civil War a few Jews fought in the armies of the Confederacy, but the majority who served in the armed forces, including General Hyman Bush, Abraham Gunst, Isaac Magnin and Abraham Mayfield, fought with the Union armies. Rabbi Elkan Cohn campaigned actively for California's adherence to the Union cause. Immediately following the Civil War, Cohn and the Reverend Thomas Starr King introduced joint Thanksgiving services for the membership of Temple Emanu-El and the First Unitarian Church, a custom which has continued uninterruptedly. When Cohn died in 1889, he was succeeded by Jacob Voorsanger as rabbi of Temple Emanu-El, who served until his death in 1906. During the earthquake and fire of that year the Sutter Street Temple, which had been pronounced by competent architects the seventh most beautiful synagogal structure in the world, was all but destroyed. It was reconstructed and dedicated on September 1, 1907. From 1910 until his death in 1923 Martin A. Meyer occupied the pulpit. He was followed by Louis I. Newman, who served from 1923 to 1930. In 1925 the new Temple and Temple House at Arguello Boulevard and Lake Street were dedicated. The new Temple Emanu-El is one of the most magnificent and completely equipped synagogues in America. In 1930 Irving F. Reichert was elected rabbi, and

The Jewish Community Center, San Francisco

continued to occupy this position in 1943. The congregation enjoyed a distinguished ministry of music. Among its cantors were Edward J. Stark, whose compositions of synagogal music are widely used in American Reform congregations, and Reuben R. Rinder.

At Sherith Israel A. J. Messing succeeded H. A. Henry as rabbi in 1869, occupying that position for three years. Succeeding rabbis were Henry A. Vidaver (1874-82), Falk Vidaver (1883-92); Jacob Nieto (1893-1930), Jacob J. Weinstein (1930-32), Morris Goldstein (1932-). Sherith Israel is a Reform congregation, and in 1943 occupied a beautiful synagogue at California and Webster streets. Congregation Beth Israel (Conservative) was organized in 1860, and had for its first rabbi M. Wolf (1860-74). Other rabbis were A. Streisand (1874-78), A. J. Messing (1878-90), M. S. Levy (1890-1916), H. Lissauer (1916-26), Elliot M. Burstein (1927-).

At the San Quentin and Folsom prisons congregations (Conservative) were organized in 1921, and Rabbi Rudolph I. Coffee was called to serve them, assisted the first year by Rabbi Martin A. Meyer. Coffee was still in charge in 1943. The congregations used the libraries of the prisons for their meeting place. The practice obtained of burying Jewish prisoners, on their death, not in the prison cemetery, but in a Jewish cemetery of an adjoining city.

The remaining Jewish congregations of San Francisco in 1943 included Ahabot Achim Israel, Anshey Sfard, B'nai David, Beth Hamidrosh, Beth Sholom, Chevra Thilim, Keneseth Israel, Mokum Israel, Sephardic, Magaen David—all Orthodox. Under the ministry of Saul E. White, Beth Sholom Congregation (14th Avenue and Clement Street) in recent years achieved a considerable growth in numbers and influence.

The San Francisco Jewish community enjoys the reputation of having created and maintained with exceptional generosity an outstanding roster of social service institutions.

Among these are the Federation of Jewish Charities, housed in its own modern building at Post and Scott streets, and directed by Hyman Kaplan. The Hebrew Home for the Aged Disabled, established in 1889, occupied a handsome building erected in 1923 at a cost of a quarter of a million dollars. Mount Zion Hospital, established in 1887, had 163 beds. In 1941 it treated 4,275 patients and 3,306 patients in the Out Patients Dispensary. The Jewish Committee for Personal Service is a unique organization, founded by Rabbi Martin A. Meyer to minister to the welfare of Jewish inmates in the penal institutions of Northern California. A beautiful and splendidly equipped Jewish Community Center building at the corner of California Street and Presidio Avenue was completed in 1933. The Pacific Hebrew Orphan Asylum and Home Society (Homewood Terrace), founded in 1871, was generously maintained on a commodious site. Congregation Emanu-El and Sherith Israel had separate cemeteries and modern community mausoleums and crematoriums. The Jewish Educational Society supported several schools in the city. The Board of Rabbis of Northern California included in 1943 representatives of Orthodox, Conservative and Reform synagogues. The Concordia-Argonaut Club occupied a splendid building at Van Ness Avenue and Post Street, and was the leading Jewish social club of the community.

Among the leading Jewish women's organizations in 1943 were the sisterhoods of the various congregations (The Women's Guild of Temple Emanu-El), Hadassah, B'nai B'rith women's auxiliaries, Philomath Club, a cultural organization; the National Council of Jewish Women, and the Mount Zion Women's Auxiliary. The Independent Order of B'nai B'rith had three lodges, with a total membership of approximately 2,000. The Emanu-El Residence Club, a home for working girls (founded 1902), provided comfortable housing for young women without families.

Almost all important Jewish national organizations maintained branch offices in San Francisco. The Jewish National Welfare Fund, established in 1925, was the first fund of this character started in a major community. It has been estimated that the per capita contribution of San Francisco Jews to local and national philanthropies is greater than that of any other city. The standards of service and the completeness of program of the local Jewish communal agencies are considered outstanding by competent experts. In this connection it may be stated that the per capita wealth of the general San Francisco community is the largest of any large city in the United States. A weekly publication, *Emanu-El and Jewish Journal,* was founded in 1895 by Rabbi Jacob Voorsanger, and is privately owned and published.

Jews were represented in practically every important department of the state and municipality. Among the most prominent were Benjamin Franklin Peixotto, consul general to Roumania (1872-76); Julius Kahn, Congressman (1889-1902, 1905-24); his widow, Congresswoman Florence Prag Kahn (1925-36); Marcus C. Sloss, judge of the supreme court (1906-19); Jesse Colman, chairman of the board of supervisors (1941-); Jefferson E. Peyser and Milton A. Marks, supervisors, and members of the California legislature; Albert C. Wollenberg, assemblyman; Edgar C. Levey, speaker, California assembly; Walter A. Haas, president, San Francisco Chamber of Commerce (1940-41); Harold Brunn, in medicine and surgery; Edmond Godcheaux, recorder for the city and county of San Francisco (1899-1939); Isadore M. Golden, chief deputy district attorney (1919-33) and judge of the superior court (1934-41). Harry F. Camp was, in 1943, regional director of the Office of Price Administration. In banking circles, in 1943, the Hellman, Ehrman

San Francisco, Calif. Hebrew Home for Aged Disabled

and Heller families were prominent (Wells Fargo Bank and Union Trust Company); the Zellerbach and Shainwald families were identified with the manufacture of newsprint, paper, paint and paraffin products.

Philip Bush was, in 1943, president of the San Francisco board of education, and Herbert Fleischhacker was chairman of the park commission. The San Francisco Jewish community made exceptional contributions in the field of music. Outstanding were Alfred Hertz, Pierre Monteux, Yehudi Menuhin, Isaac Stern, Miriam Solovieff, Darius Milhaud, Sigmund Beel, Ernest Bloch and Ruth Szlencinsky.

Albert M. Bender (d. 1940) was an outstanding patron of literature and the arts, and presented collections to the San Francisco Art Museum and to the libraries of the University of California, Stanford and Mills College. Sidney M. Ehrman endowed a chair of history at the University of California; the new women's dormitory on the Berkeley campus was the gift of Mrs. Sigmund Stern. The Rosenberg Foundation offered generous grants-in-aid to institutions and individuals. Jews occupied positions of importance on the faculties of Mills College, Stanford and the University of California, whose vice-president and provost in 1943 was Monroe E. Deutsch. Felix Kahn was in that year the director and treasurer of the six companies which constructed the Grand Coulee, Bonneville, Parker and Boulder dams and numerous shipyards on the Pacific Coast. Harry Hilp engaged extensively in shipbuilding and war construction projects. Joseph B. Strauss planned and completed the Golden Gate Bridge—the "bridge that couldn't be built." Hugo D. Newhouse was president of the Golden Gate Bridge and Highway District. Edmund Coblentz and Clarence Lindner directed two of the city's important newspapers (the San Francisco *Examiner* and the *Call-Bulletin*). The Jews had a distinguished record in supporting, both by patronage and talent, the local opera, symphony and theatre.

Many large mercantile establishments were owned and operated by Jews: I. Magnin and Company, Levi Straus and Company, Ransohoff's, Roos Brothers, Davis-Schonwasser Company, Liebes, Schwabacher-Frey, Charles Brown and Sons, Sommer and Kaufmann, Livingston's and Gump's. Haas Brothers, Sussman-Wormser and M. J. Brandenstein) grocery products and coffee are nationally used. Samuel Kahn was president of the Market Street Railway.

The Jewish population of San Francisco was surveyed in 1938 under the auspices of the local Federation of Jewish Charities and the Conference on Jewish Relations. Of the 28,133 individuals covered by the survey, 9,124, or 32.4 per cent, were foreign-born. The distribution of 14,965 gainfully employed Jewish workers, fifteen years of age and over, by socio-economic classes and sex in the city of San Francisco in 1938 was as presented in the table below.

Lit.: Moment, Samuel, "A Study of San Francisco Jewry 1938," *Jewish Population Studies,* edited by Sophia M. Robison for the Conference on Jewish Relations (1942).

Social-Economic Classes	Total		Male		Female	
	Number	Per Cent	Number	Per Cent	Number	Per Cent
Professional persons	1,699	11.4	1,076	10.5	623	13.2

Edward N. Saveth.

SANBALLAT (properly Sin-uballit, an Assyrian name), governor of Samaria under the Persian king, Artaxerxes I. He was on friendly terms with the high priest Eliashib at Jerusalem, and was regarded as a proselyte. However, when the pious Jews, under the leadership of Ezra, began a policy of religious exclusion and endeavored to remove those of foreign origin from the Jewish community, Sanballat took alarm. He tried to prevent Nehemiah from building the walls of Jerusalem; his later offers of assistance were refused. A grandson of the high priest who had married a daughter of Sanballat was expelled from Jerusalem by Nehemiah (about 430 B.C.E.); according to a later tradition, this priest established a sanctuary on Mount Gerizim, which the Samaritans accepted in place of the Temple at Jerusalem which they had formerly honored. This event marks the final separation of the Jews and the Samaritans. An Elephantine papyrus (Sachau 1) mentions two sons of Sanballat, Delaiah and Shelemiah, as heads of the Samaritans at the end of the 5th cent. B.C.E.

SANCHEZ, ANTONIO NUNES RIBEIRO, Marrano physician, b. Pegna Macor, Portugal, 1699; d. Paris, 1783. He fled the Portuguese persecution and went to Leyden, Holland, where he studied medicine. His teacher, the famous physician Boerhaave, recommended him to the Russian Empress Anna Ivanovna, and Sanchez became first a Russian army physician (1731) and subsequently a personal physician to the czar and his family. For services rendered to medi-

Daniel Sanders

cine, he was made an honorary member of the St. Petersburg Academy of Science, but in 1748 his name was dropped from the list of the Academy, after Czarina Elizabeth Petrovna had heard that he was of Jewish origin.

Sanchez went to Paris, but continued his friendly relations with Russian court circles, and on the accession to the throne of Catherine II, to whom he had been of great service, he received a pension for life. In Paris he displayed great activity as a Freemason. His scientific works include a treatise on the origin of syphilis, *Sur l'origine de la maladie vénérienne* (1750). Sanchez published also an apologetic essay, *L'origine de la persécution contre les juifs,* and a treatise on the Inquisition.

Lit.: Grusenberg, "Doctor Sanchez," *Voskhod,* vol. 7 (1898); *Raszvyet,* No. 16 (1888); *Handbuch der Freimaurerei,* vol. 2 (1868) 600; Richter, *Geschichte der Medizin in Russland,* vol. 3; Shugurov, M. F., *Russkii Arkhiv,* vol. 1 (1894) 55-94, 129-81, 289-349, 465-500; vol. 2, pp. 44-102.

SANCHEZ, GABRIEL, chief treasurer at the royal Spanish court of King Ferdinand and Queen Isabella during the latter part of the 15th cent.; d. 1505. He belonged to a prominent Marrano family, many of whose members were burnt as Jewish heretics by order of the Inquisition. As a zealous patron of Christopher Columbus, he seconded the efforts of Luis de Santangel, his kinsman, in prevailing upon the queen to employ the great navigator and in supplying the funds for the first voyage of discovery. Upon the return voyage Columbus sent a letter narrating his exploits, dated May 3, 1493, to Sanchez—in addition to one which he had previously despatched to Luis de Santangel.

The Sanchez letter was first printed in Barcelona, and a Latin translation appeared in the same year (1493). Both letters are highly prized as historic documents. Sanchez was frequently asked by Columbus to intercede in his behalf—especially when the latter's fortunes were on the decline. One of his relatives, Rodrigo Sanchez of Segovia, took part in the first voyage of discovery at the special request of Queen Isabella.

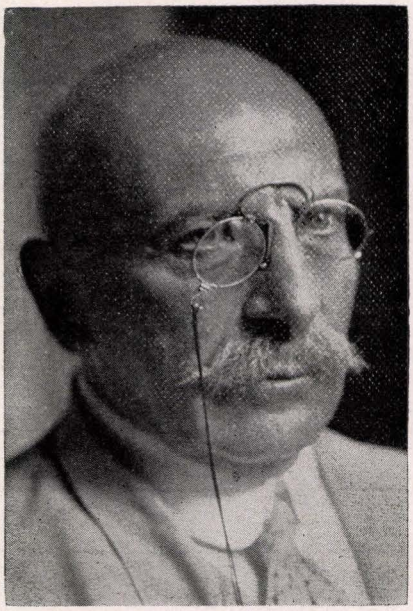
SANDALPHON, one of the highest angels in late Jewish angelology. He was said to have been taller by a 500-year journey than his fellow angels, and to be occupied with weaving crowns for the Creator (*Hag.* 13b). When Moses ascended to heaven to receive the Torah, the fire of Sandalphon threatened to destroy him, but his weeping was heard by God and he was able to continue on his way (*Pesikta Rabbathi* 20; edit. Friedmann, 97b). In Cabala Sandalphon is of especial importance and the genius and protector of the deceased and their souls. The prayers of Israel are under his protection (*Zohar, Vayishlach* 167b; *Beshallah* 8a). The Jewish souls that wander about in the Diaspora are entrusted to his protection, and he prays constantly for them to receive mercy (*Tikkune Zohar,* Tikkun 6, Lemberg, 1864, ed., 45b). At the day of the great awakening (the Last Judgment) Sandalphon, supported by the laments of Rachel, will seek mercy for suffering and scattered Israel; God thereupon, while all the world is being ruined and tossed by earthquakes, will shed two tears into the ocean. Then, at the command of God, Sandalphon will resurrect the dead with the dew of life, and bring them back to God, with reunited soul and body (Naphtali ben Jacob Elhanan, *Emek Hamelech,* Amsterdam, 1648, ed., 42a, 51b).

Henry Wadsworth Longfellow's poem about "Sandalphon the angel of glory, Sandalphon the angel of prayer" is based on these Jewish legends.



SANDEK, *see* CIRCUMCISION.

SANDELSON, DAVID ISAMBARD, legal expert and writer, b. 1889. A solicitor, Sandelson acted as financial adviser to the British Military Mission in Siberia in 1919. He was an executive of the Liberal National Federation of Yorkshire. Active in the Jewish community, he was a member of the Board of Deputies of British Jews, was elected president of the Leeds United Hebrew Congregation, and held important posts in other Jewish organizations.

He published: *Kolchak Army and the Jews; The Reform of Divorce Laws; Deeds of Arrangements Act; Road and Rail Traffic Acts* (1933). Sandelson was created an officer of the Order of the British Empire.

SANDERS, DANIEL, pedagogue and lexicographer, b. Alt-Strelitz, Mecklenburg, Germany, 1819; d. Alt-Strelitz, 1897. He studied philology, history, mathematics and natural sciences at the University of Berlin.

Together with his friends Heinrich Bernhard Oppenheim and Moritz Carrière, he published *Neugriechische Volks- und Freiheitslieder* (translations from modern Greek; 1842). His great interest in modern Greece is shown by his works *Das Volksleben der Neugriechen* (1844); *Die Hochzeit des Kutrulis* (translation of the play by Alexander Rizos Rhangabes; 1848); *Neugriechische Grammatik nebst Sprachproben* (1881); *Geschichte der neugriechischen Literatur* (with Rhangabes; 1884). He was appointed director of the public school of the Jewish community of Alt-Strelitz in 1842; in 1850, however, after he and Adolf Glassbrenner published a pamphlet *Xenien der Gegenwart* protesting against the lack of liberalism, the government closed the school, and Sanders thenceforth devoted himself to writing.

Pál Sándor (See also illustration in vol. 2, p. 575)

His main work was *Handwörterbuch der deutschen Sprache* (3 vols., 1859-65), which soon became a standard work; it was augmented by *Ergänzungswörterbuch der deutschen Sprache* (1879-85). In addition, he published numerous works on German orthography, grammar, synonyms, language and literature, and made a metric translation of *Song of Songs* (1866). In 1887 he founded the *Zeitschrift für die deutsche Sprache,* which he edited until his death.

He composed poems for youth, including *Heitere Kinderwelt* (1868; new edition, 1889); the collection *Aus den besten Lebensstunden* (1878); and *366 Sprüche* (1892). He was granted the title of professor in 1877.

Lit.: *Festschrift zu Daniel Sanders' siebzigstem Geburtstag* (1889); Segert-Stein, *Daniel Sanders, ein Gedenkbuch* (1897); Dusel, *Daniel Sanders* (1886; 2nd ed., 1890).

SANDGROUND, JACK HENRY, parasitologist, b. Johannesburg, South Africa, 1899. He graduated from the University of South Africa (M.Sc., 1920), where he was the holder of the Porter Overseas Scholarship (1922), and from Johns Hopkins University, Baltimore (D.Sc., 1925). Sandground lectured on zoology and comparative anatomy at the University of Witwatersrand, South Africa (1920-22), and became an assistant in medical zoology at Johns Hopkins University (1923-25). In 1926 he was appointed assistant professor in the department of tropical medicine, Harvard Medical School, and two years later curator in helminthology of the Museum of Comparative Zoology at Harvard University. In 1939 he became parasitologist at the Eli Lilly Research Laboratories, Indianapolis. As an expert in helminthology he accompanied several expeditions sent to Honduras, Yucatan, Rhodesia, Mozambique, the Belgian Congo, Java and Celebes by Harvard University and other scientific institutions.

He wrote on biology, immunology, chemotherapy and taxonomy of parasites, especially the parasitic worms, and on the detoxication of arsenical and other drugs used to treat neuro-syphilis and various tropical diseases. Sandground was the recipient of the Captain Scott Medal, awarded him by the South African Biological Society (1919), and of a Guggenheim fellowship (1938).

Lit.: *American Men of Science* (1938).

SANDOMIERZ or SANDOMIR (Yiddish, Zusmir), city in Poland, district of Kielce. In 1367, simultaneously with Lemberg and Cracow, the Jewish community of Sandomierz was granted a general charter by Casimir the Great. In 1602 the community included about fourteen families; in 1641 the Jews owned sixteen houses and inhabited several others. As the result of a battle between Poles and Swedes in 1655, in which young Jews of Sandomierz fought on the side of the Poles, the Swedes burned the Jewish quarter to ashes and banished the surviving Jews from the city. After the war the Jews returned to the city and rebuilt their houses and the synagogue.

A ritual murder trial took place in Sandomierz in 1698, another in 1710. The case was argued twice before the royal tribunal in Lublin. Father Stefan Zuchowski, a member of the chapter, induced the insane and baptized Jan Serafinowicz to testify that Jews were using Christian blood for religious purposes. One of the leaders of the community and the rabbi expired under torture; a number of Jews were condemned to death, and only the king saved the whole community from being exiled (1712).

To commemorate the trial, Peter Zuchowski wrote two books, one in rhyme entitled *Oglos procesów kryminalnych na zydach,* the second in prose, presenting his services in the trial. Among three other "historical" events, a gruesome ritual murder scene with a Latin inscription is depicted on the west wall of the Sandomierz church.

During the 18th cent. the Jewish community of Sandomierz increased in number. Including the surrounding villages, it was populated by 801 individuals in 1765. Jews held the title to forty-six houses in 1787. In the 20th cent. Sandomierz had a total population of 8,763, including 2,641 Jews. It had many Polish but no Jewish antiquities, except a historic memorial book. The old cemetery was completely demolished and the inscriptions almost everywhere were illegible.

In 1939 Sandomierz was occupied by the Germans. Deportation of Jews from the Kielce district, to which Sandomierz belonged, began in 1940.

SÁNDOR, PÁL, economist and political and communal leader, b. Hódmezővásárhely, Hungary, 1860; d. Budapest, 1936. After studying at Budapest and Dresden, he entered his father's grain business. In 1903 he founded and was president of OMKE (national Hungarian commerce union), which was of economic and political influence in Hungary. Among many other corporate interests, he was (from 1912 on) director general of a transportation company.

Sándor was a deputy to the Hungarian Lower Chamber from 1901 until his death. In 1935 he opened the session in the capacity of dean. During the Soviet regime, in 1919, he was detained as a hostage. In the years of the anti-Jewish counter revolution (from 1920 on) Sándor, a deputy in the national assembly and later in parliament, brought out into open discussion the anti-Jewish excesses of terroristic groups and tried to stem the tide of discriminatory legislation. His analyses and proposals for stabilizing the economy of post-War Hungary won him, a member of the Liberal opposition, influence with the government. Sándor was prominent among those Hungarian Jews who, in the 1920's, by the sheer weight of their economic importance, brought about a compromise between the Hungarian government and the Jewish community, which was gravely threatened in its rights and liberties. He is credited also with obtaining two seats in the

Upper House for the Hungarian Jewish community, instead of one.

In 1928 Sándor organized a strong majority within the Jewish community of Pest, thereby inaugurating, under the presidencies of Aladar Kaszab and Samu Stern, an era of firm and financially successful administration which, however, failed to meet its social responsibilities during the economic crisis of the early 1930's. Sándor's influence on Jewish communal movements remained great. He championed Hungarian Jewish patriotism, and was a mainstay of the opposition to Zionism. In 1930 he was active in the Magyar Zsido Unió (union of Hungarian Jews), which cooperated with the government of Count Stephen Bethlen in an endeavor to strengthen the Hungarian minority in Czechoslovakia and other succession states. Through his positive attitude and the firmness of his convictions Sándor was a definite influence toward reestablishing the security of Jewish life in Hungary between the two fascist eras of 1920 and 1938.

In 1927 he visited the United States, where he won many friends. A memorial meeting was held for him at the Commodore Hotel, New York city, in 1936.

SANEGOR (Greek, *synegoros*), term used in Jewish sayings and legend for an advocate or defender Another similar term is Peraklit (Greek *parakletes*, literally "comforter"). In post-Biblical literature the Sanegor or Peraklit is given a special role as the attorney who defends individuals or humanity in the heavenly court. Thus on Rosh Hashanah, when God decides as to whether each individual shall live or die during the coming year, the advocates (*sanegorin*) and accusers (*kategorin*) are permitted to appear before the heavenly court and make their pleas for and against the individuals in question (*Yer. R.H.* 1:3). Every commandment one fulfills procures him one advocate; every sin he commits raises against him one accuser (*Aboth* 4:11); they are thus the personified actions of man. Nevertheless, according to one view, one Sanegor is worth more than 999 accusers, and his plea can nullify their complaints (*Sab.* 32a). The children who have died young because of the sins of their parents will in the future act as their advocates in order to save them from future punishment (*Midrash Eccl.* 4:1).

Every nation, including Israel, has its own special angel who acts as its Sanegor in the heavenly court. The Sanegor of Israel is Michael; he is the high priest of the Jewish people and makes sacrifices for them on the altar. He is in constant war with Samael, who hates and accuses Israel, and will finally overcome the latter and all other foes of the Jews (*Zeb.* 62a; *Midrash Ex.* 18:5; *Yalkut Shimeoni, Isaiah* 63; *Zohar, Bereshith* 80a).

SANGER, ADOLPH L., lawyer and communal worker, b. Baton Rouge, La., 1842; d. New York city, 1894. He studied at the free Academy (subsequently College of the City of New York) and at Columbia Law School, and was admitted to the New York bar in 1864. A lifelong associate of Myer S. Isaacs, he soon became a prominent lawyer. He served as commissioner of the United States deposit funds (1870), as president of the board of aldermen (1885), as commissioner of education (for three terms beginning with 1886), and as president of the board of education (1893). In 1880 and 1884 he was a presidential elector of the state of New York. He was acting mayor at the time of the reception of the Bartholdi Statue of Liberty.

One of the most widely known Jews of his day in New York city, Sanger was a leader in the B'nai B'rith, a president of the Board of Delegates of American Israelites, and a vice-president of the Union of American Hebrew Congregations.

SANHEDRIN, a term which occurs in rabbinic literature, Josephus, the Apocrypha and the Gospels in the sense of a body convoked to render decisions either in a specific criminal case or on general questions involving Jewish law (Halachah). It is the Hebraization of the Greek word *synedrion* (plural, *synedria*), which means "assembly." The earliest mention of the term is in Josephus, who speaks of Gabinius' division of Palestine into five *synedria* (57 B.C.E.). The contemporaneous *Psalms of Solomon* uses the term to designate a trial court. However, it is possible that the term was current in Jewish usage at an earlier time, the Hellenistic-Maccabean period (about 170 B.C.E.).

Non-rabbinic sources often use the term Sanhedrin in its general sense of assembly. Only in rabbinic tradition does Sanhedrin specifically refer to a trial court. These sources speak of two types of Sanhedrins: smaller Sanhedrins of twenty-three to deal with capital cases, and a court at the peak of the entire judiciary system, the Great Sanhedrin of seventy-one. This Sanhedrin was a supreme court of Halachah; it interpreted the Jewish law and enacted decrees for religious observance. The functions and procedure of these Sanhedrins are outlined in the tractate *Sanhedrin* of the Talmud.

1. The Problem of Conflicting Accounts. Much controversy has arisen among scholars as to the nature of this Great Sanhedrin. On the one hand, rabbinic tradition describes it as a legislative and judicial court, with rabbinic pairs (Zugoth) at its head; on the other, non-rabbinic sources indicate that the high priest always presided at its sessions. Hence many scholars are of the opinion that the Great Sanhedrin consisted of Pharisees and Sadducees, elders and priests who gathered together to constitute the supreme council of the state for the purpose of executive and administrative, as well as religious and judicial, functions.

Various scholars have made attempts to solve the problem of this conflict. Those who accept only non-rabbinic sources as accurate (such as Kuenen and Schürer) held that the rabbis of the Talmud colored their descriptions of the institution from conditions prevailing in the period after the destruction of the Temple (70 C.E.), during which time a collegiate Sanhedrin existed at Jabneh. They came to the conclusion that the real Sanhedrin of the Second Commonwealth functioned as a state institution under the presidency of the high priest. Others (such as Jelski) have suggested that there were two separate heads—a rabbinic presiding officer who decided on matters of Jewish law, and the high priest, who headed the assembly in political affairs. Büchler, on the other hand, developed the idea of two separate institutions—a religious Sanhedrin and a political one. Still other scholars advanced the idea that the Sanhedrin of Halachah was only a special committee drawn from the members of the Great Sanhedrin of the state.

In general, however, the view may be accepted that the Great Sanhedrin of the Second Commonwealth was definitely a religious court interpreting Jewish law and tradition. The Synedrion (the Greek term is here used to distinguish it from the Jewish Sanhedrin), as portrayed in non-rabbinic sources, was often an extraordinary assembly meeting under the direction of the reigning monarch and dealing solely with political matters, that is, it was a state Sanhedrin. These Synedria had nothing to do with the interpretation or execution of the Jewish law *per se*. Thus the various trials recorded in the Gospels were held, not by the Great Sanhedrin of Halachah, but by a special convoked Synedrion ("council") composed of the aristocracy of the state. The

main function of this Synedrion was to maintain the peace of the state and to suppress sedition. The non-rabbinic sources, therefore, picture a council of state as it was in the time of their composition, that is, as it existed in the two decades before the destruction of the Temple. These sources, on the other hand, can not be used authoritatively in studying the Jewish Sanhedrin, since these sources take little or no interest in religious matters. On the other hand, the Jewish sources, which were close to the institution, were the only ones which depicted it faithfully (Ginzberg, L., in Moore, G. F., *Judaism,* vol. 3, p. 33).

As already has been definitely established by Jean Juster, the Great Sanhedrin had jurisdiction in Jewish law—a jurisdiction which Rome at this period freely granted to the Jews. However, matters that were political and dealt with the affairs of the government were decided by the other Synedria in which the high priest played a prominent part. The sources give evidence only to the effect that the high priest was head of the state; they rather indicate that he was not the head of a permanent Sanhedrin. The trials of Jesus, Paul, the apostles and others were held in state Synedria convoked for the emergency because the charge against them was one of sedition or incitation to insurrection. Such emergency courts for sedition trials, with verdicts subject to review by the Roman authorities, are attested in other countries by the papyri. On the other hand, two cases recorded in non-rabbinical sources were held before regular Jewish trial courts: that of Herod, as recorded in Josephus, which was probably before an established court of twenty-three, and that of Stephen, as described in the Gospels. In both cases the charge was not sedition, but infraction of Jewish law.

2. History. The earliest judicial bodies among the Israelites were closely connected with the rulers. Justice was meted out by the war leader (*Shofet*) or king. After the Babylonian Exile and the time of Ezra, a body known as Gerousia ("council of elders"), consisting of priests, served as the supreme institution of the state. This council, in addition to exercising political and ritual functions, also interpreted the Jewish law. A separation of the political and the religious elements in the state was not effected until the Hasmonean uprising (2nd cent. B.C.E.), which divorced priestly ritual and religious interpretation of the Jewish law from the absolute rule of the state. Hence the origin of the Great Sanhedrin is in all probability connected with the establishment of the Hasmonean commonwealth by Simon in 141 B.C.E. At that time a new specialized religious body was created to interpret the Halachah; other matters of the state—administrative, executive and priestly and ritual affairs—were left to such other existing institutions as the Heber or Beth Din of the priests.

This Great Sanhedrin of Halachah lasted until 66 C.E., *four* years before the destruction of the Temple (not *forty,* as is often assumed). It was not, like the Gerousia, a body possessing all the functions of the state; nor was it like the Great Assembly of the pre-Hasmonean period, since the latter was only a temporary institution, meeting only when exigency demanded (as in the time of Ezra and Nehemiah, or in 196 B.C.E., when Palestine passed from Egyptian to Syrian rule). After the destruction of the Temple the Great Sanhedrin was replaced by the patriarchate, which served as the recognized Jewish government in Palestine to the beginning of the 5th cent. Attempts were often made to resurrect the institution of the Sanhedrin, as in Babylonia in the offices of the Gaon and the exilarch. Later attempts were made, unsuccessfully, by Jacob Berab and Joseph Caro in the 15th cent., and the Napoleonic Sanhedrin, too, was an attempt at reviving the ancient institution at the beginning of the 19th cent.

3. Functions. Although many of the functions of the Great Sanhedrin as recorded in the Talmud may seem to be theoretical or academic, these really depict the constitutional rights of that body. Its main function was that of being the highest court of appeal for the interpretation of Jewish law. It dealt primarily with upholding the laws of the Soferim ("scribes") who interpreted the Torah, the Jewish constitution. Definite instances of such appeals and interpretations have been recorded by the rabbis.

Since Rome as a rule did not interfere in the execution of Jewish law, the Sanhedrin was supreme in this field, fully empowered to interpret the ritual code and to punish any infractions of it. The elders, scribes and sages in the Sanhedrin used the Torah as the source of the Jewish law and issued their interpretations in the form of ordinances (Takkanoth) and decrees (Gezeroth). The Great Sanhedrin also had the power to excommunicate individuals, arrange for the establishment of smaller courts, appoint judges, and judge such outstanding cases as that of a rebellious tribe, recalcitrant elder or judge, false prophet, woman suspected of adultery (Sotah), or even the high priest if he violated Jewish law and tradition. It was empowered also to serve as spiritual guide in war, to sanction additions to the area of Jerusalem, and to supervise such special priestly ceremonies as the preparation of the Temple ritual for the day or the sacrifice of the red heifer. Its main duty, as expressed in the Talmud, was "Justice, justice shalt thou pursue; go after the wise men in the chamber of hewn stone" (its meeting place).

4. Membership. At the head of the Great Sanhedrin stood two men who bore the titles of Nasi ("chief") and Ab Beth Din ("father of the court"). The first five sets of these officers whose names are recorded are known as the Zugoth ("pairs"), and functioned from about the middle of the 2nd cent. B.C.E. to the beginning of the 1st cent. C.E. They were not merely president and vice-president of the body, but represented rather different points of view. The Nasi represented the right wing (conservative opinion or strict constructionism), the Ab Beth Din, the liberal left (loose constructionism); this is apparent from an examination of the Halachoth discussed in the time of the Zugoth and the various views expressed by the leaders.

The usual number of the Great Sanhedrin was seventy-one. However, this was the case only in the time of the Zugoth when there were both a Nasi and an Ab Beth Din (from 141 B.C.E. to 30 B.C.E.). Thereafter, when Hillel assumed power and the Hillelite house controlled the entire institution for the next hundred years, the position of Ab Beth Din was abolished, reducing the number to seventy. This accounts for the fact that in traditional sources the number is given sometimes as seventy, sometimes as seventy-one.

Members of the Sanhedrin included both Sadducees and Pharisees, since these represented the different religious and social views of the times. The composition of the body or the supremacy of one group over another and consequently the presidency or majority leadership often varied with the political and religious trends prevalent in the turbulent period of Greco-Roman rule.

According to the description of the Mishnah, the members of the Sanhedrin may have been chosen from the lower courts of twenty-three. Yet the Nasi was appointed by the entire group and from them, as is apparent in the story of the elevation of Hillel. The term Nasi designated the leader in the court sessions, and was not used outside of it as a title; hence omission of reference to it in non-rabbinical sources is understandable.

5. Meetings. The Sanhedrin met in what was called the *lishkath* ("chamber") *hagazith.* The latter term may mean "hewn-stone" and refer to a room on the xystus colonnade of the Temple; but it may also

be so derived from a root meaning, "cutting," hence "decision," as the Law was decided there. The chamber on the Temple Mount was chosen to enable all who wished to enter therein to inquire of the Jewish law without priestly interference. The procedure followed in adjudicating cases is recorded in the Mishnah *Sanhedrin,* in which the special differences between civil and criminal jurisdiction are recorded. Capital punishment could be inflicted by the Sanhedrin only for the violation of a major Jewish law; no sanction of the procurator was necessary. The latter, as agent of Rome, interfered only in cases which involved suppression of treason and maintaining the Roman rule.

The Great Sanhedrin, as distinct from the Synedria, was the connecting link for the preservation of Jewish law, between the priestly Soferim before its time, and the Tannaim who succeeded to its functions.

SANHEDRIN ("court"), fourth tractate of Nezikin, the fourth division of the Mishnah and Talmud. Its eleven chapters deal mainly with the composition of various courts, judicial procedure and criminal law, as follows:

Chap. 1. The court of three judges, the small Sanhedrin of twenty-three judges, and the Great Sanhedrin of seventy-one members; the cases tried by each type of court. Chap. 2. Laws, duties and privileges of the high priest and of the king. Chap. 3. Arbitration; persons disqualified to act as witnesses or judges; examination of witnesses; reversal of the decision of the court on the basis of new evidence. Chap. 4. Differences in court procedure in criminal and civil trials; seating of the judges; duties of the court stenographer; admonition of witnesses. Chap. 5. Examination of witnesses; debate of the judges on the verdict; majority required for the decision. Chap. 6. Taking a condemned person to the place of execution; confession before execution; regulations as to the punishment of stoning, the burial of the corpse, and the attitude of the family of the one executed. Chap. 7. List of crimes punishable by stoning; description of three other modes of execution: burning, decapitation and strangulation. Chap. 8. Laws concerning the "stubborn and rebellious son" (*Deut.* 21:18-21); right of killing in self-defense; right to kill those about to commit a gross crime. Chap. 9. Enumeration of crimes punishable by burning, decapitation and lynch law, respectively. Chap. 10 (Perek Helek). Those who have no share in the world to come; laws of the "apostate city" (*Deut.* 13:13-19). Chap. 11. Crimes punishable by strangulation; laws of the "rebellious elder" (*Deut.* 17:12-13); false prophets. The order of chaps. 10 and 11 is reversed in the Mishnah of the Babylonian Talmud.

The Tosefta contains fourteen chapters which are in the main an amplification of the laws in the Mishnah, but include also many interesting Haggadic statements. The Palestinian and Babylonian Gemaras contain many exegetical comments and ethical statements, especially to the tenth chapter, which is almost entirely devoted to Haggadah. Among the interesting sections of the Babylonian Talmud are the records of disputes with heretics (38b-39b), the Noahide laws (56a-60a), and the events expected to precede the coming of the Messiah (97b-99a).

1812.

Facsimile of the title page of the minutes of the Napoleonic Sanhedrin

SANHEDRIN, NAPOLEONIC. On May 30, 1806, Napoleon I convened in Paris an assembly of prominent French Jews, known as the Assembly of Notables, attended by 112 delegates, before which the French government put a series of questions mostly bearing on the attitude of Jews toward Christians, and which were answered to the satisfaction of Napoleon. However, since the decisions reached by this Assembly had neither religious nor legal binding power upon all Jewry, Napoleon conceived a further plan of convoking a synod, a sort of conclave on a broader basis, the so-called Sanhedrin. This assembly, in order to have a similarity with the ancient Sanhedrin of Jerusalem, was to consist of seventy-one members, of whom two-thirds were to be rabbis and one-third laymen. Its decisions were to have binding power for all the Jews of the world.

The convention met in Paris on February 9, 1807. Its membership, however, was not entirely in accord with the wishes of the emperor, for besides the French delegates there were present also German and Italian Jews. Napoleon had even prescribed special attire for this occasion. Some of the most eminent personalities of this first Jewish world congress were Rabbi David Sinzheim, president (Nasi); the Italian rabbi Joshua Benzion Segre, first vice-president; Hacham Abraham de Cologna of Mantua, second vice-president; and Abraham Furtado, an eloquent orator. All these were appointed by the minister of the interior. The aspect of this judicial body, composed mainly of rabbis, was an unprecedented spectacle to the Parisians. The public exhibition, to which this assemblage was unaccustomed, evoked a feeling of restraint among the members of this Jewish parliament.

The opening session of the Grand Sanhedrin held at Paris on February 9, 1807. From a contemporary etching formerly in the collection of the Jewish Community of Berlin

Aaron Worms (1754-1836), noted Talmudist and chief rabbi of Metz (1832-36), was also a member of the Grand Sanhedrin. He delivered an address before the Sanhedrin in which he discussed the relations of Jews to non-Jews in accordance with rabbinic law and showed that the opinions mentioned in the Talmud with reference to heathens were not to be taken as criteria for conditions prevailing in France in his days or for regulations to be issued by the government.

The Sanhedrin empowered itself to render decisions binding upon all Jewry. Twelve questions were submitted to this Napoleonic Sanhedrin. It reached the following decisions: in conformity with the decree of Rabbi Gershom, polygamy is forbidden to the Jews. Divorce according to Jewish law becomes valid only after being first decided upon by the civil authorities. The religious act of marriage must be preceded by a civil contract. Mixed civil marriages between Jews and Christians are valid even without religious ceremonies. It becomes the religious duty of every Jew to regard his non-Jewish fellow citizens as brothers and to aid, protect and love them like his own coreligionists. The Jew is in duty bound to regard the country of his birth or of his choice as his fatherland, and to love and defend it whenever called upon to do so. The Jew shall have the right to every occupation and profession. Jews are urged to engage in agriculture, manual labor and the arts and crafts as was the custom of their ancestors in Palestine. Finally, Jews were prohibited to practice usury on Jew or non-Jew.

In order to attain the objective of the Napoleonic government by securing the respect of world Jewry for the decisions of the Sanhedrin, President Sinzheim later issued a proclamation in Hebrew and French. Napoleon's purpose in creating the Sanhedrin was purely political, and in no way effected by humanitarian motives or sympathy toward Jews. His aim was to win over the Jews of the world by posing as their benefactor. The attitude of the convention toward the emperor, who did not even receive the members of the Sanhedrin, was neither very frank nor upright.

SANIELEVICI, HENRIC, professor, essayist, literary critic, scientist and sociologist, b. Bucharest, Roumania, 1871. He was educated in Roumania, Germany and France. He lived in the latter country for many years, and many of his books on natural history were published there. A considerable work, *La vie des mammifères et des hommes fossiles,* was hailed as an important contribution by biologists and zoologists. Sanielevici's writings covered a vast field of learning. In Roumania he made a name as a gifted writer and literary critic. Militant by nature, he was sharply polemic in his criticisms, and applied high moral standards in his appreciations. In his magazine *Curentul Nou* (The New Current), which was published at Galatz from 1908 to 1911, he combatted romanticism and advocated classicism in literature.

He contributed to many Roumanian magazines and daily newspapers, notably to *Adeverul* (The Truth) and *Dimineatza* (The Morning), where he wrote in the same biting and polemic manner about political and social problems. In 1936 he published a book in two volumes on the racial problem (in Roumanian, published by *Adeverul*), in which he attacked the Nazi theories about race and constructed a race theory of his own.

SANTANGEL, LUIS DE, comptroller and chancellor of the court of Aragon, and favorite of King Ferdinand and Queen Isabella of Spain; d. 1505. He was a member of a prominent Marrano family, which suffered persecution on account of its Jewish faith. His father, who died in 1476, was farmer of the royal taxes and customs in Valencia, to which office the son succeeded. Luis de Santangel became a power in commerce and finance, and won the lifelong friendship of King Ferdinand because of his administrative ability. He is best remembered for the part he played in connection with the discovery of the New World by Christopher Columbus.

Latter-day historians accord Luis de Santangel the major credit for prevailing upon Queen Isabella to recall Columbus after all negotiations between the navigator and the Spanish court had been broken off. It is generally conceded that Santangel was chiefly instrumental in enabling Columbus to realize his great dream, lending not only his moral support, but supplying the necessary funds for fitting out the expedition. The original account-books in the *Archivo de Indias* in Seville bear out this contention, showing an item of 1,140,000 maravedis which he gave toward financing the expedition.

In token of his gratitude Columbus sent Santangel the first communication on the discovery of the New

World. This letter, dated February 15, 1493, was written by Columbus near the Azores or the Canary Islands on his return from the first voyage. Santangel had this historic document printed, and thus became responsible for the first printed record of the great discovery (see vol. 3, p. 307).

The Jewish financier and statesman, who was the Lord Beaconsfield of his time, received numerous tokens of the royal favor; the most important was a grant of exemption from any charge of apostasy that might thereafter be brought by the agents of the Inquisition against him, and against his children and their heirs. Upon his death in 1505 he was survived by three sons and an only daughter. One of his sons, Fernando, succeeded him in public office by appointment of King Ferdinand.

SANTILLANA, DAVID, Islamist and authority on Moslem law, b. Tunis, North Africa, 1855; d. Rome, 1931. He prepared (1889) the scheme of a code of civil law and commercial law to be adopted in Tunisia; it was praised as a work of exceptional juridical value and ingenuity, in view of the difficulty of conforming Islamic law in Tunisia to a heterogeneous Arab-European population. Santillana was one of the most representative members of the Commission for the Codification of the Tunisian Laws, and highly honored for his great erudition and integrity. From 1910 to 1912 he taught history of philosophy at the Egyptian University in Cairo, and then occupied the chair of Moslem law at the University of Rome from 1913 to 1923.

Together with the Italian Arabist, Professor M. Guidi, he published (1919) the translation of the Khalil Code, the fundamental text of the Malichite jurisprudence which is applied in the Italian colony of Libya. In 1926 he began the publication of the *Istituzioni di diritto musulmano malichita.*

SANTOB (SHEMTOB) DE CARRION, poet, b. Carrion de Los Condes, Castile, Spain, toward the

Jacob Saphir

Moritz Gottlieb Saphir

end of the 13th cent. About 1360 Santob finished his *Consejos y documentos del Rabbi Don Santo al Ley D. Pedro* (called also *Proverbios Morales*), a collection of aphorisms of 686 stanzas, composed partly by the author himself, but principally derived from *Proverbs, Ecclesiastes, Aboth,* the Talmud and the Midrash, as well as from the *Mibhar Hapeninim* of Solomon ibn Gabirol and the *Musare Hafilosofim* of the Syrian Christian author Honein ibn Ishak.

This work was published from an Escurial manuscript in the fifty-eighth volume of the *Bibliotheca de autores españoles* (Madrid, 1864, p. 331 et seq.) and also in G. Ticknor's *History of Spanish Literature* (New York, vol. 3, 1849, pp. 475-503). Moritz Kayserling's *Sephardim* (Leipzig, 1859) and J. Fastenrath's *Immortellen aus Toledo* (Leipzig, 1869) contain extracts from the work, translated into German.

Lit.: Stein, L., *Untersuchungen über die Proverbios Morales* (1900).

SÃO SALVADOR, *see* BAHIA.

SAPHIR, JACOB, author and traveler, b. Oshmiany, near Vilna, Lithuania, 1822; d. Jerusalem, Palestine, 1885. In 1833 Saphir came with his father to Safed, Palestine, where in 1858 he was appointed collector of funds for the Jews in Palestine. Thus he went on extensive trips to various parts of the world, and gathered much interesting material concerning the past and present of the Jews. He published his travelogue under the title of *Eben Sappir* (vol. 1, Lyck, 1866; vol. 2, Mayence, 1874); this work contains a description of his travels in Egypt, Arabia, Yemen, Aden, British India, China, Australia and other lands, with specific reference to the Jews in these countries.

He copied old epitaphs and hymns, and inserted Jewish legends, folk tales and descriptions of religious customs. After a sojourn in Mayence, Germany, Saphir returned to Jerusalem, where he spent the rest of his life.

Lit.: Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana,* 332-33; Fünn, S. J., *Keneseth Yisrael,* 557-58; idem, in *Hakarmel,* vol. 4, No. 33 (1866); Geiger, in *Jüdische Zeitschrift,* vol. 11, pp. 263-70; Luncz, *Luah* (1911).

SAPHIR, MORITZ GOTTLIEB, humorist b. Lovasberény, Hungary, 1795; d. Baden, near Vienna, 1858. He settled first in Vienna (1822), then moved to Berlin (1825), where he founded the papers *Ber-*

liner Schnellpost (1825) and *Berliner Courier* (1827).

Saphir spent a few years in Munich, where he edited *Bazar für München* (1830-33) and *Deutscher Horizont* (1831-33), but in 1835 he returned to Vienna where, in 1837, he founded *Humorist,* the most widely read satirical periodical of that era, which he edited until his death. His introduction of Akademien, social gatherings in which writers, musicians and artists participated and which were generally concluded with humorous recitals, made him very popular. Saphir's poems, *Wilde Rosen,* inspired by Heinrich Heine, were widely read and also set to music. Saphir embraced the Protestant faith in 1832, but his sketch, *Judenfeind,* indicated his sympathy with Jewry.

His complete works were published in twenty-six volumes (Brünn, 1886). From 1850 to 1858 he edited a year book, *Humoristisch-satirischer Volkskalender.* His literary peculiarity consisted mainly in puns upon words. While his bon mots became very popular, his sharp polemics made him many enemies.

Lit.: Brümmer, Franz, *Lexikon der deutschen Dichter und Prosaisten,* 433; *Allgemeine Deutsche Biographie,* vol. 30.

SAPHIRE (SAPIR), SAUL, Yiddish novelist and journalist, b. Vilna, Lithuania, 1895. He came to the United States in 1916. In 1925 Saphire became affiliated with the *Jewish Morning Journal* and the weekly *Jewish American;* he was made associate editor of the *Jewish American* in 1927. Saphire also acted as correspondent for various other newspapers.

He was author of numerous historical and Biblical novels in a popular vein, including *Caliph of Cordova* (1929); *A Tale of Two Kings* (1936); and *A Challenge to Caesar* (1938).

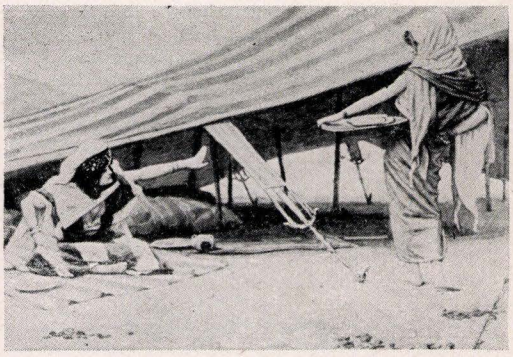
SAPIR, EDWARD, anthropologist and linguist, b. Lauenburg, Pomerania, Germany, 1884; d. New Haven, Conn., 1939. He was the child of Orthodox Jewish parents, who brought him to the United States when he was five years of age. He was educated at Horace Mann school and at Columbia University, where he did post-graduate work under Franz Boas. He studied the language of the Wishram Indians in the state of Washington and that of the Takelma Indians in Oregon. The material collected was presented in a remarkable volume, *The Takelma Languages of South West Oregon* (1912).

After receiving the Ph.D. degree from Columbia University (1909) Sapir taught for a brief period at the University of Pennsylvania, and in 1910 was appointed director of the division of anthropology at the Canadian National Museum. During the fifteen years spent at Ottawa, Sapir continued to pursue extensive researches among Indians. In 1925 he was made professor of anthropology and general linguistics at the University of Chicago, and in 1931 Yale University called him to the Sterling Professorship of Anthropology and Linguistics. He exerted great influence on the science of linguistics. His principal work is *Time Perspective in Aboriginal American Culture* (1916).

Sapir wrote also *Language* (1921) and (with Marius Barbeau) *Folk Songs of French Canada* (1925). A bibliography of his works published in *Boletin bibliográfico de Antropologia Americana* (vol. 3, 1939, No. 1, pp. 80-86) lists 106 books and articles on American anthropology, whereas the bibliography of his total work includes upwards of 250 titles.

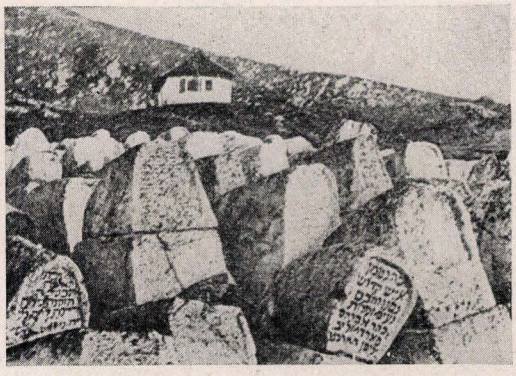
During the latter part of his life Sapir devoted himself to the study of Bible and Talmud from the point of view of cultural anthropology, and offered many an interesting interpretation of linguistic facts. He was associated with the Yiddish Scientific Institute, and himself published essays on Yiddish philology. He was a founder and vice-president of the Conference on Jewish Relations, and discussed the Jewish people and its problems in many articles. His was the dispassionate approach of the scientist, but he believed that it was first and foremost the pursuit of knowledge and social justice that could give meaning to modern Judaism.

Sapir wrote poetry which was published in *The Nation, Poetry* and other periodicals. He was also a gifted pianist and composer. In 1929 Columbia University conferred upon him the honorary D.Sc. degree. He was president of the American Anthropological Association and of the Linguistic Society of America, and a member of the National Academy of Sciences.



SAPOSS, DAVID JOSEPH, labor economist, b. Kiev, Russia, 1886. He came to the United States in 1895, and was there educated, pursuing his higher studies at the University of Wisconsin and at Columbia University, in New York city. From 1911 on he served numerous important public agencies as an investigator of labor problems, and held several teaching positions. He was assistant to Professor John R. Commons at the University of Wisconsin (1913-17), and helped him produce the classic and monumental study *History of Labor in the United States* (1918). In 1919 he was educational director of the Amalgamated Clothing Workers of America (New York city), and later taught at Brookwood Labor College, in Katonah, N. Y. (1922-33). He also taught in the summer sessions and extension division of Columbia University (1926-30). He was investigator in the problem of company towns for the United States Commission on Industrial Relations (1914), and for the Carnegie Corporation in their Americanization Study. For the Inter-Church World Movement he helped produce *Public Opinion and the Steel Strike* (1921). *The Labor Movement of Post-War France* (1930) was written by him under the sponsorship of the Rockefeller Foundation and Columbia University. Saposs also worked with the United States Department of Labor and the New York State Department of Labor. He produced a study, under the auspices of the Twentieth Century Fund, Inc., of government and labor relations, entitled *Labor and the Government* (1935). In 1935 he was appointed chief economist of the National Labor Relations Board, and occupied that position until, in 1941, he became labor consultant to the Coordinator of Inter-American Affairs at Washington, D. C., a post he still held in 1943.

In addition to the writings already mentioned, and to numerous studies in journals and standard works of reference, Saposs published *Readings in Trade Unionism* (1926) and *Left Wing Unionism* (1926). Students of the labor movement and critics of the literature of industrial economics valued the writings of Saposs for their first-hand experience and intimate knowledge of the American labor movement, coupled with exhaustive research and studied objectivity.



Lit.: *Political Science Quarterly,* vol. 42, No. 3, pp. 493-95.

SAPPHIRE, *see* GEMS.

SARAGOSSA (Spanish Zaragoza), city in the province of Aragon, Spain, in the Ebro valley. In the 2oth cent. it was an important manufacturing center, with a university. In 25 B.C.E. it was taken by the Romans, and became a center of trade and a military station. It later fell to the Visigoths, then to the Moors, and finally was captured by Alfonso I of Aragon in 1118.

Sarah and Hagar. From a painting by James Jean Jacques Tisso

The ancient Jewish cemetery at Sarajevo

The beginnings of Jewish settlement in Saragossa date back probably to the Roman period. During the reign of Emperor Louis I the Pious (814-40), Bodo, an Alemannian deacon, and a bishop of the Catholic church, embraced Judaism and came to Saragossa to live in the Jewish community. In the 11th cent., when the Arabs were in power, the grammarian Jonah ibn Janah and the poet Solomon ibn Gabirol criticized the Jewish community of Saragossa for its licentiousness. In the 13th cent. the Jews of Saragossa were again the butt of criticism, leveled at them by the poet and philosopher Solomon ben Reuben Bonafed.

Jews played an important role in the financial administration of Saragossa. Some of them served as interpreters, physicians and financial ministers to the kings of Aragon. More than a quarter of the area of the city, surrounded by a Roman wall and provided with gates, was occupied by the Jews, who were heavily taxed. Those engaged in the textile industry were keen competitors of the Christian tradesmen. The statutes of the Jewish shoemakers' guild are still preserved. The Jewish wood-turners had their own synagogue. In the 16th cent. a church was erected on the site of the Great Synagogue. The influential rabbis of the community were Aaron ben Joseph Halevi (about 1285); Azariah ibn Jacob (1313-28), spoken of as the "Excellentissimo de la Juderia de Zaragoza"; Isaac ben Sheshet (about 1373-85) and Hasdai Crescas (about 1385-1412).

The Jews of Saragossa suffered comparatively little from the catastrophe of 1391 in Spain. However, several members of the Caballeria family and other Jews of Saragossa renounced Judaism as a result of pressure exerted by reason of the religious disputation of Tortosa (1413-14). About 200 families remained faithful to Judaism until the expulsion of the Jews from Spain in 1492. Several Marrano families, such as Caballeria, Santangel and Sanchez, played an important role in the general history of Spain. Saragossa had many Marranos who held the highest offices, but this did not prevent them from falling victims of the Inquisition.

SARAH ("princess"), wife of Abraham and mother of Isaac. The story of her life is related in the Bible in *Gen.* 11 to 23. She was originally named Sarai, but this name was changed to Sarah at the time when Abraham accepted circumcision (*Gen.* 17:15). According to *Gen.* 20:12, Sarah was the half-sister as well as the wife of Abraham. She accompanied Abraham on his journeys from Mesopotamia to Haran and then to Canaan; her beauty caused her more than once to be coveted by the rulers, but the danger was averted by God. Childless for many years, she gave Abraham her handmaid Hagar in order that he might have children; but when Hagar and her son Ishmael became overbearing, Sarah became angry and drove them out. She was eventually the mother of a son, Isaac, at the prediction of whose birth she had laughed, deeming it impossible because of her advanced years (*Gen.* 18:12). She died at the age of 127 and was buried in the Cave of Machpelah, which Abraham purchased for the express purpose. Since she was the first of the four Matriarchs, her name is mentioned in the parental blessing of girls on Sabbaths and holidays. Rabbinic and Islamic accounts of Sarah are mostly expansions or elaborations of the Bible story.

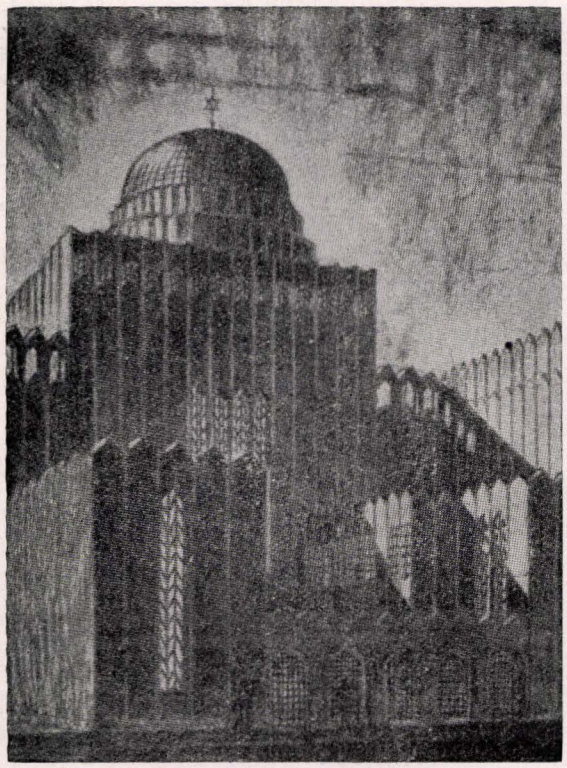
SARAH, character in *Tobit.* The daughter of Raguel of Ecbatana in Media, she had been married seven times, only to have each of her bridegrooms killed on his wedding night by the demon Asmodeus. She was delivered from this by the young Tobias who, with the aid of the angel Raphael, drove off the demon and successfully married Sarah.



See also TOBIT.

SARAH, Jewish female physician of the 15th cent. Upon a tax payment of ten guilders she was granted permission by Archbishop Johann II, of Würzburg, to practise medicine in his bishopric. She developed her practice to such an extent that she soon acquired considerable wealth.

SARAJEVO (Turkish, Bosna Serai), capital city of Bosnia. There is no record of Jews in the history of the fort Bosnavár, in the emplacement of which the conquering Turks founded Bosna Serai in 1465. A document of 1541, however, tells of a group of Salonika Jews who were the first to establish business contacts with Sarajevo. They visited the city to transact their business, but preferred to reside elsewhere, sending commissioners to the governor to collect their outstanding funds.

Yet tombstones prove that Jews were buried at Sarajevo as early as 1551. In 1565 Donna Gracia Mendesia and Don Joseph of Naxos obtained certain guarantees under which the Jews felt secure in settling at Sarajevo. Subsequently a special quarter was allotted to them where they built houses in return for small contributions to the mosques of the town. In 1614 they had a powerful advocate in Naphtali Manjor (or Maggiore), who came to Sarajevo as a personal

The principal synagogue at Sarajevo

A page from the Sarajevo Haggadah

banker of the governor, Balatai Mehmed Pasha. During the next two centuries there was very little change in the life of the Sarajevo Jews. They had noted rabbis, such as Asher Zebulun and Hacham Zebi (17th cent.), David Pardo and Moses Danon (18th cent.), and Moses Perera and Judah Finzi (19th cent.); at the same time, however, the Sarajevo community, consisting of Sephardic Jews only, accepted the leadership of that of Salonika.

The most enduring document of Jewish life at Sarajevo is the Sarajevo Haggadah, described and partly reproduced by H. Müller and J. von Schlosser in 1898. A manuscript dating from the 14th cent., it contains many full-page illuminations to the Bible from the creation of the world to the Revelation at Mount Sinai. It is one of the "Spanish" Haggadahs, and evidently accompanied a Jewish family expelled from Spain upon its peregrinations to the Balkan peninsula. It was on exhibit in the Provincial Museum of Sarajevo.

A significant change in the life of the Jews occurred when Bosnia was placed under Austrian protectorate in 1878. As early as 1850 the Jews of Sarajevo were authorized by the Turkish government to live in any part of the city, and they were practically granted emancipation. A large number of Ashkenazic Jews came in the wake of the Austrian occupation; these settled at Sarajevo as physicians, lawyers, government officials and businessmen, and offered an example of the life of the emancipated Jew. The two communities for a long time kept strictly apart. In 1929 there were 1,200 Ashkenazic Jews in a total Jewish population of 8,500. Several Jewish newspapers were published in the Serbian language at Sarajevo. Under Austrian rule, Sephardic Jews from Sarajevo founded the Esperanza association at Vienna; under Yugoslav rule, the local Sephardim gave active support to their coreligionists in Palestine. About the fate of the Jewish community at Sarajevo after the German occupation in 1940 there was no definite evidence available in 1943.

SARASOHN, KASRIEL HERSCH, journalist and publisher, b. Paiser, Russian Poland, 1835; d. New York city, 1905. He was a pioneer of Yiddish journalism in the United States. He relinquished plans for a rabbinical career and emigrated to the United States in 1866. There, in New York city, he undertook his first journalistic venture, *Die New Yorker Yiddishe Tzeitung,* established in 1872. The paper failed. Undeterred, Sarasohn founded the weekly *Die Yiddishe Gazetten* in 1874. Its success led, in 1885, to the establishment of the *Yiddishes Tageblatt* (Jewish Daily News), the first Yiddish daily in New York city and probably in the world.

Sarasohn continued to publish the *Gazetten,* which, in addition to offering a summary of the week's news, emphasized miscellaneous literary material. The *Tageblatt* reported the news as the conservative organ of the Orthodox Zionist section of immigrant Jewry, and was eventually merged with the *Morgen Zhurnal.* Associated with Sarasohn in his publishing ventures was his son Ezekiel, onetime president of the Jewish Press Publishing Company.

In 1882 Sarasohn founded the Hebrew Sheltering House (Hachnosas Orchim), which subsequently became the HIAS. Sarasohn visited Palestine in 1901, and was later leader of the committee in New York which raised funds for the support of indigent Palestinian Jews. He was chairman of the committee for the Kishinev pogrom victims.

Kasriel Hersch Sarasohn

SARATOV BLOOD ACCUSATION. In December, 1852, and January, 1853, two Christian children disappeared in Saratov, Russia, and their bodies were found in the Volga. Both were circumcised, yet according to neither the Jewish nor the Mohammedan rite. Some witnesses, mostly depraved individuals, among whom was the baptized Jew Yurlov's mistress, accused Yurlov's old father, Yushkevitcher, the soldier Shlieffermann, and even Yurlov himself, as accomplices in the crime. Durnovo, the official in charge of the investigation, refused to follow up another clue which was also available. The matter was eventually taken up by the imperial council, which dismissed the issue of ritual murder with the motivation that the latter, in spite of extensive literature, had not been clarified, but maintained the charge of murder without any motive against the Jews. By a majority of twenty-two to two, in opposition to the advice of Minister of Justice Semiatim, who demanded the acquittal of the accused Jews, Yushkevitcher and Shlieffermann, as well as the baptized Yurlov, were sentenced to hard labor. Sanctioned by Czar Alexander II, the verdict took effect in 1860. After fourteen years of imprisonment, during which time two of the convicted ones committed suicide, Yushkevitcher was released by Alexander II (1867) upon the instance of Adolphe Crémieux.

SARAVAL, JACOB RAPHAEL, rabbi and poet, b. Venice, Italy, about 1708; d. Mantua, Italy, 1782. He was a rabbi in his native city, and then in Mantua. Saraval wrote an epistle defending the Jews from accusations made by the lawyer Benedetti of Ferrara, and an elegy, *Kinath Sofedim,* lamenting the death of sixty-five Jews in an accident at Mantua in 1776. He published *Avvertimenti alle anime,* a translation of the Viddui (confession of sin) by Bahya ibn Pakuda and of one by Nissim ben Jacob (Venice, 1806), and, in collaboration with Simon Calimani, he translated *Aboth* into Italian (Venice, 1780). In his old age he became blind. His sermons were collected and published posthumously.

SARBÓ, ARTHUR (DE SZEPESVÁRALJA), neurologist, b. Budapest, 1867. After studying at Budapest, at Berlin, and at Paris under Charcot, Sarbó became (1896) lecturer in neurology at the University of Budapest. From 1909 on he was titular professor; he was also head of the neurological department of the Szent István Hospital at Budapest. Sarbó was author of several books and over 120 memorandums to the medical press on organic neurology, syphilis of nerves, epilepsy, the effect of traumata on the nervous system, and other subjects. He was especially active during and after the first World War in research on war lesions of the nervous system.

Among his books published in German were *Der heutige Stand der Epilepsie und Therapie* (1905) and *Zur Pathologie und Therapie der Kriegsnervenschädigungen.* He contributed the chapter "Die Nervensyphilis" to Lewandowski's medical handbook (1935). Sarbó was vice-president of the national association of Hungarian physicians. He accepted the Christian faith.

SARDINIA, an island in the Mediterranean Sea, south of Corsica and west of Italy, belonging to Italy. When the Roman Emperor Tiberius (about 19 C.E.) banished the Jews from Rome and from the rest of Italy for the purpose of putting an end to Jewish proselytization, he sent 4,000 Jewish young men to Sardinia in order to combat brigandage there.

Whether the origin of the Jewish community in Sardinia dates from this event, or whether, even at an earlier time, individual Jews had settled there for trading purposes, can not be ascertained. It is certain, however, that in Cagliari and in Sulcis (Santo Antioco) Jewish graves dating from the time of the Roman dominion and objects bearing Jewish emblems were found. In 599 a converted Jew placed Christian emblems in the synagogue of Cagliari. The Jews thereupon appealed to Pope Gregory the Great, who ordered their removal. Despite the great amount which is related regarding the Jews in Sardinia in the following centuries, too much weight should not be attached to these reports, since they are based on the writings of Arborea, which are falsifications. Scattered reports from the time of the Pisa and Genoa governments have been preserved. Thus, for example, for the year 1258 it is stated where the Jews of Cagliari resided (the name of the locality being mentioned), and where their synagogue was situated.

More frequent and coherent are the reports from the beginning of the Aragonese rule (1325). Immigration from Barcelona, the Balearic Isles and other Jewish centers belonging to the Aragonese crown increased the number of Jews in Sardinia. In Cagliari and Alghero, where they were engaged chiefly in commerce and trade and were often entrusted with the collection of the taxes, the communities were especially prosperous. There were also physicians and scholars among the Jews, for example the physician Isaac Eymies, the surgeon Solomon Averonques, and the Talmudist Bonjodas Bondavin (Judah ben David).

But the prosperity of the Jewish communities of Sardinia came to an end in 1479, when Aragon was united with Castile. New regulations were continually issued, oppressing the Jews and rendering their lives difficult until finally, in 1492, the expulsion of the Jews from the kingdom of Spain put an end also to the Jewish communities in Sardinia. A few Jewish families immigrated thither in recent times. According to the census of 1911, the Jews of Sardinia numbered 206.

In 1943 there were but a few Jews left in Sardinia. In the early 1930's, in his conversations with the Ger-

Margheritta Sarfatti

man Jewish writer Emil Ludwig, Benito Mussolini referred to the Jewish commandant of Sardinia, an artillery general named Modena.

Lit.: Spano, in *Rivista Sarda,* vol. 1, pp. 23-52; idem, in *Vessillo Israelitico,* vol. 27; *Revue des études juives,* vol. 8, p. 280 et seq.; *Notizie degli scavi* (1908) 150 et seq.; *ibid.* (1922) 335 et seq.; Pais, *Storia della Sardegna e della Corsica* (1923) 178 et seq., 183, 283, 577; *Publications of the American Jewish Historical Society,* No. 27 (1920) 357; No. 28 (1922) 135 (note), 210; Ludwig, Emil, *Talks with Mussolini* (1932) 74.

SARFATTI (or SARFATI), Jewish family residing at Venice, Italy, and evidently of French origin, as the name Zarfatti generally indicates. Joseph ben Samuel Zarfatti (d. 1527), a physician who was exempted by the senate of Venice from the wearing of the yellow hat and permitted to wear the dress of the ordinary Christian practitioners, was probably no ancestor of the Venetian Jewish family, who spelled the name with an S from the beginning of the 17th cent. or even before.

Many of the Sarfattis of Venice were rabbis, among whom three whose first name was Benzion were the best-known. Benzion, son of Samuel Sarfati, was mentioned in manuscripts and books of the end of the 16th cent. as of French origin. Gaon Benzion Sarfati, rabbi of Venice (d. 1610), was also declared to be a Frenchman. He participated (1606) in a great theological disputation at Venice. In the same year (1610) a third Benzion Sarfati, physician and Hacham, died at Venice. Leone da Modena wrote their epitaphs.

There were other members of the Sarfatti family who were rabbis at Venice and in towns of the Venetian Republic. During the 18th cent. and in the first half of the 19th, however, none of the Sarfattis became noted. However, Attilio Sarfati (b. Venice, 1863; d. Recoato, Italy, 1900) was a popular lyrical poet. He wrote poems in both the Italian literary language and in the Venetian dialect; his poem *Minuetto* (1890) became classical. Sarfati was also a historian, principally devoted to the history of his native town. He published several studies on the doge Manin and his time, and discovered manuscripts on Venetian history at the Library of Paris.

Cesare Sarfatti (b. Venice, 1857; d. Milan, 1926) was a well-known lawyer. At the end of the 19th cent. he became a member of the socialist party, and subsequently a highly esteemed counsel for political defendants. In 1913 he pleaded the cause of Benito Mussolini, then leader of the left wing of the Italian socialist party, before the jury of Milan. Mussolini and Sarfatti became intimate friends after the end of the trial, and Sarfatti followed Mussolini when he left socialism and founded the fascist party. Sarfatti married Margheritta Grassini, who, descended from an old Venetian Jewish family, became well-known as authoress under the name of Margheritta Sarfatti.

Roberto Sarfatti (b. Venice, 1900; d. in action at Col d'Echele, 1918), their son, escaped in 1915 from the family in order to volunteer in the first World War. Rejected because of his youth, he attended the Nautical Institute, and in 1917 he was accepted and entered an Alpini battalion, an elite troop. In 1918 he was killed in action after recapturing a fortified position. A gold medal (Medaglia d'Oro) was made in memory of the young war hero, the descendant of several generations of rabbis, and the poetess Ada Negri (1918) and Benito Mussolini (1924) praised his heroic death; Mussolini referred to him as the loftiest example of Italian patriotism. His name is engraved on a tablet in the Jewish Temple at Venice, which records the names of members of that community who died in action in the first World War.

Hugo Bieber.

SARFATTI, MARGHERITTA, author and art critic, b. Venice, Italy, 1883. She was the wife of Cesare Sarfatti, and the mother of Roberto Sarfatti. Margheritta Sarfatti took an active part in the Italian socialist movement, addressing public meetings and contributing to numerous periodicals. After the outbreak of the first World War (1914), she advocated the intervention of Italy in the conflict on the side of the Allied powers, and took part in a commemoration ceremony for the martyred nurse Edith Cavell in the hall of the Milan conservatory. Soon thereafter, however, she left the ranks of the socialist party and joined the Fascist movement, which was organized by another socialist renegade, Benito Mussolini. She became closely associated with the new official organ of the Fascist Party, *Il Popolo d'Italia,* as editor of the art and literary section. When Mussolini founded the monthly *Gerarchia,* principal political organ of Fascism, he entrusted Margheritta Sarfatti with its direction, a position which she held until the inauguration of the Fascist anti-Semitic and racial policy (July, 1938).

Margheritta Sarfatti was one of the chief promoters of the Italian artistic movement called "Il Novecento Italiano," and was president of the Italian jury and vice-president of the international jury of the Exhibition of Decorative Art held at Paris in 1924.

Her biography of Mussolini, replete with personal notes revealing her long personal friendship and collaboration with the Italian dictator, was published in 1925 and translated into many languages. In 1935 she visited the United States, later publishing *L'America, ricerca della felicità,* a book of travel impressions.

SARID, *see* Colonies, Agricultural.

SARLOUIS, LODEWIJK, rabbi, b. Amsterdam, Holland, 1884. After studying at the Netherlands Israelite seminary of Amsterdam, he became rabbi of the main synagogue of that city (1912). In 1936 he was appointed chief rabbi of the Netherlands Jewish community, for the Amsterdam district; in that capacity he became a board member of many institutions and organizations, including the presidency of the Teachers' College of the Beth Hamidrash Ets Haim, and of the Central Committee for the Religious and Moral Uplift of Jews in the Netherlands, as well as a member of the Rabbinical College. In 1942 it was reported that the Nazis had deported Sarlouis and his family to an undetermined part of Eastern Europe.

SARNOFF, DAVID, radio executive, b. Uzlian, Minsk, Russia, 1891. He was brought to the United States in 1900. Prevented by economic hardship from obtaining more than a formal public school education, he nevertheless managed later in his career to take special engineering courses at Pratt Institute in Brooklyn.

In 1906 Sarnoff became a messenger boy with the Commercial Cable Company, and later was made an office boy for the Marconi Wireless Telegraph Company. He became a junior telegraph operator with the Marconi Company in 1907, and in the following year was made operator at the station at Siasconset, on Nantucket Island. The next few years brought him shifts of post and some unusual experiences; he was the wireless operator on several ships, and made a trip to the Arctic ice fields on a sealfishing expedition.

As wireless operator for the Marconi Station at John Wanamaker's in New York city (1910-12), he received the message reporting the sinking of the *Titanic*.

Provoked to action by the *Titanic* disaster, the United States Congress passed a law requiring all seagoing passenger vessels to be equipped with wireless. Sarnoff was by this time an important member of the Marconi Company staff, and it was under his supervision as radio inspector (1912) and as chief radio inspector and assistant chief engineer that the installations were made. By 1919, when the Radio Corporation of America absorbed the Marconi Company, Sarnoff had served as contract manager, assistant traffic manager and commercial manager. He was taken over into the new firm as commercial manager. Subsequently he became general manager (1921), vice-president (1922), executive vice-president (1929) and president (1930).

The development of radio communications and broadcasting was probably the most influential achievement of the period between the two wars. Sarnoff, rising to a prominent post in American radio within that time, was able to meet the demands of the expansion and even to further it. In various public speeches he stressed the value of radio as a form of public opinion as well as of communication. As director and chairman of the board of the National Broadcasting Company, Sarnoff was also partly responsible for the immeasurable improvement in the quality of radio programs, musically and otherwise. He was also a director of the Metropolitan Opera Association. Sarnoff has seen to it that the music from the rostrums of Toscanini, Stokowski and Damrosch has reached the hearts of millions of Americans.

Sarnoff received a series of honorary doctorates: from St. Lawrence University (1927), Marietta College (1935), Norwich University (1935), Oglethorpe University (1938) and Suffolk University (1939). He held numerous advisory posts in educational organizations and institutions; he was a councillor of New York University, two-term president and later a director of the Economic Club of New York and a member of the President's Committee on Fair Employment Practice. He was, in 1943, a member of the industry advisory committee of the United States Defense Communications Board. Sarnoff was awarded the order of Polonia Restituta (officer's grade, 1924) by the Polish government, the Legion of Honor (chevalier, 1935; officer, 1940) by the French government, and the Oaken Crown of the Grand Duchy of Luxembourg (1935).

David Sarnoff

At various times Sarnoff participated as an official in Jewish undertakings, such as the Ort Reconstruction Fund. He was a colonel in the United States Army, serving in that capacity in 1943. In 1939 he received one of the three annual awards of the National Institute of Immigrant Welfare, for distinguished service in the United States.

The life of David Sarnoff is the true expression of American democracy. There is no better example of the American way than the record of his career.

SASKATCHEWAN, one of the nine provinces of the Dominion of Canada. Saskatchewan is bounded on the south by the states of North Dakota and Montana, on the east by the province of Manitoba, on the west by the province of Alberta, and on the north by the North West Territories. Its length from north to south is 645 miles and its breadth from east to west 390 miles. Its area is 251,700 square miles, of which 13,725 square miles are covered by water. Saskatchewan is one of the three prairie provinces of Canada, and was established as a province on September 1, 1905, at the same time as its sister province Alberta.

The early Jewish history of Saskatchewan is unique in that its earliest Jewish settlers were not merchants but farmers. Its first synagogue services were held in sod-covered cabins on the prairie, and its oldest Jewish cemetery is in the Jewish farm settlement of Hirsch.

The first Jew known to have settled in the province of Saskatchewan, at that time known as the North West Territories, was Max Goldstine, a tailor from Russia who settled

in Fort Qu'Appelle as a merchant in 1877. He served as quartermaster during the Second Riel Rebellion in 1885. A group of Jews known to have settled in this area came to Canada in 1882 as a result of the Russian pogroms and May Laws. About twenty-five families were settled as farmers in the Moosomin district by the Russo-Jewish Committee, while others worked as track layers and laborers on the Canadian Pacific Railway, the first transcontinental railway in Canada, built through the province in 1882 and 1883.

The next Jewish farm settlement was established at Wapella in 1888, and some of the pioneer Jewish farmers in that area were still living on their original homesteads in 1943. In 1892 the Young Men's Hebrew and Benevolent Society of Montreal, acting on behalf of Baron Maurice de Hirsch, founded the farm settlement of Hirsch in Southern Saskatchewan, with forty-seven Russian Jewish families.

The free homestead policy of the Canadian government and the stream of Jewish immigration which followed the persecution of Jews in Russia and Roumania resulted in the establishment of more Jewish farm settlements in Saskatchewan. With the assistance of the Jewish Colonization Association, Lipton was founded (1901), Sonnenfeld (1906), and Edenbridge (1906).

The province of Saskatchewan had, in 1943, the largest percentage of Jewish farmers and Jewish rural residents of any province in Canada. In 1936 the proportion of the total Jewish population of Saskatchewan living in rural areas was 19.0%, as compared with 3.5% for the entire Dominion of Canada.

The Jewish population of Saskatchewan increased from about seventy-five in 1891 to 296 in 1901. By 1911 it had risen to 2,066, and to 5,380 in 1921. In 1931 the number of Jews declined to 5,116, and in 1936 to 4,291, according to government censuses. Jews formed the twelfth largest ethnic group of non-Anglo-Saxon origin in the province in 1936, being only 0.46% of the total population of the province. The Jewish population was exceeded by that of German origin (19.86%), Ukrainian (8.16%), French (5.39%), Norwegian (4.28%), Polish (2.79%), Swedish (2.37%), Russian (2.37%), Hungarian (0.84%), Danish (0.67%), and Czechoslovak (0.52%).

Regina, capital city of Saskatchewan, was, in 1943, the tenth largest Jewish community in Canada, with a Jewish population of 902 in 1936. The only cities in Saskatchewan with a Jewish population exceeding 100 in 1936 were Saskatoon (611), Prince Albert (135), Melville (116) and Yorkton (103). Congregation House of Jacob was situated in Regina, and Agudath Israel was in Saskatoon.

According to the government census of 1936, of the total Jewish population of Saskatchewan, 26.17% were living in towns and villages with a total population of less than 1,000; 14.57% were living in towns with a total population of more than 1,000 and less than 10,000; 4.98% were living in towns and cities with a total population exceeding 10,000 and less than 30,000; and 35.26% were living in urban centers with a population exceeding 30,000. There were 463 incorporated cities, towns and villages in Saskatchewan in 1936, and Jews were living in 204 of them.

Of the Jews gainfully occupied in the province of Saskatchewan and reported in the 1936 census, 57.6% were engaged in merchandising as compared with 6.1% among the gainfully occupied of all origins; 14.2% of all Jews gainfully occupied were engaged in agriculture as compared with 62.7% of the total population gainfully occupied; and 3.9% of all Jews gainfully occupied were engaged in manufacturing industries as compared with 3.2% among the gainfully occupied of all origins.

Out of every 100 Jewish men in 1936 gainfully occupied in Saskatchewan, thirty-six were retail merchants, fourteen were salesmen, eleven were farmers, seven were wholesale merchants, five were farm laborers, three were doctors and two were teachers. Tailors, truck drivers, commercial travelers, buyers, canvassers, insurance agents, Shohets, dentists, lawyers, theatre proprietors, hotel keepers, dyers and cleaners, bookkeepers and office clerks numbered one each.

Out of every 100 Jewish women gainfully occupied in 1936 in Saskatchewan, thirty-six were saleslades, twenty-one were stenographers, eight were domestic servants, seven were teachers, six were bookkeepers and cashiers, four were retail merchants, four were office clerks and two were farmers. Music teachers, graduate nurses and housekeepers numbered one each.

There were Jewish synagogues in 1943 in Regina, Saskatoon, Prince Albert, Moose Jaw, Melville, Yorkton, Kamsack, Estevan, North Battleford and Lipton, and rabbis in the Regina, Saskatoon and Moose Jaw communities. There were Talmud Torahs conducting supplementary week day classes in each of the communities of Regina, Saskatoon, Prince Albert, Moose Jaw, Melville, Yorkton, Estevan, North Battleford and Lipton. There were also branches of the Canadian Jewish Congress, Zionist societies and Hadassah chapters in every Jewish community in Saskatchewan with a Jewish population exceeding fifty, and Pioneer Women's Clubs and Young Judea clubs in the larger communities. There were (1943) three B'nai B'rith lodges in Saskatchewan, one in Regina, one in Saskatoon and one in Moose Jaw, and a section of the National Council of Jewish Women in Saskatoon.

SASPORTAS (from the Hebrew *shesh she'arim,* equivalent to the Spanish *seis portas,* "six gates"), a Spanish Jewish family members of which lived in the 16th cent. in Oran, Algeria, then a Spanish possession. The Sasportas family rendered invaluable services to the Spanish kings as councillors during the wars with the Moors. A branch of the family lived in Montpellier, France. Among its outstanding members were:

JACOB BEN AARON SASPORTAS (b. Oran, Algeria, 1610; d. Amsterdam, Holland, 1698), an important Halachist, who served as rabbi in various towns of North Africa. He was imprisoned as the result of a false accusation, but in 1652 escaped to Amsterdam. In 1659 he was recalled by the king of Morocco, who sent him to Spain on an important mission. Sasportas became rabbi of the Spanish Jewish community in London in 1663. As the result of a plague, he went to Hamburg, Germany, then served as Rosh Yeshiva (head of the academy) at Amsterdam in 1673, thence went to Livorno, Italy, in 1675, and finally returned in 1680 to Amsterdam, where he remained until his death. Sasportas was one of the few cool-headed and courageous men who remained sober during the Sabbatai Zevi frenzy, which he vigorously and persistently sought to denounce and expose as an imposture. This aim of his appears in several missives which he addressed to communities in Europe, Asia and Africa, and in his *Tzitzath Nobel Tzebi* (Amsterdam, 1737).

ISAAC BEN JACOB SASPORTAS, the son of Jacob ben Aaron Sasportas, a rabbi, lived in Amsterdam in the first half of the 18th cent. He wrote numerous responsa, as well as poems.

SOLOMON SASPORTAS (d. 1724), the son of Isaac ben Jacob Sasportas, lived at Nice, France. He was the author of Cabalistic works, the most important of them *Shesh Shearim,* as well as of poetry.

SASSANIDS, *see* BABYLONIA; PERSIA.

SASSO, ALFREDO, merchant and civic worker, b. San José, Costa Rica, 1897. His mother, Leita Robles, was the daughter of the first Jew to settle in Costa Rica, and his father migrated to Costa Rica from the Virgin Islands in 1890.

At the age of seventeen Alfredo Sasso started in the agency business in San José, and in 1917 formed the agency of Sasso Hermanos with his three brothers as partners. The firm became a merchandising concern as well. Later the two firms, International Agencies and Compañia Industrial Sasso, the latter operating a plant for the bottling of charged water, were established. Sasso thus became one of Costa Rica's most successful business men, and in 1920 organized the Chamber of Commerce; in 1925 he was elected its president, and was reelected numerous times. He was active also in the Red Cross of his country, and was appointed vice-president of the National Aviation Board.

As one of the country's important commercial leaders, he promoted numerous plans for the development of the country's resources and commercial possibilities. He was particularly interested in the encouragement of immigration into Costa Rica.

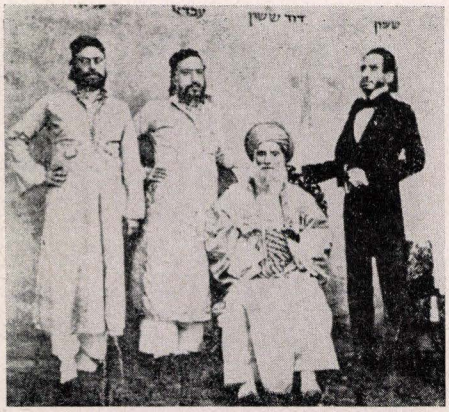
SASSO, SOLOMONO, *see* ERCOLE DEI FIDELI.

SASSOON, a family of merchants, industrialists and, later in its history, bankers, whose progenitor, settling in the key city of Bombay, wrested a fabulous fortune out of the accelerated industrial development of British India and China during the latter half of the 19th cent. The family originated in Baghdad, Mesopotamia (Iraq); to this region its forebears probably emigrated from Palestine during the Babylonian Exile, although what would seem to be wholly apocryphal accounts later linked the Sassoons with certain notable Spanish Jews of the same root name. (*Sason* is the Hebrew word for joy.) The family held first position in the Jewish community of 18th cent. Baghdad, and this record of its eminence may or may not be considered as lending some substantiation to alleged descent from the medieval exilarch or Prince of the Captivity. The Oriental saga of David Sassoon and Company included more than just its potent and far-flung business interests; the whole industrial and civic development of Bombay was closely bound up with the family's enterprise; and to the Jews in remote communities of the East and Far East the name Sassoon came to signify an intricate structure of public benefactions and private charity.

But in the second generation the family made a radical shift of the center of its activities from Bombay to London. Then in the space of a few short years the clan of pious Oriental Jews, students of Talmud and wearers of turbans, were assimilated into an intensively British existence, playing a role in English society and sports, in public life, politics, art and the army. In the first World War, fourteen grandsons and great-grandsons of the family progenitor held commissions in the British Army.

Notable as was the rapid metamorphosis of the family from East to West, so, too, was its swift decline.



Thus, despite a second generation of eight sons and four daughters, by 1943 the direct male line was flourishing in only one or two branches. By that time only one Sassoon was still prominently engaged in large-scale business. The original firms, whose checks had once been stamped in Hebrew as well as in English, had long since evolved from partnerships of brothers and sons into private corporations, where non-Jews were among those in control. Still in England were the descendants of Sassoon women who had married into the British nobility, and in the Orient, where the Sassoons had married and intermarried with the Ezras, Davids and Gubbays, many a Jewish aristocrat claimed among his forebears the family's founder, David Sassoon.

David Sassoon

DAVID SASSOON (b. Baghdad, 1793; d. Poona, India, 1864) was the son of Sassoon or Sason ben Saleh ben David ben Jacob ben Saleh ben David (b. Baghdad, probably 1749; d. Bushire, Persia, 1829). In 1782 Sason ben Saleh was in office as Saraf Bashi, or treasurer, to Ahmet Pasha, the vali (governor) of Baghdad under the rule of Abdul Hamid I. The office, carrying with it automatic leadership of the Jewish community, may have been quasi-hereditary in the family. Sason ben Saleh served for forty years, until he was ousted under a hostile vali. He married Amam, daughter of Gubbay, a former Nasi (head) of the community, and of this marriage was born David. David received the traditional Hebrew education and the customary counting house apprenticeship, married Hannah, daughter of Abdullah Joseph, at an early age, and had by her two sons and two daughters. She died, and he was wedded to Farha, daughter of Farraj Hyeem of Baghdad, who in time bore him six sons and two daughters. In 1829 David Sassoon, already a leader of the community, was forced to flee his native city, where the then ruling pasha was no friend of the Jews. For several years the Sassoons lived in Bushire, on the Persian Gulf. In 1833 they moved to Bombay, the strategic gateway to the trade of India and the Far East.

Sassoon set up his business at 9 Tamarind Lane, exporting English textiles to Persia and Mesopotamia and importing in return native products which he then sold to British traders. Soon, however, his trade had spread into Central Asia and, marking the rise of his great fortune, into the cities of China, to which country he sent his sons to exploit the rich new veins of commerce. In brief time David Sassoon and Company had a monopoly of trade in Indian yarn, in Lancashire cotton goods, and in opium, the last being then considered officially unexceptionable. The network of business spread also to Japan. At his death Sassoon's

David Sassoon (seated) with three of his sons: (left to right) Elias, Abdullah and Sassoon

fortune was estimated to be about five million pounds.

In his adopted Bombay Sassoon was a leading citizen. Tall and impressively handsome, he was seen always in Oriental costume. He was accomplished in several Oriental languages, but never learned to speak English, and when, in 1853, he became a British subject, he signed the oath in Hebrew. Sassoon was the great patriarch of Eastern Jewry. He restored the traditional shrine of the prophet Ezekiel in Mesopotamia. Throughout his life he adhered to strict Orthodoxy in all matters. Of his fortune, in accordance with Biblical injunction, he gave at least a tithe to charity. His charity was, too, intricately interwoven with business. He employed only Jews in his business, and wherever he sent them he built synagogues and schools for them. He imported whole families of fellow Jews from Baghdad, put them to work, educated their children, and in turn put these to work.

Under his benefactions the community of Bombay flourished. He built the Maghen David synagogue (1861), and numerous other communal institutions. He was the recognized judge of all disputes among Bombay Jews. For the city as a whole he established the Sassoon Reformatory and Industrial Institution for Juvenile Offenders, and in his will provided for the Mechanics' Institute, an educational center. He donated an illuminated clock-tower to the Victoria and Albert Museum. At Poona he established the General Hospital (completed in 1867) and the Sassoon Infirmary and Leper Asylum. And at his death he was buried in the mausoleum in the courtyard of the synagogue which he had built at Poona. A public statue was erected to him in the Mechanics' Institute.

ABDULLAH (later ALBERT) SASSOON (b. Baghdad, 1817; d. Brighton, England, 1897), the eldest son of David Sassoon, inherited his father's business talents, and the management of the business, which he significantly extended from trade into industry by opening one of the first great textile mills in Bombay. That city, becoming a manufacturing center, now underwent a profound economic development, as did the whole East, decisively affected by the completion of the Suez Canal (1869). The Sassoon firm branched out not only into manufacture, but also into insurance and banking. Albert Sassoon took over a collapsed port development scheme, and turned the land involved into a gigantic cooperative farming venture, which fed much of the populace of Western India. The firm rose to its peak of development.

Like his father, Albert Sassoon was devoted to Bombay, where he served in the legislative council from 1867 to 1871. At Bombay he built the first wet dock on the west Indian coast, and thus gave the initiative to Bombay's becoming a modern port city. He erected the splendid building of the firm, then the finest in the city, and to the Elphinstone High School he gave a new building. Continuing the tradition of his father's interests, he donated a school to the Alliance Israélite Universelle in Baghdad. In Bombay he was a great social figure and entertained British royalty. But after 1872 he abandoned the Orient, and settled in London, where in 1873 he was honored with the freedom of the city. From that time on the firm had its center in England.

In London and Brighton Sassoon moved in the circle of the society of the Prince of Wales, later Edward VII. The triumph of his social career was his reception tendered in London to the Shah of Persia (1889); he had already received the order of the Lion and the Sun from that ruler. In 1890 Sassoon, who had been knighted in 1872 as a Knight Companion of the Order of the Star of India, was created first Baronet of Kensington Gore. He died at Brighton and was there buried in a private mausoleum, from which subsequently, however, his remains were removed. In 1940 the Brighton tomb of Albert Sassoon was put into service as an air raid shelter.

It was not Albert, however, but Reuben, the fourth son, and Arthur, the fifth, who became the star representatives of the Sassoons in high British society. It was the period of the first flush of power of the industrial bourgeoisie, and the democratic tastes of the heir to the British throne and society's leader, Prince Albert Edward, found the rich, and in their own Oriental way, aristocratic Sassoons entirely acceptable. REUBEN SASSOON (b. Bombay, 1835; d. England, 1905) had gone to England in 1867 and established himself in a house at 1 Belgrave Square, where, to begin with, he worshipped regularly in his private synagogue, following the Oriental custom of his family. But his connection with Judaism, as with the family business, was soon reduced to the formal, and his chief preoccupation became his intimacy with the prince, whose luxurious tastes he shared, and who found Reuben's well-stored mind instructive and entertaining. They were constant companions, in London, at Brighton, or on the Continent, particularly just before the Prince's accession.

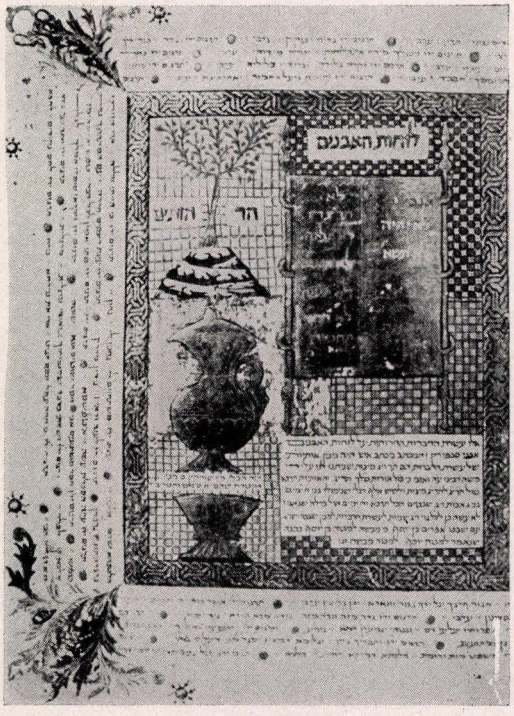
ARTHUR SASSOON (originally Abraham; b. Bombay, 1840; d. Leighton Buzzard, Bedfordshire, England, 1912) was the first of the clan to go to Europe, when in 1855 he was sent to England to be educated under Hermann Adler, son and later successor of the chief rabbi. Back in the Orient again, he served his commercial apprenticeship, then returned to England for good. In 1873 he married Eugenie Louise Perugia, daughter of an old Italian Jewish family. Her younger sister, Maria, married Leopold de Rothschild of England. The women became leading London hostesses, particularly Arthur's wife, and the two couples were in the prince's innermost circle. To the outside world Arthur was the best-known of all the brothers. Both Arthur and Reuben were designated members of the Royal Victorian Order in the coronation honors list. Arthur's friendship with the prince grew even closer after the latter's accession; the king often relaxed in Arthur Sassoon's London home or Brighton residence or at Tulchan Lodge, the Sassoon hunting cottage. Arthur had no children; and Reuben's only son died childless. In 1942 Eugenie Louise Sassoon was still living in England.

Active in neither society nor in the business was AARON SASSOON (b. Bombay, 1841; d. England, 1907), one of a set of twins, sixth and seventh of David's sons, who led an obscurely private existence, and who, when he died unmarried, left almost his entire fortune to be distributed to the poor—wherever, at that time, David Sassoon and Company were carrying on their business. The youngest son, FREDERICK SASSOON, originally Farraj Hayim (b. Bombay, 1853; d. Lon-

don, 1917), had been initiated into the business in China, where he was for several years a member of the Hong Kong Legislative Council. He married Jeanette Raphael, daughter of an old Anglo-Jewish banking family. From 1912 to his death five years later he was chairman of the firm. The Sassoon line became extinct here, too, when Frederick's only son died childless.

Faithfully remaining in the Orient was the twin of Aaron, SOLOMON SASSOON (b. Bombay, 1841; d. Bombay, 1894). Next to Albert the most capable of all the brothers in David Sassoon and Company, Solomon had at an early age been sent to Shanghai and Hong Kong, where he was put in sole charge of the business and where he became a leader in the Jewish community. He returned to India, and was there in control of the business from 1877 until his death. Like his father and his eldest brother, he was an important personage in Bombay. He served as director of the Bank of Bombay, as a leader in the Chamber of Commerce, as a trustee of the Bombay Port, and was twice nominated additional member of the Legislative Assembly. Like his father, too, he remained devoted to things Jewish. He was active in the Anglo-Jewish Association, and held services in the private synagogue of his sumptuous home. He was also a Hebraist and a student of Talmud.

More renowned as a Hebrew scholar was his wife, Flora (originally Farha). FLORA SASSOON (b. Bombay, 1859; d. London, 1936) was herself a great-granddaughter of the original David Sassoon, being the daughter of a daughter of Albert Sassoon; her father was Ezekiel Gubbay of Baghdad. On her husband's death she took over the management of the firm in Bombay, and carried on for ten years, steering its fortunes through the critical times of the 1890's. Then in 1901 David Sassoon and Company was incorporated, and Flora Sassoon went to settle in London. There she became a social leader of a different order from that of the Sassoons around British royalty. In her West End house she entertained public men, and scholars, rich and poor, in the grand salon style. At her table Kiddush was said, and Jew and non-Jew alike wore the Yarmelke. She was a master of several languages,



Flora Sassoon

including Hebrew, and a student of the Talmud and Talmudic literature.

She presided once at Prize Day of the Jews' College in London, and delivered a learned Talmudic discourse. An essay of hers on Rashi appeared in the *Jewish Forum* (October, 1930). In her own practice of Judaism she was strictly Orthodox. When traveling, she took with her a retinue to include a Minyan and a Shohet. Several times she visited Palestine and was escorted into Jerusalem by the Rabbinical Assembly. In London she was an active member of the Sephardic community. She put her grandson to school in the Yeshiva in the heart of the London Jewish quarter. She helped found the London Jewish Hospital.

David Solomon Sassoon (b. Bombay, 1880; d. London, 1942), Flora's son, carried on his mother's interest in Jewish life and Hebrew scholarship. He was said to know more about the history of the Jews of the Orient than any other living person. The catalogue *Ohel David* (2 vols., 1932) lists his collection of over 1,000 Hebrew and Samaritan manuscripts, accounted one of the most valuable in the world, and including among its rare items the Farhi Bible, written in Provence in the 14th cent. Among the monographs on history and literature which he himself wrote was the literary treatise *Meat Debash* (A Little Honey; 1928).

However, among the original eight brothers, the most literary and enthusiastic Hebrew scholar was the third eldest, Sassoon David Sassoon (b. Bombay, 1832; d. London, 1867). He was the first to settle in England, although Arthur had preceded him into the country as a schoolboy. He was sent to Baghdad in his boyhood and given a traditional education. Like Solomon, he also married a Flora (Farha), daughter of Solomon Reuben of Baghdad. He served his apprenticeship in Shanghai, and in 1858 was sent to England, where before long he had become a well-known figure in London business circles and had made known to the English the potent Oriental house of David Sassoon and Company. He considerably advanced the Sassoon interests in England during the American Civil War, when the cotton market was revolutionized in the blockade established by the North against the South.

Sassoon took a keen interest in London Jewish life. He served as warden of his synagogue, and was a member of the council of the Jews' College. He was also examiner in Hebrew at the Jews' Free School. He was at one time interested in an expedition to investigate the Jews of the Far Eastern countries. In his house in Regent's Park he had a noteworthy collection of Jewish items of art and literature. Finally, Sassoon chose to live in the country, and bought the historic estate of Ashley Park, near Walton on Thames, which he enjoyed only for a short while before his untimely death. His widow built the public hall in Walton (1879).

Joseph Sassoon (b. Bombay, 1855; d. 1918), eldest son of Sassoon David Sassoon, married a daughter of Baron Horace de Günzburg of St. Petersburg. Of his five sons, four went into the army. When his eldest son, Sassoon Joseph Sassoon, a captain in the Inniskilling Dragoons, died (1922), Ashley Park was sold.

Although Sassoon David Sassoon, before he was twenty, had issued at Bombay the earliest numbers of the first Jewish periodical to be published in India, it was his daughter who extended the Sassoon energies into journalism. Rachel (Richa) Sassoon Beer (b. Bombay, 1858; d. 1927) was brought to England as an infant. Her independence of character first manifested itself when she chose to work for two years as an unpaid hospital nurse. In 1887 she married the wealthy and ailing Frederick Arthur Beer. Soon she became the editor of his paper, the *Sunday Observer,* and in 1893 she bought its rival, the *Sunday Times.* She then performed the remarkable feat of editing both papers, as rivals. She changed the nature of the *Times,* which she controlled until 1904, from an independent liberal organ to a non-partisan "objective" press. Altogether, though her publishing ventures were accounted rather a brilliant personal display than the most serious of engagements, she made a unique reputation as a woman in journalism. It remained for a nephew of hers to win a place in the highest ranks of English letters.

The younger brother of Rachel and second son of Sassoon David Sassoon was Alfred Ezra Sassoon (b. England, 1861; d. England, 1895). He led an unconventional life as a young man, and was the first of the Sassoons to wed outside of the Jewish faith. In 1884 he was married to Theresa Georgina Thornycroft, daughter of a family of artists. Her father was the sculptor Thomas Thornycroft. Of this marriage, which proved to be a very unhappy one, three sons were born.

One was Siegfried Sassoon (b. England, 1886). He failed to receive a degree at Cambridge and concentrated on the writing of poetry. His first volumes, issued not under his name, gained favorable critical attention. Then came the first World War, in which he enlisted. Before a year was up he was given a commission in the Royal Welsh Fusiliers; he also won the Military Cross. But his reaction against the war was violent, and he began to embody his hatred for it in a series of poems. The volume *The Old Huntsman* (1917) contained some of these. In 1918 appeared

The Sassoon family mausoleum at Brighton, England

(Above) Sybil Sassoon, (left) Sir Philip Sassoon, (right) Siegfried Sassoon

Counter-Attack. Finally, on sick leave (he had been wounded by a bullet through the neck), he issued a sensational public statement (July, 1917) intimating his refusal to serve further. Thereupon his poet and soldier friend, Robert Graves, countered with an explanation of Sassoon's state of mind, and the latter was sent to a home for neurasthenics. He recovered from his wound, and fought again in France and in Palestine, advancing to the rank of captain. After the armistice he appeared publicly as a pacifist. He served for a time as literary editor of the *Daily Herald,* then chose to settle in the country, where he continued to write.

He published *Picture Show* (1919); *Satirical Poems* (1926); *Lingual Exercises for Advanced Vocabularians* (1925); and *The Heart's Journey* (1927). Critics had already accorded him a permanent place in English poetry, and he was considered by many the foremost representative of the English poetry of reaction against the first World War. Then in 1928 he appeared with sensational success in a new genre: he published the prose *Memoirs of a Fox-Hunting Man,* which was acclaimed a masterpiece of English style, and a hunting classic. The book was awarded the Hawthornden Prize in 1929. In prose, also, there followed *Memoirs of An Infantry Officer* (1930), considered to be a classical account of trench life in the War. *The Old Century and Seven More Years* (1938) was autobiographical and again noteworthy for its description of the English countryside and country life. *The Weald of Youth* (1942) returned to Sassoon's formative years in the pre-War days. Other volumes were: *The Road to Ruin* (1933); *Vigils* (1935); *Rhymed Ruminations* (1939).

Also well-known to Englishmen, though in another realm of action, was Siegfried Sassoon's second cousin and contemporary, PHILIP ALBERT GUSTAVE DAVID SASSOON (b. 1888; d. London, 1939). He was the only son of EDWARD ALBERT SASSOON (b. Bombay, 1856; d. London, 1912), who was the only son of Albert Sassoon, and thus second baronet of Kensington Gore. Edward Albert Sassoon linked the House of Sassoon with the House of Rothschild when he married Aline Caroline de Rothschild, daughter of Baron Gustave de Rothschild of Paris, in 1887, in a ceremony performed by the chief rabbi of France. Aline Sassoon established herself and her husband in a mansion in Park Lane, taken over from Barney Barnato, and thither the social, political and artistic great of London came, among them H. G. Wells, Winston Churchill, Arthur James Balfour and John Singer Sargent.

Edward Albert Sassoon was a partner in the firm and for a time its chairman, but he was the first Sassoon to choose politics as his chief field. In 1899, a member, like numerous other wealthy Jews, of the Unionist party, he was elected to Parliament from the Hythe Division of Kent, and held the seat until his death. He interested himself chiefly in the improvement of telegraphic communications between India and England, and introduced a bill to make wireless equipment mandatory on ocean-going vessels. His work in this connection came to fruition much later. Aline and Edward Albert Sassoon both died comparatively young, and left their two children, Philip and Sybil.

PHILIP SASSOON, third baronet of Kensington Gore, was first elected to Parliament from Hythe in 1912, and was for years the youngest member in the House of Commons. Like his father, he continued to be a member until his death. He became a major in the East Kent Yeomanry in the first World War and was appointed military secretary to Commander-in-Chief Douglas Haig, who three times cited him in despatches. It was Sassoon who initiated and carried out the plan of sending artists to the front to record their impressions of the fighting. Most notable of these painters was John Singer Sargent, friend and portrait painter of the family. Philip Sassoon was decorated by several governments for his war service. Although privately he expressed horror of all that the war involved, he publicly repudiated his relationship with Siegfried Sassoon, because of the latter's anti-war sentiments.

After the armistice, Philip Sassoon was elected to the House of Commons as a Coalition Unionist candidate, and served as parliamentary private secretary to the Minister of Transportation (1919). He then served Prime Minister David Lloyd George in the same capacity. His famed Port Lympne country house was the scene of numerous political conferences. In 1924 Sassoon was made Under-Secretary of State for Air,

and served until 1929; he was again in the post from 1931 to 1937. He became a leading propagandist for aviation, making two long journeys by plane into the East and Far East. He was credited with having helped lay the basis of a solid air force for England. In 1937 he was made First Commissioner of Public Works, a post he held until his death.

He was also a trustee of the National Gallery (1921-28), and from 1929 on of the Wallace Collection, Tate Gallery and British School at Rome. Sassoon, without making any money, came by inheritance to have double the wealth of his father, and was often designated "the richest bachelor in England," famous for his great houses with their treasures of art, and for the munificence of his entertainments. Among his intimate friends were T. E. Lawrence and King Edward VIII. He had only slight and formal Jewish affiliations.

SYBIL SASSOON (b. 1894) came to be regarded by some as England's most beautiful society woman. She was often painted by Sargent. She married George Horatio Charles Cholmondeley, Earl of Rocksavage, who, succeeding his father in 1938, became the fifth Marquess of Cholmondeley. The baronetcy dates from 1611. Two sons and one daughter were born of this marriage.

Sir Victor Sassoon

Out of the original Sassoon clan of eight sons, the second eldest, ELIAS SASSOON (b. Baghdad, 1820; d. Colombo, Ceylon, 1880), chose to seek his fortune outside of the family firm. When, at the age of twenty-four, he was sent to China to supervise and develop the Sassoon business there, he proved a capable manager. He was supposed to have advised his father in the India cotton boom of the 1860's, so that the firm steered clear of the general collapse afterwards. But on his father's death, forced to play second to Abdullah (Albert), he organized, with his son Jacob as partner, the rival firm of Messrs. E. D. Sassoon and Company (1867). Subsequently E. D. Sassoon and Company, carrying its business into the Orient, Europe, Africa, and America, outstripped the original firm; the two houses remained separate and rivals. Like his father, Elias employed large numbers of Jews in his gigantic concern, and in whatever remote places he sent them, he established Jewish institutions for their use. On his death the business passed into the hands of his sons Jacob, Edward, Meyer and David.

JACOB ELIAS SASSOON (b. Bombay, 1844; d. 1916), the eldest son of Elias Sassoon, was the brilliant head of the firm. He extended the business farther, and established branches in Manchester and London, where he himself directed affairs in the 1880's. But he returned to Bombay, and there soon played the foremost role in the development of the cotton textile industry in western India. He bought numerous mills and established the first dye works in Bombay. The Jacob Sassoon Mill, the largest in the country, employed in its best days 15,000 hands. Jacob Sassoon originated the Eastern Bank Limited (1909), an exchange bank for Indian business with headquarters in London.

Like his grandfather, Jacob, who was created baronet in 1909, was a benefactor of Bombay. He supported the various family charities, and left numerous endowment trusts for the Baghdad Jews of Bombay. Together with his brothers he built the synagogue Keneseth Eliyahu. In the hospital compound established by David Sassoon he erected the Jacob Sassoon European General Hospital. He was one of the chief supporters of the Central Nursing Association in Bombay. Also, he opened a free school at Bombay for Jewish boys and girls, and he founded there the Central College of Science. Failing sight kept him in the Orient, but his younger brothers took the center of the business to England. In 1920 E. D. Sassoon and Company became a private limited corporation.

It was left for the son of Jacob's younger brother Meyer, REGINALD ELLICE SASSOON (b. 1893; d. London, 1933), whose mother, Mozelle Gubbay, was a granddaughter of Sir Albert Sassoon, to win renown in a field remarkably remote from the family's original interests and achievements. He became director of two of the E. D. Sassoon companies and of Arnhold and Company, a subsidiary through which much of the business was done. In the first World War he was a captain in the Irish Guards, and won the Military Cross. Afterwards he went back to business, and spent much of his time in India and China. But he had become interested in racing, and he purchased a string of horses and began himself to ride in the races under National Hunt rules. He became a popular and skilful rider, and was elected to the National Hunt Committee. His ambitious objective was to ride in the Grand National. But in 1933, in a steeplechase at Lingfield, he fell from his horse and died of the injuries he sustained. A race was instituted in his memory.

Reginald Sassoon's sister, VIOLET LEAH SASSOON, married Derek Barrington Fitzgerald, a younger son of Irish nobility, who then became head of various E. D. Sassoon interests in England.

In 1943 the only remaining big business man of the Sassoon house was (ELLICE) VICTOR SASSOON (b. Naples, Italy, 1881), whose father, SIR EDWARD ELIAS SASSOON (d. 1924), had inherited the baronetcy from his older brother Jacob Sassoon. Victor Sassoon became third baronet in 1924, and chairman of the family firms. Like Philip Sassoon, he was an air enthusiast, served in the first World War, and rose to captain in the Royal Air Force. Like his great-grandfather, he became an important figure in Indian industry, and head of British Indian Jewry. He was in the Indian Legislative Assembly (1922-23 and 1926-29) and a member of the Royal Commission for Investigation of Labor Conditions in India (1929). But conditions in India caused a contracting of the business there, and in 1930 he established the E. D. Sassoon Banking Company, Limited, which he registered at Hong Kong.

This banking business became his chief interest then. He removed from India to China, and became identified with the latter country. He was known as "the man who made modern Shanghai." In 1935 a new company, the Arnhold Trading Company Limited, was formed at Shanghai to take over the Oriental produce business of E. D. Sassoon and Company, and in this new concern the Sassoons retained only a minority holding.

Victor Sassoon interested himself in the Jewish refugee problem created by the Nazi domination of Europe. He made an outstanding contribution to British national defense in the second World War.

By the end of 1941, with the complete occupation of Shanghai by the Japanese, Sir Victor Sassoon was forced to relinquish his headquarters in that city. In 1943 Victor Sassoon, unmarried, had no heir to succeed him.

SASULY, MAX, statistician, b. Satanów, Austria, 1888. He was brought to the United States in 1899. The University of Chicago, in 1912, conferred upon him the B.S. degree, and the M.S. degree in the following year. From 1914 to 1924 he served on the scientific staff of the United States Bureau of Standards, being assistant physicist from 1917 on and associate physicist from 1921 on. Subsequently he served as director of statistical research in the Irving Fisher Index Institute, and from 1929 to 1932 he was with the Institute of Economics, Brookings Institution. In the National Recovery Administration he served as senior statistician of the Division of Research and Planning (1933-36). From 1937 on he was statistician of the Social Security Board, a position which he still held in 1943.

Sasuly, a fellow of the American Association for the Advancement of Science, published *Trend Analysis of Statistics* (1934) and *Analysis of the President's Re-Employment Agreement Census* (1936).

SATAN, the name of the arch-evil spirit in Jewish and Christian tradition and legend, especially identified in Christian literature and early theology with the Devil. Actually Satan first appears as a distinct, individualized evil spirit only in late Biblical writings. Manifestly this concept resulted from the reaction of Persian dualism upon popular Jewish thought and theology. About 540 B.C.E., Deutero-Isaiah had affirmed (*Isa.* 45:6-7) that there is only one God and none other, and that He alone is the creator of both light and darkness, of evil as well as good. This affirmation was obviously designed to refute the Zoroastrian, dualistic doctrine of two gods, one of good and the other of evil, each independent of and hostile to each other, and each seeking to undo and destroy the other's work, and intended to forestall the spread of this somewhat attractive doctrine in Jewish circles. Nevertheless, popular Jewish thought in Palestine about a generation after Deutero-Isaiah began to accept the doctrine in somewhat modified form conceived to be not inconsistent with basic Jewish monotheism. The figure of a power of evil was evolved, actually the antithesis to and opponent of God. In this manner popular Jewish fancy imagined that it could solve readily some of the most crucial and perplexing problems of human existence. This figure was Satan.

In the Bible the verb *satan* is used, although by no means frequently, in the meaning "to oppose, to hinder" (*Zech.* 3:1; *Ps.* 38:21; 71:13; 109:4, 20, 29), while in the Biblical literature of the pre-Exilic period the noun *satan* occurs occasionally with the connotation "an opponent, an adversary" (*Num.* 22:22, 32; *I Sam.* 29:4; *II Sam.* 19:23). In the Biblical literature of the post-Exilic period it continues to be used, although rather infrequently, in the same general meaning (*I Kings* 5:18; 11:14, 23, 25). In all these passages the word signifies "an adversary" in the ordinary, conventional meaning of the term. In fact, with the exception of *Num.* 22:22, 32, where the angel who is sent by God to impede Balaam's progress is called his *satan,* his "opponent" or "hinderer," the word in every case designates a purely human, personal enemy or adversary and in no way whatever implies anything of the divine or demonic.

In only three Biblical passages, all coming from the post-Exilic period, does Satan appear as a concrete, individualized, demonic figure. In the earliest of these, *Zech.* 3:1-2, Satan functions as the adversary and accuser of the high priest, Joshua, bringing charges against him before the court of God, sitting in judgment, as was customary, on the New Year's Day. By his accusations Satan obviously seeks to disqualify Joshua from functioning as high priest, and in particular from discharging the important duty of entering into the holy of holies, into the very presence of God, the rite climaxing the celebration of this great day. In this particular case Satan's charges are apparently found unsubstantiated, and he is rebuked by God. This passage is significant, not only because it is the earliest instance of the appearance of Satan as an individualized, demonic personality, but also because it demonstrates clearly what were undoubtedly the primary and most persistent character and function of Satan, i.e. as the uncompromising enemy of man and his accuser before the judgment seat of God. This is apparent not only from this passage, but also from *Ps.* 109:6, where *satan* means, not the demon himself, but only the malicious and false accuser of the innocent, righteous man, and from *Ezra* 4:6, where the feminine noun *sitnah* means "an accusation," and particularly a false, malicious accusation (see also *Gen.* 26:21), and likewise from the role which Satan plays in the literature and folk-lore of the rabbinic period under the well-known name Satan Mekatreg, "Satan, the Accuser."

In the Biblical passage next in chronological order in which the figure of Satan appears, *Job* 1 and 2, a marked development may be noted. Here, represented seemingly as one of the "sons of God" (see *Gen.* 6:4), and therefore possessed of a superhuman divine or semi-divine nature, Satan is still the accuser of man before the divine court; but he is also far more than this. He is man's implacable enemy. He wanders constantly about the earth, noting the evil deeds of men so that at the proper time he may report them to the Deity and have punishment visited upon the sinners. He is cynically suspicious of man and his motives, and credits him with no good whatever. Man is righteous, so Satan claims, only because and so long as it is to his advantage to be so, in order that he may thus gain divine favor. But man's innermost nature is evil (see *Gen.* 8:21), and when the advantage of the reward of righteousness disappears, his true, evil nature reasserts itself. Accordingly, a fundamental part of Satan's characteristic activity is now to bring out man's true, evil nature by persuading him to disregard the utilitarian

advantage of righteousness, to be himself, in other words, and therefore to sin.

Accordingly, Satan has become here something more than the mere hostile and malicious accuser of man before God; he is now the persuader of man to sin, the evil, sin-producing force in the world. He is still subordinate to God, and by no means completely independent of or openly hostile to Him. Nevertheless, he does persuade God to mistrust Job, or at least to consent to put his righteousness to the test, and to permit him to bring misfortune and personal suffering upon Job. In a sense, therefore, the Satan of *Job* has become semi-independent of God, a true, creative power and source of evil in the world and the inveterate, malicious enemy of man. This concept approximates Persian dualism as nearly as the basic monotheism of Judaism would permit.

In *I Chron.* 21:1, coming from the beginning of the 3rd cent. B.C.E., the latest Biblical passage in which the figure of Satan appears, he plays the role which in the parallel and much older record in *II Sam.* 24 is played by God Himself. That passage, itself representing a modification of a still older belief or superstition, tells that God, angered at and desiring to punish Israel, Himself persuaded David to violate the old superstition, and take the census of the people. Thus, so the chapter implies, God created for Himself a favorable excuse and opportunity to send the pestilence, the work of the evil spirit, the *mashhith,* against Israel.

In the version of the same narrative in *I Chron.* 21:1 it is Satan, acting, so it seems, quite independently of God and altogether as a malicious spirit, hostile to Israel, who persuaded David to take the census and thus compelled God to send the pestilence against the people. This modification of the older version of the narrative is significant of this new development of the Persian period, and illustrates how completely Satan is in the way of becoming an all-powerful evil spirit, completely independent of God, and even hostile to Him, the frustrator of God's purposes of good for man, therefore the eternal and inveterate enemy of man as well as of God and the source of all evil and misery in the world. In this capacity he is the absolute antithesis of God Himself, the source of all good.

Yet the monotheistic principle, eternally basic in Judaism, prevented it from going to the full length of Zoroastrian dualism, and making Satan the equal and constant rival of God. It contented itself with representing Satan as the chief of the evil spirits, whose number grew steadily in popular superstition, until it literally became legion (see *Mark* 5:9, 15; *Luke* 8:30). All the gods of foreign nations now came to be conceived of as evil, supernatural powers, demons in other words, and uniformly hostile to Israel (see *Dan.* 10:13, 20). Various diseases were conceived of as evil spirits, messengers of God's wrath (*Ps.* 78:49; 91:3-7; *Prov.* 17:11), and even as angels or messengers who bring death (*Prov.* 16:14). But Satan was the supreme head of the hosts of evil spirits. And so he continued in rabbinic literature and theology as well as in the New Testament and subsequent Christian tradition. And, going beyond Jewish doctrine, in accordance with its basic theology, Christianity has even identified the serpent in the Garden of Eden story (*Gen.* 3:1-15), the most cunning of all the creatures which God had made, who persuaded the woman to disobey the divine command, with Satan.

SATANOW, ISAAC, Hebrew writer and scholar, b. Satanów, Podolia, Poland, 1733; d. Berlin, 1804. He moved at the age of forty to Berlin, where his father-in-law, the writer and religious reformer, David Friedländer, and the banker Isaac Daniel Itzig, elder of the Berlin Jewish community, aided him to procure a livelihood as a teacher of Hebrew. He became acquainted with Moses Mendelssohn, and was a member of the Meassef group. Many-sided and brilliant though he was, he had a queer, rather unbalanced mind which impaired the value of his activities. He combined in his person the features of a thorough Talmudic scholar and the outlook of a freethinker, was dressed like a typical Polish Jew, yet imbued with the spirit of Berlin Aufklärung; he was an outstanding philosopher, physicist and poet, yet he took refuge in literary forgeries. Not only did he pass his own works off as pseudoepigraphic, but he even frequently changed the texts of the classical works which he edited. Despite these shortcomings, he occupied an important place in Hebrew literature insofar as, in the words of Franz Delitzsch, he represented the transition from the medieval to the modern school of Hebrew style.

The contrasts in his nature were reflected perfectly in his paradoxical book of proverbs, *Mishle Asaf* (Berlin, 1781-92), a brilliant work which is such an exquisite imitation of the Biblical style that it was condemned by some critics as a plagiarism.

His other works were: *Sifethe Renanoth* (Berlin, 1773), a brief Hebrew grammar; *Sefer Hahizzayon* (Berlin, 1775), which treats of a variety of subjects, such as philosophy, gnomonology, science and demonology; *Vayetar Yitzhak* (Berlin, 1785), a prayer-book, with emendations and comments; commentaries to his editions of Maimonides' *Moreh Nebuchim* (Berlin, 1791-96) and Judah Halevi's *Kuzari* (Berlin, 1794), and on Aristotle's *Ethics* (Berlin, 1790-91).

SATANOWER, MENDEL, *see* LEVIN, MENDEL.

SATENSTEIN, LOUIS, bookbinding executive, b. Kovno, Lithuania, 1874. He was educated at Paine's Business School, New York city. In 1899 he organized The American Book Bindery, Inc., which became the largest printing plant in America of its time. He printed the American editions of H. G. Wells' *Outline of History* and the works of Vicente Blasco Ibañez. Satenstein was also president of Strathford Press, Kings Varick Corporation, and other book publishing organizations. He was chairman of the New York Employing Binders Association. Satenstein was active in communal welfare work, being president of the Jewish Maternity Hospital and vice-president of Beth Israel Hospital.

SATIRE. The Bible makes frequent use of satirical depiction (as in the parable of Jotham, *Judges* 9), in order to present a view of both the good and the bad side of human character. Many passages in the Bible are keenly satirical, such as: "If he be a god, let him contend for himself" (*Judges* 6:31) or Samson's: "If ye had not plowed with my heifer, ye had not found out my riddle" (*ibid.* 14:18). The prophets frequently make use of sharp ridicule in their outbursts against the sins of the people, in particular against idolatry; thus Elijah mocks the prophets of Baal for their failure to awaken their god (*I Kings* 18:27), and Deutero-Isaiah scornfully depicts the making of idols (*Isa.* 44). There are numerous satirical passages in *Isaiah, Jeremiah* and *Psalms.* Other objects of satirical attack are corruption in family life (*Amos* 4 and 6) and the luxurious life of the women (*Isa.* 3:16-26; *Prov.* 7). Political satires include the fable of Jotham, mentioned

above, *Isa.* 14 on Nebuchadrezzar, *Ezek.* 34 against the leaders of the people, *Jer.* 23 against the false prophets, and *Isa.* 8 against the wizards and necromancers.

The Talmud and Midrash also contain many satiric expressions of a political nature, generally directed against the Roman government. An example of them is the fable which Akiba told of the fox who advised the fishes to leave the water (*Ber.* 61b); it is probable that other satiric passages in the Talmud were deleted by later censors. The poetry of the Spanish and Provençal period contains numerous satiric sayings and poems, such as the satiric wine song of Solomon ibn Gabirol and the satires of Abraham ibn Ezra, Joseph ibn Zabarra, Judah ibn Sabbatai and Judah Bedaresi. The Makamas of Judah al-Harizi have an abundance of wit and humor.

Satires and pointed epigrams played a great role in the dispute about the writings of Maimonides. Sheshet ben Isaac Benveniste sent his pointed arrows against Abulafia; other satirists of the period were Sheshet ben Isaac Hanasi of Barcelona, Judah ibn Alfakar, Meir Abulafia, and various anonymous authors of derisive poems. The poem *Eben Bohan* (Touchstone) of Kalonymus ben Kalonymus is a poetical satire of a complete nature. Still more outstanding was the latter's contemporary, Immanuel ben Solomon of Rome, whose extravagances and distortions made his satires almost caricatures.

During the time of the persecutions in Spain (end of the 15th cent.) Jews made use of the satire in order to make veiled attacks on Christianity. The most striking of these is the letter written by Profiat Duran (Isaac ben Moses Halevi) under the title of *Al Tehi Kaabothecha* (Be Not Like Your Fathers); the true purpose of this epistle was so well conceived that Christians mistook it for an argument in favor of Christianity, and even quoted it under the title of *Alteca Boteca.* Solomon Alami's *Iggereth Musar* (Letter of Instruction) satirizes the morals of his time. The German Minnesinger Süsskind of Trimberg wrote many satirical verses. Wandering preachers such as Solomon Ephraim Lunschitz (d. 1619) and Zebi Hirsch Woydyslaw (1796) made use of satire in their sermons.

In the modern period satire was a favorite weapon of the Maskilim in their attacks on religious prejudice. Isaac Erter assailed superstition and Hasidism in his *Hatzofeh Lebeth Yisrael* (Watchman Over the House of Israel), as did Joseph Perl in his *Megalleh Temirin* (1839). The writings of Sholom Aleichem, Mendele Mocher Seforim and Israel Zangwill are full of satiric touches. Topical satire also played an important part in the addresses of the wandering preachers, especially of the Dubner Maggid, Jacob ben Wolf Kranz.

ALEXANDER KRISTIANPOLLER.

SÁTORALJAUJHELY, city in Zemplén county, Hungary, with 4,700 Jewish inhabitants in a total population of 18,500. The Hebrah Kaddisha of Sátoraljaujhely was founded in 1771, at which time the community also had a bath, a small hospital and a hostelry. Jews are believed to have lived there early in the 18th cent. as army suppliers, farmers, and even as combatants in the troops of Ferenc Rákóczi.

Sátoraljaujhely is near the Galician border, and the influence of that country is marked. Hasidism, introduced by Rabbi Moses Teitelbaum (1808-40), and rabbinical Orthodoxy, inspired by Rabbis Jeremiah Löw (d. 1874) and Eleazar Löw (1874-87), coexisted in 1943 with a large status quo community, all of which groups had in common the upholding of Jewish tradition. The Orthodox community, founded in 1886 through secession, established a synagogue, school, Talmud Torah and (1922) a Yeshiva; the Hasidic (Sephardic) group, led by the descendants of the Zaddik Moses Teitelbaum, centered around the prayer house founded by the latter. The status quo community had two synagogues and a hospital, founded in 1904. Its outstanding institution was a school, which was founded in 1838 through a legacy of 100,000 gulden left by one Márton Kesztenbaum, who started out as an agricultural laborer.

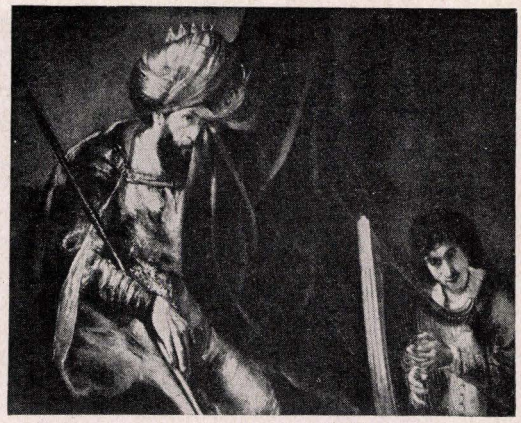
For some time the Kesztenbaum school included a junior high school and was a model school; Michael Heilprin taught there before coming to the United States. The school, which was still functioning in 1938, gave Hungarian Jewry many pedagogues of note. Among the members of the Jewish community, Vilmos Schwarz, a friend of Louis Kossuth and a soldier under his flag, was made honorary citizen, and Salamon Reichard mayor, of Sátoraljaujhely.

In 1919 a part of Sátoraljaujhely was incorporated into the Czechoslovak Republic. This circumstance, as well as the fact that some of the Jews of Sátoraljaujhely or their fathers had come there from Galicia, led to much confusion in the question of citizenship and to the expulsion from Hungary, after 1939, of the families concerned. In the late 1930's Sámuel Roth (status quo), Bernát Klein (Orthodox) and David Meisels (Hasidic) were the principal spiritual leaders of the Jews of Sátoraljaujhely. All groups cooperated in helping the poor Jews of the rural districts who were gravely affected by anti-Jewish legislation (1939-42).

SATYRS, *see* ANIMALS, FABULOUS.

SATZ, LUDWIG, actor, b. Lemberg (Lwów), Poland, 1891. At the age of five he made his first stage appearance, and two years later he sang in the chorus of the operas and operettas produced at the municipal theatre in his native city.

In 1910 Satz joined a traveling troupe in Przemysl, appearing in Jacob Gordin's *Gott, Mensh un Teivel.* At this time his predilection for comedy, in which he was later to win his reputation, manifested itself, and in 1911 he was the leading comedian in the Yiddish theatre company in Lemberg. Part of a season in Budapest and two years (1912-13) in London followed, then he returned to Lemberg. But the outbreak of the first World War sent him to the United States, where his first affiliation with the theatre was as publicity man and business manager of the Yiddish group playing in the roof garden of the National Theatre on Second Avenue.



Later on he returned to acting, mainly as comedian, and appeared with Jacob P. Adler (1917-18) and at the Irving Place Theatre (1918-19) with Maurice Schwartz, Celia Adler and other founders of the Yiddish Art Theatre. As the vitality of the American Yiddish theatre began to wane, in the 1930's, Satz toured more throughout the United States, other American countries, and Europe. His cultured and profound creation of characters in plays by Peretz Hirschbein, Sholom Aleichem and other classical writers of the Yiddish theatre made Satz one of the most important figures in its heyday on the American scene. In 1926 Satz appeared for a short time in English plays, as Abe Potash in *Potash and Perlmutter.* He also directed some of the plays produced by the companies with which he was affiliated, made numerous phonograph records, and was author of the lyrics for several Yiddish musical comedies.

Lit.: Zilberzwaig, Zalmen, *Lexikon fun Yiddishen Teater* (1931), cols. 753-56.

SAUDEK, ROBERT, physiologist and graphologist, b. Kolin, Bohemia, 1880; d. London, 1935. His most important works, *Wissenschaftliche Graphologie* (1925) and *Experimentelle Graphologie* (1928), were translated into many European languages. Saudek wrote

Saul listening to David. From a painting by Ernest Normand

David playing the harp for Saul. From a painting by Rembrandt Harmensz van Rijn

also a number of plays, which became popular in Germany and were produced also in Holland, England, Belgium and Czechoslovakia.

Of his novels, some of which were translated into several languages, *Dämon Berlin* (1907) and *Diplomaten* (1921) are especially noteworthy. In English there appeared his *What Your Handwriting Shows* (1932) and *Anonymous Letters, A Study in Crime and Handwriting* (1933).

Lit.: Roback, A. A., "Dr. Robert Saudek," *Character and Personality,* vol. 3 (1935) 263-69.

SAUL, the first king of Israel, who ruled from about 1040 to 1017 B.C.E. The Biblical account of his life is given in *I Sam.* 9 to 31. This account is not uniform and is built up from an earlier source, which tends to treat the reign of Saul as an introduction to the work of David, and a later source, which modifies the part played by Samuel. A critical examination of these sources indicates that the most probable statement of his career is as follows: Saul was the son of Kish, of an ancient family of the tribe of Benjamin, living in Gibeah, and possessed of considerable property (*gibbor hayil, I Sam.* 9:1). He had reached the age of forty at the time when he was summoned to the kingship. It was a period of national humiliation, for the Philistines had routed the tribe of Ephraim, carried off the Ark of the Covenant, and imposed such terror upon the Israelites that none dared oppose them.

The death of Saul. From a drawing by Julius Schnorr

Samuel, the leading seer of the time, was seeking for a leader to revive the spirit of the nation. Meeting Saul accidentally, he was impressed by the great size and strength and the active spirit of the latter; he secretly anointed him as king over Israel. Saul joined the ecstatic bands of the prophet's followers, but made no move to assert his kingship until a plea for help came to Israel from the city of Jabesh-gilead, then besieged by the Ammonites. Saul raised an army which successfully accomplished the relief of the city, and this exploit aroused such enthusiasm that he was proclaimed king by a large part of the people. Establishing his capital at Gibeah, he prepared for war with the Philistines. The war began with an attack on the Philistine garrison at Geba; a Philistine expedition was defeated at Michmash. The war continued until near the end of Saul's reign without any decisive victory for either side; the Philistines could not drive Saul from the hills, and the Israelites dared not assail their enemies in the plain. In the meantime, Saul gradually extended his sway over the Israelites by warring against their other enemies: the Moabites, the Ammonites, the Edomites, the Arameans of Zobah and the Amalekites.

Despite these early successes, the administration of Saul did not accomplish as much as it might have, largely because of the mentality of the king himself. Temperamental by nature, alternating between bursts of energy and fits of depression, he failed to follow up his victories; his moody, suspicious temperament led him to quarrel with others and to break up the unity of his kingdom. A rift developed between Saul and Samuel; of this the Bible gives more than one version, but it was apparently a clash of authority between seer and king. Later when David, who first came to the court as a skilled musician and then became Saul's son-in-law, developed into a renowned chieftain in border warfare, Saul suspected him of treason, attempted to kill him and pursued him out of the kingdom. He angrily attacked his own son, Jonathan, for defending David, and slaughtered the priests of Nob for unwittingly aiding him. He reduced the Gibeonites, old Canaanite allies of Israel, to slavery; there is a hint of a similar act of harshness to the inhabitants of Beeroth.

The Philistines took advantage of the instability of Saul's kingdom by enlisting David on their side and invading the country from a new quarter. Avoiding the mountains, they attacked Israel through the valley of Jezreel. Saul faced them at Mount Gilboa. The story of his evoking of the shade of Samuel through

Saul is anointed king. From a painting by Raffaelo Santi in the Vatican

the witch of En-dor (*I Sam.* 28) is a dramatic representation of his despair. In the battle that followed the army of Israel was crushed, and Saul fell, either by his own hand (*I Sam.* 31:4) or by that of an Amalekite (*II Sam.* 1:9). The Philistines hung up his body in the temple of Astarte at Beth-shan, from which place it was rescued and buried by the men of Jabesh-gilead. At the end of his reign the Philistine yoke was as heavy as it had been at the beginning; yet he had made a start toward the consolidation of the nation and had paved the way for the victories of David.

Rabbinic opinion on the character of Saul varies. Some teachers praise him, others condemn him. His war against idolatry, his modesty, his tremendous endurance in war, his fearlessness and his devotion to his people are commended. The sombre side of his character is glossed over or explained away.

Saul's turbulent life offered a rare opportunity for dramatic and artistic exposition. Rembrandt, Holbein and, in modern times, Epstein, have made him their subject. A number of tragedies have been written about him, as well as some of the best verses of Byron. In music the outstanding creation has been Handel's oratorio *Saul*.

SAUL WAHL, *see* WAHL, SAUL.

SAV-LA-MAR, principal town of the parish of Westmoreland, Jamaica, British West Indies. Jews in small numbers undoubtedly settled there in the early part of the 18th cent., for in the old cemetery one notices the graves of Joseph Lopez de Silva (d. 1760), Abraham Lopez (d. 1767) and Rachel, wife of Mordecai Pelba (d. 1775). Although the historian Long, in his history of Jamaica (vol. 2, p. 224), records in 1774 that there was no synagogue here, Joseph de Silva, whose will was dated December 7, 1759, and who died on January 10, 1760, made a bequest to the Sav-La-Mar synagogue and for the enclosing of the cemetery with a brick wall.

There is a lot adjacent to the cemetery which was the property of the Jews of Westmoreland. Perhaps this was the site of the house of worship. Jews left Sav-La-Mar during the 19th cent. for Montego Bay and Kingston.

Lit.: Andrade, *A Record of the Jews of Jamaica.*

SAVAGE, LEON, lawyer, journalist and communal worker, b. Kovno, Lithuania, 1888. He was educated at Kovno, at the University of Paris and at Columbia University, the latter conferring upon him the LL.B. degree in 1923. Having arrived in the United States in 1914, Savage served on the editorial staff of the Philadelphia *Jewish World* until 1916 and as city editor of *The Jewish Day,* New York city, from 1917 to 1918. His feature articles appeared in the Philadelphia *North American* and were published also by the American Alliance of Labor and Democracy. In 1916 he edited, in collaboration with B. Charney Vladeck, *Fun Tiefenes Jun Harz* (From the Depths of My Heart), a two-volume anthology of social protest. During the Kerensky regime in Russia he was associate representative of the Russian press in the United States.

Savage gave of his time and effort to multifarious endeavors, civic, communal, social and Zionist, being particularly devoted to Americanization. A prominent citizen of Upper Manhattan and Washington Heights, New York, he was chairman of the public improvements committee, secretary and director of the Young Men's Hebrew Association, and chairman of the American Jewish Congress for that section of the city. During 1940 and 1941 he was president of the Bronx and Upper Manhattan Zionist Region. He was a member also of the National Administrative Council of the Zionist Organization of America. He founded the first association of Lithuanian Jews in New York city, and was co-founder and director of the Union of Russian Jews.

The synagogue of Congregation Mickve Israel in Savannah

SAVANNAH, a city in Georgia, which included in its total population of 95,996 (census of 1940) approximately 4,000 Jews in 1943, of whom more than three-quarters were of Eastern European origin. Savannah was the first settlement of Georgia, made in February, 1733. In the following July, Governor James Edward Oglethorpe, contravening the express prohibition of the colony's trustees, admitted into the settlement a boatload of forty Jews: a dozen indigent families, sent aboard the ship as charges of the London Jewish community; and a number of well-to-do Portuguese Jews, who, paying for their grants, immediately became landowners in the colony. The Jews justified Oglethorpe's judgment. Dr. Samuel Nuñez (Ribiero) gave vital medical aid to sick colonists. Abraham de Lyon introduced grape cultivation, and Jews started the culture of silk. Two individuals of this first contingent were Abraham Minis and Benjamin Sheftall, whose sons were later to help make Revolutionary Georgia history. Philip Minis, son of Abraham, was the first white male native of Georgia, born at Savannah on July 7, 1734.

It appears that in the very first month of their arrival the Jewish settlers organized the synagogue "Mikveh Israel" (Mickve Israel), renting a house in Market Square and using a Sefer Torah which they had brought with them from England. The congregation dissolved in 1740, when most of the Jews of Savannah, as well as a great number of non-Jews, began an exodus to more prosperous neighboring colonies. The émigrés returned, however, and in 1750 religious services were resumed, but continued to be irregular until Mordecai Sheftall offered his residence, in 1774, for regular worship. The year previous Sheftall had given a tract of land for a Jewish cemetery, which was used until 1850, when (adjacent to the Union Station) it became a historic landmark of Savannah.

Jews had continued to distinguish themselves. Joseph Ottolenghi arrived from London in 1751 to take charge of the silk industry, and was elected a member of the colonial assembly (1761-65). David Nuñes was waiter (watchman) for the port of Savannah (1765). Moses Nuñes was the port searcher (1768-74). One Lucena was a justice of the peace (1768). Jews contributed generously to the colony's library, established in 1751. Daniel and Moses Nuñes were master Masons in the lodge established by Oglethorpe himself. With the outbreak of the Revolutionary War, Savannah Jews gave further proof of their energy and talent. At this time an estimated forty Jewish families were living in Georgia, mainly in Savannah.

The outstanding Jewish patriot of the Revolution was Mordecai Sheftall, who as chairman of the town's Parochial Committee was a marked enemy of the British. He and his son Sheftall Sheftall were finally captured. Mordecai Sheftall, an original co-founder (1750) of the famous inter-faith charitable Union Society of Savannah, with others kept the society alive even while under duress by the British. Philip Minis and Levi Sheftall were named in the patriot plans for the siege of Savannah after its capture by the British in 1778. Benjamin Nones, and probably also Jacob De Leon, and Emanuel and Jacob de La Motta, participated in that engagement.

After the peace, Savannah Jews resumed their communal life, and in 1790, shortly after Savannah was itself chartered a city, Mickve Israel, third oldest congregation of the colonies, received its perpetual charter from the state legislature. It is on record that Mickve Israel was Savannah's only congregation to address a message of congratulation to George Washington on his assuming the office of president. The city of Savannah originally donated a lot to the congregation for its house of worship. In 1876 the Gothic structure on Bull Street was first erected; after being damaged by fire in 1927, it was rebuilt. In 1877 Isaac P. Mendes was called to the pulpit; he served until 1903, when he was succeeded by George Solomon, who was still the incumbent in 1943. The original Sephardic worship of the congregation was modified by a series of reforms, instituted especially as the German membership increased. In 1904 the congregation joined the Union of American Hebrew Congregations.

The Orthodox B'nai B'rith Jacob Congregation was organized in 1864 by a group of Polish Jews under the leadership of Rabbi Jacob Rosenfeld. They erected a synagogue on Montgomery Street. It was not, however, until the 1880's, with a new influx into Savannah of Jews from Eastern Europe, that the congregation became firmly established. In 1909 an impressive new house of worship was erected. Rabbis who served the congregation included Hirsch Goldberg, Charles Blumenthal (1913-16), L. M. Palitz, B. L. Rosenblum, M. Hirschsprung (1923-27), Nathan N. Rosen, Morris Max, David Shapiro and William Drazin, who was the incumbent in 1943.

The Orthodox Congregation Agudath Achim was organized in 1901, and first worshipped in a synagogue in Bryan street. The synagogue erected in Montgomery street (dedicated in 1922) was replaced by a new edifice, in 1941. In 1943 Irving A. Gordon was the incumbent rabbi.

In addition to the congregations, their schools and several auxiliaries, Savannah Jewry maintained in 1943 the local organizations Hebrah Gemiluth Hesed (chartered in 1889) and the Hebrew Women's Aid Society. Branches of national organizations were a lodge of the B'nai B'rith, an A. Z. A., Hadassah, Zionist Organization, and a section of the National Council of Jewish Women. In 1934 the Savannah United Jewish Appeal was instituted, with Rabbi Jerome Labovitz as executive secretary. The Jewish Educational Alliance was organized in 1916 and, attracting a large proportion of Savannah Jewry, became the center of communal life. Jerome Labovitz was director in 1943.

Herman Myers was mayor of Savannah (1895-97 and 1899-1907) and his administrations were distinguished for the high character of his service.

Jews active in public life in 1943 included Emanuel Lewis,

The Jewish Educational Alliance building at Savannah

judge of the municipal court (1933-) and executive in numerous organized activities of Savannah and of the Jewish community; Edmund H. Abrahams, member of an old Savannah family, chairman of the advisory commission on national parks and monuments of the department of the interior, and local representative of the American Jewish Committee; Herbert L. Kayton, former member of the city council and member (1943) of the Savannah Housing Authority; Morton H. Levy, formerly president of the South Georgia Chapter of the American Institute of Architects, and state chairman of the Joint Distribution Committee; Captain B. H. Levy, onetime member of the County Board of Education; Mrs. Harry M. Kandel, member (1943) of the County Board of Education.

In 1943 the city council included Ben I. Friedman and Louis J. Roos. Morris Slotin was chairman of the city council of the city of Savannah Beach and state regional chairman of the Joint Distribution Committee; A. W. Solomon, Sr., was a member of the county commissioners (formerly chairman). Jacob Gazan, a trustee (1943) of the Georgia Infirmary, was onetime president of the Savannah Bar Association; Morris H. Bernstein was president of the Savannah Family Welfare Association and of the Community Forum; Dr. Henry L. Levington had served as president of the Georgia Medical Society. H. Sol Clark was chairman in 1943 of the county department of public welfare.

SAVOIR, ALFRED DE (originally Poznanski), playwright, b. Lodz, Poland, 1884; d. Paris, 1934. He made his debut with the comedy *Le troisième convert,* which was presented at the Odéon in Paris in 1906. Alone and in collaboration with others, he produced numerous comedies, many of which were presented on the German and American stages. Some of his plays were adapted for the screen. In 1927, together with Owen Davis and Frederick Lonsdale, Savoir formed an authors' council for the promotion of original stories for motion pictures.

His works include: *Le baptême* (1907); *La sonate à Kreutzer* (1910); *L'éternel mari* (1911), all three in cooperation with Fernard Nozière; *Devant la mort* (1920; with Léopold Marchand); *La huitième femme de Barbe-Bleue* (1921); *Banco!* (1922); *Ce que la femme veut* (1924; with E. Rey); *La petite Catherine* (1930); *La patissière du village* (1932).

SAVOY, former duchy, part of the kingdom of Sardinia from 1720 on. It was annexed to France in 1860, and in 1943 it formed the departments of Savoie and Haute-Savoie. A Jewish colony is believed to have been in Savoy as early as the 7th cent., because a Jew named Sapaudus (Savoyan) is mentioned in a document from Narbonne of that period.

When the Jews were expelled from France in 1182, a number of them immigrated into Savoy, settling in various cities there. In 1300, when the Jews were accused of a ritual murder, they were paying a special tax, but in 1331 Count Aymon of Savoy reduced their annual Jewish tax from 2,000 to 1,200 florins. Persecutions of Jews in Savoy were most frequent at the time of the Black Death (1348-49), and recurred in 1394, under the influence of the preacher Vincent Ferrer. According to Solomon ibn Verga, the Jews suffered persecution in 1490 also.

Some of the Jews of Savoy were engaged in money lending, and others in trading in jewelry. A considerable number practised medicine and became personal physicians of counts and dukes; several of them were baptized. To them fell the task of examining Jewish books when charges were brought against the Jews in the 15th cent. that their literature was anti-Christian. The Jews were exiled from Savoy at the end of the 15th cent., and most of them settled in Italy.

Savoy, especially Chambéry, had many prominent Jewish scholars, including Jacob Levi and the brothers Solomon and Joseph Colon.

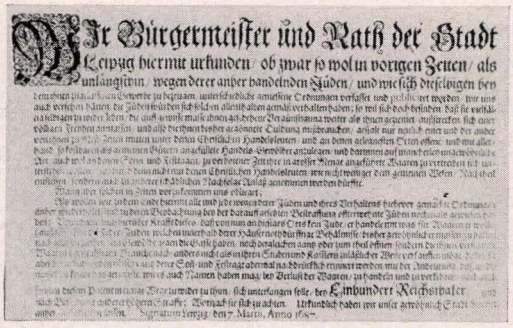
SAX, GERT (Gertrude Landsberger-Sachs), painter, b. Berlin, 1888. She studied in Berlin under Martin Brandenburg and Leo von König, and also in Paris. In 1915 she settled in Berlin, where her exhibi-

tions of portraits, still life and landscapes were well received. Leaving for Paris in 1934, she exhibited at the Salon des Tuileries and the Salon d'Automne. Some of her outstanding portraits were of Fritz Stahl, Berlin art critic, Norbert Falk, writer and theatre critic, Professor Jourdan of the French Embassy in Berlin, and of Georg Bernhard, once editor of the *Vossische Zeitung* in Berlin, whom she married in 1938.

In France she painted also many urban views, Seine landscapes and scenes from the south of France, as well as watercolors from Monte Carlo. Her later work showed a renewed luminosity of color and freshness of composition. In 1941 she came to New York city, and continued to work on local subject matter.

SAXL, ERWIN J., physicist and chemist, b. Vienna, 1904. He received the Ph.D. degree from the University of Vienna (1927), and came to the United States in 1929. He was lecturer in physics at the New School for Social Research, New York city (1930-34), and in the Massachusetts Department of Education, Cambridge, Mass. (1940-41). Saxl contributed chapters to the *Rayon and Synthetic Yarn Handbook* (1936), and published numerous technical and scientific papers. He made several inventions in electronic apparatus, microwave generators, precision-testing instruments, high-powered incandescent lamps and textile chemicals, and became a fellow of the Royal Society of Arts, England.



SAXL, FRITZ, art historian, b. Austria, 1890. He was educated at the universities of Vienna and Berlin (Ph.D.), received a scholarship from the Institut für Österreichische Geschichte in Rome (1812-13), and was a librarian at the Warburg Institute in Hamburg (1913-14). After the first World War he was appointed director of the Warburg Institute and professor of the history of art at the University of Hamburg. When the Nazis came to power (1933), Saxl was ousted from his professorship. The Warburg Institute was moved to London, wher Saxl was again made its director; he still held this position in 1943.

His published writings include *Frühes Christentum und spätes Heidentum in ihren künstlerischen Ausdrucksformen* (1923); *Dürers Melancolia* (with Erwin Panofsky, 1923); *Antike Götter in der Spätrenaissance* (1927); *Mithras. Typengeschichtliche Untersuchungen* (1931); *Classical Mythology in Medieval Art* (with Erwin Panofsky, *Metropolitan Museum Studies,* No. 4, 1933); *La fede astrologica di Agostino Chigi* (1934); *Costumes and Festivals of Milanese Society under Spanish Rule* (1938).

SAXONY, a state in the German Empire. It derived its name from its inhabitants, the Saxons, who in the Middle Ages lived west of the rivers Elbe and Saale. At the end of the 9th cent. they formed a duchy, which reached its greatest extension and importance in the 12th cent., when its eastern boundary was the river Oder. At various periods of its history it had ascendancy over Thuringia, to the southwest.

The first authentic information regarding Jewish settlements in the localities of Magdeburg and Merseburg, and regarding the salt industry of the Jews on the Saale river, dates back to the reign of the German Emperor Otto I (965). Soon afterward Jews were found also at Halle, and then at Meissen, Erfurt and Nordhausen. In all, the presence of the Jews has been established in 124 localities of Saxony for that period.

Their social status, which was fair about the year 1000, changed for the worse by the end of the 12th cent.; henceforth they were not regarded as members of the merchant class, but as mere money lenders. It was also about 1200 that the first persecutions occurred; they were renewed at the end of the 13th cent., when ritual murder accusations

Wir Bürgermeister und Rath der Stadt
Leipzig hiermit urkunden / ob zwar so wol in vorigen Zeiten / als
anfänglichen / wegen derer anher handelnden Jüden / und wieselbe dieselbigen be-

An ordinance affecting the Jews of Leipzig, Saxony, issued by the mayor and city council in 1687

spread to Saxony. A happier period during the early 14th cent., when the Jews enjoyed satisfactory legal rights and were permitted to acquire real estate, was brought to a sudden and catastrophic end by the Black Death in 1349; the persecutions of that time affected almost all the Jewish communities in Saxony.

When the Jews resettled in Saxony thereafter, they were again almost exclusively money dealers. Their financial power became indispensable to wide circles in need of credit, but as creditors they were despised, envied, persecuted and killed. The German emperors looked upon them merely as objects for exploitation, and sought continually to exact from them new revenues. Their interests were gravely affected also by the "killing" (cancellation) of credits owing to them. About 1450 the Jews were again expelled from all the communities, whereupon they probably migrated eastward. In Nordhausen only did a Jewish community remain until the middle of the 16th cent., but afterward Jews gradually resettled in Halberstadt also. A body tax for Jews, introduced in 1556, was revived in 1733, at which time it was due from every Jew who had passed the age of ten years. New Jewish settlements took place at Magdeburg and Halle shortly before the 17th cent. In Leipzig and Dresden Jews settled even later; they were permitted to worship in prayer-houses, but were forbidden to build synagogues. They were subjected to the "Mandat" of 1746, a set of oppressive regulations which hampered them extremely in their enterprises and forced upon them a rigorous passport system in their travels. Nevertheless, they were of utmost importance in commerce, particularly in the world fairs of Leipzig.

The Congress of Vienna of 1815 divided Saxony into two parts, the northern part being incorporated into the state of Prussia as the "Province of Saxony." The southern part became an independent kingdom and later a federated state of the German Empire (1872) and of the German Republic (1919). At the Congress of Vienna the representatives of Saxony were against improving the civic conditions of the Jews. The Prague financier, Simon von Lämel, was instrumental in having the body tax abolished in 1813. The situation of the Jews improved very slowly. Prussia granted its Jews a more favorable status, for which reason many Jews preferred to reside in the province of Saxony, near the border of the kingdom, which they crossed daily in the conduct of their business. In 1868, finally, the Jews in the kingdom of Saxony were emancipated. A specific Jewish oath had to be taken until 1879.

In the modern period Thuringia (which was constituted a state in the German republic from 1919 on) and Saxony were of far less importance for the history of the Jews than they were in the Middle Ages. The combined number of Jews in the province and kingdom of Saxony was 25,000 in 1910 and 31,000 in

1925, with Leipzig as the only city in this territory to record over 10,000 Jews. While in 1925 the number of Jews in Thuringia, which was 3,603, was found to have decreased by 5.8 per cent as compared with 1910, in Saxony it increased by 32 per cent as a result of immigration of Jews from Eastern Europe. The city of Dresden and Chemnitz (kingdom of Saxony) had 5,000 and 4,000 Jewish inhabitants, respectively. Magdeburg (province of Saxony) had 2,400 Jews.

Despite the small number of Jews in Thuringia, anti-Semitism throve there even before the Nazis' advent to power in 1933. It was also among the first states which declared its legal profession to be "free from Jews" (as early as October, 1933). In the kingdom of Saxony, the chamber of artisans of the city of Chemnitz, an important industrial center, was prompt in ousting all Jews from trade and commerce in 1933. Leipzig, however, continued to admit Jews to its fairs, even after all other fairs in Saxony had excluded Jewish participants. While the state of Thuringia was prompt in ousting Jews from official positions and professions, as well as from schools, and exerted social pressure on those who still continued to trade with Jews, Saxony was slower in following the Nazi lead. In November, 1937, however, the government of Saxony forbade the teaching of Hebrew, formerly a required subject for students of Christian theology in the University of Leipzig, thereby abolishing a tradition which had been an influence in the shaping of Reform. The burning of synagogues in 1938, the subsequent mass emigration and the ultimate total annihilation of the Jewish community in Saxony followed the general pattern of the German Reich.

SCHAAP, MICHAEL, merchant and civic leader, b. New York city, 1874. He received his LL.B. degree from the Law School of New York University (1896), practised law, and taught English and stenography in New York evening schools for several years. He was elected to the New York Assembly for 1913 and 1914 on a National Progressive (Bull Moose) party ticket. He introduced many progressive measures, including the first minimum wage bill in New York state.

In 1917 Schaap retired from law practice and entered the department store of L. Bamberger and Co., Newark, N. J., as director of personnel. He was vice-president and general manager of the store when, in 1929, he resigned to become president and managing director of the department store of Bloomingdale Bros., Inc., in New York.

In 1943 Schaap was a member of the board of trustees of the New York University School of Retailing and of the Institute for Advanced Study at Princeton.

SCHÄCHTER, MIKSA, surgeon and communal worker, b. Vác, Hungary, 1859; d. Budapest, 1917. He studied in the medical school of the University of Budapest. In 1890 he became a private lecturer in the surgery of ulcerous wounds; in 1917 he was named assistant professor. In 1886 he founded the important medical journal *Gyógyászat* (Medicine), which after his death was edited by his son Dezső Schächter. He was instrumental in the creation and development of a medical judiciary board, under the supervision of the Hungarian minister of justice; he served as its secretary.

Schächter was a columnist for the *Pester Lloyd* and other Budapest daily newspapers. He was active in Jewish communal affairs; he offered constructive criticism of the policies of the Jewish community of Pest, and thereby inaugurated the founding of an opposition party. He inspired various Jewish youth movements.

SCHADOW, family of artists. The Jewish origin of the family goes back to Johann Gottfried Schadow (1764-1850), famous sculptor (his bust of Moses Mendelssohn is known throughout the world). In 1785 he married Marianne Devidels, daughter of a Jewish court jeweler from Vienna. He eloped with her to Italy, but finally, when he came of age, received his parents' consent. Rudolf and Wilhelm Schadow were their offspring. After Marianne's death, Schadow married again; his second wife was not Jewish. Again there were two children. The daughter, Lyda, married the Jewish painter Eduard Bendemann, and the son, Felix (1819-61), a portrait and genre painter, married Eugenie d'Alton, granddaughter of the sculptor Rauch.

RUDOLF SCHADOW (b. Rome, 1786; d. Rome, 1822), sculptor, was a half-Jew, and a pupil of his father, of Thorwaldsen and of Canova. One of his best-known works is *Die Sandalenbinderin* in the Glypothek in Munich (1817); his *Achill und Penthesilea,* which after the artist's death was completed by his cousin Emil Wolff, is also well-known.

WILHELM VON SCHADOW (b. Berlin, 1789; d. Düsseldorf, Germany, 1862), painter, was half-Jewish. Also a pupil of his father, he was converted to Roman Catholicism in 1814. He was known as the painter of numerous altar pieces, for example at the Casa Bartholdy in Rome (1816-17). In 1819 he became professor at the Berlin Academy of Arts, and in 1826 director of the Düsseldorf Academy of Arts. He was knighted. His writings include *Der moderne Vasari, Erinnerungen aus dem Künsterleben* (1854).

Lit.: Allgemeine Deutsche Biographie, vol. 30 (1890).

SCHAEFFER, HANS, jurist, economist and public servant, b. Breslau, Germany, 1886. He was a lawyer at Breslau from 1912 to 1919, then became councillor to the ministry of economics of the Reich, and from 1923 to 1929 he was director of the ministry. From 1929 to 1932 Schaeffer was under-secretary of finance. When the von Papen government was established Schaeffer was removed from office. From 1932 to 1933 he was managing director of the Ullstein publishing firm. He was acknowledged one of the most experienced economists of modern Germany. After the Nazis came to power Schaeffer emigrated to Sweden, and became adviser in the reconstruction of the Swedish Match Trust which had been ruined by Ivar Kreuger.

Schaeffer accomplished his most difficult task of reconstruction from 1933 to 1936. From 1936 on he was adviser in international finance and law at Jönköping, the seat of the Swedish Match Trust. He published several treatises on German law and economics; his principal works are *Kartelle und Konzerne* (1928) and *Die Problematik der kapitalistischen Gegenwart* (1931).

SCHAFFER, AARON, professor of Romance languages, b. Baltimore, 1894. He received the Ph.D. degree from Johns Hopkins University (1917), where he served as assistant (1917-18) and instructor (1919-20). After serving as instructor, assistant and associate professor, he rose to the position of full professor of Romance languages at the University of Texas in 1928, and still held this position in 1943.

Schaffer's writings include: *Georg Rudolf Wecherlin* (doctoral dissertation; 1917); *Parnassus in France* (1929); and a translation of *Akiba* by Marcus Lehmann (1925). He edited several French textbooks, and was co-editor of the Zionist periodical *Kadimah* (vol. 1, 1918; vol. 2, 1920). He headed the Intercollegiate Zionist Association (1917-18). Schaffer received the decoration of Officer of the Academy from the French ministry of education (1938).

SCHAFFERSTOWN, *see* PENNSYLVANIA.

SCHAIKEWITZ, NAHUM MEYER (SHOMER), writer, b. Minsk, Russia, 1849; d. New York city, 1905. His early training was entirely religious, but later he acquired a secular education. Under the influence of the Haskalah movement, he turned to the writing of fiction in Yiddish.

His first novel, *Zibehe Inquisitia,* was accepted for publication by S. J. Fünn in Vilna in 1872, but censorship difficulties delayed its publication for some time. Later it appeared in Hebrew under the title *Cain* and in Yiddish as *Die Blutige Liebe.* At Fünn's suggestion, Schaikewitz turned to the writing of short novels, which he ground out at the rate of one a day, signing them Shomer, the name by which he became best-known and the name which was adopted by his family.

At first his welcome was warm, not only popularly but among literary critics. As the period of enlightenment spread, however, and a more classical school of Yiddish writers developed, such leaders as Sholom Aleichem began to deride the artificiality and the improbability of the plots which Schaikewitz used, and which were of the same extravagant form as those upon which dime-novel literature in any language depends. This opposition and the ban on the Yiddish theatre (for which he had also written) in Russia prompted him to move to New York, where he was assured a welcome by the Yiddish theatre and newspaper world. Arriving in 1889, Schaikewitz at once plunged into a continuation of his prolific career. The criticism of his antagonists did not deter Schaikewitz.

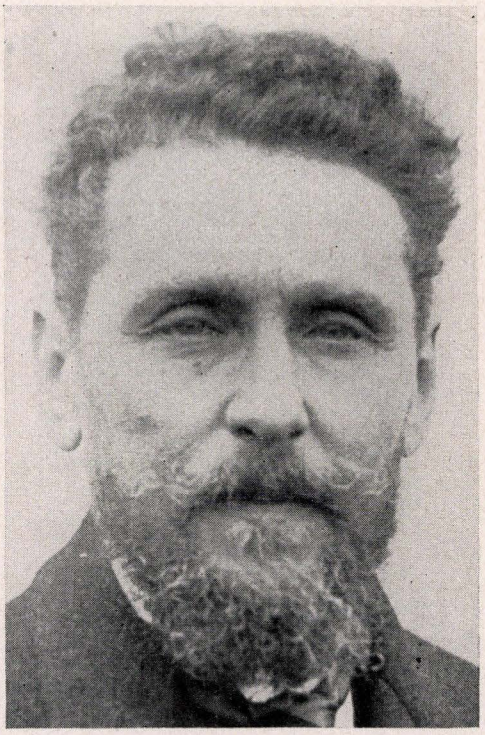
He defended his technique by pointing out that the serious, classical literary approach was preferable in the teaching of morality, but was a bitter medicine which had to be sweetened before the child-public would take it. And although his rococo, fanciful plots and situations disqualified him for inclusion in the roster of superior Yiddish writers, he was nevertheless significant in that his very faults served as a magnet whereby the uneducated public was first drawn to reading.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 758-808; Waxman, Meyer, *A History of Jewish Literature,* vol. 4 (1941) 485-86; *Minikes' Sukkes-Blatt* (1901).

SCHALIT, RAHEL, *see* SZALIT, RAHEL.

SCHAMBERG, JAY FRANK, dermatologist, b. Philadelphia, 1870; d. Philadelphia, 1934. Having received the Ph.D. degree from the medical school of the University of Pennsylvania, he took post-graduate courses in Vienna, Paris and Berlin, and settled in Philadelphia as a specialist on diseases of the skin. During the first World War the Schamberg Research Laboratories turned out the entire salvarsan supply for the United States government. The profits, an estimated $750,000, were employed by Schamberg and his two associates for the establishment of the Research Institute of Cutaneous Medicine which he directed.

Schamberg contributed many memoranda on diseases of the skin to the medical press. An ailment first described by him is known as Schamberg's disease. In his capacity of professor in most of Philadelphia's medical colleges, he published many standard textbooks, some of them in collaboration with Carroll S. Wright. His first professorship was with the Philadelphia Polyclinic and College for Graduates in Medicine. From 1919 on until his death he headed the department of dermatology in the Graduate School of Medicine, University of Pennsylvania. He was one of the founders of The Pharisees, a society for Jewish studies, before which he read his paper on skin diseases and blemishes in Bible and post-Biblical literature. Schamberg was president of the American Dermatological Association and of the Philadelphia County Medical Society (until 1932).



SCHAMBERG, MORRIS I., oral surgeon, b. 1875. He received the D.D.S. degree from the University of Pennsylvania in 1896, and the M.D. degree from the Medico-Chirurgical College of Philadelphia in 1898. Next he enlisted in the 1st Pennsylvania Regiment to fight in the Spanish-American War, and served in Puerto Rico under General Miles as a first lieutenant. Schamberg was professor of oral surgery at the Medico-Chirurgical College of Philadelphia, and was the first to hold such a professorship in a post-graduate medical school in New York city, lecturing at the Post-Graduate Hospital and School of Medicine. Subsequently he became professor of clinical oral surgery at the Columbia University Dental School.

He contributed many articles to the medical press, and was a member of the editorial board of *Modern Dentistry.* Among the appliances which he devised for dentistry was the Schamberg burr.

SCHANFARBER, TOBIAS, rabbi, b. Cleveland, 1862; d. Miami, Fla., 1942. He received his education at the University of Cincinnati and from the Hebrew Union College, which ordained him in 1884. After ministering to congregations at Fort Wayne, Ind., and Toledo, Ohio, he was called to Baltimore where, during his ministry, he studied Semitics at Johns Hopkins University (1894-98) and wrote editorials for the Baltimore *Sun* and the *Jewish Comment.* A short period of service to the congregation of Mobile, Ala., was followed by his being invited, in 1900, to Kehilath Anshe Maariv, the oldest congregation of Chicago, which he served until, in 1924, he was made rabbi emeritus. In Chicago, Schanfarber was co-editor of *The Reform Advocate* and editor of the *Chicago Israelite and Sentinel.* In 1933 the Hebrew Union College conferred upon him the honorary D.H.L. degree.

Lit.: *Central Conference of American Rabbis Year Book,* vol. 52 (1942) 269-75.

SCHANZER, CARLO, Italian statesman and former minister for foreign affairs, b. Vienna, 1865. His family later emigrated to Italy. He entered the Italian administrative service as secretary of Luigi Bodio, well-known Italian economist and head of the general bureau of statistics in Rome. In 1892 he became magistrate of the Italian Council of State, and three years later was promoted to the grade of councillor. He also taught constitutional law at the University of Rome. In 1901 he assumed the important post of director general of the civil administration of the Italian ministry of the interior, a post which he held until 1905. In 1906, after his election as deputy, he was nominated

Carlo Schanzer

minister of posts in the Giolitti cabinet. In 1919 he was appointed senator, and held the portfolio of minister of finance in the two Nitti cabinets (1919-20). Schanzer then organized the "Victory Loan" (Il Prestito della Vittoria), which brought in twenty-six million lire, thus saving the Italian treasury from bankruptcy. In 1920 he headed the Italian delegation to the Naval Conference in Washington, where he obtained for Italy naval parity with France. In 1922 he became minister of foreign affairs in the Luigi Facta cabinet, and as such took an important part in the preparation for and the work of the International Conference in Genoa (in the spring of 1922), which was the first meeting between representatives of the Allied powers and Germany. He was an opponent of the Balfour Declaration, and during his visit to London (1922) expressed fears as to the future status of the holy places in Palestine.

After Mussolini's "March on Rome," in October, 1922, Schanzer retired from active political service, limiting his activities to writing and to his interest in Italian colonial affairs. In 1929 he became chairman of the first department of the superior colonial council, dealing with all political, juridical and administrative affairs of the Italian colonies. He was then nominated minister of state. He published a study on the League of Nations (1925) and a collection of political essays, *Il Mondo fra la pace e la guerra* (1931).

OTTONE SCHANZER, the brother of Carlo Schanzer, was head of the department of foreign commerce in the Italian ministry of commerce and industry, and translated various German poems into Italian.

SCHAPIRA (SCHAPIRO), CONSTANTIN ABBA, Hebrew poet, b. Grodno, Russia, 1840; d. Leningrad, 1900. He received the usual Orthodox education, and at the same time secretly studied Hebrew language and literature. His early life was embittered by the fanatic Orthodoxy of his father.

Lured by the reputation of Perez Smolenskin, he went to Vienna, but soon returned to Russia, disappointed, and settled in Leningrad, where he lived in want and poverty. A Russian dressmaker, whose daughter he subsequently married, supported and took care of him from her meager earnings, and during his serious illness she induced him to accept the Russian Orthodox faith. Schapira recovered, but although he later became famous as a photographer in Leningrad, the matter of his baptism weighed heavily upon his mind; the lyric poems which he composed in these years, considered the best of that period, are filled with profound mourning and overpowering pain.

The Russian pogroms of the 1880's brought Schapira to the painful consciousness of his secret Jewishness. His life became a living, self-afflicted martyrdom in remorse for his act of apostasy from Judaism He made his literary debut in 1885 with a cycle of poems entitled *Mehezyonoth Bath Ammi* (Visions of My People). His grief over the lot of the Jews is movingly proclaimed in his collection of lyrical poems entitled *Mishire Yeshurun* (Songs of Jeshurun); some of these poems, such as "Besadmoth Beth-lehem" (In the Fields of Beth-lehem) and "Birkath Haneroth" (The Blessing over the Candles), are still regarded as gems of Hebrew literature. His poems are among the finest lyric productions of Hebrew poetry.

The Zionist movement and the First Zionist Congress aroused in Schapira the desire to settle down in Palestine and return to Judaism. However, he died in the midst of these preparations. He bequeathed his rich library to the Midrash Abarbanel in Jerusalem.

Lit.: Introduction to the new edition of Schapira's selected poems, entitled *Shirim Nibharim,* by Jacob Fichmann (1911); Gitelowitz, G., in *Hashiloah,* vol. 32 (1917) parts 2 and 3.

SCHAPIRA, HERMANN (HIRSCH), mathematician and Zionist leader, b. near Taurage, Lithuania, 1840; d. Cologne, Germany, 1898. He studied at a Yeshiva and was appointed to the rabbinate in a small community at the age of twenty-four, but a Hebrew book on mathematics which accidentally came into his possession completely changed the course of his life.

In his desire for secular education he first traveled to Odessa, then to Berlin (1868), where he studied for three years at the Gewerbeakademie; he returned to Odessa, where he engaged in commerce, but finally went to Heidelberg, Germany, to study mathematics at the university. Despite great hardships—he worked in factories, slept on park benches and suffered all kinds of privations—he attained the Ph.D. degree at the age of forty (1880). In 1883 he became instructor and in 1887 assistant professor of higher mathematics at the University of Heidelberg. His income as an instructor had been so small—he often did not have enough students to form a class—that, in order to support his family, he had taken up the repairing of clocks.

Schapira was a renowned mathematician who published a number of scholarly treatises; of his main work, *Theorie allgemeiner Kofunktionen und einige Anwendungen,* however, which he had planned as a three-volume work, only one volume was completed. He edited in 1880, from a Munich manuscript, *Mishnath Hamiddoth* (Doctrine of Measures), the oldest extant mathematical work in Hebrew, and pointed out the relation to it of the medieval Arabian mathematician, Mohammed ben Mussa.

Ostracized as a Russian Jew by both the non-Jewish and assimilated Jewish members of the university and, as a man who had exchanged the rabbinate for a secular position, regarded with suspicion by the Orthodox Jews, Schapira felt relieved by the arrival at the university of a number of Jewish students from Russia, with whom he discussed his Zionist ideas. In his early thirties, in his contributions to the Hebrew periodical *Hamelitz,* he had advocated the establishment of a

Hebrew University in Palestine as a spiritual center for the Jewish colonies that had sprung up since 1882. In a telegram which he dispatched to the first conference of the Chovevei Zion, the Kattowitz Conference (1884), he had already proposed the foundation of a fund to purchase land in Palestine, but no action was taken. In Heidelberg he founded Zion, the first Jewish nationalist club in Germany, the aims of which were the fostering of Hebrew language and culture, aid to Jewish settlers in Palestine, and the creation of a university there. Significantly, he signed his letters to friends in this manner: "Zebi Hirsch, Dr. Hermann Schapira, professor of mathematics at Heidelberg until God will establish his academy in Zion."

At the first Zionist Congress at Basel (1897) Schapira served as one of the five members of the commission which drew up the Basel Program and, as Max Nordau put it, "brought to its task his mathematically trained mind and his idealistic heart." At the final session of the Congress he brought forward his scheme for a Jewish National Fund on the following lines:

(1) Money was to be collected from Jews all over the world, from rich and poor alike, as a regular contribution to the establishment of a general fund; (2) two-thirds of the Fund was to be used as a land fund, solely for acquiring land for the Jews, the remaining third to be applied for the preservation and cultivation of the land; (3) the land thus bought was never to pass out of the control of the Fund, and not to be sold to individual Jews but leased for a period not exceeding forty-nine years.

His proposal was warmly recommended and referred to the Inner Actions Committee, but was not adopted until the Fifth Zionist Conference (1901), three years after Schapira's premature death. It received the name of Jewish National Fund (Keren Kayemeth Leyisrael). Another plan of Schapira, the Hebrew University, was realized in 1925. The hundredth anniversary of his birth was celebrated in 1940 all over the world, and a street in Tel-Aviv was named after him. ALFRED WERNER.

Lit.: *Die Welt* (1897-98); Zitron, S. L., *Lexikon Zioni* (1924), col. 665 et seq.; Jaffe, Leib, *Professor Hermann Schapira* (1930); idem, *Rabbi and Mathematician: The Life of Hermann Schapira* (1939); *Zionist Review* (London), Jan., 1936; Menahem, G., *Professor Zebi (Hermann) Schapira* (1938); Melamed; S. M., "Hermann Schapira—and Herzl," *The New Palestine,* Dec. 13, 1940.

SCHAPIRA, ISAIAH MEIR, rabbi, b. Memel, Germany, 1828; d. Czortkow, Galicia, 1887. He was one of the few Orthodox rabbis of Eastern Europe who combined Talmudic scholarship with secular knowledge and wrote an excellent Hebrew. A regular contributor to *Hamaggid,* he wrote a great number of Talmudic dissertations, and articles on current affairs. Like Hirsch Kalischer, he opposed the Reform Movement and championed Jewish nationalism and Palestinian colonization. In spite of the hostility of his Orthodox Hasidic surroundings, he endeavored to further modern learning and culture, and won a reputation as a Maskil. In Czortkow, where he was district rabbi, he founded a number of public institutions, including cooperatives.

His son DAVID SCHAPIRA, physician in Dünaburg (Dvinsk), Latvia, was also a Hebrew writer, and his granddaughter, Sarah Schapira, became known through her Hebrew poems, especially her song of Zion, "Al Tal Veal Matar" which appeared under the title of "Zion" in *Keneseth Yisrael* (vol. 2, 1887) and achieved great popularity. It was set to music several times.

SCHAPIRA, SAMUEL WILLIAM, surgeon, b. Vilna, Lithuania, 1872; d. New York city, 1936. He came to the United States in 1888, and studied at the New York University (M.D., 1895). Schapira took post-graduate courses in Paris and Berlin, and familiarized himself with the cystoscope, the use of which he introduced into the United States in 1896. He was instructor in genito-urinary surgery and venereal diseases at the New York University Post-Graduate Medical School. As professor of urology and venereal diseases at the Fordham University Medical School, he filmed for the first time twelve motion pictures of surgical operations which were later used in medical schools. From 1918 to 1920 he served as major in the United States Medical Corps. He was among the pioneers in the use of radium in surgery for renal cancer.

SCHAPIRO, ISRAEL, librarian, b. Sejny, Russia, 1882. He studied at the Yeshiva in Telshi, and received also a secular education at Russian schools and later at the Universities of Berlin and Strasbourg, where he obtained his Ph.D. degree in 1906. Subsequently he studied at the Hochschule für die Wissenschaft des Judentums and at the Veitel-Heine-Ephraim'sche Beth-Hamidrash in Berlin.

In 1907 Schapiro became professor of Jewish history and Hebrew literature at the Lehrer-Seminar in Jerusalem, remaining until 1910. The following year he emigrated to the United States, joining the staff of the Jewish Bureau of Education in New York. Simultaneously he was also co-editor, with Reuben Brainin, of the Hebrew weekly *Haderor.*

The United States Congress, in 1913, passed a bill for the establishment and maintenance of a Semitic division in the Library of Congress. Schapiro was made the first chief of the Division. Under his directorship, which he still held in 1943, the Division, consisting of books in Yiddish, Hebrew, Arabic, Aramaic and cognate languages as well as Judaica, grew extensively.

The Hebraica alone in 1942 totalled more than 40,000 volumes, including more than a third of incunabula and numerous rare editions of the 16th and 17th centuries. It is

to Schapiro's credit that the Hebrew collection of the Library of Congress ranks well with any of the great national libraries.

Writing under his own name and as Elisha ben Shaphat, Schapiro was the author of many studies on Hebrew literature and bibliography. Among these were: *Die hagadischen Elemente im erzählenden Teil des Korans* (1907); *Leviticus XXVII im Lichte des Talmuds* (1909); *Bibliography of Hebrew Translations of English Works* (1929); *Bibliography of Hebrew Translations of German Works* (1934); *Schiller und Goethe im Hebräischen* (1935). He was also the editor of various rabbinical treatises and commentaries, and of two volumes from the literary manuscripts of his father, Tobiah Pesach Schapiro (1845-1924). His Hebrew translation, *Bikkashticha,* of Nahida Ruth Lazarus' *Ich suchte dich,* was published in 1932. Schapiro wrote also for the annual reports of the Librarian of Congress. He was a contributor to the *Universal Jewish Encyclopedia, Dictionary of American Biography, Otzar Yisrael,* and to numerous Hebrew periodicals in the United States and elsewhere. From 1916 to 1927 he was professor of Semitics at George Washington University.

SCHAPIRO, JACOB SALWYN, historian, b. Hudson, N. Y., 1879. He received the Ph.D. degree from Columbia University (1909), and was appointed assistant professor (1915) and full professor there in 1922; he still held this position in 1943. Schapiro was a member of the board of directors of the New York Adult Education Council.

His works include: *Social Reform and the Reformation* (1909); *Modern and Contemporary European History* (1918); *Modern Times in Europe* (1927); *Civilization in Europe* (1928); *Condorcet and the Rise of Liberalism* (1934).

SCHAPIRO, LAMED, Yiddish novelist, b. Rzhyshchev, Russia, 1878. Early in the 1900's he came to Warsaw, where he was active in the Jewish division of the socialist movement and also turned to Yiddish writing. His first story, *Itziki Mamzer,* was published in 1904 in Abraham Reisin's *Yohrbuch Progress.* From 1906 to 1909 Schapiro lived in New York city, where he continued to write stories in various periodicals.

Israel Schapiro

Much of his work dealt with harrowing pogrom details, and although he was never a prolific writer, the impressionistic power of his work gave him a high rank in the roster of 20th cent. Yiddish writers. In 1910 he lived in Zurich, and then returned to the United States, spending most of his time in Los Angeles.

One of Schapiro's most famous stories is *Der Tzailem,* dealing with a pogrom episode in which hooligans burned a cross on the victim's forehead—an incident frequently repeated, with variations, after 1933 in Nazi-occupied countries. An English translation of the story was published in the *Reflex* (July, 1928). Schapiro translated works of Rudyard Kipling and other authors into Yiddish. Among the volumes of his collected stories were *Der Kush* (1909); *Oifen Yam* (1910); *Novellen* (1910) and *Die Yiddishe Meluche un Andere Sachen* (1919).

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 465-69.

SCHAPIRO, TOBIAH PESACH (pseudonyms, Jehoshaphat and Shofar Mehar Sinai), Hebrew author and pedagogue, b. Seiny, province of Suwalki, Russia, 1845; d. Kalvaria, Lithuania, 1924. At first he was a teacher in various places, including his native town. After the pogrom of 1881 Schapiro left for the United States, where he studied methods of Jewish education. He returned to his native country and served as a teacher first at Seiny and subsequently, for fifteen years, at Lodz.

His published books, of didactic purpose, include *Mishle Ab* (1906); *Imre Shefer* (1911); *Sippurim* (tales from the Jewish Middle Ages for Jewish youth; 1875). He also translated into Hebrew Berthold Auerbach's *Spinoza* (1899). Among his works, *Meshal Hakadmoni* (Philadelphia, 1925) and *Pithgamin shel Hachamim* (New York, 1927) were published posthumously.

SCHARFSTEIN, ZEVI, educator and author, b. Dunayevtzy, Ukraine, Russia, 1884. He came to the United States in 1914, and in the following year was made head of the textbook department of the Bureau of Jewish Education, New York city, a position which he held until 1921. In 1917 he became instructor in Hebrew literature and pedagogy at the Teachers' Institute of the Jewish Theological Seminary of America, and still held this position in 1943.

Scharfstein edited the Hebrew periodicals *Shaharith* (1916-21), *Tarbuth* (1920), *Hinnuch* (1936-39) and *Shebile Hahinnuch* (1939-). His writings include: *Horaath Halashon Haibrith* (Methods of Teaching Hebrew; 1922); *Hahinnuch Beeretz Yisrael* (Education in Palestine; 1928); *Dareche Limmud Hatanach* (Methods of Teaching the Bible; 1934); *Otzar Hamillim Vehanibim* (Thesaurus of Hebrew Synonyms and Idioms; 1939); *Dareche Limmud Leshonenu* (Methods of Teaching Hebrew; 1941). Scharfstein contributed an article on the status of the Jewish teacher and the history of Jewish education to the sixth volume of the *Sefer Hashanah Liyehude Amerikah* (edit. Menahem Ribalow, 1942).

Lit.: *Hadoar,* vol. 20, No. 24 and 25; *Daily Forward,* April 21, 1940; *Dos Yiddishe Folk,* March 15, 1940.

SCHARRER, IRENE, pianist and teacher, b. London, 1885. She studied at the Royal Academy of Music under Tobias Matthay, making her debut successfully in London in 1901. Thereafter she toured Europe extensively both in recitals and in appearances with orchestra, and achieved recognition as one of the leading English women pianists. She toured also the United States with great success. For many years she taught piano at the Matthay School in London.

SCHATZ, BORIS, sculptor, painter and art educator, b. Vorna, near Kovno, Lithuania, 1866; d. Denver, Col., 1932. Already as a boy he carved in wood,

Bronze plaque of Solomon Schechter by Boris Schatz

portraying Biblical prophets and figures. In spite of great hardships he went to Vilna, where he studied at the art school and happened to meet the eminent sculptor, Mark Antokolski, who encouraged him to go to France. After study at the arts and crafts school at Warsaw, Schatz moved to Paris, where he became a pupil of Jean Alexandre Joseph Falguiere. Schatz received a medal for his statue, *Old Woman,* exhibited in the Grand Salon in Paris (1887), which was followed by a Belgian decoration for a monument. His *The Mother of Moses,* exhibited in 1892, attracted much attention. From 1890 to 1896 he was a pupil and collaborator of Antokolski. Following a call to Sofia, the Bulgarian capital, in 1896, he became court sculptor of Prince Ferdinand and one of the founders of the Bulgarian Academy of Fine Arts. Outstanding among the works which he produced in Bulgaria was a statue of Mattathias, father of the Maccabees, which was a favorite of the prince. Schatz also arranged the Bulgarian art section at the St. Louis Exposition (1904), which received a high reward.

An ardent follower of Zionism and encouraged by Theodor Herzl, to whom he expounded his idea of fostering Jewish national art, he left his position as court artist and professor of art in 1906 in order to establish at Jerusalem the Bezalel School of Industrial Art. It was, in his own words, not a school in the same sense as other schools of art: "Its purpose is not merely to teach arts and crafts in Eretz Israel, but to create Jewish art, to gather together the sparks of Jewish art not only in Palestine, but the world over, sparks that have been spread broadcast these 2,000 years." His main idea—challenged by many critics and artists—was to emphasize the historical characteristics of Jewish craftsmanship which he believed that he had found in the Orient as well as in the Eastern European ghettos, and to produce a synthesis of them.

Boris Schatz

The school was established with departments devoted to drawing, sculpture, painting, decorative art, carpet weaving, wood carving, metal work, ivory carving, cameo making, enameling, ceramics, lace making, metal engraving and silver hammering. One of the difficulties confronting Schatz at the outset was the opposition of fanatics who declared such work violated the Second Commandment about "graven images."

Under his direction the school, nevertheless, became a great success, and it had more than 400 pupils when, in 1913, he brought an exhibition of products of his pupils and also a number of his own works to Madison Garden in New York city. During the first World War, however, the school was completely disorganized, and Schatz was held prisoner of war by the Turks for ten months. He later succeeded in obtaining funds for its reconstruction, and held a very successful Bezalel exhibition in the United States in 1926, having in the previous year opened the Bezalel Museum, attached to the institute; but the school was closed again in 1928. Thereupon Schatz journeyed once more to the United States, exhibiting collections of his own works and of Bezalel products in all large cities in order to raise the money required for the reopening of the school, but fell ill and died at Denver. In accordance with his last will, his body was sent to Palestine for interment. The Bezalel school was reopened in 1934 under the directorship of Joseph Budko.

Schatz was a prolific artist who expressed himself in a great many mediums. His best-known works, aside from

his statue of Mattathias, were his bas-relief sculptures (*The Prophet Jeremiah, Ninth of Ab, Shofar Blower* and others). He also produced busts of Antokolski, Herzl, Anton Rubinstein, Alexander Strakosch and Louis Pasteur. In his last years Schatz abandoned sculpture and devoted himself to painting Palestinian landscapes. His writings include an autobiography, the utopian *Die Geboite Yerushalem, a Cholem oifen Vahr* (Hebrew, *Yerushalayim Habenuyah: Halom Behekitz*), and *Bezalel: Toledothav, Malutho Vaathido*. He was awarded many honors, and made an officer of the French Academy in 1901. His son and daughter, BEZALEL and ZAHARA SCHATZ, are also gifted artists.

SCHECHTER, ABRAHAM I., rabbi and educator, b. Wiznitz, Roumania, 1894; d. Providence, R. I., 1936. He was educated in Roumania and Germany. After serving as custodian of manuscripts and documents at the National Library of Zurich, Switzerland (1919-21), he came to the United States, where he became a fellow at Dropsie College, Philadelphia, from 1922 to 1924, and where he obtained the Ph.D. degree. In 1924 he was appointed professor of Hebrew language and literature as well as of Jewish history at the Hebrew Theological College, Chicago. Thence he was called to Houston, Texas, where he served as rabbi of Congregation Adath Yeshurun for many years and founded the College of Jewish Studies. Toward the end of his life he served as rabbi in Providence, R. I.

Schechter was author of several books on Jewish prayers. He published: *The Ritual Order Hibbur Berachoth by Menahem b. Solomo* (1926); *Studies in Jewish Liturgy* (1930); *Lectures on Jewish Liturgy* (1933). In Germany he published *Palästina, seine Geschichte und Kultur im Lichte der Ausgrabungen und Forschungen* (1918).

SCHECHTER, SOLOMON, rabbi, scholar, and president of the Jewish Theological Seminary of America, b. Focshani, Roumania, about 1847; d. New York city, 1915. His father, distinguished for learning and piety, gave him the rabbinical education usual among such families in that district. When Schechter matured, he decided to complete his studies in Vienna under Isaac Hirsch Weiss and Meir Friedmann at the famous Jewish Theological Seminary there, and also to pursue secular studies at the University of Vienna. After he had received his Semichah (rabbinical ordination) from Weiss, Schechter proceeded to Berlin, where he continued his secular studies at the university, and his Talmudic studies under Israel Lewy. While he was in Berlin, his erudition and personality attracted the attention of Claude G. Montefiore, who in 1882 invited him to come to England as his tutor in rabbinics.

During the years which Schechter spent in England and in the United States, he made an enduring impression not only on Judaism, but also on religious scholarship generally. Although he knew no English at all when he arrived from the continent, he soon gained such a mastery of the language and such facility in expressing himself that his published works have been recognized as important contributions to English letters as well as to Jewish scholarship.

His first published essay, entitled "The Study of the Talmud," was written in English and appeared in the *Westminster Review.* This was to be the first of a series of such essays, many of which appeared in the

Solomon Schechter

Jewish Quarterly Review, and were later collected in his monumental works: *Some Aspects of Jewish Theology, Studies in Judaism,* first, second and third series. (The third series was published posthumously under the editorship of his son, Frank, and of Professor Alexander Marx.) The publication of these essays brought to the world of scholarship, for the first time, a real understanding of Judaism, as seen by its own adherents. Beyond any predecessor, Schechter succeeded in clarifying to the world the Jewish attitude toward the Torah, toward the Kingdom of God, toward the concept of the selection of Israel, toward tradition and toward learning. Belonging to this period was his preparation of editions of the *Aboth de Rabbi Nathan* and of the Midrash Hagadol on *Genesis.*

However, Schechter's fame is based primarily on his recognizing, in a document which was referred to him for examination, a fragment of the lost Hebrew original of the book of *Ecclesiasticus* (*Sirach*). As a result of this discovery, Schechter went to Egypt and Palestine to seek the possible source of the various fragments which had been appearing from time to time among European booksellers and bibliophiles. He discovered the source of these manuscripts to be the Genizah of the synagogue in Cairo, Egypt, where for hundreds of years the members of the community had been storing worn out prayer-books and other religious volumes in a room especially set aside for this purpose. The Egyptian climate, of course, preserved these manuscripts, of which there were no less than 100,000. Schechter obtained permission to bring the whole collection to England, where he and the distinguished scholar, Charles Taylor (who had provided the means for his travels), presented it to the Library of the University of Cam-

Solomon Schechter working among Genizah fragments in the library of Cambridge University, England

bridge, where it is known as the Taylor-Schechter Collection.

The collection has become the basis of a whole series of studies in Jewish history, theology and literature. It has led to a reconstruction of long periods of Jewish history, to a clearer appreciation of the teachings of various Jewish sects and rabbinic schools, and to a restoration of many lost literary monuments. Only a part of the contents of the collection, however, has thus far been published; several generations will probably pass before all of it becames available in printed form. Schechter himself published several books based on manuscripts in this collection. In cooperation with Taylor he published *The Wisdom of Ben Sira,* containing the Hebrew text, according to the fragments of that book found in the collection. Subsequently he published *The Document of the Zadokite Sect,* a code of a forgotten Jewish sect which, originating in Palestine, had settled in Damascus probably early in the 2nd cent. B.C.E. In addition to these works, he published *Saadyana,* remnants of writings of and about the Geonim, principally Saadia; and various Karaite texts.

Schechter served as reader in rabbinics at Cambridge University from 1892 to 1902. A new role in Jewish scholarship and religion came to Schechter when, in 1902, he was called to assume the presidency of the reorganized Jewish Theological Seminary of America in New York city, which he held until his death in 1915. Under his guidance the Seminary, which had been established some sixteen years earlier under Sabato Morais and H. Pereira Mendes, entered on a new period of development. Schechter assembled a faculty, including such then young but distinguished scholars as Louis Ginzberg, Alexander Marx and the late Israel Friedlaender, with whose cooperation the Seminary developed into one of the leading centers of Jewish learning in modern times.

As president of the Seminary, Schechter exerted a profound influence on the whole of Jewish life in America. Through the alumni of the Seminary, his teachings were carried to a considerable group of congregations, which were in 1913 organized as the United Synagogue of America.

Perhaps the most significant concept which Schechter developed was that of "Catholic Israel." By this term Schechter tried to express the idea that although Judaism has no hierarchical or other form of organization, it has an inner unity, based on the generally recognized consensus of loyal and devoted Jews. This consensus obtains expression not through any formal vote or plebiscite, but rather after the manner in which a scholarly or scientific consensus is expressed: through general acceptance.

Schechter's personal following both in England and in the United States was very great. A number of distinguished leaders of Jewish thought looked to him as their master, and tried, each in his own way, to carry on Schechter's work. His significance for American Judaism became clearer with the passing of years, and the Seminary, which was the institution where he was especially effective, became more influential.

LOUIS FINKELSTEIN.

Lit.: *Bentwich, Norman, Solomon Schechter, A Biography* (1938); idem, *Solomon Schechter* (1931); Oko, A. S., *Solomon Schechter, A Bibliography* (1938); "Solomon Schechter," a biographical sketch, *American Jewish Year Book,* 5677, pp. 25-67; Marx, A., and Stroock, Sol M., *Memorial Addresses* (1917); Jewish Theological Seminary of America Students' Annual, Schechter Memorial, vol. 3 (1916).

Principal Publications of Schechter: *Aboth of Rabbi Nathan* (London, 1887); *Studies in Judaism,* First Series (Philadelphia, 1896); *The Wisdom of Ben Sira* (published in cooperation with Charles Taylor; Cambridge, 1899); *Midrash Haggadol on Genesis* (Cambridge, 1902); *Studies in Judaism, Second Series* (Philadelphia, 1908); *Some Aspects of Rabbinic Theology* (New York, 1909); *Documents of Jewish Sectaries* (2 vols., Cambridge, 1910); *Seminary Addresses and Other Papers* (Cincinnati, 1915).

FRANK ISAAC SCHECHTER, lawyer (b. London, 1890; d. New York city, 1937), was the only son of Solomon Schechter. He received the LL.D. degree from Columbia University Law School, and was admitted to the New York bar. In the first World War he served in France with the rank of lieutenant. In his New York

practice he specialized in patent and trade mark law. He also collected letters and other material for the biography of his father written by Norman Bentwich. Together with Alexander Marx, he edited the third series of his father's *Studies in Judaism* (1924), which comprised many papers not previously published. He was especially interested in the Jewish aspects of Roman law.

SCHEFTELOWITZ, ISIDOR, Indologist, b. Sandersleben, Germany, 1875; d. Oxford, England, 1934. He worked in the British Museum and the Bodleian Library from 1906 to 1907, and from 1909 to 1926 served as rabbi and teacher of religion in Cologne. In 1920 he became professor of Sanskrit and Iranian philology at the University of Cologne. His numerous scientific works embrace such fields as Sanskrit, Iranian and comparative philology and religion, especially the Jewish. After the establishment of the Nazi regime (1933), Scheftelowitz emigrated to England, where he lectured at Oxford University.

His published works include: *Arisches im Alten Testament* (2 vols., Berlin, 1901 and 1903); *Apokryphen der Rigveda* (1906); *Zur Textkritik und Lautlehre der Rigveda* (1907); *Das Fisch-Symbol* (1911); *Das Schlingen und Netzmotiv* (Giessen, 1912); *Der Optimismus des Judentums* (Frankfort, 1913); *Das stellvertretende Huhnopfer* (Giessen, 1914); *Die altpersische Religion und das Judentum* (Giessen, 1920); *Die Bewertung der aramäischen Urkunden von Assuan und Elephantine für die iranische Geschichte* (1923); *Is Manicheism an Iranian Religion?* (1924); *Altpalästinensischer Bauernglaube* (Hannover, 1925); *Die Zeit als Schicksalsgottheit in der indischen und iranischen Religion* (Stuttgart, 1929).

SCHEINFELD, AMRAM, journalist and author, b. Louisville, Ky., 1897. He was the son of Rabbi Solomon D. Scheinfeld, chief rabbi of the Orthodox Synagogue, Milwaukee, and Hebrew author.

In 1915 Amram Scheinfeld entered journalism, and was a reporter, feature writer, editor and cartoonist for newspapers in Milwaukee and Baltimore. In 1929 he removed to New York city, and contributed to newspaper syndicates and national magazines. Attracted to scientific problems, Scheinfeld began to lecture (1935) and to prepare books on human sciences. In 1939, assisted by Morton D. Schweitzer, a trained geneticist, he published *You and Heredity,* explaining the known general principles of heredity and criticizing one-sided exaggerations and fallacious inferences drawn by politically interested theorists.

His book was selected by the Book-of-the-Month Club for October, 1939, and translated into Swedish, Danish, Spanish and Portuguese. In 1942 Scheinfeld was engaged in writing *Women and Men,* another scientific work scheduled for early publication.

SCHEITEL, *see* WIG.

SCHENCK, JOSEPH M., motion picture executive, b. Russia, 1882. Coming to the United States at the age of ten, Schenck soon entered the motion picture business and became one of the top executives. He started in the industry as manager for Norma Talmadge and Roscoe Arbuckle. He became chairman of the board of United Artists Corporation (1925) and has been president since 1927. In 1933 Schenck founded the Twentieth Century Pictures Corporation, which shortly thereafter merged with the Fox Film Corporation.

Until the early 1940's he was chairman of the board of Twentieth Century Fox Film Corporation and executive head of production. He was, for a time, president of the Association of Motion Picture Producers, Inc. He was one of the early motion picture pioneers and has had a hand in some of the most successful productions in the history of the industry.

SCHENCK, NICHOLAS M., motion picture executive, b. Russia, 1883. Coming to the United States at the age of nine, Schenck was one of the early pioneers in the motion picture industry. His name has been associated with Loew's, Inc., and Metro-Goldwyn-Mayer Pictures Corp., of which he was president. He was said to be president of more than one hundred other corporations in the United States, with an income reputed to be one of the largest in the motion picture industry. Schenck has concerned himself largely with theatrical operations and the business end of the motion picture industry.

SCHENECTADY, a city of New York state which, in 1943, included a Jewish population of approximately 3,800 in its total population of 87,549 (census of 1940). The city was chartered in 1798, but declined after the construction of the Erie Canal. About 1880 a new era of industrial activity began, and Schenectady came to be the center of the largest electrical manufacturing industry in the world.

Louis Jacobs, who was engaged in the clothing business, was one of the first Jews in Schenectady, and was living there in 1848 when Alexander Susholz came into the city. The Jacobs family moved away, but that of Susholz remained and was shortly joined by Jonathan Levi, Meyer Cohen, David Marks, Jacob Henry, A. Seelig, Cohen Levi, Harris Davis and Louis Davis. At this early period, from 1852 to 1853, Mordecai Meyers was mayor of Schenectady.

These men gathered for their religious services in private homes until the year 1856, when they formed and incorporated the Orthodox congregation Sharei Shomaim, later known as Temple Gates of Heaven. The first place of worship was in lower Liberty street, where the congregants met for about a decade. The first rabbi was Moses Freidenheimer. In 1892 the congregation adopted the modern Jewish ritual, and then came to be the Reform element in Schenectady. In 1943 David S. Gruber (elected in 1935) was the incumbent rabbi.

Up to 1890 Sharei Shomaim was the sole Schenectady Jewish congregation. In the 1870's a new Jewish influx found its way into the city. Most of the newcomers were peddlers, traveling with their packs through the county; some were engaged at various trades, from tailor to coppersmith. Thus by 1890 the growing community felt the need of another congregation, and the Orthodox Agudas Achim was organized. In course of time this group became Conservative. In 1943 Rabbi Aaron M. Wise, who had come to the pulpit in 1937, was serving the congregation.

The Hungarian Jewish immigrants who came into the city in 1890 and settled in the district known as Mont Pleasant were for a time affiliated with Agudas Achim; in 1893 they established their own congregation, Ohab Zedek. One of their members, Louis Starkman, came to be exceptionally active in the organization of Schenectady Jewish life, and in 1943, in his late seventies, was still engaged in communal labors. In 1943 the rabbi of Congregation Ohab Zedek was Benjamin Miller.

The Orthodox Congregation Ohab Sholom was founded in 1894; with it was merged, some years later, Congregation B'nai Abraham. In 1943 Rabbi Louis Hait was head of Ohab Sholom. Congregation Adath Israel, also Orthodox, had as its rabbi until his death in 1942 Solomon M. Hinden.

The Ladies' Benevolent Society was founded in 1883, the United Hebrew Charities in 1897, and the Hebrew Sick and

Benevolent Society in 1909. A section of the National Council of Jewish Women was organized in 1897, and a lodge of the B'nai B'rith was established in 1921. In 1917 the YM and YWHA were organized, with Joseph B. Grosberg, who served for seventeen years, as the first president. The organization became, in 1932, the Jewish Community Center, which erected a new building in that year to house its varied activities.

The Center came to be the dominating force in the life of Schenectady Jewry. It was instrumental in organizing the Jewish Community Council which, administered through the Center's staff, took over the planning of all community activities, and the conducting of the annual United Jewish Appeal campaign. Lewis Lurie, Harry G. Coplon and Walter S. Gross were successive presidents of the Jewish Community Center. In 1943 Samuel Weingarten was its executive secretary. In addition to those already mentioned, organizations supported by the Schenectady Jews in 1943 included a district of the Zionist Organization of America, a Senior and Junior Hadassah, a Workmen's Circle, and a local unit of the American Jewish Congress. Paralleling a fall in the general population, Schenectady's Jewish population declined from a high point of about 5,000 in 1918; but the community came to be progressively organized and unified.

A comparatively small number of Schenectady Jews entered the industrial establishments of the city as workers; a much larger proportion were engaged as small merchants, and went into the professions.

In Schenectady, Louis M. King was city clerk (1899-1902); Henry Heilbroner was at one time a member of the board of education; Ellsworth H. Cohen was on the Civil Service Commission. In 1943 Simon Etkin, in office from 1936 on, was city clerk. SAMUEL WEINGARTEN.

SCHENK, LEOPOLD, embryologist, b. Ürmény, Hungary, 1840; d. Schwanberg, Styria, 1902. On completion of his medical course in the University of Vienna (1865), he became staff member of its institute of physiology, and in 1869 lecturer on evolutionary theory. The first chair of embryology in any medical school was established in the University of Vienna for Schenk, who won fame for his extensive studies on the determination of sex in the embryonic stage. He was full professor from 1896 on.

Schenk's claim that the sex of a child may be predetermined by the kind of food consumed by its mother met with harsh criticism on the part of Virchow and others. He eventually resigned his professorship, but stoutly maintained his theory. Schenk published: *Elements of Bacteriology* (1893); *The Determination of Sex* (1898); *Lehrbuch der vergleichenden Embryologie der Wirbeltiere* (1874); *Lehrbuch der Histologie des Menschen* (1885); *Lehrbuch der Embryologie* (1896); *Lehrbuch der Geschlechtsbestimmung* (1901).

SCHENKER, HEINRICH, musicologist, b. Wisniowcyzsk, Poland, 1868; d. Vienna, 1935. He completed his music studies in Vienna, following which he settled in that city and established himself as a teacher of theory. He originated a school of musical theory which exerted great influence in Europe and found many disciples: this school attempted to find the laws governing musical composition by dissecting musical masterpieces.

To prove his theories, Schenker annotated works by Bach and Beethoven, and wrote numerous articles and books. His discoveries were publicized in the United States by Hans Weisse.

Lit.: Katz, Adele T., "Heinrich Schenker's Method of Analysis," *Musical Quarterly,* July, 1935.

SCHERESCHEWSKY, JUDAH IDEL, Talmudist, b. 1804; d. Kovno, Lithuania, 1866. From 1852 to his death he was teacher of Talmud and rabbinics in the Vilna rabbinical seminary. His chief work was *Kur Lazahab* (A Furnace for Gold; 2 vols., 1858 and 1866), a commentary on a number of Haggadic passages in the Talmud, together with an introduction on Haggadah and an essay on the religious views of the teachers of the Talmud. He wrote a sermon and a hymn on the occasion of the coronation of Alexander II in 1855, and contributed frequently to Hebrew periodicals.

Leopold Schenk

Lit.: Fünn, S. J., *Keneseth Yisrael* (1886) 422-23.

SCHERESCHEWSKY, BISHOP SAMUEL ISAAC JOSEPH, convert and translator, b. Kovno (other sources say Tauroggen), Lithuania, 1831; d. Tokio, Japan, 1906. He studied oriental languages at the University of Breslau, where a few years before another Jewish convert, Daniel Chwolson, had studied. In 1854 Schereschewsky arrived in New York city, at the sage of twenty-three. He was befriended by Professor Turner of the General Theological Seminary of New York, studied Talmud and Old Testament under him and, in 1855, Schereschewsky became a member of the Episcopalian Church. Three years later he was graduated from the Seminary as a deacon, and a year later was an ordained priest.

He was appointed a missionary to China in 1859. He remained for two years in Shanghai and lived in Pekin for thirteen years (1862-75). He undertook a translation of the Bible into the court language (Mandarin). Earlier translations had been attempted, but they were inadequate and had been made from the English. Schereschewsky began his translation of the Old Testament from the original Hebrew. After eight years of labor, in 1874 the first edition of the Old Testament appeared in a language spoken by more than 200,000,000 persons. It still remains the outstanding translation into the Mandarin idiom.

In 1875 he returned to the United States on a leave of absence, and two years later was appointed missionary bishop in China. In 1881 he became paralyzed and speechless, and in 1886 he resigned. He was able to typewrite with one finger of each hand only, and continued a revision of his Old Testament translation. He then undertook a translation of the entire Bible into the literary language of China known as Wenli. He lived in Cambridge, Mass., for a time, and in 1895 went to Shanghai to supervise the correction and printing of his two Bible versions. He also translated the New Testament into Mongolian. While engaged on annotations he died in Tokio, Japan, in 1906. The Mandarin

Bible for which he is chiefly known is called the "Two Finger Bible" because of the handicapped method by which the translation was produced.

SCHERMAN, HARRY, author, economist and book distributor, b. Montreal, Canada, 1887. When he was two years old the family moved to Philadelphia. After two years at the University of Pennsylvania, he went to New York city, where he did free-lance writing. He also became an adroit copywriter, specializing in mail-order copy and later becoming a partner of the new advertising firm of Sackheim and Scherman. Together with Max Sackheim and Charles Boni, he launched the Little Leather Library, reprints of classics in miniature size, priced at ten cents each. Eventually some 40,000,000 copies of these books were distributed throughout the United States.

In 1926 Scherman was instrumental in founding the Book-of-the-Month Club, over whose destinies he still presided in 1943. Beginning with a membership of 4,000, this pioneer book club had, in 1943, more than 500,000 members, and was by far the largest book-distributing agency of its kind in the world.

Scherman himself has probably sold more books to more persons than any man on earth; sold and given away, for the retail value of the free books given to members by the organization was, in 1943, over $5,000,000 a year. The Club is uniquely the product of Scherman's business genius; from the beginning he was solely responsible for its many creative aspects.

In 1938 Scherman wrote his first book, *The Promises Men Live By,* a clarification of the structure of debt and credit in modern society. It quickly became a best-seller and received high praise from economists and laymen everywhere. Bernard Baruch called it "a landmark in economic literature."

A number of articles and pamphlets by Scherman followed in quick succession. First published in the *Saturday Evening Post* and then, in pamphlet form, by Simon and Schuster were *The Real Danger In Our Gold* and *Will We Have Inflation?,* both of which contained some of the clearest thinking that had been done on these subjects, and in addition were expressed in such a way that their message could be grasped by the layman. A few months before the United States entered the second World War, Scherman published an essay in the *Atlantic Monthly* entitled "The Last Best Hope of Earth." This was designed to set forth in simple terms the aims for which the majority of mankind is fighting. It was hailed by editorial writers and commentators everywhere, including Mrs. Franklin D. Roosevelt, as one of the most thoughtful writings about the War, and was reprinted first in the *Reader's Digest* and later in a book published by Random House.

At the request of the United States Treasury Department, Scherman contributed an article, "Invisible Greenbacks," to the *Saturday Evening Post* (issue of July 4, 1942), pointing out the necessity for the widespread purchase of war bonds if future inflation is to be avoided by the American people. By special arrangement of the Treasury Department, "Invisible Greenbacks" was reprinted in the *Reader's Digest.*

EDWIN SEAVER.

SCHERMANN, RAPHAEL, graphologist, b. Cracow, Poland, 1874. He was educated at a Heder, afterward attended a Realschule and a commercial school, and became a clerk of the Phoenix Insurance Company at Cracow, and subsequently at Vienna. Interested in graphology from his early youth, he first experimented with the handwritings of acquaintances, who told journalists of his uncanny faculty of deducing the character and case history of a person by merely glancing at his or her writing.

Several scientists studied Schermann's phenomenal ability. The Viennese neurologist, Professor Moritz Benedikt, writing of Schermann's talent in 1918, traced it to radiation emanating from the handwriting, to which the graphologist's brain was especially susceptible, comparing it to a wireless set which can both transmit and receive. Oscar Fischer, professor of neurology and psychiatry at Prague, who experimented with Schermann for several years, concluded that there was in Schermann a power beyond our perception and that he combined many innate senses: graphological, physiognomic, hyperesthetic and telepathic (1924).

Having delivered his first public lecture in the Grosser Konzerthaussaal of Vienna (1918), Schermann made lecture tours to Germany, Czechoslovakia, Switzerland, Hungary, Poland and Roumania, and in 1923 to 1924 he toured the United States. Tested by a jury of physicians in New York city, he examined the handwritings of patients and diagnosed correctly in cases of high blood pressure, diabetes and lung diseases. Dr. Charles Ward Crampton declared that Schermann appeared "to have a sixth sense—of intuition developed to a degree that the rest of the world will not attain for a thousand years." Schermann also proved successful in unravelling criminal cases for the police.

Hailed by authorities as a miracle worker, Schermann himself disclaimed any supernatural qualities, declaring that he was no clairvoyant and that in him there was developed to a rare degree a sense latent in every human being, but as yet unexplained by psychophysiological science. In *Die Schrift lügt nicht* (1929; English trans., *Secrets of Handwriting,* 1937), Schermann emphasizes the fact that handwriting is "the form of expression that lies the least." His experiences served as topics for several novels and motion pictures. His subjects have included members of royalty, eminent thinkers and other personages of note.

In 1941 Schermann was reported living in Siberia, having been evacuated by the Russians from Galicia after the outbreak of the Russian-German war.

ALFRED WERNER.

Lit.: Hayek, Max, *Der Schriftendeuter Raphael Schermann* (1921); idem, *Das Geheimnis der Schrift* (1923); Fischer, Oscar, *Experimente mit Schermann* (1924); Bagger, E. S., *Psychographology* (1924).

SCHERSCHEWSKY, ZEBI HIRSCH HAKOHEN, Hebrew writer and editor, b. Pinsk, Poland, 1840; d. Rostov on Don, Russia, 1910. From early childhood he devoted all his time to the study of Talmud, Hebrew literature, ancient and medieval, and archeology. He also wrote much poetry. Scherschewsky was for a time secretary of the Jewish community of Pinsk, which he later left for the Crimea and thence for Odessa, where he became a contributor to *Hamelitz.* In the absence of its editor, Alexander Zederbaum, Scherschewsky served as editor. It was at this time that he wrote *Boser Aboth* (Odessa, 1877), in which the decadent and irrational methods then used in the education of Russian-Jewish children were satirized, and *Iyyun Sifruth* (Vilna, 1881), in which the author emphasized the important part played by Jewish literature in the cultural and ethical growth of the Jewish people. In the Warsaw edition of the *Midrash Shoher Tob,* by Padna, there appear notes and commentaries written by Scherschewsky, and in *Keneseth Yisrael* (vol. 1, p. 408 et seq.; vol. 2, pp. 2-6) his rhymed parodies. He wrote such parodies in the Biblical (*Ben-Mishle*) and Talmudic (*Lishna de-Chakima*) styles.

In 1883 Scherchewsky settled at Rostov, where he opened a book store which soon became a center of Jewish intellectuals. At that time he was contributing to numerous current Hebrew periodicals, publishing scientific and publicistic articles, as well as a whole series of poems (mostly under the pseudonym of Yabetz Yeshua Sar Eshek).

In 1902 he was elected secretary of the Hebrah Kaddisha of Rostov, and held this office until his death. When Rabbi Moses Eisenstadt started to reorganize the old-fashioned Heders, Scherschewsky became his close associate. In 1904 he began work on the history of the Jewish community of Rostov; for many years he compiled material for it and succeeded in writing a great part of it. But this work remained uncompleted, and the valuable manuscript perished.

MOSES EISENSTADT.

SCHEUER, EDMUND, communal worker and merchant, b. Berncastel on Moselle, France, 1847. In 1943 he was living in Toronto, Canada. He was educated at the École Supérieure in Metz, Lorraine.

In 1865 he became a diamond-purchasing agent in Paris for the firm of Levy Brothers. The Franco-Prussian War induced him to emigrate to Hamilton, Canada, in 1871, when he became a partner in Levy Brothers. The following year he established a Jewish Sabbath school, the first in the province of Ontario, and for fifty-two years he continued to instruct Jewish children in the tenets of their faith. He was president of Anshe Sholom Congregation at Hamilton from 1873 to 1885.

In 1882, through his efforts, the first Reform Temple in Canada, the quaint Hughson Street Synagogue, was erected. In 1886 he moved to Toronto, where he joined the Holy Blossom Congregation. He was instrumental in the erection of two synagogues in that congregation, Bond Street Synagogue (1896) and the new Holy Blossom Temple on Bathurst Street (1938). In 1892 he founded the first Jewish Benevolent Society in Toronto, and became president of the Federation of Jewish Charities. The building of the Federation was named after Scheuer. He was a member of the Toronto Board of Trade from 1886 on, and a justice of the peace from 1902 on. Scheuer was president of the Toronto branch of the Anglo-Jewish Association, of London.

SCHEY VON KOROMLA, Jewish family of industrialists, financiers and scholars. At the beginning of the 19th cent. three brothers, Joseph, Philipp and Max Schey, educated by their orthodox father and Talmudic scholars, directed a wholesale business at Kőszeg, Hungary.

Joseph Schey, the eldest of the brothers, went to Vienna to represent the firm, and succeeded because of his diplomatic ability. He was on good terms with the Austrian government.

PHILIPP (FÜLOP) SCHEY (b. Kőszeg, 1798; d. Baden, near Vienna, 1881), the second of the brothers, directed the business at Kőszeg. He was also on good terms with the government and the imperial court of Vienna, especially after the revolution of 1848, because he remained loyal to the House of Habsburg and refrained from participation in the Hungarian revolt. Emperor Francis Joseph expressly acknowledged Schey's attitude when he knighted him in 1859. The emperor also mentioned Schey's benevolence, which was in fact considerable. He erected at his own expense a synagogue and a hospital at Kőszeg, and contributed to charitable causes on a non-sectarian basis. Schey was the first Hungarian Jew to become a member of the nobility of Austria.

FRIEDRICH SCHEY VON KOROMLA (b. Kőszeg, 1815; d. Vienna, 1881), the nephew of Philipp Schey and the son of Max Schey, went to Vienna in 1832, and there studied at the Technikum. Then he entered (1835) the banking house of von Wertheimstein. In 1838 he became a partner of J. Landauer, his father-in-law. Upon the death of his wife Emilie Landauer (1817-1840), Schey married her sister Charlotte (1820-42), and after her death he married Landauer's third daughter, Hermine (1822-1904). Schey was honored by the emperor for his great services to silk manufacture in Austria and Hungary, which were acknowledged also at the London exhibition in 1867. He introduced worsted spinning into Austria, and actively promoted Austrian railways. He was vice-president of the bourse of Vienna, and a member of the boards of trustees of almost all the important banks of Austria. He was one of the founders of the commercial academy of Vienna, and continued to support that school until his death. He assisted many authors and artists, especially the dramatist and stage manager Heinrich Laube. When Laube intended to found the Wiener Stadt-Theater, Schey provided him with the necessary funds. In 1869 Schey was made a baron. He was member of the board of directors of the Jewish community of Vienna, and spent much of his money for charitable work and promotion of Jewish scholarship.

JOSEPH FREIHERR SCHEY VON KOROMLA (b. Vienna, 1853; d. Vienna, 1938), the son of Friedrich Schey von Koromla, was one of the greatest authorities on Austrian civil law. He became professor at the University of Vienna in 1885, and, after serving as professor at the University of Graz from 1893 to 1897, returned to Vienna, holding the most important chair of the faculty of law. His numerous publications dealt with Roman law, the civil law of modern Germany, and Austrian civil law. His treatise on the law of obligations according to Austrian civil law (3rd ed., 1907) was of great importance, and his edition of the German civil law adapted to Austrian civil law (21st ed., 1926) became a standard work. As a member of the Austrian upper house, Schey was an outstanding speaker of the Constitutional party. He was a liberal but, notwithstanding his descent from a family of wealthy financiers, opposed capitalism. From 1914 to 1916 Schey took an active, even decisive, part in the drafting of the revised Austrian code of civil law. After the first World War (1919) Schey became a member of the Franco-Austrian and Anglo-Austrian courts of arbitration, and in 1922 successfully negotiated with the Reparations Commission in obtaining important concessions for the republic of Austria. His son HERBERT BARON SCHEY VON KOROMLA, a banker, emigrated to New York city in 1938.

HUGO BIEBER.

SCHICK, BÉLA, pediatrician, b. Boglár, Hungary, 1877. He obtained his preliminary and professional education in the Austrian province of Styria, graduating from the medical department of the University of Graz (1900). For over twenty years he was connected with the University of Vienna, where he was appointed professor of pediatrics (1918). Invited to the United States as Harvey lecturer (1923), he remained in that country as pediatrician-in-chief to Mt. Sinai Hospital, New York city, and as clinical professor of diseases of children in Columbia University, the position made famous by Abraham Jacobi.

Schick achieved his reputation by a series of striking observations: the initial loss of weight occurring during the first few days of life can be offset by feeding the newborn with large amounts of carbohydrates; the stridor heard on expiration in an infant is evidence of tuberculosis of the bronchial glands (Schick sign); the estimation of the antitoxin-producing power of the

blood by the cutaneous reaction; individuals living in congested districts frequently become immune to diphtheria after tonsillectomy. His outstanding work was his discovery (1908-13) of the method for determining susceptibility to diphtheria (Schick test).

Among the case histories of Hippocrates, which laid the foundation of clinical medicine, is one which we recognize as diphtheria. Under the names of Egyptian disease and Syrian ulcer, Aretaeus the Cappadocian drew a vivid picture of its essential features. It is thus an ancient disease, and its virulence did not decrease with time. It is alluded to in the Babylonian Talmud, and was prevalent in the Middle Ages as throat pestilence. Diphtheria was among the first and worst epidemics that ravaged the New England colonists, and legislatures decreed a day of thanksgiving at their cessation. The murderous membrane of diphtheria, creeping from the tonsils to the fauces, inexorably suffocating its victims, makes it one of the cruelest diseases of the nursery. The identification of the bacillus by Klebs and Löffler, the production of antitoxin by Behring, the development of toxin-antitoxin by William Hallock Park and Abraham Zingher, and the introduction of the Schick test, which for the first time made it possible to separate immune and suspectible children, were the main steps in the modern conquest of diphtheria.

With the aid of the Schick test, the city of New York won a remarkable victory in preventive medicine, and continues to relegate diphtheria to the vanishing diseases. The Schick test, which began with a scratch, has written the name of Béla Schick on the roll of the benefactors of childhood.

Schick's published works include: *Serum Krankheit* (in collaboration with Clemens Pirquet; 1905); *Scarlet Fever* (with Theodore Escherich; 1912); *Pirquetsches System der Ernährung* (1918); *Child Care Today* (with William Rosenson; 1933). In addition, he wrote many articles on concentrated feeding in childhood, diptheria, the nutrition of newborn children, scarlet fever, and tuberculosis.

Schick was awarded the gold medal of the New York Academy of Medicine (1938), the Addingham gold medal, at Leeds, England (1938), and the gold medal of the Midwest Forum on Allergy, at Indianapolis, Ind. (1941). In 1942 a number of his pupils, associates and friends raised a fund of $2,000 for the establishment in his honor of a lectureship at Mt. Sinai Hospital to be known as the "Bela Schick Lectures." VICTOR ROBINSON.

SCHICK, JOSEPH, rabbi, b. Ónod, Hungary, 1892; d. New York city, 1938. He was educated at the Yeshiva in Bratislava, Slovakia, and at the Rabbinerseminar für das orthodoxe Judentum in Berlin. During the first World War Schick served in the Austro-Hungarian army as a chaplain, and received eleven decorations from the Austrian, German, Hungarian, Italian and Roumanian governments.

He was rabbi of Beth Israel Congregation in Budapest (1918-22), emigrated to the United States in 1922, and was active as rabbi of the congregations Chevrah Kadisha (1923-25) and the West Side Jewish Center (1926-38), both in New York city. His writings include *The Kaddish: Its Power for Good* (1928) and *Joseph's Harvest* (1932).

SCHIFF, an old Jewish family of Frankfort, Germany. The earliest member, Jakob Kohen Zedek Schiff, who is mentioned on the tombstone of his son, Uri Phoebus Schiff, as having discharged the function of Dayan at Frankfort, must have been born about 1370, which is the earliest date to which any contemporary Jewish family in Germany can be definitely traced. Uri Phoebus Schiff attained to a great age, as his tombstone mentions, and died in 1481; he must therefore have been born about the year 1400. The name occurs as one of the signs of the Judengasse as early as 1613; in Middle High German the word *Schiff* means a vial, and may have been used as the sign of

Béla Schick

an apothecary or physician. Another early member of the family was MEIR KOHEN ZEDEK SCHIFF, referred to as Parnas (president) of the community, who died in 1626.

The Schiff family intermarried with the Adlers, Oppenheims, Wertheimers, Günzburgs, Geigers, Glogaus, Mannheims and Hanaus, and one member married a cousin by the name of Zunz. A step-grandfather of the poet Heinrich Heine was named Schiff; he belonged to a branch of the family settled at Hamburg. Several members of the family became famous in various fields.

Lit.: Ullmann, A., *Familienregister des Jakob Hirsch Schiff und seiner Nachkommen* (1885); *Dietz, Stammbaum der Frankfurter Juden.*

SCHIFF, EDUARD, physician, b. Trieste, 1849; d. Vienna, 1913. He became lecturer in 1884 and assistant professor of syphilology and dermatology at the University of Vienna in 1901, and introduced the use of X-rays in the treatment of skin diseases and lupus (cancer). Schiff abandoned Judaism in 1899.

His published writings include: *Die Krankheiten der behaarten Kopfhaut* (Vienna, 1892); *Der gegenwärtige Stand der Röntgentherapie* (Breslau, 1901); *Erfolge der Röntgentherapie* (Vienna, 1904); *The Use of Cold in Dermatology* (Vienna, 1911).

SCHIFF, FRITZ, physician and pioneer in the field of blood group investigation, b. Berlin, 1889; d. New Rochelle, N. Y., 1940. Schiff's special fields were those of serology and bacteriology. He published the results of numerous experiments in these fields which in our days of blood transfusions have become of paramount importance. He was chief of department of the Municipal Hospital of Friedrichshain, Berlin, and from 1930 on lecturer at the University of Berlin and member of the Kaiser Wilhelm Institute in Berlin-Dahlem. He was forced to leave Germany in 1935.

He lived in New York city, where he worked at Beth Israel Hospital until he died of a heart attack. Schiff's writings include: *Technik der Blutgruppenuntersuchung* (1926); *Die gruppenspezifischen Substanzen des menschlichen Körpers* (1931); *Die Blutgruppen und ihre Anwendungsgebiete* (1933).

SCHIFF, HERMANN, writer, b. Hamburg, Germany, 1801; d. Hamburg, 1867. Schiff, originally named David Bär, studied at the University of Göttingen, and graduated in 1824. He went to Leipzig, then the center of the German publishing business and of literature. He took every opportunity of attracting the attention of publishers and critics, and wrote novels,

sketches and historical books, but failed to make a name for himself. He posed as a cousin of Heinrich Heine, although they were but distantly related. In 1836 Schiff returned to Hamburg, where he tried to earn a living as a writer, musician, actor, dancer, fencing master, or music copyist. All his efforts were in vain. He died in an almshouse.

Schiff abused his questionable talent, and was especially unfair in his treatment of Jewish subjects. In 1848 he published a novel (under the pseudonym of Hacham Isaac Bernays) entitled *Schief Levinche und seine Kalle,* a vicious lampooning of Jewish ceremonials. He was even more abusive in *Die Wilde Rabbizin* (1866). He had but a superficial knowledge of Jewish religion, rituals and history. Nevertheless, he published (1866) *Heinrich Heine und der Neu-Israelitismus,* presuming to deal authoritatively with the problems of emancipation, religious conservatism and the very existence of Judaism in modern civilization.

SCHIFF, HUGO, chemist, b. Frankfort, Germany, 1834; d. Florence, Italy, 1915. He became instructor at the University of Bern in 1857, and from 1863 on served continuously as professor at the Istituto di Studi Superiori at Florence, except for three years (1876-79) during which he taught at the University of Turin. In Florence he founded the university laboratory (1869). Schiff made many scientific contributions to the field of organic chemistry. He experimented in glucocides, derivatives of urea, and amino and gallic acids, and produced compounds of aldehydes and amines (the Schiff bases). His experiments in biurate reactions are also of importance. Schiff's writings include *Über einige Phenyl- und Naphtyl-Derivate.*

Lit.: *Berichte der chemischen Gesellschaft,* vol. 48, p. 1566; Wininger, S., *Grosse Jüdische National-Biographie.*

SCHIFF, JACOB HENRY, financier and philanthropist, b. Frankfort, Germany, 1847; d. New York city, 1920. Schiff was a descendant of a family known to have been settled at Frankfort as early as 1370 and which counted among its members several distinguished rabbinical and scholarly men, the earliest of whom, Jacob Kohen Zedek Schiff, was Dayan at Frankfort. Among the rabbinical authors included in the family are Meir ben Jacob Schiff, known as Maharam Schiff (d. 1644), and David Tebele Schiff, chief rabbi of the Great Synagogue, London (1765-92), and author of *Leshon Zahab.*

Schiff received his early education at the school of the Jewish Religious Society (Israelitische Religionsgesellschaft), established in 1853 by Samson Raphael Hirsch, who founded a movement intended to combine a high degree of modern secular learning with the most rigid observance of the traditional practice of the Jewish faith. Schiff adopted the vocation of his father, Moses Schiff, who was one of the brokers of the Rothschilds in Frankfort. In 1865, at the age of eighteen, he emigrated to the United States, where he became one of the leading bankers of the country. At first he was employed as a bank clerk by the firm of Frank and Gans, brokers in New York. Two years later he formed the brokerage firm of Budge, Schiff and Co., which was dissolved in 1873, whereupon he went to Europe and established connections with some of the leading German banking houses. He returned to New York in 1875 and married Therese Loeb, daughter of Solomon Loeb, head of the banking house of Kuhn, Loeb and Company. Schiff joined the firm and displayed such acumen in financial affairs that he was made head in 1885, when Loeb retired.

There were few important financial transactions in that period of tremendous industrial expansion with which Schiff was not in some way connected. Schiff's firm helped in the reorganization of the Union Pacific Railroad (1897) and in the acquisition by that system of the Southern Pacific and other railroads. He was vice-president of the New York Chamber of Commerce and active director of many important corporations and trust companies. Before he reached the age of fifty he had acquired a reputation throughout the country as one of the greatest financiers among New York bankers, and was respected and honored as such until his death.

Schiff's firm also engaged in underwriting loans to foreign governments, municipalities, and the like. His outstanding achievement in international finance was the floating of a bond issue of $200,000,000 for the Japanese government at the time of the Russo-Japanese War in 1904 to 1905. Because he viewed the czarist regime as the enemy of all mankind on account of its oppression of Jews and of other minorities, Schiff welcomed this opportunity of aiding Japan. In appreciation of the services rendered by Schiff, the emperor of Japan conferred upon him two of the highest Japanese decorations. Schiff was one of the founders of the Japan Society, and a staunch supporter of good relations between Japan and the United States; he had abiding faith in Japan and numbered many Japanese among his intimate friends. However, at the beginning of the first World War he deeply regretted seeing Japan on the side of Russia, and deplored its obvious design to make the Chinese people permanent vassals. He resigned from the Japan Society. In his later life he recognized that he had innocently aided in the creation of a menace in the shape of Japanese imperialism. His deep resentment against the Petrograd ruthlessness did not change, for even as late as 1915 he exerted his powerful influence to prevent the granting of a war loan to Russia, although this procedure entailed a great personal financial loss.

Schiff's contribution to the development of American industry alone made him an outstanding figure in American economic history. It is, however, his philanthropic activities which entitle him to a leading place in the American roll of honor and which have left a more permanent impress upon the development of the United States. There was scarcely a good work of public import of any description which Schiff did not encourage with his moral and material support. These public activities were inspired by his affection for his adopted country, an affection which was combined with religious reverence. He joined at various times in memorial projects like those of the Hudson-Fulton celebration in 1909, the Washington Manor House Fund, the Alexander Hamilton Association, the erection of a statue of General William Tecumseh Sherman, and numerous similar patriotic projects.

Typical of the wide range of his interest were his large donations to the Henry Street Settlement for Nurses (of which Schiff was a co-founder, together with Adolph S. Ochs, Solomon Loeb and Lillian D. Wald), the Society for Ethical Culture, the Salvation Army, Paul Ehrlich's experiments which culminated in the discovery of salvarsan, efforts in behalf of the improvement of the political, social, and economic conditions of Negroes, movements for the enlightened treatment of the inmates of penal institutions, and many other public causes. While giving generous support to these and many other non-sectarian and non-Jewish philanthropic activities and institutions, he did not overlook the needs of the Jewish community, for there is hardly a single important Jewish charitable institution in New York city to which he did not contribute munificently. The Home for Aged and Infirm Hebrews, the Hebrew Infant Asylum, the Downtown Sabbath School, the Hebrew Technical School for Girls, the Emanu-El Sisterhood for Personal Service, the United Hebrew Charities (later the Jewish Social Service Association), the Hebrew Free Loan Society, the Hebrew Sheltering Guardian Society, the Educational Alliance, and the Central Jewish Institute, are some of the organizations in which he took an interest

Jacob H. Schiff. From a rare photograph in the Warburg family collection

and which he aided. For many years he served as an officer of the Young Men's Hebrew Association of New York city, to which he gave the building occupied by it from 1900 to 1929, when it was replaced by the present edifice. However, the Montefiore Hospital for Chronic Diseases, an institution which was founded by him in the year 1884, occupied more of Schiff's time and interest than any other single philanthropic institution with which he was connected. He served as its president from 1885 to 1920, visiting the Home almost every week and making the personal acquaintance of its many patients. It was only sheer physical exhaustion which forced him to relinquish this office.

It was natural that Schiff's generosity should give him wide recognition as leader in many important fund-raising projects. One of the earlier noteworthy movements of this kind was the collection of funds for the relief of the victims of pogroms which took place in Russia from 1903 to 1905. Schiff was the treasurer of a committee voluntarily set up by leading American Jews under the chairmanship of Oscar S. Straus. This Committee for the Relief of Victims of Russian Massacres succeeded in raising the unprecedented sum of about $1,750,000. The conviction of the members of this committee that the Jewish community of the United States needed a permanent organization to deal with similar emergencies was one of the factors which led to the establishment (1906) of the American Jewish Committee, of which Schiff was one of the leading founders. In 1917 Schiff was active in the raising of a fund of $5,000,000, jointly for the American Jewish Relief Committee and the Jewish Welfare Board, when the activities of the latter in ministering to the social and spiritual needs of Jews in the armed services were greatly expanded.

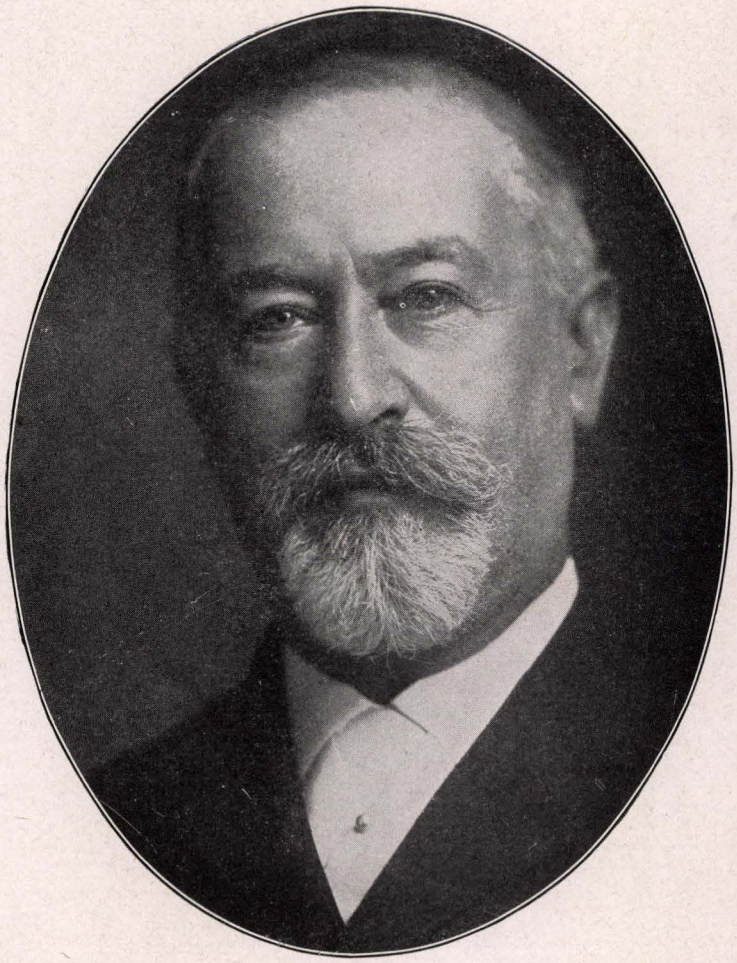
Schiff's appreciation of the importance of higher Jewish learning was evidenced by his generous support of the rabbinical departments of the Jewish Theological Seminary of America, of New York, and of the Hebrew Union College, of Cincinnati; his establishment of the Teachers College Fund to assist the Teachers Institute of the Seminary and to make possible the founding of a similar school by the Cincinnati college; his donations for the acquisition of great collections of Hebrew books and manuscripts, such as the Steinschneider and Deinard collections, which he gave to the Seminary and the Library of Congress, collections which have become basic to scholarly research; his support of the Jewish Division of the New York Public Library; his creation of the Semitic Museum of Harvard University; and his provision for its archeological expedition to Samaria, the capital of the ancient kingdom of Israel, and the subsequent publication of two comprehensive volumes, which are of immense importance to students of archeology.

Schiff also helped make possible the production of the new English translation of the Holy Scriptures, an important step in the promotion of mass education of Jews. This translation, which was the cooperative work of the Jewish Publication Society of America and the Central Conference of American Rabbis, not only ranks as one of the best ever made, but is also of special importance because it made the sacred words available in an English rendering to those who were repelled by other translations because of Christological references. He also gave the Jewish Publication Society a special fund for the publication, in English translation, of a series of Jewish classics, which included the poems of Solomon ibn Gabirol, Judah Halevi, and Abraham ibn Ezra, which makes available to persons of average education the works of Jewish poets and scholars which would otherwise remain unknown except to the learned. Schiff was also one of a small group of men who contributed to a fund which made possible the completion and publication of the *Jewish Encyclopedia* projected by the late Isidore Singer.

He also devoted himself ardently to the furtherance of general education; one of Schiff's first interests in this direction was Barnard College, and his gifts to that institution are said to have exceeded the $1,000,000 mark. He furthermore founded at Columbia University a chair in social economics and established scholarships for students in that field.

As a leading member of the executive committee of the American Jewish Committee, Schiff was personally active in the Committee's efforts to bring about the abrogation of the commercial Treaty of 1832 between the United States and Russia because of the Russian

government's persistent violation of that treaty in denying admission to Russia of American citizens of the Jewish faith. He was a member of delegations which discussed the subject with Presidents Theodore Roosevelt and William Howard Taft, and appeared before Congressional committees in support of the termination of the treaty.



He also actively supported efforts to organize the Kehillah, the Jewish Community of New York city, and gave that organization a fund for the establishment of its Bureau of Jewish Education, which outlasted the Kehillah itself and did pioneer work in the direction of improving the methods, curricula and textbooks of Jewish religious schools.

Although a Reform Jew, a member of Temples Emanu-El and Beth-El, and a prominent supporter of the Union of American Hebrew Congregations, Schiff always retained his affection for and attachment to the traditional observances of his youth in Frankfort. He generously supported both the Hebrew Union College (Reform) and the Jewish Theological Seminary of America (Conservative).

For many years Schiff was an outspoken opponent of Jewish nationalism. He also steadfastly objected to Zionism without a religious platform. When, however, the first World War revealed the need for a refuge for Jews who could not live happily and creatively in the countries of persecution, he was ready to admit this necessity in an address before the League of the Jewish Youth in April, 1917, and to promise his aid in the rebuilding of Zion as a great cultural center for the whole of Israel. He purchased stock in the Jewish Colonial Trust, founded by Theodor Herzl in 1899, and helped to finance loans for Palestinian wine-growers. Previously, in 1914, when the War had cut the Jews of Palestine off from sources of support abroad, Schiff contributed one-fourth of the fund of $50,000 for which Henry Morgenthau, Senior, then United States Ambassador at Constantinople, made an urgent appeal to the American Jewish Committee and the provisional committee for General Zionist Affairs.

He gave $100,000 for the founding of the Haifa Technicum at the request of the Hilfsverein der Deutschen Juden, which projected the plan. When the Hilfsverein, which favored instruction in German instead of in Hebrew, came into conflict with the Palestinian view of Jewish education, Schiff sided with the Palestinians and withdrew from the directorate of the Technicum. He subsequently financed the purchase of the Haifa institution by the Zionist executive.

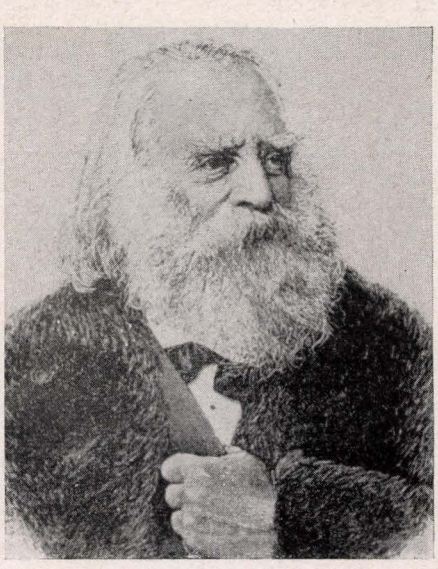
With the death of Schiff, a life rich in achievements, a life of extraordinary service to mankind, came to its end. In the words of the memorial resolution of the

Jacob H. Schiff at the height of his career

American Jewish Committee, "he never wearied of doing good and his helping hand and his loving heart were never withheld. . . . [He was] a noble exemplar of an American and a Jew, jealous for his country and zealous for his faith and always prepared to do what was in his power to secure justice for his brethren and for all men wheresoever it was denied them and to add to the justice which he thus demanded

Part of the funeral of Jacob H. Schiff in New York, showing the crowd gathered before Temple Emanu-El

that goodness and mercy to which the weak are entitled at the hands of the strong."



Jacob H. Schiff, in May, 1875, married Therese Loeb, daughter of Solomon Loeb. His children were Frieda, who in 1895 married Felix M. Warburg, and Mortimer, who in 1901 married Adele Neustadt. Upon his death he was survived by his wife and seven grandchildren. Schiff was a great upholder of family life. Every Friday evening worship would be held in his home, together with prayers.

HARRY SCHNEIDERMAN.

Schiff—His Life and Letters* (1929); Deutsch, Gotthard, *Essays on Jewish History,* vol. 2, p. 247 et seq.; *Publications of the American Jewish Historical Society,* No. 26 (1918) 48; *American Jewish Year Book,* vol. 23 (1921) 21-64; *American Hebrew,* vol. 106, p. 320; vol. 107, pp. 585, 625 et seq., 630 et seq.; vol. 113, p. 525; Jan. 11, 1929, p. 362; Feb. 9, 1906, p. 401; June 7, 1929, p. 100; May 20, 1932, p. 24; Oct. 7, 1932, p. 173; Feb. 3, 1933, p. 226; Oct. 2, 1936, p. 382; Jan. 22, 1937, p. 800; *B'nai B'rith Magazine,* vol. 43, p. 210; *American Israelite,* March 22, 1878; Sept. 5, 1913; March 30, 1916; *New York Times,* May 22, 1916; *Jüdisches Tagblatt,* Jan. 16, 1917; the general press in the United States of Sept. 26, 1920.

SCHIFF, LUDWIG MOSES, banker, philanthropist and Jewish communal worker, b. Frankfort, Germany, 1855; d. Frankfort, 1930. He was the brother of Jacob H. Schiff. He was a leading banker of his native town and strengthened financial relations between Germany and New York. For many years Schiff was a factor on the board of directors of the Jewish community of Frankfort. He supported effectively the Hilfsverein der Deutscher Juden and the Central-Verein deutscher Staatsbürger jüdischen Glaubens. Together with Professor Moritz Sobernheim, his son-in-law, he contributed to the support of Polish Jews during the first World War (1914-18). Schiff was also a founder of the University of Frankfort, whose senate bestowed honorary membership upon him. In memory of his son Manfred, Schiff endowed the Schiff foundation for medical research at Frankfort.

SCHIFF, MEIR BEN JACOB HAKOHEN, rabbi and Talmudist, called MaHaraM Schiff, b. Frankfort, Germany, 1605; d. Frankfort, 1841. In 1622 he became rabbi in Fulda (Hesse), where a school and a B'nai B'rith lodge were later named after him. He was author of the profound *Hiddushe Halachoth MahaRaM Schiff,* notes to the Talmud and *Shulhan Aruch,* which were published in many editions of both these works and which were also furnished with commentaries. His sermons and lectures were replete with warmth, humor and wit, his Bible commentaries effective and to the point. Schiff was chosen rabbi in Prague, but death prevented his occupancy of that pulpit.

Moritz Schiff

Lit.: Horovitz, *Frankfurter Rabbinen,* vol. 2; Talmudicus, "Maharam Schiff," a commemorative article, *Ost und West,* vol. 12 (1910), col. 35 et seq.

SCHIFF, MORITZ, physiologist, b. Frankfort, Germany, 1823; d. Geneva, Switzerland, 1896. In 1849 he participated in the Baden rebellion as a surgeon to the rebel army, and was forced to escape abroad. Subsequently he became professor of comparative anatomy at the University of Bern in 1854, and taught physiology in Florence in 1863 and in Geneva in 1876. Schiff, considered one of the great physiologists of the 19th cent., wrote numerous monographs on the function of the spinal marrow and brain, degeneration of the nerves and their regeneration, influence of the nerves on the function of the different organs, the activity of the central nervous system and on the reaction of the brain to stimuli on the sense organs. He also investigated sugar and bile formation in the liver, and the function of the spleen and other organs. In addition, he described the South American fauna in Lucien Bonaparte's *Conspectus Avium.*

His works include: *Untersuchungen zur Physiologie des Nervensystems mit Berücksichtigung der Pathologie* (1855); *Muskel- und Nervenphysiologie* (1858-59); *Untersuchungen über die Zuckerbildung in der Leber und den Einfluss des Nervensystems auf die Erzeugung der Diabetes* (1859); *Sul systema nervoso encefalico* (1865); *Leçons sur la physiologie de la digestion* (1868); *Sulla misura della sensazione* (1869); *De l'inflammation et de la circulation* (1875).

SCHIFF, MORTIMER L., banker and communal and civic leader, b. New York city, 1877; d. New York city, 1931. He was the son of Jacob H. and Therese (Loeb) Schiff. He had his preparatory training in private schools, and attended Amherst College, graduating in 1896 and receiving the honorary A.M. degree in 1906. Upon leaving college he studied railroading with the New York, Ontario and Western and the Great Northern Railroads, after which he spent two years in Hamburg and London studying European banking methods. When he returned to the United States (1900), he joined his father's banking concern of Kuhn, Loeb and Co., of which he was a senior member at the time of his death. He was a director of many industrial and financial enterprises, such as the Chemical Bank and Trust Co., Western Union Telegraph Co., Pacific Oil Co., Los Angeles and Salt Lake Railroad, American and Continental Corporation, American Railway Express Co., and United States Mortgage and Trust Co., and vice-president of the New York State Chamber of Commerce.

Although much of his time was necessarily given to financial activities, he devoted considerable attention and energy to various public causes. Of these, the advancement of scouting was particularly close to his heart. The Boy Scouts of America, of whose national

council he was unanimously elected president shortly before his death, was frequently the beneficiary of his munificence. His interest in this cause was not confined to its promotion in the United States, but extended to other countries. In connection with the World Jamboree in England (1929) when 50,000 boys, representing seventy-three countries, gathered for two weeks in friendship, understanding and good-will, he presented $50,000 to Lord Robert Baden-Powell, Chief Scout of the World, to be used for the extension of international friendship through scouting.

Schiff also took a direct and active part in the work of the Federation for the Support of Jewish Philanthropic Societies of New York city. He was its second largest contributor, and this agency alone recorded the receipt from him of $625,000 since its founding in 1917. Like his father, Schiff was a patron of Jewish learning. In 1923, with a contribution of $50,000, he made possible the acquisition by the library of the Jewish Theological Seminary of America of the notable collection of Elkan N. Adler of London.

Schiff was an early protagonist of the view that a satisfactory environment for children is a potent factor in assuring their development into good citizens. This view motivated his attachment to the boy scout movement and also to other projects for the improvement of the conditions of young people. He served for many years as president of the Jewish Board of Guardians of New York. In recognition of his services in this field he was appointed delegate to the State Conference of Charities and Correction in Syracuse, N. Y. (1912), and by Governor William Sulzer to the annual conference of the American Association of Officials of Charities and Correction in Springfield, Ill. (1913).

The Springfield (Mass.) Y.M.C.A. College honored him (1926) with the degree of Master of Humanics. The citation emphasized his breadth and sympathy with, and his loyal devotion to, the spiritual interests and welfare of boys and young men.

The range of Schiff's philanthropic interests was wide, including, besides the organizations already mentioned, such varied causes as those of the Cathedral of St. John the Divine, Young Men's Christian Association, New York Genealogical and Biographical Society, Henry Street Settlement, Park Association of New York, and scores of other organizations. He was president of the Provident Loan Society, a trustee of the Baron de Hirsch Fund and of the Jewish Theological Seminary of America, and a member of the board of managers of the New York Zoological Society and of the New York Botanical Gardens.

During the first World War Schiff performed many valuable services, in cooperation with both the government and relief and social service agencies. He was a member of the executive committee of the War Work Council of the Y.M.C.A., as well as chairman of the finance committee of the Jewish Welfare Board. He represented both organizations in France. One of his most important war services was as a member of the Committee of Eleven for the coordination of Army and Navy Agencies.

HARRY SCHNEIDERMAN and EDWARD JELLENKO.

Lit.: American Hebrew, March 6, 1925, p. 499; Aug. 9, 1929, p. 360; Feb. 28, 1930, p. 539; May 8, 1931, p. 662; June 12, 1931, p. 75; June 19, 1931, p. 88; Oct. 27, 1933, p. 397; (Mrs. Mortimer Schiff) July 15, 1932, p. 193; *Publications of the American Jewish Historical Society,* No. 33 (1934), 31; No. 35 (1939) 62.

JOHN MORTIMER SCHIFF (b. Roslyn, N. Y., 1904), banker, was a son of Mortimer L. Schiff. He completed his studies at Yale (B.A., 1925) and at Oxford University (1927). From 1927 to 1929 he was with the Bankers Trust Company of New York and the Missouri Pacific Railway; he then entered the employ of Kuhn, Loeb and Company, and became a partner of the firm in 1931. In 1937 Schiff became president of the Henry Street Settlement, succeeding Lillian D. Wald, and he served on the finance committee of that institution. He was a member of the executive committee of the New York and Nassau County chapters of the American Red Cross and of the Boy Scouts of America, a trustee of the New York Zoological Society, the Provident Loan Society, Hampton Institute, New York University and other institutions, and in 1939 served on the finance committee of the New York World's Fair. In 1940 he entered active service as lieutenant in the United States Navy and from 1940 to 1942 he was chairman of the Army and Navy Committee of the Jewish Welfare Board, of which he was a trustee.

Mortimer L. Schiff as president of the national council of the Boy Scouts of America

DOROTHY SCHIFF BACKER (b. Roslyn, N. Y., 1903), publisher, was a daughter of Mortimer L. Schiff. In 1932 she married George Backer, and in 1942 succeeded him as president and publisher of the New York *Post.* In this capacity she effected many changes in the format of the newspaper, such as the tabloid size of the pages and the introduction of magazine features.

SCHIFF, OTTO MORITZ, communal worker, b. London, 1876. He was the second son of Philipp Schiff, and a nephew of Jacob H. Schiff. In his early manhood Schiff became absorbed in Jewish communal work; when the persecution of the Jews in Eastern Europe and Germany increased he devoted much time to organizing British relief. He was president of the Jews' Temporary Shelter and chairman of the German Refugee Committee. After the occupation of Czechoslovakia (1939) he was among the first to answer the appeals of the Jews of that country, and he especially organized assistance to the Carpatho-Ruthenian Jews.

In 1939 Schiff was appointed (by King George VI) a Companion in the Civil Division of the Order of the British Empire, after having been nominated some years before an officer of the same order.

SCHIFFER, EUGEN, German statesman and jurist, b. Breslau, Germany, 1860. He had a Prussian civil service career, and in 1916 became supervisor of the law department in the Prussian war office, in 1917 under-secretary of state, and in 1918 secretary of the treasury of the Reich. From 1903 to 1918 he was a national-liberal member of the Prussian diet, from 1911 to 1917, as representative of the same party, a member of the Reichstag, from 1919 to 1920 democratic member of the Weimar Assembly, and from 1920 to 1924 democratic member of the Prussian diet and the Reichstag.

In 1919 Schiffer, who had renounced Judaism, became Reich finance minister and vice-chancellor in Scheidemann's cabinet. He held the same offices under Bauer (1920) and was minister of the interior in Wirth's cabinet (1921). He negotiated an economic treaty with Poland in Geneva (1922-23), represented Germany at the International Court of Arbitration, The Hague, and finally became president of the Academy of Administration in Berlin. He retired in 1933.

Thereafter he acted as legal adviser of the banking house of Mendelssohn and Co. in Berlin until its "Aryanization," and as member of the board of the Petschek interests in Prague until the Nazis' march on that city in 1939. Later he had to leave his own home. When last heard of he was living in Berlin with Otto Leibmann, former publisher of the *Juristische Wochenschrift,* who died in the summer of 1942.

Many of his parliamentary speeches were published. They include: *Feinde und Freunde* (1916); *Deutschlands Finanzlage nach dem Krieg* (1919); *Von der Nationalversammlung zum Reichstag* (1920); *Die deutsche Justiz* (1928); *Zusammenbruch und Wiederaufbau des Reichs* (1929); *Sturm über Deutschland* (1932).

SCHILDER, PAUL FERDINAND, psychiatrist, b. Vienna, 1880; d. New York city, 1940. He studied at the Universities of Vienna (M.D., 1909) and Halle (Ph.D., 1911). In 1914 he entered the Austrian army, serving as a physician throughout the first World War. Schilder became assistant professor at the University of Vienna (1925), but in 1929 he emigrated to the United States, where in the same year he became clinical director of the psychiatric division of Bellevue Hospital, New York, and research professor of psychiatry at New York University.

His published works include: *Hypnosis* (with O. Kausers, 1926); *Introduction to a Psychoanalytic Psychotherapy* (1928); *Brain and Personality* (1931); *The Image and Appearance of the Human Body* (1935); *Psychotherapy* (1938).

SCHILDKRAUT, JOSEPH, actor, b. Vienna, 1896. A son of Rudolph Schildkraut, he played with his father under Max Reinhardt in Berlin (1913-17) and under Alfred Bernau in Vienna (1917-20). In 1921 he joined the New York Theatre Guild, appearing in the title role of *Liliom* in 708 performances and in *Peer Gynt* for a full season. Subsequently he played in the Civic Repertory Theatre, New York city, impersonating leading characters in *The Affairs of Anatol; Romeo and Juliet* (1931); *Alice in Wonderland* (1933) and other important productions. He made his Hollywood debut in *Orphans of the Storm* with Lillian Gish, and was also seen in *Viva Villa, Crusade, Suez, The Rains Came,* and many other films. In 1938 he received the 1937 Motion Picture Academy Award for the best supporting actor in his portrayal in *The Life of Emile Zola.*

Schildkraut returned to Broadway, being starred with Tallulah Bankhead in *Clash by Night* (1941-42) and he shared with Eva Le Gallienne the leading roles in *Uncle Harry* (1942). His only appearance on the Yiddish stage, in the Yiddish Theatre Army and Navy Relief show, occurred in 1942.

Rudolph Schildkraut

SCHILDKRAUT, RUDOLPH, actor, b. Constantinople, Turkey, 1862; d. Hollywood, Cal., 1930. He won fame as a comedian and character actor on the Austrian and German stages and from 1905 on was a leading member of Max Reinhardt's company. He first appeared in the United States (1910-11) as the star of a German company at the Irving Theatre, New York city. There he studied the Yiddish language and followed a call to the Yiddish stage, making a deep impression in *The Inner Man* and *The Merchant of Venice* (as Shylock). In 1920 he again returned to New York, and after appearing at the Yiddish Art Theatre he made his debut on the English stage in Sholom Asch' *God of Vengeance,* which created a stir and almost a scandal; it led to the actor's arrest and subsequent release.

Later Schildkraut established an intimate theatre in the Bronx, New York, where he presented to the Yiddish-speaking public Ibsen, Strindberg and Shakespeare. Previously Schildkraut had appeared in several motion pictures in Germany and also in Carl Laemmle productions in the United States. He returned from his Bronx stage to Hollywood, where Cecil B. de Mille featured him in many screen dramas, including *His Country, The Main Event* and *King of Kings.*

Great as he was on the German and English stages, Schildkraut really found himself when he joined the Yiddish theatre. He excelled in the portrayal of Jewish fathers, those patriarchs who in the eyes of their children were the terrestrial representatives of God himself.

SCHILLER, A. ARTHUR, professor of law, b. San Francisco, 1902. He studied at the University of California (J.D. 1926) and at Columbia University (J.D., 1932). In 1937 he was appointed associate professor of law at Columbia University. He was a member of the American Oriental Society (1927-41) and of the Riccobono Seminary of Roman Law, Washington, D. C., from 1932, having been elected president of the seminary (1937-38).

Schiller served also as secretary-treasurer of the Academic Committee for the Hebrew University, and in 1943 was a member of the Jewish Academy of Arts and Sciences. His published books include: *Source Book of Roman Law* (in

collaboration; 1929-30); *Ten Coptic Legal Texts* (1932); *Texts and Commentary for the Study of Roman Law* (vol. 1, 1936); *Military Law and Defense Legislation* (1941).

SCHILLER, FRIEDRICH, non-Jewish German author, b. Marbach, Germany, 1759; d. Weimar, Germany, 1805. Some of his philosophical and critical essays are concerned with the Bible. Of these, "Über die Sendung Moses" (1790) and "Etwas über die älteste Menschengesellschaft nach dem Leitfaden der mosaischen Urkunde" are outstanding. These treatises lent themselves to philosophical reflections and critical comments concerning the Jews as bearers of some of the ideas which encompass all mankind. In 1801 Schiller adapted for the stage and first produced Gotthold Ephraim Lessing's *Nathan der Weise.* He frequently employed phrases from the Bible and paraphrases of Biblical ideas in his drama and verse, for example in the tragedies *Die Räuber, Die Jungfrau von Orleans* and *Maria Stuart.* His ode "An die Freude," for which Beethoven composed the music in the last movement of his Ninth Symphony, was inspired by *Ps.* 102.

Schiller's experience with Jews was limited. Among the first Jews he met was a bookseller of Strelitz, called Michaelis, with whom the young author had business contacts. In his latter years he made the acquaintance of Henriette Herz. He was exalted by Heinrich Heine as the poet of freedom and world citizenship. The Jews of Eastern Europe translated much of his writings into Yiddish and Hebrew, such as "Lied von der Glocke," "Worte des Glaubens," "An die Freude" and "Resignation." They gave him of their admiration more readily than to his greater contemporary, Johann Wolfgang von Goethe (see Franzos, Karl Emil, "Schiller in Barnow"). Jews all over the Western world actively participated in the Schiller centenaries held in 1859 and 1905. OSKAR FRANKL.

Lit.: Frankl, Oskar, *Schiller in seinen Beziehungen zu Juden und zum Judentum* (1905); Schapiro, Israel, *Schiller und Goethe im Hebräischen* (1935).

SCHILLER, HERBERT MAURICE, professor of law, b. Salt Lake City, Utah, 1893. He studied at the University of Utah and at Harvard University (LL.B., 1922). He became a member of the Salt Lake City board of education (1931), and resigned when he was elected judge of the Third Judicial District Court of the state of Utah (1933-41), the first Jew in Utah to be elected to the district bench. In 1941 he was appointed by the governor a member of the State Teachers Retirement Board. As a member of the Utah Bar Association, he was instrumental in the revision of the Criminal Code of Utah, and he was influential also in the revision of the juvenile court system of the state. Appointed professor of the University of Utah in 1940, he still held this position in 1943.

Schiller was president of the Western Probation and Parole Conference (1941-42), member of the advisory council of the National Probation Association, and vice-president of the State Conference of Social Workers of Utah (from 1942). His Jewish communal affiliations included membership on the board of the United Jewish Council of Salt Lake City (from 1937) and membership on the executive committee of the National Council of Jewish Federations and Welfare Funds, Western States Region (1936-38).

SCHILLER-SZINESSY, SOLOMON MAYER, rabbi and Hebraist, b. Óbuda, Hungary, 1820; d. Cambridge, England, 1890. He received rabbinical diplomas from Aaron Chorin and Löw Schwab, and the Ph.D. degree from the University of Jena. From 1844 to 1848 he was a preacher in the Jewish community of Eperjes; at the same time he taught Hebrew in the Lutheran College of that city. At the outbreak of the national revolution in 1848 he traveled about the country, exhorting his coreligionists to join the revolutionary army. He himself joined the engineering corps as a private, and distinguished himself by obstructing the enemy's progress. Captured by the Austrians, he managed to escape on the eve of his intended execution, and reached Ireland. From there he went to Manchester, England, where he served as rabbi and preacher to the United Congregation and subsequently for a brief period to the Reform synagogue.

In 1864 he went to Cambridge to study Hebrew manuscripts, and as a result of his researches published *Catalogue of the Hebrew Manuscripts Preserved in the University Library, Cambridge* (1876). From 1866 on he was teacher of Talmud and rabbinical literature in the University of Cambridge; later he became reader in rabbinics. At the time of the Tiszaeszlár blood accusation he started a movement to combat superstition. Among Schiller-Szinessy's published works are *David Kimhi's Commentary on the Psalms, Book* I and *Massa Baarab,* a record of Romanelli's travels in Morocco in the late 18th cent.

Lit.: Menorah Journal, vol. 8 (1890) 190-92.

SCHILLINGER, JOSEF, composer and teacher, b. Kharkov, Russia, 1895. After studying at the St. Petersburg Conservatory, he became dean of the State Academy of Music in the Ukraine (1918-22). After 1922 he served also as teacher of composition at the State Institute of Music Education in Leningrad. From 1925 to 1928 he was composer for the State Institute of Drama. He settled in New York city in 1929, where he began a successful career as a teacher of composition, his pupils including George Gershwin. He lectured at the New School for Social Research and at the American Institute of the City of New York.

Schillinger composed music in a variety of forms, revealing more technical dexterity than imagination. In 1927 he was commissioned by the Soviet government to write a symphonic rhapsody, *October,* to commemorate the tenth anniversary of the Soviet Union. He composed other orchestral works, compositions for the theatre, and some chamber music.

Lit.: Ewen, David, *Composers Of Today* (1934).

SCHIMONOWITZ, DAVID, *see* SHIMONOWITZ, DAVID.

SCHINDLER, BRUNO, Sinologist, b. Leschnitz, Upper Silesia, Germany, 1882. He studied Chinese language and literature at German, British, American and French universities, and for many years remained in the Far East for study and research, as a research fellow of the Staatliches Forschungsinstitut of Leipzig. He was editor of the *Hirth Anniversary Volume,* presented in 1923 to Friedrich Hirth, professor at Columbia University, by a number of authorities on sinology, and of *Occident and Orient,* presented to Moses Gaster in 1936 on the occasion of his eightieth birthday.

Schindler edited also *Asia Major* (1924-33) and *Das chinesische Wohnhaus* (1935). He published his own studies under the titles of *Das Priestertum im alten China* (1918); *On the Travel Wayside and Wind Offerings in Ancient China* (1924); and *Chinesische Frauengestalten* (1925). After the Nazis' advent to power Schindler was for some time professor at the University of Tokyo, Japan, and then he went to London.

SCHINDLER, KURT, conductor and editor, b. Berlin, 1882; d. New York city, 1935. As a young man Schindler assisted Mottl and Richard Strauss in Germany, and then migrated to New York in 1905 to be assistant conductor at the Metropolitan Opera House. In 1909, at the suggestion of his friend Gustav Mahler (then conductor of the Philharmonic), he organized for him a group of singers to perform Debussy's *Sirènes.*

This group, first called the MacDowell Chorus, soon branched out under its new name of Schola Cantorum in concert programs which were most novel and unconventional for the New York of those days.

Schindler used these programs to introduce masterpieces which he had a flair for discovering in every land and every epoch. He was more responsible than any other one man for the diffusion of Russian choral music and Russian song in the United States, this latter also through his excellent edition and translations, and he brought Russian operas, such as *Sadko,* long before they were given at the Metropolitan. He knew how to mix the latest confections of Ornstein or Malipiero with forgotten gems of Brahms and Schumann or with the classics of Bach and Palestrina, and he seasoned them all with varieties from the folk music of every country in Europe.

But it was on his favorite Spanish music that Schindler lavished his talents both of presentation and description. He first made the Western Hemisphere acquainted with Basque and Catalan music—whole programs were devoted to it. Schindler collected many picturesque ballads for the delectation of his audiences.

He is, of course, best known as the founder and first conductor of the Schola Cantorum of New York which, in the short space of seventeen years, he made world-famous. But he distinguished himself in other directions as well. In the same period he was editor for the Schirmer and Ditson music houses, and organist and choir master at Temple Emanu-El. The years 1928 to 1934 covered his journeys to Spain, and at this time he also established a new type of musical instruction at Bennington College.

The culmination of his life work was his master work of research, *Folk Music and Poetry of Spain and Portugal,* as that work is entitled in the posthumous volume of his collections issued in 1941 by the Hispanic Society under the editorship of Federico de Onis of Columbia University. In 1922 he had been made honorary president of the Fiesta Musical Bienal of Catalonia. He had introduced into the programs of the Schola Cantorum forty-nine separate Spanish compositions. But it was not until after the tragedies of his private life and after his departure from the Schola Cantorum (1926) that he found his way to that amazing achievement in the assemblage of 985 freshly discovered folk songs and ballads from seventeen provinces of Spain and from Portugal. Historically, the importance of his achievement is too obvious for comment.

Other famous editions by Schindler include: *A Century of Russian Song; Masters of Russian Song; Old Spanish Sacred Motets; A Cappella Choruses from Russian Liturgy; Sixty Russian Folk Songs; Modern Spanish Choral Works.*

HUGH ROSS.

SCHINDLER, RUDOLF, physician, b. Berlin, 1888. He studied at the Universities of Freiburg and Berlin, graduating from the latter in 1912.

From 1913 to 1914 he was assistant at the Pathological Institute of Berlin, and from 1919 to 1924 assistant at the hospital of München-Schwabing. In the first World War he was captain in the Bavarian Medical Corps, and was awarded the iron cross and the Bavarian Military Order.

In 1922 Schindler invented the gastroscope which, perfected in 1932, became known as the Wolff-Schindler Gastroscope. It makes possible an accurate diagnosis of gastritis and advances the knowledge of inflammatory conditions in the stomach. In 1934 Schindler, as a voluntary exile, became visiting professor (1934-36) and assistant clinical professor (from 1936 on) at the University of Chicago. He was attending gastroscopist at Michael Reese Hospital from 1936 on. He was awarded the 2nd class gold medal for excellence of presentation of an exhibit on chronic inflammation of the stomach as studied with the flexible gastroscope, and a prize for an exhibit on gastroscopy by the Illinois State Medical Society.

Schindler published a textbook and atlas of gastroscopy (1923), studies on the nervous system and hemorrhages, many papers on gastroscopy, gastrophotography and neuroses of the alimentary tract, and a book entitled *Gastroscopy; The Endoscopic Study of Gastric Pathology* (1937).

SCHIPPER (SCHIPER), IGNACY, *see* SHIPER, IGNAC.

SCHIPPER, JACOB, philologist, b. Oldenburg, Germany, 1842; d. Vienna, 1915. He studied at several universities of Germany and at Paris, Rome and London. In 1867 he became a contributor to Bosworth's *Anglo-Saxon Dictionary,* and in 1872 he was appointed professor at the University of Königsberg, Prussia, after having been baptized. From 1877 until his death he was professor of English language and literature at the University of Vienna. Schipper was mainly interested in English versification and in English literature of the 14th and 15th centuries. He edited various English medieval chronicles and legends, and wrote biographies of poets of that epoch. He contributed also to the knowledge of Shakespeare's life and poetry, and effectively refuted the "Bacon Legend" whose protagonists considered Francis Bacon the author of the works generally attributed to Shakespeare.

Schipper's principal works were: *Altenglische Metrik* (1881); *Englische Metrik* (1895); *History of English Versification* (1910). He edited the *Wiener Beiträge zur englischen Philologie,* and for many years organized lectures of foreign scholars on modern languages and literatures at Vienna.

SCHLEIDEN, MATTHIAS JAKOB, non-Jewish botanist and defender of the Jews, b. Hamburg, Germany, 1804; d. Frankfort, Germany, 1881. He wrote several works in which he appraised the Jews and their history. In his *Die Landenge von Suez* (1858) he describes the Exodus of the Israelites from Egypt. His study of the history of botany made him familiar with Jews of the Middle Ages in their capacity as translators of Arabic documents.

This led to Schleiden to write his essay *Die Bedeutung der Juden für Erhaltung und Wiederbelebung der Wissenschaften im Mittelalter* (published originally in *Westermanns Illustrierte Deutsche Monatshefte* in 1877 and republished as a separate article by the Deutsch-Israelitischer Gemeindebund). Schleiden's interesting treatise, *Die Romantik des Martyriums bei den Juden des Mittelalters* (1878), was written practically as a refutation of the assertion of the surgeon Billroth that Jews were incapable of responding joyfully to the romantic appeal which martyrdom may have.

Lit.: Möbius, M., *Matthias Jakob Schleiden, Zu seinem 100. Geburtstage* (1904).

SCHLEIERMACHER, FRIEDRICH, Protestant theologian, b. Breslau, Germany, 1768; d. Berlin, 1834. He was regarded as the church father of modern Protestantism. As a young preacher Schleiermacher passed the period of his inner craving and enlightenment in the "Berlin salons," especially that of Henriette Herz. He was unquestionably influenced by his Jewish environment at that time. His sincere religiousness prevented him from accepting David Friedländer's suggestion, born of a purely practical motive, to facilitate the naturalization of the Jews by converting them without their having to acknowledge Jesus. This prompted Schleiermacher to demand civil rights for the Jews lest

the church be harmed by hypocritical conversions, by a "Christianity without Christ," by a Jewish Christianity for reasons of state. On the other hand, Schleiermacher advocated in his *Briefe eines Predigers ausserhalb Berlins* "dismemberment of the Jewish nation" as a prerequisite to the naturalization of the Jews.

Lit.: *Allgemeine Deutsche Biographie,* vol. 31, pp. 422-57; Lullmann, C., *Schleiermacher,* (1907); the literature on David Friedländer's "Sendschreiben an den Probst Teller von einigen Hausvätern jüdischer Religion," in *Monatsschrift für Geschichte und Wissenschaft des Judentums,* vol. 4 (1890) 27-64.

SCHLEMIHL, *see* SHLEMIEL.

SCHLESINGER, BENJAMIN, labor leader and newspaper executive, b. Kaidan, Lithuania, 1876; d. Colorado Springs, Col., 1932. He arrived in the United States at the age of fifteen, and began to work as a machine operator on cloaks and suits in Chicago. Soon he became active in the organization of workers in this industry, and at seventeen was appointed business manager of the Chicago Cloakmakers' Union, serving subsequently as its president nine times. From 1895 on he took an active part in the Socialist Labor Party. He was one of the founders of the International Ladies' Garment Workers' Union (1900), and was its president during the years 1903 to 1904, 1914 to 1923 and 1929 to 1932. In 1909 he became manager of the *Jewish Daily Forward,* serving there until 1912, when he returned to the union.

He was also a member of the People's Relief Committee (1917-22), of the general executive committee of the International Clothing Workers Federation (1919-23), and a delegate of the American Federation of Labor to the British Trade Union Congress in 1922. In 1920 he visited Russia and had conversations with Lenin, but soon after his return to the United States (1923) he left the union due to political dissension. He then became resident manager of the Chicago *Jewish Daily Forward,* but left that position in 1926 to return to New York as vice-president of the International Union Bank. He served also as president of the Needle Trades Workers' Alliance.

During his term of office Schlesinger led twelve strikes, including those of 1916, 1920 and 1929 in the cloak and suit industry. In the latter strike he stated the case of labor before Franklin D. Roosevelt, then governor of the state of New York. In conducting negotiations he commanded respect for labor and its recognition as a party of equal if not superior standing.

Lit.: *American Hebrew,* June 10, 1932; Bercovici, Joseph, "Three Jewish Labor Leaders," *Opinion,* Jan., 1941, p. 8; *New York Times,* Oct. 31, 1928; March 4, 1929; Aug. 6, 1929; Feb. 18, 1931; June 7, 1932.

SCHLESINGER, FRANK, astronomer, b. New York city, 1871. After receiving the B.S. degree from the College of the City of New York (1890), he attended Columbia University, where he received the A.M. degree (1897) and the Ph.D. degree (1898). A year later he was appointed observer-in-charge of the International Latitude Observatory, Ukiah, Cal., serving until 1903, when he became astronomer at the Yerkes Observatory. In 1905, after a two-year period in that position, he was appointed director of the Allegheny Observatory and professor of astronomy at the University of Pittsburgh. After holding these positions until 1920, in the latter year he became director of the Yale University Observatory in New Haven, Conn., and in Johannesburg, South Africa. In 1941 he became director emeritus.

Schlesinger served as president of the American Astronomical Society and of the International Astronomical Union. He was author of numerous articles on astronomical subjects in scientific journals. He was recipient of several awards for his contributions to astronomy, among them the Valz prize, awarded in 1926 by the French Academy of Sciences; the gold medal of the Royal Astronomical Society of England, awarded in 1927; and the Bruce Medal of the Pacific Astronomical Society, awarded in 1929. The French Government made him an officer of the Legion of Honor (1935).

Lit.: Cattell, *American Men of Science* (1933) 980.

SCHLESINGER, GEORG, engineer, b. Berlin, 1874. After being director of several of the leading machine tool plants of Germany, Schlesinger was (from 1904 to 1933) professor of technical science at the technical university of Berlin. From 1934 to 1939 he was professor at the University of Brussels, and thereafter he was director of the research department at the Institute of Production Engineers, Loughborough College, Leicestershire, England. Schlesinger was a pioneer in perfecting German machine tools and in inventing new methods for the erection of modern factories. Machine tools especially were considered to be a matter of mere empiricism before Schlesinger began to take scientific measurements of the stresses and speeds which had to be actualized in tooling machines.

To this end Schlesinger founded the "Versuchsfeld für Werkzeugmaschinen," a scientific station for tool machine tests. Schlesinger's activity became one of the most important bases for the technological advance of Germany at the beginning of the 20th cent. He published many studies on tool machines and industrial equipment and on the management of plants and psychotechnics. His standard work, *Die Werkzeugmaschinen,* was published in 1936. In 1940 he published *Acceptance Tests Charts, Surface Finish.*

SCHLESINGER, HERMANN, physician, b. Pressburg, Slovakia, 1866; d. Vienna, 1934. He became assistant professor at the University of Vienna in 1902. He was also chief physician at the Allgemeines Krankenhaus, Vienna. Schlesinger was a specialist in internal diseases. He dealt particularly with the diseases of the central nervous system and the changes that occur in old age.

His published works include: *Die Syringomyelie* (2nd ed., 1902); *Beiträge zur Klinik der Rückenmarkstumoren* (1898); *Indikation zu chirurgischen Eingriffen* (1910); *Krankheiten des höheren Lebensalters* (2 vols., 1914 and 1915); *Diagnostische Irrtümer bei Krankheiten der Lunge* (2nd ed., 1923); *Klinik und Therapie der Alterskrankheiten* (1930).

Lit.: *Biographisches Lexikon hervorragender Ärzte* (1933).

SCHLESINGER, ISIDORE W., financier and philanthropist, b. South Africa. He founded or directed, as general manager, the African Guarantee and Indemnity Company, the African Life Assurance Society, the African Realty Trust, the Colonial Banking and Trust Company, and the African Consolidated Theatres, Ltd. In 1935 he offered a prize of £10,000 for an air race from London to Johannesburg, South Africa. Schlesinger created the great irrigation system in Northern Transvaal which enabled this area to be covered with citrus fruit orchards where neither tree nor brush had grown before that. Schlesinger took the initiative; the large Zebediela Estate, managed by Schlesinger, has been considered exemplary in South Africa, and Schlesinger's work radically changed the general appraisal of agricultural possibilities in certain districts of South Africa. Schlesinger was considered the most generous philanthropist of South Africa. He sponsored the *South African Jewish Year Book,* donated the Jewish War Memorial at Johannesburg, and

founded or promoted many charitable institutions, Jewish and general, at Johannesburg, where he resided. His principal interest was the South African Jewish Orphanage, of which he was honorary president in 1943.

SCHLESINGER, LOUIS, realtor, b. Newark, N. J., 1865; d. Newark, 1942. He attended the Newark public schools and began to work while still young. Schlesinger achieved considerable prominence as a realtor; he acted as a broker in the acquisition of many important industrial and residential sites in Newark and vicinity, contributed signally to the development of the city, and was instrumental in the erection of many outstanding structures in Newark. An organizer of the Real Estate Board of Newark and the New Jersey Association of Real Estate Boards, Schlesinger served as president of the latter.

Active in philanthropic affairs, he served from 1930 on as chairman of the national board of state directors, National Farm School. He was active in several fraternal organizations, and was a member of the executive committee of the Union of American Hebrew Congregations.

SCHLESINGER, LUDWIG, mathematician, b. Trnava (Nagyszombat), Hungary, 1864; d. Germany, 1933. He studied (1882-87) in the Universities of Heidelberg, Bonn and Berlin, receiving the Ph.D. degree from the latter. In 1889 he became private lecturer in the University of Berlin, and subsequently associate professor in that of Kolozsvár, Hungary. Of two chairs in mathematical sciences offered to him by the Universities of Budapest and Giessen in 1911, he accepted the latter, which he occupied until his death.

Schlesinger's lectures on absolute geometry were received with utmost interest. In addition to a vast number of memoranda to the international mathematical press, Schlesinger published: *Handbuch der Theorie der linearen Differentialgleichungen* (1895-98); *Über Gauss' Arbeiten zur Funktionstheorie* (1920); *Raum, Zeit und Relativitätstheorie* (1920); *Automorphe Funktionen* (1924). He contributed to *Scientia* (1927) articles on Benedict Spinoza and Albert Einstein.

SCHLESINGER, MIKSA, physician and author, b. Kismárton (Eisenstadt), Hungary, 1822; place and date of death unknown. He studied in the medical schools of the Universities of Prague and Vienna. Because of his participation in the revolutionary movement of 1848, when he propounded his ideas in a newspaper of his own and in several books, he was summoned before a courtmartial at Vienna. After the revolution he emigrated to Berlin and then to London.

His book *Aus Ungarn* (1850) attained two editions within the year; its English version, written by himself, aroused wide interest; in Italian it was published under the title of *Storia della guerra in Ungheria.* Another book published by Schlesinger was *Wanderungen durch London* (2 vols., 1852-53). His political satire, *Ausgleich mit Ungarn,* a one-act play, was performed in 1867 in Vienna, where he once stood before the military court.

SCHLESINGER, PAUL, writer, b. Berlin, 1878; d. Berlin, 1928. He was a gifted musician but, compelled to earn a living, he became a journalist. As a reporter, Schlesinger contributed to various departments of the Ullstein newspapers and for many years he was renowned as a music critic. Some years before the outbreak of the first World War Schlesinger resided at Munich. During the War he was Geneva correspondent of the Ullstein press. In 1919 he returned to Berlin. Schlesinger published several novels and comedies which met with considerable acclaim, but his originality was shown best in his chatty description, published under the pseudonym of Sling. A collection of them was printed in 1924, *Das Sling-Buch.* These sketches combined artistic impressionism and philosophical contemplation, inspired by observations of daily life.

By 1925 Schlesinger began to concentrate upon court sessions, and created a new genre of forensic reporting. He did not confine himself to describing the march of events; he criticized the attitude of the judges, penetrating into their psychology, and especially denounced their methods of charging perjury. Schlesinger thus became a moral authority in Germany, but was hated by reactionary jurists, especially by the Nazis, who denounced him years after his death as "the friend of every criminal." A collection of his court reports, *Richter und Gerichtete,* was edited by his widow, Josephine Schlesinger, in 1930.

SCHLESINGER, SIGMUND, composer and cantor, b. Uhlen, Germany, 1835; d. Mobile, Alabama, 1906. He received his musical education in Munich. In 1860 he came to America. For forty years he was organist and choir master of Congregation Shaarei Shomayim in Mobile. Here, having felt keenly the lack of available music for the Reform service, he composed three volumes for the Sabbath, one for the three festivals and two for the High Holy Days. These, among the first to be published in America for Reform Temples, achieved great popularity with organists and choir masters, of whom the majority were non-Jewish and entirely unfamiliar with the traditional modes and melodies of the synagogue.

Additional factors in their favor were their simple arrangements, light melodies, often adapted from the music of George Edward Oliver, Giuseppe Verdi, and others. The traditional melodies were almost entirely ignored. All his works attained numerous editions. MAX WOHLBERG.

Lit.: Idelsohn, A.Z., *Jewish Music* (1929); Binder, A. W., "Changing Values in Synagogue Music," *Jewish Music Forum,* vol. 2, No. 1 (Dec., 1941).

SCHLESINGER, WILHELM HEINRICH, painter and lithographer, b. Frankfort, Germany, 1814; d. Neuilly, near Paris, 1893. Most of his work represented the Biedermeier bourgeois period (1820-50). Schlesinger, like many Jewish portrait painters, began to work in miniatures; later he did delicate portraits and genre paintings in oil and water colors. He had studied at the Vienna Academy and was therefore active in Vienna, but also in Paris and, from 1870 to 1871, in London.

His *Am Toilettentisch* (1852) was in the early modern section of the Kunsthistorische Institut of Vienna, and his portrait of the burgomaster J. A. Edler von Leeb (1834) in the Vienna historical collection, as was also a water-color portrait of Johann Strauss the elder (1837). Schlesinger's oil portrait of the Viennese actress H. Linder (1850), the water color study of the Vienna civil guard and his portrait of Sultan Mohammed at the National Museum of Versailles were also well-known.

Lit.: Weizsäcker und Dessoff, *Kunst und Künstler in Frankfurt A.M.* (1909); Leisching, E., *Die Bildnisminiatur in Österreich 1750-1850* (1907); Grünstein, L., *Das Altwiener Antlitz* (1931).

SCHLESINGER, WILLIAM, rabbi and educator, b. St. Gallen, Switzerland, 1903. He was educated at the Universities of Breslau, Hamburg and Zurich, the latter conferring upon him the Ph.D. degree, and at the Jüdisch-Theologisches Seminar, Breslau, where he was ordained. He was rabbi of Congregación Israelita de la República Argentina, at Buenos Aires. From 1939 on he was also director of Jewish Religious Courses, an educational organization controlling sixty Jewish schools in Argentina.

SCHLESSINGER, LOUIS, soldier, b. Nagykanizsa, Hungary, in the 1820's; d. Guatemala, about 1900. He took part in the Hungarian revolutionary war from 1848 to 1849, then went into exile, and after some peregrinations reached the American continent.

He came to Nicaragua with the title of colonel and highly recommended to William Walker, head of the filibusters who were trying to gain a foothold in Nicaragua by supporting the democratic government there and forcing into exile its opponents, the legitimists. The latter had found refuge in sympathetic Costa Rica, which was prepared to render military aid against the North American and European invaders. Walker employed Schlessinger first for a diplomatic mission to Costa Rica, 1856, but Schlessinger was received most discourteously and the Costa Rican government sent troops to battle the filibusters.

Schlessinger was then placed in command by Walker of mixed German, French and American troops, being the only man who could address each soldier in his native tongue. Surprised by the Costa Ricans, his 240 men were dispersed in the battle of Santa Rosa on March 20, 1857. Schlessinger was court-martialed for cowardice and condemned to be shot, but he effected his escape and joined the Nicaraguan legitimists, becoming an opponent of Walker. Later he retired to Guatemala, where he became the owner of a coffee plantation and a respected citizen.

SCHLETTSTADT, SAMUEL BEN AARON, rabbi who lived in Strasbourg in the second half of the 14th cent. He was head of the Yeshiva of Strasbourg, but was compelled to flee from the city because the community had attempted to take action against two informers who had made accusations against the Jews to the knights of Andlau. One informer was executed, but the other escaped, and the knights and the mob sought vengeance. Schlettstadt escaped to the fortress of Hohenslandsburg, near Colmar, where he remained for a few years. Then he went to the Orient, where he persuaded the exilarch in Babylonia and the rabbis of Jerusalem to lay a ban upon the community of Strasbourg for not intervening in his behalf. He later returned to Strasbourg, where he seems to have perished with the rest of the community in the slaughter of 1380.

Schlettstadt wrote *Mordecai Katon* ("Little Mordecai"), consisting of extracts from the larger *Mordecai* of Mordecai ben Hillel, a pupil of Meir of Rothenburg; the latter work is a highly regarded collection of rabbinic views.

SCHLIMMAZEL, *see* PHRASES, POPULAR; SHLEMIEL.

SCHLOESSINGER, MAX, philologist and librarian, b. Heidelberg, Germany, 1877. He was educated at the Universities of Vienna and Berlin (Ph.D., 1903), at the Israelitisch-Theologische Lehranstalt, Vienna, and at the Hochschule für die Wissenschaft des Judentums (rabbi, 1903). In 1903 he went to the United States; there he became office editor of the *Jewish Encyclopedia,* but resigned this position in 1904 to become librarian and instructor in Biblical exegesis at the Hebrew Union College, Cincinnati. He returned to Europe in 1907. Finally settling in Palestine, Schloessinger became a member of the Board of Governors of the Hebrew University of Jerusalem (1925), acting chancellor (1930-35) and a member of the Executive Council (1935).

Retiring from his labors, he returned to the United States in 1939, and in 1943 he was living in New York city. Schloessinger published "Ibn Kaisan's Commentar zur Mo'allaqa des 'Amr ibn Kultum nach einer Berliner Handschrift," *Zeitschrift für Assyriologie und verwandte Gebiete* (1901); *Rashi, His Life and His Work* (1905); *Reform Judaism and Zionism* (1907); *Eldad Ha-Dani* (1908); *The Ansâb al-Ashraf of Al-Balâdhuri,* vol. 4 (Jerusalem, 1938).

SCHLONSKY, ABRAHAM, Hebrew poet and editor, b. Kruellov, district of Poltava, Russia, 1900. Educated in a modern Heder and in Gymnasia in Russia and Palestine, and at Sorbonne University in Paris, in 1921 he settled in Palestine, where he worked as a laborer in the collective colony Ein Harod and in Tel-Aviv. From 1922 on his poems and articles appeared in various Palestinian periodicals. From 1925 to 1926 he was associate editor of the *Dawar,* daily organ of Palestinian labor, and thereafter edited the literary section of the daily *Haaretz.* He founded and edited the weeklies *Kethubim, Turim* and *Amudaim,* and organized the cooperative publishing society Yahdav. He translated into Hebrew many Russian and other masterpieces.

Schlonsky's first poetic work appeared under the title *Devai* (Pain; 1924), a series of philosophical poems couched in symbolic imagery and depicting the sorrow, yearnings and disillusionment which came in the wake of the first World War. There followed *Bagalgal* (In the Circle; 1927), a collection of lyrical thoughts concerning the new Jew of Palestine, and *Leabba Imma* (To Papa-Mama; 1927), a group of plaintive poems expressing the nostalgia of the hard-driven adult for the serenity of childhood. The central theme of his *Beeleh Hayamim* (In These Days; 1929) is the creative labor of the Palestinian Jew. *Abne Bohu* (Stones of Chaos; 1934) is a series of poetic satires dealing with the evils of city life.

Schlonsky was one of the outstanding modernists in contemporary Hebrew literature. Greatly influenced by Alexander Block and the expressionist school of Russian poets, he had a potent originality of concept and expression. While his themes are philosophical and abstract, his style is rich in imagery. He was a master artist in his handling of the Hebrew language, molding it with great facility to novel expression.

Lit.: Zmora, Israel, *Abraham Schlonsky* (1937).

SCHLOSS, DAVID FREDERICK, jurist, public servant, and Jewish communal worker, b. London, 1850; d. London, 1912. He was educated at Corpus Christi College, Oxford, and called to the bar at Lincolns Inn in 1875. Then he was appointed member of the Board of Trade, and served in the Labor Department. In 1893 Schloss was sent by the British government to the United States to study alien immigration.

He published *Methods of Industrial Remuneration,* and numerous treatises on labor questions. He was a member of the council of the Anglo-Jewish Association and of the Board of Guardians. Schloss married a daughter of Professor Jacob Waley; his daughter Esther Ethel married John Felix Waley.

LEOPOLD SCHLOSS (b. Frankfort, Germany, 1824; d. London, 1905), the uncle of David Frederick Schloss, was vice-president of the Anglo-Jewish Association, member of the executive committee and of the joint committee of the Association and the Board of Deputies. He was also a warden of the West London Synagogue.

SCHLOSS, PHILIP, merchant and public official, b. Reineck, Bavaria, Germany, 1836; d. Indiana, 1888. He came to the United States at the age of thirteen, and was educated there. Although a Democrat, he fought for the North in the Civil War. After turning his hand to various trades, he embarked in the clothing business in Terre Haute, Ind. He was elected to the city council in 1874, and in 1878 was acting mayor upon the death of the incumbent. He was elected in

1882 to the Indiana House of Representatives for Vigo County which he represented in the Senate in the 1885 and 1887 sessions.

Schloss was president of the Hebrew Congregation, of the Burial Association, of which he was an organizer, and of the local grand lodge of the B'nai B'rith. He was also first past master of the Humboldt Masonic Lodge.

SCHLOSSBERG, JOSEPH, labor leader, b. Kaidanov, province of Minsk, Russia, 1875. He was a nephew of David Pinski and of Mordecai Spector. Schlossberg came to the United States in 1888. He made his dual alliance with Yiddish journalism and with the rising American labor movement, and from 1900 on was a leader in both. From 1900 to 1902 Schlossberg was editor of the Yiddish daily, *Abend Blatt,* and from 1904 to 1911, with David Pinski, of the weekly *Der Arbeiter,* both published in New York city.

Schlossberg's affiliation with the labor movement was mostly through the medium of the garment workers, in whose organization he was a leader from the beginning of his career. With the split in the United Garment Workers in 1914, Schlossberg joined and became secretary-treasurer of the newly-founded Amalgamated Clothing Workers of America. This post he retained until 1940, when he became secretary-treasurer emeritus. He was also in the directorates of various subsidiary enterprises of the Amalgamated, including the Amalgamated banks in Chicago and New York.

Continuing his journalistic activities, Schlossberg was from 1917 to 1925 editor of the English weekly, *Advance,* and from 1915 to 1929 of the Yiddish weekly, *Fortschritt.* His orientation to Jewish affairs veered away from the early Bundist doctrines toward Zionism. In 1934 he was made an associate editor of the *Jewish Frontier,* the labor Zionist monthly, and he was also chairman of the national committee for Jewish workers in Palestine. Among his other posts in Jewish life was his membership on the administrative committee of the World Jewish Congress and on the board of directors of HIAS. Schlossberg was made a member of the New York city Board of Higher Education in 1935, the first labor man to be so honored, and was reappointed in 1939. Schlossberg was the author of *The Workers and Their World* (1935), and of numerous pamphlets, in English and Yiddish, on labor problems.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929), cols. 670-72.

SCHMALHAUSEN, SAMUEL DANIEL (S. Daniel House), psychologist and social analyst, b. New York city, 1889. He studied at Columbia University (A.M., 1912; Ph.D., 1927), and was active as a consultant psychologist, notably in connection with the Clinic for Problem Children, at the Workers Cooperative Colony, New York (1928), and the Labor Temple School, New York (1928-30).

He was co-editor of *The American Teacher* (1914-17), the New York *Call* (1918-19) and *The Modern Quarterly.* Schmalhausen wrote: *Humanizing Education* (1926); *A Mental Hygiene Inventory* (1927); *Why We Misbehave* (1928); *Our Changing Human Nature* (1929); *The New Road to Progress* (1934). He wa. co-editor of several books on psychological and sex problems.

SCHMID, ANTON VON, non-Jewish publisher of Hebrew books, b. Swettl, Lower Austria, 1765; d. Vienna, 1855. He was educated for the ministry, but gave up his studies and entered the Kurzbeck printing establishment at Vienna. Having been assigned for some time to Hebrew typesetting, he later bought from his employer the Hebrew types which were those previously used by the Proops press of Amsterdam. In 1800 the importation into Austria of Hebrew books was prohibited and Schmid steadily increased his establishment. Joseph della Torre was supervisor of his printing. In 1816 he received a gold medal from the emperor, and he was raised to nobility in 1825 for his various book gifts to the court library. About 1834 Schmid bought the Schnisek printing office at Pressburg (Pozsony), and equipped it with Hebrew type. His son Franz von Schmid assumed care of the printing offices from 1839 on, and eventually sold them to Adalbert della Torre.

Among the books published by Anton von Schmid are: the Hebrew Bible with German translation by Moses Mendelssohn and the commentary of the Biurists (*Nethiboth Hashalom*); the literary almanach *Bikkure Haittim;* the works of Maimonides, of Judah Löb Ben Zeeb (who also acted as corrector for Schmid), of Wessely, and many prayer-books. He published also the rare books of Azariah dei Rossi, *Meor Enayim,* and four editions of the Babylonian Talmud.

SCHMIDT, NATHANIEL, non-Jewish professor of Semitics, b. Hudiksvall, Sweden, 1862; d. Ithaca, N. Y., 1939. He taught Semitic languages at Cornell University, and oriental history from 1896 to 1932. In that year he became professor emeritus. From 1904 to 1905 he was director of the American School of Archaeology, Jerusalem, and subsequently served on the board of trustees of the American Schools of Oriental Research, in that city. He was president of the Society of Bible Literature and Exegesis (1914) and of the American Oriental Society (1931-32). In 1931 the Jewish Institute of Religion, in New York city, bestowed upon him the D.H.L. degree.

Schmidt was the author of: *Introduction to the Hexateuch* (1896); *Biblical Criticism and Theological Belief* (1897); histories of Egypt (1901), India (1902) and Syria (1902); *The Prophet of Nazareth* (1907); *The Coming Religion* (1930), and other scholarly works.

SCHMIELES, JACOB, *see* BASSEVI VON TREUENBERG, JACOB.

SCHMIT, MENAHEM, painter and stage designer, b. Bobruisk, White Russia, 1896. He studied at the Odessa Art School and at first was greatly influenced by the Russian painters Repin and Seroff. In 1914 he settled in Palestine and entered the Bezalel Art School. During the first World War he was an agricultural worker and a member of the Jewish Legion. A Paris trip and the intense study of the works of Courbet and Cézanne held him for some time under the influence of these masters, but his art emerged broader in scope and originality.

From 1924 on he was associated with the exhibitions of Palestinian artists. He also designed a number of important productions for the Habimah and Ohel theatres. They include *David's Crown* by Calderon, *The Devil's Disciple* by Shaw, *Amchah* by Sholom Aleichem, *Revizor* by Gogol, *Chains* and *Shop* by Lewick, and *The Lower Depths* by Gorki. In 1943 he was living at Haifa.

SCHNABEL, ARTUR, pianist, b. Lipnik, Austria, 1882. After studying for six years with Leschetizky in Vienna, he began his concert career. He first achieved note in sonata recitals with Carl Flesch, and in trio performances, where his outstanding musicianship became apparent. Recitals followed, together with appearances with orchestra, which established his reputation as one of the foremost living interpreters of the classical and romantic composers. In 1922 he made his debut in the United States, but it was not until his return to that country in 1933 that he achieved a fol-

George Wolf

lowing comparable to that which had been his in Europe for several decades. He has been accepted as one of the greatest living interpreters of the music of Beethoven. Upon four different occasions Schnabel gave a cycle of all the Beethoven piano sonatas. He has been no less admirable in the works of Mozart and Schubert.

Besides his remarkable career as a virtuoso of the piano, Schnabel achieved considerable distinction as a teacher. In 1919 he was given an honorary professorship by the Prussian State, and from 1925 to 1933 taught at the Berlin Hochschule. He also conducted his own school of the piano at his home at Lake Como, Italy. In 1943 he was living in the United States as pianist and teacher. Schnabel edited all the Beethoven piano sonatas, wrote two volumes on music (*Reflections on Music* and *Music, Line of Most Resistance*), and composed a piano concerto, three string quartets, several sonatas and many smaller pieces for piano.

Lit.: Ewen, David, *Men and Women Who Make Music; Current Biography,* vol. 3, No. 7 (1942) 71-73.

SCHNABEL, LOUIS, teacher and editor, b. Prossnitz, Moravia, 1829; d. New York city, 1897. He studied at various Yeshivas and at the University of Vienna. His journalistic career had begun in 1847, when he contributed to *Kochebe Yitzhak*. From Vienna Schnabel went to Paris, where he taught in schools while contributing to the Jewish press. Having come to the United States as a tutor, he was appointed (1869) superintendent of the Hebrew Orphan Asylum in New York city, and established a magazine, *Young Israel,* which appeared for eight years. In 1875 he became principal of the preparatory school for the Hebrew Union College.

He was also the Hebrew instructor of Emma Lazarus. His ghetto stories appeared in book form as *Vögele's Marriage and Other Tales.* From 1890 until his death he was superintendent of the Baron de Hirsch English Classes for Immigrants from Russia.

SCHNAPPER, ISAAC BEN JOCHEL LEVI, engraver, who lived in Offenbach, Germany, during the latter part of the 18th cent. Among his engravings extant are: a picture of Empress Catherine II; a portrait of Johann Wolfgang von Goethe; the frontispiece and title of the *Herr und Diener* by F. C. von Moser (Frankfort, 1759); and some ex-libris decorations. Schnapper also wrote and illustrated on parchment a Passover Haggadah (1776).

Lit.: Wolf, A., in *Mitteilungen zur jüdischen Volkskunde,* 1905, p. 54; 1907, p. 110.

SCHNEERSOHN, DOB BER, *see* BAER (BEN SHNEOR ZALMAN) OF LIUBAWICZ.

SCHNEERSOHN, MENAHEM MENDEL, *see* MENAHEM MENDEL OF LIUBAVICH.

SCHNEIDER, BENNO, theatrical director, b. Nizhni-Novgorod, Russia, 1902. He studied painting at the Artists' Academy of Moscow. Having joined the Habimah troupe at the age of sixteen, he appeared with them (1918) in *Dybbuk*. He also played roles in *Jacob's Dream, The Deluge* and *The Wandering Jew.* In the dramatic art, Schneider was a pupil of Stanislavsky and of Vachtangov.

In 1927 he sailed with the Habimah to the United States to appear with them in the presentation of *Dybbuk*. He never returned with the Habimah, having been invited to direct the Freiheit Dramatic Studio, out of which grew later the Artef Theatre. Schneider became a director of note. His first production, *Aristocrats,* was shown at the American Laboratory Theatre and eventually, before a larger public, in the President Theatre (later the Artef Theatre).

From 1935 on he dedicated himself to teaching, conducting classes for professional players in New York city. In 1940 he directed a revival production of Ferenc Molnár's *Liliom* on Broadway, with George Meredith and Ingrid Bergman in the leading roles.

SCHNEIDER, ISIDOR, editor and author, b. Horodenka, Poland (formerly Austria-Hungary), 1896. He was brought to the United States at the age of six, and grew up on New York's East Side. He attended public school there and the College of the City of New York, which he left in his senior year. In 1918 he began his long association with the publishing business and in the 1920's was prominently connected with the house of Boni and Liveright, when that publishing firm was issuing many of the most distinguished books of the decade.

Despite his heavy schedule at Liveright's Schneider found time to write one of the most interesting novels of those times, *Dr. Transit* (1924), and an outstanding book of poems, *The Temptation of Anthony and Other Poems* (1926), in addition to numerous critical articles. Only his initials (I.S.) were used on the title page of *Dr. Transit.* In the 1930's he spent a year and a half in the Soviet Union. While there he served as editor of "International Literature." Immediately preceding his sojourn in the USSR he published his second novel, *From the Kingdom of Necessity* (1925), and in 1936 his second book of poems, *Comrade—Mister and Other Poems.*

He was for two years the recipient of a Guggenheim Fellowship in creative writing, and contributed to *The Dial, The Little Review, Poetry, The Saturday Review of Literature, Transition,* and many other periodicals. He also appeared in the first, third and fourth issues of *The American Caravan.*

All Schneider's writings combine to a rare degree a passionate concern for the welfare of the working class with the literary artist's preoccupation with rhetoric. He was for many years a guiding spirit in the League of American Writers. EDWIN SEAVER.

SCHNEIDERMAN, HARRY, communal worker and editor, b. province of Siedlec, Poland, 1885. He was brought to the United States at the age of five. In 1908 he graduated from the College of the City of New York.

From 1905 to 1908, Schneiderman taught in the religious school of the Hebrew Orphan Asylum in New York. In December, 1908, on the recommendation of Solomon Lowenstein (then executive director of the Orphan Asylum), Schneiderman became a member of the staff of the American Jewish Committee, which had been organized two years earlier and of which Herbert Friedenwald was then secretary. In 1914, upon the resignation of Herman Bernstein, who had succeeded Friedenwald as secretary, Schneiderman was appointed assistant secretary, and for the next fourteen years, until the election of Morris D. Waldman as secretary (later executive vice-president), he was acting secretary of the Committee.

Upon entering the service of the Committee, Schneiderman also began collaborating in the preparation of the *American Jewish Year Book,* published beginning in 1899 by the Jewish Publication Society, but edited from 1908 on in the office of the American Jewish Committee. Schneiderman was made its editor in 1920, and was still serving as editor in 1943. For the *Year Book* Schneiderman wrote several special articles, and from 1928 to 1936 he wrote the "Review of the Year," one of the most important features of the series. As one of the editors of the *Contemporary Jewish Record* and as the director of the Library of Jewish

Information, Schneiderman had a directing part in the expanding cultural activities undertaken by the Committee beginning in 1933.

Schneiderman's services with the American Jewish Committee were essentially functional rather than manifest. He was the central source of activity that became almost tradition, as the attitudes of the Committee toward the exigencies of Jewish life assumed a recognizable significance. In his "Review of the Year" (from 1928 to 1936), Schneiderman shows himself to be the chronicler par excellence of world Jewish events: detached, impartial, with the historian's perspective.

From 1923 to 1928, Schneiderman was an editorial writer and special contributor to the *Jewish Tribune*. He edited the translation of Joseph S. Bloch's monumental work *Israel und die Völker* (*Israel and the Nations*), translated Chayim Bloch's *Der Golem* (*The Golem*), and was the compiler of *Jews in Nazi Germany* published by the American Jewish Committee in 1933 and 1935. He was a contributor to the *Encyclopædia Judaica* and the *Universal Jewish Encyclopedia*.

The labor leader, Rose Schneiderman, was his sister.

MORRIS D. WALDMAN.

SCHNEIDERMAN, ROSE, leader in woman suffrage and trade union movements, b. Savine, Poland, 1884. Together with her brother, Harry Schneiderman, she was brought to the United States in 1890. She was without a father, and so at an early age was forced to enter the industrial world, which at that time meant long hours of labor, starvation wages and human exploitation. In the remaking of this world Rose Schneiderman was later to play an unforgettable role.

First a cash girl in a New York city downtown department store, she later became a machine operator at hats and caps. She joined the United Cloth Hat and Cap Makers' Union, of which she remained a member throughout her career and where she first learned the meaning of collective bargaining. In the strike of the industry in 1905 she had her first opportunity to use her capacities as speaker and organizer, and emerged a recognized leader and able interpreter of labor's cause. In 1906 she became a member of the New York section of the Women's Trade Union League, an organization to which she was to devote the greater part of her life; later she was made organizer and then president (1918). In 1926 she was elected president of the national organization of the League, and, serving continuously, still occupied that office in 1943.

In 1914 she was designated by the International Ladies' Garment Workers' Union as general organizer. Her eloquence soon won her large audiences. Her speeches were never bombastic. She was not an orator; but what she said had meaning and force. At a meeting held after the Triangle Shirtwaist fire catastrophe of March, 1911, in which 147 girls perished, when someone had cautioned the large audience against bitterness, urging peace and harmony, Rose Schneiderman said: "To speak of peace and harmony now would be treason to the dead!"

Logically, Rose Schneiderman turned her attention to the struggle for woman suffrage. To her, "votes for women" meant more than political equality with men: it was a weapon to be used for the benefit of the wage-earning woman, a means to an end. She became active in the Woman Suffrage Party campaign of 1917, acting as chairman of the industrial section of the Woman Suffrage Association. She continued to be a leader in the movement until it culminated successfully in the Nineteenth Amendment to the Constitution (1920).

In 1919 she was one of two delegates sent by the Women's Trade Union League to the Peace Conference in Paris to present labor standards affecting the working women of America. Subsequently she served as delegate to the International Working Women's Congress at Washington, D.C. (1919), and in Vienna (1923). She was a member of the Labor Advisory Board of the National Recovery Administration (1933-35), a member of the board of directors of the Bryn Mawr Summer School for Working Women, and a member of the board of directors of the Brookwood Labor College. In 1937 she was appointed secretary of the New York State Department of Labor, a post which she still held in 1943.

Rose Schneiderman

Rose Schneiderman's life was not only bound up with the history of labor movements—especially the movement concerned with women workers during the first four decades of the 20th cent., but helped, indeed, to make the history of these movements. She was active and rose to leadership in every project for increasing labor's share in the products of industry, for the abolition of child labor and for better working and living conditions for all wage earners, and she had the good fortune to see some of the fruits of her labor during her lifetime. Her years of insurgent effort in behalf of the underprivileged and exploited brought her the earned recognition, respect and friendship not alone of those whose battles she fought, but also of the idealists among the more fortunate groups in the community.

PAULINE M. NEWMAN.

SCHNITZER, ISAAK EDUARD, *see* EMIN PASHA, MEHMED.

SCHNITZLER, ARTHUR, writer, b. Vienna, 1862; d. Vienna, 1931. He was of Jewish descent; his father was a professor of medicine at the University of Vienna. Schnitzler himself studied medicine and was a practising neurologist. As dramatist, he won his first notable success with the *Anatol* cycle; then, two years later (1895), *Liebelei* brought him general European renown. The scandal provoked by his cycle, *Reigen* (1903), had an anti-Semitic ring, but it only served to enhance his fame. In the meantime Schnitzler had

written also a series of novels and short stories, of which *Leutnant Gustl* (1901) and the later *Fräulein Else* (1924) received particular recognition for their psychological insight and their novel structure. A longer novel, *Der Weg ins Freie* (1911) was widely translated and discussed heatedly. But Schnitzler, who was famous in his youth, had to endure a decline after the first World War; in his family life, too, he was pursued by tragedy. He died a resigned and disappointed man.

Schnitzler wrote many plays, and was fortunate in finding directors and actors who were capable of responding to his most minute intentions. His short stories and novels had attentive readers; he was a representative of his part of the world and of his time.

The frame of all of Schnitzler's work was Vienna—the pleasurable but somewhat melancholy life of the city's dominant class at the turn of the century. The content of his work was love, death and theatre. He identified himself with a boundless individualism. His morality was relative; his theme: to know all is to forgive all. The world and its people were viewed through a tolerant, benign skepticism. He was a physician, aware of and marveling at the intricate machinery of the psyche, although as a physician he knew its infirmities. Problems, exclusively psychological, were placed before the reader or audience in all their ramifications, but Schnitzler himself took no sides. He passed no judgments. He liked to send his characters to a dark and sometimes violent death that brought an end but no release. Sensitive, he grasped social problems, but evaded them if he could, and when they finally came so close that he had to consider them for better or for worse, he saved himself by an almost nihilistic estheticism.

Against the robust, scientific naturalism of his time, Schnitzler placed delicate, deliberate and diversified psychology, and therein lay his significance. Against the overly simplified theses that were current at the beginning of his literary activity he offered a drama of the soul that led to the manifold meaning of all human relationships, to the relativity and obscure fortuitousness of all events.

Schnitzler's importance was not in the plots of his fiction nor in the composition and structure of his plays. It was in the gentleness and the deft modulation of his portrayals of the human psyche, in the infallible taste with which he avoided every coarse effect. He was altogether impressionistic, and he had an incomparable faculty for the distribution of light and shadow. His position in literary history can hardly be exaggerated. He was the first to create characters out of their unconscious; he did not present that part of the psyche which lay exposed to the light of day, but cautiously took hold where it emerged from the unknown. Sigmund Freund was amazed that the scientific theories he had evolved were molded by Schnitzler, working independently, into his writing. Schnitzler wrote of the unconscious long before James Joyce. He handled it without the sombre, long-winded exactitude of the other, and with much greater artistic control. Most of the great writers of his period learned a good deal from Schnitzler, directly or indirectly. No one probed the complexity and the multiple influence of psychic events as deeply as he, no one transmitted them with such tender and varied nuances.

Schnitzler's technique was skillful and original. He had to create his own means of expression. His most important discovery, from the point of view of literary technique, was the extended inner monologue. Both of his most significant novels, *Leutnant Gustl* and *Fräulein Else,* reflected a whole lifetime of interwoven fate in the form of an inner monologue. Its treatment was plastic, and since Schnitzler did not share Joyce's inartistic tendency toward incoherence, it never grew tiresome. No matter how much he abridged and simplified, he always achieved the illusion of the total human soul, in all its splendor and confusion.

Arthur Schnitzler

Most of Schnitzler's plays now seem bound to their time and place. Even his fiction gives the occasional impression that the author made too much of himself and of his period, and that he was denied historic and cosmic vision. Here and there something seems personal, precious, self-sufficient. Among his plays, the *Anatol* cycle and *Liebelei* surmounted time and place, even while being steeped in them; the erotic realism of *Reigen* also remained vital. But Schnitzler's greatest achievements were certain novels: *Leutnant Gustl, Fräulein Else,* the tender and shadowy *Spiel im Morgengrauen* (1927), the story *Thérèse,* which Schnitzler called a novel, and the haunted, fantastic *Traumnovelle.*

On the other hand, the eminently successful *Der Weg ins Freie,* dealing with the attitudes which individual members of the Jewish minority can have to their situation, and the equally successful *Professor Bernhardi* (1912), a play based on the conflict between a free-thinking Jewish physician and a Catholic priest, both seem musty today. These two works prove that the sensitivity, one might even say the suspicion, of Schnitzler, felt the danger of Central European anti-Semitism early. As an individualist he perceived this anti-Semitism, but he closed his eyes to the sociological conditions that produced it. Schnitzler looked on Austrian anti-Semitism as a psychologist only; he refused to see it otherwise. For this reason he underestimated its possibilities. Despite his sensitivity, he was not ready for the darkening of Central Europe and of his Vienna by the gathering storm of National Socialism. As barbarism rose and left less and less of his own world, the aging writer sank more deeply into resigned nihilism. Schnitzler saw anti-Semitism, as he saw everything, relatively; to the question: How can the world conquer anti-Semitism? he knew no answer except: Each one must find his own salvation.

Schnitzler's concepts, purely psychological, or more exactly, psychiatric, have little to tell the generation of the middle 20th cent. His relativity offers no comfort in a world that demands clear affirmations or nega-

Johann Schnitzler

tions. When Schnitzler does not talk, but constructs, he remains convincing. The hand that formed his people was powerful; gently though he takes hold, the people are there. A generation better able to evaluate art only from an artistic point of view will do more justice to him. LION FEUCHTWANGER.

Lit.: Specht, R., *Arthur Schnitzler, der Dichter und sein Werk* (1922); Krojanker, Gustav, *Die Juden in der deutschen Literatur* (1922); Liptzin, Solomon, *Arthur Schnitzler* (1932); Reik, Theodor, *Arthur Schnitzler als Psycholog;* Naumburg, Bernard, "Schnitzler's Professor Bernhardi," *Judaean Addresses,* vol. 2 (1917) 119-26; *American Hebrew,* Aug. 3, 1923, pp. 244, 253; *Twentieth Century Authors* (1942) 1244-55.

SCHNITZLER, HENRY, actor and dramatic instructor, b. Vienna, 1902. The son of Arthur Schnitzler and a nephew of the famed German actor Albert Steinrück, he attended courses in philosophy and the arts at the University of Vienna. In 1921 he joined a traveling theatrical guild organized by the Austrian state for the education of the people. He was in turn connected with the Raimund Theatre of Vienna, with the State Theatre in Berlin and with the Deutsches Volkstheater, Vienna, as actor and director. In Berlin Schnitzler taught at the Max Reinhardt School, and in Vienna at the Modern Theatre School. Among others, he appeared in many Shakespearean roles. He collaborated in the editing of *Monumenta Scenica,* published by the National Library, Vienna.

The plays staged by Schnitzler at non-German theatres included Sophocles' *Oedipus Rex,* his own father's *Professor Bernhardi* (Embassy Theatre, London, 1936), and the Salzburg Festival version of *Everyman* (*Jedermann*) at East Hampton, Long Island (1942). From 1938 on he lived in the United States, where in 1940 he directed *Fledgling* on Broadway. He lectured in a number of American universities, was Walker Ames lecturer at the University of Washington, in Seattle (1942), and lecturer in dramatic art at the University of California (1942-43).

SCHNITZLER, JOHANN, laryngologist, b. Nagykanizsa, Hungary, 1835; d. Vienna, 1893. He studied in the Universities of Pest and Vienna, in 1878 became titular professor and in 1880 assistant professor of laryngology at the latter institute. He embraced the Christian faith. The Austrian medical press is indebted to Schnitzler for the founding of its foremost medical paper, the *Wiener Medizinische Presse* (J. Markbreit, co-founder), which he edited from 1860 to 1886.

Thereafter he edited the *Internationale Klinische Rundschau* (1887) and *Klinische Zeit- und Streitfragen* (1890). Among his major works were *Die pneumatischen Behandlungen der Lungen- und Herzkrankheiten* (1875) and *Die Lungensyphilis und ihr Verhältnis zur Lungenschwindsucht* (1880). His son was the Austrian novelist Arthur Schnitzler.

SCHNORRER, a unique type of beggar characteristic of Jewish social life. The origin of the term is obscure. The Schnorrer arose out of a combination of two conditions—the innate charitable nature of the Jew, which predisposed him to give freely of his money and hospitality out of a feeling that this was a service to God, and the dispersed and persecuted condition of the Jewish people, which created hundreds of homeless individuals. During the Middle Ages in Europe there were hundreds of wandering Jews, who had no fixed residence, and traveled from community to community to seek a livelihood as best they could. At first they often had a profession, such as musician (Klezmer), comedian (Badhan), preacher (Baldarsher) or itinerant merchant. They brought to scattered communities knowledge of the events of the day, gossip and tales about relatives or notables, or retailed clever stories or told jokes. With the increasing persecutions of the Jews from the 13th cent. on, the number of these wanderers grew, and many of them dropped all pretense of work and became outright dependents of the communities. A contributing factor was the shutting up of the Jews in ghettos, which enabled these mendicants to go from door to door without being seen by non-Jews; thus they could not be reproached with bringing shame upon the name of the Jew.

While the term Schnorrer is often applied to all beggars among the Jews, the real Schnorrer is not an ordinary beggar. He often lays claim to a rabbinical education, and is glib in his use of learned quotations. He regards the alms he receives not as a privilege, but rather as a vested right and a means by which the rich can secure salvation. He usually has a plausible story to account for his wretched condition; thus he may be collecting funds to go back to business, or a dowry for an orphaned female relative. He may have written a small Hebrew book and feel entitled to consideration as an author. He usually makes it a point to appear in a community on the eve of the Sabbath, sure that Jews will see to it that no son of Israel will not be provided with the means to observe the Sabbath in suitable fashion. He has routes of contributors whom he visits at definite intervals, and he has been known to sell or donate such "vested rights" to another Schnorrer. He sometimes acts as a marriage broker (Shadhan), and he usually has a store of stories, gossip and witty sayings.

Organized Jewish charity in the 19th and 20th centuries has done much to reduce the number of Schnorrers in Western countries, while the rise of newspapers and means of communication has diminished his welcome in other parts of the world. In modern times, therefore, the type of beggar that would be called Schnorrer is disappearing among Jews. Israel Zangwill's *King of Schnorrers* has preserved an outstanding specimen of the ancient type—arrogant, certain of his position, majestic in his appearance, and picturesque in his language.

Lit.: Green, A. A., "Schnorrer," *Jewish Chronicle* (1900); Abrahams, I., *Jewish Life in the Middle Ages* (2nd ed., 1932), 331-33, 346; Frisch, E., *An Historical Survey of Jewish Philanthropy* (1924) 127.

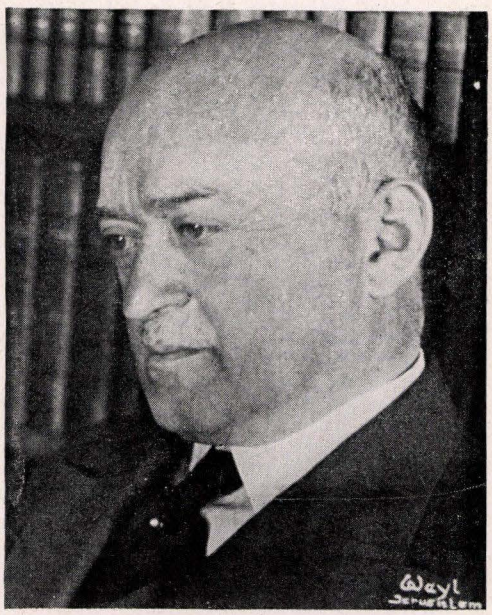
SCHNURMANN, NESTOR IVAN, educator, b. Russia, 1854; d. Cheltenham, England, 1914. In 1880 Schnurmann went to England, and became lecturer of

Slavonic languages at the University of Cambridge. He served also in the British Foreign Office, and was examiner in Bulgarian to the Civil Service Commission. Schnurmann taught many British army officers Russian and other Slavonic languages.

He published several textbooks, readers, and grammars of Russian language and literature. In 1894 Schnurmann became assistant master at Cheltenham College and head of the Jewish House. He also was registrar of marriages at the Cheltenham Synagogue.

SCHOCKEN, SALMANN, merchant and Zionist leader, b. Margonin, Posen, Germany, 1877. Together with his brother, Simon Schocken, he founded the department store, Schocken Aktien Gesellschaft, at Zwickau, Saxony (1901), an enterprise with branches in several German cities and 6,000 employes. The Schockens were pioneers in modern methods of selling. Salmann Schocken became well-known in German economic circles by his writings and lectures, expounding for the first time in Germany the *Warenhaus-Idee* (the idea of the department store). After the Nazis advent to power (1933) the stores were "Aryanized."

An outstanding figure in the economic life of Germany, Schocken at an early date devoted himself also to Zionist activities, particularly to economic and cultural work. At the Twelfth Zionist Congress (Karlsbad, 1921) he was elected to the Financial and Economic Council of the Zionist Organization, and two years later became a member of the board of directors of the Jewish National Fund.



Schocken was founder and owner of the Schocken Publishing Company (established in Berlin, 1927), which published, in a period of ten years, approximately 250 works of Jewish literature in Hebrew and German. Subsequently the seat of the firm was moved to Jerusalem, where it was devoted especially to contemporary Palestinian authors and included on its list Samuel Joseph Agnon (8 vols.) and Saul Tschernichowski.

In 1929 Schocken established in Berlin the Research Institute for Hebrew Poetry which was later moved to Berlin and headed (from 1934 on) by Heinrich Brody, former chief rabbi of Prague. The purpose of this Institute was the publication of complete editions of works of classical Hebrew poets and of heretofore unknown Hebrew poetry. Up to 1943 about fifteen volumes were published. The Institute contains the Central Archives for Hebrew Poetry, an almost complete collection of photostatic copies of all existing manuscripts of Hebrew poetry.

Schocken, who moved to Jerusalem in 1933, also founded the Schocken Library, Jerusalem, containing 50,000 volumes, one half of them in Hebrew, including his valuable private collection of Hebrew incunabula. In 1934 he acquired the *Haaretz,* a daily newspaper of Tel-Aviv. In the same year he became a member of the board of governors of The Hebrew University, Jerusalem, and in 1935 he was appointed by the board of governors head of The Hebrew University, with the title of "Chairman of the Executive Council."

The honorary degree of Doctor of Hebrew Letters was conferred upon Schocken in absentia by the Jewish Institute of Religion, New York city (1940). In 1943 Schocken was active in the United States on behalf of The Hebrew University. ALFRED WERNER.

SCHOEN, MAX, educator, b. Austria, 1888. He was brought to the United States in 1900, and studied at the College of the City of New York (A.B., 1911) and at the University of Iowa (Ph.D., 1921). In 1925 he was made professor and head of the department of education and psychology of the Carnegie Institute of Technology, Pittsburgh; he still held this position in 1943. His writings include: *The Beautiful in Music* (1928); *Human Nature* (1930); *Art and Beauty* (1932); *The Psychology of Music* (1940).

Salmann Schocken

SCHOENFLIES, ARTHUR MORITZ, mathematician, b. Lansberg, Germany, 1853; d. Frankfort, Germany, 1928. He was appointed assistant professor (1892) at the University of Göttingen. He became associate professor (1899) at the University of Königsberg, was called to the University of Frankfort in the same capacity in 1917, and served as rector during 1920 to 1921. Schoenflies was an authority on geometrical research in the structure of crystals.

His published works include: *Geometrie der Kristallstruktur* (Leipzig, 1866); *Kristallsysteme und Kristallstruktur* (Leipzig, 1891); *Einführung in die mathematische Behandlung der Naturwissenschaften* (in collaboration with Nernst; 1895); *Entwickelung der Lehre von den Punktmannigfaltigkeiten* (Leipzig, 1900-7); *Einführung in die Hauptgesetze der zeichnerischen Darstellungsmethoden* (in collaboration with Nernst; 1908; 10th ed., 1923); *Entwickelung der Mengenlehre und Anwendung* (Leipzig, 1913); *Theorie der Kristallstruktur* (1923); *Analytische Geometrie* (1925).

Lit.: Kürschners Deutscher Gelehrten-Kalender (1926) 1750.

SCHOENHEIMER, RUDOLF, biochemist, b. Berlin, 1897; d. Yonkers, N. Y., 1941. A graduate of the medical school of the University of Berlin (1922), he served as assistant in the institutes of pathology at the Universities of Berlin (1922-23) and Leipzig (1923-25).

He was professor of pathological chemistry and head of the institute of pathology at the University of Freiburg from 1926 to 1933. Schoenheimer was a leader in the Blau-Weiss German Zionist youth movement. He was a noted educator. During 1930 and 1931 he was Douglas Smith Fellow in the department of experimental surgery at the University of Chicago. In 1933 he came to the United States for permanent residence, and was appointed associate professor of biological chemistry at Columbia University. In 1941 he committed suicide under mental depression.

Schoenheimer's researches wrought a revolutionary change in the views on metabolism. Combining fats and other substances with atoms of heavy elements, he fed them to animal bodies and by a delicate weighing method traced their way through the body, thus discovering that the tissues underwent chemical transformations incessantly and disproving concepts of any stability whatsoever in living matter.

SCHOFMANN, GERSHOM, Hebrew writer and journalist, b. Orsha, district of Mohilev, Russia, 1880. In 1901 he went to Warsaw, where he came into contact with the leading Hebrew writers Isaac Loeb Peretz, Micah Joseph Berdyczewski, and Naumberg. Here his first collection of short stories was published by Tushiah. At the outbreak of the Russo-Japanese war he fled from Russia to Galicia. He stayed in Lemberg for seven years, writing for Hebrew periodicals.

Several collections of his works appeared during this period: *Reshimoth* (Sketches; London, 1908) and *Meidach Gisa* (On the Other Hand; Lemberg, 1909), and another volume of short stories in 1914. In 1913 he moved to Vienna, and in 1921, after marrying a non-Jewess, he settled in the village of Wezeldorf, near Graz. Under the impact of Nazism in Austria he migrated to Palestine, where he contributed many stories and articles to the local periodicals and labor publications. His complete works were published by Stybl in four volumes under the title of *Kithebe G. Schofmann* (Tel-Aviv, 1927, 1929 and 1931). A more recent volume, entitled *Beterem Argia* (Ere Yet I Rest; Tel-Aviv, 1942), was issued by the Palestinian Labor Publishing Company Am Oved. Many of his stories were translated into Yiddish by Abraham Reisin, Asher Beilin, and by the author himself, and appeared in various periodicals. Schofmann also translated into Hebrew some of Peter Altenberg's short stories and Anton Chekhov's plays, and edited the anthologies *Shallecheth* (The Felling) and *Peret* (Gleanings), and the monthly *Gebuloth* (Boundaries).

In his personal life Schofmann is prototypical of the rootless and restless intellectual Jew who has broken away from the Jewish milieu and is stranded in the inhospitable alien environment. This inner tragedy is mirrored in most of his short stories and sketches. His characters are invariably misfits, derelicts, weaklings, cowards, perverts and psychopaths who slink through the dark alleys of life. The recurrent note of his stories is the boredom, emptiness, meaninglessness and horror of existence. The predominant theme of eroticism in his stories is a sickly escapism from the mental tortures of his characters.

Schofmann's stories are concise and bold fragments. They are really pictorial impressions of psychological moments, in which the narrative elements have been reduced to a minimum. He is incomparable in his brevity and shrewdness of observation. In this respect he developed a style and mode of writing unique in Hebrew literature. It is undoubtedly influenced by the Viennese Peter Altenberg, but bears the mark of Jewish keenness and penetration.

Lit.: Klausner, Lachower, Streit, Elisheva and Shachatman, in *Moznaim,* Oct. 5, 1930; Greenblatt, N., in *Hatekufah,* vol. 2, pp. 607-17; Gorelik, S., *Massoth,* 83-87; Robinson, M., *Diuknaoth,* 30-33; Klausner, J., *Yotzerim Ubonim,* vol. 2, pp. 208-21; Ribalow, M., *Sefer Hamassoth* (1928) 105-29).

SCHOLASTICISM, the Christian philosophy of the Middle Ages. From the 13th cent. on it received lasting influences from Jewish writings. The work of Jewish translators contributed to making the Christian West acquainted with the Aristotelian writings and their Arabic commentators, as a result of which Aristotle became the reigning philosopher of scholasticism. This philosophy was further influenced by Jewish philosophers, especially Maimonides and Ibn Gabirol, whose works were translated into Latin. The *Moreh Nebuchim* of Maimonides showed the Christian philosophers how to reconcile the teachings of Aristotle with those of the Bible on important points, in particular as to whether the world was eternal or created and the problem of divine cognition; it was eagerly used by the founders of the Aristotelian school of scholasticism, such as Albertus Magnus and Thomas Aquinas. Ibn Gabirol, whose *Fons Vitae* has been preserved in its entirety only in a Latin translation, was influential both in specifically theological and generally philosophical teachings. His theory of a matter common to both corporeal and spiritual beings was sharply assailed by the strict Aristotelians, but was made the basis of the system of one of the most important scholastics, Johannes Duns Scotus.

The scholasticism of the end of the Middle Ages paid less attention to Jewish philosophy, and it was only in the transition period to Renaissance philosophy that a stronger Jewish influence became noticeable.

Lit.: Guttmann, Jakob, *Die Scholastik des dreizehnten Jahrhunderts in ihren Beziehungen zum Judentum und zur jüdischen Literatur* (1902).

SCHOLEM, GERSHOM GERHARD, philologist and Cabala scholar, b. Berlin, 1897. The Ph.D. degree was conferred upon him by the University of Munich in 1922. In the following year he became head of the Hebrew and Judaistic section of the National University Library, The Hebrew University, Jerusalem. The same year saw the publication of his *Das Buch Bahir.* In 1933 he was made professor ad personam of Jewish mysticism at The Hebrew University. Scholem conceived the great task of rehabilitating Jewish mysticism to its due standing in Jewish history and philosophy. His edition of Abu-Aflah's *Sefer Hatamar* (1926-27) was followed by *Bibliographia Kabbalistica* (with Issachar Joel; 1927 and 1930).

This catalogue of the manuscripts in the Hebrew University Library dealing with Cabala, Sabbatianism, Hasidism and other mystical Jewish doctrines established the basis for a vast field of hitherto unexplored research. In addition to *Teudah Letholedoth Nehemiah Hayyun Vehashabbataoth* (Testimony on the Life History of Nehemiah Hayyun and the Sabbatian Movement; 1929), Scholem published a book entitled *Zohar* (German; 1935). He contributed an article of 100 columns on Cabala to the German *Encyclopaedia Judaica.* In 1941 he published *Major Trends in Jewish Mysticism,* an edition of his lectures held at the Jewish Institute of Religion in New York city in 1938.

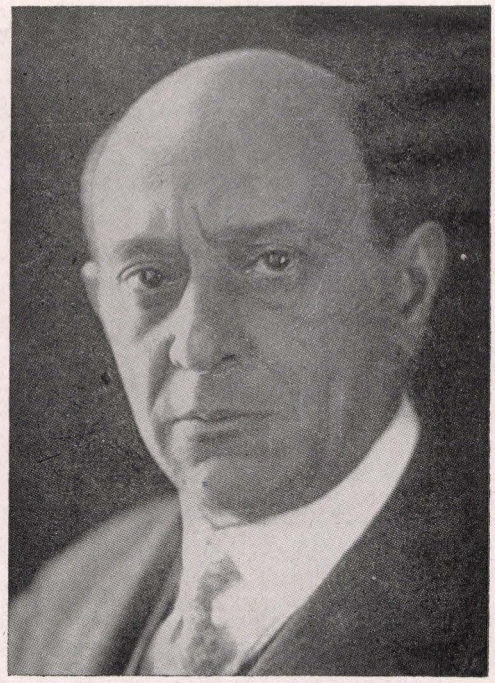
SCHOMBERG, SIR ALEXANDER, British naval officer, b. 1720; d. Dublin, Ireland, 1804. He was the son of Meyer Löw Schomberg and the brother of Isaac and Raphael Schomberg. He entered the British Navy (1743) on board the *Suffolk,* served there for four years, and passed his examination. Promoted lieutenant of the *Hornet,* he was employed on convoy and packet service. From 1750 to 1755 he was placed on half-pay, then served at the home station and in the Bay of Biscay. In 1757 he was promoted to captain of the *Richmond,* and some months later he commanded the frigate *Diana,* attached to the fleet under Admiral Edward Boscawen for the reduction of Louisbourg. The *Diana* had to cover the landing operation, and when some batteries were landed Schomberg took command of them. A gold medal was issued in memory of this action. In 1759 Schomberg took an active part in the reduction of Quebec, and in 1760 he was attached to a squadron which repulsed the attempt of the French to regain Quebec. In 1761 Schomberg commanded the *Essex,* which had sixty-four guns, and participated in the reduction of Belle-Isle. He was closely associated with General James Wolfe, but he came in conflict with Lord Sandwich, first Lord of the Admiralty, who was partial to one of his own favorites at the expense of Schomberg and remained in office for many years.

ALEXANDER WILMOT SCHOMBERG (1774-1854), the second son of Sir Alexander Schomberg, held important commands during the Napoleonic Wars. He was promoted to rear-admiral in 1830, and vice-admiral in 1841.

SIR CHARLES MARCH SCHOMBERG (1779-1835), Alexander's younger son, was lieutenant-governor of Dominica, and flag-lieutenant under Lord Keith in the Egyptian campaign. As captain of the navy, Schomberg excelled in several battles against the French fleet during the years 1805 to 1812, and he was commodore and commander-in-chief (1828-32) at the Cape of Good Hope.

SCHOMBERG, MEYER LÖW, physician, b. Fetzburg, Germany, 1690; d. Hoxton, England, 1761. He studied medicine at the University of Giessen, and practised in Schweinberg, Blanckenstein, and Metz. In 1720 he went to England, and attained a leading practice in the city of London. In 1726 he became a fellow of the Royal Society, London. He was a strong supporter of his son, ISAAC SCHOMBERG, a physician, in his dispute with the Royal College of Physicians (1714-80). Isaac Schomberg was an inflexible character, and enforced his will against mighty corporations. He was baptized, while his father adhered to Judaism and remained actively interested in the defense of the Jews in England. A Hebrew manuscript in his hand, dated 1746, was exhibited at the Anglo-Jewish Exhibition.

SCHOMBERG, RAPHAEL (or RALPH), physician and writer, b. Schweinberg, Germany, 1714; d. Reading, England, 1792. He was the son of Meyer Löw Schomberg and the twin brother of Isaac Schomberg, the elder. He studied medicine at Rotterdam, and was graduated with the M.D. degree from Aberdeen. He practised subsequently in Yarmouth, Bath and Reading.



Schomberg published numerous medical treatises, especially *Essai sur la conformité de la médecine ancienne et moderne dans le traitement des maladies aigües* (1768). He also translated Pindaric poems and some odes of Horace into English, and published essays on ancient and modern poets. His own comedies, satires and miscellaneous writings generally met with applause, but were severely criticized by some malicious adversaries and competitors.

ISAAC SCHOMBERG the Younger (1753-1813), the son of Raphael Schomberg, was a captain in the British Navy and an author. He published *Naval Chronology* (1802). He served at first under the command of his uncle Alexander Schomberg; later on he became an officer on a warship commissioned to Prince William, afterward King William IV of England. In this position he was in frequent conflict with the prince, who was completely in the wrong. The admiralty adjusted the matter by shifting Schomberg to another ship.

ALEXANDER CROWCHER SCHOMBERG (1756-92), the younger son of Raphael Schomberg, was a poet, jurist and political economist. He published *An Historical and Chronological View of Roman Law* (1785; translated into French, and reedited in English, 1856) and *Remarks on the Tariff of the Commercial Treaty with France* (1786). He was an intimate friend of the poet Robert Southey, who attended Schomberg during his last sickness.

SCHÖNBERG, ARNOLD, composer, b. Vienna, 1874. He learned to play piano and cello by himself, and composed chamber music for amateur quartets, in which he took part. Alexander von Zemlinsky taught him counterpoint and became his friend and adviser. Subsequently Schönberg married Zemlinsky's sister, Mathilde.

In 1899 Schönberg composed his sextet for strings, *Verklärte Nacht,* still performed frequently. In 1900 he began the composing of his great choral work, *Gurre Lieder* (to the text written by J. P. Jacobsen); this work was not completed until 1911. For quite some time Schönberg had to struggle for an existence. In 1901 he left for Berlin, where he became conductor of the orchestra at Wolzogen's "Ueberbrettl" (a cabaret). Through the aid of Richard Strauss he secured, in addition, the position of teacher at the Stern Conservatory.

Arnold Schönberg

Schönberg then returned to Vienna, which he left again (1911) for Berlin, whither he went for the third time in 1913 and for the fourth in 1925, when he was called to teach composition at the Academy of Arts. He found his outstanding pupils in Vienna during 1903 to 1904, including Alban Berg, Anton von Webern, Egon Wellesz, Karl Horwitz, and Heinrich Jalowetz.

The composing of his second string quartet (it had also a vocal part) initiated a new period of his creative work, together with the cycle of the *George-Lieder* and two series of short compositions for piano. Here Schönberg totally forsook the romanticism that had been transmitted to him by the Wagner of *Tristan* and by Brahms and Mahler (Mahler held Schönberg in high esteem), and there now began a new period of romantic-expressionistic atonality. This style found expression likewise in the tone images which Schönberg painted during the same period, and in two operas, *Erwartung* and *Die glückliche Hand.* The performance of his new works in Vienna never failed to occasion turbulent scenes, while those of his works which maintained tonal character, such as the *Gurre Lieder* (1913), met with extraordinary public approval. A particular sensation was caused by *Pierrot lunaire* (1912), a cycle of twenty-one poems for recitation (its tone position, however, is determined by notes) and chamber orchestra; this is considered one of the masterpieces of modern music, and is marked by grandiose applications of the art of counterpoint.

Schönberg was forty years old when the first World War broke out. He was, however, called for military service, seeing sentry duty near Vienna. Finally he was released from service through the intervention of the minister of education. He then settled down at Mödling, near Vienna, devoting himself to teaching, at which he was a genius. In 1912 he had published an extraordinary textbook on har-

mony; his pupils and friends issued the symposium *Arnold Schönberg,* a series of brilliant articles bearing testimony to their master. In 1934 he came to the United States, and in that year began teaching at the University of California; he still held that position in 1942. In 1942 he completed a textbook on counterpoint, after several years of work.

At Vienna, during the first World War, the important Society for Private Musical Performances performed, under Schönberg's direction, new works of every "tendency"—the general public was rigorously excluded—and presented arrangements of orchestral works after careful rehearsal. Meanwhile a new spirit came to prevail in Vienna, and the fiftieth birthday of Schönberg, who had been the object of repeated attacks on the part of conservative Viennese audiences, was marked by a celebration in the City Hall at which the mayor gave an address and the noted choir of the State Opera offered a complete performance of Schönberg's work *Friede auf Erden,* which therefore had been considered impossible of performance. However, this did not prevent his departure for Berlin, where he taught until the outbreak of barbarism under the Nazis.

During the early post-War period Schönberg transformed himself into a composer of basic atonality, on the ground of the "twelve-tone principle"; from a definite series of the twelve tones of the chromatic scale he formed a motive which provides the basis of the piece to be composed. Every relation to a basic tone and to its dominant has disappeared, as well as every difference between "consonance" and "dissonance" in the old sense. This system has been the subject of many studies; it has been rejected in the main as a mere "construction," and practically has gained little acceptance beyond the circle of his immediate pupils. Schönberg himself, at least, utilizes it with undeniable mastery, as is evidenced by a series of compositions for piano, chamber ensemble and voice, and by a violin concerto.

For several years Schönberg has been laboring on several major works, including an oratorio, *Die Jakobsleiter,* and an opera, *Moses;* in 1942, however, no authentic information as to their progress was obtainable. But even should no other new work ever be composed by him, those which he has already created are sufficient to assure him an extraordinary position among living composers. His works represent a distinct contribution to the history of contemporaneous music. PAUL STEFAN.

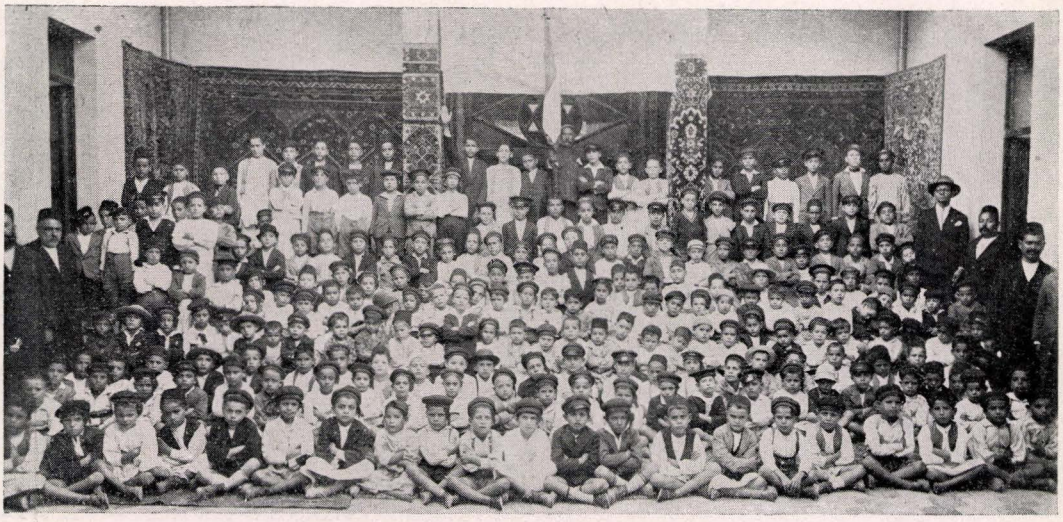
SCHÖNBERGER, GUIDO, art historian, lecturer and research assistant at the Institute of Fine Arts, New York University, b. Frankfort, Germany, 1891. He received the Ph.D. degree from the University of Freiburg (Breisgau) in 1917, and from that of Frankfort in 1926. He was lecturer at the University of Frankfort from 1926 on, and curator of the Historisches Museum of Frankfort from 1928. After the advent of the Nazi regime he lost his teaching and museum position in 1935, and became assistant at the Jewish Museum in Frankfort, in which position he remained until 1938. He emigrated to the United States in 1939, and became a member of the staff of New York University in the same year.

Schönberger published numerous articles, among them on Gruenwald, in *Städeljahrbuch* (vol. 2, 1922); "Ratgebstudien" in *Städeljahrbuch* (vol. 5, 1926), on Narwal-Einhorn, in *Städeljahrbuch* (vol. 9, 1935); "Beiträge zur Baugeschichte des Frankfurter Doms," *Studien des Historischen Museums,* vol. 3 (1927); *Das Wohnungswesen in Frankfurt am Main* (Frankfort, 1930). He was an expert on silver and tin art objects. He published *Ein Gang durch die Sammlung Nauheim,* a catalogue of a collection of Jewish ceremonial objects brought out by the Gesellschaft zur Erforschung jüdischer Kunstoenkmäler (1937), and, together with H. Gundersheimer, "Frankfurter Chanukkahleuchter aus Silber und Zinn" (in the *Notizblatt* of the Gesellschaft, 1937). RACHEL BERNSTEIN WISCHNITZER.



SCHONENBERG, FRANCISCUS (or FRANÇOIS), diplomatist, b. probably 1653; d. Lisbon, Portugal, 1717. He was descended from the Belmont-Belmonte family, but it is not certain to which of its branches he belonged, and his identification with Jacob de Abraham Belmont is not without doubt. At any rate, he was a kinsman of his friend Manuel de Belmonte. From 1678 until his death, for nearly forty years, Schonenberg served the United Provinces of the Low Countries. When Stadholder William of Orange became king of England (1688), Schoenenberg represented also, more or less officially, the crown of England in Spain and Portugal. In 1678 he was sent to Madrid as "Commissary Extraordinary of the United Provinces" in order to settle a conflict between the Dutch admiralty and the Spanish treasury. He succeeded in executing this difficult commission, and in 1684 again went to Madrid, as "Envoy Extraordinary of the Prince of Orange to the King of Spain."

From 1690 to 1703 Schonenberg was in fact Dutch minister to Madrid, but he was not formally nominated because his status as a Jew or Marrano made it difficult to accredit him as a permanent minister to the court of the Catholic king.

During the first years of this activity Schonenberg displayed great ability in dealing with commercial affairs, but beginning with 1695 Madrid became the center of European politics because King Louis XIV of France was preparing to procure the Spanish succession for his grandson. Schonenberg played an important role in the diplomatic struggle which issued from France's efforts and led to the great war of the Spanish succession. He was excellently informed about the secret démarches made by the French minister at Madrid, and the letters written by Louis XIV testify that he deemed Schonenberg a dangerous adversary. The French party at the Spanish court was eager to exploit anti-Jewish prejudices against Schonenberg, who was exposed to vehement affronts because of his Jewish origin. But William III supported Schonenberg most vigorously, and did not refrain from reprisals. In 1700 Schonenberg became victorious. His detractors were punished, and he was received by the king of Spain in public audience. After the outbreak of the War Schonenberg was the first to advise the British government to occupy Gibraltar and to seize the Mexican fleet in which were the entire resources of Spain. In 1703 Schonenberg became British and Dutch minister to Portugal. In 1694 he was naturalized as a British citizen. In 1706 the German Emperor Charles VI made him marquess of Brabant. HUGO BIEBER.

SCHOOL OF HILLEL, SCHOOL OF SHAMMAI, *see* BETH HILLEL and BETH SHAMMAI.

A Jewish school in Tripoli, Libya

SCHOOLS[1]. **1. In Ancient Times.** In the earliest period of Jewish history, from the settlement in Canaan through part of the period of the Second Temple, children were taught by their parents in the home. In all the Bible there is almost no reference to any teacher in the modern sense of the word. The many references to the training of children in *Proverbs* are all addressed to the parents. The so-called "schools of the prophets" were not schools, but rather bands of followers who served the prophet and carried out his orders. It is only in *Chronicles* that there are references to the establishment of schools on the part of Jehoshaphat (*II Chron.* 17:7-9); but Bible scholars hold that this is a projection of later ideas into an earlier age. Apparently in the time of the kings parents instructed their children in such matters as reading and writing, simple arithmetic, and the various skills necessary in agriculture or trade.

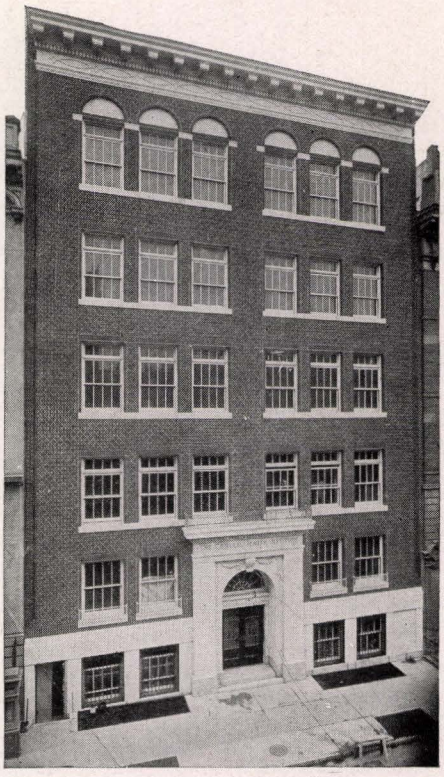
With the adoption of the Law as the code of Judaism in the time of Ezra (5th cent. B.C.E.) it became necessary to have a group of interpreters to explain it to the people. The priests and Levites thus became the first general teachers and the adult Israelites the first pupils. The method of teaching was apparently that of gathering the people in large assemblies on the festivals (as described in *Neh.* 8) and delivering lectures to them. At some time later—the exact time is uncertain—the Beth Hamidrash, or school-house, apparently located in the synagogue, supplied the needs of those who desired further knowledge. It is first mentioned in *Sirach* 51:23 (about 190 B.C.E.). The first schools for poor children were established by Simeon ben Shetah (1st cent. B.C.E.), and the first general schools for children by Joshua ben Gamla (1st cent. C.E.). These schools were apparently conducted on very similar principles. The teacher sat on a bench, the pupils about him on the ground. Instruction was largely on the basis of memorization; in fact, a standard method of foretelling one's future was to ask a child what verse he was memorizing at the time. Teachers were often volunteers, who earned their livelihood in some other way, and taught children for the love of it.

These schools were for children from six to seven up to sixteen to seventeen. Those who wished to pursue their studies further would seek instruction from the sages (later rabbis) who taught small groups of individuals. Instruction was oral and memorization the chief method; their location was usually out in the open, under a tree or on a hillside; in winter the shelter of a house was naturally preferred. Finally, the most advanced students might be allowed to attend the assembly (Yeshiva, Methibta), where they sat on benches, listening to the debates of the rabbis. They were occasionally permitted to enter into the discussion, and might in course of time be accepted as accredited scholars (*baḳi, mumheh*). The form of general adult education was preserved in the Kallah assemblies of Babylonia, and in the sermon, which was at first a lecture on the Scriptures.

2. In the Middle Ages. Jewish schools in the Middle Ages began to take the form of a definite system, although the standards varied somewhat in the various countries. A distinction developed between the elementary schools which taught reading, writing and Bible, and the more advanced schools, which took up the Talmud and Jewish law. Teachers began to receive pay, and the appointments of the schools began to improve. With the contact with Arabic culture, in particular, many secular subjects were introduced into the curriculum, such as logic, geometry, music, astronomy and medicine. Books came into use, especially after the invention of printing (15th cent.). School buildings were sometimes in existence, although the synagogue was the more common place of instruction. Older students would often travel to centers of learning in order to gain further instruction from noted teachers, or to specialize in various fields.

This development was halted by the expulsion of the Jews from the countries of Western Europe and from large portions of Italy. In Eastern Europe and Germany of the later Middle Ages contacts with outside learning diminished, and Jewish schools fell back on purely religious literature for their curriculum. The Torah, the Talmud, the prayer-book and the codes became the main curriculum of the Jewish schools. Three types of schools began to be distinguished: the Heder, the Talmud Torah and the Yeshiva. The Heder, as its name indicates, was a room, often in the house of the teacher, where children were given the

[1] Since the development of Jewish schools, as well as modern systems, is discussed under EDUCATION, this article will be devoted to an analysis of the various types of Jewish schools, past and present.



A Yemenite school for children in Palestine

most primary instruction. The Talmud Torah was a more advanced school, conducted by the community. The Yeshiva, the most advanced of all, would appear only in certain outstanding communities, where great and learned rabbis would conduct their sessions. As the pupil passed from one school to the other, he gained more freedom to pursue his studies in his own way; whereas the Heder was devoted to little more than drill, the Yeshiva encouraged debate and the exercise of individual talents.

3. Modern Times. As the Jews emerged from the ghetto life of the Middle Ages, they were com-

The Central Jewish Institute building in New York city

pelled to consider a revision in their school system. In many countries the state began taking over the education of children; in others, there was either external pressure or an inner urge to introduce secular knowledge into the curriculum. Still later the force of various ideologies among the Jews or special needs led to still other developments. In modern times, accordingly, while the older forms of Heder, Talmud Torah and Yeshiva still persist, the following general forms are noticeable:

a. Religious Schools. Jewish religious schools are maintained by synagogues in countries where Jewish children receive secular education in the general schools. Sessions are held once a week, with sometimes an additional afternoon; the curriculum includes history, Hebrew (though not always), ceremonies and current events of Jewish interest.

b. Afternoon Schools (Hebrew Schools). These schools are, like the religious schools, intended to give a supplementary education, but provide more time and more of the traditional material. They meet on afternoons after the general school sessions. The curriculum usually embraces the text of the Bible and parts of the Talmud.

c. Free Schools. Free schools arose at the end of the 18th cent. as a means of providing an education for poor Jewish children in Germany and other countries of Europe. Such schools give a general secular education, plus some religious courses. They often stress vocational training.

d. Private Schools. In countries where education is compulsory Jews who do not want to send their children to the public schools, but who are unable to have them enrolled in private schools because of the latter's setting up of a Jewish quota, have often established private schools, theoretically for all children, but with an enrollment mainly of Jewish children. Such schools have no religious or specially Jewish instruction; they follow the ordinary curriculum, and often achieve a high level of education.

e. Parochial Schools. In these schools Jewish children receive a general education as a group and under Jewish supervision. Such schools are found occasionally in Western countries, but more commonly in Eastern Europe, where Jews are segregated. The curriculum may be general or may include specifically Jewish subjects. Some types listed below may also be classified as parochial schools, if they are the sole source of instruction for Jewish children.

f. Yiddish Schools. In these the main feature is the use of Yiddish as a language of instruction. They may be either parochial schools giving general subjects, or supplementary afternoon schools devoted specifically to Jewish themes.

g. Hebrew Schools. In these the main feature is the use of Hebrew as the language of instruction; they are usually Zionist in ideology. They may be either parochial or supplementary.

h. Traditional Schools That Have Been Modernized (*methukan*). These are Heders, Talmud Torahs and Yeshivas that devote part of their time to traditional studies, and the remainder to various secular subjects.

i. Trade Schools. These are special schools, often held in the evening, for the purpose of giving vocational training to Jewish children, with a view to weaning them away from ordinary Jewish vocations.

j. Labor Schools. These are characterized by their labor or Socialist ideology, which to a large extent governs the curriculum. They are generally secular, and often anti-religious.

k. Adult Schools. These are evening schools intended to supply information on Jewish subjects to interested laymen. They are often under the supervision of a congregation or rabbinical seminary.

l. Professional Schools. Under this head come schools for the training of Jewish teachers, and rabbinical seminaries.

A synagogue with a free school for children in New York city

SCHORR, ANSHEL, playwright and stage director, b. Zloczów, Poland, 1871; d. New York city, 1942. He came to the United States in 1900, and almost at once associated himself with the activities of the Yiddish theatre. His *A Mensh Zoll Men Zein* was produced in 1905. Subsequently, in addition to writing numerous plays and libretti, Schorr was the manager and director of theatres in New York, Philadelphia and Newark. In 1910 to 1911 he was stage manager for Jacob P. Adler. Among his better-known plays were *Shir Hashirim* (1911); *Molly Darling* (1935); and *One in a Million* (1935).

Dora Weissman Schorr (b. Odessa, Russia, 1891) was the wife of Anshel Schorr, and an actress. She was brought to New York in her infancy, and first appeared on the Yiddish stage at the age of three. Child actresses in the Yiddish theatre were rare, and during her childhood and adolescence she was frequently forced to appear in several parts in different theatres on the same evening. Subsequently she studied at Hunter College (then Normal College) and the Eclectic Medical College in Cincinnati. But she returned to the stage, and in addition to playing soubrette, then dramatic roles in the Yiddish theatre, she was associated with Schorr, whom she married in 1921, in management and direction. She played also in English, appearing in Elmer Rice's *Two on an Island* and Norman Krasna's *The Man with the Blond Hair.*

SCHORR, BORUCH, cantor, b. Lemberg, Galicia, 1823; d. Lemberg, 1904. At the age of nine he entered the choir of Bezalel Odessaer, and two years later that of Yerucham Hakatan. A few years later he sang in Jassy, Roumania, where the president of the congregation showed unusual interest in the young boy, married off his daughter to him, and sent him to Vienna to study with outstanding instructors of voice. Here Schorr also continued his studies in Talmud. At the age of twenty-three he occupied his first position in Hotin, Russia. His compositions found great favor and gradually spread his fame throughout Europe, so that a few years later he was cantor in the large and fashionable Rombach Temple in Budapest. Here Schorr wrote his *Bechor Shor,* a commentary on the Pentateuch, and *Veyithron Lehochmah,* a commentary on *Ecclesiastes.* Both these books received well merited praise in rabbinic and scholarly circles.

In 1859 Schorr accepted the position of cantor at the large synagogue in Lemberg. In 1890 he composed an operetta, *Shimshon Hagibor,* for the Yiddish theatre in Lemberg. His presence at the premiere was resented by the pious element in his congregation, as a result of which he left Lemberg, and in 1891 came to New York city, where he was engaged by Congregation Mogen Avrohom, on Attorney Street. His Lemberg congregants sought his return repeatedly. For five years Schorr refused despite homesickness. Finally, in 1896, a committee from Lemberg arrived at New York city, and persuaded Schorr to return to Lemberg.

At the age of eighty-one Schorr was chanting the service on the eighth day of Passover when, in the Musaf (additional) service, as he reached the words "Ovinu Malkenu" (Our Father, Our King), the end came suddenly and dramatically. His congregation, refusing to be comforted, invited the well-known cantor Meyer Koerner to sing with Schorr's choir exclusively the compositions of their beloved departed cantor. Schorr's six sons all became cantors.

Schorr's compositions were dramatic and interpretive in character. His voice was powerful and flexible. An integral part of his art was his choir, with which he achieved unique effects of instrumental color. A volume of his compositions for cantor and mixed choir for the high holy days was arranged and published by his son, Israel Schorr (1906) in New York, and was reissued in 1928.

Max Wohlberg.

Friedrich Schorr

SCHORR, FRIEDRICH, opera singer, b. Nagyvárad, Hungary, 1888. He studied law at the University of Vienna, and singing with Adolph Robinson. An engagement with the Graz Opera, where he made his debut in 1911, convinced him to make music his career. From 1916 to 1918 he was a member of the Prague Opera, from 1918 to 1923 he sang with the Cologne Opera, and from 1923 to 1931 at the Berlin State Opera. During these years he was also a member of the Vienna State Opera, where he was a great favorite. In 1923 Schorr visited the United States with the Wagnerian Opera Company, and one year after this he was engaged by the Metropolitan Opera House. He was recognized as one of the greatest living Wagnerian singers, whose interpretations of Wotan and Hans Sachs became models to be studied and followed by an entire generation of younger Wagnerian singers. Schorr was also a principal artist of Covent Garden and, from 1925 until the rise of Nazism, at the Bayreuth festivals. In 1938 Schorr was appointed vocal advisor of the Wagner department of the Metropolitan Opera House. In 1943 he retired from the operatic stage after more than eighteen years as baritone at the Metropolitan Opera House. His farewell performance (in *Siegfried,* March 2), attended by a capacity audience, elicited a veritable ovation. In the words of the *New York Times* critic, "it will not be possible to replace Mr. Schorr on the Metropolitan stage."

SCHORR, JOSHUA HESCHEL, scholar and antagonist of Hasidism, b. Brody, Galicia, 1814; d. Brody, 1895. After acquiring a considerable fortune as a businessman he devoted himself exclusively to study. In 1852 he founded the periodical *Hehalutz,* which contained chiefly critical essays on Talmud, Halachah, Haggadah and problems of Jewish history and literature. Thirteen volumes of the *Hehalutz* appeared between 1852 and 1869.

Among its contributors were Abraham Geiger, Nachman Krochmal, Hirsch Mendel Pineles, Isaac Samuel Reggio and

Moses Schorr

Moritz Steinschneider; the last volumes, however, were written exclusively by Schorr. The *Hehalutz* caused the appearance of several polemical writings, such as *Haholetz* by Moses Harmelin (Lemberg, 1861) and *Bitur Tit Hayavan* (Pressburg, 1880), which turned against Schorr's criticism of the Talmud.

Like all Maskilim (enlighteners), he campaigned against the Heders, Hasidism and Jewish clericalism, occasionally using biting satire instead of his usual scholarly method. Schorr was a friend of Isaac Erter, Heinrich Graetz, Nachman Krochmal and Leopold Zunz. Samuel David Luzzatto dedicated his *Bethulath Bath Yehudah* to the occasion of Schorr's wedding.

Despite his great wealth Schorr denied himself even the most essential comforts, and refused to support his needy relatives. He bequeathed his fortune and his large library to the Israelitisch-Theologische Lehranstalt in Vienna.

Lit.: *Luah Ahiasaf* (5657); *Pardes*, vol. 3; Friedberg, *Toledoth Mishpahath Schorr*.

SCHORR, MOSES, Polish senator, Assyriologist and historian, b. Przemysl, Poland, 1874; d. Siberia (exact place unknown), 1942 (two years after his escape from Poland, which the Nazis invaded in September, 1939). He received his early education in the Gymnasium of Przemysl, and later studied at the Universities of Vienna and Berlin, also in the rabbinical seminary of Professor Schwartz at Vienna. Schorr became famous as a Polish Jewish historian, Assyriologist and rabbinical teacher, in addition to his communal work in various fields among the Jews of Poland.

His doctor's dissertation on the organization of the Jews in Poland from the ancient times until 1772 (published in *Kwartalnik Historyczny*, Lemberg [Lwów], 1899) emphasized his profound knowledge of Jewish history. However, his monumental work was *The Jews in Przemysl up to the End of the 18th Century* (Polish; 2 vols.), which received the Wawelberg Prize from the philosophical faculty of the University of Lemberg. His article on the history of Don Joseph Nasi (*Monatsschrift für Geschichte und Wissenschaft des Judentums*, 1897, 169-77, 228-37) and his last work, dealing with the rights received by the Jews of Cracow from the Polish King Stanislaus Augustus in 1765, were equally valuable studies. As a historian of Polish Jewry Schorr possessed characteristics of Heinrich Graetz and Simon Dubnow, whose follower he was.

His main work on the history of the Sumerian language, and especially the language, culture and laws of the Babylonians and Assyrians, was *Altbabylonische Rechtsurkunden aus der Zeit der ersten babylonischen Dynastie* (3 vols., 1910-17), published by the Vienna Academy. He wrote many articles on the same subject which were published both in periodicals and books. From 1899 on Schorr was instructor in the Jewish teachers' seminary in Lemberg. In 1910 he became assistant professor and in 1915 professor at the University of Lemberg. Ten years later he was appointed professor of Sumerian language and ancient oriental culture at the University of Warsaw.

His communal activities were begun in Lemberg, Galicia, whither he returned from Vienna in 1917, after an absence of two years. The first World War had destroyed Jewish life in Lemberg and elsewhere in Galicia, and Schorr therefore first organized a central relief committee for the Jews there. He then devoted all his free time to building up Jewish life in Galicia, and continued this work with still greater energy when he came to Warsaw in 1923 as preacher in the Tlomacka Synagogue and as rabbi in the place of the scholar Samuel Poznanski.

In Warsaw Schorr focused all his attention on the organizing of an institute for Judaistic learning, and when this institute was opened (February, 1928), he became professor and taught Bible and Hebrew philology; for several years he was its president. He fostered Jewish education, representing the Jewish community in Warsaw in the government school councils with the official sanction of the ministry for religion and public education. The ministry appointed him a member of the highest department on pedagogy and of the government council for public education. In 1936 he was elected a member of the Polish senate, serving for two years.

He was chairman of the B'nai B'rith in Poland, of the Organization of the Hebrew University in Jerusalem, of the Palestine Foundation Fund, of the Committee to Help Jews in Distress, and president of the Relief Committee to Help Polish Jews Who Suffered from German Persecution.

Z. TYGEL.

SCHOTT, LEOPOLD, rabbi, b. Randegg, Baden, Germany, 1807; d. Bühl, Baden, 1869. He was educated in Talmudic schools in Hechingen and Karlsruhe, and studied at the University of Heidelberg. After his graduation he became teacher in his native town; later he was rabbi of this community, then rabbi at Gailingen and Bühl. Although Schott was always a rabbi of small communities, his influence on the Jews of Baden was great. In 1848 he was elected one of the three rabbis who directed and supervised, together with the *Oberrat* (supreme council), the entire religious life of the Jews of Baden. Schott was a reformer, but rejected radicalism. He participated in the first conference of German rabbis at Brunswick (1844), and was a member also of the second conference at Frankfort (1845), but he severed his relations with the radical majority because it voted down a resolution advocating the retention of prayers in Hebrew.

In 1852 Schott issued his decision on the introduction of the organ into Jewish worship. This report was widely appreciated in Germany. Schott defended the use of the organ in synagogues, but he did not intend to disturb conservative communities. In 1861 he effected the introduction of Friedmann's prayer-book into the synagogues of Baden, where it remained in use until the days of Nazi persecution.

SCHOTZ, BENNO, sculptor, b. Arensburg, island of Oesel, Estonia, 1891. The son of a watchmaker, he tried his hand at modeling as a child, but was intended for a technical career. He was educated at the Gymnasium of Parnu, Estonia, and later at the technical college of Darmstadt, Germany.

At twenty he went to Scotland and studied engineering at the Glasgow Royal Technical College, but finally turned to sculpture and attended the evening classes at the Royal Glasgow Institute of Fine Arts; for the most part, however, he was self-taught. His first work was a bust of Tolstoi (1917), and by 1921 he had on view eight works in stone, bronze and plaster which denoted a definite personality. He first exhibited several of his works at the Royal Scottish Academy at Edinburgh and at the newly founded Glasgow Society of Painters and Sculptors, then had his first one-man show in Glasgow (1926), followed by another Glasgow exhibition three years later.

In 1930 he had his first one-man show in London at the Lefevre Galleries. Schotz was the first Jew to be elected a member of the Royal Scottish Academy (1937). Hugh Walpole, in his foreword to the catalogue of the first Schotz exhibition in London, emphatically declared: "Benno Schotz' work is authentic. That is no light thing to say in these days when it is so easy to pick up the externals of an art and to pretend that it is the real thing." The majority of the exhibits were bronzes (cast modelings of clay), but he proved to be also an efficient woodcarver. Schotz was especially successful in portraiture, how to project character and personality. The critics praised his genuine vigor and his convincing interpretation of character, which revealed itself best in his naturalistic, anti-academic portraiture. To this category belonged his *Theodor Herzl,* a stone bust of monumental proportions, as well as the bust of the noted Scotch painter and etcher, James McBey. Of special Jewish interest were *Jessica,* a bronze head, and *The Exile.*

In such studies, in line and plane as *Le Finale* and *Nocturne* he followed the cubistic ideas set up by Archipenko. Besides these works, he did a number of carvings on buildings in Glasgow. Schotz is represented in the public galleries of Glasgow, Edinburgh, Aberdeen and other Scotch cities. Writing on Scotch sculptors in the *London Studio* (1936), the art critic H. Harvey Wood referred to him as "the ablest sculptor in Scotland."

Lit.: Parkes, Kineton, *Sculpture of Today* (1921); *The Studio,* vol. 87 (1924) 44; Wood, H. Harvey, "Scotch Sculptors," *London Studio,* July, 1936.

SCHOUR, ISAAC, university professor and research worker, b. Efingar, Russia, 1900. He was brought to the United States in 1913. Schour studied at the University of Illinois (D.D.S., 1924; M.S., 1928) and at the University of Chicago (Ph.D., 1931). After serving as associate professor (1931-35), he was made full professor of histology at the University of Illinois, College of Dentistry, in 1935. Two years later he became head of the department.

Schour was a delegate to the International Dental Congress held at Vienna in 1936, and president of the International Association of Dental Research (1941-32). He was co-author of *Text-book of Dental Histology and Embryology* by Noyes, Schour, and Noyes (1938).

SCHRAMECK, ABRAHAM, French statesman, b. Saint-Étienne, France, 1867. He was descended from a family of Alsatian Jews. His grandfather, Gabriel Schrameck (b. Isenheim, Alsace, 1795; d. Strasbourg, 1853), was a soldier in Napoleon's army in 1812, and was captured by the Russians. His memoirs were published in 1907, and reprinted in *Die Feldzüge Napoleons, nach Aufzeichnungen jüdischer Teilnehmer und Augenzeugen* (edited by Max Grunwald, 1913).

After the annexation of Alsace by Germany (1871), the Schrameck family emigrated to France. Schrameck became a public officer, and succeeded because of his ability and energy. When the republican government of France decided to demand revision of the Dreyfus trial, it was necessary to appoint a new chief of police of Paris who would be ready to suppress anti-Semitic and royalist demonstrations.

The famous Lépine was charged with the task of maintaining order in Paris, and Schrameck became his chef de cabinet. The government, satisfied with Schrameck's activity, appointed him secretary general of the prefecture of the department of Bouches du Rhône, whose capital, Marseille, was often troubled by disturbances and criminal gangs. Schrameck came fully up to the mark also in Marseille, and in 1900 was nominated prefect of the department of Tarn et Garonne. He was at this time, and for many years, the only professing Jew to govern a department of France. Some years later he became prefect of the department of Bouches du Rhône, which was especially difficult to administer.

Soon upon the outbreak of the first World War Schrameck became governor general of Madagascar, where he had the task of suppressing German trade and secret German plots, and of mobilizing the resources of the island to supply the Allies. Schrameck proved equal to this task and introduced important economic and administrative reforms which satisfied the natives and attached them to France. In 1920 he returned to France, and was elected and reelected senator, representing the department of Bouches du Rhône until the outbreak of the second World War.

He was vice-president of the Left Democratic group, special reporter to the budget of the ministry of the interior, a member of the finance and air committee, and a member of the high council of colonies. In 1925 he was minister of the interior in two successive cabinets presided over by Painlevé. Schrameck, an ardent French patriot and republican reformer, was always interested in the defense of Judaism. His house at Paris was the home of the chief rabbi of the French Consistory. HUGO BIEBER.

SCHRECKER, PAUL, philosopher, b. Vienna, 1889. He studied in Vienna (LL.D., 1913) and Berlin (Ph.D., 1927), became a member of the Prussian Academy of Science (1929) and co-editor of the national edition of the works of Leibnitz and of the *Deutsche Literaturzeitung,* organ of the association of German academies, but in 1933 was ousted by the Nazis from his posts. He then went to Paris, where he participated in the first complete edition of the works of Father Malebranche, the "Christian and French Plato," and was the first Jew to deliver the Master Mind Lecture at the British Academy (1937).

Schrecker came to the United States in 1940, and became a member of the Graduate Faculty for Social Science, New York city (1941), and of the École Libre des Hautes Études (1942). He was a Rockefeller Fellow from 1935 to 1940. In 1936 he received the philosophy prize of the Académie des Sciences Morales et Politiques, Paris (1936).

His works include: *Henri Bergsons Philosophie der Persönlichkeit* (1912); *Lettres et fragments inédits de Leibniz* (1934); *Leibniz, ses idées sur l'organisation des relations internationales* (1937); *Malebranche, oeuvres complètes,* vol. 1 (1938); *Leibniz, opuscula philosophica selecta* (1939).

SCHREIBER (rabbinical family), *see* SOFER.

SCHREIBER, ABRAHAM SAMUEL BENJAMIN (known as Kethab Sofer, after the title of his work), b. Pressburg (Pozsony), Hungary, 1815; d. Pressburg, 1871. At the age of fourteen he wrote *Hiddushe Yorah,* and at the age of seventeen he engaged

in extensive correspondence, on religious legal questions, with many scholars. He was successor to his famous father, Moses (Hatham) Sofer, in the rabbinate and as director of the Yeshiva of Pressburg, which under him at times had 400 students. In 1859 the Austrian government recognized it as an Orthodox rabbinical seminary which graduated many famous rabbis and scholars.

Continuing in his father's traditions, Schreiber strictly opposed all religious reform, and in the national Jewish congress of 1868 to 1869 he was a leading champion of complete separation from the group of reformers. His responsa were published in four volumes, *Teshuboth Kethab Sofer* (1873-94), and under the title of *Sefer Kethab Sofer* (2nd ed., 1879) he wrote a homiletical work on the Pentateuch.

Lit.: Schreiber, S., *Hut Hameshullash* (1887); Wininger, S., *Grosse Jüdische National-Biographie* (1925-34).

SCHREIBER, BENJAMIN F., state supreme court justice, b. New York city, 1885. He received the degree of LL.B. from Brooklyn Law School and was admitted to the Bar in 1906.

In 1911 he became associated with James A. Foley, who was then a member of the State Legislature. This association continued until January 1, 1920, when Senator Foley became surrogate of New York County. In 1920 he and William T. Collins organized the firm of Schreiber & Collins, which subsequently became Schreiber, Collins & Buchter. On January 1, 1929, Collins, having been appointed a justice of the Supreme Court, retired from the firm, and the firm name was then changed to Schreiber, Myers & Buchter.

Schreiber was a first assistant district attorney under Joab H. Banton, during which time he conducted the investigation of bucket shops and presented evidence to the Grand Juries, resulting in the indictment of many owners of bucket shops. He resigned at the end of one year, when his work was completed, and was appointed a deputy attorney-general in the year 1923 to conduct investigations under the Martin act involving the issuance and sale of fraudulent securities. On March 26, 1940, he was appointed justice of the Supreme Court of the State of New York and in the elections in November, 1940, he was elected for a fourteen-year term.

Schreiber was active as a Democratic leader for more than thirty years, and president of the National Democratic Club during the years 1938 through 1939 and subsequently one of its governors. From 1933 on he was president, and subsequently honorary president of the Young Men's and Women's Hebrew Association of Washington Heights, New York city. He was also a director of the New York Guild for the Jewish Blind.

SCHREIBER, CORNELL, lawyer and mayor, b. Dayton, Ohio, 1881. He attended Central High School and Medical College at Toledo, Ohio, but abandoned the study of medicine for that of law. He was admitted to the bar in 1902.

In 1908 Schreiber was elected a member of the house of representatives sitting at Columbus, Ohio. An adherent of the Independent movement, he was elected city solicitor on a non-partisan ticket, in the administration of Brand Whitlock, in 1909. Reelected for a second term, he served in that office until the end of 1913. During his solicitorship the Schreiber ordinance, providing for three-cent fares on the privately owned traction system of Toledo, was passed and went into effect in spite of passive resistance on the part of the traction company. In 1917 Schreiber was elected mayor of Toledo, and, reelected in the next municipal election, remained in office throughout 1921. Upon his retirement he resumed the practice of law, and was still active in 1943.

Schreiber was interested in the work of the Toledo Public Library and served as secretary of its board of trustees from 1901 to 1914. He received the honorary degree of doctor of laws from Toledo University.

SCHREIBER, MOSES (HATHAM SOFER), *see* SOFER, MOSES.

SCHREINER, MARTIN, scholar, b. Nagyvárad (Grosswardein), Hungary, 1863; d. Berlin, 1926. He was ordained in the rabbinical seminary of Budapest in 1887, and after several years of ministering and teaching at the Jewish Teachers Training School at Budapest he was called to the chair of history and philosophy of Judaism in the Lehranstalt für die Wissenschaft des Judentums, Berlin. Schreiner made remarkable contributions to the history of Judaism; his special field was philosophy of Islam and its influence on medieval Jewish thought.

Among his important works are: *Zur Geschichte des Ascharitentums* (1890); *Le Kitab al-Muhadḳara de Moïse ibn Ezra et ses sources* (1892); *Der Kalam in der jüdischen Literatur* (1895); *Az iszlám vallásos mozgalmai az első négy században* (Religious Movements of Islam in the First Four Centuries; 1889); *Zur Geschichte der Polemik zwischen Juden und Muhammedanern.* In his last work, *Die jüngsten Urteile über das Judentum* (1902), he traced contemporary anti-Semitic currents back to their historic sources and tried to prepare the ground for a better understanding of Judaism.

In 1902 he became mentally deranged, and never recovered. The critical edition of the works of the Jewish medieval philosophers and of the system of Judaism which he had been preparing remained unfinished.

SCHREINER, OLIVE, non-Jewish writer, b. South Africa, 1862; d. South Africa, 1920. She believed that there was a strain of Jewish blood in her ancestry. Deeply sympathetic toward the Jews, she was the writer of a remarkable *Letter on the Jew,* addressed to a public meeting of the Cape Town branch of the Jewish Territorial Association on July 1, 1906, as a protest against the persecutions of the Jews in Russia. It included a vigorous defense of the Jews and a plea for their admission to South Africa, where they would recuperate and rise, and blossom out in noble forms of genius.

"The study of the history of Europe during the past centuries," she wrote, "teaches us one uniform lesson, that the nations which have received and in any way dealt fairly and mercifully with the Jew have prospered; and that the nations that have tortured and oppressed him have written out their own curse."

Lit.: Cronwright-Schreiner, S. C., *The Life of Olive Schreiner* (1924).

SCHREYER, JAKAB, jurist, b. Ugra, Hungary, 1847; place and date of death unknown. He studied law in the Universities of Vienna and Pest, and was admitted to the bar. He was a member of the assembly of the city of Budapest and a member of the board of the Budapest chamber of commerce. In 1893 Schreyer was commissioned by the Hungarian minister of justice to redact several bills of commercial law. Among his works, *A perorvoslatok teljes rendszere,* a complete survey of decisions in common law, won the prize of the Hungarian Academy.

SCHROFF, JOSEPH, oral surgeon, b. New York city, 1888. A bachelor of science from the College of the City of New York in 1909, he engaged in chemical research work. In 1917 he served in the New York state department of agriculture. He then engaged in the study of medicine, and graduated from Columbia University College of Physicians and Surgeons in 1920 and from the School of Dental and Oral Surgery in 1922. Schroff became associated with that university as an instructor in history and pathology, in the College of Physicians and Surgeons. After returning from

a study course at the University of Vienna (1928) he became associate professor of oral surgery.

Schroff was oral surgeon of the Jewish Memorial Hospital, Mount Sinai Clinic, and assistant attending surgeon at Presbyterian Hospital and Vanderbilt Clinic. Honorary president of the Dental Alumni Association of Columbia University, he was awarded the medal of the Association in 1933.

SCHTEINGART, MARIO HIRSCH, physician, b. Ulla, Latvia, 1893. In 1910 he went to Argentina. He studied at the University of Cordoba, which awarded him a degree in pharmacology (1917) and the M.D. degree (1922). Having specialized in endocrinology and nutrition, he became a lecturer in the University of Buenos Aires. His more than 200 memoranda to the medical press, in addition to his volumes on basal metabolism, nutrition and dietetics and on the hypophysis and its functions in the clinic, earned him the reputation of an authority on nutrition.

He was vice-president at the Cordoba Congress of Nutrition in 1939. Schteingart was president of the Buenos Aires branch of the Friends of the Hebrew University, and twice president of the B'nai B'rith.

SCHUDT, JOHANN JAKOB, non-Jewish orientalist, b. Frankfort, Germany, 1664; d. Frankfort, 1722. He was greatly interested in the Jews, their language and their history, and took part in the mission to convert them. His best-known work is his *Jüdische Merckwürdigkeiten* (Frankfort and Leipzig, 1714; new ed., Berlin, 1922). In it he gathered many facts on Judaism and its doctrines without, however, sifting or critically analyzing the material. Yet his work possesses much historical value, especially for the history of the Jews in Frankfort. A selection from it, under the title of *Von der Frankfurter Juden Vergangenheit,* was published, with an evaluation, by Efraim Frisch (Berlin, 1934).

Another work by Schudt, of humorous nature, is *Jüdisches Frankfurter und Prager Freudenfest wegen der höchst glücklichen Geburt des Kaiserlichen Erbprinzens* (Leopold) (1716). As demonstrated by his preface to Grünhut's edition of David Kimhi's commentary on *Psalms,* Schudt must have been in close relationship wih the Frankfort Jews. In his work *Judaeus Christicida* Schudt attempted to prove that the Jews had been physically and spiritually punished for their crucifixion of Jesus.

SCHUECK, JOHAN HENRIK EMIL, biographer and historian of literature, b. Stockholm, Sweden, 1855. In 1890 he was appointed professor of history of literature and arts at the University of Lund, from which he had graduated in 1882, and professor at the University of Upsala in 1898. He was head of the latter university from 1905 until 1918. In 1913 he was appointed a member of the Swedish Academy of Sciences, and during the following years also became a member of other learned Swedish and foreign societies. In 1918 he became chairman of the Nobel Foundation.

Although his field is the history of literature, Schueck considers literature a part of civilization as a whole and his works therefore provide a wide cultural outlook. Combining considerate criticism with constructive ideas, he presented new theories on the development of the ancient Germanic religion, on the origins of Swedish literature, and on the general history of literature and of Swedish literature and the independence of all European literature. His background has been termed "almost unlimited."

His first impressive work was *William Shakespeare* (1883-84), which he rewrote under the title of *Shakespeare och hans tid* (2 vols., 1916). His most comprehensive work is *Världlitteraturens historia* (2 vols., 1898-1906). This work was later reissued under the title of *Illustrerad allmän litteraturhistoria* (7 vols., 1919-26). It contains, among other topics, the history of Jewish literature. His other works include biographies of King Gustav III, Madame de Staël, Alfred Nobel (1929), and others. In 1919 he wrote *Den Israelitiska literaturen* (2nd ed., 1920), and wrote articles on Jewish literature for Bonnier's *Lexikon.* His fictional works include *En Äfventyrare* (1918), a novel of the Thirty Years War, while among his historical works is to be mentioned *Rom. En vandring genom seklerna* (2 vols., 1913-14; 2nd ed., 1923). An eight-volume collection of essays, *Ur gamla papper,* was published during 1892 to 1908. One of Scheuck's latest works is the third edition of his *Illustrerad svensk Litteraturhistoria* (1926-32), a work which he compiled together with Karl Johan Warburg. In 1939 he completed the sixth volume of his history of the Academy of Sciences of Upsala, and in 1940 he published studies on the history of Stockholm. In 1943 Schueck was still in Sweden.

Lit.: Vem är det? (1940); *Salmonsens Konversations Leksikon,* vol. 21 (1936) 129; *Nordisk Familjebok,* vol. 17 (1932) 566; Afzelius, N., *Bibliografi över Henrik Schücks* (1935).

SCHUELEIN, JULIUS WOLFGANG, painter, b. Munich, Germany, 1881. He studied in his native city, where he was especially under the influence of Hugo von Haberman. Schuelein remained in Munich until 1928, one of the most active members of the Munich Secession. His landscapes and especially charming city scenes were examples of a delicate and restrained but effective impressionism. Schuelein also lived for a time in Paris, of which his wife, the talented painter Suzanne Cavallo-Schuelein (b. 1883), was a native.

His *Montparnasse Station* was acquired by the City Museum of Munich. He also published a folio of lithographs, *Salzburg* (1922). After moving to Berlin in 1928, Schuelein went to Paris in 1933 and to New York city in 1941.

Lit.: Deutsche Kunst und Dekoration, vol. 24 (1918-19) 328; vol. 55 (1924-25) 3; vol. 65 (1929-30) 168; *Cicerone,* vol. 20 (1928) 277.

SCHUELLER, RICHARD, political economist and Austrian state official, b. Brünn, Moravia, 1870. He received the LL.D. degree from the University of Vienna (1892), and entered the office of the Austrian ministry of commerce (1898). Schueller became head of the department of tariff and commercial treaties (1905), and in 1917 was appointed head of that bureau in the ministry of commerce. The following year he entered the foreign office, where he remained until March, 1938, when he was ousted by the Nazis. In 1932 he was made envoy to the League of Nations; he served also as a member of the Economic Committee of the League of Nations. He was an expert on commercial treaties. Schueller taught economics at the University of Vienna (instructor, 1899; assistant professor, 1912; associate professor honoris causa, 1930), and was co-editor of the *Zeitschrift für Nationalökonomie* (1930-38). In 1940 he emigrated to the United States, and became visiting professor at the Graduate Faculty of Political and Social Science of the New School for Social Research, New York city. Schueller, whose mother was descended from Ezekiel Landau, chief rabbi of Prague, was one of the few non-baptized Jews in the Austrian government service.

He was the recipient of numerous orders, including the Austrian Franz Josef order and the Belgian Leopold order, and was a chevalier of the French Legion of Honor. His writings include: *Die klassische Nationalökonomie und ihre Gegner* (1895); *Die Wirtschaftspolitik der historischen Schule* (1899); *Schutzzoll und Freihandel* (1905); *Die äussere Wirtschaftspolitik Österreich-Ungarns* (1925); *The Economic Policy of Austria-Hungary During the War* (with G. Gratz; 1928).

SCHUL, popular term for synagogue; *see* SYNAGOGUE.

SCHULBAUM, MOSES, Hebraist and writer, b. Brzezany, Poland, 1835; d. Vienna, 1920. He taught Hebrew in the Baron de Hirsch schools, and in 1871

Julius Schulhoff

to 1872 published at Lemberg a weekly, *Haeth.* He translated into Hebrew Friedrich Schiller's *Die Raüber* (*Hashodedim,* Lemberg, 1871) and Aristotle's *Ethics* (Lemberg, 1877), and edited a revised edition of Judah Loeb Ben Zeeb's *Otzar Hashorashim* (5 vols., Lemberg, 1880-82), to which he added a Hebrew-German dictionary (Lemberg, 1898) and a German-Hebrew dictionary (Lemberg, 1904).

Lit.: Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana,* 23, 351; Kenaani, Jacob, in *Leshonenu,* vol. 5 (1934) 299-331.

SCHULBERG, BENJAMIN PERCIVAL, motion picture producer, b. Bridgeport, Conn., 1892. Educated at the College of the City of New York, he started as a reporter and scenario writer. In 1912 he joined Adolph Zukor's Famous Players Company, and when that concern merged with Jesse L. Lasky's company (1915) to become the Paramount Corporation, Schulberg was made general manager. During the subsequent decades he repeatedly engaged in independent production, thus from 1918 to 1925, and again in 1932 and 1936 when he organized his own company; the pictures produced by it were, however, released by Paramount.

In the intervals from 1926 to 1932 he was general manager for Paramount on the West Coast, and from 1935 to 1936 production executive for Columbia Pictures. In 1938 he associated himself with David O. Selznick, and in 1940 returned to Columbia Pictures. Among the best remembered of Schulberg's productions were: *Jennie Gerhardt; Three Cornered Moon; Little Miss Marker; And So They Were Married; Wedding Present; Blossoms on Broadway; He Stayed for Breakfast; Adventures of Martin Eden.* In 1942 he was producing *City Without Men.*

SCHULHOFF, JULIUS, pianist and teacher, b. Prague, 1825; d. Berlin, 1898. He made his piano debut in Dresden in 1842. Following a successful concert at Leipzig he went to Paris, where he attracted the attention and admiration of Chopin, who sponsored a series of recitals. Extensive tours of Europe placed him in the front rank of piano virtuosos. Following an extraordinarily successful career as concert artist, he settled in Paris as teacher. Later, in Dresden, he became one of the most successful piano teachers of his time, receiving the honorary title of royal professor in 1897. He wrote many works for piano, including a sonata, impromptus, caprices, études and waltzes.

ERWIN SCHULHOFF (b. Prague, 1894), his nephew, distinguished himself as a pianist, as a composer of radical tendencies, and as professor of piano at the Prague Conservatory.

SCHULKLOPFER, *see* FUNCTIONARIES, RELIGIOUS AND COMMUNAL.

SCHULMAN, KALMAN, Hebrew writer, b. Old Bychov, White Russia, 1821; d. Vilna, Lithuania, 1899. His literary career flourished in the heyday of the Russian Haskalah, whose central tone was criticism and negation of traditional and Hasidic Judaism. Nevertheless he devoted his efforts entirely to positive and constructive contributions to enlightenment. He was the most prolific writer of the age, producing more than twenty volumes, mostly translations and adaptations from many sources. He enriched Hebrew literature with many useful and instructive works of knowledge which was inaccessible to his generation, and thereby he widened the horizon of his contemporaries. His translations *Mistere Paris* (the adventure and mystery novel by Eugene Sue) and *Harisoth Bethar* (the historical novel of the age of Bar Kochba by Dr. Mayer Lehmann) were among the first novels to appear in the Hebrew language, and opened to the Jews of the 1860's and 1870's a new and romantic world.

Most of Schulman's works, however, were not in the field of fiction. He was primarily concerned with providing the young Jews of his day with informative reading of general and Jewish interest. Thus he translated freely Weber's *History of the World* in nine volumes (Vilna, 1867-84), wrote a ten-volume work on the geography of the world, *Mosede Eretz* (adapted from many sources; Vilna, 1871-77); and published a four-volume book of biographies of great Jewish personalities, *Toledoth Hachme Yisrael* (adapted from Graetz; Vilna 1872-78). Among his informative contributions are his translation (from a secondary source) of Josephus' *Life* (Vilna, 1859), *Jewish War* and *Antiquities* (Vilna, 1861-63); his works *Halichoth Kedem* (two volumes on the geography of Palestine and the Near East; Vilna, 1848 and 1854); and *Ariel* (Vilna, 1856) and *Harel* (Vilna, 1864), collected essays on Biblical geography, Sinaitic inscriptions, the Lost Ten Tribes and other subjects. Others of his works are *Habatzeleth Hasharon* (The Lily of the Valley; 1881), *Minhath Ereb* (Twilight Offering; 1889), *Eretz Hakedem* (The Orient; 1890), and other collections of essays and sketches, original and adapted, on historical and geographical subjects, particularly pertaining to Palestine.

His works are a virtual library prepared by one man and used by thousands who knew no other language than Hebrew. His style and content are romantic: the love of Palestine, of the Hebrew language, the mysteries of the Orient, and the adventures of the past. Even his books on practical knowledge are written in lyrical and ornate style, with an appealing charm. Schulman's contribution is not in creating a new movement or style, but in contributing more richly than any one else to the education of his generation, and also to the succeeding generation, for practical enlightenment. AHRON OPHER.

Lit.: Lachower, Fishel, *Toledoth Hasifruth Haibrith Hahadashah,* vol. 2 (1929) 133 et seq.; Klausner, Joseph, *Yotzerim Ubonim,* vol. 1, p. 56 et seq.; idem, *Historiyah shel Hasifruth Haibrith Hahadashah,* vol. 3 (1937) 400-30; Waxman, Meyer, *A History of Jewish Literature,* vol. 3 (1936) 31 et seq.

SCHULMAN, SAMUEL, rabbi, scholar and theologian of the Reform Movement, b. Kalvaria, Russia, 1864. He was brought to the United States in 1868. A precocious child, he began the study of the Talmud at the age of eight, at the same time attending public schools in New York city. He attended the College

of the City of New York (B.A., 1885) and then went abroad to study at the University of Berlin and at the Hochschule für die Wissenschaft des Judentums, at which latter institution he took all the courses for the rabbinate. He then served in the pulpits of Congregations Shalom, New York city (1889-1890), Emanu-El, Helena, Mont. (1890-93), and B'nai Jehudah, Kansas City, Mo. (1893-99). In 1899 he became co-Rabbi of Kaufmann Kohler at Temple Beth-El, New York city; when Kohler was called to the presidency of the Hebrew Union College in 1903, Schulman succeeded him in the Beth-El pulpit. He soon became known as one of the outstanding pulpit orators of the metropolis. In 1927, when Temple Beth-El was consolidated with Temple Emanu-El, he became rabbi of the newly created Congregation Emanu-El; in 1934 he was made rabbi emeritus.

During his career Schulman took a leading part in many movements, both in New York city and in the country at large. He was for a number of years chairman of the inter-faith committee of the New York Board of Jewish Ministers. He was director and vice-president of the Young Men's Hebrew Association of New York city for over a generation, and chairman of its committee on education for seven years. He was extremely active in the Central Conference of American Rabbis, serving as its president from 1911 to 1913 (honorary president, 1934) and on numerous committees. He was one of the three members of the Conference chosen to become editors of the Bible translation made under the auspices of the Jewish Publication Society of America, and served for seven years until the completion of the work in 1916. He was a member of the Publication Committee of the Jewish Publication Society for over thirty years, and was a member of the board of editors of the *Jewish Classics* published by the society. From 1927 to 1940 he was a member of the Commission on Jewish Education of the Union of American Hebrew Congregations, serving during that entire period as chairman of the committee on youth education, and furnishing the initiative for the nation-wide organization of Reform Jewish youth which was finally effected in 1939. He was a member of the American Jewish Committee. He became a member of the Synagogue Council of America at its inception, and served as its president in 1934 to 1935. He was president of the Association of Reform Rabbis of Greater New York and Vicinity, which he helped found, from 1921 to 1926; he brought about the creation of the Hebrew Union College School for Teachers in New York city, and was chairman of the school's board of governors during the nine years of its existence. He was one of the organizers of the World Union for Progressive Judaism in 1926.

Schulman's writings, sermons and pronouncements are based on a thorough and systematic theology of the Reform Movement, particularly in America. As early as 1909 he had called attention to the Midrashic term Keneseth Israel, "community of Israel," which described the Jewish people as a religious organization rather than a nation after the loss of its political independence. Judaism thus became a religious community, based on the Torah, "law demanding obedience." Accordingly, he energetically opposed mixed marriages as tending to disintegrate the religion of Israel. The essential part of the Torah was the moral law as developed by the prophets; the ceremonial law, which should always be adaptable to new circumstances, is valuable as the symbol of the moral law. He rejected the idea of a specifically Jewish civilization, maintaining that Israel had always participated

Samuel Schulman

in and contributed to the civilization of the nations, and that its specific contribution of Jewish values was not based on blood but on genius as inspired by God.

He opposed Jewish nationalism as the negation of the traditional principles of Judaism; he defined the difference between his concept of Judaism and that of the nationalists by saying that the Reform Jews wish to be *bagoyim,* "in the midst of the nations," while the nationalists wish to be *kagoyim,* "like the nations." He energetically opposed the ideology of the Zionist Movement, yet took a great interest in the Jewish settlement in Palestine, making visits to that country in 1926 and 1935, and becoming a non-Zionist member of the Jewish Agency in 1929. He hailed the United States as the first nation that had deliberately organized itself on the basis of human rights and the dignity of the human spirit rather than on blood or national descent, and as the beginning of a new order of government based on the ideals of the prophets. He was the first to use the term "melting pot" (later popularized by Israel Zangwill) as a symbol for America, in a sermon delivered on March 30, 1907.

Schulman drew up a statement embodying these principles in 1935, as the enunciation of the platform of the Central Conference of American Rabbis on the fiftieth anniversary of the Pittsburgh Platform. It was noteworthy for its rejection of belief in a personal Messiah and its insistence on moral authority in Judaism. Due to his illness, this platform was not acted upon, but, by a decision of the executive board, it was ordered printed in the *Year Book* of the Conference side by side with the platform officially adopted—an unprecedented distinction.

Schulman wrote no large works, but contributed to the work of tract commissions and to scholarly and religious periodicals; many of his sermons were issued in pamphlet form. Among these are: *Jewish Ethics,* one of the clearest and most compact presentations of this subject; "Israel," *Central Conference of American Rabbis Year Book* (1935); reviews of Houston Stewart Chamberlain's *Foundations of the Nineteenth Century* (*Jewish Quarterly Review,* New Series, vol. 5, 1914, No. 2) and George Foot Moore's *Judaism* (*ibid.,* vol. 18, 1928, No. 4); "Why American Jews are Opposed to Zionism," *Outlook,* Jan. 5, 1916; "The

Searching of the Jewish Heart," *Menorah Journal,* April, 1918; "Mission of Israel," *ibid.,* Aug.-Sept., 1924; "A Basis for a Union in Israel; Essentials of the Jewish Problem," *Contemporary Jewish Record,* Oct., 1942, in which he challenged both Jews and Christians to recognize the true spiritual nature of Judaism and its right to exist; a pamphlet on Rosh Hashanah and Yom Kippur for the Jewish Publication Society; *The Fundamentals of Judaism as a Religion for the World; Christendom's Jewish Heritage; Our America; Judaism, Jesus and the Decadence in the Reform Jewish Pulpit; The Realness of the God of the Old Testament; The Fundamentals of the Jewish Ministry;* the articles "Calumny" and "Cardinal Virtues" for the *Jewish Encyclopedia,* and "Kaufmann Kohler" for the *Universal Jewish Encyclopedia.*

He received honorary degrees from the Jewish Theological Seminary of America (D.D., 1904) and from the Hebrew Union College (D.H.L., 1925). He served as president of the Associate Alumni of the College of the City of New York from 1930 to 1932. Congregation Emanu-El gave him a testimonial dinner to celebrate the fiftieth anniversary of his rabbinate in 1939. SIMON COHEN.

Lit.: The year books of the Central Conference of American Rabbis, especially vol. 19 (1909); vol. 22 (1912); vol. 30 (1920); vol. 45 (1935); the publications cited in the article.

SCHULMANN, ELEAZAR, Hebrew author, b. Krettingen, province of Kovno, Lithuania, 1837; d. Kiev, Russia, 1904. His first work, *Haobedim Vehaniddahim* (The Lost and the Exiled; Odessa, 1886), treating of the wretched lot and life of the Jews in Russia, and which, patterned after Victor Hugo's great masterpiece *Les Misérables,* he began to publish at Odessa in 1867 in Perez Smolenskin's *Hashahar,* was not well received by the critics.

For this reason, Schulmann burned that part of the manuscript which remained unpublished. Later he published in both *Hashahar* and *Hamelitz* several belletristic works which later appeared in book form under the title of *Otzar Sipurim* (Treasurehouse of Stories; 1894; 2nd ed., 1902). Of greater importance was his *Mimekor Yisrael* (From the Sources of Israel), containing exhaustive biographies of Heinrich Heine and Karl Ludwig Börne (part 1, dealing with the life and works of Heine, 1876; part 2, on the life and works of Börne, 1894).

Schulmann devoted the last fifteen years of his life to a study of Yiddish language and literature. He published various scientific articles on this subject in Hebrew and Yiddish periodicals. His main work, a history of Yiddish literature from the 15th to the end of the 18th centuries, was published at Riga (1913) under the title of *Sefath Yehudith-Ashkenazith Vesifruthah;* parts of it had appeared first in Yiddish in the *Yiddishe Folksbibliothek* (vol. 2, 1889), and then in *Hazeman.*

SCHULTE, DAVID A., merchant and realtor, b. Thomasville, Ga., 1873. He attended school in Newark, N. J. Schulte obtained his first job in a Sixth Avenue dry goods store at $5.00 per week. He was then fifteen. Subsequently he became the partner of Anthony Schulte, his brother-in-law. In his spare time Schulte would walk around the city appraising sites as profitable locations for cigar stores. Two years after entering into partnership he became owner; at that time the business represented sales of $300,000 a year and five stores. Schulte then proceeded to realize his conception of the chain store idea. By 1925 he had 320 stores operating under his name in all parts of the country, doing approximately $30,000,000 worth of business a year. In addition, he owned three cigar factories and, as president, controlled Dunhill's, the famous London tobacconists, in London, New York and Canada.

During the period between 1925 and 1929 Schulte embarked upon a great scheme of expansion. Not only did he branch out into the cigar and general tobacco business, but also entered the real estate field. The Schulte Realty Company was set up to manage his many properties. In 1926 he acquired an interest in the Yellow Taxi Corporation, and in 1928 was elected president of the Park and Tilford Stores. He formed Huylers' Luncheonettes, Inc., in 1929, and in the same year severed connections with some of his subsidiaries, the Union Tobacco Company, Webster Eisenlohe and Union Cigar, and also with Vadsco Sales Corporation. In 1933 Schulte was elected chairman of Dunhill's.

When the N. R. A. was instituted (1933), Schulte lent all his efforts toward its support; in 1935 he conferred with President Franklin D. Roosevelt in regard to the improvement of the credit situation among small merchants. Schulte was active in philanthropic work, liberally aiding general and Jewish charities and hospitals in New York.

Lit.: New York Times, May 10, 1925; *Jewish Tribune,* Nov. 7, 1924; issues of the *New York Times,* 1926 to 1936.

SCHULTZ, HENRY, economist, b. Russia, 1893. He was brought to the United States at the age of fourteen. A graduate of the College of the City of New York, he served with the 316th Machine Gun Battalion in the Meuse-Argonne offensive, and was discharged with the rank of sergeant. He then studied during 1919 at the London School of Economics and at the Galton Laboratories of Eugenic Research in London. After an appointment as statistician for the Bureau of the Census (1919-20), he served with the Institute of Economy (1922-24) and directed statistical research in the United States Children's Bureau (1924-26).

In 1925 Columbia University conferred upon him the Ph.D. degree. The following year he became professor of economics at the University of Chicago. From 1933 to 1934 he was a Guggenheim fellow. He was a fellow and for a time vice-president of the American Statistical Association.

SCHUMAN, WILLIAM HOWARD, composer, b. New York city, 1910. He studied music privately with Max Persin, Charles Haubiel, and Roy Harris, following which he attended the Salzburg Mozarteum. In Salzburg he wrote his first symphony, which was performed in New York city and in Pueblo, Col. His second symphony, introduced by the Boston Symphony Orchestra under Koussevitzky, and a secular cantata, *This Is Our Time,* performed at the Lewisohn Stadium, focused the attention of the music world on his gifts as composer. The performance of his third symphony, by the Boston Symphony Orchestra under Koussevitzky, placed him in the front rank of younger American composers. In 1942 it was singled out by the Music Critics Circle of New York as the outstanding new American work of the year. In 1942 a fourth symphony was introduced by the Philadelphia Orchestra under Ormandy. In 1935 Schuman joined the faculty of the Sarah Lawrence College (Bronxville, N. Y.), where he taught music classes and directed a chorus (1943). He was awarded a Guggenheim Fellowship in 1939.

SCHUR, ISSAI, mathematician, b. Mohilev, Russia, 1875; d. Tel-Aviv, Palestine, 1941. In 1903 he became lecturer at the Technische Hochschule in Berlin-Charlottenburg, from 1913 to 1916 he was professor at the University of Bonn, and from 1916 to 1935 assistant and then associate professor at the University of Berlin. He was the last Jewish professor forced to leave his chair. Schur then went to Palestine, where he taught at the Hebrew University, Jerusalem, until his death. Professor Michael Fekete, dean of the science faculty, declared in his eulogy that "had he lived to complete his book, he would have revolutionized mathematics."

Schur's importance is evident, among other reasons, from the fact that he was a member of the Prussian

Academy of Sciences from 1921 on, editor of the *Mathematische Zeitschrift,* and from 1932 to 1935 co-editor of *Schriften des mathematischen Seminars und des Instituts für angewandte Mathematik,* both in Berlin. His numerous contributions dealt mainly with problems of the *Gruppentheorie, Zahlentheorie* and *Funktionentheorie.* He published his first essay at Berlin in 1901, under the title of *Über eine Klasse von Matrizen, die sich einer geordneten Matrix zuordnen lassen.*

SCHÜRER, EMIL, Protestant theologian, b. Augsburg, Germany, 1844; d. Göttingen, Germany, 1910. He was professor of theology at the Universities of Leipzig, Giessen, Kiel and Göttingen. His most important work is *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (3 vols., 1898-1901; 4th ed. 1901-9). It was translated into English under the title of *A History of the Jewish People in the Time of Jesus Christ* (5 vols., Edinburgh, 1890-1901).

Although his books are of great scholarly value, they show a lack of objectivity in regard to certain phases of the Jewish religion, especially the religion of the Pharisees. Together with Adolf von Harnack, Schürer published the *Theologische Literaturzeitung* (1881-87).

Lit.: Harnack, Adolf von, *Theologische Literaturzeitung,* May 14, 1910.

SCHUSTER, a Jewish family whose beginnings have been traced back to 1607. In the same year Elias Ettingen settled in Frankfort, Germany. It was probably his son, JACOB ETTINGEN SCHUSTER, who died at Frankfort in 1697 and was described as "the man of rich knowledge whose name is known everywhere." In 1748 MOSES MAX SCHUSTER was employed by the prince of Thurn and Taxis, who then held the monopoly of the postal services in Germany. By 1750 JUDAH JOSEPH SCHUSTER started at Frankfort a cotton goods business, trading principally with England. He died in 1782, and his son, SAMUEL JUDAH SCHUSTER, continued the business, enlarging his commercial connexions with England. When Napoleon occupied Frankfort (1808) he confiscated the property of the Schuster family because they violated the continental system, established in 1806 by the emperor. As a consequence, JOSEPH SAMUEL SCHUSTER (b. Frankfort, 1785; d. Frankfort, 1858) and his brothers made up their mind to leave Germany for England. The liquidation of the business at Frankfort, however, consumed considerable time, so that Joseph Samuel Schuster remained in his native town and, after Napoleon's defeat, dropped his plan to emigrate. His younger brothers, LEO SCHUSTER and SAMUEL SCHUSTER, settled in Manchester, and went to London later on. The youngest of the brothers, HENRY SCHUSTER, emigrated to Brussels; his only son, LOUIS SCHUSTER, went to England.

FRANCIS JOSEPH SCHUSTER (b. Frankfort, 1823; d. London, 1906), the son of Joseph Samuel Schuster, was director of the Municipal Bank of Frankfort, and owned or directed several important commercial and financial enterprises. He was a generally respected citizen of Frankfort, devoted to the maintenance of the independence of the free imperial city. When the Prussian army occupied Frankfort (1866) and the city was annexed by the king of Prussia, Schuster decided to transfer his business to Manchester in order to escape Prussian nationality, and in 1869 emigrated to England. There he founded the firm of Schuster and Sons, residing at first in Manchester, then in London.

ERNEST JOSEPH SCHUSTER (b. Frankfort, 1850; d. London, 1924), Francis Joseph Schuster's eldest son, was a managing partner in the firm of Schuster and Sons, but also studied law, graduated from the University of Munich, and became a barrister-at-law in London (1890). He was a member of the executive of the Society of Comparative Legislation, and a member of the council of the International Law Association. He published numerous treaties on English and German civil law, and a study, *The Wife in Ancient and Modern Times* (1914).

SIR ARTHUR SCHUSTER (b. Frankfort, 1851; d. London, 1934), the second son of Francis Joseph Schuster, also entered the firm of Schuster and Sons, but soon retired from business in order to study sciences. He was chief of the "eclipse expedition" to Siam in 1875, and directed or participated in the solar expeditions to Colorado in 1878, to Egypt in 1882, and to the West Indies in 1886. In 1879 Schuster became a fellow of the Royal Society, London, and in 1881 professor of physics at the University of Manchester, which chair he held until 1907. His studies and discoveries principally concerned electrical discharges through gases, also spectroscopy, which term was introduced by Schuster into scientific language in 1882, and terrestrial magnetism. Schuster was not only an important scholar, but also a great organizer of scientific work. He took an active part in the formation of the International Association of Academies (1899). He was constructively responsible for introducing meteorology as a university subject in England, and he effected the installation of physical laboratories at those universities in England which lacked such facilities and relied only on private laboratories. In 1918 Schuster was charged with reforming and reorganizing the Royal Society.

He published: *Theory of Optics* (1909); *The Progress of Physics* (1911); *Britain's Heritage of Science* (1917); *Biographical Fragments* (1932); and numerous special inquiries. During the first World War (1914-18) he served as scientific adviser in various departments of the British War Office.

SIR FELIX SCHUSTER (b. Frankfort, 1854; d. London, 1934), the third son of Francis Joseph Schuster, became chief partner in the firm of Schuster and Sons, and when the firm was amalgamated with the Union Bank of London Schuster became (1893) deputy governor and (1895) governor of the Union Bank. Schuster carried out many amalgamations which enlarged the Union Bank and the firm of Schuster and Sons, and thus became one of the most influential personalities of British banking. He was a firm free trader. Schuster was a member of the Council of India, and served on a number of governmental commissions. During the first World War he was a member of the Foreign Exchange Committee. After the War he endeavored to take an active part in the economic and political reconstruction of Europe. The "Resolution on World Restoration," inspired by Schuster, anticipated important items of the Dawes Plan. In 1906 he was made a baronet.

SIR GEORGE ERNEST SCHUSTER (b. London, 1881), the son of Ernest Schuster, was educated at New College, Oxford, and became (1903) a barrister-at-law. In 1905 he entered the firm of Schuster and Sons, and subsequently became director of the Westminster Bank, the Commercial Union Assurance Company, the English, Scottish, Australian Bank, and the East Indian Coal Company. He became chairman of Allied Suppliers Ltd. and of the Joint Committee on the Meat Trade, set up by the British and Argentine governments. During the first World War (1914-18) he served in France and North Russia, and in 1919 in the British Murmansk forces. He was (1943) chief assistant to the Organizer of International Credits under the League of Nations, and chairman of the Economic and Financial Advisory Committees of the Colonial Office.

SIR FELIX VICTOR SCHUSTER (b. London, 1885), the son of Felix Schuster, 2nd baronet, was (1943) director of the National Provincial Bank Ltd. He served in the first World War, and was decorated.

SIR CLAUD SCHUSTER (b. 1869), son of Frederick Leo Schuster and grandson of Leo Schuster, was educated at Winchester College and New College, Oxford. He was called to Bar, Inner Temple, in 1895, and from 1899 to 1902 was secretary to the London Government Act Commission. From 1907 to 1911 he was legal assistant, later on principal assistant and secretary to the Board of Education. In 1915 he was appointed clerk of the crown in chancery and permanent secretary to the lord chancellor. Schuster, an inveterate sportsman, especially as an alpinist, published *Peaks and Pleasant Pastures* (1911); *Days in the Alps and Pyrenees* (1930); and *Sweet Enemy* (1934).

LIONEL ROBERT SCHUSTER (b. London, 1879), the son of Louis Schuster, was educated at Malvern College and Sandhurst Staff College. He served in the South African War, and excelled in operations in Natal, at Rietsfontein, Lombards Kop and Langs Nek, and in the defense of Ladysmith. During the first World War (1914-18) Schuster served on general staff in France, Salonika, Egypt, and Palestine, attaining the rank of lieutenant-colonel. From 1926 to 1930 he commanded the 2nd Battalion, King's Regiment. He retired from military service in 1931. HUGO BIEBER.

SCHUSTER, JOSEPH, cellist, b. Constantinople, Turkey, 1905. He entered the St. Petersburg Conservatory on a scholarship, studying with Josef Press. His studies were completed at the Berlin Hochschule. Wilhelm Furtwängler discovered him and engaged him as first cellist of the Berlin Philharmonic, a post he held with great success until 1934. In 1934 Schuster settled in the United States, and after a successful debut at Town Hall he was appointed first cellist of the New York Philharmonic Symphony Orchestra, a post which he still held in 1943. Besides his orchestral work, he appeared extensively as soloist with orchestras, in recitals, and in performances of chamber music.

SCHUSTER, MAX LINCOLN, publisher, b. Kalusz, Galicia, 1897. He was brought to the United States when he was six weeks old. Schuster started as copy boy at the New York *Evening World,* but later became student reporter for the Boston *Evening Transcript* and the United Press Association while studying at the Columbia School of Journalism (B.Litt., 1917). During the first World War he was attached to the United States Treasury Department as chief publicity secretary of the Bureau of War Risk Insurance. In 1924 he became an associate in journalism at the Columbia Graduate School of Journalism. In the same year he founded, together with Richard Leo Simon, the Simon and Schuster publishing house.

Schuster was the author of *Eyes on the World: A Photographic Record of History in the Making* (1935). He edited *A Treasury of the World's Great Letters* (1940).

SCHUTZJUDEN, *see* PROTECTION.

SCHWAB, MOÏSE, Talmudic scholar, b. Paris, 1839; d. Paris, 1918. He was educated at the Talmud Torah in Strasbourg, and served as secretary (1857-66) to the orientalist Salomon Munk, whose biography he published in 1900 (*Salomon Munk, Sa vie et ses oeuvres*). In 1868 Schwab was appointed librarian on the staff of the Bibliothèque Nationale, Paris. His most important achievement was his translation into French of the Palestinian Talmud (*Le Talmud de Jérusalem,* 11 vols., 1871-90).

His *Répertoire des articles relatifs à l'histoire et à la littérature juives parus dans les périodiques de 1665 à 1900* (1914-23) is a highly useful reference work. Schwab's other writings include: *Histoire des Israélites* (1866; 2nd ed., 1896); *Littérature rabbinique. Élie del Medigo et Pico de la Mirandola* (1878); *Maqré Dardeqé, Dictionnaire hébreu-italien du XVe siècle* (1889); *Vocabulaire de l'angélologie* (1896-99).

SCHWAB, SIDNEY ISAAC, physician, b. Memphis, Tenn., 1871. He received the M.D. degree from Harvard University (1896) and did post-graduate work in Berlin, Vienna, Paris and London. Schwab practised neurology at St. Louis from 1899 on, and was appointed professor of nervous and mental diseases at the Washington University Medical School at St. Louis (1917); he still held this position in 1943. As a neurologist he was affiliated with several hospitals, including the St. Louis Jewish Hospital; during the first World War he served with the American Expeditionary Forces as military neurologist to Base Hospital 21 and as medical director to Base Hospital 117 (June, 1917, to January, 1919), and was discharged with the rank of captain. Schwab wrote *The Adolescent, His Conflicts and Escapes* (1929). He was a member of the sub-committee of the National Research Council on war neurosis.

SCHWABACH, JULIUS LEOPOLD, banker, b. Breslau, Germany, 1831; d. Berlin, 1898. He lost his parents in his early youth, and entered the banking house of S. Bleichroeder, Berlin, whose chief, Gerson von Bleichroeder, was his cousin.

Within a few years Schwabach became general manager of the firm, in 1883 partner and, after Gerson von Bleichroeder died (1893), chief of the firm. From 1893 until his death Schwabach was British consul general at Berlin. During the decades of Gerson von Bleichroedder's and Schwabach's collaboration the former concentrated on diplomatic activity of importance after Bismarck became prime minister of Prussia (1862) and later on chancellor of the Reich, while Schwabach was charged mainly with the technical problems of the banking business which resulted from Bleichroeder's political activity. Schwabach, however, took an active part also in diplomatic negotiations, although he remained in the background, and he also was a confidant of Bismarck.

The greatest technical problem which Schwabach had to solve was the disposition of the French war indemnity of five billions mark after the end of the Franco-Prussian War (1870-71). This great task of receiving and distributing amounts of money unheard of up to that time required extremely complicated international arrangements. It was Schwabach who drafted the plan and supervised the execution of canalizing the sums pouring into Germany, while Bleichroeder was interested mainly in the problem of how France should be able and ready to make the payment. Then Schwabach was charged with the financial problems involved in the conversion of the Prussian railways into State property. Schwabach took active part also in the financing of Russian railways, and assisted Bleichroeder in his activities in behalf of the Jews of Roumania during the Congress of Berlin (1878). He supported Jewish charitable institutions in Berlin, and secretly acted as benefactor of poor Jewish families. In 1885 Schwabach gave Bismarck 50,000 marks on the occasion of the chancellor's seventieth birthday, while Bleichroeder gave 100,000 marks and Mendelssohn 200,000 to permit Bismarck to pay off the mortgages on his family estate of Schönhausen. Schwabach's home, the Hatzfeld palace, after his death acquired by the United States Embassy, was a center of Berlin's social life. His wife, Leonie (née Keyser), continued the tradition of the Jewish "Salon" initiated by Rahel Varnhagen and Henriette Herz. HUGO BIEBER.

SCHWABACH, PAUL VON, banker and diplomat, b. Berlin, 1867; d. Berlin, 1936. He was the son of Julius Leopold Schwabach. He became converted to Protestantism in his early manhood, and studied history before he entered the firm of S. Bleichroeder, whose head he became after his father's death (1898). He was also British consul general at Berlin from 1898 to 1914.

Many of his reports on German economy and legislation were printed in the *Diplomatic and Consular Reports* of the British Foreign Office. Like his father, Schwabach was an intimate friend of Bismarck. He was one of the last visitors who met Bismarck alive when he was at Friedrichsruh on March 28, 1898. He tried, although in vain, to reconcile the dismissed chancellor and Emperor William II. After Bismarck's death Schwabach became an intimate friend of Fritz von Holstein, the real head of the German foreign office, and after Holstein's removal from office he was equally intimate with Kiderlen-Waechter, secretary of foreign affairs. On the other hand, Schwabach was on the most friendly terms with Baron Alfred de Rothschild, and with Sir Eyrie Crowe, senior clerk at the British Foreign Office.

Schwabach and Crowe in their numerous letters addressed one another by the familiar *du*. Because of this position, Schwabach endeavored to reconcile England and Germany and, although his efforts remained unsuccessful, he exerted great influence on German and British statesmen.

Schwabach was charged by the German government with presenting, unofficially, the German point of view on almost all great questions and conflicts between 1900 and 1914, and with securing information unavailable to official representatives. Schwabach worked in this way in London, Paris, Rome and Constantinople. He made the diplomatic preparations for the expedition to China (1900) after the murder of the German minister to Peking, and contributed (1905) to the solution of the Moroccan crisis without war. In 1909 Schwabach sent out a feeler concerning an agreement between Germany and England to keep England out if a war should ensue between Germany and France. In 1911 he successfully negotiated with Caillaux, then French prime minister, to obtain territorial compensations for Germany in the French Congo area for the French occupation of Morocco. In 1913 Schwabach was German delegate to the financial conference of Paris. During the first World War (1914-18) Schwabach was opposed to German annexationist policy and to submarine warfare, being aware that the United States would not tolerate it but would enter the War on the side of England and France.

After the War Schwabach aided German efforts to undo the Treaty of Versailles and to refute Germany's responsibility for the War, but he did so with more moderation than other German political leaders, bankers and professors. In 1927 Schwabach distributed among his friends a collection of documents, *Aus meinen Akten,* containing a selection from his letters to Sir Eyrie Crowe, Alfred de Rothschild and others; this collection was an important contribution to the diplomatic history of Europe between 1900 and 1914.

HUGO BIEBER.

SCHWADRON, ABRAHAM, *see* AUTOGRAPHS.

SCHWARTZ, A. S., Hebrew poet, b. near Kovno, Lithuania, 1876. He came to the United States early in the 20th cent. and graduated from the Long Island Medical College in 1906. Prior to his arrival in the United States he had written poetry in Yiddish which had appeared in *Der Yud,* and was considered one of the pioneers in modern Yiddish verse. Later, however, he turned to the writing of Hebrew poetry, and although he continued to practice medicine he contributed regularly to various periodicals, including the *Hatoren* and *Hadoar.* Schwartz was a son-in-law of Zvi Hirsch Masliansky.

Schwartz was one of the first Hebrew poets in America. Two motifs are especially noticeable in his work: Jewish tradition and nature. He loved to sing of the Jewish festivals, of Jews praying in the synagogue and of historic scenes. Among his heroes were Isaac, Ruth, Jeremiah and Johanan ben Zakkai. In his songs of nature he sees the stars burning like eternal lamps in holiness and purity. He reveals a delicate and humane feeling for animals, birds and fishes, and bespeaks the love of man for all creation. Some of his songs were published in *Anthologia Shel Hashirah Haibrith Beamerika.*

SCHWARTZ, ELLIS MAXWELL, physician, b. Jassy, Roumania, 1892. He came to the United States in 1900, and received the M.D. degree from the New York University College of Medicine (1915). In 1918 he served with the United States Army as lieutenant in the medical corps. Schwartz was on the medical staff of the Israel Orphan Asylum in New York city from 1921, and on the staff of the clinic of the New York Post-Graduate Medical School and Hospital from 1926. He was noted for his invention of the surgical instruments which were named for him: the Schwartz antrum knife, the Schwartz antrum canula and the Schwartz antrum saw.

SCHWARTZ, ISTVÁN, sculptor and medalist, b. Nyitra, Hungary, 1851; place and date of death unknown. After an apprenticeship as silversmith at Pest he studied at the Vienna school for applied arts.

In 1872 he opened his own school for silver-smithing at Vienna, and in 1881 he became a teacher at the school of applied arts. Schwartz, who embraced Christianity, exhibited some sculptures (Budapest, 1891), such as *Boy Killing Serpent, Faun with Geese* and *Hercules in Nessus' Shirt,* but he was famous chiefly for his medals, coins and tablets.

He wrought medals in memory of Empress Elisabeth of Austria, Count Gyula Andrássy, Professor Billroth, and many artists and other notables. He modeled the head of Emperor Francis Joseph on the Austrian gold and silver coins, upon which his initial S appears. He also made coins for the Bulgarian, Serbian and Montenegrin states.

SCHWARTZ, JACOB, cantor, b. Kamenets Podolsk, Russia, 1886. He sang as a child in the choir of Cantor Itsikel Shkolnik of Kamenets.

At the age of seventeen Schwartz emigrated to Vienna, where he received a scholarship in the conservatory and studied voice with Professor Habig. He studied Hazanuth with the cantors Josef Wasser of Vienna, Isaac Eibeschuetz of Ujhely (Hungary), and Kalmen Lew of New York city, whither he came in 1903.

Schwartz held positions in Vienna and in Norfolk, Va. (1909-13), and in 1914 became cantor of Congregation B'nai Jeshurun, New York, a position which he still occupied in 1943. He founded (1915) the Cantor Schwartz Institute of Hazanuth and published (1935) his *Shire Jacob* in six volumes, embracing traditional melodies and cantoral recitatives with organ accompaniment for the Sabbath, festivals and high holy days. In 1941 to 1942 he was president of the Jewish Ministers Cantors Association of America.

MAX WOHLBERG.

Lit.: Hazanuth (published by the Jewish Ministers Cantors Association, 1924 and 1937).

SCHWARTZ, JACOB RALPH, dentist and artist, b. Brichan, Bessarabia, Roumania, 1889. He was

Maurice Schwartz

brought to the United States in infancy. Schwartz graduated from the New York University College of Dentistry (D.D.S., 1913), and practised dentistry from 1913 on.

He was a member of the Kings County Medical Advisory Board (1917-18) and president of the Kings County Dental Society (1922-23). His writings include: *Practical Dental Anatomy and Tooth Carving* (1935); *Cavity Preparation and Abutment Construction in Bridgework* (1936); *Modern Methods of Tooth Replacement* (1937).

Schwartz also studied art at Cooper Union, New York city, the College of the City of New York and the Pratt Institute, Brooklyn. His works were exhibited by the Dentists' Art Club at the St. George Hotel, Brooklyn (1930). His etching, *Eli, Eli,* received honorable mention at the New York City Art Center Exhibition (1931).

Schwartz was made a member of the advisory board on industrial education of the New York Board of Education (1935) and of the executive board of the post-graduate dental committee of The Hebrew University, Jerusalem (1936).

SCHWARTZ, LOUIS, public health official, b. New York city, 1883. He received the M.D. degree from the Jefferson Medical College (1905). Schwartz entered the United States Public Health Service in 1906 and was made senior surgeon (1931) and medical director (1937). In 1934 he was appointed lecturer on dermatology at New York University; he was also adjunct professor in dermatology at the Georgetown University School of Medicine.

SCHWARTZ, MAURICE (originally **Abraham Moses Schwartz**), actor, director and producer, b. Soudilkov, Ukraine, Russia, 1888. He attended an Orthodox Heder and a Russian school up to the age of twelve. He sang in a synagogue choir and gained a reputation as a soloist, and was known as "Moishele, the Alto."

His father, a grain merchant, emigrated to the United States in 1898, and two years later sent steamship tickets to his family. At Liverpool, Maurice, who had grown too tall for his age, was not permitted to board ship for the United States because his father had sent a child's ticket for him. His mother proceeded with the other children, and left Maurice behind. The steamship company then sent him to London, where he remained for two years virtually a vagrant, working sporadically as a ragpicker's helper and singing in synagogue choirs on holidays. It was in London that he saw his first stage performance, a production of Abraham Goldfaden's operetta *Sulamith,* and was enchanted by it. His father crossed the ocean in 1902 and brought him to New York city, where he attended a public school, assisted his father in the ragpicking trade, and spent many of his evenings and Sabbath afternoons on the balconies of Yiddish playhouses.

When he was seventeen he joined a dramatic club and was assigned the role of a sixty-year-old man in an amateur performance of a play, *The Twentieth Century,* by Isidor Zolotarefsky. Leo Largman, manager of a Baltimore Yiddish troupe, in quest of young talent, attended the performance. He was impressed by the seventeen-year-old amateur actor and made him a member of his professional company at a salary of three dollars a week. After two years with the Largman troupe he moved on to other companies in Cincinnati, Chicago and Philadelphia. In the latter city he played Iago in *Othello* with the German Jewish actor Morris Morrison in the title role. Morrison was impressed with the young actor's talents, and prevailed upon David Kessler to engage him for his company at the Brooklyn Lyric Theatre. In 1913 Schwartz took the customary actor's test for membership in the Hebrew Actors' Union, and was voted down by a majority of its members. Indignant, he went to the editorial offices of the *Jewish Daily Forward,* forced his way into the office of the editor, who was also the newspaper's theatrical critic, and acted out a scene from a play. The newspaper then took up his cause, and as a result he was admitted to union membership. For several years he played under Kessler's tutelage, and in the summer of 1918 he organized his own dramatic company at the Irving Place Theatre. Three years later he moved to the Garden Theatre, a playhouse in the old Madison Square Garden, where he named his company the Yiddish Art Theatre.

As director and producer of the Yiddish Art Theatre company Schwartz presented a varied repertoire of no less than 150 plays, many of them dramatic works of outstanding merit. He produced plays by Shakespeare, Molière, Gogol, Shaw, Romain Rolland, Strindberg, Gorki, Andreyev, Chekhov, Tolstoy, Arthur Schnitzler and Lion Feuchtwanger with varying degrees of artistic success. His most notable achievements, however, were in the field of Jewish drama.

Among his outstanding productions are: folk plays by Perez Hirschbein (*A Forsaken Nook; The Blacksmith's Daughters*); a cycle of comedies based on the stories by Sholom Aleichem, in the dramatization of J. D. Berkowitz (*Tevya, the Dairyman; It's Hard to be a Jew; The Sweepstakes; Sender Blank*); the *Dybbuk,* by S. An-Ski (Solomon Rapoport); a series of plays based on the novels of Sholom Asch, dramatized by Maurice Schwartz (*Kiddush Hashem; Uncle Moses; The Witch of Castille; Three Cities; Salvation*); the sophisticated comedies of Ossip Dymov (*Bread; Human Dust*); plays by H. Leivick (Leivick Halper) (*Rags; Chains; Who Is Who*); plays based on the novels of I. J. Singer (*Yoshe Kalb; The Brothers Ashkenazi*).

In 1924 Schwartz toured Europe with his Yiddish Art Theatre company. He also appeared in and directed plays in Palestine, Argentina, Brazil, Montevideo and Mexico. He acted in some Yiddish motion pictures, the most noteworthy being *Tevya, The Dairyman.*

As an actor Schwartz excelled in character parts, in

which he displayed a rare versatility and a genuine sense of the humorous without resorting to the banalities of the conventional comedian. As a stage director he achieved a degree of artistic success with experimental productions (Abraham Goldfaden's *Ten Commandments;* Aaron Zeitlin's *Wise Men of Chelm*), but his major achievements were in the field of realistic stage presentations. LEON CRYSTAL.

SCHWARTZ, PHILIPP, professor of medicine, b. Vrsač, Yugoslavia, 1894. The son of a businessman, he first studied at the technical school of his native city, but later took up medicine at the University of Budapest. In 1927 he became associate professor at the University of Frankfort, Germany. Ousted by the Nazis in 1933, Schwartz followed a call to Istanbul, Turkey, where he was appointed full professor of pathological anatomy and director of the Pathological Anatomical Institute of the University of Istanbul.

His publications include: *Traumatische Schädigung des Zentralnervensystems durch die Geburt* (1924); *Schlaganfälle* (1930); *Empfindlichkeit und Schwindsucht* (1935).

SCHWARTZ, WILLIAM SAMUEL, artist, b. Smorgon, Russia, 1896. He studied at the Vilna Art School, and emigrated to the United States in 1913, where he continued his education at the Art Institute of Chicago. Schwartz, who was a painter as well as a lithographer and sculptor, held numerous exhibitions throughout the United States. Works of his were acquired by the Universities of Illinois, Missouri, Nebraska and Wisconsin and by the public galleries of Dallas and Cincinnati as well as by the museums of Tel-Aviv, Palestine, and Biro-Bidjan, Soviet Russia.

He was recipient of several prizes, including the First Albert Kahn Prize (Detroit, 1925), the Temple Beth El Sisterhood First Prize (Detroit, 1926), the Marshall Fuller Holmes Prize (Chicago, 1927), and the M. V. Kohnstamm Prize (Chicago, 1928). Among his best known works were Utopia, dedicated to Romain Rolland (Art Institute of Milwaukee), and the canvas *Emancipation* (revealing Abraham Lincoln robed in a toga and surrounded by Negroes), a prize-winning picture of the thirty-eighth annual exhibition at Chicago. The *Bulletin* of the Art Institute of Chicago (1941) praised the "very personal style of his later paintings" which "retain the rhythmic design and vibrant color which characterized his earlier and more abstract paintings."

SCHWARZ, ADOLF, rabbi, scholar and educator, b. Adász-Tevel, Hungary, 1846; d. Vienna, 1931. He was educated at the Breslau rabbinical seminary and the University of Vienna. Having served as chief rabbi at Karlsruhe, Germany, from 1875 to 1893, he was called to the Vienna Israelitisch-Theologische Lehranstalt as its first dean, and remained in this office to the end of his life. In Karlsruhe Schwarz devoted himself to research on the *Tosefta.*

He published: *Die Tosifta der Ordnung Moed. I. Der Tractat Sabbath* (1879); *II. Der Tractat Erubin* (1882); *Tosifta juxta Mischnarum Ordinum Recomposita et Commentario instructa. I. Seraim. II. Chulin.* (1890-1902). During his Vienna period he concerned himself mostly with hermeneutics, publishing *Die hermeneutische Analogie in der talmudischen Literatur* (1897); *Der hermeneutische Syllogismus in der talmudischen Literatur* (1901); and *Die hermeneutische Induktion in der talmudischen Literatur* (1909). Other works of his are *Die Kontroverse der Schammaiten und Hilleliten* (1893) and *Die Mischneh-Thora* (1905).

Jubilee volumes were published in honor of his seventieth (1917) and eightieth (1927) birthdays, the latter entirely in Hebrew. The Austrian state conferred upon him the title of *Hofrat* (Court Councillor).

ARTHUR ZACHARIAS SCHWARZ (b. Karlsruhe, Germany, 1880; d. Jerusalem, 1939) was a son of Adolf Schwarz. He was educated at the University of Vienna. He described many rare Hebrew manuscripts in Austrian libraries.

Among these illuminating studies were *Die hebräischen Handschriften der K. K. Hofbibliothek zu Wien* (1914), listing the manuscripts acquired from 1851 on; *Die hebräischen Handschriften der Nationalbibliothek in Wien* (1925); *Die hebräischen Handschriften in Österreich ausserhalb der Nationalbibliothek Wien* (part 1, dealing with Bible and Cabala, 1931). He was also editor of the jubilee volume published in memory of Hirsch Perez Chajes (1930).

SCHWARZ, DAVID, inventor in the field of aviation, b. Kesthely, Hungary, 1845; d. Vienna, 1897. Schwarz, who was living in Zagreb, Croatia, and was by profession a lumber merchant, began the study of aviation in his later years by himself and became the actual inventor of the rigid airship. The Austrian war ministry disapproved of his technical project, whereupon he went to Russia, became a Russian government engineer in St. Petersburg, and there built his first airship in 1892. It had an aluminum framework and a balloon covering. Unfortunately, the material furnished by the Russian government was so inferior that it was impossible to fill the balloon with gas.

Schwarz then turned to the German government, which was in favor of his project to build an aluminum balloon eighty meters in length and twelve in diameter. He was promised 300,000 marks for the undertaking in the event that he succeeded. On January 13, 1897, a telegram summoned him to Berlin to be present at the test flight, but just as the telegram was handed to him on the street in Vienna he died of a heart attack. His widow, Melanie Schwarz, took charge of the preparations for the ascent which was made on November 3, 1897, from Tempelhof Field, near Berlin, in the presence of a number of spectators, including Count Zeppelin. The flight of the airship was successful, but its unskilled pilot brought it to the ground with such violence that it was smashed to pieces. Although Zeppelin, in applying for his patent in 1894 to 1895, did not mention the work of Schwarz, experts have regarded it obvious that in the rigid airship which he built he made use, for the most part, of the method which Schwarz had previously adopted.

On February 10, 1898, a contract was drawn up between Schwarz' widow, Councillor Berg, of Stuttgart, and Count Zeppelin. This contract gave to Berg the right to exploit in Germany "those inventions, whether patented or not, which belonged to Schwarz and his heirs," and Zeppelin received the right to Schwarz' "inventions and experiments" in return for compensating the heirs of the inventor. Although Zeppelin, in a letter to Maximilian Harden (editor of *Die Zukunft*) in 1911, denied that he had used the discoveries of Schwarz in building his own airship, it is clearly established that priority in the discovery of the rigid airship belongs to David Schwarz.

His daughter, Vera Schwarz, was an opera singer, who for a time appeared in the United States.

HANS MÜHSAM.

Lit.: Berg, Carl, *David Schwarz, Carl Berg, Graf Zeppelin. Ein Beitrag zur Entstehung der Zeppelin-Luftschiffahrt in Deutschland;* Heppner, Ernst, *Juden als Erfinder und Entdecker* (1913) 55-58; Roth, Cecil, *The Jewish Contribution to Civilisation* (1938) 181.

SCHWARZ, EDE, physician and anthropologist, b. Miskolc, Hungary, 1831; d. Vienna, 1862. After having fought in the Hungarian revolutionary war (1848-49), where he distinguished himself in battle, he studied medicine at the University of Vienna, and received the M.D. degree in 1856. He took part in the expedition around the world of the Austrian steam frigate *Novara,* from 1857 to 1859.

Schwarz published his notes on that expedition in the volumes *Über Körpermessungen zur Diagnostik der Menschenrassen* (1859); *Chinesische Ärzte und Medika-*

mente (1859); *Die Nahrungsmittel der Tahiter; Reise der österreichischen Fregatte Novara um die Erde in den Jahren 1857-59* (1861); and *System of Anthropological Investigations* (1862). Schwarz' grave in the Jewish cemetery of Vienna was adorned by a monument from the hand of the Austrian sculptor Hieser.

SCHWARZ, JOSEPH, geographer, b. Floss, Upper Palatinate, Germany, 1804; d. Jerusalem, 1865. He published a Hebrew map of Palestine in 1829. In order to pursue researches in the Holy Land he settled in Jerusalem in 1833. During the many years of his sojourn in Palestine, Schwarz wandered all over the country in Eastern garb, and did outstanding research in the geology and geography of the country, also on its animals and plants.

The results of these studies were published in his *Dibre Yosef* (4 vols.). He published a calendar (1843) in which he set down the exact time of sunrise and sunset as observed personally on Mount Scopus. In the same year he published the first volume of his work *Tebuoth Hashemesh,* on the physical geography of Palestine. The second volume, *Tebuoth Haaretz* (1845), deals with the geography, geology and chronology of the Holy Land. The two remaining volumes, *Peri Tebuah* and *Shoshannath Haemek,* appeared in 1861 to 1862.

Schwarz was recognized as an authority in his field and was called the second Estori Hafarhi. Joseph Kohen-Zedek of Lemberg published an edition of his works in 1865, and in 1900 Abraham Moses Luncz of Jerusalem also published an edition, with an extensive biography.

Lit.: Otzar Yisrael; Zitron, S. L., *Lexikon Zioni* (1924); Luncz, *Einleitung zu Schwarz' Werken.*

SCHWARZ, KARL, art historian and museum director, b. 1885. He lived and worked in Berlin, first as writer and critic, and after 1928 as director of the art rooms of the Jüdische Gemeinde (Albert Wolff collection). By establishing the Jüdischer Museums-Verein (1929) and by the subsequent removal (1933) of the rich collection to suitable quarters, Schwarz contributed to the advancement of Jewish art in Germany as a whole. During the summer of 1933 Schwarz went to Tel-Aviv, Palestine, where he directed the opening of a museum on Rothschild Boulevard containing the art collection accumulated by Mayor Meyer Dizengoff. Schwarz made the museum an intellectual and cultural center of significance for all Palestine, offering a survey of international creative art as well as of Jewish art. Exhibitions, lectures and a large art library completed the activities.

In 1911 Schwarz (collaborating with Arnold Fortlags) issued *Das graphische Werk von Herman Houck;* in 1920 he published several volumes of *Jüdische Bücherei.* His *Die Juden in der Kunst* (1928) was reprinted in 1928 in Jerusalem, and his *Modern Jewish Artists in Palestine* (1941), with biographical text in English and Hebrew, is an important source book.

SCHWARZ, LEON, *see* MOBILE.

SCHWARZ, SAMUEL, mining engineer and historian, b. Poland, 1880. In 1915 he settled at Lisbon, Portugal, as a mining engineer, and performed meritorious service for Portuguese economics by exploring the geological conditions of the country. In 1917, on a business visit to Belmont, a somewhat inaccessible spot in the north of Portugal near the Spanish frontier, he discovered the existence of Marranos who (unbeknown to the Catholic Church, to which they formally adhered) continued to observe the Jewish Law throughout the centuries subsequent to the abolition of the Inquisition, absolutely isolated from the general Jewish world. Schwarz gained the confidence of these Marranos, assisted their secret divine service, and was given a collection of manuscripts of prayers which he completed by recording their oral traditions. The discovery of Marranos who had remained in Portugal and Spain for centuries was an important one. About 10,000 families of Crypto-Jews were thus discovered to be in need of assistance on the part of the Jews of the other countries. They afforded intensely interesting information respecting Jewish history.

The British historian Lucien Wolf made an expedition to the area where the Marranos are settled in order to organize help and studies. Schwarz, a passionate student of Jewish history, described his discovery in *Os Christãos-Nosos em Portgual no seculo XX* (1925). Previously he edited a collection of Hebrew inscriptions in Portugal, mainly of the 13th and 14th centuries, *Inscricoves hebraicas em Portugal* (1923). Schwarz was an associate member of the Archeological Society of Portugal.

SCHWARZBART, IZAK IGNACY, Polish government official, b. Chrzanow, near Cracow, Western Galicia, 1888. He attended Heder and also received a secular education. Later (1913) he received his law degree from Jagiellon University in Cracow, and established himself in the practice of law in Cracow. After the restoration of Poland he entered the Polish army (1918), but was demobilized at the end of the year for having inscribed himself as being of Jewish nationality. Reentering the practice of law, Schwarzbart eventually opened his own office in Cracow in 1922.

Schwarzbart's participation in Jewish communal life had begun early, although it had been preceded (1904) by his entry into socialist activities. Before long, however, his interest was directed toward the Zionist Movement; in 1911 he was elected president of the Hashahar, the Association of Zionist Academic Youth. At the end of the first World War he became general secretary of the newly-formed regional Zionist organization of Western Galicia and Silesia. In 1919 Schwarzbart participated also in the formation of the Jewish National Council under Osias Thon.

Schwarzbart struggled consistently for coordination among the various segments of the Jewish population, within and without the Zionist circle. He was responsible (1938) for the formation of a coordination committee of all Zionist groups in Western Galicia and Silesia. In 1933 he was made a member of the Actions Committee of the World Zionist Organization. Later he was a member of the Administrative Committee of the World Jewish Congress. As early as 1921 he was the editor of the first Zionist daily in Galicia, *Nowy Dziennik,* and he wrote for numerous other periodicals and newspapers in Poland and elsewhere.

On being elected to the Polish Sejm in 1939, Schwarz-

Karl Schwarz

Izak Ignacy Schwarzbart

bart won 94 per cent of the Jewish votes in Cracow. He was a member of the Town Council of Cracow, and chairman of the Club of Jewish Councillors. He was also a member of the Council of Polish Jews of Cracow.

Caught between Warsaw and Cracow at the outbreak of the second World War, he escaped to Roumania where, until 1940, he aided in caring for Polish refugees and also in the transportation of Polish and Roumanian Jews to Palestine. In 1940 the Sikorski Government-in-Exile made Schwarzbart a member of the first National Council, and he went to Paris to join it. From the very beginning of his service here he was unflinching in his resistance to the anti-democratic and anti-Semitic taints occasionally shown by some divisions of the Polish government. Made a member of the Second National Council, he subsequently moved with the Government to London, after the downfall of France, and here again fought the shadows of discriminatory attitudes which had been transported from the original Warsaw scene by certain Polish leaders.

Schwarzbart was instrumental in eliciting, from the Government-in-Exile, a statement promising equal rights (1941), and in 1942 he tried to put through a four-point program on Polish-Jewish relations declaring still more plainly that all past discriminations and confiscations in regard to the Jews were null and void, evacuations and coerced emigration forbidden and full minority rights assured. This program was rejected, in view of the earlier statement of principles. Schwarzbart brought out numerous facts about the German mass-murder of Jews. He was president of the Council of Zionists from the Continent. In 1943 he was named rapporteur general on the budget of the Polish government-in-exile.

JOSEPH THON.

SCHWARZFELD, a family of authors and historians.

ELIAS SCHWARZFELD (b. Jassy, Roumania, 1855; d. Paris, 1915) began his career as a journalist in the Jewish press of Jassy, where he founded (1874) the magazine *Revista Israelitica.* From 1877 to 1878 he edited *Jüdischer Telegraf,* a daily, and when this ceased publication, *Hayoetz,* a weekly, both in the Yiddish language. In 1881, after returning from the University of Brussels with the degree of doctor of law (LL.D.), he was called to the post of the chief editor of the Jewish weekly newspaper *Fraternitatea* (Brotherhood), which under his direction became a militant publication of high political and cultural standards. Because of his ceaseless attacks on the anti-Semitic policy of the government he was expelled from Roumania in 1885, together with Moses Gaster and other Jewish writers. He settled at Paris where, in the following year, he was appointed private secretary of the philanthropic department of the Baron de Hirsch Foundation, and when the Jewish Colonization Association was founded, he became its general secretary.

His studies on the history of the Jews in Roumania, contributed to the year book *Anuarul pentru Israeliti,* founded by his brother Moses in 1877, form an invaluable reference source.

He was also co-editor of *Egalitatea,* founded by Moses Schwarzfeld at Bucharest (1890). Under the assumed name of Edmond Sincerus he edited *Les Juifs de Roumanie depuis le traité de Berlin* (1901). Schwarzfeld's most important study is *Impopularea, reimpopularea si intermeerea targurilor si a targusoarelor in Moldova* (Populating and Founding Little and Market Towns in Moldavia; 1914). By means of a critical analysis of documents, in many cases first published by him, he disproved the current anti-Semitic thesis that the Jews had but recently "invaded" Roumania, and showed that they were of long standing in that country. In the *Anuarul* he published also short stories dealing with Jewish life and selected translations from such authors as Ludwig Philippson, Julius Barasch and Ernest Renan. He also wrote a number of novels many of which were translated into Hebrew. They include: *Rabinul Facator de Minuni* (1883); *Bercu Batlen* (1890); *Unchiul Berisch; Un Vagabond; Schimschele Ghibor.*

MOSES SCHWARZFELD (b. Jassy, 1857) founded the *Anuarul pentrue Israeliti* (Year Book for Jews, 1877-98), the first issue of which was called *Calendarul pentru Israeliti.* In addition to himself and his brother Elias, the most distinguished Roumanian Jewish authors contributed to this year book, which is an indispensable source for the history, folklore and cultural life of the Jews in Roumania. The year books of the Julius Barasch historical society, *Analele Societatea Istorice Iuliu Barasch,* founded by him, were devoted solely to the history of the Jews in Roumania. Moses Schwarzfeld also wrote for *Fraternitatea* under the pen name of Ploestanu. His most significant contribution to Jewish endeavor in Roumania was the weekly *Egalitatea,* which he founded in 1890 and which reflects all Jewish life in Roumania during the half-century from 1890 to 1940. He was active also in the Zionist Movement and in the movement for emancipation. On his eightieth birthday (1937) the Jews of Roumania tendered a national gift to him.

His published books include: *Cilibi Moise* (the biography and literary remains of Moses Cilibi; 1883); *Cercetari critice despre istoria Evreilor* (Critical Researches in Jewish History; 1888); *Cantece populare* (Popular Songs; 1886); *Vasile Alexandri sau mesterul drege-strica* (Vasile Alexandri or the Muddle-Master); *Dr. Iuliu Barasch* (1919).

WILHELM SCHWARZFELD (b. Jassy, 1856; d. Bucharest, 1894), historian and philologist, was a brother of Elias and Moses Schwarzfeld. He was educated at Jassy and at Bucharest. He contributed many articles to the Roumanian Jewish press and especially to the *Anuarul pentru Israeliti.* Among his memoranda of greatest interest are that on Jewish scholars and authors of Jassy, based on the tombstone inscriptions in the Jassy cemetery and that on the Jews of Moldavia who embraced Christianity. He published also studies in Hebrew grammar and a work on synonyms and the law of evolution.

SANIEL LABIN.

SCHWARZSCHILD, KARL, astronomer and mathematician, b. Frankfort, Germany, 1873; d. 1916. He started lecturing at the University of Munich in 1899, became director of the observatory and professor at the University at Göttingen in 1901, and in 1909 was

appointed director of the astro-physical observatory near Potsdam. Schwarzschild invented an instrument for the actinometric photography of stars and a Zenith camera for topography.

His published works include: *Das zulässige Krümmungsmass des Raumes* (1900); *Untersuchungen zur geometrischen Optik* (3 parts, 1905); *Über die Eigenbewegungen der Fixsterne* (1908); *Tafeln zur astronomischen Ortsbestimmung* (together with Bick; 1909). His articles, appearing mainly in the publications of the Akademie der Wissenschaften in Berlin (of which he was a member), dealt with such subjects as Einstein's theory of relativity, especially with the structure of space and gravitation. Schwarzschild renounced Judaism.

Lit.: Müller, G., *Astronomische Nachrichten,* vol. 202 (1916); Eddington, *Monthly Notices,* vol. 77 (1917).

SCHWARZSCHILD, LEOPOLD, journalist, editor and author, b. Frankfort, Germany, 1891. In his early childhood he displayed great musical talent, and at the age of nine he was considered a promising musical prodigy. But, although he remained a good piano player, he became more and more interested in politics. During the first World War Schwarzschild attracted attention by his articles published in the *Europäische Staats- und Wirtschaftszeitung* professing opposition to militarism and nationalism. After the War he contributed to Austrian and Swiss newspapers, and in 1924 he became chief editor of the weekly *Das Tagebuch.* In the same year he published a dramatic piece, *Der Sumpf.*

Directing *Das Tagebuch,* Schwarzschild conducted several campaigns against the German military circles whose members became influential especially after Paul von Hindenburg was elected president of the Reich. Schwarzschild, who had severely criticized Friedrich Ebert, first president of the Reich, because, according to him, Ebert bargained too much with the adversaries of the republic, became more and more hated by the German nationalists, especially because of his campaign against the public prosecutor Joerns, whom he accused of complicity in the murder of Karl Liebknecht and Rosa Luxemburg. Schwarzschild denounced also all attempts made by German army officer industrialists and public servants to elude the obligations of the Treaty of Versailles.

Thus he was particularly menaced when the Nazis came to power. He emigrated to Paris, and published there, in German and English, *Das Ende der Illusionen* (1934), a balance of the history of the preceding years. From 1934 to 1940 Schwarzschild edited in Paris the weekly *Das Neue Tagebuch,* the foremost anti-Hitlerian periodical published in German. Well informed about the secrets of the Nazi regime, he refuted many official statements of the Third Reich, especially those of the German ministers of finance and economy, and denounced German rearmament.

Occasionally Schwarzschild was provided with information by high German officials who were opposed to Hitler and tried to counteract him, but mostly he got his results by critically examining German statistics of all kinds and contrasting them with the measures taken by the Nazi government and the fallacious speeches of Hitler and his lieutenants who were eager to appease the governments of the other countries. It was a hint published by Schwarzschild, not heeded early enough by the Allied military commanders and diplomats, which caused the German high command to hasten the occupation of Norway and to invade that country some days earlier than the German timetable had provided for, lest the Allied powers take their countermeasures.

In 1940 Schwarzschild went to the United States, and in 1942 he published *World in Trance,* a critical survey of the events between the two World Wars and a denunciation of the unreadiness of the leading statesmen of the formerly allied powers to face the facts of German preparations for war.

SCHWEID, MARK, actor and writer, b. Warsaw, Poland, 1891. He graduated from the Warsaw Dramatic Academy, and later played on the Polish stage. In 1911 he came to the United States, where he was associated with various Yiddish theatres, not only as actor, but also in a directive capacity. Schweid made his first appearance on the English stage in 1926, and subsequently appeared in productions of the Theatre Guild, the Boston Repertory Theatre and in other plays, including *The Eternal Road.* He also engaged in radio productions, directing the *Israel in American History* series over WEVD (1935-36) and in 1942 playing in *You Can't Do Business with Hitler.*

Schweid's first poems were published in 1909. He was the author of *Burshtinene Shisslen* (1921); *Tzu Gott un tzu Leit* (1926); *Ch'vel Machen Tay* (1927); *Dos Folk fun'm Safer* (1930); and *Un Ich Red Prost* (1935). He also wrote for Yiddish periodicals and magazines, under his own name and as M. Daner, D. Tamarin, O. Kama and other pseudonyms. Schweid was for a time president of the Hebrew Actors Union. During the first World War he served as recruiting officer for the British Military Mission in the United States.

SCHWEIGER, LÁZÁR, rabbi and ethnologist, b. Nagytapolcsány, Hungary, 1872. After receiving a thorough Talmudic training in Hungary, he studied in the Universities of Frankfort and Bern. From 1904 to 1929 he served as rabbi at Eger, Hungary; in 1929 he was called to Nitra, Slovakia. About his whereabouts in 1943 nothing was known. Schweiger was a distinguished ethnologist and ethnopsychologist.

Among his published works, many of which appeared originally in Hungarian, were: *Das Gesetz der grossen Zahl* (1904); *Die logischen Methoden der Ethnologie* (1909); *Die Anknüpfungspunkte der Kunst und Ethnographie* (1910); *Die Religion im Lichte der Völkerpsychologie* (1911); *Moritz Lazarus* (1911); *Der Neodarwinismus* (1912).

SCHWERIN ABARBANELL, JEANETTE, communal worker and author, b. Berlin, 1852; d. Berlin, 1899. She was one of the founders of the German Society of Ethical Culture, which led the struggle against intolerance and materialism, and published the *Auskunftsbuch über die Wohlfahrtseinrichtungen Berlins,* giving information on public relief and welfare in Berlin. She was instrumental also in the establishment of the first public reading room, sponsored by the ethical society. It greatly influenced the movement for popular education in Germany. In 1893 she and some friends founded the Mädchen- und Frauengruppen für Sociale Hilfsarbeit, groups of women and young girls banded together for the performance of social service work in Berlin. Another foundation of hers was the home nursing association (Hauspflegeverein), which procured aid for sick women. She was active also as a feminist.

Lit.: Lange, Helene, Foerster, Friedrich Wilhelm, and Salomon, Alice, *Jeanette Schwerin zum Gedächtnis* (1899); Harder, Agnes V., edit., *Bahnbrechende Frauen* (1912); *Handbuch der Frauenbewegung* (1901).

SCHWIMMER, ERNÖ, dermatologist, b. Pest (Budapest), Hungary, 1837; d. Budapest, 1898. After graduating from medical school at Vienna and studying dermatology in Viennese clinics and in Egypt, he became a pioneer in the specialized care of infections of the skin in Hungary. He met with much indifference and had to set an example to health authorities by opening a dermatological dispensary at his own expense in Pest. In 1870 Schwimmer was allowed to lec-

Rosika Schwimmer

ture on dermatology at the university of that city, and five years later he succeeded in obtaining two rooms in a public hospital for skin patients. He was associate professor in 1878 and full professor in 1891, at the same time also physician-in-chief in dermatology at the Szt. Istvan public hospital. Schwimmer embraced the Christian faith.

Among his many writings, contributed to the international medical press, are three books published in German: *Die neuropathischen Dermatonosen* (1883); *Hautkrankheiten* (1884); *Die Grundlinien der heutigen Syphilistherapie* (1888). He contributed the dermatological articles to the Eulenburg *Realencyclopädie der gesamten Heilkunde*.

SCHWIMMER, ROSIKA, pacifist, b. Budapest, Hungary, 1877. She was educated in public schools and privately in her native country. Following the family tradition, she devoted herself early to causes for social and political betterment, particularly to woman suffrage and world peace. She became a journalist of wide repute. In Hungary she helped form a national council of women, led in organizing the women clerks on a national scale, brought into being the first women's trade union in Hungary, and organized the peasant women. She was a board member of the Hungarian peace society and Hungary's representative in the International Neo-Malthusian League.

Mme. Schwimmer's first personal contact with the international woman's movement (1904) led her to found the woman suffrage movement (Feministák Egyesülete) in Hungary, which fifteen years later gained full victory. She organized the memorable International Woman Suffrage Congress held in Budapest in 1913. A year later she lived in London as correspondent of important Hungarian, German and English newspapers and as press secretary of the International Woman Suffrage Alliance.

A few weeks after the outbreak of the first World War she came to the United States with a petition on behalf of organizations from all over the world, urging President Woodrow Wilson (September 8, 1914) to call a neutral conference for mediation to prevent the spreading of the war. She had interviews also with Secretary of State Bryan and other political and social leaders, remained in the United States to present the plea for a neutral conference, and spoke in hundreds of meetings in twenty-two states, resulting in the organization of the Emergency Peace Federation in Chicago, December 19, 1914. In January, 1915, the Woman's Peace Party was organized with Jane Addams as president and Rosika Schwimmer as international secretary. The latter was the leading figure at the Women's Congress at The Hague (April, 1915), where 2,000 women, from belligerent and neutral countries, backed her plan for neutral mediation and the new technique she had urged in presenting resolutions to governments.

The congress commissioned a delegation of women under the leadership of Jane Addams, who had presided, to visit the belligerent governments to present the resolutions of the congress and discuss them personally. Another delegation headed by Rosika Schwimmer was sent with the same mission to the neutral countries. The plan, accepted by virtually all belligerent and neutral governments, failed because of President Wilson's refusal to call or cooperate with the neutral governments.

Henry Ford, having publicly announced the wish to do something for world peace, was approached by Rosika Schwimmer. He agreed to finance and personally participate in a neutral conference for continuous mediation. A neutral peace pilgrimage preceded the conference. To carry the American members over to Europe, Ford chartered the *Oscar II*. It became known as the "Peace Ship" and is to this day mistakenly considered the object of Ford's peace endeavor. Before the ship sailed Rosika Schwimmer, in company with Mrs. Ethel Snowden, had a second interview with President Wilson. The neutral conference was set up in Stockholm, Sweden; its members were men and women of high standing in their countries—legislators, university professors, writers and historians. But those interests which insisted on continuing the war forced the destruction of this democratic endeavor to bring about peace. In this process Rosika Schwimmer was subjected to much abuse and was accused by the American press of being an adventuress, a swindler and even a German spy. In 1929 she was vindicated by receiving an award of $17,000 in a libel suit against Fred R. Marvin, one of the chief figures in the libel campaign against her.

At the end of the war she became a member of the National Council of Fifteen which had taken over (October, 1918) the royal power under Count Michael Károlyi. In November, 1918, she was appointed Hungarian minister to Switzerland, the first woman envoy in modern history. She refused to serve the Bolshevik regime which followed the fall of the Károlyi government in March, 1919. Horthy's White Terror regime, which overthrew the Bolsheviks, threatened her because of participation in the democratic Károlyi regime. In February, 1920, she was forced to flee, and in 1921 came to the United States. Her pacifist creed remained the motivating force of her existence, and she was penalized for it by being refused American citizenship in 1929. The Supreme Court upheld the refusal by a vote of 6 to 3. Justice Oliver Wendell Holmes, who wrote the dissenting opinion (Justices Brandeis and Sanford concurring), pointed out the similarity between Rosika Schwimmer's views and those of the Quakers, and concluded: "I had not supposed hitherto that we regretted our inability to expel them because they believe more than some of us do in the teachings

of the Sermon on the Mount." After his retirement from the Supreme Court, Justice Holmes welcomed Rosika Schwimmer in his home and they became personal friends. On December 5, 1937, she was awarded an unofficial world peace prize ($8,300), to which contributions were made by kindred spirits from many lands.

Donors of the prize urged her return to leadership of world peace action. In response to that mandate, Rosika Schwimmer published in co-authorship with Lola Maverick Lloyd, *Chaos, War, or a New World Order,* a widely read brochure, the fourth edition of which was revised in 1942. Rosika Schwimmer and Lola Maverick Lloyd founded (1937) an organization (Campaign for World Government) advocating the establishment of a world government, based on equality among nations. Their plan antedated other suggestions for international federation which appeared with the advent of the second World War. Rosika Schwimmer disagreed with some of the tenets in other plans—Clarence Streit's *Union Now,* for instance—because of their disregard of essential equality.

Mme. Schwimmer was the author of pamphlets and studies on pacifism and world peace. Among her publications was also *Tisza Tales,* English versions of Hungarian children's stories (1928). In 1942 she presented to the New York Public Library her valuable library and archives. More than 100 current books of history and biography and other publications refer to some phase of her activities.

Lit.: Schwimmer, Rosika, "The Enigma of Henry Ford," *The Day,* March 20, 1927; Winsten, Archer, "In the Wake of the News," *New York Post,* June 6, 1934; Derlinger, Sutherland, "Orphans of the Storm," *New York World Telegram,* March 25, 1935; Bromley, Dorothy Dunbar, "The Pacifist Bogey," *Harper's,* Oct., 1930; Gavit, John Palmer, "A Woman Without a Country," *Survey Graphic,* Sept., 1937; Kropotkin, Princess Alexandra, "To the Ladies," *Liberty,* Sept. 7, 1940; "Rosika Schwimmer—World Patriot" (biographical sketch), *International Committee for World Peace Prize Award* (1937); Sullivan, Mark, *Our Times,* vol. 5 (1914-18); Millis, Walter, *The Road to War—America, 1914-1917;* Chafee, Zechariah, Jr., *Free Speech in the United States,* chap. 11 (1942).

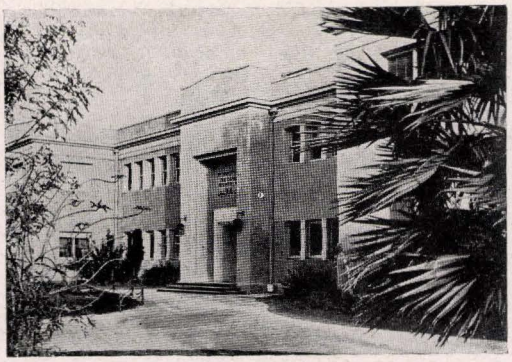
FRANKLIN GORDON.

SCHWOB, MARCEL, writer, b. Chaville, near Paris, 1867; d. Paris, 1905. He was the son of Isa Georges Schwob, a friend of Gustave Flaubert and editor of the Nantes newspaper, *Le phare de la Loire.* Schwob, professor at the École des Hautes Études and contributor to influential French periodicals, was an expert on Old French, the argot of François Villon and the English of the Elizabethan era.

In his poetry, *Mimes* (1894), the old Greek world is mirrored; *Livre de Monelle* (1894) and *Moeurs des Diurnales* (1903) deal with modern problems. Other works of his were: *Le roi au masque d'or* (1893); *La croisade des enfants* (1895); *Vies imaginaires* (1896); *La lampe de psyché* (1903). His *Oeuvres complètes,* with a biography by P. Champion, appeared in 1927 and the following years.

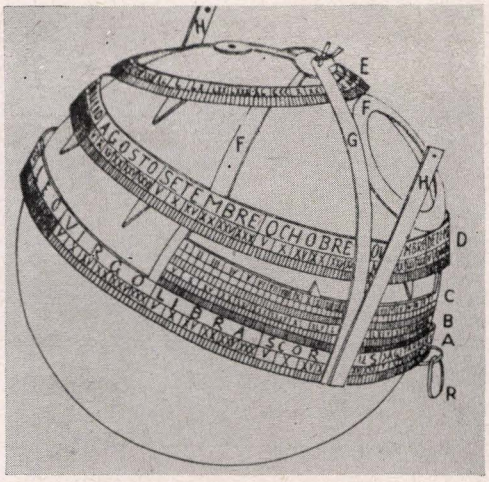
Lit.: Champion, P., biographical sketch of Marcel Schwob in Schwob's *Oeuvres complètes;* autobiographical notes in *Mimes* (1894) 89-97; *La Grande Encyclopédie,* vol. 29, p. 790; *Jewish Chronicle* (London), March 3, 1905.

SCHWOB, RENÉ, writer and French naval official, b. Paris, 1895. Schwob entered the administration of the French Navy, and became paymaster. He participated in several expeditions of French warships to the Far East, and visited the countries of the Mediterranean coast. In 1928 he published *Profondeurs de l'Espagne.* For many years Schwob suffered from severe intestinal ailments and after several unsuccessful treatments by professional physicians began to despair and put his sole trust in a miracle. He therefore participated in a Catholic pilgrimage to Lourdes, but the expected miracle failed to materialize, and Schwob was finally cured through an operation performed by a regular surgeon. Nevertheless, Schwob continued to believe in the thaumaturgic force of the Catholic church, and he became converted in 1927 after having been rejected by the church a year earlier



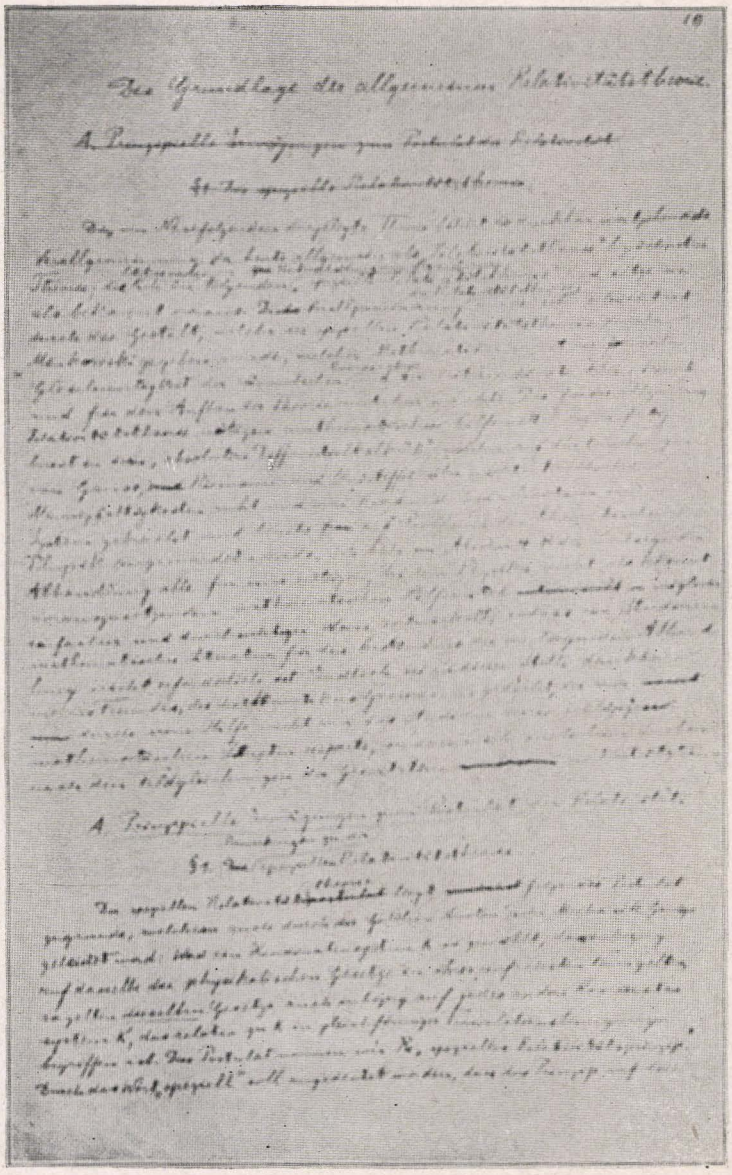
He related the history of his conversion in *Moi, juif* (1928) and *Ni grec ni juif* (1931). Schwob expressed his conviction that the Jews are the Chosen People, and that their mission is to be a people of priests. His arguments for his conversion lack originality; they repeat those of previous converts who pretend that Catholicism is the fulfillment of Judaism. Schwob published also *Chagall et l'âme juive* (1930); *Rome ou la mort* (1937); and *Itinéraire d'un Juif vers l'Église* (1939).

SCIENCE AND INVENTION. The contributions of Jews to science and invention have been directly in proportion to the amount of freedom they enjoyed to participate in the contemporary life of the peoples among whom they lived. When they were isolated, or shut up in ghettos and denied free access to all occupations, their most brilliant minds devoted themselves to purely Jewish studies, and contributed nothing to more general fields; once they were emancipated, they began to employ their powers in dozens of different directions.



In ancient times Jews seem to have been fairly abreast of contemporary science, though few names of individual researchers have survived. There are references to astronomical and entomological studies, and the necessities of Jewish law required a fair knowledge of animals, as well as of botany and embryology. During the Middle Ages the chief Jewish fields of interest were medicine and astronomy. In these occur the earliest inventions known to have been made by Jews. The bain-marie, or water-bath used in chemistry, is universally attributed to Maria Hebrea, about whom very little is known; she is reputed to have discovered hydrochloric acid. Abraham ibn Ezra (1092-1167) seems to have invented a type of astrolabe; Jacob ben Machir ibn Tibbon (1230-1312) devised a quadrant for the use of sailors, in use for centuries; Gersonides (1288-1344) was even greater with his invention of the Jacob's staff for measuring visual angles, and of the camera obscura. Two centuries later Abramo Colorni (1540-99), an engineer in the service of princes, was credited with inventions in the military field.

With the emancipation of the Jews and their entrance into European culture, the number of Jewish scientists rapidly increased. They worked in various fields of general studies, as well as in the specific Jewish fields that are grouped under the general term of Science of Judaism. Chemistry, biology, philology and Oriental studies particularly engaged their attention. Jewish inventors appear a little later, especially in the second half of the 19th cent. and after; their contributions have been especially outstanding in the fields involving electricity and the transmission of words and sounds. Jewish scientists have received a number of awards of Nobel Prizes, and the number of Jewish scientists and inventors is proportionately high for their population figures, but not when considered on the basis of general occupational stratification. Since a large number of Jews gravitate to the professions, it is not surprising that many of them should have attained preeminence in various scholarly fields.



From the beginning of the 19th cent. on, there has been a noteworthy shift in the type of sciences in which Jews were interested, from the more or less literary, such as philology and Oriental studies, to the practical, such as biochemistry and physics; in invention, the shift has been from the mechanical to the

electrical. This merely echoes the general trend of shifting interest in science and invention.

The most important Jewish scientists and inventors in general fields, exclusive of specifically Jewish studies, are listed below (details are given in their individual biographies):

ANTHROPOLOGISTS

Boas, Franz, 1858-1942
Bogoraz, Vladimir, 1865-1938
Burchardt, Hermann, 1857-1909
Elkind, Arkady D., 1869-
Fishberg, Maurice, 1872-1934
Goldenweiser, Alexander, 1880-1940
Herskovits, Melville Jean, 1895-
Jochelson, Vladimir, 1856-1937
Kanitz, Felix Philippe, 1829-1904
Radin, Paul, 1883-
Seligman, Charles G., 1873-1940
Sternberg, Lev, 1861-1927

ARCHEOLOGISTS

Glueck, Nelson, 1895-
Hirschfeld, Gustav, 1847-95
Maisler, Benjamin, 1906-
Mazur, Belle D.
Stein, Marc Aurel, 1862-
Sukenik, Eliezer Lipa, 1889-

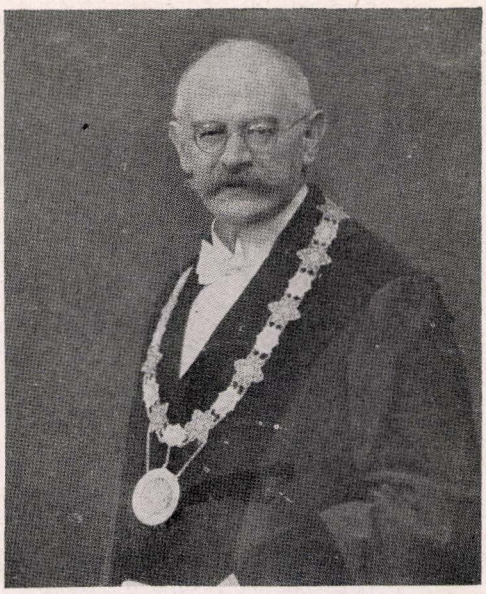
INVENTORS (*giving chief inventions or field of work*)

Aron, Hermann (1845-1913), electric meter, wireless telephone.
Aronson, Louis V. (1869-1940), Ronson lighters.
Artom, Alessandro (1867-1927), radiogoniometer, telegraphy.
Ayrton, Hertha (1854-1923), Ayrton flapper.
Becker, Moritz (1830-1901), machines for processing amber.
Belais, David (1862-1933), white gold.
Berliner, Emile (1851-1929), microphone, gramophone, internal combustion engine.
Dubilier, William (b. 1888), mica condensors.
Goldschmidt, Hans (1861-1923), thermite process.
Goldschmidt, Rudolf (b. 1876), rotating-field alternator.
Goldsmith, Alfred Norton (b. 1887), radio devices.
Gompertz, Lewis (d. 1861), expanding chuck, and numerous others.



Abram F. Joffe, physicist (See article in vol. 6, p. 162)

Eugen Mittwoch, orientalist (See article in vol. 7, p. 591)

Hubert, Conrad (1860-1928), mechanical and electrical devices.
Isaacs, Jacob (d. 1798), process for obtaining fresh water from salt water.
Jacobi, Moritz Hermann (1801-74), electrotyping.
Jeffe, Ephraim, non-glare screen.
Josepho, Anatol, photomaton.
Kapitza, Peter, liquefaction of gases, turbine compressor.
Kitsee, Isador (1845-1931), more than 2,000 patents, including a disc phonograph record, refrigerator car and vacuum tube.
Levy, Louis Edward (1846-1919), Levytype.
Levy, Max (1857-1926), half-tone screen, precision devices.
Lieben, Robert von (1878-1913), radio tube, telephone.
Marcus, Siegfried (1831-98), benzine automobile, electrical devices.
Marks, Louis Benedict (1869-1939), inclosed arc lamp.
Naumburg, Robert Elkan (b. 1892), visagraph and other devices.
Popper, Joseph (1838-1921), steam engines, electrical power.
Reis, Philipp (1834-74), telephone.
Ries, Elias Elkan (1862-1928), electrical devices, audioscope.
Samuda, Jacob (1811-44), atmospheric railway.
Schwarz, David (1845-97), dirigible.
Silverman, Alexander (b. 1881), illuminator for microscopes.
Stern, Abraham Jakob (1760-1842), calculating machine.
Slonimsky, Hayim Selig (1810-1904), calculating machine.
Zalinski, Edward Louis Gray (1849-1909), ramrod-bayonet, torpedo-gun and other military devices.
Zalinski, Moses G. (1863-1919), dynamite gun.

Clarence Feldmann, physicist and rector of the University of Delft (1924-25)

SIMON COHEN.

Lit.: Roth, C., *Jewish Contribution to Civilisation* (1938); Brodetsky, in *The Real Jew*, 162-76; Blackman, *ibid.*, 186-96; Roback, A. A., *Jewish Influence on Modern Thought* (1929); Heppner, *Juden als Erfinder und Entdecker* (1913); Oppenheimer, *Ezekiel to Einstein* (1940); Gershenfeld, L., *The Jew in Science* (1934).

SCIENCE OF JUDAISM (Wissenschaft des Judentums), the systematic study of Judaism as a living and growing entity and as a sociological and historical unity; it ranges over the entire field of Jewish life, and aims to investigate and present all the phenomena and activities of Jewry in all ages and all countries. Its methods of approach differ widely from those practised by the Jews of previous ages. The traditional method was one-sided, fettered by dogma, and couched in the form of dialectics; the Science of Judaism replaces this by systematic, critical and scholarly investigation. Accordingly, it has raised the knowledge of Judaism to the rank of a science, and has given it a standing among other scholarly vocations.

The term Science of Judaism is a translation of the German *Wissenschaft des Judentums*. This was coined by Leopold Zunz in 1823 to express the purposes of the group who intended to publish a periodical devoted to Jewish scholarship, *the Zeitschrift für die Wissenschaft des Judentums*. The group of pioneers (1822-23) included Nachman Krochmal, who defined the concept of Jewish literature; S. J. Rapoport, who defined the concept of Jewish history; Samuel David Luzzatto, who, together with Rapoport, began to explore the sources for both fields. Luzzatto restored Jewish study of the Bible and Hebrew philology to the rank of a science. Salomon Munk inaugurated the study of the history of Jewish philosophy. Within a generation Selig (later Paulus) Cassel was writing a history of the Jews, Moritz Steinschneider a history of Jewish literature, and Heinrich Graetz a history which combined both fields. On the other hand, the systematization of Jewish ideas and study of contemporary Judaism emphasized by Abraham Geiger languished until the end of the 19th cent.

The Science of Judaism did valuable service in dispelling erroneous notions of the Jews and Judaism among non-Jews. It aided in bringing about the emancipation of the Jews; it made Jews proud of themselves and their people; it improved education, clarified religious views, and played its part in the secularization of Jewish life. It was never followed by many; it remained the field of specialists, though its results were brought to the public in the form of articles in periodicals and through schools and lectures. Since the studies produced were written in the languages of the countries in which the scholars lived, it has been difficult for any one individual to know them all; but with the increase in the use of Hebrew as a living language, more and more scholarly works are being written in that tongue, and are therefore capturing the interest of larger groups than before. In addition, more Jewish scholars and teachers were trained.

As Zunz recognized from the beginning, the preservation of the scientific study of Judaism depended upon the willingness of individuals or public institutions to make contributions to that cause. It was for this purpose that he founded his Verein and that similar groups were created to furnish the support for Jewish scholarship. Later on, and especially in the latter part of the 19th cent., efforts were made to create established positions for Jewish scholars. In England and the United States chairs for post-Biblical Jewish literature at the universities were founded by private foundations. In Germany there were similar teaching positions. The École Pratique des Hautes Études in Paris had a chair for Jewish religious studies; Harvard University in Cambridge, Mass., and Columbia University in New York maintained a professorship in Jewish studies.

After 1800 many governments required that Jewish theologians should have a scholarly education, and this idea was seconded by the Jews themselves. Contributions from individuals, sometimes assisted by subventions from the government in European countries and in the United States, created rabbinical seminaries for rabbis and Jewish teachers, in which the Science of Judaism was fostered and expanded. These schools made possible the activities of such men as Frankel and Graetz in Breslau, Geiger and Müller, Berliner and Hofmann in Berlin, Bacher and Kaufmann in Budapest, Loeb in Paris, Kohler in Cincinnati and Schechter in New York, and produced a splendid new generation of scholars.

In the 20th cent. there have been institutions devoted solely to Jewish scholarship, such as Dropsie College for Hebrew and Cognate Learning in Philadelphia (1907), the research institute of the Berlin Akademie für die Wissenschaft des Judentums (1919), the Judaistic Institute of the Hebrew University, and the Research Institute for Hebrew Poetry, Jerusalem. The results of research are published in the larger works of the leading scholars, and in learned periodicals and collections in various languages.

Besides these institutions there have been others which had as their purpose the dissemination of the results of Jewish scholarship, such as the Zunz-Stiftung (1864); the Gesellschaft zur Förderung der Wissenschaft des Judentums (1902), Berlin; the Société des Études Juives (1880), Paris; the Jewish Publication Society of America (1889), Philadelphia; the Mekize Nirdamim society, and a number of other kindred organizations for historical study.

A NEW

LETTER

FROM

ABERDEEN

IN

SCOTLAND,

Sent to a *Perſon of Quality.*

WHEREIN

Is a more full Account of the *Proceedings* of the

JEWES,

Than hath been hitherto Publiſhed.

By R. R.

LONDON, Printed by *A. Maxwell*, in the year, 1665.

(1)

A

LETTER

FROM

ABERDEEN,

October 26. 1665.

SIR,

THat our former and friendly Correſpondence may not dye, though of a long time I have not heard from you, yet hoping this will find you living, and in good health, give me leave to acquaint you of what I know concerning the proceedings of the *Iſraelites*, in this juncture of

(2)

of time, wherein ſcarce any thing elſe, is either talkt of, or look after, in compariſon of them. The whole World we ſee is out of order, nothing to be expected but Wars and Inteſtine Broils, and whether the Lord will be pleaſed in the midſt of theſe Combuſtions to call in his Ancient People, and magnifie his Name in them, he only knoweth. On the 23 inſtant, by the foulneſs of the weather and ſtorms, put into this place a Ship, from whence ſhe came we cannot tell, but our Profeſſor of the Tongues and Languages having notice thereof, went down unto them, but could not underſtand them; he ſuppoſes they ſpoke broken *Hebrew*, and by a Letter they had in High-Dutch, they found them bound for *Amſterſtam*, and to have correſpondence with their Brethren (the *Jews*) there; Which Letter further relates, That there is Sixteen hundred thouſand of them together in *Arabia*, and that there came into *Europe* Sixty Thouſand more; as likewiſe, that they have had Encounters with the *Turks*, and ſlain great numbers of them; none are able to ſtand againſt them: They give Liberty of Conſcienc

(3)

ſcience to all, except the *Turks*, endeavouring the utter Ruine and Extirpation of them: As for their Ship, the Sails thereof are white branched Sattin, and all their Ropes are Silk of the ſame colour; and in the Sails was this Inſcription in fair Red Characters, *THESE ARE OF THE TEN TRIBES OF ISRAEL*, which was to diſcover them to be *Jews*: Their Food on board was onely Rice and Honey; As for their Habit (or Clothing) it is of black and blew. It ſeems they have ſent to all remarkable places in the VVorld to their Brethren, to give them notice of their proceedings, to the end they may come unto, and joyn with them: I ſuppoſe you have not been ignorant of the Letters from ſeveral parts, the noiſe of them being communicated to moſt parts of Chriſtendom. Thus have I given you an acconnt of the *Jews*, aſſuring you, that there's not a tittle in it but what is truth, being all at the preſent that this place affords, And, hoping to hear from you ſo ſoon as poſſible, I remain

Your Friend and Servant.

A historic record of the Jews of Scotland. Reproduced by courtesy of the "Jewish Chronicle" of London

SCOTLAND, that part of the United Kingdom lying north of the river Tweed. Its total population in 1943 was about 4,850,000, of whom less than 20,000 were Jews. The Jewish population was concentrated in Glasgow, which had about 16,000, and in Edinburgh, which had about 1,500.

There is legendary reference to Jewish children having been transported north to Scotland during the persecutions that preceded the Expulsion in 1290, in the effort to effect their thorough conversion. Of such migrations, however, there is no record. And although there was no Jewish settlement in Aberdeen at the time, there is evidence that the residents of Aberdeen, in 1665, were favorably aware of Jews. Two letters are known to have been sent telling of the arrival of a boatload of Jews who were bound from the Continent for Palestine, under the influence of the movement of Sabbatai Zevi.

The first professing Jew known to have settled in the territory came to Edinburgh in 1691, followed by another in 1698. Not until 1816 was a synagogue established in the city. That same year, in Glasgow, there were about ten Jewish families, and here there was no synagogue until 1858. In both these communities the Jews were, in 1943, engaged in the varied trades and professions. The university life of Edinburgh had attracted Jewish converts, as instructors in Hebrew and cognate subjects, even before professing Jews arrived in the community, and the university remained an attraction for Jewish students. Its medical school, in particular, brought to Edinburgh Jews from all parts of the world.

In 1943 there were small Jewish settlements also in Aberdeen, which had a population of less than fifty (the first congregation had been founded in 1893); Ayr; Dundee, where a congregation had been established in 1874 and which had (1943) a little more than 100 Jews; Dunfermline; and Inverness. Whittengehame Estate, the former residence of Arthur James Balfour in Scotland, was dedicated, in 1939, as a farm school for training of young immigrants to Palestine.

SCOTT, CHARLES ALEXANDER, soldier of fortune and author, b. London, 1803; d. Venice, Italy, 1866. His original name was Blumenthal; according to H. Guedalla, who was his friend for many years, notwithstanding his trouble because of Scott's extravagances, his name was Cohen. In his early youth Scott left England for Venice, his mother's native town. He traveled extensively and mastered several languages. He was a volunteer in the army of the Spanish pretender, Don Carlos, and at the end of the Spanish civil war offered his services to Abd El Kader, who was preparing to wage war against France. In 1848 Scott joined the Italian revolutionary movement, and took an active part in the defense of Venice against the Austrian army. When Venice was captured by the Austrians, Scott succeeded in escaping, and served under the command of Garibaldi in various countries. He paid 90,000 francs for 3,000 muskets at Birmingham to arm revolutionary soldiers, but he finally preferred to return to England and to devote his time to literary work. In 1858 Scott published an English translation of Guerazzi's *Beatrice Cenci.*

In the Italian war of 1859 he against served under Garibaldi, and in 1860 he obtained his chief's consent to prepare a coup de main to abduct young Edgar Mortara but, in consequence of an unforeseen departure, he could not make this attempt.

In Garibaldi's headquarters Scott came in sharp conflict with Lord Seymour, eldest son of the Duke of Somerset.

Jewish bagpipers in Scotland

Scott insulted the lord, and the latter retaliated in kind. They accused one another of dishonorable machinations, published pamphlets one against the other, and brought action for libel. In 1860 they met at Naples. Lord Seymour horsewhipped his adversary. The latter fired his revolver but missed, whereupon he was brutally beaten by his assailant. Subsequently Scott brought a lawsuit against Lord Seymour, and obtained an indemnity of £500, but he never fully recovered from the beating. During the last five years of his life Scott regularly attended the synagogue, to which he had been a stranger. He also contributed to the *Archives Israélites* under the pseudonym of Maccabeus. He bequeathed £1,000 to St. George's Hospital, £1,000 to the Jewish Free School, and £1,000 to the Alliance Israélite Universelle.

SCOTT, MIRIAM FINN, child diagnostician, b. Russia, 1882. She was brought to the United States in 1893. She studied at Hunter College, New York city (A.B., 1903), and received the M.A. degree from New York University (1936). She was in charge of 1,000 children on the first roof playground in New York city (1898), of the children's work at the University Settlement, New York city (1899-1903), director of girls' work, Speyer School, Columbia University (1903-6), and served in many other capacities, endeavoring to educate young children through play and intimate personal contact. In 1937 she was appointed director of the School for Parents; in this capacity she emphasized the development of the individual child through the extensive cooperation of home and school.

She spoke on parental education over several United States radio stations. In 1928 she delivered lectures at the Universities of Leningrad and Moscow. Her writings include *How to Know Your Child* (1915) and *Meeting Your Child's Problem* (1922).

SCRANTON, third largest city in Pennsylvania, located in the heart of the anthracite mining district of the state. In 1943 the Jewish population of Scranton was estimated to be about 5,500 in a total population of 140,404 (census of 1940). The borough of Scranton was established in 1841, and toward the end of that decade the first Jewish families came in. They were German immigrants, and prominent among them were Jacob Krotosky, Samuel Samter, J. L. Wormser, Barnett Moses, David Landau and Joseph Rosenthal. There were also the families Sutto, Newhouse, Josephson, Green, Wertheimer, Lauer, Sullam, Freeman, Klein, Brooks and Alexander. The pioneer Jews were for the most part tradesmen. The first Jew to hold public office in Scranton was Joseph Rosenthal, who in 1860 was Scranton's first, and for a period its only, policeman.

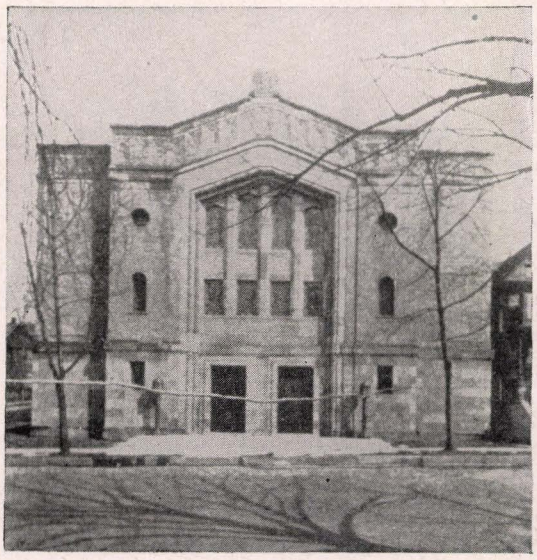
After journeying for a number of years to the Wilkes-Barre synagogue to observe the high holy days,

The Madison Avenue Temple at Scranton

Scranton Jews finally organized the Reform Anshe Chesed Congregation in 1860, just six years before Scranton was incorporated as a city. In 1867 the first Temple was built on Linden street. When this edifice was sold in 1901 to the Orthodox K'neseth Israel Congregation, a new synagogue was erected on Madison Avenue (1902); it was still in use in 1943, and was known also as the Madison Avenue Temple. Rabbi E. K. Fisher was the first to serve Anshe Chesed; he was followed by Rabbis I. Cohn, Weil, L. A. Sohn, Samuel Freudenthal, William Lowenberg, Jacob Feuerlicht, Edward Chapman and Abraham S. Anspacher. Later came Meyer Lovitch (1915-20), Bernard Heller (1922-29), John J. Tepfer (1931-32), Victor Eppstein (1933-35) and Efraim M. Rosenzweig, who began his service in 1936 and was the incumbent in 1943.

Jews continued to be attracted to the growing city, and in the 1880's the first immigrants from Eastern Europe came in. At the same time, a small number of Sephardic Jews also settled in Scranton. To serve the expanding community, Orthodox congregations were organized. Bnai Abraham and Jacob was organized in 1888, Bnai Israel in 1892, Ahavas Achim in 1899, and K'neseth Israel in 1901. In 1943 there were also the congregations Bnai Zion, Ahavath Sholom and Machzikeh Hadas; the latter was founded in 1924, and was served by Rabbis Morris Besdin, Morris Mescheloff and Melech Schachter (1937-). In 1943 Rabbi Henry Gutterman, who had served for thirty years, was head of Scranton's Orthodox Jewry. As such, he supervised the programs of the Central Talmud Torah, organized in 1894 as the first modern Hebrew school by Abraham B. Cohen, who from then on became one of the leading factors in Jewish communal life, and was still active in 1943.

The Conservative Congregation Temple Israel was founded in 1921, and erected its synagogue three years later. Rabbi Max Arzt was called to its pulpit then, and served until 1939; in 1943 Arthur T. Buch was rabbi of Temple Israel. Prominent in social service, Arzt was president of the Council of Social Agencies (1932-34) and was appointed by Governor George H. Earle to be a member of the State's Committee in Public Assistance and Relief. Under the directorship of Louis Wolf, Temple Israel established (1925) a large Hebrew school whose method of instruction became a model for other schools throughout the country. It was estimated that in 1943 85 per cent of Scranton's Jewish school children were attending the classes of the various Hebrew schools.



By 1943 the Jews of East European origin made up more than 95 per cent of the community, while only 3 per cent were of German extraction. The Y. M. H. A. of Scranton, organized in 1909, was credited with cementing into a closer bond of cooperation the various elements of the Jewish community. The Y. M. H. A. became a member of the local Community Chest in 1922. Several successful fund-raising campaigns resulted in the establishment of a building with full modern equipment for an extensive and varied program, which, in 1943, was under the supervision of Samuel Shair, managing director. The building became headquarters for such national organizations as the Zionist Organization of America, Senior and Junior Hadassah, Mizrachi, National Council of Jewish Women, Jewish Workers Alliance and Workmen's Circle, and for such local groups as the Jewish Home Board, Jewish Federation Board, Scrap Metal Association, Hebrew Ladies' Aid Society, the city's Red Cross groups, and the WPA orchestra.

The Jewish Federation, a member agency of the Community Chest, was first established by Abraham B. Cohen in 1915 as the Kahilla. In addition to the usual service, the Federation instituted a non-sectarian baby welfare center and a health and dental clinic. To take care of the aged and children of the community, the Jewish Home was established. Scranton's Jewry strongly supported the annual United Jewish Campaign.

Jews of Scranton engaged as merchants, owners and operators of industrial establishments, and professional people. The interest of Scranton Jews in the civic affairs of their city made for excellent interfaith relationships. M. L. Goodman and I. E. Oppenheim were presidents of the Scranton and Dunmore Community Chests; the former and Morris Goodman were chairmen of successful Community Chest campaigns. Abraham B. Cohen organized the Good Will Committee of Scranton in 1933, and in 1907 founded the Bureau of Recreation, of whose commission he remained chairman from then on.

Numerous Jewish citizens were appointed to such city administration posts as treasurer, solicitor, and director of public safety; others were executives of the Chamber of Commerce, and still others officers in the dental and medical societies of Lackawanna County. In 1943 the morning *Tribune* and the Sunday *Scrantonian* were published by Michael L. Goodman and his son Herman Goodman.

SAMUEL SHAIR.

Temple Israel at Scranton

SCRIBES, a term used in the New Testament to denote certain Jewish teachers who differed from or were opposed to Jesus (*Matt.* 7:29). It is often used in the combination "scribes and Pharisees" (*Matt.* 23). The term is apparently the translation of the Hebrew *soferim,* which means not scribes in the usual sense, but "book-men," that is, interpreters of the *sefer,* the book of the Law (*torah*). This title was borne by the teachers, beginning with Ezra, who interpreted the Scriptures from the 5th cent. to the 2nd cent. B.C.E., when the Pharisees began to dispute their place. Apparently these teachers were priests, or followers of the priestly group, the Sadducees; therefore the term "scribes" in the New Testament may be the equivalent of "Sadducean teachers."

For a discussion of the work of these "scribes," *see* SOFERIM. For scribes in the ordinary sense, *see* WRITING.

SCRIPTURES, READING OF, *see* HAFTARAH; TORAH, READING OF.

SCROLL OF THE LAW, *see* TORAH, SCROLL OF.

SCYTHIANS, a nomadic people in Central Asia, living north of the Black Sea and east of the Carpathian mountains. About 630 B.C.E. they began to erupt southward and eastward, and this was one of the chief causes for the fall of the Assyrian Empire in the decades which followed. The Bible makes no direct reference to the Scythians, but Herodotus reports that they threatened to invade Egypt by way of Palestine and that they withdrew only after being bought off by the Pharaoh of Egypt. Bible scholars have suggested that the threatened invasion of the Scythians had repercussions in Judah, possibly even leading to the Deuteronomic reformation.

Certain passages in *Jeremiah* (4:5-31; 6:1-8) as well as *Zephaniah* may have been written in anticipation of a Scythian invasion; while Ezekiel's description of a coming war (*Ezek.* 38) from Magog may refer to the Scythians. However, the only traces of the onslaught in Palestine was the change of the name of Beth-shan to Scythopolis.

SEAL (Hebrew *hotham*), an object used to stamp a device or a name in a soft substance, such as clay or wax, which when hardening preserves the impression and thus serves to authenticate a document or other official object. The Jews, like other peoples of antiquity, made use of seals as far back as Biblical times. These consisted of flat or circular stones into which marks or pictures were cut; they were used to seal letters and documents (*I Kings* 21:8; *Isa.* 29:11; *Jer.* 32:10) or to close up vessels and doors. They were generally worn on a string which went around the neck or the arm, or set in a ring (*Gen.* 38:18; *Jer.* 22:24; *Song of Songs* 8:6).

A large number of such seals have been excavated in Palestine. It is difficult in many cases to determine whether the inscription is Hebrew, Aramaic or Phoenician, since all these languages used the same alphabet, wrote without vowels and used words with the same basic consonants. However, the pictures used and the nature of the inscriptions often indicate certain seals as Jewish, as for instance the seal of "Shema, servant of Jeroboam," found at Megiddo (it is reproduced in vol. 1, p. 459); this shows a leaping lion with wide open jaws, such as is found frequently in the monuments of Assyria and Babylonia. The accompanying Hebrew inscription shows that the seal was made in Palestine, though possibly by a Babylonian artist. A second seal of a Shema (perhaps the same man) has been found in Jerusalem.

In Talmudic times seals were made of metal and wood; they were often dipped in a special ink and used to seal letters. The objects depicted on ancient seals are of many kinds; plants and animals occur frequently, but there are also utensils, human beings and parts of the body.

In the 7th cent. the Mohammedan Caliph Omar forbade the Jews to wear seal-rings, which at that time was regarded as the right of the upper class; he limited this to Mohammedans. An exception was made in the case of the exilarchs, who were permitted to wear seal-rings as the sign of their office.

In Europe seal-rings were at first used only by kings and princes, and it was not until the 13th cent. that their use became general. To this period belong the first discoveries of Jewish seals in Spain, Italy and Central Europe. A little later almost every Jewish community had a seal of its own, the use of which was regulated by the government. Numerous private individuals, especially rabbis and merchants, had seals of their own.

These seals usually had a figure as well as an inscription; the latter was generally in Hebrew or Latin. Many seals had two faces: one with Hebrew for dealings with Jews, and one with Latin for dealings with non-Jews. The images often were a sort of pun on the name of the owner; thus Spinoza had a seal of a thorny twig, from the Latin *spinosus,* "thorny." The signs of the zodiac and the Shield of David were favorite objects on seals. In the 19th cent. metal seals were replaced gradually by rubber stamps and gradually lost their legal importance. Seals are still used, however, to mark certain foods as Kosher.

Most large museums have collections of seals, in which Jewish seals do not appear separately but are included in those of their respective eras.

SEASONGOOD, LEWIS, merchant, b. Burgenstadt, Bavaria, Germany, 1836; d. Cincinnati, 1914. He came to Cincinnati, where he engaged in business, in 1851. He was one of the originators of the Cincinnati Exposition, of which he was treasurer in 1872. In 1873 President Ulysses S. Grant appointed him one of the four United States commissioners to the Vienna Exposition. He was one of the projectors of the Southern Railroad. In 1875 he was appointed one of the sinking fund commissioners of Cincinnati.

Seasongood served on many important commissions in the board of trade and chamber of commerce, and in 1880 was appointed quartermaster-general and commissary-general of the state of Ohio. For twenty years he was financial secretary of the United Jewish Cemetery Association of Cincinnati, and for many years he was on the executive board of the Union of American Hebrew Congregations.

Lit.: "Sketch of the Life of Lewis Seasongood," *Historical and Biographical Cyclopedia of Ohio.*

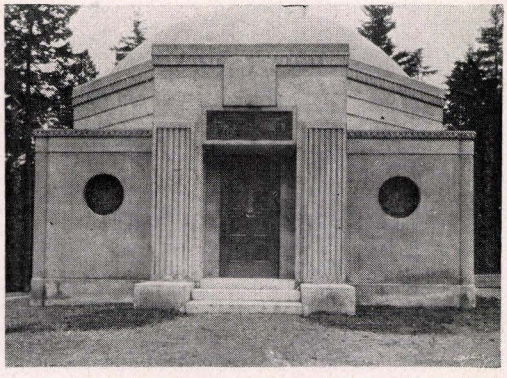
SEASONGOOD, MURRAY, jurist and mayor, b. Cincinnati, 1878. He was educated at Cincinnati, Guilford, England, and at Harvard University, which conferred upon him the M.A. (1901) and LL.B. (1903) degrees. He practised law, and from 1926 to 1930 served as mayor of Cincinnati, for two terms. From 1925 on he taught the subject of municipal corpora-

tions at the University of Cincinnati. Seasongood served also as chairman of the Ohio Commission for the Blind (1915-25) and of the City Planning Commission (1926-30), and as president of the National Municipal League and of the Hamilton County Good Government League (from 1934 on). Seasongood was credited with having taken the initiative in the political reform movement which resulted in the elimination of the Cox machine and the introduction of the commission form of city government in Cincinnati. He was also a member of the Criminal Rules Committee appointed by the United States Supreme Court. He was a trustee of many welfare and educational institutions, including the Hebrew Union College, and served on the executive committee of the American Jewish Committee as well as on the council and board of directors of the American Jewish Joint Distribution Committee.

Seasongood was the author of *Local Government in the United States* (2nd ed., 1934) and *Cases on Municipal Corporations* (2nd ed., 1941). He contributed to Cincinnati, Harvard and Virginia law reviews, to *Scribner's Magazine*, to *American Scholar* and many other publications.

Murray Seasongood

SEATTLE, the largest city in the state of Washington, including, in 1943, approximately 15,000 Jews in its total population of 368,302 (census of 1940). Thus about three-quarters of all the Jewish inhabitants of the state were concentrated in Seattle. The first permanent settlement was founded here in 1852; in the following year, filing its town plat, Seattle was made the seat of newly erected King County. Seattle was nothing more than a sawmill center when, shortly after 1860, Jews first put in their appearance. To the east, at Walla Walla, Sigmund Schwabacher, pioneer Jew of the region that later became the state of Washington, had founded the wholesale grocery firm of Schwabacher and Company in 1862. Seven years afterward a branch of the business was opened in Seattle; the company erected the city's first brick building. To this thriving little community on Puget Sound, destined to be a prosperous lumber and fishing center and a great seaport of the Pacific, came Jews from the well-established Jewish community of Victoria in British Columbia, and from Portland, Ore. Word of mouth history relates that each newcomer was welcomed in the spirit of pioneer democracy by those already settled in the town; and that many a stranger was provided with some small capital with which to start an enterprise and thus became firmly integrated into the community.



Among the Jewish settlers who early established themselves in the town were Bailey Gatzert, Simon and Jacob Davis, Emanuel Rosenberg, Paul Singerman, Caroline Kline Galland, Samuel Frauenthal, Kassel Gottstein and the Schwabacher family. Later, there were the Rickles family, Frank Antel, Morris Pearl, B. Myer, Aaron Garfinkle, Harry Lasky, Philip Silverstone, Benjamin Levy, Joseph Abramowitz, Jacob Alpern, Zalman Grodsinsky, Hyman Levitt, J. M. Buttnick, Max Cohen, Herman Kessler, Mendel Aronin, Isaac Colsky, M. Goodelik, Solomon Potts, Abraham Spring, Sam Shapiro and the Shafter family.

Meeting in Minyans in private homes or rented rooms, the Jews of Seattle held unorganized religious services for about ten years. But with the growing city (Seattle received its first charter in 1880 and its first railway connection in 1884) the Jewish community, likewise expanding, felt the need for formal religious worship. In 1887 a congregation, Ohabath Sholom, was organized. This group later formed the nucleus of the Reform Temple De Hirsch, organized largely through the efforts of Leo Kohn.

Temple De Hirsch was founded in 1899, in the period when Seattle Jewry was sharing in the prosperity brought by the gold rush of 1897. Theodore F. Joseph was called to be the congregation's first rabbi, and served until 1906. He was then succeeded by Samuel Koch, who was retired in 1942 as rabbi emeritus. The congregation then called to the pulpit Raphael H. Levine, whose synagogue in London had been destroyed in the air raids of the second World War. A synagogue for Temple De Hirsch was started but not completed in 1901; in 1908 a new building was erected on another site. In 1943 the congregants were

The Herzl Synagogue at Seattle

The Fani Rosenbaum Memorial Chapel at Seattle

Synagogue of Congregation Chevra Bikur Cholum at Seattle

using the impressive Temple and Center built in 1925.

A decade before this Reform congregation was founded a handful of Orthodox Jews met in Red Men's Hall for high holy day services. In 1892 the group officially became Congregation Chevra Bikur Cholum, and elected as rabbi H. Genss, the first ordained rabbi to serve in Seattle. The synagogue was opened in 1898. Rabbis succeeding Genss were Gedaliah Halpern (1905), Simon Glazer (1919), Simon Winograd (1923) and Solomon P. Wohlgelernter, who was elected in 1930 and was still the incumbent in 1943. The second synagogue was erected in 1925, and was subsequently enlarged and improved.

Another group, Herzl Synagogue, was constituted in 1906. In 1932 the members reorganized into the Herzl Conservative Congregation, and elected as their rabbi Philip A. Langh (1932-40). He was succeeded by Bernard D. Rosenberg (1940-41); Samuel Cass (1941-42), who left for the Canadian Army chaplain service; and Franklin Cohn (1942-). The synagogue erected in 1924 was in use in 1943. A remarkable feature of the Herzl Synagogue is the hand-carved panel over the Ark, wrought by Leo A. Meltzer in his leisure hours as a labor of love. In 1937 the congregation dedicated the Fani Rosenbaum memorial chapel (in Herzl Memorial Park), the gift of her son, Lewis N. Rosenbaum, one time of Seattle and later of New York city.

In a study made in 1933, Seattle was found to have the third largest Sephardic Jewish community in the United States, composed of approximately 3,000 Jews of Levantine origin. The Sephardic Jews supported numerous organizations of their own, including the congregations Ezra Bessaroth (organized in 1912), of which Isidore Kahan was rabbi in 1943, and Sephardic Bikur Holim Ahabath Achim, organized in 1914.

The Orthodox congregation Machzikay Hadath (organized in 1929) had as its rabbi, in 1943, Baruch Shapiro.

The Hillel Foundation at the University of Washington was under the direction, in 1943, of Rabbi Arthur Zuckerman. Jewish education of youth and adults came to be a major activity of the Seattle community. The Talmud Torah of Congregation Chevra Bikur Cholum, moving into a new structure in 1930, became a city-wide institution. Its Yeshiva was reorganized in 1939. In 1943 Rabbi Chaim Yaakov Levine was its head. The Herzl Conservative Congregation, in addition to its school for young people, undertook a program of adult education, and established the Martin Klatzker library in 1938. The library of Temple De Hirsch schools numbered more than 7,000 volumes. Temple De Hirsch instituted a graduate school for high school and university students, and a correspondence school for Jewish children in isolated communities.

In charitable and social service the community made an early start. The Ladies' Hebrew Benevolent Society of Temple De Hirsch was organized in 1892; its president and secretary, together with the like officers of Congregation Temple De Hirsch, were designated executive directors of a large trust fund left by the will of Mrs. Bonham (Caroline Kline) Galland (d. 1907) for the care of the aged of the Pacific Northwest in the Caroline Kline Galland Home for the Aged. The Seattle Hebrew Benevolent Association was formed in 1895, the local section of the National Council of Jewish Women in 1900, and the Ladies' Montefiore Aid in 1901. The Bikur Cholum Hachnosas Orchim was established in 1937. General organizations were the Federated Jewish Fund, of which Alfred Shemanski was president and Rabbi Wohlgelernter associate president in 1943, and the Jewish Welfare Society. The Workmen's Circle dedicated its new building in 1942.

The *Jewish Transcript,* a Pacific Northwest weekly in English founded at Seattle in 1924, had Herman A. Horowitz as editor and publisher until 1942, when it was made a community newspaper. Herman Keisler became chairman of the board of trustees, and the editorial board included the local rabbis and the presidents of the Federated Jewish Fund and the B'nai B'rith.

In the democratic community of the far Northwest, Jews were from the first participants in political life. Bailey Gatzert, a leader in business and politics, was an early mayor of the city. Isaac J. Lichtenberg was judge of the superior court of King County (1889-93). Philip Tworoger was an associate police judge (1917-20). Samuel R. Stern was judge of the superior court (1925-37), and Simon Wampold was a municipal court judge (1941). In the city council were A. Louis Cohen (1921-34) and David Levine (1930- ; president, 1934). Saul Haas was collector of customs (1935-). In the state legislature from Seattle were A. Louis Cohen (1934-42) and David Cowen (1934-36). Mark M. Lichtman was legal adviser to the legislature in 1935 and 1937. Joseph Jacobs was director of the Washington State Chamber of Commerce (1925-30).

Prominent in business, and in the civic and philanthropic life of the city, were Charles Miller, an early resident;

Berman Schoenfeld, of a pioneer family, member of the National Business Survey Conference Commission under President Herbert Hoover; Max A. Silver, president of the Retail Code Authority of the NRA; Henry Pecord, on the State Reformatory Parole Board; Lewis N. Rosenbaum, active in interfaith work. Alfred Shemanski, president of the board of regents of the University of Washington, established at the school the Jewish Student Loan Fund. Mrs. Samuel Rosenberg founded a scholarship at the university in memory of her husband. Samuel Koch was a member of the city's public library board for more than a decade. P. Allen Rickles, son of an early settler, was grand president of the B'nai B'rith District 4, and an editor of the *Jewish Transcript*. In 1928 Nathan Eckstein, president of the old firm of Schwabacher Brothers and Company, and long time member and president of the city school board, was designated Seattle's most useful citizen, an honor conferred for the first time in the city's history. Herman Schocken was very active, being the original founder of the Jewish Community Council and acting chairman of the Washington Émigré Bureau of the National Refugee Service. LIONEL HILL.

Lit.: *American Hebrew*, Aug. 21, 1931, p. 247, *Golden Jubilee Book of Congregation Bikur Cholum* (Seattle, Wash., 1941).

SEAVER, EDWIN, writer, b. Washington, D. C., 1900. He received the A.B. degree from Harvard in 1922. His two novels, *The Company* (1930) and *Between the Hammer and the Anvil* (1937), made an impression abroad as well as in the United States, particularly in the Soviet Union, where both were published in large editions. His work received critical acclaim as a mature example of socially conscious realism. A number of his short stories were reprinted in the O'Brien anthologies. Notable features of Seaver's fictional method are his use of social groups as protagonists, clarifying and fulfilling the characters in a synthesis of relationships.

Seaver was active also as editor, critic and lecturer. The magazine *1924*, named for the year of issue, was under his editorship, and was one of the more important of the short-lived but influential "little" magazines of the 1920's. He was book editor of *Direction;* for it, and for other periodicals, he wrote reviews.

He also conducted a book review program over radio station WQXR, and taught modern fiction at the New School for Social Research and at the Writers School of the League of American Writers. In 1943 he was director of public relations for the Book-Of-The-Month Club.

ISIDOR SCHNEIDER.

SEBAG-MONTEFIORE, Anglo-Jewish family, founded by SAMUEL SEBAG, merchant and diplomat (b. Mogador, Morocco, 1783; d. London, 1831). In 1799 Sebag went to London with his relative, Meir Cohen Macnin, who was accredited to the Court of St. James as diplomatic representative of the Sultan of Morocco. Sebag served Macnin as chief clerk. At the same time they were associated in carrying on a business.

Although Sebag was very young, he took an important part in international affairs because England was greatly interested in Morocco during the Napoleonic War. In 1813 Sebag married Sarah, eldest daughter of Joseph Elias Montefiore and sister of Sir Moses Montefiore. The Montefiores highly appreciated Sebag, and Lady Montefiore mentioned him more than once in her *Journal*.

Sebag's son, JOSEPH SEBAG-MONTEFIORE (b. London, 1822; d. London, 1903), became Sir Moses Montefiore's intimate confidant, and succeeded to his estates and heirlooms. He was consul general for Italy at London, and Lieutenant of the City of London. In 1896 he was knighted. Sir Joseph Sebag-Montefiore was for many years president of the elders of the Spanish and Portuguese Congregation, and from 1895 to 1902 president of the Board of Deputies. Many of his descendants served and excelled in the British Army.

CECIL SEBAG-MONTEFIORE (b. London, 1874) was captain of the Royal Engineers and chief staff officer of the Jewish Lads' Brigade. ROBERT SEBAG-MONTEFIORE, a captain, died of his wounds in 1915. THOMAS HARRY SEBAG-MONTEFIORE, a colonel, was decorated with the Distinguished Service Order, and became elder of the Spanish and Portuguese Congregation. CHARLES EDWARD SEBAG-MONTEFIORE (b. London, 1886) was, in 1943, president of the Jewish ex-service men's Legion and honorary secretary of the Jewish Victims of the War Fund. He was also a member of the board of the Jewish Legion and of the Jewish religious education board, member of the Board of Guardians, and treasurer of the Victoria Boys Club and the Hayes Industrial School. ERICH SEBAG-MONTEFIORE was, in 1943, captain of the Durham Light Infantry.

SEBAG-MONTEFIORE, WILLIAM, merchant and communal worker, b. London, 1885. He was a grandnephew of Sir Moses Montefiore. He studied at Clifton College, Bristol, and at an early age entered the British army service, later retiring to follow a business career. He settled in Canada in 1912, taking up residence in Montreal, where he married a great-granddaughter of Henry Joseph.

When the first World War broke out he went overseas to rejoin his regiment, the Fifth Lancers, of which he was a former lieutenant. He served on the western front in France, was transferred to the heavy artillery and promoted to captain, later being appointed to the headquarters' staff with the British forces in Egypt. During the operations of General Allenby against Palestine, Captain Sebag-Montefiore was in command of a squadron of cavalry. He was twice mentioned in despatches, and awarded the Military Cross.

Sebag-Montefiore took a keen interest in the affairs of the Spanish and Portuguese synagogue, Montreal, of which he became president in 1921; by 1942 he had served for twenty-one consecutive years in that post. He was, in 1943, a member of the Dominion council of the Canadian Jewish Congress and of its war efforts committee, and was closely connected with other phases of Jewish communal activity. BENJAMIN G. SACK.

Lit.: *History of the Spanish and Portuguese Congregation, Montreal* (1918); *The Jew in Canada* (1926).

SEBASTE, *see* SAMARIA.

SEBESTYÉN, KÁROLY, author and educator, b. Gödre, Hungary, 1872. He studied at the Universities of Budapest, Leipzig and Berlin, and became a teacher of classical languages in a Budapest Gymnasium. He contributed theatre criticism to the leading Budapest newspapers, translated several classical dramas, including Shakespeare's *Timon of Athens,* and published numerous essays and books on esthetics.

He became vice-director of the Hungarian academy of the dramatic arts, was elected to leading literary societies, and through his criticism exerted a definite influence on the Hungarian theatre. Sebestyén was a regular contributor to the year books of the Jewish Hungarian literary society. A poet of distinction, he translated selections from Byron's *Hebrew Melodies.* His books published in Hungarian include monographs on the Hungarian-Jewish poet Emil Makai, on Shakespeare and the English Renaissance, on the philosophy of the Greeks, on Roman literature, and on dramaturgy.

SEBŐK, ZSIGMOND, author and journalist, b. Párkány, Hungary, 1861; d. Budapest, 1916. Having studied philosophy and the sciences at the University of Budapest, he entered the journalistic career, collaborating on daily newspapers in Budapest and Szeged as well as on *Az Én Ujságom* (My Newspaper), a children's weekly, founded by men who were alive to the shortcut of communication that exists from the poet to the child. To this children's world of poetry Sebők contributed the figures of Mackó Ur

(Mr. Grizzly) and of Dörmögő Dömötör (Gregory Grumble), around whose hilarious exploits on visits to town he spun many enchanting yarns. Underneath the fun Mr. Mackó and Dörmögő Dömötör, in their awkward geniality, symbolized the Hungarian country gentleman of the older generation whom life had by-passed in its progress towards industrial civilization, and whose species was doomed to extinction like that of the bear. The bear cubs, Zebulon and Dorka, in their frisky capers, are just children of all countries and all times who are fortunate to be guided by naive and well-meaning elders.

Their adventures told by Sebők in the pages of *Az Én Ujságom* and later of *Jó Pajtás* (The Good Pal), which he edited with E. Benedek from 1910 on, as well as in many books, became a definite factor in the literary education of children. A sensitive teller of short stories, Sebők also published several volumes of them. His general outlook and his language were deeply rooted in Magyar culture. Sebők adopted the Christian faith.

SECRET WRITING, *see* CRYPTOGRAPHY.

SECRETS OF MOSES, title given to the Samaritan book *Asatir* by its editor, Moses Gaster. It contains a repetition of the narrative of the Pentateuch after the style of the Midrash, and ends with a prophecy of the events of the next 3,204 years and the death of Moses. Gaster put the origin of the work in the middle of the 3rd cent. B.C.E.

Lit.: Gaster, M., *The Samaritan Book of the "Secrets of Moses"* (1927).

SECTS. Sects are defined as groups within the followers of a religion which separate from the main body or which arise to struggle for supremacy with other sects within the religion. Sects usually appear when the older forms of religion have fallen into decay and need a regeneration or when outside events have led to a reworking of ideas.

Such sects have arisen on various occasions in Judaism from the time when it became a religion (5th cent. B.C.E.). The first of these was the Pharisees (2nd cent. B.C.E.), which arose as a revolt of the lay teachers against priestly authority. The older party formed the counter-sect of Sadducees, while in course of time other and more limited sects arose, such as the ascetic Essenes and Therapeutae and the warlike Zealots. There are also certain obscure sects of the period, such as the movement headed by Dositheus the Samaritan and the unknown group which produced the Damascus document (the New Covenant, or Damascus Covenant).

Another period of formation of sects was during the stagnation of Judaism in the period after the close of the Talmud (6th to 10th centuries C.E.). The principal one of these sects was the Karaites, which for a time threatened to wrest supremacy from the established group, the Rabbinites. There were also such movements as those of Abu Isa Isfahani and Yudghan.

In the 18th cent. similar conditions produced the rise of the sect of Hasidim. The Reform Movement of the 19th cent. and after never became a separate and distinct sect, nor are the modern divisions in Judaism so sharp or hostile as to be regarded as sects.

The traditional Seder dish

SEDER ("order" or "arrangement"), name of the home service which is held on the first two evenings of the festival of Passover in accordance with a prescribed and fixed order; in the United States, Reform Jews generally observe only the first evening of the Passover. The Sephardic Jews call this home religious service *Haggadah* ("narration" or "telling"); the little book used by Jews everywhere for the Seder service is termed *Haggadah Shel Pesach* (Passover Haggadah; literally, "the narration [of the story] of Pesach") or also simply the Haggadah.

The Seder has its origin in the Passover meal which in the days of the Temple was connected with the bringing of the Pesach offering. Hence the actual development of the Seder into an important religious celebration held in the home and in the family circle did not begin until after the destruction of the Second Temple at Jerusalem (70 C.E.), for at this time the men ceased making the required pilgrimage to the Temple at Jerusalem for the celebration of the Passover, which was one of the three Pilgrimage Festivals. With the destruction of the Second Temple the festival gained in importance and meaning, for now the people felt that they were considerably more in need of redemption and deliverance than at any time since the beginning of the Roman rule. The remembrance of the miraculous deliverance in the days of the forefathers strengthened Israel in its hope for the longed for future redemption. It was this circumstance especially which gave the Seder its specific color and which clothed it with its peculiarly mystical and attractive poetic nature.

Spice box used at the Seder table

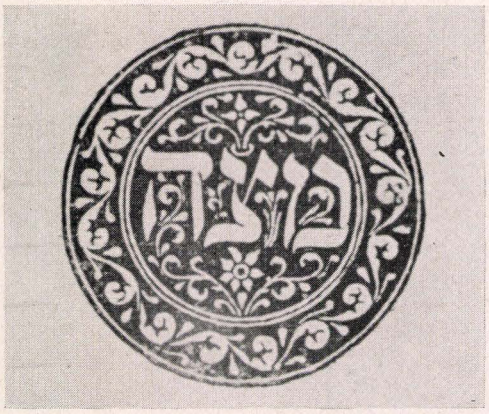
The Seder, as depicted by Moritz Oppenheim

The Paschal meal could no longer be celebrated after the fall of the Temple and the cessation of the sacrificial system; only a bone with a little roasted meat on it (*zero'a*) still reminds Israel today of the paschal lamb. Yet there remained as festive symbols the unleavened bread (*Matzah*) and the bitter herbs (*maror*) which were once eaten together with the Passover lamb; the *maror* was reminiscent of the bitterness of the Hebrews' lot under Egyptian bondage (*Pes.* 116b). There was added also a mixture prepared from apples and nuts, called Haroseth, which was supposed to represent symbolically the mortar (clay) employed by the Hebrews in their forced labor in Egypt, while the parsley which was dipped into the salt water is reminiscent of the hyssop which, according to *Ex.* 12:22, was dipped into the blood of the paschal lamb. In addition, a roasted egg was to symbolize the freewill festival offering. All these symbolical objects are placed on the "Seder dish" together with the three Matzoth, called Kohen, Levi and Israel, in reference to the three main groups of the Israelites: priests, Levites, and laymen.

Wine, too, is placed on the Seder table. On every festival evening two cups of wine are drunk, one after the Kiddush and the other following the grace after meals. On the Seder evenings, however, two additional cups of wine are drunk in order to heighten the joy in the festival; one of these is drunk at the close of the first portion of the Seder or of the Haggadah, just before the meal is served, while the other is drunk at the end of the praises of God which were added to the Haggadah narrative in accordance with ancient prescription. Another reason for the four cups of wine (*'arba ḳosoth*) is the passage *Ex.* 6:6-7, where the redemption of Israel from Egypt is announced in four different phrases. Furthermore, one cup of wine is poured out for the prophet Elijah (popularly called Alyenove or Elyenove, a corruption of *'Eliyahu Hanabi,* "Elijah the prophet"), who was believed to be the messenger announcing the future redemption of Israel.

The Haggadah, up to and including the Nishmath Kol Hai portion, arose in the Mishnaic and Talmudic period (*Pes.* 10); thus far the Haggadah is the same in all the several rituals. In later times much was added in the various rituals. The Ashkenazic Jews adopted into their Haggadah two small portions of the Sabbath liturgy as well as two songs connected with the benediction over the fourth cup of wine. This benediction is preceded by the words *leshanah haba'ah biyrushalayim* ("the coming year in Jerusalem"), and it is followed by the benediction which is customarily recited after the enjoyment of wine and the conclusion of which is a petition for the rebuilding of the holy

An American family at Seder. From Frances Nathan Wolff's "Four Generations" (1939)



Temple. The latest portions of the Haggadah of the German ritual are formed by three additional poems or songs which were taken over into the Haggadah toward the end of the Middle Ages. The third and last of these, the Had Gadya ("One Kid"), has become especially popular. In all probability it is patterned after an old German song, and poems similar to it in form and content are to be found among other peoples as well. It is descriptive of the constant process of retribution, and is interpreted, in connection with the prophecies in the book of *Daniel,* as referring to the world powers which destroyed each other successively and the destruction of the last of which will finally be followed by the inauguration of the kingdom of God.

The arrangement and order of the Seder are as follows: as on every festival evening (the Ereb of the festival), the Kiddush is recited first, and then the master of the house washes his hands. He then dips parsley or some other vegetable, such as water cress, into the salt water and gives a piece of it to all those at the Seder table. Then he breaks the middle one of the three cakes of Matzah into two, and sets aside one-half as the Afikomen, which is distributed among those present and eaten at the end of the meal as a sign that after the meal nothing further may be eaten on that night. Next follows the recitation of the famous section, composed in the Aramaic vernacular of the Babylonian Jews: *ha lahma 'anya* ("This is the bread of affliction which our fathers ate in the land of Egypt. Whoever is hungry, let him come and eat! He who is needy, let him come and celebrate the Passover with us! This year here; next year in Jerusalem. This year [we are] still slaves; next year [we shall be] free men").

The narrative (Haggadah) is then begun with the recitation, by the youngest person present, generally a child, of the well-known four questions (popularly called Kashes), which begin with the words *mah nishtannah* ("Why is this night different from all other nights?") and refer to several of the practices carried out on the Seder evening, inasmuch as the "Haggadah," the telling of the story of the Exodus from Egypt, is chiefly, according to *Ex.* 13:8, for the sake of the children.

In keeping with the desire to retain the attention of the children in the Seder services, the Talmud suggests various devices for keeping them awake during the somewhat lengthy service and arousing their interest so that they may be impelled to ask questions. It is suggested in the Talmudic tractate *Pesachim* (109a) that nuts and other goodies be distributed among the children and also that the Matzah be "snatched" so that the children "remain awake and ask questions."

Based upon the idea of "snatching the Matzah" the custom arose of allowing the children to steal the fragment of Matzah broken off from one of the three ritual cakes at the beginning of the meal and put aside to be eaten at the conclusion of the Seder. Since the Seder can not be concluded without eating this fragment of Matzah (the Afikomen), the

A Seder plate

children who find it are given a present in return for it (cf. *Minhage Jeshurun,* § 122).

The narrative then continues with the story of the oppression and deliverance of Israel, in connection with various Biblical verses, especially *Deut.* 26:5-8. One of the introductory portions reads as follows: "And this promise of God (mentioned just previously) has been fulfilled in us and in our fathers; for not only one person has risen up against us to destroy us, but in every age there arose up against us men who wished to destroy us, but the Holy One, blessed be He, delivered us out of their hand."

Next, the explanation of the three symbols of the Passover festival, i.e. the paschal offering, the unleavened bread and the bitter herbs, is followed by a portion beginning with the words: "In every age the Jew is obligated to regard himself as though he himself had gone forth from Egypt." This closes the Haggadah portion proper, and the praises of God commence with the singing of the Hallel psalms, which used to be sung in former times when the Passover offering was brought and at the Passover meal. *Ps.* 113 and 114 precede the serving of the meal; the other psalms of the Hallel are recited at the conclusion of the meal. Before the meal the second of the four cups of wine is drunk, after a benediction in which thanks are expressed to God for the former redemption as well as a petition for the future redemption. In this connection unleavened bread and bitter herbs, usually horseradish, are eaten, first separately and then together. The meal proper is now served, followed by the grace after meals and the third cup of wine.

After the meal, in accordance with a custom which did not develop until the latter part of the Middle Ages, the door is opened for a moment while several verses are recited. According to some, this is for the purpose of announcing that this night is a "night of watching" (*lel shimmurin, Ex.* 12:42), and in order to hasten Israel's redemption by means of this trust and belief. The Biblical verses which are recited at the opening of the door reflect the Jews' terror and dread of the ritual murder allegation which was usually and chiefly connected with Passover and the Seder evening. There then follow, in keeping with the old order, the remaining Hallel psalms (*Ps.* 115 to 118) and other hymns, followed by the drinking of the fourth cup of wine, which in turn, in the Ashkenazic ritual, is followed by three additional songs.

SEDER OLAM ("order of the world"), an old book which records in chronological order the Biblical events from the Creation to the war of Bar Kochba (132-35 C.E.). This compilation adheres closely to the Bible, employs Scriptural expressions and is often a mere combination of scattered verses. Wherever the data or sequence of events is indistinct in the Bible, the writer avails himself of old rabbinic interpretations. It is the aim of the author to present the events in as concise a form as possible. The book may be designated as a Midrash to a certain degree: it also contains certain digressions, which are explainable on the ground of association of words, such as abound in the Midrash. Only the last chapter of the book shows independence. There the author endeavors to outline in detail the era between the end of the Persian period and the eve of the Bar Kochba war. The computation of time since the Creation, which came into general use among the Jews of Europe, is based upon the Seder Olam. The work is mentioned as a Baraitha in the Talmud. Johanan ascribes its authorship to Jose ben Halafta (d. about 160), who was regarded as an authority on chronology. The chronological record of the Seder Olam terminates with Johanan's death.

The fact that Jose's views as expressed in the Talmud conflict with those in the Seder Olam does not disprove his authorship. It is held that the present text underwent many changes, and moreover that the author chronicled the generally prevailing opinions instead of his own. The book is written in clear and concise Hebrew. It is the first Hebrew work of the post-Biblical period to be generally accepted. The material is divided into thirty chapters in all manuscripts and editions; these were for a long time embodied into three parts, similar to the Mishnah tractates *Nezikin* and *Kelim,* a feature lacking in the older manuscripts. The text of the Seder Olam as a whole is well preserved. Extensive material for its critical analysis was compiled by B. Ratner. A. Marx started a thorough critical review of the work, but only chapters one to ten saw the light. The book was widely studied, frequently commented upon and translated into Latin.

Since its first printing the Seder Olam has always been published together with another short chronicle. Much of the contents of the second book are derived from the original. The first book is therefore named Seder Olam Rabbah, while the smaller publication is termed Seder Olam Zuta. The latter was written with the object of proving that the lineage of the exilarchs, who descended from the house of David, had died out a long time before, and that only a female branch, which had emigrated to Palestine about 520 B.C.E., existed. A detailed account of Mar Zutra's adventures is rendered at the end of the book to substantiate this contention. This part of the Seder Olam Zuta is also of historic importance. The story is preceded by a dry chronological account of eighty-five generations, starting with Adam and ending about the year 500. The author then enumerates the generations from Adam to King David; these are followed by the kings of Judah with the high priests and prophets of their respective periods. The final part starts with King Jehoiachin and cites the exilarchs with the sages of their time. This list is also historically important, because there is no other source of information concerning the period it covers. Through this record the Karaites traced back the descent of their exilarchs. The text of the Seder Olam Zuta is preserved in poor condition; it has as yet not passed a critical review, but was commented upon and translated into Latin.

Owing to literary contributions by medieval authorities, it is held that the Seder Olam Zuta was written about 804. According to others, the book originated in the period of the Saboraim. In all likelihood, the book was composed at a time when there was considerable doubt as to the authenticity of the pedigree of the Babylonian exilarchs. ISMAR ELBOGEN.

Lit.: Neubauer, Adolf, *Medieval Jewish Chronicles,* vol. 2 (1895); Seligsohn, M., in *Jewish Encyclopedia,* vol. 11, pp. 147-50; Marx, A., *Seder Olam* (1903).

SEDER TANNAIM VAAMORAIM, a short treatise dating from 885 or 887 in which the succession of the numerous figures whose names and discussions occur in the Talmud, and also those in the line of Saboraim, is given chronologically and with reference to the development of doctrine according to time and circumstance. By means of this work the student was enabled to derive an orderly historical scheme and a consistent methodology from the innumerable disconnected labyrinths with which the Talmud is threaded.

The text was published at Prague in 1839, with notes by Hayim Joseph David Azulai; in *Kerem Hemed,* vol. 4 (1839), by Samuel David Luzzatto; by Heinrich Graetz in *Festschrift für Zacharias Frankel* (Breslau, 1871, and London, 1910); and at Warsaw (1866); it was included in the *Festschrift für Israel Lewy* (Breslau, 1911), with a new text by A. Marx (155-72, Hebrew, and 392-99, German).

SEDJERA (Ilania), *see* COLONIES, AGRICULTURAL.

SÉE, well-known Jewish family, whose ancestors added to their name the designation Mizze or Mizze Ashkenazi, which is probably derived from the river Seille (Lorraine), on the shore of which Jews resided.

The first known member of the family was Samuel Sée, who in 1541 was rabbi in Frankfort. Besides, there are records of Eleazar Sée of Worms (1587); Isaac Sée, corrector of the Mahzor Tannhausen (1594); Mattithiahu ben Adonijah Israel Sée, grandson of Israel Heppingen and disciple and correspondent of Samson Bacharach, in Thiengen and Stühlingen (d. after 1663); Joseph ben Lipman of Prossnitz, who was driven out of his home by the Swedes and who composed in Judeo-German rhymes an elegy and memorial book on the persecution in Kremsier (1643), in the Ukraine and Lithuania; Judah Selke, rabbi in Cracow (1643-60); Moses ben Elijah in Posen (1652); Menachem Manlin Sée, precentor in Worms (prior to 1688); and Moses Hayim ben Eliezer Todros in Prague (1702-9). Many members of the family lived in Metz from 1595 on, whence they emigrated to the other communities of Lorraine, to Alsace (Bergheim, Rappoltsweiler and Colmar), and, later, mostly to Paris.

The most important members of the Sée family in the 19th and 20th cent. were:

GERMAIN SÉE (b. Rappoltsweiler, Alsace, 1818; d. Paris, 1896), was a physician. In 1852 he was made Médicin des hôpitaux; subsequently he was appointed professor of therapeutics at the Faculté de Médecine of Paris, as successor to Trousseau (1866). In 1869 Sée was given a position at the Charité. He was a member of the Académie de Médecine, commander of the Legion of Honor, and Officier de l'instruction publique.

LEOPOLD SÉE (b. Bergheim, Upper Alsace, 1822; d. Paris, 1904), was in 1849 promoted to captain of the third line regiment in the French Army. He was wounded twice during the Crimean War (1853-56) and once at Saint Privat during the Franco-Prussian War (1870-71), where he was taken prisoner. Two months after he was discharged as an invalid he returned to France, reported for military duty and was made a brigadier general. Sée was entrusted with the defense of Carentan. He became a commander of the Legion of Honor (1876), and subsequently grand officer of this body. In 1880 he became a general of a division.

CAMILLE SÉE (b. Colmar, 1847; d. Paris, 1920) was a jurist and statesman. He studied law at Strasbourg and began to practise in Paris (1869). Appointed secretary general to the minister of the interior in 1870, he showed remarkable executive ability in handling difficult problems during the Franco-Prussian War. He helped to liberate the detained members of the government. In 1872 he became sub-prefect of Saint-Denis, but resigned after the fall of Thiers (1873). In 1876 he became a deputy, and sided with the Republicans of the left. After he was defeated in the elections of 1881 he was appointed a councillor of state. During his parliamentary career he defended the civic rights of women, and introduced laws favoring the promotion of education among girls. He was the prime mover for the enactment of the law known as Loi Camille Sée, which was adopted by the Senate in 1880.

By this law a teachers' college for girls was established at Sèvres. Sée was decorated with the ribbon of the Legion of Honor in 1884; the girls' lyceum of Colmar was named after him in gratitude. A collection of documents relative to his activities was published by him in 1881, *Les lycées et collèges des jeunes filles.* He founded and directed the educational periodical, *Revue de l'enseignement secondaire des jeunes filles.*

EDMOND SÉE (b. Bayonne, France, 1875) was a dramatist and critic. He published the *Avenir Artistique,* a literary review, while he was still a student. Subsequently he became a dramatic critic for *La Presse* and *L'Oeuvre.* His critical articles were published in book form, *Le Théâtre des Autres* (2 vols., 1915) and *Le Soir,* notes on the theatre.

In 1893 he wrote his first one-act play, *Ce qu'elles veulent,* but it was not until 1896, when his two-act play, *La brebis,* was produced, that he was recognized as a dramatist. *Les miettes* (1899), a drama in two acts, was presented at the Odéon in Paris (1905) and later at the Comédie Française. Among his other works were: *L'indiscret* (1923); *Saison d'amour* (1919); *Un ami de jeunesse* (1921); *Le métier d'amant* (1928); *L'élastique* (1930); *Charité* (1932). He was author of many novels, including: *Confidences* (1919); *Notre amour* (1920); *La lettre anonyme* (1921); *Un cousin d'Alsace* (1918), which won the Montyon prize of the French Academy.

SEEING EYE, a philanthropic organization located in Morristown, N. J., whose purposes are to train dogs to act as guides for the blind, to teach blind persons the proper use of the trained dogs, and to teach instructors in the science and technique of educating dogs as guides. Morris S. Frank was the first blind man in America to be guided by a Seeing Eye dog. He received his dog in Switzerland where he had gone at the invitation of Mrs. Dorothy H. Eustis who at that time, with Elliott S. Humphrey, the geneticist, was investigating the intelligence of dogs in relation to

their service to mankind. When Frank returned to the United States with Buddy, he traveled thousands of miles testing the efficiency of his dog guide under all conditions of American traffic. When his experiment was a proved success, Mrs. Eustis returned to the United States and, together with Frank and Humphrey, founded the Seeing Eye school (1929), establishing a new concept of philanthropy for the blind. Frank was vice-president of the organization in 1943.

In 1943 there were approximately 700 Seeing Eye dogs in service all over the country. Eighty-five per cent of all Seeing Eye graduates were gainfully employed.

SEELER, MORIZ, theatrical and motion picture director, b. Berlin, 1888; d. somewhere in Germany, 1941. From his early youth Seeler belonged to the theatre. He was the discoverer and patron of many young artists during the years following the first World War.

He opened the *Junge Bühne* in Berlin with a performance of Arnold Bronnen's expressionistic drama *Vatermord,* which started a theatre scandal of proportions rarely known to Berliners. Yet the play opened the door for many young talents. (That Bronnen, whose father was the Jew Esriel Bronner, later became one of the ugliest Nazi writers is one of the many grotesque occurrences of that time.) Among the motion pictures which Seeler directed, *Menschen am Sonntag* turned out to be one of the greatest German motion picture successes. His direction of the legitimate play *Automaten Buffet* was no less successful.

After the Nazis' ascent to power, he became a refugee in Prague, where he lived in retirement, writing verses of uniquely melancholy beauty. His collection of poems was published in Vienna (1937) under the title of *Die Flut.* The very last poem, covering the very last page, bears the title "Weltuntergang." It ends with these prophetic words:

"Die fürchterliche Flut von Tränenschaume
Und dem durch rotes Blut gefärbten Gischt
Steigt zu des Himmels Rand und seinem Saume
Und sie verschlingt die Sonne, die erlischt."

When the Nazis entered Prague Seeler was forced to return to Berlin. He was so ill, however, that he was exempted from doing forced labor. Finally, in 1941, the road to liberty seemed to open; he had received permission to enter Switzerland. But on the eve of his departure he was again arrested and now forced to do hard labor. A few weeks later he died at work in a coal mine in Nazi Germany.

Lit.: *Der Aufbau* (New York), Oct. 24, 1941.

SEELIG, MAJOR GABRIEL, physician, b. Helena, Ark., 1874. He studied at Harvard (A.B., 1896) and Columbia University (M.D., 1900). He was a professor of surgery at the St. Louis University School of Medicine (1905-10) and at the Washington University of St. Louis from 1918 on. Seelig joined the staff of the Jewish Hospital at St. Louis in 1904. He entered military service in 1917 as lieutenant in the Medical Corps, and retired in 1918 with the rank of colonel. He wrote *Outline of Medical History* (1925).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 223.

SEELIGMANN VON EICHTHAL, a Jewish family which played an important part in the development of German industry at the end of the 18th cent.

AARON SEELIGMANN established (1779) a tobacco factory at Leimen, near Heidelberg, Germany. The Elector of the Palatinate to which Leimen then belonged granted Seeligmann several privileges. Thus all Jewish workers employed in Seeligmann's factory were exempted from the protection money which other Jews had to pay, and Seeligmann was also allowed to have four other Jewish families exempted every year. Due to his initiative, an important tobacco industry flourished for more than a century in the grand duchy of Baden. Seeligmann was president of the Landjudenschaft (Jews of the duchy) of Baden.

LIEBMANN SEELIGMANN, the brother of Aaron Seeligmann, was treasurer (*Kassierer*) of the Landjudenschaft, and was granted full citizenship in 1808. Although Aaron Seeligmann gave 30,000 florins for Jewish humanitarian and cultural purposes, the Jews of Baden seemed to be opposed to the supremacy of the Seeligmann brothers, and tried to induce the government to nominate another president and treasurer. The government endorsed the Seeligmann family in 1804.

DAVID SEELIGMANN, the son of Aaron Seeligmann, founded the banking house of Seeligmann and Company at Karlsruhe. In 1809 he took the salt monopoly on lease, and made it profitable. With the consent of Emperor Napoleon, he negotiated a loan for the government of Baden, but was unsuccessful because the Dutch creditors tried to overcharge the lender.

AARON ELIAS SEELIGMANN, a nephew of Aaron and Liebman Seeligmann, was granted a franchise for himself, his children and sons-in-law, in 1799. He went to Munich, and was created Baron von Eichthal after his conversion to Catholicism.

DAVID SEELIGMANN, Baron von Eichthal, the son of Aaron Elias Seeligmann, founded an arms and machine factory at St. Blasien, employing more than 400 workers. He had no male issue, and the Barons von Eichthal died out before 1840. The French Barons d'Eichthal, descended from baptized Jews of Nancy, were not related to them.

Lit.: Levin, Adolf, *Geschichte der badischen Juden* (1909); Rosenthal, R., *Heimatgeschichte der badischen Juden* (1927); *Gedenkbuch zum 125-jährigen Bestehen des Oberrats der Israeliten Badens* (1934).

SEELIGMANN, SIGMUND, historian, b. Karlsruhe, Germany; d. Amsterdam, 1941. Descended from a family of bankers (which flourished at Karlsruhe from the end of the 18th cent. on), he went to Amsterdam (1885) where he devoted himself to the study of the Jews in Holland and the Dutch colonies. He founded the Genootschap for de Joodsche Wetenschap in Nederland (Society for the Science of Judaism in the Netherlands) and became its first president. For some years he was also president of the Nederlandsche Zionistenbond.

Seeligmann, who was a corresponding member of the American Jewish Historical Society and contributed to its annual publications, wrote *De Emancipatie der Joden in Nederland* (1913), *Het Geestijkleven in de Hoogduitsche Joodsche Gemeinte te's Gravenhage* (1914), a study on the cultural life of the German Jewish community of The Hague, and *Het Marranen-Problem uit oekonomisch Vogpunt* (1925) in which he sought to prove that the first Marranos did not come to Holland to enjoy religious freedom but for economic reasons, and returned to Judaism only after a lapse of time. He also published a short survey on *Bibliographie en Historie* (1927). A bibliography of his writings was compiled by Helmuth Galliner (*Historia Judaica,* vol. 5 (1943), No. 1.

SEELIGSON, MICHAEL, mayor, Texas pioneer, b. 1797, place of birth unknown; d. Galveston, Texas, 1867. He resided at various times in Pennsylvania and Michigan, being master mason of lodge 168, Doylestown, Pa. (1824), and of lodge 130, Philadelphia, in 1835. In 1838 he came to Texas; in the same year he was royal arch mason, San Felipe de Austin, Chapter No. 1 at Galveston. In the following year he had his family join him at Galveston where he established himself very well, for in 1840 he was elected alderman. Re-elected in 1848, he was made mayor in 1853, but

several months later he resigned from office. Two of his sons shared in his work for the annexation of the Republic of Texas to the United States.

HENRY SEELIGSON, Texas pioneer and combatant (b. Philadelphia, 1828; d. Texas, 1886), was a son of Michael Seeligson. On the side of his mother, Adelaide Gottschalk, he was a cousin of the composer and pianist Louis Moreau Gottschalk. He joined his father at Galveston in 1839. As a youth, he was elected first lieutenant of the Galveston Cadets, a corps of men fifteen to eighteen years old which served in fighting off the attempted invasion of Galveston by the Mexicans. In the war of 1846 against Mexico he served under Captain McLean and subsequently in the expedition to Monterey under General Zachary Taylor, who complimented him for gallantry in battle. Next Seeligson participated in an unsuccessful Mexican revolution under General Jose Maria Carabajal. His last fight was in the Civil War, where he enlisted in the cavalry of the Southern Army and took part in several engagements under Captain Woodward.

SEERS, *see* PROPHETS.

SEFER HATAGIN, a Midrash dealing with the shapes of the letters of the Hebrew alphabet and the ornamental points or crowns (*tagin*) which ornament them. Since Akiba is reported as having derived laws from these points (*Men.* 29b), its authorship is ascribed to him and it is known also as *Midrash Rabbi Akiba Bechithre Haothioth* (Midrash of Akiba on the Crowns of the Letters). It was written not later than the beginning of the 9th cent., as it is mentioned at that time.

A version of it was published by Abraham Portaleone in his *Shilte Hagibborim* (Mantua, 1613, 177), another by Bartolocci in *Bibliotheca rabbinica* (vol. 4, p. 275), and both by Adolf Jellinek in his *Beth Hamidrash* (vol. 5, pp. 31-33). These editions contain only the portion dealing with the ornaments on the letters; the complete work was published as *Sefer Taghin* by J. L. Barges (Paris, 1866).

Lit.: Scholem, G., *Bibliografia shel Sifruth Hakabbalah.*

SEFER TORAH, one of the minor tractates of the Talmud, a compendium of rules to be observed by scribes in the preparation and writing of scrolls of the Law. It contains five chapters dealing with writing material, language and translation of Scripture; the Septuagint; the manner of writing; the names of God and the interdiction against erasing them. These five chapters compose also the first part of the tractate *Soferim.*

Lit.: Higger, M., *Seven Minor Treatises* (1930).

SEFIROTH (singular, *sefirah*), name given in Cabala to the ten creative powers, arranged in a gradation from the most spiritual to the least, through which the divine original Essence manifests itself in the world. The term *sefirah* is generally regarded as meaning "number," though some connect it with the Greek *sphaire,* "sphere." The organic relationship of the Sefiroth to one another is often expressed in the form of a tree (*'ilan*) or else as different parts of the primordial man (Adam Kadmon); in this the uppermost Sefirah, Kether ("crown"), shades away into the ineffable original Essence (En Sof), while the lowest, Malchuth ("kingdom"), represents the spiritual elevation of the world of mankind. The ten Sefiroth, each one of which acts as the shell for the preceding, are often brought into relationship with the ten numbers of the Pythagorean decade, the ten cosmic spheres of Greek cosmology, and the ten creative words in the first chapter of *Genesis.*

Nine of the Sefiroth are arranged into three triads. The highest is that of the original spiritual powers: Hochmah (positive "wisdom"), Binah (critical "understanding") and Daath ("knowledge" as the product of the first two). The middle group is that of the spiritual and ethical powers: Hesed ("love"), either Pahad ("fear") or Din ("justice"), and either Tifereth ("glory") or Rahamim (effective "mercy"). The lowest are the original natural powers: Netzah ("victory"), Hod ("glory") and Yesod ("foundation"). Above these groups is Kether and below, Malkuth; the two together, as Kether Malkuth ("the royal crown"), give an upper and lower limit to the divine glory of revelation.

A division into right, left and middle "columns," on the other hand, indicates a differentiation into purely positive, extensive and irradiating, and negative and limiting powers of existence, together with a harmonious basis or completion of all of them. In their various relations the Sefiroth are given numerous names and are brought into relationship with the various names of God. They are also represented as being connected with one another by various "channels," by means of which the descent of the luminous divine substance is made possible.

The sixth Sefirah is generally placed at the center of the symbolic tree, while the ninth and tenth are in the closest possible connection. There are also various systems in which the Sefiroth are divided according to original male and female principles, father and son principles, the Messiah and the community of Israel, and a place is found for each and every polarity and gradation of these.

The doctrine of Sefiroth is first found, in philosophic form, in the *Sefer Yetzirah,* attributed to Isaac the Blind, with Azriel ben Menahem, in the *Bahir* and the *Zohar,* and in express form with Moses Cordovero and the later Cabalists.

Lit.: *See* under CABALA.

SEGAL, ALFRED, newspaperman, b. Cincinnati, 1883. He attended the University of Cincinnati and the Hebrew Union College, and joined the staff of the Cincinnati *Post* as reporter (1904). Later he became city editor. In 1918 he served as war correspondent in France. Segal wrote the "Cincinnatus" column in the Cincinnati *Post,* a column of liberal opinion, credited with having fathered the municipal reform movement by which city management and proportional representation were established in the government of Cincinnati.

He has been author of the column "Plain Talk" released to many Anglo-Jewish periodicals by the Seven Arts Feature Syndicate. In this weekly commentary on various phases of Jewish life, Segal has revealed himself to be a keen-eyed and constructive observer in quest of truth and fair play. He was also editorial writer for the *National Jewish Monthly.* Together with Boris D. Bogen, he published *Born a Jew* (1930). Segal was an organizer and the first president of the Cincinnati Newspaper Guild, and a trustee of the Isaac M. Wise Temple in Cincinnati (1938-40).

SEGAL, ARTUR, painter and etcher, b. Jassy, Roumania, 1875. He studied in Berlin, Munich and Paris. From 1914 to 1920 he lived in Ascona, Switzerland; then, until 1933, in Berlin. In 1933 he went to Palma de Mallorca, and in 1936 to London. Segal attracted attention through his interesting experiments with the painter's conceptions and technique.

Beginning as an impressionist, Segal later moved toward neo-impressionism (the breaking up of planes into separate lines, points and small squares), and then he came under the influence of van Gogh and Matisse. After 1915 he was especially interested in the problems of the optical equality of the components in painting and in the prismatic treatment of light in connection with Goethe's theories of color.

Artur Segal

In contrast to this was his attempt to work out a focus (*Tassenstillegen,* 1927), to achieve effects by optic plastic and to approach as closely as possible to the phenomenon of light (*Strassenbild,* 1926; numerous still lifes, 1927). Still later he went over to a rigidly objective naturalistic luminosity of color (landscapes, still lifes, portraits, including excellent self-portraits). Segal possessed unusual pedagogical talent, and had his own school in Berlin and in London.

His canvases were purchased for the city collections of Berlin and The Hague. He wrote a great deal on his changing theories: "Die neue Malerei und der Künstler" (in *Aktion,* vol. 2, 1912); *Grundlagen der wissenschaftlichen Kunst* (1917); *Lichtprobleme* (1925); *Optische Plastik* (1926); *Gesetze der Malerei* (1927).

Lit.: *Cicerone,* vol. 7 (1915) 368; vol. 11 (1919) 95; vol. 17 (1925) 608; *The Studio,* vol. 100 (1936); *Kunstblatt,* vol. 4 (1920) 381.

SEGAL, HAYIM BEN ISAAC, 18th cent. painter. He created the magnificent interior decorations of the wooden synagogue in Mohilev, in White Russia. The synagogue was a pattern for Polish decoration of this kind, showing the East European adaptation of baroque ornamentation, wildly crowded and mounting in sharply contrasted colors to a veritable frenzy. Animals and birds of all kinds rise out of thick foliage and vines —parrots, snakes, camels, pelicans, roosters and symbolic creatures, together with the animals in Ezekiel's prophetic vision, especially lions. Landscapes are also included in the Mohilev paintings; among these is a fantastic view of Worms, with a dragon before the city. This has been considered a rendition of the Nibelungen theme, which might have traveled eastward with the language.

Lit.: Cohen-Wiener, Ernst, *Die jüdische Kunst* (1929) 225-26; *Rimon,* 1923, No. 3 (with colored reproductions); Landsberger, Franz, "Jewish Artists before the Period of Emancipation," *Hebrew Union College Annual,* vol. 16 (1941) 394.

SEGAL, LASAR, painter and etcher, b. Vilna, Lithuania, 1889. His talent was discovered in 1905 by the Russian sculptor Mark Antokolski. After studying in Berlin he went to Dresden in 1910, and was caught up in the current of expressionism. He remained in Dresden until 1922, and then, after a stay in Berlin, he went to Brazil. Remaining there until 1929, he became naturalized. The next two years he spent in Paris, then went back to Brazil, where he was living in 1943. Segal's originality consisted of a fusion between powerful coloring, sensual oriental moods, melancholy and pessimistic fantasy and a pronounced tendency toward techtonic composition.

His first successful painting was *Kaddish* (1918). This was followed by *Der Ewiger Wanderer* (1919), purchased by the city museum of Dresden; *Witwe* (1920), acquired by the Folkwang Museum in Essen; *Schwermut* (1921); and *Irrende Frau* (1923). Segal made some attempts at abstract painting. While in Brazil he achieved greater harmony between form and color. Among his etching and lithograph folios were *Die Sanfte* (1918); *Erinnerungen an Wilna; Bubu de Montparnasse;* and *Masze Bichl.* His works are included also in the Museum of Chemnitz and the Pinakothek in São Paulo, Brazil.

Lit.: Däubler, Theodore, *Lasar Segal* (Jüdische Bücherei, vol. 20, 1920); George, Waldemar, *Lasar Segal* (1931); *Deutsche Kunst und Dekoration,* vol. 60 (1927) 86-90.

SEGAL, MOSES HIRSCH (ZEVI), Hebraist and translator of the Talmud, b. Maishad, Lithuania, 1876. He attended several Yeshivas and was ordained rabbi in 1906. Subsequently he studied at the University of Oxford (M.A., 1906), where he became a teacher of the Bible and Semitic languages (1910-26). Segal served as rabbi of the congregations of Newcastle on Tyne, Swansea and Bristol. In 1926 he was called to The Hebrew University, Jerusalem, where in 1943 he was professor of Bible. He was a member of the Zionist Commission of Great Britain (1918-19).

Segal published *Grammar of Mishnaic Hebrew* (1927), and contributed to the *Magnes Anniversary Volume* (1938). He wrote numerous works in Hebrew on the Bible, Hebrew philology, phonetics and lexicography. He was one of the contributors to *The Babylonian Talmud,* translated into English under the editorship of Isidor Epstein and published by the Soncino Society (1935-).

SEGALL, BERNARDO, pianist, b. Campinas, Brazil, 1911. He was a child prodigy, often referred to as the "Brazilian Mozart." He won the National Chiafarelli Contest in his fourteenth year, and was awarded an honorary degree by the Conservatory of São Paulo. Soon after this he was sent to New York city for study with Alexander Siloti. Although he toured South America in 1928 and again in 1931, it was not until 1936 that he made his American debut. His fluent technique, magnetic personality and fine musical perception brought him critical acclaim. Thereafter he performed frequently in the United States and throughout South America. In 1939 he was a featured artist in the South American program performed by the New York Philharmonic in conjunction with the World's Fair.

SEGALL, JACOB, statistician and physician, b. Czempin, Posen, Germany, 1883. In 1909 he became successor to Arthur Ruppin as director of the bureau for statistics of the Jews in Berlin, and in 1911 research worker on the staff of the Central-Verein deutscher Staatsbürger jüdischen Glaubens. From 1914 to 1921 Segall was chairman of the committee for war statistics; he arranged the preliminaries for the founding of the Central Welfare Station for German Jews, the business director of which he was until 1926.

Segall published many studies on denominational statistics in the *Zeitschrift für Demographie und Statistik der Juden,* which he edited together with I. Kosalnik. His works include: *Die Entwicklung der jüdischen Bevölkerung in München 1875-1905; Die beruflichen und sozialen Verhältnisse der Juden in Deutschland* (1912); *Die deutschen*

Juden als Soldaten im Kriege 1914-18 (1922). Together with Frieda Weinreich, he edited *Die geschlossenen und halboffenen Einrichtungen der jüdischen Wohlfahrtspflege.* After the Nazis' advent to power (1933) he emigrated to Palestine, where he was living in 1943.

SEGAN, *see* TITLES.

SEGEL, BENJAMIN, Jewish journalist and writer, b. Lopuschna, Galicia, 1866; d. Bad Pistyan, Czechoslovakia, 1931. He was an expert in problems of East European Jewry, Palestine, Jewish nationalism and Bolshevism in its beginning.

Segel studied the natural sciences, philosophy and history of art in Lemberg and Berlin. He was especially interested in ethnology. This led to his collection of Jewish proverbs, legends and folk songs. Writing was his world. He wrote hundreds of essays and pamphlets and several books under his name and a number of pen names. After the first World War he became known to the German Jewish reading public as a contributor to *Ost und West, Im Deutschen Reich, C.-V. Zeitung* and *Der Morgen,* and as an author (Philo Verlag).

Segel attracted particular attention by his studies on Bolshevism, which appeared under the pseudonym of Dimitri Bulaschow in 1921 as *Bolschewismus und Judentum* (5th ed., 1924). Another work, *Die Protokolle der Weisen von Zion kritisch beleuchtet,* scientifically explored this forgery in all its details. Segel proved that the document, which serves anti-Semitism as its main weapon, is a forgery. During the well known trials which took place in Switzerland and South Africa and in American publications Segel's work was of great assistance.

Among his other works, the following are noteworthy: *Der Wald,* drama (1914); *Der Weltkrieg und das Schicksal des jüdischen Volkes* (1915); *Die polnische Judenfrage* (1916); *Rumänien und seine Juden* (1918); *Weltkrieg, Weltrevolution und Weltverschwörung* (1925).

Segel lived in Berlin and Vienna, and died in 1931 after a long illness in Pistyan, where he had sought relief.

Lit.: C.-V. Zeitung, Allgemeine Zeitung des Judentums, March 20, 1931.

SEGHERS, ANNA, writer, b. Mayence, Germany, 1900. Her original name was Netty Reiling, and she adopted the name of Anna Seghers as her pen name. She was the daughter of a well-to-do dealer in antiques, and was educated at the University of Cologne, where she studied the history of art. She received the Ph.D. degree from the university, her thesis (written in 1924, and unpublished) dealing with the subject of Jews and Judaism in the works of Rembrandt. For her first book, *Aufstand der Fischer von St. Barbara* (1928), a novel about an uprising among a group of fishermen (published in English as *The Revolt of the Fishermen,* 1929), she was awarded the Kleist Prize. Subsequently she wrote in Germany *Auf dem Wege zur amerikanischen Botschaft* (1930), a volume of short stories, and the novel, *Die Gefährten* (1932).

Forced to leave her native country after Hitler's advent to power (1933), she went to Paris and there wrote several revolutionary novels, including *Der Kopflohn* (1933), depicting life in a German village in the summer of 1932, under the rising Nazi terror, and *Der Weg durch den Februar* (1935), dealing with the Socialist uprising in Vienna of 1934. When the Nazis occupied Paris (1940) she fled to unoccupied France and with the help of the exiled writers committee of the League of American Writers she and her family were rescued and brought to Mexico, where she was living in 1943, working for the Heinrich Heine Club for Free German Culture, one of whose founders she was, and contributing to the magazine *Das freie Deutschland.*

In 1942 she won fame with her novel, *The Seventh Cross,* the story of seven men who escaped from a German concentration camp; it was chosen by the Book-of-the-Month-Club in New York city. Her radio play, *Der Prozess der Jeanne d'Arc in Rouen 1431,* was published by *Internationale Literatur* (Moscow, 1937).

Lit.: Book of the Month Club News, Sept., 1942; *Current Biography,* vol. 3, No. 12 (Dec., 1942).

SEGOL, *see* CANTILLATION; VOWELS, HEBREW.

SEGRE, ARTURO, historian, b. Turin, Italy, 1874; d. Turin, 1928. He was professor of history at the Lyceum d'Azeglio, and assistant professor of the history of business institutions, commerce and commercial geography at the University of Turin. His works deal mostly with the history of commerce, the history of Piedmont, and the royal house of Savoy.

SEGRE, CARLO, littérateur and editor, b. Florence, Italy, 1867. He became managing editor of the magazine *Fanfulla della Domenica* which achieved distinction under his able direction (1891-1919). Segre was collaborator of the principal Italian political and literary review *La Nuova Antologia* and was associate professor of Italian literature at the University of Rome. His major absorption centered about literary relations between Italy and England, notably the epic and poetical creations of Petrarch.

SEGRE, DINO (Pitigrilli), author and journalist, b. Turin, Italy, 1893. He was on the editorial staff of the *Epoca* in Rome (1918-20) and correspondent in Constantinople of the *Gazzetta del Popolo.* Back in Italy, he founded (in Turin) the magazines *Le Grandi Firme; Il Dramma; Il Cerchio Blu,* which attained wide popularity. Segre became popular, under his pseudonym of "Pitigrilli," as author of novels and short stories, which were translated into many languages. Their success was due mainly to the boldness of conception and the outspoken eroticism which formed the background of his writings. Among his best-known novels were *La cintura di castità* (1920); *L'Esperimento di Pott* (1930), and *I vegetariani dell'amore* (1932).

SEGRE, GINO, legal authority, b. Bozzolo, Italy, 1864. He graduated from the University of Pavia in 1866 and began to teach Roman law four years later at the University of Camerino. In 1902 Segre was called to the chair of Roman law at the University of Pavia, where he was rector of the law faculty for a decade. Thereafter he went to the University of Turin, where he remained for over a quarter century; in 1936 he was made professor emeritus. Segre was member of the Royal Commission for the reform of the Italian civil code.

In 1930, to celebrate forty-five years of scientific activity, Italian universities presented him with two volumes of selected studies on Roman law and a collection of his own most notable works. He was one of the principal contributors to the *Bollettino dell'Istituto di Diritto Romano* and to *Rivista Italiana di Scienze Giuridiche,* and he published many monographs on the historical development of Roman law and institutions.

SEGRE, ROBERTO, army general and military expert, b. Turin, 1872; d. 1936. His career began as an artillery officer (1890), but he was soon transferred to the chief of staff. He took part in the Libyan campaign (1911-12) where he received three promotions for military valor. At the beginning of the first World War Segre was chief of staff of a division on the Carso, and (from November, 1915, until May, 1917) was in charge of operations of the Third Italian Army

Corps. Subsequently he became chief of staff of an army corps on the Pasubio, commanded the Italian troops in the Asiago mountains, and (from March to November, 1918) was in charge of the artillery operations of the Italian Sixth Army Corps.

General Segre was highly praised by Italian and Allied military leaders as one of the most brilliant and skilled artillery experts. He was among the first to study the preventive use of artillery, as a defensive action, before the enemy launched his offensive. He employed his tactics and artillery methods to great advantage in the battles of Gorizia (August, 1916), Valbella (January, 1918), and in the battles of Piave (June, 1918).

After the armistice he was appointed chief of the Italian Military Mission to Vienna, about which he wrote an illuminating monograph. He was author also of various other studies and books on military subjects (*Bonaparte in Syria, Vienna and Belgrade; The Manoeuvres in Alsace and Lorraine in 1914*). He compiled a German-Italian military vocabulary.

SEIDEL, TOSCHA, violinist, b. Odessa, Russia, 1900. He studied violin with Max Fiedelmann, then at the Stern Conservatory in Berlin, and finally with Leopold Auer. His debut, in Oslo in 1915, was a sensation. For the next few years he toured Europe as child prodigy with extraordinary success. His American debut, in 1918, was equally successful. For the next fifteen years he toured the world frequently, and was recognized as one of the leading violin virtuosos of the period. For an extended period he abandoned the concert field for the radio, appearing frequently over the air in unusual recitals, including an important series devoted to the development of the violin concerto.

For a while he was advisory director of music of the Columbia Broadcasting System. Later he abandoned radio to devote himself to motion picture music, working for the Metro-Goldwyn-Mayer studios from 1938 to 1940, and for the Paramount Studios from 1940 to 1942. In 1942 he enlisted in the United States Navy as first musician.

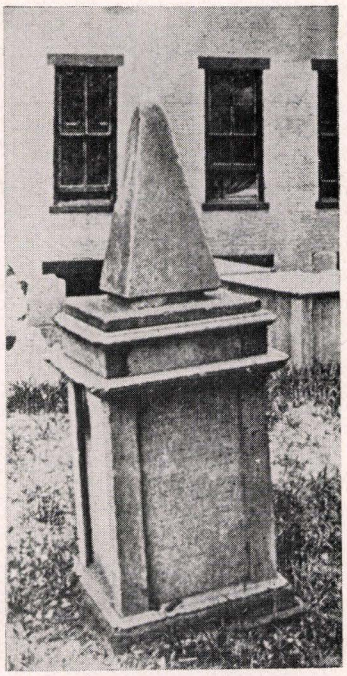
His brother, WLADIMIR SEIDEL, was a well known mathematician, a member of the faculty of the University of Rochester (New York).

SEIDLIN, JOSEPH, educator, b. Pavlograd, Russia, 1892. He arrived in the United States in 1906, studied at the University of Missouri and at Cornell University, and received the Ph.D. degree from Columbia University in 1931. Seidlin taught mathematics at Alfred University, N. Y., where he was appointed director of the graduate division in 1939. His works include *Elementary College Mathematics* (1926) and *A Critical Study of the Teaching of Elementary College Mathematics* (1931). He was an associate editor of the *National Mathematics Magazine*.

SEIR, a mountainous region south of Palestine, extending from the lower part of the Dead Sea to the Gulf of Aqaba. According to the Bible, it was occupied by the sons of Seir the Morite (*Gen.* 36:20); the name seems to be eponymous, as Ramses III of Egypt (about 1200) says that he gained a victory over a Bedouin tribe known as Saira, or Seirim. This early group was apparently displaced by the Edomites after 1200; the Bible sources apparently do not distinguish between the Horites and Edomites in this area. The highest point of Seir is Mount Hor, the traditional site of the death and burial of Aaron (*Num.* 20:27-28).

Lit.: Robinson, Edward, *Biblical Researches,* vol. 2 (1841-43).

SEIRIM, *see* DEMONS.



SEIXAS, DAVID G., teacher of the deaf and dumb, b. Philadelphia, 1788; d. South Bend, Ind., about 1880. He served as a soldier during the war with Great Britain in 1812-14. In 1819 he was struck by the plight of the deaf children of Philadelphia. Though possessed of small means, he undertook to teach a group of them in his own home, making use of the lip-reading methods then in vogue. He was so successful that he enlisted the aid of Jacob and Joseph Gratz, as a result of which an asylum was established for deaf children in 1820. Seixas served as principal from May, 1820, to October, 1821. In January, 1821, he gave an exhibition of his pupils' progress before the Pennsylvania legislature, which was so impressed that it voted $8,000 for the institution, which then became the Pennsylvania Institute for the Deaf and Dumb. He was one of the first in the country to make daguerreotypes.

Lit.: Morais, H. S., *The Jews of Philadelphia* (1894) 296-98.

SEIXAS, GERSHOM MENDEZ, patriot Jewish minister of the American Revolution, b. New York city, 1745; d. New York city, 1816. He was the son of Isaac Mendez and Rachel (Levy) Seixas. He became minister of Congregation Shearith Israel (Spanish and Portuguese Congregation) in 1766, and continued as such for about half a century.

Although most of the Christian ministers of New York sided with the king at the outbreak of the Revolution, Gershom Mendez Seixas at once espoused the patriot cause. At the approach of the British in August, 1776, he preached an English sermon, alluding to the fact that this might be the last service at the old Mill Street synagogue; and it was largely due to his influence that the congregation closed its synagogue rather than continue under the British.

Many of his congregation removed to Philadelphia, while Seixas and others went to Stratford, Connecticut. He took with him to that place the sacred scrolls and other ceremonial objects, and there he remained until about 1780,

Tombstone of Gershom Mendez Seixas in the Chatham Square Cemetery, New York City

Bronze medal of Gershom Mendez Seixas, struck off by Columbia University in his memory

when he went to Philadelphia in response to a call from a number of refugee patriots who were about to establish a permanent congregation there. This was the origin of Congregation Mickvé Israel of Philadelphia. At its dedication several prominent non-Jewish patriots attended, and during the ceremonies Seixas invoked the blessing of Almighty God on Congress and on General Washington.

When Pennsylvania adopted a religious test for office, Seixas and several members of his congregation addressed the Council of Censors in 1783, calling attention to the injustice of such a test, particularly in view of the services of Jews to the patriot cause. Westcott, the historian, states that this protest was influential in securing the subsequent modification of the test clause in the Constitution.

After the evacuation of New York by the British, Seixas returned there in 1784, and resumed his rabbinate. He was noted for his public spirit, and was one of the first ministers of any denomination to preach a regular Thanksgiving sermon. At Washington's inauguration as first president, he was one of the thirteen clergymen participating in the ceremony. Later he became one of the incorporators of Columbia College, and was one of its trustees continuously from 1787 to 1815. One of his addresses, still extant, was delivered in historic St. Paul's church, New York, in 1800. During the War of 1812, he warmly supported the administration.

He founded in 1802 the Hebra Hased Ve Amet for the relief of the sick and burial of the dead. This society, which is still in existence, placed a bronze tablet to his memory in the synagogue, on its centennial anniversary.

Seixas was twice married, his first wife being Elkalah Cohen, whom he married in 1775, and his second being Hannah Manuel, whom he married in 1786. He left a large family, and several of his descendants have been prominent in New York annals. One of his sons, David G. Seixas, founded the Pennsylvania Institute for the Deaf and Dumb in 1820, and another son, Joshua Seixas, was at one time professor of Hebrew at Andover.

Gershom Mendez Seixas is buried in the Chatham Square Cemetery on New Bowery, New York. His portrait appears on a bronze medal struck by Columbia College after his death, and a painting of him was hung at Columbia University on its 175th anniversary. LEON HUHNER.

Lit.: Huhner, in *Jewish Comment* (1902); Daly, *Settlement of the Jews in North America* (1893) 56; Morais, *Jews of Philadelphia* (1894) 11-13, 16-18; *Publications of the American Jewish Historical Society,* No. 4, pp. 204-9; No. 6, pp. 129-33; No. 35, pp. 189-205, 309-10.

SEJM, JEWS IN, *see* PUBLIC OFFICE.

SEKLES, BERNHARD, composer and teacher, b. Frankfort, Germany, 1872; d. Frankfort, 1934. After holding several minor posts as conductor of theatre orchestras, he became a member of the faculty of Hoch Conservatory in Frankfort in the department of theory (1896). He held this teaching post with great honor for many years, and in 1923 was appointed the director of the Conservatory. In 1933, because of the rise of the Nazi regime, he was compelled to withdraw from his directorial position and enter upon retirement.

Sekles composed works for the theatre, ballet, orchestra, and chamber music ensembles, some of which enjoyed considerable vogue in Germany. His *Serenade,* for eleven instruments, was performed by one hundred different European orchestras in 1909, and his opera, *Scheherazade,* was presented on fifty different stages. One of his orchestral compositions, *Gesichte,* was featured in the United States by the Philadelphia Orchestra under Leopold Stokowski.

SELAH, a term of uncertain origin and meaning which occurs about seventy times in *Psalms* and three times in *Habakkuk.* As it usually occurs when there is a pause in a verse or a change in thought, it is believed to represent some sort of musical interval or flourish at the end of a section of a psalm. The Septuagint accordingly renders it in this sense as *diapsalma;* but Aquila, the Targum and Jerome interpret it to mean "forever." The root may be *salal,* "to lift up," that is, the word Selah would be a direction to the orchestra to increase its volume of sound.

Lit.: Brown, Driver and Briggs, *Hebrew and English Lexicon of the Old Testament* (1907) 699-700.

SELDES, GEORGE, newspaperman, editor and author, b. Alliance, N. J., 1890. He received his preliminary education in the public schools of that state. His real education began on February 9, 1909, when he went to work as a cub reporter for the Pittsburgh *Leader,* at that time under the editorship of Alexander P. Moore, who later became the United States Ambassador to Spain.

The eighteen-year-old Seldes entered the career of journalism full of enthusiasm for truth and confidence in the freedom of the press. As his education progressed he retained his enthusiasm for truth. This realistic enlightenment in journalism, economics and politics as practised in a large American city was temporarily interrupted in 1912 when he got together all his savings and spent a year at Harvard, where he was able to study truth in its more abstract and comfortable forms under Professors Copeland, Baker, Taussig and George Herbert Palmer. In the following year, however, he returned to what newspaper men sometimes refer to as "the second oldest profession in the world," and by the time the first World War broke out in Europe he was night editor of the Pittsburgh *Post.*

In 1916 he transferred his keen nose for news to a wider field and, more important, he took along an even keener brain and an incorruptible heart. After serving as managing editor of a New York publication known as *Pulitzer's Review,* he set sail for Europe where, for the next twelve years, his education progressed in direct proportion as his search for truth brought him into close contact with the great names and events in world history. When the United States entered that struggle he was appointed by General John J. Pershing to the press section of the United States Army, where he worked throughout the War.

On Armistice Day, as related in one of his autobiographical chapters, he and three other correspondents "took an oath on the battlefield that we would tell the truth the rest of our lives, that we would begin telling the truth in time of preparation of war, that we would do what was humanly possible to prevent the recurrence of another such vast and useless horror."

Then, just to make it easier, he went to work for the Chicago *Tribune.* From 1919 to 1928 he was head of

its Berlin office, in the course of which service he covered at close quarters the forward march of Mussolini and the other dictators. His assignments included putsches, assassinations, uprisings, revolutions, Baltic and Balkan wars, peace conferences, the entire ghastly spectacle of Europe getting read for the second World War. In his efforts to report the news truthfully to America he was expelled from several countries. In 1928 Seldes resigned from the Chicago Tribune Foreign News Service and began to write books in order that others might share the fruits of his education.

In 1929 appeared *You Can't Print That,* known in Britain as *The Truth Behind the News.* In 1931 was published *Can These Things Be!,* in the next year his tribute to Mussolini entitled *Sawdust Caesar,* and in the year following *World Panorama* and *The Vatican and the Modern World.* The year after that saw his *Iron, Blood and Profits,* and in 1935 appeared *Freedom of the Press.* From December, 1936, until May, 1937, he reported the war in Spain for the New York *Post,* and also published *You Can't Do That.* In the next three years, at the rate of one a year, appeared *Lords of the Press; The Catholic Crisis;* and *Witch Hunt.*

In 1940 he began what many consider his most important work—the publication and editing of a weekly paper entitled *In Fact,* into which have been poured all his experience, intelligence, and courage, in an effort to preserve for the American people the foundation stone of democracy, freedom of the press—to which Seldes has devoted his life. DONALD OGDEN STEWART.

Lit.: Seldes, George, *Freedom of the Press* (1937) 19-38; *New Republic,* Feb. 15, 1939; Seldes, Gilbert, in *American Hebrew,* Apr. 5, 1929, p. 771; *Current Biography,* Feb. 1941, pp. 46-47.

SELDES, GILBERT (VIVIAN), writer, b. Alliance, N. J., 1893. He received his A.B. degree from Harvard in 1914 and that same year joined the staff of the Philadelphia *Evening Ledger* as a music critic. In 1916 Seldes left this post; subsequently he was a correspondent abroad during the first World War and also a sergeant in the anti-aircraft division of the United States Army. He was political correspondent in Washington for *L'Écho de Paris* (1918).

In 1920 Seldes became managing editor of *The Dial,* the ultra-intellectual periodical of the time. He remained managing editor until 1924, when he became dramatic critic (1924-29). Subsequently (1931-37) he was a special writer for the *New York Journal* and associated newspapers. When the Columbia Broadcasting Company inaugurated its television section in 1937, Seldes was made director of its program department, and still held this post in 1943. His wide range of interests has been lucidly reflected in numerous books and magazine articles. His has been a crowded career, though less colorful than that of his brother George.

Seldes' published works have included criticism, fiction and plays. Among them were *The Seven Lively Arts* (1924); *The Wisecrackers* (1925); *The Orange Comedy* (1926); *The Wings of the Eagle,* fiction (1929); *The Years of the Locust* (1932); *Mainland* (1936) and *The Movies Come from America* (1937). He also made a new adaptation of Aristophanes' *Lysistrata* (1930).

SELEKMAN, BENJAMIN MORRIS, social service executive and educator, b. Bethlehem, Pa., 1893. A graduate of the University of Pittsburgh (B.S., 1915) and Columbia University (M.A., 1917), he received the Ph.D. degree from Columbia in 1927. From 1929 on he was executive director of the Associated Jewish Philanthropies of Boston. He was also a lecturer at the Graduate School of Business Administration, Harvard University, from 1935, and an associate professor from 1942.

An authority on labor relations, Selekman continued

George Seldes

his interest in this field concurrently with his responsibilities as a Jewish communal leader. From 1916 through 1927, excepting 1918, he was a member of the research staff of the Department of Industrial Studies, Russell Sage Foundation. During this period he wrote extensively on labor problems. In 1928 he became director of the American office of The Hebrew University, Jerusalem, a position which he relinquished in the following year to go to Boston to head and reorganize the Associated Jewish Philanthropies. In Boston, Selekman continued his interest in labor matters. Aside from teaching at Harvard, where he conducted a course in human relations in business, Selekman was a public member of the Regional Labor Board of New England (1934); a member of the advisory board of the Emergency Relief Administration of Massachusetts (1934-35); impartial chairman, Men's Clothing Industry of Boston; and arbitrator for the War Labor Board (1942-).

Selekman was president of the National Conference of Jewish Social Service (1934-35); president of the Massachusetts Conference of Social Work (1937); member of the board of directors, Greater Boston Community Fund (1942); member of the executive committee, Boston Council of Social Agencies from 1932; and chairman of the Committee on the Local Public Relief Situation of the Massachusetts Committee on Post War Adjustment (1941-).

He wrote: *Employees Representation in Steel Works* (1924); *Sharing Management With the Workers* (1924); *Employees Representation in Coal Mines* (with Mary Abby Van Kleeck; 1924); *British Industry Today* (with Sylvia Kopald Selekman; 1929); *Law and Labor Relations: A study of the Industrial Disputes Investigation Act of Canada* (1936). He also contributed articles to the *Atlantic Monthly, Survey,* and the *Harvard Business Review,* of which he is a member of the board of editors.

HENRY W. LEVY.

SELEUCIA, name of several cities in Syria in the Hellenistic period. The most important was that founded on the Tigris by Seleucus I Nicator. It was the metropolis of Hellenism in the territory east of the Euphrates; it was the residence of the Seleucideans and later, together with nearby Ctesiphon, it became the capital of the Parthian Arsacids and the Persian Sas-

sanids. Many Jews settled there, especially after the career of the two bandit brothers Anilai and Asinai. About 40 C.E. the united Greeks and Syrians of Seleucia attacked the Jews and massacred about 5,000 of them (Josephus, *Antiquities,* book 18, chap. 9); however, Jews were still living in Seleucia at a later period. In the time of the Amoraim, Seleucia was called Mahoza.

Another Seleucia, a Greek city in Transjordan on Lake Merom, was captured by Alexander Jannaeus about 80 B.C.E.

Lit.: McDowell, R. T, "Excavations at Seleucia on the Tigris," *Papers of the Michigan Academy of Science, Arts and Letters,* vol. 18 (1932).

SELEUCIDAE, Macedonian dynasty which ruled in Syria from 311 to 64 B.C.E. Its founder, Seleucus I Nicator, was a general of Alexander who, after the battle of Ipsus (301), laid hold of most of the Asian conquests of the latter. However, the large, unwieldy kingdom was unable to hold together; its eastern portions fell away and were later absorbed into the kingdom of the Parthians, parts of Asia Minor became independent, and the southwestern part, including Judea, was subject to the attacks of the Ptolemies of Egypt. The dynasty, accordingly, sought to win the Jews over to its side by means of concessions. Thus Seleucus himself granted civic rights to the Jews of Antioch and was liberal toward the Jews of Babylonia. In the initial struggle between Egypt and Syria, the Jews were inclined to the side of the latter.

Seleucus was eventually compelled to yield Palestine to the Ptolemies, and it was not until 200 B.C.E. that one of his successors, Antiochus III the Great, succeeded in wresting Palestine from Egypt and adding it to his own empire. The Jews greeted him with joy, and in return received a remission of taxes and other favors. However, the situation changed because of Antiochus' unsuccessful war with Rome, and his resulting need for money. The burden of taxes increased, which embittered the people, and at the same time the Seleucidean rulers, in preparation for future war, endeavored to consolidate their empire by bringing its various provinces into a more uniform mode of life. In the latter they were aided by the Jewish Hellenists who favored the adoption of Greek customs. However, the attempt of Antiochus IV Epiphanes (175-164 B.C.E.) to suppress the Jewish religion, together with his plundering of the Temple and violent persecutions, produced a revolt headed by the Hasmoneans. For the next thirty years the Seleucidae were engaged in trying to hold Palestine.

Antiochus V Eupator (164-162 B.C.E.) and his governor Lysias granted freedom of religion and successfully resisted the efforts of the Hasmoneans. The struggle of the Jews for independence, however, was aided by dissensions among the Seleucidae themselves. Successive contenders for the throne, such as Demetrius I, Alexander Balas and Demetrius II, granted further and further concessions to the Hasmoneans, until by about 140 B.C.E. they were almost completely independent. Antiochus VII Sidetes (138-129 B.C.E.) succeeded in reimposing Syrian rule upon Judea for a short period, but his defeat and death in a campaign against Parthia allowed Judea to throw off the Syrian yoke once more. Last attempts were made by Antiochus IX Cyzicenus, Demetrius III and Antiochus XII Dionysus, but these were mere raids and had no permanent effects. In its latter years, the kingdom of the Seleucidae shrank in size and became the prey of civil wars, so that it was easily conquered by Pompey in 64 C.E. For many years afterwards, however, the Jews retained the Seleucidean Era (beginning 312 B.C.E.), according to which all official documents were dated.

SELEUCIDEAN ERA, *see* ERAS.

SELF-DEFENSE. While Biblical and Talmudic law is condemnatory of murder, it realizes that homicide in self-defense is often necessary and therefore not to be punished. The Bible provides that a housebreaker at night may be slain on the spot without blood-guilt (*Ex.* 22:1), although this is not the case if the burglary be by day. The Talmud explains this by stating that the householder knows that the housebreaker would kill him if he were discovered (*Sanh.* 72a). It further elaborates the principle into a general one of the right of self-defence, "If one comes to kill you, kill him first" (*haba lehargecha hashkem lehargo; ibid.*).

It is noteworthy that in the case of self-defense it is not necessary to warn the criminal, as is required in Jewish law in cases where one witnesses a capital crime. The purpose of the warning is to establish intent, and the intent of an attack on one's person with murderous weapons is self-evident.

Homicide is regarded as permissible in defense of others as well as oneself; this is a sort of self-defense of the community. This is based on the Biblical principle, "neither shalt thou stand idly by the blood of thy neighbour" (*Lev.* 19:16). Similarly, one might kill the pursuer of a betrothed maiden. However, if it was possible to stop the assailant by a wound or blow, it was regarded as forbidden to kill him (*Sanh.* 74a). The discussion of such cases and the distinction between acts committed in self-defense and otherwise are discussed at length in rabbinic literature.

Lit.: Mendelsohn, *Criminal Jurisprudence of the Hebrews;* Benny, *Criminal Code of the Jews.*

SELF-DEFENSE ORGANIZATIONS. Self-defense organizations were created by the Jews on occasions when they were violently attacked and the authorities were too weak to aid them or refused to check the rioters. According to the historian Simon Dubnow, Jewish self-defense committees were formed as early as 1664 in Lemberg, where the Jews were attacked by the Christian students of the cathedral school and the Jesuit academy, at Posen in 1697, where the Jews were attacked by students of the Catholic academy for refusing to pay the school tax, and at Uman in 1768, because of the Haidamak attacks.

Jews again attempted to defend themselves in the Russian pogroms of the 19th and 20th centuries; these attempts were often successful, despite the fact that the government was often more severe upon them than upon the rioters. Thus in the pogroms of 1881 to 1882 the Jews of Odessa attempted to organize self-defense, but the leaders of this movement were imprisoned. Self-defense became a general Jewish policy after the Kishinev pogrom of 1903, when it became evident that the government would give the Jews no aid. The self-defense organization was composed mainly of youthful members of the Jewish national and revolutionary parties, such as the "Bund," the Poale Zion, or the Zionists. These organizations performed prodigies of valor in checking the mobs when they were unhindered by the police or military authorities.

Shortly after the creation of the self-defense organization, the government took steps to suppress it. In April, 1903, Minister of the Interior Plehve directed the governors of the provinces to prevent both violence and the work of the self-defense groups. After the pogroms were over, the police arrested not only rioters, but also members of the Jewish self-defense; thus after the Homel pogrom of August, 1903, thirty-six of the sixty persons brought to trial were Jews. In the same manner, measures were taken against Jewish self-defense organizations in the pogroms at Zhitomir, Kertch, Odessa and Bialystok (1905-6).

Nevertheless, the self-defense idea remained alive, and in the turbulent years after the first World War self-defense organizations were formed wherever Jews were threatened. In Palestine the self-defense organi-

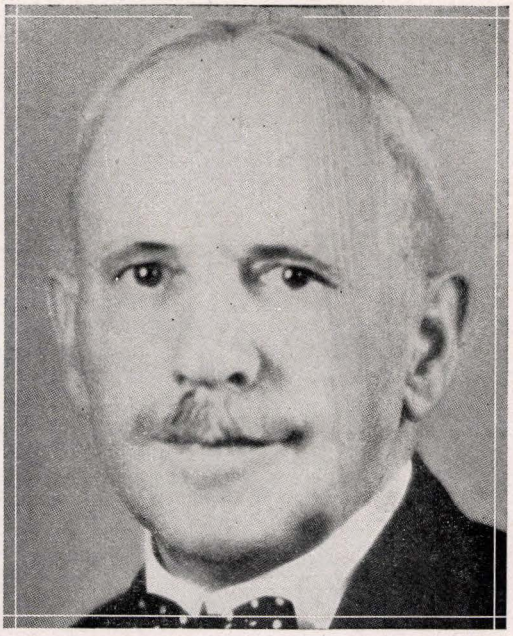
zation known as the Haganah, the outgrowth of the corps organized by Vladimir Jabotinsky in 1920, repeatedly and successfully repelled the attacks of the Arabs. Similarly, at Warsaw in 1934, a Jewish self-defense corps, under the leadership of Chaskiel Dalman, was quickly mobilized to prevent further attacks.

SELF-GOVERNMENT. During the period of Jewish independence, the Jewish people naturally enjoyed both national and cultural self-government, which evolved in the course of centuries into a religious state organization which regulated every phase of life. As the Jews dispersed among the nations, especially after the loss of national independence in the 1st cent. C.E., this self-government was modified in many respects. In the Roman empire the Jews had the status of a religious community and not that of a nation; but since education at that time was largely a private matter, they were able to maintain their own culture, the more so as this culture was intimately connected with Judaism. In civil matters, on the other hand, their autonomy was restricted; they were denied jurisdiction in criminal cases, though in certain parts of the empire, especially in Palestine, Jewish courts which passed judgment on civil cases existed side by side with the Roman courts. Jews were free to speak any language they chose, as well as to observe their Sabbaths and holidays.

In the countries further east, under the rule of the Parthians and their Persian successors, Jews possessed a still greater measure of self-government. They were under the jurisdiction of their own hereditary ruler, the exilarch, and they were settled in compact groups which made it possible for them to maintain a cultural life of their own, marked by the use of a separate language. This condition continued for a time under Islamic rule, but was gradually broken up under the oppressions that marked the latter part of the Middle Ages. Vestiges of national autonomy disappeared, although there was no interference with cultural autonomy.

When Christianity became the dominant religion in the Roman empire (4th cent.), it put the Jews in a separate and inferior category and thus tended to strengthen their communal cohesion. This, and the separation into classes which was characteristic of the feudal period, fostered self-government among the Jews in the various countries of Europe. It was only in rare instances, as in Spain, that they were allowed as much self-government as the right to put to death those Jews who were convicted of a capital crime; but in general they possessed jurisdiction in civil cases between Jews, and their right to cultural autonomy was unquestioned. The Jewish communities of the Middle Ages not only conducted schools, but had their own officers and administrators, and passed numerous ordinances (Takkanoth) to regulate the lives of their members. This became the easier when the Jews were forced to live in ghettos and were thus a separate group. In many instances the governments made use of the Jewish administrators to enforce the special taxes that were laid upon the Jews and thus gave them an official status.

With the progress of emancipation of the Jews, beginning at the end of the 18th cent., as well as their growing participation in the cultural and national life of the countries in which they lived, this cultural and communal autonomy broke up. The communities again became purely religious organizations, and their jurisdiction was limited to matters within the realm of religion. Jewish children attended the public schools, and were more and more compelled to do so as the state insisted on a uniform education for all its children; Jewish courts disappeared, and individual Jews broke away from the control of the communities. Thus in Western Europe, self-government on the part of the Jews disappeared because the Jews themselves abandoned it; in Eastern Europe the governments, instead of permitting Jewish self-government, were concerned with destroying the Jewish communal system in the hope of converting the Jews or of forcing them to adopt European culture. Thus by the end of the 19th cent. practically all vestiges of the Jewish self-government of the Middle Ages had disappeared; there remained only the differences as to religion and, in countries of Eastern Europe, the use by the Jews of a vernacular of their own.



The rise of nationalism in the 19th cent., as well as the principles of self-determination advanced at the close of the first World War, led many Jews to propose the revival of Jewish self-government as a means of meeting the problems of the Jews and of their relationship to the peoples among whom they lived. Since it was obvious that even the creation of a Jewish state in Palestine would not provide a homeland for all the Jews of the world, it was necessary to establish a status for the Jews outside of Palestine. In the Soviet Union, attempts were made to organize a separate Jewish nationality, to sanction Yiddish as a separate national language, and to create a special Jewish center in Birobidjan. In other countries proposals were made for minority representation; the Jews were to vote for their own representatives in national parliaments and to be given a certain amount of jurisdiction in their internal affairs. Some countries set up separate Jewish ministries and established Jewish minority rights, but these had all disappeared by 1943. Still others proposed a cultural autonomy, whether religious or national, which would permit the Jews to have control over their language and education for the purpose of preserving the cultural values of Judaism. Such a cultural autonomy was granted to the Jews of Germany by the Nazis in 1933, though it was practically nullified by the sweeping decrees of 1938 and after. Since that time, in those countries where Jews have been once more shut up in ghettos (1939 and after), the administration of these crowded haunts of Jews has been put in the hands of Jews elected or appointed for that purpose. In a number of countries in Eastern Europe, prior to the second World War, Jewish school systems were in existence, and these in one form or another provided a certain amount of cultural autonomy. In Western countries, national autonomy has never been sought by Jews, and cultural autonomy only in the sense of instruction in specifically Jewish values in addition to the elements of universal culture.

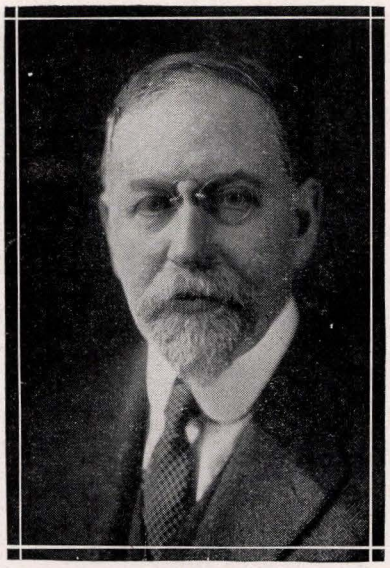
SELIGMAN, ARTHUR, governor of New Mexico, b. Santa Fe, N. M., 1873; d. Albuquerque, N. M., 1933. He was educated at the Swarthmore College Preparatory School and at a business college in Philadelphia, and returned to New Mexico, where he entered the merchandising field at an early age. From 1903 to 1926 he was president of Seligman Brothers. Among his other business activities were the building

Arthur Seligman

of La Fonda, one of New Mexico's show hotels and his presidency of the First National Bank of Santa Fe. Seligman entered political life, joining the Democratic Party, before New Mexico attained statehood, and was chairman of the Territorial Democratic committee from 1895 to 1911. From then until 1920 he was chairman of the state committee, and subsequently became national committeeman. His occupancy of various political posts, including six years of office as mayor of Santa Fe, was characterized by a progressive attitude, stabilization of finances and modernization of life.

While chairman of the Santa Fe county commissioners he effected large savings for the taxpayers and improved the schools. The floating of a $500,000 bond issue for state highways found no buyers, because of a low rate of interest, and Seligmann bought out the entire issue himself. His election to the governorship in 1930 was a personal triumph, overthrowing traditional Republican strongholds. He was reelected in 1932, and died while in office.



Lit.: *American Hebrew,* Nov. 14, 1930, p. 775.

SELIGMAN, SIR CHARLES DAVID, banker and philanthropist, b. London, 1869. He was the son of Isaac Seligman, whom he succeeded as senior partner of the banking house of Seligman Brothers. Charles David Seligman, after receiving the M.A. degree from Cambridge, became director of the Commercial Union Assurance Company and of the National Discount Company.

In 1921 he was appointed member of the advisory committee of the Export Credits of the Board of Trade, and in 1933 member of the British Oversea Development Council of the Board of Trade. In 1934 he participated in the Federation of British Industries Mission to Japan and Manchukuo. He supported many Jewish charitable institutions, and was vice-president of the Home for Jewish Incurables.

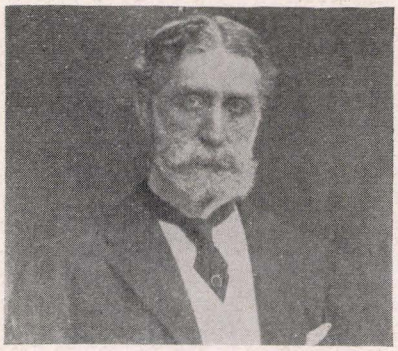
SELIGMAN, CHARLES GABRIEL, anthropologist and ethnologist, b. London, 1873; d. London, 1940. He was educated at St. Paul's School, London, and studied medicine.

Seligman became house physician of St. Thomas's Hospital, and some years later director of its clinical laboratory. He lectured at the Royal College of Surgeons. In 1898 Seligman, although he had not yet had any anthropological

Edwin R. A. Seligman

training, participated in the Cambridge Anthropological Expedition to Torres Straits and Borneo. He paid particular attention to native medicine and surgery; he discovered and wrote informatively on women's puberty customs in the Western Island of Torres Strait.

From 1901 on Seligman concentrated more and more on anthropology while he continued medical writing until 1914. In 1905 he married Brenda Z. Salaman, a learned zoologist who assisted him in anthropological research work. Seligman succeeded in interesting the American Major Cooke Daniels in an expedition to New Guinea. The results of this expedition, financed by Daniels, were published in 1910 in Seligman's first greater anthropological book, *The Melanesians of British New Guinea.* The British government entrusted Seligman with official anthropological work in Africa and Ceylon. In 1911 he published *The Veddas.*



His African studies were based on three important expeditions to the Sudan (1909-10, 1911-12, and 1921-22). Their fruits were *The Races of Africa* (1930); *Pagan Tribes of the Nilotic Sudan* (1932); and *Egypt and Negro Africa* (1934), mainly a study on comparative religion.

Seligman was professor of anthropology at the University of London until 1934, president of the Royal Anthropological Institute from 1923 to 1925, and member of numerous learned societies. He received the Annandale Memorial Medal from the Asiatic Society, and the Huxley Memorial Medal. From 1919 on he was fellow of the Royal Society. Proceeding from medical studies, Seligman step by step widened his scientific sphere until he embraced physical anthropology, archeology, comparative religion, and the social structure of the peoples and tribes observed by him. He became an authority also on Chinese ceramics, and edited the *Cresset Historical Series,* devoted to the knowledge of China and Japan.

Lit.: *Essays Presented to Charles Gabriel Seligman* (1934).

SELIGMAN, EDWIN ROBERT ANDERSON, economist, b. New York city, 1861; d. Lake Placid, N. Y., 1939. He was the son of Joseph Seligman. He studied at Columbia University, from which he received the Ph.D. degree in 1885, and also at various European universities.

Appointed a lecturer on economics at Columbia in 1885, he retained a connection with the university until his death; from 1888 to 1891 he was adjutant professor of political

Isaac N. Seligman

economy, from 1891 to 1904 professor of political economy and finance, from 1904 to 1931 McVickar professor, and after 1931 professor emeritus in residence.

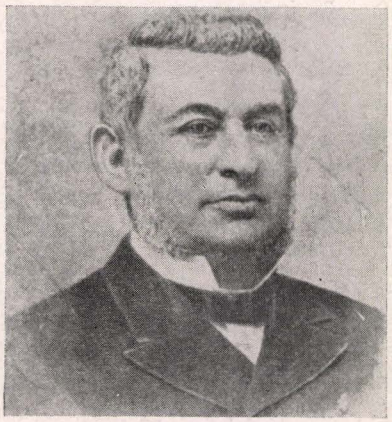
The scope of Seligman's advisory work in taxation and other fiscal problems extended from municipal undertakings through national matters into the requirements of foreign countries and the League of Nations, for whose committee on economics and finance he was an expert in 1922 and 1923. From 1905 to 1910 Seligman was chairman of the trustees of the Bureau of Municipal Research; later he was chairman also of the Mayor's Tax Committee. He was adviser to the Ways and Means Committee of the House of Representatives (1918-25), and expert adviser to the Joint Legislative Tax Committee (1919-22). Among his notable accomplishments for foreign countries was his reorganization of the fiscal system of Cuba, a study of which he undertook at the request of President Gerardo Machado in 1932, while he was lecturing at the University of Havana. In recognition of this he was made a Commander of the Order of Manual de Cespedes. Seligman was also for a time honorary economics adviser to China.

His first published work was *Finance Statistics of American Commonwealths* (1889). The numerous studies on taxation and other phases of economics which appeared subsequently brought the total of his books to fifteen. Among them were: *Economic Interpretation of History* (2nd ed., 1937); *Principles of Economics* (12th ed., 1929); *Essays in Economics* (1925); *The Economics of Farm Relief* (1929); and *Price Cutting and Price Maintenance* (1932). Seligman's accomplishments as editor produced some of the most informative material available on economic subjects from a 20th cent. viewpoint; he edited the *Columbia Series in History, Economics and Public Law,* the *Political Science Quarterly* and the fifteen-volume *Encyclopaedia of the Social Sciences* (New York, 1930-35). His private library of 50 000 volumes, valued at $1,000,000, was acquired in 1930 by Columbia University. NATHAN RICARDO.

Lit.: *New York Times,* July 19, 1939.

SELIGMAN, HERBERT SPENCER, British army officer, b. London, 1872. He was the son of Leopold Seligman (1831-1911). He was educated at St. Paul's School, London, and at the Military Academy, Woolwich. From 1892 to 1919 he served in the Royal Artillery, and retired as brigadier general. In 1900 Seligman participated in the South African War, and was decorated with the Queen's Medal. In the first World War (1914-18) Seligman was mentioned six times in the despatches of the British High Command and decorated with the Distinguished Service Order and the Legion of Honor.

SELIGMAN, ISAAC N., banker, Jewish communal worker and philanthropist, b. Baiersdorf, Germany, 1834; d. London, 1927. He was the tenth child of David Seligman (1790-1845), who emigrated to the United States at the end of the 1930's. Isaac Seligman and some of his brothers returned to Europe, and became bankers at London, Paris, and Frankfort, while others founded similar businesses at New York city and San Francisco. He was educated at New York College, and graduated there. He came to London with his brother Leopold (1831-1911), and founded the firm of Seligman Brothers, which became one of the leading banking concerns of England. Seligman was a prominent Jewish communal worker. He was a member of the Jewish Board of Guardians, a treasurer, and vice-president of the Anglo-Jewish Association, whose sessions he attended from the first preparatory meeting until his death.



He was a member also of the board of directors of the West London Synagogue, and supported many Jewish charitable and educational institutions. He took a keen interest in Jewish affairs abroad and was one of the most active members of the Joint Foreign Committee. On the occasion of the celebration of his ninetieth birthday, when he was honored by Jewish organizations and British authorities, he handed over his magnificent country house to the Order Achei B'rith and Shield of Abraham, to be used as a convalescent home.

SELIGMAN, JESSE, banker and philanthropist, b. Baiersdorf, Germany, 1827; d. Coronado Beach, Cal., 1894. He came to the United States in 1841 and settled in Selma, Ala. In 1848 he moved with his brother Henry to Watertown, N. Y., where he became friendly with Ulysses S. Grant. In 1850 he went to San Francisco with his brother Leopold. There he was a member of the various vigilance committees. Seligman left California in 1857 and joined in establishing the banking business of J. and W. Seligman in New York city, of which he assumed charge in 1880.

In 1859 he helped found the reorganized Hebrew Orphan Asylum Society, and was president of it until his death. He was one of the original members of the board of the Baron de Hirsch Fund, and was a prominent worker in the Republican Party, twice refusing the nomination for mayor of New York.

Lit.: Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen* (1895) 430-40; *National Cyclopaedia of American Biography,* vol. 4 (1897) 224.

SELIGMAN, JOSEPH, banker and philanthropist, b. Baiersdorf, Germany, 1819; d. New Orleans, La., 1880. He came to the United States in 1838, and was soon followed by his seven brothers.

Jesse Seligman

After working as a cashier in Philadelphia he became a dry goods merchant in Greensboro, Ala., and in 1848 opened an importing house in New York city. In 1857 he visited Germany to establish relations with German bankers, and in 1862 he founded the firm of J. and W. Seligman and Company in New York, with branches in New Orleans, San Francisco, Frankfort, London and Paris.

Seligman was a friend of President Abraham Lincoln, and his firm negotiated the raising of European loans to finance the Civil War. The appointment of Ulysses S. Grant to the supreme command of the army was partially due to Seligman's influence with Lincoln. In 1877 Seligman rendered an important service to the Navy Department of the United States by holding over to the next fiscal year a large debt due to his firm. Thenceforth he was the financial representative of the department. He was an intimate friend of President Grant, who offered him the office of Secretary of the Treasury, which he refused. From 1868, with the exception of the two administrations of Grover Cleveland, his firm served as fiscal and naval agents of the United States.

Seligman was one of the founders of the reorganized Hebrew Orphan Asylum. He was also a founder of the Society for Ethical Culture, of which he was president until his death. He served as member of the Board of Education of New York for several years, and presided over the first Rapid Transit Commission. He was also an early president of the American Geographical Society.

WILLIAM SELIGMAN (b. Baiersdorf, Bavaria, 1822; d. Paris, 1910) was a brother of Joseph. In 1839 William Seligman came to the United States, settling in Alabama. He was a resident partner of J. and W. Seligman and Company in New York city and in 1864 went to Paris to establish the French branch of the concern, Seligman, Frères et Cie., of which he was the senior partner. He interested the French public in American government bonds and other securities, and did much towards effecting satisfactory trade relations and treaties between the United States and France.

In 1879 he was decorated with the Legion of Honor by the French government. Seligman was dean of the American Chamber of Commerce in Paris, and he represented American Jews in the International Jewish Conference in Paris in 1876. From 1860 to 1864 he was a director of Mt. Sinai Hospital. Seligman's descendants include many notable figures on two continents, among them the French playwright Henry Bernstein.

Lit.: National Cyclopaedia of American Biography, (1893) vol. 3, p. 342-43.

SELIGMANN, CAESAR, rabbi, leader of Liberal Judaism in Germany, b. Landau, Germany, 1860. In 1889 he became rabbi of the Temple in Hamburg, and in 1902 rabbi of the Jewish community of Frankfort. Seligmann attained international repute in 1910 through his radically reformist *Israelitisches Gebetbuch,* and composed also a German *Hagada für den Sederabend* (1913). He took an active part in the organization of the Vereinigung für das liberale Judentum in Deutschland, and was editor of *Liberales Judentum,* the organ of this society, published until 1922. *Richtlinien zu einem Programm für das liberale Judentum in Deutschland,* of which he was co-author, was adopted by a group of forty-seven liberal rabbis who met at Frankfort in 1912. After the pogroms of November, 1938, Seligmann emigrated to London where he was still living in 1943.

Besides sermons and short essays, Seligmann published: *Judentum und moderne Weltanschauung* (1905), a popular presentation of Jewish philosophy; *Geschichte der Reformbewegung von Mendelssohn bis zur Gegenwart* (1922); and a prayer-book (1929, in collaboration with Ismar Elbogen and Hermann Vogelstein), by commission of the Liberal Jewish Committee of the Preussischer Landesverband jüdischer Gemeinden.

SELIGMANN, JACQUES, art dealer, b. Germany, 1859; d. Paris, 1923. He went to Paris in 1873, and built up a considerable art dealing business. He became one of the greatest art dealers of his time and one of the best renowned experts in art. Seligmann was a trustworthy adviser of his patrons, who included J. P. Morgan, and exposed many frauds and forgeries. He opened a branch at New York city, and contributed greatly to American art collections by selling, donating and lending works of art for exhibitions.

SELIGMANN, KURT, painter, b. Basel, Switzerland, 1900. He was one of the few Jewish artists to ally himself with the abstractionists and surrealists; the simultaneously current expressionist movement held the greatest lure for Jewish—particularly East European Jewish—painters.

Beginning with 1920, Seligmann studied at the École des Beaux Arts in Geneva and the Academia in Florence. Even earlier (1918) he held his first exhibition at the Kunsthalle in Basel, where he showed canvasses and original paintings under glass which betrayed the intermingled influences of the post-impressionists as well as such fanciful Renaissance masters as Konrad Witz, Urs Graf and Baldung-Grien.

In 1929 Seligmann went to Paris, to become a member of the abstraction-creation group led by Auguste Herbion. Later (1936) he joined the surrealists under André Breton. With rare imagination, Seligmann developed a very personal "art non figuratif" of great momentum and wealth of shimmering color which were conjured up by his bubbling inventiveness and which were often reminiscent of the haunted work of Hieronymous Bosch and Matthias Grünewald. His later compositions tended toward a tighter plane order and brighter illumination.

Seligmann's exhibitions in Paris, London, Milan, Rome and especially in Tokio and New York were very successful. In 1939 he moved to New York, in time for his first exhibition at the Nierendorf Galleries. Exhibitions in other American and Canadian cities followed. His work is represented at the Museum of Basel, the Museum of Modern Art (New York), Jeu de Paume (Paris), in the Museum of Lodz, Poland, and in the Gobelin collection of Aubusson. Among his etchings and illustrations are those for *Protubérances Cardiaques; Vagabondages Héraldiques; Métiers des Hommes* and *Une Écriture Lisible.* MAX OSBORN.

Lit.: Almanach neuer Kunst in der Schweiz (1940); *Catalogue* (Nierendorf Galleries, 1939); *Catalogue* of "Artists in Exile" Exhibition (Pierre Matisse Gallery, 1942).

SELIGSBERG, ALICE L., communal leader, and Hadassah and Zionist worker, b. 1873; d. 1940. Throughout her extraordinarily active life she gave of herself fully to serve the underprivileged, and made a notable contribution to the furtherance of Zionism in the United States and in Palestine. Reared in the principles of the Ethical Culture Society, of which her parents were founders, she nevertheless identified herself fully with the Jewish community in its religious and cultural aspects.

Alice L. Seligsberg received her academic training at Barnard College, New York city, and after studying at Columbia University and at the Friedrich Wilhelm University in Berlin, became active at once in the field of social work. For many years she conducted girls' clubs at Madison House. She was also deeply interested in the Hebrew Sheltering Guardian Society orphanage at Pleasantville, N. Y., of which her father was a director, and made an outstanding contribution to social welfare when she founded Fellowship House,

which placed thousands of boys and girls in homes and in positions, and helped them, on leaving Pleasantville, to adjust themselves to the life of the city.

Another outgrowth of her affiliation with the Hebrew Sheltering Guardian Society was the "boarding-out" of dependent children, free from institutional control, a program which she was instrumental in starting, and which changed the course and character of child-care throughout the country. She was largely responsible, too, for the establishment of the Jewish Children's Clearing Bureau, a pioneer in the placement of dependent children in homes or institutions on a basis which recognized their individual needs, and served as its executive director from 1922, when it was founded, until 1936.

In Hadassah, the Women's Zionist Organization of America, she found another outlet for her humanitarianism as well as for her deep interest in Zionism. In June, 1918, when the United States entered the first World War, she headed the American Zionist Medical Unit which sailed secretly from New York in a convoy of American troop ships. After a hazardous voyage through submarine lanes in the Atlantic and in the Mediterranean, she arrived in Palestine with the forty-four physicians, dentists, nurses, sanitary engineers and administrative staff comprising the unit. There she helped to lay the foundations of the country-wide medical service now developed and maintained by Hadassah. In 1919 she became executive director of the Palestine Orphan Committee of the Joint Distribution Committee, and in that capacity introduced modern methods in the care of dependent children.

From 1924 to the end of her life she was adviser to Junior Hadassah on Palestinian problems, and an active worker in the Senior organization. The Junior organization honored her memory by establishing a clinic in its Children's Village in Palestine, and in 1942 Senior Hadassah established the Alice Seligsberg Memorial, a vocational training school for girls, conducted on modern progressive lines, for the underprivileged youth of Palestine.

SELIGSOHN, ARNOLD, lawyer and author on German patent law, b. Samotchin, Posen, 1854; d. Berlin, 1940. An honorary doctor of the University of Berlin, he was for thirty years active as corresponding secretary of the Law Society in Berlin, chairman of the Union to Aid Jewish Students, also honorary chairman of the board of regents of the Lehranstalt für die Wissenschaft des Judentums.

Seligsohn's more important writings were *Patentgesetz und Gesetz betreffend den Schutz von Gebrauchsmustern* (1892; 7th printing, 1932) and *Gesetz zum Schutz der Warenbezeichnungen* (1894; 3rd printing, 1925). He wrote also numerous articles for scientific periodicals, and was publisher of the *Zeitschrift für das gesamte Handels- und Konkursrecht.*

Lit.: C.-V. Zeitung, Sept. 6, 1934; *Jüdisches Nachrichtenblatt,* Feb. 15, 1939.

SELIGSOHN, JULIUS LUDWIG, patent lawyer and communal worker, b. Berlin, 1890; d. in the Nazi concentration camp Sachsenhausen, 1942. The son of Arnold Seligsohn, he was educated at the Universities of Berlin, Munich and Freiburg, and received the LL.D. degree from that of Halle in 1921. Serving with the German army in the first World War, he was made a first lieutenant and awarded the Iron Cross of the first class and the Bavarian medal for military merit. Seligsohn was a distinguished patent lawyer whose opinions were published by a number of German law journals. He took an active part in Jewish communal affairs, being chairman of the Youth Organization of Reform Jews, a member of the assembly of the Jewish Community of Berlin, and a member of the Council of German Jewish War Veterans. He served also on the board of the Reichsvertretung der Juden in Deutschland and as president of the Hilfsverein der Deutschen Juden, the only organization of the German Jews tolerated by the Nazis.

In 1940 he published for the benefit of those seeking to emigrate *Die Einwanderung nach U. S. A.* (Immigration to the United States of America). In October, 1940, the Jews of Baden and of the Palatinate were deported to unoccupied France. On this occasion Seligsohn called upon the German Jews to observe a fast day. This passive form of protestation was resented by the government, and Seligsohn was taken to a concentration camp. In March, 1942, his death was reported. His wife and children later came to the United States.

SELIHOTH ("pardonings," "forgivenesses"), a designation for prayers for the forgiving of sins and for penitential prayers. According to the Talmud (*R. H.* 17b), God Himself taught Moses the "Selihoth" in the "thirteen attributes" enumerated in *Ex.* 34:6-7 ("The Lord, the Lord, God, merciful and gracious . . . forgiving iniquity, transgression and sin"). These attributes still form the nucleus and the ever-recurring refrain of all Selihoth; the introduction to the Selihoth, the El Melech Yosheb, reechoes these ideas.

In former days penitential prayers were early felt to be a necessary requirement for fast days, which, whether such fast days were historic in nature or occasional fast days (the result of a general misfortune), brought home to the repentant soul the thought that each misfortune had been caused by sin. The old liturgy of fasts from the time of the Temple (*Taan.* 2) consisted in an amplification of the prayers (Tefillah) through psalms and litanies. This old fast day liturgy became the model of the Selihoth used today. At the repetition of the Eighteen Benedictions (Shemoneh Esreh), the Selihoth are inserted into the sixth benediction and consist chiefly of Biblical passages and litanies. Selihoth are characteristic of Yom Kippur prayers likewise. In order to create the proper penitential mood "Selihoth days" were instituted even before the great holiday of the Day of Atonement. Among the Sephardim these begin as early as the 1st of Elul; among the Ashkenazim these Selihoth days commence on the Sunday before Rosh Hashanah or, if Rosh Hashanah begins on Monday or Tuesday, even on the preceding Sunday, and last until the Day of Atonement. These Selihoth are altogether separate from the Tefillah (the prayers) proper; they are mostly recited before dawn, and often, in certain regions, at midnight.

When the Paytanim (composers of Piyutim, or liturgical poems) began to turn their skill also to the Selihoth and to fix the beliefs and history of their period in this form, the old simple material of the Selihoth was interrupted by artificial poetic creations and even often entirely supplanted thereby. Thus the Selihoth became so numerous that whole collections of them were gathered together. These collections of Selihoth poems number into the hundreds, and are arranged according to the different types of poetry used (Pethihah, Pizmon, and the like). An important part of all Selihoth is formed by the theme of the Akedah, the recollection of Abraham's sacrifice of Isaac, which was frequently elaborated and was employed with reference to martyrdom.

Perhaps the best-known Selihah is Gershom ben Judah's "Zechor Berith" (Remember the Covenant). Many Paytanim, in addition, enriched the body of the Selihoth through the composition of profound and moving elegies. An important model in the field of the composing of Selihoth was Solomon ben Judah Hababli, who lived at Rome between 950 and 980. For a long time Selihoth were called Shalmonith, after his name.

JULIUS JARECKI.

Lit.: Seligsohn, M., and Cohen, F. L., in *Jewish Encyclopedia,* vol. 10, pp. 170-80; Dembitz, L. N., *Jewish Services* (1898) 169-70, 192, 223-30, 239-40.

Benjamin Selling

SELIKOVITSCH, GEORGE (GOETZEL), editor and scholar, b. Rietavas, Lithuania, 1863; d. New York city, 1926. Well versed in Semitics and Egyptology, he was attached to the Bibliothèque Nationale de Paris and was head interpreter to Lord Wolseley and Lord Kitchener during the British expedition to relieve General Gordon from the Soudanese at Khartoum (1885). After his arrival in the United States (1887) Selikovitsch lectured on hieroglyphics and Egyptology at the University of Pennsylvania and at the Franklin Institute of Philadelphia. He was editor of the *Hamelitz* (St. Petersburg) and *Hamaggid,* and was a contributor to the *Reform Advocate* (Chicago). From 1901 to his death he was literary editor of the New York *Jewish Daily News* (*Der Tageblatt*).

He was author of many works in various languages, including *Le Schéol des Hébreux* (1881); *Dawn of Egyptian Civilization* (Philadelphia, 1887); *Tziure Massa* (1910); and *Torath Buddha* (New York, 1922), the original text of Buddha's gospel translated for the first time into Biblical Hebrew. He was president of the board of directors of the Association of the Jewish Blind, a member of the advisory board of the Hebrew magazine *Hadoar,* and honorary president of the Goetzel Selikovitsch Club, a Hebrew-speaking club in New York.

Edgar Selwyn

SELLING, BENJAMIN, merchant and civic leader, b. San Francisco, 1852; d. Portland, Ore., 1931. The son of pioneers, Philip and Caroline Auerbach Selling, he was brought to Portland at the age of ten. One of the most prominent and energetic citizens of the state, he was elected to several public offices. He was commissioner of ports and of docks, member of the state assembly and its speaker, member of the state senate for eight years and its president for one year, and for a brief period acting governor of the state.

Apart from being a leading figure in politics and a wealthy clothing merchant, he was known for his philanthropy. He founded the Waverly Baby Home, was president of the Portland Jewish Federation and of several other Jewish charities, as well as of the B'nai B'rith, and provided the first considerable fund for the purchase of books for the Hebrew Union College Library. In 1931 he established the Ben Selling Scholarship Loan Fund with a view to extending loans to students in Oregon colleges and to students in rabbinical colleges throughout the United States.

In 1928 the Portland Realty Board voted him Portland's "first citizen." In 1929 he was appointed a non-Zionist member of the Jewish Agency.

SELTMANN, REZSŐ, sociologist and historian, b. Hódmezővásárhely, Hungary, 1889; d. Budapest, 1930. He was the son of Lajos Seltmann (1854-1932), rabbi of Hódmezővásárhely, who contributed to the Hebrew periodicals *Hayehudi* and *Otzar Hasifruth* and was an authority on Jewish marriage law. Rezső Seltmann studied philosophy and political science in the Universities of Budapest and Leipzig. A teacher in one of the state Gymnasiums at Budapest, he fell a victim to the anti-Jewish purge in 1920. By that time Seltmann had published (in Hungarian) books on Russian agrarian reform (1915), on feudal society (1919) and on several subjects of political history and economy. After 1920 he had to depend on his writings for a living.

In addition to newspaper articles, he published: *Fascista ideológia és angol reálpolitika* (Fascist Ideology and British "Realpolitik"; 1926); *A szocializmus Szovjetoroszországban* (Socialism in Soviet Russia; 1926); *J. Bellers, a Páneurópa gondolat atyja* (J. Bellers, the Father of the Pan-Europa Concept; 1926). His book *A fejlődés törvényszerütlensége a történelemben* (On the Irregularity of Evolution in History; 1926) was translated into Serbian. In 1928 he published the monograph *Az inkvizivió a történelmi kutatások megvilágításában* (Inquisition in the Light of Historical Research). Seltmann was an editor of the *Magyar Zsidó Lexikon,* to which he contributed numerous articles on Biblical and Talmudic subjects as well as biographies. The cause of his premature death in 1930 appears to have been suicide due to financial troubles. His father, aged seventy-six, officiated at his funeral.

SELVER, PAUL, writer, b. London, 1888. He was attached to the staff of the Czechoslovak Legation in London, and endeavored to spread the knowledge of Czech literature by means of his translations.

He edited *Anthology of Bohemian Literature* (1912); *Modern Czech Poetry* (1920); and *Anthology of Czech Literature* (1929), and translated *R. U. R.* by Karel Capek, *War Memoirs* by Eduard Benes and poetry by Brezina and Machar into English. Selver's original works include two volumes of poetry, *Personalities* (1918) and *A Baker's Dozen of Tin Trumpets* (1935), and several books of fiction, such as *Schooling* (1924); *One, Two, Three* (1927); and *Private Life* (1931).

SELWYN, EDGAR, playwright, theatrical producer and motion picture director, b. Cincinnati, Ohio,

George Wolf

1875. Originally an actor, Selwyn made his debut in New York (1896) and subsequently appeared in many shows, including such hits as *Arizona* (1900) and *King's Musketeers* in which he made his London introduction in 1902. Since writing his first play (1911), he authored such hits as *Rolling Stones; Mirage,* and *Dancing Mothers.* In 1917, in partnership with Samuel Goldwyn, Selwyn was founder and vice-president of Goldwyn Pictures, Inc.

For many years he was president of Selwyn & Co., theatrical producers of *White Peacock; The Circle; Dancing Mothers; Charlotte's Revue,* and others. In bringing *Charlotte's Revue* to the United States he introduced to American audiences Gertrude Lawrence, Beatrice Lillie and Noel Coward. Following the dissolution of Selwyn & Co. (1924) Selwyn, together with others, produced *Gentlemen Prefer Blondes* (1925); *The Barker* (1927); *Strike up the Band* (1930), and others. Among Selwyn's best known motion picture productions were *The Sin of Madeleine Claudet* and *The Mystery of Mr. X.* At various times during his career he was associated with his brother, Archibald.

HENRY W. LEVY.

SELZNICK, DAVID O. (OLIVER), motion picture producer, b. 1902. One of the most successful of motion picture producers, the president of David O. Selznick Productions, Inc., Selznick represented the second generation of the family in pictures.

His father, Lewis J. Selznick, who went into the industry in 1910, was one of the early film pioneers. Before getting into financial difficulties in 1923, the father's Selznick Corporation was a $60,000,000 business. David O. Selznick, along with his brother Myron, who in 1943 was a leading agent in Hollywood, were child prodigies in the industry during the days of their father's affluence. But so complete was the elder Selznick's failure that both boys had to start all over in the business. David O. Selznick's initial independent production was a one-reeler starring Luis Firpo, the boxer, called *Will He Conquer Dempsey?* It netted a $2,000 profit.

In 1939 American theatre-goers paid $32,000,000 to see the Selznick production of *Gone With the Wind,* which was produced at a cost of $4,250,000, made a profit of $6,000,000 for MGM Pictures, and netted Selznick $2,000,000. Selznick's first real job in Hollywood was as story editor of Metro-Goldwyn-Mayer (1926). He was successively producer, Paramount Pictures (1927-31); vice-president and producer, MGM (1933-35); organizer and president, Selznick International Pictures (1936-40); and founder and president, David O. Selznick Productions (1940). For ten successive years the motion picture exhibitors voted David O. Selznick the Number 1 producer of outstanding box office attractions. In 1942 Selznick and 20th Century-Fox united for the duration of the war.

Among them were: *Dinner At Eight; Viva Villa; David Copperfield; Tale of Two Cities; Anna Karenina; Little Lord Fauntleroy; A Star Is Born; Tom Sawyer; Gone With the Wind; Rebecca. Gone With the Wind* won the Academy Award for Selznick in 1939, as did *Rebecca* in 1940. The rights to these two pictures, as well as to *Claudia* and *The Keys of the Kingdom,* were sold to Twentieth Century Fox in 1942. In 1939 he was the winner of the Irving Thalberg Memorial Award for Most Consistent High Quality of Production.

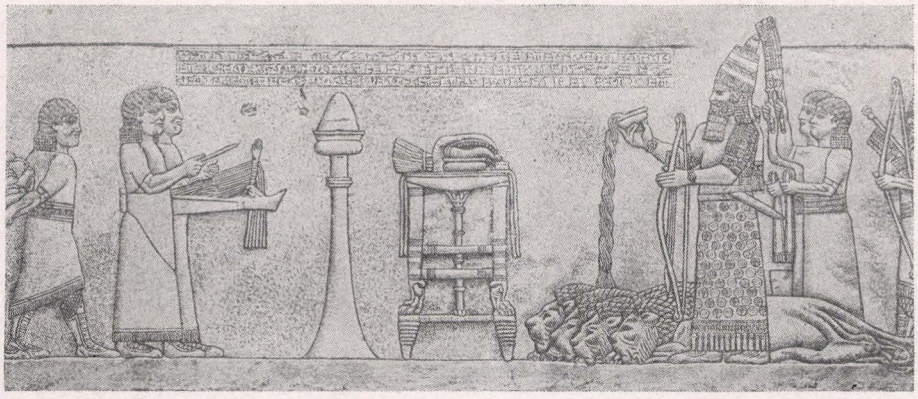
One of the high points in Selznick's career was his production of Charles Dickens' *David Copperfield.* Against all prevailing Hollywood opinion, Selznick insisted that a careful transcription of the original film story would merit public approval. Thereafter he became the leading proponent of cinematic versions of literary classics. Selznick gave Katharine Hepburn and Mickey Rooney their film starts, and is credited with introducing Myrna Loy to sophisticated comedy roles.

HENRY W. LEVY.

SeMaG (abbreviation for the Sefer Mitzvoth Gadol), *see* MOSES BEN JACOB OF COUCY.

SEMAHOTH ("joys"), euphemistic designation of one of the minor tractates of the Talmud, called *Ebel Rabbathi* (the large tractate on "mourning"), which deals with mourning for the deceased. A collection of Baraithas bearing the latter name is mentioned in the Talmud (*M.K.* 24a, 26b; *Keth.* 28a). There was another tractate of the same sort called *Ebel* or *Ebel Zutarti* (the small tractate on "mourning"), from which citations are made by post-Talmudic authorities. However, the present tractate is not identical with either of these, but is a post-Talmudic compilation from older works which originated in Palestine and was enlarged in Babylonia. The work was in existence in the time of Rashi (11th cent.).

Semahoth has fourteen chapters and deals with such subjects as the following: the mourning to be observed for pagans, slaves, suicides, persons condemned to death, and renegades; differences in mourning customs according to the age of the deceased; the duties of members of priestly families; the mourning observed during the first seven and the first thirty days; customs which may be observed even though they are of heathen origin; mourning for various relatives, for scholars and priests; mourning of a woman for her husband's relatives; the manner of interment; the mourners' meal.



Lit.: Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 180-82.

SeMaK (abbreviation for the Sefer Mitzvoth Katan), *see* ISAAC BEN JOSEPH OF CORBEIL.

SEMAN, PHILIP L., educator and social worker, b. Warsaw, Poland, 1881. He was brought to the United States at the age of twelve. After receiving the B.S. degree from Adelphi College, Brooklyn, he taught at the Jewish Orphan Asylum of New York city (1900-2). From 1905 to 1910 he was superintendent of the Jewish Educational and Charitable Association, St. Louis; he also taught at the school of social economics, Washington University (1907-10), and received the LL.B. degree from that university in 1910. After two years as executive director of the Federation of Jewish Charities, Brooklyn, Seman became (1913), general director of the Jewish People's Institute of Chicago which, under his direction, grew to be one of the most important factors in the life of that city's Jewish masses.

Seman served also as director and secretary of the Chicago Council of Social Agencies and as president of the Boys Workers Association of Chicago. He gave of his effort to state and national adult education councils as well as to the National Youth Administration. In 1931 he served on President Herbert Hoover's Committee on Child Health and Protection. In the same year he was president of the National Conference of Jewish Social Service, and in the following year vice-president of the National Conference of Social Work. Having been instrumental in the founding of the Chicago Recreation Commission, he became its chairman in 1934. He was a member of the executive commission of the Jewish Welfare Board and of its Army and Navy Committee, and president of the National Association of Jewish Community Center Workers. He was also the representative of this association on the selection committee of the department of social institutions of the *Universal Jewish Encyclopedia.*

Seman lectured at the Hebrew Theological College, Chicago, and at the Garrett Biblical Institute of Northwestern University. He contributed to many periodicals, including

Dress and Figures of Semites at the height of Assyrian culture

Religious Education, American Citizen and *Social Science*. In 1932 the Liberal Church of America conferred upon him the honorary Ph.D. degree. In 1942 he was awarded the forty years' service medal by the Boys' Clubs of America.

Among his published books were: *Jewish Community Life* (1924); *Program of a Jewish Community Center* (1926); *Problem of the Leisure Hour* (1927); *Training for Leadership* (1928); *Social Orientation* (1930); *Community Culture in an Era of Depression* (1932).

SEMEL, BERNARD, merchant and communal worker, b. Bolechow, Galicia, 1878. He was educated at a Gymnasium and a Yeshiva in his native country which he left at the age of twelve to come to the United States.

Early in life he divided his time between work in commerce which eventually resulted in his becoming an important cotton merchant, his yearning for a solid education which made him pursue university evening courses at New York, and his desire to be of service to the masses of Jewish immigrants who found themselves in a new world, uprooted and disoriented.

From early manhood on Semel was an active Zionist and in 1909 was appointed a member of the executive committee of the Zionist Organization of America. In an effort to serve the group of Jews who came from his native East Austria, he was comptroller (1904) and president (1906 to 1913) of the Federation of Galician and Bucovinian Jews of America. Semel wholeheartedly associated himself with the Kehilla movement which to him meant a more articulate Jewish life and the salvaging on a new continent of the best Jewish tradition. In 1914 he founded, together with Judah L. Magnes, the Yiddish daily newspaper *Der Tog* (The Day), which was still appearing in 1943.

Semel's main interest in life, around which were gathered all his other activities, was Jewish education. In the lifelong endeavor which he gave to this cause he was actuated not only by an idealistic urge to perpetuate the Jewish way of life, but also by the conviction that, in order to be good Americans, the Jewish masses would have to be good Jews. Semel, one of the organizers of the Jewish Education Association in 1918, became its honorary secretary and a member of the board and secretary of the Jewish Education Committee.

Active in many other important Jewish communal endeavors, Semel was a member of the executive committee of the Jewish Welfare Board; a trustee of the Federation for the Support of Jewish Philanthropic Societies and of the Society for the Advancement of Judaism. He was a member of the American Jewish Committee and of the Joint Distribution Committee in addition to membership in more than a hundred charitable and religious organizations. Among civic activities his appointment by Mayor John Purroy Mitchel as a member of the committee on unemployment (1917) and his services as an arbitrator in the garment industry were notable.

His articles on Jewish education appeared in various Jewish publications.

SEMICHAH, *see* LAYING ON OF HANDS; ORDINATION.

SÉMINAIRE ISRAÉLITE, rabbinical seminary, later École Rabbinique de France. It evolved from the Yeshiva founded in 1704 by Abraham Schwab at Metz. This Yeshiva functioned regularly up to 1793 but during the Reign of Terror it was closed. It was reopened in 1819 as a Talmud Torah and in 1829 it was elevated into a modern rabbinical school, the first of its kind in the Western world. In 1859 the seminary was transferred to Paris where a Talmud Torah, also known as Minor Seminary, had been founded in 1852. This was directed successively by Isaac Trénel, Zadoc Kahn, Lazare Wogue and others. In 1873 it was joined to the major seminary and, though retaining its own organization, was placed under the same directorship. In 1860, the seminary was placed under the supervision of the Central Consistory of France.

Its directors were: Lion-Mayer Lambert (1829-37), Mayer Lazard (1837-56), Isaac Trénel (1856-90), Joseph Lehmann (1890-1917) and Jules Bauer (1919-31). Maurice Liber directed the Séminaire Israélite until 1940 when it was closed as a result of the occupation of Paris by the German Army. Among its teachers were Isidore Loeb, Lazare Wogue, Hartwig Derenbourg and Israel Lévi. Prior to its being closed down in 1940, the teaching staff included S. Back (Talmud), George Vajda (Judéo-Arabic literature) and Julien Weil.

The seminary was maintained by the Jewish community of France; for several decades it was also subsidized by the state. In 1892 a teachers' training class was established and a class of Hazanim in 1899. During the first century of its existence, a total of 259 students were enrolled.

SEMITES, a term derived from Shem, the son of Noah and reputed ancestor (*Gen.* 10) of the Hebrews, Arameans and Arabs, and applied since the middle of the 18th cent. to the peoples who speak the related group of tongues known as the "Semitic languages." The list of the nations in that chapter of *Genesis* is based not so much on a linguistic or ethnological basis, as on geographic and political conditions; thus the Canaanites, who certainly spoke a Semitic language, are placed among the Hamites. Most of these so-called Semitic peoples appear to have spread out from a

common ancestral home, which most scholars place in Arabia.

However, there is much uncertainty about the elements composing the Semitic peoples, as well as the relationship of the language they spoke to the Hamitic languages on the one hand and the Indogermanic group of languages on the other; there are evidences of kinship in the early forms of Semitic, Hamitic and Indogermanic languages, as well as of intermixture of various groups of peoples.

In the 19th cent., when the discovery was made of the family of Indogermanic languages stretching all the way from Sanskrit in India to the extreme west of Europe, the fallacy arose that there was an Indogermanic race, personified as Aryans. This in turn was contrasted to the so-called Semitic race. The tall, blond, dolichocephalic Aryans were contrasted to the short, dark, brachycephalic Semites; the latter were regarded as the antithesis of the ideal spiritual and moral "Aryan" character. Various authors represented the Semite as the product of his wilderness origin: empty-headed, uncreative, unmetaphysical, materialistic, cruel and impatient. Scientific criticism rejects these pretended racial types of Aryan and Semite. There is abundant proof that there is no such thing as a pure Aryan or Semite type, that common speech is far from denoting common race and that there are blond Semites as well as brunette Aryans. Max Müller, himself a former advocate of the Aryan theory, later remarked that it was as absurd to speak of an Aryan race or Aryan blood as to speak of "a dolichocephalic vocabulary or a brachycephalic grammar."

Despite these limitations of the concept "Semite" by scholars to the field of philology, it has been retained in a racial sense by the apostles of chauvinistic race theories, and particularly by anti-Jewish writers. Actually, the Jews of the present day are a mixed race, considerably different in ancestry from their original "Semite" forebears.

SEMITIC LANGUAGES AND LITERATURE.

The term Semitic languages is given to a number of related tongues spoken in ancient times in an area reaching from Babylonia in the northeast to Ethiopia in the southwest; some of these have subsequently been borne, through the influence of Jews and Moslems, into many parts of the world. These languages possess similar root-forms, and are characterized by special ways of inflection and sentence construction that set them apart from other groups of tongues, such as the Indogermanic and the Mongolian. For convenience, Semitic languages are divided into two main groups, the North Semitic and the South Semitic. The North Semitic group includes the following: the Babylonian-Assyrian speech; the Canaanite dialects (Hebrew, Moabite, Phoenician, Punic; Aramaic, including the dialect of the Sendjirli inscriptions (8th cent. B.C.E.), Biblical Aramaic, the language of the Targums, Samaritan, Nabatean, Palmyrene, Syriac, the Aramaic of the Talmud, and Mandean. The South Semitic group includes: Arabic, with its numerous dialects; the language of the South Arabian inscriptions; Minean; early Ethiopic, from which the present-day language of Ethiopia is derived.

All these Semitic languages make use of a verb stem consisting of three consonants, with two main tenses to the verb, and changes in meaning resulting from changes in the vowels attached to the consonants. These features were recognized as far back as 1000 C.E., long before the discovery of the connection between the Indogermanic languages. Semitic languages are inflexional, that is, their words are composed of roots and additions that affect the meaning; these additions may be suffixes, prefixes or even infixes (insertions within the root itself). A characteristic feature of Semitic languages is that the consonants remain relatively fixed and that the vowels change freely to indicate a change in meaning. The amount of inflexion varies; it is naturally the greatest in the more primitive members of the group. Arabic has best preserved the oldest forms of the Semitic speech and has the richest vocabulary; it is therefore best adapted as a basis for a comparative grammar of Semitic languages.

A. The North Semitic Languages. 1. Hebrew. Hebrew is the best-known of the Canaanite dialects because it has been used as a language by the Jewish people for thousands of years and possesses an extensive literature. Research has established the fact that the neighbors of the Jews spoke dialects which were very close to Hebrew. This may be seen from the language of the Moabite Stone, which is practically the same as Hebrew. A still more emphatic proof is contained in the Tell el Amarna letters (15th and 14th centuries B.C.E.) which, although written in Babylonian, contain numerous expressions in the contemporary language of Canaan, all of which are practically the same as Hebrew. It is safe to assume that a dialect very close to Hebrew was spoken in Canaan even before the conquest of that country by the Israelites.

The oldest passages in the Bible go back to the 2nd millennium B.C.E. One of the most important of these is the Song of Deborah (*Judges* 5), composed immediately after the battle which it commemorates (about 1250-1200 B.C.E.). The Siloam Inscription and seals and gems with Jewish names also furnish specimens of the Hebrew of the times. The Hebrew language of the Bible attained its highest form in the speeches of the prophets, the teachings of the wisdom literature, and in the psalms.

The destruction of Jerusalem by Nebuchadrezzar (586 B.C.E.) had a damaging effect upon the Hebrew language. Despite the efforts of Nehemiah and the later Soferim, it was more and more replaced by Aramaic. After the conquest of the Persian Empire by Alexander the Great (4th cent. B.C.E.), Greek began to be spoken in the Near East and was adopted by many Jews as their language. Thus Hebrew ceased to be a vernacular and instead became a language for religion and study. Although *Sirach,* written about 200 B.C.E., is composed in a pure Hebrew, it is evident that Hebrew had completely died out as a spoken language by the time of the Maccabees (165 B.C.E. on).

The Hebrew used in the houses of study has been preserved in the Mishnah and the Talmud. Despite a certain artificiality of expression and certain borrowings from Aramaic, it contains genuine ancient Hebrew elements which are not found in the Bible. Up to the end of the 19th cent. Hebrew, aside from being the language of Jewish scholarship, philosophy, liturgy and poetry, acted as a bond to connect the widely scattered Jewish people. In modern times Hebrew has been revived as a vernacular and has become the language of most of the Jews who have settled in Palestine.

2. Aramaic. Nothing is definitely known about the original home of Aramaic, a language closely related to Hebrew. In course of time it became widespread; it was first the vernacular of Syria, then of Palestine, and in the 1st cent. C.E. it was spoken in Mesopotamia.

The oldest records of Aramaic are inscriptions found on seals and gems and legal pieces. Inscriptions have been found in northern Syria that go back to the 8th cent. B.C.E. In the Persian period (6th to 4th centuries B.C.E.) coins

of governors and vassal princes of the provinces west of the Euphrates bear Aramaic inscriptions. A proof of the spread of Aramaic as a spoken language is the fact that it is the language of the papyri written by the Jewish military colonies at Assuan and Elephantine at the end of the 5th cent. B.C.E. Old Aramaic inscriptions have been found at the oasis of Teima, in Arabia, some of which apparently come from the pre-Persian period. The Aramaic portions of the Bible have preserved the language as it was spoken by the Jews of Palestine. This Biblical Aramaic is closely related to both Palmyrene and Nabatean.

The adoption of Aramaic as a vernacular on the part of the Jews in Palestine brought about the compilation of the Targums, the Aramaic translations and interpretations of the Scriptures; however, the final redaction of the Targums took place in Babylonia. That form of Aramaic which was spoken in Galilee appears in a number of works, such as the so-called Jerusalem Targums, some Midrash compilations, and the Palestinian Talmud. The Eastern Aramaic of the Babylonian Talmud is the dialect that was spoken in Babylonian in the 3rd to 6th centuries C.E. The earliest Christians and apostles undoubtedly spoke Aramaic. Later on the Aramaic Christians of the countries near Palestine adopted the Aramaic spoken at Edessa, in western Mesopotamia; but since the word "Aramean" had come to mean "heathen" to both Jews and Christians, they called their language Syriac. This language produced a considerable literature in the 3rd to 7th centuries C.E., including an important translation of the Bible, the Peshitta.

The advances of the Arabs in the 7th cent. brought to an end the rule of Aramaic, which had lasted for more than a thousand years. Nevertheless it was still in use at the end of the Middle Ages as the language of the *Zohar,* the chief work of Cabala, and in other works of that mystic philosophy, although its form was artificial and its vocabulary limited.

Other dialects of Aramaic include the Samaritan, in which there is a translation of the Pentateuch, and the language of the Mandeans, a sect which combined paganism and Christianity, a tongue which showed many marks of similarity to the language of the Babylonian Talmud. An Aramaic dialect which, however, has been much influenced by Arabic is spoken in Malula and two other villages of the Anti-Lebanon near Damascus. Aramaic dialects, indirectly related to Syriac, are spoken today in the mountains of Tur Abdin, east and south of Mosul and on the western shore of Urmia lake.

3. Babylonian-Assyrian. The Babylonians and Assyrians spoke the same language, in which there were minor dialect variations. It was in use long before Aramaic, and goes back at least as far as the 5th to 4th millennia B.C.E. It is only in the latter part of the 19th and in the 20th cent. that it has been so studied by scholars that it has acquired a great importance for the knowledge of Semitic languages. Babylonian-Assyrian is rather closer to Hebrew than to Aramaic. It is not written in an alphabet, like these two branches, but in a writing of its own, the cuneiform, a complicated system of syllables and ideographs which, nevertheless, was used not only in Mesopotamia but also by the Persian kings and even as late as the Greek period (after the 4th cent. B.C.E.).

An extensive literature in this language has been excavated and deciphered. The most important parts of it are the penitential psalms, the letters which deal with both public and private affairs, the historical narratives and the legends, some of which give additional details to Biblical narratives or deal with material similar to them. The best-known work of this literature is the legal code of Hammurabi, which furnishes a picture of Babylonian law in ancient times long before Jewish law arose, and which undoubtedly exerted an influence upon the development of the latter. Babylonian was the dominant language of the entire Near East about 1500 B.C.E.

B. The South Semitic Languages. 1. Arabic. The term Arabic covers a wide variety of dialects spoken over the wide stretch of the Arabian peninsula. It is customary to make a distinction between northern and southern Arabic dialect groups. The oldest native inscriptions in the language come from the pre-Christian era. The dialect spoken by the Bedouins and city-dwellers in Arabia proper is regarded as the standard form of Arabic. During the pre-Islamic period it produced a poetry that was noted for its ability to depict in small compass and its strictness in meter and rhyme. This Arabic became a world language because it was the language of the Koran, which the conquests of the Mohammedans carried into many countries in Asia, Africa and the Iberian Peninsula.

The contact with foreign cultures brought many new valuable elements into Arab civilization. These became still stronger under the rule of the Abbasid caliphs (750-1258) and gave an impulse to comparative study and scholarship. In course of time the Arabs made important contributions to geography, historical study, philosophy, philology, medicine, mathematics, physics and astronomy. The chief historical study was the assembling of reports about the life of Mohammed and the victorious campaigns of early Islam.

Authorities endeavored to establish a sound chain of tradition all the way back to the "companions" of the prophet. The chief writer in the field of dogmatics was Ghazali, whose works, which were much studied by Jews, embraced the entire field of philosophy, ethics, mysticism, law and dogmatic theology. Arabic literature of the 19th cent. was much influenced by European thinking. In modern times scholars are endeavoring to make the most important works of Arabic literature accessible by means of new editions and translations. Arabic is the only Semitic language to be widely spoken in modern times, and is the vernacular of many Jews of the Orient.

2. South Arabic. Long before the time of Mohammed the Sabeans had developed an independent culture in the southwestern plateau of Arabia. Their inscriptions (often improperly called Himyaritic, after a people that lived within the territories of the Sabeans) date from pre-Christian times to the 6th cent. C.E. Their interpretation is attended with difficulties, which are partly due to the fact that the greater part of the inscriptions are devoted to peculiar religious expressions or architectural terms. This Sabean culture finally disappeared as a result of the wars of that region with the Ethiopians.

3. Ethiopic (Geez). Still another Semitic tongue was spoken in Ethiopia at a very early period. Its oldest monuments are royal inscriptions. Its script apparently did not develop gradually, but was artificially formed from the Sabean alphabet. Christian missionaries brought the Bible to the Abyssinians and wrote many theological writings in the language. When the so-called Solomonic dynasty arose in the 13th cent., Amharic became the language of the court, while Geez remained the language of the church and of literature. Today a number of dialects are spoken which represent modern forms of Geez. Amharic, although a dominant language used by Falashas and Ethiopians, has never become a literary language.

The relationship of the Semitic languages to other groups is still a moot question. It is noteworthy that ancient Egyptian had some relationships to Semitic languages, as did some of the languages of northern Africa. Hebrew terms, through the Bible, have become loan-words in all European languages, while Arabic expressions, through Islam, have spread through southern Asia as far as the Philippines, and south through Africa. pp. 187-92; Wright, *Comparative Grammar of the Semitic Languages* (1890); Zimmern, *Vergleichende Grammatik der semitischen Sprachen* (1898); there are also a number of grammars on the individual languages mentioned; *see also* under ARAMAIC; HEBREW LANGUAGE.

SEMKOVSKY, SEMEN IULEVICH, journalist, historian and philosopher, b. Russia, 1882. His original family name was Bronshtein. In 1901 he was a member of the "Iskra" social democratic group. Later he associated himself with the Mensheviks. Failure of the 1905 revolution induced him to identify himself with the so-called "liquidators," who turned away from revolutionary underground work and advocated a legal struggle for reforms. Semkovsky played a role in the Second International and contributed to the European social democratic press. In the 1917 revolution he was a member of the Central Committee of the Mensheviks, but in 1920 he broke away from that group and submitted to the victorious Bolshevik doctrine.

Semkovsky then taught in various Ukrainian universities, where he conducted historical and philosophical research. He was the author of a series of works on the philosophy of Marxism, the national question and other topics.

SEMON, SIR FELIX, laryngologist, b. Danzig, 1849; d. London, 1921. He studied medicine at Heidelberg, Berlin, Vienna, Paris and London, and became one of the leading specialists in diseases of the throat. During the Franco-Prussian War (1870-71) he served as a volunteer with the Prussian Guard. In 1874 he went to London, and after some years on the staff of the Hospital for Throat Diseases in Golden Square, and later as head of the throat department of St. Thomas Hospital, where he quickly gained a wide reputation, he was appointed laryngologist to the National Hospital for the paralyzed and epileptic. There, in association with Sir Victor Horsley, he conducted valuable researches in his field. He was one of the founders of the Laryngological Society (later merged in the Royal Society of Medicine), acting as its president (1894-96).

The German Emperor William II, in 1894, conferred on him the title of royal Prussian professor of medicine. Queen Victoria of England knighted him (1897), and in 1901 he was appointed physician extraordinary to King Edward VII. Besides publication of a selection of his more important writings, he edited the *International Journal of Laryngology and Rhinology,* which he founded in 1884.

Lit.: Semon, Henry C., *The Autobiography of Sir Felix Semon* (1926).

SEMON, RICHARD WOLFGANG, physician, b. Berlin, 1859; d. Munich, Germany, 1919. He was a brilliant physiologist, working extensively in the field of comparative morphology and experimental and practical biology. His work necessitated trips to Africa, Australia and the Malay Peninsula for the purpose of gathering information.

His major work was *Die Mneme als erhaltendes Prinzip im Wechsel des organischen Geschehens* (Leipzig, 1904; 3rd ed., 1911; English trans., Bella Duffy, *Mnemic Psychology,* London, 1923). This work is considered important as a contribution to the study of heredity and racial biology. Others of his works were *In the Australian Bush and the Coast of the Coral Sea* (New York, 1899) and *Das Problem der Vererbung erworbener Eigenschaften* (Leipzig, 1912).

SENATOR, DAVID WERNER, social welfare worker, b. Berlin, 1896. During the first World War he served in the German army (lieutenant of artillery) and subsequently he received the Ph.D. degree after writing a thesis on *The Conditions of Land Tenure and Ownership of the Jewish Settlements in Palestine.* In 1920 he assumed a leading position in the Arbeiterfürsorgeamt der jüdischen Organisationen Deutschlands (the workers' welfare office of the Jewish organizations in Germany) where he obtained experience in social work among Eastern European Jews. The following year Senator became a member of the staff of the Joint Distribution Committee, and from 1925 to 1930 he served as general secretary at the European headquarters of the J. D. C., participating in constructive relief (for example, the cooperative societies) and traveling extensively through Eastern Europe. He visited Palestine for the first time in 1924, the United States in 1929.

Hermann Senator

In 1935 he became a member of the Executive of the Jewish Agency for Palestine; the following year he was appointed head of the Jewish Agency's Immigration Department. Elected to the office of administrator of the Hebrew University in Jerusalem in 1937, he was still holding this position in 1943.

SENATOR, HERMANN, physician, b. Gnesen, Posen, Germany, 1834; d. Berlin, 1911. In 1873 he became assistant professor and in 1899 professor with the title of Geheimer Medizinalrat. After Ludwig Traube's death, Senator became director of the third medical clinic of the Charité, Berlin, and in 1907 he was elected chairman of the Berlin Medical Association. He was regarded as one of the greatest authorities on internal medicine in his day. His writings deal mostly with disturbances of the respiratory organs and their effects upon metabolism, and with the pancreas and kidney trouble. Senator was for fifteen years a representative of the Orthodox wing on the council of the Jewish community of Berlin.

Senator's published works include: *Untersuchungen über den fieberhaften Prozess und seine Behandlung* (1873); *Die Krankheiten des Bewegungsapparates* (1875); "Diabetes mellitus und insipidus" (in Ziemssen's *Handbuch der speziellen Pathologie,* 1879); *Die Albuminurie im gesunden und kranken Zustande* (1882); "Die Erkrankungen der Nieren" (in Nothnagel's *Handbuch der speziellen Pathologie und Therapie,* 1896).

Lit.: Hirsch, *Biographisches Lexikon der hervorragendsten Ärzte;* Pagel, *Biographisches Lexikon hervorragender Ärzte.*

SENDER, TONI, deputy, b. Biebrich-on-Rhine, Germany, 1888. She studied economics and entered the field of politics. From 1919 until the assumption of power by Hitler (1933) she was a member of the German Reichstag, first elected on the Communist,

then on the Social Democratic ticket. She was also for four years a member of the city council of Frankfort. As deputy in the German parliament she sponsored a great deal of social legislation and was a champion of the better understanding between the nations and of free trade. Sender edited the Social Democratic papers, *Volksrecht,* Frankfort, and *Frauenwelt* (Berlin), and a magazine of the union of metal workers. She played a vital role in the Verein für Frauenstimmrecht (League of Women Voters).

Upon Hitler's assumption of power she left Germany and in 1936 she emigrated to the United States where she was still living in 1943, engaged in lecturing and writing political articles. She was one of the sponsors of the anti-Fascist Association of Free Germans in the United States. Sender published *The Autobiogrphy of a Rebel* (1939).

SENIOR, MAX, business man and philanthropist, b. Cincinnati, 1862; d. Cincinnati, 1939. He was educated in the Cincinnati high schools and for two years attended the University of Cincinnati; thereafter he entered business. He was a pioneer in the United States in the movement for the federation of Jewish social agencies, a form of communal organization which to a large extent served as a model for the modern community chests. In 1896, he was chiefly responsible for the establishment of the United Jewish Charities of Cincinnati; later he became its president. In 1899, he was chosen as the first president of the National Conference of Jewish Charities, which he was instrumental in calling.

During the first World War, Senior and Boris D. Bogen went to Holland as representatives of the Joint Distribution Committee. There they established, through the Dutch Jews, the connections necessary for the distribution of American relief funds in German-occupied Poland and other distressed areas.

Among the philanthropic and civic causes to which Senior dedicated himself were the Juvenile Court Air Association of Cincinnati, the Cleveland Jewish Orphan Asylum, and the Shoemaker Clinic for the Promotion of Negro Health and Welfare (Cincinnati) of which he was for a time the head. He was also president of the Model Homes Co. (one of the first organizations to make a practical attempt at low cost housing) and of the Citizens Mortgage Loan Co., a company which made chattel mortgage loans on fair terms to necessitous borrowers. Senior served also as a member of the Ohio State Tuberculosis Commission.

Lit.: American Israelite, vol. 84 (1938) 49-52.

SENNACHERIB, *see* ASSYRIA.

SEPHARDIM (also Spaniols, Spagnioli), Jews of Spanish descent, a term applied especially to the descendants of the exiles and refugees from Spain and Portugal.

Large-scale migration of Spanish Jews commenced with the massacres and persecutions of 1391, which were followed by forcible mass conversions in 1412 to 1415. Spanish Jews in large numbers were then compelled to flee for safety to neighboring states in North Africa. The total expulsion of Spanish Jewry in 1492, followed by parallel action in Portugal in 1497, caused an overflow of Jewish migration into all parts of the Ottoman Empire (including North Africa and Asia Minor) and also Italy and Provence. The exiles were joined later by numerous Marrano families who escaped from the terrors of the Inquisition. These found their way to Holland, England and subsequently to North and South America. The Levantine and Balkan countries received their Sephardic settlements when they were part of the Ottoman Empire. Sephardic communities also established themselves in the mercantile centers of Germany, Denmark, Austria and Hungary. Outstanding centers of Sephardic influence were Constantinople, Adrianople and Salonika, in the Turkish Empire proper; Jerusalem and Safed, in Palestine; Cairo, in Egypt; and Venice, Ancona, Amsterdam, Bordeaux and London, in Western Europe.

With so extensive a geographical and political distribution, it was only natural that the character of the cultural, economic and social life of the Sephardic Jews developed great heterogeneity. Nevertheless, there were certain common traits of language, religious custom and general demeanor which unified the widely scattered Sephardic elements. In all parts of the world they retained tenaciously their own Spanish (or Portuguese) idiom, Ladino, as the language of speech and as a literary medium, secondary to Hebrew. Unlike Yiddish, Ladino is a close replica of the native language, in this case Castilian. Throughout their wanderings, the Spanish Jews and their descendants never lost their consciousness of aristocracy or a sense of intellectual and spiritual superiority. The sufferings of the exile and the tragic experiences of the Marranos did not break their spirit. On the contrary, they felt ennobled by their martyrdom for the sanctification of the Name.

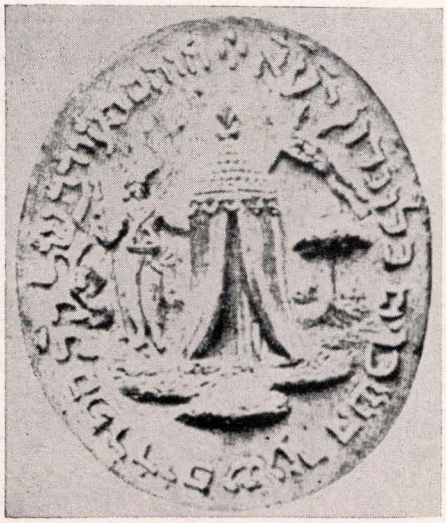
Wherever they settled, they insisted upon retaining their own local customs and religious traditions, which often differed from the practices of the local Jewish communities. They insisted upon the right to found their own congregations and communal organizations. This complicated the structure of the Kahal organization and seriously interfered with its normal functioning. It not only created religious confusion but hampered the practical work of tax assessment, created friction in the operation of the Jewish courts and caused unnecessary duplication in the organization of the charities. The native communities naturally resented the attitude of the newcomers and opposed the process of disintegration, but ultimately they succumbed to the influence of the newer elements of the population so that the communities became predominantly Sephardic.

This triumph of Sephardic Jewry was in great measure due to an unprecedented revival of Jewish learning among the descendants of the Spanish exiles. Under the rabbinate of David ibn Abi Zimri, Samuel de Medina, Jacob Berab, Levi ibn Habib and Joseph Caro, great academies arose in Cairo, Salonika, Jerusalem and Safed, the like of which Spain itself had not known for fully a century before the tragedy of the Expulsion. Among the exiles and their descendants were also men of affairs, who continued the proud traditions of their forebears in Spain: statesmen and financiers, physicians and scientists, administrators in government, industry and commerce. They played an important role in the economic expansion of the Turkish Empire, upon which its military powers and conquest were based. They introduced the printing-press into Turkey, as well as the manufacture of various implements of war. Don Joseph Nasi, duke of Naxos, and his aunt, Gracia Mendesia, "the heart of her people," were romantic figures of this period.

It was not in the Orient, however, that the Sephardim were destined to wield the most enduring influence. For with the general decadence that attacked the Ottoman Empire after it reached its peak in the 16th cent., Jewish life, too, declined precipitately. The Messianic mirage of the Sabbatian movement was both a symptom and the cause of intellectual obscurantism and spiritual decay. In contrast to this progressive deterioration, Sephardic Judaism in the West grew in strength and vigor.

The communities which had established themselves in Holland, Italy and Southern France were increasing numerically through the accretion of Marrano families that were steadily escaping from the Iberian Peninsula. These were as a rule important families were international connections in finance and commerce. As their forebears had contributed heavily to the financing of Columbus' expeditions, so they now invested in the colonial enterprises of the Dutch in South and North America. Their weight as shareholders in the Dutch West India Company secured the legal status of the Jewish settlers in New Amsterdam (New York).

More distinctive than their wealth was their cultivation of science, literature and philosophy. The genius of Baruch Spinoza was rooted in Spanish Jewish thought. The contribution of Sephardim to Spanish literature was considerable. In Amsterdam they established poetical academies according to Spanish models. The best-known of these were the Academia de los Sitibundos and the Academia de los Floridos. Tenacious of their traditions, the Sephardim also preserved tales of folklore, songs and melodies of medieval Spain, which otherwise would have been lost.



Highly characteristic of Spanish tradition was their devotion to the practice of medicine and their occupation with the affairs of state. Among the Sephardim in the East as well as the West were many celebrated physicians. The career of Amatus Lusitanus was typical of many of his confrères. As to political station, from Isaac Abravanel to Benjamin Disraeli, Sephardic Jews occupied the highest positions of honor and trust in the public service of their respective countries.

Their social prestige and intense self-consciousness caused the Sephardim to keep aloof socially from their fellow Jews of German or Polish origin or from intermarrying with them. This was equally true among the early Jewish settlers in America as in the older communities of Amsterdam, London and Bordeaux. As a result, although the Sephardic synagogue ritual was thereby kept intact, the Sephardic population dwindled in size, and with it followed an inevitable decline of leadership. It was only with the advance of the 19th cent. that through the double process of assimilation and nationalism the social barriers were broken down, leading in the Western countries to the gradual absorption of the Sephardim by the more numerous Jews of Ashkenazic origin.

At the time of the invasion of Holland by the Nazis in 1940, Amsterdam was the chief center of Western Sephardic Judaism. Influential, too, were the Sephardic congregations in London and Paris. In the United States, the Shearith Israel Congregation in New York (dating from the Jewish settlement in New Amsterdam in 1654) and the Mikveh Israel Congregation in Philadelphia (established in 1740) consistently maintained the Sephardic ritual notwithstanding the fact that the membership of these congregations has been largely or predominantly Ashkenazic. In Montreal, Canada, the Sephardic Congregation (Shearith Israel) has had a precarious existence.

Following upon the Turkish revolution in 1908, there was a considerable migration of Sephardic Jews from the Levant, the Balkans and Morocco to the United States. Some of these immigrants settled in Los Angeles, where they established three congregations, which are loosely federated and consist of about 600 families. Some settled in Atlanta, Ga. But the bulk of the new Sephardic immigration was, in 1943, to be found in New York city. Socially and culturally these newcomers represent a lower stratum than the earlier immigration from Eastern Europe. Under the leadership of Shearith Israel Congregation in New York, supported by Mikveh Israel Congregation in Philadelphia, the Union of Sephardic Congregations was established in 1929 with a view to stabilizing the new Sephardic communities in accordance with the standards of the older American Sephardic congregations.

SEPPHORIS, city in the district of Galilee, in Palestine, often called Diocaesarea by Greek and Roman authors from the time of Antoninus Pius on. It was once one of the largest and most strongly fortified cities in Galilee. In 20th cent. Palestine Saffuriye, a village north of Nazareth, was on its site. Its Hebrew name, Tzippore or Tzipporin (birds), is probably an allusion to its being perched at the top of a mountain (like a bird).

Sepphoris is first mentioned by Josephus, who asserts that Ptolemy Lathyrus tried unsuccessfully to conquer the city under Alexander Jannaeus. The Herodians devoted themselves to the development of Sepphoris. In the course of the disorders attending the death of Herod (4 B.C.E.) Sepphoris was destroyed by the Roman general Varus, and its citizens were sold as slaves. However, it was rebuilt by Herod Antipas into a magnificent city. The Roman procurator Felix (52-60) made it the capital of Galilee and granted it autonomy. Many prominent priestly families lived there.

At the beginning of the great uprising against Rome (66), Josephus fortified the town, yet it surrendered to the Romans without resistance. Refugees from

Jerusalem and Judea, among them many priests, settled in Sepphoris, which was presented to Agrippa II, after the year 70. Another wave of refugees appears to have reached there from Judea following the Hadrianic persecutions (after 135). Sepphoris was one of the five administrative units of the country organized by the Romans. For about one hundred years after the middle of the 2nd cent. Sepphoris was a center of Jewish learning. About the end of the 2nd cent. the Beth Din (court) was transferred thither, remaining there for fifty years.

Johanan bar Nappaha and Judah Hanasi taught in Sepphoris, and the patriarch Judah ben Ilai spent the last seventeen years of his life there, the high altitude of the city being beneficial to his health.

Sepphoris is often mentioned in rabbinic literature and is referred to as an important commercial mart (*B.B.* 75). It also played a part in the New Testament, but until the middle of the 4th cent. it was mainly a Jewish city. In 351 the governor, Gallus, punished a local uprising of the Jews by destroying Sepphoris, among other Galilean cities. An Aramaic and a Greek inscription, as well as a mosaic from a Sepphoris synagogue (there were eighteen of them in Talmudic times), are preserved, also the ruins of a church, for from the 5th cent. on Sepphoris became a Christian town.

SEPTUAGINT (Latin, "seventy"; abbreviation, LXX), traditional name of the oldest Greek translation of the Bible. The name goes back to the legend which is found in the *Letter of Aristeas* and in Talmudic literature (*Meg.* 9a; *Soferim* 1:8) that seventy or seventy-two elders, six from each of the twelve tribes (*Soferim* 1:7, on the other hand, says that there were only five), were summoned by Ptolemy Philadelphus (about 250 B.C.E.) to translate the Torah into Greek. The *Letter of Aristeas* says simply that they met together and translated it; but later legend expanded this to a miracle: the seventy translators were each put into separate cells, yet every one of them produced the same translation—a proof of divine inspiration.

The story is unhistorical, as was proved by the earliest Jewish critic, Azariah dei Rossi, but it shows the importance in which this translation was held. As a matter of fact, it arose gradually out of the needs of the Jewish community in Alexandria. The Jews there had lost their knowledge of Hebrew, and required a translation for their general knowledge, for reading in the synagogues (the same cause brought about the Aramaic translations of the Bible, the Targums, in Palestine and Babylonia) and for propaganda for monotheism among the non-Jews. Some scholars still think, however, that the king played some part in the work; perhaps he had the translation written down or compiled in order to place it in his library. Others think that the Jews themselves made the translation in order to show the Greeks that they, too, had a literature. It is possible that all these reasons played a part in bringing about the translation.

The entire Bible was not translated at once. The earliest part to be rendered into Greek was the Torah, and the work of translating the remainder of the Bible was not completed until about 100 B.C.E. Hence the translation itself is far from uniform. Scholars have detected different hands even in individual books of the Bible. The capacities of the translators in both Hebrew and Greek were very different. Some knew both Hebrew and Greek; some knew Hebrew, but wrote only stumblingly in Greek; others showed the crassest ignorance of the Hebrew language. Furthermore, the Septuagint text itself is not uniform; there are many variants in the manuscripts, and these variants show a difference in knowledge of either Hebrew or Greek or both. The range of skill in translation extends from a mere senseless attempt to give a literal meaning to Hebrew expressions to highly artistic paraphrase.

The language of the Septuagint is not a Jewish dialect, but the ordinary language spoken at that time, the Hellenistic *koine,* or common dialect, such as is found in hundreds of papyri documents of the period from 300 B.C.E. on. Naturally there are Hebraisms, due to the fact that many of the translators were anxious to preserve the Hebrew idiom. This appears especially in the construction of the sentences, the presence of the absolute infinite (rendered as a participle) for emphasis, and the absence of the characteristic Greek particles. The translators were probably of Palestinian origin, since all the early reports (the *Letter of Aristeas,* the appendix to *Esther,* and the preface to *Sirach*) agree on this, and it is probable that the Palestinian Jews were more familiar with Greek than the Jews of Alexandria were with Hebrew. However, the translation itself was undoubtedly made in Egypt.

The translation of the Torah was probably made about 300 B.C.E., and that of the other books followed in due course. The preface to *Sirach* (about 130 B.C.E.) declares that by that time the Torah, the Prophets and other books had already been rendered into Greek. Naturally, some of the books of the Hagiographa were not translated until later than this period, as they were not in existence, or not in their final form, at this time.

The importance of the Septuagint at the time when it was made can not be set too highly. It was the first translation of a great literary work and thus marked a distinct literary and cultural advance on the part of humanity. Despite its defects it soon received recognition, for it had no predecessors and no aids (thus the Hebrew original had no final letters and no division into verses) and the two languages were as far apart as the entire culture and thought of the two peoples. The Septuagint made the Bible accessible to both the Jews and the heathens of all countries, since Greek was at that time the language of all educated persons; it preserved the Bible for posterity at a time when it might have perished with the fall of Jerusalem. It was with right that the Jews of Alexandria made an annual feast in its honor (Philo, *Life of Moses* 2:7) and adorned its origin with legends. The Talmud applied to it the blessing of Noah (*Gen.* 9:27) in the interpretation: "The beauty of Japheth shall dwell in the tents of Shem" (*Meg.* 9b); the Apocrypha were also included in this work, now regarded as sacred.

In the next centuries the Septuagint contributed to the spread of Christianity. The writers of the New Testament cite the Bible frequently in the form of the Septuagint, and some of them apparently knew it only in that version; the Septuagint had also prepared the heathen world to accept monotheism. For these reasons Christianity made the Septuagint its own Bible, and even the Vulgate was unable to replace it. However, in these centuries the church inserted into the Septuagint its own teachings, which were different from those of Judaism. As a result, the Jews later rejected it and said that the Septuagint translation had been as sinful as the making of the golden calf, and that both had been completed on the same day, the 8th of Tebeth; that immediately after, darkness had come upon the world for three days, and that the day was to be observed as a fast (*Soferim*

1:7). It is possible that the rejection of the Septuagint was to some extent due to a nationalism which regarded as profanation a translation of the Scriptures into a heathen tongue.

The deviations of the Septuagint from the current Hebrew text of the Bible led to three new translations of the Bible into Greek in the 2nd and 3rd centuries C.E.: the unduly literal rendering of Aquila; the revision of the Septuagint by Theodotion (which came to replace the Septuagint version in *Daniel* and a part of *Job*); and the well styled version of Symmachus. Origen made a comparison of these four translations, the Hebrew original and a Greek transliteration of the Hebrew, in his *Hexapla*. Unfortunately, he attempted to "correct" the Septuagint on the basis of the other versions and the Hebrew, and this, together with the mistakes of the copyists, brought about still more confusion in the text of the Septuagint.

About 300 three recensions of the Septuagint were made by Christian teachers, each of which was regarded as authoritative in a certain area: that of Eusebius and Pamphilus in Palestine, that of Lucian in Syria, and that of Hesychius in Egypt. Of these, at least the first half of the Lucian recension was published by Lagarde in 1883. This recension had revised a form of the Septuagint which had been used by Josephus, Theodotion and the earliest Latin translation (the Itala); it is termed by scholars the Ur-Lucian. It is notable for doublets, that is, a Hebrew word is twice rendered, once by the original Septuagint and once by a Lucianic rendering.

There are numerous manuscripts and editions of the Septuagint. The most important are three which are written in capitals (uncials) and come from the 4th and 5th centuries, making them about 500 years older than the oldest Hebrew manuscript of the Bible. These three are: Codex Vaticanus 1209, at Rome (generally known as B); Codex Sinaiticus, at Leningrad (designated as ℵ); Codex Alexandrinus, in London (called A). In addition, there are about a dozen other uncial codices of the first millennium and hundreds of manuscripts written in small letters (minuscules).

From the 16th cent. on there have been various printings of these different manuscripts either singly or collectively for purposes of comparison. Scholars of the past three centuries have been engaged in the tremendous work of examining all these manuscripts and their variants and from them trying to arrive at the original Septuagint text. In addition to the texts themselves, there are such aids in this work as ancient lectionaries and citations on the part of the church fathers (though often unexact), and the daughter translations made from the Septuagint into Latin, Syriac, Armenian, Ethiopic and Gothic.

The Septuagint is of considerable importance for the scholarship of the present day. Its transliterations of Hebrew names are of great value in determining the proper pronunciation of Hebrew in ancient times, although due attention must be paid to the fact that the Hebrew names have been Grecized, as well as to possible errors in transcription. Still more important is the testimony of the Septuagint to an underlying text which differs in many respects from the present Masoretic text of the Hebrew Bible. Since the Septuagint was made in the years 300-100 B.C.E. and the Masoretic text can not be established earlier than the 2nd cent. C.E. it is an important early witness.

Both the order and the number of the books are different in the Septuagint version from the order and number found in the Hebrew Bible. The Septuagint includes the Apocrypha and arranges the books according to subject matter, as follows: 1. Historical Books. The Torah, *Joshua, Judges, Ruth,* four books of *Reigns* (equivalent to the two books of *Samuel* and the two books of *Kings*), *Chronicles,* two books of *Ezra* (*I Esdras, Ezra* and *Nehemiah*), *Tobit, Judith* and *Esther*. 2. Poetical Books. *Job, Psalms, Proverbs, Ecclesiastes, Song of Songs, Wisdom of Solomon* and *Sirach*. 3. Prophetical Books. The Minor Prophets, *Isaiah, Jeremiah, Baruch, Lamentations, Epistle of Jeremiah, Ezekiel, Daniel,* the books of *Maccabees* and the *Prayer of Manasseh*. *Esther* and *Daniel* include the apocryphal additions.

Next there are differences within the books themselves. The most notable of these is in *Ex.* 35 to 40, which describes the making of the tabernacle. The Septuagint has an entirely different order, which seems to represent an earlier arrangement of the material than is to be found in the Hebrew. *Jer.* 46 to 51, the prophecies against the nations, is placed in the middle of the book in the Septuagint version, and in a different order of chapters. The numbering of *Psalms* is different throughout the greater part of the book, as the Septuagint combines *Ps.* 9 and 10 and makes two psalms of *Ps.* 147.

Finally, the Septuagint points to a Hebrew text which in many details differed from that of the Hebrew. Thus it often has expanded introductions to the *Psalms* (as in *Ps.* 27 and 91); it correctly preserves traditions about the psalm to be sung for certain weekdays in its introductions to *Ps.* 24, 48, 93 and 94. An apocryphal psalm, said to have been composed by David after he defeated Goliath, is added at the end of the Psalter. There is an appendix to *Job* and an additional introductory verse to *Lamentations*. There are thousands of other variations in the text which have been carefully studied by Bible scholars. Many of these point to a text which is superior to that of the present Hebrew Bible, and such emendations as they suggest have been accepted by scholars.

The testimony of the Septuagint on these points, however, must be cautiously examined before being accepted. The translators, it is very clear, did not feel bound to render the Hebrew literally; it was their task to give a version of the Bible that agreed with their own religious views or which served the purpose of bringing out the stories and the teachings. In hundreds of cases they added words in order to make the somewhat terse Hebrew more intelligible; thus in the Torah they often mention the actual subject in cases where the Hebrew was content with "he" or "it" in a narrative. They altered passages which were regarded as improper or not suitable to be rendered literally.

In fact, *Meg.* 9ab records thirteen or fourteen passages which the translators are said to have deliberately changed, including the rendering of *'arnebeth,* "hare," by a word (*dasupous*) that would not be the same as that of the Ptolemaic dynasty (*lagos*); some of these verses still show changes in the rendition, although not exactly the same as those given by the Talmud (as in *Gen.* 18:12). In other cases they made changes deliberately so as to square the text with the Halachah of their time. The most striking example of this is in *Lev.* 23:15, dealing with the counting of the fifty days from Passover to Shabuoth; here the Septuagint renders the Hebrew *mimohorath hashabbath,* "from the day after the Sabbath," as "from the day after the festival," in accordance with the Pharisaic opinion. In some cases the Septuagint seems to guess at the meaning of the Hebrew and to choose a rendering from similarity of sound to another word; this has led some scholars to hold that the translation was made, not from a Hebrew text, but from a transliteration of it in Greek letters.

Despite the caution with which the Septuagint testimony is to be used, it furnishes many valuable aids to recovering a better Hebrew text. Thus it is undoubtedly right in placing the words "and it was so" at the end of *Gen.* 1:6 instead of at the end of verse 7. It supplies the missing speech of Cain in *Gen.* 4:8, and furnishes a lucid and understandable text for *I Sam.* 14:41. In numerous places of the Bible it helps to remove obscurities, to detect glosses and omissions, and to interpret difficult passages. Thus the Septuagint is of such great aid to Bible scholars that it is an indispensable source for the study of the Bible.

SERAPHIM, a class of angels, distinct from the cherubim and Ofannim. They are mentioned once in the Bible (*Isa.* 6), where they are described as having six wings, attending the throne of God, and serving as His messengers. This representation seems to be borrowed from Assyrian and Babylonian models. The exact meaning of the word is uncertain. It may mean "fiery ones," with fire as the element of their being; some think, however, that it is connected with serpents.

SERKES, JOEL BEN SAMUEL SEGAL JAFFE (called also BaH), rabbi, b. Lublin, Poland, 1561; d. Cracow, Poland, 1640. He was rabbi at Pruzanij, Lublin, Brest-Litovsk and finally Cracow, where he remained until his death. He wrote a lengthy commentary on the *Arba Turim* of Jacob ben Asher under the title of *Bayith Hadash* (Cracow, 1631-40), after which he was called BaH.

His other writings include responsa, *Sheeloth Uteshuboth Bayith Hadash Hahadashoth* (Koretz, 1785), which contain valuable material on the history of the Jews in Poland, Lithuania and Russia.

SERKIN, RUDOLPH, pianist, b. Eger, Czechoslovakia, 1903. He was discovered by the eminent Viennese pianist, Alfred Grünfeld, who arranged for him to come to Vienna to study with Richard Robert. Serkin made his concert debut when he was twelve years old, appearing as soloist with the Vienna Symphony Orchestra. A tour followed, despite the success of which he soon deserted concert work to return to more intensive study. When he emerged from this retirement he proved that he had grown into one of the greatest of living artists. A style of extraordinary sensitivity, a musical perception that was profound, a thorough command of the keyboard, a poetic temperament were the qualities which placed him in the front ranks of concert pianists. Following his many concerts in Europe, Serkin made his American debut in 1933 and was at once hailed as a master of his instrument. In the United States he gave many recitals, appeared frequently as soloist with the major orchestras, and upon three different occasions offered in New York city monumental cycles of piano concertos.

Serkin also appeared frequently in sonata recitals with his father-in-law, Adolph Busch, and in chamber music concerts with the Busch Quartet. In 1941 he became a member of the faculty of the Curtis Institute of Music.

SERMON, an address usually given for religious edification during divine services. Sermons are classified into those given for special occasions, such as weddings, funerals, patriotic or other observances, and those which are delivered during the regular congregational worship. The latter class are of two kinds: analytic and synthetic. In the former the preacher begins with a verse from the Scriptures, explaining and applying it to the conditions of his own time. In the latter, the preacher takes up a theme of present-day significance, bases his conclusions on his own reasoning, and uses quotations from the Scriptures only by way of confirmation.

As a regular religious institution the sermon is a unique creation of Judaism which was adopted by other religions. Although the prophets were the earliest preachers in Israel, their addresses cannot be termed true sermons, because they were original pronouncements not based on known truth as embodied in texts.

The sermon developed out of the vernacular expositions of the Scriptures inaugurated in the time of Ezra. These expositions were made necessary by the need of applying scriptural truth to current conditions, and thus in the 1st cent. C.E. the Jews who spoke Aramaic or Greek were already familiar with the sermon. Philo speaks of learned discourses by the Essenes in the synagogue. In fact, *IV Maccabees,* while not actually delivered as such, may be regarded as the first complete sermon preserved.

At first the sermon was a combination of edifica-

tion and instruction in the Law. In later ages, the sermon became mostly Haggadic in character, ordinarily closing with the "comforting assurance" of the "redemption of Zion."

In the period of the Amoraim (3rd to 5th centuries) sermons were given in the houses of prayer or of study, on Sabbaths, festivals and fast days; the especial occasion for sermons was the "Kallah Sabbath" before a festival. The Talmud mentions addresses which were given on other special occasions, as on the arrival or departure of famous guest teachers. Sermons of a Haggadic nature were more frequent than those of Halachic content (known as *pirka*), although on occasion there was a mixture of both elements. The *hesped,* or funeral oration, was delivered by the funeral orator, or *sapdana.* It began with an exposition of the Scriptures, followed by words of lamentation and consolation, and closed with a doxology and a blessing pronounced upon all those present.

At first the sermon followed immediately the Haftarah, but in later times it was given at other places in the service, and sometimes apart from it. The introduction (*pethihtah*) opened with a passage from the Scriptures which was taken from a book outside the Pentateuch. At a later period this introduction often consisted of a law, introduced by: "Let our masters teach us." A short formula, such as: "Therefore the Torah says," introduced the main portion of the sermon, which either interpreted the portion of the Torah for that day verse by verse, or selected an individual verse and gave several Haggadic interpretations. The conclusion was formed by a doxology, a prayer, or a reference to the redemption. On the three Sabbaths before and the seven after the Ninth of Ab, the sermon usually expounded the weekly Haftarah.

The preacher did not always confine himself to a single theme. In the main he sought to inculcate such virtues as steadfastness in suffering and fidelity to the Law.

In the first period of its growth (3rd to 5th centuries) the sermon occupied a prominent position in Jewish worship, and was also used advantageously by Christian teachers to inspire their followers. In the Saboraic and Gaonic periods (6th to 10th centuries) there was little change in the form of the sermon, or the *derashah,* as it was then called. It spread also to the Occident; and where it assumed artistic form, even Christians came to listen. The height of preaching during that period was probably reached by the author of *Tanna Debe Eliyahu* (about 10th cent.).

In the 13th cent. and after, a new type of sermon developed. This was based on a text, and laid emphasis on unity of thought, proper method and artistic style. The background for this type of sermon had been prepared by the philosophical interpretations of Scriptures introduced by Maimonides. The best examples of this style of preaching are seen in the *Malmad Hatalmidim* of Jacob Anatolio, the writings of Nahmanides and Nissim Gerondi, the *Kad Hakemah* of Bahya ben Asher, and in the *Akedath Yitzhak* of Isaac Arama.

As a rule the rabbi was the preacher; he received a special honorarium and his ability in speaking was considered at the time of his election. His sermons were delivered from the Almemar; he spoke on Sabbaths and holidays, and also on many other occasions. In Spain the content of the sermon was generally philosophical; elsewhere it was both Cabalistic and ethical, dealing with religious law and interpreting the Scriptures.

While the sermon was eclipsed somewhat in such countries as Germany and Poland by persecution and economic discrimination, nevertheless preachers in large Jewish communities pursued their tasks with vigor and left us volumes of sermons which even today give inspiration to those who read them. Notable among these are Ephraim Luntshitz and Jonathan Eybeschütz.

In the 19th cent. the sermon received fresh impetus and widest acceptance. Its popularity was such that not even the prohibition of the Prussian government against sermons in the vernacular (1823) could halt its progress. The modern sermon however is more like a secular address, even though it uses a text and scriptural citations. The modern sermon deals, in the main, with such themes as faith and piety, ethical virtue, love of humanity and devotion to Jewish ideals, in such a manner as to demonstrate how Jewish thought handed down from the past applies to the problems of the present.

SERMON ON THE MOUNT, a speech of Jesus reported in *Matt.* 5 to 7 and generally considered to be the expression of the essential teachings of Jesus and, in particular, of the Christian concept of true religion and morality. According to *Matt.* 5:1, this discourse was delivered on a mountain; according to *Luke* 6:17, it was delivered in a field. The speech as reported by *Luke* 6:20-49 is briefer and its content differs in many essentials. The additional material found in *Matthew,* such as the Lord's Prayer and the sayings concerning anxiety and the amassing of wealth, are, in *Luke,* referred to other occasions and are found in different passages (*Luke* 11:1-4; 12:22-34). The Sermon on the Mount is therefore to be regarded as composed by the writers of the Gospels; some of its individual groups of sayings were taken from the so-called "Logia," others from oral tradition.

In many passages there are echoes of the position of the Christian community in the 2nd cent. C.E. The author of the gospel had in mind the persecutions of the Christians of that time by the heathens and a separation from Judaism. The consideration of this fact and of the essential differences in content between *Luke* and *Matthew* exclude the possibility that the traditions are completely reliable. It can not be conclusively decided which sayings are to be attributed to Jesus and in what form they were uttered by him. This is particularly true of *Matt.* 5:10-12, on persecutions; *Matt.* 7:21-23, on false prophets; perhaps also *Matt.* 5:21-48, where the literal and spiritual meanings of the words of Scriptures are discussed.

As regards the relation of the Sermon on the Mount to the teachings of Judaism: there are exact parallels in Talmudic and Midrashic literature to the views found in the Sermon on the Mount on adultery, oaths, the giving of alms, prayer, fasting, faith in God, the gathering of treasures, anxiety, and the serving of God alone.

Literal or almost literal parallels are found in this same Jewish literature to the views on forgiveness (*Matt.* 6:14-15; cf. *Yoma* 87b), on judging one's fellow men and on a mote in the eye of one's fellow man (*Matt.* 7:2-5; cf. *Sotah* 1:7; *Arach.* 18b), also to the comprehensive principle "all things therefore whatsoever ye would that men should do unto you, even so do ye also unto them: for this is the law and the prophets" (*Matt.* 7:12; see *Sab.* 31a); the same is true of the Lord's Prayer (*Matt.* 6:9-14). The nine beatitudes (*Matt.* 5:3-11) are in accordance with the teachings of Judaism, especially those about the poor and the suffering, with whom Jesus especially concerned himself. On the other hand, the views on the extreme formulation of the prohibi-

tion of murder (*Matt.* 5:21-22) and on that of divorce (*Matt.* 5:31-32) and on the morality of non-resistance (*Matt.* 5:39-41) which are advanced there have no parallels in Biblical or in Talmudic Judaism. These views can be explained as due to the belief of Jesus and his followers that the kingdom of heaven was near at hand and that if one understood and carried out the written word to the utmost degree and also bore the greatest possible burden of undeserved suffering, one would be all the more worthy of the splendors of the imminent kingdom of heaven. From this same point of view must be considered also the formulation of the command in *Matt.* 5:44 to "love your enemies, bless them that curse you, do good to them that hate you, and pray for them that despitefully use you."

The Bible contains various statements concerning one's enemies and the recommendation not to requite them as they deserve or to rejoice at their discomfiture (cf. *Prov.* 24:17, 29; 25:21; *Ex.* 23:4-5). Similarly, a prayer preserved in the Talmud and which for many centuries has formed the conclusion of the main daily prayer or Eighteen Benedictions reads: "Unto those that curse me may my soul be dumb, and may my soul be unto all as the dust (i.e. humble)." *Sanh.* 48b-49a says: "Rather belong to those who are cursed than to those who curse."

A similar passage in *B.M.* 93a states: "Be always rather one of the persecuted than one of the persecutors." *Sab.* 88b says: "Our rabbis taught: Those who would rather be oppressed than oppress others, who listen to words of insult and do not insult in return, who do everything for the love of God and rejoice in the sufferings they must endure, of them it is written (*Judges* 5:31): But they that love him be as the sun when he goeth forth in his might." Beruriah, the wife of Meir, expressed the opinion that one should not pray for the removal of sinners, but rather for the destruction of sin (*Ber.* 10a). According to *R.H.* 17a, "God forgives the sins of him who forgives an injury committed against himself." The expression "eye for eye, tooth for tooth" (*Lev.* 24:19-20), is to be understood not in the moral sense, but rather as an expression of legal justice; in Talmudic jurisprudence the penalty is understood as not to be taken literally, but in the sense of a repayment for the injury; the prevalent moral view is that given above. Moreover, the saying reported in *Matt.* 5:43: "Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy," has no definite object and constitutes one of the strangest passages in the New Testament and one that is still unexplained.

SERMONS, COMPULSORY. During the Middle Ages, beginning with the latter part of the 13th and the first part of the 14th centuries, the practice became common of compelling Jews to listen to conversionist sermons whose object was to persuade Jews to accept Christianity. Such sermons were usual especially in Italy (Rome), in parts of France, and in the lands controlled by the Holy Roman Empire (Germany, Austria, Bohemia). In Rome the practice was continued until far into the 19th cent., being finally abolished by the liberal Pope Pius IX shortly after his accession to the papacy in 1846.

Through the support of the apostate Pablo Christiani, Pope Clement IV (1265-68), urged the king of Aragon to force Jews to listen to conversionist sermons. Pope Nicholas III (1277-80), in 1278, declared the necessity of preaching such sermons to the Jews. In England, in 1280, King Edward I, at the prior's request, granted the Dominican friars permission to preach sermons to the Jews in an attempt to convert them to Christianity. Edward even went so far as to issue a warning to all the Jews that they listen to these sermons in patience, and silently, without attempting to contradict or to blaspheme.

Beginning with the year 1311, Pope Clement V and subsequent popes became interested in the establishment of chairs of Hebrew at the various universities in Italy, in order to prepare preachers who were to deliver such compulsory sermons to the Jews.

In France, in March, 1368, King Charles V (1364-80), in answer to a complaint that a number of Jewish converts to Christianity had joined forces with the Christian clergy to compel the Jews to go to the churches in order to listen to Christian sermons, issued an order forbidding such procedure.

In 1375 Pope Gregory XI (1370-78) wrote to King Henry of Castile a letter in which he urged him to compel the Jews to listen to such sermons delivered by apostates from Judaism. Gregory XI himself granted to a converted Jew permission to preach conversionist sermons in the Avignon (Southern France) synagogue.

The bull issued on May 11, 1415, by Pope Benedict XIII (1394-1423) contained, in its eleven anti-Jewish clauses, one requiring all Jews to listen to compulsory sermons on Christianity three times in the course of the year: during Advent (the period including the four Sundays before Christmas), at the Easter season, and during the summer. It was provided that the entire bull (*Etsi doctoribus gentium*) was to be read aloud at the conclusion of each of these three annual sermons, and that each year their contents were to consist of proof to the Jews that the real Messiah had already come in the person of Jesus, that the Jews were guilty of the commission of abominations and heresies, all of which were contained in their Talmud, and had proved unfaithful to God, and, finally, that the destruction of the First Temple and of Jerusalem and the scattering of the Jews had been foretold by Jesus. However, the provisions of this entire bull were never actively enforced, since Benedict XIII was deposed from his office shortly thereafter by the Council of Constance.

In Sicily, on February 5, 1428, during the reign of Alfonso V, a decree ordered all Jews throughout the island to listen to sermons intended to convert them to Christianity. This decree was apparently obeyed after a fashion by the Jews of Sicily until January 1, 1430, when it was repealed by the king as the result of the appeal made by a large deputation of Jews sent to the king at Naples and the payment of a considerable amount of money.

At its session of September 7, 1434, the Church Council of Basel, revising and amplifying the various restrictions against the Jews, added a new one which required all Jews to listen to conversionist sermons; if they refused to attend willingly, force was to be employed.

By statute of May 19, 1454, the liberal King René of Provence, in southern France, freed the Jews from the requirement of attending compulsory services in the churches. For their protection he ordered that all such sermons were to be rigidly supervised.

In 1535, under Pope Paul III (1534-49), according to the terms of an extremely favorable charter granted to the Jews of Ancona and of the Italian province of Romagna, it was ordered that all conversionist sermons were to be prohibited. However, Pope Gregory XIII (1572-85) played an important role in the restaging and regulation of compulsory sermons. In September, 1577, he issued an order compelling the Jews of Rome to listen to such sermons, which were to be preached mostly by converted Jews. These sermons were to be delivered in the Jewish houses of worship on all Sabbaths of the year and on all the Jewish holy days; their subjects were to be the doctrines and beliefs of Christianity, and they were to be preached in Hebrew whenever possible. About the same time a school was established for the training of such preachers of sermons to the Jews. In September, 1584, by the terms of the bull *Sancta mater ecclesia,* Gregory XIII ordered the Jews of Rome to see to it that every week at least one-third of the total number of members of the Jewish community there, i.e. one hundred men and fifty women above the age of twelve, were in attendance at all

compulsory sermons. As a result of these and other strenuous conversionist activities, and because of fear or of social and economic advantage, many Jews of Rome submitted to conversion, and a large number of other Jews left the city.

Pope Sixtus V (1585-90), in his bull *Christiana pietas,* issued in October, 1586, reduced the number of compulsory sermons which Jews were to attend in the course of the year from fifty-two (weekly) to six.

Clement VIII (1592-1605), in a bull of February, 1593, reordered the compulsory attendance of Jews at conversionist sermons every week, since the practice had seemingly lapsed into non-observance or was carried out with great laxity during the papacy of his predecessor, Sixtus V. On instructions from Clement VIII, the papal vicar published detailed regulations as to the number of Jews of Rome who had to attend such sermons and as regards the seating arrangements to be employed at such sessions.

In 1627 the Holy Roman Emperor Ferdinand II (1619-37) introduced into the city of Prague, in Bohemia, the compulory attendance of all adult Jews and Jewesses at Christian sermons to be delivered on every Sabbath. Some three years later, in February, 1630, Ferdinand II, deeply interested in the conversion of the Jews to Christianity, issued a decree, patterned after the compulsory sermon decree of Pope Gregory XIII, in which he ordered that the Jews of Vienna were to be forced to listen to conversionist sermons on every Sabbath morning between the hour of eight and nine; at least one hundred Jewish men and boys and one hundred Jewish women and girls were to be present at each service, including forty young Jewish persons of both sexes between the age of fifteen and twenty. Summonses to attend these sermons were to be issued weekly to different persons of the Jewish community of Vienna, and those who failed to appear were to be fined one thaler for each such absence, and increased sums for each subsequent failure to attend. All such sums collected as fines were to be used solely for the support of Jews already converted to Christianity. Jews who talked or fell asleep during these sermons were to be punished. However, these regulations of Ferdinand II were not rigorously enforced, partly because the court councillors accepted gifts of money for the purpose of relaxing them, and partly because both they and the Jesuits preferred to oppress the Protestants and to enhance their own authority rather than gain Jewish converts.

In 1627 the clergy of Hamburg, Germany, demanded the appointment of a Christian to act as "rabbi" to the Jews and to preach Christian sermons to them either in their own synagogues or in other places.

The German professor Johann Christoph Wagenseil (1633-1705), kindly disposed toward the Jews and their defender from a number of false accusations, expressed it as his opinion that in his days only a bare handful of Jews used to listen to the preachments of a Dominican monk at Rome on certain Sabbaths of the year whereon they were compelled to attend such sermons. Wagenseil declared that often the Jews made fun of the preacher, or ignored his words, and he urged that the Protestant princes evolve and enforce a better method of winning the Jews over to Christianity if they actually desired to do so.

Innocent XI, who was pope from 1676 to 1689, again stringently enforced the requirement of the Jews' attendance at weekly conversionist sermons. However, he gave orders that in their sermons the preachers were not to offend their auditors' sensibilities.

Pope Pius VI (1775-99) again revived the compulsory sermon, and it was once again renewed under Pope Leo XII (1823-29). However, the liberal and progressive Pope Pius IX (1846-78), early in his reign, while still friendly disposed toward the Jews, totally abolished the requirement of their attendance at compulsory sermons.

The eminent English poet Robert Browning, in his poem "Holy Cross Day" (1855), represents one of the Jews compelled to listen to an annual sermon preached by a Christian at Rome as delivering an ironical monologue on the subject.

ABRAHAM I. SHINEDLING.

SERPENT (Hebrew, *nahash*). Serpents are very frequent in Palestine, and are mentioned often in the Bible, no less than ten different terms being used for them besides the generic term. The serpent is used by poet and prophet as the symbol of evil, cunning and enmity. It was a frequent object of reverence with the peoples of antiquity, and shrines were often attended by a large serpent which acted as guardian and patron deity. Serpents accompanied the Greek god of healing, Aesculapius, and have survived in medical insignia from this early association. The Egyptians had a special serpent cult. In many negro tribes the serpent is so sacred that no one may harm it and human sacrifices are made to it. Excavations of the sanctuary at Gezer revealed a six-inch serpent image of bronze, which may have been used as an amulet.

The serpent appears prominently in the Bible in the story of the Garden of Eden (*Gen.* 3), where he is described as the cleverest of all the animals, who tempts the first human pair to disobedience and is punished by being condemned to crawl on his belly and eat dust. This account seems to have been derived from an older story which added a sequel of how the serpent ate the fruit of the tree of life and became immortal; for ancient peoples believed that the serpent renewed its life by shedding its skin. In Babylonian seals the serpent is represented in connection with the tree of life, perhaps as the giver of life. In later apocalyptic literature this serpent of the Garden of Eden became identified with Satan.

Another story of the serpent is that of the serpents that were sent to bite the disobedient Israelites in the wilderness, and how Moses healed them by means of a brazen serpent set up on a pole (*Num.* 21), an example of homeopathic magic. It was probably the same image which Hezekiah destroyed in the course of his reformation of the cult (*II Kings* 18:4). Since serpents prefer a damp environment, it was but natural that certain springs should be named after them: there was a serpent's stone near the En-rogel spring (*I Kings* 1:9), and Nehemiah speaks of a dragon's (that is, serpent's) well (*Neh.* 2:13); both were near Jerusalem. The serpent was used as a symbol for Dan (*Gen.* 49:17) and of the nations (*Isa.* 27:1); it was later worshipped by the sect of Ophites.

The Talmud notes the miracle that no one was ever injured by a serpent in the Temple (*Aboth* 5:8). Uncovered vessels containing liquids might be poisoned by serpents, hence drinking their contents was forbidden (*Git.* 69b). Biologists have noted more than thirty specimens of serpent in Palestine, some of which are poisonous.

SERVANT, *see* LABOR; SLAVERY.

SERVANT OF GOD (*'ebed 'adonai,* or, according to Bible scholars, Ebed Yahveh), terms used frequently in the Bible to indicate either one who is utterly devoted to God or who is especially close to Him and therefore entrusted with His missions. It is accordingly applied to such characters as the Patriarchs, Moses, Joshua, David, the prophets and Isaiah. When used in the plural it frequently takes the sense of those of the people who are religious. It is applied even to non-Jews such as Nebuchadrezzar (*Jer.* 25:9) who unconsciously carry out the will of God. In certain passages in *Jeremiah* (such as 30:10) and *Ezekiel* (such as 28:25) God speaks of all Israel as His servant.

The most extensive use of the expression occurs in Deutero-Isaiah (*Isa.* 40 to 55). In this the servant is described as being blind, unwilling to understand the commandment of God, despised and plundered, weak and powerless, yet destined to bring light to all the nations and to become their teacher; eventually these nations will acknowledge that he was punished for their transgressions and let himself be killed for their

sins (chaps. 41, 42, 44, 49, 52, 53). If *Isa.* 40 to 55 is a unit, then the "servant of God" is undoubtedly the people of Israel, since the identification is made several times (41:8; 44:1; 49:3); in this case the expressions that seem to refer to an individual, such as being called from the womb (49:1) or led to the slaughter and buried (53:7-9), are merely figurative.

Some scholars, however, hold that the prophet speaks both generally of Israel as a servant and of an individual servant whom he has in mind, such as Jeremiah or the prophet of the time. Accordingly, the passages which speak of Israel refer to the servant as blind and unwilling, while those which refer to the individual represent him as conscious of his mission and as suffering an undeserved death. Still others regard the so-called "suffering servant cycle" as of a different authorship than the other chapters. The identification of the "servant of God" with Israel is the oldest; the latest identification in point of time was with the suffering Messiah, an idea that was taken over by the Christian church, especially since the thoughts in *Isa.* 53 are close to the doctrine of vicarious atonement.

SETH, third son of Adam and Eve, born to them after the murder of Abel; the name is derived from the fact that God "appointed" (*shath*) another son to replace Abel (*Gen.* 4:25). Bible scholars attribute this narrative, as well as the genealogy of the descendants of Seth in *Gen.* 5, to the Priestly Code (*P*). In *Num.* 24:17, ascribed to older sources, "sons of Seth" are made parallel to Moab.

The rabbis declare that Seth was the first of Adam's children to have the true figure of a man. In apocryphal and pseudepigraphical literature Seth often appears as the relator of or actor in stories about the beginning of human existence.

SETZER, SAMUEL HARRY (Tzvi Hersh), Yiddish and Hebrew writer, b. Novgorod-Volhynsk, the Ukraine, Russia, 1882. He came of an old Hasidic rabbinical family, and in 20th cent. Hebrew and Yiddish literature he was the spiritual heir of his progenitors. At the age of nineteen, while he was head teacher at the modern Talmud Torah in Zhitomir, his first literary work was published in *Hador* (Warsaw). Later a series of studies on Friedrich Nietzsche in the same periodical showed an unusual combination of Jewish and European traditions, and won recognition for Setzer in Warsaw literary circles.

In 1903 Setzer was injured, and barely escaped death, in the Zhitomir pogrom. Moving to Warsaw, he became literary editor of *Hatzefirah,* under Nahum Sokolow, and later editor-in-chief of the Yiddish daily, *Der Telegraf.* At the same time, using various pseudonyms, he wrote for almost all the periodicals of the time. During the eight years that Setzer lived in Warsaw, he completed biographies of Judah Halevi, Abraham ibn Ezra and Maimonides, and a long study, in Yiddish, of Ferdinand Lassalle. He also translated from Hebrew and other languages into Yiddish, and founded (1910) a Hebrew weekly, *Hayarden.*

Setzer came to New York city in 1912, and was editor of *Hatehiyah,* a Hebrew weekly. In 1915 he was stricken with a serious and usually fatal illness which incapacitated him for two years. His recovery, which nevertheless necessitated a disciplined and restricted life, brought him back to his chosen work of interpreting Jewish tradition and history. *Dos Vort,* founded by him in 1921, appeared as a weekly for one year and then as a monthly until 1926.

Among his works published in book form during this period were *Rabbi Israel Baal-Shem Tob* (2 vols., 1919); a book on the origins of Christianity (1922); *Middath Harahamim* (the Quality of Mercy; Yiddish), which was awarded the prize for the best book on Jewish learning in Yiddish (1928); and the wonder tales of Rabbi Nahman ben Simhah of Bratzlav (the Bratzlaver) (1929). Setzer started to issue a new form of *Dos Vort* in 1934, a monthly edition of monographs on historical subjects, mostly written by him. In 1942 the first three volumes of a compilation of these monographs appeared, *Die Vichtigste Momenten in der Yiddisher Geshichte.*

Setzer's work is a continuation of the accomplishments of his forebears. He was a medieval scholar transformed to live in the period of modern Hebrew and Yiddish cultural renaissance. His approach is one of "subjective objectivity." Intuition enables him to perceive a situation which he confirms by the use of objective logic. B. RIVKIN.

SEVASTOPOL, a Russian naval port on the Black Sea. It was founded in 1784 as a fortress at the point where the ancient Greek colony of Chersonesus was formerly located. According to records, Jews first settled here shortly after the Crimea was conquered by the Russians in 1791, during the reign of Catherine II (1765-96); these early settlers were Jews from Galicia.

Early in the 19th cent. the Jews of Sevastopol began setting up workshops and stores and purveying supplies for the local garrison. The 1825 plague seriously affected the Jewish community. As they were just recuperating from this severe blow, an order was issued forbidding Jews residence in Sevastopol except for those in military service. The then military governor of Sevastopol, Admiral Greig, did make attempts to have these anti-Jewish measures cancelled and to gain permission for the Sevastopol Jews to remain living there, but to no avail. In 1842 even the permits for temporary stays in Sevastopol were drastically cut to one month.

When Alexander II came to power in 1855 residence in Sevastopol was opened to certain groups of Jews. In the Crimean War (1853-56) many Jews fought and many fell. In 1864 a monument was put up in the Sevastopol cemetery to their memory, with the inscription: "In memory of the Jewish soldiers who fell for the fatherland in the defense of Sevastopol during the war 1854-1855."

The Sevastopol synagogue was destroyed in the defense of the city, and it was not until 1874 that a new house of prayer was built (for the soldiers). In 1884 a synagogue was built. The lot on which it was to be built had been presented to the Jewish community by Czar Alexander II, but for some reason this land was sold and a new piece of land bought with the money which the sale brought in. (Interestingly enough, later research revealed that this land had formerly belonged to the Sevastopol Jewish community.)

By 1880 the Jewish population of Sevastopol had grown to over 400. These were, for the most part, artisans and petty officials and their families. There were both foreign and Russian Jews in the Sevastopol community. Local Jewish residents started the bread export business, bringing in many families of Jews to help expand these businesses and by 1897 there were 3,930 Jews in Sevastopol out of a population of 57,000. However, in 1907 to 1909 the expulsion of groups of Sevastopol Jews was begun, including men who had participated in the defense of Sevastopol. Their house of prayer was closed.

According to the 1926 census, Sevastopol had 74,700 in-

habitants; in 1935 they numbered 82,000, but by 1939 the population had grown to 111,900 (1939 census), of whom the Jewish population was a minority. Before the outbreak of the war with the German Nazis, on June 22, 1941, Sevastopol served as the Black Sea fleet base. There were important shipbuilding yards here, and a new electric power station.

In November, 1941, the city fell under siege. The Nazis had invaded the Crimea and by November were at the city's gates. But it was not until July, 1942, that the Germans were able to enter Sevastopol, after much loss of men and matériel. The city had been defended not only by the Red Army and the Red Navy but by its whole population—men, women and children fighting the Nazis street by street and house by house. Among the fighters, both civilian and military, were many Jews, men and women. Groups were evacuated as soon as the Crimea was invaded, but many stayed on to fight. And when Sevastopol fell and the city was evacuated, considerable numbers stayed on to join the guerrillas.

SEVENTH HEAVEN. It is clear from passages in the Bible (*Deut.* 10:14; *Ps.* 148:4; *Neh.* 9:6 and others), which speak of the "heaven of heavens," or highest heaven, that the ancient Israelites thought of the superior regions as consisting of a number of divine spheres, one above the other. There are no details about the numbers in the Bible, but the idea must have been a familiar one; for in *II Cor.* 12:2 Paul speaks of a saint who was "caught up to the third heaven," and the pseudepigraphic *Ascension of Isaiah* 6:13 mentions seven heavens, above which is the divine throne. According to this last account, the lowest heaven is visible to man, while the highest heaven is the site of Paradise. *Enoch* (in the Slavonic version) also speaks of seven successive heavens, in the highest of which are the archangels. The term "seventh heaven" has accordingly come to be used in the sense of "supreme bliss."

Later Jewish literature, especially that known as *Hechaloth,* multiplied the number of heavens to seven times seven, or forty-nine.

The Jewish quarter in Seville, Spain

SEVILLE, capital of Andalusia, in Spain, situated on the Guadalquivir river. According to a Jewish legend, the presence of Jews in Seville dates back from the destruction of the Second Temple (70 C.E.). It is, however, safe to say that the Arabs either found Jews already in Seville or brought them thither after they conquered Spain in 711.

The Jewish community of Seville first began to prosper in the later part of the 11th cent., under the rulership of cultured Al-Motamid, at whose court Isaac ben Baruch Albalia served as astrologer. After the disruption caused by the Almohades (1148), the community recovered but slowly. The recapture of the city by the Christians (1248), in which many of the older inhabitants were exiled, was the cause of a complete change. Alfonso X of Castile replaced the expelled Jews with those from his own realm and provided large territories of land for them. He presented the Jewish community with three mosques for divine services, and allocated to them an extensive fortified quarter near the old Moorish palace.

In this important commercial town there began to develop one of the richest and most powerful Jewish communities on the Iberian peninsula. According to Hasdai Crescas, there lived at Seville about six to seven thousand Jewish families, an estimate which, however, may be exaggerated. The influence of the community on the economic life of Spain was considerable. Intellectually, however, the community of Seville could not be compared with the communities of northern Spain.

In 1391 the Seville Jewish community was destroyed entirely. Incited for fourteen years by the speeches of Fernando Martinez, the mob invaded the Jewish quarter in 1391, killed or enslaved the Jews and forced a large number of them into baptism.

For the third time an entirely new community developed in Seville which, owing to favorable political and economic conditions in the 15th cent., again attained a moderate degree of prosperity. Moreover, Seville became the most important center of the Marranos, who secretly remained faithful to Judaism. Seville was thus the first place where, in 1481, the reorganized Inquisition was set up. The Jews were

Tombstone of Solomon ben Abraham found at Seville

banished from the city and from the archduchy in 1463. *See also* SPAIN. FRITZ BAER.

SEVITZKY, FABIEN (original name, Koussevitzky), conductor, b. Vishni-Volotch, Russia, 1893. He was the nephew of the world-famous conductor, Serge Koussevitzky. He entered the St. Petersburg Conservatory on a scholarship, studying with Rimsky-Korsakoff, Liadov and Glazunov. He entered music professionally as a double-bass player, performing in important Russian orchestras, and in 1915 touring the country as virtuoso. In 1922 he went to Poland, where he played in the orchestras of the Warsaw Philharmonic and the Warsaw State Opera.

In 1923 Sevitzky came to the United States, and was engaged by the Philadelphia Orchestra. Two years later he organized a chamber orchestra, which gave concerts throughout the United States. After holding several conductorial posts with opera companies in Pennsylvania, Sevitzky resigned his position with the Philadelphia Orchestra in 1930 to devote himself exclusively to the baton. Between 1930 and 1935 he gave numerous guest concerts in Europe and America. In 1936 he was appointed permanent conductor of the Indianapolis Symphony Orchestra, which he was responsible for developing into one of the most progressive orchestras in the country. Sevitzky directed numerous radio concerts over the three networks.

SÈVRES, TREATY OF, drawn up at the end of the first World War between the Allies and Turkey and signed at Sèvres, near Paris, on August 10, 1920. This treaty, through which Turkey lost control of Syria, Palestine, Mesopotamia and other territories, was, however, never ratified, and was subsequently replaced by the Treaty of Lausanne, Switzerland (1923). The text of the Treaty of Sèvres contained the Balfour Declaration which recognized the "historical connection" of the Jewish people with Palestine.

SEX LAWS AND CUSTOMS. The need of human beings for the companionship of those of the opposite sex is strongly emphasized at the very beginning of the Bible. The story of the creation of woman turns on the idea that "it is not good that the man should be alone" (*Gen.* 2:18) and that woman should be man's helper (*ibid.*). It closes with the idea that as woman is "bone of his bones and flesh of his flesh" (verse 23) "therefore shall a man leave his father and his mother, and shall cleave to his wife and they shall be one flesh" (verse 24).

The narratives of the Bible contain many descriptions of the sex customs of the day, including both normal regulations, and, occasionally, aberrations. Marriage is a practically universal custom; Jeremiah has to be commanded not to take a wife (*Jer.* 16:2), and this commandment is explained as due to the troublous times in which he lived. Incest, prostitution and other abnormal sexual practices are noted, but always in terms of condemnation or scorn; concubinage, however, was permitted, especially if a wife was childless (*Gen.* 16:2; 30:3). Polygamy was regarded as entirely legal, the codes concerning themselves only with seeing that the father did not exercise favoritism (*Deut.* 21:15-17); however, the narratives indicate that monogamy was the general rule.

Among the Jews, as among most oriental peoples, the sexes were segregated. While the Jews had no harems for their wives, married women were expected to avoid the company of other men, as adultery was regarded as the worst of crimes. Similarly, men were to avoid temptations; they were not to look at a woman while she was laundering, with her arms exposed (*Maḳ.* 24a), nor to walk behind a woman (*Ber.* 61a). A man must not permit a woman other than his wife to wash his hands or feet, to make his bed or to wait on his table (*Nid.* 16b). A sage warns against the dangers of too much conversation with women (*Aboth* 1:5). Parents were not to expose themselves in the presence of their older children. Ezra was reported to have introduced the wearing of a garment called *sinnar* (a sort of petticoat or drawers) by women as a matter of chastity (*B.K.* 82a).

Games and merriment between the sexes were discouraged as conducive to promiscuity. A man must not kiss or hug a woman whom he was forbidden by the Law to marry. The prohibition of wearing the clothing of the opposite sex (*Deut.* 22:5) may point to a libidinous ritual in Canaan, to an attempt to enter unnoticed among members of the opposite sex for immoral purposes, or to a form of homosexuality. There is an old sexual taboo in the law requiring that the hand of a woman who, in order to save her husband, takes hold of the aggressor's genitalia, should be cut off (*Deut.* 25:11-12); the Talmud, however, interpreted this to mean that she should pay a fine. The rabbis forbade a man even to talk across the fence with a woman for whom he has a violent desire (*Sanh.* 75a). At the same time, we are told that prominent sages freely expressed their admiration of feminine beauty. When the patriarch Simeon ben Gamaliel (2nd cent. C.E.) saw an exceedingly beautiful Gentile woman while he was standing on the Temple Mount, he exclaimed with ecstasy: "How great are Thy works, O Lord." When Akiba saw the wife of the Roman Tinnius Rufus, he cried: "Alas that such beauty is destined to rot in the earth!" (*A. Z.* 20a).

Sexual Maturity. Up to the age of twelve years and one day a girl is considered a minor (*ḳetannah*); for the next six months she is a maiden (*na'arah*), and afterwards she is considered a mature woman (*bogereth*). However, in order to cease to be a minor a girl must exhibit certain signs (*simmanim*) of puberty: at least two pubic hairs, a fold beneath the breasts when her arms are turned backwards, the darkening of the nipples and their slow rise when depressed, and the softening of the mons veneris. The Talmud notes that girls in the cities develop the pubic signs earlier and attributes this to the fact that they attend public baths, and that girls in the country, because they work grinding grain, have an earlier development of the breasts. With wealthy girls the right breast develops first because their sweaters are attached by a right shoulder strap; with poor girls, it is the left breast, because they carry water pitchers on

their left shoulders and their little brothers on their left arms (*Nid.* 45b-47b; *Yeb.* 12b, 97b; *Yad Hahazakah, Hilchoth Ishuth* 2). If a girl fails to develop these signs by the age of twenty years less thirty days, she is considered sexually subnormal (*'ailonith*).

A male is considered a minor (*katan*) until he reaches the age of thirteen years and one day, and shows two pubic hairs; he then becomes an adult (*gadol*). A natural eunuch is a man who at the age of twenty years less thirty days has deficient hair on his head, no growth of a beard, smooth skin and feminine features.

The Talmud discusses both the hermaphrodite (*'androgynos*), who had organs of both sexes, and the agenosomus (*tumtum*), who had none of either sex (*Bik.* 1:5; *B.B.* 126b). The Bible forbids men with crushed testes or amputated penis (*Deut.* 23:2) "to enter into the assembly of the Lord," that is, to marry an Israelite woman. There was a tradition that in ancient times women bore children at the age of eight (*Sanh.* 69b). A certain Justinia told Judah Hanasi that she had been married at three and had given birth at seven. It was understood, however, that a safe pregnancy takes place only after the age of twelve (*Nid.* 45a). A woman who is married before twenty may bear children until she is sixty; if at twenty, she will be fruitful until forty; if married at forty, she will never conceive (*B.B.* 119b). The Talmud saw the possibility of rupturing the hymen through exercise (*Yer. Keth.* 1:1; *Sab.* 63b). Menstruation begins when the pubic hair appears, and the average interval is thirty days (*Nid.* 9b). It is accompanied by yawning, sneezing, chills, headaches and pelvic pains (*ibid.* 63a). The Talmud goes into great detail in differentiating between the menstrual flow and pathological hemorrhages and discharges (*Yad Hahazakah, Issure Biah* 5 and 6).

Marriage. Marriage was encouraged in order to perpetuate the human race, to direct the sexual craving into moral channels and to increase human happiness. "A man can not live without a woman and a woman without a man" (*Yer. Ber.* 9); "without a wife there is neither gladness nor bliss" (*Yeb.* 62a). Polygamy was forbidden in neither the Bible nor the Talmud, but was not of frequent occurrence; thus none of the rabbinic sages in the 800 years of the Talmud is reported as having more than one wife at a time. According to Ammi, if a man married a second wife without the consent of the first, the latter was entitled to a divorce (*Yeb.* 59a). The possession of more than four wives was specifically prohibited (*ibid.* 44a). In the year 1000 Rabbenu Gershom of Mayence placed polygamy under the ban, and this interdiction was in course of time accepted by all Jews except those in Mohammedan lands. If a man's wife became insane, however, he could take a second wife provided that he received the consent of one hundred rabbis residing in no less than three countries.

Marriage was preceded by betrothal (Erusin, Tenaim). In former times a betrothed woman, though forbidden to cohabit with her betrothed, was considered by the law as a married woman in relation to other men, who would suffer capital punishment for illicit relations with her.

The Talmud preached against marriage for money, improved social status or political connections. "Whoever marries a woman for her money will become the father of unworthy children" (*Kid.* 70a). "When a father marries off his young daughter to an old man, he forces her into prostitution" (*Sanh.* 76a). "One may not marry when one intends to divorce soon after" (*Yeb.* 37b). "Go down a degree and take a wife" (*ibid.* 63a). One should not marry off his daughter when she is a minor, and a man should see his wife before he marries her (*Kid.* 41a). A man is advised to learn about the characters of his prospective wife's brothers, as his sons will resemble them if he marries her. He should not marry a woman of a family stigmatized by leprosy or epilepsy (*Yeb.* 37b). One should not marry a woman whose two first husbands have died prematurely (*Yeb.* 64b). Maimonides, who denies a rational basis to such fears, admits that they affect the happiness of the superstitious.

The commandment to be fruitful and multiply was given to men and not to women, and women are by nature eager to anchor their lives in a marital haven (*Yeb.* 113a). As soon as a man passes his eighteenth birthday he must take to himself a life partner (*Aboth* 5:20); if one passed the age of twenty without being married, he was liable to sin and punishment, unless he devoted himself to the study of the Law (*Kid.* 29b). In Palestine, however, economic conditions were so bad that the Midrash states that men could not marry until they were thirty or forty. A bachelor is sure to fall into temptation; if he does not, particularly if he resides in a large city, God himself proclaims his chastity daily (*Pes.* 113a).

Virginity was highly prized. A virgin received 200 zuz as her Kethubah (marriage portion), as compared to 100 in the case of a widow. Virgins were married on Wednesday, so that if a husband claimed that his wife was not a virgin, he could bring his case next day to the court that met every Thursday (*Keth.* 1:1); upon its decision depended the amount of the wife's Kethubah and her moral status. The bride might claim in self-defense that she had been raped after betrothal, or that her hymen had been ruptured by a blow, or that she belonged to an anemic family, or that he did not consummate the act. If the latter is claimed, the husband must repeat the act under supervision.

Cohabitation. The sages required modesty and reserve even in marital relationships. Love was to be more than mere passion (*Aboth* 5:16). A wife was not to expose her hair to the sight of other men than her husband, lest she arouse their passion; such prevention of exposure was later achieved by shaving off the hair, by wearing a wig, or by both (*Ber.* 24a; *Leb Ibri,* 129). Every word that passes between a man and his wife at the time of conjugal relations will be recited back to him on the Day of Judgment (*Hag.* 5a).

According to Jewish law, cohabitation was a duty owed to the wife by the husband (*Keth.* 61b; *Nid.* 71a). Should a husband take a vow not to cohabit with his wife, he must either have his vow annulled or grant her a divorce with full compensation. If he agrees to maintain his wife, but refuses to cohabit with her because of his dislike for her, she may either obtain a divorce outright or stay and receive an addition to the amount of her Kethubah. The Talmud discusses the frequency of proper marital relations, according to the occupation of the husband. A wife who refuses sexual relations is punished by divorce or by the reduction in the amount of her Kethubah.

Overindulgence in sexual acts was declared to cause podagra and to increase the libido (*Suk.* 52b). If cohabitation is performed in a standing position, convulsions will result, but no impregnation; if while sitting, delirium will appear; if in an unnatural position, diarrhea (*Git.* 70a; *Sanh.* 37b); if on the bare floor, the result will be sickly children (*Keth.* 60b). It is to be avoided during the day, in the same room as other persons, in public places, or when staying overnight in an inn (*Pes.* 112b; *Sab.* 87a; *Keth.* 65a). A husband must not force his attentions on his wife if the latter is unwilling (*Erub.* 100b). Marital relations endanger health if they take place just after returning from a journey, in convalescence (*Aboth de Rabbi Nathan* 41), after venesection, heavy drinking or after returning from the latrine (*Git.* 70a; *Nid.* 17a).

Children. A high value was set upon progeny. One without children may be considered dead (*Ned.* 64b); whoever intentionally avoids having children is committing murder (*Yeb.* 63b). A man fulfils his obligation "to be fruitful and multiply" when he becomes the father of at least one son and one daughter capable in their turn of procreating. If his children died but left grandchildren of both sexes, his obligation was met (*Yeb.* 61b). A man must not marry a woman who is sterile, old or a minor, unless he already has children by another wife. In former times the husband was compelled to divorce his wife after ten years of childless marriage. If the fault is his, she gets her Kethubah; if she is to blame, she does not.

The children pay as follows for the sins of their parents: if they have been conceived during their mother's menstrual impurity, they will be born with skin lesions (*Midrash Lev.* 15); if their father intended at the time of sexual relations to divorce their mother, they will be impertinent and delinquent; the same defects will be found in children conceived as the result of seduction, or within three months after the death of the first husband of the wife.

Sons and Daughters. The world needs both sexes, but happy is the man whose children are males and woe to him who is the father of females (*Pes.* 65a). According to one teacher, a daughter is a perpetual worry to her father: when she is small, he is afraid lest she be seduced; when older, lest she become promiscuous; when mature, lest she be not married; when married, lest she have no children; when old, lest she become a witch (*Sanh.* 100b). It is good for the first child in the family to be a girl, as she can help in rearing the younger children. Hisda said, "I prefer daughters" (*B.B.* 141a). A reputed recipe for having male children was to have the conjugal bed stand between north and south; another statement declares that the child will be a boy if the wife has her orgasm first (*Nid.* 31a).

Illegitimates. If an infant is found in the street, in a protected place, and well covered, showing that his parents have cared for him, it is called a foundling (*'asufi*). Two foundlings may not marry lest they be blood relations (*B.M.* 87a; *Kid.* 73a).

If the mother of the child is known, but not the father, and the mother states that its father is one who could be legally married to her, the child is called *shethuki*. It is admitted neither to inheritance nor to the priesthood (*Kid.* 4:1; *Yeb.* 100b).

A bastard (*mamzer*) is defined as a child born of parents who could not legitimately be married because of consanguinity or other prohibitions, or the offspring of the adultery of a married woman. However, if a wife continues to live with her husband, her children are not to be stigmatized as bastards even though it is known that she is unchaste (*Sotah* 27a). While a bastard may not marry a Jewish woman, he is considered a Jew in every respect, and if he is a scholar he deserves to be respected more than a high priest who is an ignoramus (*Hor.* 13b). A child born of a priest and a woman whom he is forbidden to marry (for example, a divorced woman) is called *halal* ("profaned"; *Kid.* 77a). If a boy, he is unfit for priesthood.

Conduct of Married Women. Among the causes for divorcing a wife are adultery, walking in the street with uncovered hair, relations with her husband while she is menstruous, exposure of her forearms, frivolous conduct with other men, or seclusion with another man or kissing him after her husband has warned her against him. If a wife had been raped, she remained with her husband unless he was of priestly descent.

Illicit Relations. One who has seduced an unmarried girl not older than twelve and a half years and of faultless reputation pays a standard fine of fifty selas, plus compensation for insult and loss of value. One who has raped her pays in addition a compensation for pain suffered, must marry his victim, and may never divorce her, provided that the crime is proved before a court (*Keth.* 3:4-5). Adultery, described as a sexual relationship between a married woman and a man other than her husband, is punished by the death of both parties (*Lev.* 20:10); the mode of execution was strangulation (*Sanh.* 11:1).

The Bible forbids ten types of sexual relationships because of consanguinity (*Lev.* 18 and 20; *Deut.* 23 and 27), and the Talmud expands these by adding twenty-one more. The Karaites extended the prohibitions because of consanguinity much further. There are prohibitions against relations between men (*Lev.* 18:22) and between humans and beasts (verse 23). Onanism was warned against, for Onan, the grandson of Jacob, was killed by God because he practised coitus interruptus (*Gen.* 38:9). The Talmud cautions one who is unmarried not to touch the genitalia in order not to arouse the libido (*Sab.* 108b).

Nocturnal emissions (*keri*) were said to result from voluptuous thoughts the day before (*Keth.* 46a), and to be precipitated by sleeping on one's back (*Ber.* 13b), spicy food and alcohol (*Yoma* 18a). Marital relations are prohibited while the wife is in her menstrual state and for seven days after the cessation of the flow, altogether about twelve days (*Nid.* 31b). After that she takes a ritual bath (*tebilah*) in a specially constructed pool (Mikveh) containing forty seahs of water.

Virility. A man is considered capable of impregnating as long as he can lace and unlace his shoe while standing on one leg (*Hul.* 24b). Mandrakes (*Sanh.* 99b), myrrh, balsamum (*Sab.* 62a) and lewd pictures (*Sanh.* 39b) were said to increase desire and potency. The Talmud enumerates many anatomical maldevelopments, deficiencies and injuries that cause sterility, such as epispadias (*marzev*), atrophy (*shahifuth*), trauma of the special centers in the brain, alcoholism, sterilizing potions, wasps' stings and testicular injury (*Sotah* 26b; 36a; *Hul.* 45b; *Tos. Yeb.* 8:3; *Yeb.* 75b).

SFORNO, OBADIAH BEN JACOB, Bible exegete, Talmudist and physician, b. Cesena, Italy, about 1475; d. Bologna, Italy, about 1550. A descendant of a family that was distinguished for its scholarship, he soon acquired great knowledge in Bible, rabbinics and philosophy. He studied medicine at Rome, where he was highly regarded by Christians; Johann Reuchlin learned Hebrew from him. His commentaries on the Bible show a degree of philological method which is unusual for the time, although Sforno often inclines toward philosophical interpretation.

He wrote commentaries on the Pentateuch (Venice, 1567, and frequently reprinted), *Song of Songs* and *Ecclesiastes* (Venice, 1567; dedicated to Henry II of France), on *Psalms* (Venice, 1586), the commentary *Mishpat Tzedek* on *Job* (Venice, 1689), and others on *Jonah, Habakkuk* and *Zechariah* (published by David ibn Hin in *Likkute Shoshanim,* Amsterdam, 1724). His *Or Ammim,* a philosophic work, attacks Aristotle and Maimonides (Bologna, 1537); he translated the book into Latin and sent it to Henry II. Sforno wrote also a philosophical commentary to *Aboth* which was printed in the Roman Mahzor (Bologna, 1540). Some of his works are extant in manuscript, while certain of his responsa were published in the works of other writers.

SHABBETHAI BEN MEIR HAKOHEN (generally known as SHaCH, from the initials of his principal work), Talmudist, b. Vilna, 1621; d. Holleschau, Moravia, 1662. While he was still very young he became one of the rabbinical assistants at Vilna. He is said to have completed his monumental commentary on *Shulhan Aruch, Yoreh Deah* at the age of twenty-four; it was called *Sifthe Kohen* (Lips of the Priest) and published in 1647. This work earned him a place among the greatest codifiers of his age. In 1648 he fled from the Chmielnicki massacres and became rabbi, first in Dresin and then in Holleschau. There he had an active correspondence with Magister Valentin Vidrich of Leipzig.

He died at a comparatively early age, and most of his writings were published posthumously. They include: *Sifthe Kohen,* a commentary on *Hoshen Mishpat* (Amsterdam, 1667); *Sefer Haaruch,* notes to *Yoreh Deah* (Berlin, 1667); *Nekudoth Hakesef,* criticisms of David Halevi's commentary on *Yoreh Deah* (Frankfort on Oder, 1677); *Tokefo Kohen* (Frankfort on Oder, 1677); *Geburath Anashim,* on *Eben Haezer* 154 (Dessau, 1697). He wrote also a historical chronicle, *Megillath Afah,* and a homiletical exposition of the passage "Kammah Maaloth" in the Passover Haggadah.

SHABBETHAI ZEBI, *see* SABBATAI ZEVI.

SHABUOTH ("weeks"; more accurately, Hag Hashabuoth, Feast of Weeks), a festival celebrated in the month of Sivan; its name is derived from the fact that it was celebrated in Bible times seven weeks after the bringing of a sheaf of barley as an offering on the festival of Passover (*Lev.* 23:15-16). It is denoted in the Bible also by the names *yom habikkurim* ("day of the first-fruits"; *Num.* 28:26) and *hag hakatzir* ("feast of harvest"; *Ex.* 23:16). In Talmudic times it was called Atzereth ("conclusion"; *R.H.* 1:2), because it marked the end of the barley harvest.

The Torah provides that the seven weeks up to Shabuoth be counted "from the morrow after the day of rest" (*mimohorath hashabbath*) of the Passover festival (*Lev.* 23:15). The interpretation of this passage became one of the outstanding points at issue between the Pharisees and the Sadducees. According to the Pharisaic point of view, supported by the Septuagint and later universally accepted in the Talmud, the *shabbath* in question was the first day of Passover; hence Shabuoth would always fall fifty days later, on the 6th of Sivan. The Sadducees, however, and later the Karaites, supported by the Samaritans, took the word to mean literally the Sabbath after the beginning of the Passover festival; thus Shabuoth would always fall on a Sunday and might vary in date from the 7th to the 13th of Sivan, as the provision that Passover could not occur on certain days of the week was not in force in the time of the Second Temple.

A third interpretation of the passage is advanced by the Falashas, who count the seven weeks from the "day of rest" at the end of Passover, the seventh day of the festival. They seem to be following an ancient tradition, for according to *Jubilees* (2nd cent. B.C.E.), Shabuoth is observed on the 15th of Sivan, which would be seven weeks after the last day of Pesach, if a calendar of months consisting of twenty-eight days is presumed. The Peshitta (Syriac translation) renders "day of rest" in *Lev.* 23:11 as "latter day"; the same interpretation was followed by the Zadokite sect of Damascus as late as the 10th cent.

In the Biblical era Shabuoth was an agricultural festival; on it two wave-loaves of fine wheat flour were offered in the sanctuary as a symbol of the first-fruits (*Lev.* 23:17). As early as the time of *Jubilees* (1:1; chap. 6) and later, during the Talmudic period, it was divorced from its agricultural setting. It became the traditional anniversary of the revelation from Sinai (*zeman mattan torathenu,* "the time of the giving of our Law"); after the destruction of the Second Temple this became its master aspect, as shown by the reading of the Decalogue and other religious observances for the day. Accordingly, the idea of the three "days of setting of bounds" (*shelosheth yeme hagbalah*), found in the Sinai story, was transferred to the three days before the festival.

Shabuoth is observed by Orthodox Jews, except in Palestine, on the 6th and 7th of Sivan; by Reform Jews, on the 6th of Sivan only. The eve of the first day is observed by reading passages from the Torah, the other books of the Bible, and from the Mishnah, as well as from the *Sefer Yetzirah* and the *Zohar,* and a summary of the 613 commandments and prohibitions in the Torah. This custom, *Tikkun Lel Shabuoth,* probably arose at an early period, and became widespread in Eastern Europe and the Orient, under the influence of the Lurian Cabala, from the 16th cent. on. *Psalms* is read on the second night, probably because David, its traditional author, was said to have been born and to have died on Shabuoth.

The idea of the revelation from Sinai is carried out in the morning services in the *Akdamuth* poem, recited after reading the first verse of the Torah portion. The reading of *Ruth* on the morning of the second day may be either because of the connection of the book with David, or because its story is laid in the time of the barley harvest.

In many places houses and synagogues are decorated on Shabuoth with branches of trees, flowers and various plants; this is perhaps connected with the ancient character of the festival as a harvest feast, or with the fact that the day was believed to be a day of judgment for the thriving of the fruits of trees (*R.H.* 1:2). Another characteristic custom is the eating of various dairy dishes. In medieval times Shabuoth was also the day on which small children, at the age of four or five, were taken for the first time to school, where they would be presented with a honey-covered cake on which a Biblical verse was inscribed. Often the parents gave a scroll of the Torah on this occasion.

Since 1831, when Solomon Eger of Braunschweig, Germany, first held confirmation on Shabuoth, the festival has been used for this ceremony. As the day of Israel's supreme covenant, it was logically the time for the confirmation of Jewish youths into the faith of their fathers. At first bitterly contested, this custom won acceptance not only by Reform congregations, but also by a number of Conservative and even Orthodox congregations in the United States. It did much to revive the waning influence of Shabuoth in Jewish life. Another modern custom which has served to revive Shabuoth is that of the Bikkurim, or first-fruits, in Palestine. First-fruits are offered in a procession modeled after that of Temple times. The offerings are then sold and their proceeds are given to the Jewish National Fund. This custom is observed also at Chicago and other cities in the United States.

SHACH, abbreviation for Shabbethai ben Meir Hakohen.

SHACHTER, JACOB, rabbi, b. Roumania, 1887. He went to England as the rabbi of the New-Roumanian Synagogue in Manchester, and subsequently was made rabbi of the Jewish Communities of Belfast and the districts of Northern Ireland. Shachter was a leader in the Jewish communal activities of the country, and was also vice-president of the Jewish National Fund for Great Britain and Ireland, as well as of the Mizrachi Federation. He was dean of residences of Queen's University in Belfast. Among his published works were *Mahazeh Abraham* and *Likḳute Yaaḳob;* he was also a collaborator in the preparation of the Soncino edition of the Talmud tractate *Sanhedrin.*

SHADDAI, *see* GOD, NAMES OF.

SHADHAN, usual Jewish term for marriage broker. The term is derived from the Talmudic Hebrew verb *shedach,* "to persuade," to "influence," with particular reference to marriage contracts (*Sab.* 150a). The business of acting as Shadhan was already popular in the Middle Ages, especially among the Jews in Germany, and might be either a definite profession or just a side line. Many prominent rabbis of the Middle Ages are found in such a side line of matchmaking as their chief source of income, since they did not accept any salaries for their rabbinical functions. They had widespread acquaintances in the remotest parts of the country, great understanding of human nature, and enjoyed unlimited confidence because of their upright character. They considered the matchmaking business not merely as a source of income, but also as a pious task desired by God—a Mitzvah. Usually the fees for the matchmaking were paid equally by the parents of the bride and the groom. The profession of Shadhan is still widely practised in Eastern Europe, and even in modern, educated circles. An association of Shadhans was incorporated in New York city in 1929.

SHAHARITH, *see* MORNING SERVICE.

SHAKESPEARE, WILLIAM, famous English dramatist and poet, b. Stratford on Avon, 1564; d. Stratford on Avon, 1616. The chief of his presentations that are of especial Jewish interest is the character of Shylock, as well as the portrayal of subordinate Jewish characters, in his *Merchant of Venice,* written about 1596. It is notable that while the bard, as a concession to the British prejudice of the day, had to make Antonio the nominal hero of the play, Shylock is the actual protagonist, to whom the chief interest of all the spectators is directed.

Shakespeare had many similar plots upon which he may have built, ranging all the way from Giovanni Florentino's *Il Pecorone* and the *Cursor Mundi,* in which the creditor was a Jew, to the state trial of Dr. Rodrigo Lopez (1594), in which, as in the play, the enemy of Lopez bore the name Antonio. This has been pointed out both by Frederick Hawkins and Sidney Lee, suggesting this additional motif.

Although William Shakespeare's *Merchant of Venice* was played originally as low comedy, the character of Shylock loomed large in the imagination of

A scene from "The Merchant of Venice"

such modern actors as Edmund Kean, Edwin Booth and Henry Irving, for they brought out the dignity and appeal of Shylock as the victim of the prejudice of his age, rather than as the would-be avenger of his own wrongs. Only the genius of Shakespeare could rise above his time and write that defense of the human quality of the Jew in the third act, when Shylock exclaims, "Hath not a Jew hands, organs, dimensions, senses, passions?" This is the logical sequence of the famous speech in the first act, when Shylock dwells upon the insults he is compelled to bear:

"For sufferance is the badge of all our tribe;
You call me misbeliever, cut-throat dog,
And spit upon my Jewish gaberdine."

As one studies the speeches of Shylock, one feels how completely Shakespeare had become Shylock, so that he might more fully express what must have been the inmost secrets of his troubled soul. He towers above his enemies in the demonstration of his right to live and act—and suffer. He dominates the play, and even though balked of his revenge, he gains the sympathy of thinking heroes. Georg Brandes offers an incisive, illuminative study of Shylock in his volume on Shakespeare.

The character of Jessica, Shylock's daughter, hardly presents much that is notable, for her elopement is rather the excuse for the deepening of Shylock's resent-

A scene from "Love's Labour's Lost"

A scene from "Henry VI"

ment against his foes. Tubal is a mere shadow, and no other Jewish character appears in any other play of Shakespeare; even the word Jew, singularly, but seldom appears.

In the *Merchant of Venice,* as well as in other plays, Shakespeare shows great familiarity with the Bible, quoting it frequently. It is not surprising that many persons are confused in hearing a quotation, not knowing whether to attribute it to the Bible or Shakespeare. One reason for this is the similarity of language, for the Authorized Version of the Bible was published for the first time in 1611, in the Shakespearean period, and the English of that version and that of Shakespeare are similar. The earlier versions of the Bible extant in Shakespeare's time, especially the Coverdale and Geneva Bibles, contain phraseology that was borrowed by the poet. Thus when Cardinal Wolsey says (*Henry VIII,* act 3, scene 2), "He falls like Lucifer," he is practically quoting from the current Bible translation of *Isa.* 14:12, though the Hebrew expression means only "day-star."

Every play of Shakespeare contains examples of how much Shakespeare owes to the Bible and how he did not hesitate to help himself to a thought or a metaphor when it suited him.

Examples of such use of the Bible are:

Love's Labour's Lost, act 4, scene 2: "You are two bookmen; can you tell me by your wit what was a month old at Cain's birth that's not five weeks old as yet? The moon was a month old when Adam was no more" (cf. *Gen.* 1 to 3).

A scene from "As You Like It"

A scene from "All's Well that Ends Well"

Henry VI, Second Part, act 3, scene 3: "And from his bosom purge this black despair; see how the pangs of death have made him grim" (cf. *Ps.* 51:7; *Isa.* 65:6; *II Sam.* 22:5).

Richard III, act 2, scene 3: "By God's good grace, his son shall reign. Woe to the hand that's govern'd by a child" (almost directly from *II Chron.* 23:3 and *Eccl.* 10:16).

All's Well That Ends Well, act 4, scene 3: "Now, God delay our rebellion! As we are ourselves, what things are we! Merely our own traitors. And as in the common course of all treasons, we still see them reveal themselves till they attain to their abhorred ends, so that in this action contrives against his own nobility, in his proper stream o'erflows himself" (cf. *Prov.* 11:5; *Ps.* 35:8; *Esther* 7:10).

Henry IV, First Part, act 5, scene 4: "But that the earthy and cold hand of death lies on my tongue; no, Percy, thou art dust and food for—worms" (cf. *Job* 17:11, 13).

As You Like It, act 3, scene 2: "How brief the life of man runs his erring pilgrimage, that the stretching of a span buckles in his sum of age" (cf. *Ps.* 39:6; *Gen.* 47:9).

Measure for Measure, act 5, scene 1: "The very mercy of the Lord cries out most audible, even from his proper tongue, 'An Angelo for Claudio, death for death!' Haste still pays back, and leisure answers leisure. Like doth quit like, and measure still for measure" (cf. *Num.* 35:30,31; *Lev.* 24:17; *Jer.* 2:19).

Macbeth, act 4, scene 1: "Show his eyes and grieve his heart" (cf. *I Sam.* 2:33).

Macbeth, act 5, scene 1: "Lighted fools the way to dusty death" (cf. *Ps.* 22:15).

Lear, act 2, scene 4: "We'll set thee to school to an ant, to teach thee there's no laboring in the winter" (cf. *Prov.* 30:25).

Timon of Athens, act 5, scene 1: "Who, like a boar too savage, doth root his country's peace" (cf. *Ps.* 80:13-14).

Henry VIII, act 5, scene 2: "My stay, my guide and lantern to my feet" (cf. *Ps.* 119:105).

Comedy of Errors, act 2, scene 2: "There's a time for all things" (direct quotation from *Eccl.* 3:1).

Merchant of Venice, act 4, scene 1: "A Daniel come to judgment!" (cf. the story of Susanna in the additions to *Daniel* in the Apocrypha).

Richard II, act 5, scene 4: "What Eve? What serpent hath suggested thee to make a second fall of cursed man" (*Gen.* 3).

King John, act 3, scene 1: "Thy word is but the vain breath of a common man" (cf. *Isa.* 2:22; *Job* 16:1-3).

Taming of the Shrew, act 3, scene 2: "She is my goods, my chattels. . . . my field, my barn, my horse, my ox, my ass, my anything" (Tenth Commandment, *Ex.* 20:14; *Deut.* 5:18).

Hamlet, act 2, scene 2: "O Jephta, Judge of Israel, what a treasure hadst thou" (cf. *Judges* 11).

Many of these echo the common speech of the time which, because of the study of the Bible, was filled with Biblical phraseology. Shakespeare's rich use of Bible expressions shows how the mind of the poet and dramatist fully appreciated the rich store of apt and striking expressions in which the Bible abounds.

CLIFTON HARBY LEVY.

SHALASHUDOS, name given to festive celebrations on the afternoon of the Sabbath. It goes back to the fact that in ancient times two meals were eaten on week-days, while the Sabbath was distinguished by the fact that it had three meals (*shalosh se'udoth*). The third Sabbath meal, therefore, which distinguished the Sabbath day, was made up of dainties, and was accompanied by song and other festivities.

For the modern development of the institution, *see* ONEG SHABBAT.

SHALET (SHALENT), *see* COOKING.

SHALKOVITZ, ABRAHAM LEIB (pen name, Ben Avigdor), Hebrew writer and publisher, b. Zaludel, province of Vilna, Lithuania, 1862; d. Karlsbad, Bohemia, 1921. He first prepared himself for the rabbinate, but later turned to the Chovevei Zion movement, became secretary of the fraternal order Bene Mosheh, a foundation of Ahad Haam, and finally entered the publishing business. Ahiasaf (1892) and Tushia (1896), which he himself directed and which published books at very moderate prices, occupied honorable places in the history of Hebrew publishing. Shalkovitz was for more than two decades one of the outstanding publishers of Hebrew literature. He also founded the first illustrated Hebrew magazine for children, *Olam Katan* (1901).

Having made his literary debut in *Hamelitz* (1889) with general articles, he devoted himself to fiction-writing and wrote a large number of short stories which realistically depicted the bitter life of the poverty-stricken Jewish masses. This emphasis on modern life and the fact that the principal characters of most of his stories are women made him a pioneer in contemporary Hebrew literature.

Shalkovitz wrote also a historical novel, *Lifne Arba Meoth Shanah,* dealing with the exodus of the Jews from Spain and published on the four hundredth anniversary of this event (1892).

Lit.: Waxman, Meyer, *A History of Jewish Literature,* vol. 4 (1941) 80-84; *Luah Ahiasaf* (1923); Fichmann, J., in *Hatekufah,* vol. 12, pp. 477-80.

SHALLUM, 1. son of Jabesh who assassinated Zechariah, the son of Jeroboam II, and seized the throne of Israel (about 741 B.C.E.). He was in power for only a month, when he was deposed and killed by Menahem (*II Kings* 15:10-15).

2. fourth son of Josiah of Judah (*I Chron.* 3:15), who was made king after the death of his father and took the name Jehoahaz. Jeremiah (*Jer.* 22:11-12) still uses the old name.

See also JEHOAHAZ.

SHALMANESER, *see* ASSYRIA.

SHALOM ALECHEM, a song sung by the master of the house after his return from the synagogue on Friday evening. In this song he greets the angels of peace who, according to an ancient Jewish folk notion (*Sab.* 119b), accompany each Jew back to his home from the synagogue on the evening before the Sabbath (Ereb Shabbath).

SHALOM, SHALOM ALECHEM, *see* GREETING AND WISH FORMULAS.

SHALOM, S. (SHAPIRO), Hebrew poet, b. Drohobycz, Poland, 1904. He studied in Vienna, then at the teachers' seminary in Jerusalem and finally at the University of Erlangen. In 1922 he moved to Palestine, and soon became known, not only as one of the

leading poets of Palestine, but as one of the most authentically Palestinian of the Hebrew writers. Among his books were *Pela Gema* (1934); *Sonnethoth* (1934); a volume of collected verse, *Sefer Hashirim,* and *Eben Ben Pela.* His book *Mipanim el Panim* was awarded the Bialik prize for 1941.

Shalom's poetry depicts the mysticism of Hasidism (his ancestors were Hasidim) and the struggles and trials of the modern man. His poetry is varied and many-sided; he is at once a heretic and a believer, a destroyer and a builder. The destruction of Europe and the upbuilding of Palestine are the two central motifs of most of Shalom's poems. The Jewish homeland and the outside world, the individual and the people, are well harmonized in his poetry.

Lit.: *Moznaim,* vol. 10, No. 5.

SHALOM SHACHNA BEN JOSEPH, Talmudist, d. Lublin, Poland, 1558. He was a pupil of Jacob Pollak, and became rector of the Yeshiva at Lublin. In 1541 he and Moses Fischel were made seniors (chief rabbis) of all the Jews in Little Poland, and Shalom was entrusted with a larger share in the administration. He was frequently called upon to settle all rabbinical and scholarly problems. According to a statement of his son, Israel, Shalom had forbidden the publication of his works, and it was not until the 19th cent. that his *Pesakim Beinyan Kiddushin* was published. His numerous pupils included his son-in-law, Moses Isserles.

SHALOWITZ, AARON LOUIS, cartographic engineer and lawyer, b. Ponviez, Russia, 1892. He was brought to the United States in 1895. Shalowitz graduated from the Baltimore Polytechnic Institute (1911), received the LL.B. degree from Georgetown University (1926), and was admitted to the Maryland and Washington, D. C., bars. In 1930 he was given the LL.M. degree by George Washington University. From 1916 to 1921 he served in the United States Navy with the rank of lieutenant as a hydrographic and geodetic engineer, directing surveys in Alaska, the Virgin Islands, and parts of the United States. In 1921 he was appointed principal cartographic engineer (departmental service) in the Division of Charts of the United States Coast and Geodetic Survey; he still held this position in 1943.

Shalowitz also delivered lectures on nautical charts in a defense mapping course held at George Washington University. Shalowitz evolved an original method for determining the velocity of sound to be used in hydrographic surveying by acoustic methods (1931), and published several scientific papers and collaborated in the preparation of the *Manual of Hydrographic Surveying* (1942 ed.) for the United States Coast and Geodetic Survey. He served as vice-president (1935-36) and educational chairman (1935-37) of the Washington, D. C., district of the Zionist Organization of America.

SHALSHELETH, *see* CANTILLATION.

SHAM TRANSACTION. According to Jewish law, a legal transaction is valid only if both parties in the case seriously intend it. If this intention is absent, it is only a sham transaction (*simulatio*) and therefore is not valid. The Talmud gives the following illustration of such a sham transaction: a wife, before divorce, issues a document presenting a part of her property over which her husband has the right of control and use (*nichse melug*) to a third party in order to deprive her husband of the use of it. A similar sham transaction would result if a husband transferred a piece of property to another man in order that it might not be seized in fulfillment of the claims of his wife. Donations made to others to escape the demands of creditors are also regarded as sham transactions. It is further proof of the sham nature of the transaction when the donator does not actually hand over the property but keeps it in his possession and control. However, proof of simulation must be clearly established and confirmed by an authoritative judge. The Talmud is very strict on such sham transactions, and its teachers were apparently willing to go to all lengths to prevent them. Thus Rab Nahman is reported to have torn up a document of this nature in a legal dispute that was brought before him, and Samuel is said to have declared that he would do the same to any such document that was brought before him (*Keth.* 79a).

Lit.: *Keth.* 19a et seq.; 78a et seq.; 97a et seq.; *B.B.* 150b et seq.; Maimonides, *Hilchoth Ishuth* 22:9; *Hilchoth Zechiah* 6:12; *Shulhan Aruch, Hoshen Mishpat* 99:6 et seq.; 111:19 et seq.; *Eben Haezer* 85:7; 90:7 et seq.

SHAMGAR, son of Anath, one of the judges of Israel. According to one statement, he saved Israel by slaying 600 Philistines with an ox-goad (*Judges* 3:31); the Song of Deborah has a reference to the people's avoiding the highways in his days (*ibid.* 5:6). The latter statement, as well as the name Shamgar, which does not seem to be Hebrew, have caused Bible scholars to question the correctness of the first statement. A war with the Philistines at that time would not be impossible, as some of that people had already settled in the country as early as the 13th cent.

It has even been suggested that the name was borrowed from the Song of Deborah to fill out the list of the twelve judges. It is possible, however, that Shamgar was an Israelite with a foreign name, and that the statement represents a shadowy reminiscence of an early tribal leader.

SHAMIR. The word *shamir* is used in the Bible in two senses: that of sharp thorns (*Isa.* 5:6), and that of a hard substance, used as a point for a pen (*Jer.* 17:1). In the latter passages it is sometimes translated as "diamond," although it is hardly likely that diamonds were used for that purpose in ancient times. It may have been some form of flint (like the Aramaic *shamira*) or corundum (the *smyrites lithos* of the Greeks).

Jewish legend, however, takes the Shamir to be a miraculous worm, which had the power of splitting the hardest stone or even metal. It was used by Solomon for the building of the Temple; for Biblical legislation had provided that no iron could be used for shaping the stones of the altar (*Ex.* 20:22), and this was applied to the entire building, especially since, in the later Jewish conception, iron was regarded as the symbol of war and therefore not appropriate for use in constructing the Temple, the building of peace. According to one account, Moses had made use of the Shamir in engraving the gems of the high priest's breastplate.

The story relates that Solomon was advised by the rabbis of the existence of the Shamir, which was of the size of a grain of barley and had been created at the end of the sixth day of creation. It had been entrusted to the prince of the sea, who in turn had given it to the wood-grouse to use. Solomon sent Benaiah to seek for it (other accounts say Ashmodai), and he obtained it by means of the following stratagem: he covered the nest and young of the bird with glass, and when the wood-grouse brought out the Shamir to split the glass, he surprised her and seized the Shamir. Solomon was compelled to keep it, when not in use, wrapped up in wool and in a leaden box filled with bran (other accounts speak of a brass box), for nothing else was able to resist its penetrative power.

There are numerous parallel traditions to the idea of the

Shamir in the legends of non-Jewish peoples; in some cases an herb takes the place of the Shamir as the means of splitting rocks. The story passed over from the Jews to the Arabs, and is found, with some variations, in medieval tales.

SHAMMAI (often with the title Hazaken, "the elder"), founder of a school of sages in the 1st cent. C.E. Together with Hillel, whose Ab Beth Din he was, he constituted the last of the five pairs (Zugoth) by whom the Pharisaic tradition was transmitted (*Aboth* 1). He was probably older than Hillel, for which reason he is always mentioned first in their Halachic controversies; the school he founded (Beth Shammai) seems to have been in existence before the establishment of the school of Hillel (Beth Hillel).

Only a few of the opinions of Shammai, in which he differs from those of Hillel, are recorded in the Mishnah and other Halachic sources. There were undoubtedly many more which have come down to us as differences of opinion on the part of the schools of these men. One of these differences that has been recorded was on the question of the laying of the hands of the offerer upon the festal sacrifice, a difference which had begun with the previous pairs and was not settled until a pupil of Shammai, Baba ben Buta, definitely adopted the view of Hillel (*Betzah* 20a). Shammai was very strict in religious matters. He was even unwilling to let his very small son eat food on Yom Kippur (*Tos. Yoma* 4; *Yoma* 77b).

The stories about him and Hillel depict Shammai as rather harsh and irascible compared to the gentle Hillel; he is said to have rejected questions with scorn. Yet his favorite expression shows that his attitude was friendly and gracious: "Make thy study of the Law a fixed matter, say little and do much, and receive every man with a friendly countenance" (*Aboth* 1:15). He followed the profession of building or carpentry (*Sab.* 31a).

SHANGHAI, industrial and commercial capital of China, with a population of 3,500,000 at the end of 1941, of which number 22,000 were Jews. With the exception of a small number of English and American Jews, most of whom were only temporary residents, and an even smaller group of wealthy Jews of Indian and Iraquian origin, Shanghai Jewry was almost entirely a refugee community in 1940. Its older residents were Russian Jews who had fled first from Russia to Manchuria and then settled in Shanghai in the early 1930's after the Japanese seizure of Manchuria. But the overwhelming proportion of the community was made up of Austrian and German Jews who arrived between 1938 and 1939, when Shanghai had no immigration restrictions. But the outbreak of the second World War, which blocked the trans-Siberian route for immigrants, and the introduction of increasingly rigorous curbs by the Japanese authorities, cut immigration to almost nothing. However, more than 1,000 Polish Jews, mostly Yeshiva students who had fled after the Nazi occupation, managed to reach Shanghai by roundabout routes, with the hope of getting to Palestine, Canada and the United States. The spread of the second World War trapped many of these students in the Far East.

Arriving at a time when the war-born economic crisis had seriously affected Shanghai, these various strata of Jewish refugees, who had made Shanghai the largest Jewish settlement in the Far East, were largely dependent on relief for their existence. Nearly half the entire population was being maintained by the Joint Jewish Refugee Relief Committee, which received $25,000 a month from the American Jewish Joint Distribution Committee. About 7,000 were self-supporting, while the rest lived on private contributions from abroad. On the eve of the Japanese attack on Pearl Harbor, 15,000 Jews were concentrated in the Hongkew area, with the remaining 7,000 scattered through the International and French Settlements.

Despite their economic difficulties, the refugees were able to create a network of cultural and religious organizations. Among these were the European Jewish Artist Society, which sponsored plays and concerts; the Shanghai Jewish Youth Association School, which trained refugee youngsters with the help of funds provided by Sir Horace Kadoorie; a Work Cooperative of Jewish Youth; a Cultural Circle; the General Zionist Organization Theodor Herzl; a Jüdische Gemeinde; a Jüdische Liberale Gemeinde; and three newspapers. The ORT had also opened a training school.

Immediately after Japan declared war on the United States and Great Britain, 1,800 refugees were arrested and thousands of others were seized but later released. Many, however, were turned over to the Gestapo, whose Shanghai chief, Christian Zissner, was placed in control of the refugees. At the same time a new Nazi paper, the *Beobachter in Asien,* launched an anti-Jewish crusade. Bank accounts of Jews were frozen, seriously impairing the work of the refugee committees. Threats were made to deport Polish Jews to Poland. Efforts to get some of the Polish refugees out by way of Russia and Palestine had made little headway by the fall of 1942. In October, 1942, twenty-nine Polish and fourteen Czechoslovakian Jews, the first group of Jewish refugees to reach England from territory held by the Japanese, arrived by way of Portuguese East Africa from Shanghai.

Laura Margolis and Manuel Siegel, both Americans, who represent the Joint Distribution Committee in Shanghai, refused to leave when they had a chance, and continued to render yeoman help to refugees with the increasingly limited funds at their disposal. In October, 1942, distress and hunger were reported widespread among German Jewish refugees in Shanghai. All Jewish organizations in Shanghai were still functioning but under strict governmental supervision in the early part of 1943. Reports of typhus among the Jewish population created further concern in the fall of 1942 for the 22,000 Jews who were already in a desperate way. One of the first casualties of the war was *Israel's Messenger,* the oldest English-language Jewish paper in the Far East.

For the history of the Jews in Shanghai prior to 1940, *see* CHINA. BERNARD POSTAL.

SHANTZ, HAROLD, foreign service officer, b. Rochester, N. Y., 1894. He was educated at the University of Rochester (B.S., 1915), and served as a private in the cavalry on the Mexican border (1916-17) and with the American Expeditionary Forces (1918), to be honorably discharged as first lieutenant. From 1922 on he served successively as vice-consul, consul, consul general, chargé d'affaires and in other diplomatic positions at Calcutta, Toronto, Hong Kong, Singapore, Monrovia (Liberia), Barcelona, Oporto, Prague, Nairobi (East Africa), Moscow, Athens and Helsinki. In 1941 he was appointed first secretary of the American Embassy in London.

SHAPERO, NATE S., head of a leading American chain of drug stores, b. Detroit, 1892. He received the

Ph.B. degree from Ferris Institute, Big Rapids, Michigan. Shapero became president of the Shapero Drug Stores in Detroit, Cleveland, Cincinnati, Toledo, Pittsburgh; president of Cunningham's Drug Stores in Detroit, and twenty-three other Michigan cities; chairman of the board of Marshall Drug Stores in Cleveland.

He was president (1943) of the Board of Fire Commissioners of Detroit, national president of the Chaim Weizmann Chemical Research Foundation of Rehovoth, Palestine, a member of the Board of Ferris Institute, as well as a member of the board of governors of the Jewish Welfare Federation of Detroit, which he served as vice-president (1940-42). Shapero became president of the National Association of Chain Drug Stores and chairman of its executive board in 1943.

He was on the executive committee of the Detroit Round Table (of Catholics, Protestants and Jews), served as president of the Michigan State Welfare Commission and (1943) of the board of the Police and Fire Pension Committee. In June, 1942, Shapero made a tour of the west for the United States Treasury Department, and won official commendation for his war efforts from Secretary of the Treasury, Henry Morgenthau, Jr. PHILIP SLOMOWITZ.

SHAPIRO, DORA MONNESS, philanthropist, b. New York city, 1881. She was educated at high school in New York city and at the age of twenty was married to Solomon Shapiro, a business man, who became president of the firm Levinsohn & Shapiro and who died in 1927. Dora M. Shapiro founded, in 1923, the Deborah Tuberculosis Sanatorium at Browns Mills-in-the-Pines, New Jersey, a non-sectarian institution extending free care to tubercular sufferers. She donated (1932) to the Einstein Institute of Physics in the Hebrew university, Jerusalem, a building in memory of her husband, and two wings named for her parents and her husband's parents. She also established at Zoslia, Lithuania, the native town of her husband, a free loan society and a Talmud Torah. In New York city, she founded the Solomon and Dora Monness Shapiro Charitable, Benevolent and Education Fund, Inc., whose annual contributions to organizations and individuals exceeded $10,000.

Among the many institutions in New York city, which benefited from her major endowments, were the Home of the Daughters of Jacob, whose president she was; the home of the Daughters of Israel, of which she served as director; the dormitory of Yeshiva College and also Montefiore, Mount Sinai, Beth Israel and Beth David Hospitals and the Rabbi Jacob Joseph School. She belonged to over eighty organizations embracing all races and creeds.

SHAPIRO, HARRY LIONEL, anthropologist, b. Boston, 1902. He received the Ph.D. degree from Harvard University (1926). As a Yale University fellow (1923-25) at the Bishop Museum, Honolulu, Hawaii, and as research professor at the University of Honolulu (1931-38), as well as on numerous trips to the Pacific Islands, to the West Indies, and to the southwestern United States, he explored the characteristics of the aborigines and population problems. He studied the history of the descendants of the mutineers on the *Bounty* on Pitcairn Island and showed a particular interest in the effects of migration and racial intermixture especially among the Japanese and Chinese in Hawaii. In 1938 Shapiro became lecturer at Columbia University. From 1931 on he served as associate curator at the American Museum of Natural History, New York city, and in this capacity as well as in that of member of the Research Council and Consulting Staff of the Presbyterian Hospital, New York city, he concentrated on the practical application of the results of his field work.

Shapiro's published writings include *The Physical Characteristics of the Society Islanders* (1930); *The Alaskan Eskimo* (1931); *The Physical Characteristics of the Ontong Javanese* (1933); *The Heritage of the Bounty* (1936); *Migration and Environment* (1939). He was an editor of *Anthropological Briefs.* SURA TYGEL.

Isaiah Leo Sharfman

SHAPIRO, JOSEPH GEORGE, lawyer, b. New York city, 1886. He was educated at Yale University (LL.B., 1907), and was prosecuting attorney (1913-20) and judge of the city court of Shelton, Conn. (1920-31). Shapiro served also as a member of the Judicial Council of Connecticut (1927-31) and as acting judge at the Court of Common Pleas (1928). He was a member of the Bridgeport Jewish Community Council.

SHAPRUT, HASDAI IBN, *see* HASDAI IBN SHAPRUT.

SHAPRUT, SHEMTOB BEN ISAAC IBN, *see* IBN SHAPRUT, SHEMTOB BEN ISAAC.

SHARFMAN, ISAIAH LEO, economist, b. Polonnoye, Ukraine, Russia, 1886. He was brought to the United States in 1894. He studied at Harvard College (A.B., 1907) and at the Harvard Law School (LL.B., 1910), became professor of law and political science at the Imperial Pei-Yang University, Tientsin, China, and in 1914 was made full professor of economics at the University of Michigan (chairman of the department of economics, 1927); he still held this position in 1943.

Sharfman served on the Advisory Committee on Railroad Employment, Office of the Federal Coordinator of Transportation (1933-36), and in several other public offices. In 1942 he was appointed associate member of the National War Labor Board. He was president of the Harvard Menorah Society (1907-8) and of the Intercollegiate Menorah Association (1913-16), and edited the *Menorah Journal* (1915-16). Sharfman was affiliated also with the American Jewish Historical Society, and was a fellow of the Jewish Academy of Arts and Sciences.

In 1939 he was awarded the James Barr Ames Prize by the faculty of the Harvard Law School. His published writings include: *Commission Regulation of Public Utilities* (with others; 1913); *Railway Regulation* (1915); *The American Railroad Problem* (1921); *The Interstate Commerce Commission* (5 vols., 1931-37).

SHARON, the principal plain of Palestine, running along the seacoast from Mount Carmel to Jaffa; it is about forty miles long and from seven to twelve miles wide. It was extremely fertile in Bible times and hence was used as a symbol of beauty and fruitfulness (*Isa.* 35:2; *Song of Songs* 2:1). The Talmud records a prayer of the high priest on Yom Kippur for the inhabitants of Sharon: "that their houses may not become their graves" (*Yer. Sotah* 8:7). This has been interpreted to mean that the sandy soil of Sharon was such an unsafe foundation that the houses built on it had to be repaired at least every seven years (cf. *Matt.* 7:26-27); others think the reference is to another Sharon, between Mount Tabor and Tiberias, which was subject to earthquakes. The plain of Sharon is the site of some of the most important Jewish colonies in modern Palestine, and of a number of orange plantations centering around Petah Tikvah.

SHARONA, *see* COLONIES, AGRICULTURAL (also under RAMATH DAVID).

SHAVEI ZION, *see* COLONIES, AGRICULTURAL.

SHAVING. Biblical law permits shaving of the head, which was apparently done as a sign of mourning, but prohibits the shaving of the "corners of the head" and the "corners of the beard" (*Lev.* 19:27). No reason for this law is given. One possible basis is the high regard felt for the beard as a sign of manly dignity, so that cutting it off forcibly was regarded as degradation (cf. *II Sam.* 10:4-5). Another was the avoidance of the rites of the Canaanites in which men who assumed the garments and manner of women shaved their faces. A third is the fact that some Arab tribes shaved off their forelocks, apparently for some ceremony connected with idolatry (cf. *Jer.* 9:25). Maimonides connected the prohibition with the purpose of avoiding the appearance of heathen priests who often (as in Egypt) shaved their hair and beard.

The Talmud (*Shebu.* 3b; *Mak.* 20ab) enumerates five "corners of the beard": two on each cheek and one on the chin. The prohibition was interpreted as meaning only shaving with a razor, or a pumice stone, and not removal by means of a depilatory. Thus in countries where the wearing of beards was not usual, Jews frequently shaved their faces by use of a depilatory; others objected to this for the sake of appearance (*mar'ith 'ayin*), because it might appear as if they had used a razor in shaving. Trimming the beard with shears was permissible at all times.

Men were also prohibited from shaving with a razor the hair on other parts of the body in places where women would customarily remove it; this was an extension of the law forbidding men to dress as women.

The Hasidim and Yemenites often shave their heads but leave the side-locks (Peoth) untouched. In most Western countries the removal of the beard has tended to become more common among Jews in accordance with the prevailing customs of the general population.

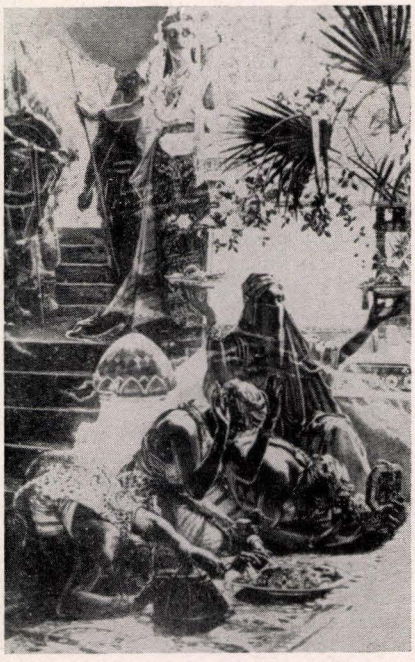
SHAVITCH, VLADIMIR, conductor, b. Russia, 1888. He studied music in Berlin with Godowsky and Busoni. In 1923 he became conductor of the Rochester Philharmonic, and in 1925 of the Syracuse Symphony Orchestra. He visited the Soviet Union in 1928, achieved great success, and was appointed first conductor of the Moscow State Opera one year later. He appeared as guest conductor of the most important orchestras in London, Berlin, Paris, Detroit, San Francisco and Los Angeles. In 1937—both in London and New York—he introduced an experiment called "synchro-opera" in which the roles were sung by living musicians on the stage, while the orchestra and chorus were reproduced electrically through recordings made at Covent Garden; Shavitch coordinated the performance from behind the scenes.

SHAW, IRWIN, playwright and author, b. Brooklyn, N. Y., 1913. He studied at Brooklyn College, and began his career by writing radio scripts. In 1935 his one-act play, *Bury the Dead,* was published in *The New Theatre;* subsequently it was produced by an experimental group and reprinted in book form. The play attracted wide critical and popular attention both for the deftness of its dialogue and for its "eloquent powers of expression" of the pacifist ideology which was then paramount. It was built around the efforts of soldiers who had been killed in the war to effect an understanding of the horror of war. *Bury the Dead* was republished a number of times and theatre groups throughout the country produced it.

Shaw was called to Hollywood on the strength of this success, and while writing routine scripts there he continued with his own work. *Salute* was the next of his plays to be written. *Siege,* depicting an episode of the Spanish civil war, was produced in 1937. *The Gentle People* (1939) was a greater commercial success; in 1941 it was issued as a motion picture under the title of *Out of the Fog. Retreat to Pleasure* (1940) showed some vacillation between the confusion of unquestioning pacifism and outright adoption of left-wing theories, and more realistic attitudes, but this work still displayed remarkable ability for authentic dialogue.



The same capacities were evidenced, too, in the many short stories Shaw wrote for various periodicals; some of these stories were collected into two volumes: *Sailor Off the Bremen* (1939), *Welcome to the City* (1942), and *Sons and Soldiers* (1943). Shaw joined the army in 1942.

SHEAN, AL, vaudeville comedian and actor, b. Dornum, near Hannover, Germany, 1868. The son of Louis Schoenberg, a strolling magician, he was brought to the United States and educated in the public schools of New York city. In 1890 he organized the vaudeville team known as the Manhattan Comedy Four, which included also Sam Curtis, Arthur Williams and Ed Mack; for a decade the team contributed notably to the advance of vaudeville entertainment, then in its expanding stage. Then Shean, noted for his voice and his spontaneous wit, joined Charles L. Warren and played with him for another ten years. This connection gave way to the famous association of Shean with Ed (Edward) Gallagher, their team eventually becoming the most familiar in American vaudeville. They started, however, in musical comedy, and played in the *Rose Maid* (1912).

From 1914 on, for about six years, their partnership was split by an unexplained quarrel. Reconciled by the intervention of Minnie Marx, mother of the Marx brothers and sister of Al Shean, the partners opened their first vaudeville act in a theatre of Long Island, New York, in 1920. The act was "Mr. Gallagher and Mr. Shean in Egypt," and in it the team made vaudeville history with the song "Oh, Mister Gallagher, Oh, Mister Shean," for which Bryan Foy wrote the lyrics and Shean himself composed the music. The humorous song became one of the most popular and familiar ever to strike the American public's fancy. The famous team ceased to exist when Gallagher died, in 1929.

Shean appeared in the *Ziegfield Follies* (1923); *The Prince of Pilsen* (1930); and *Music in the Air* (1932).

The Queen of Sheba visits King Solomon. From a painting by Julius Kronberg.

Shean himself considered the high point of his career to have been his serious starring role of the old priest in the play *Father Malachy's Miracle,* produced on Broadway in 1937. His performance received high critical praise. In 1941 he appeared again on Broadway in the leading role of the comedy *Popsy.*

Entering the motion pictures, Shean played in the comedy *Chills and Fever* (1930), and thereafter appeared in numerous pictures, including *The Bluebird* (1940) and *Friendly Neighbors* (1940). In 1941 he collaborated on and appeared in *Ziegfeld Girl.* Subsequently he appeared in *Friendly Enemies,* in the same principal role in which he had starred in the stage show some twenty-five years before.

SHEARER, NORMA, *see* THALBERG, IRVING J.

SHEAR-JASHUB ("a remnant shall return"), symbolic name given by the prophet Isaiah to his son. The original significance of the name is explained in *Isa.* 10:21-23: only a remnant of the people shall be left out of the extermination which a just God will inevitably bring upon Israel. Later the name received a somewhat more optimistic interpretation: that there would always be a saving remnant which would return to God and rebuild the people.

Lit.: The commentaries on *Isa.* 7 and 10.

SHEBA BERACHOTH, *see* MARRIAGE BENEDICTIONS.

SHEBA, QUEEN OF. 1. In the Bible. *I Kings* 10:1-13 and *II Chron.* 9:1-12 tell how Solomon was visited by the queen of Sheba, who was accompanied by a great following and rich presents. She declared that the fame of his wisdom had penetrated to her kingdom, and that she wished to satisfy herself of the truth of the report by personal experience. Solomon showed her all his glory and solved all the riddles which she put to him. Thereupon the queen declared that the reality which she had experienced far exceeded the reports; and after having received rich presents from the king, she returned to her country.

Later legend adorned this story with the account of a love affair between Solomon and the queen. The son of this union, named Melech, was said to have migrated with his followers to Abyssinia; the royal house of Ethiopia still claims descent from the son of Solomon and the queen of Sheba. It is probable that the story in the Bible rests on a historical basis. Queens of Sheba (Sabea in Arabia) are mentioned in Assyrian inscriptions; and contests of riddles were frequent in ancient times. In the New Testament the word Sheba is interpreted as meaning "south," and the queen is mentioned in *Matt.* 12:42 and *Luke* 11:31 as an example to the contemporaries of Jesus.

The story of Solomon and the queen of Sheba has been frequently represented in art; Karl Goldmark's opera, *Queen of Sheba,* makes free use of the Biblical material.

2. In the Midrash. The Talmud and the older Midrash collections do not refer to the story of the queen of Sheba, but it appears in *Targum Sheni* to *Esther* 1:3, in *Midrash Proverbs* (beginning) and in *Yalkut* on *II Chron.* 9:1 (section 1085). Here there is the story that Solomon, who understood the language of the birds, learned from the hoopoe of the rich country of the queen of Sheba, who lived in the city of Kitor. Accordingly, he sent a letter to the queen, with an order to visit him, by the hoopoe. The queen, frightened by the letter, sent Solomon 6,000 boys and girls, all born on the same day and at the same hour, and promised to come to Solomon within three years. When she arrived in Jerusalem she was received by Solomon with great pomp. She proposed to Solomon three riddles which, to her great astonishment, he was able to solve; accordingly, she made him rich presents. There is a reference to the story in the Koran, and it was a favorite with Arabic writers, who gave the queen the name of Belkis.

SHEBARIM, *see* SHOFAR.

SHEBAT (a month in the Hebrew calendar), *see* CALENDAR; MONTHS.

SHEBAT, FIFTEENTH OF, *see* NEW YEAR FOR TREES.

SHEBIITH ("Sabbatical year"), fifth tractate of Zeraim, the first division of the Mishnah. It consists of ten chapters, and deals with the regulations of the Sabbatical year during which, according to Biblical law, no produce was to be raised in Palestine and all debts were to be released. The first nine chapters deal with the agricultural regulations for the Sabbatical year. Since the year opens in the fall, they treat of such questions as how long the crop may be cultivated in the period preceding the Sabbatical year, and what can be done in the case of each individual kind of vegetable or fruit. There are discussions of how much preparatory work, such as removal of stones, wood and weeds, fertilizing and fencing, may be done. The limits of the observance of the Sabbatical year are drawn; it must be observed strictly in Palestine, partly in Syria, and does not apply to other countries. There are also regulations for the disposition of what grows in the Sabbatical year, and directions as to what must be destroyed. The tenth chapter deals with the release of debts, and discusses the institution of the Prosbul. It is noted that if one, despite the release, insists on paying his debts on the Sabbatical year, he is regarded as praiseworthy.

The Tosefta contains eight chapters and has some interesting and important additional details; for in-

stance, it reports that Rabban Gamaliel and his court permitted ploughing during the entire year before the Sabbatical year. It also gives an express and detailed list of the cities that formed the boundary of Palestine (4:11). There is no Babylonian Gemara; that of the Palestinian Talmud contains some interesting stories, such as that of Abba bar Zebina, who worked for a non-Jewish tailor in Rome, and successfully passed a test of fidelity to Jewish ritual law (4:2).

Lit.: Danby, Herbert, *The Mishnah* (1933) 39-52; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 236-37.

SHEBUOTH ("oaths"), sixth tractate of Nezikin, the fourth division of the Mishnah and Talmud. Its eight chapters deal mainly with the laws of various oaths and the laws of uncleanliness, as follows: Chap. 1. Various forms of oaths; atonement by sacrifices. Chap. 2. Laws of uncleanliness. Chap. 3. The punishment for "vain" and "rash" oaths. Chap. 4. The oaths of witnesses. Chap. 5. Oaths in cases where objects have been unlawfully obtained or retained. Chap. 6. The oaths of the defendant in civil cases. Chap. 7. Oaths taken by the plaintiff. Chap. 8. Laws of bailments.

The Tosefta consists of six chapters which follow closely the subject matter of the Mishnah. Both Babylonian and Palestinian Gemaras to the tractate, in addition to explanations of the text, contain many Haggadic passages.

SHECHEM, a city near the southern boundary of western Manasseh; it was originally a Canaanite town, and its Israelite affiliations fluctuated between Manasseh (to which it was generally attributed) and Ephraim. In *Gen.* 34 it appears as the seat of the Canaanite clan of Hamor, which still dwelt there in the time of the judges, as we learn from *Judges* 9. Its early connection with Hebrew history is attested by the fact that Joseph was believed to have been buried there and that a famous meeting of the Israelite confederacy was said to have taken place there in the days of Joshua. The first residence of King Jeroboam of the Northern Kingdom was also at Shechem, which remained Israelite until it fell into Assyrian hands between 724 and 721 B.C.E. In the 4th cent. B.C.E. a temple was built on the adjoining summit of Mount Gerizim by a dissident Jewish group, from which the Samaritan sect developed; this temple was destroyed by John Hyrcanus over two centuries later. In 67 B.C.E. Shechem was destroyed by the Roman general Vespasian, who later built the new city of Neapolis (the Nablus of today) on a site two miles away. The results of archeological research supplement and illustrate the Biblical record very happily.

Documentary sources show that it was a flourishing town under Egyptian rule during the period from 2000 to 1800 B.C.E. and again between 1400 and 1200. The excavations of Ernst Sellin and his collaborators from 1913 to 1934 have recovered two millennia of its archeological history, spanning the entire period covered by Biblical and extra-Biblical allusions. The site is now called Tell Balatah.

SHEFELAH, a hilly stretch of territory in Palestine, situated west of the mountains of Judea. It is frequently mentioned in the Bible as a natural division of Palestine (*Josh.* 9:1; *Judges* 1:9; *Jer.* 17:26 and elsewhere), in the Apocrypha (*I Macc.* 12:38) and in the Mishnah (*Shebi.* 9:2). In *Tos. Shebi.* 7:7 it is defined more exactly as the "Shefelah of the south." Shefelah is sometimes erroneously translated as Lowland.

The church father Jerome speaks of a Shefelah around Lydda, Emmaus and Eleutheropolis (Beth Gubrin), evidently not identical with the seacoast (*hof hayam, Deut.* 1:7). Yet there seems to have been no exact line of demarcation between the two areas, as the enumeration of the towns in the Shefelah (*Josh.* 15: 33-47) mentions some places, such as Gaza, that were actually on the coast. In modern times the name Shefelah is ordinarily given to the coastal plain between Jaffa and Gaza; it is a sort of southern continuation of the plain of Sharon, and the two areas are the chief localities for Jewish plantation colonies.

The Tannaim regarded sycamores as the characteristic feature of the Shefelah (*Tos. Shebi.* 7:11; cf. *I Kings* 10:27). On the basis of this feature the Mishnah applies certain regulations of the Sabbatical year not only to the Shefelah of Judea, but to other regions designated as Shefelah in Perea (Transjordan) and Galilee.

SHEFTALL, family identified with the early history of the colony and state of Georgia and the city of Savannah.

BENJAMIN SHEFTALL, the founder of the family, came to Savannah in July 1733, with a group of Portuguese Jewish immigrants. He became a merchant, and was highly esteemed as a man of broad charity. He was one of the five men who, in 1750, founded a philanthropic society, calling it the Union Society because each one came from a separate religious group. He kept a diary of events, written in Hebrew, and still in the possession of the family, which gives important data on the arrival and settlement of the Jews in the Southern colonies.

MORDECAI SHEFTALL (b. Savannah, 1735; d. Savannah, 1795), soldier and patriot of the American Revolution, was the elder son of Benjamin Sheftall. On reaching maturity he became a merchant like his father,

and was active in Jewish congregational affairs, as well as in the Union Society.

From the very outset of the Revolution he allied himself with the American cause. As chairman of the Parochial Committee, which opposed British tyranny and was organized in Savannah to safeguard the city's freedom, Mordecai Sheftall incurred the wrath of the royal regime, which denounced and persecuted him with the utmost severity. Unmoved by this Sheftall joined the revolutionary army and became commissary general, first for the Georgia troops and then for the continental army in the neighborhood. In October, 1778, he became Deputy Commissary of Issues for South Carolina and Georgia, at the same time serving as a staff officer in the Georgia Brigade. He was meticulous in his post, requiring a receipt for even the smallest object he delivered and preserving these papers for years after.

Sheftall took an active part in the defense of Savannah against the British in 1778. After the fall of the city, both he and his son Sheftall Sheftall were taken prisoner and placed on board a prison-ship bound for the West Indies. He kept a journal, entitled *Capture of Mordecai Sheftall, Deputy Commissary General of Issues,* in which he relates his sufferings. He refused all offers to enter British service, was eventually released on parole, and in 1780 was among those under British ban in the Disqualifying Act. He was for a short time in Philadelphia in 1782, where he helped organize the Mickvé Israel congregation. In 1783, following the war, he received a grant of land from the government in recognition of his services during the Revolution. During the struggle he had advanced monies for the maintenance of the troops; despite appeals to Congress, these were never repaid.

Sheftall took an active part in communal work and in the reorganization of the Savannah congregation in 1774, after he had already donated a piece of ground for its cemetery a year previously. He was prominent as a freemason, and conducted a correspondence with the leading men of his time.

Levi Sheftall (b. Savannah, 1739; date of death unknown) was the younger son of Benjamin Sheftall. Like his father, he was prominent in the activities of the Savannah Jewish congregation and the Union Society. He was one of the signers of a resolution submitted to the first Provincial Congress at Savannah, on July 4, 1775, to promote the cause of liberty in America. He was one of the prominent patriots proscribed by the British in their Disqualifying Act of 1780. He was president of the Savannah Jewish congregation at the time when that body sent its congratulations to George Washington on his elevation to the presidency, and he was one of the committee which signed the letter.

Sheftall Sheftall (b. Savannah, 1762; d. Savannah, 1847), lawyer and American patriot, was a son of Mordecai Sheftall. He shared most of the hardships of the Revolution with his father. He served as assistant deputy to the latter when he was but fifteen. After imprisonment and release on parole he went to Philadelphia, where the Board of War appointed him a Flag Master and entrusted him with money and provisions to be carried and delivered to General Moultrie for the relief of the starving people of Charleston.

Sheftall lived nearly all his life in Savannah, where he was engaged in the practice of law. He was a charter member of Mickve Israel Congregation, incorporated in 1790. In recognition of his services to the cause of liberty, the Georgia Historical Society elected him an honorary member in 1839. To the end of his life he clung to the old style of dress, knickerbockers and a three-cornered hat. The waistcoat and breeches worn by him were preserved by his family, and were acquired by the American Jewish Historical Society.

Moses Sheftall (b. Savannah, 1769), physician and surgeon, was another son of Mordecai Sheftall. He practiced medicine in his native town, and was surgeon of the Chatham Regiment in 1802. In 1804 he was one of the incorporators of the Georgia Medical Society. He served as alderman, port warden and overseer of the poor for the city, was twice elected to the legislature, and was a judge of the county court. In 1834 he was president of Mickve Israel Congregation. CLARENCE I. FREED.

SHEGETZ, *see* Phrases, Popular.

SHEHEHEYANU (usually pronounced Shehehe-yonu), a blessing which thanks God "for keeping us alive to this season." It is pronounced whenever one has the joy of again reaching a holiday in the course of the year. The usual occasions are after the first holiday Kiddush, at the first lighting of the Hanukah lights, and before reading the Megillah on Purim eve, as well as at the first eating of a new fruit, at the first wearing of a new suit of clothes, and on all unusual and extremely happy occasions.

SHEITEL, *see* Wig.

SHEKALIM ("shekels"), fourth tractate of Moed, the second division of the Mishnah and Talmud. Its eight chapters deal with the half-shekel tax which served to defray the costs of the maintenance of the Temple (*Ex.* 30:12-16; *Neh.* 10:33), as follows: Chap. 1. Those subject to the tax and the manner of its collection. Chap. 2. Conveyance of the shekels collected to Jerusalem; how the surplus of the sums collected for certain definite purposes may be used. Chap. 3. How money was removed from the Temple treasury. Chap. 4. Objects purchased and salaries paid from the Temple treasury; use of the surplus; disposition of property dedicated to the Temple; how the Temple purchasing agent determined prices. Chap. 5. The fifteen Temple offices and their overseers; purchase of dated tallies to obtain material for sacrifices; the chamber in the Temple for charity contributions. Chap. 6. An enumeration of the thirteen chests, the thirteen tables and the thirteen prostrations in the Temple service. Chap. 7. The disposition of money, meat or cattle found in the Temple, in Jerusalem or its environs; seven decrees concerning sacrifices. Chap. 8. The cleanliness or uncleanliness of spittle and utensils found in Jerusalem; purification of Temple objects which had become ritually unclean.

The Tosefta contains three chapters which follow the content of the Mishnah. The Palestinian Talmud to the tractate contains many interesting historical notes, as well as many legends and Haggadic interpretations. There is no Babylonian Gemara to the tractate; it is uncertain whether this is because the tractate was not intensively studied in Babylonian academies or because the redactors of the Babylonian Talmud did not compile the teachings on this subject. The Palestinian Gemara to Shekalim is usually included in the printed editions of the Babylonian Talmud.

Lit.: Danby, Herbert, *The Mishnah* (1933) 152-62; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 256-57.

SHEKEL, a weight and later a coin, which served as a standard of value among the ancient Israelites and Jews. It was apparently based on a standard similar to that of the Babylonians who, as the principal trading people of the ancient Orient, impressed their own standards of currency upon the neighboring nations.

In modern times the shekel has become the standard for contributions to the Zionist Organization as annual dues. This was first proposed at the Zionist Congress at Basel in 1897, and has since been generally adopted by Zionists. The value of the shekel was set at twenty-five cents, but the valuation was raised about 50 per cent in 1927.

See also NUMISMATICS.

SHEKINAH, a term used to express the immanence and omnipresence of God. It originated after the close of the Biblical canon, and is derived from the Hebrew word *shachan,* meaning "to dwell." The spelling Shechinah for the word is often found. The term was first used in Targum Onkelos, where it forms a frequent periphrasis for God considered as dwelling among the children of Israel, in the same way as *Maḳom* ("place"), *Harahaman* ("the Merciful One"), and the like are used for God. In the philosophy of Philo, the Shekinah is the equivalent of "Logos," a sort of divine emanation as an intermediary between God and the world. That was the view also of Maimonides (*Moreh Nebuchim* 1:28). The Cabalists and mystics generally extended this view, regarding the Shekinah as a real entity, a real and factual divine emanation.

The rabbis of the Talmud and Midrash regarded the Shekinah as a manifestation of God only in a figurative sense, except in the case of the Tabernacle in the wilderness, where they held that it descended on the Holy of Holies in the form of a cloud (*Midrash Gen.* 3:9), and in connection with Solomon's Temple, where, likewise, it was "seen" in the form of a cloud. In general, the rabbis used the word in its primary meaning as a periphrasis. Thus Ishmael, in the 1st cent., said: "The Shekinah is everywhere" (*B.B.* 25a). Although the Shekinah is in heaven, it looks down upon the world and takes cognizance of mankind everywhere (*Midrash Ex.,* part 2). And that is the reason God revealed Himself to Moses in the thorn bush—to teach men that the Shekinah is everywhere (*ibid.*). The perpetual light in the Tabernacle was to be a sign that the Shekinah (i.e. God) dwelt in Israel (Midrash Rabbah, *Sab.* 22b).

In the Talmudic sense, accordingly, Shekinah is a term descriptive of the omnipresence of God. It is often a synonym of divine light and divine glory. The wicked remove themselves from the Shekinah, or God, while the righteous approach Him (*Ber.* 64a; *Sanh.* 6a; *Sab.* 57a, 103a). From the text of *Ps.* 82:1, "God stands in the congregation of the righteous," the rabbis derived that the Shekinah, i.e. God, is with ten people who join in prayer, because the ten spies in *Num.* 14:27 are called a "congregation." In commenting on *Ps.* 41:4, "the Lord support him upon the bed of illness," they likewise said that the Shekinah heals the sick. So, also, they made the terms Shekinah and God interchangeable when they said: "Wherever the Israelites went into exile, the Shekinah accompanied them" (*B.K.* 25a; *Sotah,* 5a; *Sab.* 67a).

SHEM, eldest son of Noah; in the genealogical table in *Gen.* 10, he is made the progenitor of a group of nations including the Elamites, Assyrians, Arameans and Arabs, and in the following chapter the line of descent from him to Abraham is traced. In *Gen.* 9:18-27 there is a story of how Shem and his brother Japheth acted in a respectful manner toward their father Noah, whereas Ham (or Canaan), for acting disrespectfully, was cursed and declared to be born a slave. This story seems to reflect the attitude of the Israelites, who regarded themselves as ancestors of Shem, toward the Canaanites.

The rabbis extol the virtues of Shem, declaring that he was one of the few perfectly righteous individuals. He served as priest after the Flood, as his father had been lamed by a blow of the lion's paw. He is sometimes identified with Melchizedek, priest of Salem (*Gen.* 14:18-20). Together with his son Eber, he established an academy which was attended by the Patriarchs —a typical rabbinical anachronism.

SHEM HAGEDOLIM, *see* AZULAI, HAYIM JOSEPH DAVID.

SHEMA (*ḳeri'ath Shema;* contracted in popular speech to Krishma), in the narrower sense, the reading of the Shema (*ḳeri'ath Shema leinen;* in popular speech, Krishma leinen). The original Shema consisted of three portions from the Bible: the Shema itself (*Deut.* 6:4-9; equals *ḳabbalath 'ol malchuth hashamayim,* "the acceptance of the yoke of the kingdom of heaven"); *vehayah 'im shamo'a* (*Deut.* 11:13-21; equals *ḳabbalath 'ol mitzvoth,* "the acceptance of the yoke of the commandments"); and *vayomer* (*Num.* 15:37-41, which closes with a reference to the redemption from Egypt [*ge'ullah*]).

The Shema receives its name from the first word of *Deut.* 6:4, which is Israel's confession of the One and only eternal God: "Hear" (*shema*), O Israel: the Lord our God, the Lord is One. This verse is also recited separately when the Torah is taken out on the Sabbath and the festivals, in the Kedushah for the Additional Service, and at the end of the Neilah prayer. As far back as ancient times it was recited by the dying, or by those who assembled about their deathbed. The Midrash declares that it was already uttered by the children of Jacob as he lay dying, and the martyrs uttered this confession with their last breath. According to the ancient requirement, the Shema, consisting of the three portions mentioned above, was read twice daily, in the morning and in the evening. In the time of the Amoraim the Keriath Shema Al Hamittah (called also Keriath Shema Shel Mittah) was also instituted; this consists of *Deut.* 6:4-9 only.

In the broader sense, the words Keriath Shema designate the prayer itself, both the first and most important part and the three sections of which it is composed. Then it is further extended to include the two benedictions that precede it in the morning and evening service, as well as the single benediction that follows it in the morning, or the two that follow it in the evening.

The "Shema" section of the liturgy begins with the *barechu* ("Praise ye"). In most ancient times this was nothing else but the invitation to begin the divine service. Nowadays it still constitutes the beginning of the Evening Service for the Sabbath and the festivals, but on weekdays it is preceded by *Ps.* 78:38 (*vehu rahum*) and *Ps.* 20:10 (*'adonai hoshi'a*). The congregation then makes the following response to the

barechu: Baruch 'adonai hameborach le'olam va'ed ("Praised be the Lord, Who is to be praised, forever and ever").

The first benediction of the Morning Service is called Yotzer, and praises God for the creation of the light that is renewed daily. The corresponding benediction for the Evening Service, *hama'arib 'arabim,* takes as its subject the alternation of the day and the night, and the darkness of the night illuminated by the stars.

The second benediction is called Birkath Hatorah. In the Morning Service, it begins with *'ahabah rabbah;* in the Evening Service, with *'ahabath 'olam.* Its subject is the return of thanks for the Law which has been given by God. Then comes the recitation of the three Biblical sections mentioned above. Just before the Shema, the prayer-books contain the addition *'el melech ne'eman* ("God, faithful King!"). The initials of these three words form the word *'amen.* As a matter of fact, it was an old custom in Palestine to say "Amen" after the second benediction (*Yer. Ber.* v, 9c). Later on this "Amen" was resolved into the three words mentioned above. The mystics then discovered that these three words, together with the 245 words contained in the Biblical portions which make up the Shema, made up the mystic number 248 —the total of the members of the body and of the positive commandments in the Law. Hence the precentor, who does not say the *'el melech ne'eman,* must repeat aloud the last three words of the final Shema portion, *'adonai 'elohechem 'emeth.* The recitation of the Shema is interrupted by the response *baruch shem kebod malechutho le 'olam va'ed* after the first verse. This is an old response which was already in use in the time of the Temple whenever the name of God was pronounced. It corresponds to *Ps.* 72:19, except that it replaces "His glorious name" by "the name of His glorious kingdom."

The three Biblical passages of the Keriath Shema are already found in combination in the Mishnah (*Ber.* 1 and 2), and Josephus also knows that they belong together. However, the third, *vayomer,* according to good tradition, was not recited in the evening in Palestine as late as the 9th cent.

The Geullah follows the Shema as the third benediction. In the morning it begins with *'emeth veyatzib;* in the evening, with *'emeth ve'emunah.* The Biblical passage contains both a confirmation of the confession of faith and thanks for the deliverance of Israel from Egypt. The final benediction accordingly reads: *ga'al yisra'el* ("Redeemer of Israel"). In addition, the Evening Service has a fourth benediction, *hashkibenu,* a prayer for protection during the night.

SHEMAIAH, Pharisaic leader of the 1st cent. B.C.E.; he and Abtalion constitute the fourth of the five pairs (Zugoth) who formed part of the chain of tradition (*Aboth*) 1). Both Shemaiah and Abtalion were said to have been descendants of proselytes (*Git.* 57b; *Yoma* 71b). His favorite saying was: "Love work, hate rulership, and do not seek to become friends with the rulers."

Shemaiah is probably the same as Sameas, of whom Josephus (*Antiquities,* book 14, chap. 9, sect. 4) relates that when Herod appeared before the Sanhedrin for trial, he overawed all of them but Sameas, who predicted that if they spared Herod then, he would some day condemn them all to death—a prediction which was duly fulfilled when Herod came to power. However, he spared Sameas and his colleague Pollio (Abtalion) because they had counselled submission to his power. The Talmud has a similar story (*Sanh.* 19ab), but erroneously refers it to the better known Simon ben Shetah.

Lit.: Graetz, H., *Geschichte der Juden,* vol. 3, pp. 171-207, and note 16.

SHEMARIAH BEN ELIJAH IKRITI, of Negroponte, Bible commentator and philosopher, who flourished in Italy in the first half of the 14th cent. His father was rabbi or head of the community in Crete (therefore the surname Ikriti, the Cretan), but he claimed to be a descendant of an old Roman family. King Robert of Naples, who had been familiar with Shemariah's Biblio-philosophical writings, induced him to begin (1325) his Bible commentary and Shemariah tendered to the king (1328) commentaries on *Genesis* and on *Song of Songs.*

Manuscripts of his commentaries on the *Song of Songs* are preserved in the Bibliothèque Nationale, Paris, and those on the book of *Esther* in the library of the University of Cambridge. In 1346 he wrote *Sefer Hamora,* "a book inspired by God," to refute the views of the philosophers on the creation of the world.

Other works of Shemariah include: *Elef Hamagen,* a work on Haggadah; *Sefer Amatzyah; Hibbur Ish Veishto;* a commentary on the Kaddish; *Higgayon,* a treatise on logic. His handbook of the Talmud is not extant. In 1352 Shemariah went to Southern Spain in an attempt to conciliate the Rabbinites and the Karaites. A satirical poem accuses him of having represented himself in Spain as the Messiah who would have saved Israel in 1358, but this accusation is not borne out by any other evidence. Shemariah ended his life in a Spanish prison. He wrote also interpretations of the Haggadic part of the first section of the Talmud tractate *Megillah,* and some Piyutim.

SHEMEN ROKEAH, *see* LÖW, ELEAZAR.

SHEMINI ATZERETH, the eighth day of the festival of Sukkoth; outside of Palestine, the ninth day of Sukkoth is the second day of Shemini Atzereth, but is more generally known as Simhath Torah. The more exact name of this day is *yom hashemini hag ha'atzereth* ("the eighth day, the festival of conclusion"). The word Atzereth originally meant merely "festive assembly" or "holy convocation" (*Lev.* 23:36; *Deut.* 16:8; *Isa.* 1:13), but was later understood to mean "feast of conclusion."

From the point of view of the Jewish religious law, Shemini Atzereth is regarded as a separate festival or holiday, yet the ceremony of dwelling and taking one's meals in the huts or booths is observed on Shemini Atzereth as well, although no blessing is recited. Ancient Jewish writers and religious authorities stated: Just as the festival of Shabuoth (which was called also Atzereth, Festival of Conclusion, in the Talmudic period) was celebrated on the fiftieth day after the festival of Pesach, so the Shemini Atzereth festival originally was supposed to be celebrated only on the fiftieth day after the festival of Tabernacles. However, in view of the approaching rainy season, it was immediately joined to the festival of Tabernacles.

The complete Hallel is recited on Shemini Atzereth, and the book of *Ecclesiastes* is read if the festival falls on the Sabbath. The reading from the Torah consists of *Deut.* 14:22 to 16:17. As a supplementary selection for the Maftir, *Num.* 29:35 to 30:1 is read. The Haftarah, or prophetical portion, consists of *I Kings* 8:54-66.

According to the German-Polish ritual, a memorial service (Hazkarath Neshamoth) is read on Shemini Atzereth directly after the reading from Scripture.

Into the second benediction of the Additional Service (Musaf), which mentions God's omnipotence, there is inserted a short section which tells of God as the giver of rain; this formula is retained in the main prayer, the Eighteen Benedictions (Shemoneh Esreh), until the first day of the festival of Pesach. This insertion, which is announced in a loud voice before the Musaf prayer, gave rise to the origin of the Prayer for Rain (Tefillath Geshem), the melodies of which, like those of the Day of Atonement, as well as the Kaddish recited before the Musaf service, are clothed with great solemnity. The person who reads the Musaf service puts on a white garment, as is done on the Day of Atonement.

SHEOL, a general Hebrew term for the abode of the dead, mentioned frequently in the Bible and later Jewish literature. Its etymology is obscure, and its meaning varied with the shifting ideas of the ancient Israelites and Jews as to the fate of the souls of the departed and their conception of retribution. At first Sheol was merely a place where the dead resided; from there they might be summoned to answer the inquiries of the living, as in the case of the evocation of Samuel by the witch of En-dor for Saul (*I Sam.* 28). However, such summoning of the dead was regarded as wicked. It was only at a much later period that there was any fixed notion of a retributive judgment beyond the grave.

In many places in the Bible Sheol is made practically equivalent to death and the grave. Since it devours all men, it is described as a monster with insatiable greed (*Isa.* 5:14; *Hab.* 2:5; *Prov.* 27:20; 30:16). It is represented as a realm of eternal darkness and dust (*Job* 10:21-22 and other passages), located far beneath the earth. In common with the description of the netherworld in Babylonian-Assyrian mythology, it is provided with gates, like a city (*Isa.* 38:10; *Ps.* 9:14 and other passages). There silence reigns supreme (*Isa.* 14:20). In other places, because of its connection with the grave, it is called a pit (*Ps.* 86:13).

Traces of the idea of Sheol as a place of retribution appear in *Ps.* 49:15 and *Isa.* 24:21-22. Sometimes it is represented as an intermediate state in which the righteous are separated from the wicked, the former rising to the eternal Messianic kingdom, the latter remaining to endure punishment. In the latter case the common term for Sheol is Gehinnom or Gehenna (*II Esdras* 4:41; *Enoch* 22:13). When Sheol is regarded as an intermediate state, comparable to the Christian idea of purgatory, the righteous go to a separate division of it or to an intermediate paradise, while the wicked remain and suffer everlasting torment.

There is also the suggestion of a belief that God has nothing to do with the dead in Sheol. There no one praises him (*Isa.* 38:18; *Ps.* 6:5). It was the great fear of the devout that they would be denied that privilege, although *Ps.* 139:8-12 expresses exactly the opposite idea, based on the concept of the all-pervading power of God. Hence it is only in the earlier Biblical literature that Sheol is shut off from God; in later passages He is expressly described as having power over it.

The ideas as to Sheol in the Talmud generally correspond to those in the Bible.

CHARLES A. RUBENSTEIN.

SHEPHERD. There are frequent references to shepherds and their life in the Bible and Talmud. The dependence of the sheep upon the shepherd for pasturage and water is especially noted (*Ps.* 23; 77:21; 78:52) and used as a metaphor for the care of God. The life of the shepherd was one of danger and hardship. He had to protect his flock from the cold, from wild animals and from robbers. His only weapons were a staff and a sling (*I Sam.* 17:40). He gathered his flock at night into caves (*I Sam.* 24:4) or sheepfolds made of rough stones (*Num.* 32:16; *Judges* 5:16); he stayed out in the open air keeping watch over them (*Luke* 2:8). He would carry in his arms lambs that were too small or too weak to walk (*Isa.* 40:11). In the latter part of the Biblical period shepherds made use of dogs to aid in guarding the flock (*Job* 30:1).

Among the ancient Israelites the shepherd was often a daughter of the family or a prospective son-in-law earning a bride. The profession was regarded as honorable, and among those who served as shepherds are recorded the names of Rachel, Jacob and his sons, Moses and David. Hence it was natural to describe God as the Shepherd of the people (*Ps.* 23) or to use the term as synonymous with ruler. Later, as the shepherd became more of a hireling, his status declined. The Talmudic rabbis, who opposed the raising of flocks because it interfered with the cultivation of crops, even stigmatized shepherds as uncouth and dishonest (*Sanh.* 25a). On the other hand, it is stated that because Moses was a good shepherd he was found worthy to lead the people of Israel (*Midrash Ex.* 82).

SHEPS, ELIAS (ELIYAHU HAYIM), Yiddish writer, b. Warsaw, Poland, 1892. He was known also by the pen names Eliash, Gitlin, Ali Elin, and (after 1918) Almi. He started writing for Yiddish newspapers in Warsaw at the age of sixteen. He came to New York city in 1913. Except for a stay of about five years in Montreal, Canada, he thereafter resided in New York, where he was a member of the editorial staff of the *Yiddishes Tageblatt* until its suspension in 1929.

Sheps wrote (in Yiddish) articles and poems on a variety of subjects—nearly two-score volumes on spiritualism, anti-Semitism, Jewish legends of the Polish rebellion, Chinese philosophy and poetry, and the history of religion. He also edited Yiddish publications in Warsaw, New York and Montreal. Among his works which were translated from Yiddish into English are: *Second Existence* (1920); *Anti-Semitism—Why?* (1938); *Eternal Frontiers* (1939).

SHERBOW, JOSEPH, attorney, b. Baltimore, 1901. He received the LL.B. degree from the University of Maryland (1922), and served as associate justice at the People's Court of Baltimore City (1929-35). As a people's counsel of the Public Service Commission of Maryland (1939-41), he conducted the litigation which resulted in the acquisition by the state of Maryland of the ferry system across Chesapeake Bay. In 1941 he was appointed general counsel of the Public Service Commission of Maryland.

Sherbow was a sponsor of the plan for non-partisan election of judges of the supreme bench of Baltimore City, and propagated his plan in a series of articles. He was a vice-president of the bar association of Baltimore, president of the Jewish Family and Children's Bureau, Baltimore, and a

member of the board of directors of the Zionist Organization of America, representing the Baltimore Zionist district.

Lit.: *The Baltimore Evening Sun,* June 16, 1941 (editorial); *ibid.,* June 20, 1941 (article).

SHERESHEFSKY, JUDAH LEON, professor of chemistry, b. Pinsk, Russia, 1896. He came to the United States in 1912, and studied at the University of Pittsburgh (bachelor of chemistry, 1923) and at Johns Hopkins University (Ph.D., 1926). Shereshefsky was research fellow of Johns Hopkins University (1926-28) and of the Mellon Institute of Industrial Research (1928-30), and in 1930 was appointed professor of chemistry at Howard University; in 1936 he became head of the department of chemistry. He was active in the Jewish labor movement, and a member of the constituent assembly of the first American Jewish Congress. Shereshefsky published numerous scientific papers.

SHERIRA, Gaon at Pumbeditha, b. about 900; d. 1001, when he was about one hundred years old. He came from a line of scholars, a number of whom, including his father Hananiah, were Geonim. He was head of the academy from 968 until his death. He made strenuous efforts to arrest the process of degeneration which had overtaken the schools of Babylonia in his time; he sent letters to numerous communities appealing for funds, and he answered numerous letters on ritual matters addressed to him by the Jews of the Orient, Egypt, Northern Africa, Spain and even Italy. Toward the end of his life he resigned most of the duties of his office to his son and successor, Hai. The two were arrested because of a malicious accusation before the caliph; according to Cassel, Sherira was actually executed, but others think he was spared, and one suggestion is that the caliph's sister saved him. He died shortly after this unhappy occurrence.

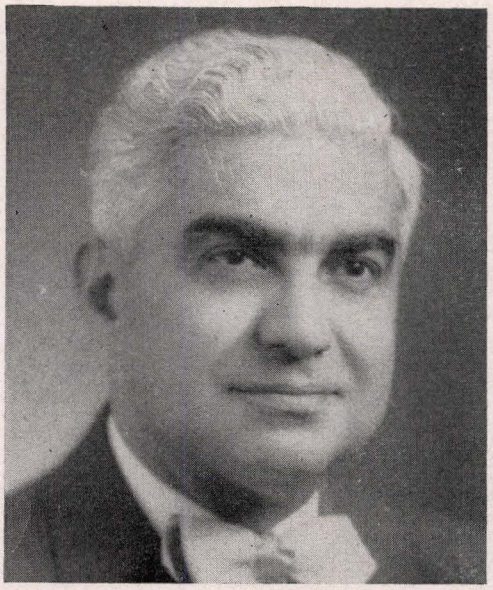
Sherira is famous for the letter which he wrote detailing the history of the development of the oral tradition through the Mishnah, Talmud and the Geonim, together with a historical sketch of the academies and their teachers. It is the chief source for the history of the Jews of the Orient from 200 to 1000 C.E. It has been frequently printed in at least two versions, both in the original and with translations.

Sherira Gaon* (1921); idem, *Otzar Hageonim* (1928-35); Elbogen, I., "Wie steht es um die zwei Rezensionen des Scherira-Briefes?", *Festschrift des Jüdisch-theologischen Seminars,* vol. 2, part 1 (1929) 61 et seq.; Mann, J., in *Hebrew Union College Jubilee Volume* (1925) 237-48; Marx, A., in *Journal of Jewish Lore and Philosophy,* vol. 1 (1919) 397-401.

SHERMAN, CARL, lawyer, b. Olmütz, Moravia, 1890. He was brought to the United States in 1894. Sherman studied law at the University of Buffalo (LL.B., 1910), was assistant United States attorney for the western district of New York (1918-20), and attorney general of the state of New York (1923-25). He was a member of the national executive committee of the Zionist Organization of America (1934-35 and 1937), and a member of the governing council of the American Jewish Congress. In 1935 Sherman was a member of the deputation sent to Mexico by the American Committee on the Rights of Religious Minorities.

SHERTOK, MOSHE, Zionist political leader, b. Kherson, Ukraine, Russia, 1894. He was educated at Kherson and in London (B.Sc.), specializing in economics. Shertok came to Palestine in 1906, was a captain in the Turkish Army (1915-18), and served as a member of the executive of the Poale Zion in England (1920-25). He edited *Dawar* from 1925 to 1931, when he became secretary of the English branch of the executive of the Zionist Organization and the assistant of

Moshe Shertok



Victor Hayim Arlosoroff. After the latter's assassination Shertok succeeded him as head of the political department of the Jewish Agency (1933). Upon the outbreak of the second World War (1939) he conferred with British political and military leaders in London and the Near East, urging the mobilization of all Jewish manpower in Palestine and demanding the establishment of a Jewish army fighting with the Allies.

SHESHBAZZAR, a prince of Judah, about whom the only facts known are that he headed the first group of Jews who returned to Palestine from Babylonia after Cyrus had granted them permission (*Ezra* 1:8; 5:14), and that he laid the foundations of the Temple (*ibid.* 5:16). Wellhausen identified him with Zerubbabel, but other scholars hold that the two were separate individuals. Eduard Meyer suggested that he was the same as Shenazzar, a son of Jeconiah (Jehoiachin), the next to the last king of Judah (*I Chron.* 3:18). The name sounds Babylonian; it may have been Shamash-bil-uzzur or Sin-uzzur.

Lit.: The Biblical dictionaries and commentaries on *Ezra.*

SHESHET, Babylonian Amora of the third generation. He is mentioned frequently in discussions with Nahman ben Jacob, and as being on friendly terms with Hisda. He often attended the lectures of Huna, head of the academy at Sura. He lived for a time at Nehardea, where he was perhaps a pupil of Samuel; then he went to Nehardea, and finally founded an academy of his own at Shilhi. Despite his blindness (*Ber.* 58a) he had thoroughly mastered all the traditional law, and used to review it every thirty days, a feat far beyond the capacity of any of his contemporaries. Thus his remarkable memory enabled him to produce the proper reference from the Mishnah or Baraitha on any Halachic question, and he won a great reputation as teacher. He was an opponent of quibbling casuistry (*B.M.* 38b).

SHESHET BEN ISAAC BENVENISTE, *see* BENVENISTE, SHESHET BEN ISAAC.

Simon Shetzer

SHESTOV, LEV (originally, Lev Isaakovich Schwarzmann), philosopher, b. Kiev, Russia, 1866; d. Paris, 1938. In 1922 he became professor of Russian philosophy on the Russian faculty of the University of Paris. His suprarationalistic philosophy was based on the Bible and in opposition to every merely and exclusively scientific philosophy. Thus, independently of Kierkegaard, he often reached the same conclusions as the Danish philosopher.

Several of Shestov's works, which include books on Dostoevski, Tolstoi and Nietzsche, were translated into French, English and German. In English appeared *Penultimate Words and Other Essays* (1916); *All Things Are Possible* (with a foreword by D. H. Lawrence; 1920); and *In Job's Balances; On the Sources of the Eternal Truths* (1932); the last-mentioned work contains, among others, essays on Dostoevski, Tolstoi, Spinoza, Pascal and Plotinus.

Lit.: Schloezer, Boris de, "Un penseur russe: Leon Chestov," *Mercure de France,* vol. 159 (1922) 82-115; Merz, G., *Zwischen den Zeiten* (1929); Fondane, Benjamin, "En las riberas del Iliso," *Sur* (Buenos Aires), eleventh year (1940) 7-39.

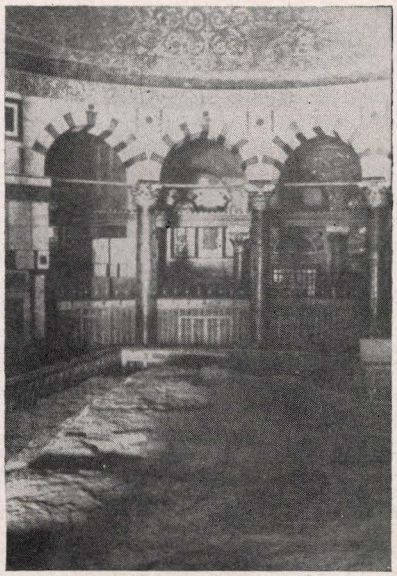
SHETIAH (*'eben shethiyyah*), legendary foundation stone for the creation of the world. According to the Mishnah (Yoma 5:2), the Ark of the Covenant disappeared at the destruction of the First Temple; at the place where it had formerly stood there was a stone, called "foundation," which rose to the height of three finger-breadths above the surface of the ground. During the period of the Second Temple it was there that the high priests would set the censer of burning incense on the Day of Atonement. This undoubtedly refers to the natural rock which arises in conical form out of the Temple mount, and may perhaps contain a reminiscence of the idea that the entire rock was consecrated as an altar, as indicated in *I Kings* 8:64.

This natural rock forms the central part of the Mosque of Omar, giving it its name Kubbet es Sakhra, "Dome of the Rock." It is about fifty-feet long, forty-three feet wide and nearly seven feet high; it still shows the channels for conveying away the sacrificial blood.

As the name Shetiah, "foundation," indicates, and as other myths in rabbinic writings show, a cosmogonic principle was connected with this stone; it was believed to reach the bottom of the universal ocean and to form the stable point on which the earth was founded. In the same way Palestine, Jerusalem and the sanctuary were regarded as occupying a central position in the earth. The church writings do not mention the stone.

Lit.: Luncz, A. M., *Jerusalem,* vol. 5, pp. 111-14; Horovitz, J., *Geschichte des Sch'tijasteines* (1927).

SHETUKI, *see* FOUNDLING.



SHETZER, SIMON, attorney and communal figure, b. Detroit, 1900. He received the B.A. degree from the University of Michigan (1921) and the LL.B. degree from Harvard Law School (1924). He practiced law until 1926 and became a partner of I. Shetzer and Co., wholesale dry goods distributors, in 1937. He was chosen national executive director of the Zionist Organization of America in 1941, and took up residence in Washington, D. C. Nationally recognized as a leader in Jewish affairs, Shetzer devoted many years of his life to the cause of Zionism, and gained recognition as organizer of the Detroit Jewish Community Council, which he served as president from 1937 to 1941. He was a member of the national executive committee of the Zionist Organization of America and of the board of governors of the Jewish Welfare Federation of Detroit, president of the Michigan State as well as of the Midwest Region Zionist Organization.

Shetzer served as vice-president and treasurer of the Detroit United Hebrew Schools, director of the American Economic Committee for Palestine and of the East Central States Regional Conference of Jewish Federations and Welfare Funds, in addition to being chairman of the Detroit League for Human Rights and president of the wholesale merchants' bureau of the Detroit Board of Commerce (1932-36). He was also a member of the executive committee of the United Jewish Appeal and a founder of the Detroit Round Table of Catholics, Protestants, and Jews. Shetzer wrote several monographs including an illuminating brochure entitled *The Jewish Community Comes of Age.*

SHIBAH DENEHEMTA, *see* under SABBATHS, SPECIAL.

SHIBBOLETH (meaning either "ear of grain," *Job* 24:24, or "flowing stream," *Isa.* 27:12), a test word mentioned in the story of the defeat of the Ephraimites by the Gileadites under Jephthah (*Judges* 12:1-6). The Gileadites, who had seized the fords of the Jordan in the rear of the fleeing enemy, were able to detect the Ephraimites by the fact that the latter pronounced *shibboleth* as *sibboleth*. The same pronunciation of the Hebrew letter Shin (*sh*) as *s* is found among the Lithuanian Jews of modern times. There are historical parallels to the story in the case of the Sicilian Vespers (1282) and the revolt against the French in Flanders (1302), in which the French were detected by similar differences in pronunciation. It has been generally assumed that the Ephraimite pronunciation was a local dialect; Speiser, however, thinks that it was the usual form, and that the Gileadite pronunciation (approximately *tubbulat*) was a dialect form unusually difficult for other Israelites.

SHIDDUCH, *see* SHADHAN.

SHIELD OF DAVID (Magen David; in Ashkenazic pronunciation, Mogen Dovid), a symbol made up of two equilateral triangles that are interlaced so as to form a hexagonal star, every point of which touches a circle of the same radius as each one of their six sides. This symbol is of ancient origin; according to the teachings of the Rosicrucians, it was known to the ancient Egyptians, Hindus, Chinese and Peruvians. It is found on a Hebrew seal discovered in Sidon and dating from the 7th cent. B.C.E.; upon the tombstone of a certain Leon ben David, dating from the 3rd cent. C.E.; on the synagogue at Tell Hum (Capernaum) in Galilee, from the same century; in the Jewish catacombs at the Villa Torlonia, near Rome; on the city wall at Jerusalem; in an Arabic amulet of the 9th cent.; in Byzantine magic texts; in medieval books of magic (but as a pentagraph); in German folklore; in the relics of the Templars; as the "stone of the wise" in alchemy; as the stone-mason's sign (but in a somewhat different form) in the coat of arms of the Freemasons; as the "Order of the Seal of Solomon" in Abyssinia (from 1874 on); in the old town hall of Vienna; on or in churches at Aquileia, Brandenburg, Stendal, Hannover, Lüneburg and Bad Gastein (the latter is the most recent date). It was placed on the sign-board of taverns, particularly in South Germany, reputedly because it was used by the Pythagoreans on their begging tours to notify their comrades that at that place they had found a hospitable reception.

It can not be definitely stated just when the Shield of David became a generally acknowledged symbol of Judaism. When it first appears on Jewish buildings and objects, it often occurs in connection with other symbols, so that it may be no more than a conventional decoration. On the other hand, so few Jewish synagogues have survived from the earlier period that it is impossible to draw conclusions from the absence of the symbol in earlier accounts and to hold that it may not have a much longer history than that which is actually known. It begins to appear frequently on synagogues from the 16th cent. on, when the influence of the Cabalist Isaac Luria was spreading. It appears side by side with the Menorah, which until then had been regarded as the "shield of David," and which it gradually displaced in synagogues and on religious objects. A Hebrew manuscript

Bernard L. Shientag

of 1564, in the Hamburg Stadtbibliothek, has the symbol accompanied by the words, *magen david;* it is further met with in the arrangement of the Seder, as a Zionist emblem, and in the name of the Red Magen David Society (equivalent to the Red Cross).

It is only in Jewish sources that the interlaced triangles are called "shield of David," as non-Jewish sources call the symbol the "seal of Solomon." The Jewish title appears first in the *Eshkol Hakofer* (about 1148) of the Karaite Judah ben Elijah Hadasi. Here, in connection with the Mezuzah (the doorpost amulet), the names of seven angels are given, each one of which is accompanied by this hexagram. This connection would indicate one meaning of the symbol. According to an ancient view, angels, as well as spirits and demons, were created out of fire and air. The zodiac was considered as consisting of twelve signs, of which three each belonged to the four elements of fire, water, air and earth; the hexagram was formed by drawing lines that connected the zodiacal symbols (arranged in a circle) devoted to fire on the one hand and air on the other. Again, according to the Cabalistic view which speaks of two worlds, an upper and a lower one which corresponds to it, the two triangles, one upright and one inverted, would be the symbol of evolution and involution, the inner link of the visible and the invisible world, the representation of the Ten Sefiroth as the mathematical figure of the Tree of Life. Mythologically, it designates the emergence of the microcosm (man) from the macrocosm (the universe), of the Zeir Anpin (immediate aspect of God) from the Aba Veumma (hidden aspect of God); according to this analogy, the Messiah David will arise from the "bosom of Abraham," the foundation stone of the world.

A further confirmation of this mythological explanation is the fact that in medieval times the symbol was designated "shield of David and Abraham"; God as the "shield" or protection of both David and Abraham appears in the Bible (*Gen.* 15:1; *Ps.* 18:36). The use of the term "shield" points to an astrological and mythical connection, and is reminiscent of the shield of Melkart (Hercules), with which the latter slew the giant Antaeus. Just as this was preserved in the temple at Gadeira, so the shield of David, according to David Reubeni, was preserved in the synagogue at Bologna.

Not to be confused with the Shield of David is the pentagram with the names of God in ancient papyri. This five pointed symbol is a rival of the hexagram for the title of "seal of Solomon."

The Shield of David was further interpreted to denote the seven days of the week, with the planets as their overlords. The hexagon in the center, the most complete figure, was the Sabbath; the six outer triangles, the six week-days. It was also divided into four rhomboids, corresponding to the four cardinal directions: north, south, east and west. As a Messianic symbol, it represented the zodiacal sign of Pisces (February 21 to March 20), the time of the year in which the Messiah was supposed to appear.

In modern times the Shield of David has become the most universally recognized Jewish symbol. It appears in synagogues and ritual objects, on the seals of Jewish organizations and on bookplates, on the Zionist emblem (see illustration, vol. 2, p. 66) and on amulets. It was so closely connected with Jewish life as to be called the "Jewish star" by anti-Semites and to be chosen by the Nazis as the shape of their reintroduced Jew badge. MAX GRUNWALD.

SHIENTAG, BERNARD LLOYD, justice, b. New York city, 1887. He received the LL.B. and M.A. degrees from Columbia University (1908), and the LL.D. degree from St. Lawrence University. He served as counsel for various state commissions and was instrumental in bringing about legislation in behalf of workers in manufacturing and industrial establishments. As associate counsel of the famous New York State Factory Investigating Committee he helped reveal the evils and hazards of sweatshop factories and to prepare remedial legislation. Subsequently he became chief counsel of the New York State Industrial Commission (1919-21) and of the Governor's Labor Board and Industrial Commission (1923). He was one of the inner circle of the advisors of Governor Alfred E. Smith in the latter's program of progressive and humane legislation.

In 1924 Governor Smith appointed Shientag a justice of the city court, to which he was elected in the following year. He served with distinction until 1930, when he was appointed a justice of the Supreme Court by Governor Herbert H. Lehman. In the same year he was elected to the Supreme Court for a fourteen year term. He was designated to the Appellate Term of the Court for 1934, 1935 and 1938.

Shientag held numerous other public offices, including the chairmanship of the Industrial Council, Labor Department (1923), and was a vice-president and director of the Child Welfare Committee of America. He was a trustee of the Federation for the Support of Jewish Philanthropic Societies of New York city, and president of the Young Men's Hebrew Association.

His published writings include *The Trial of a Civil Jury Action in New York* (1938); *Summary Judgment* (1941); also the penetrating article "The Opinions and Writings of Chief Judge Benjamin N. Cardozo" (in *Columbia Law Review,* May, 1930).

SHILKRET, NATHANIEL, conductor and composer, b. New York city, 1895. He was educated at the College of the City of New York and at Bethany College, Kansas, receiving his doctorate in music at the latter institution. For a period he played the clarinet in many major symphony orchestras, including the New York Philharmonic and the New York Symphony. In 1915 he became director and manager of the R.C.A. Victor Company, creating and conducting the Victor Symphony Orchestra; during his twenty years in this post he made more than 3,000 recordings. From 1935 to 1937 he was the music chief of the R.K.O. motion picture company. He had a long and rich association with radio, directing the music for more than 7,000 broadcasts over the two major networks.

Shilkret composed classic, semi-classic and popular music. His serious works include a ballet, *Skyward* (a symphonic poem), a clarinet sextet, a clarinet quintet, a concerto for trombone, and smaller pieces for the violin. He wrote several popular songs which were nationwide successes, including *Prisoner's Song, Jeannine I Dream of Lilac Time,* and *Lonesome Road.* He produced also the musical scores for various motion picture films, including *Queen Mary of Scotland* and *Winterset.*

SHILLMAN, BERNARD, communal worker, b. Dublin, 1892. He studied law and was admitted to the bar, subsequently becoming a member of the Irish Bar. At the age of seventeen he entered the civil service, retiring in 1933, at which time he was inspector of factories and workshops in the department of industry and commerce.

Shillman was one of the most active members of the Jewish community of Dublin. After the departure of Isaac Halevi Herzog from Dublin to become chief rabbi of Palestine, Shillman was appointed by the Minister of Education of Eire to serve as manager of the National Jewish Schools, which serve as the secular schools for the Jewish children of the country. He was also a leader in the Zionist movement and the founder of Lev-Zion, a Dublin Zionist society. In 1942 he was Dublin chairman of the Committee for the Relief of Jews in Poland and Eastern Europe.

In the field of law, English literature and Jewish history, Shillman wrote many studies and monographs. He was the author of *The Law Relating to Employers' Liability and Workmen's Compensation in the Irish Free State; Irish Workmen's Compensation Cases* and *The Licensing Laws of Ireland* (1941). His researches into English literature have centered largely on Shakespeare. He wrote on Irish Jewish history for the *Transactions of the Anglo-Jewish Historical Society* and on cognate subjects, and was also the author of *Hebraic Influences on Masonic Symbolism.*

SHILOAH (SILOAM), a pool which serves as a reservoir for the waters drawn from the Gihon spring east of Jerusalem by two conduits. The older conduit, situated above the ground, has been for the most part destroyed; the later one is a tunnel driven through the rock in the time of Hezekiah (*I Kings* 1:33; *II Kings* 20:20; *Isa.* 8:6; *Neh.* 3:15). In 1880 bathing children found an inscription, written in ancient Hebrew characters, not far from the pool. The upper line has been mutilated, but the rest reads as follows: ". . . the conduit. This is the story of the conduit. While the axes of one group (were opposite to) those of the other and they were but three cubits apart, it was possible for one to call to the other, for there was a fissure in the rock to the right and the left. On the day of (the completion of) the conduit the diggers struck facing one another, axe facing axe, and the waters flowed from the spring to the pool for a distance of 1,200 cubits. The height of the rock above the workers was 100 cubits."

This famous Siloam Inscription is in the museum at Istanbul. The reason for cutting this tunnel was preparation for the anticipated siege of Jerusalem by the Assyrians; a water-supply close to the walls of the city was desirable. The pool is mentioned in later times; it was repaired by the high priest Simon (*Sirach* 50:3) and by kings of the Herodian dynasty (*Tos. Arach.* 2:6).

Lit.: Vincent, *Jérusalem,* vol. 1 (1912); Diringer, *Le iscrizioni antico-ebraiche palestinesi* (1934) 81-102 (with full bibliography).

SHILOH, sanctuary city of ancient Israel, situated between Shechem and Beth-el. It is mentioned in *Josh.* 18:1 as the place where the tent of meeting was set up and the congregation assembled, it was there that the final division of the land took place and the tribes separated to conquer their allotted territory. *Judges* 21 describes a harvest festival at Shiloh, at which the virgins came out to dance; this occasion was used by the remnants of the tribe of Benjamin to obtain wives for themselves. Shiloh was apparently the first locality in Palestine where the Ark of the Covenant was located. According to *I Sam.* 1 to 4, it was lodged in a house or temple, in which Eli and his sons officiated as priests.

After the disastrous battles in which the Ark was captured by the Philistines, the latter seem to have destroyed the sanctuary and laid the town in ruins; it never again attained importance, though it furnished one prophet, Ahijah of Shiloh, in the reign of Solomon. There is a reference to Amorite rulers of Shiloh who waged war against the sons of Jacob (*Jubilees* 34:4, 7). The site of Shiloh is marked by the village of Seilun, where Sellin and later Schmidt made important investigations.

Lit.: Hastings, James, *Dictionary of the Bible,* vol. 4, pp. 499-500.

SHIMONOWITZ, DAVID, Hebrew poet, b. Bobruisk, district of Minsk, Russia, 1886. At twenty-three he spent a year in Palestine as a laborer and guard (Shomer) in the Judean colonies. This experience left an indelible impression upon him, and found expression in most of his literary works. During the years to 1911 to 1914 he studied at various German universities, and when the first World War broke out he was compelled to go to Russia, where he lived through the years of the War and the Revolution and pogroms. In 1921 he settled in Palestine where, after four years' residence in the colony of Rehovoth, he was appointed teacher at the Herzliah Gymnasium of Tel-Aviv.

Shimonowitz began his literary career at the age of fifteen, publishing many poems and stories in various Hebrew periodicals. In 1911 his first collection of poetry appeared under the title of *Yeshimon* (Wilderness); a second collection, entitled *Saar Udemamah* (Storm and Calm), appeared in 1912. His collected works were published in four volumes by the Devir Publishing Co. of Palestine: vol. 1, *Shirim* (lyrical poems; 1925); vol. 2, *Idilioth* (idylls and ballads of the life of the new Palestine; 1927); vol. 3, *Poemoth* (epic and reflective poetic works; 1930); vol. 4, *Shire Massa* (Travel Poetry; 1931; it contains many of the poems written during his wanderings in Germany and Russia). The idylls *Bayaar Behedera* (In the Woods of Hedera), *Yobel Haeglonim* (Carriage Drivers' Jubilee) and *Meagadoth Tzefath* (Of the Legends of Safed) had each appeared previously in book form; a later idyll appeared in 1936 under the title of *Sionah.* Shimonowitz published also Hebrew translations of many of the works of Alexander Pushkin, Mikhail Yurevich, Lermontov and Leo Tolstoy.

Shimonowitz is often called *the* poet of modern Palestine, for the dominant theme of his poetry is the life of that land. Its history, its place in Jewish con-

sciousness, its natural scenery, the heroism and creative endeavors of its pioneers find sympathetic expression in his lyrical and epic works. His idylls are magnificent portrayals of the serene and humorously refreshing aspects of pioneer life. Shimonowitz's work is not limited to this theme, but covers a wide range of poetic creation: love, nature, human emotion, conflict and aspiration, the fate of the Jew. Its forms are varied and manifold: lyrical and epic, reflective and hortatory, descriptive and narrative.

Some of his lyrical works are among the gems of modern Hebrew poetry ("The Last One," "I Have Known My People"). His extensive poems are mighty monuments of the spiritual struggle of man ("Job's Wife," "In the Serpents' Den"). In all his work there is a genuineness of feeling and a wholesome simplicity of expression. His style is rich and lucid, and his poetic forms are classical.

SHIMRON, *see* COLONIES, AGRICULTURAL.

SHIMSHELEVITZ, ISAAC, *see* BEN ZEVI, ISAAC.

SHINAR, name mentioned eight times in the Bible as the equivalent of Babylonia, or modern Iraq. The word is probably identical with the Sangar mentioned in Egyptian reports and the Shangar of the Tell el Amarna letters; an identification with Sumer, the term used for southern Babylonia among the early Assyrians and Babylonians, is hardly likely. The term continued to be used in the Talmud, and is used by Oriental Jews (together with Babel) as a designation for Baghdad.

Lit.: Hastings, James, *Dictionary of the Bible,* vol. 4 (1919) 503-5.

SHINEDLING, ABRAHAM ISAAC, rabbi, linguist and translator, b. Menominee, Mich., 1897. His parents settled in Paterson, N. J., when he was six years old. After graduating from the University of Cincinnati (A.B., 1919) and from the Hebrew Union College (Rabbi, 1920), he served congregations in Georgia, Missouri, Texas and North Carolina (1920 to 1928), and then settled in New York city, joining the staff of the *Universal Jewish Encyclopedia* as assistant editor and translator; in 1939 he became its revision editor. He received the M.A. degree from Columbia University (1928). From 1932 on he served as chaplain of the Westchester County Penitentiary and Jail, at East View, N. Y., and taught in several institutions in Westchester County under the auspices of the Westchester Sections of the National Council of Jewish Women, for which he lectured frequently. He was a charter member (1937) of the National Council of Jewish Chaplains in Penal Institutions, and a member of its executive board (1937-).

Shinedling translated Ismar Elbogen's *Geschichte der Juden seit dem Untergang des jüdischen Staates* under the title of *History of the Jews After the Fall of the Jewish State* (Cincinnati, 1926). He also translated from German into English the complete prose and poetical works of Manfred Sturmann (they were still in manuscript in 1943). Shinedling translated articles and essays from German, French, Hebrew and other languages for the *Hebrew Union College Annual* and for several periodicals, and wrote articles on religious and historical subjects for *Young Israel Magazine* and for the *American Hebrew.* In addition he conducted a column of current events and news (1930-41) for *Young Israel Magazine.* He contributed a number of articles to *The Encyclopedia of Jewish Knowledge* (1934) and to the *National Encyclopedia* (10 vols., 1932-33), and from 1938 on wrote the article "Jews" for the latter's *Year Book.*

MOSES SHINEDLING (b. Shkud, province of Kovno, Lithuania, 1860; d. Paterson, N. J., 1928), Hebrew writer and satirist, was the father of Abraham I. Shinedling. He left Russia in 1880, and after living for a year in Berlin and for three years in Manchester, England, came to the United States. He settled in Paterson, N. J., in 1904, where he earned a livelihood as a printer. In the 1890's and 1900's Shinedling gained considerable renown as a Hebrew satirist and essayist, contributing a large number of articles to such Hebrew periodicals as *Hashiloah, Hadoar* and *Hameassef.* He was an early protagonist of Zionism and of Haskalah in the United States.

SHINNUI HASHEM, *see* NAMES.

SHINWELL, EMANUEL, Member of Parliament, b. London, 1884. An influential member of the British Labor Party, he was elected to the House of Commons by Linlithgow (1922-24 and 1928-31) and by Seaham Harbour (from 1935 on). He was financial secretary to the War Office (1929-30) and parliamentary secretary to the Department of Mines (1924 and 1930-31). He has been an arresting and dynamic speaker since his back-benching days, always commanding the attention of friend and foe alike. Shinwell was one of the Jewish members of the British Privy Council that proclaimed the former Prince of Wales as King Edward VIII (1936).

In 1941 and 1942 he persistently criticized the allegedly inefficient conduct of the war by the Winston Churchill government, and demanded the opening of a second front in Western Europe by the Allies in order to relieve the hard-pressed Russians.

Lit.: Current Biography, Jan., 1943, pp. 44-46.

SHIPER, IGNAC, Jewish historian and Polish deputy, b. Tarnow, Poland, 1884. He was educated at the Universities of Cracow and Vienna, where he studied jurisprudence and philosophy. He then became a member of the Vienna Institute for Social Sciences and received the degree of Doctor of Jurisprudence (1907). Thenceforth he contributed to various magazines (Polish, Russian, German, Hebrew and Yiddish) on topics dealing with Polish Jewish history which remained his major field. Shiper is recognized as the outstanding modern historian on Polish Jewry: its life in the Middle Ages and its economic role through the centuries since Jews have lived in Poland.

He has written numerous monographs on the great Jewish personalities of Poland as well as its old synagogues, embracing Polish Jewish life in all its aspects. Shiper specialized in the history of the Jewish theatre and its art since ancient times. A number of his works have appeared in book form and, if all his literary compositions were compiled, they would emphasize his monumental achievement. Among Shiper's printed volumes are *Dzieje handlu zydowskiego na ziemiach polskich* (The History of Jewish Trade in Poland, Warsaw, 1937); *Studya nad stosunkami gospodarcymi Zydów w Polsce podczas sredniowiecza* (Jewish Economics in Poland During the Middle Ages, Lemberg, 1911); *The Beginning of Capitalism of Western European Jewry; History of the Jews in Tarnow.*

His communal activities started simultaneously with his creative writing. He was organizer of the first youth group in Western Galicia. In 1903 he joined the Palestine Labor Party (Poale Zion) and was soon among its outstanding leaders. He became a member of its central committee and editor of its party organ. In the first World War he enlisted as a private and rose to be, during the last year of his service, a judge advocate. In 1919 he was elected a member of the Polish Sejm (Parliament) where he was active on a number

Emanuel Shinwell

of committees. Upon reelection to the Sejm he joined the Jewish Parliamentarian Club (Kolo) and was one of its active members. Subsequently Shiper made his permanent home in Warsaw, and became the chairman of the Jewish Writers and Journalists Organization in Poland. In 1926 he was made executive director of the Jewish Academic House in Warsaw, serving in this position until the outbreak of the second World War.

Z. TYGEL.

SHIPLACOFF, ABRAHAM ISAAC, labor, Socialist and Jewish leader, b. Chernigov, Russia, 1877; d. Brooklyn, N. Y., 1934. He came to the United States early in the 1890's.

While a student at the Jamaica (Long Island) teachers' training school, he organized the William Morris Educational Club in Brownsville, Brooklyn, later incorporated as a branch into the Socialist Party. Without abandoning his Socialist and trade union agitation, he served as a public school teacher until his health broke down, after which he found employment for some years as a customs inspector. Later he was labor editor of the *Jewish Daily Forward,* and still later was secretary of the United Hebrew Trades, in which capacity he helped clean out the gangsterism of that time from several Jewish unions.

Shiplacoff was elected as a "lone Socialist" to the New York state assembly in 1915, and in the 1916 session he carried on a single-handed fight against a series of military bills which attracted wide attention. Reelected with one colleague, and later with nine, he remained an assemblyman until 1918, supporting his family of three children by lecturing and writing. In 1918 he ran for Congress, and in 1919 was elected a New York alderman, serving for two years. At the same time he was chosen manager of the New York Joint Board of Amalgamated Clothing Workers, and conducted a general strike of tailors. Later he was an official of the Pocketbook Workers' Union, and became one of the most popular labor and Socialist orators of the country. He ran for Congress several times, and made several trips to Europe and Palestine on behalf of the Jewish Labor Committee.

Shiplacoff was one of the strongest opponents of Communism in American Labor ranks, and as a member of the national executive committee of the Socialist Party he voted to expel the Communist members. He was active in the agitation against the execution of Sacco and Vanzetti, and was a leading fighter against Nazism.

At the time of his death (February, 1934) from a kidney ailment which had afflicted him for several years, he was employed by the *Jewish Daily Forward.* Shiplacoff was devotedly loved by the workers for the sweetness of his character and the unselfishness with which he gave of his time and his practical wisdom to aid them individually as well as in his public capacity. A public park and playground in Brownsville, his old section of Brooklyn, was established and named after him by the city of New York in 1938.

ALGERNON LEE.

SHIPMAN, SAMUEL, dramatist, b. New York city, 1883; d. New York city, 1937. He was fifteen years old when his first play was performed at the Educational Alliance on East Broadway.

On entering Columbia University, he studied drama under Brander Matthews and Clayton Hamilton. His adaptation for the English stage of *The Kreutzer Sonata,* in collaboration with Hamilton, was performed in 1904 at the old Manhattan Theatre. Upon his graduation in 1906 from Columbia University he had a contract for the performance of his play *The Spell.* His early dramatic efforts did not find favor with the public and Shipman turned to writing sketches for vaudeville, mostly in collaboration with Clara Lipman.

Together with her he wrote a full-length play *Elevating Her Husband* (1911) which proved to be his first major success. Then followed among many others *Children of Today, The Woman in Room 13, Lawful Larceny, East is West, Friendly Enemies, The Lady is Detained.* Shipman had abandoned his ambition of writing literary drama, but his keen sense of dialogue and his consummate technique in creating suspense assured not only the great success of more than thirty-three plays produced under his own name, but also of many productions which secured his collaboration.

He also wrote *The Unwritten Chapter,* a play concerning Haym Salomon, the Revolutionary patriot. Among authors collaborating on some of his own plays were John B. Hyner, Max Marcin and Percival Wild.

SHIR, abbreviation for SOLOMON JUDAH LÖB RAPOPORT.

SHIR HAKABOD, *see* ANIM ZEMIROTH; SHIR HAYIHUD.

SHIR HAMAALOTH ("A Song of Ascents"), superscription of the fifteen psalms beginning with *Ps.* 120 and extending through *Ps.* 134. The expression "Song of Ascents" is interpreted variously, usually in one of the four following senses: (a) according to *Ex.* 34:24, in the sense of "pilgrimage song," recited when the Hebrew pilgrims went up to appear before the Lord in Jerusalem three times in the year; (b) according to *Ezra* 7:9, in the sense of "Song of Return," recited by the Hebrews under Ezra when they "went up" from Babylonia to Palestine in the reign of Artaxerxes, king of Persia; (c) according to *Mid.* 2:5; *Suk.* 5:4; *Suk.* 53ab, in the sense of "Song of Degrees" or "Song of Steps," to be sung by the Levites "on the fifteen steps" which led from the women's compartment to the men's compartment in the Temple court (this explanation is perhaps erroneous); (d) in the sense of "song of ascending," in the sense that frequently a word in one verse is repeated in the next verse, just as, in ascending stairs or steps, one foot is left standing on the lower step while the other foot is standing on the higher step.

However, none of these four explanations fits the contents of all these fifteen psalms. Perhaps the designation Shir Hamaaloth originally referred to one or to a few of these psalms, and was then carried over to each one of the entire

little collection. These fifteen psalms are altogether different in metre, content and length; such a brief psalm as *Ps.* 127 is not even a unit. However, all fifteen have in common original imagery and deep religious feeling; they are all among the most beautiful of the Psalter. Most of these fifteen are in the nature of folk songs. They are read, together with *Ps.* 104, on the Sabbath, after the Afternoon Service (Minhah) during the winter.

In a narrower and more restricted sense, popular Jewish phantasy has come to apply the term Shir Hamaaloth to *Ps.* 126, the Song of the Return to Zion, which is sung on Sabbaths and festivals before the Grace After Meals in accordance with various melodies which have become traditional in families, communities or regions.

SHIR HASHIRIM, *see* SONG OF SONGS.

SHIR HASHIRIM RABBAH, *see* MIDRASH SONG OF SONGS.

SHIR HAYIHUD ("song of unity"), a mystical and speculative hymn of lofty nature which originated in the circle of Judah Hehasid of Regensburg (d. 1217). Formerly the entire song was recited in the daily prayer; today only the concluding portion of the Shir Hayihud, the Shir Hakabod ("song of glory"), beginning with the words Anim Zemiroth ("I will chant sweet hymns"), is recited toward the end of the Orthodox Morning Service (Shaharith).

SHISHAK (more properly, Sheshonk), king of Egypt, founder of the twenty-second (Libyan) dynasty in 945 B.C.E. An energetic and capable ruler, he renewed the aggressive policy of Egypt that had been in abeyance for three centuries. He took advantage of the division of the kingdom of Israel after the death of Solomon (about 935 B.C.E.) to make a raid upon Palestine. According to the Bible (*I Kings* 14:25-26), he invaded Judah and forced Rehoboam to surrender much of the Temple treasure. However, Shishak's own inscription at Karnak shows that he raided practically all of Palestine, for he enumerates 156 cities in all parts of the country as having been subdued by him. His claim to have captured Megiddo has been verified by a seal of his that was found there. His expedition led to no permanent results, but is noteworthy as the first revival of Egyptian claims to suzerainty over Palestine.

Lit.: Breasted, James H., *A History of Egypt* (1912) 527-31.

SHIUR KOMAH ("measurement of stature"), a Cabalistic work of which only two fragments have been preserved, one in the *Sefer Raziel,* the other in the *Alphabet of Rabbi Akiba.* It purports to give the dimensions of God, Who is represented as having a tremendous human form. The work was known to Saadia, and was ascribed to the Tanna Ishmael of the 2nd cent., but probably originated in the early part of the Gaonic period (6th to 10th centuries). Graetz traces it to Arabic influence, while Gaster detects Gnostic elements.

SHLEMIEL AND SHLIMMAZEL. Shlemiel (variants: shelumiel, schlemiel, schlemihl) is a Hebrew word used in Yiddish to denote one who handles a situation in the worst possible manner, or is dogged by an ill luck that is more or less due to his own ineptness. The expression is found a few times in 20th cent. British literature, and more frequently in American literature, as well as in Hollywood motion picture dialogue. However, as yet (1943) the expression had not been recorded in either British or American dictionaries of slang. It is frequent in German literature, due to the influence of Adalbert von Chamisso's comedy, *Peter Schlemihl,* at the beginning of the 19th cent.; Chamisso, however, only borrowed the name, and his Schlemihl is quite a different person from the ordinary Shlemiel of Yiddish humor. The following are the three main theories as to how the word received its Yiddish connotation:

1. Shelumiel the son of Zurishaddai is mentioned as a prince of the tribe of Simeon (*Num.* 1:6). The Talmud identifies him with Zimri, the son of Salu (*Num.* 25:8, 14), who had the ill-fortune to be singled out from among all the Israelites who had sinned when Phinehas was moved by righteous wrath to make a public and disgraceful example of killing a sinner in the very act (*Sanh.* 82b).

2. A medieval responsum gives the story of a man named Shelumiel who returned after a year's absence to find that his wife had given birth to a child. The rabbi's decision that the child was legitimate satisfied the father, but the neighbors of the pair were extremely dubious as to the paternity of the child. Thus Shlemiel gradually became a byword for a person simpleminded enough to involve himself in a difficult situation from which he could not extricate himself.

3. Shlemiel is regarded by some as a contraction of *sheluach min 'el* ("sent away from God").

A number of humorous magazines in Hebrew and Yiddish have borne the title *Shlemiel.* Martha Wolfenstein has a story, "Löbele Schlemihl," in *A Renegade and Other Tales,* while another, "Anschel the Schlemihl," was printed in an anonymous collection of tales from Jewish periodicals, *Friday Night.*

Shlimmazzel is a general Yiddish term for bad luck, being a hybrid compound of the German *schlimm,* "bad," and the Hebrew *mazzal,* "luck." In British and American dictionaries the word is usually spelled shemozzle or schlemozzle, and has, especially in the slang of the English underworld, the following two derived meanings: to decamp; a disturbance.

The probable origin of the first meaning is that only one who has ill-fortune (Shlimmazel) gets himself into difficulties from which he must hastily flee. The probable origin of the second is that the most unfortunate thing which could happen to one in the act of committing a crime would be to create a disturbance which would lead to his apprehension. Though the two terms Shlemiel and Shlimmazel are to a certain extent similar in idea, they differ in the fact that the Shlemiel falls victim to his own stupidity or simplemindedness, while Shlimmazel may be purely accidental and may happen to anyone.

HIRSCHEL REVEL.

SHLIMMAZEL, *see* PHRASES, POPULAR; SHLEMIEL.

SHMERL, banker, who lived in Hungary and Austria in the second half of the 14th cent. He and his brother Eferl lived at Sopron, Hungary, until the expulsion of the Jews from that country in 1360. On that occasion they removed to the nearby Wiener Neustadt in Austria, from where they conducted important financial operations. Both Hungarian and Austrian documents frequently refer to their transactions between the

years 1374 and 1386. They loaned a substantial amount to the city of Vienna and gave mortgage loans to the feudal lords of Hungary.

SHMUSS, *see* PHRASES, POPULAR.

SHNEOR ZALMAN BEN BARUCH OF LADI (Liady), Hasidic rabbi, founder of the Habad movement, b. Liozna, province of Mohilev, Russia, 1747; d. Pyen, near Kursk, Russia, 1812. He received an elaborate Talmudic education, but in his youth was won over to Hasidism and became a disciple of Baer of Meseritz. He settled in Mohilev, where he founded the group of Hasidim known as Habad (from the initials of *Hochmah,* "wisdom," *Binah,* "understanding," and *Daath,* "knowledge"), which combined Talmudic knowledge with the mystic doctrines of the Hasidim. This intellectual rephrasing of Hasidism attracted many of the Jews of White Russia and Lithuania, and Shneor Zalman had more than 100,000 followers.

His efforts met with bitter opposition on the part of the Orthodox, and his life was one of persecution. He finally settled in Ladi, whence he is often known as Liader or the Rab of Ladi. He made various changes in the ritual, principally to the effect of making it closer to the Sephardic form, and composed a new code of Jewish law, called, like Joseph Caro's, *Shulhan Aruch* (published at Shklov). These innovations infuriated his opponents, who denounced him to the government as a dangerous heretic. He was arrested and put in prison in 1800, and was freed only on the accession of Alexander I to the throne in 1801. In 1812, when Napoleon invaded Russia, he patriotically denounced the French, and it was during his flight from the invaders that he met his death.

Shneor Zalman wrote prolifically, but only a few of his writings have been published. They include: *Tanya,* or *Likkute Amarim,* which gives his philosophic system (4 vols., 1st complete edition, 1814); *Seder Tefilloth,* a prayer-book with a Cabalistic commentary (2 vols., Kopust, 1816; published also at Shklov); various homilies to the Bible, sermons and pastoral epistles. He had three sons; one, Baer of Liubavich, was his successor, the second, Hayim Abraham, was his secretary, and the third, Moses, became a convert to Christianity, but returned to Judaism toward the end of his life.

Lit.: Teitelbaum, *Hareb Miladi* (1911-13); Horodezky, S. A., *Hahasiduth Vehahasidim* (4 vols., 1922 and 1928); Minkin, J. S., *The Romance of Hassidism* (1935); Baron, Salo W., *A Social and Religious History of the Jews,* vol. 3 (1937) 127.

SHNEUR, ZALMAN (SALKIND), Hebrew and Yiddish poet and novelist, b. Shklov, district of Mohilev, Russia, 1887. His father, a dealer in jewelry, of a distinguished Hasidic family, gave him a traditional Heder education combined with a familiarity in Hasidic lore. Under the influence of his "enlightened" brothers he left home at the age of thirteen and set out on a course of wandering and homelessness, which characterizes his personal career and left its mark on his literary work. He spent a short time in Odessa, the seat of Hebrew renaissance, where he was accepted and encouraged as a literary child prodigy by the leading figures of modern Hebrew literature—Bialik, Rabnitsky, Mendele Mocher Sforim and Lilienblum. From there he went to Warsaw, where he worked for the Tushiah publishing house and later as private secretary to the writer Isaac Loeb Peretz. It was there that he met Frischman, who became his mentor and lifelong friend. After three years of economic struggle and literary growth in Warsaw, he spent two years in Vilna, where he came into contact with some of the leading Yiddish literati, and thereafter became a bilingual writer. In 1906 he visited Switzerland, which inspired his poetic opus *Beharim* (In the Mountains), and then settled in Paris, where he studied and worked until 1914. The years of the first World War found him a civilian war captive in Germany; from 1918 to 1924 he wandered from Berlin to Copenhagen, thence to the United States and back to Berlin, until he finally returned to Paris, where he lived, except for short visits, to various European cities and to Palestine, until 1940. Upon the Nazi invasion of France he fled to the United States.

Shneur began his literary career at an extraordinarily young age. His first poems appeared and were favorably received as early as his first Odessa visit. Thereafter he produced a wealth of writings in poetry and prose which appeared in scores of Hebrew and Yiddish periodicals all over the world. His Hebrew works, if collected and published in book form, would number eighteen volumes. His Yiddish writings might fill thirty volumes.

Much of this work was as yet unpublished in 1943. The following works appeared in book form: *Im Shekiath Hahammah* (At Sunset; lyrical poetry; Warsaw, 1906); *Shire Yeladim* (Poems for Children; Warsaw, 1908); *Gesharim* (Bridges; lyrical and epic poetry written between 1900 and 1912; Berlin, 1923); *Hezyonoth* (Visions; a collection of poetic works written between 1912 and 1921; Berlin, 1924); *Pirke Yaar* (Forest Chapters; a collection of poetry written between 1920 and 1926, which received the first Bialik Prize in Hebrew literature and includes the great poetic creation of the same title; Tel-Aviv, 1933); *Leyalde Yisrael* (children's poetry; Paris, 1930); *Vilna* (a poetic monument to that city and its Jewish associations; Berlin, 1923); *Min Hahayim Vehamaveth* (From Life and Death; a collection of short stories and sketches; Warsaw, 1910); *Haeth* (The Time; a short story; 1912); *Bametzar* (In Straits; a collection of short stories, essays and poetry in prose; Berlin, 1923). Of his Yiddish works, fewer appeared in book form. These are his three volumes of *Gesammelte Shriften* (Collected Works; Warsaw, 1909); *A Toit* (A Death; the diary of a demented suicide; Warsaw, 1909); his novels *Noah Pandre* and several other novels which appeared serially in the *Forverts.*

He published also numerous memoirs, Hebrew and Yiddish anecdotes and literary evaluations of many of the writers whom he knew. Some of his works were translated into as many as fourteen European languages. English translations of some of his poetry may be found in H. H. Fein's *Harvest of Jewish Verse* (New York, 1934) and in Maurice Samuel's edition of Edmond Fleg's Jewish anthology. His novel *Noah Pandre* was translated into many languages; an English version by Joseph Leftwich appeared in 1936. His Yiddish novel *Napoleon and the Rabbi* appeared in a French translation, and in 1943 was being translated into English. Some of his short stories as well as selected poetic works were (1943) in the process of publication in English translation.

Shneur has been in the forefront of modern Hebrew poetry, sharing the laurels with Bialik and Tschernichowsky. With the latter he was among the first to broaden the horizon of Hebrew literature with themes of universal, rather than particular, Jewish interest. During the first period of his career he persistently refrained from Jewish subjects, and in his later work Jewish motifs are on the whole an undertone of his universal message. Shneur is the poet of maturity and realism, who shrinks from the adolescent romanticism of the small town mind that characterized the vintage of his predecessors and much of his contemporaries. Since he lived most of his life in the large cities of Europe, his writings manifest the broad outlook, the sophistication and the detached morbidity of the metropolitan. Even his nature poetry bespeaks this mentality. Rich though it is in color, imagery and

poetic phantasy, its essence is the human analogy and the reflective message which renders each poem into a metaphysical homily. The natural objects and phenomena assume in his poetry anthropomorphic characteristics and bear messages of human significance. Thus the red poppies which turn into black heads-of-seeds when the petals have withered symbolize the flaming human passion which culminates in the dull fruit of utility (*Peragim* [Poppies]). The short-lived effulgence in nature at the end of the winter carries the human implication that the prophets and pioneers of great events and movements never live to enjoy the fruit of their finding (*Mishenichnas Abib* [When Spring Comes]). This motif is elaborated in his monumental poetic trilogy, *Mishire Hagoral* (The Songs of Fate), in which the gold digger, the pearl diver and the prophet sacrifice themselves in order to uncover the treasures of earth and sea and the mysteries of the spirit for the benefit of others.

The recurrent theme in all his poetic work is the struggle between the creative forces of nature and the sterile, intellectual, utilitarian city-bred civilization. In *Beharim* (the poetic panorama of the Alps) winter symbolizes all that is fresh and strong and genuine in life, while the warmth of civilization, though it resists nature's assault, is artificial and pathetic. In *Pirḳe Yaar* (the poetic drama of the forest and the intrusion of civilization into it) the trees represent the productive forces of nature, while steel is the symbol of destruction and barrenness. Civilization has destroyed the wholesome elemental life of nature and of man, but has found no satisfying substitute for it. In the same way civilization has irrevocably banished simple faith but produces nothing better in its stead.

> The soul of man has become a bottomless barrel
> Which he is doomed to fill.
> And he draws from every fountain and pours into it—
> But it remains ever empty. . . .

Shneur was, by his own characterization, the poet of "rebellion and strife." He sees struggle everywhere, between nature and civilization, between the new and the old, between the individual and society, between Judaism and Christianity; and he rebels against many things, against the injustices of society, against the hypocrisy and falsehood of city life, against the brutality of man, and also against antiquated Judaism with its fossilized forms of sanctified senility. But his sternest rebellion is against all forms of weakness, softness and servility. In *Belel Ḥanukḳah* (On Ḥanukah Night), he derides the psychology of martyrdom, the soft, cringing and forgiving ghetto mentality of the traditional Jew; in *Bechorah* (Birthright) he denounces the inverted-Marrano type of Jewish radicals who have rendered Israel "the manure of the world to fertilize every tribe which is rising to life"; and in *Yemoth Ḥamashiah* (The Millennium) he ridicules the weaklings of Jewish leadership who peddle salvation for fund-raising campaigns. His poem *Vehayah Beaḥarith Hayamim* (It Shall Come to Pass in the End of Days) is a contemptuous parody of the eschatological vision of Isaiah that would emasculate the giants of nature and reduce its beauty to mediocre utility. Thus his poetry deals much with woman but little with love. In woman he sees one of life's deceptive tricks designed to weaken and subdue man.

Shneur was hence the poet of negation and despair. He saw life as empty and illusory, leading to inevitable doom (*Aharon* [The Last Man]). He prophesies the collapse of Western civilization. The major cause for the failure of Christianity he attributes to its assault upon Israel (*Im Tzelile Ḥamandolinah* [To the Strains of the Mandolin]). In 1913, during the days of the Beilis libel, he wrote his startlingly ominous poem, *Yeme Ḥabenayim Mithḳarebim* (The Middle Ages Are Approaching), in which he foretold with sickening accuracy the coming conspiracy of the world against the Jew. He warned the Jews not to be deluded by progress and civilization, for the "medieval dragon" of Jew-hate was not dead, but lying dormant under a thin layer of gardens and cities which he would shake off and break loose. He urged the Jews to abandon the martyr attitude and choose the hero's death. In a later prophetic poem, *Dibre Don Henriḳes* (1937), he foresaw the expulsion of Jesus from the Gentile world and his return to his own people, who had rejected him in his triumph but would accept him in his defeat. The central motif in his "national" poetry is the contempt of the proud and unconquerable Jew for the spiritless and brutal foes of his people. Israel's contempt is the same as that of the trees for the steel. For the springs of Judaism have fructified the cultures of the world, and these would not survive the drying up of their source. Among his noteworthy national poems are his sonnets on the massacres in the Ukraine.

Shneur was an artist of broad canvas, extravagant in his colors and imagery. His imagination was boundless, his symbolism profound, touching upon the mystery of existence and the destiny of man. His style is light and elastic. He avoided the artistry of rhyme and harmony and preferred to change the meter frequently as the theme varied. His language is rich in idiom, but simple and lucid in expression.

His early short stories and novels deal with pathetic characters who are the victims of life's tragedies. Later he set down in narrative form his memories and impressions of small-town Jewish life. AHRON OPHER.

SHNODDERN, the custom of promising a sum of money to the congregation after having been called up in the synagogue to recite the benedictions over the lesson from the Torah. The term is derived from the fact that such a donation is announced in the form of a prayer which invokes the blessing of God upon the donator because he vowed to give (*shenadar*) a specified sum of money. The term "vow" is used, as the money may not be actually given on the Sabbath or festival, but at a later time. In most Orthodox congregations, where there are no membership dues, Shnoddern furnishes a large part of the revenues.

SHOCHEN AD ("He Who inhabiteth eternity"), the concluding portion of the hymn Nishmath Kol Hai ("The breath of every living being") with which the service on Sabbaths and holidays begins. From the last twelve words of the portion it was believed that the acrostic *Yitzḥaḳ* (Isaac) could be derived, and that thus the name of the composer of the Nishmath Kol Hai had been found. In the Mahzor for Rosh Hashanah and Yom Kippur these verses are arranged in such a way as to form the two acrostics *Yitzḥaḳ* (Isaac) and *Ribḳah* (Rebekah), since the invocation of the patriarch Isaac and of the matriarch Rebekah was regarded as especially efficacious.

Blowing of the Shofar, with countenance veiled to shut out worldly sights

Types of Shofars

SHOFAR, a curved wind instrument made from the horn of the ram. In ancient times the Shofar, or ram's horn, was used chiefly for signals of alarms, and, in war, to assemble the army, as a signal for the attack, for the stopping of pursuit, for the dismissal of the army, or for the return home. The Shofar was blown also for the purpose of proclaiming an important event, such as the accession of a ruler to the throne. The Shofar was blown, in addition, on the 1st of Tishri, the beginning of the year, and at the commencement of the Jubilee year, and finally, in addition to other musical instruments, it was frequently employed in the worship in the Temple at Jerusalem (*Ps.* 98:6; 150:3).

But the Shofar attained its chief and lasting religious importance in connection with the New Year's festival (Rosh Hashanah), celebrated on the 1st of Tishri (*Lev.* 23:24; *Num.* 29:1). Although in this connection it was originally intended at first only for the announcing of the new year, later the mighty, rolling and stirring sounds of the Shofar were felt to be in the nature of a divine summons to repentance and improvement. "Just as you take the Shofar to blow it, renew your deeds and do penance" (*Pesikta,* edit. Buber, p. 166). Such a change in the conception of the meaning of the Shofar arose from the fact that the New Year's festival came more and more to be regarded as the earnest and consecrational beginning of the Ten Days of Penitence which close with the Day of Atonement (Yom Kippur) and from the fact that it came to be looked upon as the day of the divine judgment (Yom Hadin).

Even at an earlier period the Shofar had come to be associated with the proclaiming of God's judgment of the world at the end of time. This association of ideas necessarily intensified the religious significance of the blowing of the Shofar on the New Year's Day, and this significance was still further deepened through the reminder of the Revelation of the Divine Will on Mount Sinai, at which the mighty tones of the Shofar caused the hearts of the people to tremble before the near presence of the Divine Majesty (*Ex.* 19:16). Furthermore, the future redemption of Israel, which was conceived of in connection with Israel's repentance, was to be announced by means of the Shofar (*Isa.* 27:13). Finally, the Shofar was connected with the patriarch Abraham's pious act in connection with the intended sacrifice of his son Isaac (the Akedah, binding of Isaac); when God rejected Abraham's sacrifice of his son, Abraham sacrificed a ram in his stead (*Gen.* 22:13). The Shofar's connection with the binding of Isaac is intended, on the one hand, to secure God's favor, and on the other hand, to present to those who are repentant the image of the noble and self-effacing patriarch Abraham.

Thus the blowing of the Shofar on the festival of the New Year gained a manifold importance replete with strong religious motives. In order to announce the coming period of repentance and to prepare the hearts of the worshippers for it, the Shofar is blown a month before the New Year's festival, beginning with the 1st of Elul, at the conclusion of the Morning Service, and in many congregations also at the con-

clusion of the Afternoon Service (popularly called *Elulblasen,* "the blowing [of the Shofar] in Elul"). At the conclusion of the services of the Day of Atonement the blowing of the Shofar announces the end of the sacred day.

Individual Shofars vary as to the notes that they sound, but usually produce two notes, separated by an interval of about the fifth (four notes). The two notes appear in each of the Shofar blasts in various combinations. The Tekiah ("blowing") is a glissando which begins with the lower note and swells into the higher one; the Teruah ("alarm") is a series of staccato blasts upon the lower note, followed by a longer high note; the Shebarim ("tremolo") is an alternation of lower and higher notes.

These three notes are used in three series on Rosh Hashanah. In each case the Tekiah begins and ends the series, and the middle blast varies. Since there was a dispute as to whether Shebarim or Teruah should be first blown, there is a combination of the two in the first series; Shebarim appears in the second series and Teruah in the third. Thus there are ten blasts altogether, and this is still observed in Reform congregations. In Orthodox congregations, due to a desire to increase the blowing of the Shofar, these ten blasts are repeated over and over until there are a hundred blasts in the course of the first ten days of Tishri, from Rosh Hashanah to Yom Kippur. The last Tekiah, known as Tekiah Gedolah, is prolonged as long as the breath of the officiant holds out. In some congregations the sounds of the Shofar are imitated by a cornet or the organ.

In 1940 the Union of American Hebrew Congregations announced that it had developed a Shofar with a mouthpiece to facilitate the blowing of the notes.

The solemn blast of the Shofar signalizes Rosh Hashanah prayers in the synagogue

The Shofar blower. From a plaque by Boris Schatz

MAX JOSEPH.

Lit.: Finesinger, S. B., "The Shofar," *Hebrew Union College Annual,* vol. 8-9 (1931-32) 193-228; Dembitz, L. N., *Jewish Services* (1898) 319-22; Idelsohn, A. Z., *Jewish Liturgy* (1932 210-12; Rosenau, William, *Jewish Ceremonial Institutions and Customs* (1903).

SHOFAROTH ("sounds of the Shofar," or "Shofar blowings"), the last of the three prayers which are recited only in the additional (Musaf) service of Rosh Hashanah, the New Year's Day, and which are characteristic of this service alone. The other two additional sections of these prayers are called Malchuyoth and Zichronoth. Like the Malchuyoth, the Shofaroth consist of ten Biblical verses arranged one after the other and praising God as the Redeemer. These verses are introduced by the hymn "Attah Nigletha" (Thou didst reveal thyself), which was composed probably by Rab (Abba Aricha), as were the introductory hymns to the Malchuyoth and the Zichronoth. The Shofaroth hymn has as its exclusive content the revelation on Sinai, whereas most of the Biblical verses cited, as well as the petition and the blessing contained in Shofaroth, refer to the Messianic future.

In addition, one of the supplementary petitions of the old fast-day liturgy is called Shofaroth; this has also the same eulogy (*baruch 'attah 'adonai shome'a teru'ah,* "Blessed art Thou, O Lord, Who hearest the sound of the blowing") which the Shofaroth for the New Year's Day possesses (*shome'a kol teru'ath 'ammo yisra'el berahamim*).

SHOHL, ALFRED THEODORE, physician, b. Cincinnati, 1889. He was the son of Charles Shohl. He received his medical degree from Harvard University in 1914, and was attached to the staff of Johns Hopkins University School of Medicine from 1915 to 1921; in his final year there he served as associate professor of chemical hygiene. He then became associate professor of pediatrics at Yale University School of Medicine (1921-28), and at Western Reserve University, in Cleveland (1928-33). In 1934 he was appointed research associate in pediatrics at Harvard University, a post he still held in 1943.

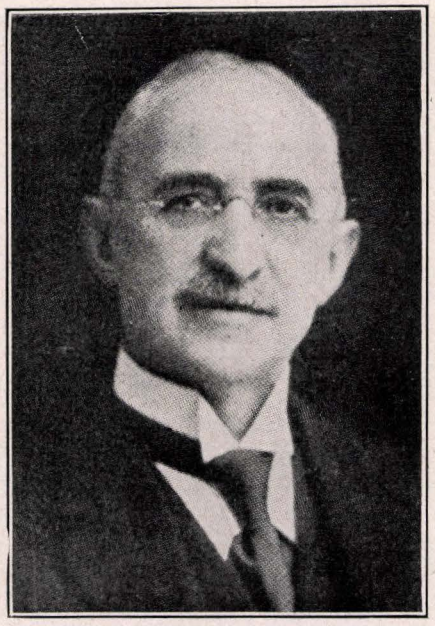
Shohl carried out numerous investigations in the field of nutrition and pediatrics, and contributed more than seventy-five articles to the medical press. In 1939 he published a book entitled *Mineral Metabolism* for the American Chemical Society monograph series. In the first World War, Shohl served with the American Expeditionary Forces as a captain in the Medical Corps.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 169, 623-24.

SHOHL, CHARLES, merchant and lay leader of Reform Judaism, b. Cincinnati, 1850; d. Cincinnati, 1940. One of the early lay disciples of Isaac Mayer Wise, Shohl was active throughout his long lifetime in almost every phase of Jewish life in his city and in the national work of the Reform Movement. He served on the executive board of the Union of American Hebrew Congregations from 1903 to his death, as well as on its subsidiary boards, the board of governors of the Hebrew Union College, and the Board of Delegates on Civil and Religious Rights. From 1915 to 1921 he was chairman of the board of managers of Synagogue and School extension. From 1921 to 1925 he was president of the Union, and after that honorary president.

Under Shohl's administration, the board of managers expanded its program, creating a system of visits by Reform rabbis to universities, institutions and small Jewish communities, increasing its publication of textbooks and aid to teachers, and organizing summer services. His presidency of the Union was marked by the successful campaign to raise funds for the Hebrew Union College dormitory, the organization of the Federation of Temple Brotherhoods, and the founding of a normal school for Jewish religious school teachers in New York city.

GEORGE ZEPIN.



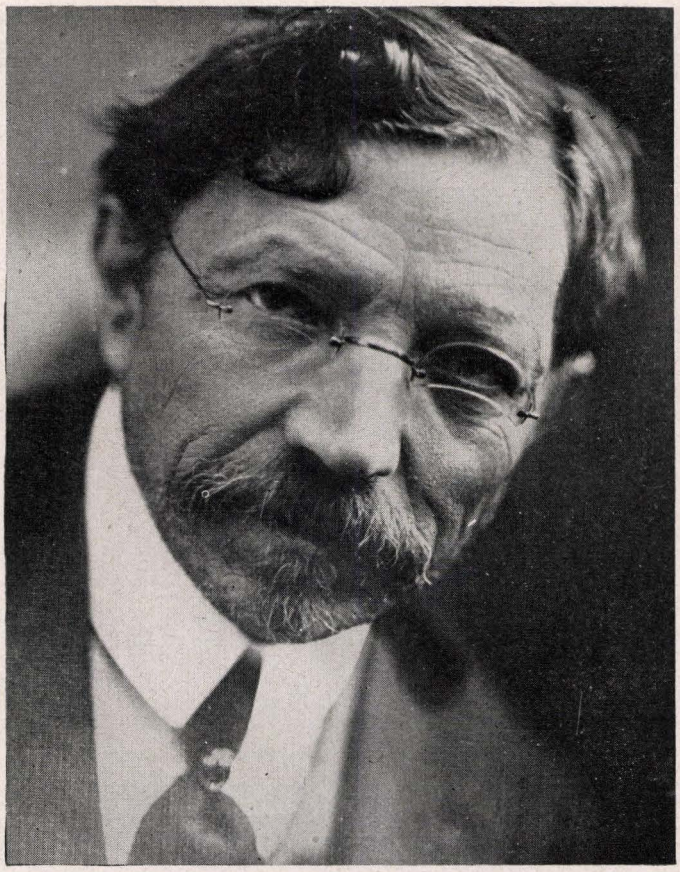
SHOLEM ALEICHEM, *see* GREETING AND WISH FORMULAS.

SHOLOM ALEICHEM (pen name of Solomon Rabinowitz), Yiddish humorist (known in America also as "the Jewish Mark Twain"), b. Pereyaslav, Russia, 1859; d. New York city, 1916.

He early distinguished himself by his thorough knowledge of Biblical Hebrew in the traditional Heder and perfect, idiomatic Russian at the local district school; he was an unusually happy, joyful youngster, the first to notice the humorous element in a situation and ever bent upon imitating his elders and making up funny stories for the amusement of his playmates—despite a depressing home atmosphere, where the trials of the impoverishment of his father, a scholarly, silent, saddened innkeeper, were intensified by the harsh treatment of the early orphaned children by a scolding, cursing stepmother.

At the age of seventeen Sholom Aleichem was already on his own, supporting himself by teaching Russian privately, and in the following year he went to the large landed estate of Elimelech Loeff, at Sofievka, near Kiev, as the teacher of his only twelve-year-old daughter, Olga. Three years later teacher and pupil were madly in love with each other, to the dismay of the girl's father. Sholom Aleichem was forced to leave the Loeff estate, where he had spent the "three happiest years of his life," served for a time as government rabbi in the town of Luben, and finally married Olga Loeff in 1883. She died (1942) in New York city.

After the sudden death of his father-in-law (1885), Sholom Aleichem became the administrator of the former's estate, which amounted to close to a quarter of a million rubles—a great fortune for the time. He thus came into intimate contact with the upper Jewish rich of Kiev, lived their life for a time, traded on the grain and stock exchanges, quickly lost his fortune, but



Charles Shohl

managed to subsist precariously on these activities until 1900, when he retired from all business activities to devote himself entirely to writing. After the 1905 Kiev pogrom, which he witnessed, he emigrated with his family from Russia and, leaving his family in Switzerland, went on extended lecture tours in several countries of Western Europe, England and the United States. A sudden attack of pulmonary disease brought him down in the midst of a lecture tour in Russia in 1908, and during the next six years, together with his family, he spent his winters in Italy and his summers in Switzerland. The outbreak of the first World War found him with his family at Albeck, Germany, a watering place on the North Sea. He barely escaped internment in Germany by taking the last train out to Denmark, from which country he came to the United States early in December, 1914.

Sholom Aleichem's early literary efforts were made simultaneously in Hebrew and Russian as well as in Yiddish. He first broke into print with local correspondence to the Hebrew weekly, *Hatzefirah* (1879); this was followed by articles on Jewish education and military service in the Hebrew weekly, *Hamelitz* (1882), which brought out also a number of his short stories in 1889. His Russian writings, both stories and articles, appeared in *Yevreiskoye Obozrenie* in 1884 and in *Kievlanin* the following year. It was in Yiddish, however, that he was to find himself and to achieve true greatness, beginning with his first short story *Tzvei Shteiner* (Two Stones) in the *Folksblat* of St. Petersburg (1883), and ending with part of a chapter of his autobiography, *Fun Yarid,* for the *Varheit* of New York city (1916). He enriched Yiddish literature with some forty volumes of short stories, novels and plays.

The significance of Sholom Aleichem's works is so multifarious that only its barest outline can be attempted here. No other Yiddish writer succeeded in tapping the luxuriant resources of the Yiddish language as did Sholom Aleichem, whose style is so racy, picturesque and idiomatic that it vibrates with life, to the despair of even the best translators. The expressiveness and humor of the Yiddish idiom are an important feature in his "monologues" and plays; the lyrical cadence of the language is manifest in his story

Sholom Aleichem (Solomon Rabinowitz)

of youthful love *Shir Hashirim* (Song of Songs); the purity, simplicity and restrained poetic quality of the language was realized by him in his *Fun Yarid*.

Beginning his literary career at a time when Yiddish was still looked down upon as the "language of the housemaids," Sholom Aleichem set himself the task of raising the dignity of the vernacular both by a literary crusade against those writers of his day who did write "just for the housemaids," in his *Shomers Mishpat* (Trial of Shomer), who was the most popular *shund* writer of the time, and by the publication of a literary annual that would stand comparison with the best in the Russian tongue, the *Yiddishe Folksbibliotek*. To attract to his annual the most prominent Jewish writers of the time, who naturally wrote in Hebrew, he paid fabulous honoraria—200 rubles for one poem to the Hebrew author, David Frischman.

The chief importance of Sholem Aleichem's works lies, of course, in the so-called Sholom Aleichem world which he created, a world peopled with literally many hundreds of distinct, individual types, old and young, men and women, rich and poor, ignorant and learned, good and bad, old-fashioned and modern—all in full view, with their physical appearances, mannerisms, ways of expression, inner inconsistencies, struggles for existence and social relationships. Indeed, it has been said that if all other records of the time were lost, one could reconstruct a true picture of Jewish life in Russia at the turn of the century on the basis of Sholom Aleichem's works alone.

Some of his characters have become proverbial. The Yiddish expression "to be a Menachem Mendel," which means to be a Shlemiehl, a ne'er-do-well, a man chasing the rainbow, is derived from the classic type Menachem Mendel, whose letters from the big city to his wife in the little town tell of his Don Quixotic efforts to earn a living at the various *Luftgesheften* to which the Russian Jews had to resort under the rule of the czars, when most of the ordinary trades and professions were closed to them. Even when Menachem Mendel undertakes the most typical Jewish trade and becomes a matchmaker, he finds after much ado that he has been trying to arrange a match between two girls.

Another famous character of Sholom Aleichem's works is Tobias the dairyman, who is the very opposite of Menachem Mendel. He is a man of the soil, rooted in the land and in the faith of his fathers. He is an ignorant man, yet saturated with Jewish culture in its elemental sense; he never knows the meaning of the words in the Biblical passages he so copiously quotes, yet invariably divines their true purport. He is on intimate terms with his God as he is chummy with his horse; above all, Tobias typifies the endless faith of the Jew and his reliance upon God, which alone could sustain him throughout his tragic past.

Sholom Aleichem was the first Yiddish writer to write for children, to understand them, to be able to laugh with them and cry with them. His stories for children are as beloved by Jewish children in the United States and Argentine today as they were almost half a century ago by the Jewish children of Russia.

Sholom Aleichem's humor is rich in pathos; it has been described as "laughter in tears." He laughs with his characters, not at them. It is the kind of laughter

that lifts man above the impediments on his path and even above his own failings, for these are only externals, while the core is the thing. And the core is always good. It is this basic optimism, this faith in man, however lowly he might be, which endeared the works of Sholom Aleichem to all readers in all languages and by which he achieved universality and immortality. His works are much more read today than they were at the time of their first appearance.

Sholom Aleichem was the most successful of Yiddish writers. He received almost instantaneous recognition and popularity. He was acclaimed not only by Yiddish literary critics but also by many great writers of his day in other tongues, including Maxim Gorky and Leo Tolstoy. He was compared to Gogol in Russia and to Dickens in England, and is regarded as one of the three classics of modern Yiddish letters. Many of his stories were published in booklets and sold in the hundreds of thousands. His works were collected in a variety of volumes and published in different countries, being the proverbial best sellers in the Yiddish field. His dramatization of *Tevia der Milchiger* (Tobias the Dairyman), produced by Maurice Schwartz, laid the foundation for the Jewish Art Theatre, and his comedy *Shver tzu Zein a Yid* (It's hard To Be A Jew), also produced at that theatre, first brought Paul Muni, then known by his real name of Muni Weisenfreund, to the attention of the theatre world. His works were translated into a score of languages, including Esperanto and Japanese. In Russian translation alone three million copies of his works were sold between 1917 and 1942.

His principal works include: *Tevia der Milchiger* (Tobias the Dairyman); *Tzezeit un Tzeshpreit* (Scattered and Dispersed; a play, produced in 1905); *Der Ausvurf* (The Scoundrel; a play); *Der Mabbul* (The Flood); *Menachem-Mendele; Motel Peise dem Chazans* (Motel, the Son of Peise, the Cantor; 1907-8), a novel dealing with the first Russian revolution; *Eisenbahn Geshichtes* (2 vols., 1909), a novel based on the life of actors; *Die Blonzende Shtern* (Straying Stars; 1909-11; *Marienbad* (1911); *Der Blutiger Shpass* (1912-13), a story based on the Mendel Beilis ritual murder charge and trial at Kiev (dramatized in 1914 as *Shver tzu Zein a Yid* [It's Hard to Be a Jew]); *A Toisend un Ein Nacht* (A Thousand and One Nights); *Der Groisse Gevins* (The Great Gain; 1915); *Fun Yarid* (Return from the Fair; autobiography); *Shomers Mishpat* (The Trial of Shomer; 1888); *Der Oitzer* (The Treasure; 1908); *Sender Blank* (1888); *Stempeniu,* a novel; *Yosele Solovei,* a novel of the life and tragedy of a young cantor.

SHOLTZ, DAVID, governor of Florida, b. Brooklyn, N. Y., 1891. A son of Michael and Alta (Bloom) Sholtz, he was educated at Yale (A.B., 1914) and at Stetson University (LL.B., 1915), and was admitted to the bar in 1915. The following year he became a member of the Florida legislature, but resigned in order to enlist in the United States Navy. Sholtz held the positions of state attorney of the seventh judiciary circuit of Florida (1919-21) and of municipal judge of Daytona, Florida (1922). He was also president of the Florida Chamber of Commerce. His activity and popularity won him the governorship of Florida (1933-37). In 1943 he was a commander in the United States Naval Reserve. He became a member of the Congregational Church.

SHORE, HENRY, industrial physicist, b. Boston, 1903. He studied engineering at the Massachusetts Institute of Technology and at the Carnegie Institute of Technology, the latter conferring upon him the degree of M.S. in 1925. He pursued research at the University of Wisconsin (1925-1926) and he obtained (1931) an engineering license in New York state.

Shore was research assistant in the department of electrical engineering at the Massachusetts Institute of Technology from 1926 to 1927. In the latter year he became affiliated with the Radio Corporation of America, serving as research engineer until 1929. He then was made design and development engineer for RCA Communications, Inc., and technical assistant in its pattern department, New York city, in 1935. In 1938 he received the LL.B. degree from New York Law School. In August, 1942, he was commissioned a major in the United States Army. He was a fellow of the American Society for the Advancement of Science.

Shore discovered effects of apparent solidification in oils subjected to pressure and was the inventor of the constant frequency variable dot system of transmitting pictures through radio.

SHOSHKES, HENRY, writer and authority on cooperatives, b. Bialystock, Poland, 1891. He was the son of Abram Shoshkes (d. 1937), vice-president of the Jewish community of Bialystock and manager of the Mutual Credit Bank in that city.

Henry Shoshkes studied at the Universities of Ghent and Brussels in Belgium and received a doctorate in commercial science from the University of Brussels in 1932. From 1917 to 1920, Shoshkes was connected with the cooperative bank in Kharkov, where he was also a member of the Jewish community council. Then he returned to Poland, to become an organizer and inspector of cooperatives for the American Reconstruction Foundation.

The following year he was made chief inspector of the Union of Cooperatives in Poland, a post he held until 1932; during this period he was also one of the editors of the cooperatives' weekly periodical. From 1932 until the outbreak of war in 1939 Shoshkes was general manager of the Central Cooperative Bank in Warsaw, controlling 655 cooperatives with a membership of approximately 250,000. On behalf of various government agencies he visited the United States and also several Middle East countries on numerous occasions. In 1939 he was appointed honorary consul of the Republic of Poland to Palestine. Later that year he came to the United States, where he was living in 1943. He was the organizer, in the United States, of the International Committee for Cooperative Reconstruction.

In Yiddish as well as Polish, Shoshkes wrote a great deal on his subject. His books in Yiddish were: *Entshtehung fun der Kooperativer Bevegung* (1927); *Lender un Shtedt* (1930); *Durch fier Velt Tailen* (1935) and *Soviet Russland* (1936); in Polish there appeared *Ladem i Morzen* (Continents and Seas; 1935) and a version of his book on Soviet Russia (1937). During the first World War Shoshkes received the St. Vladimir Cross with swords from the Czarist government; later he was awarded the Merit Cross by the Polish government. In 1942 he was commissioned a lieutenant in the New York City Patrol Corps, in charge of the United Nations Battalion.

SHOWBREAD (*lehem panim* or *lehem hapanim*), twelve cakes of bread, arranged in two rows, together with frankincense as a "memorial-part" (*'azkarah*), and placed on a table in the sanctuary. Each was made of one-fifth of an ephah of flour; new cakes were prepared every week and set out on the Sabbath, while the old ones were to be eaten by the priests (*Lev.* 24:5-9). They are called also *lehem hatamid* ("perpetual bread"), *lehem hama'arecheth* ("arranged bread") and *lehem kodesh* ("holy bread"). The custom of placing bread before the altar of the deity as a symbolic offering was common among ancient peoples. The prescriptions in the Torah, as well as the statement that the baking of the showbread was done by the Levitical clan of Kehathites (*I Chron.* 9:32), come from priestly sources and are regarded by critics as giving the final development of the institution. The story of David's flight from Saul, where he and his followers are permitted by the priest to eat of the showbread provided that they are in a state of sexual purity (*I Sam.* 21:2-7), shows that originally the showbread could be eaten by laymen as well as priests.

Josephus (*Antiquities*, book 3, chap. 6, section 6; chap. 10, section 7) and the Mishnah (*Men.* 5:1; 11) add some further details about the preparation of the showbread. It was made unleavened, and each cake was kneaded separately. They were baked two at a time in a special mold; their dimensions are given as ten handbreadths long, five broad and seven high. They were baked on the Friday before they were placed on the table, and were eaten on the Sabbath when they were replaced by new loaves.

The table of the showbread was one of the most conspicuous objects in the Temple. According to the description in *Ex.* 37:10-16, it was made of acacia wood, overlaid with gold and provided with a border; it was two cubits long, a cubit broad and a cubit and a half high. The table in the First Temple was destroyed in the fall of Jerusalem (586 B.C.E.); that of the Second Temple was seized by the Romans and depicted on the Arch of Titus. It remained in Rome until 455 C.E., when it was taken by the Vandals to Carthage. It was recovered by Belisarius in 533 and sent to Constantinople; thence Justinian, on the appeal of a Jew, sent it to Jerusalem. It was probably finally destroyed in the capture of Jerusalem by Chosroes (614).

SHREVEPORT, the second largest city of Louisiana, with a population of 98,167 (census of 1940), which in 1943 included a Jewish community of about 2,000, second in size to that of New Orleans. Shreveport was first settled about 1835, and as early as 1848 perhaps a dozen Jewish families resided there. In 1857 they organized a congregation, and shortly thereafter called Rabbi Julius Lewin to preside. The Hebrew Mutual Benevolent Association was incorporated in 1858, with A. L. Heine as president, and in the following year dedicated the first cemetery of the community, which remained in use until 1887.

In 1861 the settlers (including M. Baer, H. Weinstock, H. Dreyfus, Felix Cahn, E. Eberstadt, P. F. L. Frank and Abraham Winter) organized as the Har El Congregation. Replacing Lewin, who had joined the Confederate army, Winter was spiritual leader, and services were held in his home. The congregation obtained a charter under the name Hebrew Zion Congregation in 1866, and called Max Samfield to be its first rabbi; he served until 1871. The first small synagogue erected on Fannin Street was occupied in 1870. Captain Simon Levy, who distinguished himself in the War Between the States, was the first president. In 1908 the congregation joined the Union of American Hebrew Congregations (Reform), and in 1914 a new synagogue, still housing the worshippers in 1943, was built on Cotton Street. By then the final name of B'nai Zion had been adopted.

Rabbis succeeding Samfield included M. Levine, M. Greenblatt, E. L. Hess, I. Saenger and Moses Jacobsohn. In 1920 Abram Brill was called to the pulpit, and served until he was retired as rabbi emeritus in 1942. The pulpit was then taken over by his associate, David Lefkowitz, Jr., who was the incumbent in 1943. Jack Kaufman, still serving in 1943, had then been secretary of B'nai Zion for more than forty-five years.

The earliest Jewish settlers of Shreveport had been mainly of German and Alsatian origin. The decade of 1880 to 1890 brought a number of East European immigrants to the city. In 1884 several of these Orthodox families held their separate holiday services. The group, calling itself Beth El, included Levi Groner and Isaac Marks, and was enlarged by the families of Sam Willer, J. B. Schwartzberg and B. Miller from nearby Benton. Congregation Chessed Shel Emmeth was incorporated in 1901 and, combining with another group known as Beth Joseph, chartered the Orthodox Congregation Agudath Achim, with fifty-eight members, in 1902. In 1905 the school was established under Rabbi Joseph Getzler. Other rabbis included Charles Blumenthal (1925-27) and Israel Gerstein (1931-34). The first synagogue was built on Fannin Street in 1905. An imposing new structure was erected on Line Avenue, and dedicated in 1939. Leo Brener, elected in 1935, was the incumbent in 1943. About 500 of the city's Jewish families were, in 1943, affiliated with B'nai Zion and Agudath Achim.

The Hebrew Benevolent Association eventually became defunct. The Hebrew Ladies' Benevolent Association, instituted in 1861 for aid to the indigent of any race or creed, was absorbed in 1923 by the local section of the National Council of Jewish Women, formed in 1897. Mrs. H. L. Heilperin had been president of the Association for twenty years. A Hebrew Relief Society, incorporated in 1887, was functioning in 1943, as the Ladies' Auxiliary of Congregation Agudath Achim. Shreveport's B'nai B'rith lodge was the first to be organized in Louisiana, in 1870, under the leadership of Ernest R. Bernstein. In 1943 Shreveport maintained also a Zionist District (1920) and a Hadassah, Sidney L. Herold was president of the United Jewish Campaign. The Council of Jewish Federations was established in 1941.

For its size, the Shreveport Jewish community came to be one of the most prosperous in the United States, and its members participated notably in commercial and civic life. Captain Simon Levy (d. 1898) was a member of the city council for nine years. Abraham Winter, who settled at Shreveport in 1851, was a leading citizen. His son, William Winter (d. 1917), one of the foremost insurance underwriters of the South, served two terms in the city council and was in the state legislature (1904). The brothers Isaac, Julius and Raphael Kahn settled at Shreveport in 1866, and became successful in the cotton business. Their descendants were living in Shreveport in 1943. Ernest R. Bernstein was mayor of Shreveport from 1906 to 1908. Also in the legislature was David B. Samuel (1912-16), and he served as city court judge (1916-17).

Simon Herold moved to Shreveport after the War Between the States. His son, Sidney L. Herold, was elected president of the Louisiana State Bar Association in 1926. He was made vice-chairman of the southwestern region of the United Jewish Appeal, and president of the Shreveport Council of Jewish Federations. Another son, Arthur A. Herold, prominent in medical circles, was appointed advisory professor of medicine at the Louisiana State University Med-

ical Center. Elias Goldstein, prominent attorney, son of Samuel Goldstein (d. 1906), served for a number of years on the Caddo Parish School Board. He was first president (1923) and chairman (1924-31) of the Shreveport Federation of Community Work. He was part donor to the city of the Betty-Virginia park. Michaelis L. Bath, a leading business man of the South, and a communal leader, was president of the Shreveport Refugee Service in 1943. He was made a trustee of the city's foremost institution of higher learning, Centenary College, and contributed importantly to its library and to the Shreve Memorial Library. Other prominent Jews in business included Emanuel Phelps, and his son Benjamin Phelps; and Henry Levy, and his son Marx M. Levy. Nathan Murov was made a member of the national council of the Joint Distribution Committee in 1933. In medicine were Paul Abramson and Jacob M. Bodenheimer, made a member of the city board of health in 1934. Members of the bar were Isaac Abramson, Samuel Abramson, G. M. Bodenheimer, Jr., I. B. Herold, Simon L. Herold, Abe Freyer (president of the Shreveport Bar Association, 1925), A. B. Freyer Jr., and Sylvain W. Gamm. Abe Freyer, Sr., was an active member of B'nai B'rith; in 1943 he was a past president of District 7 and vice-president of the Supreme Lodge and Grand Council of B'nai B'rith.

The *Jewish Journal,* a monthly publication serving the states of Arkansas, Louisiana, and Texas, was established at Shreveport in 1937 by Larry Freeman. In 1943 it was being published by Mrs. Anne Freeman. Its managing editor continued to be Adolf Philippsborn, previously of Shreveport, and in 1943 rabbi of Temple Moses Montefiore of Marshall, Texas. ADOLF PHILIPPSBORN.

SHRODER, JACOB, judge, b. Cincinnati, Ohio, 1848; d. Cincinnati, 1925. While at Harvard University Law School he was appointed assistant to the United States Attorney General Hoar. Upon his return to Cincinnati he entered the practice of law and was later elected judge of the Common Pleas Court of Hamilton County District for six years (1886-1892). For thirty years he was a member of the Union Board of High Schools of the Cincinnati School District, serving as its president several times. He was also president of the Board of Trustees of the Cincinnati Medical College, and was also active in the Union of American Hebrew Congregations.

Lit.: Markens, *The Hebrews in America* (1888) 195.

SHRODER, WILLIAM JACOB, communal leader, b. Cincinnati, Ohio, 1876. He received the LL.B. degree from Harvard University (1901) and practiced law at Cincinnati, but retired in 1921 to devote his entire time, without compensation, to social and civil activities. He was president of the United Jewish Social Agencies of Cincinnati (1923-26), vice-chairman of the American Jewish Joint Distribution Committee from 1939 on, and in the same year he was made president of the National Council of Jewish Federations and Welfare Funds. Shroder was also treasurer (1941) of the Cincinnati Committee to Defend America by Aiding the Allies and a board member of the National Refugee Service. Shroder lectured at the medical college (1924-38) and at the college of liberal arts (1925-32) of the University of Cincinnati. As president of the Cincinnati Board of Education (1926-34) he introduced the principle of equal pay for all teachers, regardless of sex or grade taught, and raised the qualification standards for admission of teachers. His father was Judge Jacob Shroder.

SHROUD, *see* BURIAL AND BURIAL CUSTOMS.

SHTADLAN (advocate), a Jewish title in Central Europe and Poland dating from the 16th cent. although the title Mishtadlim, denoting delegates elected to represent Jewish interests, was used in Spain as far back as 1354. At times a Shtadlan was the salaried business manager and the representative of the external affairs of the larger Jewish communities, appointed for a fixed period. At another epoch the title implied a dignified and honorary position, entered upon voluntarily. This post could be held solely by someone who, by virtue of his wealth, his business connections, his eloquence and his personality, was influential with kings, princes, and other authorities. He was the sentinel of the Jewish community or of all Jewry within the state which was always in constant fear of encroachment upon its meager existence, and he frequently averted threatening danger or harmful regulations against the Jews.

A true type of a Shtadlan was Joselmann of Rosheim, although he is designated as such only occasionally. Other famous Shtadlans were: the Austrian purveyor of the royal court, Samuel Oppenheimer (1630-1703), who, in his last will, urged his children to intercede with the highest authorities in behalf of their coreligionists; Samson Wertheimer, Austrian financier (1658-1724); Leffmann Behrend Cohen (1634-1714), chief court purveyor in Hannover; Simon ben Michael of Pressburg (d. 1719), great-great-grandfather of Heinrich Heine; Jacob Koppel Theben, head of the Pressburg community (1731-98); members of the Geldern family in the duchy of Jülich-Berg and of the Gomperz family in the duchy of Cleve, in the 17th and 18th centuries. Distinguished Shtadlans in Poland and Lithuania were Isaiah of Vilna and Mordecai of Posen. The title Shtadlan disappeared gradually in the second half of the 18th cent.

SHTIF, NOCHUM (pseudonym, Bal-Dimion), Yiddish philologist and socialist leader, b. Rovno, province of Volhynia, Russia, 1879; d. Kiev, 1933. He began studying Hebrew at an early age. At fifteen he entered the Realschule in Rovno. In 1899 Shtif was admitted to the Polytechnicum in Kiev, where he studied engineering and chemistry. Active in Zionist affairs as a student, he later founded a radical group, and wrote a longer work presenting for the first time the ideological basis for socialist Zionism. After the Kishinev pogrom (1903) he became active in the Zelbshuts (self-defense) movement.

In 1903 Shtif met with Ben-Adir and others in Kiev and founded the Seimist (Jewish Socialist Labor) Party, in which he was especially active during 1907 to 1908. He traveled abroad frequently and organized political groups. He also worked in the emigration division of the Jewish Colonization Association at St. Petersburg. In 1909 he enrolled at the lyceum for jurisprudence in Jaroslaw and was graduated with a dissertation on criminal law according to the Old Testament and the Talmud.

In 1914 Shtif went to Vilna where he became the manager of Kletzkin's publishing house. In the early months of the first World War he returned to St. Petersburg, where he revived the publication efforts of the Vilner Farlag. In 1917, shortly after the Russian Revolution, he resumed political work and founded the Folkspartei. In 1919 he organized at Kiev a committee to collect and publish materials about the pogroms in the Ukraine. Shtif went to Berlin in 1922 and there (together with M. Weinreich, Zalman Reisen, E.

Tcherikower and others) founded the organization committee of the Yiddish Scientific Institute and wrote the first booklet on the aims of the Institute, *Vegn a Yiddishn Akademishn Institut* (Vilna, 1925). For years he devoted himself to the growth and development of the Yiddish Scientific Institute, and was considered its spiritual father.

Returning to Kiev in 1926, Shtif conducted the work of the linguistic section of the Institute for Yiddish Proletarian Culture, and edited the periodical *Di Yiddishe Shprach* (later *Afn Shprachfront*). From 1905 on the most important periodicals in Yiddish and Russian—such as *Folkshtime* (Vilna), *Di Voch* (Vilna), *Der Fraind* (St. Petersburg), *Dos Naye Lebn* (New York), *Di Yiddishe Velt* (Vilna), *Nais* (Kaunas), some of which he edited—published many of Shtif's journalistic and literary articles. But his reputation rests largely on his unique scholarly contributions in the field of Yiddish style.

Throughout his varied career, Shtif never forgot his aim and guiding motive: the quest for a full Jewish life through the medium of Yiddish. It was this ideology that led him to Yiddish research. At a time when stereotyped discussions sought to prognosticate the future of Yiddish, Shtif settled down to work in order to show its past. His work was brilliant and prolific. His studies (in *Yiddishe Filologie, Filologishe Shriftn* of the Yiddish Scientific Institute, *Yiddishe Shprach* and elsewhere), particularly on early Yiddish literature and language, may be regarded as lasting contributions.

SHTUSS, *see* PHRASES, POPULAR.

SHUBERT, LEE, theatrical producer and manager, b. Syracuse, N. Y., 1875. Starting out as the Syracuse correspondent of the New York *Dramatic News,* theatrical trade paper, Lee Shubert, with his brothers, the late Sam S., and Jacob J., rose to dominance in the theatrical industry. The first venture of the Shubert brothers was the management of road tours in the vicinity of Syracuse of plays by Charles Hoyt. Leasing the Bastable Theatre in Syracuse, they conducted a stock company. In 1900 the Shuberts went to New York as managers of the Herald Square Theatre. At that time the theatrical industry was controlled by the Klaw-Erlanger interests and the Shuberts found it necessary to buck the "syndicate." So successful were they that they eventually succeeded the Klaw-Erlanger group as the most important theatrical organization in the country. Following their quick success in administering the Herald Square Theatre, they managed the Casino, Princess, Hippodrome, Majestic and other theatres. In 1931, they controlled thirty-one theatres in New York and sixty-three others throughout the country, as well as a few theatres in England.

In the years since 1900 the Shuberts have produced over 400 plays. In 1908 Lee Shubert became business manager of the New Theatre, later known as Century Theatre. It was constructed by a group of New York millionaires, with the hope that it might become a semi-official state theatre, but it was a great failure. In the days following the 1929 crash in Wall Street, the Shubert interests went through receivership. In 1943 they controlled fewer theatres than they did at their peak. Although at that time they had been producing a limited number of shows annually under their own name, the Shuberts were more concerned with the business end of the theatre, including investments in the productions of many other producers and looking after booking arrangements.

Lee Shubert

SAM S. SHUBERT (b. Syracuse, 1878; d. 1905), the second of the three Shubert brothers, was killed in a railroad accident. Thereafter the controlling interest in the Shubert corporation rested with Lee Shubert. JACOB J. SHUBERT "J. J."; (b. Syracuse, 1880) interested himself mainly in musical productions and operettas, such as *Old Heidelberg* and *The Chocolate Soldier.* Two other Shuberts also were connected with the firm from time to time, namely, John (son of J. J.) and Milton, a nephew of the Shubert brothers.

HENRY W. LEVY.

SHUL, popular term for synagogue; *see* SYNAGOGUE.

SHULHAN ARUCH ("prepared table"), the authoritative code of Orthodox Judaism. In its original form it was an extract from Joseph Caro's commentary (*Beth Yosef*) on the *Turim* of Jacob ben Asher; it was made in an easily comprehensible form in order that any one might arrive at decisions for any problem in religious law as easily as he could help himself to food from a table which is already prepared for a meal. The Shulhan Aruch follows the arrangement of the *Turim,* and contains only such regulations as are regarded as still valid after the destruction of the Temple. Its decisions preferred the views and customs of the Sephardic Jews; for this reason it did not win general acceptance until it was supplemented by the *Mappah* (Tablecloth) of Moses Isserles, additions which contain the practices of the Ashkenazic Jews. It was first printed at Venice in 1565; the first edition with the additions of Isserles appeared in 1578. Since then there have been numerous reprints, together with a large number of commentaries that have been written on it.

The Shulhan Aruch is divided into four parts, named as follows: *Orah Hayim* (Way of Life; *Ps.* 16:11), containing the regulations about the fringes (Tzitzith), phylacteries (Tefillin), prayers, synagogue, benedictions (Berachoth), Sabbath, festivals and the like; *Yoreh Deah* (Teaching Knowledge; *Isa.* 28:9), dealing with ritual slaughtering (Shehitah), the dietary laws, idolatry, interest, purity, vows, respect due to parents and teachers, benevolence, circumcision, preparation of the scrolls of the Law, plants, the sick, the dying, mourning, and similar subjects; *Eben*

Haezer (Stone of Help; *I Sam.* 7:12), on marriage and divorce; *Hoshen Hamishpat* (Breastplate of Judgment; *Ex.* 28:30), comprising civil and criminal law.

Few books of the Halachah have received such wide dissemination and general recognition as the Shulhan Aruch; in the course of time it became practically canonical. It owes it success principally to its brief, compact presentation of the law and its clarity of language, both of which make it an ideal reference work. Yet it did not at once win recognition.

Despite the fact that it went through eight editions in its first thirty years, it met with severe opposition on the part of its contemporaries. There were even some Sephardic scholars who deprecated its value in determining the Halachah. Thus Yomtob Zahalon scornfully declared that it was written "only for children and laymen" (responsum 67), while Jacob Castro asserted that it contained many inaccurate statements because Caro had composed it when he was very old (responsum 20). According to Samuel Aboab, Caro had his pupils prepare the work, as a result of which many differences in opinions and readings had crept into the work (responsum 255).

The battle about the Shulhan Aruch was still more severe in Poland. Caro had disregarded the customs of the German Jews, and this led the Polish rabbis, who regarded themselves as representatives of Ashkenazic Jewry, to turn against his work. Moses Isserles began the attack through his Haggahoth (glosses) in which, in the 1578 edition of the Shulhan Aruch, he skilfully added the German customs and views. The widespread opinion that Isserles' additions were intended only as a supplement to the Shulhan Aruch is wrong. Isserles' position was that of a critic, as he makes it clear and express in his preface. For the same reasons, but in a much more aggressive fashion, Solomon Luria (1510-78) rejected the Shulhan Aruch; but he was an opponent of all forms of codification. His pupil Mordecai Jaffe (1530-1612), in the preface to his *Lebush,* stigmatizes the Shulhan Aruch as "a sealed book, a dream without interpretation," because it does not give the reasons and the sources for its decisions. Long after the Shulhan Aruch had won general acclaim, there were occasionally teachers who objected to it. Thus Joshua Falk Cohen (1559-1614) finds that it requires a knowledge of the sources on the part of its readers, and that these are usually ignorant thereof. The decision of Joel Sirkes (1561-1640) was still more unfavorable; he rejected the decisions of Caro. The chief objection on the part of the opposition was directed against codification in general, since it was too far removed from the sources of the Halachah, the Mishnah and the Talmud.

It was not until the middle of the 17th cent. that the commentaries on the Shulhan Aruch which were published established its authority and gained it universal recognition. The most important and authoritative of these commentaries are the following: to *Orah Hayim: Ture Zahab,* by David Halevi (1586-1667), and *Magen Abraham,* by Abraham Gombiner (1635-85); to *Yoreh Deah: Ture Zahab* and *Sifthe Kohen* (SHaCH), by Shabbethai Kohen (1622-63); to *Eben Haezer: Helkath Mehokek,* by Moses Lima (about 1637), and *Beth Shemuel* (BaSH), by Samuel ben Uri; to *Hoshen Hamishpat: Sefer Meirath Enayim* (SeMA), by Joshua Falk, and *Sifthe Kohen.* The Shulhan Aruch has been translated as follows: into German by H. G. F. Löwe (Hamburg, 1837-40; 2nd ed., Vienna, 1896); by Pavly (part 1, Basel, 1888; part 3, St. Ludwig, 1893); by P. Lederer (1st and 2nd parts, Frankfort, 1897, and Pilsen, 1900; 2nd ed. of part 1, 1906); into French by E. Seutayra and M. Charleville (part 3, Paris, 1868-69) and A. Neviasky (part 2, Paris, 1910). There is no complete English translation; the nearest is H. E. Goldin's translation of Solomon Ganzfried's abridgement, *Kitzur Shulhan Aruch,* published as *Code of Jewish Law* (New York, 1927).

Ever since the time of Eisenmenger (1700) the

A page of the "Shulhan Aruch," the standard code of Orthodox Jewry; text in center, surrounded by commentaries

Shulhan Aruch has been the target of attacks by anti-Semites. Passages have been wrenched from their context and incorrectly interpreted, or even false statements have been alleged, for the purpose of ridiculing the Jews and Judaism, or presenting Jewish teachings as hostile to humanity, exclusive in intention, or permitting all forms of fraud, misconduct and treachery against non-Jews. These false accusations have been repeatedly exposed by both Jews and non-Jews. It is true that the Shulhan Aruch, being a code of religious law, has to include some measures directed against idolatry, but it definitely states that these laws do not apply to the adherents of monotheistic religions. Its few directions that might be regarded as imposing discriminations on non-Jews are mild compared to canon laws of Christians and Moslems against infidels. Its prohibitions against the use of certain foods prepared by non-Jews are based on the fact that the latter do not observe the Jewish dietary laws; these laws apply equally to non-observing Jews. Taken as a whole, the Shulhan Aruch emphatically insists on the equality, before the law and in practice, of every man, be he Jew or non-Jew; it even states that deceiving a non-Jew is worse than deceiving a Jew, since it is not only wrong, but also a profanation of the name of God.

SHULTZ, SAMUEL, judge, b. Victoria, 1865; d. Vancouver, 1917. His mother was the first Jewish woman married in British Columbia and the first Jewess to be buried in the Jewish cemetery at Victoria. He was educated in the public schools of Victoria and at the University of Toronto, obtained his legal educa-

tion at Osgoode Hall, and subsequently returned to British Columbia where he practised law at Nelson, Victoria and Vancouver. In 1909 he was elected Alderman for North Vancouver. In 1914 he was appointed judge of the County Court at Vancouver, being the first Jew to be appointed judge in the Dominion of Canada. LOUIS ROSENBERG.

Lit.: The Jew in Canada (1926).

SHUMLIN, HERMAN E., theatrical producer and director, b. Atwood, Col., 1898. Making his debut as a theatrical producer in 1928 with *Celebrity* and as a director in 1930 with *Grand Hotel,* Shumlin rapidly came to the fore as one of the finest producers and directors in the contemporary theatre. In making their awards for the 1940-41 season, the New York Critics' Circle singularly honored Shumlin when they chose two plays produced and directed by him as the "best play of American authorship" and the "best play of foreign authorship." The Shumlin plays so honored were Lillian Hellman's *Watch on the Rhine,* the first successful anti-Nazi play produced on Broadway, and *The Corn is Green,* a drama of early 20th cent. Wales by Emlyn Williams. With their two immediate predecessors, *The Male Animal* and *The Little Foxes,* Shumlin scored the almost unbelievable triumph of four successful productions in a row.

Before becoming a producer in his own right, Shumlin served as a press agent for both motion pictures and plays, as a reporter and critic for two theatrical trade papers, *The New York Clipper* and *Billboard,* and as general manager for Jed Harris, then a successful producer. While associated with Harris, Shumlin had a hand in such successful productions as *Broadway* and *The Front Page.*

Starting with *Celebrity,* Shumlin's first four productions, none of which he directed, were failures. His first moderate success was *The Last Mile,* a starkly realistic play about a prison death house. Shumlin's first great success was *Grand Hotel,* for which he assumed direction after the original director had seemingly failed. *Grand Hotel,* written by a then unknown Viennese Jewish novelist, Vicki Baum, was a new adventure in the theatre as it brought to the stage an adaptation of motion picture technique. Using a movable stage, Shumlin presented a many scened slice-of-life in episodic cinema style.

In 1934 Shumlin presented his greatest hit, *The Children's Hour,* the first play by Lillian Hellman. Thereafter he produced two other successful plays by Miss Hellman, *The Little Foxes* and *Watch on the Rhine.*

A careful, serious producer, who never went in for mass production, Shumlin presented comparatively few productions after his first venture in 1928. Others of his better known productions were *Clear All Wires* and *The Command Performance.* In the fall of 1942 he presented *The Great Big Doorstep,* a not very successful venture, with which he broke his streak of four successes in a row.

A leader in the anti-Fascist wing of theatrical workers, Shumlin always believed that the theatre can entertain by making people think. Except for his first few unsuccessful plays, which were in the so-called "bootleg" era of the American theatre, Shumlin always was associated with plays of serious content. He was one of the current theatre's most distinguished craftsmen. HENRY W. LEVY.

SHUREK, *see* VOWELS, HEBREW.

SHUSHAN (SUSA), capital of the Elamite kingdom, situated on the Ulai river; it is frequently mentioned in the Bible (*Neh.* 1:1; *Dan.* 8:2; *Esther* 1:2 and other places). It is first mentioned in a Babylonian inscription which reports that the Kassite king Kurigalzu (about 1300 B.C.E.) captured a town which he calls Shasa. The city then became the capital of Elam, and was taken and destroyed by the Assyrian king Ashurbanipal (640 B.C.E.), who restored to its shrine a statue of the goddess Nana, which the Elamites had carried off from Erech 1,635 years before. A few decades later the territory fell into the hands of the Persians. Darius Hystaspes (521-485) began the building of a magnificent palace there, which was completed by Artaxerxes I (465-424) and altered by Artaxerxes II (405-359). The city was a favorite residence of the kings of Persia.

Herman E. Shumlin

Alexander the Great entered the city after his conquest of Persia (330) and found a great treasure there. It continued to prosper under the Seleucidae, Parthians and neo-Persians, and began to decline only after the Arab conquest of the 7th cent. C.E. It ceased to be of importance after the 13th cent. The traditional grave of Daniel is situated near the ruins, which have been excavated by Dieulafoy, De Morgan, Scheil and Herzfeld. *Esther* always makes a distinction between Shushan Habirah, the royal palace and citadel, and Shushan Hair, the city proper.

SHWARTZMAN, GREGORY, bacteriologist, b. Odessa, Russia, 1896. He received the degree of M.D. from the University of Brussels in 1920. From 1923 to 1927 he was professor of bacteriology and public health at the New York Homoeopathic Medical College. From 1926 on he was head of the department of bacteriology at Mount Sinai Hospital. The local skin reactivity to bacterial filtrates described by him was called Shwartzman phenomenon and became the starting point for a great deal of international medical research. Later Shwartzman published valuable results

regarding the treatment of typhoid fever, meningitis and other diseases. He also described a new category of toxics. In 1941 he published an important paper together with O. Marburg regarding brain reaction to bacterial filtrates in existing local tissue reactivity.

His book, *The Phenomenon of Local Tissue Reactivity,* published in 1937, is a monograph on the work done on the Shwartzman phenomenon by him and numerous investigators in the United States and abroad.

SIBERIA, a vast territory of 4,028,615 square miles in northern Asia belonging to Russia. Its population was 8,667,874 (census of 1926), including 49,571 Jews. It is divided into the West Siberian territory, with its capital city Novosibirsk, and the East Siberian territory, the principal city of which is Irkutsk. The autonomous regions of Oirat and Khakass form part of the West Siberian territory, and the Chita region and the autonomous Buriat-Mongolian republic, with its principality Verkhneudinsk, form part of the East Siberian territory. The far Eastern territory, the principal city of which is Khabarovsk, is divided into eight regions. The Jewish Autonomous Region, or Birobidjan, is part of this.

Siberia was for many years a penal colony, and was used as such as early as the 17th cent. From 1863 on, after the Polish insurrection, more and more convicts were sent thither. At the beginning of the 19th cent. 2,000 persons were sent to Siberia annually; this number rose to an average of 20,000 from the year 1880 until 1900, when the system was discontinued. After their liberation the convicts who had been sentenced to hard labor settled in villages. This country was first colonized by parties of Cossacks who settled on the frontiers; many serfs who were liberated in 1861 settled here also, entire populations of Russian peasants emigrating en bloc from their villages. The first Jewish settlers came as exiles to Siberia in the 17th cent. They were allowed to settle here after the expiration of their sentences, and their relatives were permitted to join them. Jewish merchants were allowed to settle in Siberia only after receiving a trade license which had to be approved by the minister of finance (Resolution No. 6875, of 1834). The Jews in Siberia became greatly assimilated; many of them became Christians and contracted mixed marriages. When laws were passed in Russia limiting Jewish settlement, Siberia was included. In 1827 Jews were forbidden to follow their deported wives into exile. When, in 1836, the Russian government founded Jewish agricultural colonies in the districts of Tobolsk and Omsk, the Jews of Courland wished to join.

In 1937 Czar Nicholas I ordered these settlements discontinued. Those Jews who were to be banished were no longer to be sent to Siberia. If under thirty-five years of age, they were to be assigned to military service; if between thirty-five and forty they were to be sent to the workhouse, and if over forty, to the remote region of Siberia, i.e. to the territories of Yakutsk and Transbaikalia. Male children under eighteen were to be registered among the military "Cantonists"; they were educated in special "canton schools" for military service. These schools, originally created for the sons of Russian soldiers, were situated in different provinces. Jewish boys were sent far from their birthplaces, and every means was tried to make them join the Greek Orthodox Church. These "canton" schools, which were first built and used in 1805, were abolished in 1857.

In 1860 the Jews were granted basic equality with the rest of the population of Siberia. However, in 1891 the Russian senate stated that the right of the Jews to settle in "non-restricted" territory did not apply to Siberia. In 1897 another senate resolution stipulated that Jews were to be permitted residence only in those places in which they were registered legally, and they were not to be allowed to move from one place to another without special permission. The Siberian authorities placed their own restrictions on the Jews, and in 1899 Jewish emigration to Siberia was stopped.

At the beginning of the first World War (1914) the legal rights of the Jews in Siberia were as follows:

1. No Jew, irrespective of class, was allowed either entrance or settlement. Only exiled Jews were allowed in Siberia; their wives, and children under five, were permitted to follow the exiles; children who were between five and fourteen were admitted only by special permission of the ministry of justice.

2. Freedom to move from place to place was granted only to descendants of soldiers and to Jews who had been living in Siberia prior to 1899.

3. Jews remaining outside of the legal territory were not allowed to acquire real estate, to engage in money lending, to hold mortgages, or to be elected to a city council.

4. Within the limits of one hundred versts (66.29 miles) Jews were subject to trade restrictions.

5. Jews were permitted to return from Siberia to the Pale of Settlement.

At the end of the 19th cent. there were about 35,000 Jews living in Siberia. In 1909 the town of Irkutsk had 6,169 Jews, and in 1919 about 10,000 to 12,000. The migration of the Jews in Siberia from the country to the towns is marked. The largest Jewish community of the country was organized in Irkutsk in 1918.

The Siberian Jews did not follow the commercial trends of Jews elsewhere. But during the first World War and afterward the center of Jewish economic life shifted from Irkutsk to Vladivostok and Harbin (China). Many Jewish fugitives came to Siberia after the War. The first Jewish convention to elect a national council met in 1919. During the conflict between the White Russian Admiral Kolchak and the Bolshevists (1918-19) the Jews were the target of anti-Semitism, and in great danger.

After the first World War the intellectual life of the Siberian Jews improved greatly. Jewish Gymnasiums were founded. Whereas the czarist government had never recognized the culture of smaller nationalities and had proscribed their languages, the Soviet government encouraged these groups, and the Jews profited thereby. A Jewish Gymnasium was established at Tomsk. Siberia had two universities, one at Tomsk, the other at Irkutsk. New towns were built in Siberia in connection with the new enterprises established there in recent years, and several existing towns were reconstructed, such as Novosibirsk. By 1932 Siberia was connected to Moscow by radio, and there were Moscow-Irkutsk, Moscow-Novosibirsk, Irkutsk-Yakutsk, and Irkutsk-Khabarovsk connections. The transsiberian airline connects Moscow with Vladivostok. The great development of Siberia started with the Transsiberian Railroad.

In relatively recent years measures were adopted for the founding of Jewish agricultural colonies. Through the help of the ORT association the Moscow commissariat allotted the Jews free land for their settlements in the Amur territory.

In 1942 some 240 refugee Jews from Estonia, Latvia and Lithuania were reported to be living in Siberia. At the same time many Jewish refugees from Poland fled to Siberia in 1940 to 1942, and were reported to be scattered over remote sections of the land to which it was difficult for Jewish relief organizations to send aid. In April, 1942, several thousand Jews from the collective agricultural settlements of the Crimea settled in the Krasnoyarsk district of Siberia on land allotted to them by the Soviet government.

SIBYLLINE BOOKS, a collection of propaganda writings widely circulated in Greek and Roman times. Sibyl was the name given by Greeks and Romans to certain women who prophesied under the inspiration of a deity. These oracular prophecies, called Sibylline Books, were collected and preserved in Rome and consulted for divine guidance, and in order to avert calamities. While the earliest pagan writers, such as Heraclitus, Aristophanes and Plato, speak of only one Sibyl, later authors mention several with various dwelling places. Thus, Varro, the Roman scholar, enumerates ten, namely, the Persic, the Delphic, the Cumean, the Erythrean, the Semian, the Cuman, the Hellespontic, the Phrygian, the Libyan and the Tiburtine, who lived at different times.

Because of the popularity enjoyed by the Sibylline Oracles in Greek times, cultured Hellenistic Jews of Alexandria, in the 2nd cent. B.C.E., utilized the forms of oracular verses, attributing them to the Sibyls, and dwelling upon the superiority of the monotheistic principles of Judaism over heathenism. The Jewish Sibyl, addressing herself to heathen nations in Greek hexameters in the dialect of Homer, prophesies the fate of the world, warns of impending divine judgment, and announces the approaching Messianic period. The author envisions in the upheavals of the Roman Empire renewed hopes for Judaism.

This form of apocalyptic writing was adopted later by the Christians also to propagate the doctrines of Christianity. In many cases, however, the Christians merely revised or interpolated the Jewish text. Thus the Sibylline utterances in their present form are a mixture of both and are sometimes difficult to differentiate. The Christian verses may in some instances be distinguished by their allusion to Jesus or by their animosity toward the Jews.

The order in which the Sibylline prophecies are presented does not indicate their relative antiquity. The compositions lack uniformity and coherence. The material is complicated and its ideas can be followed only with difficulty. While some passages of the oracles are highly poetical, the general theme is mediocre.

The first edition of the Sibylline Books was prepared in eight books by Xiptus Beluleius (1545). It was not until the 19th cent. (1917) that Angelo Mai issued four additional books. Alexandre published an elaborate edition with a Latin translation (Paris, 1841-56; 2nd ed., vol. 1, 1869); another edition published by Friedlieb (1852); another valuable edition was published by Geffcken (Leipzig, 1902).

The most ancient and definitely Jewish verses are contained in the third book, according to the opinion of most critics. Its origin is assigned to the period from about 160-140 B.C.E. This poem may be divided into three groups: (1) verses 1-294; (2) verses 295-488; (3) verses 489-828.

The first group commences with the building of the Tower of Babel, the confusion of tongues, and the dispersion of mankind; it describes the rivalry among the three kings, Chronos, Titan and Iapetus. After their annihilation there arise successively the Egyptians, Persians, Medes, Ethiopians, Assyrians, Babylonians, Macedonians and Romans. The Sibyl then begins to prophesy the advent of the Solomonian reign, and the rule of the Greco-Macedonian race and the creation of the "many-headed" Roman empire. After the seventh king of Egypt of the Hellenic race will come the rule of the people of God. This is followed by a sketch of the history of the Jewish people from their exodus from Egypt to Cyrus.

The second group threatens the heathens, namely, Babylon, Egypt, Gog and Magog and Libya, with judgments and calamities, and promises Messianic prosperity to Israel. There are oracles covering Phrygia, Troy, Cyprus, Italy and other lands.

The third group likewise exhorts and denounces the idolators mentioned in the previous oracles, particularly those of Hellas, praising Israel and its cleaving to God and His Law, and envisions a Messianic king. The Sibyl concludes the third book with an epilogue, stating that the Greeks have falsely regarded her as Erythrean, but that she is actually Babylonian and a daughter of Noah.

The fourth Sibylline book is undoubtedly of Jewish authorship, though regarded as Christian by older critics, and was composed about 80 C.E., probably in Asia Minor, as may be inferred from the prophecy of the flight and return of Nero. The Sibyl, as the prophetess of God, predicts calamities upon the nations unless they repent.

In the fifth Sibylline book the majority of verses are of Jewish origin. There is no agreement as to date, although the author laments the destruction of the Temple, and predicts a Messianic era. It is probably a product of the 1st cent. C.E., or a little later. Books six, seven and eight are generally held to be of Christian authorship, while books nine and ten are missing. The origin of books 1 and 2 and 11 to 14 is doubtful. Books one and two are generally regarded as a Christian revision of a Jewish original, while Lucke, Friedlieb and Dechent ascribe book eleven to a Jewish author, as does Friedlieb, book 14. Book 11, ascribed to a Christian author, is a versified history of Egypt down to the beginning of the Roman Empire.

SICHEL, NATHANAEL, painter, b. Mayence, Germany, 1843; d. Berlin, 1907. He studied at the Royal Academy of Art in Munich and was only twenty when he attracted wide attention with his painting, *Philipp the Magnanimous at the Grave of His Wife* (in the art gallery of Darmstadt, Hesse, Germany). His picture *Joseph Explains the Dreams of Pharaoh* won him the Rome Prize which enabled him to study in Rome for two years.

Nathanael Sichel

There he painted mainly historical pictures. Returning to Germany in 1869, he devoted himself to portrait painting. Famous paintings of his were *Francesca da Rimini and The Beggar of the Pont des Arts.*

SICHER, DUDLEY DAVID, manufacturer and communal worker, b. New York city, 1876; d. New York city, 1939. He was educated at the Peekskill (N. Y.) Military Academy and at Columbia University. A leader in the cotton garment manufacturing industry, he became interested in education, particularly that of immigrants, and in 1914 he founded the Sicher School for Immigrants, the first experiment in adult education among factory employees, which he carried on with the workers in his own organization. The school was conducted in cooperation with the Department of Education of the city of New York and was a forerunner of the modern system of continuation schools.

Sicher was very active in the Federation for the Support of Jewish Philanthropic Societies from its foundation (1917), and was elected (1929) president. Sicher, who, in 1912, was president of the Cotton Garment Manufacturers' Association, retired from business in order to devote his full time to philanthropy.

He was a director of the Montefiore Hospital in New York city (1913-27), treasurer of the Committee for the Care of Jewish Tuberculars (1920-27 and 1931-39), and director of the Needlecraft Educational Committee. The New York city Conference on Social Work (1929) and the New York state Conference on Social Work (1931) elected him president. In 1933 he was chairman of the New York division of the German Relief Campaign of the American Jewish Joint Distribution Committee. Shortly before his death (1939) he served on the advisory committee of the Wages and Hours Law Administration. He was also a member of the advisory board of the National Labor Relations Board and of the board of the Joint Distribution Committee.

SICILY, the largest island in the Mediterranean Sea, and an Italian department, with a total population of four million, of whom 240 were Jews (1938). Excavations revealed that Jews had actually lived during the Roman period in Syracuse, Catania, Noto, Cittadella and Palazzolo Acreide. The orator Caecilius (end of the 1st cent.), who professed Judaism, came from Calacte, but it is not known whether he was of Jewish blood or embraced Judaism in his later years. Toward the end of the 6th cent. Pope Gregory the Great mentioned Jews living in Messina, Palermo, and Girgenti, and Samaritans in Catania and Syracuse. In the year 725 a Jewish magician named Eliodorus was said to have been burned at Catania; however, this statement seems to lack historical authenticity.

In many reports describing the period of conquest of Sicily by the Saracens (827-78) Jews are mentioned as having lived in Sicily; the Arab writer Ibn Haucal (10th cent.) also reported the existence of a Jewish ghetto in Palermo. During the Arab domination over Sicily the Jews shared the misfortunes of the Christians; they were subject to the payment of the Gizyah, a special tax, but were otherwise free to profess their own religion. From documents of the Genizah (11th and 12th centuries) it may be noted that the Jews of Sicily carried on active business relations with North Africa and the Orient. The Sicilian judge Matzliah ibn al-Bazak (11th cent.) came from the Orient.

In the second half of the 11th cent. Sicily came under the dominion of the Normans, yet the actual conditions of the daily life of the Jews remained unchanged. Even long after the conquest of Sicily by Henry VI of Hohenstaufen (1194) the condition of the Jews remained in great part the same, despite the restrictive regulations introduced by Frederick II (1198-1250). He decided that badges were to be worn by Jews, although he was personally well disposed toward them and kept Jewish officers and scholars at his court, such as the treasurer, Gaudio of Palermo. Charles I of Anjou (1266-82) also enforced the wearing of badges by Jews, and although he counted many faithful followers among the Jews, he ordered scores of Talmudic and Jewish liturgical books to be burned (1275).

In 1282 Sicily came under the control of the government of Aragon. In those days there existed in Sicily some fifty Jewish communities with a well-established community life. Most of the Jews were business-men, dealing in corn, cheese and cattle, but there were among them also skilled dyers, weavers, farmers, mechanics, smiths, carpenters and shoemakers, as well as porters. Many of the roughest trades were almost exclusively carried on by Jews. Among Jewish men of science and literature were Ahitub of Palermo, Isaac al-Hadib, Aaron Abulrabi, Jacob Sikili and Moses Rimos. In 1466 the Jews obtained permission from the king to establish a Jewish university, but the plan was never realized.

Under the Aragonese government the situation of the Jews grew steadily worse, and they were even forced to protect themselves from the cruelty of the populace, who often assaulted and mistreated them. Under John I (1458-79) these attacks by the mob became more and more frequent and alarming, and the measures of protection granted the Jews by the government were not always sufficient. The situation grew still more critical when Sicily became a part of the Spanish Empire. The expulsion of the Jews from Spain (1492) marked the end also of the Jewish communities in Sicily.

A vivid description of medieval Jewish life in Sicily was given in a letter written by Obadiah ben Abraham Bertinoro (1486). In the 20th cent. the number of Jews in Sicily was small, and their communities were of no importance.

SICK, CARE OF, *see* HOSPITALS; KUPPAH; SOCIAL SERVICE.

SICK, VISITING OF (Bikkur Holim). Visiting the sick is a form of Jewish benevolence that goes back to Biblical times and is in the category of a religious duty. While the Bible itself has no ordinance requiring visiting the sick, a number of instances are given when even kings went to see those who were ill (*II Kings* 8:29; 13:14; *Gen.* 48:1; *II Sam.* 13:6). Ben Sirach definitely prescribes visitations: "Omit not to visit the sick, because for this thou wilt be loved" (*Sirach* 7:35). Although there is no positive commandment in the Bible that the sick must be visited, Maimonides (*Mishneh Torah, Hilchoth Ebel* 14:1) derived authority from *Lev.* 19:18: "Thou shalt love thy neighbour as thyself." The Talmud found sanctions for visiting the sick from other verses of the Bible as well (*B.K.* 100a; *B.M.* 30b; *Sotah* 14a; *Ned.* 39b; *Ber.* 10a). God Himself was supposed to have visited the sick when he appeared unto Abraham, who was recovering from his circumcision (*Tanhuma Gen.* 41a; cf. *Gen.* 18:1).

Visiting the sick is listed as one of the good deeds which are to be practised without stint, the benefits of which are operative for all time (*Peah* 1:1). The 12th cent. moralist, Judah Hehasid, said: "Even the great should visit the humble; if a poor man and a rich man fall ill at the same time, and many go to the rich man to pay him honor, go thou to the poor man, even if the rich man is a scholar" (*Sefer Hasidim* 361; see also *Ned.* 39b; *Taan.* 21b). Relatives and friends were expected to visit the sick person as soon as he fell ill; others after three days (*B.M.* 30b). The patient should not be seen, however, during the first three or the last three hours of the day (*Ned.* 40a). Abba bar Hanina stated that everyone who visits the sick takes a sixtieth of his malady from him. The question was raised: "Why not remove all his illness by the presence of sixty persons?" The answer given was that after the first visitor a law of diminishing returns operates, so that each successive visitor removes only a sixtieth of the remaining illness. Huna said, however, that sixty visitors would cure the invalid if they loved him as much as they loved themselves. Eleazar Hakappar maintained that a visitor removes a sixtieth part of the illness only if he exerts himself and serves the sick person. This same rabbi continued with a very puzzling statement, that he who does not visit the sick adds a sixtieth to his malady (*Ned.* 39b; *Midrash Lev.* 34:1; *Midrash Tehillim* 41:2). This same obscure and somewhat mystical concept is often repeated: "Anyone who does not visit is as if he shed blood" (*Ned.* 40a).

Although authorities would make visiting the sick a virtue which can not be practised in excess, others would limit the number of calls. Thus, for example, Maimonides: "One may visit even many times a day, and he who visits often is praiseworthy, except only that he does not overburden the afflicted." (*Hilchoth Ebel* 14:4; cf. *Ned.* 39b). Those with certain maladies are not to be visited, probably because the nature of the illness would make visiting an undue strain on the patient (*Ned.* 41a). The more rigorous Shammai declared that the sick are not to be visited on the Sabbath, while the lenient Hillel permitted it (*Sab.* 12a).

It was a custom in the Middle Ages for the congregants to visit the sick when they departed from the synagogue on the Sabbath morning (Abrahams, Israel, *Jewish Life in the Middle Ages,* 353). "The Jewish etiquette at such visits was almost beyond praise. It was thought bad manners to call upon the patient too soon after he fell ill, for such precipitancy might make him appear in a worse plight than he actually was. No visitor was to become a nuisance by making too long a stay; nor was he to present himself when the sufferer was in acute pain. The patient was to be cheered, and not depressed by conversation on dismal topics of death and misfortune. A man's personal enemy was to refrain from visiting the sufferer, for his presence might be misconstrued as implying a desire to gloat over his foe's prostration. An essential of the visit was the prayer uttered on the patient's behalf" (*ibid.,* 354).

Jews are directed not to confine their benevolence to their coreligionists. It is an ancient rule: "The Gentile sick, as well as the Jewish, are to be visited, for the purpose of fostering communal unity" (*Git.* 61a).

The visitor has certain duties to discharge. If he knows of any particular medicine he thinks valuable, he is expected to recommend it. The visitor is expected to pray on the patient's behalf and to include in his prayers a request for healing of "all the rest of the sick of Israel." The visitor is requested to speak pleasant and comforting words with a cheerful countenance, so that the patient will not be led to feel that he is very ill. However, the visitor is not to neglect the opportunity to discuss serious matters, to advise the patient to set his affairs in order, and to confess any misdeeds. The visitor is directed to raise the tone of the conversation by successive stages to the highest plane of spirituality, culminating in prayer. In the presence of the sick any language may be employed for the prayer (*Sab.* 12b; *Sotah* 33a).

Although the visitor may compose his own prayer, traditionally there are various kinds of prayers that are recited for the particular situation, including: one for the Sabbath and the Day of Atonement; when one's own wife or child is ill; a closing prayer recited by scholars who have come to study Mishnah at the home of the ill; a prayer used when the invalid is so seriously ill that his name is changed (with the idea of baffling the Angel of Death). It is an interesting commentary on the Jewish conception of prayer that a close relative of the sick person is told to pray for "the sick of Israel" rather than for the member of his household directly; since the invalid is included with the others who are ill, prayers in his behalf will be heard for the sake of many.

Praying for the sick is incumbent upon all. Says the Talmud: "Anyone who is able to seek mercy for his neighbor and does not do so, is called a sinner" (*Ber.* 12b).

DAVID S. JACOBSON.

SIDDUR, *see* PRAYER-BOOKS.

SIDE-LOCKS (Hebrew, *pe'oth,* "corners"). In accordance with the Biblical law (*Lev.* 19:27) against cutting round the corners of the head, it was a pious custom, as early as Talmudic times, to leave uncut a part of the hair over the temples and before the ears. The amount and length of these side-locks was never given a fixed measure by ritual law and depended entirely upon the customs of the Jews in individual countries and at various periods. Maimonides states that there is no norm for the side-locks; other codifiers are of the opinion that four hairs are sufficient; the *Shulhan Aruch* considers the proper length of the side-locks as from the temples to below the ear, to the point where the lower jaw begins. During the Middle Ages the Jews seem to have worn side-locks of a rather moderate length. The Sephardim in the Orient today wear short, almost imperceptible side-locks.

The Lurian Cabala frequently discusses and ascribes great importance to the side-locks for the face of man, which is like that of God. The Hebrew word for side-lock (Peah) has the same numerical value (80 plus 1 plus 5 equals 86) as a name of God, Elohim (1 plus 30 plus 5 plus 10 plus 40 equals 86). The two side-locks together with the beard form an additional means of transmission of the thirteen attributes that stream from the ten Sefiroth of God in the so-called Lesser Face (*zeer 'anpin*). As a result of the in-

fluence of the Cabala, the Hasidim in Galicia, Hungary, Bucovina, Carpathorussia and Palestine wear very long side-locks, often reaching down below the face and shining through the application of fat. Many, out of regard for their sanctity, never cut the side-locks at all, but permit them to grow to a great length. Many Hasidim braid or curl their side-locks in order that they may not appear so long.

The Jews of Yemen, under the influence of the Lurian Cabala, also let their side-locks grow long. They call them *simanim* ("signs"), as they are the visible symbols of Judaism. In Russia the government made laws, which were often cruelly enforced, to compel the Jews to wear their side-locks short; the only exception made was in the case of rabbis. Many Hasidim in Russian Poland, therefore, used to shove their side-locks behind their ears, so as to make them unnoticeable and thus circumvent the law. It was a custom among the Cabalists of Palestine that when a boy is four his hair is cut in the synagogue and for the first time masses of hair are allowed to be seen over the temples. This ceremony is called Halakkah, from an Arabic word meaning to cut the hair. The usual time for this ceremony, if after the birthday, is the week of Passover or the thirty-third day of the Omer, the anniversay of the death of Simeon ben Yohai. Many Sephardic families celebrate the Halakkah on that day at Meron (near Safed) in the court before the grave of Simeon. The hair that has been cut off is weighed and a corresponding amount in gold, silver or copper, depending on the means of the parents, is given to the poor; the hair itself is burned.

In modern times, especially in Western Europe and America, the wearing of the side-locks has been generally abandoned by all but the most orthodox Jews.

SIDIS, BORIS, psychologist and psychopathologist, b. Kiev, Ukraine, 1867; d. Portsmouth, N. H., 1923. He came to the United States in 1887, and studied medicine at Harvard University (M.D., 1908). He was associate psychologist and psychopathologist at the New York Pathological Institute, and director of the Psychopathological Hospital of the New York Infirmary for Women and Children. Sidis founded the Sidis Psychotherapeutic Institute, in Portsmouth, N. H., and he was its medical director until his death. He was known internationally for his work on the psychology of suggestion and mental dissociation.

Among his more important works are *The Foundations of Normal and Abnormal Psychology* (1914); *The Psychology of Suggestion* (1916), dealing with researches into the subconscious nature of man and society. With Goodhart he wrote *Multiple Personality* (1905). Sidis was associate editor of *Archives of Neurology and Psychopathology* and of *The Journal of Abnormal Psychology.*

Lit.: Kelly and Burrage, *Dictionary of American Medical Biography* (1928); Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 173-74.

SIDNEY, SYLVIA (née Sophia Koskow), actress, b. New York city, 1910. Following her education in the New York public school system and the Theatre Guild School (1921-25), she achieved stardom on the stage and screen.

After making her debut in a small role in *The Squall* (1924), she became a featured player after her appearance with Chester Morris in *Crime.* Other stage roles during the period from 1924 to 1931 were *Mirrors, Nice Women, Old Fashioned Girl, Crossroads, Many a Slip* and *Bad Girl.*

Following the acclaim that greeted her in the latter, she went to Hollywood. In motion pictures she achieved nationwide fame with her performances in *An American Tragedy, Street Scene, Ladies of the Big House, Accent on Youth, Dead End, Madame Butterfly, Jennie Gerhardt* and *City Streets.* In 1939 she returned to the legitimate stage, playing in *Gentle People* and *To Quito and Back* in New York, and *Accent on Youth* on the road.

Married to the actor Luther Adler (her first husband was the publisher Bennett Cerf), she became a member of the most famous theatrical family of the Yiddish stage. In 1942 she assisted her husband in his repertory productions at the Providence (R. I.) Playhouse.

SIDON (Hebrew and Phoenician, *Tzidon*), Phoenician city, situated along the slopes of the mountains on the northern part of the coast of Palestine. It had its own rulers, and maintained a lively commerce between the interior of Palestine and the countries of the Mediterranean. It is mentioned as early as the Tell el Amarna letters (15th cent. B.C.E.). At one time it outranked its rival city of Tyre, and in many places in the Bible the term Sidonians is used in the meaning of "Phoenicians." When the Jews returned from the Babylonian Exile (6th cent. B.C.E.), Cyrus commanded the Sidonians to furnish them with wood for the building of the Temple.

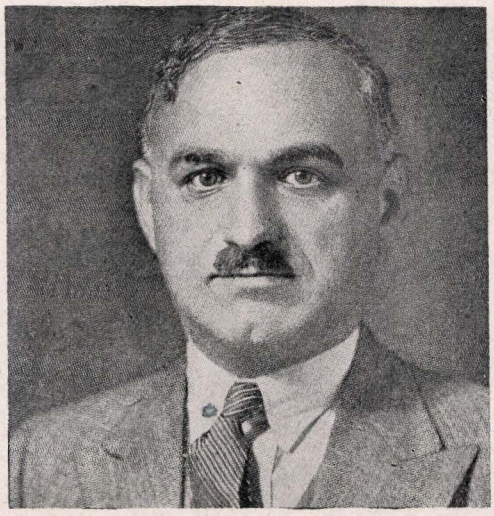
Jews settled in Sidon before the destruction of the Second Temple (70 C.E.); several scholars lived there in the 2nd cent., and many Jews, including the Tanna Jose ben Halafta, were employed in the tannery at Sidon. The city retained its importance as late as the 17th cent., but after that its harbor became sanded up, and it lost its trade to Beirut. The modern city, known as Saida, has about 12,000 inhabitants, including about 1,000 Jews. It is not included in the Palestinian Mandate, but belongs rather to Syria.

Lit.: Eiselen, F. C., *Sidon, a Study in Oriental History* (1907); *Syrie-Palestine* (*Guide Bleu;* 1932) 400 et seq.

SIDRA, a term which at first meant "arrangement" (of the readings from the Torah), but which was eventually applied to the actual Sabbath or festival portion read in the synagogue. In Palestine the entire Torah was read in the course of three years (some believe it was three and a half years), in Babylonia in one. Thus the Palestinian Sidras are variously reported to have numbered from 154 to 175, while the Babylonian became fixed at 54. In course of time, the Babylonian usage became universal among Jewry.

The following are the customary Sidras and the prophetical portions (Haftarahs) that accompany them. The latter are given according to the Ashkenazic practice; Sephardic variants are indicated in parentheses.

NAME	SIDRA	HAFTARAH
Bereshith	*Gen.* 1:1 to 6:8	*Isa.* 42:5 to 43:11 (42:5-21)
Noah	*Gen.* 6:9 to 11:32	*Isa.* 54:1 to 55:5 (54:1-10)
Lech Lecha	*Gen.* 12:1 to 17:27	*Isa.* 40:27 to 41:16
Vayera	*Gen.* 18:1 to 22:24	*II Kings* 4:1-37 (4:1-23)
Hayye Sarah	*Gen.* 23:1 to 25:18	*I Kings* 1:1-31
Toledoth	*Gen.* 25:19 to 28:9	*Mal.* 1:1 to 2:7
Vayetze	*Gen.* 28:10 to 32:3	*Hosea* 11:7 to 12:12
Vayishlah	*Gen.* 32:4 to 36:43	*Hosea* 12:13 to 14:10 (*Ob.* 1:1-21)
Vayesheb	*Gen.* 37:1 to 40:23	*Amos* 2:6 to 3:8
Miketz	*Gen.* 41:1 to 44:17	*I Kings* 3:15 to 4:1
Vayiggash	*Gen.* 44:18 to 47:27	*Ezek.* 37:15-28
Vayehi	*Gen.* 47:28 to 50:26	*I Kings* 2:1-12
Shemoth	*Ex.* 1:1 to 6:1	*Isa.* 27:6 to 28:13; 29:22-23 (*Jer.* 1:1 to 2:3)
Vaera	*Ex.* 6:2 to 9:35	*Ezek.* 28:25 to 29:21
Bo	*Ex.* 10:1 to 13:16	*Jer.* 46:13-28
Beshallah	*Ex.* 13:17 to 17:16	*Judges* 4:4 to 5:31 (5:1-31)
Yithro	*Ex.* 18:1 to 20:23	*Isa.* 6:1 to 7:6; 9:5-6 (6:1-13)
Mishpatim	*Ex.* 21:1 to 24:18	*Jer.* 34:8-22; 33:25-26



Terumah	*Ex.* 25:1 to 27:19	*I Kings* 5:26 to 6:13
Tetzavveh	*Ex.* 27:20 to 30:10	*Ezek.* 43:10-27
Ki Thissa	*Ex.* 30:11 to 34:35	*I Kings* 18:1-39 (18:20-39)
Vayakhel	*Ex.* 35:1 to 38:20	*I Kings* 7:40-50 (7:13-26)
Pikkude	*Ex.* 38:21 to 40:38	*I Kings* 7:51 to 8:21 (7:40-50)
Vayikra	*Lev.* 1:1 to 5:26	*Isa.* 43:21 to 44:23
Tzav	*Lev.* 6:1 to 8:36	*Jer.* 7:21 to 8:3; 9:22-23
Shemini	*Lev.* 9:1 to 11:47	*II Sam.* 6:1 to 7:3 (6:1-19)
Tazria	*Lev.* 12:1 to 13:59	*II Kings* 4:42 to 5:19
Metzora	*Lev.* 14:1 to 15:33	*II Kings* 7:3-20
Ahare Moth	*Lev.* 16:1 to 18:30	*Ezek.* 22:1-18 (22:1-16)
Kedoshim	*Lev.* 19:1 to 20:27	*Amos* 9:7-15 (*Ezek.* 20:2-20)
Emor	*Lev.* 21:1 to 24:23	*Ezek.* 44:15-31
Behar	*Lev.* 25:1 to 26:2	*Jer.* 32:6-27
Behukkothai	*Lev.* 26:3 to 27:34	*Jer.* 16:19 to 17:14
Bemidbar	*Num.* 1:1 to 4:20	*Hosea* 2:1-22
Nasso	*Num.* 4:21 to 7:89	*Judges* 13:2-25
Behaalothecha	*Num.* 8:1 to 12:16	*Zech.* 2:14 to 4:7
Shelah	*Num.* 13:1 to 15:41	*Josh.* 2:1-24
Korah	*Num.* 16:1 to 18:32	*I Sam.* 11:14 to 12:22
Hukkath	*Num.* 19:1 to 22:1	*Judges* 11:1-33
Balak	*Num.* 22:2 to 25:9	*Micah* 5:6 to 6:8
Pinhas	*Num.* 25:10 to 30:1	*I Kings* 18:46 to 19:21
Mattoth	*Num.* 30:2 to 32:42	*Jer.* 1:1 to 2:3
Masse	*Num.* 33:1 to 36:13	*Jer.* 2:4-28; 3:4 (2:4-28; 4:1-2)
Debarim	*Deut.* 1:1 to 3:22	*Isa.* 1:1-27
Vaethhannan	*Deut.* 3:23 to 7:11	*Isa.* 40:1-26
Ekeb	*Deut.* 7:12 to 11:25	*Isa.* 49:14 to 51:3
Reeh	*Deut.* 11:26 to 16:17	*Isa.* 54:11 to 55:5
Shofetim	*Deut.* 16:18 to 21:9	*Isa.* 51:12 to 52:12
Ki Thetze	*Deut.* 21:10 to 25:19	*Isa.* 54:1-10
Ki Thabo	*Deut.* 26:1 to 29:8	*Isa.* 60:1-22
Nitzabim	*Deut.* 29:9 to 30:20	*Isa.* 61:10 to 63:9
Vayelech	*Deut.* 31:1-30	*Isa.* 55:6 to 56:8
Haazinu	*Deut.* 32:1-52	*II Sam.* 22:1-51
Vezoth Haberachah	*Deut.* 33:1 to 34:12	*Josh.* 1:1-18 (1:1-9)

See also PARASHAH.

SIEFF, ISRAEL MOSES, merchant and philanthropist, b. Manchester, England, 1889. He graduated from Owens College at Manchester University, and entered the merchandising field. As vice-president of the Marks and Spencer chain stores he became one of the leading businessmen of England, and one of the country's important industrial leaders. He served from 1931 to 1939 as chairman of the Political and Economic Planning Committee in London, and after 1939 as vice-chairman.

Among Sieff's philanthropic and cultural activities in the Jewish field was his establishment (1933) of the Daniel Sieff Research Institute in Rehovoth, Palestine, in memory of his son. His contributions to Zionist activities in England were consistently significant; however, it was not only as a philanthropist, but as a disciple of Chaim Weizmann, that Sieff was one of the most devoted supporters of the Zionist movement. During the early years of the first World War he worked with Weizmann to bring about the issuance of the Balfour Declaration.

In 1918 he was secretary of the first Zionist commission to Palestine. Afterward he turned his industrial knowledge and experience to the task of building a sound economic structure in Palestine. From 1925 to 1935 Sieff was vice-president of the English Zionist Federation. He also served from 1924 to 1934 as grand master of the Order of Ancient Maccabeans. In 1943 Sieff was visiting in the United States, where he had been (from March, 1942) a member of the industry council of the Office of Price Administration.

Israel Moses Sieff (see also illustration on p. 441)

REBECCA DORO SIEFF, wife of Israel Moses Sieff, was associated with him in Zionist and other philanthropic activities. She was chairman of the Women's International Zionist Organization (WIZO) and president of the Federation of Women Zionists of Great Britain and Ireland. She was also affiliated in a directive capacity with refugee work.

SIEGEL, ISAAC, lawyer, American Congressman, and judge, b. New York city, 1880. He received the LL.B. degree from New York University Law School, and was admitted to the New York bar in 1902 and to Supreme Court practice in 1916. From 1909 to 1911 he served as special attorney general of New York state for the prosecution of bankruptcy and election frauds. He was elected as a Republican to Congress, serving from 1915 to 1923.

Siegel was chairman of the Overseas Committee which, in 1918, visited France and Italy to inquire into the conditions of Americans serving in the expeditionary forces and on that occasion he helped to establish several headquarters in France of the Jewish Welfare Board on whose Army and Navy Committee he was serving. After the War Siegel led the fight against immigration restrictions, and in 1921 he was chairman of the committee to investigate immigration conditions on the Pacific coast, and more particularly Japanese immigration. He drew up the Federal Probation Law.

In 1923, about 3,200 immigrants were faced with being returned to their points of departure because they were in excess of quota. Before the United States District Court and against the Attorney General of the United States, Siegel contended that the use of anticipated quota numbers for troops of General Kolchak was unlawful, and successfully claimed 3,200 quota numbers for the immigrants waiting for admission.

Siegel also dealt with some 4,700 soldier cases that came up before military tribunals, including the case of Private Lawrence Perlmutter, whose acquittal of the charge of espionage he brought about.

Siegel was appointed a magistrate of the city of New York in 1939 and a justice of the Domestic Relations Court of the city of New York in 1940. He played a prominent role in the Republican Party of New York city, being a delegate to several Republican national conventions and a candidate on the Republican ticket in various elections. From 1920

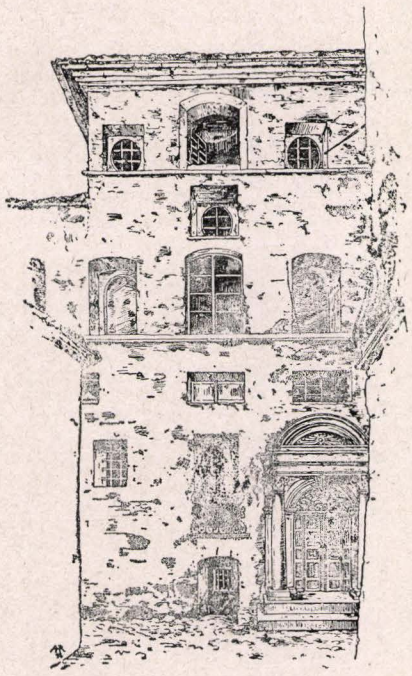
to 1939 he served as president of the Republican Club of the 18th Assembly District.

Siegel was also active in Jewish religious, educational and civic endeavors. He was a co-founder and president of the Institutional Synagogue; a co-founder and member of the executive committee of the Jewish Education Association; he also served on the executive committee of the Central Jewish Relief Committee. From 1926 on he was a director of the Young Men's Hebrew Association.

SIEGELSTEIN, BENNETT E., lawyer, b. Jassy, Roumania, 1880. He was brought to the United States in 1883. Siegelstein received the LL.B. degree from New York University and was a member of the New York state legislature (1903-4), the youngest man in the legislature. He was the author of the Bill to Abolish Capital Punishment and of the Reform Prison Bill. Siegelstein was a delegate of the State of New York to the convention of the American Bar Association in London (1924). He was a president of the United Roumanian Jews of America and Canada.

SIEGHART, RUDOLF, public official and financier, b. Troppau, Moravia, 1866; d. Vienna, 1937. Sieghart, whose original name was Singer before he was baptized, studied law at Vienna from 1883, and earned his living as a private teacher.

In 1884, as a student, he became secretary to the political headquarters of the Austrian United Liberal Parties. Thus he became acquainted with almost all the leading politicians and the editors of the great newspapers both of Austria and Germany. In 1892 he was graduated as a doctor of law. In 1894 he entered the Austrian ministry of finance, and soon attracted the attention of his superiors by his memorandum concerning the new regulations of the financial contributions of Austria and Hungary.



In 1897 Sieghart entered the chancery of the Austrian prime minister, and was the most influential adviser of five successive prime ministers, without consideration for their different political opinions.

Sieghart supported Archduke Francis Ferdinand, heir to the throne, when this prince was preparing for his marriage with Countess Choteck, and mediated between the archduke and the reluctant emperor. Francis Ferdinand for some years exalted the service done by Sieghart, but afterward he became Sieghart's adversary.

Sieghart succeeded in inducing Lueger and his anti-Semitic party to support the government, although this party had been opposed to all preceding governments. Sieghart pretended to believe anti-Semitism mainly an economic movement, and avowedly neglected its religious and racial tendencies. In 1907 Sieghart was appointed director of the Österreichische Boden-Credit-Anstalt. But his adversaries made every effort to remove him from this position, too. They succeeded (1916) in ousting him, but he was reinstated after the first World War (1919), and remained in this position until the crisis of 1929. Sieghart was an aggressive person, ready to surrender any political ideal in order to satisfy his ambition. The one idea to which he was devoted was that of the preservation of the Hapsburg monarchy. He published *Die letzten Jahrzehnte einer Grossmacht* (1932), partly an autobiography, partly a history of Austria from 1900 to 1914.

SIEGMEISTER, ELIE, composer and conductor, b. New York city, 1909. He graduated from Columbia University, and studied music principally at the Juilliard Graduate School, New York city, and at the École Normale de Musique, Paris. For a short period he conducted the Manhattan Chorus, and in 1940 founded and directed the American Ballad Singers. Siegmeister gave courses on the history of music at Brooklyn College and at the Roerich Museum.

He composed music for orchestra, chorus, and chamber music ensembles which was performed by many leading musical organizations. He is author of *Music and Society,* and (with Olin Downes) edited *A Treasury of American Song.*

Sketch of the ancient synagogue at Siena

SIENA, city in Tuscany, Italy, with a total population of 48,000, including 150 Jews (1938). An organized Jewish community existed there as early as 1229.

During the 14th cent. Jewish bankers in Siena were permitted to do business and to own real estate. In 1439 the Jew badge was introduced into Siena, but Jewish bankers were not required to wear it. Despite the indignation of the population against the Jewish money lenders, despite the preaching of Bernardino of Siena against the Jewish money trade (at the beginning of the 15th cent.), and despite the founding of a municipal pawn shop (1472), the privileges of the Jews with respect to the conduct of financial transactions were not withdrawn during the whole period of the republic. They were not abolished even when Cosimo I became duke of Florence (1555). But as soon as this duke became grand duke of Tuscany (1571) he forbade Jewish money transactions and banished the Jews to the ghetto. They now lived solely by commerce.

During the 18th cent. the wool business was exclusively in the hands of Jews; some of the Jews, however, were engaged in the weaving industry. Grand Duke Pietro Leopoldo (1765-90) annulled a series of restrictions against the Jews. Complete freedom was brought about by French sovereignty in 1799, yet in the course of a rebellion in the same year thirteen Jews were burned to death in the public market by the mob, which exclaimed, "Viva Maria!"

The restoration of the grand duchy forced the Jews back into their previous dire circumstances (1799-1807). The second period of the French dominion 1808-14) gave them temporary freedom. Full freedom was obtained by them after the unification of Siena with the kingdom of Piedmont (1859), which became the kingdom of Italy. The small but beautiful synagogue of Siena was built in 1786.

The figure of Moses at the well in the ghetto of Siena

30, 65; Cassuto, Umberto, in *Hatzofeh,* vol. 8, p. 36; *Lunario israelitico per l'anno 5698;* Friedenwald, Harry, "Jewish Physicians in Italy," *Publications of the American Jewish Historical Society,* No. 28 (1922) 191.

SIFRA ("book"), Halachic Midrash to *Leviticus,* and therefore known also by the latter's Hebrew title, *Torath Kohanim.* A part of the section dealing with the Parashah Kedoshim is Haggadic. The book is called also Sifre Debe Rab, which has led some to ascribe it to Abba Aricha, who is called Rab; however, Malbim has shown that it was edited probably by Hiyya, and Debe Rab means merely "of the academy." The book is definitely from the school of Akiba, although it is prefaced by the thirteen hermeneutical rules of his rival, Ishmael. It is a compilation of earlier works which perhaps bore the same name; one of them is known to have consisted of nine sections, as reported in an account given by Simeon ben Judah Hanasi. Its later form consisted of fourteen sections, divided into further sub-sections.

The first edition of the Sifra was that of Venice (1545); editions of modern times are those of Malbim (Bucharest, 1860), I. H. Weiss (Vienna, 1862), and M. Friedmann (a part, Breslau, 1915).

Lit.: Horovitz, S., in *Jewish Encyclopedia,* vol. 11, pp. 330-32; Moore, G. F., *Judaism,* vol. 1, pp. 140-42.

SIFRE ("books"), Halachic Midrash to *Numbers* and *Deuteronomy;* it is known also as Sifre Debe Rab, which presumably means the Sifre of the academy. The work is not uniform in character, as the portion dealing with *Deut.* 12 to 26 is evidently from a compiler entirely different from that of the remainder of the book. There is a large amount of Haggadic material, especially in the part dealing with *Deuteronomy.* The portion dealing with *Numbers* is based on two Midrash compilations, one from the school of Ishmael and one from the school of Simeon ben Yohai; it resembles in many respects the *Mechilta of Rabbi Ishmael.* The portion dealing with *Deuteronomy* differs both in arrangement and in the names of the authorities which it cites for the opinions. It is ascribed to the schools of Akiba and Simeon. The Sifre has come down to modern times in a somewhat defective state as compared to the *Mechilta* or *Sifra.* Citations made from it by the Amoraim are now missing, and even passages cited by Rashi are not to be found in the present editions.

The first printed edition of the Sifre was that of Venice (1545). A new edition was made by M. Friedmann (Vienna, 1864). S. Horovitz began a definitive edition of which the first part (*Corpus Tannaiticum, Section 3, Part 3, Siphre d'be Rab, Siphre ad Numeros adjecto Siphre zutta*) was issued during his lifetime (Leipzig, 1917); the remainder was edited by Louis Finkelstein from Horovitz' literary remains (1935).

Lit.: Jewish Encyclopedia, vol. 11, pp. 332-33; *Encyclopaedia Judaica,* vol. 1 (1928), cols. 984-86.

SIFRE ZUTA ("the little Sifre"), a lost Halachic Midrash on *Numbers.* It was in existence as late as the 13th cent. Maimonides knew of it under the title of *Mechilta* to *Numbers;* the *Yalkut Shimeoni* and the *Midrash Hagadol* have preserved larger fragments. S. Horovitz reconstructed the book on the basis of citations and fragments, and printed it together with his edition of the *Sifre.* All authorities agree that it comes from the school of Akiba and was compiled probably by the latter's pupil Eliezer ben Jacob.

Lit.: Jewish Encyclopedia, vol. 11, pp. 333-34; *Encyclopaedia Judaica,* vol. 1 (1928), cols. 989-90.

SIHON, king of the Amorites who ruled over that part of the Transjordan between the rivers Arnon and Jabbok; his capital was Heshbon. He opposed the entrance of the Israelites to Canaan and was defeated and slain by them at Jahaz (*Num.* 21:21-26), and his territory fell to the tribe of Reuben (*Josh.* 13:15-21). According to the rabbis, he was the brother of Og, king of Bashan.

SIK, SÁNDOR, poet and educator, b. Budapest, 1889. As a student in Budapest he embraced the Roman Catholic faith and joined the Piarist Order. From 1911 on he taught at the Gymnasium of the Order in Budapest; later he was named professor of Hungarian literature in the University of Szeged. Sik was one of the leading Catholic poets in Hungary; his verse, his dramas and his devotional books were equally appreciated for their spirit and their esthetic value.

A member of the Catholic Szent István Academy and of the leading literary societies, he occupied a distinguished position in Hungarian letters. His poetry included translations of the psalms; his dramas, *Salamon király gyűrűje* (The Ring of King Solomon); *Alexius; Zrinyi; A boldog ember inge* (The Happy Man's Shirt; 1930), treat of historical or symbolical-religious subjects. Among his books were *Gárdonyi, Ady, Prohászka* (1929), which dealt with religious inspiration underlying literary achievement, and *Fekete kenyér* (Black Bread; 1932).

SIKARIKON, *see* AGRICULTURE (section 2).

SIKO, M. (Mayer Smilansky), Hebrew writer, b. Tolpino, province of Kiev, Russia, 1876. He was a brother of Moses Smilansky. After a first visit to Palestine in 1891-92, Siko returned to Palestine to live in 1912. His work, mostly short stories, appeared in various periodicals in Palestine and other countries. A collection of his stories was published in 1928. In 1943 he was living in Palestine.

Siko was one of the leading Hebrew novelists in Russia at the beginning of the 20th cent. He ably and vividly described Jewish life in the Ukraine, the enthusiasm of the Hasidim, the idyllic innocence of the life of the Jewish people ("The Old Man of Shpola," "Nahman of Shicotova," "Daughter of Israel" and other tales). He derived great satisfaction from describing Jewish weddings in which the participants forgot their drab present and joyously reveled.

After the pogroms of Petliura and Denikin in the Ukraine (1920-21) he wrote a series of moving stories dealing with the acts of horror in that country ("The Scroll of Rosava," "Falling Birds" and others), in which the idyllic and joyful note of his earlier stories is replaced by the voice of spilt Jewish blood crying to heaven.

Lit.: Klausner, Joseph, *Kitzur Toledoth Hasafruth Haibrith Hahadashah* (1934) 186.

SIL-VARA (originally Gustav Silberer), critic and dramatist, b. Werschetz (Versecz), Banat, Hungary 1876; d. Vienna, 1938. From 1894 to 1914 he lived in England, where for many years he was literary correspondent of the *Neue Freie Presse* and the Ullstein papers in Berlin. At the beginning of the first World War he fought on the Russian front and was seriously wounded. In 1917 he was made press attaché with the Austrian legation in Stockholm. There he stayed until the fall of the monarchy, when he moved to Vienna.

Sil-Vara's prose works include: *Londoner Spaziergänge* (1914); *Kriegstagebuch aus Galizien* (1915); *Englische Staatsmänner* (translated into five languages; 1916); a pacifist treatise, *Warum kommt der Friede nicht zustande?* (1932). He was successful as playwright. *Die Frau von vierzig Jahren* (1913); *Es geht weiter,* showing the breakdown of an empire after a lost war (1917); *Die Mädchenjahre einer Königin,* a comedy centering about young Queen Victoria of England and Albert of Coburg (1933). He won distinction also as translator of numerous English and American plays, notably works of Galsworthy, Pinero, Barker, Housman, Sutro and Lord Dunsany. Several of his plays were presented on the English stage, among them *Caprice* (in German, *Mit der Liebe spielen*) was produced by the Theatre Guild in New York city (1929).

Lit.: Rittenberg, Louis, "Sil-Vara: Man of Paradoxes," *American Hebrew,* Jan. 4, 1929; *Wer ist wer, Lexikon österreichischer Zeitgenossen* (1937).

SILANO, one of the earliest liturgical poets of Italy, rabbi in Venosa in the 9th cent. He is mentioned in the chronicle composed by Ahimaaz ben Paltiel of Oria in 1054, in connection with the following incident: An emissary of the Jerusalem academy came to Venosa to collect funds for the academy. He was invited to preach on the Sabbath, with Silano acting as interpreter, rendering into the vernacular the foreigner's Hebrew-Aramaic dialect.

Silano did not relish being placed in an inferior position, and sought an opportunity to discredit the emissary. When a fight broke out in town on a market day and the women attacked the men with kitchen implements, Silano found his opportunity. He scratched out from the synagogue copy of the Midrash two lines of the following Sabbath's portion, substituting for them in Hebrew the following: "When men came in wagons, the women came out of their kitchens and beat the men with their fire forks." On the Sabbath the unsuspecting emissary read these words from the Midrash, and Silano mockingly explained that the Midrash had prophesied the recent unfortunate incident. The embarrassed and incensed foreigner, on his return to Jerusalem, related his experience to the scholars of the academy, who thereupon put Silano under a ban.

Some time later a pious man from Italy came to Jerusalem with donations for the institutions of the Holy Land. Officiating at the academy during the Ten Days of Penitence, he chose a liturgical poem by Silano which won general approbation, and the ban was lifted.

Like other stories in the *Chronicle of Ahimaaz,* this was declared by many scholars as pure fiction, the very existence of Silano being doubted. In 1933 Joseph Marcus discovered among the Genizah manuscripts of the Jewish Theological Seminary of America in New York city the very poem which acted as reconciler between Silano and the Jerusalem rabbis.

It is an alphabetic elegiac poem, in Kaliric style, lamenting the destruction of Jerusalem, the persecutions and sufferings of the Jewish communities. Silano is also the author of the well-known liturgical poem included in the Neilah service of the Day of Atonement, "Enkath Mesaldecha."

Lit.: Marcus, Joseph, "Studies in the Chronicle of Ahimaaz," *Proceedings of the American Academy for Jewish Research,* vol. 5, pp. 85-91.

SILBER, MENDEL, rabbi and author, b. Vilkomir, Lithuania, 1882. On his mother's side he was a descendant of Gabriel Riesser (1806-63), the noted champion of Jewish emancipation in Germany. He came to the United States in 1900. Silber received the A.B. degree from the University of Cincinnati in 1904, and in the same year was ordained at the Hebrew Union College. The University of Denver awarded him the Ph.D. degree in 1914. After serving as rabbi of Congregation Emanuel, of Duluth, Minn. (1904-6), United Hebrew Congregation, St. Louis (1906-10), and Albert Congregation, Albuquerque, N. M. (1910-14), he was elected to the pulpit of Congregation Gates of Prayer, New Orleans, in 1914, serving until 1936, when he became rabbi emeritus. At Albuquerque, in addition to his rabbinical position, Silber served as professor of psychology at the University of New Mexico (1911-14) and as acting dean (1911-12), the first Jew to hold this position. From 1914 on he served on the boards of various New Orleans philanthropic and educational institutions.

Silber served on the editorial staff of *The Modern View* under the pseudonym of Emes, and from 1915 to 1936 held a similar position with *The Jewish Ledger.* In 1903 he was associate editor of the *Hebrew Union College Journal,* and in the following year associate editor of the *Hebrew Union College Annual.* His published books include: *Gaon of Wilna* (1904); *Jewish Achievement* (1910); *Ancient and Modern Modes of Burial* (1912); *The Origin of the Synagogue* (1914); *The Scripture Stories* (4 vols., 1st ed., 1915; up to 1942 eighteen editions had been published); *America in Hebrew Literature* (Hebrew ed., 1928; English ed., 1929); *Palestine—The Holy Land* (1927). Silber was a contributor to this encyclopedia.

SILBERBUSCH, DAVID ISAIAH, Hebrew and Yiddish writer, b. Zalesczyski, Poland, 1854; d. Tel-Aviv, Palestine, 1936. His first story appeared in *Hamabbit* in 1877, after which he contributed frequently to Hebrew periodicals. His most important work is *Dimath Ashukim* (Tears of the Oppressed; 1887), describing the sufferings of the Jews in Roumania. Another noted story was *Masseh Beishah Ahath* (Story of a Woman; Vienna, 1923). He wrote also Yiddish sketches and stories, which were published under the title of *Strechelach* (Vienna, 1917),

and are concerned principally with the war refugees. Silberbusch lived in Vienna from 1883 to near the end of his life, when he went to Tel-Aviv. His other writings included: *Mahazoth Vesippurim* (Cracow, 1905); *Kethabim Nibharim* (1920); *Mipinkas Zichronothai,* an autobiography (Tel-Aviv, 1936).

SILBERGLEIT, ARTHUR, poet and critic, b. Gleiwitz, Upper Silesia, 1886. He attended high school in Gleiwitz and then became an apprentice in a banking house in Breslau, where his writing talent was discovered by Martin Buber. He became editor of *Osten,* organ of the Breslau Dichterschule. He went to Berlin in 1906, where Fritz Engel invited him to the columns of the *Berliner Tageblatt.*

When last heard of, he was still living in Berlin alone with his art. His poems are hymn-like, sombre unworldly songs in rhyme in prose flowing freely from his imagination. They were widely printed in numerous German-language newspapers and periodicals. Some of them appeared in the following collections:

Flandern, experiences during the first World War (1915); *Das Füllhorn Gottes* (1919); *Die Magd,* a legend (1919); *Der verlorene Sohn,* poetry (1920); *Alte Stadt* (1921); *Die Balalaika* (1921); *Das Farbenfest,* poetry in prose (1922); *Bajazzo Herbst* (1929); *Orpheus* (part 1, 1931).

His lyric poem *Orpheus* was ready for the printer in 1936; this is a collection of about 600 poems. Another work, *Höre Israel,* was also finished. The Nazis' accession to power stopped the publication of these works. Several of the poems appeared in Jewish papers (1933-38).

SILBERGLEIT, HEINRICH, statistician, b. Gleiwitz, Upper Silesia, 1858; d. Berlin, 1939. He studied mathematics in Breslau, Leipzig and Berlin, and political science in Giessen, where he graduated.

From 1886 to 1890 he worked for the statistical office of the city of Berlin, then for thirteen years as director of the statistical office in Magdeburg. In 1903 Silbergleit returned to Berlin. He was director of the statistical office of the German capital in Berlin-Schoeneberg (1906-23). He delved mainly into population and professional problems.

In 1912 he was invited to write the jubilee book on the occasion of the one-hundredth anniversary of the Prussian Diet. After the first World War he did valuable work in collaboration with the Reichsbund Jüdischer Frontsoldaten in collecting material about the participation of German Jews in the first World War. Up to his very last days he was busy on a thesis concerning the problems of the professional structure of the Jewish population of Germany on the basis of the figures which had been made known by the German censuses in 1925 and 1935.

Of his numerous writings the following are best known: *Finanzstatistik der Armenverwaltung von 130 deutschen Städten 1901-1905* (1908); *Grundzüge der Krankheits- und Todesursachenstatistik* (1903); *Preussens Städte* (1908); *Säuglingssterblichkeit* (1911); *Das statistische Amt der Stadt Berlin 1862-1912* (1912); *Zwanzig Jahre Leiter des statistischen Amtes der Stadt Berlin* (written on the occasion of his retirement; 1923); *Die Bevölkerungs- und Berufsstruktur der Juden im Deutschen Reich,* a standard work (1930). He was also editor of vols. 30 through 34 of *Statistisches Jahrbuch der Stadt Berlin.*

SILBERMANN, ELIEZER LIPMANN, founder of modern Hebrew journalism, b. Rossieny, Lithuania (or Königsberg, Germany), 1819; d. Lyck, East Prussia, 1882. While serving as a Shohet in Lyck, he founded the weekly, *Hamaggid,* in 1856, and continued with its publication until 1880. He was successful in combining a tendency toward assimilation with conservatism in religion. His readers were mostly Eastern European Jews. Of greater importance is the fact that he was a founder of the literary society Mekitze Nirdamim (The Awakeners of the Sleeping), which from 1864 on published important earlier Hebrew books. Among its publications are Isaac Lampronti's *Pahad Yitzhak* (The Fear of Isaac), a Hebrew lexicon, legal opinions and responsa of the Geonim.

Lit.: Lippe, C. D., *Bibliographisches Lexikon,* vol. 1, p. 451 et seq.; Meisl, J., *Geschichte der Juden in Polen und Russland,* vol. 3, pp 388-89.

SILBERSTEIN, LUDWIK, physicist, b. Warsaw, Poland, 1872. He received the Ph.D. degree from the University of Berlin (1894), was an assistant in the department of physics at the University of Lemberg, Galicia (1895-97), and a lecturer in mathematics and physics at the University of Bologna, Italy (1899-1904). In 1904 he became lecturer at the University of Rome.

Silberstein went to the United States in 1920 and there became a research physicist of the Eastman Kodak Company. He lectured on relativity and gravitation at the Universities of Cornell, Toronto and Chicago. His writings include *Vectorial Mechanics* (1913; 2nd ed., 1926); *The Theory of Relativity* (1914; 2nd ed., 1924); *Simplified Method of Tracing Rays Through Lenses* (1918); *Elements of Electromagnetic Theory of Light* (1918); *Elements of Vector Algebra* (1919); *Theory of General Relativity and Gravitation* (1922); *The Size of the Universe* (1930); and *Causality* (1933).

SILBERSTEIN-ÖTVÖS, ADOLF, esthete and journalist, b. Pest (Budapest), 1845; d. Budapest, 1899. He studied medicine in the University of Leipzig which, after courses in philosophy at Berlin and Heidelberg, conferred upon him the Ph.D. degree. At that time he was already a contributor to the *Leipziger Tageblatt* and *Deutsche Allgemeine Zeitung.*

Next he became editor of *Fremdenblatt* and *Dramaturgische Blätter* at Vienna, and of *Temesvárer Zeitung* (1870-71) in Hungary. During the following years Silberstein-Ötvös wrote editorials and reviews for more than a dozen leading Budapest newspapers and periodicals, in both German and Hungarian.

Silberstein-Ötvös published in book form, among others, *Philosophische Briefe an eine Frau* (1873); *Dichtkunst des Aristoteles* (1876); *Bibel der Natur* (1887); *Im Strome der Zeit* (4 vols., 1894-95). But his masterpieces were his feuilletons written for the newspapers. He translated classics of Hungarian literature into German.

SILBERT, BEN, painter and etcher, b. Gorki, Russia, 1893; d. Florida, 1939. Coming as a young man to the United States, Silbert was a pupil of the Art Institute of Chicago. He also studied art in Paris, a city where he lived for several years. The first important recognition of his talent in the United States resulted from the enthusiasm shown by Marie Sterner, who exhibited his work at her New York Galleries, at a time when the artist was impoverished. Through Marie Sterner, Silbert came to the attention of Florence N. Levy, formerly director of the Baltimore Museum of Art and supervisor of the New York Regional Art Council. As a consequence, numerous collectors of New York and Baltimore acquired his paintings, and he was commissioned to paint the portrait of the internationally known philanthropist and collector, Jacob Epstein, as well as other portraits. Silbert is best known for his water colors, which are sensitive and delightful achievements, original in treatment. They are to be found in the Brooklyn Museum of Art, the Art Institute of Chicago, the Milwaukee Art Institute and the Baltimore Museum of Art. Silbert was also decidedly talented as an etcher.

Examples of his work in this field have been acquired by the Honolulu Academy of Art and by the Museum of Cahors for the French National Collection. Articles and illustrations by Silbert appeared in the press of France and Germany, as well as of America. GEORGE S. HELLMAN.

SILBERT, SAMUEL H., judge, b. Kiev, Russia, 1882. He was brought to the United States at the age of six, attended grammar school, peddled newspapers in Newark, N. J., and subsequently settled in Cleveland. He worked as a watchmaker, and attended evening high school and law school, receiving the LL.B. and LL.M. degrees. Silbert practised law, and in 1911 was elected municipal judge at Cleveland. In 1922 he was elevated to the common pleas bench; in 1943 he was completing his seventh term as judge, having led the ticket on six occasions, and was unopposed at his last election. From 1912 on Silbert was professor of law on bailments and domestic relations at the Cleveland University Law School. He was active in B'nai B'rith work.

SILESIA, a Prussian province. The earliest evidence of Jewish settlements in Silesia dates back to the middle of the 12th cent., although the Spanish traveler Ibrahim ibn Jakub mentioned the fact that Jews lived in the area between the old Jewish settlements of Gnesen and Prag in 973.

Documentary evidences of Jews in Silesia are the tombstone dated the 25th of Ab, 4963 (August 4, 1203), and several seals of that time found in 1917 in the north side of the cathedral in Breslau. Early settlements of Jews are documented in cities which are situated along the two old trade routes from Breslau to Leipzig and from Breslau to Magdeburg and Hamburg. Breslau also was the center of trade between Gnesen and Prag.

The *Emek Habacha* mentions massacres of Jews in Silesia in 1147, and there are vague traditions of persecutions in Glatz (1163) and Leobschütz (1163). The existence of Jews is mentioned in the following other cities: Löwenberg (1209), Bunzlau (1190), Liegnitz (1301; in 1348 the Liegnitz cemetery is mentioned), Gorlice (1230), Lahn (1362), Rosenberg (1226), Beuthen (Upper Silesia; 1226; here Jews were active in developing silver mines, in 1298), Beuthen (1227), Schweidnitz (1270), Jauer (1364), Striegau (1350), Reichenbach (1367), Nimtsch (1320), Münsterberg (1285), Glogau (1264), Brieg (1324), Neisse (1319; a synagogue is mentioned), Neumarkt (1332), Goldburg (1320), Haynau (1320), Hirchberg (1345), Steinau (1336), Guhrau (1336), Lüben (1336), Fraustadt (1336), Namslau (1359), Strehlen (1336; here a Judengasse as well as a synagogue are recorded), Ohlau (1357), Zuckmantel (1339), Namslau (1321; a Jewish district is recorded), Braunau (1354), Ottmachau (1357), Ujest (1357), Weidenau (1357), Grottkau (1357), Bernstadt (1354), Ratibor (1367), Oberglogau (1349), Kosel (1373), Peiskretscham (1373), Ziegenhals (1357), Neustadt (1350), Jägerndorf (1386), Trebnitz (1348), Kanth (1401). The Memorbook of Deutz mentioned Jews murdered in 1348 to 1350 in Neisse, Oels, Guben and Zülz.

In Breslau, the oldest tombstone is dated 1203. Three synagogues are mentioned, in 1352, 1349 and 1375. The latest discovery by Alfred Grotte that the consecrated Gymnasialkirche in 1253 was formerly a synagogue destroyed by the Tatars points to an organized Jewish community at the beginning of the 13th cent. Since the first named tombstone mentioned a Hazan, that statement can be easily believed. Two Jews, Joseph and Chazkel, are mentioned as farmers in the "Falknerdorf" that was part of Breslau. Although there were no ghetto restrictions in Silesia until the 14th cent., the Jews preferred to live together in the Judengasse, due to various practical motives (religious, ritual and community purposes, better protection, and the like). The Breslau community was under the leadership of the *episcopus judeorum,* the "Jews' Bishop." The ritual butcher (Shohet) and the different teachers were under his supervision. On September 27, 1345, King Ian gave permission to use all the stones of the Jewish cemetery in Breslau for the fortification of the city. Fifty men worked for nine days removing the stolen stones.

The Jewish community of Breslau grew rapidly through the influx of newcomers from the Reich after the Germanizing of the east, yet the Jews were deprived gradually of their equality of civil rights. Antagonism toward Jews grew with the improvement in the Jewish economic position, and anti-Semitism spread also to Silesia. A provincial synod in Breslau (1267) issued exceptional regulations against the Jews, resulting in the separation of Jews from Christians. They had to wear pointed hats, and were prohibited from using public bathhouses and hotels. They were not allowed to buy food in the same stores as Christians. Jewish doctors were not allowed to treat Christian patients, and conversion to Judaism was punished by death. Also dealing in money (exchange banking, pawnbroking, and the like) was considerably restricted.

During the period of the Flagellants Jew-hatred was propagated also in Silesia, particularly in Gorlice, Glatz and Upper-Glogau, which resulted in Jews being murdered throughout all the settlements. The growth of the Jewish community in Breslau started again in the middle of the 14th cent., but in 1360, following an incendiary fire, the Jewish quarter was plundered again and all the Jews who resisted conversion (baptism) were murdered or expelled. They fled primarily to Schweidnitz. The Jews did not even then vanish entirely from Silesian history in spite of unbearable persecutions. In Schweidnitz, known in the 14th cent. as the city of great Talmudic scholars, the Jews stood in good favor with Duke Bolko II, and later with his widow. The Hussite war again brought hardships to the Jews (15th cent.). Indescribable was the furious Johann Capistrano, who almost exterminated the Jews of Breslau in 1453. Capistrano ordered forty-one Jews to be burned at the marketplace (May 2). The rabbi, who was among these victims, committed suicide. After the execution 318 Silesian Jews who had been imprisoned had to leave Silesia and in 1455 King Ladislaus issued a decree banning Jews from Breslau "until eternity." The synagogues were converted into storehouses and the property of the Jews confiscated.

During the 16th cent. ensued the expulsion of the Jews from the duchies of Oels and Münsterberg, later also from the other Silesian towns by decree of Ferdinand I (1527). After 500 years only four Jewish communities were still in existence: Glogau, Zülz, Dyhernfurth and Breslau. The community in Glogau retained its status, and even developed prosperity. But the Jews of Silesia had continually to defend their position as regards dwellings and industrial privileges. During the Chmielnicki revolt (1648-49) in Poland many Jews fled to Silesia, and brought about an increase in the Jewish population; new Jewish communities were founded, especially in Upper Silesia, with Beuthen as main center, and Dyhernfurth, where Sabbatai Bass established a famous print-shop in 1688. Dyhernfurth was the first place in Silesia to be settled by Jews since their expulsion. Bass established a cemetery there (1689) which served the Jews of Breslau and vicinity until 1761. The tolerated Jews, refugees from Polish persecution, had to challenge the landlords, the municipal councils, the court-officers and the emperor. These conditions ceased finally after the issuance of a decree of tolerance by Charles VI (January 10, 1713). This decree provided the right of dwelling not merely for old inhabitants, but also for aliens after payment of a so-called "tolerance tax."

The year 1740 brought Silesia under the rule of Frederick the Great. Thereafter began a new era in the history of the Silesian Jews, which developed with the history of Prussia. Frederick II of Prussia brought Jews to Upper Silesia to develop the mines. Solomon became the founder and owner of the "Solomon-Mines." The new spirit of tolerance induced Ephraim Kuh of Breslau to write poetry in German. The philosopher Solomon Maimon found a refuge in the castle of the count of Niedersiegersdorf, near Glogau. As regards the internal affairs of the Silesian Jews in the 19th cent., the conflict within the Breslau community which is perpetuated in the names of Abraham Geiger and Solomon Tiktin is well-known.

During the 19th cent. Jews became instrumental in the industrial development of Silesia. Moritz Friedlaender and Simon Levy founded the outstanding foundry, Friedenshütte, in 1867, Salo Hultschinski founded the Gleiwitzer Walzwerke, Albert Hahn built

the famous Oberschlesische Röhrenwerke, and Simon Pringsheim the Bismarkhütte. Rudolf Pringsheim, grandfather of the wife of Thomas Mann, organized and owned the Silesian-Oder-Railroad Schmalspurbahn. Otto Friedlaender founded the Moritz foundry and owned the Heinitz mine. Oskar and George Caro owned the Herminen foundry. The Kern family became well-known in Germany as steel masters. Adolf Jarislowski developed the Donnersmark foundry. Caesar Wollheim founded and owned the greatest inland trade organization connected with ports of the river Oder. Lippmann Bloch and Rawack and Grünfeld became internationally known as Germany's outstanding ore dealers. Jews developed the lumber, leather and paper industries. After Silesia became part of Prussia Jews became very active in the textile industry, and founded firms of world fame: in Landeshut, I. Rinkel, Meyer Kauffmann, Albert Hamburger; in Neustadt, S. Fraenkel; in Sagan, Moses Loew Behr; in Reichenbach, Albert Cohn and S. Fleischer.

In the first third of the 20th cent. Jews were living in all the cities of Silesia, taking active part in its cultural, economic and political development. They numbered 45,000 (1925). The leading city of Jewish life was Breslau. In the province of Lower Silesia (district of Breslau, and Liegnitz) lived 35,000 Jews, and in the province of Upper Silesia nearly 10,000 Jews. The principal community was Beuthen. After the plebiscite in Upper Silesia (1920) more than 4,000 Jews came under Polish rule, but many moved to Germany.

The Jews took an active part in the defense of Upper Silesia against the Polish insurgents. They joined the "Free-Corps," and several of them fell in the battle of Annaberg. The hero of that period is the fifteen-year-old Jewish boy Rudolf Haase, who was executed by the Poles for his activities as a German. The Nazi government (*Der Stürmer,* for instance) later praised him as a typical German hero, the "Silesian Schlageter." Dr. Max Bloch became the head of the German civilian defense organizations against the Poles. Chief Rabbi Kopfstein of Beuthen was taken by the French army of occupation as a hostage, since many Jews had been active in guerrilla warfare against the Poles and French. Many of them were killed.

Jews were active in the cultural development of Silesia during the time of the German Republic. They became leaders in practically all fields of science, art and trade, and in the cultural organizations in Silesia. Dr. Immerwahr of Beuthen founded its Museum, and Josef Pinkuss of Meustadt founded and collected the greatest library of Silesian writers and scientists. Willi Cohn helped to enlarge the museum in Breslau.

The rise of the Nazi government in 1933 put an end to all this in Lower Silesia. Upper Silesia was under a special Versailles edict, and the Jews were therefore protected to a certain degree. This special status expired on July 15, 1937, and the Nuremberg Laws were instituted. On that day a great riot was staged in Beuthen, the synagogue windows were destroyed, stores pillaged and many persons cruelly beaten. On November 9, 1938, all synagogues in Silesia were destroyed and 5,000 Jews thrown into the concentration Camp at Buchenwald. The famous Jewish hospital of Breslau was handed over to the government at one hour's notice after the outbreak of the second World War. Emigration of Jews from Silesia was organized by the Hilfsverein der Deutschen Juden, with its two main headquarters in Breslau and Beuthen. In 1942 there were still three rabbis active in Silesia, the courageous Reinhold Levin in Breslau, Herbert Bileski in Beuthen, and Albert Saretzki in Gleiwitz. The latest (1942) reports from France and Belgium stated that thousands of Jews were deported as forced laborers to the Upper Silesian coal mines and foundries, which were founded by Jews, and also that the entire Jewish population of Silesia who had not been found fit to serve Hitler's war effort was annihilated by mass deportation to Lublin and mass executions in the Polish part of Silesia, leaving the country almost *judenrein.*

SILKIN, LEWIS, member of parliament and communal worker, b. London, 1889. He studied law at the Universities of London and Oxford, became a solicitor and was elected on a Laborite ticket to the House of Commons from the Peckham Division of Camberwell in 1936. Silkin served as chairman of the Town Planning Committee of the London County Council and was a member of the Central Housing Advisory Committee and of the Select Committee on National Expenditure.

SILKINER, BENJAMIN NAHUM, Hebrew poet, b. 1888; d. New York city, 1934. He was one of the first of the Hebrew poets to become prominent in America, and the quality of his verse made him also the outstanding Hebrew poet of his time in the United States. Silkiner was the first to introduce American Indian themes into Hebrew poetry, especially in his epic *Mul Ohel Timura,* which appeared around 1910. Others of his longer poems deal with spiritual and moral legends, as well as with Jewish national themes. A collection of his verse was published posthumously.

Silkiner's poetry shows a break from the Hebrew poems of his predecessors in being free from gloom and forward-looking. His writing is delicate, resembling skilled embroidery. He is in his happiest mood in depicting the calm that comes after a storm. His Indian themes show force and power of narration, the fate of the disappearing tribes and of a minority. Silkiner translated Shakespeare's *Macbeth* into Hebrew, and collaborated with Ephrath and Judah Kaufman in compiling an English-Hebrew dictionary.

SILOAM INSCRIPTION, *see* SHILOAH.

SILVA, ALBERTO CARLOS DA, librarian, b. Lisbon, Portugal, 1850; d. Lisbon, 1912. He was *official* and then *Primeiro-Conservador* of the Bibliotheca Nacional de Lisbon from 1887 to his death. In his later years he collected rare books written by Portuguese Jews, most of which he gathered in England, Germany, and Holland.

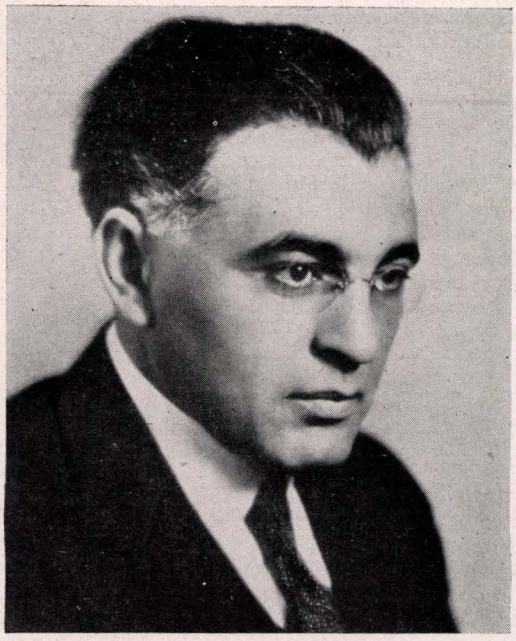
Lit.: American Jewish Year Book, vol. 25, p. 148.

SILVA, ANTONIO JOSE DA (frequently called O Judeu ["the Jew"]), Marrano dramatist, b. Rio de Janeiro, Brazil, 1705; d. Lisbon, Portugal, 1739. After studying in Coimbra he became a lawyer in Lisbon. At an early date he began to write for the theatre, sketching in comedies, comic operas, marionette shows and songs the viciousness of his contemporaries. His

comedies, later known as the "Comedies of the Jew," were successfully performed in 1733 to 1738. Until the end of the 18th cent. his productions were published anonymously, for fear of the Inquisition. Some of his acrostics, however, indicate the author's name. A portion of his work was still unpublished in 1943.

At the age of twenty-one Silva was accused of writing impudent satires and of observing the Jewish religion secretly. A few months thereafter the tribunal of the Inquisition announced that Silva, who was subjected to torture, was to be considered a penitent sinner. He nevertheless continued to observe the Jewish ritual. Silva thereupon took two peculiar steps: he submitted to circumcision, and joined the Franciscan Order, for the purpose of dissipating the rumors that he still adhered to Judaism. In 1737 he and his wife were imprisoned by the Inquisition and sentenced to death; two years later, despite the intercession of King João V, Silva was burned at the stake in the presence of his wife at Lisbon (October 19, 1739).

Silva's principal works include: *Don Quixote* (1733); *Esopaida* (1734); *Os encantos de Medea* (1736); *Labyrintho de Creta* (1736); *Guerras de Alecrim e Mangerona* (1737); *As variedades de Proteo* (1737); *Precipio de Faetonte* (1738).



Lit.: Denis, Ferdinand, *Chefs d'oeuvre du théâtre portugais* (1823); Varnhagen, *Florilegia da poesia brazileira* (1850); Wolf, Ferdinand, *Don Antonio Jose da Silva* (1860); Kohut, George Alexander, *Bibliography of Works Relating to José da Silva and Don Antonio's Compositions;* Kayserling, M., *Biblioteca Española-Portugueza-Judaica* (1890); Bell, A. F., *Portuguese Literature* (1922); Roth, Cecil, *A History of the Marranos* (1932) 165, 180, 393; Moraes, E. de, *Carceres e fogueiras da Inquisição.*

SILVA, FRANCISCO MALDONADO DE, Marrano physician and martyr of the Spanish-American Inquisition, b. San Miguel, province of Tucuman, Peru, 1592; d. Lima, Peru, 1639. He was baptized and brought up by his father, the Marrano Diego Nuñez de Silva, in the Catholic faith. At the age of eighteen he learned through his father of his Jewish origin, began to study Judaism, and became a devout Jew.

Silva, who practised medicine and surgery in the city of Concepcion, Chile, endeavored to convert his sister, Doña Isabel Maldonado de Silvia, an ardent Catholic, to Judaism. Thereupon she denounced him to the authorities, and on April 29, 1627, Silva was arrested and thrown into a cell of the convent of San Domingo. Later he was removed to a prison in Lima, Peru, where he spent the last twelve years of his life.

All efforts made by the heads of the Inquisition to have Silva renounce Judaism and to return to Catholicism were fruitless. At the first hearing before the tribunal, on July 23, 1627, the prisoner refused to take the customary oath on the crucifix. In prison he entered upon a series of religious disputations with theologians who vainly sought to win him over. On the contrary, he wrote commentaries on the Bible and treatises intended to reclaim Marranos to Judaism. He even succeeded in inducing several of his fellow prisoners to return to Judaism. After the last efforts of the Inquisition to convert the prisoner had failed, he was burned at the stake along with ten others, on January 23, 1639. His last words were: "I shall see the God of Israel face to face."

M. de Silva," *Publications of the American Jewish Historical Society,* No. 112 (1903) 163-79; Wiernik, Peter, *History of the Jews in America* (1931) 27; Roth, Cecil, *A History of the Marranos* (1932) 163, 165, 173, 279.

Abba Hillel Silver

SILVA, SAMUEL DE, 18th cent. painter. He is known to have worked in London, but evidently lived for the most part in Holland, from which country the name originates. The German poet Karl Gutzkow derived the name de Silva for his drama, *Uriel Acosta,* from his Amsterdam studies. Only one work of Samuel de Silva's is known, a portrait of the chief rabbi of London, Moses Gomez Mesquita (1688-1751), and this has come down only through a mezzotint reproduction by J. Faber (1752). But the engraving shows it to have been an outstanding accomplishment.

Lit.: Rubens, Alfred, *Anglo-Jewish Portraits* (1935); Landsberger, Franz, "Jewish Artists Before the Period of Emancipation," *Hebrew Union College Annual,* vol. 16 (1941) 377.

SILVER, ABBA HILLEL, rabbi, orator and Zionist leader, b. Neinstadt, Lithuania, 1893. He was brought to the United States by his parents in 1902, settling in New York city.

As a boy he was a leading member of a Hebrew speaking club, named after Theodor Herzl, which conducted debates and performed plays in the Hebrew language. He studied at the University of Cincinnati and the Hebrew Union College, graduating from both in 1915. He then became rabbi of Eoff Street Temple, Wheeling, W. Va. Two years later he received a call to The Temple of Cleveland, the largest Reform congregation in the United States, where was still serving in 1943. During his ministry the beautiful new Temple was built. In 1925 he received the D.D. degree from the Hebrew Union College.

Silver was active in the Central Conference of American Rabbis, the Union of American Hebrew Congregations and the Hebrew Union College. He took a leading part in the civic and philanthropic affairs of the Cleveland community. He sponsored the first unemployment insurance law in Ohio, was a member of the board of directors of the American Civil Liberties Union, and was interested in child labor legislation. He was chairman of the Cleveland Jewish Welfare Fund from 1935 to 1941, and co-founder of the Cleveland Bureau of Jewish Education and its first presi-

dent. Silver was co-chairman of the United Jewish Appeal, and chairman of the United Palestine Appeal from 1938 on.

During the first World War Silver was sent to France by the United States government and at the invitation of the French government, which later gave him a decoration. He attended a number of international Zionist congresses and in the spring of 1942 visited England on a diplomatic mission for the Zionist Movement as well as to aid the campaign of British Jewry for the Palestine Foundation Fund.

Since the beginning of his career, Silver had played an important part in the American Zionist Movement. He held a number of important offices, serving as vice-president of the Zionist Organization of America and a member of the Zionist Actions Committee, the Council of the Jewish Agency and of the American Emergency Committee for Zionist Affairs. In 1921 he was a leading member of the Brandeis-Mack group but was among the first of the dissenters to return to active Zionist service. Silver favored the plan for the extended Jewish Agency proposed by Weizmann and Marshall, which was later ratified at Zurich (1929). He entered the lists actively against the British government's plan to partition Palestine, later abandoned. Silver was a consistent critic of British administration in Palestine and spoke with vigor and skill in condemnation of British violation of their mandatory undertakings. Together with Samuel Untermyer he organized the anti-Nazi boycott in the United States.

In addition to skill in negotiation and administration, Silver possessed a unique and unrivalled gift of oratory. On occasion his fervor and passion made lasting impressions on large audiences. His sermons and public addresses were distinguished for grace of expression and vision, for fine style and originality of thought, which often rose to lofty dramatic heights, and for boldness and courage. It set a standard for Zionist platform utterances and Jewish pulpit oratory.

His writings include: *Messianic Speculations in Ancient Israel* (1927); *The Democratic Impulse in Jewish History* (1928); *Religion in a Changing World* (1930); *World Crisis and Jewish Survival* (1941). He was awarded honorary degrees by Western Reserve University (Litt. D., 1928) and the Hebrew Union College (D.H.L., 1941) and in 1940 was Dudleian lecturer at Harvard University.

LOUIS LIPSKY.

Lit.: Freehof, S. B., in *Congress Weekly*, Jan. 15, 1943, p. 10.

SILVER, ELIEZER, rabbi and Orthodox Jewish leader, b. Abel, province of Kovno, Lithuania, 1882. The son of Rabbi Bunem Zemach Silver, he received his rabbinical education in the Kibbutzim of Poland, Lithuania and Latvia, and settled in the United States early in 1907. He served (1907 to 1925) as rabbi of the Orthodox congregations Chisuk Emuno, Kesher Israel and Machzike Hadas in Harrisburg, Pa. In 1925 he was called to the pulpit of the united Orthodox congregations in Springfield, Mass. (Kodimo, Bney Israel, Beth Israel and Kesher Israel), serving until 1931, when he became rabbi of the United Orthodox Congregations in Cincinnati; he was still serving in this position in 1943. Silver was president of the Union of Orthodox Rabbis of the United States and Canada (1929) and, together with Rabbi Israel Rosenberg of New York city and Rabbi Bernard L. Levinthal of Philadelphia, he was (1943) on its presiding board.

In 1939 he was elected president of the newly founded United States branch of the Agudath Israel. In 1943 he was still the head of the Greater Cincinnati Vaad Hair (Orthodox city council). In addition to articles contributed to the *Degel Torah* (Warsaw), *Hapardes* and *Migdal Torah* (New York), Silver wrote a Talmudic encyclopedia on the divisions Zeraim, Kodashim and Toharoth.

SILVERBERG, PAUL, industrialist, b. Bedburg, Germany, 1876. In 1903, after having studied law and economics, he succeeded his father as general manager of the lignite mine Fortuna, and developed to pre-eminent position his mines and briquette factories. Silverberg was board member of numerous industrial and financial institutions. For many years he was vice-president of the Reichsverband der deutschen Industrie, the principal association of German industry. When Stresemann directed German foreign policy, Silverberg was particularly influential with German industrialists and endeavored to make them sympathetic with the republican government.

Even after Stresemann's death, Silverberg increased his efforts to prevent leaders of German industry from following Hitler, but he was finally defeated. In 1932 Silverberg was still elected president of the Chamber of Industry and Commerce of Cologne, but in 1933 he was forced to retire into private life.

SILVERMAN, ALEXANDER, chemist and glass technologist, b. Pittsburgh, 1881. After working as a chemist with a glass company, he was appointed to the chemistry faculty of the University of Pittsburgh (1905) and there received his master's degree (1907). In 1918 Silverman was made head of the department of chemistry, a post he still occupied in 1943. Under his guidance, the department became famous in university circles. His pioneer researches in the chemistry of glass were outstanding and internationally famous; in that field he contributed numerous discussions to the professional press and appeared regularly as lecturer before scientific societies. His collection of modern glass came to be reputed one of the most notable in the world, from the standpoint of both art and technology. He received a number of patents in the United States and Europe for coloring agents for glass, as well as patents for his microscope illuminator. As delegate of the American Ceramic Society, of which he was vice-president (1931) and trustee (1932), he attended several international chemistry conventions; in 1938 he was official United States delegate to the Tenth International Congress of Chemistry held at Rome, Italy.

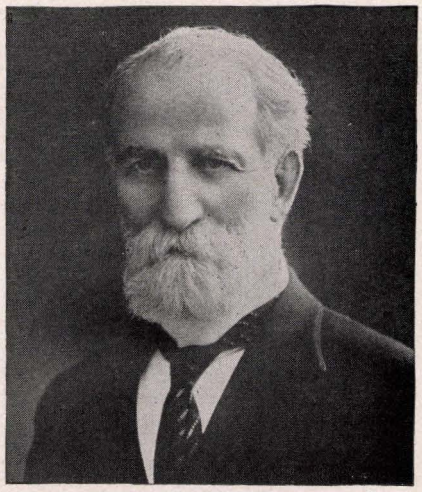
In addition, Silverman published prolifically on other phases of chemical knowledge, and together with A. L. Robinson was author of the book *Selective Experiments in General Chemistry* (1939). A member and fellow of many learned societies, Silverman received the Pittsburgh Award of the Pittsburgh section of the American Chemical Society in 1940 for his contributions to industrial chemistry and to chemical education. Previously he had been awarded the honorary degree of doctor of science by the University of Pittsburgh (1930) and Alfred University, Alfred, New York (1936).

SILVERMAN, DANIEL S., physician, b. New Orleans, 1894. He graduated from Tulane University School of Medicine, New Orleans (M.D. 1917), and was made professor of gastro-enterology in the university's Graduate School of Medicine. Silverman described a rapid method for the determination of gastric acidity by means of test papers (1925), isolated and first identified the bacillus of Duval as a cause of endemic and sporadic bacillary dysentery in the United States (1931). He made several other discoveries in the field of bacillary dysentery and other regions of gastro-enterology.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 595.

SILVERMAN, HENRY P., rabbi, b. Bournemouth, England, 1895. He became minister of the Oxford Road Synagogue, Manchester, England, and later served as rabbi of Temple B'nai Israel and People's Temple Beth-El, Elmira, N. Y. In 1935 he became minister of the United Congregation of Israelites at Kingston, Jamaica, which combined the former Sephardic and Ashkenazic congregations. Silverman was also active in several charitable organizations of Kingston. He was a delegate to the American Prison Congress, and author of *Friday Night Evening Service, Hymns and Special Prayers* (1936). He was a contributor to the *Universal Jewish Encyclopedia.*

SILVERMAN, HERBERT A., educator and writer on economics, b. Leeds, England, 1896. He studied at the University of Leeds and became a lecturer in economics at the Chatham Technical Institute (1917-19) and at the University of Birmingham (1919-29). In 1929 he was appointed head of the department of adult education of University College, and director of Vaughan College, Leicester, England.



His published writings include *The Substance of Economics* (1922; 11th ed., 1939); *The Economics of Social Problems* (1925); *The Groundwork of Economics* (1926); *Taxation: Its Incidents and Effects* (1931) and *Economics of the Industrial System* (1931).

SILVERMAN, IDA M. (Mrs. Archibald Silverman), Zionist leader, b. Russia, 1882. She was brought to the United States as an infant. She early became interested in the Zionist Movement, and played an important part in the preparation of plans for the expansion of Jewish settlement, organizing and serving as chairman of the Jezreel Development Co. and as a member of the board of the Herzlia Development Co., both of which engaged in irrigation and planting.

Her active participation in Zionist affairs resulted in her holding office in both the world movement and in the American branches. She was a deputy delegate of the inner actions committee of the World Zionist Organization, a member of the Council of the Jewish Agency for Palestine, vice-president of both the Zionist Organization of America and Hadassah and active in the interests of the Hebrew University. Prior to the second World War she spent six months out of every year in Palestine.

Her other interests included the American Jewish Congress, of which she was a national vice-president, membership on the Women's Advisory Committee of Rhode Island for the New York World's Fair, and local activities in Rhode Island. In 1941 she spent seven and a half months in South America, visiting practically all the Jewish communities on the continent, and assisted in the organization of the Inter-American Jewish Conference held in Baltimore in November of that year. In 1942 she toured England in the interests of the Keren Hayesod. She visited thousands of communities in the United States, speaking in behalf of Zionism.

ARCHIBALD SILVERMAN (b. Russia, 1880), was the husband of Ida M. Silverman. He was brought to the United States in 1890 and early entered the jewelry manufacturing business in Providence, R. I. He was president of the Lincoln Trust Company, the National Realty Company, and the City Real Estate Company. Following the first World War, he served as chairman of Jewish war relief work in Providence and maintained his interest in Jewish affairs by serving for eight years as president of the Jewish Orphanage of Rhode Island, as a director of the HIAS and the Jewish Consumptives' Relief Society of Denver, and as a member of the American Jewish Committee.

Joseph Silverman

SILVERMAN, JOSEPH, rabbi, b. Cincinnati, 1860; d. New York city, 1930. He was ordained in 1884 by the Hebrew Union College, from which he received the D.D. degree in 1887. Silverman served as rabbi of Temple Emanu-El in Dallas, Texas, and of Temple Israel in Galveston. In 1888 he became junior rabbi of Temple Emanu-El of New York, then served from 1903 to 1922 as senior rabbi and from 1922 to his death as rabbi emeritus. In 1923 he visited Palestine and wrote a series of articles for the New York *Tribune* on his Palestinian experiences. He toured extensively as a lecturer, and wrote numerous theological works.

Silverman was founder and first president of the Emanu-El Brotherhood, president of the Eastern Council of Reform Rabbis and of the Central Conference of American Rabbis (1900-3), honorary president of the New York Board of Jewish Ministers, and a founder and first president of the Association of Reform Rabbis of New York City and Vicinity.

Lit.: New York Times, July 27, 1930.

SILVERMAN, MORRIS, rabbi, b. Newburgh, N. Y., 1894. After studying at Ohio State University (A.B., 1916), Columbia University (M.A., 1917) and the Jewish Theological Seminary (Rabbi, 1922), he became rabbi of Emanuel Synagogue at Hartford, Conn., in 1923, and was still serving there in 1943.

He was instructor of Jewish history at the University of Connecticut from 1934 to 1936. He participated actively in communal affairs, being the first rabbi to be president of the Hartford Association of Ministers and Rabbis (1934) and a director or member of the executive committee of numerous local Jewish organizations. He served on the executive board of the Rabbinical Assembly of America, and was chairman of its committee on ritual.

Silverman made a notable contribution to the liturgy of Conservative congregations by preparing a series of prayer-books containing the traditional prayers with an English translation, explanatory notes and supplementary material. The books were hailed as inspiring and adopted by many Conservative Congregations. They are: *The Junior Prayer Book* (vol. 1, 1933; vol. 2, (1937); *Sabbath and Festival Services* (1936); *High Holiday Prayer Book* (1939).

SILVERMAN, SAMUEL SYDNEY, deputy, b. Liverpool, England, 1895. He studied law at the University of Liverpool, received the B.A. and LL.B. degrees, and was a lecturer in English at the National

University of Finland, Helsinki (1921-24). Silverman was admitted to the bar in 1927 (Solicitor) and was elected to the House of Commons on a Laborite ticket in 1935. He was a president of the Liverpool Zionist Committee and founder of the local branch of the Poale Zion.

SILVERMAN, SIME, theatrical publisher, b. Cortland, N. Y., 1872; d. Hollywood, 1933. In 1905 Silverman founded *Variety,* which has come to be known as the "Broadway Bible." Written by and for people of the theatre, *Variety* developed a slang of its own that has since, in part, become incorporated into the American language. H. L. Mencken, in compiling a list of the ten foremost language coiners in this country, listed Sime Silverman in first place. Under Silverman's editorship, *Variety* was an independent trade journal. He and his publication fought a long and winning battle with the Albee vaudeville interests, the Klaw-Erlanger syndicate and the Shubert monopolistic practices in the theatre. Progressively edited, the paper envisioned the decline of vaudeville, the rise of the motion picture and the ascendancy of radio long before others in the trade became aware of the trends. Silverman, one of the most beloved of Broadway characters, was succeeded as publisher of *Variety* by his son, Sidney Silverman.

SILVERS, LEWIS J. GORMAN, physician, b. New York city, 1895. He studied at the Cornell University Medical College (M.D., 1921) and served as otolaryngologist at several New York hospitals. From 1940 to 1942 he was president of the New York Physical Therapy Society. Silvers was a pioneer in the field of electrosurgery in otolaryngology, and published many papers and articles on rhinolaryngological subjects, such as the electrosurgical extirpation of the tonsil.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 703.

SIMA, MIRON, artist, b. Proskoff, Russia, 1902. The son of an architect, he started drawing at an early age, studied at the Realschule of his native city, in 1920 went to Odessa to study art, and in 1923 entered the State Academy of Dresden, Germany, where he was influenced chiefly by his teacher and friend, the modernistic painter Otto Dix. In 1925 he visited Palestine, where his family was living. In 1932 Sima received the prize of the city of Dresden for his painting, *The Grinder,* but in the following year, when the Nazis came to power, he left Germany for Palestine.

Sima first produced a series of woodcuts and drawings, showing pogrom scenes, but later the subjects of his paintings became chiefly the worker, the unemployed, the street urchin, painted in a realistic vein. During his visit to Palestine and after he settled there he made numerous lithographs and oil paintings on Palestine subjects. His work is represented in many museums and private collections in Germany and Russia, as well as in Palestine, where he had held numerous exhibitions.

Lit.: Newman, Elias, *Art in Palestine* (1939) 100.

SIMCHOWITSCH, JAKOB NAPHTALI (pseudonym, Simchoni), historian, b. Slutsk, Russia, 1884; d. Berlin, 1926. A student of modern Hebrew scientific literature and a gifted historian, he wrote: a study book on the history of the Jews (Hebrew; Berlin, 1922); biographies of Solomon ibn Gabirol (in *Hatekufah,* vols. 10, 12 and 17) and Samuel David Luzzatto; and translated Josephus' *Jewish War* into Hebrew. Simchowitsch was a member of the staff of the *Encyclopaedia Judaica* from 1924 until his death.

Lit.: *Jüdische Rundschau,* 1926, Nos. 40-41; *Zijunim* (memorial volume for Simchoni; 1928).

SIMEON, 1. second son of Jacob and Leah, born in Haran (*Gen.* 29:33), and traditional ancestor of the tribe of the same name. There are only a few references to him in the Bible story. Together with Levi, he is reported to have taken violent revenge upon Shechem for the violation of their sister Dinah (*Gen.* 34). He was kept as a hostage by Joseph after the first visit of the brethren to Egypt (*Gen.* 42:24, 36; 43:23). In the Blessing of Jacob (*Gen.* 49) he is reproached for his anger and violence, and his descendants are doomed to dispersal. Bible scholars regard these stories as based on the history of the tribe.

In apocryphal and rabbinical literature Simeon is given a somewhat larger role. He is depicted on the one hand as possessing extraordinary strength, and on the other as being the implacable enemy of Joseph. His being held as hostage is variously explained, either as in repayment for the fact that it was he who cast Joseph into the pit, or out of fear lest he destroy Egypt.

2. one of the tribes of Israel. Its history is comparatively obscure; thus in *Num.* 1 its man-power is placed at 59,300 and in *Num.* 26 at only 22,200, with no explanation for the startling decrease. The reference in the Blessing of Jacob seems to point to an unsuccessful attack on the Canaanites. According to *Judges* 1, Simeon joined with Judah in a successful attack from the south of Canaan, and settled in the extreme southern part of the country. The tribe seems to have intermingled with the Canaanites, as one of its clans is recorded as being descended from a Canaanite woman (*Gen.* 46:10). The tribe is not mentioned in the Blessing of Moses (*Deut.* 33) or the Song of Deborah (*Judges* 5), although it is still regarded as an independent unit as late as the time of Hezekiah (*I Chron.* 4:24-26). The tribe seems to have been closely affiliated with Judah, especially after the rise of David.

Lit.: The Biblical dictionaries and encyclopedias; *Jewish Encyclopedia,* vol. 11, pp. 344-46.

SIMEON BEN ELEAZAR, Tanna of the fourth generation; according to Frankel and Bacher, he was a son of Eleazar ben Shammua. He was a pupil of Meir, whose Halachic and Haggadic teachings he transmitted as well as those of Judah ben Ilai, Jose ben Halafta and others. He had Halachic discussions with his friend Judah Hanasi and religious disputations with the Samaritans; he proved to the latter that the doctrine of resurrection was contained in the Scriptures (*Sifre* to *Num.* 15). He is mentioned only seven times in the Mishnah, but very frequently in the Baraithas.

The story is told of Simeon that as he was returning home from the house of study in a very joyful mood he met a man, whose greeting he did not return, but instead mocked him for his ugliness. But when the ugly man answered: "Go and tell the Master who made me how ugly His work is," Simeon was ashamed. He descended from his ass, threw himself down before the man and begged forgiveness. The latter at first refused, and Simeon followed him back to his native city, where the inhabitants begged him again to forgive Simeon. He finally did so on condition that the rabbi would never act again in such fashion. Thereupon Simeon returned to the house of study and said: "Let a man be always pliable as a reed and not unyielding as a cedar" (*Taan.* 20a). He formulated an exegetical rule for those words in the Bible over which dots are placed: if the letters over which there are dots are more numerous, they must be interpreted; if not, those without dots (*Midrash Gen.* 48).

Lit.: Frankel, Zacharias, *Hodegetica in Mishnam,* 200; Bacher, Wilhelm, *Die Agada der Tannaiten,* vol. 2, pp. 422-36.

SIMEON BEN GAMALIEL I, great-grandson of Hillel and head of the Sanhedrin from about 50 to 70 C.E. Little is known about his activity. He is reported to have taken drastic measures to reduce the price of doves in Jerusalem when it rose to an inordinate height (*Ker.* 1:7). As head of the Pharisaic party, he joined the Sadducean high priest Anan to take the lead at the beginning of the Great War against Rome (66-73). He was an opponent of Josephus, who nevertheless later praised him (*Life* 38) as being a prudent and capable leader. He perished during the siege of Jerusalem, but no details are known. His favorite sayings was: "I have lived all my life among the wise, and I have found nothing better than silence; not study, but conduct, is the principal thing; every one who talks much comes to sin" (*Aboth* 1:17).

SIMEON BEN GAMALIEL II, Tanna of the third generation and head (Nasi) of the Sanhedrin. When his father died in 110 Simeon was still very young (*Sotah* 49b), and it was not until 140, when a new Sanhedrin assembled in Usha after the Hadrianic persecutions, that he was officially installed as Nasi. In the meantime the place was filled by the vice-president, Nathan the Babylonian, and a new office, that of Hacham, was created, and the post was given to the most important teacher of the generation, Meir. Although personally modest and humble, Simeon, like his father, attempted to increase the power and the authority of the Nasi. This led to conflicts with both Nathan and Meir.

His Halachic teachings, which extend over all fields of the law, particularly civil and marriage law, show a desire to be practical. He favored modifications according to circumstance (*B.B.* 1:5; 6:8) and local custom (*Keth.* 6:4; *B.M.* 7:1). He sought to protect the interest of the wife in marriage, and to improve the position of the slave, declaring it a religious duty to aid the latter to obtain his freedom (*Tos. Git.* 3). He was most concerned with the common good, and declared that no ordinance should be issued which was too much for the majority to bear (*B.K.* 79b). He generally favored the more lenient point of view in religious matters; all but three of his decisions were ratified by the sages (*Git.* 75a).

His best known Haggadic sayings were: "The world rests on three things: justice, truth and peace" (*Aboth* 1:18); "One need not erect monuments to the righteous, for their works preserve their memory" (*Yer. Shek.* 2:6).

Lit.: Bader, G., *The Jewish Spiritual Heroes,* vol. 1 (1940) 343-52; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 347-48.

SIMEON BEN ISAAC BEN ABUN (known also as Simeon the Great), Talmudist of the 11th cent. He may possibly have come from Le Mans; he lived in Mayence, where he was famed for his scholarship and his willingness to serve. When Emperor Henry of Germany ordered the expulsion of the Jews of Mayence in 1012, Simeon collected large sums of money, which he used to secure permission for the Jews to live in the city. In thankfulness for this his name was mentioned as benefactor every Sabbath in the synagogue. Simeon was a skilful poet; his liturgical poems rank next to those of Kalir in the Ashkenazic prayer-book. He was a contemporary of Gershom ben Judah.

Lit.: Graetz, H., *History of the Jews,* vol. 3 (1927) 245-47.

SIMEON BEN LAKISH (also abbreviated to Resh Lakish), one of the most important Palestinian Amoraim of the second generation, b. about 200; d. about 275. Like Johanan bar Nappaha, he ascribed all his knowledge of the Torah to the instruction of Judah Hanasi (*Yer. Betz.* 63a). He was also a pupil of Bar Kappara, many of whose teachings he reports, and probably also of Hoshaiah. Simeon interrupted his studies for a time, and "sold himself" to the owners of a gladiatorial troupe, since he was possessed of uncommon bodily strength which made him always successful in the arena. Many stories are told about this period of his life. He was won back to the study of the Torah by Johanan, who gave him his sister in marriage. Simeon renewed his studies with such zeal that Johanan soon recognized him as his equal and his "right hand."

A favorite saying of Simeon was: "If one neglects the study of the Torah for a single day, it will leave him for two" (*Yer. Ber.* 9). He never established an academy of his own, but was the principal assistant in that of Johanan. He would criticize the opinions of his master and his colleagues, and then give the reasons for his own view which contradicted theirs. Ulla described his skill in debating by calling him "one who uproots mountains and grinds them to bits" (*Sanh.* 24a). The places of his activity with Johanan were Sepphoris and Tiberias.

Simeon is said to have pined away because of a remark made to him by Johanan. When he showed that he knew more than his master on a question involving knives, the latter rather testily remarked: "The robber knows his trade" (*B.M.* 84a). This allusion to Simeon's former profession as gladiator not only wounded him deeply, but led to stories that he actually had been head of a band of robbers. When he died, no one in the academy could take his place; Johanan sorrowed over the loss of his disciple, who could ask twenty-four questions on every Halachic subject, and soon followed him to the grave.

Simeon's Haggadic sayings, which are characterized by acuteness and originality, are numerous, and in many places his opinion is transmitted to us side by side with the contrary view of Johanan (*B.B.* 16b; *Midrash Lev.* 13). Among them are: "No man commits a sin unless the spirit of insanity has entered him" (*Sotah* 3a); "Adorn thyself, then adorn others" (improve yourself, before you try to improve others; *B.M.* 107b); "Truth is the seal of God" (*Midrash Gen.* 81); "The words of the Torah will remain only with him who kills himself for the sake of learning" (*Sab.* 83b). An interesting piece of Bible criticism is found in Simeon's view that Job is not historical, but a poetic invention (*Yer. Sotah* 20d).

Lit.: Bader, G., *The Jewish Spiritual Heroes,* vol. 2 (1940) 97-110; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 354-55.

SIMEON BEN SHETAH, one of the most important Pharisaic teachers, who lived in the 1st cent. C.E. He and Judah ben Tabbai constitute the third of the pairs (Zugoth) who transmitted the Pharisaic tradition. He was the brother of Salome Alexandra, the wife of Alexander Jannaeus (*Ber.* 48a), and this enabled him to take a prominent place in the Sanhedrin, which at that time was controlled by the Sadducees. The accounts of his activities are somewhat obscured by the legends about his life.

The early period of Alexander's reign was favorable to the Pharisees, and Simeon apparently succeeded in placing many of the latter in the Sanhedrin. However, he is said to have clashed with the king when one of the latter's soldiers killed a man. He boldly summoned Alexander to appear before the court to stand trial, with the words: "You stand not before us, but before Him, Who commanded and brought the world into existence." However, the Sanhedrin was unwilling to press the case (*Sanh.* 19a).

On the other hand, some scholars think that this story

has been transferred to Simeon and really refers to Shemaiah and Herod. Alexander had also quarreled with the Pharisees on the occasion of the Sukkoth festival. As a result, he swung over to the Sadducees, and bitterly persecuted the Pharisees, whose leaders, including Simeon, were compelled to flee to Egypt. He apparently did not return until Alexander, on his deathbed (76 B.C.E.), made Salome Alexandra regent and advised her to give preference to the Pharisees.

Simeon thereupon entered upon the most influential part of his career. He put the power so effectively into the hands of the Pharisees that from that time on their leadership was permanent. He recalled Judah ben Tabbai from Egypt, and appointed many of the Pharisees to the Sanhedrin. Two institutions of his are especially mentioned. Up to this time the marriage portion of the wife had been kept in escrow to be delivered to her if she was widowed or divorced; Simeon permitted the husband to make use of the portion, but made his entire estate security for its payment. The other institution was the requirement that every father should see that his son was educated; thus universal education began among the Jews.

Simeon was extremely active in punishing violators of the Law, especially witches. He thus made for himself many enemies, some of whom suborned false witnesses to lay charges against Simeon's sons on a capital crime. As a result they were convicted and sentenced to death. The sons protested so vigorously that the witnesses confessed their perjury; but Simeon felt that it was better for the innocent to suffer than that the Law, which refused to accept the recantation of witnesses, should be violated (*Yer. Sanh.* 23a). This story may be reflected in his saying: "Be very careful in examining the witnesses; be prudent in your words, lest from them they learn to sin" (*Aboth* 1:9).

Simeon's character is revealed in a story which tells how his pupils made him a present of an ass which they had purchased from an Arab. When they found a costly jewel hanging about the neck of the ass, they rejoiced, for they knew that this would relieve the poverty of their master. Simeon, however, gave the jewel back to the Arab, since he felt that it was not rightly his; whereupon the Arab exclaimed: "Praised be the God of Simeon ben Shetah!" (*Yer. B.M.* ii, 8c). SIMON COHEN.

Lit.: Bader, G., *The Jewish Spiritual Heroes,* vol. 1 (1940) 79-86; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 11, pp. 357-58.

SIMEON BEN YOHAI, one of the most important Tannaim in the post-Hadrianic period (middle of the 2nd cent. C.E.), and reputed author of the *Zohar,* b. Galilee; d. Meron, near Safed, Palestine. His principal teacher was Akiba, whose academy at Bene Berak he and his close friend Hananiah ben Hachinai attended for thirteen years (*Midrash Lev.* 21). He was one of the pupils who visited Akiba for instruction while the latter was in prison. Akiba, however, ranked him as second to Meir, and seeing that Simeon was offended, comforted him with the words, "By thy life, thy strength is known both to me and to thy Creator" (*Yer. Sanh.* 19a). After the death of Akiba, Simeon received ordination, together with four others, from Judah ben Baba. He was persecuted by the Romans —according to the Talmudic story, because he uttered remarks derogatory to their building activity—and was compelled to hide with his son in a cave (*Sab.* 33a). There they remained for thirteen years, subsisting on carobs and water. As a result of this diet their bodies became covered with sores which, after they were able to travel freely once more, they healed at the warm baths of Tiberias. In gratitude Simeon proclaimed Tiberias, which had hitherto been regarded as ritually unclean because of the numerous graves there, to be clean and suitable for the residence of the sages; in consequence, the city became the center of Jewish activity and eventually one of the four holy cities.

Simeon settled in Galilee, where he gathered around him a school which became famous. He resided principally at Meron; other sources mention his residence at Tekoa, which is not the same as the Biblical Tekoa, but certainly a town in Galilee and perhaps identical with Meron (*Sab.* 147b). He became so influential that he was sent to Rome with Eleazar ben Jose to obtain the repeal of imperial orders which had forbidden certain Jewish ceremonial observances. He was successful in this, but the story (*Meil.* 17ab), as well as others about his life, are so intertwined with legends that it is impossible to know the exact facts. He died on the 18th of Iyar (Lag Beomer), and his traditional tomb is still shown at Meron.

Simeon was one of the most fruitful teachers of the Halachah, his studies covering practically every branch of the subject. He is mentioned more than 325 times in the Mishnah, while Margaliot counted 2,245 references to him in Jewish literature. To him is ascribed the compilation of the *Sifre* (*Sanh.* 86a) and the *Mechilta of Rabbi Simeon ben Yohai;* it is probable, however, that neither of these works as we have them now is wholly from Simeon or his school. His method of interpretation is that of logical deduction; he is interested in obtaining the underlying reasons for the laws, and he therefore advocated modifying them in many details in order to express their proper spirit.

Simeon's Haggadic utterances are distinguished by richness of fantasy and forcefulness of expression. Some of them have become frequently cited, such as: "There are three crowns: the crown of Torah, the crown of priesthood, and the crown of royalty; but the crown of a good name excels them all" (*Aboth* 4:17). "Injury by means of words is a greater sin than overreaching" (*B.K.* 58b). "It is better to jump into a fiery furnace than to offend another in public" (*Ber.* 43a). "Pride is akin to idolatry" (*Sotah* 4b). "The service of scholars is greater than the study of the Law" (*Ber.* 7b). "So great is the power of repentance that a complete sinner may be considered righteous if he repents before his death" (*Tos. Kid.* 1:14).

Some of Simeon's utterances, such as his reference to a magic sword of Moses, have a mystic stamp, and he himself was not inclined toward modesty, declaring that even if the number of those who were to be admitted into the kingdom of heaven were very few, he and his son would be among the number (*Suk.* 45b); on another occasion he declared that he must be accounted perfectly righteous, since in his lifetime the rainbow, the sign of God's mercy, never had to appear (*Yer. Ber.* 9:2). These utterances, and his reputation as a wonderworker, have led to the ascription to Simeon of various mystical works, the chief of these being the *Zohar,* actually the compilation of Moses ben Shemtob de Leon in the 13th cent. As a result of this, Simeon ben Yohai (in Aramaic, Bar Yohai) is the chief hero of the mystics, who make an annual pilgrimage to his reputed grave at Meron on the 18th of Iyar (*See illustration in vol. 6, p. 509*). SIMHAH BEN SAMUEL OF VITRY, *see* MAHZOR VITRY.

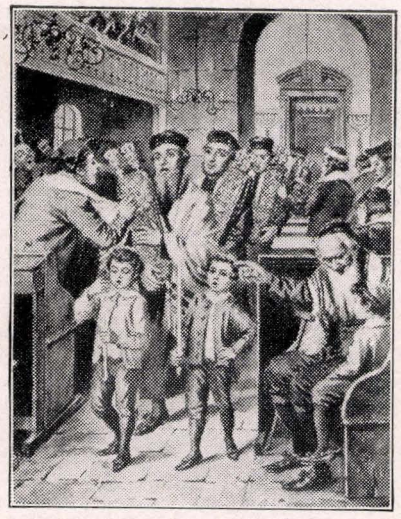
SIMHATH TORAH ("Rejoicing in the Law"), designation for the 23rd day of the seventh Hebrew month Tishri, the last of the nine days of Sukkoth and the second day of Shemini Atzereth, the concluding day of the series of Jewish holidays occurring during the month of Tishri. In the Talmudic period the especial character of this day, as we know it today, was still unknown. Its development did not begin until the time in which the yearly cycle of the reading of the Torah, or Law, was adopted, i.e. in the 9th cent. The reason for the special significance of this day consists in the fact that the yearly cycle of the reading of the Torah is concluded on this day with the reading of the last section of the Torah, and this occasion gives rise to increased joy in the Law.

Beginning with the 14th cent., the reading of the last portion from the Torah on Simhath Torah was accompanied by the reading of the first portion of the coming cycle. Not much later there arose the custom of taking all the scrolls of the Torah out of the ark, of vying joyously in making donations for the maintenance of the synagogue, and of preparing a festive meal in honor of the Torah. In the 16th cent. arose the custom of making processions with the scrolls of the Law in the synagogue. The children, who on this day are called up to the Law (an exception being made on this day), in order to pronounce the blessing over the Torah, carrying little flags or little torches and candles in their hands, join the adults who are bearing the scrolls of the Law in taking part in these processions. The adults who carry the Torah scrolls during these processions give way usually to another group of adults after each procession, in order to permit all the members of the congregation to participate in the festivities. The procession takes place in the Evening and the Morning Service. The one who is called up for the reading of the last portion from the Torah is called Hathan Torah (the bridegroom of the Law,) and the person who is called up for the reading of the following first portion of the new Torah cycle is called Hathan Bereshith (the bridegroom of *Genesis*). Both these "bridegrooms" have the obligation of contributing more liberally and to invite friends and acquaintances to participate in the festive meal in honor of the Torah.

For the Maftir (the concluding portion read from the Torah), as on the first day of Shemini Atzereth, there is read from the Torah *Num.* 29:35-39. The Haftarah, or prophetical portion, consists of *Josh.* 1.



The special prayers recited and songs sung on this festival date from various periods, beginning with the 9th cent. The custom of presenting children with fruits on Simhath Torah is traced back to a very early period. The festival has an exceptionally joyous character, and gives eloquent and sincere, childlike expression to joy in the words of the Torah and to readiness to take them to heart and fulfill them.

SIMLAI, Palestinian Amora of the second generation, who lived in the 3rd cent. C.E. He was the son of Abba and came from Nehardea in Babylonia, but spent most of his life in Lydda. He was especially noted for his interpretation of the Scriptures, and was very popular as a speaker because of his use of figures of speech and clear method of presentation. The most famous of his sayings was his enumeration of the commandments (*Mak.* 23b-24a): "The Torah consists of 613 commandments and prohibitions. David reduced them to eleven main principles (*Ps.* 15), Isaiah to six (*Isa.* 33:15), Micah to three (*Micah* 6:8), Isaiah again to two (*Isa.* 56:1), and Habakkuk to one, 'The righteous shall live by his faith' (*Hab.* 2:4)." Simlai's extensive and thorough knowledge of the Bible made him eminently fitted to refute the teachings of the church fathers who sought to find proof for the doctrines of Christianity in the Scriptures. His polemic was especially directed against the doctrine of the Trinity (cf. *Yer. Ber.* 9:1; *Midrash Gen.* 9).

SIMMEL, GEORG, philosopher and sociologist, b. Berlin, 1858; d. Strasbourg, 1918. He obtained his Ph.D. degree from the University of Berlin in 1881, and taught philosophy at the Universities of Berlin and Strasbourg. Between 1900 and the time of his death he exerted a remarkable influence on liberal youth. He introduced the theories of Henri Bergson and William James, and combined them with the idealistic traditions which were then prevalent. Re-examining the sociological theories of Karl Marx, Simmel established the priority of the analyses of human attitudes to all changes in social institutions.

His work, however, can not be defined in terms of any system, but rather as the personal interpretation of a philosopher and humanist who experienced transition and change in the established social and intellectual patterns. Man and his attitudes were made the center of philosophical reflection. Simmel began as a positivistic thinker who reduced moral and intellectual problems to empirical causes. Then he turned to the epistemological problems of Neo-Kantianism, and finally laid the foundations of a philosophical science of man, deeply influenced by Bergson and James. This development mirrors the revolutionary change in philosophical thought from a positivistic trend to a renaissance of idealistic tendencies and to a philosophy of life which analyzes scientifically the self-transcendence of man and opens new avenues to metaphysical reflections.

In his philosophy of money Simmel discovered the impact of human attitudes on the transformation of social institutions. On the other hand, he noted the influence of economic forces on intellectual patterns. He saw that functional thinking as opposed to thinking in terms of substance was the result of the new mobile money economy, and established the thesis that there is a mutuality in all societal relationships. Society meant to him intersubjectivity as a constitutive element of human conduct. For this reason sociology

and philosophy were two aspects of the interpretation of human existence in the world. In his biographies Simmel discussed the paradox of philosophers, poets and artists, determined in time and space, yet transcending their historico-social conditions and thus becoming the true witnesses that life is more life and more than life.

Among Simmel's published works were: *Über soziale Differenzierung* (1890); *Einleitung in die Moralwissenschaften* (1892); *Probleme der Geschichtsphilosophie* (1892; revised ed., 1902 and 1907); *Philosophie des Geldes* (1910); *Soziologie* (1908); *Kant* (1903); *Schopenhauer und Nietzsche* (1906); *Goethe* (1913); *Rembrandt* (1916); *Philosopkische Kultur* (1919-22); *Der Krieg und die geistigen Entscheidungen* (1916); *Das Problem der historischen Zeit* (1916); *Der Konflikt der modernen Kultur* (1918); *Lebensanschauung* (1918); *Fragmente und Aufsätze aus dem Nachlass* (1923). Extracts from much of his work appeared in various periodicals published in English. Simmel was a member of the evangelical faith, but of Jewish descent.

SIMMONS, LAWRENCE MARK, rabbi and historian of philosophy, b. London, 1851; d. Manchester, England, 1900. In 1873 he completed his theological studies at the seminary in Breslau. Then he graduated from London University, and from Victoria University, Manchester. From 1877 until his death Simmons was rabbi of the Manchester Synagogue of British Jews, and reader in Hebrew and Arabic at Queens College, Manchester. He was considered one of the most devoted and scholarly Jewish ministers in England. Although he served at a Reform synagogue, he was respected by Jewish representatives of all factions, and even ultra-Orthodox Jews attended Simmons' sermons to learn his ideas.

Simmons took a prominent part in the work of the Anglo-Jewish Association and all charitable and educational work in Manchester. In the final year of his life he played a prominent role in the Indian Famine Fund Committee. He was especially popular with the Jewish masses of Manchester. When the philosopher Samuel Alexander, Nathan Laski and other Jewish leaders created the Lawrence Simmons Memorial Fund, hundreds of Jewish workers contributed a shilling each. Simmons was a regular contributor to the *Jewish Chronicle* and the *Jewish Quarterly Review.* He translated also into English Maimun ben Joseph's *Letter of Consolation* (1893) and published a study entitled *Maimonides and Islam* (1888).

SIMMONS, MAURICE, lawyer, b. London, 1878. He was brought to the United States in 1880. Simmons studied at the College of the City of New York (B.S., 1897) and at New York University Law School (LL.B., 1899). He volunteered in the Spanish-American War (1898), was commander of the Spanish War Veterans of New York State and commander-in-chief of the Spanish War Veterans throughout the United States (1911-12). He was also founder and first commander-in-chief of the Jewish War Veterans of the United States.

Simmons was chairman of the Anti-Defamation Committee which labored to suppress racial slander on the stage and took an active part in defending the rights of defenseless immigrants. He served as commissioner of the Board of Assessors of the city of New York (1916-24) and was made property clerk of the New York city police department in 1938.

SIMON BAR GIORA, leader in the Great War against the Romans from 66 to 70 C.E. His name may possibly indicate that he was the son of a proselyte. Unfortunately the only detailed source for Simon's life is the writings of Josephus, who was distinctly hostile to him; hence all that can be said with certainty is the following: He was still a young man when he took up arms against the Romans, participating in the defeat of Cestius Gallus in 66. Later he left Jerusalem and maintained himself outside of the city, levying contributions for the needs of his army. In the spring of 69 he was summoned to Jerusalem by Matthias the high priest; from that time on he and John of Gischala desperately defended the city against the Romans. After the fall of the city he tried to escape, but was compelled to surrender; in 71, at the triumph of Titus in Rome. Simon, as the chief of the Jewish leaders, was dragged along in the procession and then executed, either in the prison next to the forum, or by being hurled from the Tarpeian Rock.

Josephus charges him with ambition and cruelty, and with waging civil strife even against his fellow Zealots, but this is due partly to the historian's conscious blackening of the character of the Jewish patriot leaders, and partly to his motive of explaining the fall of Jerusalem as due to quarrels among the defenders. On the whole, Simon appears to have been the true leader of a desperate cause, bold, resourceful, ruthless and heroic.

See also ZEALOTS.

Lit.: Bentwich, Norman, *Josephus* (1914) 124-28; Sachar, A. L., *A History of the Jews* (1930) 120; *Jewish Encyclopedia,* vol. 2, pp. 502-3.

SIMON BEN AZZAI, *see* BEN AZZAI, SIMEON.

SIMON THE JUST, high priest of the Second Temple, noted as the last of the Men of the Great Synagogue. Scholars differ as to his time and place in the line of high priestly descent. Graetz and Frankel follow Josephus in making him the son of Onias I and in stating that he lived about 300 B.C.E.; Krochmal, Brüll and Dubnow identify him with Simon II, son of Onias II, who lived about 200 B.C.E. His favorite saying is reported as: "The world rests on three things: the Torah, the divine service, and on beneficence" (*Aboth* 1:2).

The Talmud (*Yoma* 69a) has a story of how Simon came out to greet Alexander the Great as the latter approached Jerusalem; this seems to be borrowed from the same story about Jaddua, as reported by Josephus (*Antiquities,* book 11, chap. 8). A more trustworthy report states that he rebuilt the walls of Jerusalem after they had been destroyed (probably in the wars between the Seleucidae and the Ptolemies). *Sirach* 50 gives an elaborate description of the appearance of Simon when he officiated as priest, and this poem, with certain changes, is found in the Abodah of Yom Kippur.

Simon is said to have disliked the Nazirite vow, and to have approved it only in the case of a youth who feared to be too beautiful (*Ned.* 9b). He is reported to have been high priest for forty years, and to have foretold his own death when a figure, that appeared to him every year as he entered the Holy of Holies on Yom Kippur, appeared dressed in black instead of white garments. Two red heifers were prepared in his administration, and numerous miracles took place because of his sanctity. After he died the ineffable name of God (Tetragrammaton) was no longer pronounced in the Temple.

SIMON THASSI, one of the five Hasmonean brothers, and the last of them to become ruler of Judea (142-135 B.C.E.). He participated in the revolt against Antiochus IV Epiphanes, distinguishing himself by his valor and circumspection. After the death of Judas Maccabeus, when Jonathan, their brother, became head of the movement for independence, Simon

conquered Beth-zur, Jaffa and Adida, which he colonized with Jewish settlers. After the treacherous seizure of Jonathan by Tryphon (143 B.C.E.) he became leader of the Jewish forces, laid siege to the Acra in Jerusalem, and successfully warded off Tryphon's attempt to relieve the fortress. In the following year he captured Gazara and thus blocked an attack from the direction of the sea. When Tryphon murdered Jonathan, Simon became ruler of Judea. He captured the Acra, thus ridding Judea of the last Syrian garrison, and gained the independence of the country by negotiations with Demetrius II. Thus for the first time in 400 years Judea was again free.

In order to commemorate this eventful change in the history of the Jewish people, documents and contracts from the year 142 B.C.E. and after were dated according to the reigning year of Simon, high priest and prince (ethnarch) of the Jews. These hereditary titles were solemnly conferred upon Simon at a large popular assembly, in the month of Elul, 141 B.C.E., and marked the foundation of the Hasmonean dynasty. Simon ruled peacefully and promoted the prosperity of the country. He was threatened only once, when Antiochus VII Sidetes of Syria demanded the restitution of all the territories conquered by the Hasmoneans, with the exception of Judea, and sent an army of invasion led by Cendebeus. However, this army was decisively defeated by Simon's two sons, Judah and Johanan, at Jamnia. In 135 B.C.E. Simon and these two sons were treacherously assassinated by his son-in-law Ptolemy, who hoped to usurp the throne, but instead was driven off by John Hyrcanus, Simon's third son, who thereupon succeeded to the rule.

Lit.: The standard Jewish histories for the period.

SIMON OF TRENT, victim of an alleged ritual murder. The Franciscan monk Bernardinus da Feltre, who had taken offense at the cordial relations between Jews and Christians in Trent, Italy, had predicted that there would be a ritual murder at the next Passover holiday. Accordingly, when Simon, the three-year-old child of Andreas Unverdorben of Trent, disappeared on March 23, 1475, it was immediately asserted that he had been found with the Jews. The officials began an investigation which was at first without results, but on the 26th of March some Jews found the body of a child in a stream near the house of one of them. The podestà then seized the body and arrested all the Jews who were present. Then a baptized Jew, named Israel, who had been condemned to a long period of imprisonment, found the occasion a very favorable one to obtain his freedom by denouncing the Jews as the authors of the crime; but in the long run he did not escape the wheel. He accused the Jews of Trent and of other places, including Regensburg, where action was later taken against them from 1476 to 1480, of making use of Christian blood for ritual purposes on Passover.

The action against the Jews in Trent began on March 28th. These, in turn, accused two Christians of having done the deed, and the latter were arrested but later set free. Now began a period of torment for the imprisoned Jews, who were subjected to all the customary forms of torture in order to make them reveal their secrets. Duke Sigismund brought about a cessation of the ordeals for a time; but eventually an eighty-year-old man was compelled to make a confession after undergoing horrible tortures. Thereupon the Jews were condemned (June, 1475), some to the scaffold, and some to be beheaded.

The affair made a great impression, so that even the pope took cognizance of it. The bishop of Ventimiglia, whom the pope had named as his commissioner, made a report that Simon had been killed by Christians for the purpose of laying the crime to the Jews, and that the bishop of Trent, named Hinderbach, had enriched himself by confiscating the goods of those who had been executed. Thereupon the pope appointed a new investigating commission, but its head was a special friend of the chief enemy of the Jews, the Franciscan monk Bernardinus da Feltre. Thus it came about that eventually, through a papal bull (June 20, 1478), the process against the Jews of Trent was proclaimed as properly and rightly imposed (*rite et recte factum*), and that Bernardinus da Feltre and Simon of Trent were made saints by Pope Gregory XIII, and that the former received the reputation of prophet and the latter that of martyr. The church of St. Peter at Trent has a chapel of St. Simon of Trent.

Lit.: The standard Jewish histories of the period; Hildesheimer, H., *Simon von Trient* (1903); the literature under BLOOD ACCUSATION.

SIMON, family of financiers, public officials and publishers which originated at Königsberg, Germany, in the 19th cent. In the 1860's the banking house of J. Simon Witwe und Söhne in Königsberg, East Prussia, flourished, and was respected in many commercial towns of eastern Germany and throughout Eastern Europe. It was headed by SAMUEL SIMON and his younger brother, MORITZ SIMON. Samuel Simon was also city councillor at Königsberg and a leader of the Liberal Party. He was interested in history and philosophy, and devoted much of his means to the fostering of philosophical inquiries. In 1866 Moritz Simon was appointed privy councillor of commerce. The Simon brothers created the Königsberger Privatbank, promoted railroads in East Prussia, and took a large part in the industrial development of Prussia.

FELIX SIMON, the son of Moritz Simon, became owner of the *Königsberger Allgemeine Zeitung,* a leading paper of the National Liberal Party and, after the beginning of the 20th cent., the most important newspaper of East Prussia. He married Therese Sonnemann, daughter of Leopold Sonnemann, founder and owner of the *Frankfurter Zeitung.* Felix Simon, who lived in Berlin, had considerable influence with the German government. He was on especially good terms with the prince of Aremberg, a Catholic leader, who was employed by Emperor William II and his chancellors as a secret intermediary in frequent negotiations on both internal and foreign policy. Due to his relations with several members of the aristocracy, his position as owner of an important newspaper and as the son-in-law of the owner of the *Frankfurter Zeitung,* Simon was well informed on internal governmental affairs and was often consulted by government leaders. His wife, who survived him by many years, directed the *Frankfurter Zeitung* and *Königsberger Allgemeine Zeitung* with considerable ability and energy.

HEINRICH SIMON (b. Berlin, 1880; d. Washington, D. C., 1941), the eldest son of Felix Simon, studied philosophy at the University of Freiburg, from which he graduated in 1905. In 1906 he joined the staff of the *Frankfurter Zeitung,* and was active, successively, in all departments of that newspaper. From 1914 on he presided over the editorial staff conferences, and from 1929 on he was one of the owners. His *Arbeit am Tage* (1926 and 1931) represented a selection of articles previously published in that newspaper. Heinrich Simon always espoused democratic principles, but was more faithfully devoted to art, literature and philosophy, and especially to music. He devoted spe-

cial attention to the comparatively new book-publishing Frankfurter Societätsdruckerei, and was on the supervisory board of the Heidelberg festivals. He wrote *Fragmente des Novalis* (1905) and *Der magische Idealismus* (1906), studies on Novalis' (Friedrich Leopold, Freiherr von Hardenberg) philosophy, and translated into German Vittorio Alfieri's *Saul* (1927). He was co-founder of the Palestine Symphony Orchestra (1936), and its first manager. After his persecution by the Nazis and the expropriation of his possessions, he emigrated to the United States (1939), settling in Washington, D. C. In the spring of 1941 he became the victim of an assassination in that city which was still unsolved in 1943.

CURT SIMON (b. Börnicke, Germany, 1881), the youngest son of Felix Simon and the brother of Heinrich Simon, studied law at the University of Heidelberg, from which he graduated in 1907. He then became associated with the *Frankfurter Zeitung,* being appointed chief clerk (1914) and general manager (1929). He managed the technical and commercial affairs of the newspaper, while his brother was charged with political and editorial matters. He directed also the *Königsberger Allgemeine Zeitung* until the Nazis robbed him of both papers. Before 1933 he was a member of the board of directors of the Reichsarbeitsgemeinschaft, an organization uniting employers and employees. In 1933 he emigrated to the United States. HUGO BIEBER.

Lit.: *Die Geschichte der Frankfurter Zeitung 1856-1911* (1911); *Aufbau,* May 9, 1941.

SIMON, ABRAM, rabbi, b. Nashville, Tenn., 1872; d. Washington, D. C., 1938. A graduate of the University of Cincinnati (B.A., 1894), he was ordained by the Hebrew Union College in 1894, and received the Ph.D. degree from George Washington University (1917) and the degree of Doctor of Hebrew Literature from the Hebrew Union College, the latter degree on occasion of the fiftieth anniversary of the founding of the institution (1925). After serving Congregation B'nai Israel, of Sacramento, Cal., and Temple Israel, Omaha, Neb., he was, from 1904 until his death, rabbi of the Washington Hebrew Congregation, Washington, D. C. During the first World War he served as a Red Cross investigator near Verdun, France. Simon was president of the Washington Board of Education (1920-23) and of the Central Conference of American Rabbis (1923-25), and was a founder of the Synagogue Council of America (1928).

He was one of the organizers of the Washington Chapter

Carrie Obendorfer Simon

Abram Simon

of the National Conference of Christians and Jews. In 1929 he was appointed one of the non-Zionist members of the council of the Jewish Agency. Active in Jewish educational work, he was the author of *History of Jewish Education* (with William Rosenau; 1912).

Lit.: *American Hebrew,* Jan. 25, 1929, p. 407; *Central Conference of American Rabbis Year Book,* vol. 49 (1939) 303-8.

SIMON, CARRIE OBENDORFER (Mrs. Abram Simon), communal worker, b. Uniontown, Ala., 1872. She founded the National Federation of Temple Sisterhoods in 1913 and served as president for the six years following. In 1943 she was honorary president. During her incumbency as president, the Federation initiated a number of successful and important projects. These included: the issuing of the Annual Jewish Art Calendar; the establishment of scholarships and education funds at the Hebrew Union College of Cincinnati; a movement for the collection of religious ceremonial art objects, which developed into the establishment at the same college of its Museum. Later, as chairman of the Federation's committee on the Hebrew Union College dormitory, Mrs. Simon contributed importantly to the campaign which raised the funds to erect the dormitory on the College grounds (dedicated 1925). As chairman of the Conference Committee of National Jewish Women's Organizations, Mrs. Simon appeared in numerous pulpits throughout the country to speak in behalf of Jewish women.

SIMON, FRANKLIN, merchant, b. New York city, 1865; d. New York city, 1934. He entered the merchandising field in his boyhood, and subsequently rose to the position of buyer for Stern Brothers. In 1900 he founded the Franklin Simon store; several years later he broke from tradition and built a new store on Fifth Avenue, until then untouched territory for merchandising. The store became one of the leading apparel centers in New York city. Simon was active in various philanthropies, particularly in hos-

pital work. He was from 1913 until his death on the board of directors of the Hospital for Joint Diseases.

SIMON, FRANZ EUGEN, physicist, b. Berlin, 1893. He was assistant professor of physics at the University of Berlin (1927-31) and in 1931 he was made full professor and director of the laboratory of physical chemistry at the University of Breslau. He resigned in 1933, upon the Nazis' advent to power, and went to England where he received a research post at the Clarendon Laboratory, Oxford. In 1941 he became a Fellow of the Royal Society. In 1943 Simon was a reader in thermodynamics at the University of Oxford. Simon, who taught at the University of California, in Berkeley, as a visiting lecturer (1932), published numerous scientific papers and articles, chiefly on the physics of very low temperatures.

SIMON, HEINRICH, jurist and statesman, b. Breslau, Germany, 1805; he was drowned in the lake of Wallenstedt, Switzerland, 1860. Simon studied law at the Universities of Breslau and Berlin. As a young barrister attending the courts and qualifying for the post of an assisting judge, he had to fight a duel, and unfortunately killed his adversary. Simon was therefore sentenced to life confinement in a fortress, but was granted an amnesty in 1830. From 1834 to 1841 he was assisting judge at the highest court of appeals at Berlin. In 1841 the Prussian minister, Eichhorn, entrusted Simon with the elaboration of suggestions for the reform of the schools of Prussia. But Simon's report did not meet with the minister's approval, because it was considered too radical.

Meanwhile Simon had published *Das preussische Staatsrecht* (1844) and, jointly with Professor Rönne, *Die Verfassung und Verwaltung des preussischen Staates* (1840-54). Both these works were highly esteemed by contemporary critics. In 1844 Simon was promoted to the position of judge, but retired from office in the following year because he severely criticized the disciplinary laws of Minister von Mühler who, according to Simon, had tried to abolish the independence of the judges of Prussia. Simon gave reasons for his point of view in the pamphlets *Die preussischen Richter und die Gesetze vom 29. März 1844* and *Mein Austritt aus dem preussischen Staatsdienst* (1846).

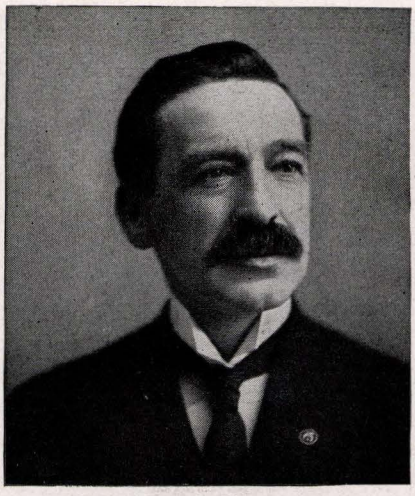
In consequence of these publications, Simon was hailed by German liberals and democrats, for he proclaimed the principle that every official had to consider his allegiance to the country as higher than allegiance to the monarch.

When, in 1847, King Frederick William IV summoned the provincial diets instead of establishing a modern parliament, Simon characterized the king's action as disloyal in his pamphlet *Annehmen oder Ablehnen,* which caused an immense sensation in all the states of Germany. He was therefore prosecuted for lèse-majesté. After the outbreak of the revolution of 1848 Simon became one of the principal leaders of the Prussian democratic party. He was a member of the deputation received by King Frederick William IV to negotiate for the constitution. At the same time he fought for the liberation of Poland and Italy. As a member of the National Assembly at Frankfort he represented the extreme left. He was one of the five regents of Germany the leftists tried to install when Frederick William declined to be elected emperor.

After defeat of the revolution Simon left Germany for Switzerland. He was sentenced in contumaciam to penal servitude for life, but was highly respected in Switzerland, where he became interested in mining industry. In 1859 he received an honorary degree from the University of Zurich. Simon was a vigorous personality, fair-minded, courageous and energetic. He would have been capable of governing if only his party had been strong enough to support him. Even many of his adversaries could not but like him. His cousin, Fanny Lewald, was not the only woman who loved him. Since he preferred another woman writer, Countess Ida Hahn-Hahn, Fanny Lewald took her revenge by means of her satirical novel *Diogena.* HUGO BIEBER.

SIMON, HENRY W., educator and writer, b. New York city, 1901. He received the Ph.D. degree from Columbia University in 1932, and in the same year was appointed professor of education at the Teachers' College of Columbia University. In 1940 he became music editor of the New York daily *PM.* His writings include *Reading of Shakespeare in American Schools and Colleges* (1932) and *Preface to Teaching* (1938).

His brother, RICHARD LEO SIMON (b. New York city, 1899), was co-founder (1924) of the publishing house of Simon and Schuster, which became known as one of the smartest publishing houses in the country. He was also the author of a book on amateur photography (1937). Another member of the family, ROBERT A. SIMON (b. Germany, 1897), a cousin, was music critic of the *New Yorker.* He was also translator of Arthur Schnitzler's *Fräulein Else* into English (1925), and the author of *The New York Wits* (1927) and of *Bronx Ballads* (1927).



SIMON, HERMANN VEIT, attorney, b. Berlin, 1856; d. Berlin, 1914. He was a descendant of the famous Veit family, and a great-grand nephew of Moritz Veit. Simon was a prominent attorney and jurist of Berlin, and a bank president for a short time. Besides his principal work *Die Bilanzen der Aktiengesellschaften und Kommanditgesellschaften auf Aktien* (4 vols. 1910), he wrote several other books and essays dealing with commercial law. He published the writings of his teacher, Levin Goldschmidt. Although a liberal and an opponent of Jewish nationalism, he was prominent in the councils of the Jewish community of Berlin and distinguished himself as chairman of the board of the Hochschule für die Wissenschaft des Judentums, of which his father, privy councillor Carl Berthold Simon, was a co-founder. He was a leader of the Hilfsverein für jüdische Studenten.

Lit.: Hermann Veit Simon (private edition; 1915).

SIMON, HUGO, financier and public official, b. Usch, Prussian Poland, 1880. In 1911 Simon became partner of the banking firm of Bett, Simon and Co. at Berlin. He financed many industrial enterprises and, cultivating an interest in artistic endeavor, he sponsored several writers and painters. Following the outbreak of the first World War (1914-18), Simon opposed the German government and joined the independent Socialist Party which refused war credits.

In November, 1918, upon the advent of the revolution, the Independent Socialist Party and the old Socialist Party, which had supported the policy of the German government during the War, formed a new government and appointed Simon Prussian minister of finance. But, due to a rupture between the two political parties, Simon resigned early in 1919. After the Nazis came to power (1933), Simon emigrated to Paris and there established a banking business. In 1941 he left France for Brazil.

SIMON, JAMES, communal leader and philanthropist, b. Berlin, 1851; d. Berlin, 1932. As the head of the great cotton and linen firm of Simon Brothers, of Berlin, he played an important part in German economic life; he was also for years vice-president of the Berlin Chamber of Commerce as well as member of the board of directors of the German Reichsbank. He contributed large sums to public charity and public undertakings; he was one of the founders of the

Joseph Simon

Deutsche Orient Gesellschaft (1898) and its secretary from 1904 on, and financed to a great extent the excavations in Mesopotamia (Babylon, 1898-1912; Assur, 1902-14), those in Palestine (Jericho, the synagogues in Galilee), and in Egypt (Abusir near Cairo, Abusir-El-Meneq and El-Amarna, 1908-14) and Asia Minor (Boghazköi). In 1901 he founded the Hilfsverein der Deutschen Juden together with Eugen Landau and Paul Nathan, and made it his life work.

During the first World War Simon traveled in the war areas in Russian Poland in order to supervise the work undertaken by the Hilfsverein. He was also one of the founders of the technical college in Haifa and belonged to the council of the Jewish Colonization Association in Paris until 1929. A great many other social institutions were founded or supported by him. He was one of the best known patrons of art and an art connoisseur. He enriched the Kaiser Friedrich Museum in Berlin by his valuable collections. For these gifts Simon was honored with the Wilhelmsorden. In 1907 the Academy of Sciences in Berlin bestowed the golden Leibnitz Medal upon him.

SIMON, SIR JOHN, English barrister and Member of Parliament, b. Montego Bay, Jamaica, 1818; d. London, 1897. He was sent to England in 1833 and was called to the bar in 1842, the first Jew to practise at the common law bar.

From 1843 to 1845 Simon lived in Jamaica, then returned to England. His legal practice won him quick recognition, especially in the northern circuit. He was made a sergeant at law in 1864 and Queen's Counsel in 1868. In 1858 Simon, by acting as assistant to the county court judges, had become the first Jew to serve as a judge in England, and he sat on the bench frequently thereafter.

First elected to Parliament in 1868, from Dewsbury in West Riding, Simon was a member for twenty years, until ill health forced his retirement. Throughout his career, Simon participated in governmental treatment of his native island of Jamaica. Emancipation of the Jews in England and the amelioration of their treatment in Eastern European countries had his persistent championship. The Russian persecutions of the 1880's elicited a series of protest meetings from the general citizenry of Great Britain, including the famous Mansion House and Guildhall meetings, and Simon contributed largely to bringing them about.

From the death of Sir Francis Goldsmid in 1878 until his own death, Simon was the leading British protagonist of Jewish rights in England and elsewhere. He was one of the founders (1871) of the Anglo-Jewish Association and an early associate of the Reform Synagogue. Simon was knighted in 1886.

Oswald John Simon (b. 1855; d. 1932) was the son of Sir John Simon and, like him, a communal Jewish leader. His first affiliation with Jewish affairs came during the revival of the persecutions in Russia in 1890 when he deputized for his father, who was then too old to be active, in the summoning of protests. Later he was active in various Jewish philanthropic and educational undertakings, and was a member of the Board of Deputies. He was author of *The World and the Cloister* and *Faith and Experience.*

SIMON, JOSEPH, American Senator, b. Bechtheim, Germany, 1851; d. Portland, Ore., 1935. His family came to the United States in 1857, settling in Portland, Ore., and he was admitted to the bar in 1872. He was a member of the city council from 1877 to 1880, secretary of the Republican State central committee in 1878, and its chairman in 1880, 1884, and 1886. Simon was a member of the Oregon state senate from 1880 to 1898, serving as president during five sessions. He served as a member of the Republican National Committee from 1892 to 1896. He was elected to the United States Senate in 1898, to fill a vacancy, and served until 1903. In 1909 he was elected mayor of Portland, serving until 1911.

Lit.: Biographical Dictionary of the American Congress (1928) 1526.

SIMON, JULIUS, economist, Zionist leader, and authority on business in Palestine, b. Mannheim, Germany, 1875. He was active in the work of the Zionist Organization, Jewish National Fund and Jewish Colonial Trust before the first World War. In 1913 he was a member of a Zionist mission which investigated colonization in Palestine. During the first World War Simon resided in Holland, but in 1920 removed to England, where, from 1920 to 1921, he was a member of the Executive of the Zionist Organization. In 1920, as a member of a special committee of three whose other members were Nehemia de Lieme and Robert Szold, he visited Palestine, and prepared a report recommending reorganization of the work of the Zionist Organization in the Holy Land.

Simon settled in New York city in 1922, serving from 1922 to 1926 as a director of the Palestine Cooperative Company. He was a founder of the Palestine Economic Corporation (1926), its vice-president (1928-29) and its president (from 1930); in 1934 he was placed in charge of its operations in Palestine, and still held this post in 1943. He was a member of the boards of directors of the Palestine Economic Corporation, Central Bank of Cooperative Institutions in Palestine, Ltd., Palestine Mortgage and Credit Bank, Ltd., Palestine Potash, Ltd., Palestine Hotels, Ltd., and of several land and water corporations in the Holy Land. From 1939 on he was a member and treasurer of the Hadassah Emergency Committee.

His father, Naphtali H. Simon, served in the Fifty-First Infantry Regiment of Georgia in the Civil War.

SIMON, LEON, official and Zionist worker, b. Southampton, England, 1881. He studied at Oxford University, and entered the service of the General Post Office in 1904. He was appointed director of telegraphs and telephones (1931), and director of savings (1935). Simon was a member of the Zionist Commission to Palestine (1918).

He was the translator of Ahad Haam's *Essays* into English (1912 and 1922). He also translated several of Plato's *Dialogues* into Hebrew, and was editor of *Aspects of the Hebrew Genius* (1910) and joint editor of *Awakening Palestine* (1923). His writings include *Studies in Hebrew Nationalism* (1920).

SIMON, LUCIEN, painter, b. Paris, 1861. He was the son of a physician, and brother of the scientist Eugène Simon (1848-1924), who was an authority on the arachnids. Prince Karageorgievich, afterward King Peter I of Serbia, one of Simon's fellow pupils at the Bossuet College of Paris, related that even in school Simon was passionately fond of designing, but as a conscientious collegian refrained from drawing except on Sundays.

After his father's premature death Simon studied painting in the studio of Jules Didier, and later on became a pupil of Tony Robert-Fleury, chief of the Breton school. In 1885 Simon began to exhibit in the "Salon" of Paris. His picture, *The Man Who Pursues Fortuna,* was a success. For twelve years, however (1885 to 1897), Simon continued to experiment. In 1893 he left the "Salon" and joined the Société Nationale des Beaux-Arts, and subsequently developed an artistic originality.

A first-class draftsman, Simon was also one of the most vivid colorists. His vigorous application of colors was in constant accord with the solid construction of his figures. Although he broke with all tradition, there remained a spontaneous classical vein in his dynamic style. It was the picture *Circus* (1898) that first showed Simon's originality. *A Group of Painters* (1899); *The Procession at Penmarc's* (1901) and *Old Household* (1901) won him world renown. In 1905 he was awarded the first class medal by the Carnegie Institute for his canvas *Evening in a Studio.*

From 1913 on, when the Buffalo Fine Arts Academy organized an exhibition of Simon's works, he became popular in America. His pictures were acquired by the art galleries of Paris, Lyon, Boston, Brooklyn, Chicago, Detroit, Philadelphia, Pittsburgh, Budapest, Cairo, Helsingfors, Moscow and Stockholm. He exhibited regularly also at the International Society, London, presided over by Whistler and, after his death, by Rodin. In 1927 Simon was elected member of the Académie des Beaux-Arts of Paris, and thereafter he aided and encouraged younger artists. From 1933 on he was "peintre de la marine." Simon created historical and symbolical as well as naturalistic works. Many of his most popular subjects flowed from his keen observation of the life of the peasants in Brittany, but he made fascinating pictures also of Paris and its suburbs. He succeeded in depicting poor people and fashionable society, Catholic priests in the church, actors and scenes of public amusement.

Inspired by the first World War, Simon created great symbolical paintings—*Finis Belli* (1918); *Colored Soldiers in Marseille* (1919); *The Sacrifice* (1920)—showing a peculiar union of naturalistic and visionary elements and a very original composition caused by a completely new disposal of space. A distinguished portraitist, he painted his mother, children, brother and wife, the painter Jeanne Simon (née Dauchez), and many artists, public figures and aristocratic personages, all of whom he limned with psychological penetration.

HUGO BIEBER.

Lit.: Valmy-Baysse, J., *Lucien Simon, sa vie, son oeuvre* (1910); *Bulletin de l'Académie des Beaux-Arts* (1927).

SIMON, MORRIS, state legislator, b. Podu-Iloie, Roumania, 1892. He was brought to the United States at the age of three. Living in Dover, Del., Simon was a merchant and also a participant in the political life of the community. He was for two terms (1932-36) a member of the Delaware House of Representatives, and during his second term was majority floor leader. Simon was president of the Jewish Association of Lower Delaware.

SIMON, SIEGFRIED VEIT, botanist, b. Berlin, 1877; d. Bonn, Germany, 1934. He began his career in 1909 as a lecturer at the University of Göttingen. After the first World War he became associate professor

Charles C. Simons

(1922) at the botanic institute of the University of Bonn. His main sphere of interest was plant physiology.

Simon's better known works include: *Regeneration der Wurzelspitze* (1904); *Differenzierungsvorgänge im Cellusgewebe von Holzgewächsen* (1908); *Der autotropische Ausgleich geotropischer und mechanischer Krümmungen der Wurzeln* (1912); *Reissbau auf Java* (1912); *Keimungsphysiologie der Winterknospen von Hydrocharis* (1928); *Genetik der Nachkommen einer vergrünten Mutante von Torenia Flournieri* (1930).

SIMONS, CHARLES C., judge, b. Detroit, 1876. He was the son of David W. Simons, member (1918-20) of Detroit's first Nine-Man Council. He was educated in the public schools of Detroit, and graduated from the University of Michigan (B.L., 1898; LL.B., 1900). In 1938 Wayne University awarded him the honorary LL.D. degree. In 1903 Simons was elected a state senator of Michigan. He served as circuit court commissioner of Wayne County (1905-6), was a member of the Michigan State Constitutional Convention (1908), a Republican presidential elector-at-large (1916), and director of the Detroit Board of Commerce (1918).

In 1923 President Warren G. Harding appointed Simons United States district judge, and in 1932 he was elevated to the United States Circuit Court of Appeals by President Herbert Hoover. He was the first Michigan Jew to hold these two positions, and one of the three Jews to hold office as United States circuit court judge in the United States. In 1943 Simons still occupied the latter position, having gained national recognition for his important decisions. In 1903, as a member of the Michigan state senate, Simons gained national fame for introducing and bringing about the passage of the first state direct primary law, revolutionary legislation for that time.

SIMONS, DAVID, jurist, b. The Hague, Holland, 1860; d. Utrecht, Holland, 1930. In 1884 Simons settled in Amsterdam as a lawyer, and became the foremost criminal counsel in Holland. From 1897 until his death he was professor of penal law at the

David Jacob Simonsen

University of Utrecht. In 1910 he was named member of the royal commission for the reform of penal law, criminal procedure and execution of sentences.

In 1888 Simons became editor of the juridical journal *Paleis van Justitie,* in 1890 editor of the journal *Themis.* From 1898 on he edited *Tijdschrift for Strafrecht,* and after 1902 *Weekblad van het Recht.* His *Leerboek van het Nederlandsch Strafrecht* (1910-12) became the Dutch standard work of penal law. In 1929 Simons published *Probleme van het Strafrecht.*

In contrast to most of the specialists on penal law in continental Europe, Simons combined practical experience and theoretical thoroughness. He was a cautious progressive who endeavored to heed the demands of humanity and of public welfare.

SIMONS, JACOB BARNET, linguist and historian of literature, date and place of birth unknown. He studied at Wales University, and was the first secretary of the Welsh University Jewish Students Union. In the 1920's Simons was lecturer on modern literature at the Workers Educational Association and on modern languages at the Commercial Department, City of Portsmouth College. In 1928 he lectured at Southampton University College.

Simons published intelligent studies on John Galsworthy, George Bernard Shaw, and Lion Feuchtwanger. His principal work, *Arnold Bennett and His Novels,* blending philological erudition with psychological penetration, was published in 1936.

SIMONS, LION, author and literary patron, b. The Hague, Holland, 1862; d. The Hague, 1932.

He attended the Kensington Art School at London, later the Drawing Academy at The Hague, and the School of Polytechnics at Delft. Presently he embarked on journalism as an art critic of one of Holland's oldest dailies, the *Oprechte Haarlemsche Courant.* He became editor of *Het Tooneel* (The Stage), then left for England (1893) where he joined a firm of publishers. Seven years later he returned to Amsterdam; and from then on devoted all his time to sociological and artistic activities.

In 1905 Simons founded the Maatschappij voor Goede en Goedkoope Lectuur (Society for the Production of Good and Low-Priced Literature) which operated one of the most influential cultural enterprises in The Netherlands. It published thousands of essays, novels and plays (in the original tongues and in translations) of French, German, English, Italian and other authorship.

Perhaps the most significant of Simon's own publications was an edition of the works of Joost van den Vondel, the foremost poet of Holland's culturally fertile seventeenth century; also his survey of the *History of the Development of the Stage and Drama.*

Simons wrote many books. The most important among those published are: *Reserved Seats* (1891); *Vondel's Gijsbrecht* (1893); *George Meredith* (1898); *Studies and Lectures* (1911); *Vondel's Drama* (1912); *Condition and Power of the People* (1916); *Vondel's Philosophy of Life* (1929); *Development of the Stage and Drama* (5 vols., 1921-32).

Under the pseudonym Albert de Vries, Simons published *Three Anthologies of Morality Plays* (1910), while *Amsterdam in Pieces* was published anonymously in 1891. He married Josine Adriana Mees, noted playwright, who was his staunch collaborator throughout his life. Simons was better known as Leo Simons, a figure of prime importance in the furtherance of Holland's cultural interests. As propagandist, teacher, politician, writer, journalist and publisher, he strove to bring art and literature to the masses.

SIMONS, MICHAEL, merchant, philanthropist and communal worker, b. London, 1842; d. Glasgow, 1925. As a lad, he entered the business his father, Benjamin Simons, founded at Glasgow.

It became one of the largest fruit importing firms in England. In the interest of the firm Simons traveled widely, visiting Southern Europe, the United States and Canada. He opened branches in other ports, and his great organizing skill enabled him not only to expand but also to lower the prices of oranges and other fruits to British consumers.

The king of Spain made him knight of the Order of Isabel the Catholic. In 1883 Simons became a member of the Glasgow City Council, and in 1887 he was elevated to the magistracy. Afterward he was deputy-lieutenant of Glasgow and justice of peace to the county of the city of Glasgow. Simons was one of the originators of the international exhibitions held at Glasgow in 1886 and 1901. In 1904 he became chairman of the council of the Royal Glasgow Institute of Fine Arts and took a leading part in the reconstruction of its galleries, which ranked with the finest in England. He also promoted the theatres of Glasgow and Edinburgh.

Simons was keenly interested in Jewish communal work. He was one of the founders of the Garnethill Congregation and its honorary secretary. For some years, he was president of the Jewish Community of Glasgow. He supported many Jewish social and philanthropic organizations, and for many years he was president of the Glasgow Jewish Literary Society.

SIMONSEN, DAVID JACOB, rabbi, orientalist and bibliophile, b. Copenhagen, Denmark, 1853; d. Copenhagen, 1932. He was descended from a Jewish family native in Denmark for over 300 years.

He studied in Copenhagen (1870-74), and at the age of twenty-one entered the rabbinical seminary in Breslau, where he studied under Zacharias Frankel and Heinrich Graetz. He left the seminary in 1879 to become assistant rabbi to Abraham Wolff in Copenhagen.

He became chief rabbi of Denmark in 1893. Simonsen resigned his position in 1903 to devote himself to philanthropy and to scientific study, and built up his library, the more than 100,000 volumes of which form part of the Royal Library in Copenhagen (Biblio-

theca Simonsensiana). When Simonsen celebrated his seventy-fifth birthday (1928), King Christian decorated him with the golden service medal.

Simonsen contributed frequently to periodicals and Festschriften on theological, Oriental, historical and bibliographical subjects. He wrote a work on the Palmyrene sculptures and inscriptions preserved in the Copenhagen Ny Carlsberg Glyptothek (Danish and French; 1889). When the Mekitze Nirdamim publication society was reorganized (1908), Simonsen was elected its first chairman. From 1917 on he was associate editor of the Danish periodical *Tidsskrift for Jodisk Historie og Literatur.*

During the first World War Simonsen served in an important capacity with the international Jewish war aid, and after the War was over he became chairman of the Jewish World Relief Conference. He was a member of the executive board of the Alliance Israélite Universelle.

Among the treasures of the Bibliotheca Simonsensiana were five incunabula, including a special Soncino print of the year 1490; 800 volumes of responsa, partially handwritten in the 13th cent.; and an almost complete edition of the thirty volumes of the famous Amsterdam *Peri Ez Hajim,* the first known purely Jewish periodical (1728-61). There were also many valuable books and pamphlets on the Reform Movement and the emancipation of the Jews.

Lit.: *C.-V. Zeitung, Allgemeine Zeitung des Judentums,* May 20, 1937; Fischer, Josef, *Festsskrift i Anledning af Professor David Simonsen 70-aarige fødselsdag* (1923); *Jewish Chronicle* (London), June 24, 1932; Bricka, *Biografisk Leksikon;* Moritzen, Julius, "The Passing of a Great Scholar," *American Hebrew,* Sept. 2, 1932, p. 290.

SIMONSEN, ROBERTO, banker, industrialist and engineer, b. Santos, Brazil, 1889. He received the degree of civil engineer from the Polytechnic School of São Paulo, Brazil (1909), worked as an engineer for the Southern Brazil Railroad (1909-10), as director general of the prefecture of Santos (1911-12), and as chief engineer of the Municipal Improvement Commission of Santos (1911-12), and became the president of several large syndicates and engineering firms. In recognition of his merits he was made the representative of the state of São Paulo on the Brazilian commercial mission to England and Brazilian delegate to the International Cotton Congress of Paris (both in 1919). He was professional delegate to the Constituent Assembly of Rio de Janeiro (1933), and served as federal deputy from 1924 to 1937. He was Commander of the Order Orange-Nassau of Holland.

Simonsen taught history of economics at the School of Sociology and Politics of São Paulo, and was author of numerous books, including: *O municipio de Santos* (1911); *Os melhoramentos municipaes de Santos* (1912); *O trabalho moderno* (1919); *O calçamento de São Paulo* (1923); *A orientação industrial brasileira* (1928); *As financas e as industrias* (1931); *A construcção dos quarteis para o exercito* (1931); *A margem da profissão* (1932); *Rumo á verdade* (1933); *Ordem economica e padrão de vida* (1934); *Aspectos da economica nacional* (1935); *Historia económica do Brasil* (1937); *A industria em face da economia nacional* (1937); *Brazil's Industrial Evolution* (1939).

SIMONSON, LEE, scenic designer and writer, b. New York city, 1888. He received his A.B. degree from Harvard in 1909. During the first World War he served as a second lieutenant in the Corps of Interpreters. In 1919 Simonson was one of the founders of the Theatre Guild, of which he served as a director until 1940. As a result, most of his more important stage settings were done for that organization. It was his belief that "production" is as important as either script or players, and it was always his practice to emphasize this too-often ignored detail of theatrical production in each of his dramatic offerings.

Lee Simonson

Simonson served as director of the International Exhibition of Theatre Art, which was held at the Museum of Modern Art in New York (1934). He was a director of both the Municipal Art Society of New York and the National Theatre and Academy, and his private costume collection was donated to the Museum of Costume Art in New York city, of which he was a founder, and of which he was still a director in 1943. During the New York World's Fair (1939-40), Simonson was a consultant for the Palestine Pavilion and was designer of the dioramas exhibited at the Pavilion. He also acted as consultant for three college theatres of importance in the American little theatre scene: the University of Wisconsin, the University of Indiana and Hunter College, New York.

Among Simonson's literary work, in addition to numerous articles and reviews in art and other cultural magazines, were *The Stage Is Set* (1932) and *Minor Prophecies* (1927). He was the co-author of *Settings and Costumes of the Modern Stage* (1933) and he contributed the articles on "Scenic Design" and "Stage Equipment" to the fourteenth edition of the *Encyclopaedia Britannica.* Simonson's illustrated autobiography, *Part of a Lifetime,* appeared in 1943. He was (1928-29) editor of *Creative Art.*

Simonson's contribution to the American cultural scene has been diverse and significant. As a designer of both scenic and interior architecture, he established himself as a creative force whose work profoundly affected the trend of contemporary design. As an author, critic and lecturer he did much to clarify and define those aesthetic considerations which characterize the American artistic scene. NORMAN BEL GEDDES.

Lit.: MacGowan, Kenneth, *The Theatre of Tomorrow;* Hume, J. J., and Fuerst, W. R., *XXth Century Stage Decoration* (1929); Brown, John Mason, *Upstage* (1930); *Settings and Costumes of the Modern Stage* (1933); Fülop-Müller, G., *Das amerikanische Theater und Kino* (1931); Moussinac, L., *Tendances Nouvelles du Théâtre* (1931).

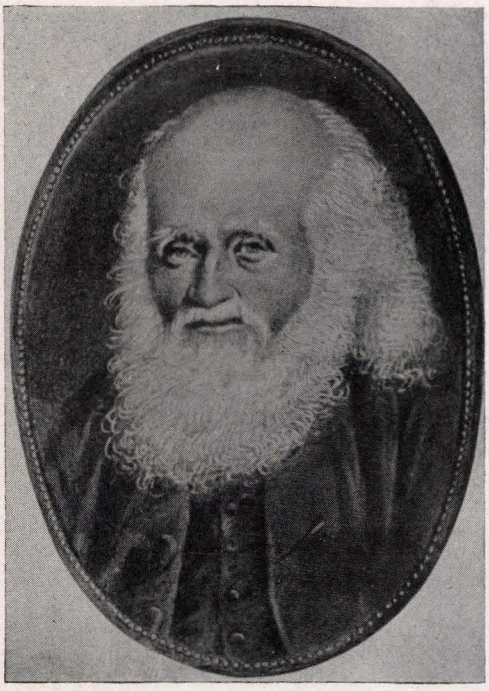
SIMONYI, JENÖ, Hungarian geographer and author, b. Veszprém, Hungary, 1860. Completing his formal education at the University of Budapest, he was

made professor at the Academy of Commerce (1880), serving in that capacity during many decades prior to the introduction of anti-Jewish laws (1938-39).

Simonyi wrote extensively on the natural sciences for publications at home and abroad. He translated into Magyar numerous foreign works dealing with geographical and geodetic subjects, including Ratzel's *Anthropo-geography* (1st section) and Leroy-Beaulieu's authoritative work dealing with Judaism and anti-Semitic trends.

Among Simonyi's more widely recognized original writings in Hungarian are such volumes as *A sarkvidéki felfedezések története* (1890), a history of polar expeditions; *Az uj világ* (1890), a vivid description of the New World; *A világkereskedelem* (1899), an analysis of international commercial relations; *Idegen népek között* (3rd ed., 1905), being Simonyi's picturesque account of his experiences among strange peoples. His scientific papers appeared chiefly in scholarly journals: *Budapesti Szemle, Földrajzi Közlemények,* and *Természettudományi Közlöny.*

SIMONYI, ZSIGMOND, linguist, b. Veszprém, Hungary, 1853; d. Budapest, 1919. After receiving the Ph.D. degree from the University of Budapest and doing graduate work in Leipzig, Berlin and Paris, he became (1877) a private lecturer in the University of Budapest. In the following year the newly founded rabbinical seminary of Budapest appointed him a member of its staff. At the same time he became an associate professor in the university. Full professorship was bestowed on him in 1889 after he accepted the Christian faith.



Simonyi specialized in the morphology, syntax and purism of the Magyar tongue, which was then the state language of a population of twenty million and an important medium of assimilating the nationalities. He published many volumes which were awarded prizes by the Hungarian academy, and in 1898 he was recipient of the Francis Joseph Coronation Award. The important linguistic publications which he edited included a historical dictionary of the Magyar language (with Gábor Szarvas).

Simonyi's magnum opus is the first exhaustive and systematic grammar of the Hungarian language, based on sound historical principles, the phonetical part of which was written in collaboration with József Balassa. As an academic teacher of influence he became the head of a school of Hungarian philology. His works as a whole may be regarded as a scientific corollary of the national-popular school of Hungarian poetry.

In the anti-Semitic counter revolution (1919) this exponent of the most patriotic branch of scholarship had to suffer, at the age of sixty-six, the ordeal of disciplinary investigation by the Hungarian academy which probed into his political beliefs. Simonyi died (November, 1919) of the attendant shock.

SIMSON, eighteenth cent. family of merchants in New York city. Nathan Simson (d. London, 1725) resided in New York between 1706 and 1722. In 1718 he was elected and sworn in as constable of South Ward, New York. He left a will, recorded in Somerset House, London, from which it appears that he owned large shares in the South Sea Company of Great Britain and had relatives in Bonn, Germany, and in Amsterdam.

Joseph Simson (b. 1686; d. New York city, 1787) was a nephew of Nathan Simson. He came to New York in 1718 and lived with his uncle for about a year and a half after his arrival. He was made a freeman in New York under the act of 1723, and became a naturalized citizen in 1740. He belonged to the

Joseph Simson

Orange County Regiment of New York volunteers, organized about 1738. Throughout his life Joseph Simson was closely connected with Congregation Shearith Israel, of which he was president for several terms. He appears to have been scholarly and learned in Hebrew, carrying on a correspondence with Dr. Kennicott of Oxford and Dr. Cooper, president of King's (later Columbia) College. He also conducted a correspondence in Hebrew with the Jews of China. He married Rebecca Isaacs (or Isaacks) in 1722, and they had two sons and a daughter. A miniature painting of Joseph Simson, done by a French artist, shows his appearance at a very advanced age.

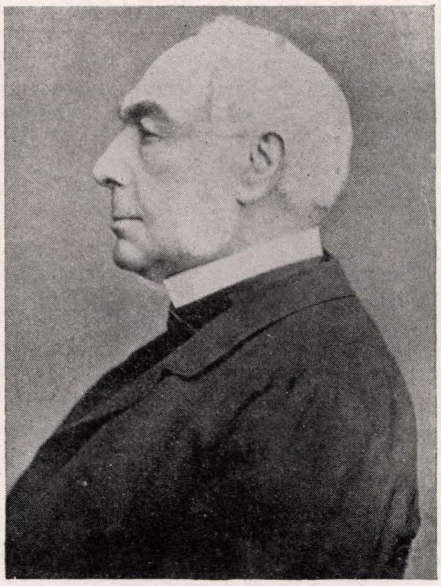
Sampson Simson (b. New York city, about 1725; d. New Yory city, 1773) was the elder son of Joseph Simson. He was one of the founders and a distinguished member of the New York Chamber of Commerce, and one of the most prominent New York merchants of the time. He owned several ships which carried on an extensive foreign trade. Colonial records refer to him as "a remarkably pious and conscientious Jew, celebrated for punctuality and strict honesty." He died unmarried, whereupon his brother Solomon and other surviving relatives continued to carry on his many business enterprises.

Solomon Simson (b. New York city, 1738; d. New York city, 1801) was the second son of Joseph Simson. He was partner of his brother in business, and took an active part, as trustee and elector, in the affairs of Congregation Shearith Israel. During the Revolution he moved to Connecticut, together with a number of Jewish families, when the British occupied the city. In 1768 he married Sarah Mears. They had two sons and three daughters: Sampson, Joseph, Rebecca, Jochebed and Ellen. Jochebed married the Reverend Ansel Leo, reader of the Bnai Jeshurun Congregation of New York city.

Lit.: Publications of the American Jewish Historical Society, No. 2 (1894) 83; No. 3 (1895) 81; No. 10 (1902) 109-10; No. 11 (1903) 91-92, 155-56; No. 25 (1917) 87-91; No. 27 (1920) 371, 373.

SIMSON, BERNHARD VON, historian, b. Königsberg, Germany, 1840; d. Berlin, 1915. He was the son of Eduard von Simson. He studied history, as a pupil of Ranke, from 1856, and after his graduation became lecturer at the University of Jena (1863).

From 1869 to 1872 he was recorder at the archives of Düsseldorf, and from 1877 to 1905 professor of history at the University of Freiburg. In 1907 Simson was named a member of the general directorate of the *Monumenta Germaniae.* Simson was the last representative of Ranke's school in Germany. He mastered critical methods in editing historical sources, mainly of the Middle Ages and composing the historical records of the German emperors Charlemagne and Louis the Pious. He wrote the sixth volume of Giesebrecht's *Geschichte der deutschen Kaiserzeit* (1895), and edited his father's *Lebenserinnerungen* (1900).



In 1887 he was elected member of the Bavarian Academy of Sciences. Simon's critical masterpiece was the discovery of the forgeries of Le Mans, which were considered the work of Bishop Isidorus until Simson bared their spuriousness in 1886.

SIMSON, MARTIN EDUARD SIGISMUND VON, German statesman, and teacher of law, b. Königsberg, Germany, 1810; d. Berlin, 1899. He was the son of Jewish parents, his mother having been a niece of David Friedländer. Simson was baptized in 1823. His brother, August Simson, became a Lutheran professor of theology. Simson was closely allied with the German unification movement, and acted as chairman at its meetings, his pleasing personality, ready wit, keen perception and oratorical gifts making him an asset. He was president of the Frankfort National Assembly (1848-49), of the Reichstag of the North German Union, and of the German Reichstag (1867-74). He served also as the first president of the German Supreme Court (1879-91), and was the founder and chairman of the Goethe Society (1885-99). He headed the delegation which, in 1849, announced to Frederick William IV his election as German emperor, as well as the delegation which, in 1870, tendered the same title to King William I of Prussia. In 1888 Simson received the title of the hereditary nobility. He played only an inconspicuous role as writer and legislator.

Lit.: Allgemeine Deutsche Biographie, vol. 54, pp. 348-64; Meyer, A., in *Biographisches Jahrbuch,* vol. 4 (1900) 307-17; Simson, Bernhard von, *Eduard von Simson, Erinnerungen aus seinem Leben* (1900); *Goethe-Jahrbuch,* vol. 21, p. 4.

SIMSON, PAUL, historian, b. Elbing, Germany, 1869; d. Danzig, 1917. He received the Ph.D. degree from the University of Berlin in 1891, became teacher at the municipal college of Danzig, and in 1906 was appointed professor. Simson was the first modern historian of the city of Danzig. He published (1903-16) four volumes of a large *Geschichte der Stadt Danzig,* and numerous special inquiries into the political and cultural history of Danzig, East Prussia, Pomerania and Poland. Simson was loyal to Judaism, and professed liberalism in politics. He was a member of the city council of Danzig, and launched a movement for the conservation of historical architecture in that city.

SIN. The provision in the book of *Leviticus* (chaps. 4 and 5) for sin-offerings by the ancient Hebrews and the universal appeal of the Day of Atonement show clearly that the acknowledgement of sin and the desire to attain forgiveness have a prominent place in Jewish thinking. It should be borne in mind that Judaism does not affirm the existence of sin per se. It is always something which man commits.

Martin Eduard S. von Simson

Among the Hebrew words used to denote sin are *het, 'avon* and *pesha.* Originally *het* meant the missing of the goal or of the mark, as in *Prov.* 19:2, which may be translated literally: "He that hasteth with his feet loseth the way." In the Hithpael verbal form it means "to be bewildered." *'Avon* means crookedness or perversion of the right order. The most grievous sin is *pesha,* or rebellion. The verb is used in *II Kings* 1:1 in reference to Moab's rebellion against Israel, but in the theological sense it means rebellion against God and man's better nature. By implication, this sin is a denial of the basic principle of religion, the existence of God and His providence.

In the Scriptures the most extreme sinfulness is always regarded as rebellion. The generation of Noah, the builders of the Tower of Babel and the people of Sodom and Gomorrah were rebels against the divine will. Sodom and Gomorrah were the scene of the three cardinal sins, idolatry, adultery and murder (*Midrash Num.* 7:10).

The general term "idolatry" includes pride (*Mechilta* 72a), which in itself is a denial of complete dependence on God. The prophecy of Isaiah opens with the declaration (*Isa.* 1:2) that Israel has rebelled against his Heavenly Father. Similarly, Ezekiel (*Ezek.* 20:13-26) interprets Israel's transgression even in the wilderness as rebellion. "But the house of Israel rebelled against Me in the wilderness; they walked not in My statutes, and they rejected Mine ordinances."

Judaism holds that sins are committed against God, society and the individual. Man is admonished to flee from even the slightest infraction of the divine law (*Aboth* 4:2). But when he does sin it is necessary for him to seek forgiveness from God. On the Day of Atonement such forgiveness is granted to the sincerely repentant sinner (*Yoma* 85a), but if his sin is against one of his fellow men he must first endeavor to be reconciled with him.

Because of the oft-repeated statements in *Amos* (*Amos* 1:3, 6, 9, 11, 13; 2:1, 4, 6) it is commonly believed that God will forgive man's repetition of sin only thrice. When it is committed the fourth time man must bear the full consequence of his wrongdoing. However, it is specifically stated (*Yoma* 85a) that if a man says: "I will sin and repent, then sin and repent again," he will find repentance beyond his power. Recitation of one's own sins is regarded as arrogance (*Ber.* 34b). Hence the *Al Het* litany in the Day of Atonement ritual is regarded as confession of communal transgression.

Germanic National Museum, Nurmberg

THE TORAH

From a 15th-Century Illuminated Haggadah, Showing (above) Moses Unrolling the Torah and (below) Moses Kneeling in Prayer on Mount Sinai

In the actual confession of sin, Ps. 106:6 is followed; the formula *"hatanu, 'avinu, pashanu*—we have sinned, we have done iniquitously, we have dealt wickedness," is taken from the Psalmist. This order was followed by the high priests in the ancient Temple (*Yoma* 36b), and it is used by the individual worshipper to this day. In the traditional confessional on the Day of Atonement (Singer, S., and Abrahams, I., *The Authorised Daily Prayer Book*, p. 258 et seq.) an exaggerated number of sins is listed. The acrostical form shows that the liturgist assumes poetic license, for even the most blameless saint is expected to ask forgiveness for sins of which he never could have been guilty. In the concluding section (p. 262) reference is made to violations of positive (sins of omission) and negative commands (sins of commission).

While sin affects the spiritual condition of the whole world (Midrash *Eccl.* 10:1), its greatest effect is on man himself (*Sotah* 32ab). It first enters man as the spirit of folly. In the course of time man comes under its sway, growing more and more callous. At first it is like a spider's web, then it becomes like a wagon rope. This folly is at first only a passer-by, then a visitor, then it becomes man's master. Hence it is said: "One sin brings another in its train" (*Aboth* 4:2). Sin thus enslaves him who is free. Proof is often cited from the book of *Job* (35:1-8) that God is not affected by man's wrongdoing, but that man bears the full consequences. This spirit of folly which causes man to sin is called the Yetzer Hara, the inclination to do evil. At times rabbinic statements seem to imply that this force has separate existence (*B.B.* 16b).

Simeon ben Lakish said: "Satan, the Yetzer [Hara] and the angel of death are one and the same." However, it is likely that the rabbis spoke only figuratively. Usually they refer to the Yetzer Hara as a purely subjective force, which is not altogether evil. Without it man would not marry, beget children, build a home or engage in commerce (*Midrash Gen.* 9:7). Therefore it derives its nature, whether it be good or evil, from the use which man makes of it. It may become the motivation for adultery or for a wholesome family life, depending on man's power to master the desires of his own heart. This point of view is constant in Jewish literature and in the liturgy of the people of Israel.

SIN (a letter of the Hebrew alphabet), *see* ALPHABET.

SIN-OFFERING, *see* SACRIFICE.

SIN, ORIGINAL, *see* ORIGINAL SIN.

SINA, IBN, *see* AVICENNA.

SINAI, the most usual name in the Bible for the sacred mountain from which the Ten Commandments were revealed (*Ex.* 19 and 20). The term Horeb appears elsewhere, and it is evident that Horeb and Sinai are merely variant terms for the same mountain. According to Bible critics, Sinai is preferred by the *J* and *P* sources, Horeb by *E* and *D*. The origin of the name is uncertain, some connecting it with the moon-god Sin, others with the thornbush (*seneh*). There is apparently no Jewish tradition as to the location of Sinai; Christian tradition, which can be traced back as far as the 4th cent., identifies it with the range of mountains in what is now known as the Sinai Peninsula, between Arabia and Egypt. Hence

The traditional Mount Sinai

various travelers have suggested Jebel Musa or Jebel Serbal as being Sinai, and this has been followed by many writers. However, this identification is untenable. On the one hand, this part of the peninsula was the scene of extensive mining operations on the part of the Egyptians, so that it is unlikely that the Israelites would have ventured thither. On the other, passages in the Bible practically equate Sinai with the mountains of Seir, in the country of the Edomites, south of Palestine (see *Deut.* 33:2; *Judges* 5:4-5). Furthermore, it was near enough to Midian for Moses to reach it in leading his flocks (*Ex.* 3:1) and but three marches from Canaan (*Num.* 10:33). Hence the location of Sinai is apparently in Seir, and probably not far from Kadesh.

In 1904 to 1905 Flinders Petrie found interesting alphabetic inscriptions in the region of the traditional Sinai. These Sinai inscriptions have been studied by scholars from 1916 on, and have been shown to be the earliest form of the alphabet. Grimme's attempt to read them as inscriptions of Moses has been rejected by scholars. *See* ALPHABET.

SINAI, NATHAN, university professor, b. Stockton, California, 1894. He received the degree of Doctor of Public Health from the University of Michigan (1926) and was appointed there associate professor in 1929, full professor in 1932, and was still holding this position in 1943. He was a consultant of the United States Public Health Service.

His published writings include *A Survey of the Medical Facilities of San Joaquin County, California* (1931); *A Survey of the Medical Facilities of Philadelphia* (with A. B. Mills, 1931); *A Study of Physicians and Dentists in Detroit* (with A. B. Mills, 1931); *The Way of Health Insurance* (with A. M. Simons, 1932); *The Incidence of Illness and the Receipt and Costs of Medical Care* (with I. S. Falk and M. Klem, 1933); *Medical Relief Administration, Essex County, Ontario* (1937); *Medical Relief in Michigan* (with M. Hall, V. Hogue and M. Steep, 1938), and *Medical Relief Administration* (with M. Hall and R. E. Holmes, 1939). He also compiled the report of the survey of medical services and health agencies in Michigan (1933).

SINAITIC LAWS (*halachah lemosheh misinai*). Approximately forty laws are described in Talmudic literature as "special traditions revealed to Moses on Sinai." The Sinaitic laws pertain mainly to weights and measures, phylacteries, directions to scribes, and agriculture. In addition, there are six laws introduced by the words *be'emeth 'amru* ("In truth it was said"), which the Talmud considers as Sinaitic laws (*B.M.* 60a).

According to Maimonides (Introduction to his com-

mentary on the Mishnah, edit. Hamburger, 21-23-25), these Sinaitic laws are laws which can in no way be derived from, or related to, any passage in the Bible, and there can be no dispute as to their validity. A contrary opinion is expressed by Rashi and other scholars, who hold that most of the laws of the Talmud which are introduced by the formulas *gemiri, gemara gemiri, hilchatha gemiri, halachah, de'oraitha* and *debar torah* are also Sinaitic laws.

Nahman Krochmal, Zacharias Frankel and I. H. Weiss, as well as others, hold that those laws the origins of which were shrouded in obscurity were termed Sinaitic. Bacher pointed out that the term *halachah lemosheh misinai* was used mainly by the sages who were contemporaries of Rabban Gamaliel I (1st cent.), who sought to relate all oral traditions to the time of Moses.

SINGAPORE, capital of the island of Singapore, in British Malaya, with a total population of 500,000, including about 2,500 Jews (1940). The Jewish settlement dates from 1840, when a small number of Jews fled thither from Mesopotamia.

Religious service was held first in a rented house near the business quarter, in a street since known as Synagogue Street, but in 1878, when the community had increased through the further influx of Jews from Baghdad and India, the Moghein Aboth Synagogue was built in Waterloo Street through popular subscription. While the community numbered about twenty families in the middle of the 19th cent., it reached the number of 450 by 1900, the majority of whom were Sephardim from the Near East and from India, with a sprinkling of Russian refugees as well as of Jewish merchants from England, The Netherlands and China. The Sephardim, many of whom had established prosperous firms, dealt largely in opium, rice and gunny bags, while the business of the Ashkenazim was chiefly liquor, hotel keeping and furniture. When, subsequently, opium became outlawed as an article of trade, its place was taken by the business of rubber and tin and by banking.

An outstanding figure in the communal life of Singapore and a great philanthropist was Sir Manasseh Meyer (1846-1931), who came to the colony as an impecunious immigrant boy, became a leading merchant and a municipal commissioner, built a Talmud Torah and a new synagogue, Chesed El (1905), and founded the first Zionist society in Singapore—it was the first Zionist society in the whole Far East. His daughter, Mrs. Edward Nissim, became the leading spirit of the community after his death.

There existed a Jewish Women's League, a sports club and, temporarily, a magazine, *The Israelite*. The Singapore community contributed per capita a greater amount annually to the Palestine Foundation Fund than any other group in the world. Yet Israel Cohen and other visitors from Europe or the United States noticed the lack of interest in Jewish culture among the younger generation, which was completely Europeanized, and also a certain antipathy between Sephardim and Ashkenazim. The two synagogues, both Orthodox and following the Sephardic ritual, had the Bimah in the center rather than on the eastern side, and were lighted only by the Ner Tamid (perpetual lamp). A new burial ground was acquired in 1902.

A small Jewish community, established in 1895, existed also on the island of Penang, north of Singapore, on the west side of the Malay Peninsula; its members were removed to Singapore in December, 1941, where they shared the fate of the entire Jewish community when the island was occupied by the Japanese in February, 1942. ALFRED WERNER.

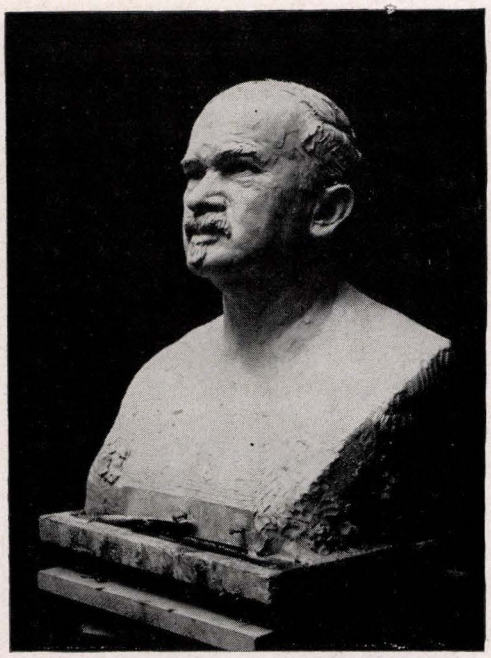
SINGER, ÁBRAHÁM, rabbi and historian, place and date of birth unknown; d. Várpalota, Hungary, 1914. For many decades he ministered to the Jewish community of Várpalota, on whose history he published a volume. His other works include *Paris, Braunschweig, Arad,* sidelights on the history of Reform Judaism in Europe; *Materialien zur Geschichte der Juden in Ungarn; Chronik der Juden in Ungarn; Hamadrich* and *Magyar Zsidó Levéltár,* a collection of documents of Jewish interest.



His history of Hungarian rabbis and communities remained in manuscript. His son and successor in the rabbinate of Várpalota, Leó Singer, contributed to the periodical press many articles on the history of the Jews in Hungary and was a contributor to several Jewish encyclopedias.

SINGER, BERTHOLD, consul-general, jurist and educator, b. Jászberény, Hungary, 1860. He studied at the Universities of Budapest and Berlin and in 1884 came to the United States. He settled in Chicago where he became consul of Spain, Costa Rica and El Salvador. From 1899 on he was consul-general of Nicaragua at Chicago, and subsequently became consul-general of Costa-Rica and Turkey; he was still in those offices in 1943. Singer was the author of several works on international patent and trade mark law. In 1918 the Chicago Law School conferred upon him the degree of LL.D. Subsequently he became lecturer of international law and a member of the advisory board of De Paul University, Chicago. He was also a knight and commander of the Order of Isabella the Catholic.

His published books include: *Foreign Patents, Trade Marks and Designs* (1903); *United States and Foreign Copyright Laws* (1907); *Patent and Trade Mark Laws of the World* (1911); *Trade-Mark Laws of the World and Unfair Trade* (1913); *International Law* (1918); *Patent Laws of the World* (5th ed. 1930).

SINGER, CHARLES, historian of medicine, b. London, 1876. He was the son of Simeon Singer. After studying in England and abroad, he became professor of the history of medicine at the University of London (University College). He was also university lecturer in the history of biological sciences at Oxford (1931-32), visiting professor of the history of science at the University of California, Herztein lecturer at Leland Stanford University, Goldwin Smith lecturer at Cornell University, Noguchi lecturer at Johns Hopkins University, Fitzpatrick lecturer at the Royal College of Physicians, visiting lecturer at the University of Birmingham, and physician to Dreadnought Hospital. Singer presided at the Third International Congress of the History of Medicine (1922) and at the Second International Congress of the History of Science and Technology (1931), both held in London. He was expert on Hebrew MS illustrations.

Singer's writings include: *Studies in the History and Method of Science* (Oxford, 1917-21); *Greek Biology and Greek Medicine* (1922); *History of the Discovery of the Circulation of the Blood* (London, 1923); *The 1493 Venice Fasciculo di Medicina* (Milan, 1924); *The Evolution of Anatomy* (1925); *The Legacy of Israel* (co-editor with Edwyn Robert Bevan, 1927); *A Short History of Medicine* (1928); *From Magic to Science* (1928); *Historical Relations of Religion and Science* (1928); *A Short History of Biology* (1931); *A Short History of Science* (1941).

Isidore Singer. From a contemporary sculpture

SINGER, EDMUND, violinist and educator, b. Tata, Hungary, 1831; d. Stuttgart, Germany, 1912. Singer was a fellow-student and friend of the famous Joachim. He received his musical education in the Vienna conservatory and at Paris. During the 1850's he gave successful concerts throughout Europe. In 1854 Liszt recommended him for the position of concert master at Weimar.

From 1861 on Singer was a professor of the Stuttgart conservatory. He was a prolific composer of serenades, fantasies, impromptus and other minor pieces, many of which were inspired by Hungarian folk music. He was also well-known for his *Grosse theoretisch-raktische Violinschule.*

SINGER, GUSZTÁV (DE SEVERIN), soldier, b. Somfa-Baranya, Hungary, 1863. A major in the Austro-Hungarian Army at the outbreak of the first World War, he was gravely wounded in the battle of Lwów (September, 1914) and after fighting throughout the Carpathian campaign, returned seriously ill from the successful siege of Przemysl. Upon his recovery, in 1917, he was made a colonel, knighted and sent to the Roumanian front. In 1918 he served in the military administration of occupied Serbia. Singer was the recipient of many high military distinctions.

SINGER, ISIDORE, editor and writer, b. Weisskirchen, Moravia, 1859; d. New York city, 1939. He studied at the Universities of Vienna and Berlin (Ph.D., 1884), and founded and published the *Allgemeine Österreichische Literaturzeitung* (1884-85).

Becoming a literary secretary to Count Alexandre Foucher de Careil, French ambassador at Vienna, he followed him to Paris, where he joined the press bureau of the French Foreign Office and also became editor-in-chief of *La vraie parole* (1893-94). Through this paper, which he founded to counteract the anti-Semitism propagated by Edouard Drumont's *La libre parole,* Singer defended Alfred Dreyfus fearlessly.

Encouraged by an editorial written for the *American Hebrew* Singer went to New York city (1895) to carry out his life work, *The Jewish Encyclopedia.* Having done the preliminary work together with Richard J. H. Gottheil and Kaufmann Kohler, he became managing editor of the encyclopedia, and was in charge of the department of modern biography (for the period from 1750 to 1904).

Singer was managing editor also of the *International Insurance Encyclopedia* (1909) and co-editor (with Kuno Francke of Harvard University) of the *German Classics of the 19th and 20th Centuries* (20 vols.). He was founder (1922) and literary director of the interdenominational Amos Society, a monotheistic world league for better understanding among peoples, and president of the Justice Lodge of the B'nai B'rith.

Singer was a prolific writer in three languages. His works include: *Berlin, Wien und der Antisemitismus* (1882); *Presse und Judentum* (1882); *Sollen die Juden Christen werden?* (1884); *Die bieden Elektren—humanistische Bildung und der klassische Unterricht* (1884); *Auf dem Grabe meiner Mutter* (Hebrew trans., Solomon Fuchs, 1888); *Le prestige de la France en Europe* (1889); *La question juive* (1893); *Anarchie et antisemitisme* (1894); *Der Juden Kampf ums Recht* (1902); *Russia at the Bar of the American People* (1904); *Christ or God?* (1908); *Social Justice* (1923); *A Religion of Truth, Justice and Peace* (1923), which was issued by the Amos Society and claimed to be "a challenge to church and synagogue to lead in the realization of the social and peace gospel of the Hebrew prophets." Singer edited *The World's Debt to the Jew* (6 vols.), and translated books from French into German, including treatises by James Darmesteter and Zadoc Kahn.

Singer's favorite idea was the establishment of world peace and of close spiritual cooperation of Jews and Christians. "This little man," wrote Gutzon Borglum, "with his vast dome and sparkling eyes, whom I tried in my own modest way, as a tribute to a friend, to fix in bronze as a type of Jewish thinker, involuntarily reminds me of his great predecessors, and models, Leibnitz and Diderot." Extensive tribute was paid Singer on the occasion of his sixtieth (1919) and seventieth (1929) birthdays. ALFRED WERNER.

Lit.: *American Hebrew,* Nov. 7, 1919, p. 628; Nov. 8, 1929, p. 819; Cohen, George, *Jews in the Making of America* (1924) 236; Eisenstadt, Benzion, *Hachme Yisrael Beamerikah* (1903).

SINGER, ISRAEL JOSHUA, writer, b. Bilgoray, Poland, 1893. He studied at the Yeshiva in Warsaw, and first began to write professionally in 1915, starting with Hasidic tales. Some of his short stories, collected in the volume *Pearl* (1923), won him recognition not only throughout the European continent, but in the United States as well. He became the Warsaw correspondent of the *Forward,* a post he held until his removal to the United States in 1939.

Before leaving Poland Singer had already written many of the novels which were later, in their translations into numerous languages, to make him and the milieu he chose to depict familiar to foreign readers. *Yoshe Kalb* (1932) appeared in English book form in the following year as *The Sinners;* under its original title it had been produced in 1932 at the Yiddish Art Theatre in New York city by Maurice Schwartz. Here Singer still derived his material from Hasidic themes, telling of a young rabbi's sin with his father-in-law's young wife, and of his subsequent penitential wanderings. The drama made of the book was colorful to the point of exoticism, and the mystical strain of the script raised it to the level of allegory.

But *Di Brider Ashkenazi,* which in its English translation (*The Brothers Ashkenazi,* 1936) was the most successful of Singer's novels, fused the old Jewish Polish tradition with a study of the industrial city of Lodz, and the web of transformation which it effected

on the descendants of a leader of the Orthodox Jewish community. Singer's eye is that of the superior novelist: noting detail and grasping significance. But not always is the ultimate union of all his separate efforts sufficiently interactive. In a great work there is a molding of components, giving circumstance and character a structural solidity. The men and the women of *The Brothers Ashkenazi* are occasionally jagged in their virtue or their villainy. Circumstance, too, shows vehemence without invariably possessing grandeur.

Among Singer's other works translated into English were *The River Breaks Up,* short stories (1938), and *East of Eden* (*Chaver Nachman;* 1939), a novel of the failure of any ideology—from Orthodoxy to Communism—to provide a man with the key to spiritual gratification. In Yiddish there have appeared, among others, *Oif Fremder Erd* (1925); *Stohl un Eisen* (1927; English trans., London, 1936); *Nei Russland* (1927); *Die Mishpoche Karnovsky;* in 1943 it was being published serially in the *Forward* and in the Buenos Aires *Di Presse*). *In die Berg,* a novel in an American setting, was published serially in the *Forward* in 1942 and was being prepared (1943) in English translation. Translations of Singer's work appeared also in Hebrew, Polish, Spanish, Swedish and other European languages. In 1943 Singer was living in New York.

BASHEVIS SINGER (b. Radzynin, Poland, 1894), writer, was a brother of Israel Joshua Singer. His first work appeared in the *Literarishe Bletter* in Warsaw; it took the form of short stories. He came to the United States in 1935, and in the same year his novel, *Der Soten in Goray,* was published. The novel, set in the 17th cent., dealt philosophically and skeptically with the problems of holiness and wickedness. In 1943 Singer was associated with the *Forward* in New York, writing also under the pseudonym of Yitzchok Varshavsky.

NATHAN RICARDO.

SINGER, JACOB, rabbi, and authority on Jewish music, b. Kruspils (Kreutzburg), Latvia, 1883. He was brought to the United States in 1892. A descendant of the cantor and Hebrew author Joshua Heschel Singer, he received the A.B. degree from the University of Cincinnati in 1907, the A.M. degree in 1908, and in the following year was ordained at the Hebrew Union College. He pursued post-graduate studies at Johns Hopkins University, Baltimore (1910-12), studied musical theory at the Peabody Conservatory of Music in that city (1916), and in 1925 received the Ph.D. degree from the University of Nebraska. Singer served as rabbi of Congregation Beth Israel, York, Pa. (1909-12), Bnai Jeshurun, Lincoln, Neb. (1912-23), and Temple Mizpah, Chicago (1923-). He was also associate professor of the history and theory of music at the University of Nebraska (1916-23), and lecturer on Jewish liturgical music at Northwestern University, Evanston, Ill. (1931-).

During the first World War Singer served as resident rabbi and chaplain at Camp Funston and Fort Riley, Kan. (1917-18). He was founder of the B'nai B'rith Hillel Foundation at Northwestern University, and its director from 1933 to 1934. He was president of the Chicago Rabbinical Association (1939-41), a member of the Board of Governors of the Hebrew Union College, and in 1942 was elected vice-president of the Hebrew Union College Alumni Association. He lectured on Jewish music at the Hebrew Union College from 1912 to 1914.

Singer's works include: *Taboo in the Hebrew Scriptures* (Chicago and London, 1928); "Jewish Music Historically Considered" (*Central Conference of American Rabbis Year Book,* vol. 23, 1913, pp. 232-48); "Adult Education and Judaism" (*ibid.,* vol. 38, 1928, pp. 361-71); *A Sunny Morning Spring,* a children's operetta (Chicago and London, 1925); six liturgical numbers, including the Kol Nidre setting for cantor, choir, organ and violin obbligato (New York, 1938); "Music of the Synagogue" (in the year book of the Music Teachers National Association, 1915). Singer composed hymns for the *Union Hymnal* (1932), of which he served as a co-editor, and contributed articles on Jewish music to the *Universal Jewish Encyclopedia.*

SINGER, JOSEF, cantor, b. Illinik, Hungary, 1841; d. Vienna, 1911. He was the son of the cantor Srole Illinik, in whose choir he sang at the age of five.

Singer graduated from the teachers' institute in Tyrnau in 1860, then entered the conservatory in Prague, and for a short while sang in the Prague State Theatre. In 1866 he became cantor in Beuthen, Upper Silesia. A well-schooled baritone voice and extensive Hebrew knowledge secured for him (1874) the position of cantor in Nuremberg. Here he composed and introduced into the synagogue many hymns in German. His singing and musicianship led to many opportunities for his appearance on the concert stage. Noted critics, including Richard Wagner, lauded him. In 1881 Singer went to Vienna to succeed Solomon Sulzer as cantor of the Seitenstettengasse Temple, and within a short time became part of musical Vienna. Brahms and Goldmark came to listen to his renditions of oratorio selections at various concerts. Singer taught music at many institutions, but his most important achievements were in the musical-literary field.

His many articles on Jewish music and Hazanuth in the *Jüdischer Kantor* and *Österreich-ungarischen Kantoren-Zeitung,* and especially his brochure, *Die Tonarten des traditionellen Synagogen-Gesanges* (Vienna, 1886), stamped him as an independent and resourceful student of Jewish music. In this work he groups all traditional modes and cantillations in three distinct scales or Steigers, i.e. the Yishtabah, the Magen Aboth and the Adonai Malach scales, thus being among the first to give Hazanuth a scientific foundation.

MAX WOHLBERG.

SINGER, JOSEPH, Austrian general, b. Lemberg, Poland, 1797; d. Vienna, 1871. The son of a well-to-do family, Singer was prepared in his early years to enter the Austrian army. In 1813 he was commissioned lieutenant in the Third Regiment of lancers, and fought gallantly against French troops in Italy. In 1832 he was promoted to the rank of captain and joined Field Marshal Radetzky's general staff. In 1835 Singer became major, and in 1847 colonel. Two years later, after the victory of Radetzky over the Italian revolution, Singer was nominated major general and soon thereafter brigadier general. Radetzky's successor, Field Marshal Hess, also admired Singer's talents and appointed him, after the outbreak of the Crimean War, chief of the general staff of the Third Army commanded by Hess. But the Austrian army did not enter the war and, upon demobilization, Singer retired from service, being nominated lieutenant field marshal. He returned to active service when, in 1859, Austria was at war with France and held a high command at Cracow.

Singer then traveled extensively through most of the countries of Europe, Asia and America. He was fluent in virtually all European languages. Singer was esteemed as

David Joseph Sinzheim

a distinguished strategist who, however, was unwilling to adopt the views of his superiors once he had formed ideas of his own, but he never had an opportunity to command a battle wholly on his own responsibility.

SINGER, LUDWIG, attorney and Zionist leader, b. Kolin, Bohemia, 1876; d. Prague, 1931. As chairman of the Bohemian Zionist committee he conducted negotiations in 1917 with leaders of the newly formed Czechoslovak government. As a result, Jewish minority rights became an integral part of the Czechoslovak constitution. When the Jewish national council was formed (1918), Singer was elected president, retaining this office until his death. As president of the council he took part in the Versailles peace treaty parleys. He was a member of the Prague city council, and played a leading role in the struggle for an amendment to the new citizenship law which solved the question of the naturalization of Jewish war refugees. Singer repeatedly headed the Jewish list at the parliamentary elections, and was elected deputy in 1929. From 1930 until his death he was president of the Jewish community of Prague.

SINGER, PAUL, German Social Democratic leader, b. Berlin, 1844; d. Berlin, 1911. In 1869 he and his brother established a successful factory for ladies' coats; he retired from the firm in 1886. At first he belonged to the liberal party, and joined the Social Democratic party only after the passage of the Socialist law (1878). A keen student of the condition of the laboring classes, he soon became one of the party's most prominent leaders, and in 1884 was elected to the Reichstag. In 1886 the Prussian government ordered his expulsion from Berlin because of his exposure of the spy system (agents provocateurs) of the Berlin political police; later he was expelled also from Dresden. However, the decree of expulsion was soon rescinded, and in 1887 the party called him to its executive board and three years later he was made its chairman. Possessed of a keen sense of justice, Singer was noted for his public charity, and took part in many international socialist congresses. Through his aid the working class of Berlin founded its own organ, the *Volksblatt* (1884), which later became the *Vorwärts.*

Lit.: Stegman and Hugo, *Handbuch des Sozialismus,* (1897) 750; Curley, A., "Social Democrats in the Reichstag," *Harper's Magazine,* vol. 71, 343-49.

SINGER, SIMEON, preacher, translator and communal worker, b. London, 1848; d. London, 1906. He became minister of the Borough New Synagogue of London in 1867, moving from there to the new West End Synagogue in 1878 where he remained until his death. Singer was a scholar of high repute, one of the best masters of English in the Anglo-Jewish pulpit, and a strong power in the Jewish community. Though a lover of tradition, he recognized the necessity of reforms. In 1892 at his instigation the first English conference of Jewish preachers was held, and some reforms were introduced, such as Bible readings in English, the admission of women as choristers and others. He did much to reunite Conservatives and Liberals in the community and he himself preached at the Reform synagogue in Manchester.

He translated into English a number of religious books, but his most famous work is the English translation of the *Authorised Daily Prayer Book* (1896) which was accepted by the United Hebrew Congregations of the British Empire. A selection of his sermons, lectures and addresses was edited by Israel Abrahams. He was the father of Charles Singer.

Lit.: Abrahams, Israel, *The Literary Remains of the Reverend Simeon Singer* (3 vols., with a memoir, 1908).

SINIGAGLIA, LEONE, composer, b. Turin, Italy, 1868. He studied at the conservatory of Turin under Giovanni Bolzoni, and later in Vienna and in Prague under Anton Dvořák. The Bohemian Quartet introduced his chamber music in 1898, and three years later Arrigo Serrato played with considerable success his violin concerto in the principal cities of Germany.

Sinigaglia's music drew its inspiration chiefly from local Italian folk lore, particularly from his native province of Piedmont. He published four books of Piedmontese folk tunes. Well-known are his *Rapsodia piemontese* for violin and orchestra (1900); *Danze piemontesi* (1905); and *Piemonte,* a suite for orchestra (1910). He wrote an overture to Goldoni's *Le baruffe chiozzotte.*

SINZHEIM, DAVID JOSEPH, rabbi, b. Trèves, Germany, 1745; d. Paris, 1812. He was rabbi in Strasbourg, and a member of the Assembly of Notables summoned by Napoleon I in 1806. As the most distinguished member of this committee, he was entrusted with a difficult task, which he executed most satisfactorily. He was also chairman (Nasi) of the "Sanhedrin" instituted by Napoleon in 1807. Following introduction of the consistorial system Sinzheim became chairman of the central consistory (1808). An excellent Talmudist, he wrote a series of notes on the Talmud, *Yad David* (Offenbach, 1799).

Lit.: Biographical notes in *Yad David;* Carmoly, E., in *Revue orientale,* vol. 2 (1842) 240-42; Graetz, H., *History of the Jews,* vol. 5 (1927) 452, 483-84, 490-91, 495, 502; Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 8.

SINZHEIM, JUDAH EPHRAIM (called Löb Sinzheim), one of the most distinguished Jewish financiers of the 18th cent., place and date of birth unknown; d. Vienna, 1744. He stemmed from a Mannheim family and was married to a granddaughter of Samuel Oppenheimer. Sinzheim not only participated in many important financial enterprises of the Austrian Empire, but was also recognized as an outstanding philanthropist and patron of Jewish scholars. One of his philanthropic acts was the transformation into an academy of the Rashi Chapel at Worms.

Lit.: Wachstein, B., *Die Inschriften des alten Judenfriedhofes in Wien,* vol. 2 (1917).

SIOUX CITY, the second largest city of Iowa with a total population of 82,364 (census of 1940). In 1943 the Jewish community of the city, which was likewise the second largest in the state, numbered approximately 2,500. Sioux City was settled about 1850 and chartered in 1857. It may have been about a decade later that the first Jews began to arrive in the pioneer community. By 1869 there were an estimated twenty-five Jewish residents. One of the first of these was Godfrey Hattenbach, an immigrant from Germany who came to Sioux City from Baltimore, Md. Pursuing several occupations, including peddling, Hattenbach came, in time, to be a business leader of the city. Even more prominent was his son-in-law, David A. Magee, a convert to Judaism who took an active interest in all Jewish affairs. He was a leader in the important meat packing industry of the region, and was elected mayor of Sioux City in 1897.

Other leaders of the early Jewish community were the meat packer Charles Wise; Julius Pappe; and the brothers Davidson, who starting as peddlers in the early 1880's, eventually founded the department store which was to become the foremost establishment of its kind in the city. David, Ben and Abe Davidson were factors not only in the Jewish community, but in the upbuilding of Sioux City as a whole. Later there arrived J. N. Krueger, Max Brodkey, Barney Baron and Abe Goodsite. The Barons established the firm of Barney Baron & Sons. J. Kaufmann, H. Levine, Abraham L. Galinsky and Sam Lipman were early members of the Jewish community.

The first venture at organization was made in 1869, when a group of Jews established a cemetery on a lot donated by Godfrey Hattenbach. In 1884 a new group formed the Mount Sinai Cemetery Association, and had the bodies buried in the old cemetery removed to the new ground. The Reform tendency was strong in this early community. In 1885 the Hebrew Ladies' Aid Society was established for the customary charitable purposes. An Orthodox cemetery was bought in 1900.

Meanwhile the Orthodox Jews, who had come into the city in ever-increasing numbers from Eastern Europe, established in 1888 the first permanent congregation in Sioux City: Adath Jeshurun. A. B. Simon was called to be the rabbi; and he, together with his congregation, was influential in the promotion of Orthodox Jewry throughout the state. It remained, however, for the Orthodox Congregation Tifereth Israel, organized in 1907, actually to build the first Jewish synagogue in Sioux City, erected on the West Side. In 1910 a third Orthodox group, Congregation Beth Abrahams, bought and remodeled a building for a synagogue. To begin with, these congregations flourished; but with time they diminished. In 1942, all three groups were being served by one spiritual leader, Rabbi S. Bolotnikov.

In 1898 the movement for a Reform synagogue culminated in the establishment of Mount Sinai Congregation, which first held services in the Masonic Temple. In 1901 the congregation began to worship in its own Temple, a remodeled structure, still in use in 1943. Eugene Mannheimer was the first rabbi (1902-05). Succeeding him were Joseph Rauch, Emanuel Sternheim, Maurice Mazure, Raphael Goldenstein (1920-21), Isadore Isaacson (1922-26), Theodore N. Lewis (1927-38), Albert S. Goldstein (1939-42) and Bernard H. Lasine.

The movement for a Conservative synagogue, strongly promoted, as in the case of the Reform Mount Sinai, by a group of women, resulted in the establishment of Shaare Zion Congregation in 1925. Two years later its synagogue was dedicated. H. R. Rabinowitz, elected its rabbi in 1925, was still serving the congregation, one of Sioux City's most active groups, in 1943. The synagogue also housed the city Talmud Torah, first established in 1902, and reorganized in 1912.

The Jews of Sioux City were active in establishing numerous other organizations in addition to their congregations and congregational schools, sisterhoods, men's groups and youth groups. The B'nai B'rith, first organized in 1904, was reorganized in 1920 and was increasingly supported by younger members of the community. The Aleph Zadik Aleph was organized in 1926. Zionist groups of the community, including a district of the Zionist Organization (founded 1905), Hadassah (1920), Junior Hadassah (1926), Business and Professional Women of Hadassah, Pioneer Women (1930), Young Judea, Mizrachi and Poale Zion were organized into the Sioux City Inter-Zionist Council. An early charitable society was the United Hebrew Charity Association, organized in 1892. Later it became the Federation of Jewish Social Service, established in 1920 and affiliated with the Community Chest of the city.

The three major Jewish organizations in the community: the Federation of Jewish Social Service, supporting the Family Care Agency, the Talmud Torah, the Jewish Community Center and the Emergency Loan Fund; the United Jewish Appeal (1929), the single fund-raising instrument for all non-local Jewish causes; and the Jewish Community Council (1928), representing every recognized Jewish group in the community, were merged in 1943 into one central community wide organization, known as the Jewish Federation.

In addition to those already mentioned, Jews active in the civic and commercial life of the city, as well as in the affairs of the Jewish community proper, included Bernard Baron, regional director of the School of Religion of the State University of Iowa; Laurance Davidson; Arthur Sanford, one of the city's prominent realtors; Sam Cohen, chairman United Jewish Appeal (1941) and prominent wholesale grocer; John Lansburg; Morey Lipshutz, L. J. Kaplan, chairman United Jewish Appeal (1940); Esack N. Grueskin, president of the Federation of Jewish Social Service; Abraham L. Galinsky, director of the Chamber of Commerce (1918-30), and active in the Red Cross; Adolph M. Davis; Edward E. Baron, general chairman of the Community Chest (1929) and special counsel to the county attorney (1936). Dr. B. Courshon, the first Jewish physician in Sioux City, became city health physician (1908). W. C. Slotsky was president of the Jewish Community Council and secretary of Associated Retailers. Dorothy Merlin was made executive director of the Jewish Community Council, United Jewish Appeal and Federation of Jewish Social Service (appointed 1937). H. R. RABINOWITZ.

Lit.: Wolfe, Jack, *A Century with Iowa Jewry* (1941).

SIPPURIM, *see* CHAPBOOKS; HASIDISM; LEGENDS; LITERATURE, HEBREW.

SIR LEON, *see* JUDAH BEN ISAAC.

SIRACH, a book of the Apocrypha; it contains fifty-one chapters, devoted to aphorisms very similar to those of *Proverbs*. Its Greek title is the equivalent of the Wisdom of (Jesus the son of) Sirach; its Latin title is Ecclesiasticus; in Hebrew it is usually known as Ben Sira. The Septuagint places Sirach together with *Wisdom of Solomon* after *Job*. It is the only book of the Apocrypha for which there is a Hebrew text extant. In 1896 Solomon Schechter found the text in two pages in the Cairo Genizah; later four manuscript fragments of the same origin (11th-12th cent.) were found; all these together made up about three-fifths of the book. They are not retranslations of the Greek into Hebrew, as a few scholars maintained, but the original text, which in the course of transmission acquired a number of corruptions. Because of its great value, it was reproduced photolithographically as *Facsimiles of the Fragments of the Book of Ecclesiasticus in Hebrew* (1901).

The Greek translation, on which the present versions in the Apocrypha are based, is very incomplete; it makes many mistakes in the rendering, is corrupt in

places and is distorted by glosses of its own, in addition to the glosses present in the Hebrew original. The manuscripts of the book seem generally to be based on an Alexandrian chain of transmission, but some of the glosses are Palestinian. The Old Syriac version, made directly from the Hebrew, is superior, but it often weakens the poetry into prose and was made from a Hebrew original corrupt in many places.

The writer of the book gives his name (50:27) as Jesus (that is, Jeshua) the son of Sirach Eleazar (in some manuscripts, the son of Eleazar). Similarly, the Hebrew manuscripts give his name as Simon ben Jeshua ben Eleazar ben Sira; Saadia (*Sefer Hagalui,* edit. Harkavy, 151) has the same, except that he gives Eliezer instead of Eleazar. The Syriac version in the London Polyglot gives his name in the title of the book as Jesus the son of Simon Asira ("the captive"; perhaps a deliberate reinterpretation of the name). The word Simon may be a later addition. The original form of the name was the Talmudic Sira, which means either "thorn" or "metal"; the addition of the ch at the end was a practice common with the Greeks to indicate that a word was indeclinable.

According to the account given in the book, the author had been a student from his youth not only of the Bible, but of many writings similar to his own. His life had become endangered as the result of a calumny (34:11 et seq.); on his flight he assembled lessons from his own experiences and those of others. He eventually was restored to honor (51:17, Hebrew) and became a sort of lay preacher. He seems to have possessed a good education, derived from the philosophical schools of the time which, as Judaism always did, were directed to establishing a proper ethics and a wise view of life. He is rather self-complacent about his own knowledge. He was certainly not a skilled interpreter of the law (Sofer), nor a priest. He seems to have lived for the most of his life in Jerusalem (50:27). The time of his life can be fixed by the following three indications. The Greek text is introduced by a prologue, written by the grandson of the author, which says that he made his translation soon after the thirty-eighth year of Euergetes; this must have been Euergetes II, and so the date of the translation can be set at 132 B.C.E. Sirach was well acquainted with the high priest Simon ben Onias, that is, Simon II, who died in 199 B.C.E., and was apparently no longer living at the time when the book was written (50:1). The book reveals nothing of the sufferings during the period just before the rise of the Maccabees (about 170 B.C.E.). Hence it may be concluded that the book was written about 190 B.C.E., which makes it the oldest book in the Apocrypha.

In the Greek text a misplacement has taken place, by which 30:25 to 33:16 and 33:17 to 36:16 have become interchanged; this must have taken place at an early period, for it is found in all the manuscripts. There is also a second prologue, which comes from the 4th or 5th cent. C.E.

The language of Sirach in the Hebrew text is classical, with many borrowings from the Bible; in vocabulary and syntax it resembles *Ecclesiastes* and other books of the same period in being somewhat close to Aramaic and Mishnaic Hebrew. Its poetry makes use of parallelism and a verse with six accents. 51:13 et seq. are the fragments of an alphabetic acrostic. Just before this the Hebrew has a thanksgiving prayer in the style of *Ps.* 136, which by its contents is a sort of predecessor of the Eighteen Benedictions, just as chap. 50 is a forerunner of the end of the Abodah. The style is rich in ideas and pictures, often intelligent and at the same time in the form of a proverb (13:1), sometimes witty and stinging (38:15). Yet it falls short of true genius in style and ideas. Many passages have a poetic touch, especially those which are not directly didactic, but this is generally superabundant (as in 50:5 et seq.). The author was no real poet, although a distinct personality.

The contents of the book, like those of *Proverbs,* are principally didactic. The ideal of the book is the pious man, that is, the man who is morally good and at the same time clever. This leads to a rather utilitarian philosophy of life, which is seen both in the advice given and the reasons that back it up (22:23; 38:17). The ideal in life is a popular combination of good fortune and supreme happiness. The main themes are love of parents and friends, the education of children, benevolence, clever and stupid words, unchaste and noble women, and above all and repeatedly, the wisdom of God, of man, and of the Torah.

Noteworthy passages in the book include: wisdom's praise of itself (chap. 24); on physicians, artisans and scholars (chaps. 38 and 39); a supplication for Israel (36:1-17); the praise of great men (chaps. 44 to 50).

The piety which Sirach preaches is somewhat weak, unheroic, and often rather prosy; it becomes somewhat more forceful in the prayer against his enemies and those of Israel and in the insistence upon self-restraint (42:1 et seq.). He takes the fulfillment of the Law for granted and never speaks of it. He mentions only two acts of ceremonial piety, prayer (39:5) and sacrifice (35), neither of which is specifically Jewish. Religion is to him an affair of the heart; his lawgivers are conscience, goodness, tact and the play of the emotions. He regards God as Father and Creator, and he is the first, apparently, to mention the "evil inclination"; he identifies piety with social ethics. He never once mentions the Messianic idea. His connection with the Jewish people is largely composed of a remembrance of its glorious past, his pride in its being chosen and granted revelations, and his hope that it will be freed from the yoke of the heathen.

Similarly, wisdom is for him first given to Israel, but destined by its nature for all humanity and for every individual. Like his book, it is neither a systematic philosophy nor a codified law, but a poetic and popular gathering together of all that is noble and reasonable, a sort of natural religion of a sound humanity, a kind of deism. Hence it can not be said that the author follows any particular school of thought. His ethical suggestions are all the more extensive and cover all human relations. They are full of fine feeling and noble humanity. They hold as the highest virtues modesty and cleverness, moderation and all types of goodness, such as gentleness, forgiveness, compassion, anticipation of the wishes of others, and love of peace.

The book is the evidence of a highly praiseworthy ethical and prophetical religiosity on the soil of contemporary Judaism. For this reason the book has been valued almost as highly as the Bible itself; in *B.K.* 92b the verse 13:14 is cited as if it had been taken from the Hagiographa, while Saadia states that the book was vocalized just as the books of the Bible were. It is often cited in Talmudic literature, and Solomon ibn Gabirol (11th cent.) makes use of it in his *Mibhar Hapeninim.* After that it disappeared from Jewish literature, because it had not been accepted into the canon. It was still used by Christianity, and in the 19th cent. it was rediscovered by Jews, given a place of honor, and retranslated from Greek into Hebrew.

SIRACH, BEN, ALPHABET OF, *see* BEN SIRACH, ALPHABET OF.

SIRMAY (SZIRMAI), ALBERT, composer, b. Budapest, 1880. His operettas, which include *Táncos huszárok* (Dancing Hussars), *Mexikói leány* (The Girl

from Mexico); *The Girl on the Film, Alexandra* and many others were widely popular in Hungary and other countries. After the first World War, Sirmay came to the United States. He arranged the music for *A Treasury of Gilbert & Sullivan* (1941) and *Songs of the Rivers of America* (1942).

SIROVICH, WILLIAM IRVING, physician and American Congressman, b. York, Pa., 1882; d. New York city, 1939. His father was the minister for whom the Rabbi Jacob Sirovich Talmud Torah on New York's lower East Side was named.

William Sirovich was brought to New York city in his childhood, and there he was educated in conditions of family poverty and by dint of much personal struggle. After receiving his medical degree from Columbia University (1906), he set up in practice. From 1911 to 1929 he was superintendent of the People's Hospital. He became identified as the champion of the underprivileged of the East Side, where he himself lived and died. He was especially known for his work in child welfare, and was made commissioner of child welfare in the city (1919).

Under Governor William Sulzer of New York he was appointed, together with the then State Senator Franklin D. Roosevelt, member of a special committee on mothers' pensions. Although he himself was unmarried, his efforts helped establish a state law for unemployment compensation, widows' pensions and care of orphans in private homes.

Sirovich, a Democrat elected from a Republican stronghold, the 14th district of the city (including the lower East Side), began to serve in the United States Congress in 1927 and, continuously reelected, served till his death. Once described as the "most versatile of congressmen," Sirovich continued his fight for social legislation, being a strong supporter of all New Deal measures. He was a leader in the fight to reform the Federal courts in New York. He headed the legislative battle to provide greater safety insurance at sea after the Morro Castle disaster in 1934. A playwright, he was a leading sponsor of the Federal Theatre Project of the Work Projects Administration. His activities in Congress occasionally bordered on the sensational, and he was often in the public eye. His feud with New York dramatic critics, started when his play *The Schemers* (castigating the critics) was produced in 1924, particularly drew public attention. Later, as chairman of the House Patents Committee, he was once more embroiled with the critics during consideration of revised copyright laws.

The funeral of Sirovich, who in 1932 received the distinguished service medal of the Columbia University Alumni Association, was witnessed in New York city by an estimated 25,000 persons. Numerous public officials were present, including Mayor Fiorello H. LaGuardia and a delegation of all the New York city members of the House of Representatives.

Lit.: American Hebrew, May 24, 1929, p. 35 et seq.

SISERA, leader of an army of Canaanites who were defeated by Barak and Deborah in the time of the Judges. Two stories, varying as to details, are given of this encounter: a prose account in *Judges* 4 and a poetic version (the Song of Deborah) in *Judges* 5. According to the latter account, which is the earlier, Sisera was a powerful ruler, who headed a federation of the kings of Canaan (5:19). He was opposed by a group of six tribes of Israel headed by Barak, and was defeated in battle largely because of an opportune storm that bogged down the Canaanite war chariots. Sisera fled on foot to the tent of Jael, the wife of Heber the Kenite. He asked for drink and she gave him milk; but as he was in the act of drinking, she struck him down and killed him with a hammer (5:25-27). In the prose narrative, however, Sisera is only the general of the army of Jabin, king of Canaan (4:2); only two tribes fight against him, and no details are given of the battle; Jael kills him, but by driving a tent-peg through his head while he is sleeping (4:21).

William I. Sirovich

The etymology of the name Sisera is doubtful; Assyrian, Egyptian and Hittite derivations have been suggested. The Jabin mentioned in the prose account may be the same as the Jabin reported to have been defeated by Joshua (*Josh.* 11); the Bible stories represent a fusion of traditions of wars with the Canaanites in the north of Palestine. The defeat of Sisera was regarded as a notable victory, and it is mentioned elsewhere in the Bible (*I Sam.* 12:9; *Ps.* 83:10).

SIVAN (a month in the Hebrew calendar), *see* CALENDAR; MONTHS.

SIYUM, a Hebrew word meaning "end," "completion," used in combination with other nouns, to denote festive occasions of a religious and scholastic nature, as follows:

SIYUM SEFER TORAH, the formal, ceremonial act of completing the writing of a Scroll of the Torah. The scribe (*sofer*) leaves the last eight verses of the Torah unwritten, and members of the family or of the group who have shared in the expense of writing the scroll, as well as invited guests, are permitted to write one letter each, preferably the initial of their names. Psalms are sung, wine and cake are served, and contributions are made to the support of the synagogue.

SIYUM HASEFER, the conclusion of the reading of one of the books of the Torah in the synagogue. The congregation rises as the last verse is read and then recites in unison: *Hazak hazak venithhazak* ("Be strong, be strong, and we shall be strengthened").

SIYUM HATORAH, the conclusion of the reading of all five books of the Torah on Simhath Torah (Tishri 23). This is celebrated in all Jewish communities by processions with the scrolls, the serving of cakes and wine, and merry-making. All the members of the congregation in Orthodox synagogues, and even the children, are called up to the reading of the Torah. Immediately afterwards, the opening verses of the Torah are read, to show that the study of the Torah should be perpetual.

SIYUM MASSECHTA, the formal completion of a tractate of the Talmud, either by an individual scholar, or by the students of a Yeshiva. In the latter case the principal reads the last few sentences of the tractate, and both principal and students repeat three times the Hadran ("We will return"), a promise to study the same tractate again. This is followed by a festive banquet (Seudath Mitzvah), which may be held on days which would otherwise be minor fast days.

SIYUM HASHAS, known also as Siyum Hagadol ("the great Siyum"), the conclusion of the entire Talmud. Since this is of comparatively rare occurrence, it is usually celebrated by a festive banquet, to which all the scholars of the community are invited; the scholar who has completed the study of the Talmud more than once is treated with great respect and reverence. Siyum Massechta and Siyum Hashas come nearest to the graduation exercises of the modern world.

SIYUM BEDABAR TOB, a principle used in the reading of the Scripture, that every passage read from the Torah or the Haftarah must end in a blessing or an uplifting verse. In cases where the last verse is an unfavorable one, the verse before it is repeated. Four books in the Bible are so treated whenever they are read: *Isaiah,* the Minor Prophets, *Lamentations* and *Ecclesiastes;* they are known as *sifre YiTHKaK,* from the initials of their Hebrew names (*Yeshaiah, Tere Asar, Kinah, Koheleth*). HERMAN SCHELLER.

Lit.: *Mekore Minhagim* (1846).

SKEPTICISM, the doctrine that true knowledge is impossible, or that all knowledge is uncertain, and the practice of destructive criticism of all forms of current belief. This form of thinking was comparatively rare among Jews. Certain questions and doubts were raised by various thinkers as to established beliefs, but these usually led to new formulations. The chief expressions of skepticism in the Bible are those found in *Job, Ecclesiastes* and in the sayings of Agur in *Proverbs* (*Prov.* 30:1-4). The all-inclusiveness of Jewish thought admitted these passages into the Bible, but in some cases attempts were made to counteract them by adding pious statements which contradicted the opinions of the original author.

During periods of contact with non-Jewish currents of thought there were occasional periods when skepticism among Jews was prevalent, though little is known about individual skeptics. Elisha ben Abuyah was said to have cast doubts upon the doctrine of divine reward and punishment, although this may be an attempt to explain his separation from Judaism. Hiwi al-Balkhi was noted for his criticism of Jewish beliefs, and Saadia and Maimonides bear witness to the presence of skeptics in their times by the care which they take to refute them. In more modern times Uriel Acosta and some of the more critical writers of the Haskalah period and after severely attacked the traditional views, although they were by no means genuine skeptics.

SKLAR, SAMUEL BARTON, research chemist and engineer, b. Lazday, Lithuania, 1897. He was educated at the University of Minnesota (B.S., 1917), at the Massachusetts Institute of Technology (1921-22), and at the Polytechnic Institute of Leipzig (D.Sc., 1925). During the first World War he served on the staff of the Minnesota National Guard (captain, 1919); subsequently he directed large research laboratories at Memphis, Tennessee, and Wilkinsburg, Pennsylvania.

Sklar invented a number of utility objects, such as variable time alarm devices and an expansion compensating device for valve actuating smokers' cabinets. He perfected several technical devices, such as the process of exterminating pests or vermin which destroy cotton.

SKLIANSKY, EFRAIM MARKOVICH, physician, b. Russia, 1892; d. United States, 1925. He became a member of the Social Democratic Labor Party in 1913, and took an active part in the revolutionary student movement of the time. After the February (1917) revolution Skliansky was chairman of the army committee of the Fifth Army in Dvinsk. The October (1917) revolution found him in Petrograd (Leningrad), actively participating in the revolutionary struggle of the city. Soon after the revolution he was made a member of the collegium of the People's Commissariat of War; he was also, from 1918 to 1924, vice-chairman of the Revolutionary Military Committee. In 1924 he was placed in charge of the Moscow Cloth Trust. In 1925, while on business in the United States, he was accidentally drowned.

Lit.: *Malaia Sovetskaia Entziklopedia,* vol. 7 (1931).

SKOSS, SOLOMON LEON, scholar and writer in medieval Hebrew and Judeo-Arabic literature, b. Chusovaya, Perm province, Russia, 1884. He was descended from a long line of scholars and rabbis on both his father's and mother's side. Skoss studied at the Yeshivas of Dubrovna and Orsha and, after coming to the United States (1907), at the University of Denver (A.B. and A.M.), the University of Pennsylvania, the Egyptian University, the School of Oriental Studies at Cairo, and Dropsie College (Ph.D.). From 1934 on he occupied the professorial chair of Arabic language and literature at the latter institution.

Skoss's work, as scholar and teacher, has been characterized by thorough and painstaking scholarship. In the field of Judeo-Arabic he ranks by the side of Israel Friedlaender and Benzion Halper in his emphasis on the necessity of strictly modern methods of editing texts and increased attention to the philological and linguistic peculiarities of the dialect used by the Arabic-speaking Karaites and Rabbinic Jews.

In addition to numerous contributions to learned periodicals and to the *Universal Jewish Encyclopedia,* Skoss published masterly editions of two important Karaite works, the *Arabic Commentary of Ali ben Suleiman on Genesis* (Philadelphia, 1928), and the *Hebrew-Arabic Dictionary of the Bible of David ben Abraham al-Fasi* (2 vols., New Haven, 1936-1942); the latter is the earliest Karaite work on the subject.

LEON NEMOY.

Lit.: *American Hebrew,* May 28, 1937, pp. 11, 14.

SKULNIK, MENASHE, actor, b. Chmelnik, Poland, 1892. His parents moved to Warsaw in 1900. He received the traditional Orthodox education in a Heder, and sang in a synagogue choir. He participated in house theatricals with other boys, later graduating into an adult troupe of wandering actors performing at house parties.

Because of his extreme youth, as compared to the other players, he was assigned to roles of impersonating women. At the age of eighteen he joined a professional Yiddish troupe. At twenty he left the then Russian Poland and migrated to Cracow, thence to Vienna, Austria. He came to the United States in 1913, and was engaged by a Philadelphia Yiddish theatre in the multiple capacity of prompter, publicity man, stage manager and actor.

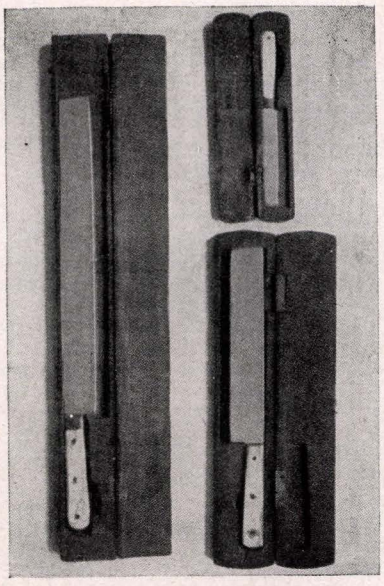
Admitted as a member to the Hebrew Actors Union in 1918, he was engaged by Jacob Ben Ami for the Jewish Art Theatre troupe at the old Garden Theatre for the season of 1919 to 1920, and promptly attracted attention as a character actor of considerable promise. He played during the following season with Rudolf Schildkraut, and then in the provinces for six years. In a frequently alternating repertoire of melodrama and operetta he was called upon to assume the role of the inevitable comedian. Utilizing the experience gained as a character actor under more artistic auspices, he gradually developed a distinct comedy style which gained favor with the audiences and established him as a leading comedian in Yiddish musical comedy. In Yiddish playhouses of New York and Brooklyn he proved exceedingly successful in the musical comedy field and never returned to the more serious character parts. However, his genuine histrionic ability lent a measure of distinction to his work as a conventional comedian.

The numerous plays in which he appeared consisted of loosely designed melodramatic vehicles into which he brought his own wit, grotesque situations and humorous comments on the contemporary scene. He was equally successful in the Yiddish theatre of Buenos Aires, Argentina, where he played several engagements as a star player with local companies.

Over a period of years Skulnik played one of the leading roles in a radio serial, "The Goldbergs," over the major networks, and participated in other American radio serials, acting a Jewish character with consumate authority.

LEON CRYSTAL.

SKUTEZKY, DÖME, painter, b. Kisgajár, Hungary, 1850; d. Banska Bystrica, Czechoslovakia, 1921. He studied at the academy of Vienna, at Munich, and principally in Italy. From 1875 to 1885 he lived at Venice. On his return he exhibited some of his Venetian genre pictures in Budapest. From 1885 on he lived until his death at Banska Bystrica (then Hungary). Continuing at first in the genre style, he painted scenes from society life. Among his canvases of this period *True Lovers, Modern Paris* and *Modern Ulysses* were purchased by Emperor Francis Joseph. Banska Bystrica, however, is a city very different from Venice; it has copper mines and foundries, and soon Skutezky was attracted by the possibilities these subjects offered.



His paintings portraying the everyday life of miners and copper workers, such as *Daily Bread* (1899) and *At Work* (small gold medal, 1905) are studies on the problem of light. His paintings were on permanent exhibit in various Hungarian galleries, as well as in those of Munich, Prague and Rome. Czechoslovakia, which called the artist her own during the last two years of his life, made an effort to acquire as many of his paintings as possible.

SLANDER (*rechiluth*). The tellings of malicious tales is strictly forbidden in the Bible (*Lev.* 19:16). The wickedness of slander is emphasized by the story of Miriam, who was punished with leprosy for spreading evil reports of her brother Moses (*Num.* 12:10), and by that of the spies, who perished by a plague because of their disheartening report about the land of Canaan (*Num.* 14:37). Speaking evil of another is denounced in the Prophets, and especially in *Psalms* and *Proverbs.*

The Talmud differentiates between *leshon hara* ("evil tongue"), or speaking what is detrimental to the character of another, and the more serious act of *motzi shem ra* ("spreading an evil name"), or spreading a report that is known to be false; the latter is doubly punished in Mosaic law (*Deut.* 22:13-19)—by corporal punishment and a fine. The admonitions against this sin run like a red thread through the Talmud; it is regarded as the greatest of all transgressions and as even more serious than the three mortal sins (*Arach.* 15b; *Yer. Peah* 15d). There are references to it in almost every tractate, and in *Arachin* several pages are devoted to it.

The effect of the malicious tongue is described as frightful; it surpasses other weapons in that it kills, not at close range but at a distance, like the arrow; the slanderer may speak in Rome and kill in Syria (*Midrash Gen.* 98:19). Slander is compared to snakebite which affects only one part of the body directly but is felt painfully by the whole body (*Yer. Peah* 16a). Death and life are in the power of the tongue (*Prov.* 18:21); that is, the tongue may kill as well as the hand (*Arach.* 15b). Listening to slander is forbidden, and both spreader and listener deserve to be thrown to the dogs.

Slander is regarded as deserving of severe punishments. One is leprosy, since the word for "leper" (*metzora*) is interpreted as *motzi shem ra,* "slanderer."

Slaughtering (Shehitah) knives commonly used

Another is diphtheria, which would choke off the slanderous speech. God deprives the world of rain because of slander (*Taan.* 7b). Even spreading gossip about another, or unduly praising him so as to incite others to slander him, is regarded as a form of slander and strictly forbidden. The customary prayer of Mar, son of Huna, "O Lord, keep my tongue from evil and my lips from speaking guile," has been incorporated into the liturgy, at the end of the Tefillah.

SLAUGHTER OF THE INNOCENTS, the murder of all children of Bethlehem under two years of age, which, according to the legend told in *Matt.* 2, is supposed to have been ordered by King Herod soon after the birth of Jesus, after he had learned that the Messianic king was born in Bethlehem. Joseph, father of Jesus, was warned by a dream vision beforehand and thus the child was saved by the flight of the family of Jesus to Egypt.

There is nothing in the historical sourcebooks about a murder of children en masse by Herod. Indeed such a deed would have been entirely superfluous since the adoration of the child Jesus by the Magi of the East, which could remain no secret in the small town, established beyond all doubt that Jesus was supposed to be the Messianic king, and the family of Jesus had already fled.

Still other features of the account point to its legendary character. The legend concerning the danger which hovered over the life of Jesus soon after his birth repeats an old, widespread motif used especially in the account of the birth of Moses. This could easily be associated with Herod, psychologically if not historically, since the latter was continually ruled by fear and mistrust on account of his illegal usurpation of the kingdom and in consequence of this had actually perpetrated a whole series of murders.

SLAUGHTERING, RITUAL (Shehitah). 1. Origin and Purpose. The ritual slaughtering of animals for food is not directly ordained in the Bible. The traditional view is that it is one of the oral regulations imparted to Moses on Mount Sinai and alluded to in the verse: "thou shalt kill of thy herd and of thy flock, which the Lord hath given thee, as I have commanded thee" (*Deut.* 12:21; *Hul.* 27a). It is generally conceded

Title page of an early (1710) description of ritual slaughtering, written by a Christian, M. Godofredus Ludovicus, in collaboration with J. Benjamin Abner

that Shehitah obtained in Israel from remote antiquity, and there is no reason to doubt that animal sacrifices offered upon the altar were dispatched by this method, although birds were slain by another procedure known as *melikah* (*Sifre Deut.* 12:21; *Lev.* 5:8).

It appears that religiously ordained methods of slaughter were observed among a number of peoples in ancient times. The Apostolic Decree forbade Christians to partake of the meat of beasts that had been "strangled" (*Acts* 15:20 and other passages). In pagan Arabia as well as among Moslems beasts were and are slaughtered by cutting the throat in a manner similar to that of Shehitah. It is not known just why special methods for ritual slaughtering were instituted. A possible explanation for the Jewish regulations is that this technique causes voluminous blood catharsis, enabling the eater of the meat to comply with the Biblical prohibition of partaking of the blood (*Gen.* 9:4; *Lev.* 3:17 and other passages).

2. The Rules of Shehitah. The rules of ritual slaughtering as drawn up by the rabbis give minute details as to manner and method. Above all, an eligible and qualified performer, a proper instrument and a correctly administered killing stroke are necessary if the meat is to be considered fit for food (Kosher).

a. The Qualifications of the Slaughterer (Shohet). The slaughterer must be a pious Jew, thoroughly versed in the laws pertaining to his task, and possessing the manual skill to execute them. He must have received a written license (*kabbalah*) from a rabbi, certifying that he has been tested and approved.

b. The Knife. The instrument used is a smooth, sharp knife, called *hallaf* (also *halluf*). Its cutting edge must be free of the slightest notch, and is considered faultless only after the Shohet has passed the fleshy tip and nail of his finger along its edge and sensed no indentation.

c. The Incision. The death-dealing cut must be made within a defined area of the frontal part of the animal's throat. Measured on the trachea, this area extends from the point where the thyroid cartilage

begins to protrude down to the point where the tip of the uppermost lobe of the lungs touches the trachea proper when inflated. The Shehitah stroke must be administered with precision, with a rapid and unhesitating to and fro motion. Five failures to execute the stroke properly are listed as follows:

1. Shehiah ("pausing"), the halting of the knife in its to and fro motion, even for a second.

2. Derasah ("pressure"), when the knife, instead of being moved lightly, cutting as it is passed back and forth, is pressed downward.

3. Haladah ("burrowing"), when the knife, instead of beginning its work at the surface and moving inward with successive movements, is first dug beneath the skin, or between the trachea and the oesophagus, and made to move toward the surface, thus slashing the organs in the reverse of the proper order. The same term is applied to cases in which the blade, though wielded correctly, is hidden.

4. Hagramah ("deviating"), when the knife moves out of the prescribed section of the throat and places the major part of the incision either above or below it.

5. Ikkur ("tearing"), when the knife, instead of severing the trachea and oesophagus cleanly, cuts them after dislodging them from their normal positions. The term is used also in cases in which the blade used is nicked.

The incision should be deep enough to sever at least a major portion of the cross-sections of both the trachea and oesophagus, but not so deep as to graze the animal's backbone. In the case of fowl, only the major portion of either the trachea or the oesophagus need be cut. Failure to comply with every requirement concerning the blade, the place of the incision and the mortal stroke makes the meat carrion (*nebelah*), as if the animal had died a natural death.

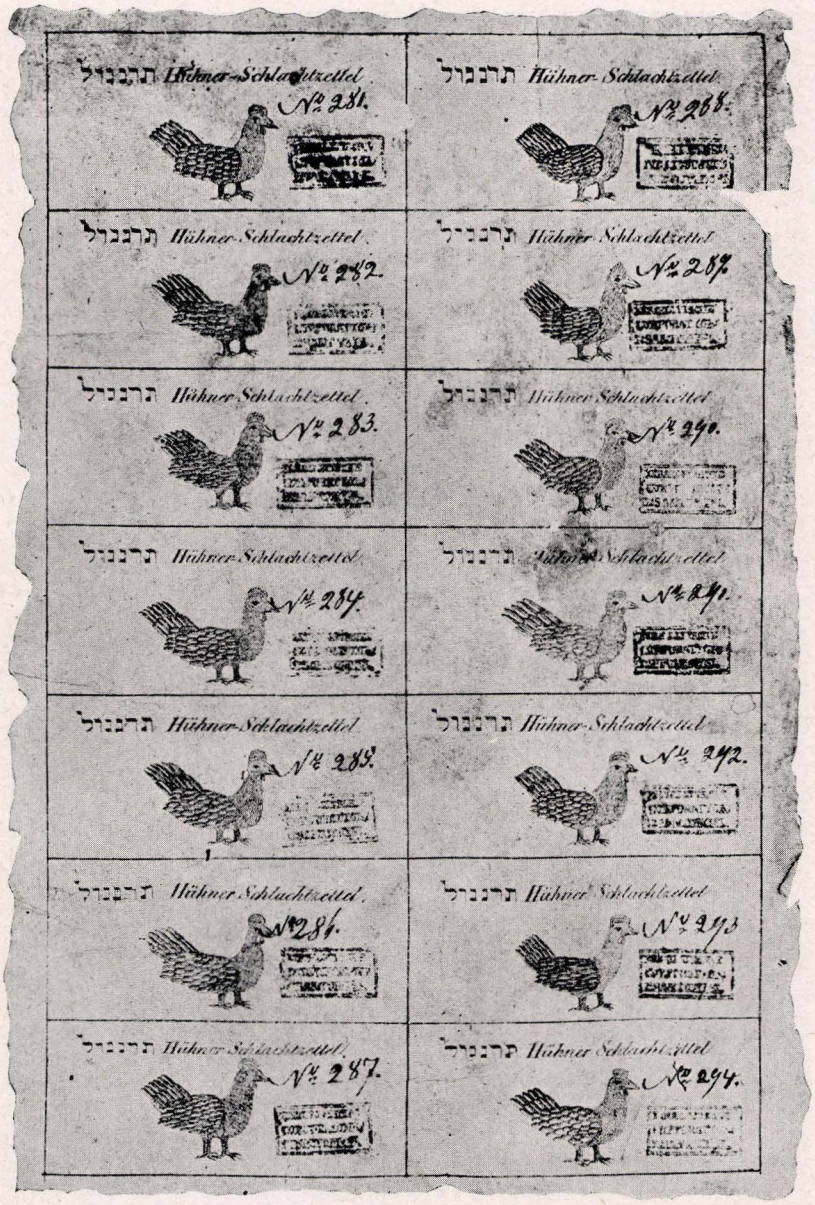
d. Post-Mortem Examination (Bedikah; popular form, Badkenen). In the case of mammals the Shohet must make a post-mortem examination of the lungs. If certain defects are found in these, it is taken to indicate that the animal, while living, had a fatal malady, and the meat is pronounced unfit for food (Terefah).

Following the slaughtering of fowl or deer, the blood which has dripped to the ground is covered with earth or ashes, and a special benediction is recited. Before slaughtering, the Shohet recites the benediction: "Praised be Thou. . . . . Who hast commanded us concerning ritual slaughtering."

3. Sale of Meat to Non-Jews. Jews are permitted to sell meat that is *nebelah* or Terefah to non-Jews, with one proviso. They may offer for sale only such forbidden meats as have come into their hands unintentionally, that is, from carcasses which they had expected to be Kosher but which, for one reason or another, turned out to be *nebelah* or Terefah. In various parts of the world and at different periods there has been objection to non-Jews' purchasing the forbidden meat of Jews. In some places, as in New York city, abattoir owners have all animals killed by Jewish ritual slaughterers; the Kosher parts are sold to Jews; those animals which are found not to be Kosher, as well as the hindquarters from which the sciatic nerve has not been removed (*porged*), are sold to non-Jews. Jews may sell Kosher meat to non-Jews.

4. Shehitah as a Factor in Jewish Social Life. The requirements of Shehitah have served to accentuate the tendency of Jews to organize themselves into self-governing communities. Jews residing in any city or neighborhood have been compelled to arrange as a group for the employment of a Shohet and for rabbinical or other controls over his work. Jewish communities, once they were in control of slaughtering operations, often proceeded to impose taxes on slaughtering. Shehitah levies were imposed in Spain as early as the 12th cent., but were not introduced into Poland until the middle of the 17th. In Czarist Russia the Kosher slaughtering tax was called *korobka*. Generally speaking, such Shehitah imposts were the chief source of income in Jewish communities in the Eastern Hemisphere (except in Western Europe) down into the 20th cent.

5. Anti-Shehitah Laws. Laws virtually forbidding the practice of Jewish ritual slaughtering have been placed on the statute books of a number of European countries. They have been motivated by anti-Semitism and based on the false assertion that the Shehitah method is inhumane. The first ban was adopted as the result of a plebiscite in the canton of Aargau in Switzerland in 1891. A popular referendum held on August 20, 1893, then made ritual slaughtering illegal in all Switzerland; the prohibition was incorporated as Article 25 in the Swiss Constitution. It reads: "It is expressly forbidden to bleed meat animals without preliminary stunning. This regulation applies to all methods of slaughtering and to all species of animals." The requirement that cattle be stunned before slaughtering is tantamount to prohibition of Shehitah, since stunning by blows upon the head (the usual method) damages the brain and its membranes and renders the animal Terefah.



The Swiss measure became the model for all subsequent anti-Shehitah legislation. In Saxony ritual slaughtering was declared illegal by decree of the Minister of the Interior on March 21, 1892; this measure was repealed in 1910. In 1911 the Russian czar abolished by decree an anti-Shehitah law adopted in Finland. Shehitah became illegal in Norway on January 1, 1930, in Bavaria (under Nazi influence) on October 1, 1930, and in Nazi Germany on May 1, 1933. In 1938 it was banned in Sweden, Hungary and Italy. During 1936 to 1939 Shehitah restrictions were adopted in Poland, and total prohibition was averted only by the outbreak of the second World War. Shehitah has been outlawed in every land overrun by Nazi arms: in Slovakia (July, 1939), Poland (October 12, 1939), Occupied France (July 27, 1940), Holland (August 4, 1940), Roumania (July 22, 1940), Bulgaria (July 16, 1941), Bessarabia and northern Bucovina (1941).

6. The Issue of Cruelty to Animals. The charge that Shehitah is inhumane has been conclusively disproved by numerous physiologists. In 1894 the Jewish Society for the Defense and Furtherance of Shehitah in Germany published *Gutachten über das jüdisch-rituelle Schlachtverfahren*. This cited 253 authorities, including fifty university professors, fourteen directors of veterinary schools and 151 medical specialists on animal pathology, all to the effect that ritual slaughtering is not pain-inflicting. The same conclusion was reached by the noted physician Isaac Dembo of St. Petersburg, who published the results of an exhaustive inquiry in *The Jewish Method of Animal Slaughter* (1894). David I. Macht has demonstrated that Shehitah-killed meat is freer of toxicity than meat from animals stunned before they are killed.

The terms of almost all existing anti-Shehitah laws do not forbid the Jewish technique as such; they simply require preliminary stunning. This requirement outlaws Shehitah only so long as stunning is effected by blows on the head. Some Jews in German and Scandinavian countries have sought to preserve the legality of Shehitah by other desensitizing procedures. Experiments have been made with electric shocks, nitrogen and such anesthetics as eunarcon. Up to 1943 the results were considered questionable from both the physiological and Orthodox Jewish points of view.

SLAVE TRADE. Up to the middle of the 19th cent. slavery was an established institution in many countries. It was common during the Middle Ages and into modern times, especially since captives of war are generally sold into slavery; it gradually disappeared in Europe with the rise of the laboring class, but continued for centuries in Asia, Africa and America. It was natural, therefore, that Jews should have participated in the trade in slaves, to which they were especially adapted in view of their knowledge of languages and their connections throughout the world. Jewish slave traders appear as early as the first centuries of the Christian Era in Europe; they were particularly active after the rise of Islam in Mohammedan countries. With the decline of Mohammedan power from the 15th cent. on they gradually withdrew from the traffic, and they took little or no part in the importation and sale of negroes in the 16th to 19th centuries.

While the rulers frequently dealt with the Jews as slave traders and even granted them charters permitting them to deal in slaves, the church was often concerned lest Christian slaves should be proselytized to Judaism. In fact, there is evidence that Jews often were willing to free their slaves if the latter would adopt Judaism. A number of church councils, therefore, beginning at least as early as the 6th cent., urged measures forbidding the Jews to own or sell slaves, or else to refrain from proselytizing. Measures were some-

The misery of slavery endured by the Israelites in ancient Egypt

times passed to that effect, but these laws were often broken by the Christians themselves, who preferred to deal with Jewish slave traders.

Lit.: Baron, S., *A Social and Religious History of the Jews,* vol. 1, pp. 321-24; Jacobs, J., in *Jewish Encyclopedia,* vol. 11, pp. 402-3; Assaf, S., in *Zion,* vol. 4 (1938-39) 91-125.

SLAVERY. The Bible uses the same word, *'ebed,* for both servant and slave, so that it is often difficult to determine which meaning is intended in a particular passage. Accordingly, when there are references to servants as sharing in the inheritance (*Gen.* 15:2-3), or as being allowed to marry the daughters of the family (*I Chron.* 2:35), the meaning may be only that of hired servants, although there are parallels to such events among Oriental peoples. There is a reference in legislation to a thief's being sold as a slave if he can not make restitution (*Ex.* 22:2); it is probable, therefore, that debtors were sold into slavery (cf. *Amos* 2:6). Other slaves were acquired as captives of war, or by purchase from traders.

The status of the "Hebrew slave," as recorded in the legislation, was a special one. In this case an Israelite who became a slave served only for a limited term of six years. If he had a family at the time, his family became slaves with him and gained freedom with him after the six years were over. But if his master gave him a wife, she and her children remained slaves, even after the father had completed his term; and if the slave desired to remain with his master, he had to go through a ceremony which made him a perpetual slave (*Ex.* 21:1-6). An Israelite might sell his daughter as a slave, and special laws were provided for her protection (*ibid.,* verses 7-11). On the other hand, there is evidence in *Jer.* 34:9-11 that these laws were frequently disobeyed.

The lot of the slaves does not seem to have been particularly hard, since the life of the times was comparatively simple. The law provided that if a master destroyed the sight of an eye of his slave, or knocked out his tooth, the latter should be given his freedom. A master who struck his slave so hard as to kill him on the spot would be punished (the penalty is not given); but otherwise the law did not interfere, out of respect for the property rights of the owner (*Ex.* 21:20-21, 26-27).

There is an entirely different passage of legislation in another part of the Torah (*Lev.* 25:39-46) which also makes a differentiation between Israelite and non-Israelite slaves, but in a different manner. Israelite slaves are not set free at the end of a six-year period of service, but en masse, at the jubilee every fifty years; but the jubilee does not apply to non-Israelite slaves. However, Biblical critics hold that this legislation is late and was never actually enforced.

The Talmudic regulations about slavery are attempts to apply the Biblical law to their own times. Apparently the laws about "Hebrew slaves" had fallen into abeyance; for a passage (*Arach.* 29a) says that the counting of jubilees had ceased before the Babylonian captivity and that from then onward there were no "Hebrew slaves." Jews who were taken into captivity by non-Jews were quickly redeemed by their families or coreligionists, and slavery for debt seems to have disappeared; the only slaves among the Jews were the so-called "Canaanite," or non-Jewish, slaves. These were humanely treated and possessed certain definite rights. In fact, the rabbis rather humorously declared that one who had bought a slave had actually bought himself a master, since he had to provide the latter with food, drink, shelter and clothing. Old slaves were often given the titles "father" or "mother," and Greek inscriptions testify to the fact that masters or mistresses, at the time of their own death, made provisions for the maintenance of their surviving slaves. Freedmen (*meshohararim*) were put in an intermediary legal class, between slaves and free Israelites.

On the other hand, there are various expressions of a sentiment belittling the character of slaves. Thus one passage says: "The more slaves, the more robbery" (*Aboth* 2:7); other statements brand them as gamblers, drunkards and idlers, and as being impudent and immoral. They were made a separate caste into which Israelites could not marry. Of course, these verdicts about slaves need not be taken literally, and there is evidence that the regulations about slaves were not always strictly heeded.

As far back as the period of the Second Temple there was an anti-slavery movement among the Jews. Two ascetic groups, the Essenes and the Therapeutae, refused to keep slaves. Others of the teachers were concerned with ameliorating the condition of slaves, or making it as easy as possible to set them free. Rabban Gamaliel was especially noted for the liberality with which he treated his slaves and for the fact that in one case at least he accorded them the same respect as that of free men. Johanan always gave a portion of the meat he ate and the wine he drank to his own slave, justifying his action with the Biblical saying, "Did not He that made me in the womb make him?" (*Job* 31:15; *Yer. B.K.* 6c). Thus slavery, although a condition of the times, was made as tolerable as possible in Jewish legislation. SIMON COHEN.

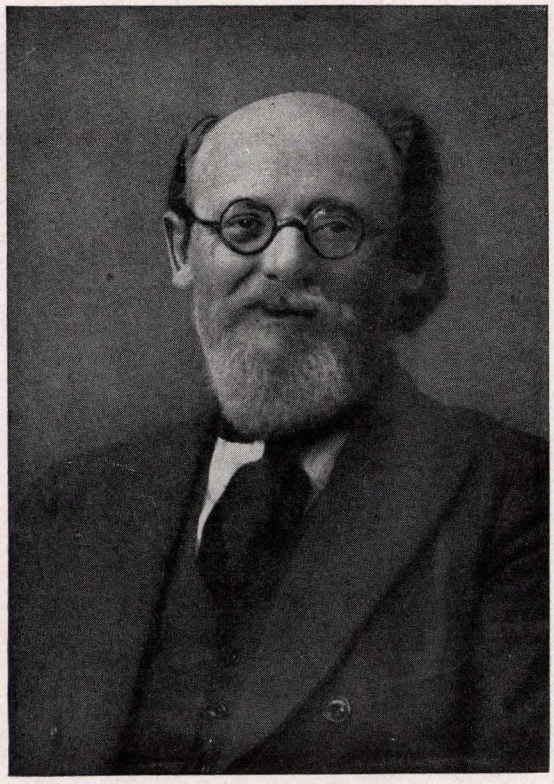
SLAWSON, JOHN, social welfare administrator, b. Russia, 1896. He came to the United States in 1903, and there received his higher education. In 1924 he was awarded the degree of doctor of philosophy by

Columbia University. After working with the New York State Board of Charities as investigator and psychologist (1921-24), he became research director of the Jewish Welfare Federation of Cleveland, Ohio (1924-28), and subsequently director of the Jewish Welfare Federation of Detroit, Mich. (1928-32). In 1932 he was appointed director of the Jewish Board of Guardians of New York city, a post he still held in 1943. Slawson, active in general and Jewish welfare work, was vice-president of the American Association of Social Workers (1930-31), chairman of the protective and correctional sections of the Welfare Council of New York city (1933-34) and in 1939 was elected president of the National Conference of Jewish Social Welfare.

In 1935 he had been appointed secretary of the crime prevention division of Governor Herbert Lehman's Conference on Crime, the Criminal and Society. In 1942 he was appointed consultant on delinquency to the Social Security Board, and conducted a demonstration, jointly sponsored by the Bureau of Public Assistance and the United States Children's Bureau, on prevention of wartime delinquency in war-affected areas. A contributor of numerous articles on Jewish and general social work, particularly in the field of delinquency, to professional publications, he served as chairman of the editorial board of the *Jewish Social Service Quarterly* (1935-39). He published *The Delinquent Boy* (1926).



SLEEP. Ordinary, physical sleep (*shenah*) was regarded as the gift of God. It is the blessing which He gives to His beloved (*Ps.* 127:2); it softens the life of toil of the laborer (*Eccl.* 5:11). On the other hand, the sluggard who loves sleep overmuch will never attain to fortune (*Prov.* 6:9-11 and frequently). Since sleep resembles death in appearance, it becomes a metaphor for death; to die is to "sleep with one's fathers" (*I Kings* 1:21), and the dead are "those who sleep in the dust" (*Dan.* 12:2).

In addition, the Bible speaks of a special form of sleep (sometimes called *tardemah,* "trance") which God sends upon man for special purposes or for revelation. Thus Eve is created out of a rib of Adam while the latter is in a deep sleep (*Gen.* 2:21); revelations in sleep are made to Abraham (*Gen.* 15), Jacob (*Gen.* 28), Pharaoh (*Gen.* 41), Solomon (*I Kings* 3), Eliphaz (*Job* 4:13) and Daniel (*Dan.* 8:18). The dreams of Jacob and Solomon, both of which take place at sacred places (Gibeon and Beth-el), recall the practice of oneiromancy, in which the worshipper sought an answer to his questions or a revelation by sleeping in the temple precincts. The Rip Van Winkle motive of an enchanted sleep, lasting for years, appears in the story of Honi Hameaggel.

SLEPIAN, JOSEPH, research engineer, b. Boston, Mass., 1891. He received the Ph.D. degree from Harvard University (1913), pursued postgraduate studies in Germany and France, and was an instructor in mathematics at Cornell University (1914-15). From 1918 on he served as an engineer for the Westinghouse Electric and Manufacturing Company, East Pittsburgh, and in 1943 he held there the position of associate director of research.

Slepian developed the auto-valve lightning arrester to protect cross country transmission lines (1922), the deion circuit interrupter (1926), the ignition mercury arc tube (1930) and several other devices used in the electric power field. He was a recipient of the John Scott Medal (1932) and of the Westinghouse Order of Merit. His writings include *Conduction of Electricity in Gases.* Slepian was elected to the National Academy of Sciences in 1941.

Henry Sliosberg

SLESINGER, DONALD, professor of law, b. New York city, 1897. He was educated at Columbia University (A.B., 1920). He served as psychologist to the Judge Baker Foundation, Boston (1920-21), then worked with the Committee for Mental Hygiene, New York (1921-23), and conducted researches under the auspices of the Laura Spelman Rockefeller Memorial Foundation (1926-27). Slesinger taught law at Yale University (assistant professor, 1929-30) and at the University of Chicago (associate professor, 1930-36). He was director of the management of training courses for the National Association of Housing Officials, Washington, D. C. (1935-36), and director of the department of education of the New York World's Fair.

SLIOSBERG, HENRY, lawyer, b. Mir, province of Minsk, 1863; d. Paris, 1937. In 1900 he became counsel to the Minister of the Interior of the Czarist government, a post he held until the revolution of 1917. During this period he was also legal advisor and attorney of the Jews in Russia in all civil and administrative cases. As such, Sliosberg was the spokesman for the Russian Jews against the numerous abuses to which Czarism subjected them. He investigated the Beilis case and much later (1934) testified at the Berne investigation of the Elders of Zion protocols, offering proof of their forgery.

For many years Sliosberg was president of the Jewish community of St. Petersburg, and during his residence in Paris, where he came after a period of imprisonment in Soviet Russia, he was head of the Russian community there. Twice, in 1925 and again in 1935, he visited the United States. Sliosberg was the editor of a law journal, *Viertnik Prava,* and toward the end of his life he wrote his memoirs in three volumes.

SLOBODKIN, LOUIS, sculptor, b. Albany, N. Y., 1903. At the age of fifteen he came to New York city, where he then studied for five years at the Beaux Arts Institute of Design. He became chiefly interested in the creation of architectural sculpture. In 1935 he was awarded, in a nation-wide competition, the commission to do a statue of the *Hawaiian Postman,* which was placed in the reception room of the Postmaster General in the Post Office Building at Washington, D. C. Later he executed panels and figures for post office buildings in New York city, in Johnstown, Pa., and in North Adams, Mass. Slobodkin was awarded second prize in a national competition for his statue *Lincoln Symbol of Unity,* for the garden court of the Federal Building at the New York World's Fair in 1939. The working model was then cast in bronze, and placed on permanent exhibit in the new building of the Department of Interior in Washington. Slobodkin headed the sculpture department of the Master Institute of the Roerich Museum in New York city (1934-37) and was head of the sculpture division of the New York City Federal Art Project (1941-42).

His pen drawing illustrations for the children's book *The Moffats,* by Eleanor Estis (1941), were designated as distinguished book illustration by the American Graphic Art Society and exhibited in the Metropolitan Museum of New York city. With Eleanor Estis, he wrote and illustrated the children's book *The Sun, The Wind and Mr. Todd* (1943).

SLOCHOWER, HARRY, educator and writer, b. Bucovina, Austria, 1900. He came to the United States in 1913. In 1928 he received his Ph.D. degree from Columbia University. The following year he was awarded a John Simon Guggenheim Memorial Foundation Fellowship. Slochower became instructor at Brooklyn College (1930) and in 1943 he was assistant professor of German. He also lectured at the University of Berlin (1929) and at the Humboldt Hochschule, Berlin (1930).

Slochower's works include *Richard Dehmel, der Mensch und der Denker* (1928); *Three Ways of Modern Man* (1937), which was voted the best book of literary criticism for the year 1937; and *Thomas Mann's Joseph Story* (1938), which Mann characterized as "the most intelligent and understanding appreciation of my work that I have come across."

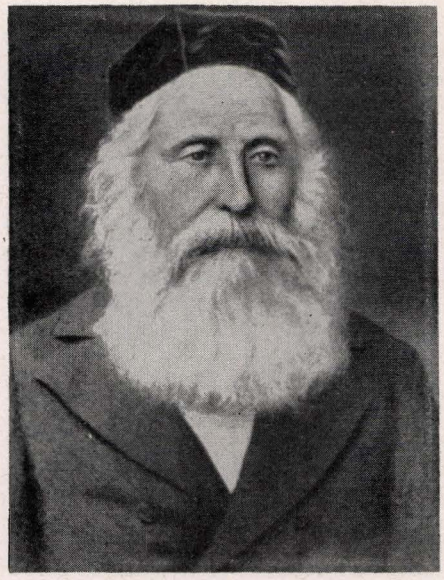
Lit.: Jewish Frontier, vol. 4 (1937), No. 10, p. 24.

SLOMANN, EMIL, educator and philologist, b. Copenhagen, Denmark, 1855; d. Copenhagen, 1904. He studied philology at the University of Copenhagen (1872), but soon became actively involved in the movement for intellectual freedom led by Georg Brandes; this led to his leaving the university without graduating. From 1874 to 1880 Slomann taught at a school in Vejle which combined realistic and classical instruction. He was also vitally interested in the workers' desire for culture, and established a workers' night school. In 1885 he founded a reform school in Copenhagen. The law of April 24, 1903, which reformed the schools of Denmark, was mainly influenced by Slomann's suggestions.

Although Slomann had not received any diploma or degree, he was generally regarded as a competent modern pedagogue who imparted to his pupils clear thinking and a good style. He advocated the reduction of Latin and Greek lessons in modern schools, but was opposed to their elimination. He was interested also in Egyptology and Danish history, publishing several treatises and lectures concerning them. He was author of a reader which became very popular in the schools of his country.

SLOMOVITZ, PHILIP, editor, b. Novogrodek, province of Minsk, Russian Poland, 1896. He was graduated from Russian schools and came to the United States in 1910, pursuing studies at the University of Michigan. Slomovitz began his newspaper career as contributor to the Bayonne, N. J., *Times* (1915). He was on the editorial staff of the *Detroit News* (1918-20), editor of the *Detroit Jewish Chronicle* (1921-24 and 1927-42), and did free-lance newspaper work, and publicity for the Zionist Organization of America (1925-26). He was editor of the *Detroit Jewish Herald* (1927), and in 1942 became editor and publisher of the *Detroit Jewish News,* first community-sponsored Jewish periodical in the country. His syndicated articles appeared in the English-Jewish press, the liberal Catholic *Commonweal,* the *Christian Century,* the *Christian Register, B'nai B'rith Magazine,* the *Jewish Daily Bulletin,* and elsewhere.

In 1918 Slomovitz organized Young Judaea in Detroit. He was president locally of the Jewish National Fund (1919-26), the Zionist Organization (1928-29), and of the American Jewish Congress (1926-42). He served on the national executive of the Zionist Organization of America, on the national board of the American Association for Jewish Education, and in the editorial advisory council of the National Conference of Christians and Jews. He was an organizer and for two years president of the Society of Occident and Orient.



SLONIM, JOEL, poet and journalist, b. Drogatzin, Russia, 1885. He was a member of the Slonimsky family to which Hayim Selig Slonimsky also belonged. Slonim was brought to the United States at the age of two, and educated first in Chicago, then in New York. His literary career began when he was fifteen, with the writing of poetry in both English and Yiddish. Although leading English critics praised his verse, Slonim ultimately chose Yiddish as his medium. His American background—he was the first Yiddish writer to have spent virtually his whole life in the United States—implemented his role as one of the founders of the school of modern Yiddish poetry in the western world. His *Yugend-Lieder* appeared in 1905, and the poetry which was published subsequently in periodicals and newspapers continued to win from Yiddish literary critics praise for its musical, imaginative and exuberant quality. His poems of New York, the first of this type in Yiddish, caught the spirit of the metropolis.

In the words of the critic Benjamin Graubart, "He is the only one who became imbued with Anglo-Saxon feeling—clear joy or clear sorrow." Morris Rosenfeld declared that Slonim had the power and energy of a Byron, while Abraham Reisen praised the power and dynamic music of his poems.

Slonim became known as a specialized writer on American political subjects; he was unofficial adviser to the city and state Democratic leaders, and many times a delegate to the state conventions. He was also secretary of the department of docks in New York city. As a journalist, he succeeded in unearthing various rackets, including public property and shipping rackets; other aspects of the New York city underworld were exposed to public opinion by Slonim through his reportorial work.

In Jewish communal life, Slonim was executive member of the Ikuf, a director of Icor, and a member of the Central Committee of the Poale Zion and of the executive of the American Jewish Congress. His work appeared in the leading Yiddish periodicals. In 1943 he was writing regularly for the *Day,* the staff of which he joined when the *Varheit,* with which he had previously been affiliated, merged with it. B. Z. GOLDBERG.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1929) cols. 650-52; *The Reflex,* June, 1928, pp. 23-29; Danzis, M., "Poet and Personality," *Jewish Spectator,* March, 1938; Graubart, Benjamin, in *Feder* (1924) 30-36.

Hayim Selig Slonimsky

SLONIMSKY, a noted Russian family of scholars, artists and scientists. HAYIM SELIG SLONIMSKY (Hasass), Hebraist, mathematician and astronomer (b. Bialystok, Poland, 1810; d. Warsaw, Poland, 1904), until his eighteenth year studied Talmud and rabbinical literature exclusively, and continued his studies in the home of his father-in-law after his marriage (1829). Here, however, he also studied foreign languages and the sciences, especially astronomy and mathematics. The first result of this application was a book on algebra, *Mosede Hochmah* (1834).

Slonimsky's ambition was to spread the knowledge of modern science in Hebrew. The appearance of Halley's comet in 1835 prompted the writing of *Kochba Dishebet,* a synopsis of the history of astronomy from Johann Kepler to his own times, with special consideration of cometary astronomy. His next work, *Toledoth Hashamayim* (1838), was a compendium of astronomy and optics, and provoked a scientific controversy about the Jewish calendar calculation between Slonimsky and Hirsch Pineles. Slonimsky wrote a study of the calendar, *Yesode Haibbur* (1852).

Leonid Z. Slonimsky

In 1844 he received the Demidoff prize of 2,500 rubles for a calculating machine he had invented. Between 1853 and 1856 he evolved an improved appliance for the steam engine and, with Aron Bernstein, a device in telegraphy which was later adapted by Lord Kelvin. In 1862 Slonimsky was made inspector of the rabbinical school at Zhitomir by the Russian government. Earlier that year he had founded the *Hatzefirah* in Warsaw, dedicated primarily to science. Slonimsky's various writings were collected as *Maamare Hochmah* (1891). Even toward the end of his life Slonimsky was still writing scientific articles for the *Hatzefirah,* whose associate editor he was until his death.

STANISLAW SLONIMSKY (b. 1855; d. 1915) was Slonimsky's eldest son, and a physician. ANTONY SLONIMSKY (b. Warsaw, 1894), the son of Stanislaw, was a well-known Polish poet who, in 1943, was living in England.

LEONID ZINOVIEVITCH SLONIMSKY (b. Zhitomir, 1850; d. Petrograd, 1918), the second son of Hayim Selig Slonimsky, was a lawyer and writer. He was educated in Kiev. His *Basic Problems in Politics* (1880) was one of the first such discussions to be published in Russia, and his analysis of Karl Marx (1898) was translated into German as well. In 1906 he published the text of the Russian Constitution, with a preface which caused the official suppression of the book. A *Political Encyclopedia* he undertook to publish did not go beyond one volume (1907). Slonimsky was a contributor to various Russian and international periodicals of his time.

JOSEF SLONIMSKY (b. 1860; d. 1933) was the third son of Hayim Selig Slonimsky. He was a linguist and the inventor of the Neo-Roman language.

Leonid Zinovievitch Slonimsky had three sons who won fame in various fields. ALEXANDER SLONIMSKY (b. Minsk, 1881) was a critic and novelist. Educated in St. Petersburg, he turned particularly to a study of Pushkin, under the influence of his uncle, S. Wengeroff. He edited the Academy edition of Pushkin's works and wrote the scenario for the Pushkin centennial film, *The Youth of the Poet* (1937). He was also the author of a historical novel, *Tchernigovtzi.*

Mikhail Leonidovich Slonimsky and Nicolas Slonimsky, sons of Leonid Zinovievitch Slonimsky, are treated separately.

SLONIMSKY, HENRY, rabbi and professor, b. province of Minsk, Russia, 1884. He was brought to the United States in 1890 and was educated in Philadelphia. After attending the University of Pennsylvania he went to Europe, studying at various German universities and receiving the Ph.D. degree from the University of Marburg (1912). Slonimsky studied also at the Hochschule für die Wissenschaft des Judentums, Berlin.

In 1914 to 1915 Slonimsky was instructor in philosophy at Columbia University, and from 1915 to 1921 at Johns Hopkins. In 1922 he joined the faculty of the Hebrew Union College in Cincinnati, remaining until 1924, when he was made professor of ethics and philosophy of religion at the Jewish Institute of Religion in New York city. He held this post in 1943.

SLONIMSKY, MIKHAIL LEONIDOVICH, writer, b. Russia, 1897. He was the son of Leonid Zinovievitch Slonimsky, and the grandson of Hayim Selig Slonimsky. In 1919 he organized in Petrograd (Leningrad) a literary society called Serapion Brothers. Through this organization a group of young writers opposed the encroachment of politics upon art, which they considered destructive of talent. In the political

atmosphere of Soviet Russia, however, this society could not thrive; it dissolved, and Slonimsky drew closer to Soviet life.

His first book of stories, *Shestoi strelkovyi* (The Sixth Rifle Battalion), came out in 1922; it described the falling apart of the czarist army early during the revolution. *Udar* (The Blow; 1924) and *Mashina Emeri* (The Emeri Machine; 1924) are books replete with adventure. Their heroes are intellectuals, strong-willed and victors in life's struggle. Their opponents were shown as weak-willed creatures and therefore losers.

Slonimsky's most mature work, according to Soviet critics, was *Lavrovy* (The Lavrovs; 1926), which depicts the downfall and stratification of a family as the result of war and revolution. This work was followed by a sequel, *Foma Kleshnev* (1929). All his works were published in three volumes in Leningrad (1933).

SLONIMSKY, NICOLAS, musicologist, conductor, and composer, b. St. Petersburg, 1894. He was the grandson of Hayim Selig Slonimsky, and the son of Leonid Zinovievitch Slonimsky (treated under the Slonimsky family). Nicolas Slonimsky studied at the St. Petersburg Conservatory.

In 1923 he came to the United States and became a faculty member of the Eastman School of Music (1923-25). Koussevitzky brought him to Boston to act as his secretary and musical assistant. In 1927, Slonimsky conducted the Harvard University orchestra and was so successful that, a year later, he founded the Boston Chamber Orchestra which featured unusual music. Slonimsky distinguished himself particularly as an interpreter of modern music, directing such programs in Havana, New York, South America, Paris, and Berlin. In 1938, he conducted a program of American and Latin American music at the Ibero-American Music Festival at Bogota, Colombia, and in 1941 he toured South America extensively as conductor and lecturer.

Slonimsky wrote extensively on music for newspapers and magazines, was the author of *Music Since 1900* (1937) and of *Panorama of Latin American Music* (1943), and assisted in the preparation of several important musical dictionaries. In 1943 he was associate editor of *New Music*. As composer he wrote pieces which were featured by Roland Hayes, Jascha Heifetz and George Copeland.

SLOSS, MARCUS CAUFFMAN, lawyer and justice, b. New York city, 1869. He was educated at Harvard University (M.A., 1893) and at Harvard Law School (LL.B. 1893). He entered the practice of law in San Francisco, becoming associated with the firm of Chickering, Thomas and Gregory, which later became Chickering, Thomas, Gregory, Gerstle and Sloss. In 1900 he was elected judge of the superior court for the city and county of San Francisco, following which, in 1906, he was appointed an associate justice of the Supreme Court of California to fill a vacancy caused by death. Having filled this post for a term of twelve years, he was elected to it in 1918, but resigned in 1919 to resume the private practice of law.

Sloss was active in endeavors philanthropic and civic, Jewish and general. He was president of the Jewish National Welfare Fund of San Francisco and of the Pacific Hebrew Orphan Asylum and Home Society; a member of the Board of Trustees of Leland Stanford Junior University and a trustee of the San Francisco Public Library. He served on the American Jewish Joint Distribution Committee and on the San Francisco Survey Committee and was also active in the San Francisco Community Chest.

HATTIE HECHT SLOSS, communal worker (b. Boston, Massachusetts, 1874), was the wife of Marcus Cauffman Sloss. She was educated in private schools and received special instruction from faculty members of Harvard University. She was the founder and first president of the San Francisco section of the Council of Jewish Women and a founder and guiding spirit in the Community Chest of San Francisco. From 1919 to 1924 she was a member of the California State Board of Charities. She was also a director of Congregation Emanu-El of San Francisco.

Nicolas Slonimsky

Hattie H. Sloss was instrumental in the establishment and continuance of the San Francisco Symphony Orchestra and the San Francisco Opera Association. She was literary director of the Browning Society and compiled *Certain Poets of Importance*, an anthology of Victorian verse (1929). In 1942, Mills College awarded her the honorary degree of Master of Arts. IRVING F. REICHERT.

SLOT, GERALD MAURICE JOSEPH, physician, b. Johannesburg, South Africa. He was educated at St. John's College, Oxford, and at the University of London (M.D.) and became connected with several British hospitals. Slot was an editor of the *Medico-Legal Journal and Criminological Review*. He published several works on the treatment of rheumatism and sciatica, on fume diseases and heart diseases, and on medico-legal topics. He was a Chadwick lecturer in 1930.

SLOUSCHZ, NAHUM, philologist, orientalist and traveler, b. Odessa, Russia, 1872. He received his rabbinical education from his father, Rabbi David Solomon Slouschz, and in the late 1880's was co-founder of the Odessa Hebrew society Safah Berurah.

Nahum Slouschz visited Palestine on two occasions, the first time in 1891 to 1892, when, under the auspices of the Odessa Chovevei Zion society, he made an unsuccessful attempt to found an agricultural colony in the Holy Land, and the second time in 1896; on the latter occasion he first traveled through Lithuania and Egypt, later writing works dealing with his journeys in these two countries.

Slouschz studied at the University of Geneva, Switzerland, from 1898 to 1899. In the latter year he went to Paris, and studied oriental languages and literature at the Sorbonne from 1899 to 1904, being a pupil of Julius Oppert and Joseph Halévy. He received the Ph.D. degree

from the Sorbonne in 1904, and in that same year became lecturer on modern Hebrew at that institution, serving until 1919, when he went to Palestine, settling in Jerusalem. During his student days he supported himself as the Paris correspondent of several famous Hebrew periodicals, notably *Hamelitz and Hatzefirah,* and from 1903 to 1918 he taught also at the oriental school for teachers in Paris.

During the first two decades of the 20th cent. Slouschz devoted a great deal of time to travels and studies in North Africa, particularly for researches on the history and antiquity of the Jews in the various countries of North Africa, and on the vestiges of Phoenician civilization in these lands. His most important journeys to these regions were made in the period from 1906 to 1914, and included Algeria, Morocco, Tunisia and Tripoli; he made several trips to the Atlas Mountains of Algeria. His report on a large Jewish tribe which lived in the regions of Morocco was published in *Unser Leben* (1909). While in Morocco he taught for some time at the academy of Rabat; later, in appreciation of his educational and archeological services in behalf of Morocco, he was awarded an honorary captaincy in the Sultan's Legion of Morocco. From 1908 on Slouschz headed several expeditions of exploration to Africa under the auspices of various French scientific institutes. During the first World War he visited the United States, serving as editor of the *Jewish Morning Journal,* and teaching for a time in the Yeshiva Rabbi Isaac Elchanan in New York city. In 1920, shortly after the end of the War, he made archeological excavations in Tiberias, Palestine, and in Jerusalem. In both cities he unearthed numerous objects of value for the study of the life and history of the Jews of the ancient period, and at Hamath he uncovered an ancient Hebrew synagogue.

From his early youth Slouschz was an ardent Zionist, a disciple of Theodor Herzl and affiliated with the Chovevei Zion movement, although he was, for a time, a Territorialist associated with Israel Zangwill. After the organization of the political Zionist movement he became an active and organizing member of the Odessa Palestine Committee, aiding in the establishing of Zionist groups in Odessa, in other cities of southern Russia, and in several other countries; he was a co-founder of the Zionist Federation of Switzerland. He served as delegate to six Zionist congresses, from the second to the seventh, and acted also as correspondent at several of them. In 1901 he wrote a Hebrew work on the fourth Zionist Congress, *Hakongres Hatziyyoni Harebii.*

Slouschz was a director of the Palestine Jewish Exploration Society, and edited its collections. He was co-editor of the *Corpus inscriptionum semiticarum* (Paris, 1881-1935), as well as of the *Revue du monde musulman.* He wrote many scientific articles for various French and Hebrew periodicals. As a result of his visits to and his interest in the various Marrano Jewish communities of Portugal, to which he devoted his Hebrew work *Haanusim Beportugal* (1934), he was made an honorary member of several of these communities. In 1942 he was the winner of the Bialik award for that year, for his research work in the scientific field.

Slouschz wrote many works in Hebrew and French, several of which were translated into English, on Jewish history and literature, travel and archeology. He translated two works by Paolo Montegazza from Italian into Hebrew, as well as individual novels from the French by Emile Zola (*Kobetz Sippurim,* Warsaw, 1899), Gustave Flaubert (*Salammbo*) and Guy de Maupassant (*Kethabim Nibharim,* 7 vols., 1904-5, containing selections from Maupassant's works and a biographical sketch by Slouschz). His other works include: *Massa Belitah* (1897); *Keneseth Hagedolah* (1898); *Emil Zola, Hayyav Usefarav* (1900); *Massa Bemitzrayim* (1902); *La renaissance de la littérature hébraïque* (1902, treating the period from 1743 to 1885; English trans., Henrietta Szold, *The Renascence of Hebrew Literature,* Philadelphia, 1909); *Koroth Hasifruth Haibrith Hahadashah* (Hebrew and French, 1903 and 1905; a supplement and sequel to *La renaissance de la littérature hébraïque*); *Hébréophéniciens et Judéo-berbères* (1908); *La poésie lyrique hébraïque contemporaine* (Paris, 1911; treating the period from 1882 to 1910); *Beiyye Hayam* (1917); *Travels in North Africa* (Philadelphia, 1927; this is included in, and forms part 1 of vol 1, of his *Sefer Hamassaoth,* under the title of *Massaai Beeretz Lub* [Travels in Libya]; Tel-Aviv, 1938); *Poésies hébraïques de Don Jehuda Abrabanel* (*Messer Leon Ebreo*) (1928); *Dahiyah Kahinah* (1934; on the 7th cent. princess and prophetess of the Djarwa, a Jewish tribe of Berbers who lived in the Atlas Mountains of Northern Africa, the modern Algeria). His thesaurus of Phoenician inscriptions, containing eleven maps and tables, was published by the Bialik Foundation at Tel-Aviv in 1942, under the title of *Otzar Hakethoboth Hafenikiyyoth.*

Nahum Slouschz

SLOVAKIA, *see* CZECHOSLOVAKIA.

SLUTSKAYA, VERA BRONISLAVOVNA (original name Berta Klementevna), revolutionary, b. Russia, 1874; d. in battle in Russia, 1917. She took part in the underground movement from early youth. She aided in the 1905 revolution at Minsk as a member of the Social Democratic Labor Party.

In 1907 she was sent to London by her party as a delegate to its Fifth Congress. Between 1909 and 1912 she lived abroad, and upon her return to Russia engaged in revolutionary work in St. Petersburg, but in 1913 she was arrested and sent into exile.

The February (1917) Revolution set her free and she returned to St. Petersburg, then became a member of the Bolshevik Party Committee. She worked as a women's organizer and also actually fought in battle against the troops of Kerensky in the October (Bolshevik) Revolution. She was killed in battle. The town of Pavlovsk was renamed Slutsk in her honor.

SMALLENS, ALEXANDER, conductor, b. St. Petersburg, 1889. He came to the United States as a child, and studied in the public schools, the College of the City of New York, and the Institute of Musical Art.

His music study was completed at the Paris Conservatory. In 1911 Smallens served as assistant conductor of the Boston Opera Company. Numerous engagements followed, with Anna Pavlova (on tour in South and Central America), the

Century Opera Company, and the Teatro Colon in Buenos Aires. He was the first North American conductor to direct performances at the Teatro Colon, and at the National Theatre in Havana.

In 1919 Smallens was appointed principal conductor of the Chicago Opera Company, remaining there for four years. During this period he served as a guest conductor at leading opera houses in Berlin and Madrid, once again being the first American ever called upon to conduct in these world-famous opera houses. In 1924 he was music director of the Philadelphia Civic Opera Company, and in 1934 he conducted the opera season launched by the Philadelphia Orchestra. From 1934 on he conducted all the opera performances held at the Lewisohn Stadium, as well as numerous operatic and orchestral performances throughout the country. Smallens was responsible for many important American and world premières, including Virgil Thomson's *Four Saints in Three Acts,* George Gershwin's *Porgy and Bess,* Prokofieff's *The Love of Three Oranges,* and Richard Strauss' *Feuersnot* and *Ariadne auf Naxos.*

Lit.: Ewen, David, *Living Musicians* (1940).

SMILANSKY, MOSHE (MOSES; pseudonym, Havagah Musa), Hebrew novelist, editor, and Zionist leader, b. Talpino, a village in the province of Kiev, Russia, 1874. He was the son of Shemaiah Smilansky and the brother of Meir Smilansky.

Moshe Smilansky received the usual traditional Jewish education in the Heder. In 1890 he emigrated to Palestine, becoming a farm laborer first at Rishon Le Zion and then at Hedera. Thereafter he devoted his entire life and energy to the Zionist cause, becoming one of the foremost Zionist leaders of the 20th cent., residing continuously in the Holy Land except for a period (1909-11) when he returned to Russia. In 1893 Smilansky became an owner of vineyards and orange groves at Rehovoth, where he still resided in 1943. He was one of the builders of that colony. In 1900 he helped to organize the Histadruth Hamoshaboth (federation of Palestinian colonies), and during the entire period of the first World War was one of its directors. In 1900 he was a member of the delegation sent by the Histadruth to the Odessa conference and to Baron Edmond de Rothschild, in Paris. He was sent as the Palestinian delegate to the Seventh Zionist Congress held at Basel, Switzerland, in 1905.

Smilansky wrote his first publicistic and literary articles for the *Hatzefirah* in 1898, and several years thereafter contributed also to the noted Hebrew periodical *Hashiloah.* Thereafter he wrote regularly for Hebrew periodicals in Palestine and other lands. In 1906 he wrote his first stories, dealing with the life of the Arab and Jewish settlers in the Holy Land; they were read eagerly because of their freshness of content and diction. In 1907 he was co-founder of the magazine *Haomer.* He was the first modern Hebrew writer to give expression to the life of the new Jewish settlers in Palestine and to depict the way in which the Arabs lived. His Arab stories are for the most part romantic and exotic in nature, but he wrote also realistic stories and novels. The style of his stories is both Biblical and popular.

In 1918 Smilansky was a member of the committee formed to organize the Jewish Legion in Palestine, and he himself became a legionnaire. After the first World War he was active in the redemption of Palestinian soil, and founded the Hebrath Noteim Anglo-Palestina (Anglo-Palestine planters' organization) and the Hebrath Yehudah Lekinyan (Jewish organization for the acquisition [of land in Palestine]). In 1929 he became co-founder and co-editor of *Bustenai,* a Hebrew weekly published by the Hithahduth Haikkarim (Palestine Farmers' Federation), whose president Smilansky later became; in 1943 he held the position of co-editor of the weekly and president of the federation, having been reelected to the latter post in 1940 with the title of president of the New Central Committee of the Palestine Farmers' Federation.

As a publicist from 1898 on, Smilansky dealt mainly with problems of settlement in Palestine, being regarded as one of the greatest authorities on the land problem in the Holy Land. In April, 1940, at a conference of Zionist leaders, Smilansky declared that, despite the recent land-purchasing restrictions issued by the Palestine government, there still remained in Palestine an area of approximately 1,500,000 dunams (345,000 acres) of land upon which some 60,000 families could be settled, and that with adequate financial resources Palestine could absorb about 1,500,000 persons. From March to May, 1940, he was in the United States, on a lecture tour under the auspices of the Jewish National Fund of America. In 1934, on the occasion of his sixtieth birthday, the Jewish colonists of Benyamina founded a colony, Kefar Mosheh, in his honor, and the British government conferred upon him the honorary M.B.E. degree.

Smilansky's works include: *Toledoth Ahabah Ahath* (A Love Story; 1911); *Bene Arab* (Children of Arabia; 1911 and 1927); *Hederah* (1930; English trans., Lotta Levensohn); *Kithebe M. Smilansky; Zichronoth* (Memoirs; 3 parts); *Kithebe M. Smilansky* (Works of M. Smilansky; a jubilee edition in 12 vols., published by the Palestine Farmers' Federation on the occasion of his sixtieth birthday, 1934 et seq.; vols. 11 and 12, Tel-Aviv, 1937); *Al Hof Hayarkon* (Tel-Aviv, 1936); *Perakim Betholedoth Hayishub,* on the history of Jewish settlement in Palestine from 1878 to 1902 (2 vols., Tel-Aviv, 1938-39; it contains reminiscences of the author). His *Palestine Caravan* was translated into English by I. M. Lask (London, 1935).

ABRAHAM I. SHINEDLING.

SMITH, SIR ARCHIBALD LEVIN, jurist, b. Salt-Hill near Chichester, England, 1836; d. Aberlour, Morayshire, Scotland, 1901. He was the son of Francis Smith, and grandson of Zadik Levin. He was educated at Eton and Trinity College, Cambridge (B.A., 1858). He was called to the Bar in 1860 and named attorney-general (1879). Smith was generally esteemed for his force of character, solid and sure judgment, and courage. In 1881 he was appointed special commissioner to probe allegations published by the *London Times* affecting C. S. Parnell and other Irish nationalists.

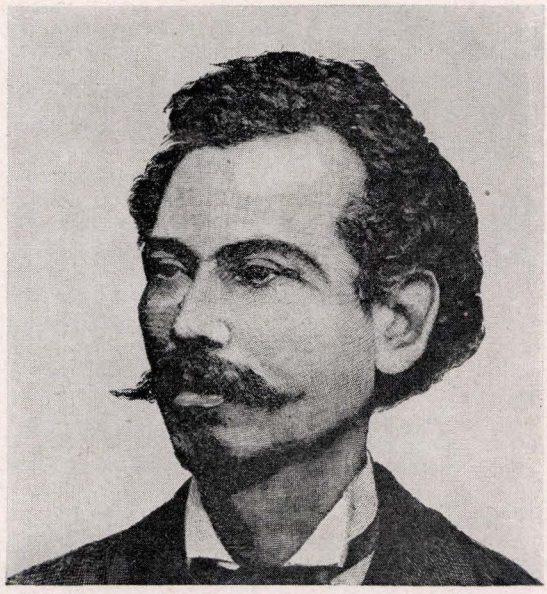
In 1883 Smith became judge of the Queens Bench Division, and was knighted. In 1897 he was promoted to the Court of Appeals, and became Master of the Rolls (1900). He resigned in 1901, three months after his wife was drowned, and a few days before he died.

Previously Smith was devoted to sports. He was fond of shooting and fishing, and in his youth (1857-1859) he rowed on the university eight in the Oxford and Cambridge boat races. Smith was the most popular English judge of his time. There was general public approval whenever the government promoted Smith to a higher post.

SMITH, ISRAEL (ISSY), first Jew to win the Victoria Cross in the first World War, b. London, 1886; d. Melbourne, Australia, 1940. In April, 1915, while serving as acting corporal in the 1st Battalion of the Manchester Regiment, on the battlefield near Ypres, Smith voluntarily moved a considerable distance toward the enemy lines and succeeded in bringing back a severely wounded man, through 250 yards of heavy fire. Later he aided in bringing other wounded men back to the British lines. Smith was subsequently made

a sergeant and awarded the Victoria Cross, being one of the five Jews to win this honor during the first World War. In 1928 he went to Melbourne, Australia, as representative of British Imperial Pictures, and lived there until his death.

SMITH, JACOB GETLAR, painter, b. New York city, 1898. He studied at the National Academy of Design (1919-21) and abroad, held a Guggenheim Fellowship in painting (1929), and received the Frank G. Logan Prize from the Art Institute of Chicago (1930). His works were shown at Carnegie Institute, Pittsburgh; the Art Institute, Chicago; the Whitney Museum of American Art, New York city (which owns his *Approaching Storm* and *Self Portrait*), and at several international exhibitions. He painted the murals for the United States Post Offices at Nyack, New York (1937), and Salisbury, Maryland. *The Snow Shovelers,* owned by the United States government, was placed in the Department of the Interior, Washington, D. C.



SMITH, MOSES, music critic and executive, b. Chelsea, Mass., 1901. He was graduated from Harvard College and Harvard Law School. In 1924, he became the music critic of the *Boston American,* and in 1934 he left this position to become the critic on the *Boston Transcript.* From 1934 to 1938 he served also as a member of the faculty of the Malkin Conservatory of Music. In 1939, he resigned from newspaper work to become the art director of Columbia Recordings.

SMITH, SARA B., writer, b. Hungary, 1888. She was taken to Budapest when a child, and brought to the United States at the age of fifteen. In 1908 she made her debut as a Yiddish writer, with short stories published in the *Forward.* The same year she became a reporter for the *Morning Journal,* the first woman to engage in Yiddish journalism in New York city. Mrs. Smith joined the staff of the *Day* at the establishment of the paper in 1918 and was a member of its staff in 1943. Her reportorial work, covering scenes in various courts and other human interest problems, made her a pioneer in that field of journalism. Later she published numerous fiction serials.

Some of Mrs. Smith's newspaper stories were reprinted in Yiddish newspapers in other countries, and she wrote also in English. Among her books were a collection of court room scenes and a novel, *Di Froi in Kaiten* (1919).

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1929), cols. 661-62.

SMOLAR, BER (BORIS), editor-in-chief of the Jewish Telegraphic Agency, b. Rovno, the Ukraine, Russia, 1897. He came to the United States in 1919. A graduate of the Haven School, Chicago (1920), he studied journalism at Northwestern University, Chicago, and worked on the editorial staff of the Chicago *Daily Forward* until 1924, when he joined the Jewish Telegraphic Agency (JTA). Subsequently he became chief European correspondent for the JTA, covering developments in every country of Europe. His dispatches to the JTA from the various capitals of Europe were for many years featured in the general press as well as in Yiddish and Anglo-Jewish newspapers. His Moscow reports in 1930 led directly to the amelioration of the position of the declassed Jews in Soviet Russia, and resulted in the dissolution of the Yevsekzia, the Jewish section of the Communist Party. In 1930, when he was assigned to cover the pogroms in Roumania, his dispatches resulted in the resignation of the notorious anti-Semite Alexander Voyda-Voivod as minister of the interior.

Peretz Smolenskin

Assigned to Berlin in 1932, just before the Nazis came to power, Smolar was among the first correspondents to predict Hitler's accession and to warn of its grave menace to the German Jews. Throughout the early days of the Nazi regime he remained at his post at great personal risk, constantly harried by the Gestapo, fearlessly reporting all the news affecting Germany's persecuted Jews. During his Berlin assignment he brought solace and active aid to the German Jewish leaders, who knew him as the sole remaining link between German Jewry and the rest of the world. The effectiveness of his work in Germany was eloquently attested to by the fact that the Nazis found it necessary to expel him in March, 1937, for "endangering the interests of the Reich" with his comprehensive reports on the disintegrating Jewish position.

Smolar was author of several books published in Yiddish and Hebrew, including: *Drei Prinzen* (Odessa); *The Witch* (Warsaw); *Die Lebedige Arithmetic* (Warsaw); *Jewish Mother Goose* (Berlin); *The Kiddies' Corner* (New York).

SMOLENSKIN, PERETZ, Hebrew novelist and journalist, b. Monastyrstchina, province of Mohilev, Russia, 1842; d. Meran, Austria, 1885. His life was a succession of privation, misfortune, homelessness, hardship and sickness.

As a child he saw his mother burdened with the care of the family while his father was away from home struggling for a livelihood or fleeing false accusers. He witnessed the "snatching" of his oldest brother for military service, in accordance with the Cantonist system, never to be heard from again. He lost his father at the age of ten, and the next year he went to study at the Yeshiva of Shklov, where he lived on the daily rations of local residents, according to the custom of the time.

Under his brother's influence he became interested in enlightenment (Haskalah), and began studying Russian and reading secular books. Because of his persecution by fanatical students he fled to Liubavich, where he stayed for some time among the Hasidim, and thence moved to Vitebsk and later to Mohilev. During this time he supported himself by singing in choirs and preaching in various synagogues, and continued to increase his general knowledge of literature. At the age of twenty he wandered to Odessa, where he spent five years studying music and languages and teaching Hebrew for a living. During his stay in Odessa he began his literary career by publishing articles in Alexander Zederbaum's *Hamelitz,* and later published his first

novel, *Hagemul* (The Reward; Odessa, 1867; an adaptation of Leo Herzberg Frankel's *Polnische Juden,* on the life of the Jews of Warsaw during the Polish rebellion of 1863).

In 1867 Smolenskin left Odessa and traveled for a year in Bohemia and Germany. He finally settled in Vienna, where he intended to enter the university. He secured a position as proofreader in a printing house, gave up the hope of a formal education, and with the aid of Solomon Rubin founded the monthly *Hashahar* (The Dawn), which became the most militant platform of the late Haskalah and early nationalist periods of Hebrew literature. It attracted the leading poets, novelists, thinkers and publicists of the age, and wielded a powerful influence upon Jewish youth of Eastern and Western Europe alike. For over fifteen years (1868-85, with short interruptions) Smolenskin published, edited, managed and wrote for *Hashahar,* which activity established him as one of the foremost literary figures of his day. When he was married in 1875 he accepted the management of the printing house in order to meet his added obligations. His literary activities never brought him any financial profit, and he was compelled to undertake two campaign journeys to Russia and elsewhere to secure funds for the publication of the magazine which he maintained until shortly before his death. In 1878 he published the weekly magazine *Hamabbit* (The Spectator), which lasted for only nine months.

In addition to his labors in the print shop and his literary activities as author and editor, he devoted much effort to public affairs. In 1874 he was sent by the Alliance Israélite Universelle to Roumania to make a study of the conditions of the pogromed Jewry of that country. With the rise of the Zionist Movement in the 1880's he became one of its leaders, organized several Zionist youth societies in Vienna, and negotiated with Sir Laurence Oliphant to intercede with European governments on behalf of Jewish settlement in Palestine. His health finally gave way under the strain. In 1883 he was stricken with pulmonary tuberculosis, but continued with his daily tasks until he was ordered by his physician to go for a rest to Meran. After four months of pain, which did not deter him from his work, he died at his desk at the age of forty-three.

His first original novel, written during his stay in Odessa, was *Simhath Hanef* (The Joy of the Wicked; Vienna, 1872). It is the story of a young son of a rabbi who deserts his wife and escapes to another city, where he tries to marry the sweetheart of his friend and benefactor, but his intent is foiled by the appearance on the scene of his deserted wife. He commits suicide and his friend marries the girl. The book abounds in lengthy discussions among the characters concerning love and passion, literature, philosophy and life. This is a common feature in all of Smolenskin's novels. Aside from its obvious moral, that the joy of the wicked is short-lived, another of the author's recurrent themes is developed in this novel—that it is not sufficient for the Jew to acquire general culture; he must also possess the knowledge and love of his own heritage.

In Odessa he also began writing his magnum opus, *Hatoeh Bedareche Hahayim* (The Wanderer in Life's Ways; 4 vols., Vienna, 1876). This is the story of the adventures and observations of an orphan, who from early childhood is left to his fate in a hostile world, wanders through all the Jewish habitations and comes into contact with all classes, sects and types of East and West European Jewry, until he meets his end defending his people in a Russian pogrom. This book, whose autobiographical character is quite apparent, is a comprehensive panorama of Jewish life in the 19th cent., an exposé particularly of its seamy side: the atrophied world of the small-town communities of the Russian Pale, the niggardliness and uninspiring atmosphere of the Heder and the synagogue, the demoralized existence of the beggar bands, the wicked cunning of the Hasidim and the blind fanaticism of their opponents, the Mithnaggedim, the humiliating life of the Yeshiva students and their single-track learning, the inhumanity of the Cantonist system, the barrenness and disloyalty of the emancipated West European Jewry, the disgrace of Jewish missionaries in England, and the horror of the pogroms in Russia. It is a dreary account of all the sins of the age, written "for the purpose of warning the wayfarers in life's paths of the traps which are strewn about their course, that they may guard their feet from stumbling."

This motif—of the adventurous and searching individual at odds with his environment—is another predominant motif in Smolenskin's works. It is the central theme of his shorter and more realistic novel *Keburath Hamor* (A Donkey's Burial; Vienna, 1874). This is the story of a talented and light-hearted young man whose love of life and adventurous spirit get him into constant conflict with the rigid conventions of the Russian Pale, and bring down upon him the wrath of its ruthlessly fanatical leaders who do not shrink from conspiring to murder him. Here is the familiar protest of the Haskalah against the benighted, tradition-bound Judaism of the ghetto. His later novels deal with the emancipated Jews of Western Europe who had emerged from the confines of their religious environment but have not found their way in the European world. *Gaon Vasheber* (Pride and Fall; Vienna, 1875) has as its background the collapse of the Viennese stock exchange of 1873. It is actually a loosely connected series of stories about various types of detached and estranged Jews who are tossed about the trackless sea of European capitalism.

Gemul Yesharim (The Reward of the Righteous; 3 vols., Vienna, 1876) is an elaboration on the theme of his first effort, *Hagemul.* It depicts the spiritual confusion of the Jewish intellectual who devotes himself to the interests of the non-Jewish world and is rewarded with derision, persecution and hate. This mental conflict of the enlightened Jews is also the theme of his last long novel, *Hayerushah* (The Heritage; 3 vols., Vienna, 1878-84). It is a parallel to *Hatoeh,* laid chiefly among the emancipated communities, and designed to show the ineffectiveness of enlightenment in bringing happiness to the Jew. His last novel, *Nekam Berith* (The Revenge of the Covenant; Vienna, 1884), was written in the wake of the pogroms of the 1880's, and describes the inner conflict of the assimilated Jewish youth in the face of the atrocities and the psychological process which led many of them to Zionism. It is thus a fitting epilogue to all his novels—the emancipated Jew returns to his people. Smolenskin wrote also many short stories, most of which appeared in *Hamabbit.*

While his works of fiction reflect on the whole the views of the Haskalah, his critical and analytical writings are devoted chiefly to a critique of that movement which led to assimilation. Espousing from the outset the national concept of Judaism, he decried the glorification of cosmopolitanism on the part of Jewish intellectuals, and advocated an intensification of Jewish consciousness. He preached auto-emancipation many years before Pinsker published his famous manifesto. In his first extensive article, *Eben Yisrael* (The Stone

Iakov Vladimirovich Smushkevich

of Israel; 1869), he contends that the causes of Jew-hatred are not merely religious, cultural and economic but chiefly political and social—the abnormal position of the Jew among the nations. He therefore called for the strengthening of Jewish ties and deepening of Jewish loyalties as the best measure against the threat of anti-Semitism.

In his *Eth Lataath* (A Time for Planting; this is one of his most important essays, published serially over a period of years in *Hashahar,* vols. 6, 8 and 9) he takes issue with the leading protagonists of Enlightenment and Reform who viewed Judaism as a religious tradition rather than as a national culture. In it he attacks both the German school of religious Reform and the Russian Jewish nihilists and socialists who became estranged from their people and mocked its sanctities, and outlines a program of Jewish revival in the Diaspora, emphasizing intelligent and intensive Hebrew education, the fostering of the hope of restoration and faith in God and the Torah. His outstanding essay, *Am Olam* (The Eternal People; 1873), is a comprehensive analysis of his views of Judaism, Jewish history and Jewish survival. Its main object is to expose the futility of the religious reforms which occupied the minds of the West European Jewish leaders at the time. His objection to them comes not from a tendency toward conservatism but from the conviction that such reforms should come about in the natural process of adjustment, as the result of a revival of the national spirit of Israel. It is this national solidarity, this hope of redemption and the spiritual aspect of its history, that make Israel an eternal people. In this, as in his many other publicistic writings, the nationalism which he preaches is of a spiritual rather than a territorial kind. Not until after the pogroms of 1881 did he write clearly Zionist articles. Smolenskin published also many articles of literary criticism in which he showed analytical acumen, ingenuity and a wide knowledge of world literature.

Most of his novels and essays appeared first in *Hashahar* and *Hamabbit.* His collected works of fiction were published by M. Katzenelbogen (Vilna, 1901). In this edition there appeared also one hundred letters of Smolenskin. The latest collection of his essays was published in Jerusalem in four volumes (1925-26).

Smolenskin was a writer of great energy and exuberance, but he was more of a journalist than a thinker and more of a preacher than an artist. His novels lack unity of form or content and continuity of sequence. His themes are few and repetitious, often borrowed from others, his plots are too fantastic and complicated and abound in verbose discussions, in sudden and prolonged digressions. Similarly, his essays lack originality, methodical development, and suffer from verbosity, digression and superficiality. But in both his publicistic and belletristic writings there is a broad vision of Jewish life, a warm feeling for his people and an intuitive recognition of the truth. His value and his influence were those of an educator and standard bearer for a new cause, rather than of a novelist; he had a vital effect upon his generation. AHRON OPHER.

SMUSHKEVICH, IAKOV VLADIMIROVICH, chief of the military air force of the Soviet (Red) Army, b. Rakiski, Lithuania, 1902. He saw his first airplane early in the autumn of 1915.

The Smushkeviches had had to pack up their belongings and leave their native town, which was in the front line zone of the first World War, to wander the roads, and on this journey Smushkevich saw an airplane flying overhead. After endless weeks of boxcar-travel, they finally arrived at the station of Niandoma in the province of Vologda, north Russia. In Niandoma the elder Smushkevich had to switch from tailoring to carting, exchanging his iron and scissors for a whip and reins. Iakov went to work in a bakery. Work was very hard and there was never enough to eat, so he finally gave up this job, and in 1916 went to the city of Vologda on the Vologda River. The war was at its peak and there was plenty of work at the waterfront.

Iakov was then only fourteen but tall, broad-shouldered and muscular. He got a job as a stevedore. Good natured, cooperative, sociable, he got along well with the other longshoremen. They were soon calling him "Iashka." The October Revolution brought Iashka even closer to his fellow workers. At sixteen he joined a workers' detachment with some of his fellow workers and went off to the front as a volunteer. Soon thereafter he joined the Bolshevik Party. Throughout the civil war he fought in the infantry.

Eventually Smushkevich was appointed political instructor to a pursuit plane unit. In 1921 he made his first flight. His unit was stationed near the little White Russian town of Pukhovichi, and he made a trip there with a pilot to interest local workers in the then newly organized Society of Friends of the Air Fleet. The plane was smashed in landing but the two men were saved and unhurt. It was here that he met Basia who soon became his wife and comrade.

For the next ten years (until 1931) Smushkevich served in the air fleet, beginning as a political instructor and rising to the position of military commissar and chief of the political department of an aviation brigade. At the same time he learned how to pilot a plane. First he qualified as an observer but

soon he was able to take off by himself. He spent hours learning the mechanics of plane construction and repair. Then he became a navigator and learned the technique of bombing. In an air force inspection Smushkevich led in aerial marksmanship.

At the end of 1931 Smushkevich was appointed commander and military commissar of an aviation brigade. When he had to fill out the questionnaire, his lack of formal education became evident. All he could enter next to the question on educational background was the Heder in Rakiski.

He was then 29, but he devoted himself sedulously to Russian grammar, mathematics, history, literature. In the autumn of 1932 he went off for thirty-nine days. Upon returning to his brigade he had a diploma from the Kach Flying School, one of the best in the USSR. He had completed a two-year course in thirty-nine days.

The "aerial stevedore," as his friends jokingly call him, was soon given a series of special reconnoitering assignments in which he proved his mettle. On January 2, 1937, the Soviet Government rewarded his valor with the Order of Lenin. In June he returned to Moscow and had conferred upon him the title of Hero of the Soviet Union. Soon he was honored with this title a second time for his heroic leadership of the air fleet in the Khalkin-Gol battles against the Japanese. On November 17, 1939, after these operations he was awarded the gold star medal and it was ordered that a bronze bust be erected at his birthplace. But Rakiski was not then Soviet territory and his close friends asked him where his bust should then he set up. He expressed preference for Pukhovichi, since his best memories were associated with this town.

In 1940, when Lithuania became a Soviet Republic, Smushkevich and his wife revisited his birthplace, to which his parents had returned many years before and where they were still living. The villagers rapturously greeted their homecoming hero.

In 1938 he was assistant head and from 1940 on chief of the Military Air Force.

BERNARD KOTEN.

SMYRNA (Turkish **Izmir**), Turkish city in Asia Minor with about 17,000 Jews among 170,000 inhabitants. The Jewish community was founded by Spanish immigrants in the 17th century. The first Jewish printing-press in Turkey was established in Smyrna (1660). Because of numerous fires, earthquakes and epidemics the economic development of Smyrna was retarded. Nevertheless, the Jewish community there was of much importance in the commercial field. For a time Smyrna was the scene of the activities of Sabbatai Zevi. Instigated by the Greeks, numerous ritual murder trials took place in Smyrna in the latter half of the 19th cent. In the same century the originally entirely Sephardic Jewish community of Smyrna was greatly augmented through the influx of many Ashkenazim (immigrants from Russia, Poland and Greece).

Lit.: Galanté, Abraham, *Les juifs d'Izmir (Smyrna)* (1937); Baron, Salo W., *The Jewish Community* (3 vols., 1942).

SNAPPER, ISADORE, physician, b. Amsterdam, Holland, 1889. He studied medicine at the University of Amsterdam. He assisted (1913-1917) Professor Hijmans van den Bergh, head of the Clinic for Internal Diseases at Groningen, and worked in a similar position in Amsterdam (1917-1919) as assistant to Professor Pel, noted Dutch internist. In 1919 Snapper was appointed professor of propaedeutic medicine and general pathology at the University of Amsterdam.

He wrote such authoritative books as *Endocrine Diseases* (1939), *Heart Diseases* (1936) and *Diseases of the Skeleton* (1937).

In 1938 Snapper obtained the permission of the curators of the University of Amsterdam to go to China on a grant of the Rockefeller Foundation. There he headed the Peiping Union's department of medicine. When the Japanese attacked Pearl Harbor and The Netherlands entered the war against Japan, Snapper was made a prisoner in occupied Peiping and sent to a Japanese camp. Shortly before that he had finished the manuscript of a new book which reached the United States and was published (December, 1941) as *Chinese Lessons to Western Medicine.* It presents a clear synopsis of lessons to be learned from the years of the Chinese war.

After several months of imprisonment Snapper was released by the Japanese in exchange for a Japanese prisoner of war in the United States. In the latter part of 1942 he came to the United States, where he became associated with the China Medical Board, in New York city.

Snapper was an internist of wide repute who conducted many experiments of a bio-chemical nature, more particularly in the fields of metabolism, bone diseases, and disturbances of internal secretion.

SNOW, ADOLPH JUDAH, industrial psychologist, b. Rzeszow, Galicia, 1894. He came to the United States in 1910 and studied at Ohio State University (M.A., 1917) and at Columbia University (Ph.D., 1919). Snow was an assistant professor of philosophy at the University of Pittsburgh (1919-20), then instructor in and subsequently professional lecturer on psychology at Northwestern University (1920-28). In 1928 he joined the staff of the mail-order house of Sears, Roebuck and Co., Chicago, and became one of its technical directors in 1940. In 1941 Snow was appointed consultant on costs, Division of Priorities, of the Office of Production Management.

His published works include *Problems in Psychology* (1923); *Psychology in Business Relations* (1925); *Psychology in Personal Selling* (1926); *Matter and Gravity in Newton's Physical Philosophy* (1926); and *Effective Selling* (3 vols., 1929).

SNOWMAN, JACOB, physician, b. London, 1871. He was a Fellow of the Royal Society of Medicine, Honorary Life Member of the British Red Cross Society and president of the B'nai B'rith Lodge, London (1913). Snowman also served as a vice chairman of the Jewish Health Organization and as a Councilor of Jews' College, London. His works include *Surgery of Ritual Circumcision* (2nd ed., 1929); *Short History of Talmudic Medicine* (1935); and *Manual of Emergencies* (3rd ed., 1936). He contributed to *Modern Treatment in General Practice* (1935).

SNYDER, AARON CECIL, lawyer, b. Baltimore, Maryland, 1907. He studied at Johns Hopkins University (A.B., 1927) and at Harvard University (LL.B., 1930). Admitted to the bars of Maryland and New York (1930), he was appointed United States Attorney for the District of Puerto Rico (1933). Snyder was chairman of the commission on criminal law of the Bar Association and a member of the Judicial Council of Puerto Rico.

SOBEL, BERNARD, writer and publicist, b. Attica, Ind., 1887. He received degrees from several universities, and was assistant professor of English at Purdue University (1918-21), extension lecturer at the University of Indiana (1918-21) and a member of the staff of the College of the City of New York (1921-25).

Herbert Russell Sobel

Sobel was dramatic critic of the New York *Daily Mirror* (1931-35), and a member of the publicity staff of the Metro-Goldwyn-Mayer motion picture producers.

He wrote the plays *Spider Web* (produced in Chicago, 1914) and *Phoebe Louise* (produced in Indianapolis, 1921); *Burlycue,* the only history of burlesque (1930); the novel *The Indiscreet Girl* (1933); and *The Theatre Handbook and Digest of Plays* (1940).

SOBEL, HERBERT RUSSELL, naval commander, b. Cleveland, 1896. He graduated from the United States Naval Academy at Annapolis (1917), and served during the first World War on the ship *Wheeling.* Subsequently he was an aide to Rear Admiral H. O. Dunn, commander of the Azores detachment of the United States Naval Forces in Europe. Sobel was made commander of the *Stevens* (1921), *Sands* (1932) and *Arkansas* (1936), and in 1942 was on duty as convoy commodore. He was vice-chairman of the Army-Navy Committee of the Jewish Welfare Board, Philadelphia.

SOBEL, ISADOR, lawyer, postmaster and civic worker, b. New York city, 1858; d. Erie, Pa., 1939. He was educated at the College of the City of New York and admitted to the bar of Erie County, Pa., in 1888. Sobel was elected member of the Erie city council (1891), and made its president in 1894. He was postmaster of Erie (1898-1912), and president of the National Association of Postmasters of the United States (1912). He was a member of the general committee of District 3 of the B'nai B'rith, and one of the fifty original members of the American Jewish Committee.

SOBELOFF, ISIDORE, communal and social worker, b. Baltimore, 1898. He served as city editor of the Cumberland (Md.) *Daily News,* managing editor of the *Jewish Social Service Quarterly,* and editor of *Better Times,* a New York social welfare publication. He was executive director of the Jewish Community Center of Jersey City, N. J., secretary of the Jewish Communal Executives of Greater New York, consultant on finance and publicity for the Travelers Aid Society of New York, and director of public relations for the Federation for the Support of Jewish Philanthropic Societies of New York City.

In 1943 he was serving as executive director of the Jewish Welfare Federation of Detroit, member of the executive committee and vice-president of the National Conference of Jewish Social Welfare (from 1939 on), member of the board of directors of the Michigan Welfare League, and member of the board of the Council of Social Agencies of Detroit.

SOBELOFF, SIMON ERNEST, attorney, b. Baltimore, 1893. He studied at the University of Maryland Law School (LL.B., 1915). He served as assistant (1919-1923) then as deputy city solicitor of Baltimore (1927-31) and as United States Attorney for the District of Maryland (1931-34) the first Jew to hold this office. He served as arbitrator for the Men's Clothing Industry of Baltimore. As chairman of the Governor's Commission on Unemployment Insurance (1934), he drafted unemployment insurance legislation.

By appointment of the Circuit Court of Baltimore, Sobeloff conducted an investigation into the failure of the Baltimore Trust Co., the largest banking institution south of Philadelphia. He was the first president of the Baltimore branch of the American Jewish Congress. Sobeloff was a director of the Associated Jewish Charities of Baltimore, vice-president of the Prisoners' Aid Association of Maryland, president of the Board of Jewish Education of Baltimore, and director of the National Association of Jewish Education.

SOBERNHEIM, CURT JOSEPH, financier, b. Berlin, 1871; d. Paris, 1940. He was the son of Adolph Sobernheim and of Anna, daughter of Meyer Magnus. After his father's early death, his widow married Eugen Landau, who saw to the education of his stepsons. Upon Landau's recommendation, Sobernheim entered the Deutsche Genossenschaftsbank at Berlin, and a few years later the Crédit Lyonnais at Paris. He was active for some years also in a London banking house. After returning to Germany, he entered his stepfather's firm, and in 1896 became director of the Breslauer Discontobank. In 1902 he became director of the Nationalbank für Deutschland, and in 1911 director of the Commerz- und Privatbank, Berlin. After the Nazis came to power, Sobernheim emigrated to Paris. There he was captured by the Gestapo when the German army occupied Paris, and was murdered some hours after his arrest. Sobernheim took a prominent part in the financial support of the German coal and potash industry and in the modernization of German machine industry. He was interested also in the promotion of German telegraph and telephone systems.

SOBERNHEIM, MORITZ SEBASTIAN, orientalist, b. Berlin, 1872; d. Berlin, 1933. He was an authority on Semitic epigraphs. As a member of the expedition to Baalbek sponsored by the Prussian government, and in behalf of the Institut français d'archéologie orientale, Sobernheim traveled extensively in Syria and Palestine. As a result of these travels he published his findings on ancient inscriptions in many books.

Among these were *Palmyrenische Inschriften* (1905); *Inscriptions de Syrie* (1909); and *Die arabischen Inschriften von Aleppo* (1926). He wrote also *Baalbek im Mittelalter* (1922), and in collaboration with Paul Kahle and Muhammed Mustafa edited vols. 4 and 5 of *Die Chronik des Ibn Iyas* (Istanbul, 1931-32; vol. 3 was published in 1936, edited only by Kahle and Mustafa).

Sobernheim was a member of the board of the colonization society Ezra, secretary of the Vorderasiatisch-Ägyptische Gesellschaft, chairman of the Gesellschaft zur Förderung der Wissenschaft des Judentums, vice-president of the Deutsch-Israelitischer Gemeindebund, and a member of the board of the German Committee Pro Palästina. From 1918

to his death he was a councillor and expert on Jewish affairs in the German Foreign Office.

Lit.: Klio, vol. 26 (1933) 396; *C. V. Zeitung* (1933) 66; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 7 (1936) 452.

SOBERNHEIM, WALTER, financier and industrialist, b. Berlin, 1869. He was the brother of Curt Sobernheim. He studied law, and graduated in 1895. Then he was active in several banking firms, and in 1901 went to the United States for two years. In 1903 Sobernheim became director of the Patzenhofer-Brauerei, one of the greatest breweries of Berlin. In 1920 he succeeded in effecting the union of his brewery with the Schultheiss-Brauerei, Dessau, the largest brewery of Germany, and became director general of the new concern. Sobernheim joined to it the Ostwerke, which produced yeast, alcohol, concrete and glass and controlled some of the most important corn mills of eastern Germany. He promoted scientific research work on the history of the brewing trade, and was consul for Spain in Berlin and member of the directory of the Reichsverband der deutschen Industrie until 1933. He then emigrated to South America.

SOBESKI, MICHAEL, art historian, b. Poland, 1877. Though his specialty was the history of culture in its broadest aspect, he concentrated on the history of fine arts. In 1919 Sobeski was made professor at the University of Poznan. His most important published works were: *Przedziwo Arachny* (The Spinning of Arachne); *Filozoja Sztuki* (Philosophy of Arts; 1917); *Wyspa Cytera* (The Isle of Cythera; 1908); *Cieszkowskiego Prolegomena do Historjozofji* (Introduction to the History of Philosophy; 1910).

SOBOL, ANDREI MIKHAILOVICH, author, b. Russia, 1888; d. Russia, 1926. He was a member of the Party of Social-Revolutionists, and for his activities on their behalf he was condemned to penal servitude and exile (from 1906 to 1914). Under Kerensky he was commissar of the Twelfth Army. Sobol opposed the Bolsheviks, but when they were victorious in the October, 1917, revolution, he joined their ranks. Inwardly, however, he never accepted them and their new order, and he sought to escape from his mental impasse by committing suicide in 1926. His most important works are: *Pyl* (Dust; 1915); *Salon-vagon* (Parlor Car); *Pesn pesnei* (Song of Songs); *Rasskaz o golubom pokoe* (The Tale of the Blue Quietude).

All of them were published in a four-volume edition in 1926. His works, impressionistic in style, and his heroes, who, according to Soviet critics, "seem to have no roots," did not conform to Soviet standards of heroic positivism and therefore did not meet with appreciation.

SOBOL, LOUIS, columnist, b. New Haven, Conn., 1896. He entered the career of newspaperman in 1914. He became a popular Broadway columnist and dramatic critic for the New York *Evening Graphic* in 1929, succeeding Walter Winchell, and subsequently general Manhattan columnist of the *Journal-American.* He wrote the play *High Hatters,* produced in New York city in 1928, and the novel *Six Lost Women* (1936). Sobol was a radio commentator (1932-33) and starred in a series of picture shorts for Universal.

SOBOTKA, HARRY HERMANN, chemist, b. Vienna, 1899. He received the Ph.D. degree from the University of Munich (1922), emigrated to the United States, and became fellow and research assistant at the Rockefeller Institute, New York city (1924-26). After working as research associate in bacteriology at Bellevue Hospital Medical College (1926-28), he was appointed chief chemist at Mount Sinai Hospital, New York (1928). He wrote *The Chemistry of the Sterids.*

SOCIAL HYGIENE OF THE JEWS. This concept embraces the complex of Jewish religious commandments and customs which aim at keeping the body clean and healthy, the origin of which may be traced back to a very ancient period of Jewish history. The social hygiene of the Jews differs from that of the other peoples of antiquity in that it was not optional, but was rigidly defined according to persons, points of time and occasions. Even though the religious nature of the hygienic laws in Bible and Talmud may have been predominant at their origin or casuistically overemphasized afterwards, there can be no doubt that they were observed to good purpose by every man and woman of the Jewish people at a time when the idea of social hygiene or its practices did not exist among civilized peoples. The motif and aim of the teaching of Jewish social hygiene were to promote the physical health and cleanliness of the individual. But, according to the Jewish concept, cleanliness of the body went hand in hand with purity of mind and soul which make for religious and ethical integrity.

The social hygienic laws of Judaism were a powerful factor in keeping the Jews strictly separated from the surrounding peoples and in preventing their mixing with them; it is largely due to the strict observance of these laws that the Jewish people persisted despite the destruction of its political homeland and its subsequently expulsions from a number of hospitable lands; that it survived ceaseless migration and persecution.

The social hygiene of the Jews applies to a number of everyday activities:

1. Nutrition. Purity of foods; the modern inspection of meats is a very ancient Jewish institution which was strictly observed; moderation in drinking.

2. Housing, clothing and personal hygiene. Separation of the two sexes; the Talmud has numerous suggestions for the most convenient layout for houses and bath houses, and for keeping the body clean.

3. Illness. Isolation of those affected by contagious diseases; "disinfection" of objects touched by them (by burning and similar procedures); circumcision; the burying of the dead.

4. Sex life. Rules concerning the menses, Mikveh, continence.

5. Infant care and child welfare. Protection of the newly-born; the care of infants; physical education, sleep and recreation for children.

6. Work. Recommendations of physical work, of crafts and agricultural labor in the Talmud.

7. Rest from work. The sanctifying of the Sabbath as a means of preventing the exploitation of bodily strength is a measure of decisive importance in social hygiene. This postulate met with great resistance in the civilized world; in Germany compulsory rest on Sunday was not decreed until 1891.

The barbaric crowding of the Jewish masses into narrow ghettos during the Middle Ages had a varying effect on the different aspects of Jewish social hygiene; while the state of being closely and constantly crowded together favored the Sabbath rest or the inspection of meat, it had the most adverse effect on housing conditions, which were bad enough outside the ghetto in the medieval cities. The better hygienic discipline of the Jewish masses and their greater familiarity with preventive isolation caused them to be affected by the Black Death to a lesser degree than their neighbors, who believed that they had found the means of avoiding the deadly draughts from wells which they were accused of having poisoned.

During the 19th and 20th centuries various trends of Jewish social hygiene developed according to the views which the various groups of Jewry took of the past, present and future of Judaism.

Orthodox Jewry integrally observed the Biblical-rabbinical law in its hygienic implications as laid down in the statutes of Maimonides and Joseph Caro (*Shulhan Aruch*); in these as well as in all other digests of Jewish religious law a variety of rules of hygiene occupies a large place. The miserable economic condition of the Jewish masses in Eastern Europe, however, to a great extent worked against the hygienic effectiveness of the observance of these laws.

Reform Jewry, greatly limiting the mandatory character of ceremonial law, was content at first to shelve the majority of the laws of social hygiene without offering a positive alternative from the Jewish point of view. However, the needs of the Jewish masses in Eastern Europe and the realization that deep-rooted ills can be attacked successfully and eliminated only by principled action, led to constructive preventive projects which took the place of aid administered spasmodically. Jewish social hygiene was revived and adapted to contemporary methods in Germany by the Grand Lodge of the Order of B'nai B'rith, while in Eastern Europe and in the Near East the Alliance Israélite Universelle, the Hilfsverein der Deutschen Juden, the OSE and ORT societies, and the American Jewish Joint Distribution Committee rendered eminent service by creating a number of useful Jewish social institutions.

Zionism envisaged the improvement of physical health as part of the political and cultural renascence of the Jewish people. Various ways and means were devised, paying due regard to the historical and national-religious factors which determine Jewish life, to create modern forms for the living principle of collective hygiene which was active in ancient thought.

In Western Europe Max Nordau was probably the first to provide the incentive for the "toughening" of Jewish youth (muscle Jews). The idea of Jewish sports associations proceeded from Jewish nationalist quarters toward the end of the 1890's. Zionism achieved also a shifting of the Jewish masses to occupations in which physical labor and self-reliant enterprise prevail; from 1918 to 1939 a considerable number of European Jewish youths settled in Palestine as independent agricultural workers engaged in the raising of crops, gardening and animal husbandry, or in handicrafts which spring from and provide for the needs of the soil on which they live.

The concept of social hygiene had a great effect on modern welfare work. Centralized welfare work in Germany took its incentive from the work of the Joint Distribution Committee in Eastern Europe and from the activities of the ORT and OSE. In the years before 1933 all branches of Jewish welfare work—orphan education, aid to the poor, care of transmigrants, vocational guidance, and many other services to the community—were carried on from the viewpoint of social policy, and the practice of individual financial aid was discarded. By methods of enlightenment and prevention the attempt was made to stop social ills at their origin; social service began to take an interest in the individual before he became poor or sick. Social work among children, the care of the crippled and the sick adapted itself increasingly to large vistas of social hygiene. In the congresses of the centralized German Jewish welfare work and of the ORT and OSE the clear formulation was made that the anomalies of economic life are the main sources from which want and misery spring, and that these problems should therefore be attacked from a wide-range viewpoint of population policy (vocational guidance, vocational retraining, housing projects, constructive service to the poor and unemployed, enlightenment on hygiene, support of sports and gymnastic associations, matrimonial consultation service, propaganda for early marriages, for the nursing of infants by their mothers, etc.).

Throughout Eastern Europe large-scale efforts were made to render Jewish economic activities profitable. Jewish masses were settled in the rural districts of the Ukraine and Crimea. In Germany the efforts of an association to further interest in agriculture among the Jews met with but little response. In Poland, however, where the Jewish masses were languishing in abject poverty and want, this trend of policy was of utmost significance. It was felt at that time—and the rising suicide wave on the one hand and the falling birth rate on the other confirmed this belief—that no satisfactory results could be expected from individual and palliative treatment, and that the misery and eventual destruction of the great masses could be effectively remedied only by a large-scale policy of social reclamation.

The theory of Jewish social hygiene was inspired in Germany by such works as Alfred Nossig's *Einführung in das Studium der Sozialhygiene* (1894), and later by those of the Jewish authors H. L. Eisenstadt and Arthur Kahn. An all-embracing movement of Jewish social hygiene, however, never got under way in Europe because Western European Jewry was split up into various groups and ideologies. *Von jüdischer Wohlfahrtspflege* (1922), edited by Eugen Caspary and published by the Central Welfare Office, Berlin, shows German Jewish welfare work as conscious of the need for a broad social view. *Hygiene der Juden* (Grunwald, M., edit.), published on the occasion of the international hygiene exhibit (Dresden, 1911), was a graphic survey of all branches and fields of Jewish social hygiene. A similar survey was afforded by the Jewish pavilion at the "Gesolei" exhibit at Düsseldorf in 1927 and by the OSE display in the Dresden hygiene exhibition (1930).

SOCIAL LEGISLATION. Social legislation is a comprehensive term which includes all laws or governmental regulations designed to protect the interests of the weaker classes and to establish the social structure upon a sound foundation. The amount of social legislation in Jewish law is large as compared to contemporary legal codes. This was due on the one hand to the strong family feeling which created a social consciousness that was more powerful than the demands of an individual, and on the other hand to the ethical teachings of the prophets, who were social reformers as well as teachers of religion. This social consciousness passed on to the rabbis, who in their legal codes continued the social legislation of the Bible and reinforced it by new enactments to meet the changed conditions of their own times.

The principal fields of Jewish social legislation (which is discussed in detail in articles dealing with the individual topics) were as follows:

1. Relief of the Poor. The chief legislation in this respect was the assignment of certain portions of the crop to the poor: the gleanings of the fields, the olives and grapes left after the harvest, and any sheaf that had been forgotten in the field, as well as a specific part (Peah) of the grain that was to be left to the poor to reap. The prohibition of interest on loans was likewise to the interest of the poorer classes. The Deuteronomic legislation further provided for a tithe for the benefit of the poor every third year. This was reinforced by the laws covering laborers, as well as by the constant injunctions in the laws and the prophetic books to take up the cause of the widow, the orphan and the needy.

2. Protection of the Laborer. The most important law in this connection was the provision that the day laborer should be paid by the day. According to the Deuteronomic

legislation, as interpreted by the rabbis, the laborer had the right to satisfy his hunger from the produce in which he was working. Questions of the mutual rights of employer and employee are discussed in detail in rabbinical literature, the object being to obtain a proper balance between the interests of both.

3. Protection of Aliens. The case of the alien in the community is covered by the simple principle, several times repeated, that there should be no difference in treatment between the home-born and the alien, that all are equal before the law. The only difference that can be noted was in regard to loans and the treatment of slaves, in which cases the alien was granted only ordinary treatment, without certain privileges; this was explained as due to the different circumstances of the alien in these respects.

4. Protection of Children. There is no social legislation in the Bible referring to children as such, which is an indication that none such was needed. In the time of the Second Temple and after the chief regulations referring to children are those which provide for universal education. There are also certain directions about the proper rearing of children and the importance of teaching them a means of earning a living.

5. Protection of Women. There is comparatively little legislation about women in the Bible, since modern problems connected with women workers did not occur in ancient times, and their interests were protected by the family. Widows came under the general legislation in behalf of the poor, and the agrarian laws were also designed to protect them. Women slaves were to be treated with greater care than male slaves, and polygamy was so regulated that an elder wife should not suffer. Rabbinical legislation protected the status of the wife by the institution of the Kethubah, which assigned to her a certain portion of the family property in the event of her divorce or widowhood, and gave her claim priority over all others.

6. Protection of Slaves. The institution of slavery was kept by Biblical legislation within strict confines. A Hebrew slave was limited to a term of six years, at which time he had to be set free, unless he expressly declared his intention of remaining a slave. Cruelty on the part of the master, such as a blow that deprived a slave of a tooth or an eye, gave him his freedom; a fugitive slave was not to be restored to his master. In rabbinical legislation, slaves were freed from all responsibility for damages which they might have caused, their masters being required to make restitution; this must have indirectly operated to make slavery less common.

7. Agrarian Laws. Agrarian legislation seems to have been directed to maintain a division of the land among as many individuals as possible and to prevent the formation of large estates. Provision was made for the redemption of property that had been sold, while the law of the Jubilee practically forbade the sale of land, permitting only a lease to the end of definite fifty year periods. Rabbinical legislation is concerned with redressing the wrongs brought about by the wholesale confiscation of property by the Roman conquerors.

8. Commercial Laws. Biblical legislation is concerned with equitable business practices, such as fair weights and measures; the rabbinical legislation discussed this in greater detail, even cancelling a sale if the price was over one-sixth too much or too little. Debts were outlawed by the law of release in the seventh year (Shemittah). Interest on loans was forbidden. Rabbinical legislation made attempts to break up monopolies in certain commodities; it discussed price-cutting, but could not decide whether to approve or disapprove of it. In both cases there are general injunctions to deal honestly in business.

9. The Sabbath. While the Sabbath was primarily a religious institution, it was a piece of social legislation to the extent that it provided for a compulsory day of rest for all classes, from the highest to the lowest. It is thus the beginning of legislation that limits the hours of labor to a definite number of hours per week.

10. Tax Laws. The only legislation in this respect is that which concerns itself with the maintenance of the priesthood and the Temple. With the exception of the small universal poll-tax of a shekel, all other contributions, including sacrifices, were graded according to ability to pay —as a rule by making the amount of the contribution a fixed part of the income measured in terms of produce or wages.

SOCIAL SERVICE, JEWISH. I. General. Jewish social service as a continuous, organized and planned approach with all the modern connotations of the scientific method, dates back to that wave of Eastern European Jewish immigration to the United States which began in 1881. It emerged from the necessity for the establishment or enlargement of agencies of one type or another to meet the health, recreational and general welfare problems and needs of the newcomers. But Jewish social service, in this sense, did not develop as a thing apart from Jewish communal organization. On the contrary, it is intricately interwoven with Jewish communal organization, both aiding in its development and being in turn conditioned by it.

The raison d'être of Jewish social service lies in the need for the adjustment of the individual, family, or group unit in terms of its Jewish religious, traditional or cultural past and present. This, as a modern scientific development, fits almost as a capstone on the former traditional theory: that in matters of philanthropy, Jews take care of their own. However, with the decline to an almost negligible degree of Jewish immigration to the United States in the period lying between the two World Wars and with the large-scale Americanization process that set in, Jewish social work yielded a good deal of its basic relief assistance, even as requested, to public assistance sources, particularly during the latter part of the depression period of the 1930's. However, it maintained its identity as an essential supplementary service entity.

II. Social Service of a Local Nature. 1. Case Work, Health, and General Welfare Activities. Generally speaking, the problem of Jewish family or individual dependency, or adjustment, largely in the lower economic brackets, is the problem of a family welfare society. In an earlier day, such societies were known by a name constituting a variant of the United Hebrew Relief or Benevolent Aid Society; and more latterly, as a reflection of the scientific attitude pervading social work, by a name approximating that of the Jewish Social Service Bureau. Eighty-four out of approximately one hundred Jewish family case work agencies in the United States in 1942 reported a record of relief and service to some 56,286 direct-service cases, as of the end of 1940.

In some cities, and working with the family welfare agency if not as part of it, there are home for transients institutions, in which a few days' care is provided for Jewish homeless wanderers. Another incidence of cooperation is the Hebrew Free Loan Association type of organization in which an attempt is made to rehabilitate an economically depressed family or person with the aid of a non-interest-bearing loan. Likewise, in a number of larger communities, Jewish hospitals, besides convalescent homes, were erected, some seventy in number. Of these, fifty-eight reporting in 1940

indicated an administration of almost four million days' care on a non-sectarian basis. There were social service departments in approximately thirty of these hospitals.

In the field of child care there were approximately one hundred local children's institutions and cottage plan systems, orphan asylums and foster care agencies in 1942. In connection with the seventy-four (including family welfare agencies) issuing reports for the year 1940, it was indicated that they had made provision for some 11,553 Jewish children throughout the country. The problem, however, was viewed as a diminishing one, because of government aid to dependent mothers and a generally higher economic standard of living in homes of origin. But, on another front in the case work field, the specific behavior problems of Jewish youth were given especial attention by guidance bureaus in some of the larger cities. There were some fifty homes for the Jewish aged, with a total of service and care as of the end of 1940 in behalf of 5,286 residents. Because of increasing government and state social security pension programs for the aged, however, the continued growth of these homes was deemed uncertain.

2. Group Work. The recreational and social activities of Jewish communities, where they were organized on a broad community-supported base, had their organized beginnings in the Young Men's and Young Women's Hebrew Associations. Along with Jewish community centers, educational alliances and the like, they witnessed their largest growth with the impetus toward improving recreational opportunities for those connected with war activity in the first World War. Patterned at first somewhat after the YMCA's, to cater to the needs of young men of lower incomes, the "Y" or Center endeavored to serve the entire Jewish community in all age groups and in all economic brackets.

3. Vocational Guidance. An activity which was fairly new on the social welfare horizon, and which was frequently combined with either center or case work programs in local communities, was vocational guidance. In some of the larger cities separate guidance bureaus were set up under the auspices of either Jewish federations or community councils or the B'nai B'rith. Essentially, however, the rationale of this service was to train Jewish youth for productive, purposeful and useful vocations. This was achieved through individual and group counselling, aptitude tests, reference to pertinent literature and counsellors in the various trades and callings, and through the availability of the findings of research in the numerous economic branches of endeavor. Usually the efforts of these agencies were directed also against discriminatory practices in industry. There were seventeen Jewish vocational guidance agencies as of 1943 throughout the United States and Canada, and also nineteen Jewish employment bureaus, serviced in great measure by the nationally organized Jewish Occupational Council.

4. Community Organization. Perhaps the largest and most significant field of welfare endeavor in the local community dealt with community organization itself, expressed by what was known as the federation of Jewish philanthropies, the Jewish welfare fund, the Jewish community council, the united Jewish community, or a similar name. The year 1895 marks the date of the establishment of the first Jewish federation, and that was in the city of Boston. As of 1943 there were 267 federations, welfare funds and community councils in the United States (and nine in Canada), with varying functions, as against sixty-five in 1932. Their central aim, however (particularly the federation), was that of coordinating the activities of all the Jewish functional welfare agencies in the city, wherever possible, and centralizing fund raising and distribution in their behalf on a planned basis.

The Jewish welfare fund is largely a creation of the federation and was brought into being in the local communities for the purpose of raising funds for non-local Jewish causes. The welfare fund and independent appeals made in local communities in 1941 in behalf of forty national and twenty-three overseas aid organizations resulted in expenditures of $22,249,189 for non-local purposes. The Jewish community council, the latest development in community organization in the United States, stemmed from a desire for greater democratization in communal affairs. Its primary concern was with intra-group and inter-group relationships.

In addition to these, most cities of considerable Jewish population had such organizations as local fraternal lodges, B'nai B'rith and others; a branch of the Workmen's Circle, and branches of organizations engaged in activities in behalf of Palestine; youth organizations; synagogues, temples and their sisterhoods and brotherhoods; *Landsmannschaften* and family societies; branches of national organizations named after countries of origin of their membership, such as the Federation of Polish Jews in America; Jewish Greek-letter college fraternities; learned societies; and, in addition, state and regional associations or councils—all concerned with one or another level of Jewish welfare preoccupation.

III. National and District Welfare Organizations. 1. Health and Welfare. The National Jewish Hospital, the Jewish Consumptives' Relief Society, and the Ex-Patients Tubercular Home, all in Denver, as well as the Jewish Consumptive and Expatients Relief Association, in Los Angeles, sanatoria under Jewish auspices, served patients from all over the United States on a non-sectarian basis. For arthritic ailments, the Leo N. Levi Memorial Hospital in Hot Springs, Ark., under the auspices of the B'nai B'rith, performed a national service, even though financial responsibility for it was considered a southwest regional undertaking. The same held true for a number of other regional or district hospitals, child care institutions and old age homes under Jewish direction.

The National Desertion Bureau, which was faced with a more active task during the early days of concentrated immigration, traced the whereabouts of missing Jewish husbands. Outstanding in the field of immigrant welfare was the National Refugee Service, which, with the aid of 900 local committees and a number of special divisions, aided in the adjustment of approximately 200,000 refugees from Nazi and Fascist countries of oppression. The National Council of Jewish Women and the Hebrew Sheltering and Immigrant Aid Society (HIAS) were likewise important in the field of immigrant aid, the former being especially concerned with women and children. The Jewish Agricultural Society, established in 1900, was devoted to the welfare of approximately 80,000 Jews in agriculture in the United States, through its advisory and loan aid service.

2. Education and Recreation. The leading organization in the general Jewish field of recreation and group work was the national Jewish Welfare Board, which serviced 328 Jewish community centers and YMHA's throughout the United States, Canada and Cuba as of the end of 1941, having 435,000 individual members. Through its Army and Navy Committee, as one of the six constituent member agencies

of the United Service Organizations in the national war effort, the Jewish Welfare Board served the armed forces by means of 285 local committees in 1942.

On the broader, nationwide educational front was the B'nai B'rith, and particularly its Hillel program in behalf of students on the campuses of seventy-six leading colleges and universities (1942); the National Farm School, in Pennsylvania; the Jewish Publication Society of America; the Intercollegiate Menorah Association, with Jewish student societies on college campuses; and the American Academy for Jewish Research. Also, there were the Jewish Telegraphic Agency, which gathered news of interest to or concerning Jews; and the Jewish Chautauqua Society, which grew from an organization concerned in an earlier day with Jewish community lyceums to a university speaker-placement organization in the interests of better understanding. The National Council for Jewish Education and the American Association for Jewish Education had for their purpose the spreading of the concept of professional Jewish education and the development of professional standards.

In the field of education for Jewish communal welfare work there was The Graduate School for Jewish Social Work, in New York city, which for over fifteen years, from its founding in 1925, made a pioneer and lasting contribution to the entire Jewish welfare economy of the United States in its careful selection and training of Jewish social workers for responsible positions in virtually every avenue of social work endeavor.

3. **Civic-Protective Work.** In the field of public relations, anti-defamation activities and intergroup relationships the leading organizations were the American Jewish Committee, the American Jewish Congress, the Anti-Defamation League of the B'nai B'rith, and the Jewish Labor Committee. With varying philosophies and concepts as to method, they concertedly recognized the necessity of safeguarding the civic and kindred rights of Jews on a basis of parity with others. Active in this field was also the organization of the Jewish War Veterans of the United States. The Conference on Jewish Relations was concerned with a social scientific analysis of the economic and adjustment problems of Jews.

4. **Coordination and Research.** The Council of Jewish Federations and Welfare Funds, an outgrowth of the Bureau of Jewish Social Research, whose activities it assumed, performed the function of a cooperating organization through which the Jewish federations, welfare funds, and community councils of the United States were enabled either to establish or to raise their professional standards for social work performance and general community welfare work; it operated as a coordinative, research and service agency, on a community membership basis. Also, the National Conference of Jewish Social Welfare, founded in 1899 as the National Conference of Jewish Charities in the United States, through its annual conferences and committee activities coordinated the professional thinking of those engaged in Jewish social work, and gave expression to principles of acceptable and positive endeavor in Jewish life with particular reference to the social welfare of the Jewish people.

IV. Organizations for Overseas Aid and Reconstruction. The American Jewish Joint Distribution Committee, founded in 1914 during the first World War, by 1942 raised and expended in approximately eighty-five countries and territories in behalf of millions of Jews and others in contiguous areas over $114,000,000, for reconstruction and relief work. The National Refugee Service, the Joint Distribution Committee, and the United Palestine Appeal (an outgrowth of the American Palestine Campaign) pooled their fund-raising resources in 1939 to form the United Jewish Appeal for Refugees, Overseas Needs and Palestine.

Along with the work of immigration aid in the United States, the Hebrew Sheltering and Immigrant Aid Society maintained offices, where possible, in European and Latin American countries, in cooperation with the Jewish Colonization Association (ICA) of France, under the name of the HIAS-ICA Emigration Association (HICEM). These American immigrant aid movements were the inheritors of the fine social service experience gained in an earlier resettlement movement in the United States through what was known as the Industrial Removal Office, which resettled some 79,000 needy immigrants between the years 1901 and 1917. The Dominican Republic Settlement Association (formed in 1939) aims at establishing in the Dominican Republic a Latin American nucleus for post-War large-scale European refugee settlement. In the field of trade and agricultural training for Jewish youth in overseas countries the American ORT Federation was identified as part of a world ORT movement.

V. Jewish Social Service Abroad. Beside the many local small-scale Jewish welfare organizations that arose among the Jews of Europe in the 19th cent., two agencies stood out as significant on a broad front: the Alliance Israélite Universelle, organized in France in 1860, and the Hilfsverein der Deutschen Juden, established in Germany in 1901. Both aimed at safeguarding the rights of Jews, and later extended their spheres of activities to relief work in Eastern Europe and the Near East. In Germany, with the rise of the Nazis, relief and emigration aid became centralized as primary matters of welfare concern.

In Eastern Europe, in the interim, and in the Balkans, the usually compact Jewish communities continued a form of communal welfare that was strongly related to that system of charity which was characteristic of Jewish life in the later Middle Ages. Even through the post-reconstruction period of the first World War, with a few exceptions, Jewish communal welfare had little in common with the basic concepts or methodology of Jewish welfare work in Western Europe.

In England, besides the Board of Deputies of British Jews, organized in 1746, there were a number of Jewish health, children's and women's welfare organizations functioning actively before the outbreak of the second World War, although social work as it developed in the United States during the 20th cent. was little known there or, for that matter, in Germany or other European countries. Great reliance was placed, however, on the state's scheme for social insurance. In Russia, with the advent of the revolution in 1917, there developed very little in social welfare organization which might be called specifically Jewish (with the exception of that undertaken by foreign organizations). The Idgezkom (Iddisher Geselshaftlicher Komitet) was organized in 1920 for the purpose of bringing succor and aid to children and others who were suffering as a result of the pogroms and the civil war; its work, however, was absorbed by the Russian government in 1924.

Except for a slight impetus given to European Jewish social welfare by a few international conferences on Jewish social work, the last of which was held at London in 1936, a stoppage in the development of standards in social welfare in the scattered Jewish com-

munities of the world occurred with the beginnings of the German and other Central European Jewish refugee movements, from 1933 on, when more immediate measures of primary relief, shelter and general immigration settlement assistance had to be extended. In Jewish Palestine, in the meantime, a functional social service program came into being as a result of the organization (1931) of a department for social service of the Vaad Leumi (General Council of the Jewish Community for Palestine). It maintained a social work library, an information center regarding philanthropic institutions, and a school for social work. It conducted countrywide social welfare conferences, and was active in aiding in the establishment of various social security systems.

Lit.: Although there is a paucity of coordinated material, the most outstanding synthesis, perhaps, is Karpf, Maurice J., *Jewish Community Organization in the United States* (1938), a pioneer work which sheds light on the scientific development of Jewish social service in the United States, through the medium of community organization. For guides to source materials and for statistics and trends, *see:* the annual bibliographical bulletins, studies, proceedings, publications and year books of the Council of Jewish Federations and Welfare Funds; indexed articles in the *American Jewish Year Book; The Jewish Center,* a periodical published by the Jewish Welfare Board; the *Jewish Social Service Quarterly* and the annual proceedings of the National Conference of Jewish Social Welfare; articles on Jewish social work in the biennial *Social Work Year Book* published by the Russell Sage Foundation. *See also: Social Work Year Book, 1941* (issued by the Russell Sage Foundation) 279-80; *1940 Year Book of Jewish Social Work* (issued in April, 1942, by the Council of Jewish Federations and Welfare Funds) 1 and Section H; *American Jewish Year Book,* vol. 43 (1941-42) 76, 577; vol. 44 (1942-43) 144, 149; Bulletin G-14 of the Council of Jewish Federations and Welfare Funds (Sept. 8, 1942); Lurie, H. L., "A Decade of Jewish Organization," *Notes and News* (issued by the Council of Jewish Federations and Welfare Funds), No. 75 (October 2, 1942) 3, 6; *The Jewish Center,* Sept., 1942, p. 9; Lestschinsky, Jacob, "Jews in the U.S.S.R.," *Contemporary Jewish Record,* Nov., 1940, p. 613; Lightman, J. B., "Organized Social Work in Palestine," *Jewish Social Service Quarterly,* Dec., 1936 (Foreign Department) 310 (and the sources cited there).

SOCIALISM. I. Socialism and the Jews. The concept and the term "socialism" originated at the beginning of the 19th cent. as the epitome of modern social ideas and of the political and economic mass movement toward the creation of a collective social, economic and legal system (the socialization of the means of production). On the other hand, social movements directed toward the elimination of economic inequality and of distinction between rich and poor, that is, proletarianization by legal means, can be found in the history of almost all civilized peoples.

The social idea or the social principle may arise out of three sources. First, it may be purely economic if the improvement of conditions of personal living is the desired outcome. In this case, the point of departure is the oppressed and self-sacrificing proletariat; the motive is dissatisfaction with existing conditions; the means is revolution or, at least, political pressure upon the state and society, at all events, struggle. The proletariat is the subject of socialism.

Secondly, it may have ethical or religious origin if individuals or classes who do not suffer economically want to improve the lot of the indigent, not merely superficially but thoroughly and systematically. In this instance, the social idea rests upon a moral sense of duty or a religious communal instinct and upon the humanitarian sentiment of the wealthy. It is based upon philosophy, and the means for realizing its objective is voluntary social legislation and organization. The proletariat becomes the object of socialism.

Finally, it may arise from a scientific and rational source if the study of economic conditions leads to a knowledge of the evolutionary necessity and the scientific superiority of a collectivistic legal and social order, based upon common property (Ricardo's theory of value, Lassalle's law of reward, and Marx' critique of capital).

All three tendencies, revolutionary, humanitarian and theoretic socialism, provide innumerable points of contact between the Jews and Judaism, on one hand, and social complexes on the other. Events in Jewish history in which economic and legalistic bases of modern socialism, in a restricted and political sense, first developed before the beginning of so-called modern times will be treated here only insofar as they carry the seed of socialism, even without political and mass character (social reform); not only conceptually, for example the prophetic "equality of all men," the ideal of justice, basic Biblical law, the Sabbath, the value of work, but also historically, through the influence of the Bible upon Western culture and through the Jewish element in the social movement of the 19th and 20th centuries.

1. Biblical Times. a. Mass Movements with a Social Character. The element of struggle is not characteristic of socialism per se, but was given to it historically by the pressure to overcome the capitalistic form of state and society and the opposition of the propertied classes against the demands of the propertyless. Moreover, social motives predominate in certain Biblical reports of political movements. The enslavement of the Israelites in Egypt by forced labor, the killing of boys and limited freedom of movement, a most severe kind of political and economic enslavement, led to a mighty uprising of the Israelites with freedom as its objective, and to the Exodus from Egypt which became the beginning of a new order of things. Nomads became farmers and citizens, the declassed became independent freemen. The revolt against Rehoboam which led to the partition of the Solomonic kingdom about 933 B.C.E. was caused by the purely economic suffering of the northern tribes, brought on by the unbearable taxation of Solomon's regime—if Jeroboam's friendly policy toward Egypt and the old conflict between north and south are disregarded.

The entire prophetic teaching of the earlier period which had definitive significance for the later development of the character of the people is a continuous protest against the increasing disregard for the law on the part of the ruling classes and against the proletarianization of the lower classes. It was a true class struggle that divided the population of Judea economically and nationally at the time of Nehemiah and which Nehemiah sought to resolve by attempting a new social order (emancipation of slaves and the cancellation of debts and mortgages) and by the ceremonial proclamation of the Torah as the constitution. Finally, in early Christianity the social needs of salvation of the lower classes in addition to purely religious factors (and national political ones, emphasized by J. Klausner) must not be overlooked.

b. The Social Program of the Bible. The basis for the covenant of Israel with God and the Law, already in the Torah, is found in the living relationship between man and God, which is looked upon as the source of all morality and of the feeling of social responsibility in man-to-man relationships. From this arises the social law of Judaism, which is unique and often surpasses the most modern requirements of social government. It was to benefit all, the poor and the neglected, the alien and the slave, and even animals.

This social viewpoint of duty of mutual aid and mutual dependency, this striving after the elimination of all injustice, is expressed in many branches of Israelitic Law,

The soil is God's property and may not be sold permanently (*Lev.* 25:23). The Sabbatical year and the Jubilee year require the emancipation of slaves and the repairing of all injustices because, with time, even justice becomes injustice (*Lev.* 25:10; *Jer.* 34; *Neh.* 5). The weekly day of rest was effective also for slaves and strangers. Conditions concerning the payment of wages at the right time (*Lev.* 19:13; *Jer.* 22:13), special protection for the economically weaker class (the indigent, widows, orphans and slaves; *Ex.* 21:1-11; 21:26; 22:21-26; 23:3-12; *Lev.* 19:9-15; *Deut.* 10:12-19; 24:10-22), all these laws indicate the social spirit of the Bible.

A new and great attempt at the realization of social ideas was made in ancient Judaism by the Essenes and their ethical radicalism. "They want a communistic state in which everyone works for all, but no one becomes rich at the cost of others." The first utopian state, projected by Ezekiel in the last chapter of his writings about the future politico-religious community after the return of Judaism from the Babylonian captivity, is found in ancient Judaism. Jewish Messianism was the first great expression of a longing for a just and freedom-loving world and of the will to create it by changing the way and conditions of living. All the strivings of European nations toward a more just world until the 18th cent. were derived from Jewish Messianism through early Christianity.

2. Modern Times. After their entrance into general political life in the 19th cent. Jews participated significantly and creatively in all political tendencies and parties. They were to be found in considerable numbers in the conservative parties (Stahl, Disraeli, Neander) and in the national liberal and free-thinking parties of all shadings. The same is true of the socialist movement. They spread over all the various tendencies, from the right wing, which has hardly any relationship with international socialism and is politically conservative (Samuel Gompers), over right revisionism (Eduard Bernstein) to right center (Léon Blum), to left center (Oscar Cohn) and, from there, over left Marxism (Rosa Luxemburg) to Bolshevism (Leon Trotsky) and anarchism (Gustav Landauer, Bernard Lazare). In continental socialist parties the Jews always played a determining and, at times, leading role. In Italy, Austria (Victor Adler), Germany (Paul Singer), Bohemia (Alfred Meissner and Leo Winter), France, Poland and Russia they were to be found in all parties, from the Right Social Revolutionary and Menshevik to the Bolshevik.

Some of the founders of European socialism were Jews. They played an especially helpful role as disciples of Saint Simon (Émile Pereire). Scientific socialism originated in the combination of Jewish Messianic feeling with German philosophy in Marx and Lassalle (whose thinking is founded upon Ricardo's theory of values), Moses Hess, and their contemporaries, including, to a degree, Heine and Börne. On the other hand, Jews played a most insignificant role in the origin as well as in contemporary leadership of English socialism. Even the radical left wing of the English movement is free of Jews. Yet, it is just in English socialism that the effects of the Bible are most clearly to be noted.

HANS KOHN.

II. Jewish Socialist Parties. The origin of the Jewish socialist movement may be traced to the abnormal position of the Jewish working class, which results as the direct consequence of the position of the entire Jewish people. The Jewish proletariat suffers the twofold pressure of social and national suppression and at the same time it is robbed of the possibility of progressing up the ladder of social development. This abnormal situation becomes more clearly defined as industrial production becomes technically more progressive. Consequently, Jewish socialism originated at a time when great progress was being made in industrial techniques, in Western Europe, in lands of Jewish concentration in Eastern Europe, above all in Russia and Austria and, especially, Galicia. For a variety of reasons (deficient physical strength, religious and linguistic difficulties and, mainly, anti-Semitism) the Jewish workingman could find work unfortunately only in Jewish enterprises and, at times, only in those that were technically antiquated and played no significant role in the process of production. As an enterprise advanced technically, as it approached large-scale industrial production, Jewish workers were increasingly eliminated from it. The Jewish worker, therefore, found use mainly in the end products of production and then only in certain branches, such as garment and luxury production. On the other hand, he never found work in the first stages of production, such as the preparation of raw materials and the manufacture of basic products; the social significance of these industries was greater, and they often assumed the form of large-scale industry.

The position of the worker in small industrial undertakings is much worse than in large establishments, and the possibility of improving this position is very limited because of the weaker opposition of the working class and the difficulty of societal control. The position of the Jewish proletariat was, therefore, much worse than that of the non-Jew. Since every possibility of forcing his way into heavy industry was closed to the Jewish worker, no hope existed for the essential improvement of conditions in the future by way of normal development. This was first indicated in the statistical investigations of the ICA (Jewish Colonization Association) toward the end of the 19th cent. Since that time the facts have been altered only slightly, and the need arose for a special movement among the Jewish working class which would aim to free Jewish workers from this two-fold pressure.

Five periods may be differentiated in the history of Jewish socialism. First, the prehistoric period was one of hesitant attempts to create a Jewish socialist movement which disintegrated because of defects in certain external conditions. The second was the one in which present-day Jewish social parties originated. The third was one of internal development and the evolution of a program of action, especially in relation to Jewish conditions. The fourth embraced the history of the movement during the first World War and the first years of the Russian revolution. The fifth was a period of liquidation and schism.

First Period (about 1860 to 1893). This was a time when socialism was that of the men of the age of enlightenment and of the Russian Jewish students. The Jewish working class, with little exception, was not touched by it. Adherents found socialistic ideas in Hebrew literature which some authors propagated mainly in the form of songs and tales (Kantor, J. L. Lewin, Winczewski and Zuckermann). In this period two almost simultaneous attempts were made (1878-79) to publish socialist journals in the Hebrew language. They were *Haemeth,* founded in Vienna by Aron Liebermann and Leiser Zuckermann, and *Asefath Hachamim,* published in Königsberg by Morris Winczewski. Both periodicals were suppressed by the authorities. In 1876 Liebermann founded in London the first Jewish socialist society. Its constitution and by-laws were written in Hebrew and Yiddish, and sought to propagandize for socialism among the Jewish working class in England and, at the same time, to organize them to fight for the improvement of their living conditions. The society founded the first union of Jewish workers in England, but after a short time it collapsed because it lacked a real working program. In general, this period was without great influence upon the history of Jewish socialism, and it was not directly related to the development of the movement although many of its active personalities were among the later leaders of Jewish socialism.

Second Period (1893 to 1907). The actual Jewish so-

cialist movement began in Russia at the beginning of the 1890's. It grew out of the so-called socialist circles that were founded by Russian Jewish students for the Jewish working class in order to win it over to socialism. After 1893 the movement took on a mass character and led to the founding (1897) of the Bund, the first Jewish socialist party, which developed intensive activity in industrial as well as in political fields. The program of the party was generally socialistic, that is, equal civil rights were to be won for the Jews. Only after the turn of the 20th cent. was interest in national questions aroused and, finally, the party formulated (in 1901, and again in 1905) a platform for the national-cultural autonomy of the Jewish people. This became an essential feature of its program after that time.

In contrast to the Bund, another part of the Jewish working class began from a national standpoint and also arrived at socialism. It was the portion of the Jewish working class that came under the influence of Zionist ideology and was brought into the Zionist Movement. The segregation of the Labor Zionists within the general Zionist Movement began early in the 20th cent. and, in the course of time, led to the founding of three so-called proletarian Zionist parties: the Sejmists, the S.S. (Zionist socialists) and the Poale Zion. All these parties were agreed that the position of the Jewish classes now becoming proletarianized was abnormal. In view of existing social conditions, the way to normal proletarianization was closed to them, i.e. the so-called non-proletarianization theory, and, on the other hand, they held that a definitive solution of the Jewish question in general as well as of the question of the Jewish working class, specifically, could be achieved only by means of a territorial concentration of the Jewish masses. The Poale Zion held that the Jewish masses should be concentrated in Palestine. The other two parties were also territorialistically minded, but the Sejmists emphasized in their program (contrary to the S.S.) the necessity for struggling for the improvement of the position of the Jewish people in whatever country they may live, especially by achieving a national-political autonomy which they saw as a prerequisite for successful territorial concentration.

In contrast to the Bund, which was essentially a Russian party (similar movements developed under other names also in England, America and Galicia), the S.S. movement especially, and the Poale Zion as well, spread also to other lands, namely, America, Austria, Palestine and England. In 1907 the Poale Zion succeeded in unifying the various national parties into a world union.

Third Period (1907 to 1914). All Jewish socialist parties came into public life out of a struggle among themselves and with the civil parties existing within Judaism. In the early years of the 20th cent. the Bund achieved great influence in the political life of Russia, and it played a significant role during the revolutionary years (1905-6). The Jewish socialist parties in Russia and Austria participated actively in general political life; for example, in Russia, in the Duma elections, and in Austria, in the struggle for the right to be elected to the Reichsrat or the Galician Landtag. In Austria there was a struggle for the recognition of Jewish nationality and of the Yiddish language. In internal Jewish life, an attempt was made to win the working class by means of direct agitation as well as by founding unions, always under the leadership of the parties, of which there were as many in each land as there were Jewish socialist parties. Only in the United States was it possible to create large politically unaffiliated Jewish unions. In addition, there was a struggle for the democratization and secularization of the Jewish communities. In the field of cultural work the attempt was made especially to foster Yiddish language and culture. There was a demand also for the founding of public schools with Yiddish as the language of instruction, and in the United States the first of these schools, the so-called national radical schools, were set up. Between 1908 and 1912 the Jewish socialist parties in Russia were hard-hit by the pressure of political and economic reaction, but by the end of the period the movement began to revive.

Fourth Period (1914 to 1919). In the first years of the first World War, the Jewish socialist movement, to all intents and purposes, came to a standstill. Only the movement in the United States remained active, where the interest of the parties revolved about charitable work, on the one hand, and the thought of a Jewish congress in America, on the other. Moreover, the world union of Poale Zion did much for the clarification of the international socialist movement in relation to the Jewish question, and it was able to secure from the Second International a statement of precise Jewish peace demands. The outbreak of the revolution in Russia, where Jewish socialist parties played a significant role generally as well as in internal Jewish life, greatly stimulated the Jewish socialist movement. The Zeire Zion movement began in this period. It was different from the other Jewish socialist parties mainly in the fact that it had a broader conception of the proletariat and it emphasized the significance of Hebrew cultural work.

The end of the War brought disruption to the Jewish socialist movement in Russia which until that time had been unified. It became divided into a series of national movements (Greater Russia, Poland, Ukraine, White Russia, Lithuania and Latvia). The center of the movement shifted to Poland, where the strongest parties were located and where union and cultural work developed intensively.

Fifth Period (from 1919 on). The most important phenomenon of this period is the splitting and liquidating process which occurred within the Jewish socialist parties under the influence of the communist movement. This movement, which promised to bring with it a quick and direct solution of the question of the Jewish worker, attracted large numbers of members of the Jewish socialist parties. In Russia and the Ukraine the Bund and the United, a party which was created in 1917, when the S.S. and the Sejmists merged, were absorbed by the Russian communist party. Although it remained independent, the Poale Zion accepted the communist program. In 1920 the world movement of the Poale Zion, within which many parties took on the communistic program, split into a Right and Left (communist) world union. The communist wing broke away from all other Jewish socialist parties, with the exception of the Zeire Zion.

The Zeire Zion movement, which had been united until this time, broke up independently. One group expressly accepted the socialist program and approached significantly the Right Poale Zion with which it finally combined. Another group remained far removed from the official socialist movement in that it strongly emphasized the national tendency and the reconstruction of Palestine, and it sought to become a people's movement. Both groups organized themselves into world unions, and gained followers in all countries where there were large Jewish settlements. The former became (1921) the world union of Socialist Zeire Zion, and in 1925 joined the world union of the Right Poale Zion. The latter became (1920) the world union of the Hithahduth Olamith Hapoel Hatzair and Zeire Zion, known in short as Hithahduth.

The Current Scene (1943-) The large number of present-day Jewish socialist parties may be divided into three large groups, namely, those to which the movement's national trend is foreign and which, unconsciously, lead to a policy of assimilation (the Jewish sections of the communistic parties in Russia, America and Palestine); those which emphasize the national tendency but seek a solution of the problem of the Jewish working class solely in the Galuth (national organizations of the Bund in Poland, America, England and Roumania; the Jewish section of the Independent Socialist Party in Poland; as well as some national parties of the world union of the Left Poale Zion); and, finally, those that believe in a definitive solution of the problem of the Jewish worker solely by means of a concentration of Jewish masses in Palestine (the world unions of the Right Poale Zion, of the Zeire Zion and of the Hithahduth; some national parties of the world union of Left Poale Zion). As a result of the great splitting up of the Jewish socialist movement, its influence upon general political and Jewish life has decreased significantly. Recently some related parties began to cooperate in certain areas, such as Palestinian and cultural work, and it is possible that

their great weakness can be overcome by a further coordination of forces, especially for general political activity. ARIEH TARTAKOWER.

SOCIÉTÉ DES ÉTUDES JUIVES, a French organization to promote the science of Judaism, founded in 1880 and existing until the collapse of France in 1940. Its founders were Counts A. and N. de Camondo, Barons David and Horace Günzburg, Lévy-Crémieux, Samuel Poliakoff, Baron James de Rothschild and the Dowager Lady Rothschild.

Among its first supporters were Claude G. Montefiore, the publisher Calman Lévy, and Raphael Bischoffsheim. Its technical and scientific preparation was mainly due to Isidore Loeb, Joseph Derenbourg, Arsène Darmesteter, Chief Rabbi Zadoc Kahn of Paris, and Chief Rabbi Marx of Bayonne. But the life and soul of the Société was Théodore Reinach, who was its secretary and exercised the greatest influence upon all its departments.

However, according to Reinach, it was the task of the Société to show "interest in science and interest in Judaism," not expressly interest in the science of Judaism. But this distinction could not be maintained. The Société was devoted to the science of Judaism and to the interests of the Jews, and it was quite natural that the history of the Jews in France and the interests of the Jews living in France were principally but by no means exclusively cultivated.

The Société published the quarterly *Revue des études juives,* whose more than 100 volumes published up to 1939 contained inquiries and essays written by the foremost contemporary Jewish scholars and some outstanding non-Jewish ones. It also edited *Actes et conférences* and an *Annuaire,* and its board arranged meetings and lectures of several kinds. Its first president was Joseph Derenbourg, who was succeeded by Zadoc Kahn and the philosopher Adolphe Franck. In the last years of its existence Seymour de Ricci directed its work.

SOCIETY FOR THE ADVANCEMENT OF JUDAISM, founded by Mordecai M. Kaplan in New York city in 1922. The purpose of the Society was to create an institution which would offer Jews an opportunity to experiment with new forms of Jewish living. Kaplan was formulating his conception of Judaism as a religious civilization, and the Society was to be both a laboratory in which this new conception would be implemented in terms of worship, education, and other group activities, and a rostrum from which he would expound the meaning of his new philosophy.

Kaplan's philosophy has come to be known as Reconstructionism, and the principal function of the Society, in addition to that of serving the personal needs of its members, has been to sponsor his efforts to disseminate the Reconstructionist philosophy. By granting to him (and subsequently also to his associate, Ira Eisenstein) an absolutely free pulpit, the members of the Society have helped to bring the Reconstructionist philosophy to the point of crystallization which it enjoyed in 1943.

The Society published the *S.A.J. Review,* a weekly magazine devoted to the exposition of Kaplan's views. This magazine suspended publication in 1929, but in January, 1935, the Society made possible the establishment of *The Reconstructionist,* a bi-weekly devoted to the same purpose. In this second effort, however, Kaplan was joined by a group of rabbis, educators, and social workers. The Society conducts a synagogue, an elementary religious school, confirmation classes and adult education courses for its local membership. Through these various channels experiments are constantly performed with a view to incorporating the basic postulates of Reconstructionism.

For a detailed description of this philosophy and movement, *see* JUDAISM. IRA EISENSTEIN.

SOCIETY FOR ETHICAL CULTURE, *see* ETHICAL CULTURE, SOCIETY FOR.

SOCIETY OF THE FRIENDS OF THE HEBREW LANGUAGE (Hebrew name, Agudath Hobebe Sefath Eber). This society was at first only a special section of the Society for the Spread of Enlightenment among the Jews of Russia. It strove to encourage Hebrew literature, and published the works of Judah Lob Gordon, Peretz Smolenskin and Isaac Erter. In 1907 it received legal recognition as a separate organization, and extended its activities to Jewish education in Russia. It advocated instruction in modern Hebrew in the Jewish schools in the Pale of Settlement, and supported various pedagogical publications, including the periodical *Hahinnuch* in Palestine.

The headquarters of the society were in Leningrad; its president was the Hebrew author Judah Lob Benjamin Kazenelson (Buki ben Jogli). The members of the society were obligated to converse with one another in Hebrew and to distribute works of Hebrew literature.

SOCIETY FOR JEWISH JURISPRUDENCE (Hebrath Hamishpat Haibri), a society founded originally in Moscow in 1918 by P. Dickstein and S. Eisenstadt; it published a work on Jewish law entitled *Hamishpat Haibri* (Moscow, 1919). From that city the Society emigrated to Palestine, where in 1921 it was reestablished at Jerusalem for the purpose of uniting Jewish jurists and Talmudic scholars in the research of ancient and medieval Jewish law.

The founders of the Society were prompted by the idea that the national renascence in Palestine was bound to lead to a continuous revival of Jewish law, because within the sphere of Jewish legal relations it was not foreign law, but the traditional forms of Jewish legislation which should be applied. This aim, however, could be attained only through historic research and a dogmatic, systematic conception of Jewish law.

The Society aimed at the scientific investigation of Jewish law, the publication of juristic literature in Hebrew, and the development of a Hebrew juristic criminology. The Society published several volumes of essays entitled *Hamishpat Haibri,* containing valuable scientific material and noteworthy historic and dogmatic treatises on Jewish law. Besides these volumes, *Hamishpat,* a monthly edited by the distinguished attorney S. Eisenstadt, was founded in Jerusalem in 1927, devoted to the law now prevailing in Palestine and to the legal position of the Jews in other countries. The magazine was suspended in 1940 because of the second World War.

In 1924 the Society inaugurated branches at Tel-Aviv and Haifa, and in 1926 a branch was founded at London; this occasionally published in English its own series of pamphlets entitled *Publications of the Society for Jewish Jurisprudence.*

SOD (in Cabala), *see* under CABALA.

SODOM AND GOMORRAH, the two most important of the five "cities of the plain," the others being Admah, Zeboiim and Zoar. According to the narrative in *Gen.* 13 to 19, these cities were situated in the fertile "plain of the Jordan" in or near the "vale of Siddim." Lot chose Sodom as his residence after he parted from Abraham; later, when the cities were overcome by kings from Mesopotamia, Abraham res-

cued their captive inhabitants. The people of the cities were wicked and, in particular, inhospitable; so God resolved to destroy them. Lot was warned in time to escape; his wife looked back in their flight and was turned into a pillar of salt; brimstone and fire rained upon four of the cities and destroyed them, Zoar alone being spared at the plea of Lot. A number of passages in other books of the Bible refer to the fate of the cities of the plain as a symbol of utter destruction. They generally use the names of Sodom and Gomorrah alone; on the other hand, *Hosea* 11:8 mentions only Admah and Zeboim.

Rabbinical sources dwell on the story of Sodom and Gomorrah, giving specific instances of their wickedness, which took the form of reversing all logical principles of justice. Eliezer, the servant of Abraham, is reported to have defeated the people of Sodom and Gomorrah at their own game.

Innumerable attempts have been made to locate the site of Sodom and Gomorrah, but none have met with success, although a pillar of salt, reputed to be Lot's wife, is shown to travelers by Arabs. Opinions are divided between the northern and southern parts of the Dead Sea. Some suggest the region near the spot where the Jordan empties into the sea; the traditional Jebel Usdum is on the western shore near the southern extremity; while Albright and Glueck have pointed out that the best water-supply is along the eastern shore of the southern part, where several streams flow into the sea.

An extensive settlement was discovered by Albright at Bab edh Dhra, about 500 feet above the shores of the Dead Sea to the east of the Lishan peninsula which divides the sea into two. The sites of the cities may therefore have been along these streams, although no evidence has yet been found. Whether they were ruined by some catastrophe or merely by changes of climate and lack of proper water conservation can not be definitely determined.

SOF PASUK, *see* CANTILLATION.

SOFER, MOSES (called Hatham Sofer, after his main work), rabbi and scholar, b. Frankfort, Germany, 1762; d. Pressburg (Pozsony), Hungary, 1839. He claimed descent from Rashi, and derived his name from a series of ancestors who had been Soferim (scribes of the Torah). He was a pupil of Rabbis Nathan Adler and Phinehas Hurwitz of Frankfort, and of Tebele Scheuer of Mayence. Having married the daughter of Rabbi Moses Jerwitz of Prossnitz, he became head of the Yeshiva in that city. He was successively rabbi at Dresnitz, Moravia, Mattersdorf, Hungary (1798-1806), and Pressburg (from 1806 until his death). Numerous pupils flocked to his Yeshiva at Mattersdorf, and at the Yeshiva in Pressburg their number was several hundred. He was considered one of the greatest Talmudic scholars of his time; in his lectures he strove for simplicity and clarity, having discarded Pilpul (casuistry). His decisions had the authority of law in Orthodox rabbinic circles down to the 20th cent.

Sofer combatted with great vigor and with the full weight of his authority the Hamburg Reform Movement as well as any attempts at secular education in his own community. His spiritual testament, *Tzavaoth Mosheh,* printed in 1863, forbade his children and descendants to have a German secular education, but it was followed also by the majority of his community at Pressburg, and influenced the attitude of Hungarian Orthodoxy for the next hundred years.

Among the numerous manuscripts which he left behind, the following were printed: *Hatham Sofer,* responsa (6 vols., 1855-64); *Hatham Sofer,* notes to many Talmudic tractates; *Shirath Mosheh* (1857), mystical poems; *Torath Mosheh* (1879-93), commentaries and notes on the Pentateuch; *Sefer Zikkaron* (1896), memoirs on the siege of Pressburg by Napoleon; *Haggadah shel Pesach* (1896), commentaries.

SOFERIM, a group of teachers in the period of the Second Temple, beginning with the time of Ezra (middle of the 5th cent. B.C.E.). Due to the fact that in the New Testament they are called *grammateis,* they are often termed "scribes"; in reality, the term means something like "bookmen" or "interpreters of the Scriptures," since it is derived from *sefer,* that is, the book of the Torah. The Soferim arose as a class in consequence of the adoption of the Torah as the basic law of Judaism. At the very beginning it was necessary to interpret these laws to the people (*Neh.* 8:8). This interpretation was entrusted to the priests, and no doubt was carried on by the priests for the next two or three centuries.

Hence scholars have often identified the Soferim with the Men of the Great Synagogue (*Aboth* 1:1), one of the objects of whom was "to make a fence about the Law." They are reported to have made eighteen changes, known as *tikkune soferim,* in the text of the Bible, intended to improve the text; thus, in *Gen.* 18:22, they are reported to have substituted for the original, "but the Lord stood yet before Abraham," the more reverent words, "But Abraham stood yet before the Lord" (*Mechilta* and *Tanhuma Beshallah*). Certain of the laws are called *dibre soferim,* "words of the Soferim." The Soferim thus form a link in the chain of tradition after Moses, the sages and the prophets, as is correctly stated in the Gospels (*Matt.* 23:34).

About the 2nd cent. B.C.E. there were, in addition to the priestly Soferim, many lay Soferim, and in course of time the latter broke away to form the group of Pharisees, who taught the Law directly, without reference to the Scriptures. Nevertheless the term Soferim seems to have been preserved to indicate teachers of Jewish law in general, down to at least the middle of the 1st cent. C.E., when it was replaed by *hachamim,* "sages," and still later by *rabbanim,* "rabbis." It is largely in this sense that the word "scribes" is used in the Gospels, distinguishing Jewish teachers from Jesus.

In a number of instances the terms "scribes and Pharisees" are combined. It is possible that by "scribes" Sadducean teachers are meant; but the nature of the questions recorded as propounded to Jesus, or the teachings cited in their name, hardly warrant this inference. The thirteenth of the Eighteen Benedictions, the prayer for the preservation of the righteous, includes a clause asking the favor of God for "the remnant of the scribes"; this petition, which probably goes back to Maccabean times, evidently refers to the Pharisaic teachers who were persecuted by John Hyrcanus and Alexander Jannaeus. Hence, while the term Soferim originally referred to the interpreters of the text of the Scriptures from Ezra to the time of the Maccabees, it later, down to the 1st cent. C.E., was understood in the sense of teacher. In the Talmud both this and the corresponding Aramaic *safraya* are used in the sense of Bible teachers in a primary school. SIMON COHEN.

Lit.: Hastings, James, *Encyclopedia of Religion and Ethics,* vol. 11 (1921) 271-76; *Jewish Encyclopedia,* vol. 11, pp. 123-24; Lauterbach, J. Z., *Midrash and Mishnah;* Schürer, Emil, *A History of the Jewish People in the Time of Jesus Christ.*

SOFERIM ("scribes"), one of the minor tractates of the Talmud; it contains twenty-one chapters, and gives regulations for the writing of the scrolls of the Torah used in the synagogue, as well as statements about the liturgy. It falls into three main divisions, of apparently different origins and periods. The first division, chaps. 1 to 5, exists in another recension in

the minor tractate *Sefer Torah;* it discusses such topics as parchment and other writing materials, the Septuagint, the qualifications of the scribe, the division of the scroll into columns, breaks in the text, the sewing together of the separate parts, whether other books may be written together with the Torah, the proper respectful treatment of the scroll, and the names of God that occur in it.

The second division, chaps. 6 to 9, comprises the Masoretic rules. It mentions all the unusual features in the scroll, discusses the Masoretic variants and special readings in the Bible, and the letters that are written extra large, and similar subjects.

The third division, chaps. 10 to 21, is further subdivided into two parts. The first of these, through chap. 15, discusses such topics as the regulations for reading the Scriptures in the synagogue, the Minyan, the writing and reading of poetical portions, the writing of the Hagiographa, especially *Esther,* the benedictions over the Scriptures, the liturgy of the reading, the qualifications of officiants at the services, phylacteries, Mezuzoth, the sanctity of religious writings, rabbinical studies, and the choice of a vocation for children.

The second part, chaps. 16 to 21, contains a variety of topics, including the value of the study of the Torah, the Haggadah, the scholarship of the rabbis, the 175 sections of the Torah, 147 psalms and 123 Hallelujahs, the readings from the Torah and the Prophets, *Lamentations* and the Megillah, on the liturgy and psalms for various festivals, on the New Moon, benedictions for weddings and funerals, the Hanukah light, the month of Nisan and the Haggadah of the patriarchs. This last part, which is latest in point of time, contains nevertheless important remains of an otherwise unknown ancient Palestinian liturgy.

SOFIA (in Slavonic, Sredec), capital city of Bulgaria (from 1878 on), founded by the Romans as Serdica early in the 1st cent. C.E. Subsequently it formed a part of the Byzantine (10th to 14th centuries) and of the Turkish empires (14th to 19th centuries).

1. From the Earliest Times to 1382. Various indications point to the presence of Jews in Sofia, which is situated at the crossroads of Asia Minor and Europe, during the early Christian Era. The first authentic information, however, dates from as late as 967, when Greek-speaking Romanic Jews settled in the city and founded a synagogue (Kal de los Gregos) in which divine services were conducted according to the Minhag Romania (Roman rite) down to 1881. In 969 Sofia was conquered by the Byzantine Empire; from 1186 on, however, the Bulgarian dynasty of the Assenides ruled and, anxious to eliminate Byzantine influence even from commerce, these rulers called merchants from Ragusa and Italy. With them came Italian and Provençal Jews who settled at Sofia under royal protection and organized their own synagogue. In 1352, as a reaction against the philo-Semitic policy of the Jewish queen Theodora (Sara), the Jews of Sofia were ordered into exile; but the ban was not scrupulously enforced. Soon afterward, Jews expelled from Hungary by King Lajos the Great (1360) and German Jews from Nuremberg (1376) were admitted. When Sultan Murad conquered the city in 1382, he found there synagogues of Greek, Italian and Hungarian rite.

2. Under Turkish Rule (1382 to 1878). Four hundred years of Turkish rule, tolerant and benevolent toward the Jews, made Sofia a center of attraction for Jews from many points in Europe, whether they came as refugees from persecution, such as Spanish Jews in 1492 or Polish Jews during the Chmielnicki riots (1648-58), or as merchants attracted by flourishing commerce, such as Jews from Salonika, Spalato and Italian cities in the 17th and 18th centuries. In 1578 the Jewish inhabitants of Sofia were estimated at 300; they were of different backgrounds and rites, and among them there were those speaking Bulgarian, Greek, Italian, Castilian and German. In course of time they were all absorbed by the Spanish Jews and adopted the Sephardic rite, except for the Ashkenazim, whose numbers were swelled by Jews from Buda, after its conquest by the Turks in 1529, and by successive waves of refugees from Eastern Europe. The (medieval German) Ashkenazic rite and melodies subsisted down to the 20th cent.

Sofia was also a haven for persecuted Sabbatians. Sabbatai Zevi himself addressed a message to the Sofia community from his prison at Abydos, and after his conversion to Islam his chief follower, Nathan Ghazzati, sought refuge at Sofia, where he died in 1680. A number of Dönmeh, the Islamic Jewish followers of the pseudo-messiah, also settled at Sofia. At that period (1680) the Jewish population of Sofia was put at 2,000.

Among the first rabbis of Sofia were Joseph Satan (early 15th cent.) and Joseph Albo (1570). Benjamin ben Meir Halevi of Nuremberg, author of the Ashkenazic Mahzor, was chief rabbi of the Ashkenazic community from 1530 on. Other noted rabbis were: Meir Angel, author of *Kesheth Nehushah* (1593) and *Massoreth Haberith* (1619); Solomon Salem (1740-52), author of *Dibre Shelomoh* and *Leb Shalom;* Issachar Abulafia (1770), son of Hayim; Samuel Conforte, head of the Yeshiva, and author of *Kol Shemuel* (1787); and Jacob ben Samuel Magyar (1795-1806), author of the commentary *Helek Yaakob.* In the 19th cent. the standards of the Sofia Yeshiva and Heders were low; these schools were the remnants of a passing culture.

3. From the Russo-Turkish War (1877 to 1878) to the Period Following the First World War (1920). At the conclusion of the Russo-Turkish War the Congress of Berlin made (1878) Sofia capital of the Bulgarian state, whose constitution granted the Jews full citizenship rights. The Jews of Sofia, who had distinguished themselves as volunteer fire fighters and guardsmen against Turkish bands, were privileged to man the first firemen's corps of the city and to send two representatives to the city council. In 1880 the old city, including the Jewish quarter, was demolished and rebuilt in a modern style. Schools founded by the Alliance Israélite Universelle raised the Jewish community to the European cultural standard. Sofia became the seat of the Tzentralna Konsistoria Na Evreit Ve Bulgaria (Central Consistory of the Jews of Bulgaria), as well as of a regional Beth Din and of the Beth Din Hagadol. The chief rabbi of Sofia was also chief rabbi of Bulgaria, drawing his salary from the state. Chief rabbis Gabriel Almosnino (from 1880 on) and Moses Tadjer were Sephardic Jews; Dankowitz from Bohemia, Moritz Grunwald and Marcus Ehrenpreis (1901-14), who later served as chief rabbis, were Ashkenazic.

In spite of anti-Semitic outbreaks in the form of blood accusations (1884 and 1890), the number of Sofia Jews grew rapidly, although not keeping abreast with the increase of the general population.

Year	Jewish Population	Percentage of the Total
1881	4,274	20.85
1893	6,872	
1910	12,852	12.5
1920	16,196	10.5
1927	20,930 (19,330 Sephardic, 1,600 Ashkenazic)	8.4

Sofia was the theatre of one of the earliest and most enthusiastic Zionist movements. Prior to the second World War (1939), of the six Sofia synagogues, five followed the Sephardic rite, among them the Old Bavarian, and in only one synagogue, erected after 1878, was the Ashkenazic ritual prevalent.

The Jewish community of Sofia maintained a hospital and five schools, including two progymnasia (junior high schools), the city of Sofia providing a subsidy toward their maintainance. In addition to numerous charitable and philanthropic institutions, as well as cultural societies, the Jewish community had three libraries and two sports clubs. Among the Jewish magazines and newspapers published were the daily *Chelovecheski Prava,* issued in 1899, the Zionist publications *El Judio* (in Ladino) and *Makkabi* (in Bulgarian) and the revisionist *Rasviet.* The official bulletin of the Tzentralna Konsistoria na Evreit Ve Bulgaria was bilingual (Ladino and Bulgarian).

The great majority of the Jews of Sofia were engaged in industry, commerce and the handicrafts. They were excluded, in fact though not by law, from governmental service and from teaching positions at the university. They contributed a fair quota to the musicians, painters, lawyers and physicians of the nation. Several Jewish authors and scientists of Sofia also achieved notability.

4. Under Nazi Influence (1923 to 1943). The first spell of persecution and political insecurity for the Jews of Sofia came with the forceful overthrow of the democratic Stambulisky government in 1923. Whatever supernationalistic rowdyism organized under anti-Jewish slogans existed in the capital of Bulgaria was ready to meet Nazi demands for the outlawing of the Jews, as in the early period of the second World War Bulgaria found it opportune to align itself with the Axis powers.

On January 25, 1939, handbills were distributed at Sofia asking for "death to all the Jews." On September 20, 1939, Jewish-owned shops were plundered and destroyed. To win Bulgaria as a base for its Balkan war operations, Germany saw fit to restore to that country Southern Dobruja, a province which she had lost to Roumania after the first World War. Thereupon, on December 20, 1940, as an act of reciprocation, Bulgaria adopted an anti-Jewish bill which forbade Jews to reside in Sofia. Following closely the Nuremberg Laws, the bill also deprived Jews and half-Jews (persons with one Jewish parent or two Jewish grandparents) of Bulgarian citizenship, imposed upon them forced labor service, barred them from public service, publishing and public entertainment, from the ownership of banks and real estate as well as from owning or renting rural property, and limited their participation in the liberal professions and in the economic life of the country as well as their attendance at public schools to their ratio to the general population. The Jewish inhabitants of Sofia, numbering in 1939 about 17,000 out of the total Jewish population in Bulgaria of 49,000, and culturally and economically the most advanced Jewish element in the country, were the main sufferers from this arbitrary legislation.

The execution of the law was suspended for six months, but coinciding with the presence of German armed forces in Bulgaria, in the summer of 1941, Sofia Jews were placed under strict surveillance and required to bear identification cards. In July, 1941, a 20 per cent levy, amounting to 575,000,000 leva, was imposed upon Jewish-owned property, and all Jewish-owned insurance policies, as well as stocks and bonds, were confiscated to enforce its collection. The mining properties of Jews were transferred to Bulgarians, and the sale of Jewish-owned houses was enforced.

In 1942 Zionist activities were declared illegal, and members of the Zionist organizations were arrested. Several thousand Jews were employed in railroad construction as a forced labor project. The German example was emulated also in the mass arrest, confining in concentration camps and even in the execution of Jews charged with various crimes, mainly that of sabotaging the war effort and communicating with the enemy (of Germany).

In 1942 the anti-Jewish law was scrupulously executed. Zionist activities were declared illegal and members of the Zionist Organization were arrested. Several thousands of Jews were herded in labor camps under martial law. The German example was also emulated in the mass arrest and execution of Jews on various charges, mainly that of sabotaging the war effort (of Germany). On August 28, 1942, a new "Nuremberg" law was promulgated. It provided for the removal of the Jews from Sofia and their concentration in restricted areas. By November 1, 1942, all Jews had to leave the capital under death penalty; a decree provided for their being allowed to visit the city once in six months for ten days. All Jewish institutions, religious and educational, were placed under the control of a Commissariat for Jewish Affairs. Jewish organizations were forbidden to own real estate and synagogues were converted into places of entertainment. All Jews had to display the Star of David, excepting those who had accepted the Orthodox Greek faith and "privileged" Jews who were permitted to make their status known by displaying a round yellow badge. On September 10, 1942, all assets owned by Jews in Bulgaria, estimated at 8 billion lewa (about 96 million dollars at the rate prevailing prior to the second World War), were placed under the control of Alexander Beleff, Commissar for Jewish Affairs, individual Jews being allowed to draw 6,000 lewa monthly from their frozen assets. Beleff also ordered all corporations having the smallest amount of Jewish-owned capital to be liquidated. Yet, Jews were still employed in trade and manufacture in November, 1942, under the compulsion of marking their businesses and manufactured products as "Jewish." On October 5, 1942, Floyd Black, a member of the American College at Sofia, arriving at Istanbul, reported the persecution of Bulgaria's Jews to be steadily growing. "Many of them will die this winter," Black said.

SOKOBIN, SAMUEL, American consular official, b. Newark, N. J., 1893. He studied at Cornell University, and in 1914 was appointed student interpreter in China. Subsequently he held vice-consulships and posts as interpreter at various Chinese points until 1930, when he was appointed consul at Saltillo, Mexico. In 1934 Sokobin was returned to the East, serving at Tsing Tao. He was made secretary of diplomatical service in 1937. Appointed consul at Kobe, Japan, in 1940, he was on his way back to his post after a visit in the United States in December, 1941, when the Japanese attack on the United States forces caught him at Manila. He was forced to remain in Manila, and was there at the end of 1942.

SOKOLNIKOV (BRILIANT), GRIGORII IAKOVLEVICH, attorney and Soviet official, b. Poltavskaia, Ukraine, Russia, 1888. The son of a physician, he spent his early childhood in the Ukraine, but received his secondary education in Moscow.

He became active in the Russian revolutionary movement in 1903, and became a member of the Russian Social-Democratic Labor Party (Bolsheviki) in 1905. He was an organizer and agitator in Moscow (1905-1907) and took part in the armed uprising at Moscow in December, 1905. Exiled to Siberia in 1909, he soon escaped to Paris, remaining abroad until 1917. During the first World War he worked on Leon Trotsky's newspaper, *Nashe Slovo,* but eventually joined Lenin's group and returned to Russia with him after the February, 1917, revolution. In April, 1917, he became a member of the Moscow Committee of the Party.

After the October, 1917, revolution, Sokolnikov directed the nationalization of banks. In 1918 he was chairman of the Soviet peace delegation to the Brest-Litovsk peace conference with Germany. From 1918 to 1920, during the period of the civil war, he was a member of the military council of the second, ninth, thirteenth and eighth armies. In 1920 he was chairman of the Turkestan Commission of the All-Union Central Executive Committee; here he organized Soviet power in Bokhara.

At the sixth Party Congress (1917), Sokolnikov was elected to the Central Committee of the Communist Party of the Soviet Union. In 1921 he was made vice-commissar of finance, and from 1922 to 1926 he was commissar of finance. He was responsible for the institution of many monetary reforms, and later the author of *Soviet Policy in Public Finance, 1917-1928.* In 1926 Sokolnikov became vice-chairman of the USSR State Planning Commission, and in 1928 chairman of the Oil Syndicate of the USSR.

From 1929 to 1933, after serving as university professor of finance, Sokolnikov was Soviet Ambassador to Great Britain. On his return to the Soviet Union he was made assistant people's commissar of foreign affairs. At two periods (1917-19 and 1922-30) he was a member of the central committee of the Communist Party of the Soviet Union.

In 1936, however, he was arrested and in 1937 was tried for treason to the Soviet Union, in conjunction with the alleged Trotskyite anti-Soviet plot. He was sentenced to ten years' imprisonment.

Lit.: *Malaia Sovetskaia Enziklopediia,* vols. 2, 8 (1930), vol. 10 (1940); Webb, Sidney and Beatrice, *Soviet Communism* (2 vols., 1936); Popov, N., *Outline of History of the CPSU,* vol. 2 (134); *Report of the Court Proceedings in the Case of the Anti-Soviet Trotskyite Center* (1937).

SOKOLOFF, NIKOLAI, conductor, b. Kiev, Russia, 1886. He came to the United States when he was fourteen years old, studying music at the Yale University School of Music. After finishing these studies he became violinist of the Boston Symphony Orchestra, at the same time continuing the study of music with Loeffler. He resigned from his orchestral duties in 1907 to complete his music studies in Europe with D'Indy and Ysaye. After a concert tour of Europe as violinist, Sokoloff returned to the United States, and in 1911 became concertmaster of the Russian Symphony Orchestra. During the first World War he directed musical groups for the American Expeditionary Forces, and played the violin in army camps. In 1918 he became conductor of the Cincinnati Symphony Orchestra, and one year after this he organized the Cleveland Symphony Orchestra, which he directed for fifteen seasons. During this period he served also as guest conductor for major orchestras in the United States and England. After his resignation from the Cleveland Orchestra Sokoloff organized the New York Orchestra. In 1935 he was appointed national director of the Federal Music Project which, under his astute guidance, included more than 15,000 musicians and 500 musical organizations. In 1939 Sokoloff resigned from this post, and returned to the baton, becoming permanent conductor of the Seattle Symphony Orchestra.

SOKOLOW, NAHUM, Hebrew journalist and essayist, known as the founder of Hebrew journalism, president of the Jewish Agency for Palestine (1931-35), and diplomatic representative for the Zionist Organization (1916-35), b. Wyszogrod, district of Plock, Poland, 1860; d. London, 1936. Sokolow was a descendant of the famous Cabalist, Rabbi Nathan Shapiro, whose grandson, Samuel, a rabbi, and one of the earliest leaders of the Hasidic movement, settled in Sokolow, Poland, from which the family took its name.

Zevi Hirsch, the son of Samuel, the great-grandfather of Nahum, differed from his father's Hasidic views, became a Mithnagged (opponent of Hasidism), and settled in Wyszogrod. When Nahum was five years old his parents moved to Plock, where he received instruction from the best teachers of Jewish subjects and was given the rudiments also of a secular education. He studied Talmud, Bible, the codes and Hebrew grammar. His parents refused to send him to a secular school, for they were strongly opposed to the Haskalah movement. Rather than have him prepared to enter a Gymnasium, his father sent him away to a brother in Lowicz, where Nahum continued his studies under the famous Talmudic authority, Joshua of Kutno.

Nahum developed his talents as a writer at an early age. Together with a few other young men, he published a handwritten Hebrew newspaper for a time, translated into Hebrew Schiller's *Die Räuber* and *Maria Stuart,* and sent out many articles to various Hebrew newspapers. His earliest Hebrew contributions appeared in 1873 in the magazine *Ibri Anochi,* published in Brody. His first article in *Hatzefirah* appeared in 1875.

At the age of eighteen he married the daughter of Isaac Hirsch Segal, a well-to-do citizen of the township of Makow. For five years his family was provided for by his father-in-law, and Sokolow continued his studies in many directions. He never attended a secular Gymnasium or university, and all the knowledge he acquired was the result of his personal application. He had a remarkable intuition for languages, and at an early age had a working knowledge of Russian, Polish, French, English, Spanish and Italian.

Toward the close of the 1870's he made his home in Warsaw. He was interested in finding a place for himself on the *Hatzefirah,* which was then conducted by Chaim Zelig Slonimski and edited by Saul Pinhas Rabinowitz, the Hebrew translator of Graetz's *History of the Jews.* Finding it impossible to enter *Hatzefirah* as one of its editors, Sokolow entered the field of commerce for a time, and traveled for a cotton concern without success. He was persuaded to accept a secretarial post in the Spanish consulate in Warsaw, but soon gave that up. During this time, however, he was contributing regularly to *Hatzefirah* and other journals, and created a wide circle of readers for his articles. In 1881 Rabinowitz resigned as its editor, and Sokolow was invited by Slonimski to take charge of the paper. Under his direction *Hatzefirah* made remarkable progress. It introduced new features, attracted new contributors and was known as the best informed journal among all who read Hebrew. It became a daily newspaper in the middle of the 1880's.

Sokolow was not a Zionist in the days of the Chovevei Zionist movement. In fact, on occasion he criticized and condemned its activities. He had many controversies with Zionists in his own paper and in other journals. He advocated immigration to Argen-

Nahum Sokolow

tina rather than to Palestine. At the first Zionist Congress he appeared as a journalist and wrote reports to *Hatzefirah* that were objective and critical, but after the adjournment of the congress he had a change of heart, accepted Herzlian Zionism and became one of its ablest exponents in the Hebrew and Yiddish press.

When Theodor Herzl died and David Wolffsohn succeeded him as president of the Zionist Organization, Sokolow became general secretary, and made his residence in Cologne, Germany. He edited *Die Welt,* the Zionist organ founded by Herzl, and established the official Hebrew organ of the Zionist Organization, *Haolam,* of which at first he was sole editor and then joint editor with Moses Kleinman who, in 1943, was still publishing *Haolam* in Jerusalem. Sokolow accompanied Wolffsohn on a political mission to Constantinople in 1909. Although associated with Wolffsohn in an official capacity, Sokolow was a member of the opposition of Russian Zionists, which later overthrew Wolffsohn and in 1911 elected a Zionist administration consisting of Otto Warburg (chairman), Arthur Hantke, Shemarya Levin, Jehiel Tschlenow, Victor Jacobson and Sokolow. In this cabinet political affairs were in the hands of Sokolow and Victor Jacobson, who was stationed in Constantinople.

At the outbreak of the first World War, Sokolow moved to London and joined Weizmann and Tschlenow in their Zionist political activities. In these Sokolow proved himself one of the most effective diplomatic representatives for important political missions on the Continent. He was responsible for securing the approval of the Balfour Declaration by the French and Italian governments, and by Poland, Roumania and South Africa. He was given a sympathetic hearing by the Pope in 1917. At the Peace Conference held at Versailles Sokolow, as president of the Committee of Jewish Delegations, participated in the submission of the statements made by the Jewish delegation with regard to Jewish minority rights.

At the first international meeting after the War, held in London in 1920, Sokolow was elected chairman of the Zionist Executive and served in that capacity until 1931. He was also elected president of the Zionist congresses, although Leo Motzkin usually served as acting chairman. At Zionist congresses Sokolow seldom took sides in controversies.

He visited the United States for the first time in March, 1913, and addressed a mass meeting in Boston, at which Louis D. Brandeis made his first public appearance as a Zionist. Sokolow at that time conferred with Brandeis on the organization of a corporation to undertake economic work in Palestine, and reported on this interview to the Vienna Zionist Congress of 1913. His second visit to the United States was in 1922, when he came as head of a Zionist delegation with Vladimir Jabotinsky and Alexander Goldstein. He visited the United States on various other occasions, always in the interest of fund-raising and general Zionist propaganda. His last visit took place in 1935.

When Weizmann tendered his resignation as president of the Zionist Organization in 1931, Sokolow was elected to succeed him, and held office for four years. When Weizmann returned to the Zionist leadership, Sokolow was elected president of the Palestine Foundation Fund (Keren Hayesod) and head of a special commission on Hebrew culture; he continued to serve as a political representative as well.

Both as journalist and as political representative Sokolow was urbane, objective, unhurried and sagacious. He never could be forced into the position of a partisan. This excluded him from the field of controversy, and he was never counted in the alignment of forces, although he was always called upon to restore a workable equilibrium between clashing ideas. His objectivity led to the charge that he had no firm convictions, but this was not so, as was evident on many occasions in his vigorous support of administrative policy. He believed in deliberation and calm judgment. He felt that it was the duty of leadership to retain control of emotion and prejudice in order to be in a position to exercise effective authority in matters calling for action. He was by nature judicial. He regarded force in argument as a form of vulgarity unworthy of intellectual leadership. That was why he seldom failed to find a medium line in partisan discussion. He lacked fire as a speaker, but his addresses always had form, were informative and good-humored. His speeches were likened to spoken feuilletons or essays, decorated with anecdote and historical allusion. He possessed an encyclopedic fund of knowledge.

He was an extensive traveler, and visited almost every part of the world. When over seventy he made trips to South Africa and to the United States, leading in Palestine Foundation Fund campaigns and receiving tremendous popular acclaim. He was at his best in political conversations with European statesmen, where manner and form were important. His memory for persons and their public achievements was amazingly accurate and comprehensive. In discussion he was able, with a light touch and in an easy manner, to draw upon history, books, personal experiences, anecdotes—all suffused with a wisdom and sagacity that made a lasting impression. He was a "grand" gentleman, affected a French style, and dressed to suit the part of the diplomat, meticulous in approach, tone and the etiquette of social relations. He grew old gracefully and maintained his dignity to the end of his

days. Among all the Hebrew writers of his generation he was the most distinguished. LOUIS LIPSKY.

Man of Letters. Nahum Sokolow was the most prolific Jewish writer of his age, having published over 4,500 articles and thirty books in Hebrew, Yiddish, English, German and Polish. He was an extremely versatile writer, his work ranging from newspaper reporting to scholarly treatises. He was the father of modern Hebrew journalism, into which he introduced the European feuilleton, the counterpart of the American column. He was a master of both the feuilleton and the essay, but fell short in literary work which required a broad canvas. The medium of this feuilleton aspect of his activity was the Hebrew periodical *Hatzefirah,* which he edited from 1884 until the first World War, and which became identified with his name. He edited also several compendia: *Haasif,* of which six volumes appeared between 1884 and 1894; *Sefer Hashanah,* of which six books appeared between 1900 and 1906; a volume on the thirtieth anniversary of the *Hatzefirah* in 1903; and a jubilee volume in 1912.

Sokolow wrote *Sefer Zikkaron,* a biographical lexicon of contemporary writers, in 1889. He was the first editor of the weekly *Haolam* which, founded in 1907, was still appearing in 1943, in Jerusalem. Among his most important books in Hebrew are: *Metzuke Eretz* (1878), a textbook on natural geography; *Sinath Olam Leam Olam* (1882), a history of anti-Semitism; *Torath Sefath Anglith* (1882), a primer for the study of English; *Tzaddik Venisgab* (Pious and Exalted; 1883), a historical novel; *Eretz Hemdah* (Beautiful Land; 1889), a geography of Palestine; *Lemaranan Verabbanan* (1901), essays on Zionism; *Kethabim Nibharim* (Selected Writings; 1904); *Baruch Spinoza Uzemano* (1929); *Haani Hakibbutzi* (1930), a treatise on mass psychology; *Ishim* (3 vols., 1935), genial essays on famous men. Sokolow also translated into Hebrew Gustav Karpeles' *Geschichte der jüdischen Literatur* and Theodor Herzl's *Altneuland.* In 1905 he published in a special pamphlet for subscribers to the *Hatzefirah* his Hebrew translation of the first part of Graetz' *Geschichte der Juden.*

In 1906 Sokolow edited *Der Telegraf,* a Yiddish daily newspaper in Warsaw, the Polish weekly *Izraelita* from 1895 on, and the German weekly *Die Welt,* official organ of the Zionist Organization. In Yiddish he published a primer for the study of English (1891) and *Oisgevelte Shriften* (Selected Writings; 1912). In German he published *Geschichte des Zionismus* (1921), and in English *History of Zionism* (2 vols., 1912; with an introduction by Arthur James Balfour) and *Hibbath Tziyyon* (1935). Among his numerous articles and essays there are lengthy ones on satire, style, journalism, travel sketches, and on Rabbi Nachman of Bratzlav.

Sokolow's writing reflects a broad outlook on life, a native wisdom coupled with a wide, mellowing experience and a statesmanlike understanding of human relationships. Being himself one of the most gifted and richest personalities of the present time, Sokolow made the study of personalities one of his favorite subjects. He was always interested not only in the man, but also in the race from which he sprang and in the people and the community which formed his background. He said of himself that he was not fond of biographies *per se,* and had no special interest in mere fact, but liked to confront the object of his study and to make his investigation directly through the living man, his appearance and his character. He always sought the distinctive quality of the man, placing him in a category of his own.

In his character sketches Sokolow displayed not only his erudition and his knowledge of men, but also an unusual combination of wide cosmopolitanism with deep Jewish wisdom and a knack of detecting the Jewish roots and the implications of the Hebrew character in the leading Jewish figures of the world. The great Dutch painter, Jozef Israels, looks like a Gimel walking along the streets of Amsterdam, or like a Samech when standing; Henri Bergson is the "grandson of Temerel," a famous woman in Polish Jewish history, and Bergson's philosophy, divorced as it is from Jews and Judaism, is "eggs laid in alien nests, gold wasted on invading Cossacks"—the latter image being a reference to the act of Temerel in preventing a pogrom on the Jews of Warsaw during the Russian invasion at the time of the Polish rebellion. In Samuel Alexander, English Jewish philosopher, he sees "the Shekinah reflected in his mild, sedate and noble figure."

Sokolow was fond of seeking out great Jewish figures in an alien world and of restoring them to their people at least in literary record. He liked to discover the traits common to the painter in Amsterdam, to the professor of medicine in Berlin and to the Talmudic scholar in Eishishok.

Sokolow, a man of great culture and erudition, contributed vitally to the enrichment and modernization of the Hebrew language. His style in Hebrew underwent many changes with time and was never fixed or uniform. But it was always rich and sparkling, reflecting both his immense Jewish scholarship and brilliant mind.

In Sokolow's writing there is analysis as well as portraiture of background, and a lyric note is often woven into strict appraisal. He had a profound appreciation of beauty in nature. The versatility of his talents was explained by Sokolow as due to the characteristic trait of the Jews who are responsive to more moods and feelings than any other people. "In our character," he says in his essay on Bialik, "there is an interchange of emotions ranging from the yearning of a maiden to the conscious strength of a mature man, the fatalistic sadness of the aged, and the gayety of the youthful."

In this very versatility Sokolow saw one of the sources of the Jew's shortcomings which he strove to combat. Sokolow permitted his talents to be diffused and scattered in every direction. Moreover, he never had the leisure and the tranquillity which one associated with the writing of a book, traveling as he did from country to country most of his lifetime. He would begin writing a book in Europe only to complete it in America, or start on an essay in South America only to finish it in Palestine, filling in chapters in the United States, Canada or some country. He wrote in several languages and passed from one field of endeavor to another. Still, in all this there were solid strength and a harmonious integrated personality.

MENACHEM RIBALOW.

Lit.: Lachower, F., *Toledoth Hasifruth Haibrith Hahadashah,* vol. 3 (1931) 33-37; Frishman, David, *Partzufim,* vol. 2; Brainin, Reuben, *Kol Kithebe,* vol. 2 (1936) 23-31; Ribalow, Menachem, *Soferim Veishim* (1936) 209-14; Streit, S., *Pene Hasafruth* (1939) 81-92; *Hadoar,* May 9, 1930 (special Sokolow issue, containing articles by S. Rosenfeld, Abraham Goldberg, Menachem Ribalow, S. Bernstein, I. Shapiro and M. Z. Raisin); Cohen, Israel, in *Opinion,* Jan. 4, 1932, p. 10; *Sefer Hayobel* (1904; collection of essays in celebration of the twenty-fifth anniversary of Sokolow's career as a journalist); *New Palestine,* Nov. 25, 1921; May 22, 1936.

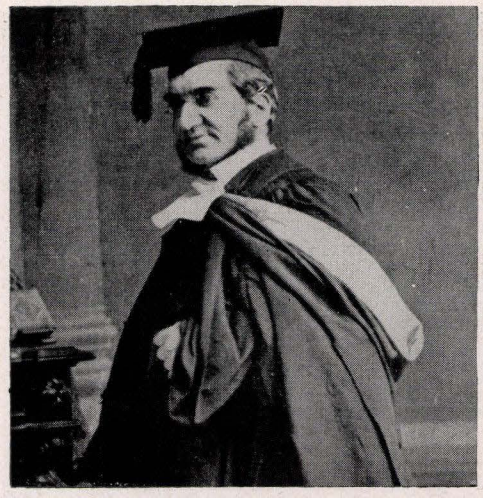
SOKOLSKY, GEORGE EPHRAIM, journalist, b. Utica, N. Y., 1893. He studied at the School of Journalism of Columbia University until 1917, when he became editor of the *Russian Daily News* in Petrograd. After one year at this post, he went to China, to serve as assistant editor of the *North China Star.*

Sokolsky spent the following ten years in the Far East. In addition to his journalistic work, he also acted in various

official capacities, mainly as adviser to Chinese officials. Among his newspaper affiliations were his service as political correspondent of the *North China Daily News* (1920-30), as editor of the *Far Eastern Review* (1927-30), as Shanghai correspondent of the New York *Evening Post,* the Philadelphia *Public Ledger,* the New York *World,* the London *Daily Express* and the Japan *Advertiser* (1920-30). He was also director of the China Bureau of Public Information (1919-20) and president of the Shanghai *Journal of Commerce* (1921-24).

After his return to the United States, Sokolsky was first (1935-40) a contributor to the New York *Herald-Tribune,* then he joined the staff of the New York *Sun,* and affiliated newspapers, as a columnist. He did some broadcasting, chiefly for the National Association of Manufacturers (1937-41). His point of view became recognized as expressing the extreme conservative attitude, particularly in economic matters.

Sokolsky wrote for various American periodicals, and was the author of *Outlines of Universal History* (1928); *Tinder Box of Asia* (1932); *Labor's Fight for Power* (1934); *We Jews* (1935); *Labor Crisis in the United States* (1938) and *The American Way of Life* (1939). He was a believer in assimilation, by marriage and otherwise, but not in arbitrary religious conversion. Sokolsky was awarded the Chiao Ho (4th class) decoration by the Chinese Government and also the Columbia University Medal (1938).



SOLA, DE, a Sephardic family, known to have come from Toledo and Navarre. Although the surname de Sola was evidently not used before the 12th cent., the family line can be traced back to prominent members in the 8th and 9th centuries. Don Bartolome, or Baruch ben Ishak ibn Daud, is said to have been a government official in Navarre in the 9th cent.

Later members of the family were physicians, scholars and officials in Cordova and Seville. Hai ben Michael (b. Seville, 11th cent.), while in Lucena, was one of the teachers under whose influence Judah Halevi came. Isaac ben Elijah ibn Daud de Sola (d. 1216), a great-grandson of Hai ben Michael, was a rabbi in Navarre. His grandson, David de Sola, was a writer and a patron of Hebrew literature. David de Sola's brother, Abraham, was a physician who emigrated to France; and another brother, Aaron (d. Salamanca, 1280), was a mathematician and astronomer.

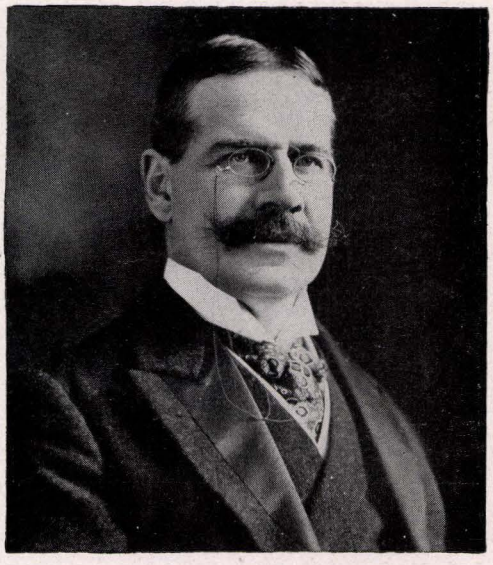
With the expulsion of the Jews from Spain, the de Sola family fled to Portugal, whence most of them subsequently arrived in Holland. One branch became Marranos for a while, but eventually also escaped to Holland. But early in the 18th cent. David de Sola (b. about 1670), who, under an assumed name, had come to Lisbon temporarily with his family for business reasons, was found by the Inquisition and tortured. Two of his sons were put to death at an auto da fé. Another son, Aaron, escaped to London (1749) and then returned to Holland. A brother of David de Sola, Isaac de Sola (b. 1675; d. London, 1734), was a rabbi and the author of sermons and commentaries. His son Abraham de Sola (d. London, 1753) was a minister in London from 1722 to 1749, and his nephew Joseph Mendes de Sola was minister there from 1749 to 1770. Another member of the family, Raphael Samuel Mendes de Sola (b. Lisbon, 1699; d. Curaçao, 1761), was Haham at Curaçao from 1749 until his death.

Benjamin de Sola (b. Amsterdam, 1744; d. Curaçao, 1817) was court physician to William V of The Netherlands, and the author of *Dissertatio Medica* (1773). He died in Curaçao, whither he went in his old age to join other members of the family who had migrated thither.

Juan Isaac de Sola (b. Curaçao, 1795; d. 1860) was a grandson of Aaron de Sola. He went to Venezuela in 1817, and after a career in journalism, joined the army revolt against Spain. De Sola became a member of the general staff, later lieutenant-colonel, then colonel. Eventually he was associated in the separation of Venezuela from Colombia. He returned to journalism for a while, but resumed military activity to help overthrow the successor of Jose Antonio Paez, whom de Sola had supported. For this he was made a general.

Abraham de Sola

Other descendants of Aaron de Sola became distinguished in London, and later in Canada.



Lit.: Jewish Encyclopedia, vol. 11 (1905) 430-34.

SOLA, DAVID DE AARON DE, minister and writer, b. Amsterdam, 1796; d. Clapton, near London, 1860. He was the great-grandson of Aaron de Sola. De Sola was ordained rabbi in Amsterdam at the age of twenty, and two years later was made one of the ministers at the Bevis Marks Congregation in London. He was the first minister to preach in English at Bevis Marks (1831).

De Sola's *Translation of the Forms of Prayer According to the Custom of the Spanish and Portuguese Jews* appeared in six volumes (1836). Various studies of historical events and personages followed, including a treatise on *Moses the Prophet, Moses Maimonides and Moses Mendelssohn.* Certain sections of the Mishnah were translated by de Sola, in cooperation with M. J. Raphall; these subsequently appeared in what was virtually a pirated edition (1843). A translation of the Scriptures with an ambitious commentary by de Sola, Raphall and I. L. Lindenthal did not go beyond *Genesis* (1844). Numerous other translations of ritual and studies in Jewish music, history and biography were made by de Sola, in English as well as in Hebrew, German and Dutch.

Abraham de Sola (b. London, 1825; d. New York city, 1882), the son of David de Aaron de Sola, was a rabbi and the first of the de Sola family to emigrate to North America. He came to Montreal in 1847, to occupy the pulpit of the Shearith Israel Congregation there. In 1848 he was made lecturer in Hebrew and Oriental literature at McGill University. He became full professor in 1853, and was also a lecturer in Spanish literature. In 1858 the University conferred on him an LL.D. degree, the first honorary doctorate given to a Canadian Jew.

A man of profound general and Jewish learning, de Sola was known as public speaker and writer, and was a frequent contributor to literary and other periodicals. He was the author of *Cosmography of Peritsol* (1852);

Clarence I. de Sola

Mosaic Cosmogony (1852); *History of the Jews in Poland* (1870); *History of the Jews in France* (1871) and of more than a dozen other biographical and historical studies. As an opponent of the Reform Movement, de Sola collaborated with Isaac Leeser for the preservation of traditional Judaism in the Western hemisphere, and wrote for Leeser's *The Occident*. In Montreal he organized the Hebrew Philanthropic Society of Montreal, the first such organization in Canada; he was also president of the Natural History Society of Canada. De Sola was invited, in 1872, to deliver the opening prayer before the United States Congress; this despite his British citizenship.

AARON DAVID MELDOLA DE SOLA (b. Montreal, 1853; d. New York city, 1918), was the eldest son of Abraham de Sola, whom he succeeded in 1882 as minister of Shearith Israel in Montreal. He held the post until his death. Following his father also in the latter's support of traditional Judaism against the Reform influence, de Sola wrote and spoke frequently on behalf of Orthodoxy. He attended the conference held in New York city (1898) which led to the organization of the Union of Orthodox Congregations of the United States and Canada, and became vice-president of the Union.

CLARENCE I. DE SOLA (b. Montreal, 1858; d. Boston, 1920) was the second son of Abraham de Sola. He was an architect by training, and was a lay leader of Canadian Jewry for many years. An early advocate of Zionism, he urged the establishment of a separate Canadian organization; de Sola became first president of the organization when it was formed (1899), and retained the post until 1919.

De Sola was the director of several steamship lines; he inaugurated a steamship service between Antwerp and Montreal, built the first oil-burning ship to cross the Atlantic, and introduced hydraulic lift-locks into Canada. In 1904 he succeeded Jesse Joseph, his maternal uncle, as Belgian consul in Montreal. For his services, during the first World War, in organizing Belgian reservists in the United States and Canada, he was decorated with the Order of Leopold (1919).

HERMAN ABRAMOWITZ.

Lit.: Sack, Benjamin G., in *The Jew in Canada* (1926) 43-44, 87, 291-305; Borthwick, J. D., *History and Gazetteer of Montreal* (1892) 465-69; Morais, H. S., *Eminent Israelites of the Nineteenth Century* (1880) 53-57; *Canadian Men and Women of the Time* (1912) 320-22; Frank, M. Z. R., in *Hadoar*, No. 34, pp. 565-66.

SOLDI, EMILE ARTHUR, designer of medals and sculptor, b. Belleville, near Paris, 1846; d. Rome, 1906. He was awarded the Grand Prix de Rome for his medal *Happiness and the Child*. Among his other works are: *Gallia,* a bronze in alto relievo, in the Luxembourg Museum at Paris (1873); *Actéon* (1877), a cameo in the museum at Besançon; and many medals.

He distinguished himself through his archeological writings, such as *La sculpture égyptienne* (1876); *Recueil et mémoire pour l'histoire de l'art; Les arts méconnus; Les nouveaux musées du Trocadéro.*

SOLDIER, JEW AS. One of the most widespread anti-Jewish canards alleges that Jews are neither willing nor fit to serve as soldiers in the countries where they live, and that they lack physical strength and fortitude. This misrepresentation is refuted by the known facts of Biblical and post-Biblical times, and by the record of Jewish service and valor in the medieval and modern periods.

1. The Biblical Period. All serious Christian historians and theologians were and are unanimous in characterizing the ancient people of Israel as a "people of heroes." Joshua, Gideon, Jephthah, Saul, David and the Maccabees were considered by all Christian peoples, from the beginning of the Common Era to the present age, as the symbol and measure of valor and heroism in war, and great Christian soldiers, such as King Gustavus Adolphus of Sweden, Oliver Cromwell of England, and Duke Leopold of Anhalt-Dessau, commander of the Prussian army, were avowedly infinitely more inspired by the example of the heroes of Israel than by those of Greek and Roman army chiefs, let alone the warriors of Germanic antiquity. Although the ancient Hebrew was taught that his mission was peace, he looked upon war as a human necessity which would be abolished in a far distant future, after the coming of the Messiah. He was ready to sacrifice his life for God, Who did not disapprove of war, and for his homeland. The people of Israel struggled for the most part against odds, unafraid of being outnumbered, unfrightened by iron chariots, elephants and other war implements unknown to them.

Apart from exaggerations as to the number of the defeated enemy—exaggerations common to all ancient chronicles—historical and epic—the historical chapters of the Bible do not show any tendency toward inciting national pride by glorifying the feats of Hebrew warriors or by concealing defeats. On the contrary, many victorious kings of Israel and Judah, who had conquered considerable territory fared badly in the judgment of the authors of the Biblical reports, who saw the moral consequences of the conquests and victories as adverse and ominous for the religious life of the people of Israel. The fact that most of the Biblical authors, historians and prophets alike, severely criticized kings and generals of the people of Israel who were gallant and ingenious soldiers but did not recognize the Temple in Jerusalem as the sole and central sanctuary, or who were inclined toward foreign worship, proves that the Biblical reports concerning victories and the valor of the Israelites are reliable, especially compared with the attitude of the Greek and Roman historians and the epics of other countries.

The conquest of Palestine by the Israelites was accomplished after a series of hard-won victories over powerful Canaanite cities and coalitions, which were

King Jehoash and Elisha (below). From a conception by Frank Dicksee

able to oppose the invaders with armies superior in number and equipped with relatively more modern weapons, or were protected by strong fortresses. Not only the Biblical reports, but also the extant Amarna Letters, addressed by Egyptian governors to their king, Amenhotep IV, describe the Hebrew conquerors as valiant warriors. Joshua, their leader, captivated the imagination of posterity by his victories as he inspired his troops by his bravery. He stormed the city of Ai and destroyed it completely, and defeated an alliance of five Canaanite kings.

After conquering the land of Canaan, the Israelites did not reach safety, but occupied a country which became a focus of the military ambitions and efforts of various great powers of the succeeding periods and a constant battlefield for centuries. After the conquest of Palestine the Israelites had to hold their own against the surrounding tribes, against Bedouin raiders, and against the disciplined armies of Egypt, Syria, Assyria and Babylonia. The period of the Judges corresponds to the heroic ages of Greek, Roman and Germanic epic poetry. Othniel fought victoriously against King Cushan-rishathaim of Mesopotamia (Aram-naharaim). Ehud, the left-handed judge, delivered his people from the oppression of a coalition of Moabites, Ammonites and Amalekites. Shamgar defeated the Philistines, against whom Samson also struggled with his terrific strength. These feats, except those of Samson, were almost eclipsed by the hero Barak who, inspired by the prophetess Deborah, inflicted a signal defeat upon the

Canaanite armies, allied under the command of Sisera, the general of King Jabin. Gideon, with 300 warriors, defeated a large army of Midianites. His exploits were afterward often compared with the legendary heroism of King Leonidas of Sparta who, however, was slain with his 300 soldiers at Thermopylae. For nearly 2,000 years Jephthah was glorified by non-Jewish poets of various nations because of his exploits and his devotion to the law during and after his glorious campaign against the Ammonites.

The wars against the Philistines were particularly arduous because the latter were superior in number and their iron weapons and chariots were more efficient than the bronze spears of the Israelites. The Philistines even hired Israelite mercenaries to fight in their ranks. Against these formidable enemies Saul, the first king of Israel, although not recognized by all the tribes, was victorious, and defeated also Israel's perennial adversaries—the Ammonites, Moabites, Edomites, Arameans and Amalekites. Saul was finally beaten by the Philistines in the battle of Mount Gilboa, and died a hero. Saul's personal valor and that of his son Jonathan, who also fell in the battle of Mount Gilboa, aroused great enthusiasm. He was a clever strategist, as is proved by the operations which he conducted in his first battle against the Philistines. His fame, however, was only moderately extolled by the Biblical reports, biased as they were in favor of his successor David or by an anti-monarchical tendency.

David organized a powerful army and defeated the Philistines in two battles, after conquering Jerusalem, the city of the Jebusites, who were the allies of the Philistines. Famous for his bravery long before he came to power, David became a great military leader; he secured and expanded his state by wars against the surrounding kingdoms. In the struggle against Rabbath-Ammon, described in detail in the Bible, David's general Joab distinguished himself through his ingenious strategy (*II Sam.* 10:9-19), and defeated both the soldiers of the beleaguered city and the Syrians trying to relieve them. But the final victory was won by David himself.

Many of the kings of Judah and Israel mentioned in the Bible were courageous fighters and successful army leaders, but their military merits did not save them from severe criticism because they "did wrong" or "that which was evil in the sight of the Lord." Any Teutonic author of heroic poems or sagas would have praised a man like Zimri, the usurper, who died in the flames of his palace instead of surrendering himself. King Omri, a successful ruler and gallant warrior, was considered less important by the Biblical chroniclers than by the Assyrian annalists, who for nearly 150 years referred to the kingdom of Israel as "the land of Omri." A military historian can not but appreciate King Ahab who, although mortally wounded in a battle against the Arameans, remained standing upright in his chariot until evening in order not to jeopardize the outcome of the battle, and died after the victory was assured (*I Kings* 22:29-37).

Jehoash and his son Jeroboam, kings of Israel, both conducted triumphant campaigns against Syria, but the prophets Amos and Hosea emphasized the fact that the military feats of these kings contributed to the decay of morals and the impoverishment of the lower classes. In this way the purely military glory of more than one Hebrew warrior and army chief was belittled. Only a king who was gallant and also "did

Ahab is Slain. From a Bible illustration by James Jean Jacques Tissot

right" was commendable, in the Biblical tradition. Such kings were Uzziah and Josiah; the latter restored the Law and destroyed idolatry before he was killed in action, defending his land against the superior forces of the king of Egypt. In the time of the Second Temple, Nehemiah's laborers on the Wall of Jerusalem also served as soldiers (*Neh.* 4).

The Maccabean revolt against King Antiochus IV of Syria (168-165 B.C.E.) arose from resistance to the attempted suppression of the Jewish religion, and developed into a struggle for state independence after religious liberty had been won. The first Maccabees, particularly Judas, showed a new type of valor, different from previous Israelite bravery and unknown to non-Jewish gallantry. Neither a dynastic struggle nor military rivalry characterized the first Maccabean campaigns, but uncompromising fidelity to an ideal. Judas Maccabeus, a specialist in sudden attacks and guerrilla warfare, who "fought gladly the battle of Israel," was afterward lauded by the poets of almost all civilized countries, especially by the great Florentine poet Dante, who placed him between Joshua and Charlemagne. In fact, the Maccabean warfare was rather comparable to the war of the Boers against the British army, except that the Boers lacked the offensive spirit which animated the Maccabees. Judas Maccabeus, with his small army of Jewish soldiers, vanquished forces which were more numerous, well disciplined and commanded by experienced generals, such as Apollonius, Seron, Lysias, Gorgias and Nicanor. The Maccabees have come to be models of valor in the history of warfare. Their example inspired the Swiss confederates, who fought for their independence against the armies of Austria and Burgundy, and the Dutch, who revolted against Spanish domination.

2. The Post-Biblical and Roman Period. Martial activities by no means disappeared in post-Biblical times. The kings of Egypt, from the days of the Pharaohs of the twenty-sixth dynasty on, employed Jewish mercenaries in their campaigns against Ethiopia and placed them in charge of the fortresses of Elephantine and Syene. The Persian rulers of Egypt did the same. The Ptolemies also appreciated Judean valor, especially Ptolemy VI, who entrusted his whole kingdom to his Jewish generals and soldiers, and Queen Cleopatra, who owed her accession to the throne to her Jewish army chiefs. During the war against Pompey, Julius Caesar made use of the military ability of Aristobulus II, who with two legions created a diversion in Caesar's favor. According to Macrobius, a Roman author, there was a substantial Jewish contingent in Caesar's army. Caesar also acknowledged the valor of Hyrcanus, ethnarch of the Jewish people, and of his 1,500 Jewish soldiers whose courage was proved in the Alexandrian war. Jews served under the first Roman emperors, as for instance Tiberius Julius Alexander, who held the rank of general and was made procurator of Judea, but had become a pagan. In the rebellion of the Jews against Rome (66 to 70 C.E.), in which they were opposed by the generals (later the emperors) Vespasian and Titus, the valor of the Jews, who struggled without any hope of success, was generally recognized. Simon bar Giora even defeated a Roman detachment. He and John of Gischala defended the city of Jerusalem for 105 days against the assaults of the Romans under Titus. In the revolt against Emperor Trajan (115-117) the Jews conquered a large part of Egypt, and were subdued only after a hard struggle. The Bar Kochba revolt (132-35) could not be put down by the Romans until Julius Severus, the greatest general of his time, was sent by Emperor Hadrian to Palestine with greatly increased forces which nevertheless had to fight hard battles.

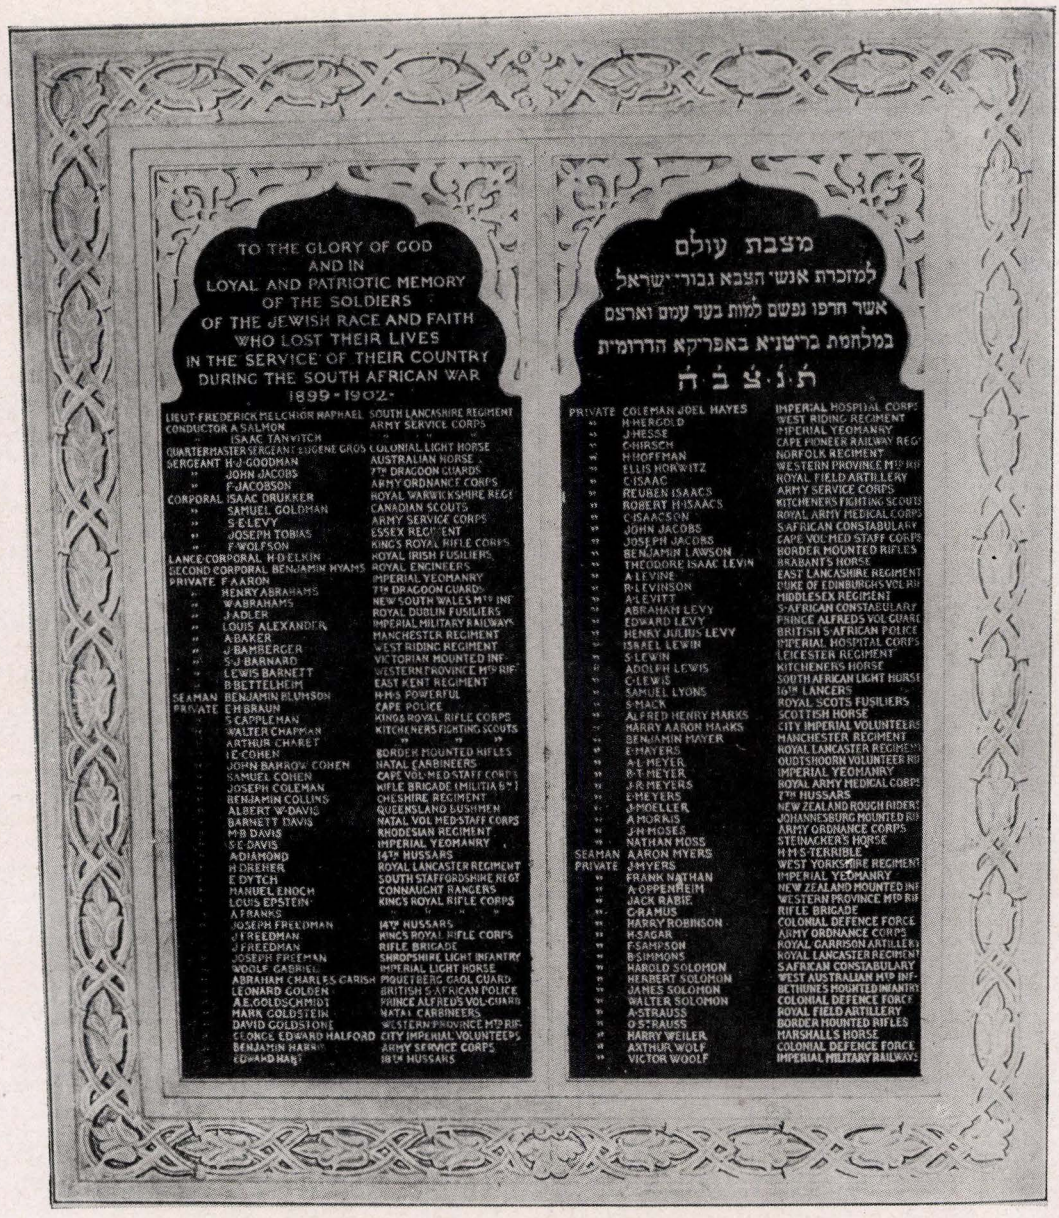
The position of the Jews in the Roman empire outside of Palestine was not prejudiced by these events, and Jews continued to serve in the Roman armies. They were highly regarded as soldiers until the end of the 4th cent. Then the Catholic church, whose in-

fluence on the political life of the ancient world rapidly increased, tried to deprive the Jews of the right to bear arms. But in 536 the Jews of Naples, espousing the cause of the Goths, took an active part in defending the city against Belisarius. They fought so fiercely that the besiegers did not dare continue their attacks against the positions held by the Jews.

3. The Medieval Period (to the end of the 15th Century). Jewish tribes fought fiercely but unhappily against Mohammed and his followers in the Middle East and western North Africa. The Djarwa, under the leadership of the Kahinah (priestess) Dahiyah, headed a large confederation which dominated almost the whole mountainous zone of the Jebel. The Kahinah at first successfully opposed the Arab invasion, but was defeated in a second attack and slain (about 703). Berber Jews participated in the conquest of Spain; two of the leaders, according to a tradition, were sons of the Kahinah. And the Jews of Toledo, revolting against their Gothic oppressors, won the city's fortress and opened the gate to the Moslem conquerors. But when the Mohammedans, despite the assistance received from the Jews, exacted a tax from them, a Jewish revolt broke out which was suppressed after heavy bloodshed. Under the reign of Al-Hakam the Andalusian Jews revolted again in 818. They sided with Mohammed ben Hisham of Cordova against Suleiman al-Hakam, and in the war between the pretenders Badis and Balkin both sides were supported by Jewish warriors. Jews also fought on both sides at the fierce battle at Zalaca (1086) between the Christian Spaniards and the Moors. In 1298 the Jews distinguished themselves in the capture of Seville, as they did in the defense of Burgos, Toledo and other cities. The Jews of Persia, led by David Alroy, accomplished noteworthy feats in the 11th cent.

Many Marranos were great soldiers or marines who played an important part in the European and colonial wars during the 16th, 17th and 18th centuries. Christopher Columbus, apart from the question as to whether or not he was himself of Jewish origin, was not only indebted to Jewish statesmen, scientists and financiers, but was accompanied on his first expedition by five persons of accepted Jewish origin: Alonso de la Calle, Roderigo Sanchez, Luis de Torres, who served as interpreter and was the first European to set foot on New World soil, Bernal, the ship's doctor, and Marco, the surgeon. The conquistador Alonso Hernando fought for five years with Cortez in many heavy campaigns against the Aztecs, and was personally engaged in the assault on Montezuma's capital. He was burnt, in 1528, as a Jewish heretic.

In the Portuguese armada which captured Mauritania in 1415 there were many Jews, and many Jews participated in the Portuguese expeditions to conquer India and the Far East.



4. The Modern Period. a. From the 16th Century to the First World War (1914). Many Marranos entered Turkish service to fight Spain and thus avenge their coreligionists who had been martyred by the Inquisition. Later on they joined the Dutch and British in their struggle against Spanish domination. In 1521 a Jewish pirate mustered a strong fleet to meet the Spanish galleys. Antonio Vaez Henriquez, alias Moses Cohen, prepared and participated in the capture of Pernambuco by the Dutch in 1630. Nuno Alvarez Franco and Manuel Fernandez Drago planned the capture of Bahia in 1623. Francisco de Campo was responsible for the capture of the island of Fernando de Noronha, off the coast of Brazil. David Peixotto was in command of the eighteen vessels fitted out for the relief of Pernambuco. The Marrano Campoe Sabbatha participated in the British expedition which captured Jamaica in 1655. Simon de Caceres was a great military strategist whose wide experience was utilized by Oliver Cromwell; the latter acted upon de Caceres' detailed recommendations for the fortification of Jamaica. De Caceres also devised a remarkable scheme for the conquest of Chile, and offered to lead the expedition or act as second in command. Francisco de Silva, a Marrano and an ancestor of the De Silva Solis family, entered Spanish service, and was responsible for the defeat of the French attempt to relieve Trèves, beleaguered by the Spanish in 1673.

The Jewish settlers in the Dutch colony of Surinam became famous for their military prowess during the 17th and 18th centuries. Commanded by Samuel Nassy, they fought in the defense against French assaults in 1688 and 1689. Zeelandia, the principal fortress of the colony, was entrusted to Nassy. In a second attack (1712) the Jews defending Surinam were commanded by Captain Isaac Pinto. The Jews of the "Joden Savanne" were foremost in the suppression of the Negro revolts from 1692 to 1774.

In medieval England the earliest Jewish soldier known by name was Hanuchim, a French Jew who was given a special license to live in England because he fought gallantly during the wars in Normandy under King John. Jews seem to have been particularly efficient as crossbowmen and sergeants-at-arms who were especially trained and served outside of the feudal levy. In the War of the Roses Edward Brandão, a Portuguese Jew who Anglicized his name to Brandon, excelled on the side of the Yorkist party. When Brandon was baptized King Edward IV acted as his godfather and introduced him to court. From 1472 on Brandon held various military and naval commands, and in 1482 he was appointed governor of the island of Guernsey; he was knighted in 1483. Francis Ames, of Marrano descent, was employed by Sir Francis Drake for intelligence work in the Azores, and held a command at Youghal, Ireland, where he gallantly defended the town against the rebels.

AUSTRIA. Under the Hapsburg monarchy Jews were admitted by Emperor Joseph II to military service. Many Jews volunteered in the wars of 1809 and of 1813 to 1814. At the end of the 19th cent. nearly one-tenth of the Austrian officers, both active and reserve, were Jewish. Before the outbreak of the first World War there were in the Austrian army one lieutenant field marshal, five major generals, seventeen colonels, fifteen lieutenant colonels, forty-eight majors, and a corresponding number of captains and lieutenants who were Jews. Particularly remarkable was the military service of Lieutenant Field Marshal Joseph Singer, who fought in the war of 1813, then joined the staff of Marshal Radetzky, and later on became chief of the general staff of an army. The professing Jews Adolf Kornhaber and Eduard von Schweitzer also became lieutenant field marshals after long and distinguished service. Heinrich Porges was a general, and Colonel Alexander von Eiss excelled in the wars of 1848, 1859 and 1866. Ludwig Tobias Oesterreicher became contre-admiral of the navy. Far more numerous were Austrian generals who were half-Jewish by descent, such as General von Henikstein, chief of the Austrian general staff in the war of 1866.

ENGLAND. After the resettlement of Jews in England, Jews figured in the Honorable Artillery Company, the oldest London volunteer organization, as early as in the reign of Charles II. Wills of Jewish sailors who served in the Royal Navy are preserved from 1759 on;

Tablet in the Central Synagogue at London commemorating the patriotic service of the Jewish soldiers who lost their lives in the Boer War in South Africa, 1899-1902

some of them fought under Nelson. Hundreds of Anglo-Jewish volunteers fought against Napoleon, so that at the great military review in 1803 King George III was impressed at the prevalence of Jewish names in a regiment recruited in East London. A veritable dynasty of British admirals stemmed from the Schomberg family, some of whose members assumed important commands in the Anglo-French wars from 1750 to 1815. The first Jew to attain high military rank in the British Army was Sir Jacob Adolphus, who was made major general in 1770, after being baptized. Albert Goldsmid (1794-1861), a professing Jew, entered the British army in 1811, as cornet in the 12th Light Dragoons, excelled in the Peninsular War from 1812 to 1814 and at the battle of Waterloo in 1815, and was promoted to major general. In 1833 Wellington stated in the House of Lords that fifteen Jewish army officers had fought under his command at the battle of Waterloo.

After the repeal of the Test and Corporation Acts (1828) the number of Jewish officers in the British Navy, the regular army and the territorial forces steadily increased. Sir George Aguilar (1784-1845) and Sir David Ximenez (d. 1848) each attained the rank of lieutenant general; Samson Gompertz (d. 1888) that of colonel. In the Canadian rebellion of 1837 to 1838 Canadian Sephardim fought with the Loyalists, and Aaron Philipp Hart raised a company of militia. In the battle of St. Charles a member of the David family had two horses shot from under him. The maintenance of British rulership in India was in no small measure due to the devotion of the Beni Israel, who joined the native regiments of the British East India Company and continued to volunteer in the Native Army under the crown. Moosaji Israel, a Beni Israel officer, who provided the earliest information concerning the outbreak of the Indian mutiny, received the Order of British India, First Class. At the taking of Seringapatam in 1799 the boldest of the attackers was Samuel Ezekiel Kharceldar of the 12th Native Infantry. Subadar Major Ellojee Davorjee Israel (1799-1826) of the 7th Native Infantry was awarded a special silver medal and clasp for bravery in the field. In 1830 Subadar Daniel ben Israel of the 16th Native Infantry won a special gold medal for gallantry. Many other Beni Israel served for decades in the army and rose to positions of command. In the war with the Kaffirs in Africa, Joshua David Norden formed and commanded a militia force, and was killed in action. Elias De Pass excelled in the same war as a volunteer, and was promoted to a lieutenancy. Previously Nathaniel Isaacs, who was called by the Zulus "Tamboosa" (the brave warrior), led many expeditions, and became chief of Natal, laying the ground for its annexation by Great Britain.

In the South African (Boer) War (1899-1902) Colonel Albert Edward Williamson Goldsmid (1846-1904) was chief of staff with the sixth division, and brought about the surrender of General Cronje and 4,000 Boers at Paardeberg. Colonel Sir David Harris was in command of the Kimberley Town Guard during the siege. He was mentioned in dispatches, received a medal with clasps, the volunteer decoration and the C.M.G. Major Samuel Weil, a member of Colonel Mahon's staff, organized transport and established the lines of supply for the entire British force outside of Natal. Major C. B. Levita played a vital part in the battle of Spion Kop by moving the Somerset Light Infantry to the relief of the hard pressed Middlesex regiment. Major W. D. Karri-Davis raised and equipped the Imperial Light Horse. He was wounded at Ladysmith, and was the first to enter Johannesburg and Mafeking. A Jewish innkeeper named Levi organized a force which, originally called the Bushveld Rifles, was in 1902 renamed the Pietersburg Light Horse. This "Jewish regiment" took an important part in pursuing General De Wet and in combing the Orange Free State for stragglers from the Boer armies. Captain Claude Laurie Marks raised the 14th battalion of the Imperial Yeomanry, and his brother, Captain Harry Hamanel Marks, commanded the East Kent regiment. Jews also fought on the side of the Boers. Naphtalie Herz Cohen, Simeon Lissak, Leopold Rogaly, and Adolph Epler, established and commanded the "Official Police for the Protection of the Mines." Of the South African Jews who fought in this war, many had previously taken an active part in the Matabele Wars.

FRANCE. Jews joined the fighting forces in 1789, even before the decree of emancipation. André Masséna (1758-1817), marshal of France, was of Jewish ancestry, according to most of his biographers. In 1808 the prefect of the Seine wrote that "more than 150 Parisian Jews serve in His Majesty's armies, either as volunteers, as conscripts on their own account, or as substitutes for Christians. Some have been promoted to officers' ranks, and several decorated with the Croix d'honneur. There are neither deserters nor defaulting conscripts among the Jews of Paris." Napoleon had declared in 1804 that out of 90,000 recruits there were 24,000 defaulting conscripts and 14,000 deserters, and this general tendency increased from year to year. A list of the same year (1808) included Sub-Lieutenant Joseph Bernard, aged forty, with eighteen years of army service; Captain Léon Ravel, thirty-four, with twenty years of army service; Captain Seligmann, thirty-five, with fourteen years of army service; artillery Corporal Abraham Godeval, thirty, with ten years of army service; Théodore Gaffré, master at arms on the sloop *Colibry,* twenty-nine, with five years of army service. Alphonse Cerfberr, artillery lieutenant, who was among the first to enter the École Polytechnique, and who in 1812 excelled and was wounded in the Russian campaign, was cited in the list of 1808 as having had four years of service at the age of twenty. A famous Jewish soldier in the Napoleonic armies was David Moreau, of Bayonne, known as "le carabinier." Alexandre Marcqufoy, also a Jew from Bayonne, was a student at the school of St. Cyr, graduated as lieutenant, won a captaincy after being wounded eleven times in Germany and Spain, was nominated for the cross of the Legion of Honor, and decorated by Napoleon himself. Michel Goudchaux was a first-class midshipman, his brother Nathan a lieutenant. Maurice Berr was promoted to major, and his brother Lion was awarded the Legion of Honor. Other distinguished officers in Napoleon's armies were Marx Cerfberr, Lion Heymann, Abraham Polonais, and the four Alvares Pereyre brothers. In 1810 the prefect of the Meurthe reported that out of the Jewish population of his department there were "75 soldiers with the colors, 20 of whom were not called by law, 5 specially distinguished themselves, 2 received the Legion of Honor, 3 died of wounds. It is recognized that in proportion to population, the Jews of the Meurthe furnished more soldiers than did the Christians of the same department." Other prefects reported in similar manner. In the battle of Waterloo alone fifty-two Jewish French soldiers were killed.

Some Jewish officers who had begun their military careers in Napoleon's armies continued to serve under the Bourbon kings. One of them, General Wolff, was made a baron, but became converted to Catholicism.

Under the bourgeois king Louis Philippe, the number of Jewish soldiers increased again, although the French army was reduced in size, and conscription relaxed by the law of 1832. Jewish soldiers participated and were prominent in the conquest of Algeria, and even more in the Crimean War (1854-56). In the assault on the Malakoff, the towering fortress of Sevastopol, Théophile Cahen, a lieutenant in a regiment of voltigeurs, was wounded twice without abandoning his post. The Jew Creilshamer was wounded five times, and each time fled the ambulance to return to battle. Lieutenant Abraham Jacob reassembled the remnants of the 51st regiment, after his superiors were killed or wounded, and led a victorious attack on an entrenchment. He was badly wounded, and one of his legs had to be amputated. Captain Mayer, Captain Aron Cerf, Captain (later Brigadier-General) Bernard Abraham, Lieutenant Alexandre Cahen and Corporal Cahen distinguished themselves also in the close fighting. In the Italian War (1859) Major Adolphe Abraham, who afterward became a colonel, stormed and captured Casa Nova and seized an Austrian battery, thus preparing the French victory at Solferino.

In the Franco-Prussian War of 1870 to 1871 Jewish soldiers fought gallantly at Reichshoffen, Spicheren, Gravelotte, Bapaume and Coulmiers. When the imperial army was captured at Sedan, Captain Halphen broke through and conducted two batteries to General Faidherbe, who continued to fight in Western France. Jules Moch, who commanded a battalion of infantry, succeeded also in breaking through, and fought under the government of national defense until the last shot was fired. Moïse Seligman-Lui, under-intendant of the army, refused to accept the capitulation, and led a small number of soldiers in a desperate battle in which all were either killed or wounded. Commandant Franchetti, a professing Jew, was killed in action at the battle preceding the encirclement of the French army; he was posthumously honored in France as one of its most valiant heroes. Colonel Leopold Sée, commander of the 65th regiment of infantry, who had served notably in the Crimean and Italian Wars, fought at Borny, Gravelotte, and Saint-Privat, where he was so severely wounded that the Prussians considered him useless and allowed him to remain in France unconditionally. Sée, however, when barely recovered, joined the government of national defense. Appointed brigadier general, he successfully covered the lines at Carentan against superior German forces. In 1880 he was promoted to general of a division. After the capture of the imperial armies at Sedan and Metz, the French government would have been unable to continue resistance against the enemy had not Maurice Lévy, an engineer, created a new French artillery. The youngest French combattant in this war was the Jew Raine, who at fifteen fought under Garibaldi. Edouard Philipp, previously rejected because of his small size, joined the francs-tireurs, saved a French flag, and was promoted to captain.

From the founding of the Third Republic until the outbreak of the first World War the Jews of France served in all branches of the French Army and participated in all colonial wars. Although a great part of the Catholic French army officers were inclined toward anti-Semitism or were even ardent members of anti-Semitic leagues, many Jews were promoted to officers, among them more than fifty generals of brigade or division (the highest rank obtainable in peacetime). Among these were Aimé Lambert, Alvares Lévy, Bernard Hinstin, Gédéon Geismar, Justin Dennery, Justin Brisac, Mardochai Valabrègue, several hundred colonels and commandants (majors), and a correspondingly larger number of captains and lieutenants. Most of them were trained in African expeditions, where they distinguished themselves. Émile Weyl was a noted naval officer and a great authority on naval strategy and tactics.

GERMANY. Jews had had the right to bear arms until the end of the 13th cent. An illuminated manuscript of the *Sachsenspiegel,* written about 1230, shows an armed Jew on horseback (see vol. 4, p. 547). Jews had the right of self-defense, and used it with valor and skill. Jewish merchants traveling through Germany in times of feuds and general insecurity had to protect themselves by force of arms. When the Crusaders persecuted them, the Jews fought fiercely against odds, as did the Jews of Prague over a period of many days. The Jews of Sala (Halle) even inflicted a defeat on the Crusaders in 1096, forcing them to retire from the country. In 1348 the Jews of Mayence fought in the streets for several days in defense of their lives. Outnumbered, they burned their houses, and threw themselves into the flames. Everywhere in the Middle Ages the majority of the Jews preferred suicide to conversion when armed resistance seemed to be hopeless.

German Jews in the Middle Ages not only had to fight against persecutors and robbers, but also to give armed assistance to the courts of law and to take their part in the levies and in the equipping of horses. When Emperor Otto II was defeated at the battle of Cotrone (982), he was abandoned by all the members of his suite except the Jew Kalonymus, who saved his life. The Bohemian chronist Hajek reported that in 995 armed Jews decided the victory of the Bohemian Christians in their battle against pagans. Until the end of the 13th cent. the Jews, who had the right to participate in trial by combat, were generally considered warlike men, and even anti-Semitic writers of the time did not call them cowards. In medieval Germany the Jews of every city were charged with the armed protection of certain parts of the fortifications. In Cologne, in 1106, they were assigned the defense of a gate, and in 1180 they defended the Wichhaus (*pugnaculum Judaeorum*) against the beleaguerers of the city. The Jews were mentioned also in 1252 as guarding the city's walls, and in the battle between the archbishop and the citizens they fought on the side of the latter. The Jews of Erfurt participated (1309) in the defense of the free imperial city against a feudal lord. They were expressly included in the terms of the peace, as they were on other occasions after they had fought at Mayence, Speyer and Hameln, and in Bohemia. In 1200 the Jews of Strasbourg were obliged by law to supply the banner of the city when the citizens departed for war. As late as 1372 a privilege of the Jews mentioned their pledge to participate in warfare. Later on, when the Jews were deprived of their right to bear arms, they were employed for the construction of fortifications in cases of emergency.

No military service of the German Jews is mentioned in documents of the later Middle Ages, but Jews probably still participated in defense. Some baptized Jews or sons of Jewish parents were professional soldiers, and there were also knights whose names indicate Jewish origin or descent from Jews. Apart from individual Jewish soldiers who participated in the wars of the 15th and 16th centuries and who concealed their origin and faith (as evidently many Jews did in the early 19th cent.) to avoid annoyance from comrades and superiors, the participation of Jewish combattants in the Thirty Years' War is unquestionable. Many Jews were mentioned as soldiers in the imperial army,

but some fought also for Gustavus Adolphus and his successors. Count Schlick, president of the Imperial War Council at Vienna, testified that the Jew Lazarus Aron excelled in audacious intelligence service and as commander of a cavalry squad that took many prisoners and horses. The imperial generals Piccolomini, Gallas and Colloredo also praised the same Aron, "the modest and valiant Jew." The Jews of Prague participated so gallantly in the defense of the city against the assault of the Swedish army in 1648 that they won from Emperor Ferdinand III the "Swedish Banner," which was preserved in the Altneuschul.

In 1787 David Friedländer and other leaders of the Jews of Prussia petitioned King Frederick William II for the admission of Jewish soldiers into the Prussian army, but the government declared Jews unfit for military service. It adopted a different view after observing Jewish soldiers and officers in the French army subsequent to the Prussian defeat of 1806. In 1809 Jews were admitted to the national guard in Berlin, and the decree of 1812 extended military service to the Jews of Prussia in general. In 1813 eighty Jews were conscripted, but at least 400 Jews volunteered in the war of that year. Hardenberg, the Prussian chancellor of state, in a letter of January 4, 1815, testified to the patriotism and valor of the Prussian Jews, and the Prussian minister of war repeated this acknowledgment in 1847, based on official documents. Seventy-one Jews received the Iron Cross, four the Russian Order of St. George, twenty-one became non-commissioned officers, twenty-five were promoted to lieutenant, twenty-seven were wounded and twenty-nine killed. David Salomon, drummer in an infantry regiment, distinguished himself in the assault on Probstheida in the battle of Leipzig, and was awarded the Iron Cross on the battlefield by Prince Augustus of Prussia, commander of the brigade. Meno Burg, promoted to lieutenant in the war of 1813, became an instructor at the Prussian Academy of War, and was afterward promoted to major. He was the only professing Jew in the list of active officers of the Prussian army as long as it existed.

In the war of 1866 more than a thousand Jews served in the Prussian army, and in the war of 1870 to 1871 the number of Jewish combattants on the side of Germany was estimated at about 15,000, many of whom received the Iron Cross and were promoted to non-commissioned officer or lieutenant. The Bavarian major Carl Henle was gravely wounded in 1866, and the Bavarian army continued to admit Jews as officers of the peacetime reserve, although Jews remained barred from officers' rank, both active and reserve, in the Prussian army except in wartime. However, Walter von Mossner, the son of Jewish parents, the keenest horseman in the imperial German army, became commanding general and personal aide-de-camp of Emperor William II, and many German officers who distinguished themselves and reached high rank were half-Jewish by descent, such as Generals Liman von Sanders, von Quadt and von Thielmann, and Majors von Stosch, von Schwerin, von Platen and von Lengerke.

ITALY. The Jews of Italy took an active part in the struggle for the independence and unity of their country. Colonel Cesare Rovighi was notable in the Crimean War, and was aide-de-camp of King Victor Emanuel I. Enrico Guastalla was a daring soldier under the command of Garibaldi, in whose famous expedition of the "one thousand" (1860) eleven Jews participated. Daniele Manin, who led the defense of Venice in 1848, was of Jewish descent. Giuseppe Ottolenghi, a professing Jew, excelled in the wars against Austria in 1859 and 1866, became a general in 1888, and Italian minister of war in 1902. Before the outbreak of the first World War there were eleven Jewish generals in the Italian Army, and Mussolini, in his talks with Emil Ludwig, paid special tribute to the Jewish general Modena because of his valor in the war. The Fascist dictator had high esteem also for the Jewish admiral Pontremoli. In 1942 Mussolini recalled Pontremoli to active service, despite the anti-Jewish laws.

RUSSIA. Although the Jews were persecuted and deprived of all rights by the Czarist government, they served with devotion in the Crimean War (1853-56), the wars against Turkey and Japan, and in the first World War. Chaim Zaitchikoff so distinguished himself during the defense of Sevastopol in the Crimean War that Prince Gortchakoff, the Russian high commander, shook his hand after the battle. A number of Russian Jews were killed in battle in the course of the Crimean War. A monument was erected in 1864 in the Sevastopol cemetery to the memory of the Jewish soldiers who fell in the defense of that city in the siege of 1854 to 1855. More than twenty years after the end of the Crimean War, General Skobeleff, Russian high commander in the war against Turkey (1877-78), shook Zaitchikoff's hand after the conquest of Plevna, in recognition of the Jewish soldier's valor. Zaitchikoff became a non-commissioned officer, and was awarded the orders of St. Anne, St. Vladimir, and St. George.

At the battle of Plevna the Roumanian Jew Moritz Brociner, afterward a colonel, won distinction.

POLAND. The Jews of Poland, although exempted from military service, several times aided in the defense of their country, especially in 1794, when Berek Joselowicz commanded a Jewish regiment, and in the war of 1830. Josef Berkowicz, a son of Joselowicz, fought in the wars of 1809 and 1812, and distinguished himself.

b. The First World War (1914 to 1918). In the first World War Jews fought in all the armies for their respective countries, whether or not their governments were hostile to the Jews or discriminated against them by administrative practice or by law.

AUSTRIA-HUNGARY. Concerning the Jewish soldiers in the Austro-Hungarian Army during the first World War no definite figures are available. However, from the outbreak of the War until the beginning of 1917 nearly 500 Austrian Jewish army officers were killed in action or died of wounds, and about 3,000 were decorated. One of the first Austrian soldiers to be distinguished was a Jew, Julius Reif, who was awarded the gold medal on August 27, 1914. The first Austrian officer to fall in the Serbian campaign was a Jew, Joseph Knerber. Baron Meyer de Rothschild, captain of the dragoons, and three sons of Lieutenant Field Marshal von Schweitzer were among the first to win citations. Adolf Kornhaber was promoted to lieutenant field marshal at the end of 1914. Leopold Austerlitz was promoted to major general. Colonel Emanuel Krausz was killed in action, and Major Moritz Feldmann was promoted to lieutenant colonel. About 10,000 Jewish soldiers of the Hungarian Army were killed in action. The military high commander and the minister of war, on several occasions during the War, acknowledged the valor of Hungarian Jewish soldiers by means of official and personal statements. Several companies of the most famous regiments of the Honvéd infantry were entirely composed of Jews. Samu Hazai, Gyula Kepes, Simon Vogel and Martin Zold were generals; Vilmos Böhm was commander-in-chief during the Communist regime (1919).

Jewish Soldiers' Memorial in pre-Nazi Munich

Statistics of Jews in the First World War

(According to *Jews in the World War*, issued by the Jewish War Veterans of the United States, pp. 4–5)

I. Mobilized Men

	Total Mobilized	Per Cent Mobilized	Jews Mobilized	Percentage of Jews Mobilized
Austria-Hungary	7,800,000	15.3	320,000	14.0
Belgium	267,000	3.6	1,000	6.0
British Empire	8,900,000	2.3	50,000	12.0
Bulgaria	1,200,000	25.0	12,500	20.0
France	8,410,000	14.9	55,000	22.0
Germany	11,000,000	17.0	100,000	17.7
Greece	230,000	5.0	4,400	5.0
Italy	5,600,000	13.0	6,000	14.0
Roumania	745,000	10.0	38,000	16.0
Russia	12,000,000	7.0	650,000	9.4
Serbia	707,000	15.0	1,200	8.0
Turkey	2,850,000	7.0	18,000	7.0
United States	4,355,000	4.3	250,000	4.5

II. Killed in Action or Died of Wounds

	Killed	Per Cent Killed	Jews Killed	Percentage of Jews Killed
Austria-Hungary	1,200,000	15.0	40,000	12.4
Belgium	13,700	5.0	125	12.0
British Empire	908,370	4.8	2,400	10.0
Bulgaria	87,500	7.0	1,000	8.0
France	1,357,800	16.0	9,500	17.0
Germany	1,773,700	16.0	12,000	15.0
Greece	5,000	2.0	300	6.8
Italy	650,000	11.0	500	8.3
Roumania	355,700	44.0	900	2.3
Russia	1,700,000	14.0	100,000	15.0
Serbia	45,000	6.3	250	2.0
Turkey	325,000	11.0	1,000	5.0
United States	126,000	2.9	3,400	1.3

BELGIUM. About a thousand Jewish soldiers were mobilized into the Belgian Army. Many of them joined the armed forces, crawling through the German lines. Some of them were shot by the German authorities for attempting to leave the occupied country in order to serve in the war against the invaders. General Louis Bernheim, commander of the 7th regiment of infantry, took a leading part in the defense of Antwerp and in preventing the encirclement of the Belgian field army. Later he commanded a brigade in the battle of the Yser, and by his example inspired the exhausted Belgian troops to hold for 360 hours against the supreme efforts of the Germans who made fifteen vain assaults. Badly wounded in 1915, Bernheim underwent a dangerous operation and was back in active service within two months. After having secured the left flank of the Allied armed forces by his glorious defense. Bernheim commanded (1918) the Northern Division of the Belgian Army and smashed the Germans, pushing them through the forest of d' Houthulst, which had previously been considered an impregnable German position. Bernheim became a national hero of Belgium, and was widely mourned at his death. Leopold Wiener was a major at the beginning of the War, and was promoted to general after receiving eight decorations for bravery; after the War he directed the Belgian Military Academy. Captain Paul Goldstein won nine decorations, Major Seligmann and Captain Max Gottschalk eight, Captain Manfred Levy and Lieutenant Charles Tolkovsky seven, Captain Adolph Feinburg, who saved the commandant of Duquesboy during a bombardment, six. Corporal Otto Rabinovitch, Russian-born, was decorated by King Albert with the medal of the Chevalier of the Ordre de Leopold.

BRITISH EMPIRE. The proportion of Jews in the British Army was far higher than the average both before and after conscription went into force, and Jews from both the homeland and from the dominions enlisted voluntarily in an extremely high percentage. The Rothschild family contributed five officers. Major Evelyn de Rothschild fell at the head of his men in Palestine; Captain Anthony G. de Rothschild was wounded in action at Gallipoli. The Sassoon family sent fourteen officers to the armed forces; three of them received the Military Cross. Major Sir Philip Sassoon was appointed military secretary to Field Marshals Sir John French and Sir Douglas Haig, British high commanders; the latter mentioned Sassoon thrice in despatches. Victor Sassoon distinguished himself as a captain in the Royal Air Force.

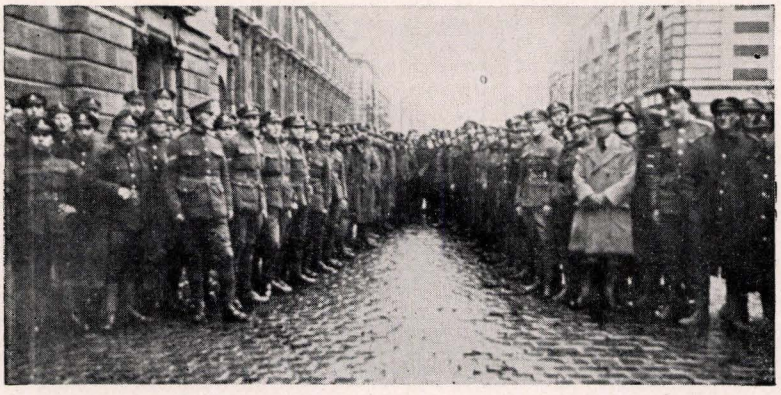
The family of Sir Isidore Spielmann was represented in the British Army by forty-one members, all of whom were commissioned officers, and three of whom were killed in action, while twelve were wounded. The Beddington family contributed thirty-seven members. Lieutenant Colonel Claude Beddington, from his youth an active member of the Territorial Army, commanded his regiment, the Westmoreland and Cumberland Yeomanry, during the first World War with distinction and was killed in the second World War while commanding his yacht at the age of seventy-two.

Lieutenant Colonel Edward Henry Lionel Beddington, who entered the War as a subaltern, was charged with the direction of the Intelligence Service of the First British Army, was cited six times, and decorated with the Order of St. Michael and St. George, the Distinguished Service Order, the Legion of Honor and other foreign orders. He reentered the British Army in 1940. Five sons of Arthur Sebag-Montefiore held commissions. Captain Robert, the eldest, won the Military Cross and the Distinguished Service Order, and his brother William was a staff officer to the Heavy Batteries in France; another brother, Colonel Thomas Harry, mentioned in despatches and decorated with the Distinguished Service Order, was recalled to active service at the beginning of the second World War. Immigrants and British-born sons of German, Russian and Oriental immigrants also were distinguished members of the British army.

The Victoria Cross, the highest military award, was won by five Jewish soldiers: Lieutenant Frank Alexander De Pass, who lost his life during the counter-attack at Festubert and was decorated posthumously; Sergeant Issy Smith (Shmulevitch), who several times exposed himself to heavy fire in order to carry wounded comrades to safety; Private Leonard Keysor, an Australian Jew, who at Gallipoli picked up two live bombs and threw them back at the enemy, and continued to throw bombs, although he was wounded twice, until the situation was relieved; Private J. White (Weiss), who, during an attempt to cross the river Diala, in Mesopotamia, salvaged his pontoon by tying a telephone wire to it, jumping overboard and towing it to shore under heavy fire, thereby saving an officer's life and bringing to land the rifles and equipment of the other men who were all dying or dead; Captain Robert Gee, captured together with the staff of his brigade, but who, as a prisoner, killed the guard with his spiked stick and, after escaping, organized a part of the brigade staff with which he attacked the enemy and cleared the locality. With a revolver in each hand, and followed by one man, Gee jumped at an enemy machine gun and killed eight Germans. Fifty Jewish soldiers received the Distinguished Service Order, among them Major Michael Adler, senior Jewish chaplain, who was mentioned also in despatches; Brigadier General Herbert S. Seligman; Lieutenant Colonels C. J. Elkan, a well-known staff officer; J. H. Levey, of the Gordon Highlanders, the man who "made" the Naval Division; Harold E. Cohen; Frederick D. Samuel; Frederick Hermann Kisch; H. Weisberg; R. H. Joseph; Jacob Waley Cohen; J. J. Miller, who rose from sergeant in the Coldstream Guards to machine gun officer of the Ulster Division and then commanded a battalion of Royal Fusiliers; and several majors and captains.

But many others who were not awarded high decorations distinguished themselves also. Lieutenant Benzecry sacrificed his life voluntarily at Bourlon Wood in order to enable the bulk of the troops to establish a new position when the enemy made a sudden attack. Lieutenant A. A. Robinson took command of his company when his superiors were dead or wounded, and captured his objective against intense machine gun fire. Advancing with four men, he took prisoner three German officers and thirty men, and held his position for three days until he was relieved. Lieutenant E. M. Wolf, commander of a tank, completely broke up a German counter-attack and saved a critical situation, remaining in action twenty-six hours. Private J. Gilbert, alone and armed only with his gun, after all his comrades and superiors had become casualties, held up a German enveloping attack on the British flank.

A large number of Jews joined the Royal Flying Corps, afterward called the Royal Air Force, and many of them gained distinction in aerial combats or daring air raids, such as Major J. Kemper, Captain D. C. Bauer, Captain Desmond Tuck, Major R. L. Marix (who participated in the first raid made upon a German aerodrome), and Captain J. I. Barnato, who bombed Constantinople.

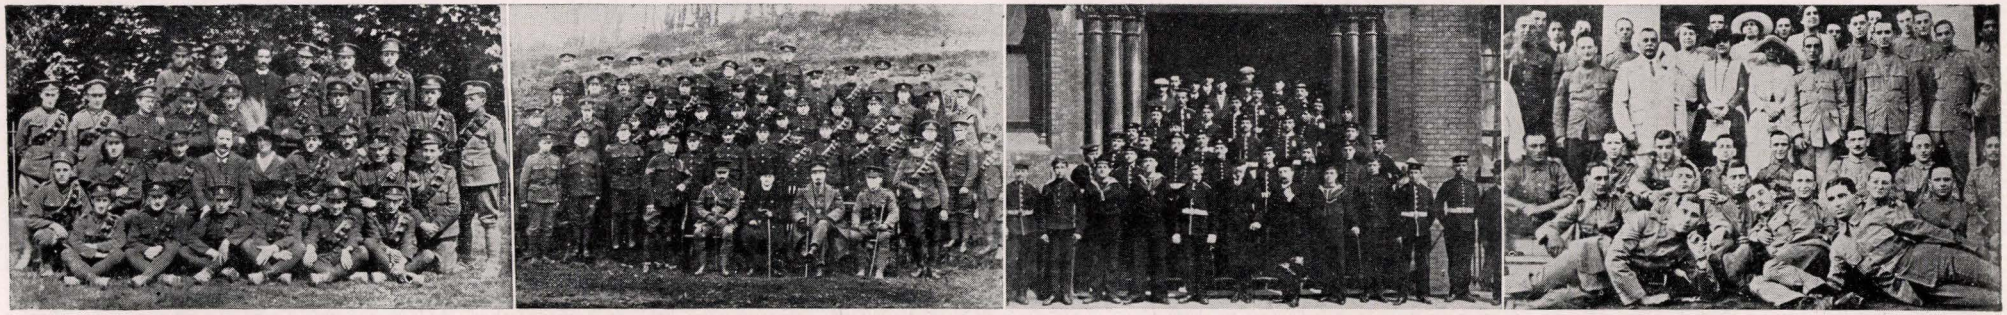


Captain and Mrs. H. (née Woolf) leaving Buckingham Palace (during the first World War) when the latter was invested with the R. R. C. by His Majesty the King

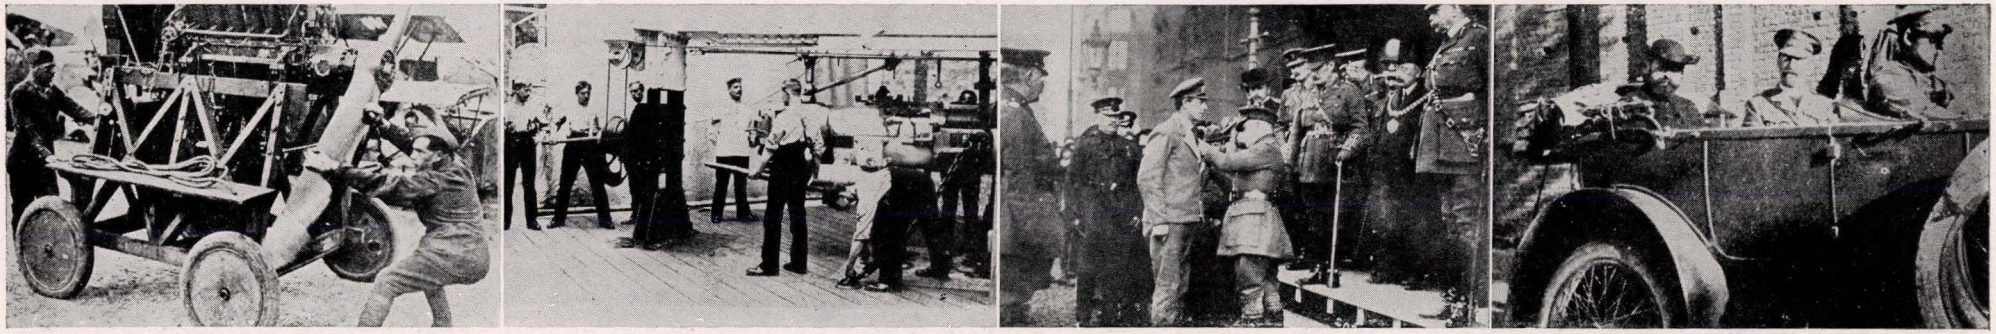
Colonel Moritz Brociner, one of the few Jews to become an officer in the old kingdom of Roumania, was twice wounded and cited for bravery in the Russo-Turkish War

Jewish bearers of the Victoria Cross for valor in the first World War: (1) Lieutenant F. A. de Pass, Poona Horse; (2) Sergeant Issy Smith, 1st Manchester Regiment; (3) Captain R. Gee, M. C., 2nd Royal Fusiliers; (4) Private (later Lt.) Leonard Keysor, 1st Australian Infantry; Private J. White (Weiss), 6th King's Own Royal Lancaster Regiment

Jewish soldiers of the Allied armies at Lille, 1919

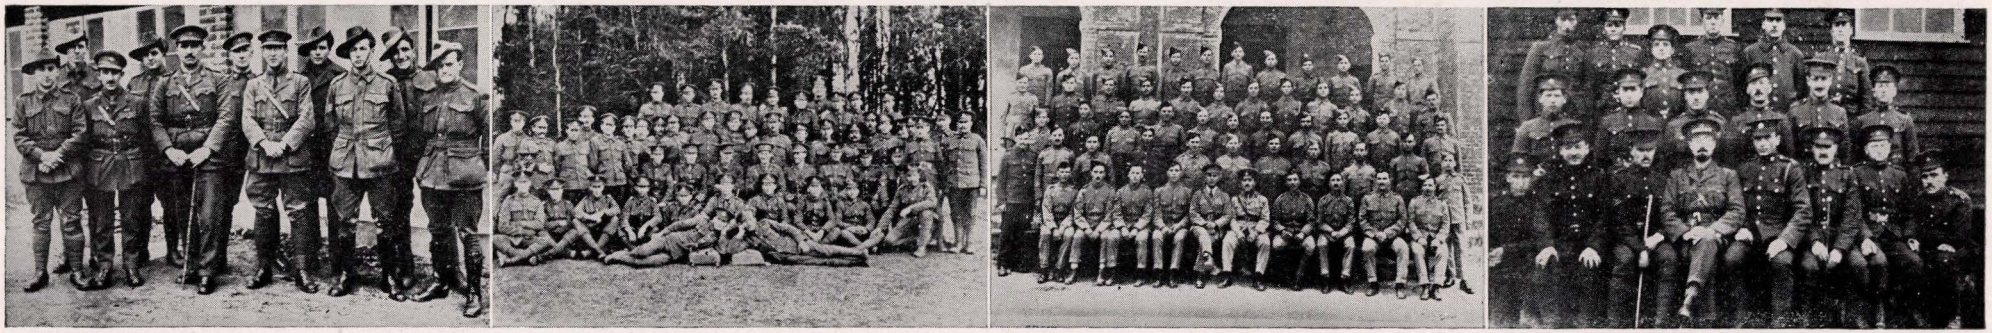


Passover Services (left) for Jewish soldiers in the Expeditionary Force at Jerusalem in 1918; (above) General John Monash, commander of the Australian Corps

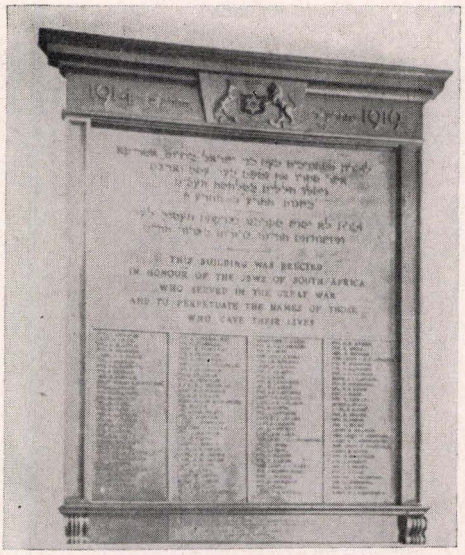


Jewish soldiers took part in all important and dangerous actions of the British armed forces. They won distinction in battles in France and Flanders, at Gallipoli and in Mesopotamia, in the Far East and in many areas of Africa. Lieutenant Commander Raphael Saunders received the Distinguished Service Order for gallantry during the famous naval operations to block Zeebrugge in the spring of 1918, but several other Jewish officers and men took also part in this action, which considerably hampered Germany's submarine warfare. In the battle of Jutland, the greatest naval battle of the War, a Jewish warrant officer was yeoman of signals on board the British admiral's flagship. Two Jewish sailors were on board the cruiser *Sydney* when it destroyed the German raider *Emden,* and Jewish sailors were in action when a German flotilla was defeated in the Downs in April, 1917. M. M. Bright commanded one of the landing parties which took the town of Akaba in 1915, and Lewis Jacobs was killed while endeavoring, without aid, to pole a cutter to the shore, the remainder of the crew and the troops being killed or wounded.

Before compulsory service was introduced the British War Office was not opposed to the formation of Jewish units. Out of several attempts to enlist Jews to serve together only the Zion Mule Corps, originally planned by Vladimir Jabotinsky, an officer in the Russian army, and recruited from Egyptian Jews and Russian Jewish refugees from Palestine, actually came into being. This famous unit was commanded by the non-Jewish Lieutenant Colonel John Henry Patterson, with Captain Joseph Trumpeldor, one-armed veteran of the Russo-Japanese War and the first Jewish commissioned officer in the czarist army, second in command. Patterson testified that his Jewish men "uphold at all times the best traditions of the British army." The Zion Mule Corps displayed heroism in the Gallipoli and Dardanelles expeditions, after the completion of which it was disbanded. Many of its members, unwilling to discontinue their participation in the War, became the nucleus of the "Judeans," organized into the 38th, 39th and 40th battalions of the Royal Fusiliers and numbering more than 4,500 men. Two of these battalions participated in General Sir Edmund Allenby's conquest of Palestine. They were commanded by Lieutenant Colonels John Henry Patterson, Eliezer L. Margolin and Frederick D. Samuel. Their number soon increased by the enlistment of American, Canadian and Russian Jews. The Jewish battalions distinguished themselves especially by taking Amman and by repelling the Turkish attack in the Jordan Valley. In this fighting Jabotinsky, promoted to a lieutenancy, took an active part, was decorated and mentioned in despatches.



General Erich Ludendorff, the real German high commander, called the day on which Australian troops broke through the German lines (August 8, 1918) "the black day of the German army," and considered it the beginning of his defeat. He did not know that General Sir John Monash, who commanded the Australian forces, was a professing Jew. Monash, who took such a decisive part in the issue of the War, was a colonel at its outbreak, and distinguished himself as commander of the 4th Australian brigade at Gallipoli, becoming a historic, almost a legendary figure for his valor and the valor of his Anzacs. In July, 1916, he assumed command of the 3rd Australian division, with the rank of major general. Subsequently Monash excelled in the Battle of Messines and the third battle of Ypres. In May, 1918, he was given command of the Australian Corps, the largest of all allied army corps fighting in France. His first heavy blow at the German Army was his victory at Villers-Brettoneux. Then he defeated the Germans in the battle of Hamel, which was the prelude to the final allied offensive and the definitive German collapse. From Ludendorff's "black day" on, Monash led his men from victory to victory, displaying tactical and strategical genius. David Lloyd George, then Great Britain's prime minister, called Monash "the most resourceful general in the whole British army," and affirmed that Monash would have been given command of all the British forces had the cabinet been informed of his military talents. Lloyd George's appreciation of Monash was fully confirmed by most of the military historians of the first World War. Monash was assisted by another Australian Jew, Major General Sir Charles Rosenthal, who commanded the artillery of the Australian forces. He was, like his



British Jews in the first World War (l. to r.): group of soldiers at Curragh Camp, Ireland (1915); officers and men at Aldershot (1915); sailors at the Central Synagogue, London (1914); observing New Year at Calcutta (1918)

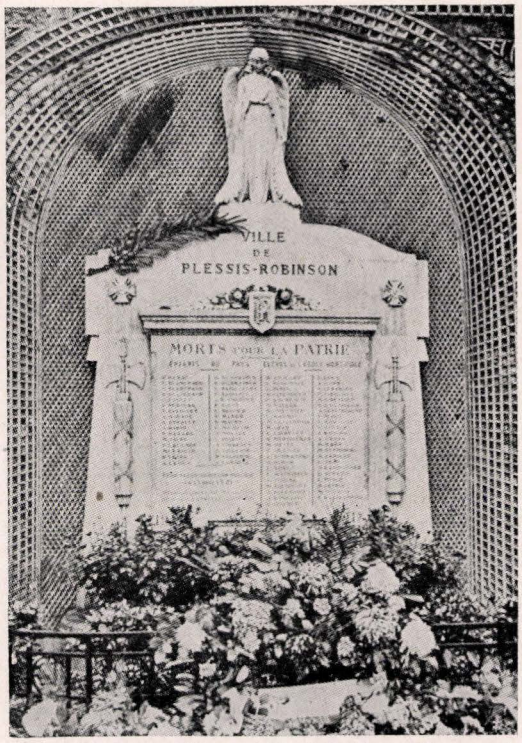
chief, Monash, a man of force and elan, a careful organizer and a daring leader. He gave especially distinguished service at Paschendaele and St. Quentin.

FRANCE. The Jewish soldiers in the armies of the democratic nations were equal in valor to both their non-Jewish comrades and their coreligionists in the armies of the more or less absolute monarchies. Many of them, in higher commands, contributed conspicuously to the final victory of the Allied powers.

Not only did all the Jews of France of ages from eighteen to forty-seven years and able to bear arms take their places in the War, but there were also many Jewish volunteers, both younger and older than military age. Captain Charles Lehmann, who had served, at seventeen, in the Franco-Prussian War of 1870, entered the service again when he was sixty-one years old. Captain René Franck, fifty-six years old, again led his company of chasseurs à pied. Captain Raoul Bloch, placed in a unit at a supply base because of his age, after repeated petitions, succeeded in being sent into action, and commanded the defense of an exposed sector where he was mortally wounded. His action was later honored by the commanding general of the 2nd French Army.

According to a very conservative estimate, at least 4,000 out of a population of 30,000 foreign Jews in France, non-citizens from Russia, Roumania and the Near and Middle East, enlisted in the Foreign Legion. A good many other Jews were rejected by the medical commission of the Legion. The 2nd regiment of the Foreign Legion, 50 per cent of which were Jews from the ghetto of Paris, stormed the fortified lines of the Germans at Carency on May 9, 1915, and only 850 out of 4,500 survived the victory. Hundreds of other Jewish soldiers in the Foreign Legion died at the Marne, in the Champagne offensive of September, 1915, and in other bloody actions. At the end of 1915 these foreign Jews were incorporated into regular French regiments. An exceptionally high number of them were cited for bravery, such as Amédée Rothstein, enrolled on the first day of the war and promoted to lieutenant because of his repeated bravery. During the Champagne offensive, he led an attack "with a remarkable impetuosity and coolness which won the admiration of both officers and men," and died before Verdun while he was leading his company brilliantly to storm a redoubt. Léon Zadikson "always volunteered for perilous missions," and was cited as a "model of courage." On August 20, 1917, he was among the first to jump into a German trench "under the violent fire of machine guns." Private Henri Lemal, under heavy bombardment, rescued the head of his platoon and several other men who had been buried under a crumbling dugout. Jacques Nayman and Alexander Glantzmann were cited for similar deeds. Sergeant Klionsky, conspicuous for his long white hair, was always the first to advance, and died valiantly in the assault on Carency. Private Joseph Krouchansky was cited because of his "remarkable courage, the superb reputation he acquired by his marvelous deportment under all conditions," after having previously been cited twice and having received the military medal on the battlefield. Doctor Chatt was twice cited for "the most absolute contempt of danger." Doctor Mendel Cemach, cited several times, was killed at his post. Doctor Eisik Liber was wounded nine times, had a foot amputated, and was decorated for "assuring the removal of the wounded without any attention to his own suffering." Henri Torrès, sergeant, won the médaille militaire, croix de guerre, and several citations.



Algerian Jews were found by the hundreds in the Zouave regiments which took an extremely brilliant part in the operations of the war. Corporal Adjadje was cited four times. Joseph Benhamon was wounded six times, and was killed while he continued to attack. Sergeant-Major Cohen-Solal was cited three times and promoted to officer; Sergeant-Major Elyahou Chouraki, a man of indomitable energy, brought his wounded captain back to the lines. Zemmour, a non-commissioned officer, discovered an enemy machine gun which was checking his section. With one other man he crawled through the grass, jumped upon the Germans manning the gun and killed several while the others fled. Later he distinguished himself further in the command of a company. There were some Algerian Jews among the best military airmen, such as Captain Allouch, Lieutenant Albert Lellouch, and Lieutenant Mesguich, chief of a section of hydroplanes.

In 1914 the Jewish citizens of France already had a military tradition connected with the history of the wars of republican and imperial France, and there were Jewish army families with traditional military endowments. General Mordecai Valabrègue, who in peace commanded the École de Guerre and was thereby responsible for the education of French army officers, took part in the Supreme War Council, and was given the command of an army in the field. Being partly responsible for the final victory of the Allied powers, he was promoted to grand officer of the Legion of Honor. General Jules Heymann was in command of the 15th Army Corps, and was promoted to lieutenant general. General Armand-Aron Bloch was one of the heroic defenders of the fortress of Maubeuge; his reputation was unsullied although he was forced to surrender. Lieutenant General Naquet-Laroque, retired from service before the War because of his age, resumed his activity as a member of the Superior Council of Inventions at the Ministry of War. Alexandre Millerand, afterward president of the republic, one of the most untiring and energetic ministers of war France ever had, was the son of a Jewish mother.

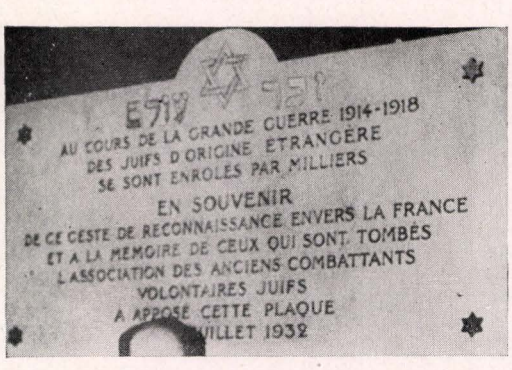
Next to the battle of the Marne, the successful defense of Verdun was of decisive importance in determining the outcome of the War. This great victory of the French, generally attributed to Marshal Henri Pétain, was in actuality due mainly to the Jewish general Paul Edouard Alexandre, who was at first a

Graves of French Jewish soldiers in France

Honor roll, in the village of Plessis-Robinson, France, of French soldiers who fell in the first World War, including forty-five Jewish students of the de Hirsch horticultural school

colonel attached to main headquarters, and in 1916 commanded the artillery of an army corps at Verdun. His merits were recognized in an order of the day: "He organized field and heavy artillery groups with indefatigable activity, absolute contempt of danger, impeccable tactical sense, and efficiency which impressed everyone; he contributed in large measure to the arrest of the German offensive." Brigadier General Justin Dennery, in the reserve before the war, reentered active service and commanded a territorial division of infantry. General Francfort commanded the fortress of Épinal. General Gédéon Geismar, while a colonel, was cited in army orders for his "talent of organization, his masterful manner and his activity which are beyond all praise, which permitted him to obtain from all his subordinates, by his personal example, the maximum results." General Paul Émile Grumbach, in command of a brigade of active infantry," gave proof of great energy and brilliant military qualities in directing, under particularly difficult conditions, a series of attacks which have had happy results." Brigadier General Camille Lévi, commanding a division of shock troops, was cited five times. Early in 1914 he had predicted, in a book, the German invasion of Belgium, but his warning was not heeded by the French high command. He was an eminent tactician who "was able, sometimes in very difficult circumstances, not only to maintain inviolably the position which was confided to him or which he had captured, but further by vigorous actions to impose great checks upon the enemy." Brigadier General Samuel Mayer commanded the expeditionary forces in West Africa, and vanquished the Germans in the Camerons. General Lucien Lévy, son of a Hazan, commanded the engineers of the 4th Army Corps, and solved difficult problems during the battle of the Marne.

The number of Jewish colonels, chiefs of regiments, charged with the command of a brigade or other important missions in the French Army was quite considerable, so that only a very small portion of them can be mentioned in this survey. Lieutenant Colonel Alfred Dreyfus, the fully vindicated victim of the famous Dreyfus Case, rendered important services to his country and the cause of the Allies. As commander of a sector of the intrenched camp of Paris, he received the news, on September 6, 1914, that the First German Army was swerving its line of march toward the east. Recognizing the importance of this information, he immediately acquainted General Galliéni with it, thus enabling him to take the measures which sealed the German defeat at the Marne. His son, Lieutenant Pierre Dreyfus, was cited several times for his persistent disregard of peril. Colonel, afterward General, Alphonse Weiller was cited as a "model of personal bravery and of intelligent energy." Colonel Léon Weiller, with fifty men, maintained during the night of October 7 and 8, 1915, the defense of a village attacked by seven companies of the enemy, and took prisoner a German lieutenant colonel and 123 soldiers. In 1916 his battalion successfully resisted a violent bombardment and repeated attacks of superior German forces for eleven days. Lieutenant Maurice Bokanowski, afterwards minister in several cabinets, was on board the battleship *Provence* when it was torpedoed. He remained on the bridge until the last moment, near the commander of the ship, encouraging the men and directing the launching of the life boats, and leaping into the sea the moment the ship sank. The astronomer Charles Nordmann, at first a private, then promoted to lieutenant, invented an important improvement in artillery and applied it under fire. Lieutenant Pierre Hadamard, son of the great mathematician, returning one day in the Verdun region from the successful establishment of an observation post, passed through an infantry trench where a close bayonet fight was being fought; he picked up a rifle and charged along with the infantrymen until he was killed. Captain Paul Helbronner, attached to a general artillery staff, invented an important gun improvement. Captain Jacques Helbronner was a daring liaison officer between the French and British forces. André Bloch, a composer, invented an apparatus to detect submarines. Jacques-Pierre Lévy, while in active service, created various types of hydroplanes and the first high-powered bomber. Robert de Rothschild, interpreter officer, was thrice cited in terms of high praise. Lieutenant Lucien Cahen was cited seven times for "putting to flight an enemy superior in number and already intrenched," for "electrifying his men by his attitude," for "remarkable bravery and rare energy." Captain Louis-Raphael Lévy was cited "as remarkable for his bravery and his technical attainments as well as for the control which he maintained over his troops



in the most critical hours." Captain Maxime Berr was idolized by his men and cited for being "endowed with the finest military virtues: authority, bravery, self-sacrifice." Lieutenant Picard was cited three times as "a veritable inspirer of men, a specialist in sudden attacks, renowned everywhere for his bravery and audacity, who begged the honor of being entrusted with the direction of all perilous enterprises." Private Joseph Cahen had his arms broken by shells, but refused to be relieved until his duty as telephone operator was done. He was cited for giving "his comrades a magnificent example of stoicism." Private Octave Lang was killed in action, after having killed three German soldiers.

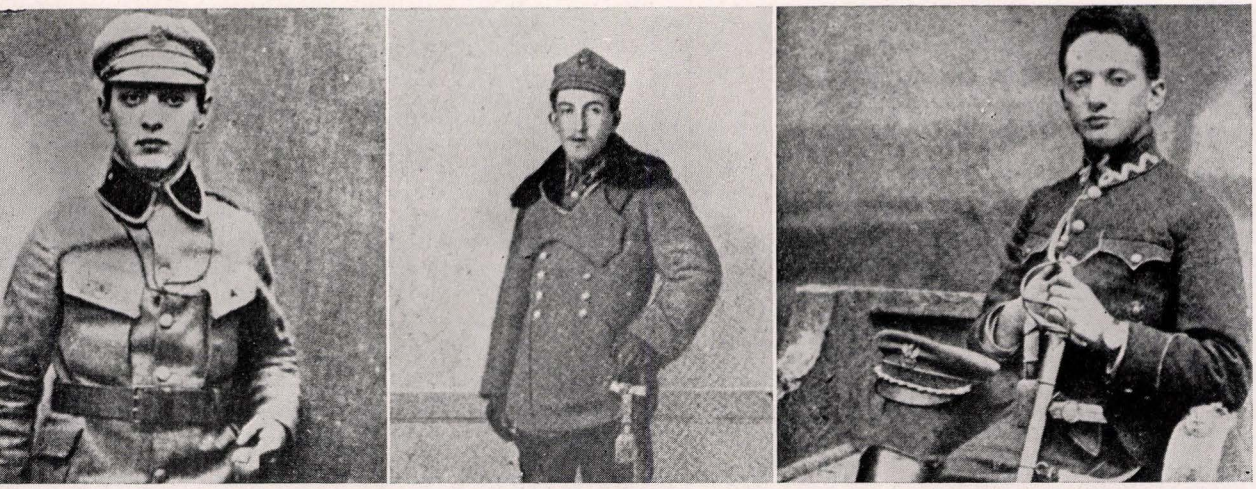
There were ninety-one Jewish aviators in the French Army, thirty-five of whom were killed in aerial combat or fell otherwise in active service. Captain Bloch was commander of a squadron which won twenty-four aerial victories. Maurice Cohen commanded the dirigible *Alsace*. Adjutant Ehrlich won nineteen aerial victories. Captain Paul Louis Weiller was cited eleven times. Sergeant Gouguenheim put to flight six enemy aviators. Lieutenant Marcel Wolff specialized in the destruction of enemy batteries. Adjutant Marcel Bloch was a specialist in successfully attacking enemy aircraft known as Drachen. Henry Bernstein, the famous dramatist, excelled in aerial combat, and was promoted to lieutenant. Captain Maurice Aron was cited four times for his bravery in the air.

Jews were also among the first tank fighters. Commandant Paul Bloch, Captain Moyse, Lieutenant Baumann, Adjutant Edmond Rosenbaum and Quartermaster Koppenhague were cited in extremely laudatory terms for their services in the then new arm of military activity.

Jewish physicians exhibited the same spirit of devotion and self-sacrifice as the combattants. Hundreds of them were killed in action while endeavoring to attend the wounded under fire.

Thirty-seven rabbis served as field chaplains in the French Army, five of them on the Oriental front. Four died in the exercise of their duty. Rabbi Jules Ruff, chaplain at Verdun, was mortally struck by a bomb near the fortress. Rabbi Witsen was killed by an aeroplane bomb. Rabbi Schwarz died of an illness contracted while in service. Rabbi Abraham Bloch was killed by a shell after seeking a crucifix for a severely wounded Catholic Frenchman, carrying this symbol of his faith to him, and assisting him in the hour of his death because no Catholic priest was present. Two other French rabbis were killed during the war; one, Rabbi Boris of Lunéville, served as a private in an infantry regiment; the other, Rabbi Vexler, teacher of theology at the Rabbinical Seminary of France, was a stretcher-bearer.

Memorial tablet in honor of non-French Jewish soldiers who served in the first World War on the side of France



GERMANY. Out of 100,000 Jewish soldiers in the German Army, at least 78,000 served at the front. More than 12,000 of them were killed in action or died of wounds. 29,875 were decorated, including 900 who received the Iron Cross first class, awarded only for definite and exceptional feats. Four were decorated with the very rare Prussian gold medal. About 23,000 were promoted to non-commissioned ranks. More than 2,000, apart from the medical corps, became lieutenants, commanding a company or battery; of these, 322 were killed in action. 200 Jewish aviators served in the German air corps; thirty were shot down. Lieutenant Max Elias was one of the German aces; he directed a Zeppelin. Wilhelm Frankl, who was killed in action, was awarded the high order pour le mérite. Jacob Wolff, a volunteer at the age of forty-eight, was the senior of German aviators. The two youngest volunteers in the German Army were the Jews Joseph Steinhardt, who was killed in action, and Richard Bing, who was wounded twice; both of them were born in 1899.

ITALY. When Italy entered the first World War there were about 700 Jewish officers in the Italian Army. Eleven were or became generals: Modena, Guido Liuzzi, Olivetti, Umberto Pugliese, Angelo di Nola, Allegro Pavia, Segre, Bonajuti, Aristide Benedetti, Vittorio Eria, Achille Levi-Bianchini. Benedetti and Pavia were killed in action. Pugliese, who rose from the ranks, was wounded three times, and won a decoration for heroism at the battle of Due Palme. He was also decorated by King George V of England, by Czar Nicholas II of Russia, and by President Raymond Poincaré of France. Levi-Bianchini won the personal thanks of King Victor Emanuel III of Italy and two decorations. Modena was highly regarded by Mussolini. Colonel Tononto was, as late as 1936, promoted to general by the Fascist dictator. M. Pontremoli, Aldo Ascoli and Paolo Marone were promoted to admiral. Lieutenant Benedette di Benedetti was killed in action at the age of seventy-seven. Lieutenant Colonel Emanuele Pugliese was decorated four times and mentioned in several orders of the day. Ottavio Raffaele Malvano, Clemente Pavia, Vittorio Emanuele Coen Pirani, Vittorio Ottolenghi, Camillo Artom, Paolo Errera, Marco Levi and Luigi Magrini were promoted to lieutenant colonel. Major Ernesto Nathan, former mayor of Rome, distinguished himself on the battlefield. Baron Raimondo Franchetti became a colonel in the Air Corps.

Among the first Italian officers who were decorated were the Jews Cesare Formiggini, Lieutenant Giuseppe Zamorani, and Aldo Padoa di Vittorio, all cited for bravery. The gold medal, the highest award for bravery which was given in the whole War to only fifty-seven Italian soldiers, was won by four Jews: Giulio Blum, Toscano Levi, Oreste Servi and Eugenio Sorani. 206 Jews received the silver medal for bravery, and more than 500 won other decorations. The Italian Army also had daring Jewish aviators, such as Captain Pico Cavalieri, Lieutenant Mario Levi, Alberto di Graziani, Bonaparte Ottolenghi, Giuseppe Ottolenghi, Enrico Basola, Deodato Cavalieri and Cesare Sacerdoti. Angelo Alhaique was submarine commander.

HUGO BIEBER.

POLAND (1914-1920). The Jews of Poland during the first World War fought on all fronts as members of the Austria-Hungarian, Russian and even German armies; they were enrolled in these armies from the

Polish Jewish heroes of the first World War (left to right): Bronislaw Zygmunt Goldschlag; Bronislaw Mansperl; Filip Smilowski

annexed parts of Poland belonging at that time to the respective states which partitioned Poland.

When the national hero of Poland, Joseph Pilsudski, then commander of the Polish Legionnaires, made an appeal to Polish youth to enroll voluntarily in his legions, the Jews came from all parts of Poland to these legions and soon showed great gallantry on innumerable battlefields of the German, Austrian and Russian fronts. Upon hundreds of these Jewish legionnaires in the Polish Army were conferred medals, distinctions and military crosses for heroism and gallantry.

It is possible to enumerate only a few of the most famous Jewish heroes and Polish ardent patriots who were awarded the highest Polish military distinction, known as the cross of "virtuti militari," for their unusual military deeds and merits. Among them were: Motel-Nathan Levinson, artisan, who fell on the battlefield in 1916, and was awarded the cross of "virtuti militari"; Isac Jungerman, who fell in 1919, and received the cross of "virtuti militari" from the hand of General Rydz-Smigly; Adolph Sternhaus, a high official in the former province of Galicia, who fell as a hero of the Polish legions near Kamieniucha, and was awarded the cross of "virtuti militari"; Filip Smilowski, who fell in 1920, and was decorated several times with medals and crosses for military deeds; the cross of "virtuti militari" was conferred upon him posthumously; Bronislaw Mansperl (pseudonym, Chaber), who fell in 1915 on the battlefield in Volhynia, and upon whom the cross of "virtuti militari" was conferred posthumously; Vladislaus Steinhaus, writer-combattant, who fell on October 24, 1915, near Maniewicze, and was raised posthumously to the rank of a captain and honored with the cross of "virtuti militari"; Mateusz Frenkel, who took part in all the campaigns of the Polish Legions under the command of Marshal Joseph Pilsudski, and was awarded several crosses and medals for gallantry and patriotic deeds; Bronislaw Zygmunt Goldschlag, who fell in the early campaign of the Polish Legions against czarist Russia, and was awarded several medals and crosses for gallantry; Stanislaus Reich, who fell in 1916, and received the cross of "virtuti militari."

During the first World War and in the Polish-Russian war of 1919 to 1920 thousands of Polish Jews joined the Polish armed forces as volunteers in order to fight for the independence of Poland. They distinguished themselves by great heroism and devotion to their native country. Many of them were promoted to the rank of commissioned officers. There were among them lieutenants, captains, colonels and generals, for example: Colonel Goldman, later director of the Polish National Economy Bank; General Mond, commander-in-chief of one of the Polish armies in the Polish-German campaign in 1939; General Krzeminsky; Colonel Karaffa-Kreutenkraft; Colonel Floyar-Reichman, later minister of the Polish Cabinet; and Major Lilienfeld.

The Jewish Organization of Ex-Servicemen in Poland comprised more than 6,000 members who had participated in the struggle for the independence of Poland. Hundreds of other Jewish ex-servicemen belonged to Polish military organizations. Among the Jewish fighters for the freedom of Poland there were volunteers from all social classes, from workers, artisans and small businessmen to industrialists, intellectuals and writers. They came from all parts of Poland.

ALEXANDER HAFFTKA.

RUSSIA. The number of Jews serving in the Russian Army was estimated as 385,000 at the beginning of the War, and finally increased to about 600,000. The military organ *Russky Invalid* stated that the "heroism, loyalty and generosity of the Jews have created a good impression," but declared that all the attempts of young Jewish students to enter the school for officers would be futile, as the general staff remained determined to exclude Jews from commissions. However, as early as September, 1914, a Jew named Katz was promoted to lieutenant and awarded the Order of St. George. Later the Jews Yoffin, Korman, Shuler, Goldner, Kaplan, Safian, Ratnov and Helfman were promoted to lieutenant. Reichelson, a volunteer at the age of fourteen, was promoted to sergeant; another Jewish volunteer, aged sixteen, also became a sergeant for concealing from the Austrians, despite torture, any data about the movements of the Russians and for giving useful information to the Russian commander. Another Jewish soldier, Ginsburg, also refused, despite torture by the Germans, to give them information they sought, and later escaped to the Russian lines. The number of Russian Jewish soldiers who distinguished themselves became so large that the leading anti-Jewish paper, *Novoye Vremya,* threatened not to publish any more names of Jews decorated for bravery if the Jewish press used them as arguments for obtaining equal rights. Several censors actually suppressed the names of Jews in the lists of the knights of the Order of St. George, or allowed only their initials to be printed. According to the London *Jewish Chronicle* of July 6, 1917, about 60,000 Russian Jews were decorated, and 2,600 were recommended for commissions.

c. In the Civil War in Spain. The outbreak of the Spanish Civil War in 1936-37 provided a battleground on which primary antipathies, later to be fought out on a world-wide scale, first met. Because of the brief existence of the Spanish Republic, with its renewed hospitality to Jews, there were few Jews within the country itself. The Loyalist armies, however, defending the Republic against the Franco rebellion, soon had the assistance of Jewish volunteers from many parts of the world. Among the volunteers from European countries was Bobrus Nissenbaum, a mechanic from Warsaw, who had been active in the metal workers' union; he walked to France from Warsaw, joined the Palafox Battalion in Loyalist Spain, and was killed in action. George Montague Nathan, a major in the British Army who was noted for his exceptional courage, was killed at Brunete. Hayim Elkon, a carpenter from Poland, died in Catalonia at the age of thirty. Friedl Kassowitz, a lawyer (b. Teplitz-Schönau, Bohemia, 1907), was a lieutenant in command of a battalion; he was killed at Navalperal. Hayim Raszelbusch, a son of a butcher from Poland, fought in the Polish Mickiewicz company, and was made a company commissary and a lieutenant; he was wounded in a battle. When last heard of, after the debacle of France, he was in that country, threatened with deportation to Poland. From the United States about 630 Jews participated, out of a total of 3,500 that went to Spain from that country to fight on the Loyalist side. The Abraham Lincoln Brigade, composed of Americans, numbered many Jews among its heroes. Of the 630 that fought in battles 217 were killed, and about 90% of those that returned had at least one wound.

Among the casualties was David Doran (b. Albany, 1910), who went to Spain in 1937, after a career in trade union organizational activities. In August, 1937, he became company commissar, and a short time later, replaced a wounded superior officer as brigade commissar, the equivalent of a lieutenant colonel in rank. He led the 15th brigade through the battles of Fuentes de Ebro, Belchite and Aragon, and was executed on March 30, 1938, after capture by the Franco troops.

Samuel Levinger, the son of Rabbi Lee J. Levinger, left his studies at Ohio State University (February, 1937) at the age of twenty-two, and was killed at Belchite in September of that year. Harry Meloff of New York renounced a career in the theatre to go to Spain. He was twenty-two years old when he was killed in 1937. He was the author of one of the marching songs of the Washington Battalion. Wilfred Mendelsohn (b. New York city, 1915) was a graduate of City College. He went to Spain in the spring of 1938 and was killed in July. Joe Dallet, thirty-two years old, who had forfeited the privileges of a well-to-do home for work in the Pittsburgh steel mills and union organizing, went to Spain in the spring of 1937 and rose to the rank of battalion commissar. He was killed at Fuentes de Ebro, after refusing to permit first-aid men to treat him in his exposed position.

Among those to return was Major Milton Wolff (b. 1915). He was in command of the Lincoln-Washington battalion during the Ebro retreat. For four days he was cut off from the Loyalist lines, but managed to effect a break-through and afterward led an offensive. Wolff became the youngest major in the Lincoln Brigade. In 1943 he was serving in the United States Army. Leonard Lamb, a twenty-seven year old school teacher, was wounded three times, and fled from the hospital to join the Lincoln Brigade at the Ebro offensive. John Gates, twenty-three, became base political commissar at the International Brigade Base. Later, as lieutenant-colonel, he led his men at Aragon and at the Ebro. He was in the United States Army in 1943. Irving Goff (b. 1911) arrived in Spain in March, 1937, and joined the guerrillas in November of that year. With them he participated in the storming of Fuerte Carchuna, near Motril on the Mediterranean, where 310 Asturians were freed. This was one of the most difficult guerrilla operations of the Spanish war. Goff was also serving in the United States Army in 1943.

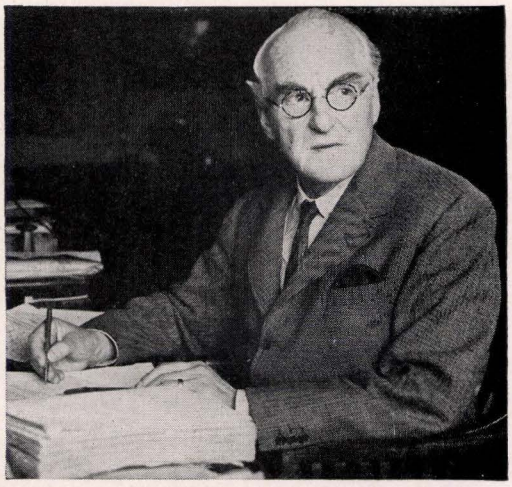
In addition to these, a group of Jews from East European countries, most of them resident in France, formed a Yiddish-speaking brigade for the Loyalist armies. Named after a Jewish communist who had been executed in Poland, it was known as the Botvin Brigade. About 100 men from Palestine, most of them members of the Mapai (Communist) party or other left-wing labor groups, made their way to Spain individually or in small groups, and participated in the fighting with the International Brigade. Of this number a large percentage were killed.

JACK BJOZE.

d. The Second World War (1939 to 1943). BRITISH EMPIRE. When Hitler attacked Poland and thus caused the outbreak of the second World War Great Britain was far from being technically ready to conduct a modern war. Leslie Hore-Belisha, British Secretary of State for War, a Jew who had distinguished himself in the first World War and had been promoted to major, endeavored, under unfavorable circumstances and hampered by influential appeasers, to modernize the British Army and to abolish outmoded routine. Although he did not entirely succeed in realizing his intentions, he laid the foundation upon which his successors accomplished the task initiated by him. Hore-Belisha, despite severe criticism, was considered a resourceful organizer and an imaginative military specialist.

The Jews of the British Empire showed, during the second World War, the same devotion and heroism they had displayed during the first. They distinguished themselves in civilian defense activities in the homeland during the air raids and in all the great war actions abroad. The majority of air raid wardens in the East End of London were Jews, and many more were engaged in exhausting work as members of the Auxiliary Fire Service and in the Auxiliary Police. Dr. Hannah Billig, a well-known East End woman physician, was awarded the George Medal for exceptional bravery while on duty as shelter doctor in a dockside shelter (1940). Solomon Wolfson received the same medal for rescuing injured persons from a blazing building while bombs were still falling. Noel Landau was awarded the British Empire Medal for bravery while serving with the Liverpool fire-fighting service during the severe bombardment of the city. Special Constable Emmanuel Graham was awarded the George Medal for driving a car regularly during air raids through streets practically impassable because of craters, debris and fires, and assisting in rescue work in dangerous areas. Harry Harris and Cyril Harris Davis received the British Empire Medal for dismantling a heavy unexploded bomb. Dr. G. S. Norris reached a demolished house through a hole dug in the debris and treated the buried occupants for three hours before rescue was effected.

In the Battle of France the British Expeditionary Force successfully resisted the German offensive until it was forced to retreat because the French armies had already yielded. At least 1,500 Jewish soldiers fought in these battles, among whom many were decorated



Colonel Lord Nathan of Churt, hero of the first World War, was director of welfare for troops in Eastern and London Commands and chairman of National Defence Public Interest Committee during the second World War

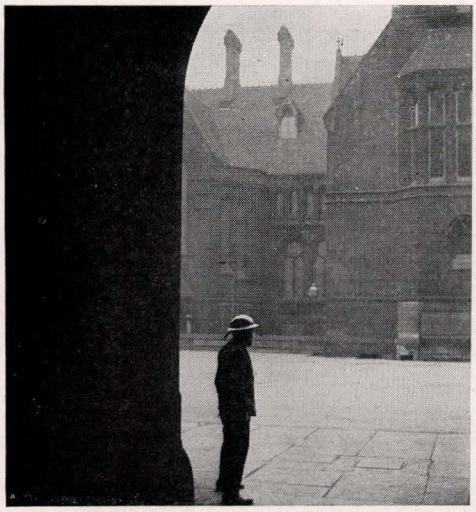
Brigadier-General Frederick Hermann Kisch, on active duty in the Middle East campaign during the second World War, was thrice wounded in the first World War and was killed in Tunisia in 1943

Major Louis Halle Gluckstein, who distinguished himself in the Infantry and Intelligence during the first World War, was attached to the Judge Advocate General's department and served in France (1940) in the second World War

Dr. Redcliffe Nathan Salaman, British scientist, expert on the genetics and diseases of the potato, served his country with distinction on the home front during the second World War. His home at Homestall was a target of air raids

Sir Robert Waley Cohen, Member of Parliament, played an important part in the Jewish community of wartime Britain. He also directed one of England's largest petroleum concerns

Colonel Lord Bearsted was awarded the M. C. in the first World War. As chairman of Shell Transport and Trading Company, he rendered patriotic service during the second World War



for bravery or mentioned in despatches, such as Sir Philip Magnus, lieutenant in the artillery corps; Lieutenant Sir Henry d'Avigdor-Goldsmid and his younger brother; Private Leon Stein, who was promoted to officer on the battlefield and Lieutenant Paul Hart, a Canadian Jew. During the embarkation at Dunkirk, one of the greatest feats in the history of war, many Jews distinguished themselves, among them Major Robert B. Solomon, Lieutenant Martin, and Lieutenant Harold Reginald Newgass. Raphael de Sola, commandant of a ship of the Royal Navy, was especially cited for his "heroic action at Dunkirk," and Captain J. Reynolds of the New Zealand Medical Corps gave at Dunkirk an "example of coolness and self-control under fire and complete disregard for personal safety." Rabbi Israel Brodie, field chaplain, was commended for his heroic conduct at Dunkirk, and Rabbi B. Cherrick was cited for similar courage at the evacuation of St. Malo.

When, after the British withdrawal from France, England was bombed by the Germans day after day during the autumn of 1940, Jewish aviators rivaled their non-Jewish comrades in the Royal Air Force struggling against odds, as did Jewish air raid wardens and fire servicemen on the ground. Subsequently many of the Jewish airmen, in raids over Germany, made the enemy pay for the devastation in England. Lieutenant William H. Nelson, a Canadian Jew, was as leader of a bombing squadron twice congratulated by King George VI. Ronald Joseph, squadron leader in the Royal Air Force, was similarly honored. Sergeant-Observer Bernard Bardega, Pilot Officer Marcus Kramer, Sergeant L. Zalsberg, Flight Sergeant Sidney Meyer Bernstein of Cape Town, Lieutenant D. F. Jacobi, Mark Alfred Niman and Michael Max Wiseman were among the first British aviators to be awarded the Distinguished Flying Cross or Medal. Other outstanding British flyers were Morris H. Rosenberg and Bernard H. Rosenberg, brothers who joined the air force on the first day of the War; their father had served in the Royal Flying Corps in the first World War. Lieutenant Brian van Mentz, a South African Jew, according to his citation "led his section with great skill and courage and always showed the greatest determination in pressing home his attacks against large enemy formations." Sergeant Raymond M. Lewin, despite his own injuries, rescued the second pilot of a burning bomber which crashed at midnight on a bombing mission against Italy, although he was certain that the bombs and petrol tanks were doomed to explosion. Lieutenant M. E. Jacobs plunged into the sea and rescued the wounded German pilot Friedrich Dilthey of Reydt, home town of Nazi propaganda minister Joseph Goebbels. Aubrey Weldin, sergeant air gunner, in a bomber raiding Mannheim, Germany, put out a fire in his plane at a height of 16,000 feet and a temperature of 25° below zero centigrade, and without an oxygen supply. Five Palestinian Jews, Corporals Pinhas Berlin, Hirschheimer and Robinson and Privates Brandt and Teich, were mentioned together for bravery. Sergeant Jocelyn Friendly of South Africa, barely eighteen years old, was awarded the Distinguished Flying Medal. Lieutenant William Treger, a Jew of Johannesburg, South Africa, was honored after successfully completing fifty-three bombings of enemy territory from July, 1940, to the end of June, 1941. In an attack on Tripoli harbor Treger, despite intense anti-aircraft fire, obtained a direct hit on an 8,000-ton tanker which was destroyed. Squadron Leader Julius Allan Cohen was the pilot who took General Lord Gort (then chief of the imperial general staff) and Duff Cooper from Southampton, England, to Rabat, Morocco, just before the final collapse of France, to make contact with French ministers who had found refuge there. Cohen faced not only the difficulty of landing his flying-machine on an almost impossible narrow water gateway, but also the enmity of "Vichy-minded" French authorities who arrested the French ministers while Cohen saved his passengers intact.

In Canada, by the beginning of 1943, more than 10,000 Jews had been enrolled in the combat forces of the dominion, more than their proportion in the general population. Among the Jews who were decorated were: Major M. Medine of Montreal and Major Bert Sucharov of Winnipeg (Order of the British Empire); Sergeant Henryk Rosany of Montreal (Polish Cross of Valor); Flying Officer William Henry Nelson of Montreal (Distinguished Flying Medal; Distinguished Flying Cross with bar), who was twice personally congratulated by the king; Flight Lieutenants Harry Shapiro of Montreal and Albert E. Glazer of Toronto (Distinguished Flying Cross); Pilot Officer Edmond D. Fleishman of Vancouver (British Empire Medal); Sergeant David Hart of Montreal, who was given the Military Medal at an investiture at Buckingham Palace; Corporal Louis Goldstein of Montreal (Air Force Medal). Petty Officer Max Abramson of Vancouver was mentioned in dispatches for gallantry at sea. Captain Ben Brachman of Regina served with the Cameron Highlanders in the raid on Dieppe in 1942 and was given high praise for his care of the wounded. Wing Commander Maurice Lipton of Sydney was praised for heroic aerial operations against the enemy. Doctor Harry Winter of Toronto was given special honor for having, in the face of danger, saved many lives at the time of the ruthless Nazi raid on Coventry, England.

A large number of Jewish soldiers participated in the raid on Dieppe, the brunt of which was born by Canadian troops. Sucharov, Hart and Brachman won their honors on the occasion of this incursion into enemy-held territory, in which at least nine Jews were killed and three missing. According to figures compiled by the Canadian Jewish Congress, there were by 1943 a total of 128 Jewish casualties, including over sixty killed in service and twenty-three soldiers who were made prisoners of war.

Up to the end of 1941 more then 10,000 Jews enlisted in the Royal Air Force, which won lasting glory. Among them were more than 2,000 Palestinian Jews. Rabbi Israel Brodie was appointed first Jewish chaplain for the Royal Air Force. He was followed by Rabbi Eli Cashdan, and Rabbi J. Eisen became Jewish chaplain for the Royal Canadian Air Force. The courage of Jewish fighter pilots was commended by Captain H. C. Biard, a non-Jewish officer in the Royal Air Force, in the *Sunday Graphic* of November 30, 1941. Giving the story of a Hurricane squadron, Biard said: "Several pilots in this squadron are East End Jews, and for reckless courage in the air, I don't want to see anything better. There were some big Junkers bombers that came over early in the airblitz that seemed to make a special point of beating up the Jewish quarter of London's East End streets and hospitals, their principal targets. There was one particular bomber—it used to come over always attended by three fighters, and it always dropped half a dozen 'Big Boys,' and then fled home hell-for-leather. Three times it got across, put down its eggs, and hared off home. Three times the Jews of the Hurricane Squadron failed to get there in time. The fourth night, something went wrong. Issy, a big-hook-nosed, sloe-eyed, curly haired lad of the type that provides some of the world's best

World Conference of Jewish Veterans in Paris, June 1935

boxers, went 'upstairs' early through some sort of mistake in orders. They never quite got to the bottom of it. He picked out the particular bomber with the escort, smote straight through the escort as if it wasn't there, and put a long burst at such point-blank range that only miraculous flying saved him from ramming. And that bomber went down to crash . . . Issy came back singing a hymn—a hymn in Yiddish that no one could understand."

Jews not only manned many of the small boats which helped in the evacuation at Dunkirk; they distinguished themselves also aboard units of the Royal Navy. Captain Daniel de Pass, leader of the Flotilla First Destroyer Division, played a famous part in the rescue of British prisoners from the German raider *Altmark*. Commander R. F. Jessel, after serving on the battleship *Hood* during the first year of the war, was given the command of a destroyer, and later on of a larger vessel, and was cited several times for defeating Japanese ships in a naval battle and annihilating a flotilla of German submarines. Lieutenant Tevio S. Eimerl, participating in the action at Namsoe, Norway, where his ship, the *Afridi,* was sunk, astonished his crew and that of the rescuing destroyer with his intrepidity. Later on Eimerl was again cited "for skill and enterprise in action against enemy submarines." Lieutenant Commander A. R. Rosenthal was cited "for courage and resolution in operations in Mediterranean waters." Petty officer A. G. Lazarus was cited "for daring enterprises in successful patrols in H.M. submarines." Lieutenant Commander M. M. Bright, commanding a British destroyer and afterward a cruiser, was repeatedly victorious in minor naval battles against enemy surface craft and submarines, and successfully carried out important and perilous naval missions. Dov Galinski and Emil Fuchs, two Jewish instructors of the Zebulun Seafaring Society, Palestine, were credited by British Admiral Cunningham with saving a British freighter when it caught fire during an attack by enemy bombers in the harbor of Famagusta, Cyprus.

It was an Australian Jew, Major Maurice Ashkanasy, who, under harrowing conditions, saved a small part of the garrison of Singapore from capture by rowing them in a boat until they were picked up by a British warship.

During the North African campaigns Jews from England, South Africa, Palestine, Canada and Australia distinguished themselves under very difficult circumstances. Colonel Frederick H. Kisch, who had gained distinction in the first World War, was promoted to general while serving in the Middle East. Colonel R. H. Lorie was promoted to major general in recognition of his skill and bravery. Major M. M. Medine, a Jew from Canada, was awarded the Order of the British Empire. Colonel J. Steigrad, an Australian Jew, became a companion of the same order. Major A. Finberg obtained the Medal of the British Empire, and was mentioned in dispatches. David Croll, the first Canadian Jew to hold a ministerial portfolio, entered the Canadian Expeditionary Force, as a private after resigning from his post, and was promoted to captain in the course of the campaign. In the battles which led to the British conquest of Italian East Africa A. M. Ruda, a Rhodesian Jew, obtained the Military Medal for distinguished service. Corporal Gerald Goddard, a South African Jew, was awarded the Distinguished Conduct Medal for bravery at Bardia, Cirenaica, and Corporal George Marx Eisenhammer won the George Cross for conspicuous action during the battle of Libya. In these campaigns many Jewish officers and enlisted men were decorated, including

Jewish soldiers passing the Great Synagogue at Tel-Aviv

Theodore Kramer, Major Lionel Melzer, Captain H. L. Silberbauer, Corporal Sidney Freeman and Private Samuel Jacobovitch, all South African Jews. Corporal Henry Fine was singularly honored by the British commander-in-chief, who gave him a special "certificate for devotion to duty."

When, in the autumn of 1941, British troops broke out of besieged Tobruk, Jewish units were in the vanguard. Scores of Palestinian Jews were engaged in the forward areas around the fortress, often fighting under gunfire and aerial bombardment for twenty and thirty hours at a stretch. Other Palestinian Jews at Tobruk together with the Australians did excellent work in anti-aircraft defense. One "suicide squad," composed of Jewish pioneers who had previously served in France, covered the left flank of the British advance to Keren, Eritrea, and cut off the Italians on a ridge to the left of the main offensive. After the Eritrean campaign the Jewish soldiers were dispatched to Abyssinia, where they engaged in raids, then they were stationed in Egypt, in the Western Desert, and in the Sudan, and took an important part in the rescue of retreating British troops from Greece. When the German general, Erwin Rommel, captured Tobruk, Jewish soldiers were among the small part of the British occupational force which broke through the German lines and joined the main British force. Private A. N. Goldman was among those taken at Tobruk. He escaped after confiscating a German tank and killing most of the members of a German patrol, one of whom he drove as a prisoner to the British lines.

China. A singular military career was that of Maurice A. Cohen (Cohen Moishe), who was minister of war and general in the Chinese army, and the confidant and military adviser of Sun Yat-sen and Chiang Kai-shek. His physical prowess won him the names of "Two-Gun Cohen" and "General Ma-Ma." The Japanese considered him a dangerous adversary.

Czechoslovakia. Jews from Czechoslovakia distinguished themselves as soldiers in France and Africa.

France. The Jewish soldiers of France fought with ardor and bravery until the collapse of that country in June, 1940. Colonel Schwartz, who had 1,300 men under his command in the Maginot fortress of Hohwald, continued to fight for two weeks after the armistice, and repelled constant German assaults until a French general arrived from Vichy and ordered the surrender of the garrison. The German commander congratulated Schwartz and allowed him to retain his sword, thus testifying to his respect for his adversary. The Jewish generals Darius Bloch and Charles Huntzinger so distinguished themselves, that the Vichy government exempted them from the anti-Jewish laws. Commander Pierre Salomon Isaac Brisac, a descendant of an Alsatian Jewish family whose members had fought and died for France in all the wars from the French Revolution until the second World War, also won exemption because of his gallantry. A regiment of the Foreign Legion which was entirely composed of Polish Jews resisted the great German offensive of June, 1940, so vigorously that the attacking commander, although his troops outnumbered the defenders who lacked equipment and yet destroyed a large number of German tanks, was forced to demand considerable reinforcements before he could advance. Only 400 Jews of this regiment, whose original force numbered 3,000, survived the battle. Zalman Bach was decorated with the Cross of the Legion of Honor for recruiting 10,000 volunteers. Captain George Cohen-Choulal, a Jew from Algeria, was mentioned in an order of the day for bravery. Lieutenant Colonels Edmond Benhamon, Captain Pierre May and Baron Guy de Rothschild became officers of the Legion of Honor for exceptional courage. Captain Georges Lévy, Pierre Louis-Dreyfus, Jean Donald Dreyfus, Michael Wenglinski and Eugene Gaudin won the Croix de Guerre. André Gutman was awarded the Croix de Guerre with Stars, a rare distinction; Joseph Kessel, the author, was decorated with the Médaille Militaire; Corporal Moïse-Aron Rubinson and Charles Hanoun won the Médaille Militaire as well as the Croix de Guerre with Palms. Maurice Stern was decorated with the Croix de Guerre, and was mentioned in a special order of the day. Edgar Lévy was cited for bravery and awarded the Croix de Guerre. Aviator Lieutenant Weisman was promoted to Grand Officer of the Legion of Honor. Lieutenant Maurice Kredelmann, Maurice Malka and Jean-Pierre Sée were decorated posthumously. Even the Vichy government felt the obligation to nominate the Jewish war hero Samuel Meyer to the Legion of Honor "for his mastery and courage" (July 15, 1941). In pre-Vichy France, before its collapse in June, 1940, ten generals in the French Army and two admirals in the French Navy were Jews.

Greece. Many Jewish soldiers of Greece participated in the defense of their country. Colonel Mordecai Frizis was killed in action when he heroically led his troops, who were defending an Albanian village; this was later renamed Frizis in his honor. Joseph Pepo and many other Jewish soldiers were awarded the Greek military cross. Several hundred Greek Jews continued to fight in the Middle East after their country had been conquered by the Nazis.

Italy. In the second World War, Jewish soldiers fought almost exclusively in the armies of the United Nations. Despite the fact, however, that the Italian anti-Jewish laws excluded Jews from "military service in peace or war," Mussolini's government summoned a number of Jewish army and navy engineers, including Admiral Umberto Pugliese (who was considered Italy's greatest naval designer) for service "as advisers" in the armed forces. At least one Jewish soldier, Bruno Jesi, was decorated by Mussolini with the gold medal "for outstanding valor under fire" (on November 24, 1939). This was evidently for meritorious service in the Abyssinian campaign.

Palestine. At the beginning of the second World War in 1939, Dr. Chaim Weizmann and the Jewish Agency for Palestine asked the British government to take measures necessary to create a Jewish division of ten thousand men, seven thousand to be recruited in America and three thousand in Palestine. The British government agreed in principle.

Because the British government intended to maintain parity between the Jews and Arabs of Palestine, there was a delay in accepting Jewish volunteers into the armed force, although 130,000 Jews and Jewesses of Palestine had declared their readiness to serve in the army at the beginning of the War. The British government finally renounced the principle of parity, and toward the end of 1942 more than 17,000 Jews of Palestine had been enlisted. They served as infantrymen, fliers, pioneers and truck drivers. There was also a Jewish unit in the Royal Navy. Palestinian Jewish port workers served in stevedores' units of the British Army in important Middle East ports under steady Axis bombardment. These Jewish soldiers fought in France, Greece, Ethiopia, Syria, and mainly in North Africa. 1,023 Jewish soldiers were lost in the British campaign in Greece and Crete. An exceptionally large number of Palestinian Jews distinguished themselves in the East and North African campaigns, and were

decorated, promoted to officer and mentioned in dispatches. Jewish units of the Royal Engineers and Transport companies took an important part in the construction of fortified strong points at El Alamein. Palestinian Jews were in the vanguard of the army which pushed the beaten enemy through Libya.

POLAND. The Jews of Poland fought devotedly for their country although they had borne the full brunt of an anti-Semitic policy pursued by the republic until the very outbreak of the War. A preliminary account of the Polish Jews who were killed in action during the three months of Polish resistance to the Nazi invasion beginning September 1, 1939, listed 31,216 names.

When the remnants of the Polish army in France escaped to England after the collapse of France (1940), thousands of Polish Jews joined the ranks of the Polish armed forces, which were organized anew in Scotland. Many Jewish refugees residing in Canada, after escaping from Poland through Russia and Japan, were trained as pilots and were sent to England in order to be enrolled in the Polish air forces.

After the new agreement between the Polish government in exile and the Soviet government in 1941, thousands of Jewish refugees joined the Polish army formed in Russia by the Polish general, Anders. This Polish army marched out from Russia to Iran, and was posted in the Middle East. Of these Polish military units which went out from Russia about 30 per cent were Jewish soldiers. In 1943 the Polish Army in the Middle East was composed of different units comprising in all more than 100,000 soldiers; the number of Polish Jews in these units amounted to more than 12 per cent. Before the arrival of the new Polish Army in the Middle East, regiments of the Polish army fought in Tobruk and in other places of Libya. When Axis aircraft damaged the water reservoir of Tobruk, Sergeant Michaelis, a Jewish volunteer from Poland, was seriously wounded and all the men under his command were killed. When Michaelis regained consciousness, he succeeded, despite badly injured hands, in closing the breaks in the pipes and repairing them temporarily until technical aid arrived.

SOVIET UNION. The fact that the armies of Soviet Russia were capable of enduring the formidable German offensives without being thrown into disordered

Lieutenant General Lev Mekhlis. From a photograph by Sovfoto

flight and that after a year of embittered fighting they became able to force the German aggressors to retreat and to inflict enormous casualties upon them astonished even well-experienced military experts of other countries. Jews contributed in various ways to the success of the Red Army. In the first place, Leon Trotsky, as commissar of war, laid the foundation for this army. Second, Lazar Kaganovich, as an appointed member of the State Defense Committee, the body charged with the direction of the war, was partly responsible for the strategic and tactical plans which were executed by the Soviet troops, and for the construction of factories manufacturing military essentials deep within the interior of Russia. Third, the gallantry of Jewish soldiers of the Red Army, from privates to generals, contributed to the thwarting of Hitler's attempt to annihilate Soviet Russia.

Tens of thousands of Russian Jewish men and women were decorated for deeds of valor.

Leizer Papiernik, one of the most famous Jewish heroes of the Red Army, who twice received the highest award for bravery, was killed in action in August, 1942, while fighting singlehanded against 400 Germans. The military commissar of the Red Army division to which Papiernik was attached declared: "The memory of Papiernik's heroic detachment will live forever and will become a legend in our history." Chaim Dyskin, eighteen years old, wounded forty times, destroyed five German tanks which tried to break into the Russian position; he was awarded the title "Hero of the Soviet Union" as well as the Order of Lenin and the Order of the Red Star.

Many other Jewish soldiers, both commissioned officers and privates, were made "Heroes of the Soviet Union": General Jacob Kreizer, one of the most be-

(Left) Major General Lev Samoilevich Berezinski; (right) Major General Jacob Kreizer. From sketches by Ivan Sors

loved military leaders in Russia, who extricated his army from a German trap near Smolensk; General Lev Dovator, famous commander of a Cossack cavalry division, who defeated the Germans at Rostov, and was made a "Hero of the Soviet Union" three weeks before he was killed in action in January, 1942; General Iakov Smushkevich, of the Russian Air Force; Captain Israel Fisanovitch, commander of a Soviet submarine, who destroyed several German convoys; General of Tank Troops Mikhail Rabinovitch; General of Tank Troops Abraham Khasin; Privates Leib Fainstein, Jacob Chrysler, Neiderman, Alia Shneur, and Lida Chalkin, who was honored posthumously; Kogan, an engineer, leader of the guerrillas at Volokolamsk on the Moscow front, who was tortured and hanged by the German high command for refusing to give out any information; Lieutenant Levin, killed while holding off a German tank unit; a surgeon, Tsifrinovich.

Exact data concerning the number of Jewish generals in the Red Army were not yet available in early 1943. Among those known were Samuel Tarkushevitch, Israel Boskin, Samuel Shapiro, Aaron Katz, Zelig Joffe and Julius Rabiner. General Isserson, innovator of new infantry tactics, was honored in German military circles long before the outbreak of the War; Isserson's ideas inspired the German offensive which was undertaken in Belgium and in France. Naum Leventov and Isai Rivkin were promoted to major general, and K. P. Podlak, a war hero, was promoted to lieutenant general. General Samuel Rogachevski, an outstanding military leader, was awarded the Order of the Red Star for his services at the front. Colonel Gottlieb Chanus was decorated with the same high order, as were Captains Hessel Berlein and Joseph Shechtman, Colonel Faivel Mikhlin, and Majors Veprinsky and Vekselman, who was killed in action. Lieutenant General Lev Mekhlis performed outstanding service in the field. Mikhlin received also the Order of the Red Banner.

The anti-aircraft gunner Sioma Shtengart was awarded the Order of Lenin after he successfully defended a Russian freighter hit by German dive bombers. Later he served on the Moscow front. Especially lauded by the Soviet press was Isaac Tkatch, leader of a group of twenty-two Russian soldiers, who by his fierce resistance prevented German troops from crossing a strategic river. Although badly wounded midway in the battle, Tkatch alone killed sixteen German officers and men. Israel Gribun, political commissar, was awarded the Order of the Red Banner for heroism during the defense of Sevastopol, where he took over a troop command of a while under enemy fire and repelled two violent attacks. Then he led an attack on German and Italian columns and tanks, inflicting heavy losses and carried out reconnaissance deep in German-held territory. Among fighters decorated for bravery was Leivik Risin. After the death of his superiors, Risin assumed the command of sixty infantrymen and succeeded in recapturing a lost position. Risin was awarded the Order of the Red Star. Sergeant S. Finkelstein and Private Marx Gallar were awarded the Order of the Red Banner for similar feats. Orderly Zalman Grinzer saved the lives of seventy-two wounded soldiers.

Elia Falkovich, noted Russian philologist, who enlisted in the Soviet Army, received the Order of Lenin for distinguished bravery.

Other Jews who distinguished themselves in the various branches of the Soviet Army in the course of the second World War through the first quarter of 1943 were: 1st Lieutenant M. E. Belenki, Major General Lev Samoilevich Berezinski, 1st Lieutenant Anatol Berliner (credited with having made more than 100 night bombing attacks on the enemy's positions), Eugenie Lvovich Burstein (medical corps), Tank Division Commander Chaskelski, Lieutenant Chernov (air force), Sergeant Drobotchevski, Jacob Drogovetski (commander of an anti-tank unit), Battalion Commissar Friedman, Shomer Halperin, R. C. Hoizenstein (artillery), I. S. Israelevich (captain of a Soviet submarine), Tank Commissar David Karsunski, Sergeant David Katz, Sergeant P. E. Klevitzki, Captain V. S. Lazarev, Moishe Lazdon (artillery), Leizer Levine, Israel F. Lifschitz, the airman David Mikhailovich (twice decorated; he made more than 100 successful bombing raids over the enemy's positions), 1st Lieutenant Minz, Captain Ovetzki, Sergeant Pasov, Israel Pisanovich (captain of a Soviet submarine), Tank Commissar I. Rosenfarb, Tank Battalion Lieutenant S. Shagall, the airman Sergeant Shapiro, the brothers Zusye and Alexander Sherman, 1st Lieutenant Shevchenko (tank division), Joseph Shevelev, Lieutenant Simon Sviedel, Jacob Isaac Zak, Sergeant Zernitzki, and D. S. Zusmanovich.

Anatol Berliner, night bombardier

Jews excelled as aviators in the Red Air Force. Special tribute was paid by the Russian press to Major Spak for his bravery in numerous air battles over Moscow. Flier Leib Rappoport was, in August, 1942, credited with forty flights for the bombing of German troops, fortresses and military stores and with downing many German planes. Captain Levin of the Red Air Force destroyed several units of German tanks and dispersed German and Roumanian infantry troops.

Many Jewish authors, scientists and artists fought and died in the defense of Soviet Russia, among them Alexander Poliakoff, whose book, *Russians Don't Surrender,* was written after he had escaped German encirclement early in the War. Born in 1908 in the Voronezh region, Poliakoff in 1927 entered the Moscow Artillery School, from which he graduated in 1931. He served as a reporter for the Red Army organ *Red Star,* and as a battalion commissar. Mortally wounded at the end of September, 1942, Poliakoff was the seventh reporter of the *Red Star* to be killed. Aaron Kushnirov, poet, was awarded the Military Merit Medal.

According to the statistics compiled by the American Russian Institute, up to the end of 1942 a total of 5,163 Jews in the Red Army were honored for bravery, out of a total of 185,000 cited.

Jewish girls and women were scarcely less significant in the defense of Russia than Jewish soldiers were. Mary Ykhnovich was decorated as a senior battalion officer. Sarah Meisel, a twenty-three-year-old Jewish girl, was hailed by the Soviet press as a heroine for saving Russian army units from destruction by maintaining telegraphic connections under heavy German fire which demolished the railway station where she worked as a telegraph operator. Lea Kontorovitch, a nurse, was cited for her refusal to leave her post although she had been wounded three times. Continuing her work in the heat of the battle, she was struck again and died immediately. Alexandra Dreiman fought behind the German lines with a guerrilla squad. She was captured, tortured and shot by the Germans for refusing to divulge the hiding-place of her comrades. During the battle for Stalingrad Gitta Schenker, a telephone operator, assumed command of a Cossack infantry battalion whose chief was critically wounded, and directed the firing. Her rapid and accurate work enabled the Cossacks to correct the range and to halt a particularly severe German assault.

In the same battle for Stalingrad Sergeant Kosik and Private Berkovitz set fire to a number of German tanks. Private Bernstein led thirteen ammunition-laden trucks through burning streets, under heavy aerial bombardment and artillery fire, to relieve a trapped Russian regiment. Sergeant Leib Fishman led his unit against a hundred German tanks, destroying fifteen and forcing the others to retreat. Lieutenant Shoichet, in command of a platoon, killed thirty-five Germans whom he had lured into a trap, and the nineteen-year-old cavalryman Abraham Rosnitzky made a perilous trip on horseback across no-man's land to restore communications between two Soviet regiments. A Jewish doctor, Simon Rafalovich, was praised for remaining at his post in a hospital, although a German bomb scored a direct hit, killing six members of his staff. His conduct was typical of that of Jewish physicians and surgeons on all Soviet fronts.

YUGOSLAVIA. The Jews of Yugoslavia took an active part in guerrilla warfare, and many of them were killed in action or were executed. General Draga Mikhaelovitch was aided by two Jewish staff officers, who occasionally commanded their own units.

5. The United States. a. The French and Indian and the Revolutionary Wars. The Jews of the United States always considered military service a pledge and a privilege. Asser Levy, the first American Jewish citizen, in 1655, one year after his arrival in what is now the United States (New Amsterdam), asked for the right to stand guard like other burghers; when his petition was refused, he appealed the case until he won. Subsequently the Jews of the colonies which afterward became the United States participated in the French and Indian War. Aaron Hart organized a battalion to help conquer Canada, and was on the staff of General Amherst when the city of Montreal was taken by the British. Isaac Isaacs was captain-lieutenant in the first expedition against the French stronghold of Crown Point. David Hays, Jr., served in the same war under George Washington. Isaac Myers organized a company of bateau men, whose captain he was, for an expedition across the Allegheny Mountains to subdue the Indians, and two other Jews took part in this raid. Judah Hays fought in this war as a privateer, with his sixteen-gun ship *Duke of Cumberland.*

In the Revolutionary War Isaac Franks, at the age of seventeen, joined Colonel Lasher's regiment, and fought in the Battle of Long Island under the direct command of Washington. David Salisbury Franks was attached to Benedict Arnold's staff at West Point, but had no part in Arnold's treason, and was honorably exonerated from any suspicion. Haym Salomon, who rendered valuable financial services to the revolutionary government, displayed great personal courage also in carrying on daring enterprises to destroy the fleet and storehouses of the enemy. One of the first Jews to give his life for the independence of the colonies was Lewis Bush, who enlisted in Washington's army, won rapid promotion because of his bravery, and as a major was fatally wounded in the battle of Brandywine in 1777. His brother, Major George Bush, distinguished himself on several occasions. Solomon Bush, deputy adjutant general of the militia of Pennsylvania, was dangerously wounded in a skirmish with the invading British army. Mordecai Sheftall, commissary general to the troops of Georgia and to the Continental troops, showed great presence of mind as a staff officer in the Continental line of the Georgia brigade, and was considered "a great rebel" by the British. David Nuñez Cardozo, a sergeant-major in the Charles Town militia, led the storming party ("forlorn hope") which assailed the British lines to recapture Savannah in 1779. Isaac Nuñez Cardozo, his brother, fought gallantly in a company composed almost entirely of Jewish soldiers to defend Charleston Harbor.

Jacob de Leon served in the same company, and fought also in the battle of Beaufort. This Jewish company was commanded by Major Benjamin Nones, a Jew who, born in Bordeaux, France, who had served on the staffs of Lafayette and Washington, and fought in almost every action which took place in Carolina.

b. The War of 1812. A relatively great number of American Jewish soldiers fought in the War of 1812. Captain (later Major) Mordecai Myers distinguished himself by saving 200 American soldiers and marines from wrecked ships off Sackett's Harbor, and again in the battle of Chrysler's Farm, where he was severely wounded. Aaron Levy, captain and paymaster, was promoted to major, because of his bravery, in 1815,

Rear Admiral Joseph Strauss, commander-in-chief (1921-22), Asiatic fleet

Rear Admiral Adolph Marix who commanded the battleship "Maine" (1893-98)

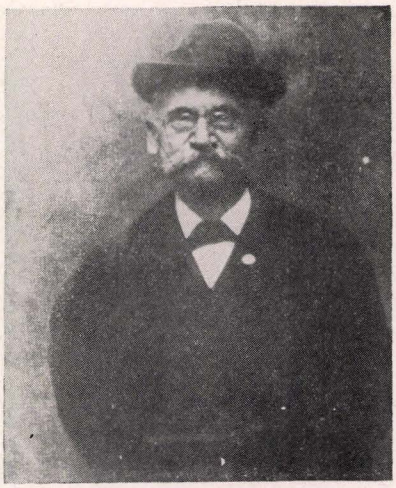
Major Alfred Mordecai, military expert (1823-1861)

Leopold Karpeles, color sergeant in the Civil War

Colonel Joseph M. Heller, Philippines Medical Corps (1899)

and to lieutenant colonel in 1816. Bernard Hart was division quartermaster. Three Seixas brothers, Abraham, Moses and Solomon, were infantry captains. Two of them were promoted to major. Samuel Noah, a West Point graduate, who fought against Mexican royalists, was a private in the defense of Brooklyn, and continued in service until the end of the war; he had a reputation for "military education, practical knowledge and quick intelligence." Isaac de Young took part in the battles of Sackett's Harbor, Queenstown, Frenchtown, Fort George, Stony Creek, Lake Champlain, Georgetown, Oswego, Chippewa and Lundy's Lane. Although badly wounded, he served to the end of the war, during which he became a friend of Winfield Scott, who afterward became general.

Jewish soldiers participated decisively in the successful defense of the city of Baltimore and of Fort McHenry, many are mentioned in the "Muster Roll of Citizen Soldiers at North Point and Fort McHenry, September 12 and 13, 1814." Solomon Etting, a member of the Committee of Vigilance of the city of Baltimore, was among the organizers of its defense. Reuben Etting, former commander of the Independent Blues, also took an active part in it. In another crisis Major Abraham A. Massias, a devoted Jew, repelled the enemy by a vigorous counter-attack at Cumberland Island, Ga. The well-known Jewish philanthropist Judah Touro fought under the command of General (later President) Andrew Jackson, and was seriously wounded while performing his dangerous duty.



In the United States Navy Commodore Uriah P. Levy excelled. One of the most successful and daring privateers was Captain John Ordronaux, a Frenchman by birth, "a Jew by persuasion, an American for convenience." In March, 1814, he took nine valuable prizes in the British Channel, and although he was hunted by seventeen British men-of-war, he brought his booty safely into port. In October, 1814, he captured the British frigate *Endymion,* which was vastly superior in guns and men. In 1942 the United States Navy named a destroyer after him.

c. From 1815 to 1861. Joseph B. Nones, who served in the United States Navy during the War of 1812, participated in the expedition of the *Guerriere* during the Algerian War in 1815, and was badly wounded in the naval encounter on June 15, 1815, when the *Guerriere* captured an Algerian battleship. His brother, Henry B. Nones, also served in the United States Navy, and rose to the rank of captain. So did other members of the Nones family, such as Henry B. Nones, Jr., Jefferson H. Nones and Washington H. Nones. Among the Jews who distinguished themselves for service in the United States Navy before the Civil War were David M. Cohen, an officer for fourteen years; Jonathan Manly Emanuel, who was shipwrecked twice; Captain Henry Etting, and the midshipmen Joseph and Israel Israel, Horace Moses, Abram Phillips and Benjamin Solomon.

In the Texan War of Independence Jews participated and in the Mexican War the Jews of Baltimore formed a volunteer corps. David De Leon twice took the place of commanding officers who were killed or disabled by wounds, and twice he received the thanks of the United States Congress for his gallantry. Colonel Leon Dryer was quartermaster general of the state of Louisiana. David S. Kauffman, aide to General Douglas, was wounded in the Battle of Neches. Surgeon-General Mose Albert Levy excelled at the capture of San Antonio because of his "unremitted attention and assiduity." Lieutenant Henry Seeligson was so conspicuous at the battle at Monterey that he was complimented by General Taylor. Major Alfred Mordecai became an authority on warfare, and was afterward sent by the American government to report on the operations in the Crimean War. Jonas P. Levy commanded the steamer *America,* and managed the transportation of American troops to Vera Cruz. At the surrender of that port he was promoted by General Winfield Scott.

d. The Civil War and After. In the Civil War Jews fought on both sides with ardor and valor. More than 6,000 Jewish soldiers enlisted in the Union armies, and 1,200 in the Confederate forces, a total of about 7,500 from less than 20,000 persons, many of them recent immigrants. There were twenty-three staff officers known to be Jews in the Confederate Army. Judah P. Benjamin was secretary of war, David De Leon was first surgeon general, A. C. Meyers was quartermaster general, and J. Randolph Mordecai was assistant adjutant general. Colonel Raphael J. Moses and Major J. M. Nanez were on the staff of General Longstreet; Captain Joseph Frankland, who entered the Confederate army as a private, was on the staff of General Joseph Wheeler, and afterward served as assistant provost marshal. Lieutenant Alexander Levy, on the staff of General John Bankhead Magruder, was wounded at Big Bethel. Isaac Heymans was wounded seven times, and promoted on the battlefield; Adolphe Proskauer was wounded four times, became color sergeant, and rose to captain. Albert Luria, lieutenant in a North Carolina Infantry regiment, was killed at Seven Pines while rallying his company, having seized the colors falling from the hands of the dying color bearer. Captain Jacob Valentine, a veteran of the Mexican War, was severely wounded while in command at Fort Moultrie. Marx E. Cohen, Jr., was killed, after heroic feats, in the battle of Bentonville.

In the Confederate Navy Captain, afterward Com-

Captain Abraham Cohen, who served in the Civil War

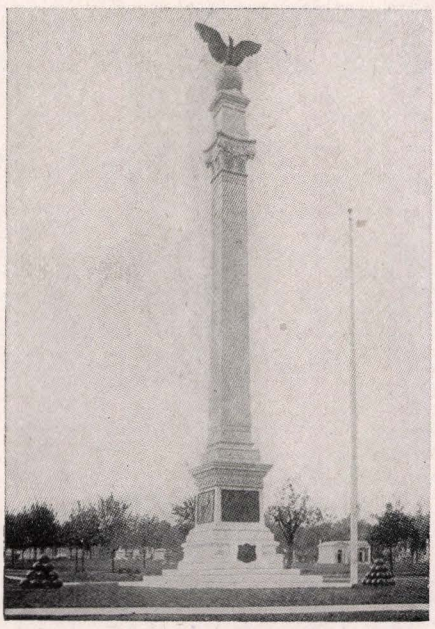
modore, Levi Myers Harby, who resigned his commission in the United States Navy, distinguished himself at the defense of Galveston, when he commanded the *Neptune,* and later on while commanding a fleet of gunboats on the Sabine River.

In the Union Army Frederick Knefler became a major general, after being repeatedly cited for bravery in battle and promoted for his efficiency. Brigadier General Max Einstein covered the retreat of the Union Army after the First Battle of Bull Run. Brigadier General Edward S. Salomon, the hero of the battles of Frederickston, Mainfordsville and Gettysburg, was appointed by General Ulysses S. Grant governor of Washington Territory after having fought in all the southwest campaigns. Brigadier General Leopold C. Newman was fatally wounded at Chancellorsville, and died while Abraham Lincoln was at his bedside. Brigadier General Philip J. Joachimsen organized the 59th New York Volunteer Regiment. Isaac Moses was adjutant general of the Third Army Corps of the Army of the Potomac. Colonel Leopold Blumenberg, a former Prussian lieutenant of the reserve and a veteran of the Prussian-Danish War, who had emigrated to the United States because of his disgust at Prussian anti-Semitism, commanded the Fifth Maryland Regiment, which was organized with his aid. He participated in the Peninsular campaign, and was wounded in the Battle of Antietam. Captain Mayer Frank fought at Chancellorsville and Gettysburg, and in many other battles; he was appointed brigade inspector. Joseph B. Greenhut, who enlisted as a private, fought under General Grant until he was badly wounded. After his recovery and his promotion to captain he became adjutant general of General Friedrich Hecker's brigade. Lieutenant Max Sachs was killed at Bowling Green, Ky., after succeeding in blocking the enemy's advances long enough to obtain support and repel them—one of the most heroic feats of the war. Leopold Karpeles, color sergeant in the 59th infantry regiment, received the Congressional medal of honor for having saved a part of the army from capture during a retreat in disorder in the battle of the Wilderness, when he rallied troops around his colors and checked the enemy's pursuit. Six other Jewish soldiers were awarded this medal. Second to Karpeles was Benjamin P. Levy, who enlisted at the age of sixteen, was detailed as orderly to General Mansfield, and once saved the steamer *Express,* attacked by a Confederate gunboat; on another occasion he saved two of the colors of his regiment from capture. The third was Sergeant Major, afterward Adjutant, Abraham Cohen, of New Hampshire, who was given the medal for conspicuous gallantry in the battle of the Wilderness. The fourth was Private David Obranski, for distinguished bravery under heavy fire at Shiloh, Tenn., and at Vicksburg. The fifth was Private Henry Heller, for daring bravery at Chancellorsville. The sixth was Private Abraham Grunwalt, who at Franklin, Tenn., captured the Confederate Corps Headquarters' flag. The seventh was Corporal Isaac Gans, who also captured a flag. Colonel Marcus M. Spiegel was to have been promoted to brigadier general, but was fatally wounded previously. Captain Edwin Wertheimer became famous for his heroism on the plains of Manassas and at Chancellorsville. Captain Abraham Hart excelled in the Second Battle of Bull Run, and Sergeant Elias Leon Hyneman at Petersburg. Private Abraham Cohen of New York won recognition several times before and after he was promoted to captain. Of many Jewish families all the males joined the Union Army, among such were Colonel Simon Levy and his sons Ferdinand, Alfred and Benjamin, of New York, and the six Cohen brothers of North Carolina.

In the famous naval duel between the *Merrimac* and the *Monitor* (March 9, 1862) William Durst, a Jewish sailor, so distinguished himself on board the *Monitor* that John Lorimer Worden, its commander, who received two votes of thanks from Congress, reported that Durst also was "eminently worthy to be recognized by some action on the part of Congress." Among other Jewish sailors who distinguished themselves during the Civil War were: Solomon Asher, promoted to acting assistant yeoman on board the gunboat *Wissahickon;* Lieutenant Henry Barnett, Ensign Isaac N. Goldsmith, Mate Nathan A. Goldsmith, Ensign Albert P. Samson and Isaac P. Sampson, and Engineer Frederic D. Henriques.

e. The Spanish-American War. In the Spanish-American War, which was very short and did not engage a large military force, there were at least 4,000 Jewish soldiers. Thirty Jews were army officers, and twenty were officers in the navy. Fifteen Jews were among the crew of the *Maine,* whose destruction caused the outbreak of the war. Lieutenant Benjamin Woog and half a dozen Jewish privates served in Theodore Roosevelt's famous regiment, the "Rough Riders," among them Samuel Goldberg, who was wounded in action, and Jacob Wilbusky, who enlisted at the age of sixteen and was killed in the first skirmish. The first man killed in the battle of Manila was Sergeant Maurice Juster, a Jew from California. First Lieutenant Oren B. Meyer was breveted for gallant services at San Juan. Abraham U. Loeb won the rank of corporal and later on that of lieutenant for his meritorious conduct while on peculiarly difficult duty at Cuba. Lee K. Bochroch distinguished himself in charge at Santiago. Sergeant Morris J. Cohen was captor of the first flag taken from the enemy in the Spanish-Tagal War, and was killed in the Philippines. Joseph M. Heller, assistant surgeon, was personally mentioned in the official report of Captain Batchelor's expedition through the heart of Northern Luzon, and was recommended by General Elwell Stephen Otis for promotion because of his "great courage in ministering to the wounded under fire" and his "perseverance, patience and fidelity to duty." Morris I. Schamberg, who enlisted as a private, was subsequently appointed acting assistant surgeon with the rank of first lieuten-

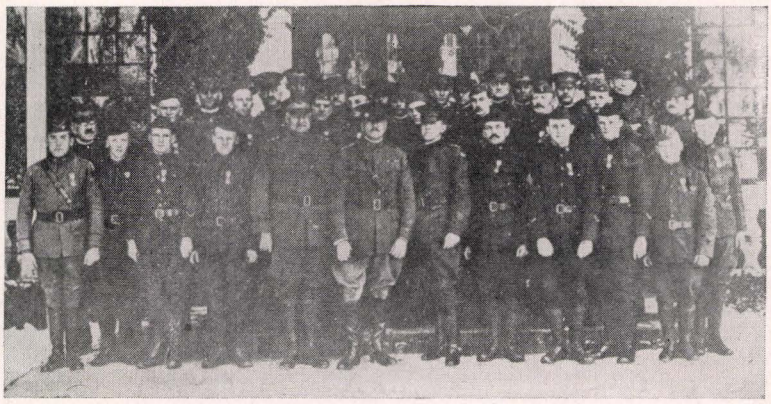
ant for "arduous and efficient work" done at the Spanish Military Hospital at Ponce, of which he was charged to take possession and fumigate for American occupancy. Samuel Hart was promoted to sergeant for gallantry at the siege of Santiago de Cuba. Private Nathan Levy excelled in the battle of Manila, the capture of Iloilo, and the skirmishes of Molo and Jaro. Irving Peixotto was one of the first American soldiers to reach the top of the hill in the battle of San Juan. Sol A. Guthman served with honor throughout the war in all the engagements before the fall of Manila, and in several later skirmishes.



As to the Navy, Lieutenant Joseph Strauss, who later became rear admiral and held an important position in the first World War, was with Lieutenant Houston when the soundings of Cabanas Harbor were taken. Lieutenant Commander Edward D. Taussig, of Jewish descent, who occupied Wake Island and was the first American officer in charge of the island of Guam, also became rear admiral afterward. Lieutenant Commander Adolf Marix, who was in command of the battleship *Maine* before her catastrophe, and secretary to the court of inquiry on the explosion, was cited for bravery in two engagements in Cuba, and promoted to commander. He retired as rear admiral in 1910.

Some American Jews took an active part in South American wars. Isidor Borowski served notably under Bolivar from 1821 on in the campaigns which sealed the Spanish defeat. Luiz H. Brie volunteered in the Brazilian army against the Argentine dictator Rosas, and later, after Rosas was overthrown, with the army of Argentine against Paraguay (1865), during which war he rose to the rank of captain. Jacob Baiz became brigadier general in Honduras. Before Sam Dreben, "the fighting Jew," joined the American Expeditionary Forces to serve in France during the first World War, he had participated in several wars of Central America. In 1910 Dreben served in Nicaragua under General Gabe Conrad; here he became known for his daring and skill. In 1911 he was a colonel in the Bonilla Revolution. Then he entered the Mexican Army as a colonel, and took an active part in the various Mexican revolutions. Previously he had served also in the Philippines, and in the Boxer Rebellion in China. Afterward General John J. Pershing called him "one of my finest and bravest soldiers."

f. The First World War. About 250,000 Jewish soldiers served in the army of the United States during the first World War, enough to fill eight complete divisions. Some 40,000 were volunteers. The percentage of Jews in the army was far more than the normal share, according to statistics of the Jewish and non-Jewish population in the United States, would have amounted to. The relative proportion of Jews in the combatant branches of the American Expeditionary Forces was also far greater than in the non-combatant branches. About 3,500 Jews were killed in action or died of wounds. Thus the Jews, who constituted 3 per cent of the population of the United States, contributed 5 per cent to the entire death roll of the United States Army. The number of wounded Jews was estimated at 12,000.

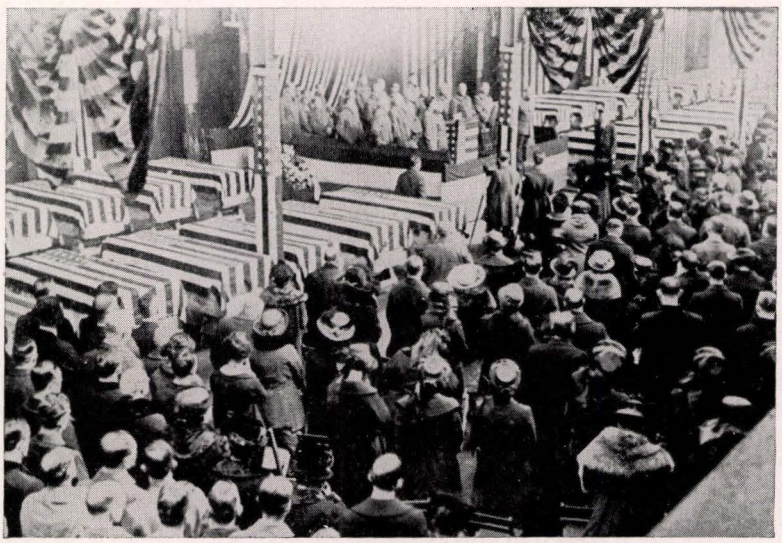


Jewish soldiers on the Mexican border

Monument in memory of Jewish soldiers in the Civil War, erected at Cypress Hill Cemetery, Brooklyn

General Pershing, commander-in-chief of the American Expeditionary Forces, declared: "When the time came to serve their country under arms, no class of people served with more patriotism or with higher motives than the young Jews who volunteered or were drafted and who went oversea with our other young Americans. I well remember in my inspections of New York divisions seeing so many patriotic, well-disciplined, well-behaved young Jewish soldiers, whose commanders spoke of them in the highest terms." Pershing was by no means lavish in compliments, nor did he seek popularity. He was rather reserved and aloof, and remote from the influence of friendship or sympathy. The highest percentage of Jewish soldiers was in the Seventy-Seventh Division, the National Army unit from New York, which bore the brunt in the Meuse-Argonne battle. Addressing a meeting at the Educational Alliance of New York, in April, 1918, Lieutenant Colonel Douglas Campbell said: "The Jewish boys of the 77th Division were the best soldiers on earth. They have participated in the greatest battles, and emerged sound. The 77th Division, of which 40 per cent were Jewish young men, was the only American division to reach the Aisne, after having penetrated into the German lines further than any other division."

In the Marine Corps about 2,500 Jews were enlisted, and more than a hundred became commissioned officers, headed by Brigadier General Charles H. Lauchheimer, who was awarded the United States Navy



American soldiers decorated with the Medal of Honor (Captain Sydney G. Gumpertz third from right) are shown here as guests of General John J. Pershing at Chaumont, France, February 6, 1919

Distinguished Service Medal "for exceptional and meritorious services in a duty of great responsibility."

Approximately 10,000 Jews were commissioned officers in the United States Army during the first World War. Most of these were promoted at the front or even on the battlefield; relatively few Jewish professional officers and West Point graduates had been in the army before the War. Milton J. Foreman, who from 1906 to 1917 had been a colonel of the First Illinois Cavalry, commanded the 112th Field Artillery in the War, and was promoted to brigadier general, commanding the 33rd Division. In 1921 he was appointed major general, and ten years later lieutenant general. He was awarded the Distinguished Service Medal and silver star decoration, and also given French and Belgian orders. Abel Davis, who had served as a corporal in the Spanish-American War and as a major in the First Illinois Infantry on the Mexican border in 1916, commanded the 132nd Illinois Infantry during the War, and was promoted to brigadier general. He distinguished himself especially in the battle of the Argonne at Consenvoye, where, according to Pershing's *Final Report,* the Americans "encountered elaborate fortifications and stubborn resistance," and the Germans "contested every foot of ground." Davis received the United States Distinguished Service Medal as well as the French Legion of Honor Medal.

More than a hundred Jewish officers were promoted to colonel and lieutenant colonel, more than 500 to major, 1,500 to captain, and 6,000 to lieutenant. More than 900 Jews were commissioned officers in the United States Navy, the highest rank reached being that of rear admiral by Joseph Strauss, who commanded the mine force of the Atlantic Fleet, and laid a mine barrage in the North Sea, in recognition of which he was awarded the United States Navy Distinguished Service Medal. Commander Walter F. Jacobs received the same decoration for his effective discharge of hazardous duty as commander of a division of mine sweepers in the North Sea. Another recipient of this medal was Captain, afterward Admiral, Joseph K. Taussig, commanding officer of the *Wadsworth,* engaged in patrolling waters infested with enemy submarines and mines, and in escorting vitally important convoys. Taussig as captain, was a master of both offensive and defensive action, and was distinguished by "vigorously and unremittingly prosecuting against all forms of enemy naval activity." Ensign MacLear Jacoby won the Distinguished Service Medal as commanding officer of the submarine *C-129* "for his quick judgment and good head work in the attack on Durazzo (then Austria), when his vessel, although practically disabled, succeeded in destroying an enemy submarine." Ensign H. W. Blumenthal, commander of the submarine *C-80,* Ensign C. G. Benjamin, commander of the submarine *C-103,* Ensign W. P. Grossman, commander of the submarine *C-327,* and Lieutenant Morton T. Seligman, commander of the submarine *C-272,* distinguished themselves also in patrol work, operating against enemy submarines and clearing the North Sea of mines. Lieutenant Albert E. Freed, commander

Memorial services held (Hoboken, N. J.) over the bodies of American soldiers killed in action and returned on the transport "Somme" in 1923

Heroes of the first World War (left to right): Pvt. Abraham Krotoshinsky (Distinguished Service Cross); Capt. Sydney G. Gumpertz (Medal of Honor); Gen. Abel Davis (Distinguished Service Cross); Sgt. Samuel Dreben (Distinguished Service Cross); Lt. Gen. Milton J. Foreman (Distinguished Service Cross)

of the *Eider,* and Lieutenant Jacob H. Klein, commander of the *Smith,* successfully operated in the war zone; the latter was especially cited "for resolute and skillful action in rescuing the crew of the U.S.S. *President Lincoln* on May 31, 1918, after that ship had been torpedoed." Ensign L. W. Freedman was cited "for distinguished and gallant conduct as radio operator of the *Luckenbach* on the occasion of an encounter with an enemy submarine."

More than 3,000 Jews served in the United States Air Force, among them 374 commissioned and 433 non-commissioned officers. Ensign H. R. Benjamin, pilot of a seaplane, "made many flights for patrolling the sea and bombing the enemy coasts, showing at all times courage and a high spirit of duty." Dudley Bernstein was a distinguished airplane fighter over the North Sea, and successfully attacked several enemy submarines. Lieutenant Louis G. Bernheimer aided materially, "by coolly and skillfully maneuvering" and "extraordinary heroism in action near Fiemes, France, August 11, 1918," in achieving an American air victory, at the same time successfully carrying out a hazardous photographic mission over the enemy's lines to the Aisne river. He evinced the same heroism in action near Tailly, France, on November 2, 1918, on a reconnaissance mission, "flying 15 kilometres behind the German lines, securing valuable information about the condition of the bridges across the Meuse river and enemy activity in the back areas, and harassing enemy troops." Lieutenant Arthur William Duckstein was responsible for crushing a German counter-offensive between Montrebeau and Exermont, France, on September 29, 1918, by providing accurate information after a gallant flight, although he was severely wounded. Major Kenneth P. Littauer volunteered to protect a photographic plane for another squadron, and, despite an encounter with five enemy pursuit planes, succeeded in achieving his purpose, although his own observer was wounded and his machine seriously damaged. He was awarded the Distinguished Service Cross "for repeated acts of heroism." Lieutenant Edward M. Morris, forced by motor trouble to interrupt a photographic mission, dispersed a battalion of enemy troops, and drove off two attacks by German fighter patrols, bringing down two German planes and remaining in the air until his motor failed completely. Lieutenant Louis C. Simon, Jr., alone attacked three German biplanes, downed one of them, and put the other two to flight. On another occasion Simon, again alone, attacked four German planes which were trying to protect one of their observation planes, drove the fighters off, and then dived at the observation plane and sent it crashing to the ground in flames. Lieutenant Jacques M. Swaab was a successful fighter even when outnumbered. Lieutenant Frederick Spiegelberg, a keen observer, "executed the most difficult missions and has given proof in all circumstances of admirable coolness." He successfully bombed German objectives in spite of unfavorable conditions, and was awarded the Distinguished Service Cross and the French Croix de Guerre.

Six Jewish soldiers won the rare Congressional Medal of Honor, the award of which is confined, by regulation, to "officers and men who have performed in action deeds of most distinguished bravery above and beyond the call of duty and so conspicuous as clearly to distinguish them for gallantry and intrepidity above their comrades." These six were: Sergeant William Sawelson, killed in action while out of his shelter to bring water to a wounded comrade; Sergeant Benjamin Kaufman, who, not yet entirely recovered from serious mustard gas burns, and unable to use his right arm, which had been shattered by a bullet, singlehandedly captured a German gun, drove five enemy soldiers off, and took the sixth prisoner; Sergeant, afterward Captain, Sydney G. Gumpertz, who,

(Left to right) 1st Lt. Herman Moyse (Distinguished Service Cross); Capt. Louis Diener (Distinguished Service Cross); Capt. Jacques Swaab (Distinguished Service Cross); Lt. Sam Goldberg (Distinguished Service Cross); Lt. Joseph A. Mendelson (Distinguished Service Cross)

on September 26, 1918, silenced numerous German machine gun nests, one of which he captured, taking prisoner sixteen enemies; Sergeant Charles W. Hoffman, who rushed a German detachment, bayoneted its two leaders, and forced the rest to flee and to abandon their guns; Sergeant Philip C. Katz, who saved a wounded comrade under heavy fire; Corporal Samuel Sampler, who silenced a German machine gun nest, killed two and took twenty-eight prisoners.

The commanding general of the American Expeditionary Forces awarded about 200 Jewish soldiers the Distinguished Service Cross "for extraordinary heroism." Major General Milton J. Foreman (then a colonel) crept through a heavy German artillery barrage to a point where he could by direct observation locate the position of enemy machine guns, and remained at this post directing his own artillery, though exposed to terrific bombardment, until the advance of the Allied troops was effected. Foreman also rendered great service during the St. Mihiel offensive and advance to the Meuse river, and was cited for gallantry in action near La Dhuy Ferme, France, on November 1, 1918. He combined intrepidity with rare skill in keeping his batteries in close support of the infantry, mastering a major problem of tactics in which most of the German artillery commanders and many French and British failed. Abel Davis also won the Distinguished Service Cross before he was promoted to general, when he led his regiment to repel a determined German counterattack. Major Julius Ochs Adler captured fifty Germans out of 150 who came on him while he was supervising the clearing out of the enemy from St. Juvin, France. Captain Robert S. Marx "displayed highest quality of courage and leadership in the face of a murderous artillery and machine gun fire," by reorganizing his battalion, which had been checked with severe losses, and directing a new assault, which resulted in the capture of the German position after Marx himself was severely wounded. Lieutenant Samuel Brown, Jr., was, with his platoon, the first to reach the barbed wire in front of the main Hindenburg line, and after discovering a gap assaulted the position, effected a foothold, took over a hundred prisoners, four field pieces and a number of machine guns, and repelled several counterattacks with his small force. Lieutenant Jacob H. Heckman started out, with the assistance of three sergeants, to destroy the last entrenchment of the Germans in the Belleau Wood, a position deemed impregnable, where enemy machine guns were concealed by rocks and heavy shrubbery. Armed with only a pistol, Heckman rushed the nest, which offered violent resistance, and captured one German officer and ninety men. Similar actions were reported concerning Lieutenant Charles Heimerdinger, Private Julius Aaronson, Sergeant Herman J. Bergasse, Private Joseph Berg, Lieutenant Henry S. Blomberg, Sergeant Samuel V. Boykin, Corporal Harry J. Davis, Sergeant Sam Dreben, the "fighting Jew," Private Samuel Gluckman, Private (afterward Lieutenant) Sam Goldberg, Private Abe Levinson, Private Isaac Rabinovitz, Corporal Nathan Lieberman, Lieutenant Merrill Rosenfeld, and others.

Another type of heroism was shown by Sergeant Martin Beifus, who, though mortally wounded, continued to encourage and direct his men in the task of consolidating their position, refusing to be evacuated until it had been accomplished. Captain Eugene S. Cohen, painfully wounded by shrapnel, refused to go to the rear, but remained on front-line duty with his men without medical attention for fifty-four hours. Lieutenant Samuel J. Marks, of the Medical Corps, 314th Infantry, advanced with the foremost elements of his battalion, dressing and evacuating the wounded under machine gun fire for a period of twelve hours. When his station was shelled, several patients and attendants being killed, Marks, although wounded, remained at his post, caring for freshly-wounded patients. Private Arthur Biesenthal carried wounded comrades under heavy bombardment until he was killed by a shell fragment. Many Jewish soldiers lost their lives attempting to save wounded comrades. The percentage of Jewish casualties caused by such acts of mercy in utter disregard of personal safety is considerably higher than the average. Sixty-four Jews and forty-six non-Jews of the United States Expeditionary Forces were killed during the War while administering aid to the wounded or carrying them to shelter.

Pvt. Joseph J. Milgram (Distinguished Service Cross)

Pvt. Morris Silverberg (Distinguished Service Cross)

American Jewish soldiers to an extraordinarily high number volunteered for despatch duty, often after others had been shot down, and when going meant almost certain death. Thirty-seven Jewish and twenty-six non-Jewish American soldiers were killed as runners or on reconnaissance duty during the first World War. The successful accomplishment of such missions often saved the situation of the troops. Abraham Krotoshinsky succeeded in getting word to American headquarters of the plight of the "Lost Battalion," after many other runners had been killed. Corporal Oscar Asher materially aided the American Army in a similar fashion in a successful attack in the Argonne Forest. Samuel Block volunteered and was successful in carrying a message through a heavy fire barrage in action at Marcheville, France, after several other runners had failed. Leo H. Blume was seriously wounded when he volunteered to carry a message from his platoon across a 200-yard zone swept by heavy artillery and machine gun fire, remaining under fire for over two hours before it was possible to rescue him. Jacob Levi was killed when he voluntarily tried to carry a message from his company, which was attacked from three sides. Irving Kiner carried a message from his surrounded battalion under heavy fire, although he was exhausted by exposure and hunger, and without food for five days. Lionel Goodman was runner for the Third Battalion, 125th Infantry, during the taking and holding of the line near La Tuilerie Farms, France. Carrying important messages, crossing and recrossing "Death Valley," he displayed "supreme courage" and succeeded in his perilous dash, getting out word of his battalion and of the division. Joseph J. Milgram showed remarkable daring in frequent disregard of heavy fire to maintain communication; he was attacked several times by enemy soldiers with hand grenades. Sergeant Herman M. Sell volunteered to deliver a message of great importance after six runners sent with the same message had failed to return. Herman

Sergeant Meyer Levin (d. 1943), who was holder of the Distinguished Flying Cross and the Silver Star

Muskovitz, although lame as the result of an accident, carried a number of messages through a heavy barrage until he was severely wounded.

Many Jewish non-commissioned officers and even privates displayed considerable qualities of leadership when their superiors were put out of action. Private Barnett Bassman collected fifteen men who had become separated from their squads near St. Juvin, France, on October 16, 1918, and organized them into a provisional platoon which he successfully led in the attack, thereby materially contributing to the success of the day. Sergeant Abraham Cohen, during the action in the Château-Thierry sector, took charge of a battery of dummy guns placed in an open field for the purpose of attracting enemy fire. Without assistance he maintained such personal activity at the battery, which was under constant enemy observation, that the object of his mission was successfully accomplished; he drew intense enemy shelling and prevented the enemy from locating the real American guns. Corporal (afterward Lieutenant) Benjamin Prager led an automatic rifle squad into action near Fiemes, France, on August 11, 1918, destroyed an enemy machine gun whose position he had discovered by an ingenious maneuver, and assured the consolidation of the newly won position, although he was wounded. Corporal Newman Davis led his company gallantly and ably, after all its officers were incapacitated, in action near Brandeville, France, on November 7, 1918. Sergeant Irvin H. Dreshach took charge of his platoon when its officers became casualties, and pushed vigorously forward, compelling the enemy to flee. Sergeant Walter S. Korn continued to lead his platoon in attack on the Hindenburg line after being wounded twice. Corporal Abel J. Levine, after a heavy bombardment near Bony, France, on September 29, 1918, collected the remaining effectives in his own and other units, formed another platoon, and continued to advance. Sergeant Herman Macarowsky, after all his superiors had been killed or wounded near Blanc Mont Ridge, France, on October 3, 1918, took command of and organized his company under heavy shell fire. He then led an attack, captured or killed many Germans and put several machine-gun nests out of action. Sergeant Joseph Miller, in action near Cunel, France, on October 12, 1918, repelled three German counterattacks, "his courage under these trying conditions being an inspiration to his men." In action near Fleville, France, on October 4, 1918, Sergeant Harry Rosen took command of his company after all the officers had been killed or wounded, and organized it under fire. Then he led it to the attack, and forced the enemy, who outnumbered his men three times, to surrender. After being severely wounded, Corporal Eli Shapiro, in action near Forges, France, on September 29, 1918, continued to lead his squad until his objective was reached. HUGO BIEBER.

h. The Second World War. Despite the relatively small percentage of Jews in the general population, men of Jewish faith during the first year of the second World War (1941-42) distinguished themselves in almost every major military encounter. At Pearl Harbor there were a score of Jewish heroes. Lieutenant Commander Solomon Isquith, of Brooklyn, commander of the target ship *Utah,* was decorated with the Navy Cross for rescuing 90 per cent of the crew of that vessel. During the Pearl Harbor attack a young inexperienced ensign, Stanley Caplan, of Elmira, N. Y., took a destroyer to sea and helped shoot down four Japanese planes and depth-bomb two Japanese submarines; he received the commendation of Secretary of the Navy Frank Knox. Ensign Milton Moldafsky was also on that ship. Ensign Nathan Asher figured in a similar action. Another young ensign, Ira Jeffery, of Minneapolis, was commended by the Secretary of the Navy for keeping an ammunition supply line going on board the battleship *California.* Jeffery was killed. A new destroyer was named in his honor. Captain Robert Kushner, a dentist of Atlanta, Ga., was cited for distinguished service in the treatment of the wounded. Private Louis Schleifer was killed in action while seeking to rescue his plane at Hickam Field. He was posthumously awarded the Silver Star and Purple Heart for gallantry. Lieutenant Stephen Salzman also was awarded the Silver Star. He brought down a strafing Japanese Zero plane at Schofield Barracks with a rifle bullet that killed the pilot.

The Philippines—Bataan and Corregidor—also had their quota of Jewish heroes. Lieutenant Henry D. Mark, of Los Angeles, was killed while throwing grenades at a Jap tank on Bataan. He received the Distinguished Service Cross. A number of Jewish doctors were on hand during these engagements, men such as Colonel Jack Schwartz and Captain Alfred Weinstein, who cared for the wounded under the most difficult and hazardous conditions. Some of these Jewish men died in the line of duty, some became prisoners and some were reported "missing."

In the naval action around the Philippines, brilliantly highlighted by Lieutenant Commander John D. Bulkeley's mosquito boat squadron, a Brooklyn youth, Radioman David Goodman, won the Silver Star and the Oak Leaf Cluster, the first for helping to torpedo a Japanese cruiser, the second for helping to bring General Douglas MacArthur out of Corregidor. Missing in action, young Goodman was one of the "expendables." Another Jewish Navy man who won the Silver Star in the Philippines was Murray Weinrub, of Los Angeles, a machinist's mate serving on a submarine. The citation declared that Weinrub was one of those who added "another brilliant saga to the feats

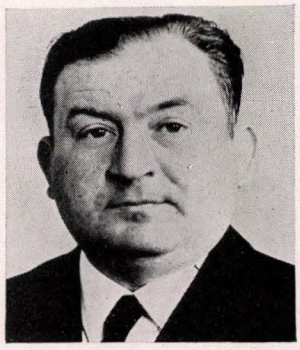
of the Navy's undersea vessels." It was in this theatre of war that Sergeant Meyer Levin, of Brooklyn, N. Y., bombardier on the plane piloted by the late Colin B. Kelly, sank his first Jap ship, repeating the performance some months later in the Coral Sea engagement. Levin was the first American Jew to be twice decorated, winning the Distinguished Flying Cross and the Silver Star. He died heroically in 1943.

At Corregidor's last stand Jews were again in the thick of the fighting. The last brave words describing that hopeless fight were tapped out by a young Jew from Brooklyn, Sergeant Irving Strobing, thus giving the world the most stirring message to come out of the War.

As the fighting spread in the Pacific—Java, Australia, Wake Island, the Coral Sea, Midway, New Guinea, the Solomons, the Aleutians—the names of Jewish men continued to figure among the heroes. Lieutenant Morris N. Friedman, of Grand Forks, N. D., pilot of a Flying Fortress, saw action in the Philippines, the Dutch East Indies and the Coral Sea, and was twice decorated, holding the Distinguished Flying Cross and the Silver Star. Another man of similar stature was Lieutenant Roy Bright, of Eveleth, Minn., who piloted the first plane to land on Wake Island just prior to the outbreak of the war and was later decorated with the Distinguished Flying Cross for action during the Battle of Midway and, more recently, with the Silver Star for gallantry in the Southwest Pacific. Lieutenant Alfred Heyman, of Youngstown, Ohio, a Flying Fortress navigator, also was twice decorated, receiving the Silver Star for action in the Coral Sea and the Distinguished Flying Cross for the completion of a secret mission. He, too, saw action in the Philippines and Java. From MacArthur's command also come the names of Private Sidney Schwimmer, of New York, winner of the Silver Star for air action over Rabaul, and Private Julius Schellenburg, of New York, a refugee, decorated for action in Java. Second Lieutenant Michael L. Reitman was awarded the Distinguished Service Cross for more than fifty hazardous flights in New Guinea.

Lieutenant Morris Berenson, Flying Fortress navigator who won four awards

Ensign Stanley Caplan, one of the heroes of Pearl Harbor



Lieutenant Henry D. Mark, who died fighting at Bataan

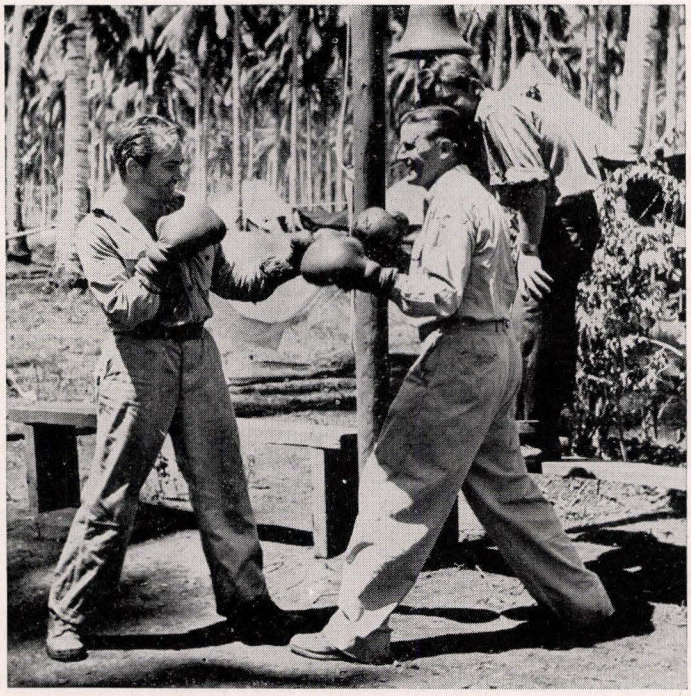
From the Solomon Islands and Guadalcanal, the list of American boys of Jewish faith who distinguished themselves or who took their place among the honored dead in that South Pacific action grew steadily during the latter months of 1942. There were Lieutenant Jacques Saphier, of Brooklyn, a doctor, killed while treating marines wounded in the front lines; Captain Jacob Joseph, of New York, the marines' youngest captain, killed in action; Corporal Leroy Diamond, wounded leader of a group of three marines who stopped an enemy advance by killing 200 Jap soldiers with a single machine gun; Private Justine Harry Arnold, of Minneapolis, a marine gunner who volunteered for a dangerous mission and was killed in carrying it out; Private Harold Pazofsky, of Brooklyn, a member of the first marine unit to land in Guadalcanal, severely wounded in the opening engagement; Sergeant Leon Lazar Schwartz, killed in action in Guadalcanal. One of the great stories to come out of the Solomons concerns Barney Ross (original name, Barnet Rosofsky), former lightweight and welterweight boxing champion, who came out of an all-night engagement with a shrapnel wound, thirty bullet creases in his helmet and countless Japanese casualties to his credit. With a small company of comrades he held up a Japanese advance throughout a long, rainy night, sending round after round of rifle fire into enemy machine gun nests until daylight and reinforcements arrived. He was promoted to the rank of sergeant and recommended for the Distinguished Service Cross.

Private Hyman Epstein was killed in heroically

Lieutenant Morris N. Friedman, Flying Fortress pilot in the South Pacific, twice decorated

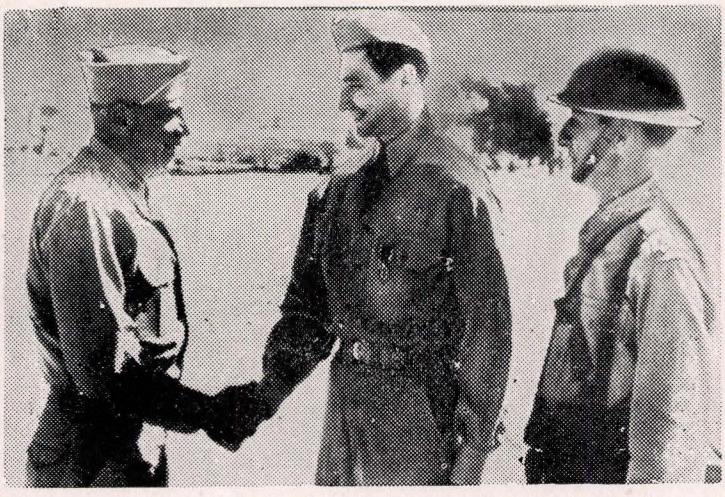
Lieutenant Commander Solomon Isquith, who rescued the crew of the "Utah" at Pearl Harbor

Lieutenant Gabriel Frumkin, whose fighter plane downed five Japanese planes

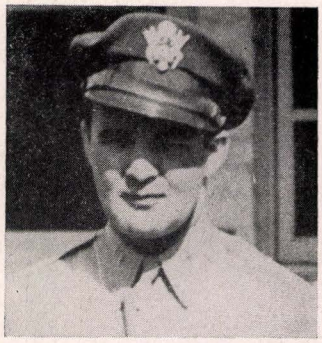


Private Louis Schleifer, killed at Hickam Field and later awarded the Silver Star

Brigadier General Edward M. Morris (above), who was in charge of setting up the American air base in Iceland (1940-41)



Commander Samuel Benjamin Frankel receiving from Secretary of the Navy Frank Knox the Distinguished Service Medal in the presence of Admiral E. J. King



Barney Ross (left), one of the heroes of the Solomons battle, with Father Frederic P. Gehring

(Bottom, right) Chaplain Alexander Goode, who was reported (Feb. 26, 1943) missing in action somewhere in the North Atlantic; (bottom, left) Private Leonard York (center) after receiving the Purple Heart from Brigadier General Julius Ochs Adler (left) for downing a Japanese plane with a machine gun

Lieutenant Roy Bright, pilot, hero of Wake and Midway Islands and the South Pacific

Lieutenant Norman Segal, leader of a light bombing squadron, won five distinctions

Private Sidney Schwimmer, who won the Silver Star for air action over Rabaul

rescuing his wounded comrades in New Guinea. Sergeant Theodore Billen, aerial gunner, won five awards.

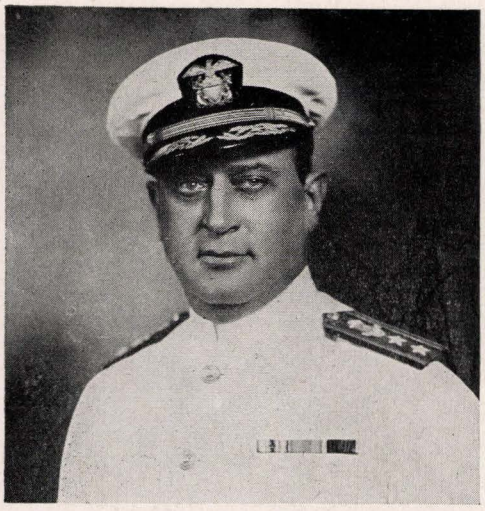
Out of the Aleutians there came the story of Lieutenant Irving Berman, of Paterson, N. J., who was lost with the crew of a heavy bomber attacking the Jap base at Kiska. He was awarded the Purple Heart.

The initial air fighting over Europe has also produced its quota of heroes, of whom none exemplifies better the indomitable spirit of courageous American youth than Sergeant Julius L. Kleiman, of Staten Island, N. Y. On September 4, 1942, an American Flying Fortress left its base in England on a bombing mission over Germany. A few hours later the giant ship was on its way home, its mission successfully completed. The Fortress reached Rotterdam and swept on toward England—and ran squarely into a squadron of fifteen German fighter planes. Kleiman, the ball turret gunner, fought off attack after attack. Three of the Nazi planes went down, and the squadron began to break up. The Flying Fortress had been hit 2,000 times but every second the plane was getting closer to safety. A lone German fighter zoomed down on the bomber for a final try, before turning tail for Germany. Kleiman got it in his sights and there was a terrific burst of cross fire. The plane went down smoking into the sea and the bomber was safe. Kleiman was killed in the last exchange of gunfire.

There were other men in the European area—such men as Lieutenant Morris B. Penner, former columnist of the San Antonio *Express,* who was killed in action somewhere over England; Lieutenant Jerome Notowitz, of St. Louis, who also lost his life in the air over the British Isles; Sergeant Chester Davis, who figured prominently in the first American air raid on Nazi-held Europe on July 4, 1942. Commander Samuel Benjamin Frankel won the Distinguished Service Medal for Merit at Murmansk and Archangel. In Egypt, among the many Jewish men fighting there, there was Captain Leo B. Margolian, of Boston, who, with his flight squadron, was cited for "excellent work" in air combat over Rommel's forces. He was later reported missing. Lieutenant Norman Segal of the Bronx, New York city, won five medals for valor as leader of a light bombing squadron. Lieutenant Philip Gram of St. Louis, bombardier, won the Distinguished Flying Cross and Air Medal, and the latter distinction was also gained by Lieutenant Robert T. Levy and Sergeant Eugene H. Stein of New York city. Chaplain Alexander D. Goode was lost in the North Atlantic when he and other chaplains remained on board a torpedoed transport to save the lives of soldiers.

In the early reports of the North African invasion appeared the names of many Jewish men, among them Lieutenant Colonel A. H. Rosenberg, of Mount Holly, N. J., who led the first contingent of American troops into Algiers; Corporal Bernard J. Kessel, of Brooklyn, who effectively manned the gun in the first tank to enter the city of Oran; Private Harry Cohen, the ship's "clown" on the convoy to Africa, who suddenly became deadly serious when the actual invasion began and, with the aid of a 30-calibre machine gun, established an advance position and held it under heavy fire until assistance reached him; Shipfitter Paul Leibman, of New York, who went down with his ship when it was fatally torpedoed off the coast of Algiers; Corporal Herbert Rosenheimer, of Brooklyn, who was wounded while himself attending wounded comrades.

Before his promotion to the rank of brigadier gen-



Sergeant Theodore Billen, aerial gunner who won five awards in the South Pacific

Radioman Irving Strobing who tapped out a series of radio messages before the fall of Corregidor

Machinist's Mate (1st class) Murray Weinrub was awarded the Silver Star

Rear Admiral Ben Moreell was appointed (1937) Chief of the Bureau of Yards and Docks and Chief of Civil Engineers of the Navy

Brigadier-General Julius Ochs Adler, an officer of the Seventy-Seventh Division, in the first World War, was assistant commander of the Sixth Motorized Division, U. S. A.

eral in the latter part of 1942, Edward M. Morris, then a colonel in the United States Air Force, was placed in command of the air forces of the American Expeditionary Forces which occupied Iceland and constructed an air base there. He had served as a lieutenant in the United States Air Force during the first World War, shot down a number of German planes over France, was cited for bravery and mentioned in official dispatches several times, and was awarded the Distinguished Service Cross. At the end of the first World War he held the rank of captain. He remained in the service after 1918, and by 1942 had attained the rank of colonel. In 1943 he was serving in California.

These men are but a few of the scores of thousands of Americans of Jewish faith who fought valiantly beside their comrades in arms. Their stories are typical of the courage and sacrifice displayed by American Jews on the Allied Nations' fighting fronts.

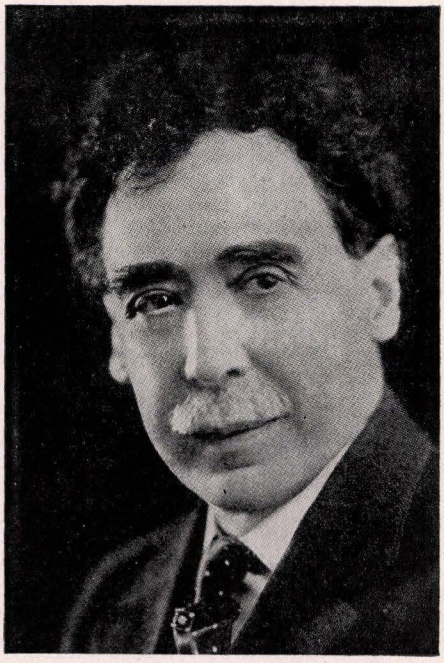
Lieutenant Jules Yates, a West Point graduate, who was reported missing "somewhere in the Philippines"

Sergeant Julius Schellenberg, a refugee, was decorated for bravery in action at Java

SOLIS-COHEN, DAVID, lawyer, communal leader and writer, b. Philadelphia, 1850; d. Portland, Oregon, 1928. He was educated at Philadelphia, but moved to San Francisco (1876) and to Portland (1878) where he was active as a founder of congregations and various Jewish charitable organizations. He was a pioneer in the cultural movement among the younger Jews in the United States which culminated in the establishment of the Young Men's Hebrew Associations. One of the early followers of Herzl in the United States, he headed the Zionist Society of Portland. Solis-Cohen took an active part in civic affairs, holding the positions of commissioner of charities and correction of Oregon (1890-92) and police commissioner of Portland (1892-94 and 1898-1902) and of mayor (1896-98).

He wrote several children's books and plays. *Our Show* (1876) was a humorous prophetic history of the Centennial Exhibition at Philadelphia. He was a brother of Jacob da Silva Solis-Cohen and Solomon Solis-Cohen.

Lit.: Morais, Henry Samuel, *The Jews of Philadelphia* (1894) 214.



SOLIS-COHEN, EMILY, author and welfare worker, b. Philadelphia. She was the daughter of Solomon Solis-Cohen, and a cousin of Judith and Myer Solis-Cohen. The eminent educators Henrietta Szold and Lucy Wilson were among her early teachers. In 1908 she published *David the Giant-Killer, and Other Tales of Grandma Lopez,* and in 1917 translations from selected stories of Judah Steinberg under the title of *The Breakfast of the Birds, and Other Stories.* She contributed a number of original poems, as well as articles and translations from Hebrew, to periodicals and newspapers, wrote monographs on the status of women in Jewish law and on the Bible, and the work *Hanukkah, The Feast of Lights* (Philadelphia, 1937), stressing the social and religious meaning of Hanukah. Her articles, giving a searching analysis of the Jewish girl, attracted wide attention. She contributed to this encyclopedia, and in 1943 was preparing a biography of the noted rabbi and Bible translator Isaac Leeser.

As field secretary for many years of the Jewish Welfare Board, and as consultant in women's activities, she organized and promoted Young Women's Hebrew Associations and social centers throughout the United States, and revived many which were dormant or had ceased to function.

She was a member of the board of the Hebrew Sunday School Society. In 1943 she was still living in Philadelphia.

SOLIS-COHEN, JACOB DA SILVA, pioneer laryngologist, surgeon, teacher and author, b. New York city, 1838; d. Philadelphia, 1927. He descended through his maternal grandmother, a daughter of David Hays, from a family active in Colonial and Revolutionary public affairs, and, through his maternal grandfather, from a distinguished 17th cent. physician, Jacob da Silva Solis of Seville, Spain. Having studied medicine at Jefferson Medical College and the University of Pennsylvania (M.D., 1860), he enlisted in 1861 as a volunteer in the Union Army, but was soon appointed assistant surgeon in the 26th regiment, Pennsylvania Volunteers. He served first in Hooker's Brigade in the defense of Washington, D. C.; later, on transfer to the United States Navy, he accompanied Du Pont's expedition to Port Royal, and was at one time acting fleet surgeon to the South Atlantic Blockading Squadron. Still later he served as visiting surgeon to two military hospitals in Philadelphia.

On retiring from government service he began investigations in the new science of laryngology, which

David Solis-Cohen

made him known as the father of laryngology in America. In 1866 he gave private lectures to classes of physicians, and in 1869 was appointed lecturer on laryngoscopy and diseases of the throat and chest in Jefferson Medical College, later becoming honorary professor. He was a founder of the Philadelphia Polyclinic and became its first professor of diseases of the throat and chest.

Solis-Cohen wrote such pioneering treatises as *Inhalation in the Treatment of Disease* (1867); *Diseases of the Throat and Nasal Passages* (1872); *Croup in its Relation to Tracheotomy* (1874); and *The Throat and the Voice* (1879). He was a founder and editor of the *Archives of Laryngology* and editor of the department of laryngology of the *American Journal of Medical Sciences.* He was one of the founders of the American Laryngologic Association (president, 1880-82) and of the Congress of American Physicians and Surgeons, as well as president of the Philadelphia County Medical Society (1877-78) and of the Northern Medical Association (1875).

Solis-Cohen received the honorary LL.D. degree from the Jefferson Medical College and from Temple University, both of Philadelphia.

Lit.: Morais, Henry Samuel, *Eminent Israelites of the Nineteenth Century* (1880); idem, *The Jews of Philadelphia* (1894).

SOLIS-COHEN, JUDITH, writer, editor, and authority on dressmaking and costumes, b. Philadelphia, 1876; d. Philadelphia, 1927. She was the daughter of Jacob da Silva Solis-Cohen, and the sister of Myer Solis-Cohen. She studied art in Philadelphia under Colin Campbell Cooper, and the history of costumes.

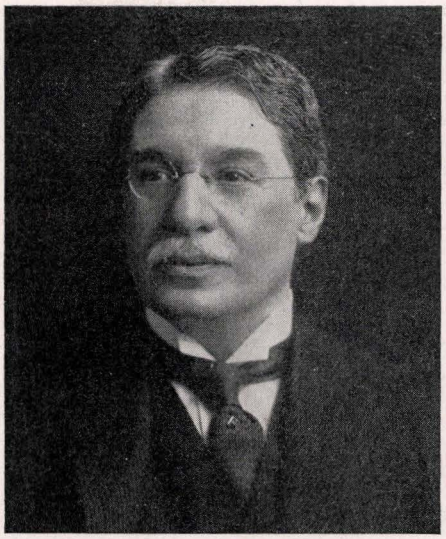
She contributed many novels, novelletes, stories and articles to leading periodicals and newspapers, including: "Writing the Informative Article" (a series, in *Writer's Monthly*); "The Indoor Pond" (nature articles, in *Little Folks' Magazine*); "Playthings that Are Alive" (nature articles, in *Little Men and Women*); "A Summer Course in Dressmaking" (in the Philadelphia *Press*); an illustrated series of articles on fashions and dressmaking for the New York and Paris editions of *Toilettes.*

Her "The Lost Magazine" (1922) and "Desdemona

of the Ghetto" (with Leon H. Elmaleh; 1925) were included among the *Best Short Stories* of the respective years. She wrote also a series of short stories, *Little Americans at Neighborhood House*. Judith Solis-Cohen for many years edited the department known as "Womankind" of the Philadelphia *Jewish Exponent*, where her serial "Milly, A Jewess of To-day" also appeared. She was the first to introduce in the United States literary work on Jewish subjects for the Jewish blind.

SOLIS-COHEN, LEON, writer, b. Philadelphia, 1840; d. (most probably in New York city) 1884. He was a great-grandson of David Hays Jr. (1732-1812) and Esther Etting, and the uncle of Myer Solis-Cohen. Leon Solis-Cohen served as a corporal in the Keystone Battery during the first two years of the Civil War (1861-63), being wounded and rendered unfit for further military service in June of the latter year. After his convalescence he returned to Philadelphia, where he gained renown as a writer of forceful verse, and was perhaps the first to render into English rhymes some of the legends of European Jewry, especially those touched with humor. For several years he resided in Memphis, Tenn., where he wrote also a number of original stories based on rabbinical legends and on incidents in literature and folklore.

Solis-Cohen used the noms de plume of "Lemon S. Cream" and "Shemuel" (Samuel), the latter for most of his Jewish stories, which were contributed mainly to the Cincinnati *American Israelite*. After residing for a time also in New Orleans, La., where he wrote for several of the local newspapers, he settled in New York city, engaged in business, and gained some renown as an amateur photographer of skill.



Lit.: Morais, H. S., *The Jews of Philadelphia* (1894) 313-14.

SOLIS-COHEN, MYER, physician, teacher and author, b. Philadelphia, 1877. He was the son of Jacob da Silva Solis-Cohen, and the brother of Judith Solis-Cohen. His great-great-grandfather on his mother's side, David Hays Jr. (1732-1812), appears to have served in the French and Indian War under George Washington, and during the Revolutionary War furnished provisions to the Colonial Army.

Myer Solis-Cohen studied medicine at the University of Pennsylvania Medical School (M.D., 1900), where he later served as instructor of medicine (1904-7). In 1900 he began the practice of medicine in Philadelphia. He was assistant professor of medicine in the Graduate School of the University of Pennsylvania (from 1921 on), lecturer on medical jurisprudence (from 1923) and toxicology (from 1929) in the Woman's Medical College of Pennsylvania, and was on the pediatric staff of several Philadelphia hospitals (1903-18). He was the director of the Mastbaum Research Laboratory of the Jewish Hospital, and pediatrist at that institution as well as at the Jewish Maternity Hospital of Philadelphia (1922-28), and held a similar post at the Eagleville Sanatorium in Eagleville, Pa. (from 1908 on).

During the first World War Solis-Cohen was a captain, serving in France in Base Hospital No. 59 and Field Hospital No. 37, and in the 78th Artillery. He then became major and (1936) lieutenant colonel in the Medical Reserve Corps, and was a member of a number of military orders, societies and clubs. He was a fellow and member of many national and local medical societies, including the American Medical Association.

Solis-Cohen contributed many original articles to encyclopedias and medical journals, his most notable contributions being on tuberculosis, heart disease, focal infection, pediatrics and infantile paralysis, and vaccine therapy, in connection with which last he originated the "pathogen-selective method" of culturing. He was the first physician in the United States to perceive and demonstrate latent diphtheria and carriers of diphtheria, and to describe an unusual species of interstitial pneumonia. Together with his uncle, Solomon Solis-Cohen, and Heist, he made the discovery of the bactericidal properties of whole coagulable blood, and originated a way to measure it.

Solomon Solis-Cohen

He wrote the following works: *Woman in Girlhood, Wifehood and Motherhood* (1906); *The Family Health* (1910); *Blue Book for Girl, Wife and Mother* (1911); *Mother and Child* (1929). Solis-Cohen was one of the founders (1908) of Congregation Beth-El, of Philadelphia. He served as vice-president and later corresponding secretary of Congregation Mikveh Israel, and was president of the Associate Organization of the Y.M.H.A.

SOLIS-COHEN, SOLOMON (DA SILVA), physician, communal leader and poet, b. Philadelphia, 1857. He received his medical degree from Jefferson Medical College, Philadelphia (1883), where he served as professor of clinical medicine from 1902 to 1927. He also taught at the Philadelphia Polyclinic (1887-1902) and at Dartmouth College (1890-92).

Solis-Cohen was the first to recognize and describe vasomotor ataxia and autonomic endocrin imbalance, and he introduced or elaborated many new methods of treatment, especially in the use of internal secretions. He was editor of the Philadelphia *Polyclinic* (1894-99) and an editor of *American Medicine* (1901-5).

Solis-Cohen was the author of *Therapeutics of Tuberculosis* (1891), *Essentials of Medical Diagnosis* (with A. A. Eshner, 1892-1900) and *Pharmacotherapeutics* (with T. S. Githens, 1928). He was editor of and contributor to *A System of Physiologic Therapeutics* (11 vols., 1900-5) which was hailed by the Boston *Medical Journal* as "marking the advent of a new epoch in medicine."

Deeply interested in Jewish affairs, he was the founder of the associate organization of the Y.M.H.A. of Philadelphia, a founder and editor of the original *Association Review* and editor of the *Association Bulletin*, organ of the first union of Y.M.H.A.'s of America.

He was a founder and editor of the *American Hebrew*, a founder and for some years a trustee of the Jewish Theological Seminary of America, and a founder of the Jewish Publication Society of America; he also headed the Board of Overseers of Gratz College, Philadelphia. One of the earliest Zionists in the United States, he attended the

King Solomon. From a painting by Pietro Peragino

Third Zionist Congress at Basel (1899), and was for a time a member of the provisional executive of the Zionist Organization of America during the first World War. In 1929 he was appointed a non-Zionist member of the new Jewish Agency for Palestine.

Beside his medical works Solis-Cohen published *When Love Passed by and Other Verses,* including translations from Hebrew poets of the Middle Ages (1929), and *Selections from the Poems of Moses ibn Ezra* (translations from the Hebrew, 1933). A selection of his writings and addresses was published under the title *Judaism and Science and Other Addresses* (1940; it contains an 84-page bibliography of his writings).

Lit.: *The Jewish Exponent,* Philadelphia, Sept. 2, 1932; Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 56-58.

SOLMSEN, FELIX, philologist, b. Schneidemühl, Germany, 1865; d. Bonn, Germany, 1911. He was first a teacher at the Gymnasium in Halle, became instructor at the University of Bonn in 1893, associate professor in 1897, and full professor in 1907. Solmsen's chief accomplishments were in classical languages.

His works include: *Studien zur lateinischen Lautgeschichte* (1894); *Untersuchungen zur griechischen Laut- und Verslehre* (1901); *Inscriptiones graecae ad inlustrandas dialectos selectae* (1905; 4th ed., E. Fraenkel ed., 1930); *Beiträge zur griechischen Wortforschung* (1909); *Indogermanische Eigennamen* (1922).

Friedrich Solmsen (b. Bonn, Germany, 1904), the son of Felix Solmsen, received the Ph.D. degree from the University of Berlin (1928) and Cambridge University (1936). After serving as lecturer at the University of Berlin (1929-33), he emigrated to the United States (1937), and was an instructor at Olivet College, Mich. (1937-40). In 1940 he was appointed acting assistant professor of classics at Cornell University. Solmsen wrote: *Die Entwicklung der aristotelischen Logik und Rhetorik* (1929); *Antiphonstudien* (1931); *Plato's Theology* (Ithaca, 1942).

SOLOMON, third king of Israel, son of David and Bath-sheba, who ruled from about 977 to 937 B.C.E.

1. In the Bible. The chief source for the reign of Solomon are passages in *II Sam.* 12 and the narrative in *I Kings* 1 to 11. The account given in *I Chron.* 22 to *II Chron.* 9 is a pious revision of the earlier accounts. It is possible that his original name was Jedidiah (*II Sam.* 12:25) and that Solomon (Hebrew *Shelomoh*) was a throne-name or an epithet derived from the peaceful nature of his reign. He was appointed king by David in preference to his elder brother Adonijah.

The beginning of his reign was marked by the removal of various personages whom he regarded as his own or his father's enemies. Joab, the general, Shimei, the reviler of David, and Adonijah, his possible rival, were killed; Abiathar, the chief priest who had favored the claims of the latter, was replaced by Zadok, from whom the later dynasty of high priests descended. After this the narrative is less detailed and gives only the broad outlines of Solomon's policy. He preferred not to expand the kingdom further, but instead to place it in a situation of defense, while expanding its commercial possibilities. He strengthened himself by alliances with Tyre and with Egypt; his marriage to the daughter of a Pharaoh (probably one of the Tanite dynasty) brought him, as dowry, his sole accession of property, the city of Gezer. His building activity was extensive, including not only the Temple and palace at Jerusalem, but also a number of fortifications and other buildings in the strategic positions. On the other hand, this policy led to the enforced enslavement of the remnant of the Canaanites and the imposition of heavy taxes and compulsory labor from the Israelites; this in turn led to a resentment which expressed itself in Jeroboam's abortive revolt, and eventually to the division of the kingdom directly after Solomon's death. In connection with the Phoenicians of Tyre, he sent out fleets to far-distant countries, established extensive smelting works at Ezion-geber, and imported horses from Arabia and Egypt. As a result, the kingdom amassed great wealth, expressed by the narrator in the words, "silver was accounted as nothing in the days of Solomon" (*I Kings* 10:21). The administration of the state was consolidated; instead of a loose confederation of tribes there was a system of administrative districts, governed by the direct appointees of the king.

Solomon possessed the reputation among his contemporaries, and still more among later generations, of great wisdom and understanding. Two stories, one of his judgment, the other of the visit of the queen of Sheba, are told to illustrate his brilliancy of mind; he is also said to have composed thousands of sayings. Later generations, therefore, willingly attributed to him the authorship of the Biblical books of *Proverbs, Song of Songs* and *Ecclesiastes.* Actually, his policy was by no means altogether wise. He was harassed during part of his reign by enemies in Aram and Edom; the nation was seething with discontent; shortly after his death it fell victim to division and invasion. The narrators can explain this only by declaring that Solomon, swayed by his wives, worshipped foreign gods (*I Kings* 11). In reality, he succeeded because of the impetus given to the nation by the conquests of David and the fortunate circumstance that the surrounding powers were friendly or else in a weakened condition. His character appears cold, almost colorless; he has none of the striking traits that so faithfully delineate his father David.

2. In Legend. No Biblical character has been so frequently the subject of legend as Solomon. Stories

that were originally attached to other characters of other peoples have been retold with him as hero. His wealth and his building of the Temple were especially dwelt upon in these stories. He was the master of the demons, whose aid he invoked in difficulties; many stories are told of him and the chief of the demons, Ashmodai (Asmodeus). He knew the languages of all animals, and conducted dialogues with the very smallest of them, including the ant, who discomfited him in argument. His meeting with the queen of Sheba is transformed into a romance. There are elaborate descriptions of his throne, as well as of the train of servants that surrounded him. In Mohammedan sources he figures as a warrior as well. In later times, almost any ancient structure of imposing size might be attributed in popular thought to Solomon or his ministers. His name was so synonymous for wealth that the Spanish navigator Alvaro Mendana, in 1567, named the islands he discovered in the southwest Pacific after Solomon, in token of the riches he expected to find there. The seal of Solomon, or pentagraph, by which he was declared to have power over the demons, was a favorite object of contemplation of medieval mystics.

N., *And It Came to Pass, Legends and Stories about King David and King Solomon* (1938).

SOLOMON AND MARCOLF, title of a book written in Germany during the Middle Ages, but which does not form a part of Jewish literature. According to some, Marcolf was Solomon's brother; according to others, he was court jester at Solomon's court. The book contains popular narratives and sayings of little wit and ingenuity.

Translations of it are extant in the old Slavonic literature. For further details, see Friedrich Vogt, *Die deutschen Dichtungen von Salomon und Markolf* (Halle, 1880). Israel Abrahams (*Book of Delight,* 10, 301-2) pointed out the connection between the Solomon and Marcolf legend and Joseph Zabara's *Book of Delight.*

SOLOMON, POOLS OF, three large reservoirs situated southwest of Jerusalem in the neighborhood of Beth-lehem; the name is given to them because in *Eccl.* 2:6 it is stated that the king, who is identified with Solomon, made pools of water. The conduits which bring water from these pools to Jerusalem were in use in ancient times, but were not necessarily made by Solomon. In fact, an inscription shows that one of the conduits was laid by the Romans in the 2nd cent. The other is ascribed to Pontius Pilate, but it is certainly of Jewish origin since, according to *Yer. Yoma* iii. 41a, the conduit that came from Etam provided water for the great laver of the Temple. It is mentioned also in *Midrash Lam.* 4:7. Etam is mentioned in *I Chron.* 4:3 and *II Chron.* 11:6, it is apparently the same as the modern Ain Atan.

The three Pools of Solomon lie one above the other, about 160 feet apart and with about 20 feet difference in levels. They range in length from 385 to 590 feet, in breadth from 150 to 255 feet, and in depth from 23 to 50 feet. They are partly hewn from the rock, partly built up from masonry. Two other great water conduits meet here.

SOLOMON, PSALMS OF, *see* PSALMS OF SOLOMON.

SOLOMON, SONG OF, *see* SONG OF SONGS.

SOLOMON, TEMPLE OF, *see* TEMPLE.

SOLOMON, TESTAMENT OF, a Christian pseudepigraphic work which purports to be Solomon's account of the building of the Temple. By acquiring a seal ring that possesses magical power, Solomon is able to gain control over the demons. Later, however, he becomes an idolator, loses his power over the demons, and succumbs to the magical wiles of a Jebusite woman. The work was apparently composed in Greek by a Jewish Christian. It gives a good picture of the folk-tales, astrological and demonological beliefs of the time.

The Testament appears to have been first mentioned by Josephus (*Antiquities,* book 7, chap. 2, section 5). It was first published by F. F. Fleck, who found the Greek manuscript in the Royal Library at Paris (*Wissenschaftliche Reise durch das südliche Deutschland,* 1837, vol. 2, part 3).

Lit.: Cowen, M., *The Testament of Solomon.*

SOLOMON BEN ABRAHAM BEN ADRET, *see* IBN ADRET, SOLOMON BEN ABRAHAM.

SOLOMON BEN ABRAHAM OF MONTPELLIER, Talmudist of the 13th cent. He was bitterly opposed to the teachings of Maimonides, and was the leader of the movement against the latter in southern France. Backed by his disciples David ben Saul and Jonah Gerondi, he pronounced a ban of excommunication on the followers of Maimonides. This led to a bitter controversy, in the course of which Solomon denounced the writings of Maimonides to the Dominican monks, as a result of which they were publicly burned by the latter, to the horror of the Jews, in 1233. Solomon appears to have been of good character and deep learning, but utterly blind in his literal acceptance of Biblical and Talmudic teachings.

Lit.: Graetz, H., *History of the Jews,* vol. 3 (1927) 527-30, 536-38, 542-45.

SOLOMON BEN ISAAC, *see* RASHI.

SOLOMON BEN JEROHAM (in Arabic, Sulaim ibn Ruhaim), Karaite polemicist and writer, probably a native of Palestine; he lived in the 10th cent. Karaite tradition has it that he was the teacher of Saadia Gaon, which is chronologically impossible (since Solomon was much the younger man) but may possibly indicate some actual personal conflict between the two, thereby explaining in part Solomon's extraordinarily bitter hatred of Saadia.

Solomon's principal work is his rhymed attack on rabbinism and Saadia, *Milhamoth Adonai* (The Wars of the Lord), written about 934, in both Hebrew and Arabic redactions, of which only the former has been preserved. Its language, even for an age characterized by abusive polemics, is unusually vehement, and the author's attitude toward the Gaon is less that of a theological adversary than that of a fiercely hating personal enemy. Solomon's subject matter has no originality in it, for he merely recapitulates the arguments of older Karaite polemicists, but the violent curses and the quasi-poetic form are all his own. Whether or not Saadia replied to Solomon's blast is a question which depends for its solution upon the confirmation of Geiger's hypothesis, supported by Davidson, that Solomon is the same person as a certain Ibn Sakawaih, whose attacks the Gaon refuted in a special work, of which only small fragments have so far been discovered.

In the 950's Solomon composed a series of Biblical commentaries written in a calmer mood, although not free from

George Wolf

attacks on Saadia's views. Of the portions (partly in Arabic and partly in Hebrew) which have been preserved, those on *Psalms, Song of Songs, Ruth* and *Esther* seem to have come certainly from his pen; those on *Lamentations* and *Ecclesiastes,* however, are so free from anti-rabbinic bias as to place his authorship under serious doubt. Solomon made also an Arabic translation of the Karaite liturgy, and supplied it with a commentary in the same language.

Solomon's obscurantist attitude extended also to secular studies in general, which he condemned as ungodly and forbidden. LEON NEMOY.

SOLOMON (ben Judah) IBN GABIROL, *see* IBN GABIROL, SOLOMON.

SOLOMON BEN MAZAL TOB, Turkish poet and printer, who lived in the 16th cent. He was engaged in printing from 1513 to 1549, and in 1518 established a printing-plant in Constantinople in which a number of Hebrew works, inscribed with his signature, were published, including Isaac Kara's *Toledoth Yitzhak* (1518) and David Kimhi's *Michlol* (1523). He wrote a work, *Ture Zahab,* dealing with the commands and prohibitions of the Torah. A collection of sixty of his liturgical compositions and poems appeared in Kimhi's *Shirim Uzemiroth Vethishbahoth,* which he printed in 1545.

Lit.: Zunz, Leopold, *Literaturgeschichte der synagogalen Poesie* (1865-67) 532-33.

SOLOMON EPHRAIM OF LECZYCE, popular preacher, b. about 1550; d. Prague, 1619. After residing at Jaroslav, Lublin (where he studied with Solomon Luria) and Lemberg, he became head of the Yeshiva at Prague, and on the death of the famous chief rabbi, Löwe Judah ben Bezalel (1609), was elected his successor. His administration was marked by reforms in the communal administration and by attempts to curb the excess of hairsplitting (Pilpulistic) methods in teaching and preaching.

Solomon Ephraim wrote several homiletical works, the most important of them being *Oleloth Efrayim.* His other writings, partly homiletical, partly exegetical, include *Ir Gibborim, Keli Yakar* and *Ammude Shesh.* He wrote three Selihoth (penitential poems) in commemoration of the deliverance of the Jews of Prague from an invasion by the army of the city of Passau (February, 1611).

Lit.: Klemperer, G., "Das Rabbinat in Prag," *Pascheles Volkskalender,* 5641 (1880); Grünwald, M., *Rabbi Salomo Efraim Luntschitz* (1892).

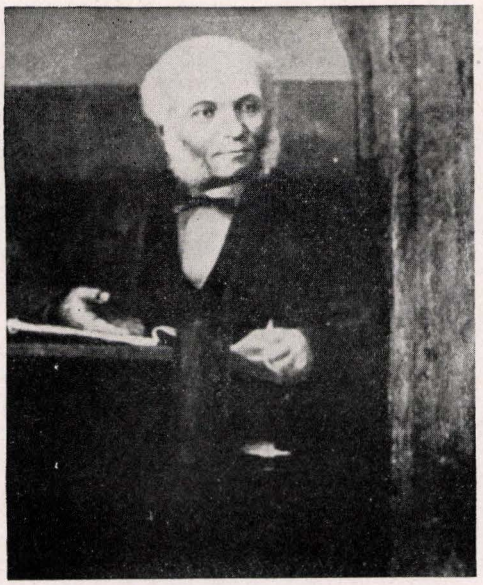
SOLOMON IBN VERGA, *see* IBN VERGA, SOLOMON.

SOLOMON MOLCHO, *see* MOLCHO, SOLOMON.

SOLOMON YITZHAKI, *see* RASHI.

SOLOMON ZALMAN BEN ISAAC, Talmudist, brother of Hayim ben Isaac of Volozhin, b. 1776; d. 1809. He was known by the name of "Reb Zelmele Vilnaer," and was a man of eminent abilities, one of the most brilliant pupils of the Vilna Gaon. His early death prevented the development of his gifts. His detailed biography was written by Ezekiel Feiwel, preacher at Vilna, who called his work *Toledoth Adam* (Dyhernfurth, 1809-10).

Saul Solomon (d. 1850)



SOLOMON, a family of the island of St. Helena. Enjoying a distinguished position in South African public life during the 19th cent., the local branch of the family originated in St. Helena, to which there came (1796) Saul Solomon, son of Nathaniel Solomon, who was interested in the East India trade. Nathaniel Solomon lived in Canterbury, England, and was married to Phoebe de Mitz or de Metz, whose sister Matilde was the wife of Levy Salomons and the mother of Sir David Salomons, pioneer of Jewish civil emancipation in England. The Solomon family became related also to Nathaniel Isaacs, the African explorer.

SAUL SOLOMON (d. 1850), who was associated with Napoleon Bonaparte's last days, in time became the wealthiest and leading citizen on the island. He was sheriff of St. Helena, consul for the kings of France and the Netherlands, and devoted much of his means to Jewish charitable work. Before the close of the 18th cent. he was joined by his younger brothers Joseph and Benjamin. The latter two eventually settled at Cape Town.

BENJAMIN SOLOMON (b. Margate, England, 1786; d. Greenpoint, South Africa, 1877), a younger brother of Saul Solomon, was the first of the Solomon family to settle at the Cape (1806). He was probably the first Jewish settler after the British occupied Cape Colony. For many years he was Usher of the Court in Cape Town. He contributed to the fund for the building of the first synagogue. Numerous families, both Dutch and British, are descended from him.

JOSEPH SOLOMON (d. 1861) was a younger brother of Saul Solomon. He married Hannah Moss (d. 1860), and sent his sons Saul Solomon the younger and Henry Solomon to England to be educated at the Jewish school conducted by H. N. Solomon, then at Edmonton. They returned to St. Helena in 1829. Henry continued his studies there, and Saul was sent to Cape Town, where he excelled at the South African College. Joseph Solomon and his wife followed their son in 1831.

SAUL SOLOMON (1817-92), the second, and his brother, HENRY SOLOMON, sons of Joseph Solomon, entered a printer's business in which they later became partners. In 1841 they acquired the *Governmental Gazette,* and became printers, bookbinders and stationers

Saul Solomon (1817-92)

to the government. In 1857 they began to print the *Cape Argus,* whose proprietors they became in 1863. They were baptized in 1834, but continued to show interest in and friendship toward Judaism and Jews. They supported Joel Rabinowitz, the Jewish minister, and aided Jewish charitable and communal work. Saul Solomon the younger represented Cape Town in parliament from 1854 on. He gained great influence with the Cape Parliament, and was called "the Warwick of the Cape." As an outstanding Liberal leader, he dominated Cape policy for more than thirty years, but he refused the premiership and speakership which were offered him.

EDWARD SOLOMON, Joseph Solomon's third son, became a Christian minister.

Saul Solomon, the second, was the father of SAUL SOLOMON, the third (b. 1875), a judge of the Transvaal Supreme Court, and of WILLIAM EWART GLADSTONE SOLOMON (b. 1880), a painter and writer on Indian art, and principal of the Government Art School at Bombay.

The three sons of Edward Solomon were all knighted for their public and legal services:

SIR EDWARD PHILIP SOLOMON (d. 1914) was minister of public works during the ministry of General Louis Botha (from 1907 on), in the Transvaal.

SIR RICHARD SOLOMON (1850-1913) was legal adviser of Lord Kitchener, and drafted the Treaty of Vereeniging in 1902. He served as attorney general for the Cape and Transvaal. He revised Transvaal legislation in 1905, and became the first high commissioner for the Union of South Africa.

SIR WILLIAM HENRY SOLOMON (1852-1930) was appointed chief justice of the Union in 1927.

EMILY SOLOMON, their sister, who was a noted social worker, was the first woman ever to be elected chairman of the Congregational Union of South Africa. She was vice-president of the World Women's Christian Temperance Union.

S. A. ROCHLIN.

Lit.: Herrman, Louis, *A History of the Jews in South Africa* (1936); Rabinowitz, M., in *South African Jewish Year Book* (1929) 47, 231-35; Rochlin, S. A., "Napoleon's Relations with Some Jews at St. Helena," *Views* (London), July, 1932; *Jewish Daily Post* (London), Aug. 6, 1935, p. 5.

SOLOMON, pianist, b. London, 1903. He was discovered by Mathilde Verne, who prepared him for the concert stage. He made his debut at Queen's Hall in 1911 and was a sensation. An extensive tour followed in which he appeared as soloist with the leading orchestras of Europe. In 1912 he gave a command performance before the king and queen of England at Buckingham Palace. In 1918 Solomon retired from concert work to devote himself to an intensive five-year period of study. Returning to the concert world in 1923, he was acclaimed as one of the leading virtuosos of the piano, particularly distinguished in the music of modern composers. In 1939 he visited the United States and appeared on a British program featured in conjunction with the New York World's Fair. He was also a prominent radio artist over the official British broadcasting system. The given name of Solomon has not been revealed.

SOLOMON, DAVID, author, public and communal worker, b. India; d. Bombay, India, 1916. Solomon belonged to the Beni Israel, and served in the Indian army and civil administration. In 1899 he was created Khan Sahib, in recognition of his public services. He published *Essay on Prayer* (1888); *Sacred Hymns* (1889), and *History of Job* (1894), a versified paraphrase in Marathi, the common language of the Beni Israel. For many years Solomon was a trustee, treasurer and later honorary secretary of the Beni Israel New Synagogue at Bombay, a member of the Council of the Beni Israel Benevolent Society and the Society for Promoting Moral and Religious Instruction among the Hebrews. He was also president of the Jews' Free Library, and a trustee of the Israelite School founded by Sir Elly Kadoorie (Shanghai) and maintained by the Anglo-Jewish Association.

SOLOMON, EDWARD S. (known also as Salomon), lawyer, soldier and governor, b. Schleswig-Holstein, Germany, 1836; d. San Francisco, 1913. In 1854 he emigrated to the United States. In 1860 he was elected an alderman in Chicago. He distinguished himself during the Civil War, rose from lieutenant to major in the Twenty-Fourth Illinois Infantry, and then joined with some comrades, as the result of a regimental disagreement, in organizing the Eighty-Second Illinois Infantry, of which he became colonel. For his heroism in many famous campaigns he was appointed brigadier-general by Secretary of War Edwin M. Stanton before the end of the war. On his return to Chicago he became county clerk of Cook County. President Ulysses S. Grant then appointed him governor of Washington Territory; Solomon served in this position from 1870 to 1874. In the latter year he moved to San Francisco, and was twice elected to the California state legislature. He was also district attorney of San Francisco. Solomon was elected department commander of the Grand Army of the Republic in California (1887) and commander and chief of the Army and Navy Republic League. He was a close friend of Carl Schurz, who praised him in the highest terms in an official report during the war.

Lit.: Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen* (1895) 164-70; *Jewish Advocate* (Boston), Nov. 28, 1929; Meites, Hyman L., *History of the Jews of Chicago* (1924); Wiernik, Peter, *History of the Jews in America* (1931) 234; *Publications of the American Jewish Historical Society,* No. 29 (1925) 122-23.

SOLOMON, ELIAS, Australian statesman, b. London, 1839; d. Fremantle, Australia, 1910. In 1868 he went to Australia, and soon after his arrival entered political life. He represented the town of Fremantle

in the Legislative Assembly of Western Australia and in the first Federal parliament of Australia. In 1892 he was elected member of parliament without any opposition. Solomon played an influential role in the extension of the port of Fremantle, and it was partly due to his efforts that Fremantle became an important city. He was also constructively interested in Jewish communal life in both Australia and England, and was active in maintaining relations between the Jews of Australia and those of his mother country.

SOLOMON, ELIAS LOUIS, rabbi, b. Vilna, Lithuania, 1879. He came to the United States in 1888. He received the rabbinical degree in 1904, and the D.H.L. degree from the Jewish Theological Seminary of America in 1910; the honorary D.D. degree was bestowed upon him by the Seminary in 1929. From 1905 to 1918 he was the rabbi of Congregation Kehilath Israel, and from 1919 to 1921 he served as associate rabbi of Kehilath Jeshurun. In 1922 he became rabbi of Congregation Shaare Zedek of New York; he still held this position in 1943. Solomon was honorary president of the United Synagogue of America, vice-president of the Synagogue Council of America, and treasurer of the American Pro-Falasha Committee. He was a board member of the National Conference of Christians and Jews.

SOLOMON, GEORGE, Jamaica public official, b. Southampton, England, 1825; d. Philadelphia, 1910. He emigrated to Jamaica in 1844, became a pioneer in banana cultivation, and owned several sugar estates. He was Custos Rotulorum in 1860 and also a magistrate in the same year. From 1860 to 1866 Solomon served as member of the House of Assembly for the Parishes of St. Thomas and St. Ann. He was the third Jew of Jamaica to be appointed by the governor a member of the Privy Council.

He was author of *The Jesus of History and the Jesus of Tradition Identified* (1880) and *The Heresies of the Christian Church.* A few years prior to his death, his family changed their name to Seymour. His son, Seymour Seymour, was for many years mayor of Kingston, Jamaica, and a member of the Legislative Council.

SOLOMON, HANNAH G., communal worker, b. Chicago, 1858; d. Chicago, 1942. In 1877 she made her entry into communal activities; in that year she and her sister, Mrs. Henry Frank, were invited to join the Chicago Women's Club—the first Jewish women to receive such an invitation. In 1890 Mrs. Solomon was a member of the Women's Committee of the World's Parliament of Religion at the World's Fair. The following year she arranged a Jewish Woman's Congress in Chicago, and this eventually became the nucleus of the Council of Jewish Women. She was honorary president of the Council for many years.

The immigration increase of the last two decades of the 19th cent. necessitated new activities on behalf of the arrivals; Mrs. Solomon established a Bureau of Personal Service for immigrants. She called the first conference of Chicago Jewish Women's Organizations in 1894. She was one of the founders (1895) and one of the first vice-presidents of the Illinois Federation of Women's Clubs. In 1899 she was treasurer of the Council of Women of the United States, where she represented the Council of Jewish Women. Accompanying Susan B. Anthony to the International Council of Women meeting in Berlin in 1904, Mrs. Solomon was one of the most prominent delegates. In 1907 she became president of the Illinois Industrial School for Girls.

Lit.: American Hebrew, Jan. 6, 1933, p. 142; *The Council Woman,* Jan., 1943.

Hannah G. Solomon

SOLOMON, HAROLD J., British army officer, public servant and communal worker, b. England, 1886; d. Valmont, Switzerland, 1930. Solomon entered the British army and became noted as a daring cavalry officer. Physical activity was the characteristic of his life until, a few years before his death, an accident impaired his health. Solomon distinguished himself in the first World War and was promoted to lieutenant colonel. After the War he became director of commerce and industry in the Palestine Administration under Sir Herbert Samuel's high commissionership. In 1922 Solomon left the civil service and became director of the Palestine Potash Company.

For some time he was a governor of the Technical Institute at Haifa. He was also director of the Anglo-Palestine Club, and council member of the Anglo-Jewish Association and of the Domestic Board for Palestine.

SOLOMON, HARRY CAESAR, neurologist, b. Hastings, Neb., 1889. He received the M.D. degree from Harvard University (1914), became senior physician in charge of the department of therapeutic research of the Boston Psychopathic Hospital (1920) and associate professor of psychiatry at the Harvard University Medical School (1936). Solomon was a member of the advisory committee of the department of public welfare of Massachusetts, and a trustee of the Associated Jewish Philanthropies. His writings include *Neurosyphilis* (with Elmer E. Southard; 1918) and *Syphilis of the Innocent* (with M. H. Solomon; 1922).

SOLOMON, IZLER, conductor, b. St. Paul, Minn., 1910. As a child he studied violin and showed such talent that he was subsidized to study in New York. In 1928 he was appointed assistant to Michael Press in the department of music of Michigan State College in East Lansing. He conducted his first orchestra in East Lansing. From 1931 to 1935 he taught in the Lansing public schools. In 1935 he became state music director for the Federal Music Project, working out a program of musical activity which was later adopted

nationally. He was sent to Chicago by regional director Guy Maier, who recognized his talent, and there he conducted the Illinois Symphony Orchestra for six years. In 1938 he became conductor of the Women's Symphony Orchestra which, two years later, was sponsored in a weekly program over a national radio network. In 1941 Solomon was appointed conductor of the newly-organized Columbus (Ohio) Philharmonic Orchestra. He appeared also as a guest conductor of the Philadelphia, the N.B.C., the Chicago Symphony and the Buffalo Philharmonic orchestras.

SOLOMON, JOSEPH, Dandekar of Ahmedabad, physician and Beni Israel communal worker, b. Malegaon, India, 1840; d. Ahmedabad, 1927. He was the son of Solomon Abraham Dandekar, a Havadar (the pride of his regiment), and was educated at Satara where he was an eyewitness of the atrocities of the Indian Mutiny. As a Beni Israel Solomon remained loyal to Britain, after having joined, in 1855, the eleventh Indian regiment. Then he was ordered to the Civil Hospital at Ahmedabad. In 1866 he became hospital assistant at the Ahmedabad Lunatic Asylum, whose director he became afterwards. During the cholera epidemics Solomon worked with great diligence and self-sacrifice. In 1900, after forty-five years of government service, he retired from office.

Solomon was the second Beni Israel to settle in Ahmedabad, headquarters of an army division with a great arsenal. Together with Abrahamju Erulkar, the first Beni Israel settler, he encouraged other Jews to settle in Ahmedabad, and laid, in this way, the foundation of the Jewish colony in Ahmedabad. In 1876 Solomon presented a cemetery to the young Jewish community, whose president he was from 1887 to 1909.

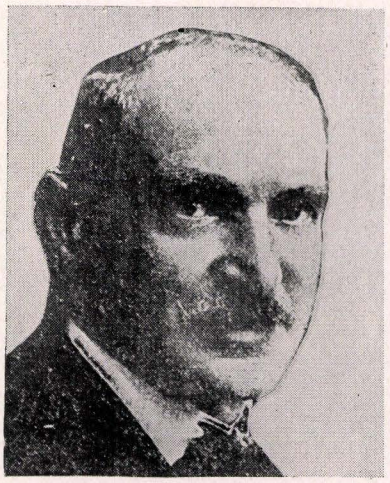
SOLOMON, JOSEPH, philosopher and linguist, b. Bristol, England, 1853; d. London, 1931. In 1871 he went to Oxford, and was educated at Corpus Christi College and Balliol College. He was the favorite pupil of Jowett, and a fellow student of Herbert Asquith, afterwards British prime minister, and Alfred Milner, who later became British proconsul in Africa. Solomon's friendship with these statesmen lasted until their death. His knowledge of ancient and modern philosophy was profound, but his inclination for learning was by far greater than that for utilizing in writing what he had learned. He accompanied Asquith to the bar, but soon left it and held several posts at Nottingham, Bangor, and Leeds, until he finally settled at Oxford as a "coach." He contributed to *Mind* and the *Classical Review,* and published (1912) a study on Henri Bergson which Bergson himself always considered the best appreciation of his philosophical intentions and position.

In his later life Solomon took up the study of modern languages, especially of the Scandinavian and Slavonic tongues. Subsequently he was employed by the British Foreign Office as translator of Russian documents. At the age of seventy-six, he began to learn Spanish by self-instruction. He was interested also in Biblical studies and in the theory of currency. He translated part of Aristotle's works from Greek into English under the title of *Ethica Eudemia* (Oxford, 1925, vol. 9 of a series).

SOLOMON, JOSEPH MAURICE, jurist, b. London, 1839; d. London, 1916. Educated at London University, and called to the Bar at Lincoln's Inn (1864), he was one of the outstanding lawyers of London, and became reader in law at London University. Some years after he had begun to lecture he was appointed also examiner in law at the same university. Solomon was an authority on the law of equity and widely esteemed because of his ability to teach this science of mixed character.

During the first decades of Solomon's activity equity jurisdiction was of the highest importance in the juridical life of England, until reforms in the procedure of the chancery courts somewhat diverted the interests of the British jurists from it. But for a long time Solomon, as a theorist and a practical lawyer, was influential with law students. He was active also in Jewish communal work, especially as committee member of the Jews' Free School.

SOLOMON, MEYER, neurologist and psychiatrist, b. New York city, 1887. He received the M.D. degree from Cornell University (1909), and was subsequently connected with several hospitals, mostly in Illinois. In 1936 he was made a member of the medical faculty of the Cook County Graduate School of Medicine. Solomon served as neurologist of the Chicago Health Department (1923-29) and as director of the Municipal Psychopathic Laboratory of the City of Chicago (1929-31).



He was founder (1930) and president of the Chicago Academy of Criminology, and author of many papers on neurology, psychiatry, speech, personality and behavior disorders.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 640.

SOLOMON, MICHAEL, Jamaican statesman, b. England, 1818; d. Jamaica, British West Indies, 1892. In 1830 he emigrated to Jamaica, and became connected with the Bravo family which, of Marrano descent, was highly respected by the Jamaican people. Later on Solomon became chief of the firm of Bravo Brothers. In 1855, when responsible government was established in Jamaica, Solomon was elected member of the Legislative Council. He represented the rural district of St. Ann, and during the first years of his parliamentary activity belonged to the opposition, the rural party. In 1859 the rural party came to power, and Solomon entered the cabinet (called "Executive Committee") as minister of finance. In 1860 he presented a statement showing a deficit in the treasury of more than £58,000, and secured the passage of a law providing for an issue of treasury bonds to balance the budget. But in 1861 he resigned, and severed his relations with the rural party, while party struggles and personal animosities dangerously increased until the outbreak of the revolution of 1865 to 1866. Although Solomon refrained from taking part in the violent struggle for or against Governor Eyre, he subscribed to a declaration in favor of Eyre, who came in conflict with the British government and was forced to retire. Solomon was at this time clerk magistrate to the district of St. Ann; afterward he became custos or senior magistrate of this district. In 1882 Solomon became member of the Privy Council, the Jamaican Upper House. In 1887 he was decorated by Queen Victoria for his services in connection with the participation of Jamaica in the Jubilee Exposition.

Lit.: Wood, J. J., *Jamaica* (1884); Gardner, *History of Jamaica* (1909).

SOLOMON, SIR RICHARD, high commissioner for the Union of South Africa, b. Cape Town, South Africa, 1850; d. London, 1913. His mother was non-Jewish. A lawyer by profession, he accompanied Lord Rosmead as legal adviser on his mission to Mauritius (1886) in order to inquire into the affairs of that island. Solomon was a member of the House of Assembly of the Cape Colony for the division of Tembuland, attorney-general to the Schreiner ministry (1898-1900), and legal adviser to the Transvaal administration and to Lord Kitchener (1901-2). He served as

Solomon Joseph Solomon

attorney-general of the Transvaal (1902-7), as acting lieutenant governor of that colony (1905-6), and as agent-general in London for the Transvaal (1907-10). He was appointed high commissioner for the Union of South Africa in 1910. He was knighted in 1901.

SOLOMON, ROBERT BERNARD, jurist, army officer and communal worker, b. London, 1889. He studied law and was graduated before 1914. Upon the outbreak of the first World War he entered the British army and served in France as an artillery officer. He was decorated with the British Military Cross and the French Croix de Guerre, and promoted to captain. When the war ended, Solomon became a solicitor at London. He was chairman of the Galilee Redemption Fund and treasurer of the English Zionist Federation. He held offices also in the Jewish War Memorial Union and the King George V Memorial Forest.

From 1930 to 1937 Solomon was president, later vice-president, of the Jewish National Fund. In 1938 he was honorary solicitor of the United Synagogue, London. For many years he also was chairman of the Union of Jewish Literary Societies and was known to be active communally in 1943.

SOLOMON, SOLOMON JOSEPH, painter, b. London, 1860; d. Birchington, Kent, 1927. He studied at the Royal Academy in London, the Akademie in Munich and the École des Beaux Arts in Paris. Beginning with 1881, he won increasing recognition at the summer exhibitions of the Royal Academy. His pieces were mostly portraits and figure paintings, the latter treating of Biblical or mythological scenes in the historical style which was then flourishing.

His *Samson* (1887) and *Job* were acquired by the Walker Art Gallery in Liverpool. Other paintings of this type were *Niobe* (1888); *Hercules* (1889); *Cassandra* (1886); *The Judgment of Paris* (1890); *Allegory; Awakening* and *St. George.*

Mainly as the result of his extended activity as portrait painter, "S.J.S." became a favorite in London society. The catalogue of his portraits in Olga Somech Phillips' study of him is like a list of the best-known citizens of the city. Among his subjects were Israel Zangwill (1894); Heinrich Graetz (1887); Solomon Schechter (1902); Lady Violet Melchett and her daughters, and the famous *Your Health,* depicting the young Miss Violet at a gay table-gathering (the painting played a romantic role in her marriage to Melchett).

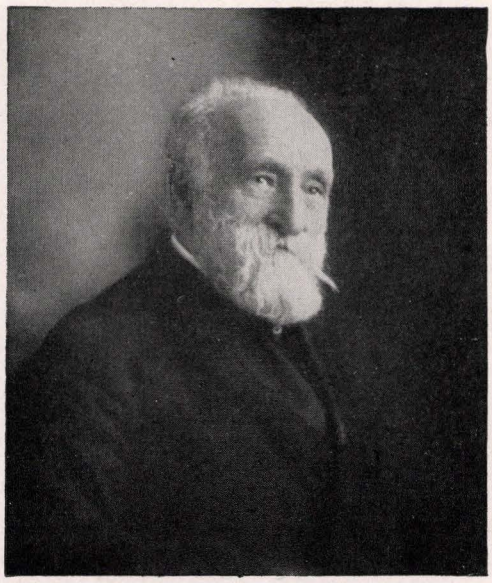
Solomon was one of the founders of the Maccabeans (1891) and later vice-president of the organization. During the first World War Solomon, who was made a lieutenant-colonel, was instrumental in converting the British army to the use of camouflage and introduced the fishing-net basis for camouflage—a method which became generally adopted. Solomon was the author of *Strategic Camouflage* (1920) and of *The Practice of Oil Painting and Drawing* (3rd ed., 1930). In 1918 he was president of the Royal Society of British Artists.

Lit.: Phillips, Olga Somech, *Solomon J. Solomon* (1933); Bensusan, S. J., in Martin Buber's *Jüdische Künstler* (1903); *The Studio,* vol. 8 (1896) 3-11; *Catalogue* of Exhibition of Works by late members of the Royal Academy, Winter Exhibition (1928) 62-71, 79.

SOLOMON, SOLOMON MARKS, rabbi, b. Melbourne, 1858; d. Melbourne, 1941. He was the first Australian-born Jew to qualify for the ministry, and served the Melbourne Congregation for about fifty years. In the first World War Solomon was Jewish chaplain to the military forces of the Australian Commonwealth and was promoted to colonel. He was the recipient of the Volunteer Officer Decoration.

Solomon was also headmaster of the Melbourne Hebrew School, and devoted himself to the physical education of Australian Jewish youth. He founded the first Jewish Scout group in Australasia. He gave his services also to the Australian Natives Association, and held office in the Friendly Society movement for sixty years. Solomon was likewise an important figure in Australian Masonry.

SOLOMON, VABIAN LOUIS, Australian statesman, b. Adelaide, Australia, 1853; d. Adelaide, 1908. He was the son of Judah Moss Solomon, who was (1852-66) a member of the legislative council at Adelaide, the first Jew in South Australia's Parliament.



Vabian Louis Solomon was educated at Adelaide and at Scotch College, Melbourne. In 1873 he went to the Northern Territory of Australia, and there edited, until 1890, the *Northern Territory Times.* From 1890 to 1901, and from 1905 until his death, he was a member of the House of Assembly of South Australia for the Northern Territory. There he was government whip to the Playford government (1890-91) and to the Downer government (1893). In 1899 he became leader of the opposition, and for a brief period served as premier and treasurer of South Australia. After having been a member of the federal convention (1897-98) which framed the constitution of the Australian Commonwealth, he became a member of the House of Representatives for South Australia in the first parliament of Australia (1901-3).

SOLOMON, WILLIAM EWART GLADSTONE, *see* SOLOMON (family).

SOLOMON, SIR WILLIAM HENRY, *see* SOLOMON (family).

SOLOMONS, ADOLPHUS SIMEON, philanthropist, b. New York city, 1826; d. Washington, D. C., 1910. At the age of fourteen he enlisted in the New York State Militia, in which he later became a sergeant. He engaged in mercantile pursuits, and in 1851 Daniel Webster, then Secretary of State, appointed him "special bearer of dispatches" to Berlin. While abroad he visited a Jewish ward in a hospital at Frankfort, Germany. He determined to establish a similar institution in New York city, and when he returned became a founder of Mt. Sinai Hospital.

In 1859 Solomons established the publishing house of Philip and Solomons in Washington, which for a number of years held the contracts for government

Adolphus S. Solomons

printing. In 1871 Solomons became chairman of the committee of ways and means of the House of Representatives of the District of Columbia, at the time when the capital had its own government. As a resident of Washington and a leading member of the Jewish community he took an active part in all the inauguration ceremonies from the time of Abraham Lincoln to that of William Howard Taft. He was on terms of cordial friendship with Lincoln; in fact, the last portrait ever taken of Lincoln was taken in Solomon's shop.

Solomons was a member of the central committee of the Alliance Israélite Universelle and its treasurer for the United States. He advocated the establishment of the Montefiore Home for Chronic Invalids. In 1891 he became the general agent for the Baron de Hirsch Fund and director of its many activities in America.

He was active also in public affairs. When the District of Columbia was given a territorial form of government (1871) President Ulysses S. Grant tendered Solomons the office of governor, which he declined. The first meeting of the American Red Cross Association took place at his home in Washington. He was an active member of the organization for seventeen years, and was one of its two vice-presidents. In 1881 President Chester A. Arthur appointed him and Clara Barton representatives to the International Congress of the Red Cross held at Geneva; he was elected vice-president of the Congress. In addition, Solomons was one of the most prominent and active members of the various charitable organizations in Washington, and contributed to the upbuilding of many institutions. He was one of the founders of the Garfield Hospital (a memorial to President James A. Garfield) and a member of its board until his death, and helped found the Jewish Protectory. His eightieth birthday was celebrated by a number of friends, who signed a testimonial address presented to him by Cyrus Adler.

SOLOMONS, BETHEL, *see* SOLOMONS, MAURICE ELIAS.

SOLOMONS, LEVY, one of the early Jewish pioneers in Canada, b. England, 1729; d. Montreal, Canada, 1792. He settled there at the time of the British conquest, coming from Albany, where he had previously lived. A trader whose successful and large-scale enterprises extended to many points, he played a most conspicuous part also in Jewish and public affairs. He was one of the founders of the Sephardic congregation in Montreal, was its first Parnas (president), elected in 1778, and one of the signers of its first code of laws. He was among the British "freeholders, merchants and traders" in the province of Quebec who in 1773, 1774 and 1784 petitioned the king for a House of Assembly.

When the American Revolutionary War broke out and General Montgomery, in 1775, occupied Montreal, he asked Solomons to provide hospitals for the continental troops, which he did. He also rendered them other assistance. This later exposed him to much persecution and suffering. He was severely treated by General John Burgoyne, the British commander, who had him expelled, with his family (1776), and most of his possessions confiscated. In the end, however, he was permitted to return to his home.

Solomons, in 1775, married Rebekah Franks (his second wife), daughter of Abraham Franks. He left two sons and six daughters, the youngest of whom, Rachel, married Henry Joseph.

BENJAMIN G. SACK.

Lit.: *Archives of Canada;* Sack, Benjamin G., *History of the Jews in Canada* (in course of publication in 1943); *Publications of the American Jewish Historical Society,* Nos. 2, 13, 27 and 31; *Les cahiers des dix,* No. 4 (1939); *The Jew in Canada* (1926); Scoville, *Merchants of Old New York.*

SOLOMONS, MAURICE ELIAS, public and communal worker, b. Dublin, 1833; d. Dublin, 1922. Eldest son of Elias Solomons (who settled in Dublin in 1824), he was a prominent merchant and leader in communal life. Solomons was justice of peace of the county and city of Dublin and consul of Austria and Hungary at his native town. In his youth Solomons was also a drama critic and contributed to *Freeman's Journal* and *Saunders' News.* He became an important figure in English Masonry, and was the representative of the Wisconsin Grand Lodge at the Grand Lodge of Freemasonry of Ireland, as well as grand officer of the Grand Royal Arch Chapter of Ireland.

Solomons was interested also in Jewish philanthropic and educational work. He donated considerably to the Dublin Synagogue, and was chairman of the education committee and honorary manager of the congregational schools under the National Board of Education.

His son EDWIN MAURICE SOLOMONS (b. 1873), stockbroker to the High Court of Justice, Eire, was for many years president of the Jewish congregation of Dublin, and the foremost Irish patron of boxing.

BETHEL SOLOMONS, another son, was an outstanding gynecologist. He was educated at Trinity College, Dublin, and at several universities in France and Germany, and was president of the Dublin University Biological Association (1919-20) and of the Obstetrical Section of both the British Medical Association (1933) and the Royal Academy of Medicine, Ireland.

His published writings include *Handbook of Gynaecology* (3rd ed., 1934); *Practical Midwifery for Nurses* (1931), and *Epitome of Obstetrical Diagnosis and Treatment in General Practice* (1934). Solomons edited the 7th edition of Tweedy's *Obstetrics.* He was an honorary fellow of the American College of Surgeons.

SOLOVEICHIK, JOSEPH BAER, Talmudist, b. Nieswich, Russia, 1820; d. 1892. He taught in Yeshivas at Minsk and Volozhin, served as rabbi at Slutzk and Brest-Litovsk, and was regarded as one

of the keenest scholars of his time. In 1889 he served on a committee of Jews convoked by the Russian government to discuss the conditions of the Jews. He favored the movement for colonization in Palestine and organized a society for that purpose in Brest-Litovsk. His chief work was *Sheeloth Utheshuboth Beth Halevi* (three parts, Vilna, 1865; Warsaw, 1874; Warsaw, 1884).

Hayim Soloveichik (d. Warsaw, 1920), his son, taught in the Yeshiva of Volozhin and was regarded as the most profound Talmudist of his generation. He succeeded his father as rabbi of Brest-Litovsk, and was one of the main organizers of the Agudath Israel. He wrote a commentary on the *Mishneh Torah* of Maimonides, called *Hiddushe Rabbenu Hayim Halevi.* His new system of Talmudic study (Habanah) opposed Pilpulism and sought a basic analysis of sources and reasonings.

Lit.: *Haasif,* vol. 6.

SOLOWEITSCHIK, MAX, scholar and deputy, b. Kovno (Kaunas), Lithuania, 1883. He wrote a number of works on topics relating to the Bible and Palestine, among the earliest being the following, in Russian: *Foundations for a History of Culture in Biblical Times* (St. Petersburg, 1912; Yiddish trans., 1923); *A Historical Atlas of Palestine* (St. Petersburg, 1913); *The Chief Problems of Bible Study* (St. Petersburg, 1913; Hebrew trans., Odessa, 1914). After the first World War he was elected to the Lithuanian parliament and from 1919 to 1922 was secretary of Jewish affairs in the cabinet. He was a delegate to the Twelfth and Thirteenth Zionist Congresses, a member of the Zionist Executive and later of the Jewish Agency. In 1923 he moved to Berlin.

His later writings included a history of Bible study and *The World of the Bible* (Hebrew, Berlin, 1925; German, Berlin, 1926; English, London, 1927); he was one of the editors of the *Encyclopaedia Judaica* and of the *Jüdisches Lexikon.* In 1933 Soloweitschik emigrated to Palestine, where he was director and manager of the branch of the Anglo-Palestine Bank at Hadar Hacarmel, a suburb of Haifa, until 1941; he was chairman of the Hadar Hacarmel Committee.

SOLTES, MORDECAI, educational executive and writer, b. Dzwiniacze, Poland, 1893. He was brought to the United States in 1900; here, in addition to receiving Yeshiva training, he secured various degrees in arts and education from New York University and Columbia University, and the Ph.D. degree from Columbia in 1924. In the following year he became director of education for the Jewish Welfare Board, a post which he still held in 1943. Prior to that he had been the director (1915-24) of the department of extension education for the Bureau of Jewish Education. Subsequently Soltes also was a lecturer (1927-29) in education and contemporary Jewish history at the Jewish Theological Seminary of America, and in Yiddish language and literature at the Graduate School for Jewish Social Work (1926-33). *The Yiddish Press, an Americanizing Agency,* a study by Soltes which first appeared in the *American Jewish Year Book* (1924-25) and was later issued in book form, remains the most comprehensive discussion of the history and role of the Yiddish press that has been produced in the United States.

Soltes presented and proved the argument that the Yiddish press, despite its use of a foreign language, served the function of introducing the Jewish immigrant populations to American practices and explaining the meaning of Americanism to them. The thesis evoked favorable critical and editorial comment from many groups.

In his capacity as director of education for the Jewish Welfare Board, Soltes wrote numerous pamphlets and brochures, most of which were published anonymously. Among these were compilations of program material on Moses Mendelssohn, Moses Maimonides, Baruch Spinoza, Rashi and Ahad Haam, as well as for the various Jewish holidays.

As chairman of the National Committee for Jewish Book Week (1941-42 and 1942-43) Soltes made the week a trilingual affair by adding Hebrew and Yiddish cultural divisions to the English division. He also instituted the practice of issuing, three times a year, a list of Jewish books in English, Hebrew and Yiddish published in the United States and elsewhere. Soltes also held executive and administrative positions with various Jewish welfare and communal organizations. He was, from 1922 to 1935, a member of the executive and administrative committees of the American Jewish Congress, and chairman of its committee on discrimination in colleges and professional schools.

Nathan Ricardo.

SOMARY, FELIX, economist, b. Vienna, 1881. After completion of his studies he worked at first in his home town, then went to Berlin, where he was active in the banking business until the outbreak of the first World War. During the War he became acting commissar general for the banks in Belgium, and later collaborated with Hjalmar Schacht in the supervision of the finances in the territories occupied by Germany. After the signing of the armistice, Somary was active on the many commissions regulating foodstuff traffic between the formerly hostile nations. In 1919 he went to Switzerland, where he was active in the international credit field. In this capacity he helped in the drafting and execution of the Young Plan. Somary came to the United States in the late 1930's, and in 1943 was in Washington, D. C.

His notable publications include his own new edition of Phillippowich's famous *Grundriss der politischen Ökonomie* (1923-36); *Bankpolitik* (Tübingen, 1915; 3rd ed., 1934); *Wandlungen der Weltwirtschaft seit dem Kriege* (Tübingen, 1929); *End the Crisis, A Plea For Action* (London, 1933).

SOMBART, WERNER, non-Jewish political economist, b. Ermsleben, Germany, 1863; d. Berlin, 1941. In his book *Die Juden und das Wirtschaftsleben* (1911; English trans., *The Jews and Modern Capitalism,* 1913) he accused the Jews of having created capitalism. Capitalism and Judaism were for him synonymous. He claimed that capitalism arose from the cold calculation of the desert nomad and was foreign to the Nordic farmer, and charged the "commercial spirit" of the Jews with having overwhelmed the utterly opposite nature of the Nordic, asserting that the Jews were never merchants and manufacturers, but only usurers.

Sombart's thesis was refuted by numerous scholars, Jews and non-Jews, who pointed out that capitalism arose in Italy and Western Europe at a time when the Jews were mostly confined to the ghettos, unable to participate in the commercial and financial life of the nations to any significant extent. By an arbitrary selection of the facts Sombart grossly exaggerated the part they played in the development of capitalism. Yet his thesis, although anti-Semitic only by implication, was taken up by anti-Jewish agitators, and was widely used in the anti-Semitic propaganda of Nazism.

In *Die Zukunft der Juden* (1912) Sombart sought to refute the charges of his critics and opposed the assimilation of the Jews with other races, but there his argumentation was even less convincing. The author, who had started as a Socialist and biographer of Marx (*Das Lebenswerk von Karl Marx,* 1909), became in his last years a staunch Nazi. In *Deutscher Sozialismus* (1934) he justified the exclusion of Jews from the spiritual and economic life of Germany

on the basis of his claim that capitalism was the exclusive expression of the "Hebraic spirit."

Lit.: Philipp, Alfred, *Die Juden und das Wirtschaftsleben . . .* (1929); Kohler, Max J., in *American Economic Review* (1912) 81-84; Schulman, Samuel, "The Jews and the Economic Life," *Judaean Addresses,* vol. 2 (1917) 77-90; Beard, Miriam, "Anti-Semitism—Product of Anti-Semitic Myths," *Jews in a Gentile World* (1942); Weinryb, Bernhard D., "Jewish History Nazified," *Contemporary Jewish Record,* April, 1941; Plotnik, Martin, *Werner Sombart and His Type of Economics* (1937); *Journal of Political Economy,* vol. 36 (1928), No. 6; vol. 37 (1929), No. 1.

SOMLÓ, BÓDOG, jurist and sociologist, b. Pozsony, Hungary, 1873; d. Kolozsvár, Hungary, 1920. He belonged to the circle of the eminent scholar Gyula Pikler. Starting from the analysis of law, which is a creation of society, both men delved into investigations concerning society itself. Pikler took the additional step toward physiological psychology in an effort to provide an ever more positive basis for his thought. Somló stopped at research on society and followed, or rather was in advance of the contemporary trend, by ascribing to the collectivity a predominant importance over the individual.

Somló studied in the Universities of Kolozsvár, Leipzig and Heidelberg. He was lecturer in the University of Kolozsvár to which, after teaching in the Academy of Law at Nagyvárad, he returned in 1905 as professor of philosophy of law. From 1918 to 1919 he was professor in the University of Budapest. He embraced Christianity. In 1920 he committed suicide.

He collaborated with Pikler on *Der Ursprung des Totemismus* (1900). He wrote books (in Hungarian) on the laws governing sociology, thus contributing towards making that field of research a science, and on state control and individualism (1903). He also published (in German) *Der Güterverkehr in der Urgesellschaft* (1909) and *Zur Gründung einer beschreibenden Sociologie* (1909). His posthumously published work (1921) dealt significantly with Niccolò Machiavelli, whose state philosophy was to dominate in the subsequent decades. During the first World War he wrote articles to disprove the sociological arguments of the anti-Semitic author Péter Ágoston.

SOMLYÓ, ZOLTÁN, poet, b. Alsódomboru, Hungary, 1882; d. Budapest, 1937. He collaborated on diverse newspapers in various Hungarian cities and published some twenty volumes of poetry and short stories. But these were the mere precipitates of a life of bitter poverty, soul-rending struggle and a ceaseless flow of rich poesy pulsating with the very warm blood of his tormented heart. In the humble atmosphere of his parental home he established many unconscious contacts with the suffering Jewish past and humble resignation, compelling recourse to one's own innermost self. These currents remained dominant throughout his life, and nothing could divert them.

Somlyó's friends and Jewish patrons of poetry and literature often asked themselves this question: "Why don't we do something to relieve his misery?" It was beyond their power. Somlyó's genius created for itself the conditions under which it throve: those of suffering. Through this attitude he encouraged editors to acquire for pennies his poetic gems; friends to take his misery for granted; philanthropists to remember him only occasionally and reluctantly. For him it was inevitable destiny to be poor, downtrodden and vulnerable; he beheld this world, which for him held out nothing but the martyr's sufferings, but the more poignant the pain, the clearer shone his vision of values eternal.

Many of his poems are deeply suffused with Jewish feeling, and not only those dedicated to the various phases of religious life, such as "Barmicvo," "Tekiah" and "Az apám" (My Father). In "Könnyező szem" (Tearful Eye) the spirit of Talmudic Haggadah is alive. All his poetry is highly subjective; the abyss between this life and himself is ever present, but he accepted his fate as a Jew. Although many of his innumerable poems belong to the finest specimens of Hungarian poetry, he was wholly ignored by official criticism. He was hardly "salonfähig" among Jews; he was just a sensitive recording instrument of all the anguish, misfortune and tragic fatality of humankind and especially of his own Jewish people. In his first published volume he gave himself the name of *Az átkozott költő* (The accursed poet; 1911). He bore his talent throughout life as a stigma; it weighed upon him like a curse, yet he beheld and expressed beauties such as only the chosen may.

Other volumes of his poetry were: *Északra indulok* (I Set Out Northward; 1912); *Végzetes verssorok* (Fatal Verse; 1916); *A halál árnyékában* (In the Shadow of Death; 1917); *A férfi versei* (Poems of the Man; 1922); and a posthumous volume of selected verse. His *Őszi regeny* (Autumnal Novel) describes the circle of young poets around Endre Ady at Nagyvárad. He contributed to all Jewish magazines, especially to *Mult és Jövő.* ANNA BETTELHEIM.

SOMMER, EMIL VON, army general, b. Bukovina, then Austria, 1866; d. Vienna, 1940. During the first World War he commanded the 24th Infantry regiment and was on the Austrian general staff for several months. He saw four years of front-line fighting in Galicia. Sommer was knighted and was the recipient of the Leopold Order, the Iron Cross and the Gold Cross. After the war he was retired from military service and was active in organizing the Jewish War Veterans of Austria which he headed for a time. But in repudiation of Sommer's strongly monarchist views the organization split, the majority of the war veterans being organized in the non-political Bund Jüdischer Frontsoldaten, while a minority gathered around General von Sommer, who became the leader of the organization of legitimist Jewish war veterans. His name was in the lime-light when, in the spring of 1938, he donned his general's uniform and decorations in defiance of the Nazis who ordered him to clean the street. Soon afterwards he was arrested and was reported to have been executed by the Nazis in 1940.

SOMMER, HARRY B., author and merchant, b. Hamburg, Germany, 1851; d. Philadelphia, 1924. He was brought to the United States in 1853 and educated at public schools in Philadelphia. Sommer was president of the Irving Literary Association (1868-70) and served on the board of directors of the Young Men's Hebrew Association of Philadelphia, of which he was president (1879-1880).

He contributed numerous humorous sketches to the Jewish and non-Jewish press and wrote under the pseudonym of "Arry O' Pagus." Sommer was author of *In Lighter Vein* (Philadelphia, 1891) and *Helping Carnegie* (Philadelphia, 1907).

Lit.: Morais, H. S., *The Jews of Philadelphia* (1894).

SOMOGYI, BÉLA, socialist educator and editor, b. Halastó, Hungary, 1868; assassinated at Budapest, 1920. He was a teacher in public and commercial schools, contributed to the social democratic press, and published pamphlets and books for the enlightenment of the people on agrarian production and on the program and aims of the Christian Socialist Party and the anti-Semitic People's Party. He organized the Social Democratic Teachers' Union. From 1897 on he edited the official social democratic daily *Népszava.*

When the collapse of the Austro-Hungarian monarchy resulted in a state of anarchy (1918), Somogyi became a member of the Workers' Revolutionary Council. When, however, the Communists took over

the reins of government, he refused every office and lived in penury rather than draw pay from the Hungarian Soviet regime. When the short-lived Communist regime came to an end, Somogyi resumed his place at the editorial desk of *Népszava,* seeking to fortify the working classes subjected to frightful terror and to assuage the passions of those wielding power.

The anti-labor, anti-Jewish press, however, branded him a Bolshevik, and one night, as he walked home from his office, accompanied by a young collaborator, Béla Bacsó, the two men were kidnapped by terrorists. Only their mutilated corpses were recovered when cast up by the Danube. Although the funeral oration spoken by the famous playwright, Jenő Heltai, denounced the assassins, they were never apprehended, named or prosecuted. The event aroused a great stir among organized labor throughout Europe.

SOMOGYI, MANÓ, sociologist and economist, b. Budapest, 1866; d. Budapest, 1928. He studied at the University of Budapest, did graduate work in various European universities, and entered the civil service in his homeland. In 1900 he was admitted to the faculty of the University of Budapest as private lecturer on national economy and social policy. The field of social policy was rather neglected in feudalistic Hungary, which suffered hundreds of thousands of its peasant stock annually to emigrate to the United States and Canada. As in many other fields of sociology, Jews in Hungary were pioneers in social policy as well. Somogyi tried to revive sound attemps at a social policy by writing on the Hungarian pioneers J. Derzsényi and I. Szokolay.

He wrote books analyzing the hygienic and economic status of Hungarian labor, on itinerant artisans and vendors, on socialist cooperatives in Belgium and on dividends for labor. Although he accepted the Christian faith, he was "purged" from the ministry of finance in 1920.

SON OF GOD (*ben 'elohim;* in Aramaic, *bar 'elahin*), a term which designates

(a) in the Bible:

1. every human being. As God is the father of all men (*Deut.* 32:6; *Isa.* 64:7; *Mal.* 2:10; *Matt.* 10:29; 23:9; *Luke* 12:32; 15:11-12), all men are "God's children" (*Mal.* 1:6; *II Macc.* 7:34; *Matt.* 5:45; *Luke* 6:35; *Enoch* 101:1).

2. the people of Israel, which is called "My first-born son" in *Ex.* 4:22-23 (*Psalms of Solomon* 18:4). Accordingly, the Israelites are "children of God" (*Deut.* 14:1; *Hosea* 11:1), "sons of the living God" (*Hosea* 2:1; *Jubilees* 1:24; *Wisdom of Solomon* 16:26; 18:13; *Psalms of Solomon* 17:27; *II Estras* 6:58; *Aboth* 3:14; *Sifre Deut.* 14:1; *B.B.* 10a; *Kid.* 36a). Judah bar Shalom (*Pesikta Rabbathi* 5, p. 14b) attacked the claim of the Christians to call themselves "children of God."

3. the angels (*Gen.* 6:2; *Job* 1:6; 2:1; *Ps.* 29:2; 89:7; 82:6, where perhaps the rulers and judges are meant; *Dan.* 3:25).

(b) in the Hellenistic and rabbinical writings:

4. the pious and just (Septuagint rendering of *Ps.* 89:20; *Sirach* 4:10; *Wisdom of Solomon* 2:13, 18; *Matt.* 5:9; *Aboth* 3:15; 5:20; *Psalms of Solomon* 13:9, "like a beloved son," cf. *Matt.* 3:17).

(c) in the Targum and in Hellenistic literature:

5. the Messiah (*Targum* to *Ps.* 80:16; *II Esdras* 7:28 et seq.; 13:32,37,52; 14:9; *Enoch* 105:2; *Mark* 1:11; *Matt.* 3:17). In rabbinical literature the Messiah is called "Son of God" only in such cases where a Messianic interpretation of a Biblical passage demands it (*Suk.* 52a, referring to *Ps.* 2:7; *Midrash Psalms* to the same passage; *Midrash Ex.,* referring to *Ps.* 89:28). But otherwise there is no instance of "Son of God" to mean the Messiah, as the rabbinical writings do not know of a divine sonship of the Messiah in the physical sense. Therefore, to cite but one example, Jewish literature never applies *Isa.* 7:14 (which should be rendered "the son of the young woman") to the Messiah. The term "Son of God," on the other hand, appears repeatedly as the name for the Messiah, in the Christological sense, in rabbinical polemics against Christianity. Thus Abbahu says (*Midrash Ex.* 29 to *Ex.* 20:2): "God says: 'I am the first' (*Isa.* 44:6), for I have no father; and I am the last,' for I have no brother; 'and besides Me there is no God,' for I have no son" (see also *Yer. Sab.* vi, 8d; *Midrash Deut.* 2 on *Prov.* 24:21; Abin in the name of Hilkiah, *Midrash Eccl.* 4:8; *Aggada Berachoth* in *Beth Hamidrash* 4:46).

6. Philo calls the Logos the "son of God" and the "first-born of God" (*De Agric. Noe* 12; *De Profugis* 20), in about the same sense as the Torah is called "daughter of God" in *Midrash Lev.* 30.

It is probable that Jesus called himself "Son of God" (*Matt.* 3:17; 16:16; 17:5) just as the pious and just called themselves "children of God." The word in its Christological meaning first appears in the epistles of Paul (*Rom.* 1:3,4; 8:3,32; *Heb.* 1:2,5,6; 5:5,8; cf. *John* 3:16; *Rev.* 2:18). PAUL RIEGER.

Lit.: Strack, H. L., and Billerbeck, P., *Kommentar zum Neuen Testament aus Talmud und Midrasch,* vol. 1, p. 371; vol. 2, p. 360.

SON OF MAN (*ben 'adam*), a term used in the Hebrew Bible, the Pseudepigrapha and the New Testament in varying implications. In the Hebrew Bible it is throughout a designation for mortal man in contrast to God (*Num.* 23:19; *I Sam.* 26:19; *Isa.* 56:2; *Ps.* 11:4 and other passages). Thus, in *Gen.* 6:2, *benoth 'adam,* "daughters of man," is in contrast to *bene 'elohim,* "sons of God." Non-Jews were also called "children of man" (*Deut.* 32:8; *Ps.* 57:5; 58:2). The phrase is a favorite one with Ezekiel; God summons him by that term over ninety times. This is probably because of the prophet's profound sense of the majesty of God; the expression tends to convey the vastness of the gulf between God and man.

In the vision of *Dan.* 7, there is reference to a glorious being "like unto a son of man" (*kebar 'enosh*) who is brought near to God and is to be given everlasting dominion (verses 13-14). This figure was, according to rabbinic tradition, supported by such modern scholars as Hastings and Charles, intended to symbolize the glorified people of Israel. At an early date, however, it was interpreted to mean the Messiah (Septuagint rendition of *Dan.* 7:13; *Yer. Taan.* ii, 65b; *Enoch* 46:2, 4; 48:3; 62:5, 7, 9, 14; *Targum Ps.* 80:18; *Matt.* 24:30; *Heb.* 2:6). Thus *Enoch* (about 100 B.C.E.) uses the expression to designate the Messiah who sits on a throne of glory at God's side, executing judgment on men and angels.

The Gospels quote Jesus as frequently using the term "son of man," to which Christian theologians have given a Christological import. It is the consensus of critical scholarship, however, that Jesus did not use the term to imply that he designated himself as the Messiah, for it is not likely that the phrase carried Messianic implications in the authoritative writings of the time. Had Jesus intended the phrase to raise Messianic pretensions, he would not have so carefully avoided any direct reference to the Messiahship which his disciples believed him to have held.

Lietzmann, Wellhausen and Driver have pointed out that the New Testament expression is based on the Aramaic vernacular of Jesus' day, and that it is the literal translation of *bar nash,* "man"; hence it could have had no Messianic

implication. Wellhausen (*Skizzen und Vorarbeiten,* part 6) argues that the revision of the Greek gospels in the 2nd cent. C.E. attempted to give "son of man" its later Messianic interpretation. ADOLPH J. FEINBERG.

SONCINO GESELLSCHAFT, a society of book-lovers founded in Berlin in 1924 for the production of fine editions of ancient Hebrew classics and modern belles lettres and for the general promotion of Jewish bibliographical lore. The society, limited to 800 members, was named for the famous family of early Hebrew printers to whom the first editions of the Talmud (1484) and of the Bible (1488) are due. Its productions, distinguished by their elegance of format and their pleasing new type-faces, were issued exclusively for private circulation and included, besides regular volumes, a bibliographical journal and periodical bulletins (*Soncino Blätter*). The moving spirits of the society were Siegfried Wolff, Heinrich Loewe, Hermann Meyer, Willi David, Moritz Simon and the publisher Josef Altmann, while among its honorary members were such well-known figures of Jewish literature and bibliography as Leo Baeck, Hayim Nahman Bialik, Martin Buber, Max Brod, Aron Freimann and Alexander Marx. Outstanding among its publications were: editions de luxe of the Hebrew Pentateuch and the book of *Jonah,* facsimile reprints of the Prague Haggadah of 1526 (the earliest with woodcuts) and of Eliezer Wallich's *Sefer Meshalim* (1679), and works by such moderns as S. J. Agnon and Arnold Zweig.

The rise of the Nazi regime in Germany forced the society into liquidation in 1934.

Distinct from the Soncino Gesellschaft is the Soncino Jewish Publication Society of London. This body, established in 1936 in connection with the Soncino Press of Jacob Davidson, concentrates on the production of Jewish classics and contemporary works in English. Its publications include: *Speeches, Articles and Letters of Israel Zangwill;* an English translation of the *Philosophy of Love* by Leone Ebreo (Judah Abravanel); *The Folklore of the Jews,* by Angelo S. Rappoport; *The Jew in the Medieval Community,* by James Parkes; *Anglo-Jewish Letters,* by Cecil Roth; and *Jewish Rights and Wrongs,* by Neville Laski. The Soncino Press itself was responsible for the first complete English rendering of the Talmud.

SONCINO, GERSHOM BEN MOSES, the most important of the Soncino family of printers, d. Salonika, 1534. He served under his uncle, Joshua Solomon Soncino, who allowed him occasionally to put his name to a book. The first of these that is known is his edition of Moses of Coucy's *SeMaG* (*Sefer Mitzvoth Gadol;* Soncino, 1488). In 1489 Gershom Soncino set out on his travels, in the course of which he searched for rare manuscripts, made friends with scholars, artists and distinguished priests, and set up printing establishments in various cities. In 1491 he was in Brescia, where he remained for several years and issued his famous Brescia Bible; from 1495 to 1497 he was the only printer at that time producing Hebrew books. In 1497 he was in Barco, after which he traveled for a while before settling in Fano in 1501. From 1506 to 1515 he was at Pesaro, then spent two years at Fano, and returned again to the former city. From 1521 to 1527 he was at Rimini; then he went by way of Salonika to Constantinople, where he was active for five years before retiring. Soncino printed over 150 books in Hebrew, Latin and Italian, distinguished by brilliant execution and careful lettering.

Among these were: Maimonides, *Mishneh Torah* (Soncino, 1490); Immanuel of Rome, *Mahberoth* (Brescia, 1491); *Selihoth* (Barco, 1497); Judah Halevi, *Kuzari* (Fano, 1506); Joseph Albo, *Sefer Ikkarim* (Fano, 1506); Bahya ben Asher, commentary on the Pentateuch (Pesaro, 1507); tractates of the Talmud (1508 et seq.); Nathan ben Jehiel, *Aruch* (1517); Elijah Levita, *Pirke Eliyahu* (Pesaro, 1520); *Kol Bo* (Rimini, 1525); Elijah Bashyazi, *Adereth Eliyahu* (Constantinople, 1530-31).

Lit.: Sacchi, M., *I tipografi ebrei di Soncino* (1877); Amram, D. W., *Makers of Hebrew Books in Italy* (1909) 70-145; Marx, Moses, in *Hebrew Union College Annual,* vol. 11 (1936) 427-501; Yaari, A., in *Kiryath Sefer,* vol. 13 (1936-37) 121-30.

SONCINO, JOSHUA SOLOMON, one of the most important Hebrew printers of the 15th cent. He commenced his activity in Soncino in 1483 with the publication of the Talmudic tractate *Berachoth* with commentaries, followed in two months by a similar edition of the tractate *Betzah.* The arrangement of the commentaries made by him became the model for future editions of the Talmud down to the present day. He also printed the first Hebrew prayer-book (the Roman ritual), the first complete Hebrew Bible (1488), the first editions of the Earlier and Later Prophets with explanations (2 vols.), the *Ikkarim* of Joseph Albo, and a large number of tractates of the Talmud, most of which are no longer extant.

About 1490 he left Soncino, probably because the press there had to close when the Jews were exiled from the duchy of Milan. He settled in Naples, where he worked for about two years. Here he published a number of smaller works, as well as a monumental edition of the Bible, and the first edition of the Mishnah with the commentary of Maimonides (1492), an especially beautiful work. Nothing is known of him after 1492. The printer Solomon Soncino, who issued books at Salonika from 1517 to 1526, may have been his son.

It is probable that the initiative for the greater part of Joshua Solomon Soncino's works came from his father, Israel Nathan Soncino; it is certain that he was aided in them by his brothers and other relatives. Since he printed mostly works that were in great use, such as prayer-books, Bibles, and Talmuds, but few have survived the wear and tear of time; the specimens that are known are distinguished by the beauty of the type. This serves to identify certain anonymous books as coming from the print-shops of the Soncinos.

SONDHEIMER, JOSEPH, pioneer, b. Bavaria, Germany, 1840; d. Muskogee, Okla., 1913. He was twelve years old when he came to the United States. He worked at first in Baltimore for a friend of his father, and then settled in St. Louis. During the Civil War he established commissary stations at Memphis and elsewhere. After the war he made a trip on horseback through the southwest, and opened several depots for the collection of furs, hides, and pecans along the road from Fort Scott, Kan., to Jefferson, Texas. He opened a depot at Muskogee in 1867, and five years later made it his headquarters. He would ride about on horseback, paying for furs in gold coin; in spite of the lawlessness of the frontier, he was never robbed.

At his death he was one of the large jobbers of hides in the country, and one of the largest buyers of pecans.

His son, SAMUEL (b. 1871), dedicated a window to the memory of his father in Beth Ahaba Temple, Muskogee. Another son, Alexander (b. 1873), although a member of the Presbyterian church, among other benefactions, gave $25,000 to Beth Ahaba Temple.

SONG OF MOSES, *see* MOSES, SONG OF.

SONG OF SONGS (*Shir Hashirim*), first of the Five Scrolls (Megilloth), a group of small books placed between *Job* and *Daniel* in the third division (Hagiographa or Kethubim) of the Hebrew Bible. It has eight chapters; its theme is the love of a maiden for a man and his return of the sentiment; much of it is in dialogue form, although other characters besides the maiden and her lover appear. There are many textual and contextual difficulties, and scholars have evolved many theories concerning the meaning or essence of the book; none of the theories has solved every problem of the work. Some hold it to be the drama of a peasant maiden who is deeply in love with her own young man but who had the misfortune to catch the eye of the king himself. According to this view there is a psychological struggle between the king and the girl, which ends by the former's realization that even a king can not wean away true love; being unable to win her heart, he finally renounces the maiden in favor of her lover. Others consider the book merely a series of unrelated love and wedding songs. They regard the references to the king as being purely allegorical, pointing out that to this day it is customary in western Asia for the bridegroom to be called "king" during the week of festivities which follows the wedding ceremony. This theory eliminates all problems arising from the lack of apparent unity in the book.

The work is ascribed to Solomon, and on this basis perhaps was admitted into the canon. Many of the rabbis of the classical period had their doubts about the propriety of canonizing a collection of secular love songs; yet on the other hand it is probable that the book was so popular that they could not reject it offhand. Jewish tradition solved this difficulty by interpreting the book as a song of love between God (the bridegroom) and Israel (the bride). The church fathers followed this lead, interpreting the bridegroom and the bride as Christ and the church. Like the other Scrolls, Song of Songs is read in the synagogue during the liturgical year; it is read on Passover, either because of its early spring setting (2:11) or else because the holiday commemorates the Lord's choosing of Israel as His own people.

Many of the lines of the book are distinguished poetry and, as in the case of much else of the Bible, a large number of phrases which have become stock in the English language were first set down in writing in the Song of Songs. Its atmosphere is that of love, fragrant and unashamed:

"Let him kiss me with the kisses of his mouth—
For thy love is better than wine" (1:2).

The country maiden does not have the aristocratic pallor of the city; she is "black, but comely"; and with youthful, if not peasant naïveté she admits that she did not know how to stop falling in love (1:6). The youth (or at least romantic fidelity would demand that the bridegroom be young) answers her yearning for him by chanting:

"Behold, thou art fair, my love; behold, thou art fair;
Thine eyes are as doves" (1:15).

The maid says of herself: "I am a rose of Sharon, a lily of the valleys" (2:1), and her beloved gallantly tells her that in his eyes all other girls are but thorns around his lily (2:2). The book was the first in literature to employ the familiar term "love-sick" (2:5; 5:8).

A lovely description of spring is found in 2:11-13, beginning:

"For lo, the winter is past,
The rain is over and gone;
The flowers appear on the earth;
The time of singing is come."

The lover addresses his sweetheart as his dove (2:14; 6:9), a metaphor which has become general. Other phrases which have entered common usage are: the voice described as sweet (2:14); dawn painted as "until the day breathe, and the shadows flee away" (2:17; 4:6); lips as a thread of scarlet (4:3); love as a ravishing of the heart (4:9); well of living waters (4:15, but also elsewhere in the Bible); "fairest among women" (5:9; 6:1); comparing a beautiful woman to the dawn, "fair as the moon, clear as the sun" (6:10); describing something beautiful as "the work of the hands of a skilled workman" (7:2); eyes compared to a pool of water (7:5); a person in love is "held captive" in his sweetheart's purple tresses (7:6); "love is strong as death, jealousy is cruel as the grave" (8:6); "many waters cannot quench love, neither can the floods drown it" (8:7; the condemnation of the man who would give all his substance for love, in the very next line, is clearly a pious interpolation); "make haste, my beloved" (8:14).

Some metaphors speak of climatic and local preference; they are either meaningless or of doubtful meaning to one unfamiliar with the life and manner of speech of the Orient. The bride's hair is compared to a flock of goats (4:1; 6:5); her neck is like the tower of David (4:4); her nose is like the tower of Lebanon (7:5). The vivid imagery of the book, its frank sensualism as regards the emotions expressed, the scenes portrayed and the physical descriptions of both the man and the woman do occasionally offend the modern reader.

Of tremendous though delicate power and keen psychological understanding are the two love dreams (3:1-5; 5:2-7), in which are repeated the frequent themes of the maiden seeking for her lover and her disappointment on waking.

It is significant that God's name is not mentioned in the entire book except in 8:6, where it is used as the symbol of power. When the daughters of Jerusalem are adjured, not God's name is invoked, but rather the gazelles and hinds of the fields (2:7; 3:5); this may of course point to early composition or at least to a vestige of animal worship. The book as we have it is undoubtedly of late compilation (perhaps the 2nd cent. B.C.E.) by the hand of a sensitive poet whose aim is to depict married love as an idyl; he uses, however, some very ancient folk songs for some of his material.

Song of Songs was probably interpreted allegorically very soon after its appearance, thus making its inclusion in the Bible feasible. It is of interest that the book is read by many pious Jews every Friday evening, because of its religious idealism as interpreted by tradition, Israel becoming here the bridegroom, and his bride being the Sabbath. Solomon Alkabetz used the theme of the Sabbath bride in his *Lechah Dodi,* a

composition which, in the words of Solomon Schechter, "is perhaps one of the finest pieces of religious poetry in existence." The phrase which gives the poem its title comes from the Song of Songs (7:12): "Come, my beloved." So profoundly devotional has the book been considered throughout the ages that the ancient rabbis found an acrostic for the month Elul (the period of penitent preparation for the high holy days) in the phrase *'ani ledodi vedodi li* ("I am my beloved's, and my beloved is mine"; 6:3), since the letters Aleph, Lamed, Vav, Lamed form the Hebrew word Elul and the passage signifies allegorically, if not mystically, that Israel is the beloved of God.

The themes of Song of Songs have inspired many artists. Ephraim M. Lilien made a notable series of illustrations covering the entire book (1905).

SONNE, ISAIAH, scholar, b. Poland. After receiving his preliminary training in his native country, he went to Italy and attended the University of Florence and the Collegio Rabbinico, which flourished there from 1899 to 1914.

Sonne completed his studies at the University of Zurich, where he was graduated. After a short interval of teaching in the Jewish Gymnasium of Lodz, Poland, Sonne returned to Florence and published several results of his studies, writing in Hebrew, Italian, German and English. From 1936 to 1938 he taught at the Collegio Rabbinico (for Sephardic Jews) on the Isle of Rhodes. Sonne contributed to the *Encyclopaedia Judaica,* the *Jewish Quarterly Review,* and to various Italian and Hebrew periodicals.

He especially enriched the knowledge of the history of Jewish printing and medieval Jewish poetry, of Jewish education and bibliography, and of the philosophers Leone Ebreo (*Intorno alla vita di Leone Ebreo;* Florence, 1934), Uriel Acosta and Baruch Spinoza. When the Italian government adopted Nazi principles and practice concerning the Jews, Sonne emigrated to the United States, and became associated with the Hebrew Union College, in Cincinnati. He was the first Jew coming from Italy who joined the "Jewish College in Exile" as lecturer and research professor. His *Expurgation of Hebrew Books—The Work of Jewish Scholars,* published in 1942, showed that the expurgated editions of the 16th cent. were the best critically because they were edited by Jewish scholars, and not by renegades, as had previously been assumed.

SONNEMANN, LEOPOLD, banker, publisher and German deputy, b. Höchberg, near Würzburg, Germany, 1831; d. Frankfort, Germany, 1909. In collaboration with H. B. Rosenthal, a banker, he published a penetrating financial report, "Geschäftsbericht" (1856), in the *Frankfurter Handelsblatt,* advocating freedom of political thought. Later the paper appeared under various titles until it finally became the *Frankfurter Zeitung* (1866). From 1867 on Sonnemann was its sole owner. He was one of the founders of the

Leopold Sonnemann

Volkswirtschaftlicher Kongress, and for decades labored at its meetings as reporter on banking and stock exchange systems. From 1871 to 1876 and from 1878 to 1884 he was a deputy in the Reichstag, as a representative of the Süddeutsche Volkspartei (Southern German Democratic party). For years he was a member of Frankfort's council of aldermen. In his will he devised that the *Frankfurter Zeitung* continue its policy of political freedom, but that it should maintain a friendly attitude toward social and political trends, be favorably disposed toward improvements, and always be willing to help the economically weak.

Lit.: Geschichte der Frankfurter Zeitung (1911); Sonnemann, Leopold, *12 Jahre im Reichstage, Reichstagsreden* (edit. A. Giesen, 1901).

SONNENFELD, *see* COLONIES, AGRICULTURAL.

SONNENFELD, HUGO, jurist and communal worker, b. Silesia, 1863; d. Berlin, 1927. He established himself as a lawyer in Berlin, and took an active part in politics, belonging to the Liberal-Democratic Party. For some decades Sonnenfeld was a member of the city council of Berlin, and exerted great influence with his fellow-councillors and the municipal authorities of Berlin. For thirty years he was syndic of the union of German railroad engineers. Sonnenfeld was one of the foremost German counselors for political defendants, and prevented more than one judicial murder, as in the Konitz trial (1900). A member of the board of directors of the Jewish community of Berlin and a leader of the Jewish liberal party, he was twice elected president of the Prussian Union of Jewish Communities.

Sonnenfeld was a founder of the Central-Verein deutscher Staatsbürger jüdischen Glaubens, for many years member of its board, and later on its vice-president. As a conscientious Jew, Sonnenfeld devoted much of his money and time to charitable work. Year after year he gave presents to 400 poor children, Jewish and non-Jewish, and he devoted half his annual income to Jewish and secular charitable institutions.

SONNENFELS, JOSEPH VON, jurist and author, b. Nikolsburg, Moravia, 1732; d. Vienna, 1817. He was the grandson of Michael Hasid, city and state rabbi in Berlin. His father, Lipmann Berlin, who was raised to the nobility after he and his sons were baptized, had adopted the name of Alois Wiener, Edler von Sonnenfels, and become professor of languages at

the University of Vienna in 1745. Joseph Sonnenfels studied law. In quest of literary achievements he became a member of the Deutsche Gesellschaft which he had helped to establish. There he ardently espoused liberalism after the Berlin pattern. He became professor (1763) and twice dean of the University of Vienna. In his weekly periodical, *Der Mann ohne Vorurteil* (1765-67, 1769, 1775), he fought for a newly instituted subject, *Polizei- und Kameralwissenschaft,* against social and literary evils, and especially for a permanent legitimate stage. As a result of his essay, *Über die Abschaffung der Tortur* (Zurich, 1775), and due to his persistent struggles, the rack was abolished in the German parts of Austria, in the Temesvar Banat, and in Galicia.

Sonnenfels played a large part in the formulation of Joseph II's Edict of Tolerance (1781), which emancipated the Jews. He was councillor to the Austrian chancery, chairman of the committee on studies and censorship (1779), and became president of the imperial academy of fine arts in 1811.

His books on criminology (1765), trade (1768) and finance (1765) passed through several editions, and were used as textbooks until 1848. His works include *Über die Liebe des Vaterlandes* (Vienna, 1771); *Briefe über die Wienerische Schaubühne* (4 vols., 1768; new ed., A. Sauer, Vienna, 1884); *Betrachtungen über die neuen politischen Handlungsgrundsätze der Engländer* (Vienna, 1764); *Grundsätze der Polizei-, Handlungs- und Finanzwissenschaft* (3 vols., 1765-76); *Gesammelte Schriften* (13 vols., 1783-87).

Lit.: Kopetzky, J., *Joseph und Franz von Sonnenfels* (1882); Müller, W., *Joseph von Sonnenfels* (1882); *Allgemeine Deutsche Biographie,* vol. 34, p. 628 et seq.; Simonson, F., *Joseph von Sonnenfels und seine Grundsätze der Polizei* (1885); Wurzbach, *Biographisches Lexikon der österreichischen Monarchie,* vol. 35, p. 332 et seq.; Landshuth, *Toledoth Anshe Hashem* (1884) 16 et seq.

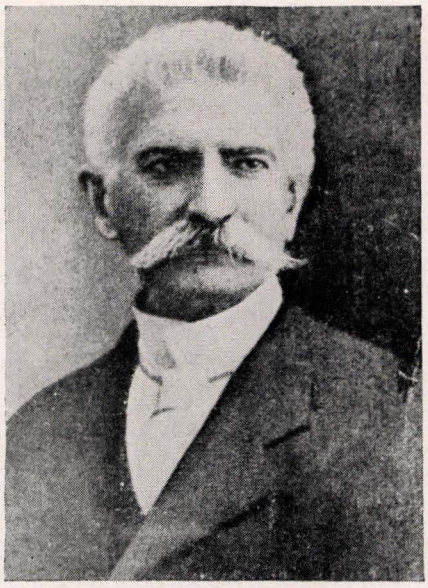
SONNENSCHEIN, EDWARD ADOLF, linguist, b. London, 1851; d. Bath, England, 1929. He studied at London and Oxford, and was granted several outstanding scholarships. From 1877 to 1881 he was assistant lecturer in humanity at the University of Glasgow, from 1883 to 1900 professor of Latin and Greek at Mason College, Birmingham, and from 1900 to 1918 professor at the University of Birmingham. The founding of the University of Birmingham was mainly due to Sonnenschein's ideas and initiative, which were approved and generously supported by Joseph Chamberlain. It was the starting-point of the new type of city-universities in England. Sonnenschein was commissioned to examine young officials by several departments of the British government.

He was founder and editor of the *Parallel Grammar Series* (1887), and joint founder of the Classical Association of England and Wales (1903). He published handbooks of Latin, Greek, and French grammar; studies on Plautus; *What is Rhythm?* (1925); and *The Soul of Grammar* (1927). During the first World War he published the pamphlets *Through German Eyes* (1914) and *Idols of Peace and War* (1915). His children assumed the name Somerset.

Lit.: Somerset, E. L., *The Birth of a University* (1934); *Classical Review,* vol. 43 (1929) 161 et seq.

SONNENTHAL, ADOLF RITTER VON, actor, b. Budapest, 1834; d. Prague, 1909. He was regarded as one of the outstanding actors on the German stage of the 19th cent., and as the greatest Jewish-born actor of his time. At Vienna, in 1850, Sonnenthal attended the famous Hofburgtheater and, inspired by the acting of Bogumil Dawison, asked Dawison for an audition. The actor, recognizing his talent, recommended him to a dramatic school. In order to pay his tuition fee, Sonnenthal was compelled to work nights as a tailor, a trade which he had learned in 1848.

Sonnenthal first appeared at the Hofburgtheater as a voluntary supernumerary (1851). From 1851 to 1856 he acted in several Hungarian cities, and later in Graz and Königsberg. On May 18, 1856, at the invitation of the great actor Heinrich Marr, he made his real debut at the Vienna Hofburgtheater as Mortimer in Schiller's *Maria Stuart.* From this date until his death he was associated with this theater, except for his frequent tours abroad. In 1859 he received the title of Hofschauspieler, in 1870 was appointed stage manager, and from 1887 to 1890 was director of the theatre. In 1881, on his twenty-fifth anniversary at the theater, he was raised to the rank of nobility, being awarded the Order of the Iron Cross by the emperor, an honor never before conferred upon an actor. The celebration of his fortieth anniversary (1896) was marred by the anti-Semitic administration of Vienna, but his fiftieth jubilee (1901) and his seventieth birthday (1904) revealed his popularity to have reached far beyond the borders of the Austrian-Hungarian monarchy. Characterized by Heinrich Laube, director of the Burgtheater and noted dramatist, as "the foremost living German actor," Sonnenthal played the role of Wallenstein when the 100th anniversary of the first presentation of Schiller's trilogy was celebrated at Weimar.



Sonnenthal started his theatrical career with juvenile leads (Hamlet, Mortimer), then turned to bon vivant roles, and subsequently played heroic parts. He was greatest as Faust, Wallenstein, Lear and Nathan the Wise. Excelling in his earlier years in the French comedy and salon play—in 1858 he went to Paris for study—in his later years he was admired chiefly for his presentation of classic roles. But his talents were flexible enough to permit him to appear even in modern naturalistic plays, and he created the part of Gerhart Hauptmann's drayman Henschel. He toured through Germany and Russia, and played with great success in the United States (1882, 1899 and 1902).

His daughter, HELENE VON SONNENTHAL (b. Vienna, 1863; d. Vienna, 1922), a writer and journalist, edited his correspondence under the title of *Adolf von Sonnenthals Briefwechsel mit bedeutenden Künstlern* (1912).

Lit.: Eisenberg, Ludwig, *Adolf Sonnenthal* (1900); Lothar, Rudolf, *Adolf Sonnenthal* (1904); Minor, Jakob, *Aus dem alten und neuen Burgtheater* (1920); *New York Staats-Zeitung,* vol. 54 (1902), No. 13, p. 3.

SONNINO, BARON SIDNEY CONSTANTINO, Italian statesman and author, b. Pisa, Italy, 1847; d. Rome, 1922. He was the son of a wealthy Jewish father and an English Protestant mother, whose faith he adopted. After his graduation from the University of Pisa (1865) he practised as a lawyer for a while, but abandoned this profession as being in disagreement with his conscience. He entered the diplomatic service in 1867, served at the Italian legations of Berlin, Vienna, Versailles and Madrid, and in 1871 resigned and returned to Italy where, aided by his financial independence, he devoted himself to the study of the social and economic conditions of the populations of Tuscany and Sicily. Together with L. Franchetti, who assisted him, he published the result of these studies under the title of *La Sicilia nel 1876* (2 vols., Florence, 1877; 2nd ed., 1925).

Turning to journalism in 1878, Sonnino founded and edited the economic review *La rassegna settimanale,* which he converted into a political daily in 1882. Nine years later he founded the *Giornale d'Italia,* an authoritative moderate liberal daily, to the columns of which he contributed much and which—as some reports have it—he owned. Sonnino's literary achievements include translations of French

Sidney C. Sonnino

and English economic works, published in the series of the *Library of Social Science,* a commentary on the sixth canto of Dante's *Paradiso,* and contributions to *Nuova antologia.* His *Discorsi Parlamentari* (3 vols., Rome, 1925) and *I contadini in Sicilia* (1925) were published posthumously.

Sonnino's parliamentary career began in 1880, when he was sent to Parliament from San Lasciano, Tuscany. As a deputy he distinguished himself as an authority on agriculture, finance and foreign affairs, introduced legislation favorable to the oppressed classes, and from 1883 on passionately advocated desertion of the Triple Alliance by Italy and its siding with Great Britain. He was under secretary of the treasury under Crispi in 1893, and his finance minister in 1896. In this capacity he saved Italy from bankruptcy, but the Adowa disaster in the same year caused Crispi's cabinet to fall. Sonnino then passed over to the opposition, became leader of the constitutional party, and strongly opposed the policies of both the Socialists and of Luzzatti.

Sonnino twice became prime minister, for a short period in 1906 and again in 1909 to 1910. At the beginning of the first World War he was foreign minister again in the Salandra cabinet, and thus was able to fulfill his old cherished policy and sign the London agreement in 1915, by which Italy sided with the Allies. Keeping his ministry also under Orlando, he was the second Italian delegate at the Peace Conference in 1919. After Orlando's fall he retired. In 1920 he was named a senator for life.

SOOTHSAYING, *see* DIVINATION.

SOPRON (in German, **Ödenburg**), city in Hungary, location of one of the oldest Jewish communities of the country. In a petition of the year 1526 the Sopron Jews claimed that their cemetery had been in existence since the 9th cent. In official documents they first appear in the 14th cent. when they lived in a separate street. Previously, under the tolerant Árpád dynasty, they may have enjoyed full equality, and therefore may have had no "history."

From the 14th cent. on until their expulsion in 1526, and even subsequently, for three centuries, their history was that of patient, cautious struggle against the well-privileged German citizenry of Sopron which tried to ruin and destroy them. In 1360 they had to seek refuge across the Austrian border in a general expulsion of the Jews from Hungary by Lajos the Great; they remained in the near-by Wiener Neustadt continuing to lend money to the burghers of Sopron. With the consent of Rudolf of Austria their credits were "killed" (cancelled), and when in 1365 they were allowed to return to Sopron, they had to sue the Sopron burghers who had taken possession of their houses. In 1379 the real estate register of the city listed twenty-seven Jewish-owned houses; the Jews then lived in all parts of the city.

In 1440 Queen Erzsébet gave the houses of the Jews to the city burghers and ordered the Jews to confine themselves to four houses. The following year she mortgaged Sopron to Frederick III who protected the interests of the Jews. In 1490, following the death of Mátyás the Just, the city imprisoned all Jews until they would consent to a cancelling of their credits; the queen-widow and the regent had to intervene on their behalf.

The guilds attempted to keep the business activities of the Jews within such limits as would not affect their own interests; at the same time, however, the city imposed special taxes and customs upon the trading Jews. They were allowed to deal in a certain kind of cloth only and were not permitted to make new clothes for Christians. In the city market they were barred from selling certain kinds of merchandise.

Under Ulászló II (1490-1516) they were plied with taxes for various purposes; in return the king and his successor, Lajos II (1516-26), granted them their, often unavailing, protection. The Sopron Jews finally lost the struggle in 1526. Although there was not the remotest connection between the presence of Jews at Sopron and the battle of Mohács, lost against the Turks in that year, the Jews were expelled from Sopron by grant of Queen Mária. At that time their number was estimated at 500. Their synagogue stood in what was then known as the "Jewish" street. On their expulsion they were robbed and their houses pillaged; their parchment scrolls were used to bind books and were conserved in the city archives until modern times. From these it is apparent that they cultivated the study of the Talmud, Bible exegesis and Maimonides.

Among their rabbis were: in the 14th cent. Meir, referred to as an authority by Jacob Mölln; in the 15th cent. Kálmán, Geld, Jacob and Judah, the latter mentioned by Gedaliah ibn Yahia among the great Ashkenazic rabbis; in the 16th cent. Merhell.

Following their expulsion, the Jews of Sopron sought refuge mainly at Mattersdorf (Nagymarton) and Eisenstadt (Kismarton), and Lakenbach (Lakompak). They formed an important element in what became known later as the Sheba Kehilloth. For their livelihood and in order to be able to the protection money to their noble landlords, they still depended on the trade with Sopron, a city well protected from the vicissitudes of war, and their protectors secured permission for them to peddle in the city. The burghers then accused them of espionage on behalf of the Turks. In 1615 peddling was forbidden. In the late 17th cent. the powerful and benign feudal lords of Esterházy secured permission for one of "their" Jews at one time to visit Sopron on two fixed days of the week; in the course of the next 150 years enlightenment, improved economic conditions and a gradual softening of the self-sufficient citizenry of Sopron increased the number of these days from two to five; some Jews even rented rooms at Sopron despite the official prohibition.

In 1840 a law adopted by the Hungarian diet gave the Jews admission to the cities. Then the descendants of those driven out three centuries ago began to

come back to Sopron, at first retaining their membership in the religious communities from which they came. Anti-Jewish demonstrations in Sopron flared up from time to time until 1858. In 1868 a rabbi, Lazar Alt, was called, and in the following year a cemetery was laid out. Then came the synagogue (1876) and the school (1884). An Orthodox community seceded in 1873; their rabbis were Manó Grünwald and Simon Posen (from 1930 on); the latter headed a Yeshiva founded in 1917. The main community, from 1896 on, was led by the historian, Rabbi Miksa Pollák.

In 1920 Sopron had 2,483 Jews in a total of 35,000; a decade later there were 1,885 Jews in a total of 36,000. The decrease of 24.1% in the Jewish population was due to the annexation to Austria of Burgenland, belonging to the economic sphere of Sopron. As a result of this, many Jews removed from Sopron. Two important textile works, the Sopron Cotton Works Gyula Eisnmann and Sopron Silk Industries Ltd., were the contribution of the Sopron Jews to the economic rehabilitation of Hungary after the first World War.

The occupation of Austria by Germany drew Sopron into the sphere of Nazi agitation. The legal status of the Sopron Jews from that time on was defined by the Hungarian anti-Jewish laws from 1938 to 1942.

ANNA BETTELHEIM.

SORAUER, PAUL, botanist, b. Breslau, Germany, 1839; d. Berlin, 1916. He was regarded as one of the originators of phytopathology. Sorauer published the results of his studies in *Zeitschrift für Pflanzenkrankheiten,* which he edited from 1891 until his death, and in his valuable works which include *Handbuch der Pflanzenkrankheiten* (1886-87; 3rd ed., 1905-12); *Atlas der Pflanzenkrankheiten* (1887-93); *Über Pflanzenschutz* (1892; 5th ed., 1910); and a popular treatise on the physiology of plants for the use of gardeners (London, 1895).

Lit.: *Nature* (London), vol. 96 (1916) 600; *Zeitschrift für Pflanzenkrankheiten,* vol. 26 (1916) 6-17.

SORORITIES. The oldest national Jewish sorority is Iota Alpha Pi, organized at Hunter College in New York in 1903. Four others were subsequently formed. In 1943 they had about ninety chapters and over 12,000 members, divided as follows: Iota Alpha Pi, thirteen chapters and about 1,000 members; Alpha Epsilon Phi (organized 1909), twenty-six chapters and over 4,500 members; Phi Sigma Sigma (organized 1913), nineteen chapters and over 2,500 members; Delta Phi Epsilon (founded 1917), sixteen chapters and about 2,000 members; Sigma Delta Tau (founded 1917), seventeen chapters and about 2,300 members. The chapters were located in about sixty-five universities in all parts of the United States and including most of the institutions attended by Jewish girls.

SORS (STERN), IVAN, artist, b. Réca, Hungary, 1895. Most of his mature years were spent in Czechoslovakia as cartoonist and illustrator for leading periodicals and publishers at Prague and elsewhere. He was for two years on the staff of *Marianne* at Paris. His sketches were published in his *Album* of the Geneva Peace Conference (1922), in *Figures parisiennes* (1933), and in an album of 300 portraits of Czechoslovakian deputies. In 1928 he visited the United States, illustrated Isaac Landman's *Christian and Jew* (1929), and made portraits of leading personages. Sors returned to the United States in 1940, and in 1943 was living in New York city, working on a series of plaques and medallions of Judaica for the Samuel Friedenberg collection. He also conducted art classes, and was a contributor to the *Universal Jewish Encyclopedia.*

SORSBY, ARNOLD, surgeon, b. England. He received the M.D. degree from the University of Leeds, and became Hunterian Professor at the Royal College of Surgeons, London (1933-34 and 1941-43), and Montgomery Lecturer at the Royal College of Surgeons, Ireland (1941). His writings include: *A Short History of Ophthalmology* (1933); *Mayou's Diseases of the Eye; Student's Guide to Fundus Appearances* (1933); *Medicine and Mankind* (1941). Sorsby was president of the London Jewish Hospital Medical Society (1937).

SORSBY, MAURICE, surgeon, b. England, 1898. He was connected with several hospitals, including the London Jewish Hospital, and was an editor of *Medical Forum* and joint editor of *Pocket Monographs of Practical Medicine* and of *Short Histories of Medicine.* Sorsby wrote *Cancer and Race* (1931). He served as chairman of the Palestine Co-operative Investment Trust and as vice-chairman of the Anglo-Palestinian Club, and headed the London Jewish Hospital Medical Society.

SÓS, ENDRE, author, editor and lecturer, b. Hungary, 1905; in 1943 he was reported living at Budapest. He was twenty-six years of age when the Hungarian Cobden Association published his book, *Mi lesz Európával?* (What Is Europe Headed For?; 1931). Another book of his, *Európa drámája* (The Tragedy of Europe; 1936), was recommended by the Hungarian Cobden Association for publication to the Carnegie Endowment for International Peace. There followed *Cion bölcsei a horogkereszt árnyékában* (The Elders of Zion in the Shadow of the Swastika; 1937). From 1934 on he was editor of one of the Budapest newspapers which are published on Mondays only. In view of anti-Jewish restrictive legislation inaugurated in Hungary (1938) Sós, in his *Becsapott Ajtók Előtt* (Facing Barred Doors; 1938), urged a constructive cultural program for Hungarian Jews to allow for a free play of creative forces.

He also engaged in a nation-wide lecture tour endeavoring to bolster the morale of Jewish youth. His *Emberdömping* (The Dumping of Humans; 1939) dealt with the various aspects of emigration and in the early 1940's he was working on a book dealing with Jews in the Hungarian cities. He was one of the chief contributors to the Hungarian Jewish press of his time.

SOSKIN, SAMUEL, medical research worker, b. New York city, 1904. He received the Ph.D. degree from the University of Toronto, Canada. Soskin was appointed director of metabolic and endocrine research at Michael Reese Hospital, Chicago, in 1929; in 1943 he still held this position. He served as assistant professor of physiology at the University of Chicago (1932-41), and from 1941 on was professorial lecturer in physiology there. He conducted extensive researches in such fields as carbohydrate metabolism, diabetes, liver function and endocrinology. In 1936 he was made permanent secretary of the Metabolic Discussion Group of the Federation of American Societies for Experimental Biology, and he served also as chairman of the Illinois section of the Society for Experimental Biology and Medicine (1940-41).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 585.

SOSSNITZ, JOSEPH JUDAH LÖB, scholar, b. Birzhi, province of Kovno, Russia, 1837; d. New York city, 1910. At the age of nineteen he went to Riga, where he taught Hebrew and studied secular subjects; in 1888 he went to Warsaw to become editor of the scientific and Cabalistic departments of the encyclopedia *Haeshkol.* Sossnitz came to New York city in

1891 and engaged in educational work. He wrote many works in Hebrew on such subjects as Talmudic lore, astronomy, physics and geometry, including: *Achen Yesh Adonai* (Vilna, 1875); *Hashemesh* (Warsaw, 1878); *Hamaor* (Warsaw, 1889).

SOSUA, an agricultural colony of refugee settlers in the Dominican Republic, established in 1940. The colony was founded by the Dominican Republic Settlement Association (DORSA), of New York city, a non-sectarian non-profit corporation formed by a group of interested Americans with an initial grant of money from the American Jewish Joint Agricultural Corporation (Agro-Joint). Agro-Joint continued to finance the colony, and an appeal was made for more general support. The initial land grant for the settlement, more than 26,000 acres situated in the province of Puerto Plata on the north shore of the East Hispaniola island, was offered as a personal gift by the president of the Republic, Generalissimo Rafael L. Trujillo.

The first selected settlers, fewer than fifty in number, arrived in May, 1940. The colony was planned to be non-sectarian, and among the majority of the Jewish settlers who were mainly from the German-speaking countries of Europe was a small minority of non-Jews. By the beginning of 1943 there were more than 550 individuals, representing a total of thirteen nations. By then 6,500 acres of land were in use. For the 150 settler units who were ready for settlement seventy-seven homesteads had already been established. Other colonists were living in dormitories used for the newcomers in their period of training. Additional facilities included employee quarters, workshops, and two schools, where instruction was given to children and adults in farming and technical subjects as well as in the academic studies, including the Spanish language. Thirty miles of road had been built or improved. The homesteads, given to family units adjudged ready for individual farming, were valued at $1,600 each (eventually to be repaid by the settler), and consisted of a small farm with two cows, a horse and a mule, as well as a quantity of small livestock; tools; a frame house with its furniture; and some financial credit for engaging in a cash-producing cooperative enterprise. The cooperative farming of a variety of crops native to the island was, by 1943, yielding a surplus for sale in markets outside of the colony. Scientific farming was producing dairy products for an increasing market.

From its inception the colony was a center of general attention, and of some controversy, as a test of possible adjustment of dislocated urban Europeans to agricultural life in a subtropical climate. By 1943 it was evident that the colonists had been able to make a successful physical adjustment to the climate, and the project was generally considered to be well launched, although, owing to the difficulties of transportation of settlers, the colonists were not nearly so numerous as had been anticipated. Prior to the entry of the United States into the second World War, representatives of Peru, Venezuela and Brazil, impressed by the organization of Sosua, had visited officials of DORSA to confer on the possibility of similar settlements in their countries.

An interesting sidelight on the Sosua experiment appeared with the publication, in January, 1942, of an article based on archives of the Dominican Republic, reporting a plan of settlement of Russian Jews in Santo Domingo in 1882. The project was initiated by a then liberal leader of the republic, General Gregorio Luperon, and was sponsored by the Alliance Israélite Universelle. Negotiations, which had progressed to the projected transport of 200 families, were abruptly halted; the reasons for the collapse of the plan remained buried in the archives of the Alliance Israélite Universelle.

SOTAH ("the wife suspected of adultery"), fifth tractate of Nashim, the third division of the Mishnah and Talmud. It contains nine chapters, of which the first six are devoted to the description of the ordeal of the "bitter waters" undergone by the wife as a test of the truthfulness of her protestations of innocence (*Num.* 5:12-31). The remaining three chapters are devoted to other subjects which are loosely connected with various ideas expressed in the first part of the Mishnah. The contents of the tractate are:

Chap. 1. The repeated admonition of the husband to his wife not to be alone with her suspected paramour. If she disobeys the second warning she is taken to the Temple at Jerusalem for trial. *Chaps. 2 and 3.* The meal-offering of the woman, the writing of the scroll, the letters of which are scraped off and mixed with the water which the woman drinks; differences in law between priests and laymen, women and men. *Chap. 4.* Women who are warned by the court, and women who are not subject to the ordeal. *Chap. 5.* How the water affects a woman and her paramour if they are guilty; exegetical interpretations made on the day when Gamaliel II was deposed. *Chap. 6.* Insufficient testimony of a woman's unfaithfulness prohibits her from undertaking the ordeal. *Chap. 7.* Enumeration of the prayers, ceremonies and formulas which may be recited in any language and those which may be recited only in Hebrew; the blessings of the priests; the septennial reading of the Law by the king (*Deut.* 31:10-13). *Chap. 8.* The priest "anointed for war"; exemptions from military service. *Chap. 9.* Laws of the heifer the neck of which was broken in case of an untraced murder (*Deut.* 21:1-9); abrogation of laws; the spiritual qualities of various individual sages; the eight degrees of holiness.

The Tosefta consists of fifteen chapters which not only supplement the laws of the Mishnah but also contain notable expositions on moral qualities, as especially in chaps. 3 and 4, which show how God rewards and punishes "measure for measure." There are Gemaras to the tractate in both Talmuds; these contain many legends and tales about Biblical characters as well as many important historical narratives.

HIRSCHEL REVEL.

SOUL. The Biblical expressions for soul (*nefesh, neshamah* and *ruah*) all go back to stems which indicate a gust of air or the human breath, which fact indicates the belief in ancient Israel that it was through the breath that the soul entered the body. Hence the story of the creation of man contains the sentence: "And God breathed into his nostrils the breath of life; and man became a living soul" (*Gen.* 2:7). According to a perhaps still older idea, the soul dwelt in the blood or was identical with it (*Gen.* 9:4; *Lev.* 17:11; *Deut.* 12:23). In both conceptions the soul is the life principle of the body, the vehicle of all the functions of life. It leaves the body in death, which

results in the extinction of all the bodily functions. Next the soul becomes not only the bearer of life but the bearer of the spiritual life. At this point the terms *nefesh* and *ruah* acquire different meanings. *Nefesh* means the person himself and hence everything that appertains to his feelings and sensations, while *ruah* rather expresses the spirit that comes from without and is given by God. It is because of this spirit that dwells within him that man is akin to God and raised above the animals. Nevertheless, up to the post-Exilic period there was no metaphysical separation of soul and body, as can be seen from the fact that the only idea of a survival of the soul after death was in the form of a shadowy existence in the underworld.

In the last centuries before the Christian Era, the idea gradually grew that there was a distinction between the body and the soul and that the latter was immortal. The very skepticism in *Ecclesiastes* (3:21) proves that it was the prevailing view of the time that the soul after death ascended to God. The distinction between soul and body is found everywhere in both Palestinian and Hellenistic literature. Philo expands the idea to resemble the Platonic conception of the soul. He holds that the soul has descended from the higher world to this in order to unite with the body, and that its aim is to return to its supermundane existence. Philo's conception of the relation of the soul to the body shows his thorough hostility to the senses. According to him the soul, through its contact with the world of material existence, is robbed of its perfection and forced into the degradations of a life of compulsion. This contrast is taken over into the soul itself, in which reason and sensuality oppose one another. Philo connects this basic division of the soul into reasoning and sensuous parts with the various divisions of the power of the soul that had been handed down by Greek philosophy, but he does not pursue this connection consistently to arrive at a definite viewpoint in individual questions.

The Talmud also teaches a strict distinction between the soul and the body, and regards the soul as the divine part of man. According to a frequently expressed view, all individual souls were created at the same time as the world, and at the time of birth they join the bodies to which they have been destined. (*Yeb.* 62a). The relation of the body to the soul is beautifully compared to that of God to the world (*Ber.* 10a). However, the distinction between the soul and the body does not lead, as with Philo, to an opposition. The Talmud expressly and emphatically states that the soul comes pure from the hand of God and enters into an earthly existence; on the other hand, the evil inclination (Yetzer Hara), which impels a man to sin, is often considered to be the same as the sensual desires of the body. But good and evil are not opposed to one another in the same manner as the spiritual and the sensual. The identification of the evil inclination with sensual desire is stated more as a matter of empirical fact than as a metaphysical derivation of evil. Sensuality itself is not polluting, and the battle between good and evil comes to an end within the soul itself. Although the goal of humanity is in the future world, this world does not lose its value. The most profound and intellectual expression of this idea is in the words of Rabbi Jacob (*Aboth* 4:22): "Better is one hour of repentance and good deeds in this life than all the life of the world to come; better one hour of the bliss of the soul in the world to come than all the life of this world." The Talmud speaks clearly only in its religious conception of the soul and its relation to the body; its other expressions about the soul and its powers hardly permit one to form a uniform picture.

The treatment of the problem of the soul by the medieval Jewish philosophers was naturally ruled by their interest in the idea of immortality. It was from this viewpoint that Saadia sought to prove the individual nature of the soul and its independence of the body. He did not succeed in giving a clear concept of the immateriality of the soul. To him it is a light-like substance, more pure than the substance of the heavenly spheres, but conceived of as half material. The later Jewish followers were divided in their concept of the soul according as they followed Neo-Platonism or Aristotelianism. According to the Neo-Platonists, the individual soul proceeded from the world soul, was joined in this life to the body, and endeavored after death to return to its original home; however, it could attain its goal only if it had kept its spiritual nature and had not allowed itself to be polluted by the sensual desires of the body. The Aristotelians regarded the relationship of the soul to the body as that of form to matter; it was the life principle, which gave to the body its organic life. Accordingly, it could exist only in connection with the body. Only the intellect is independent of the body, which permits it to survive after death. On the other hand, this intellect was a part of the soul, itself a unit. The ancient commentators of Aristotle had tried to reconcile these contradictory views, and the discussions of various ways to reconcile them runs through all Arabian and Jewish philosophy.

The form of the doctrine of immortality delineated by Jewish philosophers is dependent upon these attempts at reconciliation. Most of the Jewish Aristotelians, such as Maimonides and Gersonides, assume that only the "attained understanding" which develops out of cognition is independent of the body and therefore immortal. This would limit immortality to thinkers; to avoid this, Crescas altered the Aristotelian conception of the soul so as to give it a substantial independence and thus make it immortal by nature.

Modern Jewish theology treats of the soul particularly in its relation to immortality, regarding it as the immortal part of man, but not attempting to assign to it specific powers or functions.

SOULS, TRANSMIGRATION OF (*gilgul hanefesh*), the doctrine that human souls after death sooner or later enter another body and thus enter a new life. This belief is closely connected with the ideas of the soul and immortality. It exists in two forms; according to one, the human soul can enter the body of animals or even lifeless forms of nature; according to the other, the course of the human soul in its various existences is a process of purification, and takes place only in human bodies.

The doctrine of transmigration of souls, which was especially accepted by the Karaites, is first mentioned in Jewish literature by Saadia; it is generally attacked by Jewish philosophers, but is defended by Isaac Abravanel and Manasseh ben Israel. It appears often in Cabala; it is found in organized form in the *Zohar,* it is further developed in the teachings of Isaac Luria, and in Hasidism it becomes a universal belief. According to these teachings, all human souls have a common origin in the spiritual unity of the primordial man (Adam Kadmon), sparks (*nitzotzoth*) of which form the individual souls, corresponding to the various

organs of Adam. The sin of Adam brought higher and lower souls into confusion; as a result, every soul has to pass through a series of incarnations determined by fate. The soul itself has no sex, which is determined by the body and may vary from incarnation to incarnation.

A special and rather esoteric form of the doctrine is the idea of "soul impregnation" (*'ibbur*), in which the actual soul of an individual is overshadowed by one or more other souls at some time in its existence. The purpose of this "impregnation" is either to give the host soul a higher status or to give aid to the wandering souls which have previously committed some sin for which they have to atone. In the latter case, if the guest soul has acquired a heavy load of guilt, its entering the host body can amount to a veritable case of possession; in this case it becomes a Dibbuk and harmful, and must be expelled.

The Lurian Cabala mentions numerous cases of incarnation in one or another of these ways. Thus the soul of Aaron is said to have been reincarnated first in Eli and then in Ezra; the soul of Jacob was reincarnated in Mordecai, while the soul of Isaac Luria was overshadowed by those of Moses and Simeon ben Yohai. On the other hand, the soul of Hayim Vital is mentioned as one that was never affected by the sin of Adam.

SOUSA DE MACEDO, ANTONIO, Portuguese statesman and author of Marrano descent, b. Oporto, Portugal, 1606; d. Lisbon, Portugal, 1682. He studied law at the University of Coimbra, and was graduated with the degree of doctor of civil law. He then became a judge, and was highly esteemed because of his impartial mind. When Portugal overthrew the Spanish government (1640) and John of Braganza became king of the country, Sousa was appointed secretary of Ambassador Antão de Almada, who was sent to England to obtain recognition of the independence of Portugal on the part of King Charles I of England. Having arrived at London in 1641, Sousa took an important part in the success of Almada's mission and in concluding the alliance between England and Portugal which was still in effect in 1943. From 1642 to 1646 Sousa was Portuguese minister-resident in London. In 1645 he published *Lusitania liberata,* setting forth John's rights to the crown, and in the following years he edited also several other political or court pamphlets.

In the civil war in England (caused by the conflict between King Charles I and parliament) Sousa, by order of his sovereign, arranged for a gratuitous supply of arms and ammunition for Charles. After the latter was captured, Sousa was the most reliable and finally the only intermediary between the imprisoned king and his wife and supporters. After the battle of Naseby, Sousa's activity became public, and he was violently attacked in parliament. In 1646 he was forced to leave England. Sousa was glad to be relieved of his mission because he detested England.

From 1650 to 1651 Sousa was Portuguese minister to Holland, where the position of a Portuguese diplomat was very difficult, since the armies and navies of the two countries were battling in Brazil at the time. From 1662 to 1667 Sousa was secretary of state in the service of Kings Alfonso VI and Pedro II. He then fell into disgrace.

Sousa published *Armonia politica dos documentos divinos com as conveniencias do Estado* (1651), in which he attempted to prove that the Bible furnishes all the necessary principles of government and diplomacy. From 1663 to 1666 he edited at Lisbon the periodical *Mercurios Portuguezes.*

SOUTH AFRICA. The connection of the Jews with South Africa dates from the 15th century. The researches of Prince Henry the Navigator of Portugal paved the way for the rounding of the Cape by the Portuguese explorers Bartholomeu Diaz and Vasco da Gama. Prince Henry's school of navigation was directed by Cresques, the Jewish cartographer, and it was information brought to him by Jewish travellers that gave him the idea of reaching the Guinea coast by sea. When Vasco da Gama set out on the voyage to India which resulted in the discovery of Natal in 1497, he was provided with nautical instruments, maps and sailing instructions by Abraham ben Samuel Zacuto, Astronomer Royal to Manuel II of Portugal, and he was accompanied by the Marranos (converted Jews), Fernao Martins and Joao Nunes. Nunes established relations between Portugal and India by conversations with the Moslems.

Two Jews were among the original shareholders of the Dutch East India Company, which governed the Cape of Good Hope from 1652 to 1795. By the end of the 17th century Jews were principal shareholders of the Dutch East India Company, and some became directors, including Isaac de Pinto, who drew up a plan of action for the mutual interest of the English and Dutch East India Companies.

Pioneers—Cape Colony and Natal

At the Cape, the Dutch East India Company recognised only the Dutch Reformed Church, and servants of the company who did not belong to this Church could not expect promotion. It is impossible to estimate how many converted Jews, or the children of converted Jews came to the Cape during the 17th and 18th centuries, but many Jewish names are found among the burghers at the Cape during the 18th century. The earliest recorded Jews in the company's service at the Cape are Samuel Jacobson and David Heijlbron, soldiers, baptised in 1669. There are records of other baptisms at the Cape during this period. Adam Tas, almost certainly of Jewish descent, championed the freedom of the burghers against Governor Willem Adriaan van der Stel. Several distinguished Cape Dutch families are said to be of partly Jewish descent.

In 1795 the rule of the Dutch East India Company was succeeded by a British military administration until 1803, when the British handed over the Company to the Batavian Republic. In 1804 the Batavian Governor, General de Mist, issued an ordinance providing for complete religious toleration. In 1806 when Major-General Sir David Baird took over on behalf of the British Government from the Batavian Republic, he confirmed this ordinance.

At the beginning of the 19th century observing Jews began to arrive at the Cape, the first being Dr. Siegfried Frankel (1808). Eleven Jewish immigrants from St. Helena between 1806 and 1831 included Nathaniel Isaacs, and his cousins, Saul, Edward, Henry and Richard Solomon. Nathaniel Isaacs was one of the first explorers of Natal; he urged on the Cape Government the desirability of that territory for commerce and colonization. He was made a chief by the Zulu King, Chaka, who granted him a large tract of land, including the site of Durban. His *Travels and Adventures in Eastern Africa* (London, 1836) has provided valuable data for historians and anthropologists. Saul Solomon with his brother Henry founded the firm of Saul Solomon and Company, later Government printers. In 1863 they became proprietors of the *Cape Argus.* Saul Solomon was elected in 1854 to the Cape Parliament and played an important part in securing responsible government for the colony. Saul Richard, and Henry Solomon became members of the Anglican Church, and their brother Edward Solomon became a missionary and Congregational

Minister. All four brothers contracted Christian marriages, and so did their sister, Margaret. The descendants of the Solomon family have distinguished themselves at the Bar and in public life. One of Saul Solomon's sons became a Judge, and three sons of the Rev. Edward Solomon were knighted for legal services.

Among the 1820 settlers brought out by the British Government to colonize the Eastern Cape Province were four Jewish families, the Slomans, the Nortons, the Simons and the Nordens. Samuel Norden, and Joshua Davis Norden who is commemorated by a tablet in Grahamstown Cathedral, died fighting in native wars. Benjamin Norden, ivory trader and merchant, was one of the first explorers of Natal. At his Cape Town house, the first recorded Jewish congregation in South Africa met in 1841. Aaron and Elias de Pass, who arrived from England in 1846, became the biggest Table Bay ship-owners and leaders of the fishing industry. They initiated large-scale sealing and whaling, started cold storage at the Cape by establishing an ice factory, and opened up commerce with South-West Africa, where they started the Pomona Copper Company in 1861. Daniel de Pass, son of Aaron de Pass, contested the right of Germany to annex the whole of South-West Africa, but he was only able to obtain the right to work the Pomona Copper Mine. It was Daniel de Pass who introduced Uba, the sugarcane most suitable to South African conditions, into Natal.

Early settlers from Germany were Isaac Manuel, a pioneer of the export trade in hides; Jonas Bergtheil, the pioneer cotton planter of Natal who established a German colony there, and became a member of the Natal Legislative Council before a Jew had sat in the British Parliament; Joseph, Julius and Adolf Mosenthal, who largely created the wool and hide export trade in the Eastern Province, and helped to establish the Cape mohair industry by importations of Angora goats from Asia Minor. Julius Mosenthal opened up European markets for ostrich feathers, and was co-author of the important book *Ostriches and Ostrich-Farming,* published in 1877; Maximilian Thalwitzer, introduced merino sheep to South Africa. The foundation shareholders of the South African College (later the University of Cape Town) included Thalwitzer and Dr. Frankel. Sir John Herschel, famous astronomer, a Christian of Jewish descent, went to the Cape in 1834, and drew up an educational system for the Cape Colony in 1838 at the request of the governor, Sir George Napier.

Jews were among those to establish the first secondary industries in the Cape Province in the Cape Colony. David Isaacs with his partner, R. Rothkugel, launched in 1874 one of the first firms to employ South African labour on South African materials. D. Isaacs and Co. made furniture from South African and imported woods, and carved the arms of the Chartered Company for the Salisbury Council Chamber. Mr. F. Ginsberg, later an M.L.A., established a candle and soap industry at Kingwilliamstown, and among the early manufacturers of cigarettes were Messrs. Policansky Bros. and Messrs. Hermann and Canard. Some Jews became farmers, notably Louis Abrahamsohn, vine farmer, and Messrs. Rosenbaum, Lax and Co., ostrich-farmers.

Public Life

The Jewish citizens of South Africa began early to take a part in public life. Jewish members of the old Cape Legislative Assembly included: Saul Solomon, Charles John Manuel, Bernhard Nahum Goldman, Louis Goldman, Michael Henry Benjamin, Simeon Jacobs (Attorney-General of the Cape from 1874 to 1882, who introduced the Cape Colony Responsible Government Bill), Ludwig Henry Goldschmidt, Louis Abrahamsohn, Barney Barnato, George Garcia Wolf, Col. (later Sir) David Harris, Herbert Sextus Harris, Charles Joseph Levey, Julius Weil, Charles Sonnenberg, Ludwig Wiener (in whose memory the public holiday Wiener's Day was instituted), and Advocate Morris Alexander, K.C., who, entering the House of Assembly as a Progressive in 1908, has continued ever since to take prominent part in politics.

Sir Richard Solomon, second son of Rev. Edward Solomon, entered Parliament in 1893, and was appointed Attorney-General in the Schreiner ministry.

Jonas Bergtheil was elected to the Natal Legislative Council in 1857, and after the granting of responsible government to Natal in 1893, Charles Phineas Robinson was elected to the Legislative Assembly.

Hyman Liberman, a prominent Cape Town merchant, and a leading member of the Cape Town Hebrew Congregation was Mayor from 1904 to 1906. He gave generously to charity, and on his death in 1923 left large bequests to the University of Cape Town, and to hospitals. Funds from his estate were used to add a wing to the National Art Gallery, Cape Town.

Pioneers in the Boer Republics

The Dutch farmers who trekked away from British rule established their own republics to the north of the Cape Colony and Natal in the middle of the 19th century. Jews were among the first citizens of the Orange Free State, and The South African Republic (Transvaal). Isaac Baumann, a German Jew, one of the first directors of the Bloemfontein National Bank, arrived in Bloemfontein in 1848, before the founding of the Free State, and was followed by the Ehrlich and Leviseur families. Gustav Baumann, his son, became Surveyor-General, and was responsible for the present layout of Bloemfontein. His son-in-law, Moritz Leviseur, a friend of President Reitz, fought against the Basutos at Thaba Bosigo. He founded the National Museum at Bloemfontein. A Belgian-Jewish trader, Theodor Julius Adolph Coqui, was one of the first signatories to a petition demanding the formation of an Orange River Republic, in 1853, and he helped to draw up the first constitution of the Orange Free State.

Although Jews, like Catholics, were supposed to be debarred from holding various executive offices, and from becoming members of the Volksraad in the Transvaal, a Dutch Jew, De Vries, became State Public Prosecutor in 1868, and chairman of the Volksraad in 1872; he received the President's thanks for his services in connection with the ratification of the Transvaal-Portugal treaty in 1869. Daniel Kirsch, a photographer, who held Yom Kippur services in his house at Pretoria, became a member of the Kruger Government. Leo Weinthal, born in Cape Colony, established a State Lithographic department at Pretoria, and became manager of the Government organ *The Pretoria Press.* Alois Hugo Nellmapius, an Austrian Jew who fought in the Sekukuni war, started the Hatherley distillery later taken over by Lewis and Marks. A friend of President Kruger, he was instrumental in obtaining the consecration of a Jewish cemetery at Pilgrim's Rest. President Kruger contributed to Jewish charities both in South Africa and in Palestine, and numbered several Jews among his intimate friends. Samuel Marks, who lent money to the South African Republic in the pre-Rand days, was one of them. In 1899 President Kruger urged the admission of Jews and Catholics to the franchise before the Volksraad.

Diamonds and Gold

The discovery of diamonds in 1867 near the Orange River, and in 1869 in Griqualand West, and of the Transvaal gold-bearing reefs, changed the history of South Africa. The mines brought economic prosperity to South Africa.

It has often been assumed that Jewish emigration to South Africa from Eastern Europe in the late nineteenth century

was connected with the discovery of diamonds and gold in the 70's. It is true that from 1882 onwards a number of Jewish immigrants came to South Africa from Russia, Galicia and Rumania, owing to anti-Semitic legislation and pogroms, but these immigrants were of a different type from the Jews who were among pioneers of the diamond and gold mines. The latter came for the most part from the Cape Colony, England, Germany, and Holland. The Russian Jews among them had practically all lived for some time in England.

As early as 1854 a son of Simeon Marcus found gold near Potchefstroom, and in 1854 George Livingstone, a member of the first Cape Town Jewish community, formed a company to mine at Smithfield, with the aid of Benjamin Norden, but this petered out; it was not until nearly 20 years later that the first goldfields were actually worked. Several Jews were among the pioneers. A few years later the centre of the industry was Barberton, where a Hebrew Congregation was started in 1883.

By 1871 a mining town had arisen at Kimberley. Among the pioneers of the diamond-fields were three men who became powers later on the Witwatersrand—Barnet Isaacs (known as "Barney Barnato"), Alfred Beit, and Lionel Phillips. Barnato, English-born, was at one time the most formidable opponent of Rhodes. He formed the Kimberley Central Diamond Mining Company, later amalgamated with De Beers, and in 1889 founded the Johannesburg Consolidated Investment Company, today one of the strongest financial companies in the Union. Alfred Beit, a German Jew, became Rhodes' financial right-hand, and was one of the founders of the Chartered Company. With the advent of deep-level mining on the Witwatersrand, Beit became leader of the gold-mining industry. He gave generously to universities in England and South Africa, and bequeathed a fortune to be used for educational purposes. He also left £1,200,000 for promoting communications in Africa, and a Beit Bridge links Rhodesia and the Union of South Africa. Lionel Phillips, after some years at Kimberley, joined the firm of Herman Eckstein as a mining engineer, became head of the firm on the death of Eckstein, and later, as president of the Chamber of Mines, played a leading part in the reform movement.

Another important Rand pioneer was Sam Marks, who, with his partner Isaac Lewis, not only controlled gold, coal, copper and diamond mines, but started the first industries in the Transvaal, establishing factories for the manufacture of glass, jam, spirits and bricks. They also conducted model farms, developing scientific agriculture.

The names of the early pioneers are commemorated by the names of streets, suburbs and institutions in Johannesburg, e.g. Jeppe Street, and Jeppestown, named after Sir Julius Jeppe, a German Jew who took part in the Sekukuni War. Because of his work for Johannesburg Hospital, the Julius Jeppe Extension was named after him. The Barnato Park High School was the gift of Solly Joel, nephew of Barney Barnato, to the city. The Hermann Eckstein Park, named after the first president of the Chamber of Mines, was presented to Johannesburg by Wernher Beit & Co. Rosettenville is named after Leo Rosettenstein.

The Boer war, which broke out in 1899, was a political invasion following as elsewhere an economic invasion. The Boers in the Republics had trekked away from the industrial revolution as well as from British rule, and wished to continue to lead a simple pastoral life in independence. Imperialists like Cecil Rhodes, on the other hand, wanted to see the whole of South Africa organized as one unit under the British flag. President Kruger refused the franchise to the mining population in Johannesburg, and denied the use of English in the courts and schools. A reform movement was formed to gain political rights for the mining immigrants ("uitlanders"). Alfred Beit, Max Langerman, and Lionel Phillips were members of this movement. In 1895 members of the Reform Committee in Johannesburg invited Dr. Jameson to enter the city with armed forces from Bechuanaland, hoping a successful revolution would follow. Alfred Beit and Max Langerman were implicated, and Lionel Phillips signed the letter of invitation to Dr. Jameson. At the subsequent trial, after the failure of the Raid, Lionel Phillips was condemned to death, but this sentence was commuted, and he was banished from the Transvaal. Barney Barnato took no part in the reform movement, but used his influence with President Kruger to get the reformers' sentences mitigated after the trial. Sam Marks considered the Boer War "a preposterous blunder."

In 1899, when the Boer War broke out, a number of Jewish citizens of the two republics joined the Boer commandos, for example the shop-keeper M. Segal who fought in General Hertzog's commando, his brother "Jakhals" Segal who joined Mr. Havenga, and Herman Judelowitz who harassed British posts near the Orange River, at the head of some 400 rebels. Jews at Klerksdorp and Boksburg held days of prayer to God to bless the Boer arms. The French Schneider factory sent out Messieurs Gruenberg and Leon who started an ammunition factory in the Transvaal. Leon lost an eye on active service. There were Jewish "bitter-enders," who refused to take the oath of allegiance to the British when captured. On the British side, Jews furnished more than their proportional number to the army and organized a Jewish ambulance corps. Ben Weil, hearing rumours of approaching war from the firm of Julius Weil in the Transvaal, hurriedly provisioned Mafeking.

Emile Nathan, later a Union M.P., was a captain in the Johannesburg mounted rifles, and Colonel (later Sir) David Harris, a member of De Beers Board for nearly forty years, commanded the Town Guard of Kimberley during the siege. He had taken part in several colonial wars beginning with the Gaika-Galeka campaign (1877-8). Rev. Harris Isaacs of the Kimberley Hebrew Congregation was mentioned in despatches by Lord Roberts. Rev. Dr. Joseph Herman Hertz was banished from the Rand in 1899 by the government, owing to his fiery pro-British speeches, and lived in Cape Town during the Boer War.

Sir Richard Solomon, half-Jewish by descent, as legal adviser after the war to General Kitchener and Lord Milner, assisted in drafting the terms of peace at Vereeniging (1902), and held the position of Attorney-General from 1902 to 1907. His brother Sir Edward P. Solomon formed the Transvaal National Party, the English-speaking wing of General Botha's Het Volk, and worked to obtain responsible government for the Transvaal. In 1907 responsible government was granted to the Transvaal and the Orange River Colony. In the 1907 Transvaal Parliament sat Richard Goldmann and H. Solomon (Legislative Assembly) and Max Langerman (Legislative Council), and Sir Edward P. Solomon was appointed Minister of Public Works in the Botha ministry. Wolff Ehrlich was elected member of the Orange River Colony Legislative Assembly.

The Union of South Africa—Politics

Cape Colony, Natal, the Orange River Colony, and the Transvaal, were united in one dominion in 1910, with responsible government. Gen. Botha was the first prime minister, and his chief colleague was General Smuts. The South African National Party, which Botha led, stood for a policy of conciliation between the English and Dutch in South Africa, and the maintenance of the British connection. Gen. Hertzog was at first a member of the Botha cabinet, but later he left the South African National Party, and formed the Nationalist Party, which stood for republicanism and a policy of "South Africa First." He made a pact with the Labour party, and came into power after the 1924 election,

forming a Nationalist-Labour government. Although nationalist, General Hertzog's party did not discriminate on racial lines. It welcomed English-speaking members who were willing to work for the complete independence of South Africa, and it was not anti-Semitic.

General Hertzog had many Jewish supporters, who sympathised with the Nationalists' desire for independence as much as those Jewish citizens who had fought for the independence of the Boers between 1899 and 1902. In 1926 Mr. Tielman Roos, Minister of Justice, stated that the Government viewed with sympathy the establishment of a National Home in Palestine. It is true that the Nationalist Government of 1930 did check immigration by passing a Quota Act which limited the number of immigrants per year to fifty from each of certain specified countries, chiefly in Eastern Europe. This had the effect of limiting the immigration of Jews, but they were not mentioned by name, and similar acts have been passed by other countries.

In 1933 General Hertzog was forced by the economic crisis which began in 1929 to form a fusion government in co-operation with General Smuts. In that same year Herr Hitler came to power in Germany, and a new element began to enter South African politics—organized anti-Semitism. Herr Hitler placed the organization of anti-Semitic activity in South Africa under Ernst Wilhelm Bohle, who was brought up in South Africa. The Fichtebund distributed many pamphlets in South Africa in English and Afrikaans. The South African Gentile (Christian) National Socialist movement (later known as the South African National Party) was inaugurated under Louis T. Weichardt, with uniformed storm-troopers (the Greyshirts). This movement was subsidized from Germany. In 1934 leading Greyshirts were found guilty at Grahamstown of defamation for circulating a South African version of the *Protocols of the Elders of Zion,* forged documents alleged to have been stolen from the Port Elizabeth synagogue. Another anti-Semitic body was formed under General Manie Maritz, known as the Blackshirts. Blackshirts and Greyshirts offered themselves as candidates at parliamentary elections, and mass demonstrations led to street fighting on several occasions. Various scurrilous anti-Semitic publications circulated, including an autobiography by General Manie Maritz, *My Lewe en Strewe,* on the lines of Hitler's *Mein Kampf.*

Gradually the purified Nationalist Party, which did not accept fusion, became imbued with the ideals of Nazism. In 1937 *Die Transvaler,* the first Nationalist daily in the Transvaal, appeared and advocated a programme of planned economic discrimination against Jews. In the parliamentary election of 1938, the Purified Nationalists, fighting the United or Fusion Party, made anti-Semitism a political issue. The outbreak of war in September, 1939, split the fusion government. General Hertzog resigned, and General Smuts formed a new cabinet. General Hertzog then joined Dr. Malan, leader of the Purified Nationalists, to form a new opposition party, the Herenigde Nasionale Party (the Re-United Nationalist Party). Soon afterwards General Hertzog resigned from the Herenigde Party and formed a new organisation, the Afrikaner Party, based on a platform of equal rights for English-speaking and Afrikaans-speaking South Africans. This party is not anti-Semitic. The Herenigde Party has remained anti-Semitic, though it has begun making overtures to the English-speaking section of the population.

The Immigration Act of 1937, which gave large powers to an Immigrants Selection Board, has reduced Jewish immigration to a mere trickle, but this does not satisfy the Herenigde Party, which demands the complete cessation of Jewish immigration. Its aims include the cessation of naturalization of Jews, an occupational permit system for aliens, and an occupational quota system limiting the number of Jews in commerce, industry and the professions. The "New Order" group of Nationalists under Oswald Pirow proposes to restrict citizenship to Christian National Socialist Republicans, with state control over admission to professions or business. The Ossewa Brandwag, under Dr. J. F. J. van Resnburg, has declared for an "authoritarian National-Socialist state, which would differentiate between full citizens and mere subjects, latter to include Democratic, anti-O. B. Afrikaners, Jews, etc." In August, 1944, the Greyshirts under Weichardt and the New Order under Oswald Pirow formed a united front. The United Party won a large majority at the last general election.

Jews in Public Life Since Union

The following Jewish members were elected to the first Parliament of the Union of South Africa: Sam Marks (Senator), Morris Alexander, Col. David Harris, Emile Nathan, and Lionel Phillips (Legislative Assembly). Since then the following have sat in the Union Parliament: Senator Franz Ginsberg, Sir Harry Graumann, Senator Wolff Ehrlich, Charles Phineas Robinson, Eli Buirski, Sir Ernest Oppenheimer (diamond and gold magnate who erected cutting works to make Kimberley independent of Amsterdam), Alfred Friedlander, Advocate Morris Alexander (the only member of the 1943 House of Assembly who was a member of the old Cape Parliament), Morris Kentridge, A. Goldberg, Major Bernard Friedman, Max Sonnenberg, Lieut. Col. Henry Gluckman, Adolf Davis, Mrs. Bertha Solomon, the first Jewish woman to be elected to the South African Parliament, and Senators G. Hartog, Fritz Adler, Felix Charles Hollander, and H. Basner. The last thirteen members named above were among those to be elected to Parliament after the 1943 general election.

The mayoral chairs of many towns in the Union have been occupied by Jews, including F. C. Hollander (Durban), Sir Ernest Oppenheimer (Kimberley), Louis Gradner (Cape Town), the late Sir Harry Graumann, M. J. Harris, and Morris Freeman (Johannesburg). A. Schauder (Port Elizabeth), on retiring from office in 1942, was congratulated by General Jan Smuts for his contribution to the war effort; who did much to introduce sub-economic housing into Port Elizabeth.

The Army

Many Jews, as recorded above, fought in the early wars against native tribes. Rabbi Henry Cohen, fought in the Zulu War of 1879. A number of Jews fought in the Boer War, both on the Boer side, and on the British. (*See* Diamonds and Gold).

During the 1914-1918 war, the 1st Victoria Cross awarded anywhere in the British Empire went to the South African Lieut. Alexander de Pass, an officer in the Indian army. It is estimated that more than 8,000 South African Jews served in various parts of the British Empire.

The Second World War began in September, 1939. By May, 1945, nearly 10% of the total South African Jewish community had joined the South African forces. A number of women joined the W.A.A.F.S., the W.A.A.S., etc. Casualties up till May, 1945, represented more than 10% of enlistments. Up to May, 1945, fifty-five Jewish Springboks had been decorated. Fourteen Jewish chaplains were appointed on full-time active service, Lieut. Col. Levinson being principal chaplain until his retirement, in 1943, when Rabbi W. Hirsch (Pretoria Hebrew Congregation) took over this position in a part-time capacity.

Several Jewish physicians have filled high positions in the South African Medical Corps during the present war (*see* "Medicine and Science" below). Two engineers have done notable service, Lt. Col. Disraeli Levenkind, M.C., decorated for his work during the Abyssinian campaign, and Major Alf Goldstein, railway engineer in Syria.

A number of German-Jewish immigrants to South Africa,

refugees from Nazism, joined the South African forces, and German refugees presented twelve field ambulances to the Government.

Trades and Occupations

South African Jews are found in all branches of commerce and most branches of industry; in the professions, particularly in law and medicine, but also in teaching and (to a lesser extent) on the staffs of universities, dentistry, architecture and accountancy, engineering and technology; in journalism, though only a few Jews have been in the editorial chair of any general newspaper; in the civil service, in some of the skilled trades, and in agriculture, though not to any great extent.

Secondary Industry

Since the gold content of the Witwatersrand reefs, on which the present economic prosperity of the Union is based, is not inexhaustible but is estimated to have a further life of about fifty years, the growth of secondary industry is of vital importance for the country. Jews have been prominent in the pioneering of South African industry, particularly in the field of clothing and woollen goods.

When Solomon Harris and his son Woolf Harris started the South African Woollen Mills in 1912, the venture was considered a wild gamble, but since then it has grown into a collection of four factories, which have produced blankets for the South African army during two world wars, supply South African government departments, and export to the Congo and Rhodesia. Among the pioneers in clothing manufacture were S. Roytowski and M. Mauerberger, who established cotton-spinning in South Africa. During the second World War, the Alpha-Harris Engineering Company had initiated the production of electrical motors on an industrial scale, and Messrs. Patlansky Brothers and Schauder of Port Elizabeth have done much to save the leather industry by the manufacture of chrome salts and other tanning agents previously imported.

Agriculture

Jews are among the country's leading farmers. The South African Ort-Oze was established at a conference held in Johannesburg in 1937, both to support the work of the overseas Ort-Oze and to encourage the training of South African Jewish youth in the skilled trades and in agriculture. The S. A. Ort Utility Co. Ltd., established in 1943, acquired a farm in the Standerton District, Transvaal, in 1944, which is being prepared as a training centre for Jewish farmers.

Law

Several South African Jews have distinguished themselves at the Bar and Side-Bar, and been raised to the Bench: Simeon Jacobs, Louis Edmund Benjamin, Leopold Greenberg, Manfred Nathan, R. P. Davis, Philip Millin. Saul Solomon, son of the Saul Solomon who came to the Cape from St. Helena early in the nineteenth century, became a judge, and his cousin, Sir William Henry Solomon, became Chief Justice of the Union in 1927.

Medicine and Science

The bulk of the important work done by Jewish scientists in South Africa has been in the fields of bacteriology and medicine. Those outstanding in 1945 follow: Dr. D. Ordman of the S. A. Institute of Medical Research has performed important work on the pneumococcus and relapsing fever. Dr. Golberg of the South African Institute of Medical Research pursued research on stilboestrol and vitamins. Dr. Finlayson engaged in research on the preparation of anti-sera against the venom of the button spider. Dr. H. A. Shapiro, editor of *Clinical Proceedings,* and Dr. H. Zwarenstein, senior lecturer in physiology at the University of Cape Town, have developed the well-known frog pregnancy test. Dr. J. Gillman has made important contributions to the sexual physiology of primates, and with his brother, Dr. T. Gillman, published important findings on nutritional disorders of the liver. Important research was done by Dr. I. Schrire on endocrinology; by Dr. L. Berk on the anaemias of chronic infections; by Lieut. Col. M. M. Suzman on pernicious anemia and nutritional deficiencies; by Dr. Norman Sapeika on pharmacology; and by Dr. L. Mirvish on mineral metabolism. Dr. I. Gordon, editor and part author of the standard South African work on medical jurisprudence, made an important contribution to the study of the mode of death in cases of medico-legal importance. Dr. Solly Zuckerman, F.R.S., author of *The Social Life of Monkeys and Apes* and *Functional Affinities of Man, Monkeys and Apes,* was a South African resident in England. During the second World War he performed important work in connection with blast injuries. Well-known doctors in the South African armed forces were Dr. Orenstein, director of Medical Services; Dr. Harry Nelson, director of the hygiene section of the Medical Corps; Major J. Penn, awarded the M.B.E. for work on plastic surgery; and Dr. H. G. G. Bernstein, decorated for services during the infantile paralysis epidemic in Malta. Dr. Brown, dentist (S.A.M.C.), invented a useful dental splint for fractured jawbones. Lieut. Col. H. Gluckman, M.P., was chairman of the National Health Services Commission which reported recently.

Brigadier Basil Schonland, a well-known physicist with the British army, was placed in charge of the National Council for the Co-ordination of Scientific Research established by the Union Government. Among veterinary surgeons Dr. Max Sterne conducted research on anthrax, and Dr. B. Horwitz on milk pasteurisation and preservation. Rebecca Lurie and Dora Weintroub did important research on timber-destroying fungi, in connection with the mines.

In the field of anthropology, Isaac Schapera, professor of anthropology, University of Cape Town, published a number of important works, including *The Khoisan Peoples of South Africa; A Handbook of Tswana Law and Custom;* and *Married Life in an African Tribe.*

Literature and Letters

In 1945 the most widely known South African novelist (in English) was Mrs. Sarah Gertrude Millin, wife of Justice Phillip Millin. She produced a number of realistic novels of South African life, including *God's Stepchildren* and *The Coming of the Lord,* an autobiography, *The Night is Long;* a study of South Africa, *The South Africans,* and biographies of Cecil Rhodes and General Jan C. Smuts. Literary and art critics include Dr. Joseph Sachs, author of *Beauty and the Jew; The Jewish Genius;* and *Irma Stern and the Spirit of Africa.* Julius Herman ("Herbert Skimpole") is author of *Bernard Shaw: the man and his work.* Dr. Wulf Sachs has written an interesting psycho-analytical study of the primitive African's contact with European civilisation, entitled *Black Hamlet.* The late Dr. Manfred Nathan, K.C., wrote two historical works *Paul Kruger: His Life and Times* and *The Huguenots in South Africa,* as well as numerous authoritative studies on South African law. Lewis Sowden published a study of South Africa, entitled *The Union of South Africa* (New York, 1943), and the well-known journalist Eric Rosenthal wrote a history of American achievement in Africa, *Stars and Stripes in Africa,* a biography of the late Gen. Dan Pienaar, and a popular work on the fall of Italian East Africa. The late Nathan Levi was author of the first biography of General Smuts to be published.

Dr. Joseph H. Hertz (in 1945 Chief Rabbi of the British Empire) wrote the first published work on the history of South African Jewry, *The Jew in South Africa,* a lecture re-

printed in pamphlet form. The *History of the Jews in South Africa,* by Dr. Louis Herrman, was published in 1930.

Jews have contributed their share to the development of Afrikaans literature. The Dutch Jew Joseph Suasso de Lima settled at the Cape in 1818, and later became a member of the Dutch Reformed Church. He wrote the first history of South Africa, *Geschiedenis van de Kaap de Goede Hoop,* as well as Dutch poems, plays and pamphlets, and a work defending the form of Dutch spoken at the Cape. He opened the first Dutch book shop in South Africa, and published the humorous weekly *De Versamelaar.* Jan Lion Cachet, a baptized Jew who came to South Africa from Holland in 1860, qualified as a Dutch Reformed Church minister and later became professor of theology. One of the founders of Afrikaans literature, Jan Cachet, was associated with S. J. du Toit as an original member of the Genootskap van Regte Afrikanders. He is best known for *Die Sewe Duiwels en Wat hulle gedoen het,* now an Afrikaans classic. He founded *Het Kerkblad.* Frans Cachet, his brother, a missionary, published in 1882 the bitter anti-British *Die Worstelstrijd der Transvaalers.*

Sarah Goldblatt, friend and literary trustee of the well-known Afrikaans author C. J. Langenhoven, has done much to further the cause of Afrikaans. She is the author of two works in Afrikaans: *Liefdes Kransie* and *Wolf en Jakhalsversies.* In 1944, *Die Soeklig,* a collection of musical lyrics, was published by Olga Kirsch.

David Fram, lyrical Yiddish poet, born in Lithuania and now living in Johannesburg, wrote a number of poems inspired by his South African experiences.

Art and Art Patrons

Moses Kottler, Lippy Lipschitz, Irma Stern and Harry Trevor are among the outstanding South African artists now living. Moses Kottler, Russian-born, is well known for his portrait busts (heads of General Hertzog, General de Wet and William Plomer, among others) and for his figure sculpture in wood and stone, including stone figures on public buildings.

Lippy Lipschitz went to South Africa from Lithuania in 1908. His powerful, abstract sculpture—executed in wood, ivory and stone—expresses symbolically a philosophical vision of life. Subjects from the Bible, and post-biblical Hebrew literature inspire him. He works in South African materials not previously used, e.g. colmari and silver-tree wood. He also produces paintings and monotypes. Irma Stern, born in the Transvaal, although she has produced sculpture, is best known for her oil paintings, of South African landscapes and of the native people, in exotic colouring. The oil paintings of Harry Trevor, one of the most promising of the South African artists in their twenties, are notable for strong form and vivid colour. Edward Wolfe, South African painter, has made a name for himself in England. The late Wolf Kibel, an artist of great originality and integrity, was born near Warsaw in 1903, his father being a cantor. After living in Vienna and Palestine, he emigrated in 1929 to South Africa, where he died in 1938. He produced a number of intensely individual townscapes, still-lifes and portraits in oils and pastel, in addition to monotypes and etchings. The late Hans Ludwig Katz was born in Germany, where he held a lectureship in the history of art. He came to South Africa as a refugee from Nazism in 1936, and died in Johannesburg in 1940. His distinguished oils, pastels and water colours, like the work of Lippy Lipschitz, and that of the late Wolf Kibel, symbolize an individual vision of reality. His mural paintings are to be seen in several large Johannesburg edifices.

The late J. H. Amschewitz worked in South Africa from 1916 to 1922 and returned to South Africa from England a few years before his death. He was well-known as a portrait-painter; his murals may be seen in a number of public buildings in South Africa and in England, such as the Royal Exchange, and South Africa House in London. Several of his etchings are of synagogue scenes. The late Herbert Vladimir Meyerowitz came to South Africa in 1925, and worked there a number of years before leaving to teach art on the Gold Coast. He died in 1945. He introduced architectural sculpture to South Africa. He and his wife Eva Meyerowitz did woodcarving and sculpture on many South African public buildings, including the S. A. National Art Gallery (Cape Town) the University of Cape Town, etc.

In Cape Town and other large centres of South Africa, the patrons of art have been almost exclusively Jews. A wing was added to the Cape Town Art Gallery from funds provided by the estate of Hyman Liberman. In this wing are housed a collection of old English masterpieces and South African paintings donated by Aaron de Pass. Sir Edmund Davis also presented the Art Gallery with a collection. Max Michaelis started, and financed to a great extent, the Michaelis School of Fine Art, now part of the University of Cape Town. The Johannesburg Art Gallery was created largely due to the efforts of Lady Phillips, and Sir Otto Beit donated £10,000 to it.

South African Jewish Communal Life

The first Hebrew Congregation in South Africa met on the eve of the Day of Atonement, 1841, at the Cape Town house of Benjamin Norden, an 1820 settler and pioneer. A week later a permanent congregation, the Tikvah Israel, or Society of the Jewish Community, was formed at a meeting held in the house of Simeon Marcus, who became the treasurer. On September 15th, 1849, a converted Cape Town house was consecrated as the first South African synagogue. The first minister was the Rev. Isaac Pulver.

Two men—Rev. Joel Rabinowitz and Rev. Alfred Philipp Bender—played vital roles in the formation of the Cape Town community. Rabbi Rabinowitz, who arrived in 1859, travelled to every part of the Cape Colony, and even extended his spiritual and philanthropic ministrations beyond its borders. During the year of his arrival, the Jewish Philanthropic Society (now the Cape Town Jewish Board of Guardians) was formed. Rabbi Rabinowitz continually worked for non-Jewish as well as Jewish charitable causes. He put the synagogue on a sound financial basis, and started regular Hebrew classes. In 1863 the first synagogue, specially designed for that purpose in South Africa, was consecrated, adjoining Government Avenue, Cape Town.

Rabbi Bender arrived in 1895 from England. During the early years of his ministry, he was strongly supported by Rabinowitz. Two major achievements in education in the first year of Rabbi Bender's ministry are partly attributable to the energy of Rabbi Rabinowitz—the founding of a chair in Hebrew at the South African College, now the University of Cape Town, and establishment of a Jewish Public School in Cape Town. Bender was appointed first professor of Hebrew. The Cape Town Hebrew Congregational School was opened in 1897 (subsidized by the Education Department of Cape Colony, it later ceased to teach Hebrew, and was dissolved after a re-organization of schools in 1920). In 1905 the Great Synagogue, present house of worship of the Cape Town Hebrew Congregation, was erected, being first used for the observance of Mayoral Sunday—Hyman Liberman having been re-elected mayor. In 1912 Rabbi Bender played a large part in the foundation of a Cape Jewish Orphanage, and in 1918 the Cape Town Jewish Aged Home was started. On Bender's retirement in 1937, he was succeeded by Rabbi Israel Abrahams.

The New Hebrew Congregation was founded in Cape Town in 1900; a synagogue, built in Roeland Street, was opened in 1902. Rabbi Kirzner was the present minister in 1945. A little later two Orthodox congregations came into

Capetown's Great Synagogue (from the Gardens). Courtesy, "The Capetown Hebrew Congregation, 1841-1941"

being. These built the Beth Hamedrash in Constitution Street, and the Beth Hamedrash of the Chasidim in Buitenkant Street. Rabbi Chaim Mirvish, who came to South Africa in 1908 as minister to the Constitution Street Beth Hamedrash, now minister of the Vredehoek Beth Hamedrash, is the senior rabbi in South Africa. In 1934 The Green and Sea Point Hebrew Congregation was opened and the foundation stone was laid by General Jan C. Smuts. The minister in 1945 was Rabbi Dr. A. T. Schrock. A Beth Din was established in Cape Town in 1933. A Reform Congregation was formed there in 1944.

The first synagogue was opened in Port Elizabeth in 1862, largely through the efforts of A. M. Jackson. In 1871 the first congregation was formed at the Diamond Fields, the Griqualand West Jewish Association, numbering Isaac Lewis and Lionel Phillips among its members. The first synagogue was erected in Kimberley in 1873. The first permanent minister was the Rev. Meyer Mendelssohn, who officiated from time to time in the Transvaal and Free State Republics. His son, Sidney Mendelssohn, was the compiler of a bibliography of South African literature, and left to South Africa the valuable collection of Africana, now housed in the library of the Union Parliament. Cecil Rhodes was a large donor to the second Kimberley synagogue which was commenced in 1901.

Oudtshoorn had a large congregation in the great days of the ostrich feather industry, formed in 1883. The Witwatersrand Goldfields Jewish Association, which later became the Witwatersrand Hebrew Congregation, was formed at a meeting convened by Emanuel Mendelssohn at Johannesburg in July, 1887. A synagogue was commenced in 1888. An Orthodox congregation was formed in 1891 with a Beth Hamedrash, and in the same year the Johannesburg Hebrew Congregation was formed by another section of the community. The Johannesburg Hebrew Congregation built the Park Synagogue on a piece of land granted free by the government of the South African Republic, and President Paul Kruger performed the dedicatory ceremony.

The two men who did most to build up the communal life of Johannesburg were Dr. Joseph Herman Hertz (from 1913 until his death in 1945 Chief Rabbi of the United Hebrew Congregations of the British Empire), who was minister of the Witwatersrand Hebrew Congregation from 1898 to 1911, and Rabbi Judah Leo Landau, who became minister of the Johannesburg Hebrew Congregation in 1903. The personality of Dr. Hertz drew crowds to hear his Friday evening addresses. His lectures to Jewish and non-Jewish gatherings were an outstanding feature of Johannesburg life. Dr. Hertz inspired the establishment of the first South African Jewish orphanage opened in Johannesburg in 1903, later housed in a building whose site was donated by Max Langerman. He was also sponsor, with Max Langerman, of the first South African Jewish Board of Deputies. He was a member of the British High Commissioner's Consultative Committee in 1906, and held the chair of professor of philosophy for a time at the Transvaal University College. Dr. Landau established a Schechita Board, reorganized the Talmud Torah (1905) and secured the establishment of a kosher kitchen at the Johannesburg Hospital. In 1906 a Beth Din was founded in Johannesburg.

After Dr. Hertz's departure in 1911, the Witwatersrand Hebrew Congregation and the Johannesburg Hebrew Congregation amalgamated, and Dr. Landau became rabbi of the United Hebrew Congregation, remaining with this Congregation until his death in 1942. He was the first occupant of the chair in Hebrew at Witwatersrand University, and took the initiative in founding a South African Jewish Historical Society. His activity led to the foundation of the Johannesburg Hebrew High School. Dr. Landau also took a leading part in the Zionist movement. He published several plays, and an autobiographical work, *Viduim* (Confessions) in Hebrew, and several works in English on Hebrew Literature and Judaism.

Rabbi L. Rabinowitz, formerly Senior War Chaplain of the 8th army, became minister of the United Hebrew Congregation in 1945. This Congregation comprises the Great (Wolmarans Street) Synagogue, a large synagogue at Yeoville, and the newly formed Oxford Congregation, which in 1945 proposed to open a synagogue in Lower Houghton. The Park Synagogue was demolished when the new Johan-

nesburg station was built. Orthodox synagogues of the Rand and neighbouring districts formed a Federation of Synagogues of the Transvaal, headed by the Beth Hamedrash Hagodel in Johannesburg. Rabbi Isaac Kossowsky, Rabbi of the Federation, arrived in South Africa in 1933. Rabbi M. C. Weiler became spiritual head of the Johannesburg Reform Congregation (Temple Israel) in 1933.

The first Durban Synagogue was consecrated in 1844. Sir Matthew Nathan, Governor of Natal from 1907 to 1910, was honorary president during his term of office as Governor.

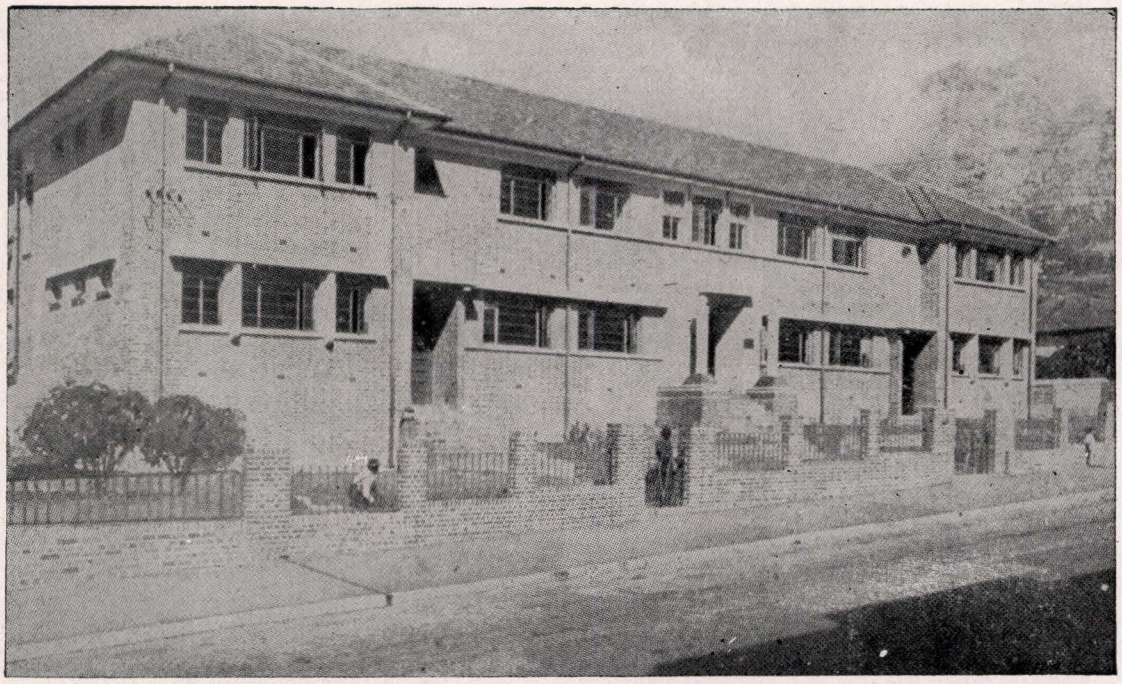
In 1871 Isaac Baumann started Yom Kippur services at his house in Bloemfontein, which were attended by Jewish traders from many Free State towns. A congregation was started in 1887, and the first Bloemfontein synagogue was opened in 1904. A Pretoria synagogue was built in 1898, and a Jewish Public School, the gift of Samuel Marks, opened there in 1905.

Jewish Education

Talmud Torahs were established in various parts of South Africa after the founding of Hebrew congregations. These Hebrew Schools had no contact with each other and pursued no common course of study. Few could afford trained teachers. Organized Jewish education for the whole of South Africa had its origin as a result of a Hebrew Education Conference which convened in Johannesburg in 1928. This conference established the South African Jewish Board of Education. In 1932 a branch of the Board, called the Cape Committee, was established in Cape Town. In 1938, Rabbi J. L. Zlotnik (from Canada) and Dr. A. Birnbaum were appointed directors of Hebrew Education in Johannesburg and Cape Town respectively. The South African Jewish Board of Education had a library (in 1945) of over 5,000 volumes, including rare incunabula. There is a hostel for Jewish school children from the country in Johannesburg and another in Cape Town. There were in 1945 three professorships of Hebrew in the Union: at the University of Cape Town, the Witwatersrand University, and the University of Pretoria. Two of these chairs were held by Rabbis L. Rabinowitz, and Israel Abrahams.

The Board of Deputies

Various Jewish organizations (such as friendly and landsleuter societies) were formed late in the nineteenth century to provide for social and general communal needs outside the synagogue. The Hebrew Order of David was founded in 1904 by leading members of the Johannesburg community. The Order is akin to the B'nai B'rith movement overseas. In 1946 there was an Hebrew Order of David lodge in almost every large city.



Until 1903 there was no Jewish body representing the community as a whole. After the Boer War, Lord Milner, British High Commissioner for the Transvaal, asked for a representative Jewish body to consult in matters touching the Jewish community. Rabbi J. H. Hertz and Max Langerman sponsored the formation of a Board of Deputies, and a Johannesburg Board of Deputies was established on the 15th of April, 1903, with Max Langerman as first president. Until the formation of the Board, the South African Zionist Federation had made itself responsible for assisting Jews, who left the Transvaal during the Anglo-Boer War to take refuge in the Cape, to obtain permits to re-enter the Transvaal. The Government now set up a Board of Deputies tribunal to advise it on the issuance of permits. The Board also countered anti-Semitic propaganda, and interested itself in Jewish education.

A Cape Jewish Board of Deputies was constituted in 1904, with Advocate Morris Alexander (later M.P.) as first president. Its first important task related to immigration. An Immigration Act had been passed in the Cape, in 1902, excluding immigrants "unable, through deficient education to write out in the characters of any European language, an application to the satisfaction of the Minister of the Interior." As a result of a deputation, introduced to the Attorney-General in 1903 by Advocate M. Alexander, Yiddish was recognized as a European language (though written in Hebrew characters). This recognition was confirmed by statute in the Immigration Act of 1906, through the efforts of the Cape Board. The Transvaal Immigration Act of 1907, the Union Immigrants' Restriction Act of 1913, and the Southern Rhodesia Immigrants' Regulation Ordinance of 1914 all followed suit. The Cape Board was also instrumental in having a clause inserted in the 1906 Act granting the right of entry to refugees from political or religious persecution, even though they had no means of support. They also undertook inquiries on behalf of the government into the bona fides of persons applying for naturalization. The South African Jewish Board of Deputies (combining the Johannesburg and Cape Boards), was formed by the Act of Union of a Congress of delegates from Jewish congregations and societies. This Congress was convened at Bloemfontein by the late Senator W. Ehrlich in August 1912. The constitution provided for four provincial committees at Cape Town, Johannesburg, Bloemfontein and Durban. This system, however, was not successful, the Transvaal and Cape committees being the only ones to meet. Under a revised constitution provision was made for an executive with headquarters at Johannesburg, and a Cape committee with headquarters at Cape Town. At its 1933 Congress the Board of Deputies adopted a new constitution providing for local committees in the Eastern Province of the Cape, Natal (The Council of Natal Jewry), and the Orange Free State.

Since its inception the Board has represented the South African Jewish community in all matters affecting it as a whole, making representations to the Government when necessary, e.g. immigration disabilities, naturalization regulations, etc. In 1930 the Board was instrumental in having an amendment inserted in the Slaughter of Animals Act, legalizing Jewish ritual slaughter. Since 1933 the repercussions of political events in Germany and elsewhere in Europe have thrown heavy responsibilities on the shoulders of the Board. The Board launched various appeals for funds for the relief of Jews in Europe. It has combatted anti-Semitic propaganda by lectures, as also by the publication and distribution of pamphlets and pertinent informative works to libraries. The Board was involved in two court cases arising out of anti-Semitic propaganda. In 1934, a number of documents were stolen from the files of the Cape Committee of the Board. In 1937, J. van S. von Moltke, former Greyshirt leader, announced the forthcoming publication of a book called *The Jews in South Africa,* making it obvious that the book would contain garbled extracts from documents designed to give a sinister picture of the Board of Deputies' activities.

The late I. M. Goodman, secretary of the Cape Committee, instituted proceedings, and an interdict was granted by the Supreme Court. In 1939, Gustav Saron, general secretary of the Board, was subpoenaed by the Crown to give evidence at the trial of General Manie Maritz in South-West Africa, on a charge under the section of the South-West Africa Criminal Amendment Act providing that "any person who utters any word or performs any . . . act . . . with intent to promote feelings of hostility between races of the community shall be guilty of an offence." Saron was able to show that General Maritz had incorporated in his book *My Lewe en Strewe* most of the forgeries figuring in anti-Semitic literature during the last hundred years. The book was banned in South West Africa and General Maritz was convicted.

The Board cooperated with the South African Zionist Federation in the reorganization of Hebrew education. Under the constitution of the Jewish Agency for Palestine, the Board appoints the South African non-Zionist representative on the Council of the Agency.

The United Hebrew Schools in Capetown. Courtesy, "The Capetown Hebrew Congregation, 1841-1941"

When the United Jewish War Appeal, launched by the Board of Deputies and the South African Zionist Federation, expired at the end of 1941, the Board continued the War Appeal under its own auspices. The War Appeal, primarily designed to bring relief, rescue and rehabilitation to Jewish victims of the war, operated in partnership with the American Jewish Joint Distribution Committee. Assistance towards the rehabilitation of South African Jewish soldiers was also provided.

The Board also appointed special committees to assist recruiting, and to help Jewish chaplains in their work. In 1945, the president of the Board was B. A. Ettlinger K.C.; and the chairman of the Executive Council was S. M. Kuper. The chairman of the Cape Committee was Leon Segal. In 1945 the principal executive and administrative officers of the Board were: general secretary, Gustav Saron; secretary, J. M. Rich; assistant secretary, L. Druion; secretary, Cape Committee, J. Dwolatzky.

Advocate M. Alexander, K.C., M.P., founder of the Cape Board, remained associated with the work of the Board from its inception. He made important speeches in the House of Assembly on numerous occasions on questions affecting the Jewish community, e.g. his speech on the Quota Bill, 1930, and his reply to the anti-Semitic attack of Eric Louw in the course of a motion regarding Communism, February, 1943.

The Board of Deputies has been assisted in its good-will work by the formation of a South African Society of Jews and Christians, founded in Johannesburg in 1937, which published a number of pamphlets in English and Afrikaans, and the monthly *Common Sense*.

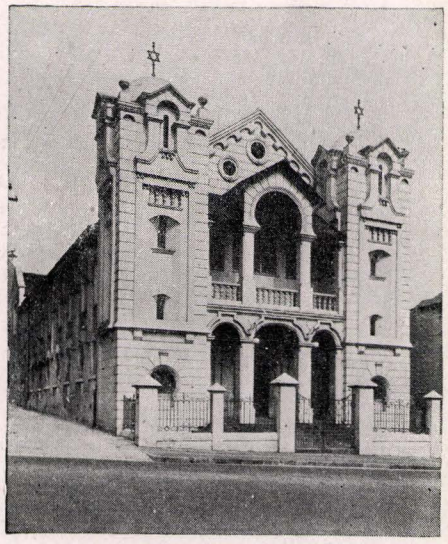
Among the other important Jewish organizations were the South African Ort-Oze, referred to above (see heading Agriculture), and the Union of Jewish Women of South Africa. The latter was founded by Mrs. Toni Saphra in Johannesburg, in 1931, to coordinate the work of Jewish women's societies. Branches followed all over the country and, in 1940, the headquarters was transferred to Cape Town. This society is represented on most nationally organized social welfare bodies. It equipped and maintained a parasitology laboratory in the Hebrew University, Jerusalem, and presented a mobile field laboratory, two mobile dental units, and an ambulance to the South African Forces. Active Jewish guilds, prominent in war work, functioned in Durban, Johannesburg and other cities.

Zionism

By 1898 a number of South African Zionist societies already existed, mostly in and near Johannesburg. The Dorshei Zion Association was founded in Cape Town, 1899. In 1898, nine Witwatersrand societies convened a congress in Johannesburg at which the South African Zionist Federation came into being. The first president was Samuel Bebro. Samuel Goldreich, elected president on the resignation of Bebro, a man of outstanding personality, put the Federation on a firm basis. There have been South African delegates at practically every Zionist Congress since 1900. From the beginning the Zionist cause has had many non-Jewish sympathizers in South Africa, notably, the Hon. Jan Christian Smuts, Prime Minister. A South African Jewish Congress convened jointly by the South African Zionist Federation and the South African Jewish Board of Deputies in 1916 urged that the Jewish claim to found a National Home in Palestine be recognized in the Peace settlement. General Smuts, interviewed on the eve of his departure to join the British War Cabinet, promised to assist in securing this recognition and in the removal of Jewish disabilities. General Smuts did much to secure the Balfour Declaration on Palestine and, on more than one public occasion since then, urged that the declaration be carried out in full. In 1926, Tielman Roos, Minister of Justice in the Nationalist-Labour Government, in a letter to Nahum Sokolow, then visiting South Africa in connection with the National Fund, stated that the Government of South Africa viewed with sympathy the establishment of a National Home in Palestine. Other well known South African public men sympathetic to Zionism include the Hon. J. H. Hofmeyr, Deputy Prime Minister; the Hon. Dr. Colin Steyn, Minister of Justice; the Hon. J. M. Conroy, Minister of Lands. In 1944, a Parliamentary Pro-Palestine Committee was formed, under the chairmanship of Senator E. H. Brookes, consisting of Jewish and non-Jewish members of Parliament. In September, 1944, at the instance of

this Committee, a statement condemning anti-Semitism was issued by four Cabinet Ministers and thirty-seven M.P.'s and Senators.

Biennial campaigns have been held in alternative years for the Keren Hayesod or the Jewish National Fund, and met with a generous response. Some of the most important leaders in the early days of South African Zionism were Rabbi Dr. Judah L. Landau; Idel Schwartz, president, Dorshei Zion Association, from 1907 to 1929, who bequeathed a large sum to the Hebrew University; Benzion Hersch, who played the prime role in founding the periodical *Zionist Record;* Joseph Janower, who placed the Jewish National Fund in South Africa on a firm footing; Isaac Ochberg, who bequeathed a fortune to Palestine, £137,000 of this sum being applied to redeem the Isaac Ochberg tract in Samaria; J. Gitlin, in 1945 chairman of the Western Province Zionist Council.



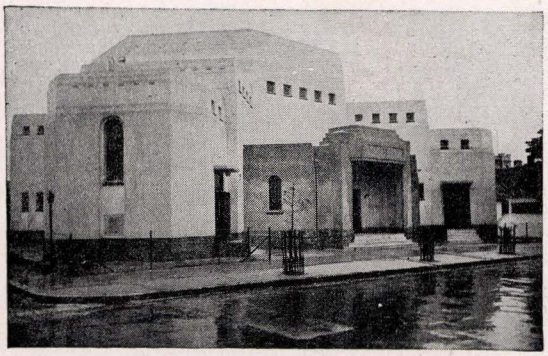
In 1933, at the initiative and under the chairmanship of the Hon. Justice Leopold Greenberg, a member of the board of governors of the Hebrew University, a South African branch of the Friends of the Hebrew University was formed, with headquarters in Johannesburg. A South African branch of the Palestine Maritime League was started in 1938.

During the twenty years prior to 1945 a number of South African companies were started for the investment of money in Palestine. The first of these, the South African Palestine Enterprise (Binyan) Corporation Limited, was established in 1922 for the purpose of offering mortgage loans at low interest rates to people of moderate means wishing to build houses. From its offices in Haifa the Company granted over 1200 loans, representing more than three-quarters of a million pounds, and also entered other fields of financial activity. In 1934, South African Zionists, influenced by the inflationary tendency prevalent in land transactions in Palestine, formed a company, with South African capital, to acquire blocks of land to be developed for parcellation and resale to small investors. The Company, known as African Palestine Investments, made several purchases, and development proceeded apace. The African Palestine Investments was a participant in the Palestine Cold Storage and Supply Company (founded, financed and managed mainly by South Africans) and in the Tiberias Hot Springs, with South African associations. A Palestine Development Company was launched in South Africa. A number of ex-South Africans live in Palestine, and most of the directors, and all of the managers of the companies named are ex-South Africans who resided for some years in Palestine. To stimulate trade between South Africa and Palestine, a group of South African business men founded Palestine-Africa Shippers Ltd.

The Zionist movement in South Africa was gradually organized on party lines. Parties represented in the South African Zionist Federation included in 1945: General Zionists (the largest party), the Zionist Socialist Party, Mizrachi, Jewish State Party, and Hashomer Hatzair, a left-wing Chalutz youth movement. The World New Zionist Organization (Revisionists) has a small branch in South Africa.

South African women's Zionist societies have a large aggregate membership, and are well organized. The South African Women's Zionist Council was formed in 1932 to co-ordinate the activities of all South African women Zionists. In 1945, the president was Dr. Deborah Katzen (also president of the Youth Aliyah for South Africa). South African women Zionists hold biennial conferences attended by delegates from the Belgian Congo and Rhodesia, as well as from all parts of South Africa. The South African Women's Zionist Council is affiliated with the Women's International Zionist Organisation. The work of the Women's Zionist movement in South Africa is non-party in character.

The South African Zionist Youth movement began in 1908 when several youth societies already existed. It emerged as an organized factor in Zionist activities in 1921 when the first Young Israel Conference was held. The South African Young Israel Federation was founded in 1927. The Youth movement was not properly unified, however, until the South African Zionist Youth Council was established in 1932, at which time the movement was reorganized with its own office and full-time officials, in the Zionist Federation. In 1945 there were junior branches of Mizrachi, Zionist Socialist Party, Hashomer Hatzair, and the United Zionist Party. In 1930, Norman Lourie started the Habonim movement in South Africa. Lourie was also responsible for the establishment of Balfouria Village near Johannesburg (in 1943) which is conducted like a kibbutz for the training of Jewish chalutzim.



Roeland Street Synagogue at Cape Town in South Africa

In 1945, the chairman of the South African Zionist Federation was Nicolai Kirschner (in whose name a forest has been planted in Palestine). The chairman of the Jewish National Fund for South Africa was Mrs. Katie Gluckman. Advocate M. Alexander, K.C., M.P., president of the Western Province Keren Hayesod, has been a leader of South African Zionism since the early days of the movement. Other Jewish members of Parliament who in 1945 played prominent roles in South African Zionism were Morris Kentridge, Dr. Bernard Friedman, and Abe Goldberg. Justice Greenberg was honorable president of the Keren Hayesod for South Africa.

The Jewish Press

The pioneer of the Jewish press in South Africa was Nehemiah Dov Baer ben Zeev Wolf Hoffmann who imported Hebrew print and established the weekly, *Der Afrikaner Israelit* (1890) in Johannesburg, and later the Yiddish weekly *Ha-or* in Cape Town. The first Anglo-Jewish paper to be published in South Africa appeared in 1902, *The South African Jewish Chronicle,* a fortnightly. It became a weekly in May, 1905, and continued as a weekly in Cape Town through 1945. In November, 1908, the first Zionist periodical, *The Zionist Record,* was published by the South African Zionist Federation, at first monthly, then fortnightly, finally as a weekly. In 1945 it was still the leading South African Zionist organ.

Other Jewish weeklies published in Johannesburg in 1945 were *S. A. Jewish Times* and *Jewish Herald;* the *African Magazine,* a bi-monthly in German and English, appeared in Johannesburg. Monthlies were published in Johannesburg (1945) by the Zionist Socialist Party of South Africa (*The Labour Zionist*), the Mizrachi organisation of South Africa (*Our Future*), the Habonim (*Habinyan*), the South African

Synagogue of the Sea Point Congregation of Cape Town

Zionist Youth Council (*S. A. Menorah*), the South African Jewish Board of Deputies (*Jewish Affairs*), and the South African Union for Progressive Judaism (*The Progressive Jew*). The South African Ort-Oze office in Johannesburg publishes a monthly bulletin. A Hebrew monthly *Barkai* was published in Johannesburg. *Great Synagogue Review* was published monthly by the Cape Town Hebrew Congregation and *Hashomer,* a monthly, by the Bloemfontein Hebrew Congregation.

Statistics

The Jewish population of the Union of South Africa, according to the official census of 1936 was 90,645, i.e. 4.52% of the total European population. (The question of religion was omitted from the 1941 census). It was estimated that there were in 1945 about 100,000 Jews in the Union. The Transvaal is the province numbering the biggest proportion of Jews among its citizens. In 1936 Jews constituted 6.57% of the total European population in the Transvaal, 3.6% in the Cape, 2.39% in the Free State, and 1.97% in Natal. The majority of Jews live in urban areas.

The Mandated Territory of South-West Africa

South West Africa was first opened up to commerce by Aaron and Elias de Pass, who reached England in 1846, and became the biggest Table Bay ship-owners. A man named Sinclair, agent of the De Passes in S. W. Africa, obtained in exchange for some cattle a strip of country which contained rich copper deposits, and the firm started in 1861 the Pomona Copper Company. Daniel de Pass contested, under Lord Salisbury's government, the right of Germany to annex the whole of South West Africa. The case was tried in Berlin, and De Pass was only able to obtain, under protocol, the right to work the Pomona Copper Mine and the surrounding two miles of land, and to retain the fishing station at Sandwich Harbour.

The development of the diamond industry which brought millions into the Treasury at Berlin, was almost entirely handled by Carl Furstenburg, famous German-Jewish banker who organised the construction of the railway from Luderitzbucht to Kubub. Emil Rathenau, senior, planned a research company which began in 1907 the study of the question of irrigation in South West Africa and other colonial problems. Emil Rathenau also created the German South-West African Mining Syndicate. Walter Rathenau, who was killed by a political assassin just after the 1914-1918 war, was one of the two experts sent by Kaiser Wilhelm II, his close friend, to report on the possibilities and administration of South West Africa. His report led to a reform of the administration.

The Windhoek Synagogue was opened in 1925, and a Jewish Guild was founded in Windhoek in 1924.

THE FOREGOING HISTORY OF THE JEWS OF SOUTH AFRICA WAS PREPARED UNDER THE SUPERVISION OF, AND APPROVED BY, THE SOUTH AFRICAN JEWISH BOARD OF DEPUTIES.

SOUTH AMERICA. Jews were among the very first colonizers of South America. They came to this New World in the 16th and 17th centuries to escape the intolerance of the Old. They were the Marranos, or New Christians, slipping away from the dreaded scrutiny of the Inquisition in Spain and Portugal. In small groups they went into the Spanish settlements of Chile, Peru, Venezuela, and the regions of Uruguay and Argentina. In greater numbers, by the thousands, they colonized Portuguese Brazil. Here they initiated pioneer agricultural projects, and prospered greatly as merchants. Under Dutch rule in Brazil they threw off their crypto-Judaism and enjoyed religious liberty in the thriving community at Recife (Pernambuco) from 1631 to 1654. They formed the first congregation on the American continent here, Kahal Kodosh, and received from Holland the first rabbi in the Americas, Isaac Aboab da Fonseca.

But in 1654 the Portuguese reconquered Brazil, and in the Spanish colonies the Inquisition set up its branches. Jewish settlements disappeared. The Jews from Brazil dispersed, some going back to Holland, others going to the West Indies, or to the mainland of North America to settle in New Amsterdam (New York). At Surinam, in Dutch Guiana, Jews settled in 1639, and in 1943 the community still existed. An ancient Marrano community, that of the Sabbatarios, was discovered in the province of Cautin, Chile, in 1919. On the whole, throughout Spanish and Portuguese South America, whatever Marranos could conceal themselves from the prying agents of the Inquisition were, in time, completely assimilated, becoming obedient and even devout Christians, and intermarrying. Vestiges of their existence remained in names of Hebrew origin and a strong tradition of Jewish blood in many an old and aristocratic family of Brazil, Argentina, Peru and Chile. In Colombia, the city of Medellin was described in 1939 by the writer Edward Tomlinson as ". . . not only a Spanish city but a Jewish city. . . ." He observed: "All are devout Catholics, especially Spanish Jews."

In the successful struggle for independence which the South American countries waged in the 19th cent., it was said, many a descendant of an old Marrano family took a leading part. New Jewish colonizers went into the free South American countries, which now offered religious liberty. In the early and middle decades of the 1800's they were from Central and Western Europe, of German origin. Also, Ladino-speaking Sephardim, attracted by the Spanish-speaking countries of South America, came from Northern Africa and the Levant. Then in the 1880's and 1890's there arrived the first large influx of Eastern European Jews, fleeing from pogroms. Under the direction of the Jewish Colonization Association, founded in 1891, thousands were established as farmers, mainly on the rich pampas soil of

Argentina. These agricultural colonies fell far short of achieving the grandiose success at first envisaged for them; but they throve, and in time became stabilized. In Argentina alone, by 1943, the colonies occupied a total area of more than a million and a half acres.

After the first World War a new stream of immigration came to enlarge the Jewish settlements in South American cities. Again there were Sephardic Jews, and Jews from Russia, Poland and Roumania. Better organized communities began to emerge. Yet it is noteworthy that a strong assimilationist tendency persisted in South America. Chilean Jews who had immigrated from Central and Western Europe in the late 19th cent. seemed to have been completely absorbed, and it was estimated that out of the more than 150,000 Jews who immigrated into Brazil between 1885 and 1935 (with but 5 per cent reemigrating) only 40,000 remained.

After 1933 the spread of Nazi domination in Europe sent a new host of immigrants, mainly German-speaking, into the countries of South America. By 1943, in a total of over ninety million, the Jewish population of the ten republics of South America was estimated to be about 550,000. This figure included the more than 100,000 newly arrived refugees. The 550,000 Jews were distributed approximately as follows:

	TOTAL	REFUGEES
Argentina	355,000	55,000
Brazil	110,500	25,500
Uruguay	37,000	7,000
Chile	25,000	12,000
Colombia	6,850	2,850
Bolivia	5,150	5,000
Ecuador	3,700	2,700
Paraguay	3,000	800
Peru	2,600	600
Venezuela	1,500	600

As the figures indicate (taken from an estimate of the American Jewish Joint Distribution Committee), the original permanent communities were considerably swelled, and in some cases overbalanced, by the new element. By 1941 to 1942 the main stream of this immigration, which encompassed only a fraction of those who had actually sought admittance to South America, was stopped by governmental restrictions. The problems then facing such organizations as HICEM and the American Jewish Joint Distribution Committee, as well as the local communities, centered around permanent organizations of social service to the new settlers, to speed their cultural and economic absorption, rather than emergency aid.

The whole picture of the South American Jewish communities in 1943 was a complex one, differing sharply in the various countries. Argentina had by far the best organized communities, served by numerous flourishing institutions, religious, social and charitable. Brazil's communities were not so well organized. In Lima, Peru, the Ashkenazic Jews were controlled and taxed by an authoritative Kehillah, an institution perhaps unique in the Americas.

Throughout the countries the minority of Sephardic Jews maintained their own synagogues, schools, burial societies, charitable organizations and the like, distinctly separate from the institutions of the Ashkenazim, who were in the great majority. The third element, the newly arrived Germans, also tended to segregate into their own groups. All Jewry, wherever possible, strongly supported the numerous Zionist organizations of South America. In the campaign of 1942 for the Palestine Foundation Fund Argentine Jewry contributed $120,000, twice the sum raised in 1941.

South American Jews came to be engaged in a great variety of occupations. Older families were prominent in big business, or as plantation owners. Many had risen to positions of great wealth, notably in Argentina, where they were to be found among prominent financiers and industrialists. In the agricultural colonies of Argentina and Brazil artisans and craftsmen were employed, as well as thousands of worker- and owner-farmers. In all the countries Jews made up part of the general proletariat. Everywhere newer arrivals especially were in small trade and manufacture. Cooperative trade associations and mutual credit organizations were successful in South America.

The marked rise of anti-Jewish feeling in the countries of South America could readily be traced to the propaganda agencies of the powerful Axis interests which had penetrated everywhere into the continent. In countries where Europeans had lived and inter-mingled with Indians and Negroes for hundreds of years racial feeling was not easily fomented. Yet economic competition and perhaps particularly the presence of refugees concentrated in urban centers and in small trade gave some popular impetus to the deliberate anti-Semitic agitation. Counter-organizations of Jews and liberals were everywhere formed to combat the work of pro-Fascist and anti-Jewish agencies. At the same time, South American Jews were vigorous supporters of the United Nations. In Argentina, Jews contributed $80,000 for British war relief in 1941. In April, 1942, the Jews of Brazil, which was then at war with Germany, contributed five airplanes to the national defense campaign of their country.

SOUTH BEND, a city in Indiana, with a total population of 101,268 (census of 1940), including in 1943 about 2,000 Jews. The first known Jew in South Bend was said to be Marx Frank, who came from Lithuania in the 1880's. Others who arrived in that period were H. Hanour, A. Livingston, Sam Adler, P. Cohen, Simon Rosenstein and the Ciralsky family. The Sons of Israel and Hebrew Orthodox congregations were organized in the 1890's; the former built the city's first synagogue in 1901. A new synagogue was erected by the Hebrew Orthodox Congregation in 1923. Rabbis who served both congregations simultaneously included Zloteloff, Light, and Shapiro; the last named organized the Hebrew Institute in 1918. In addition, Rabbis Abraham L. Schur, Irving Meisel and Dov Ber Ostrinsky (1936-40) were with the Hebrew Orthodox Congregation, and Rabbis Siegel and Greenstein with the Sons of Israel. In 1943 Aaron M. Rine, elected in 1941, was serving both congregations. Greenstein organized a third group, Sinai Congregation, in 1936; in 1943 its rabbi was Maurice A. Parzen.

The Reform Congregation Beth El was organized in 1905, and built its synagogue in 1906. The first rabbi was Abraham Cronbach (1906-16), who subsequently went to the Hebrew Union College at Cincinnati. Rabbis who succeeded him were Albert G. Minda (1919-21), Julius Mark (1922-26) and William Stern (1927-33). In 1934 Albert M. Shulman came to the pulpit, and was the incumbent in 1943, when the congregation still worshipped in its first Temple.

The neighboring community of Mishawaka, with about twenty-five Jewish families, completed the building of a synagogue in 1942. One of the early settlers, Simon Rosenstein, was largely responsible for the success of this venture.

Jewish national organizations in South Bend in 1943 included the Zionist Organization of America, a chapter of Hadassah and a lodge of the B'nai B'rith. The Jewish Wel-

fare Fund of St. Joseph Valley was established in 1935 for the support of non-local and local social services.

Jews prominent in South Bend were Samuel Feiwell, member of the state legislature (1933), and Irving Garnitz, also a member (1936-40). Arthur Scheer was county prosecutor (1936-). Ephraim L. Bach was appointed executive secretary of the Association of Commerce in 1936. Ira W. Ciralsky, who came to South Bend in the 1880's, became a prominent banker in the city, and served as treasurer of the Epworth Hospital. Professors Eugene Guth and Arthur Norton Milgram were in 1943 members of the faculty of Notre Dame University, the former in the physics department, the latter in the department of mathematics.

SOUTH CAROLINA, a South Atlantic state of the United States, which was one of the original thirteen colonies. In 1943 there was an estimated total of 5,905 Jews in the population of 1,899,804 (census of 1940). Of this Jewish population, 2,520 were in the city of Charleston.

Unlike that of most of the other states, the history of South Carolina is, almost from its very beginning, interwoven with the history of its Jews. The "Fundamental Constitutions" of the state, framed (1699) by John Locke, stipulated that "heathens, Jues, and other disenters" should be entitled to the same rights in the newly established colony as the followers of the dominant faith, and "No man shall be permitted to be a freeman of Carolina or to have any estate or habitation within it, that doth not acknowledge a God, and that God is publicly and solemnly to be worshipped." The colony therefore soon became a haven of refuge for the persecuted Jews of Europe, and especially of England. In 1694, less than a quarter-century after the founding of Charles Town, the name of one Mordecai Nathan appears in an assessment list of the town's inhabitants. Governor John Archdale also records in his book on the province of Carolina that in 1695 he used a Spanish-speaking Jew as an interpreter between him and several Florida Indians whom their Yemassee captors were about to sell as slaves, but whom he saved from their doom when he learned that they "profess'd the Christian religion as the Papists do."

An unconfirmed tradition has it that there were a few Jews among the Huguenots who began to settle in Charles Town shortly after 1680. Jews were among the first to take advantage of the act of 1697 conferring citizenship upon aliens, as is indicated by the naturalization papers of "Simon Valentine Mercht: an alien of ye Jewish Nation." This merchant Valentine is the first recorded Jewish landholder in South Carolina. Jews were reported as voting in 1703 for members to the Commons House of the Assembly.

These Jewish pioneers were mostly of Sephardic descent, and men of means and refinement. Among the most distinguished of them was Francis Salvador (1747-76), a scion of the Rodrigues family of Amsterdam and England. His uncle, Joseph Salvador of London, had come into possession of 100,000 acres of land in the northwest part of South Carolina, in the Ninety Six District (later Abbeville County), which came to be known as "Jews' Lands." Obtaining several thousand acres of this land, Francis Salvador settled down at Coronaca to the life of a prosperous South Carolina planter, and took an active part in the affairs of the province. (The uncle, Joseph Salvador, came to South Carolina at the age of sixty-eight, and two years later died at Charleston.) Francis Salvador was one of the leading advocates in the colony of rebellion against England. Together with his friend, Richard A. Rapley, he was elected as one of ten deputies from the Ninety Six District to the First and Second Provincial Congresses which met in Charleston in 1775 and 1776. When the Congress was declared by the new constitution to be the provisional first General Assembly of the independent state until the holding of elections, Salvador took a leading part in the councils of that body. Shortly afterward Francis Salvador was killed by the Indians while defending Major Williamson's plantation.

Another Jew who contributed much to the prosperity of pre-Revolutionary South Carolina was Moses Lindo. He settled in Charleston in November, 1756, and started at once on his career as exporter of indigo. Due to him, the indigo industry became the second ranking industry in the province, and in 1762 he was appointed surveyor and inspector-general of indigo.

Charleston, treated in detail in a separate article of this encyclopedia, was from the beginning, and continued to be, the metropolis of the Jews of South Carolina; thus the history of the Jews of the state, particularly in the early period, becomes tantamount to the history of the Charleston Jewish community. The first organization of the Jews of South Carolina was Congregation Kahal Kadosh Beth Elohim (originally Beth Elohim Unveh Shallom of Charleston), founded in 1749, the fourth oldest congregation in the country. In 1784 the Hebrew Benevolent Society, the earliest institution of its kind in America, was founded. Many Charleston Jews who had left the city during the British occupation returned in 1783, and a steady influx of more Jews from neighboring cities, from the islands of the West Indies and from Europe added to the numbers and prosperity of the community. By 1800 Charleston was said to be the largest and most influential Jewish settlement in America, with a population of about 500. A merchant of Charleston writes in a letter dated 1811 that the Jewish population of the whole state of South Carolina was about 1,000, and that Jews were recognized for "their spirit of enterprise and their good judgment." In their Academy the children were taught French, Italian, Latin and Greek, while Rabbi E. N. Carvalho taught Hebrew and Spanish.

Jews of South Carolina took an active part in the agitated public life of the times. They participated in the War of 1812, and in the Florida War and Mexican War, as privates, as officers, and as special staff attachés. In politics several Jews became prominent in the Union and States' Rights Party. Jews took sides in the decisive tariff question of the day, and at the "Nullification" convention of 1832 Philip Cohen and Myer Jacobs voted for nullification; Chapman Levy and Philip Phillips voted against. In that same year, 1832, there appeared a letter in the Charleston *Courier* signed by eighty-four Jews, which asserted that Jews of South Carolina did not want to be represented as a sect in the state legislature.

Finally, in the struggle between the North and South, in which South Carolina took a leading role, Jews were conspicuously loyal to their state. It was said that "practically every man was at the post of duty." They served on the line and in the home guard; many were in positions of leadership. Benjamin Mordecai of Charleston made the first and largest contribution of money to the Confederacy.

By 1825, members of Charleston Jewry were beginning to establish themselves in other communities in the state or outside the state, and later, when the Civil War was over, many more left to try to retrieve their losses elsewhere. But whatever decrease may have been suffered in the Jewish population of South Carolina was more than made up for by the influx of immigrants from Eastern Europe in the 1880's and 1890's. In the beginning of the 20th cent. there was an estimated total of 2,500 Jews in the state, still mainly concentrated in Charleston, where the "golden age" was now over, but scattered, too, in other settlements throughout the state, including many rural localities.

GEORGETOWN had Jewish settlers long before the Revolution, and the names of Cohen and Myers are recorded in that period. Jews furnished supplies to the

American patriots. Solomon Cohen was postmaster (1794), as was Abraham Cohen (1797-1800). The former was also tax-collector (1798) and treasurer of the newly organized Library Society in 1799. Numerous Jews were members of the Winyah Indigo Society, still in existence in 1943. Jews furnished several intendants and wardens to the city. South Carolina was one of three states, together with Pennsylvania and Georgia, where Jewish lawyers were to be found before 1800, and the first Jewish lawyer in South Carolina was Moses Myers of Georgetown, admitted to the bar in 1793. He was clerk of the Court of General Sessions and Common pleas (1800-17), and was prothonotary in 1806.

A Jewish cemetery was incorporated at Georgetown in 1871. In 1904 Congregation Beth Elohim was organized; in 1943 it was still the congregation of Georgetown's Jewish inhabitants, then numbering about 100 in a total population of 5,559 (census of 1940). Harold Kaminsky was mayor of Georgetown (1925-29).

CAMDEN, too, had Jewish settlers about the time of the Revolution. A will made by Joseph Kershaw in 1788 reads: "To God's Anticent people the Jews I give and devise the lot No. 315 for a Burying ground and place of worship whenever they may incline to build upon the same." The lot, however, was never claimed, and the congregation, Beth El, was not organized before 1880. In 1943 Marion H. Heyman was president of Beth El, and Jacob S. Raisin the visiting rabbi. Camden was the native place of Colonel Chapman Levy (1787-1850), a prominent lawyer who represented Kershaw County in the legislature (1829-33, 1836-38). Hayman Levy was warden (1835), intendant (1943), and a director of the Bank of Camden (1842-54). Mordecai M. Levy, a druggist, also represented Kershaw in the legislature (1834-38), and was a candidate for the Congress of the United States (1836). Chapman Levy and Hayman Levy, who were not related, were both known as skillful duelists. In Camden, Dr. Simon Baruch, father of Bernard M. Baruch, practised medicine for fifteen years, and was elected president of the South Carolina Medical Society (1873) and chairman of the State Board of Health (1880). In 1943 Camden had a settlement of sixty-seven Jews in its total population of 5,747 (census of 1940).

COLUMBIA, created the capital of South Carolina in 1786, attracted Jews at the beginning of the 19th cent., as did SUMTER (treated separately in this encyclopedia). Here Jews founded a burial society in 1822 which, in 1826, became the Hebrew Benevolent Society. Robert Mills records that the "Female Auxiliary Jew Society," established in 1823, was formed "with the express view to assist in colonising the Jews." The community grew, and soon was next in importance to Charleston. It gave to the city three Jewish mayors: A. Alexander, one of the founders of the Hebrew Benevolent Society; Mordecai H. De Leon (1833-36); and Captain Henry Lyons (1850-55). The latter was also a director of the Commercial Bank of Columbia (1854-58). A volunteer company of sixty men to take part in the Florida War was organized by Captain Isaac Cohen, and valuable services were rendered by Dr. David Camden De Leon during the Seminole War. De Leon was a distinguished surgeon and scientist, and twice received the thanks of Congress for gallantry in action in the Mexican War. In the War Between the States he occupied a prominent position under General Scott, and President Jefferson Davis assigned him the task of arranging the medical department of the Confederate Army. His brother, Edwin De Leon, an author and lecturer of note, was appointed by President Franklin Pierce consul general and diplomatic agent at Cairo, Egypt, and later by President Davis a special agent of the Confederacy to negotiate with France and England. August Kohn was "a most potent factor in the commercial upbuilding of the prosperous city of Columbia." He became manager of the Columbia Bureau of *The News and Courier* in 1892, was an eminent reporter, held important positions in various economic and civic organizations, and was for twenty-nine years a trustee of the University of South Carolina. In this institution there were also several Jewish professors: Josiah Morse, of philosophy; Isidor Shayer, of physiology; Jacob Littman, of electrical engineering; and Coleman Karesh, of law.

In 1943 Columbia had a Jewish population of 680 in its total population of 62,396 (census of 1940). It then maintained two synagogues, the Reform Etz Hayyim, organized in 1896, and the Orthodox Beth Sholem, organized in 1908. Etz Hayyim had as its rabbi from 1939 to 1942 Sidney Ballon; he then became a United States Army chaplain. The congregation also had a Sabbath School, a library, a community center and a sisterhood, one of whose members, Helen Kohn Hennig, was a vice-president of the National Federation of Temple Sisterhoods. Congregation Beth Sholem had as its rabbi in 1943 David Z. Karesh, who had been serving since its organization.

SPARTANBURG, with a Jewish population in 1943 of about 125, supported the Conservative Congregation B'nai Israel, organized in 1916. A synagogue was built that year. The rabbi in 1943 was Samuel Wrubel, appointed the previous year, and its first resident rabbi. Spartanburg also supported a B'nai B'rith lodge and a section of the National Council of Jewish Women.

Among smaller communities which, in 1943, had congregations and rabbis who visited them more or less regularly were: Greenville (population, 183; rabbi, Maurice M. Mazure); Beaufort (population, 104); Aiken (population, 102); Florence (population, 50). The even smaller Jewish communities of Darlington, Orangeburg and Kingstree also had congregations. Congregation Ohav Shalom, in Dillon, S. C., was dedicated in November, 1942.

The roster of South Carolina Jews distinguished in many activities of public life is long. Many have been already noted. In addition, Franklin J. Moses, the son of Major Myer Moses, was born in Charleston, but settled in Sumter. From 1868 until his death in 1877 he was chief justice of the supreme court of the state. His son, Franklin J. Moses Jr., was the governor of the state from 1872 to 1874; he had, however, no Jewish affiliations. The lawyer and statesman Raphael J. Moses was also a native of Charleston, and remained in South Carolina until he was about twenty-five years of age. The jurist Philip Phillips was born in Charleston and there had his early political career. Judah P. Benjamin, spoken of as "the brains of the Confederacy," spent part of his boyhood in Charleston. In the state legislature of South Carolina were Dr. Levi Myers (1796), Myer M. Cohen (representing St. Philip's and St. Michael's, 1835-36), Solomon Cohen (representing Prince George's, Winyah, 1831-36), Colonel Myer Jacobs (representing St. Helena's, 1833; elected on the Union ticket, 1836; representing St. Philip's and St. Michael's, 1838-39), Colonel Chapman Levy of Kershaw (1829-33, 1836-38), Mordecai M. Levy of Kershaw (1834-38), Moses C. Mordecai (senator, 1855-58). Later in the legislature were Louis Appelt, state senator (1896-1906; 1915-19), Samuel Rittenberg of Charleston (1933-34), Solomon Blatt of Blackville (speaker of the assembly from 1937 on), and Nathan Rosen, of Charleston, representative (1940-).

Dr. Levi Myers was also apothecary-general of the state

from sometime before 1800 to his death in 1822. Lyon Levy was state treasurer (1817-22).

From the community of Darlington, David Witcover was appointed head of the State Fair in 1925, and was still in that post in 1943; in Darlington, too, Dr. Oscar Alexander was mayor (1931-37). In Charleston, Dr. Leon Banov was head of the City & County Health Commission (1926-) and of the Southern Medical Association (1930), and president of the International Society of Medical Health Officers (1939). Joseph Fromberg was municipal court judge in Charleston (1931-). Gustave M. Pollitzer, Montague Triest and Rabbi Jacob S. Raisin were appointed members of the Commission of Education. The last named was also chairman of the Community Chest of Charleston, S. C. Anita L. Pollitzer of Charleston was elected to the national executive board of the National Woman's Party. Jane L. (Mrs. Jacob S.) Raisin was the founder of the Charleston Hadassah and an official in several women's communal organizations, including the National Federation of Temple Sisterhoods; she was also active in the local chapter of the Daughters of the American Revolution, chairman of the Division of Americanization of South Carolina Federation of Women's Clubs, and president of the Free Kindergarten Association of Charleston (1930-). Mrs. H. M. Rubin was in 1943 president of the Civic Club of Charleston, a board member of the Red Cross and the Girl Scouts, and secretary of the Charleston Service Men's Club. Dr. Isadore Schayer, professor of hygiene at the University of South Carolina, was in 1943 stationed at Fort Moultrie, S. C., with the rank of lieutenant colonel.

SOUTH DAKOTA, a north central state of the United States, with a total population of 642,961 (census of 1940). According to a survey made for 1937, the Jewish population was then estimated at 1,963. A much more conservative estimate placed the figure at about 1,000 in 1943. The chief city of the state, Sioux Falls (population in 1940: 40,832), also had the most numerous Jewish community, of about 300 persons in 1943. Aberdeen came second, with from thirty to forty Jewish families in its total population of over 17,000. There was an Orthodox congregation in Aberdeen, of which Noah Perman was rabbi in 1943. Mitchell, with a population of more than 10,000, included about fifteen families of Jews. In Rapid City, gateway to the Black Hills, the more than 13,000 inhabitants included approximately ten Jewish families. Jews were scattered in small groups of from one to six families throughout the rest of the state. The majority of Jews in the state, which is mainly agricultural, were engaged in trade. At Madison, about fifty miles from Sioux Falls, a Jewish family had been farming for about twenty years, in 1943.

South Dakota was proclaimed a state in 1889, and the next decade brought a gradual increase in the number of Jewish settlers. Julius Kuh, Charles and Sam Fantle, and Joseph Livingston were among the early settlers, as were the families Jacobs and Agrant. In Sioux Falls a lodge of the B'nai B'rith was founded in 1919. The Orthodox Congregation Sons of Israel was established there in 1916, and elected Meyer Margulies its first rabbi. He was succeeded by numerous others. Rabbi Nathan Kohler began his term of service in 1941, and was the incumbent in 1943. The synagogue then housing the congregation was built in 1916. A Women's League was an auxiliary of the congregation from its inception.

The Reform Congregation Mount Zion of Sioux Falls was established in 1919, and seven years later built a synagogue. The first rabbi was Charles Schwab, who served for one year. In 1932 Rabbi Howard L. Fineberg was called to the pulpit, and remained the incumbent till the end of 1942, when Karl Richter, a refugee rabbi from Germany, was elected to replace him. The congregation's sisterhood was founded in 1919.

Of the approximate total of eighty families in Sioux Falls, about sixty-five maintained congregational affiliation, equally divided between Orthodox and Reform. A number of intermarriages with non-Jews accounted for several of the unaffiliated families.

Other communal organizations of Sioux Falls Jewry were a chapter of Hadassah, organized in 1937; a Jewish Welfare Fund, organized in 1938, and of which Louis R. Hurwitz was secretary in 1943; and a committee of the Jewish Welfare Board, of which Louis Koplow was chairman. Other prominent communal leaders included Harry Pitts, Mrs. Joseph Brelow and Mrs. Sam Fantle. Jews were prominent in the commercial life of the city. Joseph Henlien owned the city's radio station, and several other large concerns were in the hands of Jews.

Local institutions and causes were well supported by Jews. These included in Sioux Falls Augustana College, Sioux Falls College, the Community Chest, the Red Cross and the United Service Organization. An estimated thirty-five Jewish men from the South Dakota communities served in the first World War. David J. Mendel was in the state legislature from Freeman (1910-12). Ben Strool was state commissioner of schools and public lands from 1932 to 1938. The town of Strool was named for him.

SOUTH ORANGE, a town of New Jersey which included in its general population of 13,742 (census of 1940) approximately 1,000 to 1,500 Jews in 1943. As in East Orange, a large proportion of the Jews of South Orange, primarily a suburb of New York city and Newark, N. J., maintained their businesses and offices in the two latter cities. Also, Jews of South Orange were affiliated with the congregations and communal organizations of nearby Newark, as well as of East Orange and Orange. The South Orange-Maplewood Hadassah, founded in the middle 1930's, attracted its membership from the surrounding area as well, and in 1943 had a total of approximately 500 members. Jews of South Orange also organized a lodge of the B'nai B'rith, chartered 1938. In 1943 South Orange had a branch of the religious school for children of Oheb Shalom Congregation (Conservative) of Newark.

SOUTHWOOD, BARON (Julius Salter Elias), newspaper publisher, b. Leeds, England, 1873. The son of impecunious Polish immigrants, he was taken to London as a child, and was brought up in the East End of the metropolis. He began his career as a newsboy and had no official education, but when he became chairman and managing director of Odham's press, his knowledge of the interests of the common people helped him raise the circulation of the London *Daily Herald* from 200,000 to 2,000,000, and of the weekly *People* to 3,000,000. Besides Odham's press, which published about 200 daily, weekly and monthly papers and magazines, he acquired several famous British society journals. Frequently compared with such newspaper magnates as Northcliffe and Beaverbrook, Elias headed the Periodical, Trade Press and Weekly Newspaper Proprietors' Association. He was created baron in 1937.

Lit.: *American Hebrew,* April 9, 1937, p. 1003.

SOUTINE, CHAIM, painter, b. Smilovitchi, Russia, 1894. In the small town ghetto of Eastern Russia his Orthodox surroundings distressed him and he ran off to Vilna at fourteen to study at the art school.

Three years later he went to Paris, where he was a pupil of Fernand Cormon at the École des Beaux Arts. Here he became friendly also with Modigliani. From 1920 to 1923 Soutine lived in Céret and Cagnes, painting landscapes, for the most part. In 1925 he returned to Paris. Later (1929-40) he lived in the neighborhood of Chartres; he left it after the Nazi invasion to settle in unoccupied France.

Soutine's earliest paintings are grippingly profound. His first allegories of death, such as *Still Life with Forks,* and his animal paintings, such as *Dead Fowl,* reveal an agonized spirit. Even in his landscapes his broad brush-strokes and daring colors are enervating, and this effect is intensified in his mentally and physically tortured figures. Toward the end of the 1920's, Soutine's emotional stress gave way to calmer vision, to quieter outline and color and more compact modelling (*Portrait of Mme. M.,* 1927). His later works, with more monumental composition and a richer pictorial surface, marked his artistic development (*Femme en rouge, étendue sous un arbre,* 1932; *Retour de l'école après l'orage,* 1939).

Albert Barnes of Philadelphia took a great interest in Soutine; many of the painter's works are in the Barnes collection. Others are in various museums in New York city, Chicago, Detroit, Grenoble, Copenhagen and Moscow.

SOVIET RUSSIA. 1. Demographic Statistics and Population Shifts. During the first World War and the early years of the Revolution the size and distribution of the Jewish population of the former Russian Empire was affected by several factors, notably the exodus from the military zone, the internal migrations caused by the civil war and the pogroms, the excessively high mortality, the heavy emigration of the years 1918 to 1921. But what altered the demographic picture most drastically was the loss of Bessarabia and of the western territories, which went to form Poland, Lithuania, Latvia and Estonia. While the number of Jews in Russia on the eve of the first World War has been estimated at approximately 5,600,000, the first Soviet census (December 17, 1926) recorded a total Jewish population of 2,672,000, including natives of the Crimea, the Caucasus, and central Asia. Numerically the Jews occupied the seventh place among the Soviet Union's nationalities. In the next census (taken on January 17, 1939) the number of Jews counted stood at 3,020,171. The ratio to the total population was 1.78%, as against 1.82% in 1926 and 2.4% in 1897. In Soviet usage the term "Jew" denotes a self-designated member of the Jewish group. This rule applies alike to all nationality groups. No doubt, in both censuses a number of assimilated Jews, perhaps 10%, chose to state that they belonged to nationalities other than the Jewish.

The growth of the Jewish contingent lagged considerably behind that of the general population. Because of emigration and the ravages of the civil war, the Jewish group increased only 3.9% in the three decades which elapsed between 1897 and 1926. In the thirteen years that separate the first Soviet census from the second, it grew 13% while the entire population increased 16%. In 1926 the proportion of marriages between Jewish men and non-Jewish women in the RSFSR, the Ukraine and White Russia was respectively 25%, 4.6%, and 2.0%.

It is certain that migration from the territory of the former Pale into the interior has gone on without interruption. It is believed that between 1920 and 1940 some 600,000 migrated from the Ukraine and White Russia to Russia proper. According to the census of 1939, the Jewish population was distributed as follows:

The Ukraine	1,532,827
RSFSR	948,020
White Russia	375,124
Caucasus	84,057
Central Asiatic Republics	80,143

In the interval between the two censuses the number of Jews in the RSFSR (and in the Caucasian and Asiatic regions) increased by 413,000, while in the Ukraine and White Russia together the number decreased by 73,000. In 1939 the RSFSR held nearly one-third of the Jewish population.

At the same time it showed a marked tendency to shift from the rural districts to the towns and from the towns to the cities. While in 1926 the percentage of Jews living in urban surroundings was 82, in 1939 it was 87. It has been estimated that by 1939 over 40% lived in six cities: Moscow, Leningrad, Odessa, Kiev, Kharkov, Dnepropetrovsk (Yekaterinoslav). The Jewish aggregate in Moscow was exceeded only by the communities of Warsaw and New York. Early in 1941 there were some 430,000 Jews in the Soviet capital, or 10% of the total population (in 1897 and 1926 the percentages were respectively 1 and 6.5). In 1940 Leningrad housed approximately 275,000 Jews, or 9% of the total. The estimate for Kiev was 200,000 (beginning of 1941). The urbanization of the non-Jews was, however, even more thorough, and as a result the proportion of the Jews in the entire city population decreased from 8.2% in 1926 to 4.7 in 1939. While in 1926 they constituted 22.8% of the population of the Ukrainian cities, in 1939 the percentage fell to 11.8.

The annexation of a section of Poland as a result of the fourth partition of that country, which occurred shortly after the outbreak of the second World War, brought under Soviet rule nearly a million and a half Jews, including the many refugees from Nazi-held Poland. There were also some 700,000 Jews in other East European territories incorporated into the Soviet Union in the summer of 1940: Bessarabia and Northern Bucovina, Lithuania, Latvia and Estonia. On the eve of the German invasion of the country, on June 22, 1941, its Jewish population was estimated at 5,500,000.

2. The Revolution and Civil War (1917 to 1921). The political revolution of March, 1917, brought about the complete emancipation of the Russian Jews. All the disabilities under which they had labored, including the Pale of Settlement which had already been breached, were abolished by a general decree of the Provisional Government dated March 20 (April 2), 1917. Jews were placed on an equal footing with the rest of the citizenry.

No official measures were taken, however, to implement their right to live as a national minority having an identity of its own. Yet, with the exception of the small Jewish People's Group, which represented the assimilated minority, all parties, Zionist and Socialist, demanded for the group some sort of cultural autonomy to be realized through self-governing communal agencies recognized and supported by the state. In many localities the old Kehillahs were reorganized on a democratic basis and assumed a new importance, although they had no official standing.

On November 2/15, 1917 (eight days after the overthrow of the Provisional Government), the Bolsheviks

promulgated their Declaration of the Rights of the Peoples of Russia (signed by Lenin and Stalin). It called for "(1) equality and sovereignty of the nations of Russia, (2) the right of self-determination, (3) abolition of all national and national-religious privileges and restrictions, (4) and the full development of national minorities and ethnographic groups."

Half a dozen of the candidates sponsored by the Jewish National Committee secured seats in the All-Russian Constituent Assembly, but this was dissolved after a single session held in January, 1918. In July, 1918, representatives of the Great Russian communities held a conference, but this achieved no practical results.

On July 17, 1918, the Council of People's Commissars outlawed all those who either perpetrated or incited to pogroms. "There is no room for oppression in the RSFSR," the declaration read, "where the principle of self-determination of the laboring masses of all nationalities has been proclaimed. The Jewish bourgeois is to us not a Jew. The Jewish workingman is a brother."

In April, 1919, a Soviet decree had summarily abolished the Kehillahs, and most of the Jewish cultural and charitable agencies, as inconsistent with the principle of the dictatorship of the proletariat.

Individual revolutionary leaders of Jewish origin—such as Trotsky, Zinoviev, Kamenev and Sverdlov—played a conspicuous part in the revolution of November, 1917, which enabled the Bolsheviks to take possession of the state apparatus. Yet the majority of Jewish radicals adhered to democratic socialism, and among the Jewish working class the Leninist faction had a limited following. From the first, the so-called United Jewish Socialist Labor Party fought the Bolsheviks, and the more influential Bund, too, after some

A public health officer extends medical and sanitary aid to the new colonists—partly through the assistance of the American Jewish Joint Distribution Committee

hesitation ranged itself with the Menshevik opposition, though many of its members joined the Bolsheviks. In July, 1918, there was established a Jewish section (along with other national divisions) of the Central Committee of Communist Party (CPSU). This was transformed into the Jewish Bureau in 1926, and, its functions having been absorbed by local organizations, it was abolished in 1930.

The Jewish masses viewed the seizure of power by the Bolsheviks with apprehension. They could not respond to the slogan: "Land to the peasants, factories to the workers," since there were scarcely any peasants or factory hands among the Jews. They were to a large extent artisans and traders. The prohibition of free commerce and the nationalization of private enterprises, no matter how small, meant economic disaster for them. It has been estimated that in 1918 to 1921 seventy to eighty per cent of the economically active Jews were idle.

The early years of the Soviet regime were a period of famine, pestilence and civil war following closely a devastating foreign war and complicated by an armed conflict with Poland (in 1920). Under these circumstances the Jews were in a particularly vulnerable position, being largely an urban element, and many of them living in the combat zone. Moreover, they were exposed to a series of pogroms which exceeded in scope and brutality the slaughters perpetrated by the Cossacks in the mid-17th cent. Ukraine. In the course of the year 1918 and even earlier, Jewish communities in the south were attacked by demobilized soldiers of the imperial army, by the Rada troops, and by the forces of the Ukrainian Directory. Throughout the Ukraine political passions, aggravated by racial and class animosities, were aflame, and the atmosphere was electric with fear and hate. Both the soldiery and the peasantry were bitterly anti-Semitic. The Jews were accused of sympathizing with the Bolsheviks, of helping the Germans, of profiteering, of trying to rule the country. It was not, however, until the end of 1918 that the terror assumed major proportions. Through the following year pogroms raged in Volhynia, Podolia, in the provinces of Kherson, Poltava and Kiev. There was looting and destruction of property, as well as rape and indiscriminate butchery preceded by torture. The perpetrators of these crimes were again the troops of the Ukrainian Directory and the guerrilla bands operating under various chiefs, notably under Grigoryev and Makhno, as well as the White Army headed by Denikin. These pogroms were not outbreaks of mob violence, but punitive expeditions carried out by armed forces against a defenseless civilian population.

The triumph of the Red Army over both Petliura and Denikin at the end of 1919 did not put an end

to these horrors. Further outrages were committed by the Polish troops which invaded Soviet territory in the spring of 1920 and by the soldiery under the anti-Soviet Russian military leader Balakhovich, who operated chiefly in White Russia. Even after the preliminary peace treaty with Poland was signed (October 12, 1920), Balakhovich's troops continued to raid White Russia from their base across the Polish border, and attacks on Jewish communities lasted into 1921.

Wherever the civil war was fought, the Whites identified the Jews with the Bolsheviks and singled them out for attack. In the summer of 1919 the troops of Admiral Kolchak massacred the Jews, chiefly war refugees and émigrés from Soviet-controlled areas, in the towns of Western Siberia through which they passed as they fell back before the Red forces. Such undisciplined elements in the Ukrainian army units as shared the anti-Jewish animus of their enemy were severely punished, and the Commissariat of War maintained a department for propaganda against anti-Semitism.

From the first, anti-Semitism was severely condemned by the Bolsheviks. Since the Whites chose to use it as an anti-Soviet weapon, it became a symbol of counter-revolution. In Soviet-held territory the Jews were safe from looting and slaughter. Small wonder, then, that many Jewish youths enlisted in the Red Army.

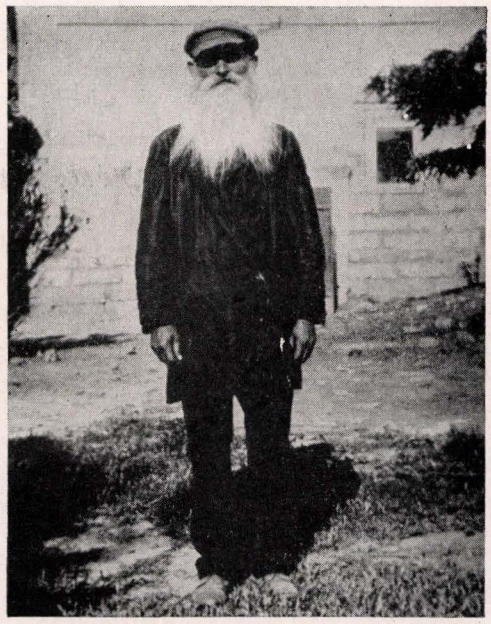
The total number of anti-Jewish outbreaks probably exceeded 2,000. Between 1917 and 1921 there were 1,520 pogroms in 911 localities in the Ukraine and White Russia alone. A Soviet writer recently stated that 90,000 to 100,000 persons lost their lives in the pogroms. Other estimates of the number of slaughtered range from 75,000 to 200,000; those of the number of orphaned children vary between 100,000 and 300,000. In the years of the civil war, mortality among the Jews increased sevenfold. It is said that 700,000 persons suffered property damages running into billions. Thus, of the 6,707 houses owned by Jews in twenty-one townlets in the province of Kiev before the pogroms, only 1,556 were habitable in 1923. The villages and smaller towns being the least safe, about 500,000 persons deserted them for the cities: forty-eight towns inhabited in 1897 by 87,777 Jews held only 17,089 in 1920; the Jewish population of a number of towns in the region of Kiev was reduced from 66,000 before the civil war to 21,000 in 1923. Because of the conditions which prevailed in Soviet Russia, about 200,000 Jews are believed to have escaped to neighboring countries in 1918 to 1921. In Bessarabia alone there were 73,000 such refugees.

That more Jews were not exterminated in those years was due mainly to the protection offered by the Red Army. In out-of-the-way places where only small guerrilla bands were active, Jewish communities were sometimes able to defend themselves by force of arms. In rare instances safety could be purchased for money. Occasionally peasants who attacked the Jews in distant villages scrupled to molest local Jews. Occasionally, too, in the cities, the Christian population, chiefly workingmen, shielded the Jews at the risk of their lives.

Type of homes erected in the new Jewish farm colonies, on the Russian prairies, with loans furnished by the American Jewish Joint Distribution Committee

3. The NEP and Economic Rehabilitation. The recuperative process which set in with the end of the civil war was furthered by the New Economic Policy (NEP) adopted in the spring of 1921. Private commerce and small-scale private industry were again lawful occupations, and Jewish businessmen hastened to take advantage of the new opportunities. Here and there trade in the small towns was restored to its pre-war level, and Jewish shopkeepers made their appearance in cities from which they had previously been debarred. By 1924 nearly one-third of all the stores in Moscow were owned by Jews. Artisans were slower in regaining lost ground.

The new policy had not been in existence for more than two years when the state, while nominally tolerating private enterprise, began to wage war on it. The business man, whether shopkeeper or small manufacturer, found himself faced with ruinous taxes and fighting a losing battle against government-fostered consumers' and producers' cooperatives. Under the circumstances the economic outlook of a considerable portion of the Jewish population was exceedingly dark.



The occupational structure of the Jewish group five

years after the inauguration of the NEP appears from the following table based on the findings of the census of December 17, 1926.

Occupation	Percentage of Gainfully Employed
Industrial Wage Earners	11.4
Craft Workers	3.7
Employers	24.7
Peasants	8.3
Artisans	22.6
State Pensioners (including university students)	5.7
Traders	8.8
Liberal Professions	1.6
Unemployed	10.0
Others	3.2

The relatively small percentage of wage earners and the large proportion of white-collar workers are noteworthy. It should be noted that many members of the liberal professions were listed as employees. Many shopkeepers and artisans were half starving, and for the most part the traders were actually or potentially déclassé, together with the unemployed and the parasitic group of those without definite occupation.

The Bolshaya Sovetskaya Entziklopedia (1932), with supplementary data in the *Malaia Sovetskaya Entziklopedia* (1935), includes the following statistical table pertaining to the Jews in the Soviet Union:

A grandfather from Vitebsk who was among the vanguard of Jewish pioneers in Soviet Russia

Category	1927-28	1929-30	1932-33
Wage Labor	431,000	562,000	830,000
Including			
Clerks	164,000	227,000	380,000
Employees	267,000	335,000	450,000
Artisans	244,000	293,000	200,000 (all in cooperatives)
Peasants	100,000	134,000	190,000 (all in collective farms)
Dependent on State and Social Organizations	63,000	83,000	130,000
Of which student fellowships	17,000	30,000	70,000
Unemployed and déclassé	257,000	130,000	15,000
Economically active (self-supporting)	41.6%	44.2%	50.7% *

* This figure, a forecast in 1931, rose to 62% of the economically self-supporting Jews, according to the *Malaia Sovetskaya Entziklopedia*, published in 1935.

As time went by, the situation tended to worsen. The shopkeepers were being squeezed out relentlessly and there was widespread unemployment among the artisans. By 1928 large sections of the Jewish population were on the verge of starvation. Some of the déclassé were finding a place for themselves in the economic system, and migration into the interior helped to relieve the misery in the former Pale of Settlement.

For some years authorities had been giving thought to the plight of the Jewish masses, and plans were being formulated for their economic rehabilitation. A place was to be made in the industries for the unemployed and they were also to be drawn into agriculture. The latter method of solving the Jewish problem early found enthusiastic supporters both in and out of the ranks of the Communist Party, at home as well as abroad. A trend toward farming arose quite spontaneously in the early years of the revolution in the semi-agrarian townlets of the Ukraine and White Russia. Jewish families took up small parcels on the nationalized land situated near their homes and engaged in subsistence farming. Some families from thickly populated sections pulled up stakes and, acting on their own initiative, set out in search of land available for cultivation. Before the end of 1924, about 600 such families had migrated to northern Crimea, where they leased 50,000 acres. The old agricultural colonies established in the early years of the 19th cent., which had been wrecked during the civil war, were by that time again in working condition.

An early village Soviet of the Jews at Rottendorf

And then the government stepped into the picture. In July, 1924, the Central Executive Committee of the White Russian Republic ordered the proper agencies to satisfy the requests of the Jews equally with those of the agricultural population, in distributing the free

land, "regardless of whether the Jews had previously engaged in farming." This was a special privilege, since as a rule the law gave priority to the claims of the peasantry. A similar regulation was adopted by the government of the Ukraine. To promote the cause of Jewish agriculture, the central authorities in August of the same year created a Committee for the Settlement of Jews on the Land (Komzet). A year later an auxiliary body in the form of a voluntary association (Ozet) was set up. Financial and technical assistance was also offered by foreign relief organizations, notably the American Jewish Joint Agricultural Corporation organized in July, 1924, by the American Jewish Joint Distribution Committee.

Land for the Jewish settlements was allocated in the Ukraine, in northern Crimea and, from 1928 on, in the Birobidjan district of the Far Eastern Region. The settlers were recruited from the artisan class, but also from among the ruined shopkeepers and other persons without an occupation. They obtained their allotments free and received financial assistance and technical aid from the government and from foreign organizations. At first colonization made rapid headway. In August, 1924, when Komzet was set up, over 17,000 Jewish families were engaged in farming, working some 400,000 acres. Within three years the agricultural population doubled, while its holdings increased threefold. It was estimated that by 1931 the number of Jews who lived off the land stood at over a quarter of a million. Thereafter some of the settlements went under, the population of others dwindled, and new settlers took up the land allotments in decreasing numbers. Alone the Birobidjan project was nursed along. In 1938 the foreign relief organizations and Komzet were liquidated. That year there were throughout the land over 600 Jewish collective farms embracing some 25,000 families. A year later some 500 collective farms were mentioned as the sum total. It is noteworthy that Jewish farming was almost wholly collectivized. That 25,000 Jewish families lived on collective farms on January 1, 1939, is a statement made by a Soviet economist (L. Zinger) in a study published in Moscow (1941). The original program of Komzet provided for the settling on the land of 100,000 families or half a million persons, and there was even talk of a million settlers. In 1932 to 1933 there were 190,000 Jews on collective farms.

The proletarization of the Jewish masses was, of course, a consummation devoutly hoped for by the Communists. Trade schools were thrown open to Jewish youths, and some of the déclassé elements were retrained for work in industry and transportation. As long as the country was in the grip of an economic depression, however, openings for the Jews were few and far between. The inauguration of the first Five Year Plan in 1928 altered the situation. Before long, many starving artisans found work in machine shops, refineries, iron works, mines, quarries and on railways —fields from which residential disabilities had formerly debarred them. At the same time the industries in which Jews had been habitually employed, such as the needle trades, were mechanized, small workshops giving way to large factories. At the beginning of 1939 some 700,000 Jews, about 40% of them women, are said to have been occupied in socialized large-scale industry and in the building trades. By that time about 80% of all the Jewish artisans without hired help had ceased to be private businessmen, having joined producers' *artels* (cooperatives). As a result, they were treated favorably, on a par with wage-earners.

There was yet another occupation which seems to have played a larger role in the economic rehabilitation of the Jews than either farming or industrial work, and this in spite of the fact that they were not officially encouraged to enter it. It has been estimated, perhaps too hastily, that at the beginning of 1939 half of all the gainfully employed Jews were white-collar workers and members of the liberal professions. Fully two-thirds of these persons were government employees. Jews began to enter government service in the early years of the revolution, when Soviet institutions were being boycotted by the civil servants of the old regime. The staffs were repeatedly cut and a tendency arose to man the government apparatus with local people proficient in the local language. The Jewish share in the liberal professions was particularly disproportionate, which may be seen from the fact that in 1935 the number of students of Jewish birth in the Soviet institutions of higher learning exceeded that of Russians, White Russians and Ukrainians respectively seven, eight, and ten times.

A clear view of the participation of the Jews in the liberal professions may be derived from the following table compiled by a Soviet economist in 1941 (the figures relate to the beginning of 1939):

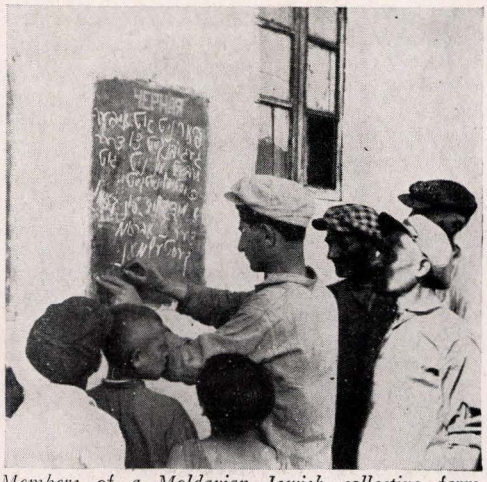
Engineers, Architects, Agronomists and other less highly trained technicians	87,000
Doctors and Nurses	52,000
School Teachers	46,000
Scientists and Scholars (including university instructors)	7,000
Journalists, Librarians, Club leaders, and the like	30,000
Artists (and writers)	17,000

Women were well represented in these occupational groups.

Individual scientists such as Abraham Joffe, the physicist, Alexander Frumkin, the physical chemist (both members of the Academy of Sciences), and Lina Stern, the physiologist, achieved high distinction in their respective fields.

By the middle of the 1930's unemployment among the Jews was practically wiped out. The Jewish question in its economic aspect was solved. Yet the balance between manual and intellectual occupations characteristic of an economically healthy group was apparently not achieved. The social structure of the Jewish people, as revealed by the 1939 census, was set forth by a Soviet economist in the following table (the figures are approximate):

Social Group	Percentage of Total Population
Workers and Employees	71.2
Members of Collective farms	5.8
Members of Artisans' cooperatives	16.1
Independent Artisans	4.7
Others	2.9



The invasion of the government bureaus by the Jews was cited by President Kalinin in 1926 as the cause of the spread of anti-Semitism among the intellectuals. Anti-Jewish feeling had survived the civil war and made itself felt in various ways during the NEP. The appearance of Jewish workmen in industries, where they had hitherto been unknown, unhappily resulted in the further spread of the ancient prejudice. Sporadic manifestations of it were most virulent toward the end of the 1920's. From the outset, anti-Semitism was vigorously combatted by the government. It is noteworthy that, according to Article 59 (Paragraph 7) of the Penal Code of the RSFSR, adopted

in 1926, a two-year prison term (under certain circumstances, capital punishment) is the penalty for the propaganda of national or religious enmity or discord, and for the preparation, circulation or storing of literature with these tendencies. The principle underlying this law was incorporated into the Constitution of the Union, adopted in 1936, which declares that "the preaching of racial or national exclusiveness or hatred or contempt is punishable by law" (Article 123).

4. The Political Situation. As previously shown, the Bolshevik regime confirmed the emancipation of the Russian Jews brought about by the Provisional Government. The *Declaration of the Rights of the Peoples of Russia* announced "the abolition of all national and national-religious privileges and restrictions" (Article 3). This principle was incorporated into the Soviet constitutions, including the one named after Stalin, adopted in 1936, and was respected. The Stalin Constitution introduced universal suffrage for all elections. Prior to its adoption, however, suffrage had been denied to employers of labor and private traders as well as to persons living on unearned income and to professional clergy, and with disfranchisement went other disabilities. The proportion of persons engaged in private business was unusually large in the Jewish group. This discrimination, however, was directed against a social, not a racial, or religious group. When a Jew who was a *chastnik* (private businessman) joined a collective farm or an artisans' cooperative, when he became a wage-earner or a salaried man, he automatically acquired the status of a full-fledged citizen.

The above-mentioned Declaration of the Rights of the Peoples of Russia pledged the government to ensure "the free development of national minorities and ethnic groups inhabiting the territory of Russia" (Article 4). The minorities were granted political autonomy within the Soviet Union, organized as a federation of states each representing a nationality bound up with a definite territory. In this scheme there was no room for an extra-territorial organization which would embrace a group like the Jews, who were scattered over the entire country and did not form a majority in any considerable part of it. The fact that they were a separate cultural group and indeed a quasi-national entity could not, however, be overlooked. On January 20, 1918, a Jewish department (Yevkom) was set up under the short-lived Commissariat of Nationalities, and a Jewish bureau was formed in the Commissariat of Education, while the Communist Party established a network of Jewish sections with a central bureau. The chief purpose of these agencies was to spread Bolshevism among the Jewish masses, to promote the class struggle within the group and otherwise to mold its life nearer to the Communist pattern. In 1922 there were said to be less than 20,000 Jewish members of the Communist Party (5.2% of the total membership); in 1927 and 1930 the respective numbers were approximately 50,000 and 76,000 (4.3% and 3.8% of the total); in 1932 (the last year for which figures are available) there were 125,000 party members and candidates. After that the number probably grew larger. Only a fraction of them made up the Jewish sections. The sections were abolished in 1930.

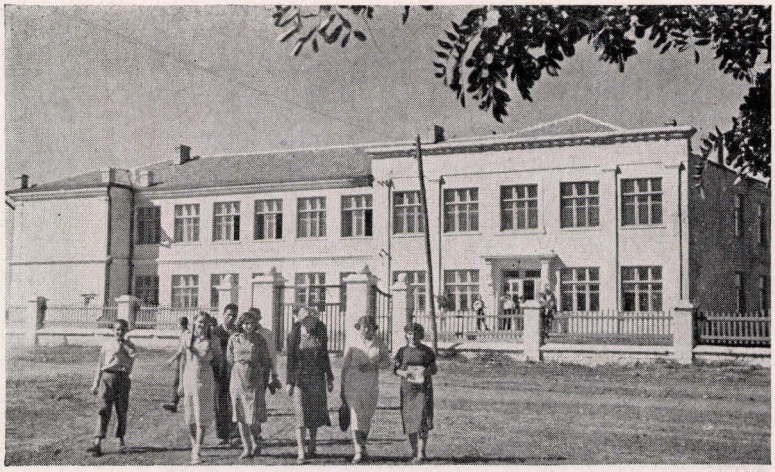
Airplane which delivers daily mail to Stalindorf, center of the Jewish National District in Soviet Ukraine

As an ethnic group apart the Jews, like the other minorities, have the right to self-government, effected strictly in conformance with the Soviet laws and under the tutelage of the Communist Party. In localities where they form a majority they are permitted, indeed encouraged, to form their own village and town soviets. These are Jewish in the sense that the area under their jurisdiction has a predominantly Jewish population and that the administrative work is carried on in Yiddish. In 1927 there was one Jewish regional soviet in the Kherson district and there were 133 Jewish soviets of the lowest category in the Ukraine and White Russia. Within half a dozen years their number increased to 224 and the number of regional soviets to five (three in the Ukraine and two in the Crimea). On January 1, 1931, there were also sixty-seven courts of law where business was conducted in Yiddish.

Birobidjan is represented in the Soviet of Nationalities, which in 1939 had 15 Jews among 574 deputies.

Certain Soviet leaders were not satisfied with the

At a memorial meeting held (1936) in honor of the hundredth anniversary of the birth of Mendele Mocher Sforim (Shalom Jacob Abramowitsch): On the platform (l. to r.): Nina Abramowitsch, daughter of the great Yiddish writer; V. V. Abramowitsch, professor of botany, grandson; Anya V. Abramowitsch, granddaughter. Picture by courtesy of Sovfoto



situation. The non-political, stateless existence of the dispersed group seemed to them abnormal, the result of a historic wrong which it was within the power of the new order to correct. The 1926 convention of the Jewish sections of the Communist Party went on record as favoring the establishment of an autonomous Jewish state within the Ukraine. While advocating the consolidation of the scattered members of the Jewish people into a nation of the normal territorial type, the Jewish Communists were at pains to disavow any nationalist intention. They were prompted, they argued, solely by the belief that the project would further the cause of the social revolution.

In the minds of some leading Communists, Jewish and non-Jewish, the project of settling the Jews on the land was associated with the more ambitious plan of restoring them to statehood. It was intended to plant the settlements on contiguous tracts of land in the hope that the area thus colonized would become a nucleus for an autonomous state. This was to straddle the Azov Sea, occupying both its Crimean and Caucasian littorals. The idea was dropped even before the flood of colonists to the Crimea began to recede, but the plan for a Jewish republic was not abandoned. In May, 1934, six years after the Birobidjan area in the Far East was set aside for Jewish colonization, the region was officially promoted to the status of a Jewish Autonomous District, only one step removed from a Republic, and given representation in the Soviet of Nationalities. The authorities were in earnest about turning this section of the Amur wilderness into a Jewish state. The third Five Year Plan provided for substantial capital investments in the region. In spite of many efforts, the Jewish population of what was groomed to be the first Jewish state since the Dispersion failed to increase noticeably. According to the census of 1939, the total population of the Birobidjan district stood at 108,400, about one fourth of whom were Jews. There were 108 schools, four higher schools and one permanent Jewish theatre. In 1941, of the sixty-seven collective farms in the District, twenty-seven were Jewish. Yiddish was the primary language.

The autonomous Jewish state projected by the Communists served mainly the interests of Soviet Jewry, but admitted Jews also from other lands. The Jewish people as a whole did not figure in their reckonings. From the first, the Zionist party was outlawed as a reactionary organization and a tool of British imperialism. While the left-wing Poale Zion and the Hehalutz groups were tolerated for some years, the Palestinian homeland was frequently disparaged as a futile hope.

5. Cultural Activities. From the first the anti-religious animus of the Soviet regime found a target in the Mosaic faith. The traditional practices of Judaism, no less than the observances of other religions, were held up to ridicule and obloquy in the propaganda sponsored by the Communist Party, while Jewish clerics were disfranchised (until 1936) and occasionally deported. A decree published on April 15, 1923, legalized "religious associations" and smaller "groups of believers," giving them the use of ritual objects and of houses of worship which had been nationalized, and bestowing upon them other rights.

In the early years of the Revolution, Orthodoxy showed a fair amount of vitality. Rabbinical conventions were held in 1922 and again in 1926. The budget

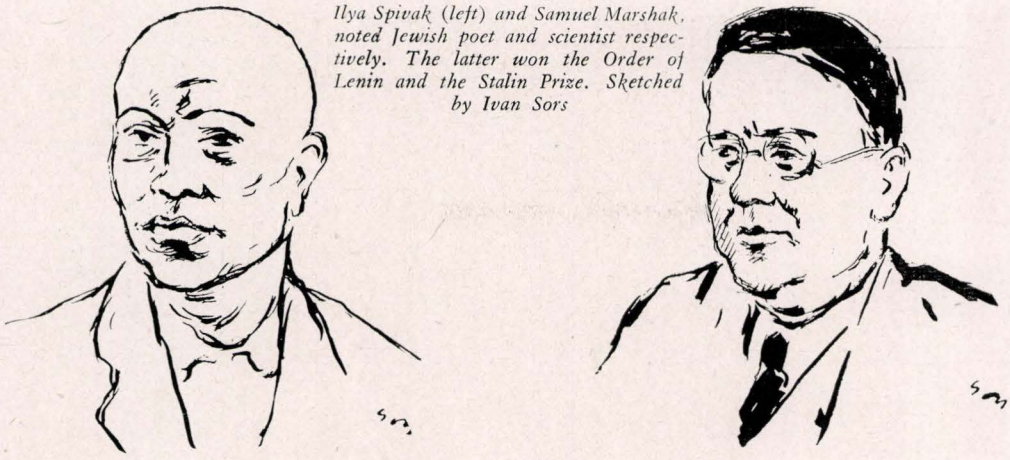
of the permanent rabbinical committee for 1927 to 1928 called for the expenditure of half a million rubles, part of which was supplied from foreign sources, on such items as the maintenance of Yeshivas, the repair of synagogues and Mikvehs, and the publication of prayer-books. On September 1, 1926, there were in the Ukraine 1,003 duly registered Jewish congregations with 137,000 members, and on October 1, 1925, there were 418 in the RSFSR. They would occasionally engage in forbidden activities: maintaining homes for the aged, credit societies for the poor, Heders for the children. The law confined their activities to purely religious matters, and as for religious schools (Heders were considered such), they are open only to persons over eighteen years old; boys and girls under that age may be taught a creed only in a home atmosphere by a parent or a tutor.



More recent information on religious activities is lacking. It may be assumed that institutional Judaism has been steadily losing ground. Yet the tenacity of the tradition must not be underestimated. In February, 1940, the Union of Militant Jewish Atheists issued a report in which it deplored the fact that the anti-religious movement had not made sufficient headway. In 1941 there were still 1,011 houses of prayer and 2,559 rabbis in the Soviet Union.

The drastic secularization of Jewish life, which was part of the Communist program, meant a ban on the Hebrew language and all it stood for. At first the prohibition was not rigidly enforced. Thus, until 1924 a company of Jewish actors (the Habimah) put on plays in Hebrew in the very shadow of the Kremlin. But as the years went by, the official attitude became more rigid. Practically all printing and importing of Hebrew books were discontinued. Yiddish is the medium of Soviet Jewish culture, as it is also the language in which the Jewish citizen may deal with the state. It is one of the four tongues in which the motto on the emblem of the White Russian Republic is inscribed. Yiddish was thus given official standing, and the Jewish Autonomous District became a center of Jewish culture.

The Communist fight against the synagogue and all its works meant also abolition of the Heders. They were replaced, in part, by state-supported secular schools in which Yiddish is the language of instruction. Every ethnic group in the Union has a network of state-supported schools in which the subjects are taught in the language of the group, although its members may send their children to other schools. This is intended as a safeguard of the integrity of the Union's national minorities. In 1931 to 1932 the elementary Yiddish schools were attended by 160,000 children, about a half of the Jewish children of school age in the Ukraine, a little over a half of those in White Russia, but only a fraction (8% in 1932-33) of those in the RSFSR. The Jewish educational system includes also a number of secondary, trade, factory and agricultural schools, several normal schools and a great many classes for adults. A few universities have Jewish departments and the whole edifice is crowned by several research bodies, notably those functioning in connection with the Ukrainian and White Russian Academies of Sciences. The Jewish institutions of higher learning attract, however, only a small fraction of the Jewish student body. As a result of increasing inevitable absorption into the national fabric, registration has been falling off in the elementary and presumably in the other Yiddish schools.

The state also supported (as of January 1, 1939) ten Jewish national theatres and two dramatic schools, exclusive of many smaller local theatres. The performances, all in Yiddish, contributed a bright note to Jewish cultural life. The peculiar mentality and spirit of the group have found expression not in painting or music, where little that is distinctive seems to have been produced, but in the arts of the stage and in imaginative writing. Since its inception Yiddish literature has been one of and for the common people, the poor, the untutored. Venerated and studied as the very foundation of Soviet Jewish culture, it has naturally grown in scope and significance. Some of the prose and verse of the new era shares the quality of its Russian models, but there are also authentic works, rooted in Jewish experience and sensibility. The purges of 1937 to 1938 removed from the scene a number of Jewish authors accused of Troskyism and nationalism. It has been stated that in the early 1940's there were 150 active Yiddish authors, and this in spite of the dwindling of the Yiddish-reading public.

The courts, the schools, the theatre, creative writing, Communist propaganda, all made claims upon Yiddish printing presses. Most of these were located in Kiev, Minsk, and Moscow. The number of titles printed increased throughout the 1920's, reaching a total of 653 in 1932. Then it began to decline. In 1939, 372 titles were published, in addition to fifty-three in Tadzhik and forty-two in Tat. When the revolution broke out there was a large periodical and newspaper press in Yiddish, Russian and Hebrew. All the publications in the latter language (there were ten of them in 1917) were discontinued, and so were prac-

Ilya Spivak (left) and Samuel Marshak, noted Jewish poet and scientist respectively. The latter won the Order of Lenin and the Stalin Prize. Sketched by Ivan Sors

tically all the Russian Jewish periodicals. Later several such publications sprang up, but they were of no great importance. The Yiddish press had the field practically to itself. In 1920 there were as many as ninety-five periodicals and newspapers in the vernacular. Their number, however, steadily diminished with the years. In 1932 it stood at twenty-nine; in 1939 there were six Yiddish magazines and sixteen newspapers as well as two in Tat and one in Tadzhik; in 1941 (exclusive of the newly annexed region) five newspapers and five magazines. The leading daily, *Der Emes,* originally the organ of the Central Bureau of the Jewish section of the Communist Party, later issued by the Council of Nationalities, had been discontinued the previous year. Only three newspapers of any importance remained: *Der Shtern* in Kiev, *Oktiabr* in Minsk, *Der Birobidzhaner Shtern* in Birobidjan.

Just before the second World War there was a fairly large professional group—perhaps 5,000 persons—functionally interested in Yiddish: authors, journalists, scholars, teachers, librarians, museum curators, actors, radio announcers. Yet the language seemed to be steadily yielding ground to Russian. Enjoying complete equality with the rest of the population, depleted by mixed marriages, the group has been undergoing a process of rapid assimilation. This development appears not to have been unwelcome to the Communists, for the Communist philosophy, while encouraging varied national cultural forms, looks toward a single socialist culture embracing all mankind.

6. The Second World War (1939 to 1942). The pact with Germany concluded just before the outbreak of the second World War did not alter the Soviet policy of racial equality. In the section of Poland annexed in September, 1939, the expropriated Jewish middle class faced a bleak prospect, in spite of the efforts of the new authorities to ease the transition to the Soviet economy, but other sectors of the population were benefited. Even among the Poles there were elements which collaborated with the new rulers. As for the Jewish youth, whose position under the Polish regime had been desperate, they greeted the Red Army with enthusiasm. Life under the hammer and sickle thus was one of security and hope. While no official attempts were made to intervene on behalf of the Jews beyond the demarcation line, the Soviet government encouraged the showing in Moscow, during 1939 and 1940, of the anti-Nazi film entitled *Professor Mamlock.* A large number of refugees from Nazi-held Poland were admitted to the country. Those who refused to become Soviet citizens and could not leave the Union were deported to the northern provinces and to Siberia, where they underwent great hardships. Among the exiles were also some natives of Galicia and White Russia, including Jews.

In October, 1939, the district and city of Vilna, with its large and ancient Jewish community, swelled by refugees, was ceded by Moscow to Lithuania. Ten months later this republic with its quarter of a million Jews was incorporated into the Soviet Union. During the summer of 1940 the Soviet Union had recaptured also Latvia and Estonia, as well as Bessarabia and northern Bucovina. The Baltic states legally voted themselves Soviet republics and were admitted to membership in the USSR, while Bessarabia had been historically part of the Soviet Union. The Sovietization of all these returned territories affected the economic status of the Jews to a greater extent than it did that of the rest of the population. Those who lost their occupations thereby were urged to emigrate to Birobidjan. Offices for the registration of prospective settlers were opened, but there are no figures as to the number of families that reached that destination. Everywhere the property of the Jewish communities was confiscated, Zionist and nationalist activities were suppressed, Hebrew schools closed and Hebrew publications discontinued, leaving the field free to Yiddish education and journalism. The Bund and other Social-Democratic parties were banned and some of the leaders imprisoned. Zionists and the moderate socialists were subjected to criticism in the Yiddish press. Yeshiva students and teachers were permitted to emigrate, and so were refugees from Nazi-occupied Poland who had refused Soviet citizenship.

The newly acquired territories housed old, conservative, close-knit communities which lived a completely Jewish life, rooted in the Hebraic tradition. Now no longer separated from the Jewish centers in the Ukraine and White Russia, they were apt to exercise a retarding influence on the process of assimilation which was making rapid strides in Soviet Russia. Before, however, their influence could make itself felt, before, indeed, life in the Galician and Lithuanian ghettos had known the full impact of the new order, the invasion of the country by German troops (begun June 22, 1941) completely changed the situation.

At once the area where most of the Jewish centers were located was in the hands of the invader. The greater part of the Jewish civilian population was evacuated, and settled in the interior, first on a temporary, later on a permanent basis. Thus, the agricultural colonists were removed to the Volga and to Si-

beria; a large number found homes in distant Uzbekistan, Central Asia. Tashkent, whither Jewish leaders, writers and publications were removed, became the Jewish center of learning. A black fate befell those who had been left behind. It is reported that many of them were exterminated by the invaders with the aid of native Fascists. A small number survived in Lithuania, Latvia and Bessarabia, none in Estonia. Most of the Jews of Riga were butchered before the end of 1941. About half of the 500,000 Jews in White Russia had been evacuated before the coming of the Germans. Of those who remained, nearly 200,000 are said to have been slaughtered. In the region of Minsk alone the number of those massacred reached 100,000. Very few Jews were left in Vitebsk, Grodno, Bialystok and Brest-Litovsk. At the very beginning of the invasion 52,000 Jews were butchered in Kiev and 25,000 in Odessa. In all, nearly a quarter of a million Jews are believed to have perished in the Ukraine, about 50,000 in Kiev alone. None remained in Berdichev, Belotzerkov, Fastov and Vinnitza. In some centers the surviving members of the group were confined to ghettos. Everywhere the Nazis conducted an intensive anti-Semitic campaign among the natives, but without success. The Jewish citizenry distinguished itself on the home front and on the firing line, both as Red Army regulars and as members of guerrilla bands.

Yechezkiel Dobrushkin, Yiddish writer

The large list of Jewish soldiers cited for valor on the battle front includes the following "Heroes of the Soviet Union":

General Jacob Kreizer, Submarine Captain Izrail Fisanovich, Cavalry General Lev Dovator (killed in action on the central front while in command of a Cossack cavalry division early in January, 1942), Private Laizer Papernik, General of Tank Troops Mikhail Rabinovich, General of Tank Troops Abraham Khasin, Private Leib Fainstein, Kogan, a guerilla fighter (killed in Volokolamsk), Private Neiderman, Lieutenant Levin of a Tank Battalion (killed holding off a German tank unit), Private Alia Shneier, and Military Surgeon (2nd Rank) Tsifrinovich.

Bearers of various Orders include Red Army Nurse Bukler, Colonel Faivel Mikhlin, Major Veprinsky, Sergeant Vekselman (killed defending Moscow) and Major Salman Osherov (killed in action).

Shortly after the outbreak of hostilities a Jewish Anti-Fascist Committee was set up in Moscow, with a Yiddish organ of its own entitled *Einikeit*. It held two conferences of representatives of Soviet Jewry, and in other ways sought to further the war effort of the Jewish people. To the same end it attempted to establish contact with foreign Jews. In August, 1941, a group of prominent Jewish scholars, writers and artists addressed an appeal to "the Jews of the world" urging them to fight Hitlerism. A number of responsible bodies, including the Executive Committee of the Jewish Agency for Palestine, responded to the call in a friendly fashion. Thus, after a lapse of nearly a quarter of a century, closer contact was established between the Jews of the world and their Soviet brethren. A sense of the common fate of all Jews throughout the world reasserted itself. In September, 1941, a Hebrew

Malka Haish, famous dancer, a Mountain Jewess of the Caucasus

broadcast from Palestine reached the Russian Jews. This was the beginning of a new era of friendliness toward the Jewish homeland and toward Zionism as well. The War also made for the abandonment of anti-religious propaganda. On the first anniversary of the German invasion, Soviet Jews urged Jews everywhere to fight Hitlerism in order to save civilization "and to protect the life and honor of the Jewish people."

SOYER, ABRAHAM, Hebrew and Yiddish writer, b. Lutzin, Russia, 1867; d. New York city, 1940. He came to the United States in 1913. Soyer wrote essays, stories and novelettes in various Hebrew periodicals in Europe and the United States, including the *Haperahim, Hatoren, Hadoar* and *Haibri.* A two-volume study, largely autobiographical in character, appeared in Tel Aviv in 1928, under the title *Hador Holech.* Soyer also wrote numerous children's stories, many of which appeared in book form. Among these was *Beolam Hapelaoth.* He was the author of a Hebrew text-book, widely used in education in the United States. His stories for children have an allegorical nature; those for adults are of a passing generation. He has a kind word even for villains. Although known mainly for his work in Hebrew, Soyer was also a contributor to the Yiddish press. After his death the Abraham Soyer memorial prize was established by Yeshiva College, with the cooperation of Soyer's children. The first award was made in 1941.

SOYER, MOSES, artist and teacher of art, b. Borisoglebsk, Russia, 1899. The son of Abraham Soyer (a Hebrew teacher and writer), Moses Soyer was a twin-brother of Raphael and a brother of Isaac Soyer, both gifted artists.

In 1913 the Soyer family, whose name is an adaptation of the Hebrew Shomer (sentinel), emigrated to the United States and settled in the East Bronx, New York city. Moses Soyer studied art at Cooper Union and at the National Academy of Design. Breaking away from the Academy, Soyer attended the Educational Alliance where he taught a life class from 1924 to 1926. Occasionally he tutored youngsters in Hebrew, among whom was Ida Chassner, whom he married (1926). That same year he won a traveling fellowship which enabled him to study art in England, France, Holland and Italy. In 1928 he returned to New York.

Soyer held four one-man shows in New York and Philadelphia. He exhibited also at the Chicago Centennial Exposition, the National Arts Club, the Whitney Museum (New York) and the World's Fair, Paris. He was represented also at international exhibitions in Stockholm, Berlin and Dresden. He was a member of the American Society of Painters, Gravers and Sculptors, and of numerous other distinguished art associations.

Although Soyer was deeply impressed by such French artists as Daumier and Degas, and influenced by Sloan, Luks and Bellows, he very early developed his innate artistic originality. He did not specialize. He created etchings, portraits, paintings of scenes, and compositions combining landscapes and figures. Opposed to Futurism, Soyer strove toward a new approach to realism. Relying upon a remarkable knowledge of anatomy, he painted with a heavy outline, and often with much impasto. Some of his most effective work is in compact design, notably evident in *Spanish Refugees* or *Mother and Children.* His principal aim was unadorned simplicity which he regarded as attainable by condensation of rather than abstraction from detail, combined with simplicity, and monumental grandeur, achieving the renewal of al fresco style. Soyer proved his aptitude for the grand style by painting murals at the Greenpoint Hospital. He was equally expert as a lithographer and excelled in effects of intimate character.

Numerous works by Soyer were acquired by permanent collections, among them the *Girl at Sewing Machine,* in the Metropolitan Museum; *An Old Worker,* in the Phillips Memorial Gallery; others in the Toledo Museum, New York Historical Society, and the Congressional Library (Washington D. C.). Soyer was one of the founders of the Jewish Art Center and the New Art School where he acted as a teacher. He instructed also at the American Artist School, New York city.

SOYER, RAPHAEL, artist, b. Borisoglebsk, Russia, 1899. His childhood years were passed in a cultured atmosphere, where he obtained a good grounding in a Jewish and Russian education.

In 1912 he arrived in the United States where, like many another ambitious immigrant, he alternately worked and studied. He attended art classes at Cooper Union, in New York city, the National Academy of Design, the Beaux Arts institute and the Art Students League. His very first show, at the Daniel Gallery in 1929 (he had started exhibiting a few years earlier), attracted favorable comment, which grew in volume with each subsequent exhibition. Awards followed: the Kohnstamm Prize (Chicago Art Institute, 1932), the Beck Gold Medal (Pennsylvania Academy, 1934), Honorable Mention (Carnegie Institute, 1939); Temple Gold Medal (1943).

His works were acquired by the Metropolitan Museum and the Whitney Museum (New York), the Baltimore Museum, the Duncan Phillips Collection and many others in the United States and abroad. He traveled through several countries of Europe, studying art, old and new. His itinerary included a visit to the U.S.S.R., where he exchanged views with Soviet artists.

An examination of Soyer's collective work shows that, while his style has been evolving through a number of phases and his themes have been widening in scope, a certain close-knit unity of conception, orientation and method emerges throughout to give a special "Soyer" stamp to his entire output. And that is only natural, for Soyer's work mirrors the artist's impressions of the world and the people he knows at first hand. They are the people from the realm of what Sombart called "asphalt civilization," i.e. the conglomerate city that determines in definite and specific ways the pursuits, pleasures, fashions, foibles, home life and social intercourse of its denizens.

A random list of Soyer's paintings chosen from various periods illustrates the point: *Family Scene; Suzan; Room Mates; In the Bus; Doctor's Office; Furnished Room; Interior; Cafeteria; In the Studio; Dancers; Street Scene; Shop Girls; Railway Waiting Room; Flower Vendor; Window Shoppers; Office Girls; Bowery.*

Soyer does not choose the extremes of wealth and labor but the fluid, indeterminate mass ranging between the lower middle class and the *lumpenproletariat.* The same pattern is followed in Soyer's cityscapes: not Fifth Avenue or Wall Street but Rutgers Square, Delancey Street, Fourteenth Street. Even the nudes (among the most numerous of Soyer's subjects) are not exempt from the effect of the sedentary, confined, artificial life under "asphalt civilization." The "eternal feminine" enjoys a brief span of fragile charm followed inexorably by a cruel reapportionment of flesh, flabbiness (*Suzan*) and other forms of deterioration.

All this Soyer has seen and felt, and all this he tells in the language most appropriate to the task—the language of interpretive realism. Imagination plays an important part in his method, of course—composition is impossible without it—but whatever liberties he may take with natural appearance, however much he may eliminate certain details and rearrange others, the ultimate source of reference is always the world of the real.

Much of the work is done in the studio and from the model with the result that many of his genre pictures are really portrait studies. It was therefore only logical that Soyer should undertake the unique project of painting a series of portraits of his contemporary fellow artists. Up to 1943 he had completed about a score, among them Walkowitz, Weber, Criss, Marsh, Gross, Evergood, Burliuk, Tschacbasov, Gropper, Sloan, Gorky, Jules, Levi and Laurent.

Soyer's work fits closely into the pattern of recent American art history. It forms a link between the "ash can" school of the muckraking era and the "social scene" movement of the post-War period. Soyer at once followed a tradition and helped to carry it forward. LOUIS LOZOWICK.

SPAETH, JOHANNES PETRUS (called Moses Germanus after his conversion to Judaism), proselyte, b. Vienna, in the 1630's; d. Amsterdam, Holland, 1701. He was the son of a Catholic shoemaker. In his manhood he embraced (1680) the Lutheran faith in Thuringia, and because of his piety he was called the second Luther. Under the influence of the theologian Philipp Jakob Spener, the father of pietism, and his friends, Spaeth returned to Catholicism at Frankfort in 1683, but his constant studies strengthened his convictions against the church, and he tried to persuade others of the futility of any one Christian denomination. Under the sway of the Socinian ideas which had penetrated into Germany from Poland and advocated the setting aside of all specific Christian doctrines, and influenced by various sects, Spaeth finally broke with Christianity entirely, and gradually approached the Jewish tenets. After undergoing circumcision in Amsterdam, he became converted to Judaism, dropped the name of Spaeth and adopted that of Moses Germanus. In order to justify his step publicly, he wrote several essays, the most important of which was *Sendschreiben eines gewesenen Pietisten.*

Spaeth seems to have been well contented as a Jew, and in his fifties, married a German Jewess of Frankfort. In all his essays, such as *Epistolae ad vindicandum judaismum; A groote Hosianna der Jooden, te Vervollkommenden Messias;* and *Jesus Christi Ehre und Lehre, gerettet wider alle Christen,* which he wrote after his conversion to Judaism, he criticized Christianity severely.

Lit.: Schudt, Johann Jacob, *Jüdische Merckwürdigkeiten,* vol. 4, p. 194; Samter, N., "Johannes Peter Spaeth (Moses Germanus)," *Monatsschrift für Geschichte und Wissenschaft des Judentums* (1895) 178 et seq.; Graetz, H., *History of the Jews,* vol. 5 (1927) 177-78.

SPAIN. 1. From the Earliest Times to the Arab Conquest (711). Jewish legends from the time of Hasdai ibn Shaprut (10th cent.) on declare that Jews settled in Spain at a very early period. Yet there are no definite proofs of the existence of Jews in Spain in the early centuries of the Christian Era. At the beginning of the 5th cent. a bishop of Magona (Mahon in the Balearic Islands) boasted that he had converted the entire Jewish community of that place to Christianity. The rule of the Arian Visigoths was fairly favorable to the Jews. The Lex Romana Visigothorum (506) merely repeated the Roman and canon law about the Jews. At first these were enforced with considerable latitude; but later on King Recared, who himself became a Catholic, insisted on their strict enforcement, and Sisebut compelled all the Jews of the country to accept baptism (612). The church disapproved this violent procedure, some of the details of which are not clear, but it could not be annulled. The legislation of the following century, formulated under the influence of the church, was intended, through the instrument of priestly control, to prevent baptized Jews from reverting to Judaism and to make difficult the lives of those who did return to their ancestral faith, by imposing upon them discriminations in economic matters, burdensome taxation and other compulsory measures.

At the Toledo council of 694 King Egica accused the Jews of conspiring with the "Hebrews on the other side of the sea" to undermine state and church. In punishment for this supposed crime, the Jews were plundered of all their property and condemned to eternal slavery as the subjects of the fiscus. King Witica (701) seems to have somewhat lightened their yoke. But they did not regain complete freedom until the Arab conquest in 711.

The accounts of the social and economic conditions of the Jews in Visigothic Spain are one-sided and unclear. According to some reports, they were independent, prosperous landowners and even held high governmental positions; they participated in overseas trade. According to other reports, they held leases from the nobility, from whom they received favors. They observed the principal usages of the Jewish ritual, were well versed in Haggadic literature, and are even reported to have written polemics against the Christians. FRITZ BAER.

2. The Arab Rule from 711 to the Middle of the 18th Century. a. The Era of Arab Invasion (711-828). According to some modern historians, such as M. Mendez Bejarano, it is to be taken for granted that the Jews of Spain actively aided the Arabian armies which invaded the country. All that can be definitely ascertained from the reports of Abhar Majmua, Al-Makkari and Ibn Adhari, however, is that as the Arabs pressed forward they left the cities they had conquered in charge of Jewish garrisons. It is further recorded that Seville was first settled not by Moors but by Jews; the latter, however, were later massacred in an uprising of the Christian population. Soon afterward the Arabs recaptured the city, and in three years they were masters of the entire peninsula. As a result of this conquest many Jews of Asia and Africa, who had served in the Arab armies, settled in Spain. The Jews of Toledo rose against their Gothic oppressors, took possession of the fortress and opened its gates to the Arabs. A part of Castile was conquered by Berber Jews of Morocco, under the leadership of Kaulan al-Yahudi.

Important autonomous Jewish communities soon sprang up in Granada, Cordova, Seville, Toledo and other cities. But when the Moslems, in breach of previous agreement, attempted to impose a poll-tax (*dzima*) upon the Jews, the latter revolted, but were defeated. Later a large part of the Jews left their Spanish homes in 721 to journey to Palestine in the train of the pseudo-Messiah Serenus, and their property fell to the Arabs. Those Jews who remained in Spain soon became prosperous.

Arab Spain became partly independent of the caliphate when the last descendant of the Omaiyads, Abd-ar-Rahman, escaped from Damascus (755) and became caliph at Cordova (757-87); the Jews acknowledged him as their ruler. Under his successor, Hisham I (788-95), they were permitted to attend the state schools, and soon learned to speak and write Arabic, from which time on they made notable contributions to Arab science and literature. Under Al-Hakam I there was an uprising of the Jews of Andalusia against the caliph (818), as a result of which a large part of them had to emigrate to Africa. In 828 there was another revolt at Tulaitula in which the Jews joined hands with the Mozarabs (Spanish Christians who had become assimilated to Arab culture); this was put down, and the Jews and Mozarabs were massacred in many places, especially in Toledo.

b. The Golden Age of Sephardic Jewry (10th and 11th Centuries). The Jewish academies of

Spain owe their beginnings to Moses ben Enoch of Sura. He and his children were brought to Cordova as slaves, and were ransomed by the Jewish community. At that time the situation of the Andalusian Jews was so favorable that they were able to take away the spiritual hegemony from Babylonia. Their spiritual leader was Hasdai ibn Shaprut (915-61), favorite and adviser of Caliph Abd-ar-Rahman III (912-61). Under his leadership both Jewish and secular sciences, especially medicine and astronomy, flourished. The commerce and trade of the Spanish Jews reached all parts of the known world. Hasdai himself translated Dioscorides into Arabic; while of his collaborators Dunash ibn Labrat (920-90) introduced versification and stanza construction into Hebrew literature, Menahem ben Saruk (910-70) wrote important works in the fields of grammar and lexicography, and the study of the Talmud was represented by Moses ben Enoch and his pupils, Enoch ben Moses (914-1040) and Joseph ibn Abitur. Famous Jewish academies arose in Cordova, Lucena, Granada, Toledo and Seville. Isaac ibn Gikatilla won renown in poetry, Judah ben David Hayyuj in Hebrew grammar, and Joseph ibn Abitur by his translation of the Mishnah into Arabic. During that period Jacob ibn Gau was Nasi and chief justice of all the Andalusian Jewish communities (985-87).

In 1013 a war broke out between Mohammed ben Hisham of Cordova, on the one hand, and Suleiman Alchakam and Ramon Borell, with 9,000 Catalonian warriors, on the other. The Jews of Cordova and Tarragona took the side of Mohammed; accordingly, when Suleiman was victorious he persecuted the Jews, confiscating their wealth and closing the Cordova academy. The Jews of Cordova fled to Granada, Toledo, Malaga and Saragossa.

In 1020 the Berber Senhajas founded the kingdom of Granada and Malaga. In 1025 the vizier of this small kingdom appointed Samuel Hanagid royal secretary, and later royal advisor and state minister (Katib). In this capacity he was entrusted with the direction of diplomatic and military affairs (1027), which he conducted for thirty years. After King Habus died (1037) Samuel, with a small group of Berber leaders, favored the succession of the king's elder son, Badis; the majority of the prominent Berber families, as well as such important Jews as Joseph ibn Migas, Isaac ben Leon and Nehemiah Escafa, espoused the cause of a younger brother, Balkin. Badis became king and Samuel the all-powerful administrator of the kingdom. The opponents of Badis left Granada; Ibn Migas fled to Seville, where he was appointed to high diplomatic positions by Emir Al-Motamid, an enemy of the king of Granada. Al-Motamid's predecessor, Emir Al-Motadhid, had been unfriendly toward the Jews; he did not grant them the least participation in the affairs of the state, and he disdained their financial assistance. However, he left them in peace and they lived in quiet, at the very time when the Jews of Cordova and its vicinity were persecuted and those of Saragossa were victims of great massacres due to religious fanaticism (1039). In 1038 the government of Almeria demanded that Samuel Hanagid be dismissed from his position in Granada; war broke out between the two countries, and Granada was victorious.

Samuel Hanagid, being himself a scholar and an author, was the patron of Jewish poets, maintained relations with Mesopotamia, Syria, Egypt and Northern Africa, supported Jewish academies in various countries, and made possible the admission of Jews to state positions and to military service. Among the notables of the period were the following: Jonah ibn Janah (955-1050), poet, Hebrew philologist, physician and Bible scholar; Solomon ibn Gabirol (1021-70), poet and philosopher; the latter's patron, Jekuthiel ibn Hassan, councillor of the king of Saragossa; Yahya ibn Mondhir, who probably lost his life together with the king in the palace revolution of 1039, which set Abdallah ibn Hakam on the throne. It appears from the writings of Ibn Gabirol that some of the Jews of Saragossa in his time spoke Romanic (early Spanish), while others spoke Arabic. Another notable figure of the time was Bahya ibn Pakuda, famed for his system of Jewish ethics, and active in the fields of philosophy, grammar, poetry and Bible exegesis. His contemporary, Isaac ibn Jasos (982-1058), was physician to the prince of Denia, as well as philosopher, grammarian and commentator.

Samuel Hanagid was succeeded by his son Joseph ibn Nagdela (1031-66), who was distinguished for his great humanitarianism. Joseph, however, was the victim of a conspiracy on the part of Arabs who were envious of his power and resented his filling state positions with Jews; in 1066 he and 1,500 other Jews were killed.

King Al-Motamid (1069-91) of Seville welcomed the Jewish refugees from Granada and entrusted Jews with such positions as state secretary, vizier, Hajib and the like. In 1083 King Alfonso VI of Castile sent his Jewish tax administrator, Amram ibn Shalbib, as his representative to Seville, where he was executed by command of Al-Motamid for his devotion to his sovereign. His death was the cause of a fierce war between the Spaniards and the Moors which ended in the battle of Zalaca (1086) in which many Jews were killed on both sides. It was characteristic of the kings of Castile that they proclaimed a truce for Friday, Saturday and Sunday, in order that the Sabbaths of Moslems, Jews and Christians might be respected.

c. The Period of the Almoravids and Almohades (12th and 13th Centuries). After the battle of Zalaca the real conquerors, the Almoravids of Africa, established themselves firmly in Spain, and under them the Jews recovered the property which they had lost under King Badis. In 1091 the Almoravids dethroned and banished Al-Motamid; the Jews of Granada were able to save their synagogues by paying large sums of money, but the Christian churches were destroyed. Soon after this King Yakub ibn Yussuf threatened the Jews with persecutions under the pretext that the Jews had promised Mohammed that they would adopt Islam if the Messiah had not come by the year 500 of the Moslem era; again the Jews had to save themselves by paying a large ransom. The persecutions created an atmosphere favorable to Messianic movements; a false Messiah appeared at Cordova, and he and his adherents were executed.

The situation of the Jews improved in the reign of Ali (1106-43), who appointed many Jews to public office and made some high dignitaries. Solomon ibn Almualem of Seville, a noted poet, became the king's personal physician and was appointed Nasi and vizier; Abraham ibn Kamnial of Saragossa was also made vizier and private physician to the king, and was distinguished by his philanthropic activities, in which he helped the Jews of Spain, Egypt and Babylonia. Abraham bar Hiyya, astronomer and philosopher, became director of police in a Moslem duchy. None of these influential Jews, however, acquired as much power as Hasdai ibn Shaprut or Samuel Hanagid.

The most important rabbi of the time was Joseph ibn Migas (1077-1141), head of the community of Lucena. The poets included Moses ibn Ezra (1070-1139),

Judah ibn Ghayyat, Judah ibn Abbas, Solomon ibn Zakbel and the famous Judah Halevi (about 1080-1140) who, although born in Castile, developed his poetic and philosophical activity in Arab Spain. Isaac Albalia (1035-94) contributed to the knowledge of astronomy, mathematics, philosophy and the Talmud; he wrote an astronomical essay about the Jewish calendar, became astronomer to King Abulkassim Mohammed of Seville, and was Nasi of the Jewish communities of the kingdom. Isaac ibn Ghayyat of Lucena (1130-89), Isaac Albargeloni and Isaac ibn Zaknai of Denia were famous Talmudists.

In the meantime the Almoravids, who had conquered Spain in order to purify Islam, were defeated by a still more fanatical sect, the Almohades of Africa, in the middle of the 12th cent. The latter persecuted the Mozarabs and the Andalusian Jews, took possession of their wives and their wealth, and burnt their churches and synagogues. In this way they destroyed the community and academy of Seville; the Jews there either fled to Toledo, Catalonia or France, or remained and adopted Islam (1146-48). At the same time a terrible persecution of the Jews took place in Valencia (1148), ending with the banishment of all the Jews of Andalusia. The members of the academies of Seville, Cordova and Lucena who escaped were received in Toledo by King Alfonso VII. After the battle of Las Navas de Tolosa (1212), however, the Almohades lost a large part of their power, and Jews could once more settle in Seville. During this dark and bloody period Maimonides (1135-1204) could save his life only by declaring himself a Mohammedan and was forced to leave his native land of Spain. The poet Ibraham ibn Sahl al Israili al Ishbili, known also as Abu Ishak (1211-50), also became a convert to Islam. After the conquest of Seville by the Christian army in 1248 he was forced to flee from Spain, but later met a tragic death at Ceuta.

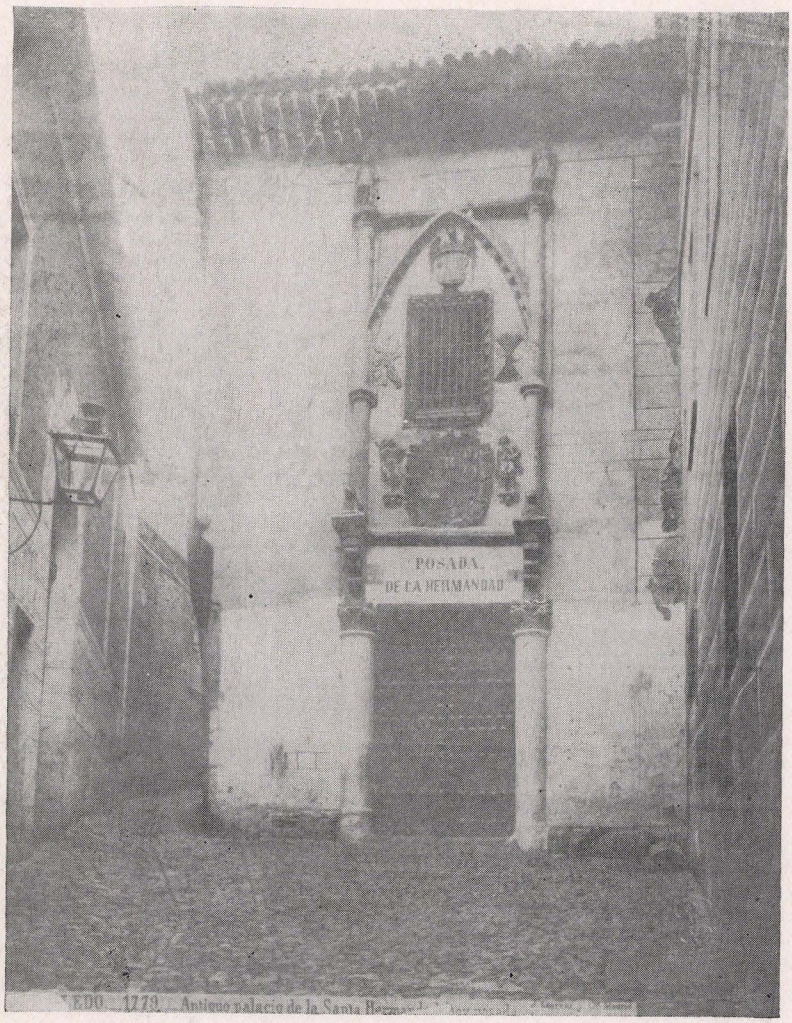
As the Spanish Christians gradually drove the Arabs out of Spain, the conditions of the Jews proportionately improved. It is true that the crusaders under the Spanish king Ferdinand the Saint attempted to force upon the Jews their oath of religious loyalty. But this won no favor with the king, who welcomed more Jews into Cordova in 1236 and into Seville in 1248. With this began a new period in the history of the Jews in Christian Spain.

Among the Jews who were forced to leave Spain by the persecutions of the Almohades were Joseph Kimhi, who fled to Narbonne and thus brought Spanish Jewish culture to France, and Judah ibn Tibbon (1120-90) of Granada, who settled in Lunel and spread the culture of Andalusian Jewry in the Christian countries. With them the center of Jewish culture shifted from Mohammedan Andalusia to Christian Spain.

SAUL MÉZAN.

3. Castile and Aragon. a. From the 10th to the Middle of the 13th Century. The Arab conquest of the Iberian Peninsula had put an end to the anti-Jewish legislation of the Visigoths, even in those portions which still remained in Christian hands. The rulers of the gradually expanding Christian states of northern Spain, in which Jews settled from the end of the 10th cent. on, bestowed favors upon them in order to further their own extensive plans for colonization, which were not limited by religious considerations. An important number of the castles of Castile were inhabited by Jews. They were protected there by the king, who regarded them as his property. Jewish tax collectors, secretaries, physicians and scholars began to play a role in the royal court.

Alfonso I of Aragon (1105-34) and Alfonso VI of Castile (1072-1109), the conqueror of Toledo, showed especial favors to the Jews. The Jews of the south, fleeing from the Almohades, found a refuge with them, thanks to the intervention of the almoxarif (tax collector) Judah ibn Ezra, who in turn was helped by Alfonso in his suppression of the Karaites. Toledo became the site of a brilliant new flowering of Jewish-Arabian culture. In the 12th cent. a new spiritual center developed in Barcelona.



As evidence of the trend toward tolerance there may be adduced the municipal charters (*fueros*) granted by the kings. Some of these gave Jews the same rights as Christians in contracts and in lawsuits. The *fueros* of Teruel and Cuenca, dating from the end of the 12th cent., refer disputes between Jews and Christians to a special court of arbitration with an equal number of judges from each side. The only exception was that Jews were not allowed to fight duels; in Leon, for instance, a Jew was allowed to be represented by a Christian champion. As a rule the Jews were exempt from military service, and participated only in the defense of the city or castle in which they lived. The report that 40,000 Jews lost their lives in the battle of Zalaca (1086) is certainly grossly exaggerated.

On the other hand, there are traces of anti-Jewish tendencies in the older Spanish laws; for instance, a provision in the charter of Leon (1091) rescinded the right of the Jews to bear evidence against Christians. In the years after the death of Alfonso VI there were rather extensive persecutions of the Jews in Toledo and northern Castile. It is certain that these persecutions were partly for religious reasons. The period was the beginning of the theological disputations and of the incitement of the church against the Jews, with the result that a few individual Jews accepted Christianity.

In the economic domain there were but few causes of friction between Jews and Christians. Although isolated reports indicate that there were Jews who engaged in money-lending, the laws on the subject do not indicate that the Jews formed a special class in this respect. The records often mention Jewish shops that dealt in cloth. The Jews of Barcelona engaged at an early period in exports and imports. There are numerous statements that Jews owned real estate, but only in rare instances was this property purely rural.

b. From the Middle of the 13th Century to 1415. The renewed victorious campaigns of the Spaniards against the Moors at the beginning of the 13th cent. resulted in the most important Jewish communities of the older realm of Arab culture becoming a part of the kingdoms of Castile and Aragon. As a result of this, these two kingdoms had the largest Jewish communities in Europe. According to reports from the end of the 14th cent., such great commercial cities as Barcelona, Valencia, (Palma de) Mallorca and Seville had each Jewish communities of about 1,000 families. Their importance was in proportion to their size. It is true that their focal point within Spain had shifted. The Jewish communities in the southern part of the country remained under the influence of Arab culture, but this was in a state of stagnation. On the other hand, the north, under Christian influence, was creative in the field of Cabala. In the course of two centuries Barcelona, by virtue of its great Talmudists, became the leading community in Jewry and the native city of a number of important authors.

The Jewish communities of Spain possessed autonomy in matters of finance and taxation, as well as jurisdiction over their own civil and criminal cases. Jewish artisans were organized into independent guilds.

A relic of the Inquisition in Spain. The old portal of the tribunal in a Spanish town.

Certain small communities were almost entirely composed of craftsmen, including smiths and masons. Most of the Spanish Jews, however, were engaged in trade, both domestic and foreign. The Jews played an extensive part in cloth-dealing and wool weaving, the most important activities of the medieval city. On the other hand, comparatively few were agriculturists, although a number of Jews owned land and cattle. A proportionately large number of Jews were engaged in the furthering of learning, not merely as Talmudists, but also as philosophers, mathematicians, physicians and translators; many were in government service. The contributions of the Spanish Jewish astronomers prepared the way for the great Spanish explorations of the 15th and 16th centuries.

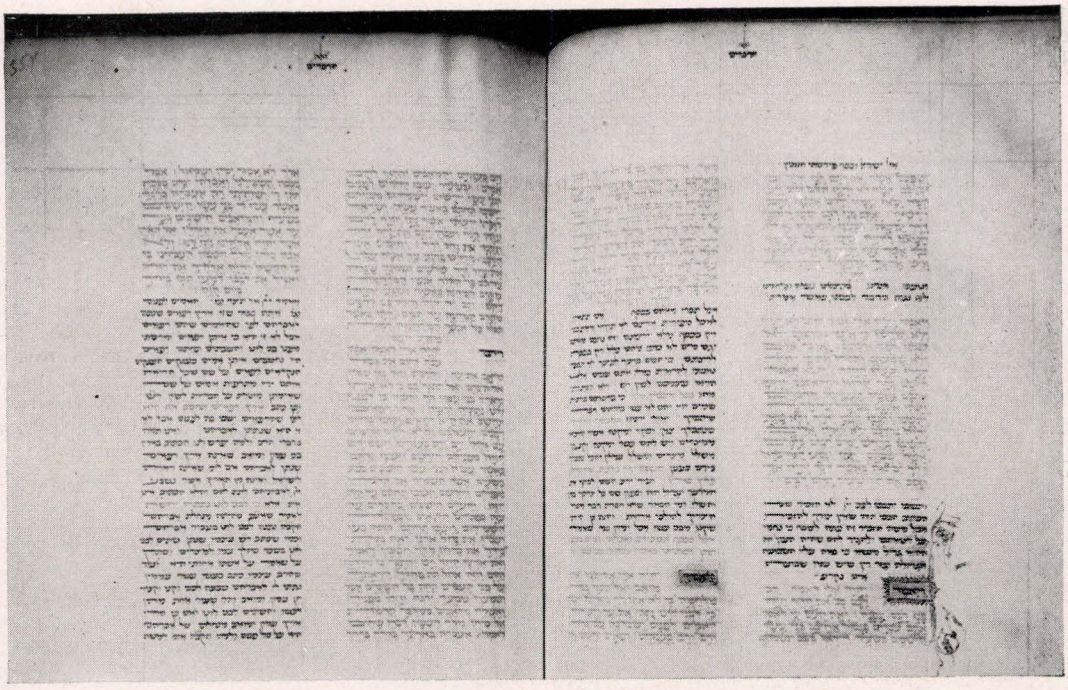
The economic position of the Jews became a difficult one for two reasons. In the first place, they were regarded (in contrast to the Moors) as the chief moneylenders, although the prohibition of the taking of interest by the canon law, which had become a public law in the 13th cent., was frequently violated by Christians. Secondly, the greater part of the state revenues of Castile was farmed out to Jews, under the direction of a Jewish tax collector general (almoxarif). The latter was also the treasurer of the king and the general purveyor of army supplies; he often became involved in political intrigues, and thus, as in the case of Samuel Halevi Abulafia under Pedro I, put his life at stake. In Aragon, on the other hand, where the art of administration was better developed, the Jewish tax collectors (bailes) were in the position of state controlled officials. Such men as Jahuda de la Cavalleria, Moses and Joseph Ravaya (Abravalia) and Muça de Portella financed the conquests of Jaime I (1213-76) and the Sicilian campaign of Pedro III (1276-85). But no later Jews won an equally high position, and the majority of the Jewish population were poor. In the Balearic Islands only was the wealth of Jews (and of Christians) proverbial. As a rule, no sooner had the Jews gotten together a little money than it passed into the hands of the state. At the end of the 13th cent. the Jews of Castile were paying ordinary annual taxes that amounted to from two to two and a half million maravedis.

The fate of the Jews depended to a large extent upon their relations with various classes of the Christian population. Rulers such as Alfonso X of Castile (1252-84), Jaime I, Jaime II (1291-1327) and Pedro IV of Aragon (1336-87) were on friendly and familiar terms not only with Jewish financiers but also with Jewish scholars and poets. Yet this did not prevent the most brutal attacks on the wealth and the life of the Jewish communities. The theory that the Jews had no rights of their own and were mere serfs of the treasury appeared in ever greater clarity. It was to the interest of the rulers to protect the Jews and to grant them privi-

leges, if extraordinary circumstances did not hinder.

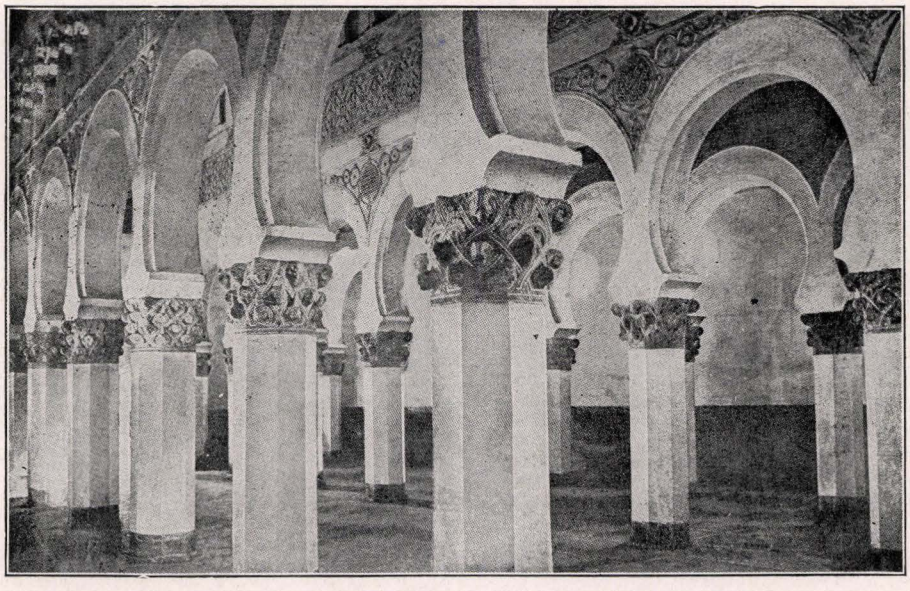
The law codes of the 13th cent. reveal a moderate amount of anti-Jewish tendencies. The rate of interest was set at 33⅓% in Castile and 20% in Aragon—a rate lower than that prevailing in most of the states of Europe. The Jews were compelled to take a special form of oath (Oath More Judaico). Yet in legal matters they enjoyed the same rights as Christians, and often in addition the special rights granted to money-lenders. Whereas the nobility on their estates imitated the pro-Jewish policies of the kings, the church and the citizens fought bitterly against the Jews.

The clergy, aided by such apostate Jews as Pablo Christiani and Abner of Burgos, sought to convert the Jews by means of sermons and disputations; the best known of the latter took place at Barcelona in 1263, between Nahmanides and Pablo Christiani. Polemical writings such as the *Pugio Fidei* (Dagger of Faith) of Raymund Martin evoked the production of apologetic literature on the part of the Jews, its first appearance in the Middle Ages. A religious conflict arose, unprecedented in any medieval state. Whereas the Christian partisans made use of secular weapons, the religious stirrings of the Jews resulted in Messianic movements, which swept the country under Cabalistic influence at the end of the 13th cent. Moreover, the agitation of the church had the effect of casting a baleful light upon the economic situation of the Jews. As a result of the ecumenical council of Vienne (1311), the Spanish church demanded the removal of all Jews from state positions, their strict separation from the Christians, the introduction of the Jew badge, which had been prescribed by canon law in 1215, and the revocation of the right of Jews to act as witnesses. The same demands were made to the representative assemblies (cortes). Demands were made that the state revoke the privileges of Jewish money-lenders, stop the Jews from acquiring real estate, and abolish the existing autonomous Jewish jurisdiction.



The mounting hatred of the people for the Jews, increased by the occurrence of the Black Death, broke out in 1348 in Catalonia, where the poverty of the peasants led to fresh excesses in the following decades. In 1354 the Jewish communities of Aragon formed a union to avert this threatening evil. In the course of the civil war in Castile between Pedro I and his half-brother, Enrique II, the Jewish communities, from 1366 to 1369, were subject to the exactions of whoever was for a time victor and to the plunderings of the common people. After the death of Pedro I, who was dubbed "the Jew-king," the cities hoped to rid themselves of the Jewish tax collectors; but Enrique, Pedro's successor, was neither willing nor able to dispense with them. In 1380, however, the cortes at Soria abolished the autonomous jurisdiction of Jews in criminal cases. The reason given for this revocation was the mysterious death of a prominent Jew, Don Joseph Pichon, allegedly executed by the Jews.

The year 1391 was one of catastrophe for the Jews of Spain. After the archdeacon Ferrand Martinez had for many years in his sermons incited the population of Seville to actual physical attacks on the Jews, the mob fell on the Jewish quarter (June 6th); those who refused to become baptized or were unable to escape were either killed or sold as slaves. These attacks then spread from Seville to other communities, sometimes through wandering bands of ruffians. Within three months all the Jewish communities of Andalusia, the city of Toledo and its vicinity, the northern part of Castile, the entire coastline from Valencia to beyond Barcelona, and the Balearic Islands, were annihilated. A large number of Jews became Christians in order to save their lives.



During the following two decades the Jews attempted to reorganize their scattered communities; at the same time the preacher Vicente Ferrer campaigned throughout the country, winning numerous converts among the terrified Jewish population. Together with Paulus de Santa Maria and the anti-pope Benedict XIII, he persuaded the regents of Castile and Aragon to inaugurate legislation (1412 and 1413) which would rob the Jews of their very last possessions. The communities were deprived of jurisdiction in civil cases and of the right of levying taxes. Jews were forbidden to practise any occupation which might bring them into contact with Christians. This meant that they were excluded not only from tax collection and trading, but even from handicrafts. Their right to move about freely was abolished, and Jews who fled were threatened with slavery. A special garb was prescribed for them, and they were forced to live in strictly secluded quarters in the cities. Benedict XIII summoned the Jews of Aragon to Tortosa for a disputation with the apostate Geronimo de Santa Fé (Joshua Lorki), who professed to be able to prove from the Talmud that Jesus was the Messiah. The disputation began in 1413 and lasted for a year and a half; its effect was to increase the number of victims of the church. A papal decree of 1415 repeated the anti-Jewish laws of the state and ordered the confiscation of the Talmud.

c. From 1414 to 1492. Twenty-five years of violent persecution had radically changed the life of the Jews of Spain. Gone were the rich centers of culture in the eastern part of the Iberian peninsula. The Jewish communities of Barcelona and Valencia were never reestablished, and a defenseless small group that had been saved on Mallorca was forced to become Christian in 1435, after a ritual murder trial had been staged. The Jews of western Aragon had been spared, but this small group no longer possessed an importance for the development of Judaism. King Juan II (d. 1454) and his minister Don Alvaro de Luna renewed the policies of the former rulers toward the Jews. A striking document of the conditions of the time which has been preserved is that of the statutes of the Castilian communities—written in a mixture of Spanish and Hebrew —which communities met in Valladolid in 1432 under the leadership of Don Abraham Benveniste, chief rabbi and tax collector general. From this it appears that the Jews once more had the right to levy taxes on the community, as well as jurisdiction in legal matters. The reorganized Yeshivas laid down the basis for the education of the Sephardic Jews in the following centuries. The Spanish Jews still cultivated spiritual values in the field of general culture, but they were no longer able to participate in the new humanistic culture. They lacked a large cultural center. The Jewish masses, like those of northern Europe, had left the larger cities and settled under the protection of the nobles, who drew the Jews to themselves for the promotion of their economic and scholarly interests.

The Jewish settlements in rich Andalusia suffered less. According to reliable contemporary reports, the number of Jews in Castile before the expulsion was estimated as between 35,000 and 40,000 families, in a general population of about 5,750,000. This number was still large enough to make the presence of the Jews in the country a problem. To be sure, conditions had somewhat changed. The Jews appear as collectors of state and city taxes to an even larger extent than before, but they were far less prominent in the money markets. Certain types of handicraft, despised by the

A Pentateuch with commentary of the first great Spanish Jewish teacher Nahmanides (1195-1270)

Interior of the former El Transito Synagogue at Toledo, Spain

Spanish Christians, were increasingly taken up by Jews and Moors. Most Jews were workmen and small traders.

In this period a new class appeared, that of the large number of Marranos, or Jews who had been compelled to accept Christianity during the time of the persecutions. Some of these merged almost completely with the Spanish nation; they filled important state and church positions and even persecuted their former coreligionists. A considerable number of Marranos, however, continued to observe Jewish rites in secret, while outwardly conforming to the Christian usages. At the same time a bloodthirsty anti-Jewish literature stirred up the passions of the mob. There were bloody excesses, principally against the Marranos of Toledo (1449) and Cordova and its vicinity (1473), but naturally also affecting the Jews. The violent struggle of factions in Castile during the reign of Enrique IV (1454-74), in which Marranos participated, cast a most baleful light upon the situation of the Jews.

Isabella and Ferdinand, who reigned over Castile and Aragon from 1474 on and who, after suppressing civil disorders, ruled with an iron hand and began the process of making Spain into a modern state, could not possibly overlook the question of the Jews. Their policy represented a compromise between reasons of state, greed and fanaticism. They had established their power through the aid of a Jewish banker, Don Abraham Senior, who later became tax collector and chief rabbi of the Jews. Both rulers made use of the taxes and loans of the Jews in financing their wars against the Moors; but the Jews were no longer indispensable to the state. According to fundamental canon law, Jews could claim toleration in a Christian state; accordingly, as in all earlier periods, legal protection was accorded to them by the "Catholic sovereigns." On the other hand, it was felt that the presence of Jews strengthened their baptized coreligionists in the latter's secret adherence to their old religion; hence their presence threatened the purity of the faith of the Christians in the state. The monarchs tried first to remove this danger by a series of definite measures which did not remedy it. Isabella again took away from the Jews the right of jurisdiction in criminal cases (1476). In 1480 she compelled them to live in ghettos; in 1481 the Inquisition, directed primarily against those Marranos who were still loyal to Judaism, began to function. In 1483 an order was issued for the expulsion of the Jews from Andalusia; this, however, was partly delayed and never completely carried out. The order of Ferdinand, expelling Jews from Saragossa and its vicinity (1486), was still less successful. In 1490 the grand inquisitor, Thomas de Torquemada, charged several Jews and Marranos with the ritual murder of a boy at La Guardia, near Toledo, and with wilfully destroying Christianity. This led to a sensational trial which, in the opinion of modern historians, led the rulers to a final decision.

After the conquest of Granada Ferdinand and Isabella decided to expel all the Jews from their kingdoms The Jews, under the leadership of Isaac Abravanel, sought to the last moment to prevent the expulsion. The decree to this effect was published on March 31, 1492, and the Jews were to leave the country by July 31st (the period was later extended to August 2nd). The officials were ordered to see that the departure of the Jews took place in a peaceful and orderly fashion; but in certain places, as in Saragossa, the officials of the state and the officers of the Inquisition confiscated the property of the Jews either to compensate the king for the loss of revenue or to line their own pockets. The Jews were simply compelled to abandon their property; what they left behind was taken over by the state. Only a small number of the Jews, among them the eighty-year-old Abraham Senior, became Christians. The exiles went for the most part to Portugal, Northern Africa, Italy and Turkey. The expulsion from Spain was one of the most shocking experiences of the Jewish people. Not only did it completely dislocate the central point in the history of the Jews, but it also profoundly affected the inner development of Judaism in the next three centuries.

d. From 1492 to 1900. After the expulsion there still remained on Spanish soil a number of converted Jews who secretly clung to their old faith. But the Inquisition worked so energetically that by the middle of the 16th cent. the forcible process of assimilation was almost completed. However, the situation changed again when the kingdoms of Spain and Portugal were united in 1580, thus opening up the frontier to the Portuguese New Christians. The "Portuguese," as the Jews of Spanish descent, with some justification, were called in northern Europe, spread over the entire peninsula, and remained apart from the rest of the population. They were called "the merchants of Hebrew or Portuguese descent" (*hombres de la nacion hebria, gente de la nacion de Portugal, hombres de negocios de Portugal*), or simply as Jews. Some were physicians or lawyers; a larger number were tax collectors and merchants who maintained connections with all the large European trading centers and with the colonies. It was said that they dominated the entire Spanish trade, that they invested their money abroad (which was partly true) and that their purpose in this was to undermine the state and to deliver the colonies to foreigners.

As a result of these conditions, there was a new outburst of anti-Semitic literature in the 17th cent. which revealed as much hatred as that of the 15th. The activities of the Inquisition became more acute, but later slackened through the influence exerted by its victims. Jewry in Spain began to gather strength again. Count de Olivares, minister of Philip IV (1621-65), even planned to colonize the neighborhood of Madrid with Jews from Africa and the Orient. But these plans could not be carried out in the face of local prejudice. Instead, more and more Marranos emigrated to Amsterdam, Hamburg, London and the colonies, in order to be able to return openly to Judaism. This movement continued until the end of the 18th cent. The emigrants carried with them their Spanish or Portuguese vernacular and spoke it in their new home; they preserved the intellectual structure which they had built up in their native land. The culture of the Sephardic Jews in Amsterdam, a mixture of fanaticism and rationalism, was essentially Spanish.

4. The 20th Century. Under the reign of King Alfonso XIII (1902-31) Jews settled in the country, although in very small numbers. When a zone in Morocco, North Africa, was given to Spain at the conference of Algeciras (1906), for the first time after the expulsion of 1492 a considerable number of Jews—about 25,000—again came under Spanish rule. Their main communities were at Tetuan, Ceuta and Larache. In 1909 Article 2 of the constitution, forbidding the establishment of synagogues, was abolished. There were also other indications that modern Spain would adopt a more friendly attitude toward the Jews. Abraham Shalom Yahuda, orientalist and Biblical scholar, was appointed to the chair of the Hebrew language and literature of medieval Spain at the University of Madrid, which post he held from 1915 to 1922. The king accepted the honorary presidency of the Union Hispano-Hebrea, composed of prominent Spaniards and Jews, aiming to foster friendly relations between the Moroccans, Jews and Spaniards. Ignacio Bauer-Landauer, publisher, journalist and welfare worker, a corresponding member of the Madrid Academy of History and founder of the Jewish community in Madrid (1917), was a personal friend of and adviser to the king. In 1917 Alfonso intervened in behalf of the Palestinian Jews, saving them from wholesale "evacuation" by the Turkish government.

There was a strong sentiment among educated Spaniards in favor of establishing closer relations with the Sephardic Jews, the "lost sons of Spain," the descendants of those Jews who had been expelled from Spain in 1492. Their number was estimated at two million, many of whom lived in the Salonika region and in Morocco, still preserving the Spanish language as it was spoken in the 15th cent. The movement endeavoring to organize a gradual return of those Jews to Spain and to enlist the sympathy of the Sephardic world communities for a liberal Spain became very popular when a prominent member of the liberal party, Angel Fernandez Pulido, the "apostle of the Sephardim," became its leader. Another friend of the Jews was the novelist Benito Pérer Galdós. In 1924 there was even a special law published facilitating the obtaining of Spanish citizenship for Sephardic Jews outside of Spain. On the other hand, much anti-Semitism was spread by Spanish newspapers and periodicals, the *Protocols of the Elders of Zion* were widely distributed in Spanish, and the Jews of Spain joyfully welcomed the fall of General Primo de Rivera's rigid dictatorship (1930) and the establishment of a democratic republic under the presidency of Niceto Alcala Zamora (in the spring of 1931).

In 1931 the Jews, who had hitherto only felt tolerated in Spain, could now openly declare their presence. After the government had issued an edict of complete religious liberty, the first wedding in centuries was celebrated in the Madrid synagogue (June, 1931). In the same summer the Federation of Jewish Communities in Spain held its first public meeting in Madrid to proceed with the organization of Jewish life in the country. There existed in 1931 a small community in Madrid, headed by Bauer and under the religious supervision of the chief rabbi of Tetuan. As late as 1934 the congregation had only forty-five registered members, due to fear or lack of interest among the Madrid Jews. Although the congregation was composed chiefly of Ashkenazim, mainly from Central Europe, the ritual followed in the synagogue was the Sephardic. In 1934 a Zionist society was organized.

Much larger and wealthier was the Jewish community in Barcelona, the industrial and commercial center of Catalonia. It originated in the first years of the 20th cent., and increased after the first World War and after the start of the Nazi regime in Germany, amounting to from 2,000 to 3,000 persons in the 1930's, although the congregation had only 200 registered members (1935). The community was first headed by Samuel Danon, a physician, later by Nesim Arias, both of them Sephardim, although here, too, the overwhelming majority of the Jews were Ashkenazim. Owing to the preponderance of Ashkenazim, the Sephardic ritual alternated in the synagogue every weekend with the Minhag Ashkenazi. As a consequence of the influx of German Jewish refugees, a society, Ezra, was established for relief and advice to needy immigrants (1934). A Zionist society was founded (1934).

A small Jewish community existed also at Seville (Andalusia), consisting of immigrants from Morocco, chiefly craftsmen. A few Jewish families were reported living also at Orense, Vigo, Gijon and Bilbao.

The pro-Jewish attitude adopted at the beginning by the republican government aroused great hopes among the Sephardic Jews all over the world. In June, 1931, the government issued a statement declaring that the expulsion edict of 1492 had become invalid as early as 1812, and that there had never been a purely anti-Semitic movement in Spain, the expulsion of the Jews having been due to the hatred of all other religions. While pointing to the pro-Sephardic law of 1924, the government did not encourage mass Jewish immigration to Spain, in view of the country's bad economic status. Jewish leaders in Spain, therefore, warned would-be-immigrants that the influx of needy Jews would create an economic problem and lead to anti-Jewish sentiments.

In 1935 the hopes of Sephardic Jewry were revived when Spain grandiosely celebrated the 1,000th anniversary of the birth of Moses Maimonides. A religious service was held at Cordova, the first since the expulsion, at the old Maimonides synagogue, and in the courtyard of the synagogue a tablet was unveiled by the mayor, who said: "This plaque shall remind future generations of the peace that has been concluded between Spain and the Jews." The government issued special commemorative postage stamps for the occasion, and a government spokesman recalled the 1492 order of expulsion and contrasted it with the constitution of the Spanish republic: "The expulsion is a black spot which we wish to wipe out." In the same year Ignacio Bauer was appointed a delegate of the Spanish League of Nations Society to the International Union of League of Nations Societies. In 1935 for the first time a Zionist representative of Spanish Jewry took part in a Zionist Congress (at Lucerne, Switzerland).

The civil war which started in 1936 wrought havoc upon those Jewish communities that came under General Francisco Franco's rule. The first Jewries to be affected were those of Spanish Morocco, where the Fascists levied heavy "voluntary" contributions upon the communities of Tetuan and Ceuta, holding the Jews virtually as hostages. Numerous Jews fled from the country, and in the fall of 1936 less than 500 Jews were left in Barcelona. The republican government, however, issued statements condemning the anti-Semitism of the rebels and the persecution of the Jews in Germany, and announced that Jews would be afforded refuge and protection when the civil war ended in a Loyalist victory. Many Jews served in the International Brigade, aiding the government, and Jewish organiza-

Sketch of a Spanish Jew

tions and individuals urged the United States government to lift the embargo on arms for republican Spain.

After the defeat of Loyalist Spain (in the spring of 1939) Franco, in a victory speech, denounced the Jews as persons "whom nobody wants because they are a Communist horde." Sharp measures against the Jews were taken along the Nazi lines, and much anti-Semitic literature was published by Franco's party, the Falange, including history books treating the Jewish problem in the Nazi fashion. Since there were few Jews left in Spain proper, the communities in Spanish Morocco had to bear the brunt of the Fascist war of extermination. In 1940 German Jewish refugees were rounded up in Madrid and Barcelona and sent to special camps. In 1942 José Luna, vice-secretary of the Falange Party, forecast that all Jews would soon be expelled from Spain in the same manner as had been done in the 15th cent. In June, 1942, all the remaining synagogues and Jewish community centers were forced to close. At the end of 1942, after the Nazi occupation of Vichy France, many Jews of France, seeking to avoid deportation to Eastern Europe, fled over the Pyrenees to Spain, where they were interned in jails or camps; the Joint Distribution Committee provided funds for their sustenance.

Franco Spain's anti-Semitism was strenuously repudiated by the exiled members of the former Spanish republican regime. ALFRED WERNER.

SPALATO (in Croatian, Split), Yugoslavian city on the Adriatic Sea, with 200 Jews out of a total population of 30,000 (1940).

Inasmuch as Jews lived in the neighboring town of Salona as early as the Roman period, it may be inferred that at the same time some resided also in Spalato. However, according to a record of the episcopal estates, the oldest Jewish synagogue referred to as "Sdorium" dates from the year 1397.

When, at the beginning of the 16th cent., Sephardic Jews came to Spalato, a dispute prevailed for several centuries between the Levantine Jews from the Orient and the so-called Pontinic Jews from Spain. In addition, Jews from Germany settled there. Thus this small community consisted for a long time of three different ritual groups. Later on, however, the community acquired a uniform Sephardic character.

Soon the Jews became leaders of economic life in Spalato and, especially due to Daniel Rodriguez, Spalato became an important port, forming the commercial center between Venice and Turkey. With the consent of the Senate of Venice, Rodriguez in 1577 succeeded in establishing a large warehouse at the harbor, called "Lazaretto." The Jews of Spalato founded their own bank in 1592; they had their own four consuls. When the Turks laid siege to Spalato (1657) the Jews were assigned to defend a section of the city-wall, the "Posto degl' Ebrei." In 1713 Christian merchants made a vain attempt to prevent Jews from trading in food. In 1738 the Jews were shut up in the ghetto by a general decree of the Doge that applied to all Venetian possessions.

Their status improved, however, after the French occupation of the city (1806). After 1870 many Jews emigrated from Spalato. On the other hand, after the establishment of Yugoslavia as an independent kingdom (1918) Jews from Bosnia and other parts of the country settled in Spalato, where they lived under favorable circumstances. In 1941 the city was occupied by Nazi German and Italian Fascist troops, and the Jews of Spalato shared the fate of the rest of the Jews in Yugoslavia.

SPANISH TOWN (St. Jago De La Vega), city of Jamaica, fourteen miles from Kingston, the island's capital until 1872. In the three Jewish cemeteries—two on White Church Street and another adjacent to the old Sephardic Synagogue on Monk Street—repose the remains of those who settled here at an early date.

One finds the tombs bearing such family names as Pereira (1727), Andrade (1747), Adolphus, Brandon, Correa, De Cordova, De Leon (1701), Henriques, Melmado, and Baruch (1730). Some of the descendants of these early settlers were actively affiliated in 1943 with the United Congregation of Israelites in Kingston.

As early as 1665 land was conveyed to Antonio Rodrigues, George Lucas and Ann Jacob. The latter

A sketch of the interior of a synagogue in Birna, Spain, in the 14th century

purchased twelve acres. The destruction of Port Royal by the earthquake of 1692 led to an influx of Jews into Spanish Town. A deed of historic value is dated August 11, 1704, where a conveyance of land is made to Jacob Alvares and Moses Mendes Quixano "Of ye town of St. Jago de La Vega, Merchants, Churchwardens for and on Behalf of ye Nacon of ye Jews." "In consideration of ye sum of forty pounds current money in Jamaica." Jacob Alvares obtained letters of denization in Jamaica in 1687 and Moses Quixano in 1719. The latter petitioned the House of Assembly in 1713 and 1715 on behalf of the Jews "to be eased of taxes."

Within a few years the Sephardic synagogue designated as K. K. Neve Shalom (Habitation of Peace) was dedicated. It is the oldest synagogue in the British Empire after the Bevis Marks of London, and was still standing (1943) on Monk Street, but in a most dilapidated condition, and had not been opened for over a quarter of a century.

The early ministers included Haham Joshua De Cordova who served for forty-six years (d. 1797), Abraham R. Lopes (d. 1775) and Jacob de La Penha (d. 1799). Rabbi B. C. Carillon and Rabbi Henry S. Jacobs ministered to the community in the middle of the 19th cent. Henry S. Jacobs emigrated to the United States where he became rabbi of Congregation B'nai Jeshurun, New York city (1874-93). One of the prominent laymen and the president of the congregation was Daniel C. Henriques whose grandson, the Honorable Owen Karl Henriques, was appointed a member of the Legislative Council (1942).

A second synagogue (Ashkenazic) was built at the close of the 18th cent. on Young Street; it was designated as K. K. Mikveh Israel (Hope of Israel). The conveyance was made in 1796 and the land was allotted to Moses Adolphus the younger (whose son bequeathed one thousand pounds towards the erection of the synagogue), Jacob Mendes, Simon Adolphus and David Lyon as trustees. This synagogue existed for only seventy years.

With the migration to Kingston, beginning in the early decades of the 19th cent., the Jewish community of Spanish Town dwindled rapidly and both houses of worship were closed except for services on holy days. In the fifth decade, Rabbi Carillon labored incessantly in the cause of religious education, and whenever Judaism was attacked, he wielded a trenchant controversial pen. The Colonial House of Assembly from time to time voted generous sums for the upkeep of the synagogues and cemeteries.

The Honorable Isaac Levy, Custos Rotulorum of St. Catherine, represented Spanish Town in the Colonial Assembly. He was a captain in the militia and one of the founders of Hamilton Lodge (Free Masonry). The cathedral bell was tolled as a mark of respect on the occasion of his death (1882). His eldest son, the Honorable Emanuel George Levy, was also a member of the Legislative Council.

There were in 1943 only a handful of Jews in Spanish Town. HENRY P. SILVERMAN.

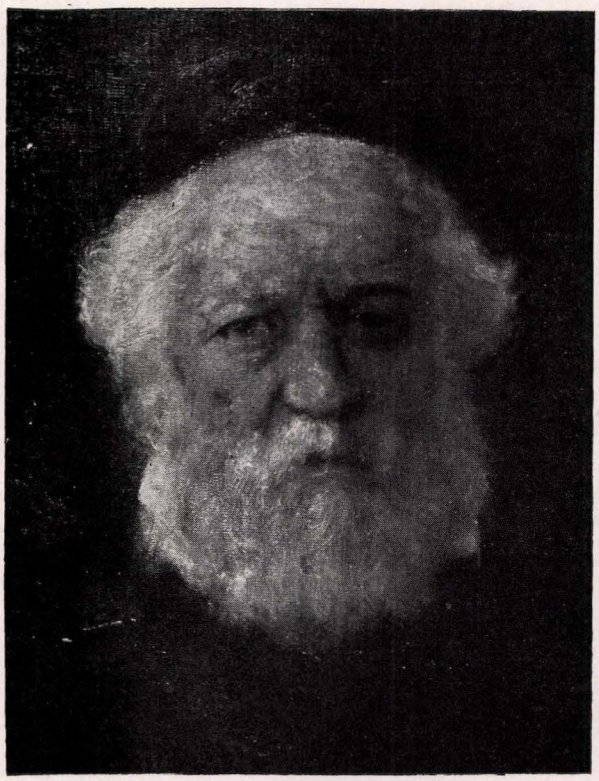
Lit.: Files of the *Daily Gleaner; The First Fruits of the West;* Records of the Colonial Assembly (1852-).

SPARGER, WILLIAM, cantor, b. 1860; place and date of death unascertainable, but after 1903. His Sabbath evening and morning services (in collaboration with Max Spicker; New York, 1901) were, with those by Schlesinger, the most popular for many years in the American Reform synagogue. Although, like Schlesinger, Sparger occasionally utilized foreign compositions, he hewed closer to the traditional tunes of the synagogue. Of great historic value is his "Introductory Essay on the Liturgical Chant of the Synagogue" to *A Collection of the Principal Melodies of the Synagogue from the Earliest to the Present* (Chicago, 1893). Alois Kaiser (1840-1908) collaborated with Sparger in this work, and Cyrus Adler wrote the preface.

In this essay the research made in the field of Jewish music by such men as Burney, Martini, Forkel, Gerbert, Baini, Kiesewetter, Pfeiffer, Speidel, Saalschütz, Arends, Anton, Haupt, Delitzsch, Naumbourg, Weintraub, Deutsch, Singer, Hiller, Marksohn, and Wolf are reviewed and their findings analyzed. Special attention is paid to the synagogal modes and their relation to the medieval church modes. One chapter is devoted to the Sephardic song.

While Sparger and Kaiser were, of course, ignorant of the subsequent discoveries by A. Z. Idelsohn, and thus could not decide with finality the many problems facing the Jewish musicologist, they nevertheless endeavored with all available means at their disposal to approach these questions scientifically. Noteworthy too is Sparger's article "Literature on the Music of the Jews," an attempt at a bibliography published in the *American Hebrew* (November, 1892).

MAX WOHLBERG.



SPEARE, MORRIS EDMUND, editor and author, b. Boston, Mass., 1877. He received the M.A. degree from Harvard University (1909) and the Ph.D. degree from Johns Hopkins University (1923). He taught English at numerous universities, was chairman of the English department and professor of English at St. John's University, Brooklyn (1933-40). Speare was director of the educational department of the Oxford University Press (1925-29), educational editor of the *American Encyclopedia* (1931-32), and editor of the *Pocket Books* (1939-41). In 1943 he was a member of the English department of Hunter College, New York city.

His writings include *The Political Novel* (1924); *The Essay* (1927); *Thomas Mann, Nobel Prize Winner* (1931); and *Geography and Travel* (1933). He edited, among others, *The Great Tales and Poems of Edgar Allan Poe* (1940) and *The Great Poems of England and America* (1940). He was the general editor of the *Chelsea Classics* (46 vols., 1932-33).

SPECTOR, MORDECAI, Yiddish novelist, b. Uman, Russia, 1858; d. New York city, 1925. He rejected an almost fanatical Hasidic heritage and turned to emancipation literature in Yiddish, becoming one of its most colloquial popularizers.

In 1883 his first novel, *A Roman on a Nomen,* was published in Alexander Zederbaum's *Yiddishe Folksblatt.* The following year *Der Yiddisher Muzhik,* a novel extolling the Zionist point of view, appeared in the same periodical. Zederbaum invited Spector to become associate editor of the *Folksblatt,* and Spector accordingly moved to St. Petersburg, where its editorial offices were located. In addition to his technical work as editor, Spector continued to write novels for the journal: *Aniim Veevyonim; Reb Traitel; A Shtumer Guter Yid; A Velt mit Kleine Veltelech.* In 1888 Spector moved to Warsaw, and started to issue an annual almanac in Yiddish, *Der Hois Freint.* When this project had to be abandoned because of competition with the Sholom Aleichem *Yiddishe Folks Bibliothek,* Spector continued to write in other periodicals and annuals. Subsequently he edited numerous other journals, all aiming toward interesting the common reader.

After living for a time in Odessa during the first World War and after the Russian revolution, Spector came to the United States in 1921, where he joined the staff of the *Zeit,* then of the *Tageblatt.* His role remained that of researcher into and interpreter of the folk ways of the Jewish people. He differed from many of the other early Yiddish writers in that he did not come to the use of Yiddish from a preliminary practice in Hebrew; Yiddish was from the very beginning his chosen and only medium. Polish and intellectual profundity may have been lacking in his novels,

Isaac Elhanan Spektor

but he believed in the importance of a moral idea formulated in homey language.

SPEIER, ISAAC BEN JACOB, Hebrew printer, b. about 1740; d. Berlin, 1788. He married Edel, daughter of David Fränkel, chief rabbi of Berlin. In 1764 Speier began his printing activity, which lasted until 1770. From 1765 on he had the title of "royal Prussian privileged Hebrew printer." The works issued from his press were generally acknowledged as of high quality.

In 1764 Speier printed *Kithebe Kodesh,* a collection of letters of Maimonides and other authors; in 1765 *Horaath Shaah,* edited by Solomon ben Samuel Greditz and Isaac Heilprin and dealing with difficult Talmudic problems; and *Melecheth Mahshebeth* by Elijah ben Moses Gershom, on arithmetic, algebra and geometry. In 1766 he printed a new edition of Benjamin Mussafia's dictionary, and two Halachic works. Then his activity declined; the last work which he printed was Moses Mendelssohn's commentary on *Ecclesiastes* (1770).

Lit.: Steinschneider, Moritz, "Hebräische Drucke in Deutschland," *Zeitschrift* für *Geschichte der Juden in Deutschland* (1886-92).

SPEISER, EPHRAIM AVIGDOR, orientalist, b. Skalat, Galicia, 1902. He came to the United States in 1920. Speiser received the A.M. degree from the University of Pennsylvania (1923) and the Ph.D. degree from Dropsie College (1924).

From 1924 to 1926 Speiser was Harrison Research Fellow in Semitics, and from 1926 to 1928 he held a Guggenheim Fellowship for historical and philological researches in Mesopotamia. In 1926 he was annual professor in the American School of Oriental Research in Baghdad, and in 1927 headed the joint expedition to Tepe Gawra, Iraq, under the auspices of that school and of Dropsie College.

From 1928 to 1931 Speiser was assistant professor of Semitics at the University of Pennsylvania, and at the end of that period he received a full professorship at the same institution which he was still holding in 1943. From 1930 to 1932 and again from 1936 to 1937 he directed the excavations of the University Museum (University of Pennsylvania) and of the American School of Oriental Research at Tell Billah, Mesopotamia, supervising also the work at Tepe Gawra. He acted as special editor for the *New Webster Dictionary* in charge of the ancient and modern Near East material, and was joint editor (1934-) of the *Journal of the American Oriental Society.*

Speiser's publications include: *The Hebrew Origin of the First Part of the Book of Wisdom* (1924); *Secondary Developments in Semitic Phonology* (1926); *The Pronunciation of Hebrew according to Origen's Transliterations in the Hexapla* (1926); *Southern Kurdistan in the Days of Ashurnasirpal and Today* (1927); *Preliminary Excavations at Tepe Gawra* (1929); *New Kirkuk Documents Relating to Family Laws* (1930); *Mesopotamian Origins: The Basic Population of the Near East* (1930); *One Hundred New Selected Nuzi Texts* (with R. H. Pfeiffer, 1937); and *Introduction to Hurrian* (1941).

Lit.: *The American Hebrew,* June 12, 1931, p. 77; "6,000 Years Ago," *New York Times,* May 10, 1937.

SPEKTOR, ISAAC ELHANAN, the most important Talmudist of the latter part of the 19th cent., b. Rossi, province of Grodno, Russia, 1817; d. Kovno, 1896. He served as rabbi in several small towns as well as in Nishvez (province of Minsk) and Novogrudok, both noted rabbinical centers; finally he was called to Kovno, where he officiated until his death. His tolerance and his fine judgment won him the love and esteem of all groups of Jews. In his decisions he always took the side of leniency and did all he could to help those women whose husbands had left them to emigrate to America and who therefore were in the status of Agunoth. He dealt with the problems of religious observance, not from the scholastic point of view, but with regard to actual living conditions. Thus during the years 1867-69, when the harvests were very poor, he allowed Jews to eat beans and peas during the Passover week, a permission which caused great excitement among the other rabbis. In 1889, which was a Sabbatical year, he ruled that the Jewish colonizers of Palestine might yet cultivate their crops.

Spektor's goal was to unify Russian Jewry and to bring it into contact with the Jewry of Western Europe. He supported entire communities that had been ruined by conflagrations or other misfortunes. He organized a number of Yeshivas and aided the colonization of Palestine. When famine prevailed, he raised large sums of money with the aid of his friends in Western Europe. During the Franco-Prussian War (1870-71) he organized a relief program for the Jewish community of Strasbourg, and in 1872 a similar aid to the Jews of Persia. After the Corfu pogrom of 1875 he issued a ban on the use of Ethrogs from that island. It was at his suggestion that Samson Raphael Hirsch delivered to Count Pahlen, head of the committee to investigate the legal status of the Jews of Russia, a memorandum in German which explained the relation of the Talmud to Judaism and the social outlook of the adherents of that faith. He aided Dembo in his endeavors to maintain ritual slaughtering (Shehitah) in Russia and Western Europe.

Spektor was an outstanding Talmudist, combining sober judgment with simplicity and lucidity of method. Before he would answer a question, he would study all

the literature on the subject and the history of its origin.

His literary production was remarkable. He wrote *Beer Yitzhak* (Königsberg, 1858), *Nahal Yitzhak* (2 parts, 1872-74) and *En Yitzhak* (1889-95), all of them classical rabbinical works of the period. He carried on an extensive correspondence with the rabbis of Western Europe, especially with Samson Raphael Hirsch. The Rabbi Isaac Elchanan Yeshiva in New York city is named after him.

Lit.: Lipschitz, J. H., *Toledoth Yitzhak* (1897); Wiernik, P., in *Jewish Encyclopedia,* vol. 11, pp. 503-4.

SPERBER, ALEXANDER, scholar, b. Czernowitz, Bucovina, 1897. He followed the course of his brother, Jacob H. Sperber (1890-1918), who died at the beginning of a promising career as professor at the Rabbinerseminar Berlin. He studied at the Universities of Vienna, Berlin and Bonn (Ph.D., 1924), and at the Jewish theological seminaries of Vienna and Berlin. Sperber started as a research fellow at the Akademie für die Wissenschaft des Judentums in Berlin (1925-33), was an instructor at the University of Bonn (1928-33), and left Nazi Germany for Palestine where he became a fellow at the Hebrew University at Jerusalem (1933-34). He came to the United States in 1934 and was a visiting lecturer at the Dropsie College (1935-38) and teacher at the Jewish Theological Seminary (visiting professor, 1934-38; lecturer, 1938-41; reader in Bible versions, from 1941 on).

Sperber was an assistant editor of *Biblia Hebraica,* edited by Kittel (1929-33), and a fellow of the American Academy for Jewish Research. His writings include *Septuagintaprobleme* (1929); *Hebrew Based upon Transliterations* (1938); *Hebrew in Parallel Transmission* (1939); *New Testament and Septuagint* (1940); *Hebrew Phonology* (1941); and *Problems of the Masora* (1942).

Lit.: Posner, A., in *Festschrift Jakob Freimann* (1937).

SPEWACK, SAMUEL, journalist and playwright, b. Russia, 1899. From 1918 to 1922 he was a reporter, and from 1924 to 1926 he was Moscow correspondent of the New York *World.* Later he was a member of the dramatic staff of the New York *Telegram.* Much of his later work was done in collaboration with his wife, Bella Cohen Spewack (b. Hungary). Mrs. Spewack had been a magazine writer and press agent. During her husband's period of service as a foreign correspondent, she aided him, and the many plays and motion picture scripts with which their names were connected were written in collaboration.

Among these productions were *War Song; Poppa; Clear All Wires* (1933); the motion picture version of *The Cat and the Fiddle* (1934); *Rendezvous* (1935); the very successful play and motion picture *Boy Meets Girl* (1938) and the motion picture *My Favorite Wife* (1938).

In 1941, Spewack went to England for seven weeks as special correspondent for the New York *Post.*

SPEYER, a Rhenish town, founded by the Romans and originally named Noviomagus. In the 10th cent. the bishop of Speyer obtained the government of the town, but in the 13th cent. the citizens revolted, and Speyer became a free city. In 1815 Speyer was annexed to Bavaria and became the capital of the Bavarian Palatinate.

In 1933, before the Nazis seized power, there was a population of about 27,000, among them 400 Jews, all of whom thereafter emigrated from Speyer.

The situation of the Jews of Speyer was greatly influenced by every change of local government. Speyer was one of the eleven German towns which were protected by fortifications uninterruptedly from the Roman times to the end of the Middle Ages, and were thus chosen by the first Jewish settlers in Germany as their residence. The earliest recorded mention of a Jew in Speyer, however, did not occur until the year 1070. When the cathedral of Speyer was completed, Emperor Henry III asked the learned Jew Kalonymus, who resided there, whether or not this new edifice eclipsed Solomon's Temple. Upon demanding and obtaining immunity, Kalonymus demonstrated that, according to *1 Kings* (6:22), the Temple had been more precious and, according to *II Chronicles* (5:14), more hallowed.

As long as the power of the German emperors was strong, and especially while the Jews remained on friendly terms with the clergy, the conditions of Jewish life in Germany in the Middle Ages were relatively favorable. The Jews of Speyer enjoyed these advantages longer and more fully than those of other cities, especially more so than the Jews of Worms, where the bishop had sided with the adversaries of the emperor. At Speyer the authorities of the emperor and the bishop were united to protect the Jews and to further their economic activity, which was useful to the imperial and episcopal finances.

In 1084 the Jewish population of Speyer increased considerably when many of the Jews of Mayence left their native town for Speyer, upon the burning of the Jewish quarter of Mayence. At the same time Bishop Rüdiger of Speyer decided to enlarge his capital by joining some surrounding villages to the city, and invited the Jews of Mayence to settle in Speyer. In doing so he declared that he "would enhance a thousand times the dignity of the new settlement if Jews could also be persuaded to gather there." By a charter which he issued in 1084 Bishop Rüdiger granted the Jews of Speyer unlimited liberty of trade. The Jews had to pay the bishop three and one half pounds of Speyer currency every year. This payment was a regular rent, due for the soil, and did not include any personal taxes. The Jews were united in a separate jurisdictional league. The president of the Jewish community acted as the judge of his coreligionists in the same manner as the non-Jewish bailiffs used to do. He had but to report to the bishop, as to the supreme judge, such cases as he could not himself decide. The Jewish settlement was surrounded by walls, and was hence a separate autonomous area which the Jews were obliged and allowed to defend with their own levy, while the bishop promised them support by his own troops in case of emergency. The bishop also guaranteed the Jews liberty of worship.

Bishop Rüdiger was praised as "a father" by Solomon bar Simon in his Hebrew chronicle concerning the persecutions of the Jews in the First Crusade (Cod. MS. 28, Jews' College, London). The Jews of Speyer, anxious to preserve their privileges even after Rüdiger's death, asked the bishop to provide them with a permanent imperial guarantee of their rights. Rüdiger obtained, a few days before he died (in 1090), Emperor Henry IV's consent that the Jews of Speyer place their lives and chattels under the emperor's special protection; Henry IV also allowed them to move free and unmolested within the confines of the German kingdom. The wording of this grant was prepared with extraordinary care, probably at the suggestion of a counsel who was charged by the Jews to look after their interests and to render their situation as safe from vicissitudes as possible. It included many phrases and rights embodied in the documents of the Carolingians who had been especially favorable to the Jews.

When, in 1096, some bands of Crusaders, coming from France, plundered the Jewish quarter of Speyer and murdered its inhabitants, Bishop Johannes I, who served from 1900 to 1104 and was a nephew of Em-

peror Henry IV, defended the Jews with his armed forces and protected them in his fortresses until they could return to their quarter. In that way the Jews were saved, except for eleven victims. The bishop punished the assailants of the Jews severely. The emperor also protected the Jews, and Rabbi Moses bar Jekuthiel, archisynagogue of Speyer, received permission to have all Jews who had been converted by force in the dark days return to Judaism.

Because of the favorable situation of the Jews of Speyer, many of their coreligionists elsewhere immigrated into this city after the events of 1096, among them a great number of scholars, including Kalonymus the Elder, Eliakim Halevi, Jekuthiel (father of Rabbi Moses), Jekuthiel ben Moses, a poet and Halachist, Judah ben Kalonymus, who directed the Yeshiva, and David ben Meshullam, who composed a Selihah on the persecutions (still extant in German and Polish rituals). In the 13th cent. Eliezer ben Joel Halevi (a Tosafist), Simhah ben Samuel (nephew of Kalonymus ben Meir), Eleazar ben Jacob, and Rabbi Jedidiah became known in Jewish literary history. A synagogue in Roman style was erected; it was destroyed by fire in 1195. Out of all the Jewish monuments, only the Mikveh was preserved.

The situation of the Jews of Speyer worsened after 1140 when the power of the German emperor weakened and the conflict between him and the pope became permanent. In 1146, when bands of the Second Crusade harried the Jews, Günther, count of Henneberg, who was bishop of Speyer, not only refrained from protecting the Jews but supported the accusation of a ritual murder allegedly committed by them. He was severely denounced for his attitude toward the Jews by Bernard of Clairvaux. During the Third Crusade (1195-96) Bishop Otto, Günther's brother, also condoned persecutions against the Jews, many of whom committed suicide before Count Otto of Burgundy conquered Speyer and punished the murderers.

The Jews of Speyer also lent substantial sums to the emperors, especially to Louis of Bavaria who treated them decently. The emperors of the house of Luxembourg were, however, their adversaries. When in 1349, during the Black Death, many Jews in Speyer as in other German towns were murdered or committed suicide, Emperor Charles IV absolved the persecutors of all blame and allowed the citizens of Speyer to confiscate all the property of the Jews.

In 1352, three years after the Jews were expelled from Speyer, the city council and the guilds invited the Jews to return, and were ready to restore to them their houses, including the "dantzhus," a building wherein Jewish festivals, especially weddings, took place. But it was not until 1354 that the first Jew returned. In 1390 Bishop Nicholas, who was in great financial difficulties, invited as many Jews as possible to reside in his capital or district. In 1394 Emperor Wenzel, who was in even worse straits than the bishop, granted the Jews of Speyer new privileges. But from 1405 to 1421 they were banished again from the city, though not from the territory of the bishopric. In 1435 they were expelled "for ever," yet twenty years later they were allowed to resume residence in Speyer.

Subsequently Speyer was repeatedly devastated by wars, especially in 1689 when the town was razed by French troops. Speyer lost much of its importance, and the Jews who were banished from Speyer (1689 to 1714) preferred such neighboring towns as Bruchsal and Landau, whose Jewish communities increased considerably in the 19th century. None of the existing documents of the Jewish community of Speyer was issued before 1820. The medieval tradition of the Jews of Speyer left no trace in the life of the city's Jewish community during the 19th and 20th centuries.

SPEYER, EDGAR, banker, b. New York city, 1862; d. New York city, 1932. He was the second son of Gustav (Eduard Gumpertz) Speyer and the younger brother of James Speyer. He was educated at the Real-Gymnasium of Frankfort and became a partner in the three firms owned by his family. From 1884 on he was resident partner in the Frankfort firm Lazard Speyer-Ellissen. In 1887 he assumed charge of the firm of Speyer Brothers, London. After the outbreak of the first World War (1914) he retired from the New York and Frankfort firms.

In 1892 Speyer became a naturalized British citizen, was created baronet (1906) and was made a member of the Privy Council (1909). King Edward VII of England was very fond of Speyer, as was Edward's son and successor, George V. Emperor William II of Germany took every opportunity to demonstrate his liking for Speyer.

Speyer joined his brother James in placing foreign loans and financing railroads. He was especially credited, even by his implacable adversaries, with "the admirable transport service with which London was equipped." He was a founder of the Whitechapel Art Gallery, and a member of the Company Law Amendment Committee (1905).

Although Speyer, after the outbreak of the first World War, severed his commercial relations with Germany, he was violently accused of remaining in spirit a friend of his native Germany and, when the leading papers of England continued to side with his accusers, Speyer demanded (1915) of Asquith, then British prime minister, to revoke his baronetcy, and resigned his privy councillorship, although Asquith and King George disapproved the attacks upon Speyer. Eventually his naturalization was also cancelled, and Speyer left England for the United States.

SPEYER, GEORG, banker and philanthropist, b. Frankfort, 1834; d. Frankfort, 1902. For many years, Speyer directed his family's banking house Lazard Speyer-Ellissen at Frankfort, and under his leadership the firm grew impressively in international importance. Speyer was devoted to the welfare of his native town, and it was his noble ambition to make Frankfort a center of intellectual life no less than it was a center of finance. To this end he was devotedly aided by his wife Franziska (née Gumbert), who was able to realize her husband's aspirations by elaborating his general ideas and by enlisting the cooperation of such influential personalities as Adickes, Lord Mayor of Frankfort, and Althoff, the all-powerful director of the Prussian Ministry of Public Education.

Speyer founded two chairs (geography and modern languages) at the Academy of Frankfort. In 1901 he provided a one-million mark endowment in the name of the Georg und Franziska Speyersche Studienstiftung. His widow, Franziska Speyer, founded a professorship in chemistry and in 1909 gave an endowment of 1,500,000 marks for the development of the Academy of Frankfort into a university. She also founded the "Georg Speyer-Haus," where Paul Ehrlich pursued his researches and elaborated many of his discoveries.

SPEYER, JAMES, banker and philanthropist, b. New York city, 1861; d. New York city, 1941. He was

James Speyer

the son of Gustav (Eduard Gumpertz) Speyer, who went to the United States in 1845 and entered the New York banking house founded by his brother Philip Speyer in 1837.

The Speyer family was in the banking business for nearly three centuries. Its first member of whom accurate records have been preserved, and of whom James Speyer was a direct descendant, was Michael Speyer, who died in Frankfort in 1686. Joseph Michael Speyer, who died in 1729, was a Parnas and assistant rabbi in Frankfort, and established there a foundation known as the Joseph Speyer Stiftung. Other members of the family also endowed charitable and educational funds which were active until comparatively recent years. Besides Philip Speyer and Company, afterwards named Speyer and Company, the family controlled the Frankfort banking house of Lazard Speyer-Ellissen (founded in 1800) and the London firm of Speyer Brothers.

When James Speyer was three years old, his parents returned to Frankfort where he was educated in public schools. At the age of twenty, he entered the family business at Frankfort, and was afterwards trained in London and Paris banking houses. In 1885, three years after his father's death, he returned to New York and joined the firm founded by his uncle Philip Speyer whose senior partner he became in 1899. He was also a partner of Lazard Speyer-Ellissen (Frankfort) and Speyer Brothers (London). In 1939 Speyer and Company (New York) was dissolved, and James Speyer retired to private life. In 1917, when the United States entered the first World War, Speyer had severed his relations with the Frankfort house.

James Speyer became a public figure in the United States, and among economists the world over, when he successfully endeavored to avert the panic of 1893. He had just returned from Europe where he had studied the operations of municipal pawnshops which lent sums on commodities at rates considerably below those charged by private pawnbrokers. Deciding to do something of a similar nature in New York, in order to save poor persons from despair, Speyer raised $100,000 from among thirty-four fellow-bankers (including J. P. Morgan, Jacob H. Schiff and Cornelius Vanderbilt) and founded the Provident Loan Society which made, in its first year, 27,000 loans, aggregating $500,000; by 1940 these loans totalled 734,881, involving $35,357,044. Of these loans 74 per cent were for less than fifty dollars and 27 per cent for less than ten dollars. From 1897 on Speyer was elected president of the society ten times.

The banking house of Speyer and Company, which enjoyed considerable reputation as a result of its flotation of government bonds in the Civil War, concentrated, under James Speyer's leadership, upon the placement of loans for railroads and foreign governments. It reached the zenith of its influence in the years immediately preceding the first World War by participating in the financial reorganization of several American railroads, including the Baltimore and Ohio, the Central Pacific and Mexican National, the Missouri-Kansas-Texas, and the St. Louis and San Francisco lines. Speyer figured prominently also in financing Pittsburgh Steel, Lackawanna Steel, General Chemical, and numerous other industrial enterprises. He acted as financial adviser to the Radio Corporation of America, the Radio-Keith-Orpheum Corporation and the Wayne Pump Company. He was on the board of many of the outstanding American banking institutions. From 1868 on the house of Speyer was a member of the New York Stock Exchange. In 1937 it joined the Hundred Years Association of New York, and James Speyer was awarded the gold medal of this association (1938), being its first member cited as "an individual who has contributed most to the civic welfare of the city."

Speyer was instrumental in the establishment of several institutions in New York city devoted to education and philanthropy. He was the moving spirit in the creation of the Museum of the City of New York. In 1902 he presented to Teachers College the Speyer School where prospective teachers could come into practical contact with children; in 1910 his wife, Ellin L. Prince (d. 1921), founded the New York Women's League for Animals to give free care to the animals of the poor. Speyer helped found the University Settlement Society, the first of its kind in America. He was vice-president of the Charity Organization Society of the City of New York, a director of Isabella Home, a trustee of the United Hospital Fund of New York, a member of the advisory board of the Salvation Army, and for nearly four decades he served as a director of Mount Sinai Hospital.

Speyer contributed more than $2,000,000 to these and other institutions and doubled the amount of his donations by his last will. Speyer also endowed (1905) the Theodore Roosevelt chair in American history at the University of Berlin, and provided funds (1910) to help found the Amerika Institut in Berlin so as to aid American students in Germany and German students in the United States. In 1925 he endowed a foundation at Johns Hopkins University, Baltimore, providing for a German scientist of prominence to be invited each year.

Speyer was a member of the American Chamber of Commerce in Paris, treasurer of the American Museum of Safety, vice-president of the Chamber of Commerce of the State of New York, president of the Economic Club of New York, treasurer of the Gaynor Memorial Association, vice-president of the Macy Memorial Committee, trustee of the Marine Museum of the City of New York, a member of the Straus Memorial Association, and a founder of the Pan-American Society. He was an honorary member of the University of Frankfort, and received the degree of LL.D. from the Lincoln Memorial University.

He was decorated by the German emperor and by the government of Hungary for his economic and cultural aid to their countries.

HUGO BIEBER.
