THE UNIVERSAL JEWISH ENCYCLOPEDIA

IN TEN VOLUMES

An Authoritative and Popular Presentation of Jews and Judaism Since the Earliest Times

EDITED BY

ISAAC LANDMAN

Rabbi of Congregation Beth Elohim, Brooklyn, New York
Founder and Director of the Academy for Adult Jewish Education

In Collaboration with the Following

BOARD OF EDITORS:

EXECUTIVE AND LITERARY EDITOR
LOUIS RITTENBERG, American Editor, *London Jewish Chronicle;* formerly Editor, *The American Hebrew*

AMERICANA: A. S. W. ROSENBACH, President, American Jewish Historical Society

ANGLO-JUDAICA: PAUL GOODMAN, Historian and Author, London

ARCHAEOLOGY: WILLIAM F. ALBRIGHT, Professor, Semitic Languages, Johns Hopkins

ART: CLIFTON HARBY LEVY, Rabbi, Author and Journalist

BIBLE: JULIAN MORGENSTERN, President and Professor of Bible and Semitic Languages, Hebrew Union College

ETHICS: LOUIS L. MANN, Rabbi of Temple Sinai, Chicago; Lecturer, Oriental Languages and Literature, University of Chicago

HISTORY: ISMAR ELBOGEN, Research Professor, Jewish Theological Seminary, Hebrew Union College, Jewish Institute of Religion; and Dropsie College

ABRAHAM A. NEUMAN, President and Professor of History, Dropsie College

JEWISH LITERATURE: JOSHUA BLOCH, Chief, Jewish Division, N. Y. Public Library

LITURGY: SOLOMON B. FREEHOF, Rabbi of Congregation Rodef Shalom, Pittsburgh; formerly Professor of Liturgy, Hebrew Union College

PHILOSOPHY: LEO STRAUSS, Associate Professor, Political Science, Graduate Faculty of Political and Social Science, New School for Social Research

RABBINICS: LOUIS FINKELSTEIN, President and Professor of Theology, Jewish Theological Seminary of America

SOCIAL INSTITUTIONS: MAURICE J. KARPF, Formerly President, Faculty, and Professor, Social Technology, Graduate School for Social Work, New York; Executive Director, Federation of Jewish Welfare Organizations and Jewish Community Council, Los Angeles

THEOLOGY: SAMUEL S. COHON, Professor of Theology, Hebrew Union College

REVISION EDITOR: ABRAHAM SHINEDLING, Rabbi, Linguist and Reviewer

DIRECTOR OF RESEARCH
SIMON COHEN, D.D., Former Instructor at the Hebrew Union College School for Teachers

NEW YORK
RABBI
GEORGE WISE

Rabbi, Congregation Schaarai Zedek

Rules Governing Transliterations, Citations, Spelling of Proper Names, and Abbreviations

THE following general rules will aid the reader in consulting these pages:

TRANSLITERATION. In transliterating from languages that do not employ the Roman alphabet, our aim has been to approximate the phonetic sound of the words for the benefit of the reader who does not understand such languages. It is assumed that the scholar will have no trouble recognizing the words in any case, while the lay reader is apt to be confused by special distinguishing signs.

In the case of Hebrew and Yiddish, transliteration has been preferred throughout, the only exceptions being instances where reproduction of the Hebrew letters may be essential to the comprehension of the article.

Hebrew has been transliterated in accordance with the rules adopted by the Joint Committee of the Jewish Theological Seminary of America, the Hebrew Union College, Central Conference of American Rabbis, and National Council for Jewish Education. We have, however, made two exceptions: *ch* instead of *kh,* to represent the aspirate Kaf, and *tz* instead of *z,* to represent Tzade. In addition, Hebrew words have been transliterated in their entirety, without the use of hyphens, while a reduplication of letters has been reduced to a minimum. (See chart on pp. 202-3 for the transliteration of consonants. For vowels see Volume 10).

Yiddish is transliterated (phonetically) with special care to distinguish its spelling from that of German. Thus *sh* is used instead of *sch,* and *fun* instead of *von.*

SPELLING OF NAMES. In all instances where the individual signs his name in Roman letters, the name is spelled precisely as he himself gives it, e.g. Chaim, Jakob, Zacharias. If, however, the person wrote in Hebrew, Russian or Yiddish, the name is recorded according to our rules of transliteration—unless it happens to be Biblical. In the latter event, the spelling adopted by the Jewish Publication Society of America is the criterion followed.

CITATIONS. When given in English, citations from the Bible conform to the version published by the Jewish Publication Society of America. The number before the colon indicates the chapter; the number following, the verse (*Gen.* 1:8-10; *Isa.* 23:14).

Tractates of the Babylonian Talmud are given by their names, by page and column, according to standard usage (*Taan.* 30a). The Palestinian Talmud is indicated by prefixing *Yer.* (Yerushalmi); page and column are designated according to the Krotoschin edition. But chapter and Halachah are cited for the guidance of readers who have no access to this edition (*Yer. B.B.* 5:2, 15b). Mishnah citations give chapter and verse in the same form as citations from the Bible.

In citing the Midrash, we use the more readily understandable form of Midrash Genesis, Midrash Exodus, etc., rather than Hebrew terms that require explanation (Bereshith Rabbah, Shemoth Rabbah, etc.). Classical works of Jewish literature are cited, wherever possible, by standard editions and pages.

LITERATURE. The bibliography, or literature, given at the end of articles is furnished primarily to enable the interested reader to learn more about any given subject than space limits of the article permit. It is authoritative throughout, yet no complete bibliography has been attempted since many of the sources contain no more than has been adduced in the article itself, while others, especially of foreign tongue, may tend to confuse rather than help.

Standard reference sources, such as encyclopedias, *Konversationslexika,* biographical collections and literary catalogues, are ordinarily omitted on the assumption that the student will consult them automatically when in need of collateral data. Preference has been given to reference works in English. Books and periodicals have not been included where investigation has shown that they are not easily available to the reader.

TITLES: In determining titles for the articles, care has been taken to choose such names and terms as are likely to be most familiar to those consulting our pages. Individuals of the modern era are entered under their family names. For the ancient and medieval periods, where the usual form is A ben (or ibn) B, the listing will be found under the first name, e.g. Aaron ben Elijah. Where, however, ben or ibn is part of the family name (as in the case of Ben Zeeb, or Ibn Tibbon), the person in question is listed under the family name, e.g., Ibn Tibbon, Judah—not Judah ibn Tibbon.

The general order of arrangement of titles embodying names follows: (1) single names, e.g. Abraham; (2) titles containing the name of the individual, e.g. Abraham, Apocalypse of; (3) titles representing individuals listed by their first names, e.g. Abraham bar Hiyya Hanasi; (4) titles listed by family names, e.g. Abraham, Abraham. The words *of* and *the* are disregarded, but not *bar, ben* or *ibn.*

CROSS REFERENCES. Special care has been taken to assist the reader by extensive cross-references, so that information desired may be obtained with the least amount of effort.

The *See also* paragraphs at the conclusion of articles (always present in general subjects) will aid the reader in securing additional details on the subjects under examination or on kindred topics.

ABBREVIATIONS. Essential abbreviations employed throughout the encyclopedia include—b. (born), d. (died), cent. (century), ed. (edition), edit. (edited by), trans. (translated by). A list of abbreviations pertaining to the Biblical references follows:

BIBLE

Gen.	Genesis
Ex.	Exodus
Lev.	Leviticus
Num.	Numbers
Deut.	Deuteronomy

Spiceboxes for use at the Habdalah ceremony, showing two unusual (right) and one common form (below). Courtesy of the Union of American Hebrew Congregations

SPICEBOXES (Besamim boxes). The use of spices is one of the characteristic features of the Habdalah service which marks the close of the Sabbath and the festivals in the Orthodox Jewish synagogue and home. In view of the natural Jewish tendency to glorify the ceremonies by making their appointments as lavish and beautiful as possible, it was natural that especial care should be paid to the boxes in which were kept the spices to be used in the ceremony. They were made in many forms and of such materials as silver, gold enamel and other fine materials; silver spiceboxes are by far the most frequent. Such spiceboxes have a drawer, made of wood or metal, and usually divided into four compartments to provide room for four different kinds of spices.

It is impossible to state just when Jews began to create such holders of spices, since they are seldom dated and little is said about them in Jewish literature. Spiceboxes preserved in the Cluny Museum at Paris and in the synagogue at Ancona are claimed to be of 16th cent. manufacture, but are probably later. The earliest dated spicebox is one that was given to the Friedberg synagogue; it bears the inscription of the donor, Recha, daughter of Eliezer Dayyan, and the date 1651. All other spiceboxes that are known come from the period of the 17th cent. and after.

Spiceboxes that were intended for use in synagogues are almost exclusively in the form of a small tower, hence the name often given to them is *migdal*. These towers are usually set on a base; from this a column rises, on top of which the tower proper is set. The upper part tapers like a church steeple, and in most cases is adorned by a flag, generally in the form of a broad pennant ending in a swallowtail. There is frequently a ball, plain or ornamented, on top of the tower, and the flag is sometimes placed just above it. Flags are often placed on all four corners of square towers; it is not unusual for them to be adorned with bells, which furnish a musical jingle as the tower is carried to the table at the close of the Sabbath. A few specimens have a bell hung within a belfry that forms the topmost portion of the tower; a tower in the United States Museum in Washington has the representation of a clock, with hands.

While the tower form of the spicebox is also a favorite in the home, a large number of other forms are also found. They are frequently made so as to represent a plant with a fruit. There rises from the base a vine with leaves, crowned by a fruit which serves as the container for the spices; the favorite forms of fruits are pears, apples and quinces. In a few cases flowers form part of the decorations. Sometimes the spice container is in the form of an urn, which is supported by plain columns or by figures. In others the spicebox is in the form of a sphere superimposed upon a heavy base. There are also specimens made in the form of a bird or a fish with moveable scales. In the early part of the 18th cent. ingenious Jewish craftsmen devised a combination spicebox and candle holder for the Habdalah ceremony by keeping only the lower part of the tower and surrounding it with a railing with holes through which tapers could be inserted.

In addition to these larger forms there are a number of small spiceboxes which were evidently intended for the use of individuals in traveling. These resemble the snuff-boxes of the period and come in a variety of shapes and sizes, round, oblong, egg-, acorn-, and pear-shaped. The covers sometimes merely fit on, while others are fastened to the box by a hinge.

It is noteworthy that the decorations of such spiceboxes are generally purely conventional and but seldom contain Jewish motives. A few have such distinctive marks as the six pointed star (Shield of David) or representations of synagogue functionaries. They resemble more the church vessels and family art objects of the period. Examples of spiceboxes of all shapes and sizes are found in most Jewish museums, such as those at the Hebrew Union College, in Cincinnati, and at the Jewish Theological Seminary of America, in New York city.

See also the illustrations in vol. 5, pp. 140-41.

SPICKER, MAX, conductor and teacher, b. Königsberg, Germany, 1858; d. New York city, 1912. After studying at the Leipzig Conservatory, he conducted theatre orchestras in many German cities. In 1882 he went to New York, serving as conductor of the Beethoven Männerchor. From 1888 to 1895 he was director of the Brooklyn Conservatory and for several years thereafter taught harmony and counterpoint at the National Conservatory in New York. He served as choirmaster of Temple Emanu-El, in New York (1898-1910).

Spicker edited several excellent anthologies of music, including *Aus aller Herren Länder* (a collection of folk songs), a four-volume anthology of sacred songs, a two-volume *Synagogal Service,* and several volumes of arias from oratorio and opera. He composed numerous works for orchestra, chorus, and chamber music groups.

SPIEGEL, DORA ROSENBERG (Mrs. Samuel Spiegel), communal worker, b. Hungary, about 1882. She was brought to the United States in her infancy and educated in New York city, receiving the M.A. degree from Teachers College of Columbia University in 1920. From 1897 to 1900, when she married Samuel Spiegel, she was employed in the Educational Alliance, New York city. Later she was both a teacher and volunteer principal at Sunday schools, taught English to foreigners, did a great deal of club leadership work at various settlement houses, and lectured on psychology at the People's Hospital Training School for Nurses (1915-19). In 1917 Mrs. Spiegel was one of the founders of the Women's League of the United Synagogue of America. She was recording secretary of the organization (1918-1929), president of the New York city branch (1921-1928), and was elected national president in 1928. In 1943 she was serving as national president.

Dora R. Spiegel

SPIEGEL, ERNEST, physician and educator, b. Vienna, 1895. He received his M.D. degree from the University of Vienna (1918) where he served as an instructor in its neurological institute (1924-1930). He came to the United States on a lecture tour in 1931, was appointed professor and head of the department of experimental neurology at Temple University School of Medicine, Philadelphia, and still held this position in 1943.

Spiegel's published works include: *Muscle tonus* (1923; 2nd ed., 1927); *Centers of Vegetative System* (1928); *Experimental Neurology* (1928); *Oto-Ophthalmo-Neurology* (with Ignatz Sommer, 1931; Spanish trans., 1938). He was a grandson of Rudolf (Reuben) Fuchs, and author of Hebrew textbooks and of Bible translations officially used in Austrian schools.

MONA SPIEGEL-ADOLF (b. Vienna, 1893), physician and educator, received the M.D. degree from the University of Vienna (1918) where, as the only woman, she was made instructor of medicine (1930). She came to the United States in 1931, was appointed professor of colloid chemistry at the Temple University School of Medicine, Philadelphia, and still held this position in 1943.

She wrote *Die Globuline* (1930). She was a granddaughter of Simon Spitzer, a noted mathematician and educator in Vienna, and the wife of Ernest Spiegel.

Lit.: *Men of Science.*

SPIEGEL, FREDERICK S., judge, b. Germany, 1858; d. Chicago, 1925. He was brought to the United States as a child, studied at the University of Alabama, and later graduated from the Cincinnati Law School, at the same time acting as a reporter for the *Enquirer* and *Volksblatt*. He practised law for several years, and was chief of the Ohio State Bureau of Statistics from 1880 to 1882, and a member of the Cincinnati Board of Education from 1880 to 1883. Spiegel served in turn as county solicitor (1890-96), judge of the Common Pleas Court (1896-1906), of the Superior Court (1907-13), and mayor of Cincinnati (1914-16). Spiegel was active in the B'nai B'rith movement. His son, Arthur M. Spiegel (b. Cincinnati, 1884), also a lawyer, was a member of the Ohio State Legislature from 1907 to 1911, and a municipal court judge of Cincinnati from 1916 to 1922.

SPIEGEL, LUDWIG, professor of political law, b. Reichenau, Bohemia, 1864; d. Marienbad, Bohemia, 1926. He taught constitutional law at the German University of Prague, and for a time was a German (Democratic) senator in the Czechoslovak National Assembly. In spite of his being a Jew, Spiegel was made rector of the University, but he died before taking office.

Spiegel's principal works were *Die Verwaltungsrechtswissenschaft* (1909) and *Gesetz und Recht* (1913). His other writings include *Die kaiserlichen Verordnungen mit provinzieller Gesetzeskraft nach österreichischem Staatsrechte* (1893); *Die geschichtliche Entwicklung des österreichischen Staatsrechts* (1905); *Hye und die Wiener Revolution* (1910); *Die Entstehung des tschechoslowakischen Staats* (1921).

SPIEGEL, MARCUS M., American Civil War soldier, b. Ohio, 1829; d. Louisiana, 1864. Spiegel was mustered into the service of the Regular Army as a second lieutenant of the 67th Ohio Volunteer Infantry in 1861. Subsequently he was promoted to the ranks of captain, lieutenant colonel and then colonel in the Union Army. His name had been suggested for promotion to the rank of brigadier general when, in 1864, he died of wounds received in action, on board the United States transport *City Belle* enroute from Baton Rouge to Alexandria, La.

Lit.: *Publications of the American Jewish Historical Society,* No. 17 (1909) 158.

SPIEGEL, SHALOM, scholar, b. Unter Stanestie, Bucovina, 1899. He studied at the Israelitisch-Theologische Lehranstalt and the University of Vienna (Ph.D., 1922); during this time he was one of the founders of Hashomer Hatzair and editor of its first publication in Vienna (1917). After teaching at the Beth Sefer Reali and Technical Institute at Haifa (1923-28), he came to the United States to teach in the Herzliah Hebrew Academy of New York city. In 1929 he joined the faculty of the Jewish Institute of Religion, and was serving as its professor of Bible and Hebrew literature, as well as acting as librarian, in 1943. He was secretary of the Alexander Kohut Foundation, a trustee of the Israel Matz Foundation, a fellow of the American Academy for Jewish Research (recording secretary, 1938-40), and served on the publications committee of the Jewish Publication Society of America and on the editorial board of the *Journal of Biblical Literature.*

In addition to articles in scholarly publications, he wrote *Hebrew Reborn* (1930), dealing with important modern Hebrew writers, plus opening and closing chapters describing the revival of Hebrew in modern Palestine.

SPIEGELBERG, a family identified with the early history of New Mexico. The first member of the family to arrive in the United States from his native

Westphalia was SOLOMON JACOB SPIEGELBERG, who came in 1842. He was the son of Jacob Spiegelberg who, known originally in his little native Westphalian town of Natzungen simply as Jacob of Natzungen, later, in 1804, after the issuance of the Code Napoléon which ordered all Jews to adopt a family name, adopted as his surname that of Baron von Spiegelberg, whose friend and trusted commercial agent he had been for more than twenty-five years previously, and near whose magnificent and large castle the village of Natzungen was located. Baron von Spiegelberg himself suggested before the governor (*Landvogt*) charged with the administration of the law requiring the adoption of surnames by Jewish families the adoption of his own surname as the family name of Jacob of Natzungen. Solomon Jacob Spiegelberg went to Mexico and later to Santa Fe with a military company under the command of a Colonel Doniphan. In 1846 he established himself as a merchant in Santa Fe. Spiegelberg was followed by his brothers Levi, Emanuel, Elias and Lehman, all of whom took the trail to Santa Fe and aided in making the Spiegelberg establishment one of the economic bulwarks of the frontier territory.

WILLY SPIEGELBERG (b. Natzungen, Westphalia, 1844; d. New York city, 1929), the youngest of the Spiegelberg brothers, arrived in the United States in 1859, and made his way to Santa Fe in 1860. During the temporary occupation of Santa Fe by a Confederate army, Spiegelberg did patrol duty, but soon afterward rejoined the other members of the family in merchandising. In the early 1870's Spiegelberg and his brother, Lehman Spiegelberg, formed the Second National Bank of Santa Fe, of which the younger brother was cashier and the older brother president for fifteen years. Spiegelberg was made commissioner for Santa Fe County in 1882; subsequently he was made probate judge. President Grover Cleveland was reputed to have offered him the governorship of the New Mexico Territory, which he refused. In the rudimentary and colorful life of the frontier community, Spiegelberg and his wife Flora (b. New York city, 1857), whom he had married while on a visit to Germany in 1874, were important adjuncts. Their friendship with the Catholic population of New Mexico was evidenced in Spiegelberg's election to the judgeship. Their interest in the Navajo Indians expressed itself in Spiegelberg's support of the Historical Society of New Mexico and in articles he wrote on Navajo culture.

In 1888 Spiegelberg moved to New York. MRS. FLORA SPIEGELBERG, who had in Santa Fe organized the first non-sectarian school (1879) and the first Jewish Sabbath School (1880), continued her communal activities in the East. She was early associated with the National Council of Jewish Women. A pioneer on incineration as a method of waste disposal, Mrs. Spiegelberg was appointed to the City Health Commission in 1914 by Mayor John F. Hylan. She was the author of several children's stories. In 1943 she was living in New York.

Among the descendants of the Spiegelberg brothers were Frederick Spiegelberg, a judge, Isaac Newton Spiegelberg (1859-1927), engineer and stockbroker, and George A. Spiegelberg, attorney (the son of Frederick Spiegelberg), associate professor of law at New York University.

NATHAN RICARDO.

Lit.: American Hebrew, Nov. 2, 1928, p. 835; Feb. 8, 1929, p. 496.

SPIEGELBERG, FREDERICK, judge, b. New York city, 1862; d. New York city, 1937. He graduated in 1887 from the Columbia Law School, was admitted to the bar in the same year, and from 1891 to 1906 was senior member of the law firm of Spiegelberg and Wise. He was elected a justice of the Municipal Court of New York city in 1907, and was re-elected in 1917, but declined the renomination in 1927. In 1913 Mayor Gaynor appointed him a member of a commission to revise the practice and procedure of the Municipal Court. In 1919 he was appointed chairman of the committee on rules for the Municipal Court, and was in large measure responsible for the subsequently enacted code which simplified court procedure and trials; he also introduced into these courts a system of conciliation and arbitration. In March, 1920, at the request of the New York State Legislature, he devised a plan for dealing with the landlord and tenant situation; this plan was later embodied almost as a whole in the so-called Emergency Rent Laws. He served as arbiter in important labor disputes from 1913 to January, 1928, when he became an official referee.

SPIEGELBERG, SOLOMON JACOB, *see* NEW MEXICO; SPIEGELBERG (family).

SPIEGELBERG, WILHELM, Egyptologist, b. Hannover, Germany, 1870; d. Munich, Germany, 1930. He was the son of the banker Adolf Spiegelberg, and studied in Munich, Strasbourg, Berlin and Paris. From 1894 on he taught at the University of Strasbourg, where as early as 1907 he had become associate professor. He was baptized in 1911. When Strasbourg returned to French rule, Spiegelberg had to leave the university. He taught at Heidelberg from 1919, and from 1923 until his death at the University of Munich.

Spiegelberg is considered one of the leading personalities in the field of modern Egyptology. His scientific knowledge was enhanced by brilliant oratory and adroit phraseology. He achieved also popularity with the public at large.

Of his published works the following are most noteworthy: *Studien und Materialien zum Rechtswesen des Pharaonenreiches* (1892); *Arbeiter und Arbeiterbewegung im Pharaonenreich* (1895); *Ägyptische und griechische Eigennamen* (1901); *Geschichte der ägyptischen Kunst* (1903); *Ägyptologische Randglossen zum Alten Testament* (1904); *Die Glaubwürdigkeit von Herodots Berichten über Ägypten* (1926); *Der Sagenkreis des König Petubastis* (1910); *Der ägyptische Mythus vom Sonnenauge* (1917); *Koptisches Handwörterbuch* (1925). The final years of his life were dedicated to the exploration of demotic papyri. As the result of these studies, the following papers were published: *Erläuterung demotischer Texte* (1912-26); *Demotische Grammatik* (1921); and after his death *Die demotischen Papyri Loeb* (1931). He published also *Demotische Studien* (8 parts, 1901-29) and *Die demotischen Denkmäler* (3 vols., 1904-32).

Lit.: Meyerhof, Max, "Wilhelm Spiegelberg," *Byzantion* (1931); Wininger, S., *Grosse Jüdische National-Biographie,* vol. 7 (1936) 457; *American Journal of Semitic Languages,* vol. 47 (1930) 297; *Aegyptus,* vol. 11 (1931) 195-201.

SPIELMAN, LADY GERTRUDE EMILY, English communal worker. She was from 1918 to 1921 president of the Union of Jewish Women. She had also served (1913-14) as president of the Union of Jewish Literary Societies. Subsequently her activities included the chairmanship of the educational committee of the Board of Deputies, the vice-presidency of the Jews' Infant Schools and of the Jewish Orphanage, and other welfare posts. She lived in London.

SPIELMAN, SIR MEYER ADAM, educator, communal and Zionist worker, b. London, 1856; d. London, 1938. He studied at the University of London and became an inspector of the reformatory and in-

dustrial schools of Great Britain. As a member of the Executive and Council of the Anglo-Jewish Association, chairman of the Jewish Peace Society and vice-president of the Jewish Agency for Palestine, he was influential in political Zionism. In recognition of his services as pedagogue and promoter of child welfare, he was knighted in 1928. He was also made a member of the Royal Institute of International Affairs. Spielman wrote *The Romance of Child Reclamation.*

SPIELMANN, SIR ISIDORE, engineer, artist, historian and communal worker, b. London, 1854; d. London, 1925. He was the eldest son of Adam Spielmann, and a nephew of Sir Samuel Montagu (afterwards Lord Swaythling). He married Emily, daughter of Sir Joseph Sebag-Montefiore. An engineer by profession, Isidore Spielmann became increasingly attracted to painting, and was recognized as a major authority on the artistic side of international exhibits.

For forty years Spielmann was a leader of the art world in England. He was director of art for the British Board of Trade. He was also governor of the British Institute of Industrial Art, and a member of numerous executive or advisory committees more or less connected with the British government.

Spielmann promoted many exhibitions of Tudor, Stuart, Italian, Spanish and other arts. He was honorary secretary and delegate of the British government at international exhibitions in Brussels (1897) and Paris (1900), and represented the British government at several international meetings. It was Spielmann who suggested the holding of an Anglo-Jewish Historical Exhibition; he devised and organized it (1887). As a result of this exhibition, the Jewish Historical Society of England was founded (1893), of which Spielmann was president for the years 1902 to 1904.

Because he resented the Russian persecutions of the Jews, Spielmann refused any participation in the International Exhibition at St. Petersburg. He was a prominent member of the Russo-Jewish committee and edited *Darkest Russia* from 1890 to 1892. In his early years, Spielmann inclined towards Reform Judaism, but the more deeply he delved into Jewish history the more closely he adhered to religious conservatism. Spielmann also negotiated the establishment of the Mocatta Library, London. HUGO BIEBER.

Lit.: *Publications of the American Jewish Historical Society,* No. 31 (1928) 290-91; *The Jewish Historical Society of England, Transactions,* vol. 7 (1915) 206-21.

SPIELMANN, MABEL HENRIETTA (Mrs. Marion Harry Spielmann), authoress, b. Liverpool, England, 1862; d. London, 1938. Mrs. Spielmann was a fellow of the Royal Literary Society. She was awarded honorable mention at the Antwerp International Exhibition for Embroidery and a gold medal and diplôme d'honneur at the Franco-British Exhibition. She was a sister of Viscount Herbert Louis Samuel.

Her writings include *Littledom Castle* (1903; 3rd ed., 1912); *My Son and I* (1908); *Margery Redford* (1908); *The Love Family* (1908); *The Rainbow Book* (1909; 3rd ed., 1913); *The Child of the Air* (1910); and *The Sterndales of Sterndale House* (1919).

SPIELMANN, MARION HARRY, art critic and writer, b. London, 1858. He was a brother of Sir Meyer Adam Spielman and the husband of Mabel Henrietta Spielmann. Educated at the University of London, he was an art critic for the *Pall Mall Gazette* (1883-90), *Westminster Gazette* and other journals and magazines. For seventeen years he edited the *Magazine of Art.*

Spielmann was an organizer of several international art exhibitions. At the request of the Maharaja of Gaekwar, he purchased and formed the collection for the State Art Gallery of Baroda, India (1911-21). He was an officer of the Order of the Crown of Belgium and a Chevalier of the Order of Leopold.

His published writings include *Henriette Ronner* (1891); *History of Punch* (1895); *The Portraits of Geoffrey Chaucer* (1900); *British Sculpture and Sculptors of To-day* (1901); *Charles Keene, Etcher* (1903); *The Portraits of Shakespeare* (1907); *Kate Greenaway* (with G. S. Layard, 1905); *British Portrait Painting* (1910); *Iconography of Andreas Vesalius* (1925); and *Hugh Thomson* (with Walter Jerrold; 1931). Spielmann was on the editorial staff of the *Encyclopaedia Britannica,* and a contributor to *Bryan's Dictionary of Painters and Engravers* and to the *Dictionary of National Biography.*

SPIELMANN, PERCY EDWIN, chemist, b. London, 1881. He studied at the University of London and at the Polytechnic of Zurich, Switzerland, and was head of the coal tar analytical laboratory of the Department of Explosives Supply, Ministry of Munitions of War (1914-19). Spielmann served as chairman and member of several international standardization committees in connection with road materials, coal tar, and petroleum. He edited and translated the first English edition of Richter's *Organic Chemistry* (1915).

His published works include *Tables of Chemical and Physical Constants* (1918); *The Genesis of Petroleum* (1923; French trans., E. Wiener, 1926); *The Constituents of Coal Tar* (1924); *Bituminous Substances* (1925); *Chemistry* (1927); *Road Making and Administration* (with E. S. Elford; 1934); and *Asphalt Roads* (with Colonel A. C. Hughes; 1936). He was on the committee of Maccabaeans.

SPINA, ALFONSO DE, Jew-baiter, d. Spain, about 1491. He was general of the Order of Franciscans, preacher in Salamanca, and confessor of King Enrique (Henry) IV of Castile. Spina wrote the polemical book *Fortalitium Fidei* against heretics, Jews and Saracens. Not content with attacking the Jewish belief, he endeavored to convince his fellow-countrymen, by means of the most venomous forms of agitation, of the wickedness of the Jews, alleged examples from the past and present, and reiteration of the blood accusation (ritual murder). In a veiled manner he demanded the expulsion of the Jews from Spain and the introduction of the Inquisition to exterminate those of the New Christians (Marranos) whose religious belief was untrustworthy.

Lit.: Spina, Alfonso de, *Fortalitium Fidei* (1470); *Catholic Encyclopedia,* vol. 14, p. 216; Graetz, H., *History of the Jews,* vol. 4 (1927) 276 et seq., 415.

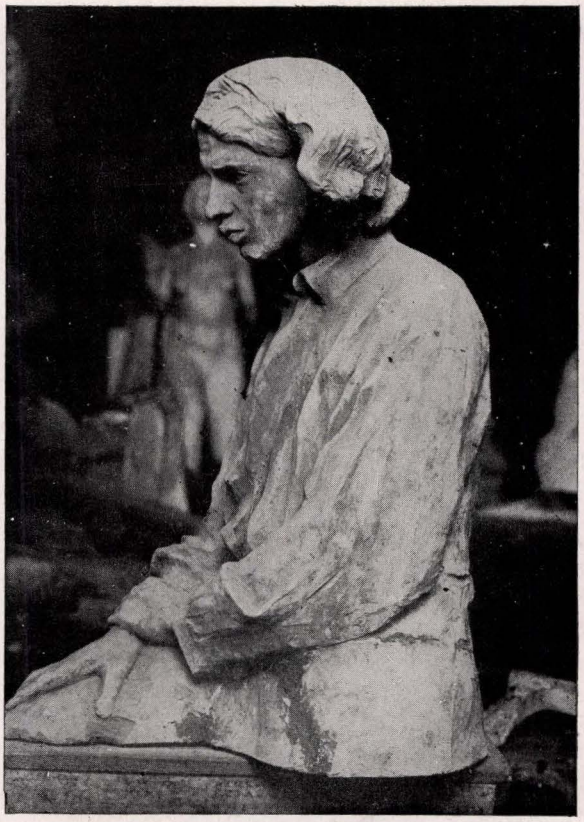
SPINGARN, ARTHUR BARNETT, lawyer, b. New York city, 1878. He studied at Columbia University (M.A., 1899; L.L.B., 1900) and was a captain in the United States Army during the first World War, serving in the United States and in France. From 1940 on Spingarn served as chairman of the legal commission and as president of the National Association for the Advancement of Colored People. In 1941 he received the honorary degree of LL.D. from Howard University. He wrote *Laws Relating to Sex Morality* (1915; revised ed., 1926).

SPINGARN, JOEL ELIAS, educator, poet and critic, b. New York city, 1875; d. New York city, 1939. He was educated at Columbia University (Ph.D., 1899) and appointed associate professor of comparative literature there in 1904. In 1909 he was made full professor and in 1911 head of the department, but the same year he was relieved of his duties by the trustees, after an academic dispute in which he had raised the issue of free speech. He was a prolific author.

A friend and follower of Theodore Roosevelt, he was a Republican candidate for Congress (1908) and a delegate to the Progressive national conventions of 1912 and 1916. He served as a major during the first World War, saw action in France and later became a lieutenant colonel in the Officers' Reserve Corps. Spingarn was a delegate to the first convention which founded the American Legion, and was the first Commander of the Legion Post at Amenia, N. Y. He was owner of the Amenia (N. Y.) *Times* (1911-26) and one of the founders of Harcourt, Brace and Co. publishing house, serving as its literary adviser and vice-president from 1919 to 1932.

One of the organizers of the National Association for the Advancement of Colored People, Spingarn was its president from 1930 to his death. In 1913 he established the Spingarn Medal to be awarded annually to "the man or woman of African descent and American citizenship who has made the highest achievement during the preceding year in any honorable field." It was largely through Spingarn's efforts that the training camp for Negro officers at Des Moines, Iowa, was established and about 1,000 Negro officers were commissioned during the first World War.

Spingarn owned the largest collection of clematis at Troutbeck, N. Y., containing more than 250 species, more than twice as many as the Royal Botanical Gardens at Kew, England. Horticulturists from all over the world visited his farm, described by the naturalist John Burroughs as "the loveliest farm in America," and by the novelist Sinclair Lewis as "a grass-grown cathedral."



Spingarn wrote *A History of Literary Criticism in the Renaissance* (1899) which was translated into Italian and published (1905) with a preface by Benedetto Croce, whose ideas had been first introduced into the United States by Spingarn.

Spingarn's other writings include *The New Criticism* (1911); *The New Hesperides and other Poems* (1911); *Prose* (1924); *Poetry and Religion* (1924); *Creative Criticism and other Essays* (1931); and *Henry Winthrop Sargent and the Early History of Landscape Gardening and Ornamental Horticulture in Dutchess County, N. Y.* (1937). He edited *Critical Essays of the Seventeenth Century* (3 vols., 1908-9); *Temple's Essays* (1909); *A Renaissance Courtesy Book, the Galatea of Casa Della* (1914); *Goethe's Literary Essays* (1921); *Criticism in America* (1924); *European Library* (25 vols., 1920-25) and *Troutbeck Leaflets* (1924-31). Spingarn was a contributor to *Civilization in the United States; Dictionary of American Biography;* and the *Cambridge Dictionary of English History.*

SPINOZA, BARUCH (Benedict), philosopher, b. Amsterdam, Holland, 1632; d. The Hague, Holland, 1677. He was descended from a family of Marranos which had come from Spain to Portugal and from the latter country to Holland. Spinoza attended the well-directed school of the Jewish community of his native city, where he studied Bible and Talmud, the exegetic and philosophical literature of the Middle Ages, and presumably also Cabala. One of his noted teachers there was Saul Levi Morteira (Mortera), who, together with Isaac Aboab da Fonseca and Manasseh ben Israel, were its heads. Morteira, like Manasseh ben Israel, was a profound student of Cabala. After leaving this school Spinoza studied Latin, mathematics and natural sciences, and then gained an insight into medieval scholasticism. Of decisive importance for him was the philosophy of the French philosopher Cartesius

Statue of Spinoza, by Enrico Glicenstein

(René Descartes), the father of modern philosophy, the study of which—in contrast to authority and tradition—placed him on the pedestal of the perception and knowledge of reason and taught him the application of mathematical methods in philosophy.

Suspected of heretical views and accused of holding them, Spinoza was placed under the ban by the Jewish community of Amsterdam in 1656. The magistracy of the city was informed of this procedure, presumably in order to avert the danger which threatened the Jews, who were merely tolerated at that time, when it became known that Spinoza had heretical views in opposition to both Christianity and Judaism alike. Indeed, it is believed that the excitement aroused against Spinoza on this occasion induced a fanatical person to make an attempt on his life. Morteira and Isaac Aboab da Fonseca were members of the Jewish court (Beth Din) at Amsterdam which excommunicated their former disciple, Spinoza.

After his excommunication, Spinoza visited the country estate of a friend of his in the vicinity of Amsterdam. Later he lived in Rheinsburg, near Leyden, then in Voorburg near The Hague, and finally in The Hague itself. He earned a comfortable living, which did not occasion his suffering any want, as a grinder of optical lenses. He refused an honorable call to the faculty of the University of Heidelberg even though he was assured of complete freedom of expression and of academic freedom, in order to maintain his full independence. He himself published only two of his works, the second of which, the *Tractatus theologico-politicus,* appeared anonymously in 1670, but aroused such a storm of indignation that his chief work, the *Ethics,* could be published only after his death. Spinoza died of tuberculosis at the early age of forty-four.

An engraving of Spinoza engaged in study

In his very year of death (1677) his literary remains were published under the title of *B. de Spinoza opera posthuma.* These contained, besides his *Ethics,* the tractate on politics, the tractate on the perfectibility of the human reason, the letters written to and by Spinoza, and a sketch of Hebrew grammar. Later editions of his works included the complete edition by C. H. Bruder (Leipzig, 1843-46) and by Van Vloten and Land (The Hague, 1883 and 1895); the newly discovered *Tractatus de deo et homine,* important for the understanding of Spinoza's development, is included in the latter edition. The last edition of Spinoza's works was that of C. Gebhardt (Heidelberg, 1925). Other German translations are to be found in the *Philosophische Bibliothek* of Kirchmann and of Baensch, Buchenau and Gebhardt (vols. 91 to 96), and of his main works in the *Reclamsche Universal-Bibliothek.* Spinoza's *Ethics* was translated into Hebrew by Salomo Rubin (*Heker Eloha,* 1885) and by Jakob Klatzkin (1923).

Three features are characteristic of the philosophy of Spinoza: the pantheism of his God conception; parallelism in the relationship between body and mind; and the principle of self-preservation, but in a special conception, as a principle of morality. Reality is a unified thing, which Spinoza calls *natura naturans* or substance or God in contradistinction to the *natura naturata,* the sum total of all individual beings or existences. The absolutely one, infinite substance has infinitely many attributes, of which only two, thought and extension, are perceptible. All individual beings are merely modifications of the infinite substance, having a relation to it comparable to that existing between the waves and the ocean, and all becoming which occurs of and in them appears, in correspondence with these two attributes, in two forms, i.e. in phenomena of movement (motion) and consciousness.

According to Spinoza, God is not to be thought of as supermundane, as transcendental, as is the case with the God conception of Judaism and of Christianity, but is to be found active in all things as their immanent cause, from which everything proceeds with mathematical necessity. God is free only insofar as He is not subject to any external compulsion in His creating; creation, however, does not occur in accordance with definite purposes, but is solely the manifestation, the self-representation of His essence. Since God shows Himself under the attribute of thought and of extension, the causal sequence in each of these two worlds is an altogether separate and closed one. Accordingly, likewise in man no mutual influencing or cooperation takes place between body and mind, but rather a thoroughgoing parallelism between physical and psychic phenomena, and each sequence of these phenomena forms a causal connexus of its own.

Hence there is no place in Spinoza's philosophical system for freedom of the will. The nature of each thing, and therefore of man as well, is self-preservation. An increase in the force of existence is perceived as an inclination or desire, a diminution thereof as disinclination or aversion. Even of virtue the basis is the instinct of self-preservation. The more ability a man has of preserving his being and of enhancing its reality, the more virtuous he is. However, this ability has its origin only in the reason. It makes man free of the power of the emotions or passions which hinder his truly beneficial development. Only the rational life is a perfect life, and there is only a single good which can not be lost, i.e. perception, sheltered within the perception of God from which "intellectual love of God" has its origin. In the perception of God there originates the loftiest rapture and exaltation of the human spirit and mind, the highest bliss. It permits us to find rest in the thought of the eternal necessity of all things, and liberates us from all tormenting and distressing emotions. Thus happiness is not the reward of virtue, but it is virtue itself.

Spinoza begins his chief work, the *Ethics,* with God, and concludes it with the bliss of intellectual love of God. He thus not only refutes the reproach of atheism brought against him, but lays bare his innermost being. Outwardly sickly, an outcast and poor, calumniated as a heretic and atheist, he lived a peacefully quiet and placidly cheerful and happy life is an unceasing striving after the knowledge and perception of God. He found peace in his God. His fate brought no bitterness into his nature. Despite his consciousness of his worth and despite his belief that he possessed the true philosophy, he was and always remained affable, modest, philanthropic, and kindly disposed toward all men.

Spinoza presents his doctrine of right and of the state as well as his views on the Bible in his *Tractatus theologico-politicus,* which appeared during his lifetime and soon came to be bitterly denounced. He demands that the state, on grounds of self-preservation, exercise no control over the thoughts and views of its members, but that it grant them freedom of thought. Even the revelational documents and the truths of revelation must be tested and proved by reason. Spinoza made a critical investigation of the Sacred Scriptures, as the first great forerunner of modern Biblical exegesis. According to his view, the Scriptures are essentially in accord with the dictates of

A LETTER FROM SPINOZA TO LEIBNIZ

THEOLOGICO-POLITICI *Cap.* IV. 53

enim cap. 13. vers. 14. תורת חכם סקור חיים *Lex prudentis* (est) *fons vitæ*, id est, ut ex modo allato textu patet, intellectus. Porro cap. 3. vers. 13. expressissimis verbis docet, intellectum hominem beatum & fœlicem reddere, veramque animi tranquillitatem dare. Sic enim ait אשרי אדם מצא חכמה וגו ואדם יפיק תבונה וגו *beatus homo, qui invenit scientiam, & filius hominis, qui intelligentiam eruit.* Ratio est, (ut vers. 16, 17. pergit) quia *dirècte dat dierum longitudinem*, indirècte divitias & honorem: ejus viæ*, (quas nimirum scientia indicat) *amœnæ sunt, & omnes ejus semitæ pax.* Soli igitur sapientes ex sententia etiam Salomonis animo pacato & constante vivunt, non ut impii, quorum animus contrariis affectibus fluctuat, adeoque (ut Esaias etiam ait cap. 57. vers. 20.) pacem, neque quietem habent. Denique in his Salomonis Proverbiis maxime nobis notanda sunt, quæ habentur in secundo cap. utpote quæ nostram sententiam quam clarissime confirmant; sic enim vers. 3. ejusd. cap. incipit כי אם לבינה תקרא לתבונה תתן קולך תור אז תבין יראת יהוה ודעת אלהים תמצא כי יהוה יתן חכמה מפיו דעת ותבונה *nam si prudentiam inclamabis, & intelligentiæ dederis vocem tuam, &c. tunc timorem Dei intelliges, & Dei scientiam* (vel potius amorem; nam hæc Duo verbum ידע *Jadah* significat) *invenies*; *nam* (NB) *Deus dat sapientiam: ex ore suo* (manat) *scientia & prudentia.* Quibus sane verbis clarissime indicat, 1. quod sola sapientia, sive intellectus nos doceat, Deum sapienter timere, hoc est, vera religione colere. Deinde docet, sapientiam, & scientiam ex Dei ore fluere, Deumque illam dare, quod quidem nos etiam supra ostendimus, nempe, quod noster intellectus nostraque scientia à sola Dei idea sive cognitione pendeat, oriatur, & perficiatur. Pergit deinde vers. 9. expressissimis verbis docere, hanc scientiam veram Ethicam, & Politicam continere, & ex ea deduci. אז תבין צדק ומשפט ומישרים כל מעגל טוב *tunc intelliges Justitiam, & Judicium, & rectitudines,* (&) *omnem bonam semitam:* nec his contentus pergit, כי תבוא חכמה בלבך וודעת לנפשך יצפה מזמה תשמור עליך תבונה תנצרכה *quando intrabit scientia*

* *Hebræis nox, nihil aliud significant quam vitam.*

reason, but they are intended merely to offer an inducement and guidance toward pious conduct, and not scientific instruction. Miracles occur only for such guidance, or else are only combinations of natural phenomena. If one believes that man's nature consists in the striving to free himself in his perceptions and views from all inherited opinions and prejudices and in his attempt to rely upon his own strength and powers, then the boldness and freedom of Spinoza's thought show him more than any other philosopher and investigator before or contemporaneous with him, to have been the first modern man in the higher sense.

The postulates of Spinoza's philosophy are present especially in that of Descartes, then of Hobbes, and in individual points also in that of Bacon and in medieval philosophy. Manuel Joel in particular attempted to throw light on the connection of Spinoza's philosophy with medieval Jewish philosophy. The indifference which Spinoza manifests toward Jews and Judaism, while not having a very sympathetic and often a painful effect, appears quite intelligible in view of his personal experiences. As a result of his rigidly rationalistic basic attitude and view, Spinoza was unable, without prejudice to his great importance for a rational exegesis of the Bible, correctly to understand the historical position of Judaism and of the Jewish prophets, no matter how greatly he emphasized the basic ethical purpose of revealed religion. Yet his sober and calm view of Judaism did not prevent the elements of his Jewish education as a youth from influencing his mind, so that these elements fused with Cartesianism in his mind to form a new and important thought-pattern.

Spinoza had met with similar views, such as those which he evolved on prophecy, revelation, the miracles, the knowledge of God, the love of God, and the absolute One God, in medieval Jewish philosophy, and in Cabala. During his lifetime and for fully a century after his death, his influence was limited especially since Leibniz (who at first was strongly influenced by Spinoza), the leading philosopher of the 18th cent., opposed the Spinozistic philosophy because of the ban which had been imposed upon it. Attention began to be called to Spinoza in increasing measure about the year 1785, when a dispute arose between Moses Mendelssohn and F. H. Jacobi on the question as to whether Lessing was a Spinozist. From then on, stimulated by Goethe and Herder, post-Kantian speculative philosophy strongly occupied itself with Spinoza, and even in modern and recent times the philosophical thought of such divergent thinkers as Haeckel, Fechner, Wundt, von Hartmann and many others contains elements of his philosophy. MAX JOSEPH.

Lit.: The literature on Spinoza is practically unlimited. The following bibliography contains both strictly scientific presentations as well as several popular disquisitions. The main source on Spinoza's life, which, however, must be used with caution, is the biography by Colerus (Dutch, 1705; German, 1733; 1876, in the *Briefwechsel des Spinoza* edited by Ginsberg). Cf. also: Wolfson, Harry A., *Spinoza* (1932); idem, *The Philosophy of Spinoza* (2 vols., 1934); idem, "Some Guiding Principles in Determining Spinoza's Mediaeval Sources," *Jewish Quarterly Review,* New Series, vol. 27 (1936-37) 333-48; Kettner, F., *Spinoza, the Biosopher* (1932); Wolf, Abraham, edit., *The Correspondence of Spinoza* (1928; in 1943 Wolf was still preparing an English edition of Spinoza's works); DeCasseres, Benjamin, *Spinoza against the Rabbis;* Dunin-Borokowski, Stanislaus, *Spinoza* (4 vols., 1933-36); Freehof, Solomon B., *Spinoza* (1933); Browne, Lewis, *Blessed Spinoza* (1932); Jacobi, F. H., *Über die Lehre des Spinoza in Briefen an Mendelssohn* (1785); Van Vloten, *Baruch d'Espinoza* (1862); von der Linde, A., *Spinoza* (1862); idem, *Benedikt Spinoza* (1871); Meinsma, *Spinoza en zijn Kring* (1896); Jacobs, Joseph, *Jewish Ideals* (1896); Rappaport, Samuel, *Spinoza und Schopenhauer* (1899); Freudenthal, J., *Spinoza, Leben und Lehre* (1927); Klatzkin, J., *Baruch Spinoza* (Hebrew; 1924); Roth, Leon, *Spinoza, Descartes and Maimonides* (1924); idem, *Spinoza* (1929); Chartier, E., *Spinoza* (French; 1929); McKeon, Richard, *The Philosophy of Spinoza* (1929); Sokolow, Nahum, *Baruch Spinoza Uzemanno* (1929); Strauss, Leo, *Die Religionskritik Spinozas* (1930); *Heker Eloah im Torath Haadam* (Hebrew trans. by Salomon Rubin of Spinoza's *Ethics,* with notes and introduction; 1885; Rubin made also a compilation of Spinoza's writings, in *Moreh Nebuchim Hehadash,* 1856-57); the chief works of Spinoza were translated by R. H. Elwes (2 vols., 1883-84; new edition, *Philosophy of Benedict de Spinoza,* 1933); *Septimana Spinozana* (The Hague, 1933); Vienna Israelitische Kultusgemeinde, *Spinoza Literatur-Verzeichnis* (1927 and 1932).

SPIRA (known also as **SPIRE, SPIER, SPIRO, SPERO, SHAPIRA, SCHAPIRA, CHAPIRO, SCHAPIRO, SHAPIRO, SPRAI, SZPIR** and **SAPHIR**), a Jewish family name which evidently indicates descent from ancestors residing in or coming from the city or the territory of the bishopric of Speyer, Germany. The variety of the spelling shows how old this name and its tradition is. The spelling "Spira" is the correct Latin form of the name of Speyer as used in documents from the 7th cent. on.

The spelling "Spire" corresponds to the Middle High German name of the city, yet the name is no infallible criterion of a descent from the Jews of Speyer. For instance, in 1813 the chief rabbi of Radolfzell, named Levi, who opposed the assumption of modern names and was therefore troubled by the local authorities, called himself Spiro, in order to announce that he still was "breathing," deriving the name from the Latin word *spiro* (I breathe).

Nevertheless, generally the tradition assuming ancestry from Speyer is authentic. In 1364 Gottschalk von Spire, an emigrant from Speyer, resided at Frankfort, and in 1369 Jacob von Spire went to Strasbourg from Speyer. The sojourn of Senderlin von Spire or de Spira at Frankfort is certified by documents originating from 1316 to 1349. Man (Manes) von Spire was domiciled at Frankfort in the years 1364 to 1367, Issachar von Spire was there in 1375, Meister Suslin Spire lived there from 1394 to 1398, and Menchin (Manes) Spire, a son of Gottschalk, in 1398. In the 17th cent. the spelling Speyer prevailed among the Jews of Frankfort who came from Speyer or who were the descendants of Jews who had come from Speyer. This fact corresponds to the change of the Middle High German vowel *i* into the Modern High German diphthong *ei* or *ey*.

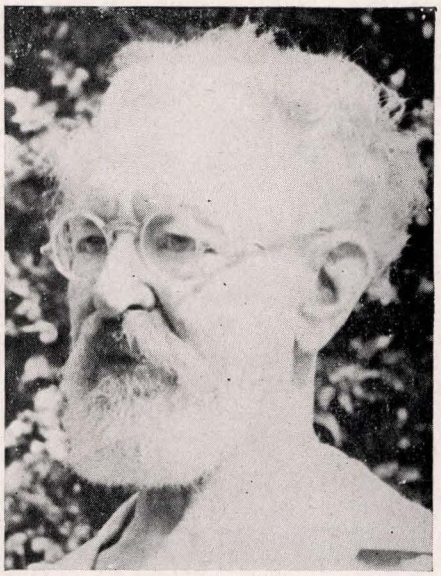
After the expulsion of the Jews from Speyer, many members of these families emigrated to Poland, Bohemia, Russia, and other countries. Baron Paul Schaffiroff, vice-chancellor of Czar Peter the Great, was the grandson of a converted Jew originally named Schapiro, who after baptism changed his name to Schaffiroff. Isaac Hakohen Shapiro, father-in-law of the eminent Talmudist Rabbi Meir Lublin, died in Cracow in 1582. Rabbi Nathan Spira, author of the *Mebo Shearim,* came originally from Prague and died as rabbi in Grodno (1582). Isaac ben Noah Cohen Spiro was author of *Sefer Zikkaron,* published in 1603. Rabbi Reuben Spiro Jerushalmi, son of Rabbi Reuben David Tebele Spiro Ashkenazi, of Cracow, was active rabbi of the Ashkenazic community in Jerusalem. He published *Tub Haaretz* in 1655, and obtained, on the strength of his profound scholarship, permission from close to a hundred rabbis to marry a second wife, besides his first one. Aryeh ben Isaac Spiro published the grammatical textbook *Kebutzoth Kesef* in Zolkiew (1741). Rabbi Phinehas Schapiro, known as Rabbi Phinehas Koretzer, was a pupil of Israel Baal Shemtob. His son Moses Schapiro (about 1758-1833), a learned printer in Slavuta, printed two excellent editions of

the Talmud (1808-13). His sons, Samuel Abba and Phinehas Shapiro, both printers and owners of the Slavuta Press (Volhynia), were denounced to the Russian authorities, accused of issuing dangerous mystical books, without the permission of the censor, and sentenced by Czar Nicholas I to the gantlet and to deportation to Siberia; they were released by Czar Alexander II.

Many Bohemian and Polish families added the name of Spiro to their names, as for instance, Frankl-Spiro, Porges-Spiro, Wiener-Spiro.

In 1760 Salomon Spiro, originally residing in Offenbach, arrived in Berlin and became master of the mint of the king of Prussia. His son, Beer Salomon Spiro (1770-1842), was a wealthy banker and had many children. Among the contemporary members of the Spiro family, the artist Eugen Spiro was the son of a famous Mohel and Hazan. The mathematician Hermann Schapira (1840-98) played an important part in the early history of Zionism. Israel Shapiro (b. 1882), orientalist and librarian, went to the United States from Russia. Meir Schapiro (b. 1887) was active as rabbi in several towns of Poland and a member of the Sejm. In France the poet André Spire (b. Nancy, 1868) became a prominent representative of modern literature.

There is no evidence as to whether Giovanni da Spira, the first Venetian printer (about 1470), was of Jewish origin. HUGO BIEBER.



Lit.: Dreifuss, *Die Familiennamen der Juden* (1927); Kessler, G., *Die Familiennamen der Juden in Deutschland* (1935).

SPIRA, a Hasidic dynasty at Munkács, Hungary. Among its more renowned members were:

ZEBI ELIMELECH SPIRA (b. Poland; d. Poland, 1841). He was a nephew of Elimelech ben Eleazar Lipmann of Lezaisk. After being rabbi in various communities of Poland, he came to Munkács where he was rabbi from 1825 to 1827. Subsequently he returned to Dinov in Poland. He was the author of a number of Cabalistic and homiletical works, including *Bene Yissachar, Igra Depirḳa, Derech Peḳudeha,* and others. He also wrote commentaries on the *Zohar* entitled *Haggahoth Mehartza.* His books are considered standard works on the study of the Talmud, especially among those of Hasidic leanings. His nephew and pupil was

Hayim Lázár Spira, Hasidic rabbi

André Spire

SOLOMON SPIRA (b. Ribatic, Poland, 1832; d. 1893). From 1857 to 1882 he was rabbi at Strizev, Poland, and in 1882 became rabbi of Munkács. His teachings influenced large Jewish masses in Northeastern Hungary. He was followed in the rabbinate of Munkács by his son,

ZEBI HIRSCH SPIRA (d. 1913), an ardent opponent of every form of modernism or assimilation. His adherents flocked to him from every part of Hungary and Galicia. He was the author of *Dareche Teshubah* (commentary on the *Yoreh Deah*); *Beer Lachai Roi* (commentaries on the *Zohar*); *Zebi Tifereth;* and of other works.

HAYIM LÁZÁR SPIRA (b. Strizev, Poland, 1868; d. Munkács, Czechoslovakia, 1937), from 1902 on Rosh Beth Din (head of the rabbinical college), from 1913 on chief rabbi of Munkács, inherited all the splendor bestowed upon the office by his predecessors. He was said to have been consulted by the emperor Francis Joseph himself. His adherents worshipped him like a prince and he wielded great influence in the rabbinical elections in Upper Hungary. The influence of Hayim Lázár and of his father and grandfather is greatly responsible for the firm attitude of Hungarian Orthodoxy. It is the only example of a large indigenous group of Jews adhering to pre-emancipation standards in a country which offered them every opportunity in civic life. Hayim Lázár Spira combatted not only Zionism, but the Agudath Israel movement itself, which he considered to be a departure from true Jewish tradition. He also waged spiritual war against the Zaddik of Belz, and made use of the weapon of anathema. He died without leaving a male heir and the rabbinate was transferred to his son-in-law, Baruch Rabinowitz.

His published works include: *Minhath Eleazar,* responsa (3 volumes); *Oth Hayyim Veshalom; Hamishah Maamaroth; Zichron Tzaddikim; Olath Tamid.*

SPIRE, ANDRÉ (Henri-Paul-André), poet and essayist, b. Nancy, France, 1868. He studied at the Lycée of Nancy and at the Collège de Toul, later at the Universities of Nancy and Paris and at the École des Sciences Politiques.

From 1887 to 1888 he was a member of the French cavalry, and from 1891 to 1899 a second lieutenant in the artillery reserve. Spire entered the Conseil d'État in 1894. The following year he was made a Doctor of Laws, and was affiliated at various times with the ministries of labor and agriculture in France.

Born into the home of an important shoe manufacturer, Spire found his adoption of a literary career the outgrowth of an atavistic, rather than of an environmental, urge. Yet the environment played a part. In a poem, "Aux livres," expressing his gratitude for the joy books have given him, he tells of kissing books with his lips when closing them. Not only an intellectual, but a Jewish background, is disclosed in these lines, for kissing a book is a Jewish ritualistic gesture.

To 20th cent. French literature, Spire's poetry was the first proof that the inherent music of words can suffice, without the rhyme on which French verse had relied. His work was so manifestly poetry that the conservative literary figures to whom he showed it bade him proceed on his own line of development. An almost monosyllabic (or Biblical) simplicity is his vehicle, but it moves obliquely, leading the reader—sometimes with silken cadences and sometimes with electric shocks—into passion or into recondite thought. *La cité présente* (1903); *Et vous riez* (1905) and *Versets* (1908) were his earliest volumes.

The Dreyfus affair was one of the events that opened in Spire the self-knowledge of his Jewish heritage, and this heritage fused with his French literary tradition in both poetry and prose. *Poèmes juifs* (1919) is one of the great statements of Jewish individualism and universality in any language. From his Jewish ancestors he derives his strength and his emotions, he says, and he invokes these qualities, not only as a support, but as a protection against the mundane:

> *Que serais-je sans vous? Venez donc me défendre*
> *Contre la raison sèche de cette terre heureuse.*

Having chosen his way, Spire took it in action as well as in thought. His *Poèmes juifs* was dedicated to Israel Zangwill, Theodor Herzl, Max Nordau, Bernard Lazare and to others who "live, fight, die for the revival of Jewish dignity." The volume had been preceded by a study of Israel Zangwill (1909). Spire was a member of the actions committee of the Jewish Territorial Organization. After the Balfour Declaration (1917), he became a Zionist; in 1919 he was a member of the Zionist delegation to the peace conference in Paris and later he went to Palestine with Chaim Weizmann. After 1932 Spire also collaborated with the World Jewish Congress.

Others of his books related to Jewish life were his *Les Juifs et la Guerre* (1917); *Samael,* a dramatic poem (1921); and *Quelques Juifs* (1923). Among his later volumes of poetry were *Poèmes de Loire* (1929) and *Instants* (1936).

With the fall of France, in 1940, Spire came to the United States (1941). He was still a man of full intellectual and physical vigor (his first child was born in the United States) and he entered on a fresh career of lecturing and teaching. He was on the faculty of the New School of Social Research and of the École Libre des Hautes Études Françaises.

SPIRITS, EVIL, *see* DEMONS.

SPIRITUALITY. Spirituality occupies the highest rank in the hierarchy of religious and ethical values. It subsumes all the great ethical ideals and religious aspirations which mankind has developed in the course of its cultural history. Spirituality is the all-embracing virtue, and is so far distinguished from all the other value words of religion and ethics that if a man lack any one virtue he may still be said to have other virtues, but yet lacking one he can not truly be held spiritual. Spirituality is the ultimate quality of the human soul which the most advanced religions and philosophies postulate as the summum bonum and chief end result of man's life on earth. The words ethical, religious and spiritual are frequently used interchangeably.

The concept spirituality is, on the one hand, quite easily understood; every one knows what a spiritual man is. Scientific analysis, however, discloses a complexity of unexpected problems. We shall first undertake a study of the place of spirituality in the philosophy of religion in general, and then turn our attention to the specific issues which arise out of the concept within Judaism. Spirituality crystallizes the eternal conflict between two moods, that which finds reality solely in the immediately given experience and that which holds real also the non-visible or spiritual world. The dichotomy here is between the secular and the religious; the natural philosopher in common with the sectarian believer will teach and practise the ethical maxims of his society, with the difference, however, that for the former they are valid human values only so far as the experience of society in its historical development has shown such doctrines to be of actual utility to men in their daily lives. In contrast to mechanistic naturalism, and at the other end of the scale, stands the supernaturalism of historical Christianity. In naturalistic philosophy there is only one realm of being, nature, and a concept like spirituality is but a value word within the natural realm; in Christianity, on the contrary, there are two realms of being, the natural and the supernatural or the spiritual. In this conception, spirit is not only not of nature but outside of and essentially antagonistic to nature, and in order to achieve spirituality the natural means of ethical conduct are insufficient without supernatural grace.

Judaism takes an intermediate position between philosophic naturalism and dogmatic supernaturalism. On the one hand, it teaches the doctrine of eternal verities, the perennial validity of justice, mercy and humility as the determinants of human life; on the other hand, far from posing nature and spirit as irreconcilable enemies, Judaism considers the world as an expression of the divine. Morality is an integral factor and part of the very structure of the universe, so that what is ethically right is naturally good. Judaism postulates a God Who so loves man that He created him in such a way so that he may enjoy life on earth by fulfilling His commands; the ethical demands which God has laid on men are for their own good. The world is so made that true happiness can be attained only by leading the high spiritual life. Thus are integrated the naturalistic and the supernaturalistic positions; Judaism agrees with the philosopher in applying the pragmatic test: no maxim of ethics can have validity unless it ultimately proves itself fertile in the enrichment and ennobling of human life. But going beyond arid naturalism, Judaism impresses life with the stamp of sacredness and sanctifies social ideals, proclaiming them spiritual truths, without rooting them out from their natural sources.

The Talmud has no word for spiritual; it was only in reaction to contact with Arabic and other theologies that the terms *ruhani* for spiritual and *gashmi* for material were later created. Spiritual objectives (*heftze shamayim*) are indeed discussed, but significantly the Talmud denotes as spiritual such matters as *tzedakah* (charity), the saving of human life, communal affairs and education (*Sab.* 150a). Spirituality in Judaism is

not a concern for personal salvation so much as it is for righteousness; a man may be a Tzaddik (pious) in his attitude toward God, but if he is not good to God's creatures he is a bad man (*Kid.* 40a). When religion came to the world, earth and heaven embraced (*B.B.* 74a). Spirituality is not an eschatological interest in the future, but an ethical goal for the here and now. It is not merely a negative shrinking from sin, but rather an active and positive force in contemporary life for each generation. When Israel was standing between the Egyptian enemy behind and the treacherous sea before them, God said to Moses: My children are in grave danger and you offer up to Me long prayers! (*Mechilta, Beshallah,* end of section 3, commenting on *Ex.* 14:15). Spirituality in Judaism does not bind God in ecclesiastical vestments but is rather inflamed by the divine fire to warm and enlighten the lives of men.

The first and most obvious aspect which Judaism presents to the non-Jewish world is the multitude of its laws, so much so that it has been dubbed the religion of Law, in contrast to other religions which call themselves religions of the Spirit. This antithesis and the accusation which it implies are essentially untrue. Judaism has never permitted its laws to submerge the spirit. For the traditional Jew, performance of the Mitzvoth (commandments) is but a means to the larger ends of the spirit (cf. *Mak.* 3:16). The great Jewish saints and mystics of history have never felt any contradiction between the ceremonial and the spiritual; they looked upon the former as a stepping stone rather than a stumbling block to the latter.

The law in Judaism did not have the automatic sacramental effectiveness of mere magic; Johanan ben Zakkai made it very clear to his disciples that there was nothing intrinsically impure in a corpse, nor anything intrinsically purifying in the holy water made with the ashes of the red heifer. God, for the pedagogic purpose of teaching men obedience to Him, laid down certain arbitrary requirements for them to follow. The law in Judaism is not opus operatum (*Midrash Num.* 19:4, on *Num.* 19:2b; cf. also *Pesikta Rabbathi* 14; *Tanhuma, Hukkath*). God was so concerned that Israel learn how to live right that He preferred, so to speak, that they should forsake Him rather than the law which teaches men how to come to Him (*Midrash Lam.,* introduction, at the beginning, commenting on *Jer.* 16:11). For the observing Jew the Mitzvoth were a joyous aid rather than a hindrance to spirituality (*Sab.* 33b).

The law was not an end in itself, displacing the spirit, but the way of winning it; rabbinic literature is so unequivocal on this point that misunderstanding should be impossible. A learned man without good deeds is like the person who builds an unstable foundation for his house; the least disturbance will make for catastrophe (*Aboth de Rabbi Nathan* 24). Spirituality is likened to the tools of the good life, without which even the expert craftsman (i.e. the scholar) is helpless (*Aboth de Rabbi Nathan* 22). The man of learning who has no reverence is like the treasurer who has the inner keys but can not enter because he lacks the main key (*Sab.* 31ab). Service is greater than mere learning of the law (*Ber.* 7b); the finest fruit of the law is humility (*Midrash Samuel* to *Aboth* 2:6). Commenting on *I Sam.* 16:7, the Talmud says: The Holy One blessed be He demands the heart (*Sanh.* 106b). The service of the heart is communion with God through prayer (*Taan.* 2a). In prayer one should cast his eyes down, but his heart up (*Yeb.* 105b). Whether one prays a long time or a short time is unimportant; what is important is that his heart be in his prayers (*Tur Orah Hayim* 1). This view of the law can hardly be interpreted as a rigid legalism which crushes the spirit.

Furthermore, one of the most insistent teachings of the Talmud is that in dealing with one's fellow men one should never take full advantage of one's legal rights, but rather act *lifnim mishurath hadin,* beyond the strict letter of the law (*Ber.* 45b; *Keth.* 97a; *B.M.* 24b). Jethro, significantly a non-Jew, gives certain advice to his son-in-law Moses (*Ex.* 18:20); Rab Joseph interprets this advice to refer to helping the needy, visiting the sick, and acting *lifnim mishurath hadin* (*B.M.* 30b; *B.K.* 99b). Johanan held that Jerusalem was destroyed because strict justice only was meted out, rather than acting *lifnim mishurath hadin.* Since prayer is a worthy act, the Lord Himself is looked upon by the rabbis as praying, so to speak; and what is His prayer? that He might deal with His creatures *lifnim mishurath hadin* (*Ber.* 7a). To the rabbis, the Law was an expression of the Spirit, its effective orientation, and not a hardship, much less a curse.

The predominant view in Judaism (for example, Maimonides, *Moreh Nebuchim,* part 3) is that the ceremonial is a pedagogic device for the attainment of the final purpose, which is spirituality. But even those Jewish thinkers (such as Judah Halevi, *Kuzari,* section 3) who reversed the values and held that the ethical life was a preparation for the ceremonial by means of which the devotee might attain a close union with God never for one instant lost sight either of the ethical, which they made the unconditional base of the religious experience, nor of the spiritual, which they retained as the summum bonum. The only difference between their view and the generally accepted view in Judaism is that they rearrange the hierarchy of purposes, changing the order from ceremonial, ethical, spiritual to ethical, ceremonial, spiritual. The end of Judaism is the spiritual life; regardless of differences in means adopted or evaluations made, the good Jew has by definition to be a spiritual man, for no amount of attention to the minutiae of the ritual was ever considered by any Jew as alone sufficient for the perfect Jewish life. The tractate *Menahoth* in the Mishnah concludes with the injunction that man's mind must be oriented toward the Eternal, and that in the sight thereof the ceremonial is insignificant (*Men.* 13:11). While one should fix a time for study (*Aboth* 1:15), one must not make prayer a fixed mechanical task (*Aboth* 2:18); prayer tempers the inner feelings (Joseph Caspi, *Sefer Hamusar,* chap. 11). This shows that Judaism is not externalistic, but stresses inwardness.

Closely connected with the problem of legalism in respect to spirituality is the traditional emphasis in Judaism on learning. It is a book religion not only in the sense that it has canonical writings; this it shares with other faiths. Its whole culture has been intellectual rather than artistic, political or commercial. For while there were important musicians, sculptors, statesmen and financiers among Jews, yet the genius of the group called Israel has prevailingly expressed itself in poetic, philosophic and legal writings. Judaism owes its very existence perhaps to the injunction repeated devoutly twice daily: "Thou shalt teach them diligently unto thy children" (*Deut.* 6:7). However, despite the intellectual emphasis, Judaism recognizes that closeness to God does not depend solely, if it does at all, on either intelligence or learning, as has already been shown. In so far, of course, as the spiritual man is also a wise man, and wisdom does derive in part at least from mental power, it can be rightly said that

intellectual resources are important for the attainment of spirituality. But in a very real sense it is true that the intellectual has not always lived the spiritual life, and that many spiritual men have been lacking in mental subtlety. That intellectual gifts may be powerful aids in the growth of spirituality is not open to doubt; that they are the conditio sine qua non of spirituality, or, conversely, that with them spirituality is assured, are both fallacies. Thus, on the one hand, an empty-headed man can not be a spiritual man (*Aboth* 2:6), but yet, on the other, he only is spiritual in whom godliness takes precedence over learning (*Aboth* 3:11, 12, 22; see also 2:9, which warns against intellectual smugness). In a very profound sense the *Wisdom of Solomon* recognizes that true wisdom is impossible without spirituality: "For into a malicious soul wisdom shall not enter" (1:4).

The most important constituent element in spirituality is humility. Humility, which is a salient virtue in Christianity as well as in Judaism, has been much misunderstood by secular critics. Nietzsche holds that Judaism overturned all moral values by placing humility at the top of the ladder (*Beyond Good and Evil,* chap. 5, and many places); the usual picture of the humble man has been drawn as that of the sniveling, hypocritical, self-seeking bootlicker, and adversaries of the Judeo-Christian civilization have pointed with scorn to the self-immolating practice of humility. The pious Jew or Christian who stands in reverence before his God has been compared unfavorably with the proud and self-assured pagan or with the natural scientist whose god is impersonal nature and before which he stands with the arrogance of the conqueror. What these arguments overlook, however, is that humility is a corollary virtue to the concept of human dignity. Judaism, in expounding humility as a personal ideal, also and at the same time teaches the dignity of every man as a social ideal. The basic program of Judaism, which is the ultimate establishment of justice in society, is founded on the concept of the equal dignity of all men.

Humility never took the aspect of groveling before either God or man; self-respect is imposed on man by the Jewish concept that man was created in the image of God (*Aboth* 3:18, commenting on *Gen.* 9:6). Although all men were made with the matrix of the first man, yet no two men are alike. Men thus differ therein from human manufacture whereby all coins made by the same mold are exactly alike; every man is unique, and must consider himself as well as all other men as discrete purposes of creation (*Sanh.* 37a). This, then, is the Jewish meaning of humility; it is complementary to self-respecting dignity; each man must respect himself and all others because each man is the singular handiwork of God. The rabbis teach respect for all men (*Derech Eretz Zuta* 2), the withholding of judgment of others until one stands in their place (*Aboth* 2:5) and the judging of all men as worthy (*Aboth* 1:6). Hillel taught the doctrine of peace: "Love thy fellow creatures" (*Aboth* 1:12). Emerson understood that humility need be neither mean nor cowardly; in his essay on Friendship he writes: "A new person is to me always a great event. He only is fit for society who is magnanimous. Friendship demands a religious treatment. Reverence is a great part of it. Treat your friend as a spectacle. Of course, if he be a man, he has merits that are not yours, and that you can not honor, if you must needs hold him close to your person. Stand aside. Give those merits room."

In the same sense does the Mishnah say: "Despise not any man, and carp not at any thing; for there is not a man that has not his hour, and there is not a thing that has not its place" (*Aboth* 4:3). In this sense does *Aboth* teach: "Be humble of spirit before all men" (4:12). All nature is uniquely and divinely appointed, and therefore demands our homage.

The practice of humility never obstructed the path of justice; thus, despite the injunction to walk humbly with God (*Micah* 6:8), Abraham undertook to discuss with Him a more just and lenient handling of sinners (*Gen.* 18:23-33), a picture of the patriarch which in nowise conforms to the presumed timorous trepidity of the pious. Instances are numerous of saints standing up to God when they felt injustice perpetrated by the course of natural or social events. The miracle worker Honi's prayers were so bold that they called forth comments from Simeon ben Shetah in Talmudic times (*Taan.* 23a). And to take an instance across the centuries, Levi Isaac of Berdichev, living but 150 years ago, made himself famous for his demands to God as the Father who is responsible for His children's welfare. The Jew felt so close to God that prayer not infrequently took the form of discussion, and pleading became a demand for justice from a just God. Judaism recognized both truths, that man is worthy because he was created in the divine image, and yet that, after all, man is but a helpless and temporary phenomenon in the endlessness of time. Contemplation of the long view will make all men humble; *Sirach* asks: "Why is earth and ashes proud? My son, glorify thy soul in meekness, and give it honor according to the dignity thereof" (*Sirach* 10:9, 28). How can man be significant when even the angels have no merit in the eyes of God? (the Piyut "Enosh Mah Yizkeh," in the Shaharith for the Day of Atonement). And aside from the conscious motives for humility, Judaism recognizes that without humility there can be no spiritual growth; to think of oneself as good is in itself an evil (Zabara, *Sefer Shaashuim,* section 7). And Ephraim Luntshitz (Solomon Ephraim of Lenczyze) sees that true religion can exist only among the humble (*Ammude Shesh,* at the beginning).

Perhaps the most visible phase of spirituality is a self-sacrificing idealism; having chosen a worthy objective for his loyalty, the spiritual man will remain loyal thereto unto death. Judaism teaches that God wants men to live by His Law, and not die (*Lev.* 18:5; *Ezek.* 20:11; *Neh.* 9:29; *Aboth* 6:7); yet society in a given time and place may be so organized that it violates the basic laws of God, and spiritual men will feel it incumbent on themselves to fight for their ideal, even if necessary willingly to lay down their lives for its preservation. This is the philosophical and ethical justification of martyrdom, to lose one's life in order in a profound sense to find it, for living an unworthy life is worse than death. The doing of the right thing regardless of consequences to one's self simply because it is the right thing to do, or, in religious terminology, because God wants you to do it and you love God so much that you obey Him without regard to the effect of such deed on your own fortunes, is the true test of spirituality. This high idealism has marked Jewish thought and life through the ages. Many phrases are current in Jewish literature expressive of this aspect of spirituality. *Lishemah,* "for its own sake," and without regard to whether the doing of it may not result to your own hurt, is a thought frequently found in the Talmud (for example, *Pes.* 50b; *Sanh.* 105b; *Arach.* 16b; *Sotah* 22b; *Hor.* 10b; *Nazir* 23b). Other phrases which speak of self-sacrificing idealism as a practical doctrine in Judaism are *leshem shamayim,*

"for the sake of God" (cf. *Aboth* 2:12), and *'al kiddush Hashem* and *hillul Hashem,* meaning, respectively, "for the sanctification of God's name," and "the profanation of God's name" (cf. *Ber.* 19; *Aboth* 4:4; *Yer. B.M.* 2, 8c). Jews have taken very literally the thought that one must always sanctify God's name and avoid its profanation even if such view involved the loss of one's life; the list of Jewish martyrs is long.

It will be seen that self-sacrifice, if it is to be a true expression of spirituality, has no reference to promised reward in a future life, since the essence of spirituality is unconcern for self. While Judaism believes, in common with other faiths and philosophies, in a life after death, and the hope for immortality has undoubtedly played its part in motivating the supreme sacrifice, yet the supreme reward for doing right is not some external payment either in this world or in the next. Judaism abhors a commercial, quid pro quo ethics, but rather teaches that the reward of one good deed is another good deed, one good act leading to another good act (*Aboth* 4:2), and conversely, that the punishment for evil doing is the further doing of evil. In this respect Judaism agrees with modern psychology or, for that matter, with Aristotle in holding that the exercise of virtue forms virtuous habits and leads to further right conduct (*Nicomachean Ethics,* book 1, chap. 9; book 2, chap. 1). The difference between science and Aristotle on the one hand and Judaism on the other is similar to the difference between Judaism and naturalism already discussed, namely, that while for Judaism, as for philosophy and science, a virtue must prove itself in actual life, yet once such proof has come forth from the facts of living, Judaism considers it an expression of the divine, since morality is an integral factor of the universe, and if a thing is good it is divine. Judaism declares right conduct holy, infusing morality with the spirit of sacredness.

Our final topic is the universality of the Jewish conception of spirituality. While Judaism looks upon itself as a way to find God, nevertheless it does not consider itself the sole means for that quest. All good men, regardless of creed, attain divine grace and share in eternal bliss, according to the prevailing view in Judaism (*Tos. Sanh.* 13:2). The Mishnah assumes that the criterion for blessedness is right conduct, without so much as a thought to the possibility that only Jews were eligible to divine favor; it lists Jews and non-Jews indiscriminately in its naming of persons who for their misconduct were denied such favor (*Sanh.* 10:1-4). The Gemara indicates that while some teachers held otherwise, yet the accepted view was that non-Jew in common with Jew depends for grace on right conduct (*Sanh.* 91b; 105a). Judaism looks upon all men as the children of God, and Jews have always regarded others as equals. Johanan would rise before old non-Jews in recognition of life's difficulties, which they in common with Jews had suffered (*Kid.* 33a). The prevailing view in Judaism holds that spirituality is a quality of the human soul which is not confined to any particular creed or to creed at all. Any man who lives in justice, mercy and humility may be called spiritual, irrespective of his doctrinal opinions, dogmatic beliefs, ritualistic practices, or the lack of any or all of them. The pagan Socrates and the pantheist Spinoza are equally spiritual with the monotheist Jeremiah and the pietist Moses Hayim Luzzatto.

In recapitulation, we shall define the essence and meaning of spirituality. The spiritual man lives by his own insights, nourished in the refectory of the prophets and fired by the explosive contact of his own spirit with the spirit of other men. Fully aware of his social responsibility, he yet rightly feels at peace with the world, and, keenly conscious of the dangers of smugness, he yet rightly feels at peace with himself. His every act is *lishemah,* for the sake of doing the right thing, and with no ulterior motive whatsoever, and his constant care is his own ethical growth in relation to his fellow men. He acts like a man of thought and thinks like a man of action, with the pure and unbending purpose of serving his God in the service of man. The spiritual man will have faith in God (*Hab.* 2:4; *Ber.* 60b), and will practise such personal virtues as humility, holiness, sympathy, patience, steadfastness in hardship and readiness to endure it unselfishly, abstemiousness, self-sacrifice, devotion to truth, inwardness, hope, trust, meditation, reverence and sanctity; he will also practise the social virtues of justice, love, mercy, charity, kindness, unselfishness, understanding of human frailty, and devotion to uprightness. The three ideals of Israel are mercy, modesty and practical aid to fellow men (*Yeb.* 79a).

SPIRO, EDOUARD (Ede), painter, b. Pozsony, Hungary, 1790 (according to other sources, 1805); d. Vienna, 1856. His studies first in Milan (1821-22), and then in Rome (1822-29), were sponsored by Count Apponyi who granted him a scholarship. On leaving Rome he returned to Pozsony, and five years later finally settled in Vienna, where his paintings had already been exhibited in 1834. Spiro was a popular portrait and *genre* painter. Occasionally, he painted histories, the first of which, the sketch of *Magyarország és Erdély Egyesitése,* dates from 1825 and depicts the union between Hungary and Transylvania. The most important one was *Bishop Astricus Accepts the Crown for King Stephen from the Pope,* which he finished in 1839. Others of his well-known paintings are *Hagar; Forge; Spinning Italian Women; The Festival of the Virgin at Genzano.*

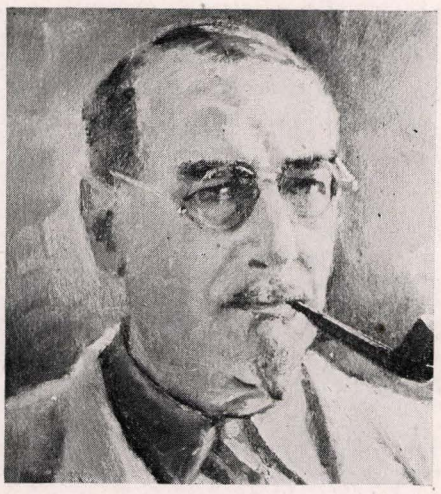
SPIRO, EUGEN, painter and etcher, b. Breslau, Germany, 1874. He was the son of Abraham Beer Spiro, chief cantor of the Storch Synagogue, Breslau (1871-1903), and composer of synagogal music. Spiro was recognized, in his youth, as one of the most talented representatives of impressionism, and attracted widespread attention with the colorful charm and

lively veracity of his work. These qualities were enhanced with the years.

Spiro studied at the academies of Breslau and Munich, in the latter city as graduate student with Franz Stuck. Between his studies in these two cities he went to Italy, for a study of the old masters which later stood him in good stead in his achievement of successful copies. He was the only Jew to have received the Silesia Provincial Scholarship (1895). After beginning his artistic activities in Breslau (1899-1903), Spiro lived in Berlin from 1904 to 1906, and again from 1914 to 1935. He was in Paris from 1906 to 1914 and from 1935 to 1940. The collapse of France in 1940 forced him to flee from Paris, and after a stay in Marseille he arrived in New York in 1941.

From 1908 to 1914 Spiro was professor at the Académie Moderne in Paris, and from 1914 to 1932 at the Berlin Academy of Arts. He also taught privately, and continued his teaching after his arrival in the United States. Beginning with 1896, Spiro's work was shown in various cities throughout the world.

He exhibited in all the German centers, annually in Paris, in the United States (at the Carnegie Institute, Pittsburgh, 1928), in Prague and Brno, Czechoslovakia (1934), at the Exhibition of Jewish Artists in London (1934) and in Amsterdam (1936). His sensitively conceived landscapes, especially those of the Provence and of Spain, his attractively lush still lifes and his interiors were well-received everywhere.



Most important of all were his portraits. Among his subjects were Lord Reading, Baron Edouard de Rothschild, Chief Rabbi Weil of Paris, Chief Rabbi Baeck of Berlin, Bruno Walter, Fritz Busch, Artur Schnabel, Fritz Kreisler, Jascha Heifetz, Gregory Piatigorsky, Richard Strauss and Gerhart Hauptmann (in the Jeu de Paume, Paris). Among his subjects after his arrival in the United States were Benjamin O'Shea, president of Union Carbide; Harvey D. Gibson, banker; Max Schott, president of Climax Molybdenum; and Albert Einstein. While in Berlin, Spiro was president of the Berlin Secession, president of the United Berlin Artists Associations and a member of the Official Purchasing Commission of the German Museums. In Paris he was president of the Free Artists Union.

Among his published works were *Im Konzert,* lithographs of musicians (1920); *Antike Fresken,* facsimiles of old frescoes in Italy; and *Spanische Reise,* travel impressions (1926). Spiro's copies of Manet's *Olympia* and van Gogh's *Asylum Garden Near Arles* were so good that the Piper series of prints were made from them and not from the originals. His work as illustrator was also unusual. More than a hundred of his paintings are in the possession of public and private collections throughout the United States.

MAX OSBORN.

SPITZER, BENJAMIN SOLOMON, sailor and trader, b. Óbuda, Hungary, 1774; d. Vienna, 1820. He was the son of a wealthy Jewish merchant, one of the leaders of the Jewish community of Pest. Spitzer was never studious, so that when his father lost his fortune, the son became a peddler. He left Hungary and lived for some time at Prague and subsequently in Germany. In the late 1790's he became a sailor on a ship departing from Hamburg and he sailed twice around the world. Subsequently Spitzer became captain of a ship at New Orleans, carrying on trade with the north and west coasts of Africa. In this traffic he accumulated several millions and returned to Pest with great ostentation. There, however, he fell into the hands of confidence men who eased him of part of his riches.

He then returned to Morocco as captain of a boat with ten guns, but his good luck deserted him, for he was stranded and wounded in a collision. In 1820 he went to Vienna where he suffered a stroke and died. At his death he was the owner of considerable real estate in the United States.

Eugen Spiro

Lit.: Reich, Ignátz, *Beth El* (1860), part 4; *Magyar Zsidó Lexikon* (1929) 803.

SPITZER, FREDERIC (SAMUEL), art collector, b. Pressburg (Pozsony), Hungary, 1814; d. Paris, 1890. He was the son of a cemetery guard. He enlisted in the Austrian army and in 1848 fought against the Italians. A genuine painting by Albrecht Dürer, which he happened to acquire at a minimal price, enabled him to expand the art collection in which he had engaged at a moderate scale. He went to London, and subsequently to Paris. Next to paintings and other objects of art he also collected weapons. This collection, which came to be outstanding among its kind, was eventually bought by the Vienna Rothschilds. The rest of his collection was bought by Léon Gambetta for the French state at the price of 6,000,000 francs. The Spitzer collection, whose catalogue also had the virtue of rarity and was sold at 1,200 francs, was converted into a French state museum, with Spitzer serving as custodian for life.

SPITZER, HUGO, philosopher, b. Einöde, Carinthia, 1854; d. Graz, Austria, 1937. From 1903 to 1924 he was professor of philosophy at the University of Graz. After Spitzer had been pensioned, he lived in Graz until his death.

In his *Beiträge zur Deszendenztheorie and zur Methodologie der Wissenschaft* (1886) he investigated the relation of the morphological difference and geographical division in certain types. The result of this work found an echo, among others, in the literature of the then ascending race theorists and strengthened those circles who considered geographical location as the decisive factor in the making of the races. His *Untersuchungen zur Theorie und Geschichte der Aesthetik* (2nd ed., 1923) endeavors to clarify the relation of esthetics and philosophy of art.

Lit.: Binder, Emil, "Hugo Spitzer zum 70. Geburtstag," *Archive für Philosophie und Soziologie,* vol. 30 (1926) 181-90.

SPITZER, LEO, philologist, b. Vienna, 1887. He became an instructor of Romance languages at the Universities of Vienna (1913-18) and Bonn (1918-25) and associate professor of Romance and comparative philol-

ogy at the Universities of Marburg (1925-30) and Cologne (1930-33). Ousted from his position by the Nazis, he emigrated to Turkey and from 1933 to 1936 he was professor at the University of Istanbul. In 1936 he went to the United States and became professor at Johns Hopkins University, Baltimore, Md., where he was still teaching in 1943. His writings include *Die Namengebung neuerer Kulturpflanzen* (1912); *Aufsätze zur romanischen Syntax und Stilistik* (1918); *Italienische Umgangssprache* (1922); *Beiträge zur spanischen Syntax* (1925); *Stilstudien* (2 vols., 1928); *Marie de France, Dichterin von Problemmärchen* (1929); *Romanische Stil-und Literaturstudien* (1932). He contributed to European and American scholarly magazines and to the *Universal Jewish Encyclopedia.*

SPITZER, LOTHAR, *see* LOTHAR, RUDOLF.

SPIVACK, JULIUS LEO, surgeon, b. Odessa, 1889. After his graduation from the Imperial Odessa University in 1914, he served as surgeon in the Russian army in the first World War and was decorated four times. In 1922 he came to Chicago and engaged in private practice, at the same time being professor and head of the Cook County Graduate School of Medicine (from 1932) and assistant professor of surgery at the University of Illinois College of Medicine (from 1935). He is principally known for his method of tubovalvular gastrostomy and for his operation for an artificial anus. In addition to numerous articles, he wrote *The Surgical Technic for Abdominal Operations* (1936; Spanish trans., 1937).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939).

SPIVAK, CHARLES DAVID, physician, b. Kremenchug, Russia, 1861; d. Denver, Col., 1927. Forced to leave Russia in his youth, he came to the United States in 1882 and settled in Denver in 1896. He received his medical degree from Jefferson Medical College in 1890. He was chief of the clinic of gastro-intestinal diseases at the Philadelphia Polyclinic (1894-95) and professor of clinical medicine at the Denver School of Medicine (1900-7). He was very active in Jewish health movements, and was secretary and gastroenterologist of the Sanitorium of the Jewish Consumptives' Relief Society (1904-27), of which he was one of the founders.

Spivak was editor of *Medical Libraries* (1898-1902), the *Denver Jewish News* (1915-18), *The Sanitarium* (1907-27), and *Longevity Almanac* (Yiddish, 1921), and served as president of the Colorado Medical Library Association and as librarian of the Denver Academy of Medicine (1905). Spivak served as special commissioner of the Joint Distribution Committee (1920), studying health and sanitation among the Jews of Europe. He was co-author, with Yehoash, of the *Yiddish Dictionary* (New York, 1911), and contributed numerous articles on medicine to the Jewish press and to the *Jewish Encyclopedia,* including a series in the *Jewish Daily Forward* on hygiene and longevity from the Jewish standpoint.

Lit.: *Who's Who in American Medicine* (1925); Hilkowitz, P., "Charles David Spivak, 1861-1927," *American Review of Tuberculosis,* vol. 16, No. 6, Dec., 1927, pp. 763-65; Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939).

SPIVAK, JOHN LOUIS, writer, b. New Haven, Conn., 1897. He was a reporter for the New York *Sun,* the New York *Call,* and other newspapers (1917-22), covering many important labor stories, including the West Virginia coal strike (1919), the national railroad strike, and the Herrin (Ill.) massacre (1922). Subsequently he was a Berlin and Moscow correspondent for the International News Service (1922-23). From 1924 on he devoted himself to free lance writing and the writing of books boldly and factually exposing the maltreatment of workers and Fascist activities in the United States.

Spivak wrote *The Medical Trust Unmasked* (1929); *On the Chain Gang,* on prison labor in Georgia (1932); *America Faces the Barricades* (1935); *Europe and the Terror* (1936); *Secret Armies; the New Technique of Nazi Warfare* (1939), exposing Hitler's undeclared war on the American people and Fifth Column activities in the United States; and *Shrine of the Silver Dollar* (1940), which dealt with Father Charles Coughlin's un-American activities. In *Plotting America's Pogroms—A Documented Exposé of Organized Anti-Semitism in the United States* (1934) Spivak utilized material that previously had appeared as a series of articles in *The New Masses.*

SPIVAK, NISEN (BELZER), cantor, b. 1824; d. 1906. He was considered the most talented of the Eastern European Hazanim of the 19th cent. His apprenticeship was served in the choirs of Zalman Konstantiner, Boruch Karliner, and Yeruchom (Hakoton) Blindman. Although he possessed a harsh voice, his innate musicianship and the masterful direction of his choir obliterated the rasping quality of his voice. His many compositions, still sung in most Orthodox synagogues, while at times exhibiting the influence of trite military tunes, are for the most part in the finest form of old Hazanuth. Their extreme length and repetitiousness may not be to the taste of modern worshippers, yet they are melodious, effective arrangements, and genuinely expressive of the Jewish spirit.

Although Spivak had but meager acquaintance with the rudiments of musical theory, his compositions (predominantly for choir with many solos, duets, and trios) show a remarkable feeling for proper harmony and at times an unerring treatment of the fugue. He served as cantor in Belz, Kishinev, and Berdichev. MAX WOHLBERG.

Lit.: *The History of Hazanuth* (1924); Idelsohn, A. Z., *Jewish Music* (1929); Zaludkowsky, E., *Kulturtrager fun der Yiddisher Liturgie* (1930); *Die Chazonim Velt* (Warsaw), July and Aug., 1934.

SPIZMAN, LEIB (L. SZIN), writer, b. Warsaw, Poland, 1903. He was educated in the Yeshiva at Warsaw and started his literary career in 1919, when he began the publication of *Der Yunger Kemfer,* an organ of the youth group of the Poale (Labor) Zion Party. Subsequently Spizman's literary work was connected, in large part, with Labor Zionist activities. From 1926 to 1933 he was the editor of the Poale Zion youth monthly in Poland, *Unser Freiheit,* and from 1933 until the occupation of Poland in 1939 he was co-editor of *Dos Neie Vort,* a daily. Among his political offices were membership on the central committee of the Poale Zion Party, on the World Zionist Actions Committee and on the office committee of the Central Jewish Culture Organization (Ziko).

His larger published works include: *Emes un Fantasie arum der Yiddisher Kolonizatzie in Russland* (1925); *Borochov un zein Gedanken-Velt* (1928); *Revizionizm Barg Arop* and *Die Yiden in Nazi Poilen* (1942). He also translated several studies of Arab and Jewish problems in Palestine from German and Hebrew into Yiddish. Fleeing from Warsaw in 1939, Spizman settled in Vilna, where he was affiliated with various research undertakings under the auspices of the Yiddish Scientific Institute. In 1940 he came to the United States, where he was living in 1943.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1929) cols. 865-66.

SPLIT (Yugoslavia), *see* SPALATO.

SPORBORG, CONSTANCE AMBERG (Mrs. William Dick Sporborg), communal worker, b. Cincinnati, Ohio, 1879. She graduated from the University

of Cincinnati in 1901 and came to New York, where she married the following year. On her arrival in New York she began to do social work, being first affiliated with several settlement houses.

Subsequently Mrs. Sporborg became identified with the activities of women's clubs and federations. She was president of the New York State Conference of the National Council of Jewish Women from 1918 to 1920, and president of the National Council of Jewish Women from 1926 to 1927. From 1930 to 1932 she was president of the New York State Federation of office. During the Chicago World's Fair (1933) Mrs. Sporborg was chairman of the Woman's Exhibit of the National Council of Women.

During the New York World's Fair (1939-40) she was a member of the Committee on Public Welfare. She also held the chairmanship and other directive posts on various welfare committees connected with women's and general citizens' undertakings. In 1939 she was given an honorary doctorate in Romance Letters by Russell Sage College.

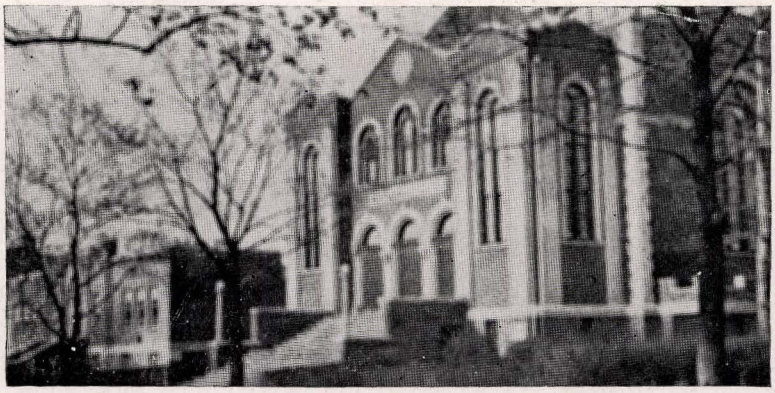
SPRING VALLEY, a city of New York state within the commuting area of New York city, including in its total population of 4,308 (census of 1940) the unusually high number of approximately 1,300 Jewish inhabitants. The Jewish community was founded by immigrants from Eastern Europe, most of whom were itinerant peddlers. Among these early settlers were Emanuel Levy, Julius Selman and Morris Berger. Others, still living in Spring Valley in 1943, were Simon Rackow, Nathan Goldman and Joseph Goldstein. The Orthodox Congregation Sons of Israel was established in 1901. A church was bought and remodeled into a synagogue. In 1943 Joseph Soloveitchik was rabbi of the congregation. A second Orthodox congregation, the Jewish Community Center, was organized about 1923. In 1936 it removed from the original private dwelling which its members had used for services to another, also transformed into a synagogue. Rabbi Jacob Cohen was head of the Jewish Community Center in 1943. The congregations instituted Hebrew schools, and a Yeshiva was opened in Spring Valley in 1942. A third small congregation, Kehilath Israel (Orthodox), built a house of worship, but did not elect a regular rabbi.

Other communal organizations in 1943 were the Circle of Friendship (Gemilas Hesed), a women's organization founded in 1915; the Women's Philanthropic League; the Workmen's Circle; and the Hebrew Citizens League.

Prominent members of the community included Samuel Berg, Harry Herzog, and the brothers Abraham and Robert Finkelstein, who in memory of their father, J. N. Finkelstein, donated the public library to Spring Valley. In 1943 Robert Finkelstein, who had then held the office for eight years, was police justice; Frank J. Schwartz was a trustee of the village board; Pincus Margulies was supervisor of Rockland County in 1943, representing the town of Ramapo.

MORRIS BEKRITSKY.

SPRINGFIELD, capital city of Illinois, including, in 1943, a Jewish population of approximately 1,300 in a total population of 75,503 (census of 1940). Springfield was chartered a city in 1840. By 1855 a sufficient number of Jews resided there to form a congregation. Among the earliest Jewish settlers were Moses Hirschfeldt and the brothers Julius, Louis and Edward Hammerslough, who established the firm of Hammerslough Brothers in 1855. Samuel Rosenwald, an employee, married their sister Augusta, and to them was born at Springfield in 1862 Julius Rosenwald. Julius Hammerslough was a personal friend of Abraham Lincoln, whom he frequently visited at the White House. At Lincoln's death he was appointed a member of the committee sent to accompany the remains of the martyred president to Springfield, and he was delegated to supply the plumes for the funeral procession. As a member of the committee to raise funds for a Lincoln memorial, Hammerslough was charged with interesting citizens of the Jewish faith in the project. In the late 1860's he moved to New York city, where he founded and was first president of the New York Clothiers Association.



Julius Hammerslough was also first president of the congregation in Springfield, which came into existence as early as 1855 and which, reorganized in 1865, ultimately became known as Brith Sholom Congregation. Its first edifice was erected in 1876, and the second one, still housing the congregation in 1943, was built in 1916. Temple Brith Sholom joined the Union of American Hebrew Congregations (Reform) in 1877. Rabbis who served the congregation were M. Schafner (1866), Bernard Deutsch (1866-78), Gustave S. Ensel (who in 1880 published *Ancient Liturgical Music*), Charles Austrian, M. Suggenheim, Isaac Rubinstein, Nathan Michnick, Sigmund Frey, Joseph Leiser (1896-98), Abraham Traugott (who was Worshipful Master of a local Masonic lodge), Abraham J. Messing, Jr. (1907-12), Sidney S. Tedesche (1913-16), I. Mortimer Bloom (1916-18), Edward L. Israel (1918-19), Solomon Landman (1919-22), Mayer Lipman. Abram L. Sachar, at the time an instructor at the University of Illinois, served from 1925 to 1928, when he became director of the University of Illinois Hillel Foundation. Herman E. Snyder succeeded him as rabbi of Temple Brith Sholom in 1928, and was still the incumbent in 1943. Governor Henry Horner of Illinois was a member of the congregation during his incumbency.

In 1866, shortly after the formal founding of the congregation, Emes Lodge No. 67, the first B'nai B'rith lodge to be founded in Illinois outside of Chicago, was chartered in Springfield. The Temple Brith Sholom Sisterhood, in existence in some form from the beginning of the congregation, became affiliated with the National Federation of Temple Sisterhoods in 1914. The Springfield Jewish Center, founded in 1929, dedicated its Temple Center House in 1934, and three years later joined the National Federation of Temple Youth. Rabbi Snyder founded the Illinois Sunday School Teachers Association in 1930. In 1939 he and Rabbi E. Louis Cardon, also of Springfield, together with Rabbis Albert Goldman, of Decatur, Ill., Melvin Sands, of Bloomington, and Harry Pastor, of Peoria, founded the Illinois Rabbinic Association for Illinois exclusive of Chicago.

The Orthodox members of Springfield Jewry who remained outside of Congregation Brith Sholom when the latter became Reform were in time joined by newcomers to the community, and they organized Congregation Bnai Abraham. Bnai Abraham secured its first synagogue in 1892, and established a Hebrew school in the same year.

The congregation engaged its first ordained rabbi in 1927, David Winchester. He was succeeded by David Tamarkin (1928-33). E. Louis Cardon then came to the pulpit, and was still the incumbent in 1943. The synagogue was rebuilt in 1934, and received the addition of a Talmud Torah building in the year 1937. Rabbi Cardon was vice-president of the Rabbinical Association of the Hebrew Theological College, and chairman of the Downstate Orthodox Rabbis.

The earliest philanthropic organization of Springfield was the Ladies Hebrew Benevolent Society of Temple Brith Sholom. In 1941 the Springfield Jewish Federation was formed to serve Springfield and the communities of Taylorville, Petersberg, Pittsfield, Mt. Pulaski, Lincoln, Winchester, Jacksonville, Athens, Pleasant Plains and Beardstown, all of which had cooperated in Jewish undertakings of the Springfield community from its beginning.

The Kodimoh synagogue at Springfield

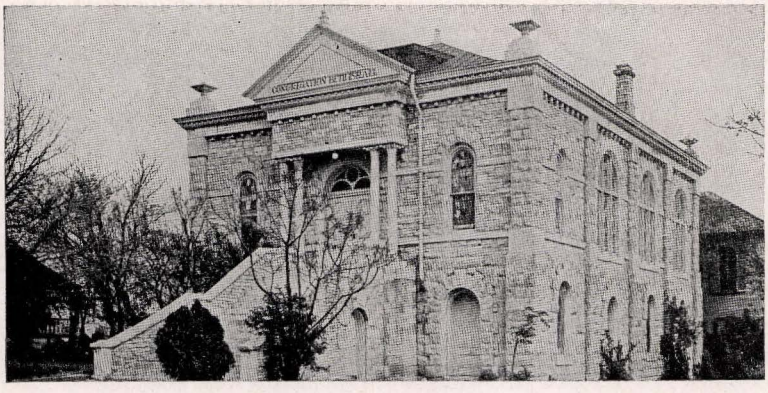
Springfield Jews active in civic affairs included Joseph Hammerslough, Sam A. Barker and Morris Myers, each of whom served as president of the local chamber of commerce. J. D. Myers was president of the Springfield board of education. Michael Eckstein was the first Jew in Illinois elected a member of the executive board of the Illinois Bar Association. He was also a founder and president of the Springfield Community Fund. Jacob Frisch served a term (1916) as member of the state legislature. Rabbi Herman Snyder, founder of the Springfield Open Forum (1929), was the first Jew to be elected president of a ministerial association in Illinois (1942-43). He was state chairman of the United Jewish Appeal for two years. Louis Myers was a prominent Mason.

Rabbi Sidney S. Tedesche was a founder of the Springfield Mid-Day Luncheon Club, an internationally famous organization. Dr. Nathan Rosen was active in professional as well as philanthropic and cultural fields. Other Jewish leaders active in Springfield in 1943 were I. D. Sinaiko, Harry Stern, M. D. Barker, A. H. Lubin, Samuel Schultz, Abe, Joseph and Louis Roberts, J. K. Gingold, Paul Koratsky, M. A. Barker, D. S. Benjamin, Saul Goldman and M. J. Kellner.

Lit.: Snyder, Herman E., *History of Temple Brith Sholom* (1935).

SPRINGFIELD, a city of Massachusetts, with a population of 149,554 (census of 1940), including, in 1943, approximately 10,500 Jews. It is supposed that several Jews from Germany who settled in Springfield in the 1860's and 1870's were absorbed into the surrounding population. The first known Jew in Springfield was Louis Rittenberg, who came from Lithuania in 1881.

Others who followed were Moses J. Aronson, Pincus Cohn, Moses Glickman, Benjamin Bearg, William Gelin, Jacob Ginsberg, Louis Lasker, Harris Kramer, Selig Manila and Max Wiener. Almost all these pioneers and to a large extent those who came afterward were from Lithuania; thus the Jewish population of Springfield came to be composed largely of Lithuanian Jews, with a smaller number from Poland and Galicia, and some few from Germany. The first Jews of the settlement earned their living in various types of small peddling. Later they became more prosperous dealers in junk, storekeepers, and real estate brokers.



In 1888 the Jews of Springfield organized their first religious group, Congregation Beth Israel. The congregants worshipped in a structure on Grays Avenue until they built the synagogue on Chestnut Street. The first rabbi of Beth Israel was Samuel Rappaport, who after twenty-five years with the congregation went to Jerusalem. He was succeeded by Eliezer Silver, president (1929-33, 1939-) of the Union of Orthodox Rabbis of America, who served from 1924 to 1930; Meyer J. Rosenberg (1931-38); and Isaac Yellin (1938-41). In 1943 Rabbi Moses D. Sheinkopf, elected in 1941, was head of Beth Israel, and of three additional Orthodox congregations in the North End section.

The Sons of Jacob congregation was organized in 1890, and had as its first rabbi Abraham Movshovitz. He was followed by Jacob Yudelewitz, Lazarus Gorelick, and Solomon Sigel, who was the incumbent in 1943. The synagogue erected on Congress Street in 1922 was still in use in 1943.

Third of the Orthodox congregations to be formed was Sons of Israel (1894), known as the "Russian Schul," and using the Sephardic ritual. Although housed in a substantial building, the congregation appointed no regular rabbi. The Reverends Joseph Freedman and Samuel Falk served the congregants, and in 1943 the cantor was Shaya Chaitowsky.

In the early 1900's a Hasidic group in Springfield established Congregation Kesser Israel, and elected as their rabbi Solomon Pessin, who served until his death in 1919. No subsequent rabbi was elected.

The Beth El Sunday School was organized in 1912, and in the following year, when Rabbi Samuel Price

The Temple of Congregation Beth Israel at Springfield

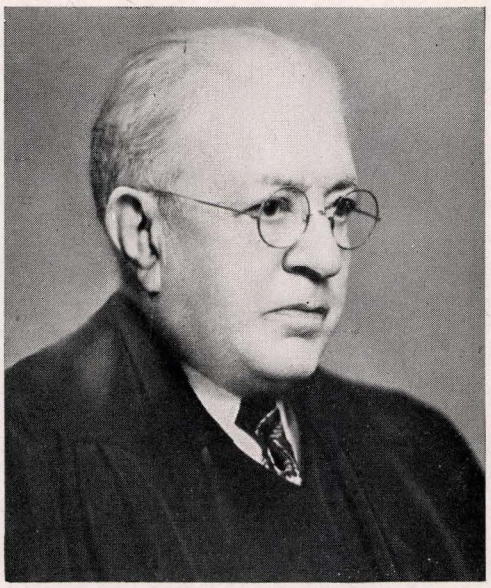
came to settle at Springfield, the Conservative Congregation Beth El was organized, of which Price was chosen leader. The congregation came to occupy a foremost position among the Springfield Jews, and its synagogue, acquired in 1918 on Fort Pleasant Avenue, served as a community center to house various other communal groups. In 1943 Rabbi Sidney E. Nathanson, elected in 1940, was associate to Rabbi Price.

A modern Orthodox group organized the Kodimoh synagogue in 1916, and built a house of worship in 1924. Reuben Magil was the first to function as the synagogue's own rabbi (1931-34). He was succeeded by Isaac Klein, the incumbent in 1943, who, on leave, was serving as an army chaplain.

The Reform Sinai Temple was organized in 1933, and called David M. Eichhorn to its pulpit (1935-37). He was succeeded by Judah Cahn (1937-42). Hershel Levin was the incumbent in 1943. Sinai Temple remodeled a structure on Summer Avenue for its synagogue.

Members of the seven congregations of the Springfield community established for the Jewish education of its youth a number of schools, notably the Beth Israel Hebrew Institute, the Forest Park Hebrew School, and the Y.M.H.A. Biblical School. In 1943 about 40 per cent of the Jewish children of school age in Springfield were receiving a Jewish education.

In addition to the congregations and their auxiliary groups, Springfield Jewry instituted a lodge of the B'nai B'rith (1910), a section of the National Council of Jewish Women (1919), the Daughters of Jacob Free Loan Society (1912), the Home for the Aged (1913), the Workmen's Circle (1920), and a post of the Jewish War Veterans (1929). Zionist groups in 1943 included a district of the Zionist Organization of America (1912) and Senior and Junior Hadassah (1914), as well as a Pioneer Women's Club, the Mizrachi, League for Labor Palestine, Hapoel Hatzair, Jewish National Fund Council and the Jewish National Workers' Alliance. The administration of local charity was begun by the Hebrew Ladies' Relief Society in 1897; this group merged in 1915 into the United Hebrew Charities, whose duties were later assumed by the Jewish Social Service Bureau (1920). The coordinating Jewish Community Council was established in 1935, followed by a community center in 1938. The Jewish Welfare Fund for contributing to national and international causes was established in 1939, and the United Jewish Fund for local causes in 1942.



In 1943 the weekly *Springfield Jewish Review* (1902), with Alexander Brin as editor, was being published in Boston by the *Jewish Advocate*.

In Springfield, a city particularly noted for its diversity of industries, Jews were engaged, in 1943, in an estimated seventy different types of economic enterprise, excluding the professions. The numerous members of the legal and medical callings were organized into professional clubs.

Springfield Jews who held public office included Henry Lasker, alderman (1907-13); Charles S. Albert, city councilman (1934-35, 1936-37; council president, 1937-38); and Alfred W. Bettigole, councilman (1940-43). Louis C. Henin was prosecuting attorney of the district court of Springfield (1922-24); Isadore H. Hurowitz was license commissioner (1920-32); Harry M. Ehrlich was a member of the state commission to investigate the judicial system (1935-36) and director of the Federal Works Progress Administration for Western Massachusetts (1936). Prominent in medical circles were James Z. Naurison and Alfred M. Glickman. Asa Cheffetz, artist, was represented in numerous museums throughout the United States. SAMUEL PRICE.

SQUARE CHARACTERS, HEBREW, *see* ALPHABET.

SRAFFA, ANGELO, authority on commercial law, b. Pisa, Italy, 1865. He taught commercial law at the Universities of Macerata, Parma, and Turin. In 1916 he became rector of the Università Bocconi, in Milan, one of Italy's principal institutions for economic studies, and held this post for ten years. From 1924 to 1926 Sraffa was also dean of the law faculty of the University of Milan. He was an active member of the commission for the reform of the Italian code of commercial law, and chief Italian delegate to the conference at The Hague for the unification of bills of exchange laws in 1912.

Joseph Stadtfeld

In 1903 Sraffa founded *Rivista di diritto commerciale,* one of the most authoritative publications in the field of commercial law. He published over a hundred juridical publications, of which the best known are *Il fallimento delle società commerciali* (Florence, 1897); *La liquidazione delle società commerciali* (1899); and *Il mandato commerciale e la commissione* (Milan, 1900; 2nd ed., 1933). He was a member of the Istituto Lombardo di Scienze e di Lettere, of the Royal Italian Academy (dei Lincei), and honorary professor of the University of Milan (1934).

ST. (abbreviation), *see* under SAINT.

ST. THOMAS, *see* VIRGIN ISLANDS.

STADLER, LEWIS JOHN, biologist, b. St. Louis, 1896. Stadler received the Ph.D. degree from the University of Missouri in 1922, and in the same year was appointed assistant professor there. In 1936 he became full professor of field crops, and still held this position in 1943. From 1936 on he served as principal geneticist in the United States Department of Agriculture.

Stadler was a member of the editorial board of *Experimental Biology Monographs and Genetics.* He wrote *Experiments in Field Plot Technic for the Preliminary Determination of Comparative Yield in the Small Grains* (1922).

STADTFELD, JOSEPH, judge, b. New York city, 1861. He was taken to Pittsburgh in his childhood, and educated there. In 1886 he was admitted to the Pennsylvania bar; from then until 1930 he was in the private practice of law. Stadtfeld was appointed to the court of common pleas of Allegheny County in 1930, and to the superior court of Pennsylvania in 1931. In 1932 he was elected to the full ten-year term of the superior court, of which he was the first Jewish member. In November, 1942, he was reelected for a fourth term of ten years. Stadtfelt held various posts in the

law associations of the United States; he was from 1927 to 1929 president of the Allegheny County Bar Association, in 1927 vice-president of the Pennsylvania State Bar Association, and in 1931 a member of the executive council of the American Bar Association. He was noted as a trial and corporation lawyer, and his written opinions added much to the learning of the legal profession. He was a participant in numerous general and Jewish philanthropies and welfare undertakings in Pittsburgh.

STAGE, *see* THEATRE.

STAHL, FRIEDRICH JULIUS (originally Schlesinger), jurist and Protestant leader, b. Munich, 1802; d. Brückenau, Germany, 1861. He embraced Protestantism in 1819, and was professor of Roman and of ecclesiastical law in Munich, Erlangen, Würzburg and Berlin. In Berlin, he became a member of the first legislative chamber of Prussia, joining the extreme rightist party; he also became a member of the Prussian Church Synod. Stahl was instrumental in the creation of the Prussian Herrenhaus (Upper House), of which he was appointed member for life.

His great work, *Die Philosophie des Rechts nach geschichtlicher Ansicht,* a historical view of the philosophy of law, appeared in 1829. In this book Stahl denied all rationalistic or speculative doctrines and used the Christian revelation as a basis of law and political science. As leader of the conservative party, he was responsible for the authorship of its platform (the so-called Tivoli program), which was directed against the emancipation of the Jews.

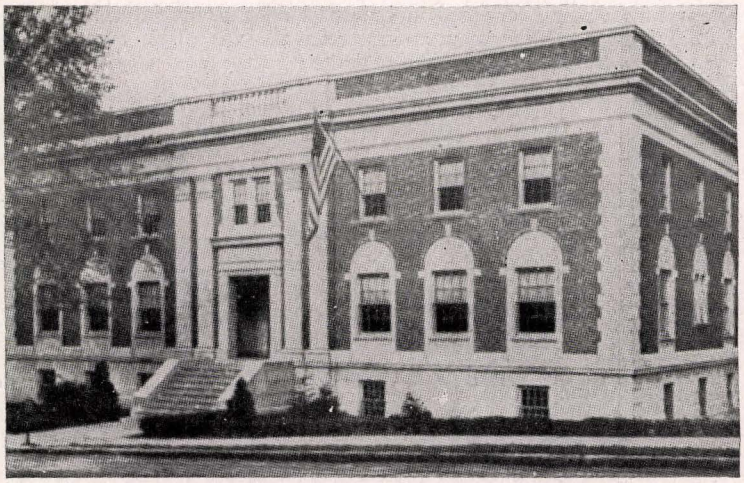
Lit.: Allgemeine Deutsche Biographie, vol. 35, pp. 392-400; Masur, G., *Friedrich Julius Stahl, Geschichte seines Lebens* (1930); Sinzheimer, Hugo, *Jüdische Klassiker der deutschen Rechtswissenschaft* (1938).

STAHL, FRITZ, *see* LILIENTHAL, SIEGFRIED.

STAHL, HEINRICH, communal leader, b. Berlin, 1868; d. Theresienstadt (Terezin), Czechoslovakia, 1942. In 1896 he entered the service of the Victoria Insurance Trust in Berlin and in course of time became one of its leading managers. He was for many years active in the Berlin community and in 1933 he was chosen its president after the Nazis had come to power. He was faced with the depressing task of reorganizing and maintaining Jewish life under the Nazi heel. He helped in the work of forming relief committees and providing for the thousands of refugees that poured into the capital, acting as spokesman for the Jews, providing for cultural work in the community, maintaining its religious institutions despite steadily decreasing funds, and meeting Nazi demands for further restriction and enforced emigration. He refused to emigrate and to leave the community, even though he could have done so, and preferred to endure all the hardships connected with his office. In 1942 he was deported to "organize" the newly erected concentration camp for Jews at Theresienstadt; he died there after a few months.

STALMASTER, IRVIN, judge and industrial relations consultant, b. Odessa, Russia, 1897. He was brought to the United States in 1906. In 1920 Stalmaster received the LL.B. degree from the Creighton University College of Law in Omaha, Neb., and the following year entered the practice of law in Omaha. Stalmaster was a member of the law faculty, as instructor and lecturer, of the University of Omaha from 1928 to 1937. He was judge of the district court in 1928 and assistant attorney general for Nebraska from 1931 to 1934, the youngest person and the first Jew to hold these posts.

In 1937 Stalmaster moved to California, where he engaged in industrial relations work. He was a permanent arbitrator in the waterfront employers-longshoremen negotiations on the West Coast (1939-40)—and impartial chairman in various other trades and industries. Both in Nebraska and California, Stalmaster was affiliated with numerous Jewish and general philanthropies and communal activities. He was the author of *The Jury System* (1931) and of *What Price Jury Trials?* (1939). In 1943 he was president of the Jewish Centers Association of Los Angeles.



STAMFORD, a city of Connecticut within the suburban area of New York city, with a Jewish population in 1943 of approximately 3,500, in a total population of about 61,500 (including the town and city of Stamford). A survey made in 1938 reported that more than two-thirds of the 3,279 Jews then living in Stamford were native-born, with less than half natives of Stamford itself. Of the non-natives, about two-thirds were from Russia and most of the remainder from Poland and Galicia. There were then in Stamford fifty-nine families of mixed marriages.

The first recorded Jew in Stamford was Jacob Fox, whose name appeared in the Register of Electors in 1860. In the following decade other members of the Fox family, and the families Cohen and Bernhard, all probably of German origin, settled in Stamford, becoming prominent in business. The lawyer Samuel H. Cohen was judge of the probate court in 1876. In course of time all save one branch of the Bernhard family left Stamford.

As in many another American town and city, the permanent Jewish community of Stamford had its beginnings in the decade of 1880, with the first mass immigration into the United States of Jews from Eastern Europe. The earliest of these immigrants, Jacob Rosenblum, came in 1880 or 1881. Abraham Cohen, shoemaker, and Joseph Nachemson, tailor, settled in Stamford soon afterward. The first step toward organized communal life was taken in 1889, when twenty-two individuals incorporated Congregation Agudath Sholem. Other communal groups, typical of the emergent stage of Jewish communities in American cities, followed: a cemetery association, and a society for aid to strangers. In this early community, kosher meat was brought in from New York city, and bread from Port Chester, N. Y.

In 1908 the first synagogue building of Congregation Agudath Sholem was dedicated. For the next dozen years the synagogue remained a strong force in Jewish life. The Vaad Hair was formed in 1921. Rabbi Shapiro, who served from 1918 to 1925, was its first permanent rabbi. He was followed by Simon Winograd (1929-32). In 1932 a fire destroyed this historic structure, and two years later the foundation for a new synagogue was laid. The second edifice was of much greater architectural beauty and located in a more attractive section of the town. The first rabbi to occupy the pulpit of the new synagogue was Herschel Shachter, elected in 1941; in 1942 he was granted a leave of absence to serve as chaplain in the armed forces of the United States. The Synagogue Auxiliary, composed of younger married men and women of the congregation, was formed in 1941. From the end of 1942, the congregation was served by a senior student of the Rabbi Isaac Elchanan Yeshiva.

As early as 1911 a break in the traditional Orthodoxy of Stamford Jewry was made when the newly formed section of the National Council of Jewish Women established a separate Sabbath school, with instruction given in English. Finally, in 1920, the Conservative Temple Beth El was organized. The congregants worshipped in the Hebrew Institute in Greyrock Place, until their own structure, in the Strawberry Hill section of the city, was finished and

The Stamford Jewish Center

dedicated (1928). Rabbi Max Arzt was the first incumbent of the pulpit of Temple Beth El (1921-24). He was succeeded by Isadore Newman (1924-25), Leon J. Liebreich (1925-27), Maurice M. Mazure (1927-31), Louis J. Haas (1931-37) and David W. Pearlman, who was the incumbent in 1943. The Sabbath school of the National Council of Jewish Women merged with the Temple's religious school. The congregation also developed a series of adult and youth groups to carry on a city-wide cultural and religious program. The study of Stamford previously mentioned estimated that in 1938 about one-half the Jewish children of grade school age were receiving some kind of formal Jewish education, either at the Center Progressive Hebrew School or at the Temple Beth El religious school.

In 1902 the Lemaan Zion Society was organized and opened the first Hebrew School. Zionist leadership helped build the Hebrew Institute and the Jewish Center. In 1939 a Zionist Council, with David W. Pearlman as president, was organized to coordinate the activities of the seven active Zionist groups: the Hadassah (1924), the Jewish National Workers' Alliance (1928), the district of the Zionist Organization of America (1933), the Jewish Pioneer Women of America (1936), the Junior Hadassah (1937), the Masada (1938), the Business and Professional Group of the Hadassah (1939).

The United Jewish Appeal, a quasi welfare federation fund, became an important unifying agency in community life, increasingly effective in making contributions to the national relief agencies, as well as to a selected list of important national welfare, cultural and religious institutions. Morris Perlman was made chairman of the United Jewish Appeal, and Judge Abraham Wofsey chairman of its administrative committee.

The Hebrew Institute, established in 1916, was replaced by the Stamford Jewish Center, which, in 1930, dedicated its modern structure adjacent to Temple Beth El. The Center became the nexus of Jewish life, promoting an extensive cultural, social, and physical education program, and housing the activities of all Stamford secular Jewish groups. From its inception the Center was an agency of the Community Chest. In 1943 Paul Kulick was its executive director.

Other organizations in Stamford included the charitable Hebrew Ladies' Educational League, the old Gemilas Hesed and Hachnasat Orchim, the lodge of the B'nai B'rith (1910), the Workmen's Circle (1905), the Independent Stamford Lodge (1911), a post of the Jewish War Veterans (1937), and an exclusively Jewish lodge of the Masons, the Roosevelt Lodge (1922).

In course of time Jews of Stamford made important contributions to the economic upbuilding of the town, playing a leading part in the development of its business section. More than half of Stamford's Jews were, in 1943, engaged in trade and commerce. More than ten of the city's major industrial concerns were owned by Jews. About 8 per cent of the Jewish population were engaged as workers in industry. Approximately one-eighth were in the various professions.

Stamford Jews came to participate actively in the civic and cultural life of their city. Albert Phillips was in the Connecticut legislature (1910), and secretary of state (1913). Hyman Newstad served on the city board of apportionment (1910-12). During the first World War Abram Spelke served as food and fuel administrator. He was also a member of the city board of finance (1928-38), and a member of the building committee of the Stamford High School. Max Spelke was prosecuting attorney of Stamford and Darien (1925-27), special assistant to United States Attorney General Homer S. Cummings (1935-40), and judge of the juvenile court (1942-). Abraham Wofsey was prosecuting attorney (1927-28) and judge of the city court (1929-33). David Sloman was chairman of the board of education (1932, 1937-38). Charles Wexler was corporation counsel (1938-40, 1942-). Samuel Gordon was corporation counsel (1936-38). George Wise was town counsel (1940-). George Dimenstein was prosecuting attorney (1939-41). Joseph P. Zone was city treasurer (1931-35) and town treasurer (1935-39), prosecuting attorney (1941-42), and judge of the city court (1942-). Hyman Frankel was a member of the city board of finance (1936-42). Leo Zone was a member of the town board of finance (1924-29). Frank Martin was president of the Chamber of Commerce (1934-36), and president of the board of education (1938-42).

PAUL KULICK.

Lit.: Koenig, Samuel, *An American Jewish Community, The Story of the Jews in Stamford, Connecticut* (Writers Project of the United States Works Progress Administration under the auspices of the Stamford Jewish Center, 1939).

STANCA, STEFAN, physician and publicist, b. Jassy, Roumania, 1865; d. Bucharest, Roumania, 1898. His original family name was Stein. His thesis offered for the M.D. degree, *Mediul social ca factor patologic* (Social Environment as a Pathological Factor; 1895), created a great stir and contributed considerably to the spreading of socialist ideas in Roumania. At the end of 1887 he launched (at Jassy) the weekly newspaper *Lumina* (The Light), dedicated to socialist propaganda among the Jewish working masses, but after a few months the newspaper ceased publication.

In 1890 he published a pamphlet, *Chestia Evreiasca* (The

Jewish Question), urging the Jewish population in strong terms to combat anti-Semitism and fight for emancipation. This pamphlet, which denounced the inertia of the Jews, had a deep influence especially with the Jewish working classes who flocked in great numbers to the socialist party. Stanca died from tuberculosis at the age of thirty-three.

STAND, ADOLF, Zionist leader and Austrian deputy, b. Lemberg, Galicia (then Austria), 1870; d. Vienna, 1919. While still a student in Lemberg he met Herzl when the latter was launching the Zionist movement, and immediately became one of his most zealous followers. For many years he was president of the Zionist organization of Galicia, and editor of the Zionist organ *Woschód* published in Lemberg and of the year book *Rocznik Zydowski.* Stand was elected to the Reichsrat from the district of Brody (1907) for a term of five years, and became a leading member of the Jewish Club of that body as well as a prominent member of the Greater Actions Committee of the Zionist Organization.

In the early months of the first World War he was obliged to flee to Vienna, where he became president of the Zionist organization of Austria and chairman of the National Council of East Galicia, and took an active part in caring for Galician refugees.

STAR OF DAVID, *see* SHIELD OF DAVID.

STAR WORSHIP, *see* ASTRAL WORSHIP.

STARK, EDWARD, cantor, b. 1863; d. 1918. The son of Joseph Stark, Hazan in Hohenems, Ichenhausen, and New York city, Edward Stark became cantor of Temple Emanuel in San Francisco.

His services for Sabbath, New Year and Day of Atonement evidence a thorough knowledge of the traditional melodies and modes as well as sound musicianship. Effective solos, fine melodic turns and rich harmonies abound throughout his works. In the first decades of the 20th cent., when the music of Reform Temples was, with little exception, adapted from the church and from the operatic stage, the Jewish music of Edward Stark was a refreshing voice in the wilderness. With Baum and Grauman, he was among the first in America to compose genuinely Jewish music for the *Union Prayer Book.*

STASSEVITCH, PAUL, violinist, pianist, and teacher, b. Simferopol, Russia, 1894. He was a pupil of Leopold Auer at the St. Petersburg Conservatory. While still a student, he appeared as violinist with the Koussevitzky Orchestra in Moscow. In 1914 he toured the Scandinavian countries, appearing both as violinist and pianist. He came to the United States in 1919, temporarily withdrawing from concert work to study the piano with Josef Lhevinne.

In 1924 Stassevitch returned to the concert stage by appearing with the State Symphony Orchestra in New York and performing concertos for violin and piano. He continued a successful career with both instruments, later combining it with that of conducting. He was in 1943 professor of the violin at the David Mannes School of Music.

STATE. 1. Development of the Jewish State in Ancient Times. There was no state in ancient Israel until the nation was united under the kings, beginning with Saul (11th cent. B.C.E.). Prior to that time the various tribes had led an independent existence, with government that was chiefly local, consisting of the heads of the clans or the elders of the cities. It was only occasionally, in times of danger from enemies, that the tribes united for the purpose of repelling an invasion or overthrowing a foreign yoke. The initiative was taken by judges, who certainly wielded a considerable amount of personal influence, but by no means set up a regular system of government. It was not until the continued menace of the Philistines forced the appointment of a perpetual judge in the person of Saul that any form of general government was established. Saul's rule was uncertain, and it was not until the time of his successor, David, that any definite form of government was established. David maintained a standing army, largely composed of mercenaries, to enforce his rule, and in his days there is the first mention of a definite cabinet of state ministers. Under Solomon the process of consolidation was still further advanced; there were regular taxes, paid either in kind, in money or by forced labor. This form of state remained after the division of the kingdom of Solomon into Israel and Judah, and did not disappear until the loss of independence, first on the part of Israel (722 B.C.E.) and then on the part of Judah (586 B.C.E.).

The head of the Israelite state was the king (*melech*); hence the usual term for state was *malchuth,* "kingdom." The king came to the throne by virtue of his birth; but there were instances in which the choice of a new ruler fell, not upon the eldest son, but upon one of his successors, apparently on the basis of popular approval. The king had certain ministers who carried out his directions: a *sofer,* or "scribe," about equivalent to a chancellor; a *mazkir,* or "recorder," who seems to have been entrusted with the duty of bringing various matters to the royal attention; certain councillors, often spoken of as "friends of the king"; a minister of the palace; tax collectors, under a special chief; and heads of the armed forces. The term *'ebed* (literally, "servant"), so frequently found on the seals excavated in Palestine, may be a title borne by the royal officials. It is uncertain whether the judges in all cases were appointed by the king. In theory the rule of the king was absolute; but in practice there were a good many checks upon his authority. The religious awe that invested the prophets gave the latter a great deal of power in opposing the designs of unscrupulous monarchs; in the case of Joash of Judah, the influence of Jehoiada the chief priest, who had been instrumental in placing him upon the throne, seems to have been paramount. In the kingdom of Israel there were frequent changes of dynasty, and a weak monarch was usually supplanted by a vigorous general or political leader. As in the case of all absolute monarchies, the question of authority must have depended upon the personality of the king; strong kings would be almost absolute, weak kings would depend on the advice and aid of councillors.

After the downfall of the Israelite kingdoms, Palestine was for a time placed under the rule of governors, first of the Babylonian and then of the Persian empires. After the time of Ezra and Nehemiah (5th cent. B.C.E.), however, the Jews were apparently given more autonomy, and the chief authority was given to the high priest, who governed with the aid of a council (*boule* or *synhedrion*) and made necessary regulations for the people. Under the Ptolemies and the Seleucidae there are references to tax-collectors who possessed a great amount of authority in Palestine. The Maccabean revolt and the recovery of national independence (2nd cent. B.C.E.) did not at first change the form of rule; the Hasmonean rulers merely took over the office of high priest as the supreme authority in the land. Thus the coins of John Hyrcanus are issued in the name of himself as high priest and that of the council (*heber*) of the Jews. Aristobulus I (104-103 B.C.E.) was the first of the Hasmoneans to

assume the title of king, but this new title did not change the form of the state. In the next hundred years the power of the king gradually weakened in favor of that of the Synhedrion, so that in the reign of Salome Alexandra (76-68 B.C.E.) Simon ben Shetah, as head of the Synhedrion, was practically supreme. After that Roman authority began to diminish the power of the Jewish rulers, who from that time on are no longer kings but ethnarchs. Herod for a time restored the power of the king; but after his death (4 B.C.E.) the Romans were soon compelled to intervene, and from that time on the Jews were governed either by procurators or by rulers with little power, until their independence came to an end with the destruction of the Second Temple (70 C.E.).

2. Jewish State Law. The legislation about the king in *Deut.* 17:14-20 is the first attempt to impose limitations on the power of the king in Israel. Scholars disagree as to whether this legislation was part of the original Deuteronomic Code of the 7th cent. B.C.E. or a part added at a later period. It provided that the king must be a native, that he must limit his extravagances, and that he must subordinate himself to the Law, that is, be a constitutional monarch. This idea of a theocracy, with God as the actual ruler and the king as His viceroy, appears again and again in Jewish literature. According to the Talmud, the king was answerable to the courts the same as a private individual (*Sanh.* 2:2; 19a).

However, there was no division of powers in this Jewish state constitution. The king was not only the executive, but also closely connected with the legislative functions of the state, and could issue decrees to apply in special circumstances, such as disobedience to the Law or danger to the state. The equality of all persons, whether natives or aliens, under the law is repeatedly stressed in the Bible and in later Jewish literature. All subjects of the state are required to pay certain taxes, often graded according to ability to pay, such as the tithes for the priests and the poor and contributions for the upkeep of the city walls. High treason and rebellion are crimes punishable by death, as are any teachings contradictory to the Torah as the constitution of the country.

It is doubtful if these ideas were literally carried out in the actual administration of the Jewish state. They represent rather the highest ideals of the Jewish people and the height reached by the state government under upright rulers.

3. The Jews and the State Outside of Palestine. The dispersal of the Jews among the various countries of the world led to numerous relationships between the several states and the Jews, ranging from comparative freedom to extreme degradation. Among some of the kingdoms of ancient times, such as the Parthians and their successors the Persians, or the Ptolemies of Egypt, Jewish communities were placed under the rule of their own leaders, called exilarchs, alabarchs, or the like. The Romans, who occasionally passed severely restrictive measures against the Jews of Palestine and neighboring countries after rebellions, were in general lenient toward the Jews elsewhere in their empire. Judaism was a *religio licita,* that is, a religion recognized by the state; the Jews were expressly exempted from the general requirement of worshipping the emperor. This condition changed completely with the triumph of Christianity in the 4th cent.; from that time on until their emancipation in the 19th cent. Jews were always treated by the state as an inferior class, subject to special taxes and hemmed in by various prohibitions.

Up to the beginning of the Crusades (end of the 11th cent.) the Jews were under the same rule as were the non-Jews, with the exception of certain discriminations to which they were subject. The attack of the mobs of Crusaders, however, forced the Jews to seek the protection of the rulers, and from that time on they developed into a class which was answerable to the ruler rather than to local authorities, the "serfs of the imperial chamber." This relationship, at first a protection to the Jews, eventually became the source of their greatest degradation. For in course of time the principle became established that the Jews were to be regarded as having no rights unless these were especially accorded by the state. They were frequently expelled from various countries or localities, burdened with special taxes, and forbidden to own land or to engage in various occupations; their property might be confiscated by the rulers on their decease. Even in the countries which were more liberal toward the Jews their status was regulated by charters granted by the rulers, and these were always considered as privileges rather than as rights.

The attitude of the state toward the Jews gradually grew milder in the modern period, particularly after the rise of the warring Christian sects after the Reformation had fostered the idea of religious toleration. The Jewish disabilities were gradually set aside, while the states at the same time often passed regulations "to make the Jews useful," to compel them to follow different occupations or to acquire a secular education. The idea of religious and political equality, beginning in the United States in 1776, gradually permeated most of the countries of Europe and did away with much of the special laws directed against the Jews. The anti-Semitic reaction of the latter part of the 19th and the first half of the 20th cent. restored many of the discriminations and once more made the state the official means of oppressing the Jews. In the second World War the treatment of the Jews became a chief point of contention; the Fascist states openly proclaimed their purpose to exterminate or degrade the Jews, the democracies to protect them.

4. The Attitude of the Jews Toward the State. Jewish literature has but little to say about the relation of the Jews toward the state, for the main reason that it was concerned particularly with religious matters. The attitude of the Jews can be seen from the fact that wherever they were treated with a degree of moderation they always preferred to be subjects of the country in which they lived and that they emigrated only under compulsion. Early attempts to set up autonomous Jewish states, such as those of Joseph of Naxos and Mordecai Manuel Noah, met with little response. The general principle in Jewish law is that in civil matters *dina demalchutha dina,* "the state law is the law," that is, it is to be followed if it contradicts Jewish law; although this is only where the state requires it. The assembly at Lydda ruled that in times of religious persecutions Jews might transgress religious law if this transgression did not involve the cardinal sins of murder, idolatry and immorality. Maimonides, in *Hilchoth Melachim,* gives a list of the duties owed to the state; a statement in *Aboth* (3:2) bids Jews pray for the welfare of even the worst state, which is necessary for the regulation of mankind, and every Jewish public service contains a prayer for the welfare of the government.

5. Modern Proposals for a Jewish State in Palestine. In the 19th and 20th centuries proposals were advanced for the creation of a Jewish state in Palestine as a means of solving the problems of the

Jews among the nations. Such proposals have been increasingly discussed by Jews ever since the idea advanced by Theodor Herzl in 1897 of a legally chartered state for the Jewish people in Palestine. Since that time this has been the object of lengthy and embittered discussions among the Jews. The debate turns on the question of whether the Jews are primarily a nation or a religious group. If they are a nation, the creation of a Jewish state would naturally follow; if they are a religious group, a separate state based on religion is contrary to all the modern ideals of religious liberty. The proponents of the Jewish state declare that the Jews are doomed to extinction unless they can obtain a land, a language and a government of their own; their opponents point to the fact that all Jews can not possibly live in Palestine, and that the creation of a Jewish state will expose the Jews to being made aliens in all the countries in which they live. In addition, there are many Jews who favor the resettlement of Palestine by the Jews as a place of refuge or for the rebuilding of a Jewish culture, but are unwilling to go so far as to propose a separate Jewish state there. In general, the sentiment in favor of a Jewish state is strongest in those countries where Jews have been most oppressed, and weakest in those where they enjoy the rights of citizenship.

STATISTICS. Estimates of the number of Jews during various ancient and medieval periods are so speculative that they may be omitted. Later they become more and more accurate, and it may be assumed that for the 19th century a correct picture of the quantitative growth of the Jewish people and their distribution is available. But since the most recent figures are the most dependable, comparison should begin with the present and go backward.

Table 1 shows the number of Jews in all the countries of the world at two specific periods: at the time of the last census in each country, and (approximately) in 1939. The first figure includes a percentage comparison with the total population of the country. The second figure is important because it depicts conditions at the outbreak of the second World War which effected a radical change in Jewish history and in the biological status of the Jewish people.

Jews were residents in 84 countries. Considering subdivisions, like the Ukraine, White Russia, Slovakia and Carpatho-Russia, the total rises to 89. This may not indicate 89 different languages, but it does imply 89 separate cultural spheres and folk customs. The continental division of the Jewish population in 1939 was as follows:

Europe	9,479,200	56.6%
America	5,537,100	33.2%
Asia	1,047,000	6.3%
Africa	627,500	3.7%
Australia	33,000	0.2%
Total	16 723,800	100.0%

In 1939 more than half the Jewish population lived in Europe, exactly one-third in the Americas, and the remaining 10% in the other three continents. In 1880 almost 90% of the Jewish population lived in Europe, and only about 3% in America.

Table 2 offers the continental distribution of Jews at five periods between 1840 and 1939. In 1840 there were some 50,000 Jews, or 1% of the total, in America. Until 1880 growth was slow: in 1880 America contained a little more than a quarter of a million Jews, or 3.3% of the total Jewish population. In 1900 there were 1,200,000 Jews, or 11.2%, on the American continent. Migration was largest just before and just after the first World War, producing a revolution in Jewish population distribution. In 1925 there were 4,660,000 Jews, or about one-third of the total, in America. That year marked a break in the immigration statistics of American countries. Quotas and restrictions were set up. The stream of Jewish immigrants struggling to escape from Europe was thinned, yet in 1939 there was in America exactly one-third of the total Jewish population.

The American settlement grew at the expense of the European. In 1840 more than 87% of the Jews lived in Europe, in 1939 only 56.6%. But the absolute number of Jews in Europe was more than doubled during this period: 3,950,000 in 1840 and 9,479,200 in 1939. In Asia and Africa the percentage diminished within the given period.

During the century between 1840 and 1939 the total Jewish population was almost quadrupled, from 4,500,000 to 16,723,800. This increase was unparalleled in Jewish history. The Jewish population entered a period of crisis, however, at the end of the first World War, when a falling birth rate became manifest in East European as well as in Western countries. A catastrophic drop in the absolute number of Jews was introduced by the events of 1939.

Table 3 shows the average annual increase during specific periods. Between 1840 and 1880 it was 78,000; between 1900 and 1925, more than 169,000. This was the largest rate of increase attained, despite the fact that the period included the first World War and the pogroms and epidemics in Russia, which took more than half a million Jewish lives. Between 1926 and 1939 the annual rate of increase dropped by one-fourth to 127,000. But even the prolific first quarter of the 20th cent. was not proportionately the best. The final section of Table 3, showing the percentage of increase, shows that in the period between 1881 and 1900 the percentage was 1.94%. At the beginning of the second World War it had dropped to 0.85%.

The first three years of the War (1939-42) entirely altered the population figures and continental distribution of the Jews. Between 1,700,000 and 1,800,000 Jews died in Europe during this period: about 800,000 were killed in pogroms and mass murders, about 200,000 died as the result of bombings or the attempts to escape, about 200,000 fell fighting in the Russian, French, Polish, British and United States armies. The number of deaths in Europe exceeded the number of births by

TABLE 1. THE DISTRIBUTION OF THE JEWISH POPULATION BY CONTINENTS AND COUNTRIES ACCORDING TO THE LATEST CENSUS (1942)

A. Europe	*Year of Census*	*Total Population*	*Of Whom Jews Were*		*Estimate at the End of 1939*

(Continued on next page)

* Estimate; no census figures are available.

(a) Russian census figures, unlike the usual figures (according to religion), were given according to ethnic nationality. It is highly probable that about 10 % of the Jews gave their nationality as Russian, Ukrainian, White Russian, and the like. The figures on the Jewish population of the R.S.F.S.R. and the U.S.S.R. are the writer's estimate.

(b) Roumanian statisticians acknowledged that the 1930 census figures were not correct.

(c) The Saar territory, acquired in 1935, is included.

(d) as of 1926.

(e) as of 1926.

(f) according to the census of 1940.

(g) From 1930 to 1939 the Hungarian Jews suffered losses as follows: by conversion, 21,125; by excess of deaths over births, 14,436; by emigration, 5,250—a total of about 40,000.

(h) This figure is given for any community with a Jewish population of less than 0.1 per cent.

500,000, so that the total loss is 1,700,000. The increase in the other four continents may be approximated at 180,000, so that the final deficit remains 1,500,000, and the total number of Jews in 1942 may be approximated at 15,200,000.

Of this number, the American continent held about 5,900,000—200,000 immigrants between 1939 and 1942 and a natural increase of 150,000; this is 40% of the total number of Jews. In Europe, in addition to the 1,700,000 loss, about 200,000 crossed the oceans to other parts of the world, and about 1,000,000 from Poland, the Ukraine, White Russia and Lithuania were evacuated or fled to the Asiatic sections of the Soviet Union. There were therefore, at the close of 1942, about 6,500,000 Jews in Europe, 43% of the total Jewish population; or about one-half of the percentage that lived in Europe in 1840.

According to *Table 2,* about half a million Jews lived in Asia and Africa in 1840; these were all Sephardic or Arabian Jews. In 1939 more than 1,600,000 Jews were on these continents. This was the result not of natural growth of the Sephardic and Arabian populations, but of the immigration of European Jews to Palestine, North Africa, the Asiatic sections of the Soviet Union, Egypt and the French colonies.

Countries which contained more than 100,000 Jews in 1939 were:

	Absolute	Per Cent of the Total Jewish Population
United States	4,900,000	29.3
Poland	3,250,000	19.4
Soviet Russia	3,025,000	18.4
Roumania	850,000	5.1
Palestine	475,000	2.8
Hungary	403,000	2.4
England	390,000	2.3
Czechoslovakia	360,000	2.2
France	300,000	1.8
Argentina	300,000	1.8
Germany	175,000	1.1
French Morocco	175,000	1.1
Canada	170,000	1.0
Lithuania	155,000	0.9
Holland	150,000	0.9
Algeria	130,000	0.7
Total	15,208,000	91.2

Sixteen countries in that year contained more than 100,000 Jews each, and 91% of the total. More than two-thirds of the Jews lived in three countries: the United States, Poland and Soviet Russia. In 1939 the United States occupied first place; in 1900 first place was occupied by Russia, which contained 48.8% of the total Jewish population. In 1900 Germany held fourth

2. Chicago	60,000	300,000	363,000
3. Philadelphia	75,000	275,000	293,000
4. Boston	40,000	80,000	118,000
5. Cleveland	20,000	100,000	90,000
6. Detroit	10,000	50,000	90,000
7. Los Angeles	2,000	45,000	82,000
8. Baltimore	25,000	70,000	73,000
9. Newark	15,000	55,000	73,000
10. Pittsburgh	20,000	60,000	52,000
11. St. Louis	35,000	60,000	51,000
12. San Francisco	17,000	26,000	40,900
13. Milwaukee	7,000	20,000	29,600
14. Kansas City	6,000	12,000	25,250
15. New Haven	5,500	20,000	24,700
16. Paterson	4,000	15,000	24,000
17. Providence	3,500	16,500	23,800
18. Rochester	5,000	10,000	23,400
19. Hartford	2,000	20,000	23,360
20. Cincinnati	15,000	25,000	21,800
21. Buffalo	6,000	20,000	21,800
22. Jersey City	8,000	12,500	21,600
23. Chelsea	1,500	14,800	21,260
24. Minneapolis	6,000	15,000	20,700
Total	868,500	2,971,800	3,391,450

place numerically; in 1939 it ranked eleventh. In 1942 Germany, with a residue of 50,000 or 60,000 Jews, would not even be included. Austria-Hungary, which was in second place in 1900, disappeared entirely as an empire. Hungary occupied sixth place, and Austria had only 60,000 Jews in 1939; in 1942 there were not more than 15,000 Jews in the latter country.

In comparison with the 2,000,000,000 total of the populations among whom the Jews are distributed, they constitute only 0.8%. The highest comparative percentage is attained on the American continent: 2.1%. In Europe it is 1.8%; in the heavily populated Asiatic continent, 0.05%.

The countries or territories in which Jews make up more than 3% of the total population are:

Palestine	31.0	Yemen	5.0
Carpatho-Russia	14.1	Latvia	4.8
Tangier	11.7	Ukraine	4.8
Poland	9.8	Gibraltar	4.7
Aden	8.8	Roumania	4.2
Lithuania	7.6	Slovakia	4.1
White Russia	7.2	United States	3.8
Rhodes	7.1	Libya	3.5
Hungary	5.1		

In only 17 of the 89 countries do Jews make up more than 3% of the population. The percentage fell markedly in territories like White Russia, the Ukraine and Lithuania, where Jews constituted more than 10% of the population at the beginning of the 20th cent.

At the beginning of the 19th cent. Jews lived in not more than thirty countries. At the beginning of the 20th cent. they were distributed among 50 countries and territories, and in 1939 in 89. Between 1939 and 1942 numerous changes occurred. Territorial divisions throughout Europe were wiped out and the Jewish population was so dispersed that a return to the status of 1939 is impossible. In the formerly heavily populated regions of Poland, Lithuania, White Russia, Carpatho-Russia, Roumania and Slovakia, where the high percentage of Jews in the general population was an important incentive to the retention of traditional forms of life, the percentage will fall sharply.

Parallel to the distribution over all the continents, a concentration of population in the cities took place. Urbanization and compactness are the most striking signs of Jewish development in the past century. The

Jews moved in mass into the large cities and at the same time settled in compact groups in small cities. In the first half of the 19th cent. about one-third of the Jews lived in villages. At the beginning of the 19th cent. there were in the world only two communities of more than 10,000 Jews each: Amsterdam and Constantinople. London, Paris, Berlin, Vienna and other world capitals had small Jewish communities. At the outbreak of the second World War almost 6,000,000 Jews, or 35% of the total Jewish population, lived in communities with more than 100,000 Jews.

	City	Country	Number of Jews	Per Cent of City's Population

	Total		5,935,000	

In Europe the percentage of the general population resident in cities of more than 100,000 was 21.1%, in America 21.7%, in each case almost one-half the percentage found among Jews: 35.5%. Only England has more residents in cities of more than 100,000 than Jewish communities of more than 100,000; in England 44% of the population lives in cities of more than 100,000.

Concentration of Jews in cities, especially in large cities, occurred mostly in countries with large immigrant populations, for the Jews here came directly to large cities and had no rural traditions. This was particularly true in the United States.

Table 4 shows the development of 24 Jewish communities in the United States containing more than 20,000 Jews, between 1900 and 1937. In 1900 these 24 communities contained 868,500 Jews; in 1937 the total was 3,391,450, or almost 4 times as many. In comparison with the total Jewish population of the country the percentage fell. In 1900 these 24 cities contained 87% of the Jews in the United States, and in 1937 only 70%.

Table 5 offers data about 25 Jewish communities in Poland at four periods, and serves to illustrate conditions in the country which best nurtured and fostered the spiritual and cultural activities of modern Jewish life. The cities named were all in Congress Poland, which belonged to Russia before the first World War. These were chosen because they represent the trend of development throughout Russia where, before the first World War, more than half of European Jewry and more than 40% of the total Jewish population of the world was concentrated. The number of Jews in these 25 communities increased from more than 146,000 in 1856-57 to more than a million in 1931, or more than 7 times as much. From 1856 to 1897 it quadrupled, and from 1897 to 1931 it almost doubled.

Concentration of Jews in compact communities played an important part in their economic, social, cultural and na-

* For the former Russian cities, the statistics year was 1897; for the former Austrian cities, 1900.

tional life. Until the middle of the 19th cent. they derived their livelihood from the surrounding populations, and were engaged as traders and middlemen. In the century that followed large centers were developed containing Jewish artisans, workers, intellectuals and private officials. In the cities themselves, and in voluntary ghettos within them, a Jewish market for Jewish trade was created. In New York, Chicago, Warsaw, Lodz, Buenos Aires and Rio de Janeiro there were thousands of Jewish storekeepers and artisans who lived entirely off Jewish trade. Professional differentiation and geographical concentration altered the social physiognomy of the Jewish population. It abetted the creation and maintenance of social and cultural institutions, and obstructed the progress of assimilation. Concentration in large cities also compensated, to some extent, for the denationalization produced by distribution through 89 countries and territories. In addition to concentration, the proportion of Jews in relation to the rest of the population is important. There were (1939) a quarter of a million Jews in London, but they comprised only 3% of the city's inhabitants. In Eastern Europe concentration plus a high proportion was conducive to the maintenance of Yiddish schools and to national or cultural autonomy.

The largest cities in Poland provided the richest soil for national Jewish aspirations and at the same time served as the center for Polish efforts to diminish the importance of Jews in the cities.

Table 6 considers the proportion of Jews in 10 cities with a population of more than 100,000. In 1900 Jews comprised 31.1% of the population in these 10 cities; in 1921 a little less, 29.3%; and in 1931 only 26.7%. The percentage of Jews dropped more quickly after Poland achieved independence than before. The highest proportion was in Lublin and Lodz, former Russian cities; the lowest was in Katowice and Posen, former German cities. Periphery cities saw the greatest drop of all—in Vilna the percentage fell from 45.4% in 1897 to 28.2% in 1931. In 1897 Jews had a relative majority in Vilna, because Poles comprised only 40.3% of the population; the rest consisted of Russians, Lithuanians, White Russians and others. But in 1931 the Poles had an absolute majority: 64.6%. This status was achieved by crowding the city with Polish officials, tradesmen and artisans. Traders and artisans from the province of Posen were subsidized for settling in the periphery cities. In 1897 Jews in Lublin constituted more than half of the city's population, or 51.3%, and in 1931 only 34.7%.

The tendency is even more clearly defined in *Table 7*, covering 8 cities with a population of more than 50,000. From a percentage of 44.6% in 1897 or 1900 the proportion dropped to 33.1% in 1921, a decrease of one-quarter. Again the proportion of Jews in the periphery cities dropped the most. Jews constituted two-thirds of the total population of Bialystok in 1897, and in 1931 only 43.0%.

* For the former Russian cities, the statistics year was 1897; for the former Austrian cities, 1900.

The list of cities with Jewish populations of more than 100,000 in 1939 does not contain the names of Berlin and Vienna, which only a decade before had been so significant, not only to the Jewish life of Germany and Austria, but to the countries as a whole and to the Jewish population of the whole world. The Jewish population records of the two communities, which at the beginning of the 19th cent. were the chief centers of enlightenment and emancipation and which, after 1933, became the centers of destruction for the Jewish people, tell the story of the rise of the Jews in Germany and Austria and of the subsequent disaster.

YEAR	BERLIN	VIENNA
1825	4,079	1,000
1850	9,595	2,000
1900	106,000	146,926
1925	172,672	201,513
1933	160,564	178,039
1939	82,788	91,480
1942	30,000	15,000

In 1825 there were only slightly more than 4,000 Jews in Berlin, where they already had the right of residence, and in Vienna only 1,000, specially privileged Jews. Prior to the Revolution of 1848 the increase was slow; afterward it moved rapidly in both countries. At the close of the 19th cent. there were more than 100,000 Jews in Berlin and almost 150,000 in Vienna. Until 1925 the increase continued—Berlin had 172,000 and Vienna passed the 200,000 mark. With 1933, the year which brought the Hitlerian curse, not only Berlin began to lose its Jews, but even Vienna, though more slowly. After 1938 the destruction of the Vienna Jewish community surpassed that of Berlin. By 1942 only shadowy remnants of the one time spiritually and materially wealthy communities were left.

Cultural Spheres. Assimilation was engendered by emancipation, but it was most widespread in countries where the general level of culture was high. In countries with a low general level of culture, assimilation barely touched the peaks of Jewish life, while the masses remained faithful to Jewish tradition. Even in Austria, where Jews had full equal rights and attended government schools, assimilation took serious hold only in those sections of the country where a high-grade German culture was prevalent. It had little success in the sections where Slavic culture was dominant. For this reason the language-spheres of the Jewish population are important.

At the beginning of the 19th cent. almost the whole Jewish people lived in a Slavic-Arabian cultural atmosphere: of 3,500,000 Jews in 1825, about 2,500,000, or more than 70%, lived in the Slavic cultural atmosphere of Eastern Europe. About half a million, or 15%, lived in the Arabian sphere, in Asia and Africa. Another half-million, or 15%, lived in Western Europe, most of them in Germany and Austria. The English cultural sphere, at that time, contained 20,000 in England and 10,000 in the United States.

Table 8 shows the distribution of Jews in 1939, according to linguistic spheres. Even borrowed linguistic spheres, such as the United States from England and South America from Spain, develop indigenous qualities, so that it might almost be said that Jews live in 89 linguistic spheres as well as in 89 territorial divisions. But the table has consolidated the various spheres into a total of fifteen. The Slavic sphere occupies first place, containing more than 6,750,000 Jews, or more than 40%. English ranks second, with 5,600,000, or more than one-third of the total. Roumanian, with 5%, is third. Next is Palestine, with almost 500,000 Jews in the Hebrew linguistic sphere. This is a new manifestation in Jewish history, not because of the possession by the Jews of their own language (which they had before, and still have now in Yiddish), but because for the first time the surrounding linguistic sphere is identical with their own language. Within Palestine there can be no suspicion of an Arabic language sphere. On the contrary, the Arabs who live there must accommodate themselves by learning Hebrew. The table contains also the territorial subdivisions of the two great linguistic spheres —Slavic and English—which surround about three-fourths of the Jewish people. It should not be supposed that the Czech language, for instance, is as

close to Russian or Polish as the English of England is to that of the United States. Between Czech and Russian there is a chasm representing a thousand years of different development.

Sex Classification. The classification by sex is of interest not only biologically, but also economically. Men are the wage-earners. Usually the birth rate of boys is higher than that of girls, but since their mortality is also higher, there is a preponderance of women. The proportion of men to women in various countries is dependent on several factors. In countries of immigration there are more men than women; in countries of emigration the opposite is true. A nation which has endured a war has a scarcity of men. Pogroms are a peculiarly Jewish factor; pogroms usually destroy many more men than women. Countries which have had pogroms usually have more Jewish women than men. In the Ukraine there were, for every 1,000 men,

Year	Jewish Women	Non-Jewish Women
1897	1,051	983
1920	1,213	1,143
1926	1,145	1,054

The proportion of Jewish women was especially high in 1920, because more men than women had been killed in the pogroms of 1917 to 1920. Even in 1926 the proportion was still greater among Jews than among non-Jews. It was high among the latter also, in 1920, because of the losses during the first World War. The end of the second World War will probably see an equally great discrepancy between the male and female Jewish populations in Europe.

In most of the countries with large Jewish settlements from which, since about 1890, there has been a large emigration, the number of Jewish women, in comparison to the men, is larger than among non-Jews, despite the fact that Jewish immigration is frequently by families. In countries of immigration the situation is reversed.

For every 1,000 men there were the following numbers of women in:

Country	Year of Census	Jews	Non-Jews
1. Soviet Russia	1926	1,114	1,069
2. Soviet Ukraine	1926	1,145	1,054
3. Soviet White Russia	1926	1,122	1,036
4. Latvia	1930	1,159	1,144
5. Lithuania	1923	1,087	1,098
6. Poland	1931	1,087	1,067
7. Hungary	1930	1,089	1,042
8. Holland	1930	1,079	1,013
9. European Turkey	1927	1,164	962
10. Asiatic Turkey	1927	1,123	1,089
11. Germany	1933	1,093	1,058
12. Czechoslovakia	1930	1,033	1,063
13. Bulgaria	1934	1,032	990
14. Egypt	1927	1,031	1,009
15. Switzerland	1930	994	1,077
16. Greece	1928	956	1,018
17. Sweden	1920	897	1,023
18. Palestine	1931	982	971
19. Canada	1930	971	940
20. Chile	1920	962	1,012
21. New Zealand	1926	935	959
22. Australia	1933	933	969
23. South Africa	1926	850	957

The first 14 countries are either countries of emigration or territories in which the normal Jewish sex proportion has been established. The last 9 countries are countries of immigration, where there are more men than women. Figures for Germany and Austria are especially interesting. In September, 1939, there were 1,390 Jewish women in Germany to every 1,000 Jewish men. In 1925, when the situation in Germany was still normal, there were only 1,050 women for every 1,000 men. The proportion in 1942 was about 1,500 to 1,000. In Vienna, the only Austrian community where there were substantial remnants of a Jewish population, data cited by the *Jüdisches Nachrichtenblatt* stated that, in 1939, of 7,522 Jews between the ages of eighteen and forty-five, 5,569 were women and 1,953 were men.

Age Classification. The age statistics of a population are significant. The greater the number of middle-aged, the larger the proportion of employables and wage-earners. The greater the number of women between fifteen and forty-five, the more potential fecundity. The more children, the more assured the biological future of a people. Wars and—among Jews—pogroms destroy adult man power. Data about the German pogroms (assisted by Roumanian, Ukrainian, Croatian and Slovakian henchmen) were not yet available in 1943; perhaps the murders affected both sexes indiscriminately. The Ukrainian pogroms of the first World War destroyed as many men as possible of middle age. Respective age groups for the ages twenty to thirty-nine among the Ukrainian Jews were divided as follows:

	Men	Women
1897	40.4	39.1
1920	33.5	38.7

Among women there was almost no change at all, but men dropped by one-sixth. The variation can not be attributed entirely to the War, for among non-Jews it was less. Pogroms were responsible. Emigration also cuts into the middle-aged population, as was evidenced in Germany and Vienna. In Germany, after 1933, further inroads into the small Jewish population were made by the Gestapo, who threw many men into concentration camps, from which they never returned.

The following are the figures, according to age (as cited by the Jüdische Reichsvereinigung):

	1939	1925
Children under 15	7.9	18.9
16 to 24	5.2	14.9
25 to 39	13.0	25.6
40 to 59	41.4	28.3
Over 60	32.5	12.3
	100.0	100.0

The percentage of Jews over sixty was almost tripled. In this group and the age group over forty, when employability is on the wane, almost three-fourths were included. In 1939 there were less than half as many children under fifteen as there had been in 1925.

In Vienna, according to the *Jüdisches Nachrichtenblatt,* there were 43,855 Jews in 1941. Of these, 19,691, or 44.8%, were over sixty, and therefore unemployable. Only 2,412, or 5.5%, were under eighteen; some 7.1%, or 7,522, were between nineteen and forty-five; and 32.6% were between forty-six and fifty-nine. The total percentage of those over forty-six was 77.4; such was the ruination brought by the Nazis to the once thriving Jewish community of Vienna.

The age-structure of a community depends primarily on the birth rate. With a normal birth rate the structure is that of a pyramid. Youth provides the broad base and the pyramid narrows as the age advances. In Germany and Austria, where Jews had a low birth rate, and where the mortality exceeded the birth rate, the pyramid was inverted. The following table depicts the age structure of Prussian Jews in percentages.

Year	Under 14		15 to 60		Over 61	
	Jews	Non-Jews	Jews	Non-Jews	Jews	Non-Jews
1. 1843	36.00	34.90	57.56	59.10	6.44	6.00
2. 1925	16.20	24.40	71.20	66.40	12.60	9.20
3. 1933	15.80	23.00	67.70	65.00	16.50	12.00
4. 1939	7.90	——	59.60	——	32.50	——

In 1843 the age structure among Prussian Jews was better than among non-Jews: the proportion of children under fifteen was higher. The proportion of elderly persons was about equal. But Jews became urbanized and intellectualized. Both factors produce a lowered birth rate. In 1925 the situation was different; the proportion of children had dropped by more than half among Jews and by only one-third among non-Jews. The percentage of elderly persons was multiplied by two and one-half among Jews and only doubled among non-Jews. The trend was therefore general, but faster and more intensive among Jews. In 1939 the proportion of children was about one-fifth of that in 1843, and the percentage of elderly persons five times as great.

As in other aspects, there is a great difference between the respective age structures of the Jewish and non-Jewish populations, not only in Western Europe, but also in the East European countries. In Poland, where the urbanization of the Jews was three and a half times that of the non-Jews, they had a higher percentage engaged in the intellectual professions. And although the percentage of children among the Jews of Poland was nevertheless greater than among the German Jews, it was still smaller in comparison with the non-Jewish populations.

According to the census of 1931, there were the following percentages in Poland:

	Under One Year	Under 9
Jews	1.7%	21.2%
Poles	2.5%	25.1%
Ukrainians and White Russians	2.6%	26.4%

The less urbanized and intellectualized a population is, the more children there are. On the other hand, the lower percentage of children among the Jews means a higher proportion of employable adults. Of every hundred individuals in Poland, the number between the ages of twenty and fifty-nine was:

Jews	52.0
Poles	48.5
Ukrainians and White Russians	48.8

But even in Eastern Europe the birth rate was falling, and began to approach that of Western Europe. The age structure of Polish Jews was:

Age Group	1897-1900	1931
1. Under one year	3.7%	1.7%
2. Age 1 to 9	25.5%	19.5%
3. Age 10 to 19	23.2%	18.2%
4. Age 20 to 39	28.3%	33.8%
5. Age 40 to 59	14.2%	18.2%
6. Over 60	5.1%	8.6%
Total	100.0%	100.0%

The first three groups dropped markedly, indicating a decrease in the birth rate. The other divisions increased. The following table shows how much difference there still was between Eastern and Western European Jewry:

Country or City	Year	Under 14	15 to 59	Over 60
1. Carpatho-Russia	1930	36.6	55.8	7.6
2. Palestine	1931	32.6	59.5	7.9
3. Poland	1931	29.6	61.8	8.6
4. Lithuania	1923	29.4	59.9	10.7
5. Slovakia	1930	23.9	65.1	11.0
6. Johannesburg	1936	23.0	68.9	8.1
7. Hungary	1930	17.6	69.5	12.9
8. Prussia	1933	15.8	68.5	15.7
9. Switzerland	1930	13.7	78.6	7.7
10. Moravia	1930	14.3	70.1	15.6
11. Bohemia	1930	13.7	70.5	16.4

The first and third age columns move in opposite directions. The age group under fourteen decreases steadily, the age group over sixty mounts, except in Johannesburg and Switzerland, which have a large immigrant population. Decrease and increase have a causal relationship: the fewer children, the more old persons. Carpatho-Russia had the highest percentage of children and the lowest percentage of elderly persons. Almost the same proportion existed in Palestine, but in the latter it was more the result of a low mortality rate while in the former it was due to a high birth rate. Comparison between the first two countries on the list and the last two shows that the Jews of Western Europe had about one-third as many children, and twice as many old persons. But even the Polish Jews had twice as many children as the Prussian Jews and half as many old persons.

The natural increase of a population is dependent on (1) the birth rate; (2) the mortality rate. Undeveloped peoples have a high birth rate but also a high mortality rate, so that the balance is not altered. Highly cultured peoples have a low mortality rate, but also such a low birth rate that there is no increase. The best conditions are found when the birth rate is not very high, but the mortality is very low. Then the final balance is advantageous, but cheaply bought.

Until the first World War the situation of the Jews was very advantageous. They had the lowest birth rate in almost all the countries of the world, but they also had the lowest mortality rate. As a result, they had the highest rate of increase, except in a few countries where the birth rate among Jews had dropped so low that the rate of increase fell rapidly. It must be remembered that the rate of mortality can not drop below a certain point; no matter how long one lives, one must finally die. The birth rate, however, can drop without limit: to a two-children level, to a one-child level, to a no-child level. This level was reached by certain sections of the French population and by German and Austrian Jews.

A falling birth rate was a general manifestation; it affected all the civilized populations. At various times and to varying degrees birth control was accepted among all people. Jews, highly urbanized and intellectualized, were in the forefront, but they were followed by the surrounding populations. The following statistics from Germany illustrate the point. For every thousand individuals, there were:

	General population	Jews
	1906-10	1876-80
Live births	31.8	31.6
Deaths	17.6	17.8
Natural increase	14.2	13.8

The two sets of figures are almost identical, but they are dated thirty years earlier for the Jews.

The natural increase for the Jews of Palestine from 1921 to 1935 was the largest known. Its annual average was:

1921 to 1925 ..... 21.2 per 1,000
1926 to 1930 ..... 22.6 per 1,000
1931 to 1935 ..... 21.0 per 1,000

This was twice the natural increase of the Polish Jews, three times that of the Roumanian, four times that of the Czechoslovakian, and twice that of the Jews of the United States. Comparison is impossible with Hungary and Germany, because during the given period there was a decrease and not an increase. The Palestinian figures were higher than the natural increase in European countries, whose annual averages, between 1931 and 1935, were:

1. England	3.0	5. Italy	9.7
2. France	0.7	6. Poland	13.6
3. Germany	5.4	7. Bulgaria	14.0
4. Hungary	6.6		

No miracles went into the making of this natural increase. Three factors contributed to it: (1) the Palestinian Jewish population consists largely of immigrant groups, which are usually made up of persons

TABLE 9. NATURAL INCREASE OF THE PALESTINE POPULATIONS BY RELIGION

Year	*Births*		*Deaths*		*Increase*	
	Jews	*Moslems*	*Jews*	*Moslems*	*Jews*	*Moslems*
1932	5,281	34,505	1,746	18,542	3,535	15,963
1933	6,113	36,018	1,940	17,382	4,173	18,636
1934	7,666	34,487	2,420	19,765	5,246	14,722
1935	9,867	39,918	2,748	17,823	7,119	22,095
1936	11,009	41,543	3,271	15,624	7,738	25,919
1937	10,597	40,261	3,003	20,091	7,594	20,170
1938	10,263	39,050	3,262	15,461	7,001	23,589
1939	9,888	39,383	3,251	14,744	6,637	24,639
1940	10,817	41,423	3,730	21,612	7,087	19,811
1941	9,714	44,009	3,711	19,133	6,003	24,867
			Per 1,000 Population			
1932	29.21	48.56	9.65	36.31	19.56	22.65
1933	29.22	49.78	9.27	24.02	19.95	25.76
1934	30.21	46.56	9.47	26.70	20.74	19.86
1935	30.64	52.54	8.53	23.48	22.11	29.06
1936	29.67	53.13	8.82	19.98	20.85	33.15
1937	26.47	49.82	7.72	24.86	18.75	24.96
1938	26.26	47.25	8.11	18.71	18.15	28.54
1939	23.02	46.42	7.57	17.38	15.45	29.04
1940	23.72	47.42	8.18	24.74	15.54	22.68
1941	20.67	49.22	7.89	21.40	12.78	27.82

in their fecund years; (2) until 1935 or 1936 the majority of the population were East European Jews, with a tradition of fertility; (3) hygienic and sanitary conditions in Palestine were so good that the mortality rate was as low as it had been among the Jews of Western Europe before Hitler, and that was the lowest mortality rate in the world.

Still another factor must be considered. The Jewish population of Palestine included, in addition to Eastern and Western European elements, many Oriental Jews—Sephardim, Yemenites, Kurds and others. These resemble their Oriental neighbors in their prolific reproductiveness. There are informative statistics available about the biological, economic and cultural differences between the Oriental and the European Jews. David Guritz offered some interesting statistics about the relative sizes of families in Jerusalem in 1939. The average for each group was:

1. Ashkenazim 3.56
2. Sephardim 4.72
3. Yemenites 4.73
4. Iraquians 5.33
5. Kurds 5.40

The following percentages of families had six or more children:

1. Ashkenazim 11.25
2. Sephardim 32.91
3. Yemenites 34.64
4. Iraquians 34.71
5. Kurds 45.81

Table 9 provides the material for deductions about the natural increase of the Jewish population of Palestine between 1932 and 1941, although the birth and mortality figures do not give a complete picture, because immigration was an important factor.

Until 1937 the changes in birth rate from year to year were small, and therefore natural, because they occur everywhere and are the result of temporary circumstances. After 1937 the change is rapid; and the increase reaches the tragically low figure of 12.78 per thousand in 1941, only half as much as in 1935. The war certainly had its effect on the 1941 data. The Jewish population of Palestine, so close to the front, refrained from having children. How important conscious control is in birth rate statistics is shown by the fact that nine months after Pearl Harbor there were one-fourth again as many children born in New York city as in the same month of the previous year. In Palestine, fear of the Nazis' reaching the country, and the fact that several thousand young men were already at the front, contributed to the lowered birth rate. The Arab birth rate increased because of an economic boom and an increase in the number of marriages, from 7,942 in 1939 to 10,808 in 1940 and 11,484 in 1941.

Table 9 shows that between 1937 and 1941 the drop in the natural increase among the Jews was due to a drop in the birth rate. The mortality rate remained practically stable, although the average for the 1932 to 1936 period was larger than the average for 1937 to 1941. This decrease in mortality should have produced a larger natural increase. However, the opposite situation was produced by the fact that in the latter period immigration from Germany and other Western European countries exceeded the immigration from other countries.

The percentage of immigrants from Germany in the total Palestinian immigration was:

1919 to 1933 ..... 1.5
1934 ..... 18.6
1935 ..... 13.6
1936 ..... 29.8
1937 ..... 34.2
1938 ..... 52.3
1939 ..... 57.9

Among the Moslems there was an increment in the natural increase during the given period. The birth rate remained stable, but the death rate decreased, largely as a result of the improved hygienic conditions introduced by the Jewish settlers. The cultural level of the Moslem population had not yet reached the point at which birth control is generally practiced; that usually requires a generation or two.

Prussia, with its old Jewish settlement and a falling birth rate, offers a sharp contrast to Palestine, with its new and increasing Jewish settlement.

Table 10 shows the population variation of Jews and in general for more than a century. At the beginning of the record, the figures for the general population and the Jews

were almost the same. The birth coefficient for the Jews was somewhat higher, but the death rate was lower, and the final balance was more favorable. The increase, per 1,000, from 1822 to 1840 was 13.9 for Jews and 10.4 for the general population. Forty years later the increase among Jews was less than among the rest, because the birth rate was falling more rapidly among the Jews. The greatest change occurred at the end of the 19th cent. Between 1896 and 1900 the birth rate for Jews was 20.4 and for others 37.1, almost twice as much. The years covering the first World War may be omitted because they are not characteristic. But between 1931 and 1935 there was a deficit of 8.5 per 1,000 among Jews, and an increase—though only of 3.4 per 1,000—among the others.

Nazism may have influenced the last few years, but even in the period between 1926 and 1930 there was among Jews a deficit of 4.4 per 1,000. The biological disaster of German Jewry, therefore, antedated Hitler, and was introduced by the one-child or no-child marriages. This is further proved by statistics on the Jews of Berlin:

Year	Births	Deaths	Balance
1927-29	3,925	7,734	— 3,809
1930-32	2,864	7,644	— 4,780
1933-35	1,920	7,313	— 5,393
1936-37	1,274	4,835	— 3,561
11 yrs	9,983	27,526	— 17,543

Since Berlin contained about one-third of the total number of Jews in Germany, it may be assumed that between 1927 and 1937 there was a total decrease of about 50,000. The birth figures include all children born of a Jewish mother, regardless of the religion of the father. All-Jewish children were fewer. According to official figures, 618 Jewish children were born in 1934, but according to the Jewish community, only 473, or one-third less, which was just the percentage of mixed marriages. In Vienna, between 1935 and 1937, there was a deficit of 6,927 in the Jewish population. Budapest had almost the same conditions:

Year	Births	Deaths	Balance
1928-32	9,413	15,181	— 5,768
1933-37	8,365	15,305	— 6,940
	17,778	30,486	— 12,708

In ten years there was a total deficit of almost 13,000, caused by a falling birth rate and a rising death rate. Among non-Jews in Budapest the situation was not much better, but there was no deficit. The figures, per 1,000, were:

	Births		Deaths		Balance	
Year	Jews	Non-Jews	Jews	Non-Jews	Jews	Non-Jews
1928-32	9.4	17.0	15.2	15.6	—5.8	+1.4
1933-37	8.8	16.2	16.1	14.0	—7.3	+2.2

A falling birth rate, however, was characteristic of East European Jews as well, although it started there much later and did not make such rapid headway. This was due not only to the mass settlements of Jews and their adherence to traditional forms of life, but also to the fact that emancipation touched these territories later and the economic and social advancement of the Jews was slow. The Jews of Galicia may be considered typical of Eastern Europe. Per 1,000 the statistics were:

Year	Births	Deaths	Increase
1882	46.20	29.40	16.80
1895-1900	40.43	20.81	19.62
1901-2	38.16	19.23	18.93
1904	36.47	18.06	18.41
1907	35.55	16.60	18.95
1910	31.80	15.62	16.18
1930	26.55	12.30	14.25
1937	24.30	12.20	12.10

Births fell by almost one-half, from 46 per 1,000 in 1882 to 24 in 1931. The natural increase did not drop accordingly, because the death rate also fell, with the result that in 1937 there was still an increase of 12 per 1,000, four times that of England and twice that of the United States.

At the beginning of the 20th cent. the increase among Galician Jews was still 18 per 1,000, while among the German Jews it was already hardly 3 per 1,000. Russian Jews also showed a high rate of increase at that time. In 51 cities containing Jewish settlements the rates per 1,000 in 1897-98 were:

Births ..... 39.29 Increase 18.10
Deaths 21.19

But even then there was considerable difference between the Jews who lived in large cities and those who lived in villages. Per 1,000 the figures were:

1897-98	Large Cities	Moderate-Sized Towns	Villages
Births	35.31	40.76	49.26
Deaths	21.92	21.39	21.50
Increase	13.39	19.37	27.76

The increase in the villages was twice as large as that in the large cities, and this was due entirely to the birth rate, because the death rate was virtually the same. Statistics are available for Soviet White Russia, where there are no large cities. Per 1,000 they are (1926):

TABLE 10. NATURAL VARIATION OF POPULATIONS IN PRUSSIA (per 1,000)

Year	*Births*		*Deaths*		*Variation*	
	General Population	*Jews*	*General Population*	*Jews*	*General Population*	*Jews*
1822 to 1840	40.0	35.5	29.6	21.6	+10.4	+13.9
1876 to 1880	38.9	31.7	23.6	17.6	+15.3	+14.1
1886 to 1890	37.3	23.9	24.3	16.1	+13.0	+ 7.8
1896 to 1900	37.1	20.4	21.4	14.3	+15.7	+ 6.1
1901 to 1905	36.3	18.5	20.1	14.1	+16.2	+ 4.4
1906 to 1910	32.5	17.0	17.3	13.7	+15.2	+ 3.3
1911 to 1915	27.1	14.4	17.7	14.8	+ 9.4	− 0.6
1916 to 1920	20.2	9.7	19.2	16.9	+ 3.3	− 7.2
1921 to 1925	24.0	14.0	13.7	12.6	+11.4	+ 1.4
1926 to 1930	18.9	9.9	11.7	14.3	+ 4.5	− 4.4
1931 to 1935	18.0	6.1	11.1	14.6	+ 3.4	− 8.5

Year	Births	Deaths	Increase
1924	30.2	10.8	19.4
1925	30.9	11.5	19.4
1926	29.0	10.1	18.9

The increase for this period is very large. Leningrad (St. Petersburg) presents a different picture per 1,000 of Jewish population:

Year	Births	Deaths	Increase
1901-4	30.0	14.0	16.0
1906-10	25.6	13.6	12.0
1911-15	17.2	10.3	6.9
1916-20	12.8	19.0	— 6.2
1921-24	16.9	15.7	1.2

Such figures are reminiscent of the statistics for Western Europe. The increase here is larger than that of Western Europe but it is much smaller than that of the Russian provinces. The five-year figures are not entirely illuminating, because the trends at the end of each period mingle with those at the beginning. This is particularly true of the death rate, which rose enormously during the first years of the Communist regime. The deaths per 1,000 in Leningrad were:

1913	10.1	1920	28.2
1917	14.4	1921	16.6
1918	22.7	1924	9.4
1919	31.2		

Before the first World War, and after the period of military Communism was over, the mortality was very low, but during the starvation period of military Communism (1919) it was twice and even three times the low figure. Even the first World War did not increase the death rate to that extent.

General Survey. A general survey of births, deaths, and natural increase of the Jewish populations, giving the annual average for the period between 1930 and 1935, offers the following figures:

Country	Births	Deaths	Balance
1. Poland	85,000	40,000	+45,000
2. Soviet Russia	70,000	43,000	+27,000
3. Roumania	16,000	10,000	+ 6,000
4. Czechoslovakia	6,000	5,000	+ 1,000
5. Germany	3,500	9,000	— 5,500
6. Austria	2,000	4,500	— 2,500
7. Hungary	5,000	6,000	— 1,000
8. England	3,500	3,000	+ 500
9. Lithuania	2,000	1,500	+ 500
10. Latvia	1,500	1,000	+ 500
11. France	3,000	1,500	+ 1,500
12. Holland	2,000	1,000	+ 1,000
13. Yugoslavia	1,500	700	+ 800
14. Bulgaria	1,000	500	+ 500
15. Italy	500	500	———
16. Switzerland	200	200	———
17. Scandinavia	500	500	———
18. Belgium	1,000	500	+ 500
19. Other European countries	6,000	5,000	+ 1,000
Total for Europe	210,200	133,400	+76,800
20. United States	90,000	50,000	+40,000
21. Canada	2,500	1,300	+ 1,200
22. Central America	1,000	500	+ 500
23. South America	6,000	2,000	+ 4,000
Total for America	99,500	53,800	+45,700
24. Palestine	7,000	2,000	+ 5,000
25. Other Asiatic countries	10,000	5,000	+ 5,000
Total for Asia	17,000	7,000	+10,000
26. Africa	15,000	10,000	+ 5,000
27. Australia	1,000	500	+ 500
Grand Total	342,700	204,700	138,000

In 1930 to 1935, then, there was an average annual increment of 138,000 Jews. Before the outbreak of the second World War this had already been decreased, because mortality had risen in the German countries and the birth rate had dropped. In the other countries of Europe the increment was decreasing. By 1939 it was certainly no more than from 130,000 to 135,000. In 1942 there was an annual deficit of about 300,000 Jews in Europe. And since, in the rest of the world, at the outbreak of the War, the annual increase was no more than from 60,000 to 65,000, the total deficit in 1942 was about 250,000.

STAUB, HERMANN, jurist, b. Nicolai, Upper Silesia, 1856; d. Berlin, 1904. He was the son of a very poor family and gave lessons to earn the means for attending a classical school and the university. In 1882 he became a lawyer in Berlin, and was soon recognized as among the foremost representatives of his profession. When the new commercial law was instituted in Germany, the government of Prussia entrusted Staub with instructing all the teachers of Prussian commercial high schools who were ordered for this purpose to Berlin. He was a member of the committee to reform the law of stock exchange practices. Staub, who never attended a lecture on commercial law at any university, was acknowledged the greatest authority on that subject. His *Kommentar zum allgemeinen deutschen Handelsgesetzbuch* (1891-93; 12th ed., 1921-32) became an indispensable standard reference work. In 1933, when the Nazis decided to ban Staub's commentary, consternation among serious German jurists was widespread. For Staub created a new kind of commentary, a discussion of every paragraph.

He satisfied the requirements of economic life, of the practical function of lawyers, and of juridical theory. He influenced German jurisdiction. The Supreme Court (the Reichsgericht) expressly adopted Staub's views in many cases, and founded its own definitions upon Staub's suggestions. He also influenced German legislation to a high degree by discussing, in his commentary, the existing law (*de lege lata*) and the possibilities of its perfection (*de lege ferenda*), and many of his proposals were eventually realized. Austrian jurists demanded and obtained a

special edition of Staub's commentary which gained wider currency than any other juridical book printed in German. Staub's *Kommentar zur allgemeinen deutschen Wechselordnung* (1895; 9th ed., 1921) also found great favor.

Staub, who united intuition with logic, a vast knowledge of theories and intimate acquaintance with practice, was on the board of virtually all professional organizations of German lawyers, and he was recognized as their foremost representative in the discussion of professional questions. It was not the least of Staub's virtues that he was able to prevent adoption of the numerus clausus and to defend the independence of the German bar. He was a founder of the *Deutsche Juristenzeitung* which he edited, as spokesman of the lawyers, together with Paul Laband, representative of German professors of law, and M. Stenglein, who spoke for the members of the German bench.

Staub declined every decoration. He was proud of his personal freedom and of his profession, and the jurists of pre-Nazi Germany continued to be proud of him. Staub was also proud of his Jewishness and he scoffed at apostasy. HUGO BIEBER.

STECKLER, ALFRED, judge, b. New York city, 1856; d. New York city, 1929. In 1886 he was elected to the bench of the Fourth District Court in New York city on an independent ticket, defeating a candidate backed by Tammany Hall, the Republican Party and several other organizations. During his incumbency, which lasted until 1893, Steckler repeatedly fought legal abuses, particularly exorbitant litigation fees. Governor Benjamin B. Odell appointed Steckler to the Supreme Court in 1901, to fill a vacancy.

STEFAN, PAUL, writer on music, b. Brünn, 1879. He was educated at the University of Vienna, and he studied theory with Schönberg and Grädener. From 1921 to 1928, he was editor of the leading Austrian music journal, *Anbruch*. For many years he served as music critic on *Die Stunde* in Vienna, and was music correspondent for many major European and American music journals. He also distinguished himself as a teacher at the Max Reinhardt Seminary in Vienna, and as a lecturer over the radio. He was one of the founders of the International Society for Contemporary Music, and vice-president of the Austrian section. For his services to music he was awarded a medal by the Czechoslovak government and was granted an honorary professorship by the president of the Austrian Republic (1932). Because of his bitter anti-Nazi articles in *Die Stunde* he was forced to flee Austria when it was occupied by Nazi Germany.

From 1938 to 1940 Stefan lived in Paris, where he was musical and program advisor for several radio stations. Subsequently he lived in Lisbon, where he broadcast over the government radio, and where he was commissioned by the government to write a book about Portuguese music. In 1941 he came to America.

Stefan wrote biographies of Anton Dvořák (1941), Arturo Toscanini (1936), Gustav Mahler (1913), Franz Schubert (these four were later published in the United States in English translations), Bruno Walter, Max Reinhardt, and Arnold Schönberg. He wrote also a history of Viennese opera, a history of music in Portugal, and critical studies of several operas. Stefan edited new publications of the writings of Wagner and E. T. A. Hoffmann, and translated numerous musical and non-musical volumes into German from Latin, English, French, and Italian. In 1942, together with Franz Werfel, he edited a selection from the letters of Giuseppe Verdi.

STEIGER, *see* MUSIC, SYNAGOGAL.

STEIN, ARTHUR, historian, philologist, and archeologist, b. Vienna, 1871. Stein studied at the University of Vienna from 1892 to 1896. The Austrian Academy of Sciences sent him to Bulgaria (1898) to study the excavations and especially the inscriptions discovered there. From 1899 to 1910 Stein studied inscriptions and other archeological documents in Italy, Greece and Asia Minor. In 1905 he became lecturer in Greek and Roman archeology at the University of Vienna; in 1918 he became associate professor at the German University of Prague. He held the latter chair until the Nazi occupation of Czechoslovakia. Stein then emigrated to France. He contributed greatly to knowledge of the administration of the Roman empire.

Stein published: *Die Protokolle des römischen Senats in ihrer Bedeutung als Geschichtsquelle für Tacitus* (1904); *Die kaiserlichen Verwaltungsbeamten unter Severus Alexander* (1912); *Untersuchungen zur Geschichte der Verwaltung Aegyptens unter römischer Herrschaft* (1915); *Die römische Provinz Thracia* (1920); *Der römische Ritterstand* (1927); *Römische Inschriften in der antiken Literatur* (1931); *Prosopographia Imperii Romani* (2 vols., Berlin, 1933-36); (with C. F. Lehmann-Haupt) *Aphipolis* (1936).

STEIN, ARTHUR, philosopher, b. Zurich, Switzerland, 1888. The son of Ludwig Stein, he studied philosophy at several German universities and was graduated in 1913. In 1920 he became assistant professor in philosophy at the University of Bern (1931) and professor at the Classical School of Burgdorf, Switzerland. Stein revived the *Archiv für Geschichte der Philosophie* (originally founded by his father; it had ceased publication in 1914), and edited it for many years until, after 1933, he was forced by the Nazi government to resign his editorship.

Stein proceeded from a penetrating analysis of the relations between modern philosophical intuitionism and criticism (*Der Begriff des Geistes bei Dilthey,* 1913) but later he became more interested in the relation between philosophy and pedagogics (*Pestalozzi und die Kantische Philosophie,* 1927). He also published a biography of the Swiss poet Gottfried Keller (1919).

STEIN, AUGUST, journalist, b. Kaiserslautern, Bavaria, 1851; d. Berlin, 1920. Stein studied medicine and was assistant to the ophthalmologist Hermann Cohn at Breslau. In 1879 he decided to become a journalist and started as a reporter of parliamentary debates, acquiring in that way a thorough knowledge of German political personalities and party machinery. In 1883 Leopold Sonnemann, owner of the *Frankfurter Zeitung,* placed Stein in charge of the newly founded Berlin office of his newspaper. Stein held this post for thirty-three years and contributed considerably to the growing influence of the *Frankfurter Zeitung.* Bismarck was apprehensive of Stein, whom he called "Sonnemann's ambassador to the court of Berlin."

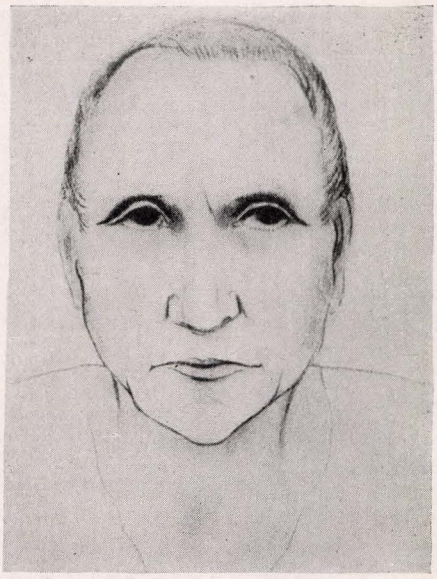
Although Stein belonged to the Democratic opposition, many German princes and ministers considered him an authority on politics and a trustworthy patriot. Bismarck's successors (Caprivi, Hohenlohe, Bülow and Bethmann-Hollweg) took Stein into their confidence. From Bismarck's dismissal to the abdication of Emperor William II, no important initiative on the part of a chancellor of the German empire was taken without preliminary consultation with Stein. His suggestions, however, were not always followed because the government did not dare to defy the emperor or leaders of the army and the nationalists.

Stein often also adjusted differences between government and parliamentary opposition. His position was not infrequently a paradoxical one because he represented a democratic newspaper which was constantly opposed to the government; at the same time he did his utmost to support this government. But no responsible statesman,

political leader or journalist ever disputed Stein's sincerity and his unselfishness.

Stein reached his apogee when he supported Bülow in his conflict with Emperor William II on the occasion of the *Daily Telegraph* affair (1908), and successfully defended William II against attempts by nationalist politicians and members of the general staff to play off the crown prince against his father. Stein constantly endeavored to enlist the government's interest in liberalism and a moderate foreign policy.

Stein often succeeded in frustrating militarist and nationalist attempts to plunge the emperor into war. But he failed in the end because those he advised were not resolute enough to stand by their convictions against military authorities. A selection of Stein's essays was published in 1921 under the title *Irenaeus* (Stein's pseudonym); it was reissued in 1922 under the title *Es was alles ganz anders.*



HUGO BIEBER.

STEIN, FRIEDRICH, jurist, b. Breslau, Germany, 1859; d. Leipzig, Germany, 1923. Stein, whose original name was Goldstein, embraced Protestantism and studied law. In 1882 he was graduated, and in 1887 he became lecturer in penal law at the University of Leipzig, where he was appointed assistant professor (1890) and associate professor (1908). He often was consulted in juridical questions by the government of Saxony. Proceeding from penal law, Stein concentrated upon German civil law, and his work became especially important when a new civil law and a new civil procedure were introduced (1900) in Germany. Stein was one of the first German jurists to teach the practical use of both and demonstrate their connection.

To this end Stein edited and modernized Gaupp's *Kommentar zur Zivilprozessordnung* which again became a standard work and was revised several times. Stein was also interested in general principles of law and psychology of judges and judgment. He published *Das private Wissen des Richters* (1893); *Die Kunst der Rechtsprechung* (1897); *Justiz und Verwaltung* (1912).

STEIN, GERTRUDE, writer, b. Allegheny, Pa., 1874. She studied at Radcliffe College (1893-97) and then at Johns Hopkins Medical School (1897-1902). But a spirit that overflowed set patterns carried her away from the practice of a therapeutic career. Even in the malleable field of writing which she finally chose, the patterns of immediate communicability were avoided by her and she evolved a protoplasmic style.

Outwardly, most of her work (with the exception of the early *Three Lives,* 1908) depends on a repetition of phrase that is intended to resemble the laving of the human mind as it tests and envelops a situation. The method was most successful in Miss Stein's *The Autobiography of Alice B. Toklas* (1933) and *Everybody's Autobiography* (1937). Both these books were virtually autobiographies of Miss Stein herself, and since a human mind is its best autobiographical register, the protoplasm this time was formed into recognizable and fascinating entities. The former volume created consternation among the author's contemporaries. An entire issue of *Transition* (1934-35) was devoted to "Testimony Against Gertrude Stein." Therein Henri Matisse, Eugene and Maria Jolas, André Salmon, Georges Braque and others characterized *The Autobiography of Alice B. Toklas* as a work "without taste and without reality." But that did not affect its popularity. Gertrude Stein was keen, witty, warmly humane and humanly mordant. The relation of human nature to the human mind, which she studied more abstractly and therefore less comprehensibly in *The Geographical History of America* (1936), was well, if unwittingly, brought out in the autobiographical works.

Gertrude Stein, a drawing by Francis Picabia

At the same time, the characteristics that made the rest of Miss Stein's writing, in this style, of lesser value were apparent even in these fulfilled accomplishments. Projected out of her own mind, where the metamorphosis into human nature was imperceptible even to herself, her protoplasmic method was not enough. *Making of Americans* (1925), a novel, brings an impression of crowded unimportance, instead of the vigor of the autobiographies. On the other hand, a peculiar effectiveness of method is shown in *The World is Round* (1939), a book for children, where the music of word composition is charming and simple. That the conservative prose structure remained a method within Miss Stein's power, and that she could use it well, was shown by *Paris France* (1940), a most moving study full of nostalgia without weeping, of the city and the country in which Miss Stein spent her long exile from the United States, and where she acquired the friends and the influence that made her person as much a source of spiritual protoplasm as was her work.

She was credited with having influenced many of the recognized American writers of the period between the two wars, such as Ernest Hemingway. While her personal contacts with them—the result of the decade when exile to France was common and necessary to growth—were probably intellectually fruitful, the derivation in matters of style, like the exile itself, is more likely to have come from a common cause.

Among her several trials at plays, *Four Saints in Three Acts,* with music by Virgil Thomson, was produced in the United States in the early 1930's. It was amusing, but not intelligible. Her other published works included: *Tender Buttons* (1915); *Geography and Plays* (1923); *Ten Portraits* (1930); *Portraits and Prayers* (1934); *Picasso* (1938).

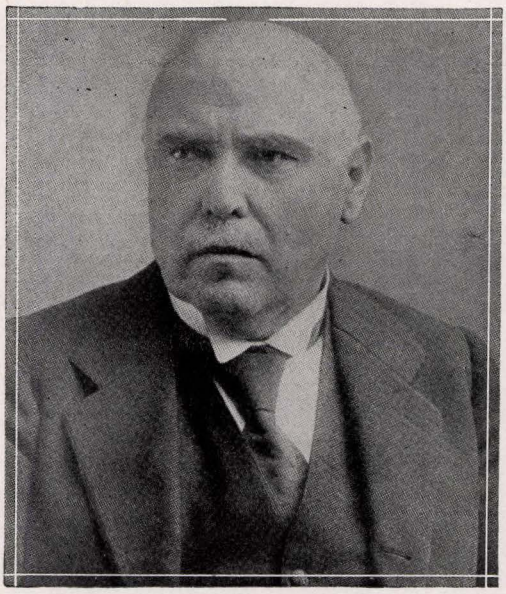
STEIN, HENRI, historian, archivist and paleographer, b. Pierry, France, 1862. After his graduation from university and the publication of his thesis on

Olivier de la Marche (1885), a Burgundian historian, diplomatist and poet, Stein had a brilliant career as an officer of the Archives Nationales at Paris. In 1923 he was charged with delivering lectures for the recording service at the École des Chartes. Up to the beginning of the second World War Stein published numerous books, treatises and inquiries on medieval French history, especially that of Paris and other French cities, and pioneered in systematic inquiry into French public records. He also reformed French scientific bibliography. Stein founded and was president of the Société Française de Bibliographie.

He was editor-in-chief of the *Catalogue général de la Librairie française* and the *Revue des Bibliothèques,* president of the Société de l'Histoire de France, the Société de l'École des Chartes, and the Société d'Histoire de l'Art Français. In 1898 Stein published *Manuel de bibliographie générale,* in 1900 *Bibliographie générale du cartulaire français;* from 1922 to 1940 he edited the annual *Répertoire bibliographique de l'histoire de France.* He published a study on Auguste Pajou (1912) and some minor contributions to the history of French artists.



STEIN, LEONARD JACQUES, communal and Zionist leader, b. London, 1887. He studied at Oxford University, and was made president of the Oxford Union (1910). In 1912 he was called to the bar, but the first World War interrupted his practice, and from 1914 to 1920 Stein served in the British Army, as an officer of the British Expeditionary Force (1914-15 and 1917-18) and as a member of the War Trade Intelligence Department (1915-17). From 1918 to 1920 he served first as a staff captain in the Palestine Military Administration and subsequently on the political staff of the Egyptian Expeditionary Force in Jerusalem and at the General Head Quarters at Cairo.

Stein was a member of the Mandates Committee and of several other committees of the League of Nations Union, and vice-chairman of the London district of the Liberal National Party. An active Zionist writer and lecturer, he was made president of the Anglo-Jewish Association (1939) and honorary legal adviser to the Jewish Agency for Palestine. His writings include: an edition of Oliver Goldsmith's *Vicar of Wakefield* (1912); *Zionism* (1925; new ed., 1932); *Syria* (1926); *Tax Avoidance* (co-author; 1936); *The National Defense Contribution* (co-author; 1937); *The Excess Profits Tax* (1940).

STEIN, LEOPOLD, Reform rabbi, b. Burgpreppach, Bavaria, Germany, 1810; d. Frankfort, Germany, 1882. He was called to Frankfort in 1844. In 1845 he was chairman of the second rabbinical congress. As a result of disputes with the board of the Frankfort Jewish community he resigned as its rabbi in 1862. Later he became manager of an educational institution and preacher at Westend-Union, Frankfort. With S. Süsskind, he published the periodical *Der israelitische Volkslehrer,* and he was also the editor of the year book *Ahava.* Stein was a friend of the German poet Friedrich Rückert, and wrote many poems and dramas.

His works include: *Gebete und Gesänge zum Gebrauch bei der öffentlichen Andacht* (1840); *Haus Ehrlich,* a drama (1863), which was presented in Mannheim; *Der Knabenraub zu Carpentras,* a play (1863); *Sinai, die Worte des ewigen Bundes* (1868); *Die Schrift des Lebens* (3 vols., 1872-1910); *Torat chajim; Das jüdische Religionsgesetz* (1877); *Der geklärte Judenspiegel* (1882). Besides these works, Stein published numerous collections of sermons, of which *Koheleth* was best-known. His *Gebetbuch für israelitische Gemeinden* (2 vols.) was edited by R. Grünfeld and adopted by the community of Augsburg (1917).

Lit.: Kohut, "Leopold Stein. Einiges aus seinem Nachlass," *Allgemeine Zeitung des Judentums,* Sept. 4 and 11, 1903; Ettelson, Harry W., in *Central Conference of American Rabbis Year Book,* vol. 21 (1911) 306-27.

Ludwig Stein

STEIN, LUDWIG (pseudonym, Diplomaticus), philosopher and rabbi, b. Erdö-Benye, Hungary, 1859; d. Salzburg, Austria, 1930. Originally he was rabbi in Berlin, and subsequently he became professor of philosophy in Zurich and Bern and at the Humboldt Academy in Berlin. His philosophical and sociological works are based on a religious and optimistic point of view; they include: *Friedrich Nietzsches Weltanschauung und ihre Gefahren* (1893); *Versuche einer Kulturphilosophie* (1899); *Die soziale Frage im Lichte der Philosophie* (1905; 4th ed., 1923); *Philosophische Strömungen der Gegenwart* (1908; English trans., 1925); *Weltbürgertum, Nationalstaat und internationale Verständigung* (1913); *Gegen Spengler* (1920); *Evolution and Optimism* (1926); *Aus dem Leben eines Optimisten* (1930). Stein published numerous other works on general history of philosophy and Jewish philosophy, and monographs on Jewish philosophers.

Stein was editor of *Archiv für die Geschichte der Philosophie, Archiv für systematische Philosophie, Berner Studien zur Philosophie, Bibliothek der Philosophie,* and of the periodical *Nord und Süd.* During the first World War he and Gustav Stresemann organized the Mittwoch-Gesellschaft, which became an important political center. Stein showed great interest in Palestinian affairs, and was a member of the German Pro-Palestine Committee.

Lit.: *Festgabe zum 70. Geburtstage Ludwig Steins* (1929); Rittenberg, Louis, in *American Hebrew,* Dec. 21, 1923; *Archiv für Philosophie und Soziologie,* division 2, vol. 39 (1931) 153-76.

STEIN, SIR MARC AUREL, archeologist, b. Budapest, 1862. He was educated in his native city and in Dresden, Vienna, Tübingen and England. In 1888 Stein became principal of the Oriental College in Lahore and registrar of Punjab University. During the period that he held these posts—until 1899—he also carried out antiquarian researches in several Indian states. In 1900 and 1901 Stein directed archeological expeditions in Chinese Turkestan for the Indian government.

From then on Stein was almost continuously engaged in special archeological surveys and expeditions, working in Central Asia, West China, Persia (Iran), Iraq and Transjordan. From 1910 to 1929 he was an officer of the Indian Archaeological Survey. He was awarded

numerous medals for his accomplishments, including the Royal Geographical Society's gold medal (1909), the Royal Asiatic Society's gold medal (1932), the Huxley medal of the Royal Anthropological Institute (1934) and the gold medal of the Society of Antiquaries (1935). Stein was given an honorary doctorate by both Oxford and Cambridge, as well as by Punjab University, and was knighted in 1912.

Among his published works were: *Chronicle of Kings of Kashmir,* in three volumes; *Ancient Khotan,* in two volumes; *Ruins of Desert Cathay,* in two volumes; *Serindia,* in five volumes; *Innermost Asia,* in four volumes; *On Alexander's Track to the Indus* (1929); *An Archaeological Tour in Gedrosia* (1931); *Archaeological Reconnaissances in Northwestern India and Southeastern Iran* (1937); *On Old Routes of Western Iran* (1940). In 1943 he was living in India.

Lit.: *Journal of the Royal Asiatic Society* (1919) 49-61.

STEIN, MENACHEM EMANUEL, scholar, b. Turka, Poland, 1891. He concluded his studies in Cracow, Poland, receiving his Ph.D. degree. He received his rabbinical diploma in Berlin. In 1929 he became professor of Jewish history, Jewish philosophy, and Midrash in the Institute of Jewish Sciences in Warsaw. He was active in this Institute up to the outbreak of the second World War; from 1938 to 1939 he was its president. In addition to articles in scholarly periodicals, he published translations in German, Hebrew, and Polish of the works of Philo, and wrote on his philosophy. He published a translation, in Hebrew, of the autobiography of Josephus.

Among his works is a translation of the philosophical writings of Cicero, while another book (1934) was devoted to the relations existing between Jewish and Greek culture, and was published in Polish.

STEIN, NATHAN, judge and communal worker, b. Karlsruhe, Germany, 1859; d. Mannheim, Germany, 1927. After having been appointed (1900) judge of the supreme court of the grand duchy of Baden, Stein became (1914) presiding judge of the provincial court of Mannheim. He was the first Jew in Germany to become president of a court. In 1924 he retired.

Stein was interested in Jewish communal life and in the defense of the civil rights of his coreligionists. When, in 1895, the constitution of the Jews of Baden was reorganized by the creation of synods, he was president of the first general Jewish synod of Baden. He was president of the board of the synagogue of Mannheim, and one of the founders of the union of Israelites of Baden which afterwards merged with the Central-Verein deutscher Staatsbürger jüdischen Glaubens and was called Landesverband Baden des Central-Vereins. For seventeen years Stein was a member of its board.

He was on the board of the Union of German Societies for Jewish Literature and History.

Stein is not to be confused with the Nathan Stein who was a banker at Karlsruhe and held important posts in the Jewish communal life of Baden at the end of the 19th and the beginning of the 20th centuries.

STEIN, PHILIP, judge, b. Prussia, 1844; d. Chicago, 1922. He was elected judge of the superior court of Chicago in 1892, and reelected in 1898. In 1903 he was assigned by the supreme court to the appellate court, and in the following year was made its presiding judge. In 1904 he headed a committee which went before Secretary of State John Hay demanding that the same treatment be given to American Jews in Russia as to other American citizens. Stein was for many years actively engaged in the work of the Anti-Defamation League, and of Jewish charitable organizations.

Lit.: *Publications of the American Jewish Historical Society,* No. 29 (1925) 186.

STEIN, PHILIPP, economist, b. 1870; d. Berlin, 1932. He was graduated from the University of Leipzig, and subsequently lived for many years in Frankfort. Here, in addition to being a member of the city council, Stein was professor of economics at the University of Frankfort. He was also director of the Soziales Museum and of the Institut für Gemeinwohl. In 1915 Stein moved to Berlin, where he became syndic of the general union of German cooperatives and served as a member of the Reichswirtschaftsrat. Among his numerous contributions to the study of economics was his *Die Lage der Arbeiter im Schneider- und Schuhmachergewerbe* (1896).

Lit.: *Werdegang und Schriften der Vereinigung sozialwissenschaftlicher Hochschullehrer* (1929) 266.

STEINACH, EUGEN, physiologist, b. Hohenems, Austria, 1861. He was the son of Simon Steinach (b. Hohenems, 1834; d. Vienna, 1914), a physician. The Steinach family, whose original name was Ullmann until Simon Wolf Steinach (1757-1829) assumed the present name in 1813, played an important part in the communal life of the Jews of Hohenems. Simon Steinach and his father held various posts in the Jewish congregation of their native town.

Eugen Steinach studied medicine at the Universities of Geneva and Vienna (M.D., 1886). Two years before he was graduated, the Academy of Sciences at Vienna published in its *Sitzungsberichte* his study on the circulation of the kidney. From 1886 to 1889 Steinach was an assistant at the Physiologisches Institut of the University of Innsbruck, and in 1890 he became principal assistant of the famous physiologist Ewald Hering, professor at the German University of Prague, where Steinach became lecturer at the same time. In 1895 Steinach became assistant professor and in 1907 full professor at the University of Prague, and in 1918 he was appointed professor at the University of Vienna and director of the Biologisches Institut of the Academy of Sciences at Vienna. He left Austria for Switzerland when the Nazis overran his native country.

Steinach published a great number of studies in scientific periodicals, such as *Pflügers Archiv, Zentralblatt für Physiologie, Wiener Klinische Wochenschrift* and *Akademischer Anzeiger der Akademie der Wissenschaften.* In 1940 he published *Life and Sex,* his first work addressed to a larger public. Although many results of Steinach's inquiries caused great sensation, he himself constantly avoided any kind of publicity.

As a physiologist Steinach proceeded from two points of view, whose consequences influenced each other: on the one hand, Steinach was not satisfied with the mechanistic and chemical interpretation of life, but endeavored to study the organic and psychic relationships of its phenomena. On the other, he proclaimed that "sex is an integrating component of life, without which there cannot be any animal life." From this statement he went on to investigate the origin of sex instinct which, when Steinach began to work, was supposed to be located in and conditioned only by the seminal vesicles. Later on Steinach successfully demonstrated that the sex instinct was active in animals deprived by operation of their seminal vesicles. He intended to devote his lifework to the clarification of the physiological process of development by studying the conditions under which the physical and psychic evolution of the child takes place. In doing so, he obtained, contrary to his expectations, results which concerned mainly aged persons.

His research on physical and psychic sex characteristics led to the discovery of the importance of the sex

glands. During many years Steinach made experiments on rats and frogs in order to study the problems of hormonal reaction and reactivation. It was generally recognized that castration caused a weakening of secondary sex characteristics, such as growth, hair and voice in human beings, plumage and growth of combs in birds, and the clasping muscle of frogs. Steinach succeeded in showing that repeated injections of testicular extracts into castrated frogs restored the development of their secondary sex characteristic, the clasping muscle. His famous experiment on rats demonstrated the complete reversal of sex instinct after he had transplanted an ovary into a castrated male or a testis into a castrated female. Other experiments on rats, repeated later on other animals and on man, convinced Steinach that blocking the tubes leading away from the sex glands in the male resulted in an increase of the hormone secretion in the blood, with consequent reactivation of the hormone. The first transplantation experiment on a rat took place in 1910. The first "Steinach operation" (called vasoligature, when performed on man) with the express clinical intention of effecting a general reactivation was executed by Robert Lichtenstern, a surgeon and urologist, under the direction of Steinach, in 1918. Steinach reported on that operation in his essay "Verjüngung durch experimentelle Neubelebung der alternden Pubertätsdrüse" (in *Pflüger Archiv,* 1920). By repeated experiments of transplantation of sex glands, resulting in masculinization and feminization of various animals, Steinach tried to establish the theory of the dual function, "that is, the procreative and hormotic functions of the whole testicular gland, as well as the separate localization of the two functions in the germ and interstitial cells."

Steinach was among the pioneers who showed that normal development and maintenance of the structures and functions concerned with sex and reproduction depend upon the internal secretions of the sex glands or gonads. He met with great opposition or skepticism; in 1926 the tide turned in his favor. HUGO BIEBER.

STEINBACH, ALEXANDER ALAN, rabbi and author, b. Baltimore, 1894. He received the M.A. degree from Atlantic University, and his rabbinical degree from the Hebrew Union College (1930). His first rabbinical post was in Bluefield, W.Va. (1921-23). From 1923 to 1934, while he was rabbi of Temple Beth El in Norfolk, Va., he was also psychological examiner for the juvenile court. Steinbach became rabbi of Temple Ahavath Sholom, in Brooklyn, in 1934, and was still serving in 1943. In addition to his varied communal and interfaith activities, he was known as a writer on Jewish and religious subjects.

He was author of: *Sabbath Queen,* a series of Bible talks for children (1936); *What is Judaism?* (1937); *When Dreamers Build,* poems (1937); *Musings and Meditations* (1941). He collaborated on a popular edition, with notes, of the first chapter of the tractate *Baba Metzia* (1928).

STEINBACH, EMIL, Austrian statesman, b. Vienna, 1846; d. Purkersdorf, near Vienna, 1907. He was regarded as one of the ablest statesmen of the Austro-Hungarian monarchy in the reign of Emperor Francis Joseph I. Steinbach received the J.D. degree from the University of Vienna (1869), practised law for a few years, and in 1873 became a teacher at the Handelsakademie (College of Commerce) in Vienna. The following year he was called by Julius Anton Glaser, the Jewish-born minister of justice, to the department of justice, and in 1887, after his conversion to Catholicism, he was appointed Sektionschef (head of the department). During his service in the ministry of justice he was instrumental in ushering in an era of social legislation which drew encouragement from the new Bismarckian policy of state socialism and workmen's insurance. He fathered legislation on compulsory accident and disability insurance as well as the new corporation law which was of the greatest importance for the development of Austrian legislation on stocks, bonds, savings banks, insurance companies.

Recommended by the minister of finance, Count Schönborn, he was made minister of finance by the president of the cabinet, Count Taaffe (February, 1891). In this capacity Steinbach undertook the long-delayed task of currency reform as well as the reform of the head taxes (Personalsteuern). He based the monetary system of Austria on the gold standard and exchanged the florin (gulden) for the crown.

After his speech before the deputies which was decisive for the success of the bill, he was sent a telegram of congratulations by Taaffe (July 11, 1892). Regarding the head taxes, he emphasized the necessity of shifting the tax burden from the financially weak to the wealthy. Steinbach was also sponsor of a bill which demanded the establishment of compulsory workmen's councils in all factories which had to watch over the interests of employes. In 1893, with the approval of Taaffe, he drafted a bill aimed against the injustice of the electoral system which left the peoples of Austria very inadequately represented; according to the new bill, the franchise was to be granted to almost all men of twenty-four years. The bill, which proposed to give the franchise to everyone who could read and write and had resided for six months in one place, was in keeping with the demands of the Socialists, but was defeated in the House of Deputies (October, 1893), whereupon Taaffe and his cabinet tendered their resignation.

In 1899 Steinbach was made chairman of a division of the supreme court and subsequently president of the supreme court (Oberster Gerichtshof) and deputy president of the Court of the Empire (Reichsgericht). Upon recommendation by the president of the cabinet, Baron von Koerber, he was made first president of the supreme court (1904), and held this position until his death (1907). His juridical opinion on the mésalliance between the heir to the throne, Archduke Francis Ferdinand, and Countess Chotek had a decisive effect on its legal status.

Although a convinced monarchist, Steinbach was a firm champion of democracy and federalism. Both as statesman and scholarly writer he endeavored to introduce social ideas in order to protect the proletarian classes. Steinbach claimed that the workers are not only to eke out a meager living, but are entitled to participate in all privileges of civilization, like the rest of society. He reiterated that the task of jurisprudence and political economy was "the limitation or even extermination of the egotistical by the social forces in man" (*Die Moral als Schranke des Rechtserwerbs und der Rechtsausübung,* 1898). As a minister he fought vigorously against corruption.

His writings include: *Rechtskenntnisse des Publikums* (1878); *Eigentum an Briefen nach österreichischem Rechte* (1879); *Stellung der Versicherung in Privatrechte* (1883); *Erwerb und Beruf* (1896); *Rechtsgeschäfte der wirtschaftlichen Organisation* (1897); *Zur Friedensbewegung* (1899); *Treue und Glaube im Verkehr* (1900); *Der Staat und die modernen Privatmonopole* (1903). STEINBACH, LEWIS W., physician and communal worker, b. Vysoka, Bohemia, 1851; d. Philadelphia, 1913. He came to the United States in 1870, studied at the Jefferson Medical College (M.D., 1880), and was made an assistant in the ear clinic of that college, and eventually became its chief. Steinbach was subsequently made professor of clinical and operative surgery at the Philadelphia Polyclinic and School for Graduates in Medicine. He was also secretary, and later president, of the Polyclinic Faculty. He was honorary secretary of the Jewish Publication Society of America, president of the Philadelphia branch of the Jewish Theological Seminary of America, and active in many other Jewish organizations.

STEINBERG, BARUCH, chief Jewish chaplain of the Polish Army, with the rank of major, and head of the Jewish Department in the Ministry of War in Warsaw, b. Przemyslany, Poland, 1898; d. 1941. He was a descendant of a famous Orthodox rabbinic family. When eighteen he was ordained, and soon after he was appointed to the post of rabbi in a large Jewish community in Galicia. At the same time he graduated from the high school of his native town, and then studied at the University of Lwów (Lemberg). In the stormy period of 1919 to 1920, when Poland was at war on its eastern borders, he took part in several battles as a volunteer of the Polish Army. After the war was over he was appointed to the post of chaplain of the Jewish faith in the Polish Army in the district of Grodno. He soon distinguished himself for his sermons, and for his unusual ability to reform, reorganize and enlarge religious services through all army units of the Polish Army where there were soldiers of the Jewish faith. The highest authorities of the Polish Army, taking notice of his work, summoned him to Warsaw and appointed him (1933) head of the Jewish Department in the Ministry of War, with the rank of major. His predecessor, Colonel Joseph Mieses, retired from this post shortly before his assignment.

Steinberg created scores of posts for military rabbis in different military districts, and in 1937 founded a military synagogue in Praga, in the borough of Warsaw, for Jewish soldiers. He was an outstanding Polish patriot, and his preachings were attended by numerous non-Jewish high-ranking officers and representatives of the administration. In his sermons he stressed the thought that complete harmony existed between faithfulness to religion and to country. He cited Jewish philosophers to show that Jews who cultivate their own religious tradition are at the same time loyal citizens of their respective countries.

During the second World War Steinberg, although a rabbi, took part in fighting on the battlefields of Poland. After the defeat of the Polish Army in the campaign of 1939 in Eastern Poland he was taken prisoner by the Soviet Army and deported far into Russia. In 1941, only forty-three years of age, he died in the camp to which he was deported. His brother, Meyer Steinberg, rabbi of Czortków, Galicia, was, in 1943, a Jewish chaplain in the Polish Army of the Near East.

ALEXANDER HAFFTKA.

STEINBERG, HANS WILHELM, conductor, b. Cologne, Germany, 1899. He was discovered by Otto Klemperer, who appointed him assistant conductor at the Cologne Opera after he had won the Wüllner Prize for conducting from his native city. In 1924 he rose to the position of first conductor. One year later he was engaged as director of the German Theatre in Prague. In 1929 he became music director of the Frankfort Opera, holding this post with great success until the rise of the Nazi government. He also appeared frequently as a guest conductor at the Berlin State Opera. After the rise of the Nazi regime he went to Palestine, where he established and conducted the Palestine Symphony Orchestra. In the spring of 1938 Steinberg came to the United States, and during the next few seasons conducted concerts of the N.B.C. Orchestra as well as serving as Toscanini's assistant. He was guest conductor for the New York Philharmonic, Los Angeles Philharmonic and Philadelphia orchestras.

Lit.: *Current Biography* (1940) 759.

STEINBERG, ISAAC NACHMAN, revolutionary and writer, b. Dvinsk, Russia, 1888. After an Orthodox Jewish education, he went to the University of Moscow, from which he was expelled for revolutionary activities. Subsequently he received the Ph.D. degree from the University of Heidelberg (1910) and returned to Russia to practise law, and contributed to various legal periodicals.

After the February, 1917, revolution in Russia, Steinberg went to Petrograd, where he became a member of the government. He remained with the left-wing group after the split later in the year, and was made people's commissar of justice after the October revolution, holding this post in 1917 and 1918. He was also on the staff or editor of numerous periodicals, including the daily *Zemlya i Volya.* Steinberg left Russia for Berlin in 1923 and continued his revolutionary writing and editing. He had from the beginning of his career written intermittently in Yiddish; in addition to his studies originally in that language, much of his Russian and German work was translated into Yiddish.

Among his books were *Dnevnik Sozialista Revoluzionera* (1915); *Ot Fevralya po Oktyabra* (1920); *Zehn Jahre Oktober-Revolution* (1927) and *Spiridonova* (1935). His drama *Dornenweg* (1927), depicting character sketches and episodes from the revolution, won a prize offered by the Bremen Goethe Gesellschaft. After 1933 Steinberg moved to London, and became an advocate of the Free Land (Australia) settlement movement for Jews; he was also a member of the Central Bureau of the Yiddish Scientific Institute.

Lit.: Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 4 (1930) cols. 604-8.

STEINBERG, JACOB, Hebrew and Yiddish poet, short story writer and essayist, b. Bela Tserkov, Ukraine, Russia, 1887. He lived for some time in Kiev and Warsaw, and studied at the University of Bern, Switzerland. In 1914 he moved to Palestine.

He began his literary career in 1903 with a series of poems and short stories which appeared in various Hebrew and Yiddish periodicals. In 1906 he published his first collection of Hebrew poetry under the title of *Shirim* (Poems), which was followed in 1910 by two additional volumes, *Sefer Hasatiroth* (The Book of Satires) and *Sefer Habediduth* (The Book of Loneliness). Another collection entitled *Shirim* appeared in 1923 (Leipzig), and in that year he also published two volumes of short stories, *Sippurim* (Stories; Berlin). His first collection of essays appeared under the title of *Reshimoth* (Notes; Tel-Aviv, 1928), and a later volume was entitled *Demuyoth Vehezyonoth* (Images and Visions; Tel-Aviv, 1935). The latest edition of his collected works was published in three volumes, in celebration of his fiftieth birthday jubilee, *Kithebe Yaakob Steinberg* (Tel-Aviv, 1937; vol. 1, *Shirim* [Poems]; vol. 2, *Sippurim* [Stories]; vol. 3, *Reshimoth* [Essays]).

Of his Yiddish writings, the following appeared in book form: *Die Mutter,* a three-act drama (The Mother; Warsaw, 1908); *Gezamelte Shriften* (Collected Writings; Warsaw, 1909); *Russland,* an epic poem (Russia; Warsaw, 1914). He also translated into Hebrew Alphonse Daudet's *Lettres de mon moulin,* was one of the editors of the *Freind* in Warsaw and of *Hapoel Hatzair* and *Dawar* in Palestine, and edited the seven-volume edition of the works of his brother-in-law Hayim Arlosoroff. In 1936 he was appointed one of the editors of the Bialik Foundation.

Steinberg's early poetry is dreamily melancholy and plaintively sentimental; in his satires he gave expression to the disillusionment and cynicism of a rootless generation, seeking escape in promiscuous eroticism and finding it ungratifying; but in his later poems, in which the Palestinian motif predominates, he resumes the romantic tone. His short stories are of the impressionistic and analytical type. They portray chiefly the young Eastern European Jews who have lost their ties with tradition and have broken away from the Jewish milieu but cannot find moorings in the natural earthy environment of the non-Jewish world, for they are the helpless victims of age-old estrangement from nature which rendered the Jew incapable of full enjoyment of life. Even the love life of his characters, which dominates their existence, appears shallow and without permanence or completion. The pessimism and futility which pervades his stories is lightened only by his portrayal of the Jewish woman, who is depicted as the bearer of the vitality and fortitude which preserved the race through the vicissitudes of life in exile. In his essays, which are concise and lyrical in tone, he gives expression to his philosophy of life and his conception of Judaism. In the national revival in Palestine he sees the concentration of the essence of Jewish spiritual selfhood. His essays are written around his impressions of Palestinian landmarks and Biblical and literary themes. His style is heavy and slow and often artificial, but it has charm and melody.

AHRON OPHER.

Lit.: Robinson, M., *Deyuknaoth,* 34-38; Ben Eliezer, in *Hatekufah,* vol. 21, pp. 501-3; Goldberg, A., in *Hadoar,* Sept. 2, 1927; Zilberschlag, I., in *Bitzaron,* Jan., 1940; Meisel, N., in *Bichervelt,* vol. 2 (1919) 34 et seq.

STEINBERG, JOSHUA, educator, b. Vilna, Lithuania, 1839; d. Vilna, 1908. He was first a rabbi in Bialystok, then, from 1861 on, in Vilna. Later (1867) he was made chief instructor of Hebrew and Aramaic at the rabbinical seminary in Vilna. This was followed, in 1872, by his appointment to the post of inspector, a position he held for thirty-two years. In the meantime he served also as censor for Jewish publications on behalf of the Russian government (1863-1908). His government connections enabled him to plead for better educational facilities for Jewish children, and as the result of his presentations a number of schools were established in Vilna and other large cities under Russian control.

Steinberg wrote voluminously in Russian and Hebrew. He was author of a Hebrew grammar (1871), of a Russian-Hebrew dictionary (1880) and of a Russian-Hebrew-German dictionary (1888).

STEINBERG, JUDAH, Hebrew short story writer, b. Lipkany, Bessarabia, 1863; d. Odessa, Russia, 1908. He grew up close to nature in an atmosphere of Hasidic piety.

After his marriage he settled in a Roumanian village as a small storekeeper. There he devoted so much of his time to reading and self-education that he failed in business and was compelled to return to his father's home and take up Hebrew teaching. But constant conflict with his father over the pursuit of secular enlightenment forced Judah to seek a livelihood elsewhere, and in 1889 he moved to the town of Yedintzy. In that year he published privately his first book, *Nib Sefathayim* (Fruit of the Lips), a Hebrew syntax, which proved a financial failure. He spent the following eight years teaching Hebrew in this small town and writing fables and children's stories. His fables appeared in two volumes entitled *Bair Ubayaar* (In the City and in the Forest; Warsaw, 1897 and 1899), which were received with great enthusiasm by the leading writers of the day, as were indeed his children's stories, *Libene Haneurim* (For the Youth; Cracow, 1897).

In 1897 Steinberg was invited as a Hebrew teacher to the town of Leovo where, under improved economic conditions, he could devote more time to writing. During his stay in this town he wrote his best works, contributed to most of the Hebrew and Yiddish periodicals, and edited textbooks and chrestomathies. His Hasidic stories appeared under the titles of *Sihoth Hasidim* and *Sippure Hasidim* (Warsaw, 1904). In 1906 he accepted the offer of the new Yiddish daily *Vahrheit* to serve as its Russian correspondent, and moved to Odessa. There, despite a torturous stomach ailment which was growing worse, he wrote his stories on the revolution. His illness, however, soon incapacitated him, and he spent the last months of his life in abject poverty and pain until he was overtaken by death at the age of forty-four.

Steinberg's collected Hebrew works appeared in four volumes, entitled *Kol-Kithebe Yehudah Steinberg* (Cracow and Odessa, 1910-13). Of his Yiddish works one volume of collected stories appeared in New York city in 1926. Some of his children's stories were translated into Yiddish under the titles of *Rodzinkes mit Mandlen* (Raisins with Almonds; New York, 1920) and *Kinder Maaselach* (Children's Tales; 1921), and some of them were rendered into English under the title of *The Breakfast of the Birds* (Philadelphia, 1917). A Yiddish translation of selected Hasidic stories, *Hasidishe Maases,* appeared in 1909, as well as a translation of his novel *Bayamim Hahem* (In Those Days), on the life of a Cantonist soldier. The latter appeared also in an English translation (Philadelphia, 1915).

Steinberg is the classical short story writer in Hebrew literature. With Isaac Loeb Peretz and Micah Joseph Berdyczewski, he shares the credit for popularizing the life of the Hasidim in modern Hebrew fiction. His stories portray the simple pious Jews of the Russian small town, in all the phases of their daily lives, with sympathy and warmth and with great skill. He is a master of the psychological sketch which in a few brief lines constructs the whole mental world of the character. Less impressive are his longer novels and the stories of the emancipated young Jew. *Doctor Orlov* (1905), a novel about an unscrupulous young Jewish physician who, in gaining wisdom, lost his principles, is artificial in plot and smacks of Smolenskin and Brandstetter. Even *Bayamim Hahem,* the most successful of his long narratives, is not really a novel but a monologue of the Cantonist soldier, although it is a vivid recital of the heroism and martyrdom of the Jewish children seized for military service and forced conversion under the Cantonist system. Steinberg's most valuable contribution to modern Hebrew literature lies in his children's stories, which appeared in numerous editions, in books, periodicals, pamphlets and anthologies, and are still read avidly by Jewish children. His vivid imagination, his deep insight into the child's mentality and his love for children are evident in these stories, which are Jewish in content, though universal in appeal. His style is light, simple and lucid.

AHRON OPHER.

Lit.: Robinson, M., in *Hasifruth Haibrith Hahadashah;* Fichman, I., in the introduction to the Cracow edition of Steinberg's collected works; Zetzer, S. Z., in the introduction to the Yiddish translation of his Hasidic stories; Wax-

man, M., *A History of Jewish Literature,* vol. 4 (1941) 62-70.

STEINBERG, MAXIMILIAN, composer and teacher, b. Vilna, Lithuania, 1883. He studied at the St. Petersburg Conservatory, where he was a pupil of Rimsky-Korsakoff, whose daughter he married in 1908. After 1908 he was professor of theory and composition at the St. Petersburg Conservatory, becoming full director in 1934. Steinberg prepared a new edition of Rimsky-Korsakoff's *Foundations of Instrumentation.* He composed ballets, works for orchestra, chamber music compositions and piano pieces which received frequent performances in the Soviet Union. He also made ingratiating arrangements for voice and orchestra of popular Russian songs.

STEINBERG, MILTON, rabbi and author, b. Rochester, N. Y., 1903. He studied at the College of the City of New York (B.A., 1924), Columbia University (M.A., 1928) and the Jewish Theological Seminary of America (rabbi, 1928). He was instructor of classical languages at the College of the City of New York (1924-25) and of Jewish history and religion at the Teachers Institute of the Jewish Theological Seminary (1926-28). After serving as rabbi of Congregation Beth El Zedeck at Indianapolis, Ind. (1928-33), he received a call to the Park Avenue Synagogue in New York city, where he was still the incumbent in 1943. He was appointed chaplain in the New York Guard, with the rank of lieutenant-colonel.

Steinberg was a member of the executive council of the Rabbinical Assembly of America (1933-40) and of the administrative committee of the Zionist Organization of America (1935-38). He served on numerous committees and boards, including the committee on publications of the Jewish Publication Society, the national commission for Hillel Foundations, and the board of directors of the New York Young Men's Hebrew Association. He was associate editor of the *Reconstructionist,* and contributed regularly to general and Jewish periodicals.

He wrote *The Making of the Modern Jew* (1934), in which he analyzes the factors which have enabled the Jewish people to survive despite adverse conditions, and *As a Driven Leaf* (1940), a historical novel dealing with the ancient heretic Elisha ben Abuyah.

STEINBRINK, MEIER, judge, b. New York city, 1880. He studied law at the New York University Law School in 1899, and was admitted to the bar in 1901. During the thirty-one years he was in private practice, he was retained as special counsel in important municipal and federal proceedings. In 1915 he acted as counsel for the Catholic interests in what was popularly termed "the wire tapping cases," and in 1918 he was the associate of the later Chief Justice Charles E. Hughes in the aircraft investigation during the first World War. In 1919 he was counsel for the Congressional Committee investigating War Department expenditures, and in 1922 he was retained as an assistant United States attorney general in the prosecution of civil cases arising out of war frauds related to aircraft production. He was special counsel for the City of New York in the investigation of city contracts (1921), and also served, without compensation, in the ambulance chasing investigation in the Second Judicial District (1928-29).

Steinbrink was made justice of the New York State Supreme Court in 1932, and in 1939 became a member of the Appellate Term. Early in his judgeship, in treating an airplane collision, he demonstrated the elasticity of the law which permitted application of its rules to novel situations. Later he authorized the use of a blood test to determine paternity, establishing a

Meier Steinbrink

precedent that eventually resulted in specific legislation. During the depression Steinbrink, in determining the applicable law, came to the aid of home owners by permitting them to retain possession during the pendency of foreclosure actions (1933). Steinbrink also declared unconstitutional an ordinance prohibiting peddling on the streets of New York city. In 1943 he was still a Supreme Court justice.

Especially in Brooklyn, where he made his home, Steinbrink was active in Jewish communal work. He was the first president of the United Jewish Aid Society, and later an incorporator and director of the Brooklyn Federation of Jewish Charities. He was president of Congregation Beth Elohim, and active on behalf of the Union of American Hebrew Congregations in the metropolitan area. In 1938, when a group of Brooklyn Jews founded an organization which was intended to propagandize for the proportional representation of Jews in government, Steinbrink was one of those who came out firmly against all segregative political steps. In 1941 Steinbrink was elected vice-president of the New York Federation of Reform Synagogues. In 1942 he was awarded the distinguished service medal of the Jewish Culture Foundation of New York University. He was given an honorary LL.D. degree by Brooklyn Law School in 1934. He was one of the sponsors of this encyclopedia.

In 1943 Steinbrink served as president of the 38th biennial convention of the Union of American Hebrew Congregations, held in New York city.

STEINDLER, ARTHUR, orthopedic surgeon, b. Vienna, 1878. He received the M.D. degree from the University of Vienna in 1902, and came to the United States in 1907. In 1915 he was appointed professor of orthopedic surgery at the State University of Iowa, Iowa City; he still held this position in 1943. He lectured at the University of Mexico, Mexico City, as assistant professor of orthopedics, and was for several years president of the American Orthopedic Association.

Steindler wrote: *Reconstructive Surgery of the Upper Extremity* (1923); *Operative Orthopedics* (1925); *Diseases and Deformities of the Spine and Thorax* (1929); *The Mechanics of Normal and Pathological Locomotion in Man* (1934). He contributed to several medical textbooks.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 230-31.

STEINER, EDWARD ALFRED, *see* YORK-STEINER, HEINRICH.

STEINER, GABRIEL, physician, b. Ulm, Germany, 1883. He received the M.D. degree from the University of Strasbourg (1908), where he became lecturer in 1913. Steiner was appointed assistant professor at the University of Heidelberg in 1920. He came to the United States in 1936, and in 1937 was made professor of neurology and neuropathology at the Wayne University College of Medicine, Detroit; he still held this position in 1943. In 1941 he founded the Wayne University Brain Disease Registry, America's best center for study of brain and spinal diseases.

Steiner wrote on neurosyphilis (in *Jadassohn's Handbuch*), and *Krankheitserreger und Gewebsbefund in multipler Sclerosis* (1931).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 628; *Journal of the American Medical Association,* Aug. 2, 1941, p. 378.

STEINER, HEINRICH YORK, *see* YORK-STEINER, HEINRICH.

STEINER, KILIAN VON, lawyer, banker and statesman, b. Laupheim, Germany, 1833; d. Stuttgart, Germany, 1903. He was the son of Victor Steiner (1790-1863), a Jewish farmer and brewer who did not assume his civil name before 1828. Kilian Steiner studied law from 1851 to 1858 at the Universities of Tübingen and Heidelberg, and established himself as a lawyer at Heilbronn in 1859. In 1865 he moved to Stuttgart, following the demands of the Deutsche Partei, the national party which advocated the union of Germany under Prussian leadership, and of several important industrialists of Stuttgart.

Steiner intervened twice in the political development of Württemberg, thus contributing to the success of Bismarck's policy. In 1866 he tried unsuccessfully to prevent the government of Württemberg from siding with Austria against Prussia, but soon after the first Prussian victories he was instrumental in the opening of peace negotiations, and gave practical support to Bismarck's efforts to pacify Southern Germany as soon as possible. When, in 1870, the government of Württemberg was inclined toward neutrality, Steiner vigorously agitated in favor of Württemberg's participation in the war against France, and within a few days he forced the reluctant government to declare war. The king of Württemberg knighted Steiner afterward. As to home politics, Steiner was closely allied with Eduard Lasker, Ludwig Bamberger and Heinrich Rickert, but later on, when the liberal leaders entered into a conflict with Bismarck, he sided with the latter.

Of no less importance was the part which Steiner played in the economic life of Germany. He was one of the first Germans to recognize the necessity of founding joint stock banks, and had a broad view on their economic tasks. Steiner was the spiritual leader of the Württembergische Vereinsbank (founded in 1869), whose history he wrote in 1894. Together with Georg von Siemens and Bamberger, he took a prominent part in the founding of the Deutsche Bank, on whose board he was for some decades. Steiner took the initiative also in the founding of the dynamite trust. He created the salt mines at Heilbronn, and bequeathed them to the city of Heilbronn. He was the counsel of the great publishing house of Cotta, and annexed several other publishing and printing firms to it.

Steiner's personality showed a peculiar combination of optimistic idealism and sober-minded realism. He was an intimate lifelong friend of Berthold Auerbach, and a good friend of many prominent German authors of his age, such as Paul Heyse, Wilhelm Raabe and Joseph Victor von Scheffel. The great majority of the professors of the University of Tübingen esteemed Steiner's hospitality and generosity, praising him as "royal merchant." Steiner remained loyal to Judaism, but indifferent to its religious traditions.

STEINER, MAX, composer, b. Vienna, 1893. He was a student at the Vienna Conservatory, where he was a pupil of Fuchs, Gradener and Mehler. After coming to the United States he became a conductor of Broadway musical comedies. He then went to Hollywood, where he became one of the leading composers for the screen, producing the scores for more than twenty-five major cinema productions.

STEINER-PRAG, HUGO, painter, etcher and book illustrator, b. Prague, 1880. He studied in Prague and Munich. As early as 1904 he began to teach at the Workshop for Free and Applied Art in Munich. The following year he was called to the State School for Arts and Crafts in Barmen, Westphalia, and in 1907 he was made professor at the State Academy of Graphic Arts in Leipzig. Here he taught until 1933 in the departments of book illustration and advertising design.

Steiner-Prag returned to Prague in 1934, founding, at the behest of the Czechoslovakian government, the Officina Pragensis, a school for graphic arts, particularly in the fields of book and commercial art. He was called to Stockholm in 1938, and to New York city in 1941, where he became a lecturer on graphic arts at New York University. His greatest accomplishments were in modern book art, in which all phases of book production—type, composition, binding, jacket, illustration and other ornamentation—were considered with the greatest care and good taste. He produced more than 1,400 books, of which he illustrated more than sixty. For more than 100 publishers he designed bookmarks and other devices. His illustrations are comprehensive and charming interpretations of the text.

He served also as art advisor to many book and periodical publishers, printing houses and binderies. He was widely honored, and invited to every exhibition. In 1914 Steiner-Prag headed the modern book section of the World Exhibition for Bookcraft and Graphic Arts in Leipzig, and in 1917 he was president of the International Exhibition of Modern Book Art. He supervised the German sections at international exhibitions, and was director of the New German Graphic Arts (New York and Pittsburgh, 1930).

Steiner-Prag worked in the theatre as well, designing the settings and costumes for plays and operas in Leipzig, Cologne, Hamburg and Prague. He continued his various activities in the United States, serving as consultant on book design for the University Press at Lincoln, Neb. For the Limited Editions Club he prepared a new edition of E. T. A. Hoffman's selected stories (1942), and for the Heritage Club he did sixteen illustrations for a special edition of Lord Byron's *Don Juan.*

Lit.: Frenzel, H. K., edit., *Hugo Steiner-Prag* (with an introduction by Max Osborn; 1928); Rodenberg, Julius, *Hugo Steiner-Prag zum 50. Geburtstag* (1930).

STEINFELD, MARTHA LEVY (Mrs. Maurice L. Steinfeld), communal worker, b. 1889; d. St. Louis, 1934. She was educated in Newark, N. J., and moved to St. Louis after her marriage. Here she became a member of the executive board of the National Federation of Temple Sisterhoods in 1917. Later she was elected second vice-president, then first vice-president, and in 1929 she was chosen president. Reelected to a second term, she was in office at the time of her death. Mrs. Steinfeld was also a member of the executive board of the Union of American Hebrew Congregations. She was responsible for the introduction of child study and parent educational activities in the Sisterhood program, and for other progressive innovations.

(*See photograph on next page*)

Martha Levy Steinfeld

STEINGUT, IRWIN, assemblyman and realtor, b. New York city, 1893. He was a graduate of St. Johns College, Brooklyn (LL.B., 1929). From 1922 on he was a Democratic member of the New York State Assembly, representing the 18th Assembly District, and from 1930 on its minority leader. In 1935 he was the Democratic speaker of the Assembly, the first in twenty-two years. He sponsored the unemployment insurance bill enacted in 1935 and was co-author of the social security bill enacted in 1937. In 1938 he was chairman of the legislative committee to prepare data and documents for the Constitutional Convention of the State of New York for 1938 in which he participated as a delegate. Steingut was a member of the state cabinet of Governors Franklin D. Roosevelt (1928-32) and Herbert H. Lehman (1932-42).

He was a director of the Brooklyn Federation of Jewish Charities (from 1928 on) and a trustee of the Hebrew Orphan Asylum, Brooklyn, and the Brooklyn Jewish Center. In the latter part of December, 1942, Steingut joined Charles Poletti, who was serving a brief four-week term as governor after Lehman's resignation, and other party leaders, in drawing up a broad program of social reform for the year 1943 and for the post-War period.

STEINHARDT, JACOB, painter, etcher and wood-engraver, b. Zerkow, Posen, Germany, 1887. He was brought up in the traditional Orthodox Jewish atmosphere, but attended the Gymnasium in Berlin and in 1909, at the age of twenty-two, moved to Paris, where he studied under Jean Paul Laurens, Théophile Steinlen and Henri Matisse. In Berlin his most important teacher was Lovis Corinth, while he acquired his etching technique from Hermann Struck. He joined several friends, among them Ludwig Meidner and Richard Janthur, in forming the group known as Die Pathetiker (1911). This group, revolting against "still life" and "mere prettiness in art," started a direction in art which might be compared to the pre-Raphaelite school in England, and which, in its macabre gravity, reflected the seriousness of the time.

Serving as a German soldier in Lithuania during the first World War, Steinhardt again came into contact with Orthodox Jewish life and was deeply impressed by his experiences. From then on he devoted himself almost exclusively to portraying life in past and present. Proof of this change were his portfolios *Litauische Juden* (eight etchings, 1919), *Jüdische Motive* (six woodcuts, 1920), *Die zehn Plagen* (ten woodcuts, 1921) and *Juden* (eight etchings, 1922). To this group belong his masterly illustrations of the Passover Haggadah (1923) and of the books of *Jonah* (1922) and *Sirach* (1929). Steinhardt contributed eight etchings to a cycle of poems by Arno Nadel (*Rot und glühend ist das Auge des Juden,* 1920), and illustrated German translations of works by Isaac Loeb Peretz (*Musikalische Novellen* and *Gleichnisse*).

Steinhardt, who developed a strong interest in Zionism beginning with the time of his stay in Lithuania, moved to Palestine in 1930; he was still living there in 1943. He had large exhibits of his works in London (1935), and a number of his woodcuts were on display in the Palestine Pavilion at the New York World's Fair (1939-40), including *Four Thousand Years of the Hebrew Alphabet.*

In his earlier works Steinhardt mirrored the world of horror which found its climax in the first World War; later he endeavored to express the inner life of the Jews, avoiding the cheap ways of Jewish genre art and, instead, picturing the spiritual pains, the religious ecstasy of the people. His sombre outlook changed, however, after his visit to Palestine (1925), where he started to portray the landscape and inhabitants and where he settled in 1930. In such oils as *View of Jerusalem from Mount Scopus, The Mosque of Omar and the City Wall, The Desert of Judaea, Tiberias Beach on the Lake of Galilee* and *Yemenite Jews* he succeeded in amalgamating his European craftsmanship with the atmosphere of the East.

Steinhardt, who, together with Joseph Budko, was one of the best-known representatives of modern Jewish art, was especially praised as a master in the field of modern Jewish graphic art. Critics maintain that his work finds its most characteristic expression in etchings rather than woodcuts.

ALFRED WERNER.

Lit.: Nadel, Arno, "Jacob Steinhardt," *Graphiker der Gegenwart,* vol. 4 (1920); Zweig, Arnold, Introduction to Steinhardt's *Ben Sirach* (1929); Lindemann, Florence, "The Sun in Palestine," *American Hebrew,* Dec. 22, 1939; Newman, Elias, *Art in Palestine* (1939).

STEINHARDT, LAURENCE A., lawyer and American diplomat, b. New York city, 1892. He received his law degree in 1915 from Columbia University, and was admitted to the bar the following year. In 1920 he joined the law firm with which his uncle, Samuel Untermyer, was connected, and remained affiliated with the firm until the beginning of his diplomatic service in 1933. He had in the interim served in the United States Army, entering as a private when the United States declared war against Germany in 1917, subsequently becoming a sergeant, a member of the Provost Marshal General's staff and, finally, being attached to the housing and health division of the United States War Department.

During his legal career Steinhardt was identified with several cases involving internationally known figures, such as Vaslav Nijinsky and Archduchess Maria Theresa. His invitation to join the diplomatic scene came in 1933, from President Franklin D. Roosevelt. A pamphlet by Steinhardt, *The Truth, the Whole Truth, and Nothing but the Truth* (1931), had criticized the economic and fiscal policies of the Hoover administration. This preliminary advocacy of principles which Roosevelt was later to incorporate into his New Deal program won for Steinhardt the attention and the trust that resulted in the offer of a post as minister to Sweden. Steinhardt was in Stockholm from 1933 to 1937, during years that were already filled with the threat of events to come. In 1937 he was made ambassador to Peru, at a time when the strengthening of Pan-American relations had become a primary task of the Western Hemisphere. He was a delegate to the eighth Pan-American Conference held in Lima in 1938, at which the majority unity

Lawrence A. Steinhardt
©Price Picture News

that was later to send most of the countries of both Americas into the war against the Axis took firmer form than it had ever had before. From Peru an even greater and more delicate assignment was given to Steinhardt: he was, in 1939, made ambassador to the Soviet Union.

His appointment to the post at Moscow was in itself a significant move, for it marked the tentative resumption of relations that had been tenuous between the two countries since the signing, earlier in 1939, of the non-aggression pact between Russia and Germany. During Steinhardt's period of residence in Moscow he had to present America's displeasure at the Russian-Finnish war. Yet the integrity and the wisdom of his behavior made him a factor, with Sir Stafford Cripps, who represented Great Britain, in implementing the friendship between the powers of Russia, Great Britain and the United States that made possible the alliance among them when the German attack against Russia was launched in 1941. With this responsibility behind him, abetted though his success had been by circumstance, Steinhardt was moved to Ankara, as American ambassador to Turkey, in January, 1942, to serve as a counterweight against the efforts of Franz von Papen to swerve Turkey toward a pro-Axis line. Allied prestige in the Near East was then in a tender state, because of the military reverses of the period, and Steinhardt's task was hard, but he had managed, by early 1943, at least to help hold Turkey severely neutral, while the change in the military situation, in favor of the Allies, made his task more gratifying.

NATHAN RICARDO.

STEINHART, FRANK MAXIMILIAN, industrialist, b. Munich, Germany, 1864; d. Havana, Cuba, 1938. He came to the United States at an early age and in 1882 enlisted in the United States Army, and by 1889 had reached the rank of sergeant. He was then transferred to the headquarters of the Division of Missouri at Chicago, serving as clerk, assistant chief clerk and chief clerk under Generals Schofield, Crook, Miles, Ruger, Merritt and Brooke at the time of the campaigns against the Indian tribes of the West. At the outbreak of the Spanish-American War he was appointed chief clerk of the First Army Corps (May, 1898) and accompanied General Brooks to Puerto Rico.

After serving for a time as chief clerk of Puerto Rico, Steinhart was transferred to Cuba as chief clerk of the military government, serving under General Leonard Wood until May, 1902; he then was appointed agent of the War Department in charge of the archives of the military government. From 1903 to 1907 he was American consul general at Havana. From 1907 to his death he was general manager of Havana Electric Railways, Light and Power Company.

STEINHAUS, HUGO DYONISE, mathematician, b. Jaslo, Poland, 1887. He was best-known for his invention of instruments for the optical measurement of curves. While serving as professor of mathematics at the University of Lemberg he published numerous scientific books in various languages.

Included among these were *Der Begriff der Grenze* (1911); *Sur les défauts de convergence* (1915); and, in Polish, a study of the peculiarities of trigonometric rows. In collaboration with S. Banach, he published an annual, *Studia Mathematica.*

STEINHAUSEN, WILHELM, painter, b. Sorau, Germany, 1846; d. Frankfort, Germany, 1924. He was the son of a Jewish mother; his father was an army physician. Steinhausen studied in Berlin and then in Karlsruhe. Here (1869) he became friendly with Hans Thoma, whose art and personality had a decisive influence upon him. Steinhausen was awarded the Michael Beer prize of the Berlin Academy for artists of Jewish origin in 1870; later he traveled to Italy and Sicily. He lived in Berlin from 1875 to 1877, and thereafter in Frankfort, where he was a neighbor of Thoma, who painted a portrait of him.

Steinhausen was made a professor in 1900, and in 1906 was given an honorary doctorate by the theological faculty of the University of Halle. Under Thoma's tutelage, Steinhausen, who had been reared as a Christian, practised a profoundly conceived Protestant piety in his art. He did many religious oil paintings and murals, etchings and illustrations. His work is represented in the St. Lucas Church in Frankfort, the Hospitalkirche in Stuttgart, and in many private houses in Frankfort, for which he designed decorations.

Among Steinhausen's paintings, *Flight to Egypt* (1874) is in the Berlin National Gallery; *The Astrologer* in the Cincinnati Museum; landscapes in Dresden and Darmstadt; a self-portrait (1860), a portrait of his wife (1884) and *Suffer the Little Children to Come unto Me* (1888) in the Städelsches Museum in Frankfort; *Holy Night* in the Folkwang Museum in Essen; *Paul* in Hamburg; and his famous painting of himself and his wife in the Wallraf-Richartz Museum of Cologne. The Steinhausen archives in the Städelsches Institut in Frankfort contain the residue of his work. Among his published illustrations were: *Six Biblical Bookmarks* (woodcuts, 1869); *Story of the Birth of Christ* (1872); *Selected Poems of Clemens Brentano* (woodcuts, 1874); *Irmala,* a novel by his brother, Heinrich Steinhausen.

MAX OSBORN.

Lit.: Koch, David, *Wilhelm Steinhausen* (1902 and 1904); Balke, S., *Zum 60. Geburtstag Wilhelm Steinhausens* (1906); Steinhausen, Wilhelm, *Aus meinem Leben, Erinnerungen und Betrachtungen* (1912).

STEINHEIM, SALOMO LUDWIG, physician and author, b. Bruchhausen, Westphalia, Germany, 1789; d. Zurich, Switzerland, 1866. He practised medicine in Altona, where he wrote most of his literary works. Together with his friend, Gabriel Riesser, he

distinguished himself in the struggle for the emancipation of the Jews. His books *Sinai* (Altona, 1823) and *Gesänge Obadjas ben Amos aus der Verbannung* (Frankfort, 1837) contain fine Jewish poetry.

In his principal work, *Die Offenbarung nach dem Lehrbegriffe der Synagoge* (4 vols., 1835-65), Steinheim attempted to elevate revelation from a religious belief to a philosophic truth. His other writings include *Moses Mendelssohn und seine Schule* (1840) and *M. M. Budinger, Lebensbeschreibung eines israelitischen Schulmannes* (1844). Steinheim spent the last twenty years of his life in Rome. In 1934 a selection of his posthumous papers was published under the title of *Vom Bleibenden und Vergänglichen im Judentum* (with an introduction by Hans Joachim Schoeps).

Lit.: Karpeles, Gustav, *Geschichte der jüdischen Literatur,* vol. 2; Rippner, "S. L. Steinheim als Philosoph," *Monatsschrift für die Geschichte und Wissenschaft des Judentums,* vol. 21, p. 347 et seq.; vol. 22, p. 1 et seq.; Schoeps, Hans Joachim, "Aus dem Briefwechsel Steinheim-Zunz," *Jahrbuch für jüdische Geschichte und Literatur,* vol. 31 (1938) 248-85.

STEINITZ, ERNST, mathematician, b. Laurahütte, Upper Silesia, Germany, 1871; d. Kiel, Germany, 1928. In 1898 he was appointed instructor at the technical college in Charlottenburg; in 1910 he became professor at the University of Breslau, and in 1920 at the University of Kiel, where he remained until his death. His most important work, "Algebraische Theorie der Körper," dealing with the abstract tendencies of modern algebra, was published in the *Journal für reine und angewandte Mathematik* (vol. 137, 1914); it became the scientific basis for many researches in the fields of algebra and arithmetic. Steinitz wrote also *Konfigurationen der projektiven Geometrie* (1910) and *Polyeder und Raumeintheilungen* (1916).

Lit.: *Jahrbuch über die Fortschritte der Mathematik,* 1894 et seq.

STEINITZ, WILLIAM (WILHELM), chessmaster, b. Prague, 1836; d. Wards Island, New York city, 1900. He was the first to bear the title of world chess champion. Steinitz, who was in bad health and was originally destined for the rabbinate, started his meteoric career in 1862, when he represented Austria in the International Chess Tournament held in London, securing sixth prize. In 1866 he became champion of the world, and retained the title until 1894, when he lost it to Emanuel Lasker. He won first prize in Vienna (1873 and 1882), second prize at the London tournament (1883), and defeated Anderssen (1866), Blackburne (1876), Zuckertort (1886), Tchigorin (1890) and Gunzberg (1892).

Steinitz lived for twenty years in England, became a naturalized British subject, editor of *The International Chess Magazine* (1885-1900), and chess editor of the London *Field.* In 1893 he settled in New York city. The inventor of the gambit which bears his name, he is considered the founder of a new school of chess based on the scientific exploitation of small advantages in position. Toward the end of his life he lost his mind.

Lit.: Devidé, C., *A Memorial to William Steinitz* (1901).

STEINMAN, DAVID BARNARD, bridge engineer, b. New York city, 1886. He was educated at Columbia University (Ph.D., 1911), was professor in charge of civil and mechanical engineering at the College of the City of New York (1917-20), and taught at several other universities and engineering schools. He was a special assistant to Gustav Lindenthal on the design and construction of the Hell Gate arch bridge in New York city, of the Sciotoville Bridge over the Ohio River, the largest continuous bridge in the world,

William (Wilhelm) Steinitz

and of several other notable bridges. He took part in the designing or construction of many bridges all over the world, including the suspension bridge at Florianopolis, Brazil, the largest bridge of this kind in South America (1922-26), the Carquinez Strait Bridge in California, the longest cantilever bridge in the United States (1923-27), the Mt. Hope Bridge in Rhode Island, the largest bridge in New England (1927-29), the Henry Hudson Bridge in New York city, the longest hingeless arch span bridge in the world (1936), and the Thousand Islands Bridge over the St. Lawrence River. He was a consultant on the construction of the George Washington Bridge between New York and New Jersey (1927-31) and on the design of the Triborough Bridge in New York (1930-36).

Steinman was awarded many medals and prizes for his professional achievements, and was president of several engineering societies. His writings include *Suspension Bridges, Their Design, Construction and Erection* (1923 and 1929); *A Generalized Deflection Theory for Suspension Bridges* (1934); and *Bridges and Their Builders* (1941). He was an associate editor of the *Engineers Handbook Library* (1921-23).

STEINMAN, ELIEZER, Hebrew novelist and journalist, b. Hobodovka, Podolia, 1892. He was the son of a rabbi, and was educated at the Yeshiva of Kishinev. For two years prior to the first World War he lived in Warsaw and wrote for the Yiddish *Moment* and contributed to numerous Hebrew periodicals.

He spent the years of the War and the revolution in Odessa, where he published one issue of a magazine entitled *Hakomunist Hayehudi* (The Jewish Communist) and continued to write fiction. There he wrote his first novel, *Sehur-Sehor* (In a Circle), which appeared serially in the quarterly *Hatekufah* (vols. 1-5). Upon his return to Warsaw in 1921 he edited the magazine *Koloth* (Voices) and published several volumes of novels, short stories and essays in Hebrew and Yiddish: *Esther Hayoth,* a Hebrew novel in two parts; *Haben Hanoded* (The Wandering Son), a story; *Sippurim* (Stories), on the themes of the pogroms and the mental conflicts of the modern Jew; *Ukraine Vaint* (The Ukraine Weeps), a collection of Yiddish short stories portraying the bloody pogroms. All these appeared in Warsaw in 1923. A volume of collected essays in Yiddish entitled *Tzu Mensh un Folk* (To Man and Nation) appeared earlier (Warsaw, 1922). In 1924 Steinman settled in Palestine, where he published the weekly *Kethubim* and later was one of the editors of the organ of Palestine labor, *Dawar.*

His later major works were the novels *Dudaim* (Love Apples); *Zugoth* (Couples; Berlin, 1930); and *Sodoth* (Secrets; 2 vols., Tel-Aviv, 1935); and the collections of literary and publicistic essays *Hayesod Bahinnuch* (The Basis of Education; Tel-Aviv, 1930); *Bemizreh Hazeman* (In the Winnowing of Time); and *Shaar Havikkuah* (The Gate of Controversy; Tel-Aviv, 1933).

Steinman's short stories and novels are in essence psychological studies of the mental conflicts and subconscious drives of the modern Jewish intellectuals, particularly the floaters and the refugees of the first World War, whose existence is torn and rootless. The erotic strain which dominates their lives only adds to their spiritual perplexity. His narratives are impressionistic in style, slow moving and full of lengthy dialogues and analytical soliloquies. AHRON OPHER.

Lit.: Epstein, A., in *Soferim;* Newman, I., in *Halil Haroim;* Niger, S., in *Tog,* March 2, 1924; Waxman, Meyer, *A History of Jewish Literature,* vol. 4 (1941) 196-97.

STEINMETZ, CHARLES PROTEUS, scientist, b. Breslau, Germany, 1865; d. Schenectady, N. Y., 1923. He studied at the Universities of Breslau and Berlin, specializing in mathematics, electrical engineering and cognate subjects. Early Socialist activities forced him to flee Germany, and he completed his studies in Zurich, Switzerland. In 1889 Steinmetz came to the United States, where he barely escaped deportation because of a deformed face from an illness.

Steinmetz first obtained employment with an electrical firm in Yonkers. But his experimental work and his monographs in various German periodicals attracted so much attention that in 1893 he became the chief consulting engineer of the General Electric Company. As head of the Schenectady laboratories, he furnished an exemplary instance of the combination of science and industry. One of the first of his services to the development of electricity was his analysis of the process and effects of the alternating current. Steinmetz was a believer in an age of comparative leisure for mankind, made possible by electricity. He predicted the displacement of the steam locomotive by electrified engines and the eventual widespread use of the electric automobile.

Holding to his early belief in political activity, Steinmetz was active in the Schenectady community. He was from 1912 until his death president of the board of education of that city and from 1916 until his death president of its common council. In 1922, Steinmetz offered Lenin his aid in the task of modernizing the Soviet Union; the offer was refused because of broken relations between the United States and the Soviet Union. Later, however, Steinmetz served on the advisory council of the Kuzbas colony in Siberia.

The credence Steinmetz had in the power of science did not lead him to a categorical rejection of religion; he wanted, on the contrary, mutual interaction and investigation between the two. Among Steinmetz' numerous larger published works, most of which went into many editions, were: *Theory and Calculation of Alternating-Current* (1897); *Theoretical Elements of Electrical Engineering* (4th ed., 1915); *Lectures on Electrical Engineering* (5th ed., 1917); *Engineering Mathematics* (1910); *America and the New Epoch* (1916); *Theory and Calculation of Electrical Apparatus* (1917). Steinmetz was awarded the honorary A.M. degree by Harvard in 1902, and the honorary Ph.D. degree by Union University, Schenectady, in 1903. He was professor of electrophysics at Union University from 1902 until his death. NATHAN RICARDO.

Lit.: New York Times, Oct. 27, 1923, pp. 1, 11, 12; Nov. 1, 1923, p. 1; *American Hebrew,* March 30, 1923, p. 660.

STEINSCHNEIDER, MORITZ, orientalist and bibliographer, b. Prossnitz, Moravia, 1816; d. Berlin,

Charles P. Steinmetz

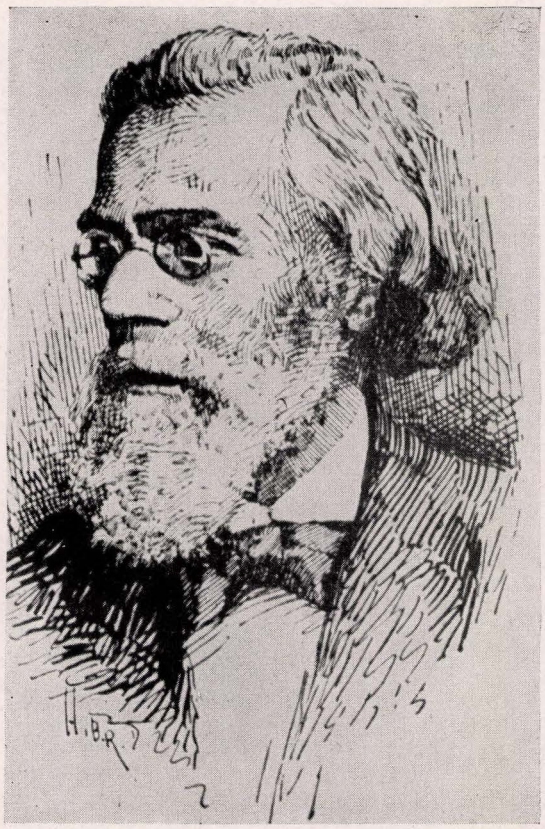
1907. After receiving a Talmudic and general education, he settled in Vienna in 1836 with the intention of devoting himself to the study of Semitic languages and Hebrew literature. The Austrian laws about the Jews prevented his attending the Oriental Institute or publishing his works; accordingly, in 1838 he went to Leipzig and a year later to Berlin, in which places he could study at the universities. After staying in Prague from 1842 to 1845, he returned to Berlin, where he lived for the rest of his life. There he was, successively, correspondent for Austrian newspapers, teacher at the Veitel Heine Ephraim Lehranstalt, representative of the Jewish community at the administration of the Oath More Judaico (1860-69), and (until 1890) director of the Jewish girls' school.

The scholarly works of Steinschneider embrace the entire range of Jewish literature and civilization from the beginning of the Middle Ages to within the 19th cent. His comprehensive knowledge and the unusual degree of his acquaintanceship with books won him the title of "father of Jewish bibliography." In 1841 he and Franz Delitzsch published a work on the *Etz Hayim* of the Karaite Aaron ben Elijah. In 1850 he contributed to Ersch and Gruber's encyclopedia an article on Jewish literature that was regarded as a classic, and so highly esteemed that it was separately reprinted and translated into several languages; he also supplied the encyclopedia with articles on Jewish typography and the Jewish book trade, which were reprinted at Jerusalem in 1938 under the title of *Jüdische Typographie und jüdischer Buchhandel.* Soon afterward he published his first great work, the catalogue of the Hebrew books in the Oxford Library (*Catalogus librorum hebraeorum in bibliotheca bodleiana,* Berlin, 1852-60; 2nd ed., Berlin, 1931). This work established his scholarly reputation on a permanent foundation.

Steinschneider now proceeded to issue further important works at short intervals, such as: *Katalog der hebräischen Handschriften der Leydener Bibliothek* (1858); *Bibliographisches Handbuch über die theoretische und praktische Literatur für hebräische Sprachkunde* (Leipzig, 1859; improved and enlarged ed., 1896; revised ed., with corrections and additions by Steinschneider and other scholars, Jerusalem, 1937); *Katalog der hebräischen Handschriften der Münchener Staatsbibliothek* (Munich, 1875; 2nd ed., 1895); *Polemische und apologetische Literatur in arabischer Sprache* (Leipzig, 1877); a catalogue of the Hebrew manuscripts in the Hamburg state library (Hamburg, 1878); *Vorlesungen*

über die Kunde hebräischer Handschriften, deren Sammlungen und Verzeichnisse (Leipzig, 1897; 2nd ed., Jerusalem, 1937); *Die hebräischen Übersetzungen des Mittelalters und die Juden als Dolmetscher,* which won the prize of the Académie des Inscriptions and is one of the most important investigations of medieval literature (in French, 1884-86; in German, Berlin, 1893); a catalogue of the Hebrew manuscripts in the royal library at Berlin (Berlin, 1893); *Die arabische Literatur der Juden* (Frankfort, 1902); *Die Geschichtsliteratur der Juden:* part 1, on Hebrew writings (Frankfort, 1905); *Die Mathematik bei den Juden* (Frankfort, 1901); *Die italienische Literatur der Juden* (Frankfort, 1901).

In addition, Steinschneider published a large number of treatises and short articles which were published in scholarly periodicals. He was founder and director of the periodical *Hamazkir, Hebräische Bibliographie* (1858-62).



His researches were for the most part devoted to fields which were previously almost unknown, especially those which comprised the achievements of Jewish writers in such studies as mathematics, natural sciences, philology and philosophy. He revealed the important part played by the Jews in the development of the secular sciences and the general culture of the Middle Ages. Together with David Cassel, he drew up a plan for a *Realencyclopädie des Judenthums,* which he published in *Literaturblatt des Orients* (1844). His more popular writings include a little book of Hebrew poems (*Manna;* 1846) and some elementary textbooks for Jewish schools in the Orient. Vol. 1 of his collected writings, edited by Henry Malter and Alexander Marx, together with an evaluation of his work, was issued at Berlin in 1925. A bibliography of his writings is given in *Festschrift zum achtzigsten Geburtstage Moritz Steinschneiders* (1896) v-xxxix; additions were supplied by Adele Goldberg in *Zeitschrift für hebräische Bibliographie,* vol. 5 (1901) 189-91; vol. 9 (1905) 90-92; vol. 13 (1909) 94-95. A bibliography of his writings concerning medicine appears in *Sudhoffs Archiv für Geschichte der Medizin,* vol. 25 (1932) 255-78.

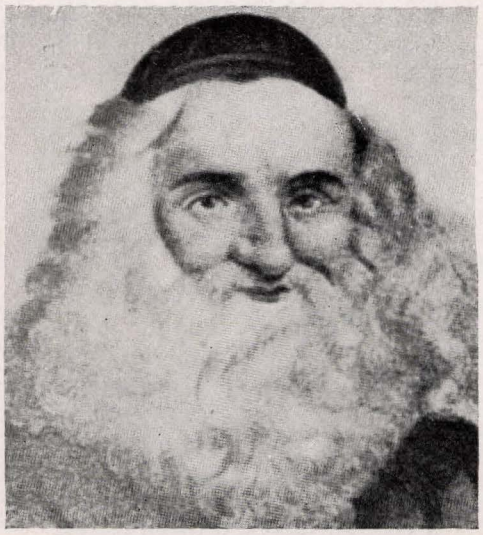
STEINTHAL, HAYIM (HEYMANN, HERMANN, or **HEINRICH),** philologist, psychologist and philosopher, b. Gröbzig, Anhalt, Germany, 1823; d. Berlin, 1899. Matriculating at the University of Berlin, he came under the spell of Wilhelm von Humboldt, by whose classroom teaching he was influenced to specialize in philosophy and comparative linguistics. In 1850 the University of Berlin called him to the post of lecturer on philology and mythology. He next applied himself, during three years in Paris, to the study of Chinese. He returned to Germany in 1855, and in 1863 became assistant professor in general philology at the University of Berlin.

Together with his wife's brother, Moritz Lazarus, he introduced and developed the principles of ethnopsychology. In conjunction with Lazarus he published and was the co-editor of the *Zeitschrift für Völkerpsychologie und Sprachwissenschaft* (vol. 1, 1860; vol. 19, 1889) in the interests of their pioneer study of the



Hayim Steinthal

nature, functions and phenomena of the human soul or mind as manifested by and through specifically folk-unitary modes of life and thought.

In 1872 the Hochschule für die Wissenschaft des Judentums engaged him to deliver courses of lectures on Biblical science and religious philosophy. He was not a Bible critic in the usual sense but was drawn to the Scriptures because of their moral fervor and literary beauty. He became in 1883 a director of the Deutsch-Israelitischer Gemeindebund, supervising for it the department of religious instruction in the small Jewish communities of Germany. Believing teachers more important than textbooks he advocated greater attention to the training of better instructors. Some of the most prominent religious leaders of America who studied under him were Emil G. Hirsch in 1873, Felix Adler in 1872, and Lippman Mayer in 1863. The definitive edition of Wilhelm von Humboldt's philological writings, published in 1884, was prepared by him.

The first publication of which he was the author, *Die Sprachwissenschaft W. von Humboldts und die Hegelsche Philosophie,* appeared in 1848. This was followed in 1850 by *Die Klassifikation der Sprachen* (the third edition entitled *Charakteristik der hauptsächlichen Sprachtypen,* revised by F. Misteli in 1893, is still useful). *Der Ursprung der Sprache im Zusammenhang mit den letzten Fragen alles Wissens* (1851) reached a fourth edition in 1888. *Die Mande-Negersprachen* was published in 1867.

Other major literary productions of which he was the author were *Allgemeine Ethik* (1855); *Geschichte der Sprachwissenschaft der Griechen und Römer* (1863; 2nd ed., 1889-91); *Abriss der Sprachwissenschaft* (vol. 1, 1871; vol. 2, 1881); *Zu Bibel und Religionsphilosophie* (1890; new series, 1895); *Über Juden und Judentum* (first edition prepared by Gustav Karpeles, second edition revised

Abraham Jacob Stern

and published by N. M. Nathan, third edition revised by the latter in 1925). HARRY H. MAYER.

Lit.: Morais, H. S., *Eminent Israelites of the Nineteenth Century* (1880) 233 et seq.; Achelis, Theodor, *Heyman Steinthal* (pamphlet, 1898); the memorial essay by his widow, in *Jahrbuch für jüdische Geschichte und Literatur,* 1900; Bernfeld, S., "Erinnerungen an Chayim Steinthal," *Ost und West,* vol. 8 (1907) 705 et seq.; Joseph, M., "Haym Steinthal, zu seinem hundertsten Geburtstage," *Jahrbuch der jüdisch-literarischen Gesellschaft,* vol. 25 (1923-24) 62 et seq.; Neumark, David, "Steinthal and Lazarus," *Central Conference of American Rabbis Year Book,* vol. 34 (1924) 177-80.

STEINTHAL, MAX, banker, b. Berlin, 1850. He was a cousin of the philosopher Heymann (Hayim) Steinthal. At the age of twenty-three Max Steinthal became a director of the Deutsche Bank in Berlin. He held this post until 1906, when he became a member of the board of trustees of the Deutsche Bank. In 1923 he was elected president of the board, and in 1929 president of the board of the Deutsche Bank und Disconto-Gesellschaft, the largest banking concern of Germany. In 1933 he was forced to resign, but remained in Nazi Germany.

Steinthal was a prominent member of the bourse of Berlin. He was interested in the African mining industry and in loans granted to several South American states, especially Argentina. The great economic and political influence which Germany exercised over Argentina was mainly due to Steinthal's financial operations. The famous German steel factory Gebrüder Mannesmann, whose expansion in Morocco caused the outbreak of the great political crisis in 1905, owed its existence to the financial support given by Steinthal. He created also several banking houses in foreign countries which enlarged Germany's political and economic influence, especially the Banca Commerciale Italiana, in Milan.

STEKEL, WILHELM, psychoanalyst, b. Vienna, 1868; d. London, 1940. He was one of the first practitioners to become interested in Sigmund Freud, and was a founder of the first psychoanalytical society. One of Freud's earliest champions and disciples, and for years the only psychoanalyst besides Freud engaged in active practice, he later broke away from Freud, disagreeing with his theories and accusing him of intolerance. The "jealousy clinic" which he established for men and women afflicted with this mental malady (1935) and his theory of the authority complex as the explanation of the success of post-war dictatorship received wide attention. In 1938 he moved to London.

Stekel wrote: *Dichtung und Neurose* (1909); *Die Sprache des Traumes* (1910; 2nd ed., 1923); *Der Wille zum Schlaf* (1916); *Störungen des Trieb- und Affektlebens* (10 vols., 1908-27); *Die moderne Ehe* (1930); *Briefe an eine Mutter* (3rd ed., 1932); *Der Seelenarzt* (1933); *Fortschritte der Traumdeutung* (1935); *Technique of Analytical Psychotherapy* (1940). Many of his works were translated into English. He edited and contributed to several psychoanalytical periodicals.

STERLING, ADA, non-Jewish author, b. near Holyoke, Mass.; d. New York city, 1939. She wrote novels and plays, including: *A Belle of the Fifties,* a novel (1904); *A Lucky Man,* a play (1912); *Lions and the Lambs,* a play (1912); *Mary, Queen of Scots,* a drama in verse (1921). The anti-Semitic campaign carried on by the *Dearborn Independent* in the early 1920's prompted Miss Sterling to write *The Jew and Civilization* (1924), a book in which she called for mutual understanding of the faiths on the basis of what each had contributed to world history. She was, in addition, the translator of works by George Sand and other authors, including Lessing, whose *Nathan the Wise* she translated in 1929.

Lit.: *American Hebrew,* April 18, 1924, pp. 710, 745.

STERN, ABRAHAM JACOB, inventor and mathematician, b. Hrubieszów, Poland, 1760; d. Warsaw, Poland, 1842. From his early youth he was interested in mathematics and mechanics. In 1811 he invented a calculating machine, and presented a model to the Warsaw Society of the Friends of Science in 1815. Through the efforts of this society he was able to demonstrate his invention to Emperor Alexander I. He received (1815) a state subsidy for the perfection of his machine and a salary of 1,200 rubles. In 1826 he refused the call of the Polish government as director and teacher of Talmud at its newly founded rabbinical seminary, as this institution was not Orthodox enough for him. Stern wrote Hebrew poems, one dedicated to Emperor Nicholas I on the occasion of his coronation (1825). His daughter married Hayim Selig Slonimsky, editor of *Hatzefirah,* and his great-grandson was the Polish poet Anatol Stern.

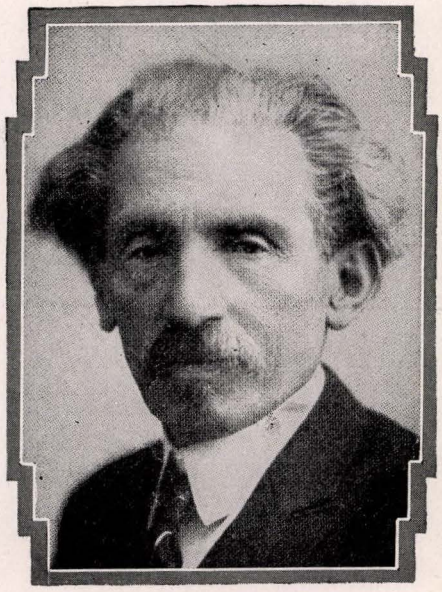
Lit.: Zeitlin, William, *Bibliotheca Hebraica Post-Mendelssohniana;* Balaban, "Abraham Stern zum hundertjährigen Gedenktag der Rabbinerschule," *Nasz Przeglad,* Sept. 26 and Oct. 3, 1926; a drawing of the calculating machine appeared in *Aus alter und neuer Zeit,* supplement to the *Hamburger Israelitisches Familienblatt* (1926), No. 43; *Perezhitoye,* vol. 1, p. 222 et seq.

STERN, ADOLF, jurist and communal leader, b. Bucharest, Roumania, 1848; d. Bucharest, 1932. Throughout his long life he played a great role in the political and communal life of the Jews of his country. A talented man with varied interests and a representative figure with a definite gift for oratory, he easily assumed leadership wherever he went. He studied at Bucharest, Berlin and Leipzig, and returned to Roumania with the LL.D. degree in 1869. He was a friend and secretary of the American consul general at Bucharest, Benjamin Franklin Peixotto, and together they founded (1872) Infratirea Zion (Zion's Brotherhood), of which he was elected president after Peixotto's departure from Roumania in 1876. In 1889 Infratirea Zion was transformed into the Order B'nai B'rith of Roumania, affiliated with the B'nai B'rith of

the United States, and from its inception until his death Stern was president of the organization.

Both organizations were successfully active in educational and philanthropic work. From the B'nai B'rith's ranks sprang (1909) the Union of Native Jews, which fought with great energy for emancipation; Stern was its president until 1924. In 1880 he succeeded in obtaining citizenship, and soon became one of the most successful lawyers in Roumania.

His *Codul Civil,* a digest of common law with commentaries of his own, was widely circulated among the legal profession, and was known as Codul Stern. For a long time he was president of Templul Coral at Bucharest. In 1912 he established contact with Luigi Luzzatti, former Italian prime minister, and interested him in the cause of the Roumanian Jews.



In an electoral agreement with the Peasant Party, Stern was elected to parliament (1922) as the first Jew in the history of Roumania in his capacity as president of the Union of Native Jews. In the following year the American B'nai B'rith awarded him its gold medal. His memoirs in two volumes, *Insemnarile Unui Evreu-Roman* (The Notations of a Roumanian Jew), in the form of an autobiography, contain much valuable material on the history of the Roumanian Jews. Stern published also several translations into Roumanian from the works of Shakespeare, Schiller and Carducci.

Lit.: *American Hebrew,* Nov. 23, 1928, p. 74; Oct. 23, 1931, p. 513.

STERN, SIR ALBERT, British officer and communal leader, b. England, 1878. He was educated at Eton College and at the University of Oxford (M.A.), and became head of the Stern brothers banking firm and a director of the Midland Bank Limited. During the first World War he served first as lieutenant of an armored car division (1914), then was appointed secretary to the Landship Committee of the British Admiralty (1915) and director of the Tank Supply Department in the Ministry of Munitions (1916). Made lieutenant colonel in 1916, Stern continued to serve as Commissioner of Mechanical Warfare in the Overseas and Allies Department (1917) and as a member of the Anglo-American Commission (1918). In the second World War he was attached to the Ministry of Supply as chairman of the Special Vehicle Development Committee (1939) and member of the Tank Board (1941). Stern wrote *Tanks* (1914-18) and *The Log-Book of a Pioneer* (1919). He was knighted in 1918. He was an officer of the Legion of Honor and of the Order of St. John of Jerusalem.

STERN, ALFRED, historian, b. Göttingen, Germany, 1846; d. Zurich, Switzerland, 1936. He was the son of Moritz Abraham Stern, professor of mathematics at the University of Göttingen. Stern studied history as a pupil of Ranke and Waitz, whose critical methods he mastered, and graduated from the University of Heidelberg in 1868. His thesis, dealing with one of the most difficult problems of German history, the authorship of the "Twelve Articles" which formed the program of the insurgents in the Peasants' War (1522), was considered basic for learned specialists from its publication to the present day, although Stern's statements were not undisputed.

From 1869 to 1870 Stern was assistant archivist in Karlsruhe, Germany, in 1872 he became lecturer in history at the University of Göttingen, and in 1873 he was appointed professor at the University of Bern, Switzerland. From 1887 to 1928 he held the chair of general history at the Eidgenössisches Polytechnikum at Zurich; there his lectures were attended also by

Adolf Stern

the students of the cantonal University of Zurich and by teachers, army officers, lawyers and judges.

He published *Milton und seine Zeit* (1877-79); *Geschichte der Revolution in England* (1881); *Abhandlungen und Aktenstücke zur Geschichte der preussischen Reformzeit 1807-15* (1885), in which he dealt also with the history of the emancipation of the Jews in Prussia and discovered important sources concerning the history of the Jews in Germany; and *Das Leben Mirabeaus* (1889). Apart from their intrinsic value, these two latter books are preparatory studies for his standard work, *Geschichte Europas seit den Verträgen von 1815 bis zum Frankfurter Frieden von 1871,* published in ten large volumes from 1894 to 1924. For more than thirty years Stern studied almost all the important archives of Europe in order to establish his description of the political events of Europe from 1815 to 1871 upon authentic sources. His work was generally acknowledged the most considerate and most penetrating history of Europe in the 19th cent. He did not conceal his sympathies for liberalism and democracy, but he constantly showed great moderation in his judgments concerning conservative and reactionary forces and personalities. Although he adopted the German point of view, Stern was hailed also by French historians as endeavoring to be as impartial as possible. Subsequently he published *Abhandlungen und Aktenstücke zur Geschichte der Schweiz* (1926), clearing up several difficult problems of Swiss history; *Geschichte der demokratischen Ideen in den letzten vier Jahrhunderten* (1927); and *Der Einfluss der französischen Revolution auf das deutsche Geistesleben* (1928).

He provided the Jewish community of Bern with historical information for the lawsuit against the propagandists of the *Protocols of the Elders of Zion.* He assisted many young Jewish scholars of several countries.

HUGO BIEBER.

Lit.: Nabholz, Hans, "Alfred Stern," *Zeitschrift für Schweizerische Geschichte,* vol. 16 (1936).

STERN, ALFRED KAUFMANN, communal leader and authority on housing, b. Fargo, N. D., 1897. He was the son-in-law of Julius Rosenwald, having married the latter's daughter, Marion. He was educated at Harvard University, saw service during the first World War, and became active in several large banking and industrial enterprises. From 1931 to 1937 he served as chairman of the Illinois State Housing Commission, later the State Housing Board, and in

1939 was made a member of the advisory board of the City-Wide Tenants' Council of New York city and director of the Citizens' Housing Council of New York, Inc.

He was for many years a trustee and director of the Julius Rosenwald Fund, and was a member of the board of the Jewish Charities of Chicago (1936-37). Stern was American Labor Party candidate for Congress in New York city in 1940. In the same year he was made vice-president of the National Federation for Constitutional Liberties.

Lit.: Kletzky, Harry, in *American Hebrew*, Sept. 1, 1933, p. 232.

STERN, BASILIUS (BEZALEL), educator, b. Tarnopol, Galicia, 1798; d. Odessa, Russia, 1853. He was made director of the Jewish school of Odessa, at that time (1828) the only one in Russia which had a secular curriculum. In 1840 he was made a member of the committee formed by the governor general of Odessa to reform the rabbinical office. He proposed the founding of a seminary for rabbis. This wish of his was fulfilled when the rabbinical seminaries of Vilna and Zhitomir were founded nine years later. He went to St. Petersburg (Leningrad) in 1843 as member of the commission which was to work out a plan outlined by Max Lilienthal to reform Jewish schools.

In 1844 Stern was elected to the council of rabbis. His research work on the tombstones of the old Karaite cemetery of Chufut-Kale was of importance. He was self-educated, and had an extensive knowledge of ancient and modern languages. Czar Nicholas I conferred honorary citizenship upon him.

Lit.: Wininger, S., *Grosse Jüdische National-Biographie*, vol. 6 (1932) 15; *Allgemeine Zeitung des Judentums*, 1853, p. 571; Tarnopol, *Notices sur les Israélites d'Odessa*, 86 et seq.

STERN, BERNHARD JOSEPH, sociologist and anthropologist, b. Chicago, 1894. He was educated at the Universities of Chicago and Cincinnati (M.A., 1917), was ordained by the Hebrew Union College (1921), and received the Ph.D. degree from Columbia University (1927). Stern lectured at the College of the City of New York (1925-26), was assistant professor of sociology at the University of Washington (1927-30), and assistant editor of the *Encyclopaedia of the Social Sciences* (1930-35). From 1931 on he lectured at Columbia University (on sociology) and at the New School for Social Research, New York city (on anthropology).

Stern was on the board of directors of the American Committee for the Protection of the Foreign Born, and active on the Commission on Human Relations of the Progressive Education Association and on the Committee on Research in Medical Economics. He was editor of *Science and Society*, and the author of numerous books, including: *Social Factors in Medical Progress* (1927); *Lewis Henry Morgan: Social Evolutionist* (1931); *The Lummi Indians of Northwest Washington* (1934); *Technological Trends and National Policy* (co-author; 1937); *The Family, Past and Present* (1938).

STERN, VISCOUNT DAVID DE, banker, b. Frankfort, Germany; d. London, 1877. Representative of a banking family, Stern moved to London, where he became known for his activity in floating loans for various countries. In recognition of his services to Portugal in this respect, Stern was made a viscount by King Luiz of Portugal in 1869. Stern was a director of the Imperial Bank and served on the Commission of Lieutenancy of the City of London.

His son, SYDNEY JAMES STERN (BARON WANDSWORTH; b. London, 1845; d. London, 1912), was also the grandson, on his mother's side, of Aaron Asher Goldsmid. He was a Member of Parliament for Stowmarket Division of Suffolk from 1891 to 1895, when he was made a baron. He was the author of a study on housing for the working classes and was honorary president of the Home for Aged Jews.

BARON HERMANN DE STERN (b. Frankfort, 1815; d. London, 1887) was a brother of David de Stern and his associate in the London banking firm. In addition to his connection with the financial affairs of Portugal, Stern was affiliated with the floating of loans for Italy and Spain. He was made a baron by King Luiz of Portugal in 1869, at the same time that his brother was ennobled. Like his brother, Stern was a director of the Imperial Bank; he was also associated with the Anglo-Jewish Association and the Jews' Free School, and a liberal benefactor to numerous Jewish causes.

STERN, EDGAR BLOOM, merchant and governmental official, b. New Orleans, La., 1886. He was the son of Maurice Stern (b. Bavaria, 1855; d. New Orleans, 1920), a member of the Louisiana State Board of Education. Stern received the A.M. degree from Harvard University in 1908. Among his merchandising and commercial posts was that of director of Sears, Roebuck and Company. Married to Edith, a daughter of Julius Rosenwald, Stern was also affiliated with many of the philanthropies in which the Rosenwald Fund was especially interested; he was a trustee of the Howard Memorial Library and of Tuskegee Institute.

Stern held numerous executive positions in cultural activities in New Orleans, and served as chairman of the board of trustees of Dillard University. In 1940 he became chairman of the State Board of Public Welfare, in 1941 and 1942 he was a representative of the War Production Board to the Board of Economic Welfare, and in 1942 he became chairman of the transportation committee of the War Production Board. His Jewish communal interests included membership on the executive committee of the American Jewish Committee and on the board of directors of the National Refugee Service. During the first World War Stern served as a captain in the Ordnance Department of the United States Army. In 1932 Stern was awarded the *Times-Picayune* loving cup for distinguished service to the city of New Orleans.

STERN, EDITH MENDEL, writer, b. New York city, 1901. She received the A.B. degree from Barnard College in 1922, and shortly afterward joined the staff of Alfred A. Knopf, publisher. After periods of affiliation with the editorial departments of other publishing houses, she wrote her first novel, *Purse Strings* (1927). There followed *Scarlet Heels* (1928); *Men are Clumsy Lovers* (1934); and *Escape from Youth* (1935).

STERN, SIR EDWARD DAVID, communal leader, b. London, 1854; d. London, 1933. He was educated at King's College, London, became the head of the banking firm of Stern Brothers, and served for twenty years in the Berkshire Imperial Yeomanry, with the rank of major. In 1904 he was High Sheriff of Surrey; the same year he was knighted. Stern saw active service again in the first World War as a lieutenant colonel. He was made baronet in 1922. A sufferer from deafness, he devoted a large fortune to the relief of the deaf.

STERN, ELIZABETH GERTRUDE (née Leven; pen name, Leah Morton), author and social worker, b. Poland, 1890. She was brought to the United States in her infancy. She studied at the University of Pittsburgh (B.A., 1911; honorary M.A. degree, 1919) and at the New York School of Social Work. As a social worker she was affiliated with the East Side House Settlement of New York city (1912), and the Jacob H.

Schiff Immigration Bureau, of Galveston (1913). She was a director of the welfare work of the Wanamaker store in Philadelphia (1919) and of the Temple Israel Community Center, New York city (1923-24); in 1941 she became a member of the American Friends' Service.

Her writings include: *My Mother and I* (1917); *A Friend at Court* (with Leon Stern; 1923); *I Am a Woman and a Jew* (1926); *This Ecstasy* (1927); *A Marriage Was Made* (1928); *When Love Comes to Woman* (1929); *Gambler's Wife* (1931); *Not All Laughter* (1937); *Vacations From Prison* (1939).

She married Leon Thomas Stern, director of the Pennsylvania Committee on Penal Affairs and regional director with the deputy attorney general of the United States in a national survey of crime.

Lit.: May, Myra, in *American Hebrew,* May 7, 1924, p. 516; Baltimore, Gertrude, *ibid.,* May 22, 1931, p. 8.

STERN, ERICH, medical psychologist and educator, b. Berlin, 1889. He studied at the Universities of Berlin, Lausanne, Strasbourg and Hamburg (M.D., Ph.D.), and was assistant professor at the University of Giessen (1924) and lecturer at the Institute of Pedagogy in Mayence (1928). He was a member of the board of directors of the Mayence Institute of Psychology, Study of Adolescence and Therapeutic Pedagogy. In 1933 he emigrated to Paris, and became a French citizen in 1938. He worked at several Paris hospitals, was active for the OSE, and published a book on the psychology of immigrants.

Stern wrote: *Einleitung in die Pädagogik* (1922); *Jugendpsychologie* (1923); *Die Erziehung und die sexuelle Frage* (1928); *Gesundheitliche Erziehung* (1928); *Autorität und Erziehung* (1929); *Die seelischen Störungen und Schwererziehbarkeit bei Kindern und Jugendlichen* (1932). He published the *Jahrbuch der Erziehungswissenschaft und Jugendkunde* and *Medizin und Pädagogik.*

STERN, ERNST, painter and theatrical designer, b. Bucharest, Roumania, 1876. He was best-known for his long association with Max Reinhardt as collaborator and artistic adviser; he remained with Reinhardt until 1933. Stern studied with Franz Stuck, and began his career as illustrator in Munich. In 1905 he went to Berlin to join the staff of the *Lustige Blätter,* but almost at once became affiliated also with the theatre. He designed various revues and films, and made posters.

Among Stern's work for the Reinhardt productions were the fine drawings for *Dantons Tod* (1917); *Soldaten von Lenz* (1917); *Midsummer Night's Dream* (1918); *Hamlet* (1920); *Julius Caesar* (1920); *Orestes* (1920); *Faust I* (1920) and *Kabale und Liebe* (1921). His published folios included *Die Ballette des deutschen Theaters* (1918); *Revolutionstag in Berlin* (1919) and drawings for Wedekind's *Büchse der Pandora* (1919).

Stern's imagination and ability to grasp the moods of a dramatic composition were combined into practical theatre presentation, utilizing gay colors and clever lighting. His decoration and costume designs were a significant part in the artistic achievement of the Berlin Deutsches Theater and the smaller stages under Reinhardt's direction.

Lit.: Goetz, Wolfgang, "Ernst Stern," in the series *Graphiker der Gegenwart,* No. 2 (1920); Thering, Herbert, *Regisseure und Bühnenmaler* (1921) 77.

STERN, GLADYS BERTHA, novelist, b. Holland Park, London, 1890. She was educated at the Notting Hill High School, which she left at the age of sixteen to travel for a time in Germany and Switzerland, an experience which, in conjunction with the Central European provenance of her family, was considerably to effect the color and flavor of her work.

Gladys B. Stern

She returned to London and studied for two years at the Royal Academy of Dramatic Art with the idea of taking up a stage career, but though she was discouraged from acting, this experience, too, was not without influence on her subsequent writings. The theatre was to provide her with some of her principal friendships (Noel Coward, John van Druten, the Lunts). She was to extract from it some of her most engaging themes and brilliant individual creations [see, for example, *The Back Seat* (1923) and *Little Red Horses* (1932)]. Finally, she was to be associated with the dramatization of two of her own novels, *Debonair* (1928) and *The Matriarch* (1929), a play which provided for the enchanting Mrs. Patrick Campbell the finest vehicle of the last stage of her career. (In 1942 she published *The Young Matriarch,* which brought the story of the Matriarch chronicles down to the beginning of the second World War.)

Miss Stern confessed to have written "plays and mediocre verse" since the age of eight. At the age of twenty-one, she produced her first novel, *Pantomime* (1914), a book which, though it had something of the G. B. Stern sparkle, indicated little or nothing of the ample reaches she was to explore during the coming years. From that time on she produced novels, short stories, essays, and reviews. She did journalism, she wrote for the theatre and the cinema. But it is as a novelist that she will survive. Indeed, when the range of her work is considered, its prodigality of invention, its humor, its ingenuity, it is impossible to withhold from her a place in the forefront of contemporary Jewish women writers, indeed of Jewish writers generally, using English or any other language.

In 1919 she married and spent five years in Italy, in a house among the olive-groves of Diano Marina, in Liguria. Out of that experience emerged some of the most charming, if not the most profound, of her works, such as *Debonair* and *Modesta,* the cunning wine-book *Bouquet* (1928), and the altogether delightful dog-book, *The Dark Gentleman* (1928). On her return to England she settled in Albany, the historic block of flats in Piccadilly where the ghosts walk regularly of men and women who knew how to eat, to drink and to write. Her book *Monogram* (1936) has proved that, even within the confines of an Albany flat, she can still gratify her passion for travel.

Miss Stern is a Jewish writer. It is in that capacity that she must in this context be judged, even if the body of her work which has a Jewish reference were not in any case the most valuable part of her achievement. She is astonishingly innocent of the intrinsic details of Judaism. Her spiritual boundaries stop short at the Pale of Eastern Europe, her temporal at the medieval darkness out of which the flare of Heine and Zangwill and Sholom Asch is directly kindled. Least of all has she anything of the terror and majesty of pre-medieval Judaism, of the Bible, that first supreme story of the *Tents of Israel* (1924). She is European, she is sophisticated. She will bid you dance with an Austrian count's daughter in a scintillant ball-room of old Vienna, rather than with Miriam in the stark morning on the shore of the Red Sea.

She is, in fact, the chronicler of that easy and opulent Jewry which, rooted in Central Europe, was robustly at its ease wherever its fortunes carried it, to the south of France, to South Kensington, to the East Sixties in New York, wherever there was good talk, good food, good humor. She is the chronicler of that Jewry whose roots Hitler has sought to extirpate with a sombre and satanic ingenuity. She may not find it possible to return to her own Jewish territory, so sodden with tears and blood, when the issue is decided. But in the linked novels of *Children of No Man's Land* (1924), *Tents of Israel, A Deputy was King* (1926), *Mosaic* (1930) and the epilogue, *Shining and Free* (1935), she has mapped it joyously and unforgettably.

In these novels the sense is produced not merely that one lifetime has produced them, nor her own race only, but her race in contact with capital city upon capital city across a pageant of centuries. When one has pursued sufficiently far and long the capricious destinies of these vast Jewish families she so matriarchally orders, one is suddenly aware of the profound paradox with which she has presented you. He finds that her cosmopolitan Jews are the only Gentiles. They alone have the freedom of Europe, of America, of the seven weltering seas. Carrying no more luggage than a recipe for *Apfelstrudel,* they have transferred their dooms gaily from a three-room dwelling in Pressburg to a palace in the Faubourg St. Honoré, from Brondesbury to the Grand Canal. They are the true Gentiles. It is the sad Christian who remains immured in a ghetto.

Her Jews are not Jews, as has been inferred, in any Talmudic or medieval sense; but they are Jews in their unparalleled vitality, their tacit assumption of kingship over all places, being less than a serf in each. It is true, even, that the greater part of her Jewesses are married to Gentiles. But it is even truer that it is the Gentiles who are married to the Jewesses. They are poor lads, most of them straws blown in the abounding Jewish winds. They are sucked up like small beads of mercury into gleaming volatile masses. Indeed, what a suave and listless chronicle seems the *Forsyte Saga* in comparison with this exuberant epopee! How shall it not be so when for Kensington Gardens is substituted the Prater in Vienna, for the Serpentine the lagoons of Venice, for the pimpled chastity of muffins the solemn and subtle monumentalism of *Zwetchkenknödel* and *Nusstorte* and *Zimmtkuchen?*

With the divination of genius G. B. Stern long ago anticipated in the form of her novels the architecture which the young intellectuals were later to make fashionable. She is the prime baroquist of the modern novel. Superimposed upon her main plan, which is always opulent and decisive, are the dexterously broken pediments, the convolutions, the profuse statuary with its garments flying and its arms spread generously across heaven, of the Central European baroque. Nor is there any reason why she should not add a dome here, throw out a wing there. She is Salzburg, Prague, Augsburg, rendered into the living word. The Gothic glooms are outmoded for her. The grim single-mindedness of Romanesque has no place in such a mind, so nervous and so populous.

Her favorite preoccupation is the family, for she is a Jewish novelist. She is philoprogenitive. The average 20th cent. writer is a complete unconscious Malthusian. If he arranges a marriage between his hero and heroine, he has the uncomfortable feeling that they may have children some time or other if he does not discourage them. He involves them in triangles, rhomboids, polygons, every manner of geometrical distraction. But there are times when the hero and heroine are contumacious. They produce two children, they produce three even. But he will try violently not to increase their responsibilities and his own any further. Children need so much managing. It is not enough to add up the characteristics of their parents and divide by the number you first thought of. They require the exercise of the true plastic faculty. It is one of the rarest, and Miss Stern possesses it. She will pile up her dizzy families like miniature Babels, for her creative energy is unflagging.

But it is not only when she deals with the family on the epic scale, as in *Tents of Israel,* or in *Children of No Man's Land,* that G. B. Stern creates characters interesting in themselves and intensely interesting in their reactions upon each other. Even in her lighter moods, when she blows such a gay bubble of a novel as *Thunderstorm* (1925) or *The Woman in the Hall* (1939), she is still the brooding and witty spirit by the hearthstone. Not that she ever loses sight of the larger group, composed out of just such families, such rebellions, such capricious loyalties. Her portraiture of a state of society is always admirable. But it has always been through the window of the family that she has seen the comedies and tragedies. Her art exists in those terms. She is a Jewish novelist.

LOUIS GOLDING.

Lit.: Lawrence, Margaret, *School of Femininity* (1936) 183-209.

STERN, HARRY JOSHUA, rabbi, b. Eragoly, Lithuania, 1897. He came to the United States in 1908, and studied at the University of Cincinnati (B.A., 1920) and at the Hebrew Union College, where he was ordained in 1922. Stern served as rabbi of Temple Israel, Uniontown, Pa. (1922-27), and was called to Temple Emanu-El, Montreal (1927), where he was still serving in 1943. Stern was secretary of the first World Jewish Congress (Geneva, 1935), and subsequently became a member of the administrative committee of the World Jewish Congress. He was secretary to the Montreal Conference of Christians and Jews, and honorary vice-president, the Royal Empire Society.

He published *Jew and Christian* (1927) and *Judaism in the War of Ideas* (1937), and was associate editor of the *Canadian Jewish Review.* In 1938 he was awarded the honorary LL.D. degree by McGill University; he was recipient also of the King George VI Coronation Medal.

STERN, HEINRICH, physician, b. Frankfort, Germany, 1868; d. New York city, 1918. He came to the United States at an early age, and studied at the St. Louis College of Physicians and Surgeons (M.D., 1889). Stern taught on diseases of metabolism at the College of Physicians and Surgeons at St. Louis, and later became professor of internal medicine at the New York School of Clinical Medicine. A president of the New York Physicians' Association, he was also a director of the Society for the Relief of Widows and Orphans of Medical Men and of a charitable medical institution named Philantropin, later called the Jewish Memorial Hospital. In 1917 he founded the American College of Physicians.

Stern was founder and editor of the *Archives of Diagnosis,* a journal on internal medicine. Stern was recipient of a

gold medal, bestowed upon him by the Medical Society of the County of New York for his study on diabetes. His writings include books on medical topics (*Angewandte Physiologie,* 1894; *The Urine,* 1897; *Auto-Intoxication and its Treatment,* 1904; *Fasting and Undernutrition in the Treatment of Diabetes*) and on Judaism (*Die Gottesidee,* 1888; *Der Untergang Israels,* 1894).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 70-71.

STERN, HORACE, justice of the Supreme Court of Pennsylvania, and communal leader, b. Philadelphia, 1878. He studied at the University of Pennsylvania (B.S., 1899; LL.B., 1902). In 1933 the University of Pennsylvania conferred upon him the honorary LL.D. degree, and in 1937 the Hahnemann Medical College also conferred that degree upon him.

Stern was admitted to the bar in 1902, and in the following year entered into a partnership with Morris Wolf under the firm name of Stern and Wolf. This partnership continued until his elevation to the bench in 1920. Immediately after his graduation from law school, Stern was appointed lecturer at the University of Pennsylvania Law School; he remained an active member of the faculty until 1917. When the United States entered the first World War Stern joined the Army, serving throughout the War in the Ordnance Department with the rank of major.

Shortly after his return to private practice he was appointed judge of the Court of Common Pleas Number 2 of Philadelphia County by Governor William C. Sproul of Pennsylvania. In 1922 he was elected for a full term of ten years, and in 1924 became president judge of that court. In 1932 he was reelected for another term of ten years. While a member of the Court of Common Pleas Stern was distinguished for his sound legal knowledge, his efficient and courteous handling of trial procedure, and his practical approach to the problems which came before him. He was a pioneer in the reform of court procedure to shorten the period between the bringing of an action and the date of trial. Stern was known as the friend and adviser of young lawyers.

In 1935 Stern was elected to the Supreme Court of Pennsylvania for a term of twenty-one years. The care with which he prepared his opinions and his independence of mind soon made him one of the outstanding members of that bench, liberal in his outlook, yet always basing his conclusions on sound legal principles. His opinions became models for the legal profession. The breadth of his learning and the adaptability of his mind are well illustrated by his opinion in the case of Waring v. W.D.A.S., which was a case of first impression in both the American and English courts. His opinion established the new principle that a musician who plays and records the composition of another in such manner as to add something to the original has a property right in the resultant product. In referring to the problems raised in that case, Stern said: "They challenge the vaunted genius of the law to adapt itself to new social and industrial conditions and to the progress of science and invention." Such a dynamic concept of the law is the cornerstone of Stern's legal philosophy.

Stern's communal activities filled all the time he could spare from the law. Even as a young man he showed an active interest in communal affairs, and participated in the work of the synagogue and local charitable organizations. For some years he taught in the Sunday school of Keneseth Israel Congregation. He was for years a director of the Federation of Jewish Charities, served as its president, and on his retirement from that office was made honorary president. When the advent of the Nazis to power in Germany made the plight of the Jews abroad more desperate, he was one of the first to see the need for unity in the United States to meet that challenge. He helped in the founding of the Allied Jewish Appeal of Philadelphia; many of its early meetings were held in his chambers. As a member of the board of directors of the Southeastern Pennsylvania Chapter of the American Red Cross he was instrumental in building an organization qualified to meet the demands of the second World War.

Horace Stern

His interests spread far beyond the bounds of Philadelphia. He devoted his time and his wide experience toward the efforts of the American Jewish Committee to protect the rights of the Jews everywhere in the world, serving as a member of its executive committee. He was for many years a member of the executive board of the Union of American Hebrew Congregations, and of the board of directors of Keneseth Israel Congregation of Philadelphia. In 1932 his plan for the reorganization of Jewish communal life caused widespread discussion. Stern always strove to make the synagogue the center of American Jewish life.

Education was always one of Stern's principal interests. He was a trustee of the University of Pennsylvania, and chairman of the board which supervises the Wharton School, one of the outstanding schools of business administration in the United States. The Louis Marshall Society, an organization for Jewish boys on the campus of the University of Pennsylvania, owed its existence to his inspiration. The Jewish Publication Society of America, of which he was vice-president in 1943, and the Dropsie College for Hebrew and Cognate Learning, of which he was also vice-president in that year, were among his main interests in the field of Jewish education. After the death of Cyrus Adler, Stern acted as president of Dropsie College until Adler's successor was elected.

STERN, IRMA, painter, b. Schweizer-Rencke, Transvaal, Union of South Africa, 1894. She studied with Gari Melchers in Vienna, then with Martin

Jacques Stern

Brandenburg and Max Pechstein (after 1916) in Berlin. Pechstein's colorful style had a lasting influence on her work.

Returning to Cape Town in 1919, she began to use Pechstein's expressive methods in depicting the freshness of her native country. She had known it since childhood, and she presented it with profound understanding: dark Zulu women and girls, in dreamy meditation, in dancing costume, with fruit baskets on their heads, or chatting in groups; men dancing or drinking; traveling Chinese actors and Hindu musicians.

Before Irma Stern, no one had bared the secrets of this world and its primitive races. Her pellucid and broadly conceived landscapes are equally charming, as are also her water colors and her published folios, which include *Dumela Morena,* scenes from Africa, a volume of lithographs.

Lit.: Osborn, Max, "Irma Stern," in the series *Junge Kunst,* No. 51 (1927); *Menorah,* vol. 2 (1926) 459.

STERN, ITZIG FEITEL, *see* HOLZSCHUHER, JOHANN FRIEDRICH SIEGMUND VON.

STERN, JACQUES, French government official, b. Paris, 1882. He entered political life as the secretary to Leon Bourgeois during the latter's service as minister for foreign affairs. In 1914 Stern was elected to the chamber of deputies, where he consistently excelled in his knowledge of financial matters. He outlined a plan for a financial society of nations, which would have undertaken to solve the problem of the reparations and inter-Allied debts that resulted from the first World War, but opposition prevented its fruition. Stern was made minister for colonies in 1936, and here again his ideas on the reorganization of the colonial system did not have a chance to materialize because of the onrush of international complications that overthrew one French cabinet after another. Late in 1942 Stern arrived in the United States.

STERN, JULIUS, conductor and music educator, b. Breslau, Germany, 1820; d. Berlin, 1883. His first experience as choral conductor was with the Deutscher Gesangverein. In 1847 he founded the Sternscher Gesangverein in Berlin which, under his direction, became world-famous. From 1869 to 1871 he also conducted the Berlin Symphony Orchestra, and in 1873 the concerts in the Reichshalle. He was famous also as a music educator, being one of the founders of the Stern Conservatory in Berlin (1850), which he directed successfully for many years, and which became one of the great music conservatories of Europe.

In 1849 he was given the honorary title of Königlicher Musikdirektor, and in 1860 that of professor. Stern composed an opera, *Ismène,* which was never performed, and published several volumes of vocal exercises and small pieces for violin and for piano.

Lit.: Stern, Richard, *Erinnerungsblätter an Julius Stern* (1886).

STERN, JULIUS DAVID, editor and publisher, b. Philadelphia, 1886. He studied at the University of Pennsylvania (A.B., 1906; LL.B., 1909), started as a reporter for the Philadelphia *Public Ledger* (1908), became general manager of the Providence *News* (1911), and purchased several newspapers in New Jersey, Illinois and Pennsylvania. Stern published the New York *Post* from 1933 to 1939, and the Philadelphia *Record* from 1928 on. In 1936 he was named general chairman of the Publishers and Advertisers Division of the United Palestine Appeal, to assist in raising $1,500,000 for the settlement in Palestine of a maximum number of refugees. In the following year he was recipient of the Shield plaque of the Civil Service Association of Camden County, N. J., given him in recognition of the part played by one of his papers, the *Post-Courier,* in the successful campaign for the adoption of civil service in Camden County.

DAVID STERN, 3RD (b. Philadelphia, 1909) was the son of Julius David Stern. He served as dramatic critic (under the pen name of Peter Stirling) with the Philadelphia *Record* (1933-37). From 1939 on he held a leading position with the Camden *Courier Post.*

STERN, KURT GÜNTHER, biochemist, b. Tilsit, Germany, 1904. He received the Ph.D. degree from the University of Berlin (1930), and went to the United States, where he worked at the Rockefeller Institute, in New York city (1930-31). Stern returned to Berlin, where he was affiliated with the Virchow Hospital (1931-33), but after the Nazis came to power (1933) he emigrated to England and worked at the Courtauld Institute of Biochemistry of Middlesex Hospital, in London (1933-35). Stern settled in the United States in 1935, worked at the Yale University School of Medicine (1935-42), and in 1942 became affiliated with the Overly Biochemical Research Foundation, in New York. He was (1943) a member of the New York Academy of Sciences and of the American Chemical Society.

His works include *Allgemeine Chemie der Enzyme* (with J. B. S. Haldane; 1932) and *Biological Oxidation* (with C. Oppenheimer; 1939).

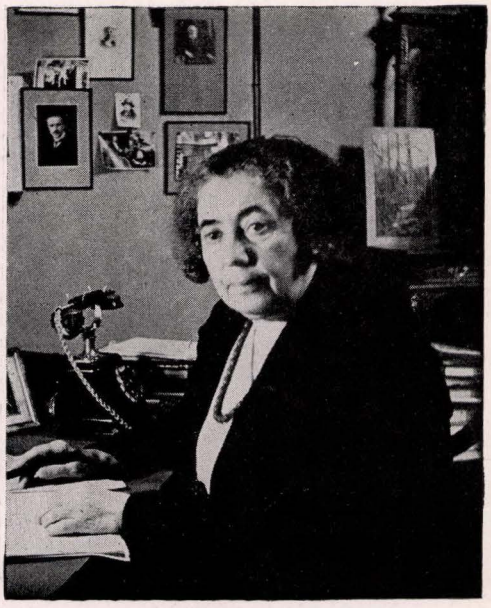
Lit.: *New York Times,* Oct. 11, 1941.

STERN (SHTERN), LINA SOLOMONOVNA, physiologist, b. Libau, Latvia, 1878. She studied physiology in Switzerland and from 1906 to 1925 was on the faculty of the University of Geneva, first as lecturer and then as occupant of the chair of physiological chemistry (1917). In 1925 she returned to the Soviet Union to offer her services and was given the chair of physiology at the Second Medical Institute in Moscow. In 1929 she was entrusted by the Soviet government with the organization of a scientific research institute of physiology. Subsequently she organized a section on physiology of age at the Moscow Institute for the Protection of Motherhood and Infancy, a sec-

tion of general physiology at the All-Union Institute of Experimental Medicine, and sections for research work in physiology at the Medical and Biological Institute and at the Metchnikoff Institute in Moscow.

Her work in the field of physiology is known all over the world. She published more than 250 works, most of which were translated into all European languages. They deal chiefly with endocrinology, fermentology and the so-called barrier functions of the haemato-encephalic barrier, the chemical and physico-chemical basis of nervous activity, and the problems of the sleep respiratory process. In addition to being a brilliant scientist she was a remarkable teacher (more than fifty per cent of her students received high honorary awards) and an active figure in public life. She was active in socio-political life before 1925, and became a member of the Communist Party of the Soviet Union in 1931.

In 1932 Lina Stern was elected to membership in the German Academy of Natural Sciences. In 1937, on the thirtieth anniversary of her scientific and pedagogical activities, she received congratulations from 200 scientists of twenty different countries and the Soviet government conferred the title of "Honored Scientist" upon her. In 1939 she became a full member of the Academy of Sciences in the USSR, a signal honor, as she was the only woman who was a full member in its more than 200 years of existence.



In 1943 she was actively engaged in preparing young scientists to take their places in the conduct of the war and the post-war reconstruction.

L., *The Romance of Russian Medicine* (1937) 313; Sigerist, H. E., *Socialized Medicine in the Soviet Union* (1937) 299, 303, 309.

STERN, MAX EMANUEL (pseudonym, Mendel Bri Stern), Hebrew writer and German poet, b. Pressburg (Pozsony), 1811; d. Vienna, 1873. He was initiated into Hebrew poetry by his father Isaac, whom he served as assistant at the Pressburg Primarschule (communal school) from the age of twelve on. He was only fourteen when he took complete charge of the teaching duties of his father, who had lost his eyesight. Stern's first Hebrew poem was published in *Bikkure Haittim* when he was twelve, and in the same year appeared a slender volume of his German verse, *Einige halbreife Erstlinge* (1824). In 1833 he went to Vienna, where he became reader and corrector at Anton von Schmid's printing office. From 1835 to 1837 he taught at the Hebrew and German school of Eisenstadt. In 1839 his epic poem on the prophet Elijah, *Tifereth Hatishbi,* was published under the pseudonym of M. J. Ernst.

In 1844 Stern published a collection of Hebrew writings which he called *Bikkure Haittim* after the well-known year book. The following issue (1845) was entitled *Kochebe Yitzhak,* and it was under that title that thirty-six volumes were published up to 1860. Stern was made a member of the Deutsche Morgenländische Gesellschaft; twice he received subsidies from the Imperial Academy of Sciences at Vienna, and was awarded a gold medal by the Austrian emperor.

Stern was a prolific author. His more important works include: *Maslul Leshon Eber,* a Hebrew grammar (5th ed., 1844); *König Sauls Glück und Ende,* a tragedy (1833); *Ebel Mosheh,* an elegy on Moses Sofer's death (1840); *Toledoth Yisrael,* a history of the Jews during the period of the Second Temple (1844); *Otzar Hamillin,* a dictionary of the Talmud (1863); *Kether Torah* (1864). He published also German versions of *Proverbs,* versified (1832) and literal, with a Hebrew commentary (1833); of *Sirach* (1844); of Jedaiah ben Abraham Bedaresi's *Behinath Olam* (1847); of Judah ben Solomon al-Harizi's *Tahkemoni* (1854); of Maimonides' *Moreh Nebuchim* (1864); and of Immanuel of Rome's *Hatofeth Vehaeden* (1865).

Lit.: Würzbach, *Biographisches Lexikon,* vol. 38 (1879) 241-46.

STERN, MILFORD, lawyer, b. New York city, 1882; d. Detroit, 1932. In 1902 he was an instructor of mathematics at the Hebrew Technical Institute, New York, and from 1903 to 1908 a teacher in the New York public schools. In 1908 he went to Detroit to enter the real estate business, combining it with law practice after his graduation from the Detroit College of Law in 1912. He served three terms as president of the Jewish Welfare Federation, and was a director of the Union of American Hebrew Congregations and a member of the Union's commission on social justice and of its finance board.

Stern was chairman of the committee of social betterment of the World Union for Progressive Judaism, director of the Jewish Centers Association of Detroit, trustee of the National Jewish Hospital at Denver, and president of Temple Beth El, Detroit, from 1925 to 1928. In 1928 he was sent to Mexico as a member of the good will committee of the Federal Council of Churches.

Lit.: *New York Times,* March 1, 1932; *American Hebrew,* March 4, 1932.

STERN, MORITZ, historian, b. Steinbach, Hesse-Nassau, Germany, 1864; d. Berlin, 1939. He was rabbi at Kiel (1891-98), director of the Jewish Realschule at Fürth (1898-99), principal of a Jewish school in Berlin (1900-5), and in 1905 he was appointed director of the library of the Jewish community in Berlin, a position which he held until 1932. At the time of his retirement the library had reached a total of more than 70,000 volumes.

Stern's writings include: *Die israelitische Bevölkerung der deutschen Städte* (parts 1 to 6, 1890 to 1937); *Urkundliche Beiträge über die Stellung der Päpste zu den Juden* (2 vols.,

Samuel R. Stern

1893-95); *König Ruprecht von der Pfalz in seinen Beziehungen zu den Juden* (1898); *Aus der Zeit der deutschen Befreiungskriege 1813-1815* (parts 1 to 5, 1918 to 1938); *Aus dem Berliner Jüdischen Museum* (1937). Together with R. Hoeniger, he edited *Das Judenschreinsbuch der Laurenzpfarre zu Köln* (1888), and, in collaboration with Adolf Neubauer, *Hebräische Berichte über die Judenverfolgung während der Kreuzzüge* (1892). From 1929 to 1937 Stern was co-editor of the *Zeitschrift für die Geschichte der Juden in Deutschland*. A bibliography compiled by Joseph Stern (Jerusalem, 1939) listed 124 publications by Stern.

STERN, MYER, communal leader, b. Bavaria, Germany, 1824; d. New York city, 1899. He arrived in the United States in 1849, and became a prosperous merchant. As one of the earliest members of Temple Emanu-El, New York, he was prominently identified, particularly as secretary, with its activities until his death. On the occasion of its fiftieth anniversary he published *The Rise and Progress of Reform Judaism, Embracing a History Made from the Official Records of Temple Emanu-El of New York* (New York, 1895). Stern served as president of the Institute for the Instruction of Deaf Mutes and of the Hebrew Benevolent and Orphan Asylum Society. As a commissioner of charities and correction (1872), he promoted important legislation concerning institutions for dependent children. Stern was one of the founders of the early Jewish Publication Society in New York city (1873).

Lit.: *American Hebrew,* Aug. 11, 1899, pp. 432-33.

STERN, NATHAN, rabbi, b. New York city, 1878. He received the Ph.D. degree from Columbia University in 1901, and after studying at St. John's College in Cambridge, England, and at the Jewish Theological Seminary in New York, he received his rabbinical degree (Hebrew Union College) in 1904. His first rabbinical post was in Wabash, Indiana; then, in 1905, he came to Trenton, New Jersey, where he was also commissioner of the public library of Trenton and Jewish chaplain of the New Jersey State Prison.

In 1910 Stern became rabbi in Providence, Rhode Island, and during his incumbency he was also a lecturer in Hebrew and Biblical literature at Brown University. Called to the West End Synagogue in New York city as assistant to Frederick de Sola Mendes in 1915, he was made associate rabbi the following year and rabbi in 1923, and was still serving in 1943. He was a member of the executive board of the Society for the Jewish Deaf and of the Jewish Big Brothers; he was founder of the Institute for Youth Leadership in New York city and its chairman (1930-).

STERN, NEUTON SAMUEL, physician, b. Memphis, Tenn., 1890. He received the M.D. degree from the Harvard Medical School (1915), pursued postgraduate studies in London, and was appointed associate professor of medicine at the University of Tennessee College of Medicine, a position which he still held in 1943. In 1919 he was awarded the Médaille d'Honneur de la République Française. For several years Stern edited the *Memphis Medical Journal,* and wrote *Clinical Diagnosis* (1933).

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 111, 586.

STERN, PHILIP, attorney and Jamaican public official, b. Kingston, Jamaica, British West Indies, 1847; d. Kingston, 1933. Called to the Bar Middle Temple in 1869, he was admitted as a member of the Jamaica Bar in 1870 when he soon became leader. He was considered the best advocate of his time. Stern served as a member of the Legislative Council for St. Catherine, and later for Kingston, and as registrar of the Supreme Court (1909-10). He was appointed a King's Counsel and justice of the peace for Kingston in 1912, and was three times mayor of Kingston. A prominent Mason, he served on several government committees, and was a governor of the Institute of Jamaica.

Lit.: *Gleaner,* Sept. 15, 1933.

STERN, SAMUEL R., judge, b. Syracuse, N. Y., 1855; d. Seattle, Wash., 1937. He removed to Spokane, Wash., in 1891, and served there as counsel for several important railway companies, including the Great Northern Railway and the Union Pacific. In 1925 he was appointed judge of the superior court of the state of Washington. He was president of the Washington State Bar Association, and represented the Spokane Chamber of Commerce on a visit to China in 1910. Stern was prominent in the B'nai B'rith.

STERN, SIGISMUND, teacher and Reformer, b. Karge, Posen, Germany, 1812; d. Frankfort, Germany, 1867. He became director of the Von Jost pension and school at Berlin in 1835, and in 1855 director of the Philanthropin in Frankfort. From 1844 to 1845 he delivered a series of lectures in Berlin on the tasks of Judaism and of the Jews; therein he outlined a program for a "Deutsch-jüdische Kirche" ("German-Jewish church"). These lectures gave impetus to the founding of the Genossenschaft für Reform, a society for Reform of which he was the organizer and leading spirit. The political movement of 1848 pushed his Reform activities into the background, as he devoted himself to it both as speaker and writer. In Frankfort he delivered lectures on literature, also on the history of Judaism from Moses Mendelssohn to his own times; these were published as his chief work in 1857 (2nd ed., 1870). Stern was chairman of the Allgemeiner Deutscher Lehrerverein.

Lit.: Auerbach, J., *Programm des Philanthropins* (1868) 3-15; Baerwald, *Geschichte des Philanthropins,* 105-12; Ritter, I. H., *Geschichte der jüdischen Reformation,* vol. 3, p. 232 et seq.; Philipson, David, *The Reform Movement in Judaism;* Galliner, Arthur, *Sigismund Stern der Reformator und der Pädagoge* (1930).

STERN, SIMON ADLER, author and financier, b. Philadelphia, 1838; d. Philadelphia, 1904. He was the foremost authority among the American Jews of his day on literature and music. He translated several works by Heinrich Heine and Berthold Auerbach from

German into English, and wrote *Jottings of Travel in China and Japan*. He was editor of the *Penn Monthly* and the *Industrial Review*, and prominent in finance. For many years he was associated in the publishing business with his brother Edward (d. 1923), who was active in communal fields in Pennsylvania and the head of one of the largest printing-presses in Philadelphia.

Lit.: *American Jewish Year Book*, 1904-5, pp. 409-18; *Publications of the American Jewish Historical Society*, No. 16 (1907) 203.

STERN, WILLIAM, philosopher and psychologist, b. Berlin, 1871; d. Durham, N. C., 1938. He was a grandson of Sigismund Stern. In 1897 he became instructor and in 1907 assistant professor at the University of Breslau, and in 1916 was appointed associate professor of psychology and philosophy, and director of the psychological institute and philosophical seminary of the University of Hamburg. Ousted by the Nazis in 1933, he was called in 1934 to Duke University, N. C., as professor of psychology, and in 1936 he was one of the distinguished foreign scholars invited to teach in the Harvard Tercentenary Summer School.

Stern was a pathfinder in the field of applied psychology and child psychology, and developed a philosophical system of his own, known as personalism. He originated the concept of the intelligence quotient (I.Q.). As editor of the *Zeitschrift für angewandte Psychologie* (with Lipman; 1907-33) he was instrumental in furthering applied psychology in Germany.

His numerous writings include: *Die Psychologie der individuellen Differenzen* (on differential philosophy; 1900), which was supplanted by *Die differentielle Psychologie in ihren methodischen Grundlagen* (1911; 3rd ed., 1930); *Helen Keller, die Entwicklung und Erziehung einer Taubstummblinden* (1905); *Psychologie der frühen Kindheit bis zum sechsten Lebensjahre* (1914; 6th ed., 1930; English trans., *The Psychology of Early Childhood*, 1928); *Person und Sache* (his philosophical main work; 3 vols., 1906-24); *Allgemeine Psychologie auf personalistischer Grundlage* (1935; English trans., *General Psychology from the Personalistic Standpoint*, 1938). He was co-editor of the *Zeitschrift für pädagogische Psychologie* (1916-33), of *Hamburger Arbeiten zur Begabungsforschung* (1919-33) and *Hamburger Untersuchungen zur Jugend- und Sozialpsychologie* (1929-33).

Lit.: Sanborn, Herbert, "An Explanation of Stern's Philosophy," *Character and Personality*, vol. 7 (June, 1939), No. 4, 318-30; Cassirer, Ernst, "William Stern," *Acta Psychologica*, vol. 5 (1940), No. 1.

STERN-TÄUBLER, SELMA, historian, b. Kippenheim, Baden, Germany, 1890. She was an outstanding authority in the field of the history of the Jews in Germany. In 1910 she joined the staff of the Akademie für die Wissenschaft des Judentums in Berlin. She published the books *Anacharsis Cloots der Redner des Menschengeschlechts* (Berlin, 1914); *Karl Wilhelm Ferdinand, Herzog zu Braunschweig und Lüneburg* (1921); *Der preussische Staat und die Juden*, vol. 1 (1925); and *Jud Süss* (1929). The last-named two books unfold and clarify the facts of Jewish history as part of the general political, social and economic history of Germany. Selma Stern-Täubler, wife of the historian Eugen Täubler, settled at Heidelberg, but moved to Berlin in 1935, where she worked on the manuscript of the second volume of *Der preussische Staat und die Juden*.

Articles of hers on the history of the Jews in Germany appeared in *Zeitschrift für die Geschichte der Juden in Deutschland*. She also contributed a monograph on the history of the communal organization of the Jews of Baden to *Gedenkbuch zum 125-jährigen Bestehen des Oberrats der Israeliten Badens* (1934). In 1941 she emigrated with her husband to the United States, and in 1943 she was living in Cincinnati.

STERNBERG, KURT, philosopher, b. Berlin, 1885. He studied at the University of Berlin (Ph.D., 1908), after which he became lecturer at the Lessing Hochschule in Berlin. Since he was reported living in Berlin in 1938 nothing further was heard about him. A prolific writer on philosophy and history, Sternberg developed his Neo-Kantian theories in *Beiträge zur Interpretation der kritischen Ethik* (1912); *Logik der Geschichtswissenschaft* (1925); *Einführung in die Philosophie* (1919); and in numerous essays. His reputation rests also on the historical monographs *Walther Rathenau der Kopf* (1924) and *Heinrich Heines geistige Gestalt und Welt* (1929).

In *Idealismus und Kultur* (1923) Sternberg sought, by means of an emphasis on an optimistic and idealistic interpretation of history, to counteract the pessimistic outlook of Spengler's concept of world history. He published also: *Staatsphilosophie* (1923); *Die Geburt des Etwas aus dem Nichts* (1933); *Die Ursprungsgedanken im biblischen Schöpfungsberichte und in Goethes "Faust"* (1934); *Philosophische Probleme im biblischen und apokryphischen Schrifttum der Juden* (1938).

STERNBERG, LEV YAKOVLEVICH, ethnologist, b. Zhitomir, Russia, 1861; d. Leningrad, 1927. He was an ardent follower of the Socialist movement as a young student, and in 1910 was exiled to the isle of Sakhalin, in the Far East, for ten years. There he devoted his time to ethnographical and ethnological research. He studied the language and folklore of the Giljake, a nomad tribe of the northeastern part of Siberia. After his return to Russia he became a member of the Academy of Science in St. Petersburg (later Leningrad), and professor of ethnography and anthropology at the Geographical Institute.

Sternberg was a contributor to numerous Jewish periodicals, and an active member of the Jewish historical-ethnographical society. His essays on Jewish anthropology, Jewish national psychology and Jewish ethnography appeared in *Yevreiskaya Starina*.

Lit.: *Yevreiskaya Starina*, 1928, pp. 7, 399 et seq.; Brutskus, Boris, "Three Jewish Leaders in Russia," *B'nai B'rith Magazine* vol. 43 (1928-29) 234-35, 241.

STERNBERGER, ESTELLE MILLER, communal worker, radio commentator and writer, b. Cincinnati, 1886. She served as executive secretary of the National Council of Jewish Women (1920-32), and was chosen to represent the organization at the World Conference of Jewish Women held at Hamburg, Germany, in 1929. In 1932 she became executive director of World Peaceways, Inc., and still held this post in 1943. She was first vice-president of the National Council of Women of the United States (1932-36), and national co-chairman of the Good Neighbor League (1936-37), founded by Franklin D. Roosevelt. She was editor of *The Jewish Woman* (1921-32), and (in the 1940's) radio commentator. She wrote *The Supreme Cause* (1936).

STERNE, ADOLPHUS, Texas pioneer, b. Cologne, Germany, 1801; d. New Orleans, La., 1852. He came to the United States in 1817 and settled in the vicinity of New Orleans, where he remained until 1824. Then he went to Texas, engaging in trade. His support, through selling ammunition, to the English insurgents against Mexican power in one of the many scuffles in the territory brought Sterne a death sentence, from which he was saved as the result of a general amnesty. Thereafter he remained faithful to an oath of allegiance he had taken, but it did not prevent him

from giving tacit consent to the use of his estate by the revolutionists in Nacogdoches, where he lived, during the Nacogdoches battle in 1832.

With Texas a free territory, Sterne became an interpreter and judge, and later a member of the lower and upper houses of the territorial congress.

Lit.: *Publications of the American Jewish Historical Society,* No. 2 (1894) 140-43; Wiernik, Peter, *History of the Jews in America* (1931) 159.

STERNE, MAURICE, painter and sculptor, b. Libau, Latvia, 1878. After attending the Technical School at Moscow, he came to the United States at the age of twelve. His early apprenticeship in art began at an engraver's, where the medium of wax led him to modeling figures. For four years, during which he helped to support himself by a night time job, he studied in the life class at Cooper Union, New York city. Thereafter Sterne became an assistant to James D. Smillie, the distinguished etcher, thus beginning his career as a teacher, a profession followed intermittently at later periods of his life. A traveling fellowship under the auspices of the National Academy of Design gave him the opportunity to become familiar at first hand with the work of European masters. Manet and Whistler were early influences, while Greek sculpture and the Italian 15th cent. masters Mantegna and Pollaiuolo left a continuing impress on Sterne's art of sculpture as well as of drawing and painting. In all these is evident the classic way of form organization, although in later years there are in Sterne's work a freer, more personal approach and a richer treatment of form that still essentially remain simplified.

His sojourn of three years, during his early thirties, in India, Java and Bali led to over a thousand studies and drawings, in color and in black and white, constituting a fascinating group. Stern returned to the United States in 1914, his talent as yet not widely recognized by collectors. He went to Italy in 1922. There, remaining at Anticoli for five years, he painted in comparative poverty. Encouraged by his friend and fellow artist, Edward Bruce, to continue at work, Sterne finished some of his finest canvases, including the celebrated *Sacrifice,* now in the Lewisohn Collection. When these pictures, with some of Sterne's sculpture, were exhibited in New York, Sterne arrived with great success. From that time on his work was exhibited in Paris, London, Berlin and all the chief cities of the United States. He is represented in the foremost art museums of New York, Boston, Pittsburgh, Cleveland, Chicago, San Francisco, Detroit and Washington, as well as in European institutions. He is the recipient of many awards and prizes, and has the rare honor of having been invited to paint his self-portrait for the Uffizi Gallery at Florence.

Four years prior to the exhibition of Sterne's masterly drawings at the San Francisco Museum of Art, a retrospective exhibition of Sterne's work was held in 1933 at the Museum of Modern Art, in New York. Figure paintings, still lifes, landscape, flowers and fruits, interiors—all these showed the evolution of the art of this important artist, who wrote: "The three essentials which have guided me and which I have endeavored to fuse in one are instinct, environment and tradition." These qualities are as equally apparent in his painting and his sculpture. In the latter field his *magnum opus* is his monument at Worcester, Mass., *The Early Settlers of New England,* whose friezes with their groups symbolizing hunting, boat-building, trapping, and the like, are related to the symbolical groups in his large mural paintings in the Department of Justice Building at Washington. Other sculptures showing Sterne's dynamic line and his structural knowledge are *The Awakening,* in the Brooklyn Museum, and *The Bomb Thrower.*

Maurice Sterne

VERA STERNE, wife of Maurice Sterne, and a pupil of Isadora Duncan, gave successful dance recitals in Italy and New York city. She also posed for several works of her husband, including *The Awakening.*

GEORGE S. HELLMAN.

Lit.: Kallen, H. M., *Maurice Sterne and His Times,* published by the Museum of Modern Art (1933); Birnbaum, Martin, in *The International Studio,* March, 1912; *American Hebrew,* July 8, 1927, p. 329; May 23, 1930, p. 17; *Current Biography,* April, 1943, pp. 67-68.

STERNE, SIMON, jurist, b. Philadelphia, 1839; d. New York city, 1901. A specialist in constitutional law and laws concerning railroads, he was counsel for the Interstate Commerce Commission in many famous cases, and had a leading part in drafting the Interstate Commerce Act. He also represented the city of New York in an important suit against the New York Central Railroad Company. He lectured on political economy at Cooper Union, New York city, helped organize the American Free Trade League (1864) and was editor of the *Social Science Review.* He was secretary of the "Committee of Seventy" which unseated the Tweed ring and was called in several times by the governors of New York and by President Grover Cleveland to report on railroad conditions and help formulate changes in government administration. Sterne was a prolific writer in the field of political science, and was co-founder of the New York City Bar Association.

Lit.: Markens, Isaac, *The Hebrews in America* (1888) 249-52; Foord, John, *The Life and Public Services of Simon Sterne* (1903).

STERNER, ALBERT EDWARD, painter, b. London, 1863. His mother was English-born, his father a German-American who had been a "Forty-niner" in California. Sterner received his early education in Birmingham. In 1879 he came to the United States. Later he studied in Paris, at Julian's Academy and at the Beaux Arts under Jean Léon Gérôme. He began to earn his living as a scene painter in Chicago, before entering the field of magazine and book illustration. His drawings for *St. Nicholas, Life, Century, Harper's, Collier's* and *Fliegende Blätter,* as well as for various novels by Mrs. Humphrey Ward and for George William Curtis's *Prue and I,* won for Sterner a distinguished

place in that notable group of American illustrators which included Edwin A. Abbey, Howard Pyle and A. B. Frost.

As early as 1891 Sterner was awarded an "honorable mention" at the Paris Salon for his painting *Le Célibataire,* later owned by the Lotos Club. Three years later he had his first one-man show of paintings and drawings at Keppel's in New York.

During the following period of almost half a century Sterner's reputation steadily increased, and he is recognized as one of the foremost American artists of the conservative school. He used many mediums—pencil, pen and ink, charcoal, lithographic crayon, the etcher's needle, chalks, oils. In every instance the selected subject directed the treatment which Sterner considered technically appropriate. Never succumbing to a settled manner, in later years he arrived at "the knowledge that light and luminous color are the main *technical* factors in the *execution* of painting." While he displayed his talent in still lifes and with increasing freedom in landscapes, Sterner is best-known for his many excellent portraits of men, women and children. Especially charming are his pastel portraits, which compare favorably with those of Latour, while his studies of the nude give further evidence of his mastery as a draughtsman. Uninfluenced by, and indeed disdainful of, what he considers decadent or extreme theories or movements in modern art, Sterner adhered to what he terms "controlled expression."

A man of cosmopolitan culture, Sterner lectured and wrote on various phases of art, and has acted in plays and even written them. He was a founder and former president of the Painter-Gravers of America, a former secretary of the New Society of Artists, and an instructor in the Art Students Leagues, as well as a member of the Society of American Etchers.

Sterner was awarded bronze, silver and gold medals at exhibitions in Paris, Buffalo, Munich and New York, two of his winning paintings being *Harold with the Wolfhound* and *Artist's Table.* Among his other outstanding paintings are: *The White Cock; Minerva in Pink; Hands of Fate;* portraits of Christopher La Farge and Theodore Steinway; *The Denver Clinic,* in the Lankenau Hospital, Philadelphia, and *Celery, Cock and Bowl,* in the Metropolitan Museum of Art, New York. His work is represented in numerous other museums, including Toronto, Carnegie Institute of Pittsburgh, Brooklyn, the South Kensington and the Victoria and Albert of London, and in royal collections in Germany and Italy. GEORGE S. HELLMAN.

Lit.: Flint, Ralph, *Albert Sterner* (in the *Contemporary American Artists* series).

STERNFELD, HARRY, architect, b. Philadelphia, 1883. He studied at the University of Pennsylvania (B.S., 1911; M.S., 1914), at the École des Beaux Arts in Paris (1919-20) and at the American Academy in Rome (1920-21). He was assistant professor of architecture at the Carnegie Institute of Technology (1914-18), and head of the department from 1918 to 1923. In 1923 he was appointed professor of design at the University of Pennsylvania; he still held this position in 1943.

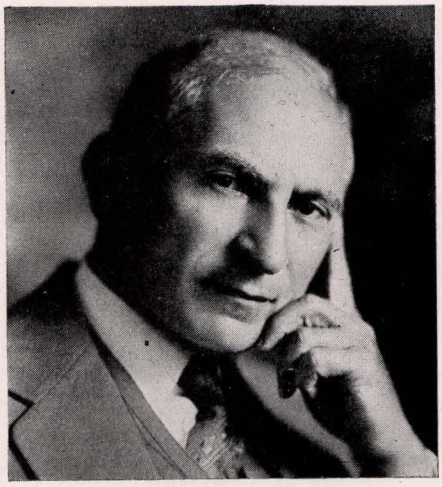
Sternfeld's principal works were: the Slovak Girls' Academy, Danville, Pa.; the Harrisburg, Pa., Catholic high school; the new city plans of Rome, N. Y.; the Pittsburgh Building at the Sesquicentennial Exposition, Philadelphia; the war memorial at Audenarde, Belgium; the Appomattox Memorial, marking the site of General Robert E. Lee's surrender; the United States Court House, Philadelphia; the Headquarters Building, Fort Monmouth, N. J.; the United States Post Office, Milton, Pa.

STERNHEIM, CARL, dramatist, b. Leipzig, Germany, 1878; d. Switzerland, 1943. Sternheim was regarded by many critics as one of the most brilliant satirists of the last years of the Hohenzollern rule in Germany. His first plays, *Ulrich und Brigitte* (1909) and *Don Juan* (1910), did not fully reveal the pungent wittiness of his later works which made him one of the most feared critics of social and moral conditions in Germany. Sternheim's comedies, *Die Hose* (1911), *Die Kassette* (1912), *Bürger Schippel Der Snob* (1913), *Der Kandidat* (1913) and *1913,* showing in a number of well portrayed types the hypocrisy and corruptness of certain sections of the middle classes, were highly successful; several were translated into English.

Less effective were his later plays, such as *Die Scharmante* (1915), *Tabula rasa* (1916), *Der Nebbich* (1922), *Das Fossil* (1926) and *Die Schule von Uznach* (1926). Sternheim also published stories (*Busekow,* 1914; *Napoleon,* the story of a cook, 1915; *Schuhlin,* 1915; *Meta,* 1916; *Fairfax,* 1922) and essays which, like his plays, sharply criticized and satirized society.

In 1928 Sternheim had to be placed in a sanatorium in Switzerland owing to his mental illness. After a few years he recovered; he was discharged as cured and wrote his autobiography, *Vorkriegseuropa. Im Gleichnis meines Lebens* (Amsterdam, 1936).

STETTAUER, CARL, merchant and communal worker, b. Fürth, Bavaria, Germany, 1859; d. London, 1913. He was educated at a Jewish school in Nuremberg and the commercial high school of Fürth.



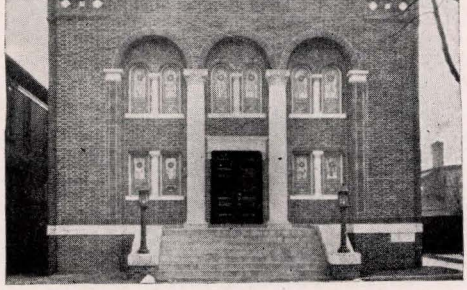
Then he entered the leather trade in his native town, and was later placed with a similar business at Bologna, Italy. For many years he was a commercial traveler for a London business, and thus visited the United States, Spain, Italy, the Balkan peninsula and Turkey. Together with his friend, August Wolff, he founded the leather trade concern of Stettauer and Wolff, which became one of the best-known firms in England. Stettauer was chosen to represent the leather section of the London Chamber of Commerce at the St. Louis Exposition in 1904.

Stettauer's interest in Jewish affairs dated from the founding of the London Hampstead Synagogue, of which he was one of the original members and financial representative. Because of his outstanding merits, the council of the United Synagogue elected him one of its representatives on the Jewish Board of Guardians. In 1904 he represented the Board of Guardians at the International Jewish Conference held at Frankfort to discuss immigration problems. After the pogroms at Kishinev and other Bessarabian towns Stettauer, together with Paul Nathan and David Feinberg, organized relief work; his previous experience during his commercial travels in Eastern Europe were useful, as were his precision and business capacity. He showed great courage also in negotiating with the reluctant Russian authorities and defying their threats and those of the incited mob. A tablet recording his services was placed in the hospital of Odessa. Then Stettauer assisted Hermann Landau in coping with the stream of refugees which increased after the outbreak of the Russo-Japanese war. He was one of the first Jewish members of the London Immigration Appeal Board, and in that quality obtained the removal of many disabilities which hampered relief work.

In English politics Stettauer was a progressive Liberal. He was elected a member of the Stepney borough council in 1903, and in 1909 mayor of Stepney, but he refused the mayoralty because of intrigues on the part of moderate liberals. He was a member of the council of the Anglo-Jewish Association and of the Board of Deputies of British Jews.

STETTEN, DEWITT, surgeon, b. New York city, 1881. One of his ancestors was the noted Paduan Tal-

George Wolf



Max D. Steuer

mudist, Meir ben Isaac Katzenellenbogen. He received the M.D. degree from Columbia University (1901), and did much post-graduate work in Vienna, Prague and Breslau. During the first World War he served in the Medical Corps, and was made a major in 1918. He was instructor in clinical surgery at Columbia University (1909-18), and became clinical professor of surgery at the New York University College of Medicine in 1931; he still held this position in 1943.

In 1929 he became chairman of the Board of Medical Control and trustee of the Blood Transfusion Betterment Association. He headed the Medical Society of the County of New York (1929; trustee, 1932-35; chairman of the board of trustees, 1935), and served as chairman of the Doctors' Committee in the Federation for the Support of Jewish Philanthropic Societies of New York City (1930-31). Stetten wrote many surgical papers, mostly dealing with hernia, diseases of the gall-bladder and abdominal surgery.

STETTINER, RICHARD, art historian, b. Berlin, 1865; d. Hamburg, Germany, 1929. He was professor of art at Hamburg and curator of the antiquities of that city, and published: *Die illustrierten Prudentius-Handschriften* (1895-1905); *Das Webebild in der Maneshandschrift und seine angebliche Vorlage* (1911); *Das Kleinodienbuch des Jacob Mores* (1916); (jointly with Richard Graul) the art review *Das Museum* (vols. 1 to 11, 1896 to 1911).

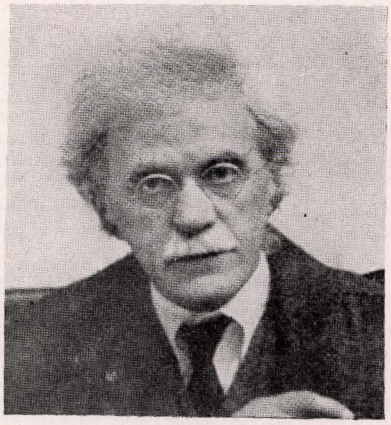
Lit.: *Wiener Morgenzeitung,* Dec. 17, 1927; Wininger, S., *Grosse Jüdische National-Biographie,* vol. 6 (1932) 33.

Temple Beth El of Steubenville

STEUBENVILLE, a city of Ohio, which in 1943 included about 1,000 Jews in its total population of 37,651 (census of 1940). Steubenville was chartered a city in 1871. In the decade of the 1880's the beginnings of a Jewish community began to emerge. Among the first Jewish settlers were William May, Joseph May, Jonas Munker, Mayer Levinson, A. J. Rothstein and Abraham Levine. About 1890 the Orthodox Congregation Bnai Israel was formed; it bought a church building and converted it into a synagogue in 1901. In 1943 Rabbi Noah Rosenbloom occupied the pulpit of Bnai Israel synagogue. He was the first ordained rabbi of the congregation; previously those who had served it combined the functions of Hazan and Shohet.

The Reform Temple Beth El was founded in 1922, and erected its house of worship in 1924. Rabbis who served the congregation were Jerome Rosen (1926), Hyman A. Iola (1927-28), Howard L. Fineberg (1929), Bert Stein (1931), Paul Richman (1933-34), Samuel Soskin (1935-36), Maurice Feuer (1937), Irving I. Hausman (1940-43), Robert L. Katz (1943-).

Other organizations of Steubenville Jewry in 1943 included a lodge of the B'nai B'rith (1915), and an Aleph Zadek Aleph (1932); a chapter of Hadassah (1924); a Junior Hadassah (1929); a branch of Mizrachi (1940); and a Jewish Community Council.



Steubenville Jews were mainly engaged in business. A very small number were workers in industry. In 1943 there were approximately thirty members of the community in the various professions. Several distinguished themselves in public office. Ralph Levinson was city solicitor (1920-24). Samuel Freifield was United States Commissioner for the Southern District of Ohio (1932-35), and a trustee of the Ohio Association of Arbitration Tribunals (1934-35). Elias Bloch, who had been head of the city recreation department (1930), was in 1943 head of the city's civilian defense. Harry May was president of the Jefferson County Bar Association (1943). IRVING I. HAUSMAN.

STEUER, ARON, judge, b. New York city, 1898. He was the son of Max David Steuer. After receiving the A.B. degree from Harvard University in 1920 and the law degree from Columbia University in 1923, Steuer entered the practice of law in New York city. In 1930 he became a justice in the city court of New York, holding this post until 1932, when he was elected to the Supreme Court of the State of New York, where he was still serving in 1943. Steuer was made a trustee of the Young Men's Hebrew Association in 1925, and retained the trusteeship in 1943.

He was on several occasions outspoken on behalf of Jewish interests; in 1935 he urged an investigation of conditions in Germany before the United States participated in the Olympics, held in Berlin the following year. Steuer served in the Tank Corps during the first World War.

STEUER, MAX DAVID, lawyer, b. Munkács, Hungary, 1871; d. Jackson, N. H., 1940. He was brought to the United States at the age of six, and educated in New York city. Receiving his law degree from Columbia University Law School in 1893, he established himself in private practice that same year.

Steuer's success as a criminal lawyer was based on his genius for making brilliant tactical courtroom procedure seem natural, almost naive, behavior. This same brilliant grasp of legalities, however, served him outside the courtroom as well, so that his advice and suggestions were dearly bought, but well worth-while, investments. Allied with the Democratic Party machine, he was known in the beginning as the "Tammany lawyer," but this association became forgotten later, as his individual prowess won him a place as one of New

Alfred Stieglitz

York city's best-known legal characters. Many of Steuer's cases were involved taxation processes, demanding a mastery of staggering financial figures. One such case was his successful defense of Charles E. Mitchell, a New York banker, against charges of income tax evasion. Steuer succeeded twice in breaking a will left by Amos F. Eno, in which Columbia University was bequeathed most of a $13,000,000 estate. The surrogate's refusal to accept this judgment led to a compromise settlement between the university and the heirs.

In 1909 Steuer was defense counsel in the lawsuit which arose as a result of the Triangle Shirtwaist Factory fire, which took 147 lives. In 1931 he served without fee, on behalf of the New York State attorney general, in the investigation and prosecution of the officers of the Bank of United States. He was a delegate to the state constitutional convention in 1937.

Steuer was a trustee of the Federation for the Support of Jewish Philanthropic Societies of New York City from 1926 until his death. In 1927, following a trip to Europe, where he attended the World Minorities Conference as a delegate of the American Jewish Congress, Steuer caused a flurry in official Jewish circles by charging that the American moneys intended for European relief had, prior to 1925, not been judiciously expended. The Joint Distribution Committee, through Louis Marshall and other leaders, refuted the charges. In 1925 Steuer became an active figure in the American ORT, and remained one of the important supporters of the organization until his death, speaking frequently on its behalf until his death. From 1938 to 1940 he was chairman of the New York campaign. Steuer was awarded an honorary LL.D. degree by John Marshall College in 1936.

Lit.: New Yorker, May 16, 1931, pp. 13-14; Boyer, Richard O., *Max Steuer, Magician of the Law* (1932); *New York Times,* Aug. 22, 1940; *New York Herald Tribune,* Aug. 22, 1940.

STEUERMAN, ADOLF-RODION, poet and physician, b. Jassy, Roumania, 1872; d. Jassy, 1918. Considered one of the most talented lyric poets of his time, he was also one of the foremost essayists and journalists of that period. He published five volumes of poetry, of which the most popular are *Saracie* (Poverty), *Lirice* (Lyrics) and *Spini* (Thorns), as well as a volume of impressionistic sketches, *O toamna la Paris* (Autumn in Paris). His column "Oameni si lucruri" (Men and Things), which was his daily contribution to the Jassy newspaper *Opinia* (The Opinion) for twenty years, made him known as one of the most gifted journalists of his generation.

For three years he edited the Zionist weekly *Rasaritul* (The East; 1899-1901). As secretary of the Jassy section of the Union of Native Jews, he participated in the struggle for emancipation. In 1918, after returning from the first World War, in which he had taken part as a physician with the rank of lieutenant, he committed suicide, declaring in a letter that he was "irremediably tired of life."

STEUSS, the wealthiest and most renowned of all the families belonging to the Jewish community of Vienna before it was destroyed in 1421. David Steuss was a very influential financier who lent money to many Austrian noblemen, among others to the burgraves of Maidberg. He was on friendly terms with the archbishop of Brixen, chancellor of the duchy of Austria. The loans with which Steuss provided the archbishop were so considerable that not only all the personal property of the archbishop but also that of the Brixen cathedral were mortgaged to Steuss. The archbishop, in a letter to Duke Rudolph of Austria, characterized David Steuss as "an honest and wise man." David Steuss' financial activity is proved by documents.

His sons Jonas, Jacob and Hendel Steuss continued his business, but on a smaller scale. They purchased and sold mainly real estate, especially vineyards. The last document describing one of their transactions was dated in 1419. In 1421 Duke Albrecht V seized their fortune and their commercial archives, part of which were preserved in Vienna.

Lit.: Revue des études juives, vol. 96 (1933) 199-204.

STIEDRY, FRITZ, conductor, b. Vienna, 1883. He studied at the Vienna Conservatory, and at the University of Vienna, where he received his doctorate in law. Mahler discovered him and appointed him assistant conductor at the Vienna Opera. Engagements followed in many German cities, following which he was appointed principal conductor of the Cassel Opera (1913). From 1914 to 1923 he was first conductor of the Berlin Opera. In 1929 Stiedry became general music director of the Berlin Municipal Opera, succeeding Bruno Walter. He held this post with outstanding success until he was forced to resign because of the rise of the Nazi government.

In 1933 Stiedry went to the Soviet Union, and for four years conducted the Leningrad Philharmonic Orchestra. In 1938 he settled permanently in the United States, and was appointed conductor of the newly-organized New Friends of Music Orchestra, with which he directed unusual compositions both old and new, including cycles devoted to works of Bach, Haydn and Mozart.

STIEGLITZ, ALFRED, photographer and editor, b. Hoboken, N. J., 1864. He studied at the College of the City of New York, and later specialized in mechanical engraving and photo-chemistry at various Berlin universities.

Returning to the United States in 1890, Stieglitz settled in New York, practising photo-engraving and photography. His pioneering services in modern art, applied first to his own field of photography, made him an internationally-known figure in a short time. His work, leaving the one-dimensional graphic behind, sought an interpretative view of the processes and the products of living through the camera's lens. Stieglitz became editor of the *American Amateur Photographer* (1892-96), *Camera Notes* (1897-1903) and *Camera Work* (1903-).

Although photography, in its progressive 20th cent. form, remained Stieglitz' profession, his devotion to art in its more comprehensive meaning, implanted on what was the untilled artistic soil of the United States at the turn of the century, resulted in a great pioneering service. He introduced modern European artists to

the United States, and later sponsored the native art that responded richly to the European incentive. His importance to the cultural maturation of the country, in art, was acknowledged in several books of the period, including Waldo Frank's *Our America.* A tribute to Stieglitz, *America and Alfred Stieglitz,* with contributions by twenty-five authors, appeared in 1934. Stieglitz' Photo-Secession Gallery, known as "291," was the earliest center of his efforts; later he was the founder of the Intimate Gallery and of An American Place. He was the recipient of more than 150 medals from various countries, and was honorary vice-president of the Society of American Painters and Sculptors.

STIEGLITZ, JULIUS OSCAR, chemist, b. Hoboken, N. J., 1867; d. Chicago, 1937. He was the brother of Alfred Stieglitz. He studied at the University of Berlin (Ph.D., 1889), joined the faculty of the University of Chicago (1892) and was appointed professor of chemistry. In 1915 he was made chairman of the department of chemistry, and during the first World War he was chairman of the sub-committee on synthetic drugs of the National Research Council. From 1918 until his death he served as special expert of the United States Public Health Service, on the Council on Pharmacy and Chemistry of the American Medical Association (1905-19), and was president of the Institute of Medicine of Chicago and of the American Chemical Society.

His research work covered almost the entire field of organic and inorganic chemistry, embracing molecular rearrangements, catalysis, nitrogen compounds, the theory of color production and the application of the electron theory of valence to organic compounds. Stieglitz was regarded as the pioneer in establishing the interdependency of chemistry and medicine.

Stieglitz was one of the co-authors of the report *The Future Independence and Progress of American Medicine in the Age of Chemistry* (1921), author of *The Nature and the World of Man* (1927), and associate editor of *The Journal of the American Chemical Society* (1912-19). His textbook, *Qualitative Chemical Analysis* (1911), a standard work, was used in universities in the United States and other countries.

In 1933 Stieglitz was made professor emeritus, but remained for research work and as lecturer.

Lit.: Journal of Industrial and Engineering Chemistry, Feb., 1917, pp. 118-19; *American Men of Science;* Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 331-32.

STIGLITZ, family of Russian barons of Jewish origin. Nicolai and Ludwig Stiglitz, the sons of a Jewish physician at Arolsen, Waldeck, Germany, migrated to Russia at the end of the 18th cent. Nicolai Stiglitz (d. 1827) became a merchant in Kherson, and later formed a partnership with Abraham Peretz. He acquired the leases of the salt and wine monopolies in Crimea, and in 1812 was one of the chief purveyors for the Russian army. He was baptized and given a government position with the ministry of finance. Ludwig Stiglitz (1777-1842), who was also baptized, was appointed court banker and was raised to the dignity of a Russian hereditary baron in 1826 for his active participation in important financial affairs. His son Alexander Stiglitz (d. 1884) became his successor as head of the banking house, and was founder of a renowned art school in St. Petersburg.

Lit.: Yevreiskáya Entziklopedia, vol. 16, cols. 116-17.

STILES, EZRA, Protestant clergyman and college president, b. North Haven, Conn., 1727; d. New Haven, 1795. He was minister of the Second Church, Newport, R. I., from 1755 to March, 1776, when the American Revolution broke up his congregation. He was called to the presidency of Yale College in September, 1777, and served in that capacity from July, 1778, until his death. It is generally conceded that Stiles was the most learned New Englander of his time. His interests were manifold and his fund of knowledge was encyclopedic.

In his youth Stiles regarded the Jews with typical mistrust and intolerance, but after assuming the Newport pastorate he came into close contact with the small Jewish community of that city and gradually his anti-Jewish prejudices disappeared and were succeeded by a relationship of mutual friendship and respect. As early as 1759 he sent a Latin letter to a Greek priest in the Near East by means of a Palestinian Jew, making inquiry regarding the present whereabouts of the lost Ten Tribes. Throughout the remainder of his life he sent letters all over the world concerning the same subject. Unlike many of his American contemporaries, Stiles did not believe that the American Indians were descendants of the lost Israelites.

In his unpublished papers and in his *Literary Diary,* which he kept diligently from 1769 to the end of his life, there are innumerable indications of his interest in Jewish literature, beliefs and customs. His *Diary* is the most accurate document extant concerning the history of the Newport Jewish community from the building of its synagogue in 1762-63 to its decline in the early years of the Revolution. He knew the Jewish citizens intimately; he came frequently to the synagogue on Sabbaths and holidays; his descriptions of sermons, liturgy and ceremonies are minutely exact.

In 1767, when he was nearly forty years of age, he determined to master the Hebrew language. In less than a year he began to translate the Bible from the original into English. He finished his task on October 22, 1770. From January 1, 1771, he set aside a portion of each day for the study of the Targums, the commentaries of Rashi and David Kimhi, the *Moreh Nebuchim* of Maimonides, and portions of the Talmud. On October 26, 1771, he commenced to read the Siddur and Mahzor (prayer-books), a quickly accomplished assignment. On November 25, 1772, he began to study the *Zohar.* This mystical work fascinated him, and he spent much time with it. He also taught himself Arabic and Syriac. He made such good progress that he was able, on December 31, 1773, to send his greatly admired friend, Rabbi Hayim Isaac Karigal of the West Indies, a Hebrew letter twenty-nine pages in length!

Although the coming of the Revolution interfered with his Semitic studies, Stiles delivered a Hebrew oration on the occasion of his inauguration as president of Yale College in 1778, and continued to study and to teach his beloved Hebrew to the end of his days.

These Jewish friendships and Hebraic studies only served to strengthen the Christian faith of Ezra Stiles. In 1782, when Aaron Lopez, the foremost Jew of Newport, died, Stiles wrote: "He was my intimate Friend & Acquaintance! . . . The amiable & excellent Characters of a Lopez, of a Menasseh Ben Israel, of a Socrates, & a Gangenelli, would almost persuade us to hope that their Excellency was infused by Heaven, and that the virtuous & good of all Nations & Religions, notwithstanding their Delusions, may be brought together in Paradise on the Xtian System, finding Grace with the all benevolent & adorable Emanuel who with his expiring breath & in his deepest agonies, prayed for those who knew not what they did. . . ." DAVID MAX EICHHORN.

Lit.: Holmes, Abiel, *Life of Ezra Stiles* (1798); Kohut, George Alexander, *Ezra Stiles and the Jews* (1902); Moore, George Foot, *Ezra Stiles' Studies in the Cabala,* Massachusetts Historical Society, March, 1918; Jastrow, Morris, "Ref-

erences to Jews in the Diary of Ezra Stiles," *Publications of the American Jewish Historical Society,* No. 10 (1902) 5-36.

STILLER, BERTALAN, pathologist, b. Miskolc, Hungary, 1837; d. Budapest, 1922. He studied at the medical schools of the Universities of Pest and Vienna. From 1874 on he was physician-in-chief of the department of internal medicine in the hospital of the Jewish community of Pest, of which he subsequently became director. From 1886 he was a lecturer at the University of Budapest and in 1906 he was made a court councillor (Hofrat). Stiller was one of the physicians who developed the "Konstitutionslehre," a doctrine according to which the physical and, to a lesser degree, the mental pathology of the individual is determined by his constitution.

His work on the subject, *Az astheniás alkati betegségekröl* (On the Diseases of the Asthenic Constitution; 1907), was published in Hungarian and German, as was his work on the nervous disorders of the stomach (1884). He published also accounts of major investigations on the pathology of the spleen and the pancreas and wrote *Glossen zur Radiologie des Magens* (1910).

STILLING, BENEDICT, surgeon, b. Kirchhain, Hesse, Germany, 1810; d. Cassel, Germany, 1879. He was at first a physician attached to the court, and then a general practitioner in Cassel. His research into the functions of the spinal cord was a pioneering attempt. The root of the spinal cord is named after him. He contributed a great deal to the physiology of nerves in modern medical science, and was the first surgeon successfully to perform a cut of the abdomen. He also operated on the ovary without opening the abdomen (1831). Stilling described this operation in *Hannoversche Annalen der gesamten Heilkunde* (1841). In Paris he performed successful operations on the urethra. He was an authority on the nervous system.

Lit.: Kussmaul, Adolf, *Dr. Benedikt Stilling* (1879); Pagel, *Allgemeine Deutsche Biographie,* vol. 36 (1893).

STILLING, JACOB, eye specialist, b. Cassel, Germany, 1842; d. Strasbourg, 1915. He was professor of ophthalmology at the University of Strasbourg. His special field was research on the sense of recognizing color. He had a method whereby the color sense can be tested by means of pseudo-isochromatic tables. Stilling's works included *Grundzüge der Augenheilkunde* (Vienna, 1897) and *Pseudo-chromatische Tafeln zur Prüfung des Farbensinns* (1910; 18th ed., 1929).

Lit.: *Centralblatt für Augenheilkunde* (1915) 165; *Deutsche Medizinische Wochenschrift* (1915) xli, 714; Wininger S., *Grosse Jüdische National-Biographie.*

STOBBE, OTTO, non-Jewish legal historian, b. Königsberg, Germany, 1831; d. Leipzig, Germany, 1887. He was professor at the Universities of Königsberg, Breslau and Leipzig. Besides his books on the history of German law, he published studies on Jewish history. His book *Die Juden in Deutschland während des Mittelalters in politischer, socialer und rechtlicher Beziehung* (Braunschweig, 1865; 3rd ed., 1923) is valuable for its unbiased approach and thorough research. Stobbe participated in the activities of the Historische Kommission für die Geschichte der Juden in Deutschland, and wrote several essays for the *Zeitschrift für die Geschichte der Juden in Deutschland,* organ of that commission.

Lit.: Kisch, Guido, "Otto Stobbe und die Rechtsgeschichte der Juden," *Jahrbuch für Geschichte der Juden in der čechoslovakischen Republik,* vol. 9 (1938) 1-42.

STOCK EXCHANGE, *see* FINANCE, JEWS IN.

STOCKTON, a city of California, which included, in 1943, a Jewish population of approximately 1,200 in its total population of 54,714 (census of 1940). Stockton began to prosper with the discovery of gold in California, and was chartered a city in 1850, when the first Jews were already settled there. There is record of a society in existence as early as 1851, for the care of the Jewish insane at the state institution. In 1855 Congregation Ryhim Ahoovim was formed, and erected a synagogue. Four years later it laid out a cemetery. An early leader of the group was the Hazan Herman Davidson, who served from 1876 to 1896. Other spiritual heads were Louis J. Kopald and Edgar F. Magnin. The congregation, later known as Temple Israel (Reform), built a new Temple in 1905, and in the following year joined the Union of American Hebrew Congregations. J. Aaron Levy was called to the pulpit of Temple Israel in 1930, and was still the incumbent in 1943.

Ida R. Safferhill served as organist for fifty years and was one of the inaugurators of the religious schools.

The Orthodox Congregation Adas Jeshurun was organized in 1910, when the Jewish population of the city had grown to approximately 600. Henry J. Horowitz was among the rabbis who served Adas Jeshurun. The congregation built its synagogue in 1911. In 1943 Maurice Abramson was rabbi.

The National Jewish Welfare Fund of Stockton was organized in 1936. The Jewish Welfare Association became affiliated with the Community Chest. Stockton Jews also maintained, in 1943, a lodge of the B'nai B'rith, together with an Auxiliary and an Aleph Zadik Aleph, and a chapter of Hadassah.

Stockton Jews were engaged as merchants, and a number were well-known in the various professions. Some were working in Stockton industries. Dr. Irving S. Zeimer was health officer of San Joaquin County (1915-20 and 1921), and in the first World War served as a member of the district board of exemption for Northern California. At the College of the Pacific, in Stockton, Irving Goleman was appointed professor in the English department (1936-). Fillmore C. Marks was made a trustee of the school in 1940. Louis Park, in Stockton, was the gift of a member of the Jewish community by that name.

J. AARON LEVY.

STOICS. The doctrines of the Stoics, especially in the strictness of their idea of duty and their identification of the will of God with natural law, show a relationship to the ideas of Judaism. Inasmuch as most of the heads of the Stoic schools were Semites, it has been suggested that Semitic influence played a large part in the development of the Stoic doctrine; however, it is hardly probable that there was any direct Jewish influence upon it, as the pantheism and materialism of Stoic thought are far different from those of Judaism. On the other hand, Stoic popular philosophy affected rabbinic thinking and had a considerable influence on Hellenistic Judaism, especially in the case of Philo, who took from the Stoic doctrine his teachings of the pneumatic substance of the soul, his central doctrine of the Logos, and the basic concepts of his ethics and critique of culture.

In the Middle Ages Stoicism, through a work *On the World,* which was circulated in the name of Aristotle, through the writings of Galen which were influenced by it, and through many commentaries on Aristotle, influenced the Arabian philosophers who were models for the Jewish philosophers and thus influenced the Jews themselves. This is particularly noticeable in the transformation of their teleology, and in the Logos doctrine of Judah Halevi, Ibn

Gabirol and the Cabala. In modern times the influence of the pantheism of Stoicism upon the thinking of Spinoza is plainly evident.

Lit.: Bergmann, "Die stoische Philosophie und die jüdische Frömmigkeit," *Judaica, Festschrift für Cohen,* p. 145 et seq.; Kaminka, in *Revue des études juives,* vol. 72, p. 233 et seq.; Wendland, *Philo und die kynisch-stoische Diatribe;* Heinemann, I., *Philons griechische und jüdische Bildung* (1930); Horovitz, S., *Einfluss der griechischen Philosophie auf die Entwicklung des Kalam* (1909) 6 et seq.

STOKES, HENRY PAYNE, non-Jewish clergyman and historian, b. Ireland, 1849; d. Cambridge, England, 1931. He studied theology at Cambridge, where he was graduated as Senior Optime in 1875. He was college chaplain and curate of St. Paul's, Cambridge. Stokes contributed to the knowledge of such English poets as Shakespeare, Cowper and Blake, and was interested in the local history and archeology of Cambridge and the surrounding counties. In that way he acquired also considerable knowledge of the history of the Jews in England, especially before their expulsion in 1290. Feeling himself, as an Irishman, a member of a minority, Stokes sympathized with the Jews, and was eager to support all endeavors to strengthen their cultural tradition, especially Jewish history. Proceeding from local studies, Stokes acquired a broad view of the history of the Jews in England during the Middle Ages.

In 1913 the Jewish Historical Society of England edited Stokes' collected studies under the title of *Studies in Anglo-Jewish History,* and in 1914 he was elected president of this society, the only non-Jew to obtain such a dignity; he served until 1916. It was due in some measure to Stokes' devotion and ability that the Society was able to survive the critical early years of the first World War. In 1921 Stokes published *A Short History of the Jews in England,* and in 1930 he edited, jointly with Israel Abrahams and Herbert Loewe, *Starrs and Jewish Charters in the British Museum.*

STOKES, ROSE PASTOR, labor agitator, writer and artist, and pioneer unflinching fighter in the struggle for every phase of human progress, b. Augustova, Russian Poland, 1879; d. Frankfort, Germany, 1933. Her family migrated to England when she was three years old. At the age of four she helped her mother sew bows on ladies' slippers in the ghetto of East London. A few years later the family came to the United States, settling in Cleveland where, at the age of eleven, she entered the cigar factory, becoming the breadwinner of the family, educating herself while working.

At the age of about twenty, while still working in the factory, Rose Pastor Stokes began contributing to the weekly column of the *Jewish Daily News* (New York city), on time stolen from sleep. Her popularity in that column won for her an invitation to come to New York to assume the full-time duties of a columnist. In that column she revealed her deep understanding of the tragic fate of the underprivileged. Her passionate plea on behalf of the common man is most inspiring. While covering an assignment for the paper, she met Graham Phelps Stokes (of the famous American family), whom she married. She was overawed by the romantic halo of the culture of his class, soon to discover that *his* culture was not *her* culture. Not until about 1925 did she succeed in obtaining a divorce, which she fought for many years to secure. She worked with Margaret Sanger in the birth control movement, was the outstanding leader in the Hotel and Restaurant Workers' strike of 1912, and did pioneer work in drawing women into the union. Later she was a leading figure in the Ladies Shirt-Waist Makers' strike. She was on the picket line, and unflinchingly faced the police. She was an active member of the Socialist Party, and for years was the field organizer for the League for Industrial Democracy, lecturing to enthusiastic college audiences throughout the United States. In 1919, when the split took place in the Socialist Party, she went with the left wing and was one of the founders of the Communist Party, for which she worked untiringly. She was a member of the Central Executive Committee for a number of years.

She possessed a buoyant spirit; no matter what the vicissitudes of life, she could adjust herself cheerfully. She never accepted defeat. She loved life and beauty and people. "For the future—not the distant future—belongs to us," she wrote her devoted friend, Eugene V. Debs, who stood so faithfully by her during the Red-baiting period of the Palmer days. At the close of the first World War Rose Pastor Stokes, together with Elmer Rice, promoted the proletarian theatre movement. She was one of the founders of the People's Play House, in New York. In its opening program a one-act play written and directed by her was included. To the youth movement she was an inspiration and guide, nor did she overlook the children. In 1929 she was national director of the children's camp sponsored by the Workers International Relief.

With the birth of the Russian Revolution she gave herself generously to the cause of the First Workers' Republic, lecturing extensively, contributing to the press and doing yeoman work generally, especially during the drive for the Russian Famine Relief. She visited the Soviet Union in 1923 and, like Lincoln Steffens, she, too, said that she had a glimpse of the future and saw that it worked.

She loved simplicity, in dress as well as in art. Simplicity and power characterize her pencil drawings of unusual originality. These drawings, about one hundred, were exhibited in Westport, Conn., in 1928. Yet she never had a drawing lesson in her life.

She was a prolific writer, regenerating humanity's tears into flaming hope, hope for the new day dawning. Her outstanding poem "Paterson" is a labor classic. She was the author of a three-act play, *The Woman Who Wouldn't* (New York, 1916). Together with Helen Frank, she translated Morris Rosenfeld's *Songs of Labor* from Yiddish (Boston, 1914). A novel, *Reizel of the East Side,* by Chaver-Paver, with Rose Pastor Stokes as the prototype, appeared in Yiddish in the *Morning Freiheit,* serialized from January to March, 1942. In 1943 her biography was in the hands of Cedric Belfrage, author of *South of God,* with the preliminary research already under way.

In 1927 she became the wife of V. J. Jerome, Marxist writer and editor.

In 1929, during a demonstration in New York city in protest against the repression of the people of Haiti, she was struck with a club by a policeman. The bruise developed into cancer. She was an ardent supporter of the rights of the Negro people, and engaged in many battles on their behalf. Her end came in a hospital in Frankfort in June, 1933. From that hospital bed she carried on feverish agitation among the hospital staff against Hitlerism which had then come into power. She died as she lived—fighting.

JEANNETTE D. PEARL.

STOLEN GOODS. The aiding of certain crimes against property for the profit of the abettor, especially those of theft and embezzlement, is prohibited by Jewish law, although it has no special term for receiving stolen goods nor any special penalty for this crime. The commandment against placing a stumbling-block before the blind (*Lev.* 19:14), which was interpreted to include any inducement to wrongdoing, can be generally applied to the reception and concealment of stolen goods.

The Talmud has the maxim: "The thief is not the

mouse, but the hole of the mouse" (*Kid.* 56b). The Mishnah (*B.K.* 10:9) only requires that neither wool nor milk may be bought of the shepherd, nor wood and fruits of the "guardians of the fruit," since one may apprehend that they have stolen these objects. In the same passage, however, permission is given to buy woollen garments from women in Judea, linen ones in Galilee and calves in Sharon, because in such cases it may be assumed that their husbands are willing and consequently one need not have any suspicion. On the other hand, nothing should be bought from one who says "that the purchaser must conceal it."

Jewish law pays much attention to the legal position of the receiver of stolen goods, that is, the regulation of the question of ownership in a case of the acquisition of stolen or lost objects. Immovable objects always go back to the owner, even after he has given up all hope of ever recovering them. He may at any time demand the restitution of his real estate by making a protesting statement (*'ir'ur*) invoking his rights of ownership; the actual possessor can defend his ownership only by claiming a better title on the ground of presumed ownership (*hazakah,* uncontested possession). In the case of moveable objects, possession alone is considered as presumption of ownership, and the whole burden of proof rests upon the owner who is not in possession of them. Furthermore, ownership in moveable property is lost whenever the owner has given up hope of recovering it (*yi'ush*); the Jewish law gives exact rules as to when such an abandonment is to be presumed (cf. *B.K.* 10:1 et seq.), making any future acquisition of the property an original legal act.

On the other hand, objects which have been lost by burglary or theft can not be acquired by invoking the rules of renunciation. There is an exception to this principle in that the thief himself can acquire the property by alteration, and in such a case has only to restore its value. The question is, whether a thief can transfer to another party an object in which he has no title, and which, in case he is caught with it, he must forthwith restore to the owner. Roman law answers that the thief can not transfer the property; the rightful owner can demand its restitution wherever he finds it, regardless of the fact that the third party may have purchased it in good faith. Jewish law, on the other hand, provides a way by which the interests of the bona fide acquirer are protected. The party from whom the object has been stolen has the right to demand a restoration of the property; the honest acquirer, however, under the principles laid down in *B.K.* 10:3, may state under oath what amount he has paid for the object, and refuse to make restitution unless this amount is refunded to him. In this way the demands of an extensive market trade were provided for (*takkanath hashuk*), because under this ruling the bona fide acquirer in closing a purchase did not need to fear lest he might later have to surrender the purchased article without compensation of the purchase price, while the mala fide acquirer, who was guilty of receiving, was obligated forthwith to surrender the object.

But since, in most cases, of course, it may be very difficult to ascertain whether the third acquirer acted in a bona fide manner, Jewish law, according to its general rules of proof, demands that the acquirer lose the claim for restoration of the purchase price paid by him only when the receiving is positively proved, that is, if it is proved that he did not act in a bona fide manner at the time of acquiring the object. This regulation, which is connected with the entire doctrine of proof in Jewish law, gives a receiver a certain amount of advantage, because the protection provided for the honest acquirer sometimes may benefit the receiver as well, if his intentions can not be proved. For this reason the Talmud (*B.K.* 114b et seq.) and the later authorities (*Shulhan Aruch, Hoshen Mishpat* 358:1 et seq.) tried to provide for such circumstances in various ways.

As the Jews in Germany were permitted in the early Middle Ages to regulate their affairs in accordance with Jewish law, they applied their own rules also to property rights. German legal codes in the Middle Ages gave them special privileges in regard to the acquisition of stolen goods, in contrast to the non-Jews. The privilege of King Henry IV of the year 1090 to the Jews of Speyer contains the oldest legal recognition of this special right; it is found also in the *Sachsenspiegel* (vol. 3, p. 7, Section 4), the most important book of German law in the Middle Ages. However, it is most significant that this Jewish legal norm with regard to receiving was incorporated also into German law, which originally did not recognize an obligation of the victim to restore the paid purchase price to the bona fide acquirer. Researches made by Herbert Meyer established the fact that Germanic law adopted those norms of Jewish law which originally were applied to Jews only. The principle of protecting the bona fide acquirer therefore has passed as a living monument of an old Talmudic legal institution into the modern legal codifications on the rights of individuals.

STOLIAR, MATIAS, editor, b. Kishinev, Bessarabia, 1886. He emigrated to Argentina in 1906, and founded in Buenos Aires the Yiddish daily *El Diario Israelita* (*Di Yidishe Tzeitung*), of which he was editor-in-chief. Its first issue appeared on November 15, 1914. In 1943 Stoliar still held the position of editor-in-chief. He was a member of several Argentine Jewish organizations, and was affiliated with the Museo Social Argentino.

STOLIARSKY, PETER SOLOMONOVICH, violinist and educator, b. Odessa, Russia, 1875. He began teaching in 1898 after graduating from the Odessa School of Music. In 1908 he started music courses which he supported by running concerts. From 1920 on he taught at the Odessa State Conservatory, of which he became a full professor in 1923. He was an eminently successful educator, and at the first All-Ukrainian contest of violinists held at Kharkov in 1930 his pupils took first honors.

In 1933 a children's musical school, organized at Odessa, was named in honor of Stoliarsky, who was also made director of the school. In 1938 the city of Odessa celebrated the fortieth anniversary of Stoliarsky's musical and educational activities.

Among his many pupils were the laureates of the All-Union (1933) and International (1936) music contests, David Oistrakh, Liza Hillels, Busya Goldstein and Misha Fichtenholz. Stoliarsky was awarded the title of Honored Artist of the Ukrainian Soviet Socialist Republic, and was a recipient of the Order of the Red Banner of Labor.

STOLPER, GUSTAV, economist, b. Vienna, 1888. After completion of his studies he became editor and publisher of the periodical *Der Österreichische Volkswirt,* and professor of political economy at the Vienna Academy of Commerce. During the first World War he was head of the research and statistical division of the Imperial Government Commissariat for War Economy. After the war he transferred his activities to Berlin, where he became editor of the *Berliner Börsen-Courier,* one of the most dignified liberal papers in the Reich capital whose financial section was widely read. In 1925 he established and edited the weekly *Der Deutsche Volkswirt* (Berlin), an economic periodical of excellent reputation. From then on and until he emigrated he was also Berlin correspondent of the London *Economist.* Hamburg sent him to the Reichs-

tag as a member of the Staatspartei (1929-32). There he was also a member of the budget and banking committee. In 1933 he settled in New York city and in 1943 he was an economic adviser to the city of New York.

Stolper wrote: *Das mitteleuropäische Wirtschaftsproblem* (1917); *Deutsch-Österreich als soziales und wirtschaftliches Problem* (1921); *Die wirtschaftliche und soziale Weltanschauung der Demokratie* (1930). The two books which he published in the United States, *German Economy, 1870-1914, Issues and Trends* (1940) and *This Age of Fable, The Political and Economic World We Live In* (1941), were widely discussed.

STOLZ, JOSEPH, rabbi, b. Syracuse, N. Y., 1861; d. Chicago, 1941. He received his rabbinical degree from the Hebrew Union College in 1884, and for the next three years was rabbi in Little Rock, Ark. In 1887 he came to Zion Temple, Chicago, where he remained until 1895, when he was called to Isaiah Temple in the same city. Stolz was rabbi of Isaiah Temple until 1927, then was made rabbi emeritus. Throughout his long rabbinical career his interpretation of the role of the rabbi as leader and guide made him one of the best-loved ministers in Chicago. Stolz was active in the civic affairs of the city, serving on the board of education from 1899 to 1905 and on the crime commission from 1910 until his death. He was president of the Central Conference of American Rabbis from 1905 to 1907, and after that a member of the executive committee.

He was also on the executive committee of the Union of American Hebrew Congregations and of the American Jewish Committee, and on the publication committee of the Jewish Publication Society of America. In 1890 the Hebrew Union College awarded him the D.D. degree, and in 1931 the honorary D.H.L. degree. Stolz was author of *Funeral Agenda of Jews* (1897).

Lit.: Schanfarber, Tobias, "Joseph Stolz," *American Jewish Year Book,* vol. 43 (1941-42) 441-44.

STONE, CHARLES ARTHUR, mathematician, b. Chicago, 1893. He studied at the Universities of Illinois (B.S., 1917) and Chicago (M.A., 1925). In 1930 he was awarded the honorary LL.D. degree by the Niagara University Law School. Stone was instructor in mathematics in the laboratory school of the University of Chicago (1922-36), and in 1924 was appointed professor of education at DePaul University, Chicago. From 1930 to 1935 he was director of the Racine Military Academy, Wisconsin. In 1933 Stone was president of the Central Association of Science and Mathematics Teachers.

His writings include: *Trigonometry* (1928); *The Slide Rule* (1929); *The Teaching Unit* (1929); *Unit Work Book in Algebra* (1931); *Workbooks for Mathematics* (1933). He edited the magazine *School Science and Mathematics.*

STONE, ELIHU D., attorney and Zionist leader, b. Meretz, Lithuania, 1888. Settling in Boston in 1906, he studied at the Boston University Law School (LL.B., 1915). He was a member of the Massachusetts House of Representatives (1918-19) and Assistant United States Attorney for Massachusetts (1922-34).

Stone was a pioneer Zionist and a staunch worker in the cause of Zionism in Boston. In 1919 he was responsible for the passage of a resolution in the Massachusetts House of Representatives, urging the American delegates to the Paris Peace Conference to favor the establishment of a Jewish commonwealth in Palestine. This resolution, copies of which were circulated at the Peace Conference, was the precursor of further action on the part of American legislators in 1922, at the time when the Palestine Mandate came before the League of Nations. Stone secured the passage of another resolution from the Massachusetts legislature, expressing satisfaction at the reestablishment of the Jewish National Home in Palestine.

Elihu D. Stone

Armed with this resolution, which had been passed under a waiver of rules and rushed over to the governor's office to be signed so that it could be ready in time, Stone hastened to Washington and arranged to meet the junior senator of his state, Henry Cabot Lodge, chairman of the Senate Foreign Relations Committee and one of the most powerful men in the United States Senate. Lodge agreed to introduce into the Senate a resolution endorsing the Balfour Declaration and the Palestine Mandate to Great Britain. The passage of this resolution (April 20, 1922) was regarded as a major victory for Zionism, inasmuch as it speeded the ratification of the Palestine Mandate, and Stone's important role in this important step was gratefully recorded by Chaim Weizmann.

In 1943 Stone was regarded as one of the elder statesmen of American Zionists. He was one of the American members of the Administrative Committee for the Jewish Agency for Palestine, a member of the Actions Committee of the World Zionist Organization, vice-president and life member of the Zionist Organization of America (of which he was a founder and for thirteen years president), national vice-chairman and New England chairman of the United Palestine Appeal, and a director of the Jewish National Fund.

A noted Hebrew scholar, he was active in the communal life of Boston. Stone was president of Congregation Mishkan Tefila for over ten years, a member of the executive committee of the Combined Appeal of the Associated Jewish Philanthropies and the United Jewish Campaign, and a member of the Allocations Committee of the United Jewish Campaign.

In 1938, on the occasion of the twentieth anniversary of the independence of Lithuania, Stone was awarded the Order of Gediminas, Grand Duke of Lithuania.

HENRY W. LEVY.

STONE, IRVING, writer, b. San Francisco, 1903. He received the M.A. degree from the University of Southern California in 1924. In 1923 and 1924 Stone was an instructor in economics at the university, then, until 1926, he held a similar post at the University of California. After 1926 he devoted himself entirely to writing.

Stone has made biography, which is not necessarily

closer to reality than fiction, identical with the most abiding of realities. All too often the biographer deliberately narrows his vision to see the world as it revolves around the individual. Stone has invariably chosen his subject to reflect the broadest of realities that play upon the individual.

In Stone's Van Gogh, as he appears in *Lust for Life* (1934), the tragedy of genius—with its mad passions and its weird curse of giving pain to its possessor—is a most terrifying height, to which men of lesser mind can rarely ascend. Yet so great is the lift of Stone's writing that he has succeeded in bringing hundreds of thousands to Van Gogh and Van Gogh to hundreds of thousands. It is hardly an adequate test of worth—though it is a gauge of influence—to note that *Lust for Life* brightened homes throughout the United States with reproductions of the colors from Van Gogh's brush. What Stone did was to take the universal appeal of Van Gogh and transmit it with firm grasp to those who had been starved in spirit.

In his *Sailor on Horseback* (1938) and his *Darrow for the Defense* (1941) Stone persisted in his task. Far apart as Van Gogh, Jack London and Clarence Darrow may appear to be on the surface, Stone's eye was keen enough to see that all three, despite their different lives and loves, were products of the common destiny of mankind. The mad painter, the self-destroying novelist, the cynical warrior of the court-room dying in weariness—all remain despite themselves the firmest proof of the inherent richness of human life. Stone was the editor of *Dear Theo,* a study of the Van Gogh letters (1937), and the author of *Pageant of Youth* (1933), *False Witness* (1940), and *They Also Ran* (1943). LEO M. CHERNE.

STONE, NAHUM ISAAC, economist and statistician, b. Odessa, Russia, 1873. He came to the United States in 1891, and studied at the Armour Institute of Technology, in Chicago (1893-96), and at Columbia University, in New York city (M.A., 1901; Ph.D., 1915). Stone served as a statistician in the Bureau of Economic Research (1899-1900), was on the editorial board of the *New International Encyclopedia* (1900-1) and was chief of the division of foreign tariffs in the Department of Commerce and Labor (1904-9). In 1906 he was dispatched as a commercial attaché of the United States delegation to the Pan American Congress in Rio de Janeiro, and was sent to Berlin by the State Department as a member of the United States Tariff Commission to arrange a commercial agreement between Germany and the United States. He was chief economist of the United States Tariff Board (1909-12). During the first World War he was attached to the Institute for Government Research in Washington, D. C., and to the office of the quartermaster general of the Army.

Stone was a member of several code authorities under the National Industrial Recovery Act (1933-35). From 1920 on he was the director of the National Bureau of Economic Research, of which he became president in 1942. He was active also in the American Economic Commission for Palestine, the American ORT Federation, and the American Friends of the Hebrew University. Stone was a life-member of the Zionist Organization of America.

His writings include: *Promotion of Foreign Commerce in Europe and the United States* (1907); *Wages and Regulation of Employment in the Dress Industry* (1914); *Productivity of Labor in the Cotton Garment Industry* (1938).

STONE, SEYMOUR MILLAIS, portrait painter, b. Russia, 1877. He was brought to the United States at the age of six. His father's name was David Berryl Kameniav. The family settled in Illinois, where Stone received his early art education at the Chicago Art Institute. This was amplified at various schools and under various painters in Europe. During 1906 to 1908 Stone studied at the Royal Academy in Munich, where De Loeftz was so competent a teacher. The next year in Paris his work at the famous Julian Academy was benefited by the criticism of Jules Lefebvre, noted for his paintings of beautiful women. Later, in Sweden, Stone came under the influence of Anders Zorn, and in England under that of the American artist, John Singer Sargent, then regarded as the foremost living painter of portraits. It was in this field that Stone achieved the distinction that is his.

With the training indicated by the manner of painting characteristic of the men under whom he studied, Stone naturally followed the traditional school of portraiture. His work, never remotely modernistic, is notable for his ability as a draughtsman and especially for his success in obtaining likenesses. While not limiting himself exclusively to portraiture—his *Parsifal* is a celebrated painting of another kind—Stone is mainly known for his portraits. Royalty and nobility sat for him, while in the United States his many distinguished subjects included three presidents—Theodore Roosevelt, Calvin Coolidge and Franklin D. Roosevelt.

He painted also notables of the American Army and Navy, among them General Robert M. Bullard, Rear Admiral Richard E. Byrd and Admiral Harris T. Lanning. Bishops, presidents of universities and governors of states were among his other sitters. Most of his portraits were of men, but his brush portrayed also numerous women. The White House in Washington and the Republican Club in New York are among the places where Stone's work is represented. In 1920 the Corcoran Gallery exhibited his paintings, and in 1921 he was decorated by the Italian government as Knight Commander of Merit, Constantinian Order of St. George. GEORGE S. HELLMAN.

STONING, *see* CAPITAL PUNISHMENT.

STÖSSEL, OSCAR, painter and etcher, b. Neunkirchen, Austria, 1879. He turned to the fine arts after graduating from the Technische Hochschule at Graz as an engineer. His first teachers in painting were Damianos and Kallmeier. Later he learned the art of etching as a pupil of Leo Diel and Ferdinand Schmutzer. A great success of his early career was the edition of his studies of dogs. His landscapes are charming by reason of their soft and poetic atmosphere besides their purely pictorial values. Stössel's etchings are distinguished by the rich chromatism of his lights and shades. His fine feeling for noble forms and his elaborate technic made him a favorite portraitist of European royalties when the beautiful likeness of Queen Marie of Roumania became known.

After the German invasion of Austria in 1938 Stössel came to the United States. Here he made portraits of President Franklin D. Roosevelt, of Secretary of State Cordell Hull, of all the members of the Supreme Court, which was thus portrayed for the first time in its entirety, and of other leading personalities of the United States. An exhibition of his work in Washington (1941) won him further fame.

Lit.: Binder, Bruno, in *Die graphischen Künste* (1922) 99-105; *The Print Collector's Quarterly* (1935) 245-64; *Österreichische Kunst* (1932), No. 6, p. 12.

STRABO, *see* GREEK WRITERS ON JEWS.

STRACK, HERMANN LEBERECHT, non-Jewish orientalist, b. Berlin, 1848; d. Berlin, 1922. He was the founder (1886) and director of the Institutum Judaicum in Berlin. Strack's writings deal chiefly with

Hebrew language and Talmud. He published a Hebrew-Aramaic grammar, a Hebrew textbook, and the *Jüdisches Wörterbuch* (Leipzig, 1916), which was compiled with the aid of Jewish scholars and gave special attention to the idiom of the Jews in Poland.

Others of his works include: excellent introductions to the Old Testament and the Talmud (*Einleitung in das Alte Testament,* 1906; *Einleitung in den Talmud,* 1885; 5th, revised ed., *Einleitung in Talmud und Midrasch,* 1921; English trans., *Introduction to the Talmud and Midrash,* 1931); *Kommentar zum Neuen Testament aus Talmud und Midrasch* (in collaboration with Paul Billerbeck; 4 vols., 1922-28); *Catalog der hebräischen Bibelhandschriften der kaiserlichen öffentlichen Bibliothek in St. Petersburg* (in collaboration with Abraham E. Harkavy; 1875); *Prophetarum posteriorum codex babylonicus Petropolitanus* (1876).

On several occasions Strack defended the Jews and Judaism against anti-Semitic attacks (*Das Blut im Glauben und Aberglauben der Menschheit,* 1900; *Sind die Juden Verbrecher von Religions wegen?; Jüdische Geheimgesetze?,* 1920), but was also eager to convert Jews to Christianity. He was granted a subvention by the Central Conference of American Rabbis (1919) for his new edition of the introduction to the Talmud.

Lit.: Garnault, P., "Le livre de Strack sur le sang et le crime rituel des Israélites," *Société d'anthropologie de Paris, Bulletins et Mémoires* (1901) 135-38.

STRAHL, JACOB STONE, judge and communal leader, b. New York city, 1876. He studied at New York Law School (LL.B., 1897), practised law, and was elected judge of the municipal court of the city of New York, borough of Brooklyn, in 1910. He was elected four times to this office, which he still held in 1943. He was the father of the Emergency Rent Laws which, passed in New York state during the rent crisis (1942), saved many families from eviction in New York city. Active in Jewish and Zionist affairs, Strahl was for seven years grandmaster (Nasi) of the Order Sons of Zion.

He was an organizer of the first American Jewish Congress in the United States, founder of the Judea Insurance Company Ltd. of Palestine, of the Palestine Chamber of Commerce in the United States, and of the Eastern Life Insurance Company of New York. His father, Robert Strahl, was one of the founders of the Jewish Hospital of Brooklyn, and his brother was Colonel Milton J. Strahl.

STRAKOSCH, ALEXANDER, actor, reciter and dramatic teacher, b. Sebes, Hungary, 1846; d. Berlin, 1909. He appeared on the stage as Spiegelberg in Schiller's *Die Räuber* (Troppau, 1862), and played the part of Franz Moor in the same drama at Budapest, but paralysis of one hand compelled him to abandon his theatrical career and he went to Paris, where he studied rhetoric under Martel of the Comédie Française. As a reader of the plays of Schiller and Goethe he attracted (1867) the attention of Heinrich Laube, who engaged him as dramatic teacher for the Stadttheater at Leipzig, later for the Vienna Hofburgtheater.

From 1879 on Strakosch toured Europe and the United States as reciter of German poetry and drama, became (1888) professor at the Akademie für Tonkunst in Munich, then teacher at the Hofburgtheater and subsequently at the Deutsches Volkstheater in Vienna. In 1905 Max Reinhardt engaged him as dramatic teacher of the Deutsches Theater in Berlin, a position which he held until his death. Strakosch was considered one of the greatest reciters.

Lit.: Wurzbach, in *Bühne und Welt,* Oct. 1, 1909; *Die Zeit,* Sept. 18, 1909; *Neues Wiener Journal,* Aug. 5, 1909.

STRAKOSCH, MAURICE (or **MORITZ**), impresario, b. Gross-Seelowitz, Moravia, 1825; d. Paris, 1887. He toured Europe as pianist, coming to the United States in 1848, where he settled as pianist and teacher. Being the brother-in-law of Adelina Patti, he acted as her manager. In 1857 he became an impresario of opera, launching a successful season of Italian opera in New York city. Two years later he visited Chicago with his troupe. He continued his activities in Europe, directing opera in Paris in 1873, and assisting his brother Max in managing the Apollo Theatre in Rome.

He composed two operas, *Giovanni di Napoli* and *Sardanapalus,* which were performed in New York city. He also wrote an autobiography (1887) and a vocal method (1896). After his death his managerial efforts were assumed by his brother Max (b. Gross-Seelowitz, 1834; d. New York city, 1892).

STRANGERS. The Bible uses four words to denote "stranger," each of which has various shades of meaning according to the context. The most common of these, *nochri,* indicates one who is marked by being different, and ranges from one who is not a relative to a member of a foreign nation. The term *zar* implies that the person in question is out of place in the particular context; thus a *zar* may be a layman who is not allowed to perform a priestly function, while the *'ishah zarah* ("strange woman") of *Proverbs* is actually the wife of another man. *Ger* and *toshab* are about equivalent to the modern term "alien," since they refer to foreigners who are allowed a right of residence.

The general rule about strangers as expressed in the Torah is that they are to have all the rights and privileges of the natives in everything but purely ritual matters. "One law shall be unto him that is home-born and unto the stranger that sojourneth among you" is a statement that occurs repeatedly (*Ex.* 12:49; *Lev.* 24:22; *Num.* 9:14; 15:16). The Sabbath rest was intended for the stranger as well as for the members of the family (*Ex.* 20:10), and a special commandment enjoined justice to the stranger, recalling that the Israelites themselves had been strangers in the land of Egypt (*Ex.* 22:20). The stranger is mentioned together with the orphan and the widow as being under the especial protection of God (*Deut.* 10:18).

This attitude toward strangers is borne out by the historical narratives. Abraham had a Damascene steward who was his presumptive heir in the absence of a son (*Gen.* 15:2), and is depicted as being on constant good terms with the Canaanites. David's captains included the foreigners Uriah and Ittai; Solomon imported Phoenician artificers for the building of the Temple. Elisha welcomed the visits of the Aramean captains Naaman and Hazael, and one of Jeremiah's friends and followers was the Ethiopian Ebed-melech.

The only exception to this general rule was during the period of Ezra and Nehemiah, when there was an insistence on racial purity, and the exclusion of foreigners from participation in the Jewish community. Yet even this was by no means a universal feeling, as is evidenced by the Biblical books of *Ruth* and *Job;* the former singles out a Moabite woman for praise, the latter makes its hero an Edomite. There is much evidence to show that during the period of the Second Temple Judaism made large numbers of proselytes among the neighboring peoples, particularly to the north of Palestine. The word *ger,* which had originally meant "stranger," eventually came to mean "proselyte." With this emergence of Judaism as a universal religion, the attitude of the Jew toward the non-Jew became based, not on difference of national origin, but on difference of religious belief.

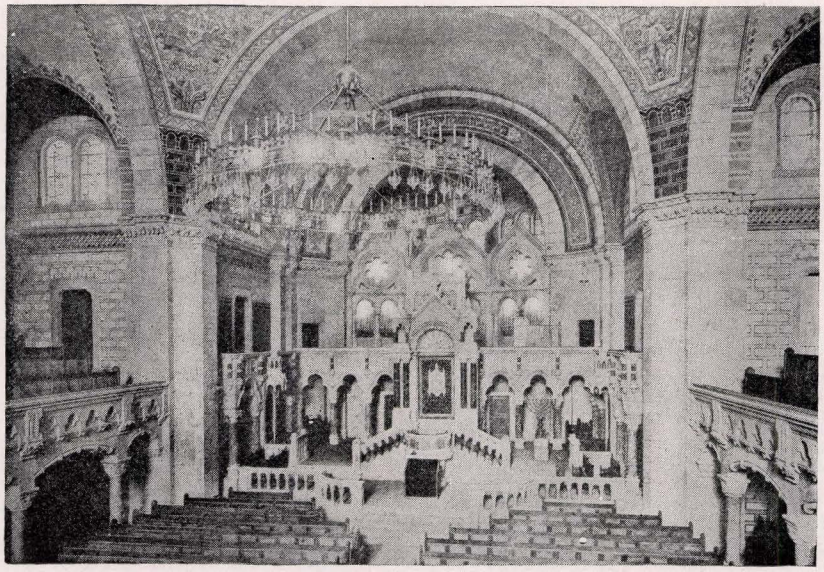
SIMON COHEN

The martyrdom of the Jews of Strasbourg in 1349

STRANSKY, JOSEF, conductor, b. Humpoletz, Bohemia, 1872; d. New York city, 1936. While studying medicine at the University of Prague he founded a students' orchestra. As a medical student at the University of Leipzig he pursued the study of music with Jadassohn, completing his music studies in Vienna under Bruckner, Fuchs and Dvořák. Although he received his medical degree, he decided to become a professional musician. In 1898 he was appointed conductor of the National Theatre in Prague, and in 1903 he was appointed first conductor of the Hamburg State Theatre. Numerous guest engagements throughout Europe increased his reputation. In 1909 he conducted the Blüthner Orchestra in Berlin and in 1910 he abandoned opera for the symphony orchestra.

After conducting the Verein der Musikfreunde in Dresden, Stransky came to the United States and succeeded Gustav Mahler as the principal conductor of the New York Philharmonic Society, holding this post until 1923. He enjoyed great popularity with New York audiences, though critics often rebuked him for his superficial readings and stereotyped programs. From 1923 to 1925 he directed the New York State Symphony Orchestra which had been founded for him. In 1925 he deserted all musical activity to become a dealer in oil paintings. He composed operas, symphonies, chamber-music works, and songs.



STRASBOURG, capital of Alsace. From about 1200 on it was a free imperial city. From 1681 to 1870 it belonged to France. From 1871 to 1918 it was annexed to Germany, and by the terms of the Treaty of Versailles (1919) it was restored to France. In 1940 the city was again occupied by the Germans. In 1938 its population was about 193,000, of whom more than 10,000 were Jews.

According to a legend, the city of Strasbourg began as a Jewish settlement established there after the destruction of the Temple (70 C.E.). Authentic history records Jews living at Strasbourg under relatively favorable conditions in the days of Charlemagne (771-814), but they probably resided there under the reign of the Merovingians. Charlemagne's successors and the bishops who governed the city until the end of the 12th cent. generally favored the Jews of Strasbourg, granting them commercial freedom, the right to own real estate, autonomous jurisdiction and the right to bear arms.

The persecutions of the Jews occasioned by the First and Second Crusade (1096 and 1156) temporarily worsened their situation, but the emperor and the higher dignitaries of the church protected the Jews after the first outbreak of popular fury. In 1160, when Benjamin of Tudela visited Strasbourg, there were Jewish schools conducted by illustrious rabbis, and many members of the community were wealthy and generally respected. In 1288 Emperor Rudolph of Habsburg intervened in favor of the rabbi and some of the elders of the Jewish community of Strasbourg who had been imprisoned on a fabricated accusation of ritual murder. In 1330 Emperor Louis of Bavaria granted the Jews of Strasbourg considerable privileges, which Emperor Charles IV confirmed and enlarged in 1347.

But two years thereafter, in 1349, the Jews of Strasbourg were among the earliest victims of the widespread persecution which was caused by unscrupulous agitators who accused the Jews of poisoning the wells or even the air. In vain did the government of the city of Strasbourg and the patricians who supported it try to protect the Jews from the artisans and some indebted feudal lords of the surrounding country who clamored for the killing of all Jews.

Jacob von Königshofen, the chronicler of Strasbourg, who incorporated considerable material from his predecessor Closener, probably an eyewitness, described the burning of about a thousand Jews of Strasbourg on a wooden platform in their cemetery. Another thousand were spared by accepting baptism, and many children were taken out of the fire and baptized against their parents' will. The city council divided the possessions of the murdered Jews among the workingmen. According to the chronist, "the money indeed was the thing that killed the Jews." It was decided in Strasbourg that no Jew should enter the city for a hundred years, but in 1368 the magistrates permitted six Jewish families to return, and in 1369 nine other families were admitted. In 1384 a Jewish physician named Gutleben obtained the right to reside and practise in Strasbourg, and even received a stipend of 300 florins per annum for his services. But in 1388 the Jews were banished again because they favored the duke of Burgundy in his dispute with the city of Strasbourg, and ceased to pay their taxes regularly. In 1534, however, Josel of Rosheim wrote a letter to the city council of Strasbourg, thanking its members for the grant of some privileges to his coreligionists, who probably did not reside there but regularly visited the city. But in general the relations between the magistrates of Strasbourg and the Jews were not even friendly until the outbreak of the revolution of 1789. A decree issued in 1539 and re-

The interior of the synagogue of the Strasbourg community

newed in 1570, 1628 and 1661 forbade Christians to make any contract with Jews, except such as concerned the purchase of horses or of food supplies.

Even before Louis XIV occupied the city of Strasbourg in 1681 he took the Jews of Alsace under his personal protection (1657). From this year on there was constant friction between the royal officers and the magistrates of the city of Strasbourg because of the treatment of the Jews. Certain marshals of France, commanding armies stationed in Alsace, favored the Jews, who furnished them supplies. In 1743 the city of Strasbourg was forced by Count d'Argenson, French minister of the interior, to grant Moses Bliem, Jacob Baruch Weill, Aaron Meyer Lehmann and Lieb Netter, all of whom had been army contractors, the right to open an office at Strasbourg. In 1771 Herz Cerfberr, through pressure on the part of the Marquis of Monteynard, was granted the right to reside definitely at Strasbourg, and soon he became respected by the city authorities. In 1775 Cerfberr was naturalized by royal letters patent, and thus was the first Jewish citizen of Strasbourg. In 1784 Cerfberr, his son and his two sons-in-law formed the four families comprising sixty-eight persons residing in Strasbourg, out of 3,913 Jewish families comprising 19,707 persons tolerated in Alsace. In the same year, the king, by letters patent, reserved to himself the right to admit Jews into Alsace, and abolished the head-tax on Jews who entered Strasbourg. In 1809 the first synagogue was opened in Strasbourg, and in 1836 the second synagogue was erected. David Sinzheim was the first chief rabbi of the community. In 1821 the first Jewish primary school was established. From 1830 to 1870 the Jews of Strasbourg, whose number increased through the coming of many of their coreligionists from smaller towns of Alsace, took a very active part in the political and cultural life of France. Jewish communal life flourished and many charitable and educational institutions were founded.

After the German annexation of Alsace (1871) numerous Jews emigrated to France. From 1871 to 1918 the Jewry of Strasbourg was divided against itself. The majority continued to sympathize with France, while others tried to prove their loyalty to Germany, and even left Strasbourg for Germany when the city, in 1918, was returned to France. They were forced to emigrate from their new fatherland when the Nazi regime was established (1933). After the outbreak of the second World War (1939) Strasbourg was evacuated for military reasons, and the Jews of the city shared the destiny of their non-Jewish fellow citizens. After the collapse of France (1940) and the establishment of the Vichy government, their situation became even worse. They had no opportunity to return, lost most of their possessions, and their possibilities of earning their living were limited by the anti-Jewish laws.

STRASBURGER, EDUARD, botanist, b. Warsaw, 1844; d. Bonn, 1912. From 1869 to 1881 he was professor of botany at the University of Jena and from 1881 to the end of his life at the University of Bonn. His contributions to botany were regarded as of the greatest importance for the knowledge of plant life. They are concerned particularly with the reproductive organs of plants and the development of cells. There is scarcely any comprehensive modern biological publication dealing with plant cytology, anatomy or embryology that does not contain some reference to Strasburger's writings. He held that there were two distinct tissue system in plants, the cortical, or assimilating, and the conducting, or stelar.

Strasburger's primary work, *Histologische Beiträge,* discusses the conducting systems of all plant groups and deals comprehensively with gymnosperms. His other writings include: *Über Zellbildung und Zellteilung* (1875); *Studien über Bau und das Wachstum der Zellhäute* (1882); *Über den Befruchtungsvorgang bei dem botanischen Prakticum* (1884); *Streifzüge an der Riviera* (1895). He was editor of the *Jahrbücher für wissenschaftliche Botanik* and of *Cytologische Studien aus dem Bonner botanischen Institut.*

STRASCHUN, MATHIAS, Talmudist and Hebrew author, b. Vilna, Lithuania, 1817; d. Vilna, 1885. He was the son of Samuel Straschun. He studied under Manasseh of Ilye and Isaac of Volozhin, and acquired a profound knowledge of the Talmud; in addition, he was well versed in modern languages and sciences. He spent a considerable part of the wealth he acquired in business for the founding of a magnificent private library, of which he compiled a catalogue, *Likkute Shoshanim* (1889). His house was the meet-

ing place for Jewish scholars. Straschun was for many years president of the Jewish charities in Vilna, and acted as adviser to the Russian government. He wrote numerous articles for Hebrew periodicals, and furnished the introduction and notes to Samuel Joseph Fünn's *Kiryah Neemanah.*

Lit.: Ratner, D., in Suwalski, I., edit., *Keneseth Hagedolah,* vol. 1 (1890) 25 et seq.

STRASCHUNSKY, JOEL DOVID (known as the Vilnaer Balebeisel), cantor, b. Libau, Latvia, 1816; d. Warsaw, Poland, 1850. Little factual information dealing with the life of this well-nigh legendary figure is extant. Many serialized newspaper articles, a four-act play by Mark Arnstein, a cinema play starring the Yiddish actor Moyshe Oysher, were all built on the few fragmentary facts of his life.

His father, Reb Zevi Halevy, cantor of Libau (Courland), was in 1826 engaged as cantor in Vilna, where young Joel Dovid received a thorough Talmudic education. Here his phenomenal musical abilities developed, as is evidenced by his mastering, untutored, the violin and improvising on it soul-stirring melodies. At the age of eleven he was placed on the pulpit of the large synagogue of Vilna, and urged by his father to chant the introductory prayers of the Musaf (additional) service, Yekum Purkan and Ab Harahamim. So great were the astonishment and admiration of the large assembly that the lad had to chant the entire Musaf service.

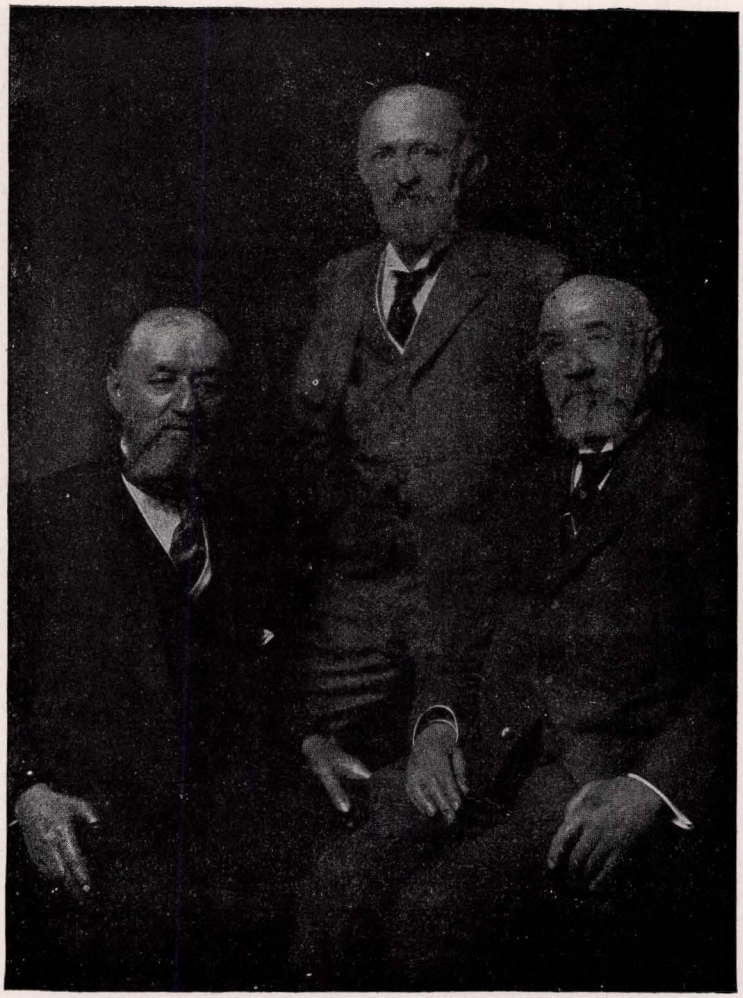
Two years later the wealthy Mordecai Straschun (hence his name Straschunsky) married him to his daughter. Soon the young married man was jocularly called the Vilnaer Balebeisel. In the following year, upon the passing of his father, young Joel Dovid was elected to succeed him.

For ten years he served as chief cantor in Vilna, and would have continued thus had not the tragic death of his three children driven him to melancholy and despair. At this time the Polish composer Moniuszko, having accidentally heard him vocalize, befriended him and urged him to study music. In 1841, Straschunsky left for Warsaw, where, under the tutelage of Moniuszko, and through the persuasion and encouragement of a young baroness who was also a pupil of the Polish composer, Straschunsky, minus his beard and Hasidic garb, studied the role of Yantek in Moniuszko's opera *Halka.* Following a successful debut, and having tasted the pleasures of secular art and found them wanting, the disillusioned and repentant cantor returned home, sick in spirit and weak in body. Under the patient ministrations of his wife he was nursed back to health, but his spirit sought solace. For a while his restlessness found an outlet in study and travel, but in 1849, severing all ties with his family and surroundings, Straschunsky, in repentance for his sins, traveled through the towns and villages of Germany, where, unheralded and unknown, he shared the misery of homeless itinerants. He more and more retired from all human contact, limiting his speech to monosyllabic responses; only the study of the Torah sustained his frail, emaciated body.

His voice was a lyric tenor of indescribable mellowness and haunting beauty. Majestic interpretation of the text, sincerity, effortless delivery and faithful expression of the spirit of the prayer marked his singing. He is remembered by a few compositions sung in synagogues throughout the world.

MAX WOHLBERG.

Lit.: "Des Sängers Schuld und Sühne," *Ost und West,* vol. 2 (1905), col. 102; Friedmann, Aaron, *Lebensbilder berühmter Kantoren,* vol. 2 (1921); Idelsohn, A. Z., *Jewish Music* (1929); Zaludkowsky, E., *Kulturtreger fun der Yiddisher Liturgie* (1930); *Die Hazzanim Velt* (Warsaw), Nos. 1, 6, 9, 12, 18, 27 and 41.



STRASFOGEL, IGNACE, conductor, b. Warsaw, Poland, 1909. When he was three years old he was brought to Berlin, where he later studied for five years at the Staatliche Akademische Hochschule. In 1926 he won the Mendelssohn Prize for composition. For several years he toured Europe as accompanist for Szigeti and Flesch, then served as coach and conductor at the municipal theatre in Düsseldorf. In 1930 he was assistant to Kleiber and Leo Blech at the Berlin State Opera. He composed music for several important theatrical productions in Berlin, including two at the Grosses Schauspielhaus and one at the Deutsches Theater. In 1933 Strasfogel came to the United States, becoming a citizen several years later. He was (1943) the official pianist of the New York Philharmonic Symphony Society.

He appeared also as piano soloist with several leading orchestras, and was an assisting artist with major chamber-music ensembles in the concert hall and over the radio. On several occasions he appeared as guest conductor with the Ballet Russe, the Naumburg Symphony Orchestra and the New York City Symphony Orchestra.

STRAUCHER, BENNO, attorney and deputy, b. Rohozna, Bucovina, Austria, 1854. In 1897, at Czernowitz, capital of the Austrian crownland of Bucovina, he was elected to the Reichsrat of Austria. Straucher, who was also president of the Jewish community of Czernowitz, advocated in parliament the national rights of the Jews long before a definite Jewish national program had been adopted. Although he was no Zionist himself, he endorsed the nationalist policy of the Zionist Organization, and in 1907 was elected president of the Jewish Club of the Reichsrat, consisting of four members. When, in the election of 1911, the other three members of the Jewish Club were defeated Straucher remained the only Jewish nationalist representative in the Austrian parliament.

The Jewish group in the Bucovina diet, of which Straucher also was a member, split into two hostile groups: the moderate nationalists, led by Straucher, and the Zionists, headed by Leon Kellner. This struggle within the Jewish group continued even after the first World War, when Straucher was made administrator of the Jewish community of Czernowitz by the Roumanian government, but was violently opposed and finally defeated by the Zionist group. His activities in the Roumanian parliament were of brief duration. Straucher lived in Vienna until at least 1934; his whereabouts in 1943, and even whether he was still alive in that year, were not known.

STRAUS, a family which came to the United States from Germany in the middle of the 19th cent. and achieved prominence in merchandising, philanthropy and diplomacy. The three brothers who first became well-known were Isidor, Nathan and Oscar Straus, the sons of Lazarus Straus. Lazarus Straus' grandfather, Jacob Lazar Straus, had been a member of the Sanhedrin convened by Napoleon in 1806. Lazarus Straus arrived in the United States early in the 1850's; his wife and sons followed in 1854, settling with him in Talbotton, Georgia. In 1865, following financial reverses resulting from the Civil War, the Straus family came to New York city. In the following year the firm of L. Straus and Sons, merchandising china and glassware, was established, and in 1871, with the leasing by Lazarus Straus of a basement in the R. H. Macy Store, for a crockery display, the connection of the family with New York's merchandising life was made. The chief members of the family, arranged by generations, were:

The three brothers (l. to r.) Nathan, Oscar and Isidor Straus

ISIDOR STRAUS, merchant and Congressman, son of Lazarus Straus, b. Otterberg, Rhenish Palatinate, Germany, 1845; d. in the sinking of the *Titanic* off the coast of Newfoundland, 1912. He attended Collinsworth Institute, a high school, and prepared to enter West Point Military Academy, when the Civil War broke out. The Talbotton boys organized a company of which Isidor was elected first lieutenant, but disbanded when it was found that there was no equipment. He went to London in 1863 as secretary to an agent of the Confederacy who was to purchase a vessel for blockade running. The trip was unsuccessful, and Isidor stayed abroad for two years, working as a clerk and selling Confederate bonds in Amsterdam and London.

When he returned to the United States in 1865, his father and brother had settled in New York. On January 1, 1888, Isidor Straus and his brother, Nathan, became members of the firm of R. H. Macy & Company. Later Isidor became a member of Abraham & Straus, the large Brooklyn department store.

In 1882 he became interested in public affairs and practical politics. In 1894 he was elected to Congress to fill a vacancy, serving from January, 1894, to the end of the term, in 1895. He was on friendly terms with President Grover Cleveland until the latter's death. Straus was a member of the original New York and New Jersey Bridge Commission and became a director of the Hanover National Bank, in 1882. He was one of the founders of the Reform Club of New York, and was at one time vice-president of the Chamber of Commerce of New York State.

When the Educational Alliance was reorganized in 1893, primarily to aid in the Americanization of immigrants, Straus assumed the active presidency, which he held until his death. He was also a trustee of the Montefiore Home for Chronic Invalids, vice-president of the J. Hood Wright Memorial Hospital, a member of the American Jewish Committee from its inception, and a trustee of the Birkbeck Company to loan money at low interest. When the *Jewish Encyclopedia* was in financial straits, he was one of the guarantors who made its continuance possible, and when the Jewish Theological Seminary was reorganized, he joined liberally in the establishment of an endowment fund. In 1905 Washington and Lee University bestowed on him the LL.D. degree. When, in 1912, he and his wife, Ida Blun Straus (b. Worms, Germany, 1849), to whom he was married in 1871, were returning from abroad on the *Titanic,* the steamer hit an iceberg. Mrs. Straus refused the rescue which was accorded to women and children, and went down to death hand in hand with her husband. She had been active in recreational and hospital work in New York city.

MAX J. KOHLER.

Lit.: *American Hebrew,* April 26, 1912, pp. 781-83; *Publications of the American Jewish Historical Society,* No. 22 (1914) 235-39; *Biographical Dictionary of the American Congress* (Washington, 1928) 1580.

NATHAN STRAUS, philanthropist, son of Lazarus Straus, b. Otterberg, 1848; d. New York city, 1931. In 1874, when Nathan was twenty-six, he and his brother Isidor became partners in the R. H. Macy firm, and in 1887 they became the sole owners of the business. The romance of the brilliant and phenomenal growth of this enterprise is due to a combination of the executive ability of Isidor and the originality and daring vision of Nathan Straus. When he lost his thoughtful, gentle brother Isidor in the sinking of the *Titanic* in 1912, Nathan was deeply affected. Shortly thereafter he retired from active concern with business, some years later severing his relations also with the firm of Abraham and Straus of Brooklyn, which the two brothers had entered in 1888. While Nathan Straus was becoming a merchant prince, other sides of his richly endowed personality were also maturing. He was quick to grasp a public cause, and he had an instinct for dramatizing a situation so as to focus public attention upon it. From 1889 to 1893 he was park commissioner of New York city, and in 1893 a member of the New York Forest Preserve Board. Although Straus did not seek public office, it was impossible to keep him out of the public eye. There was a dash, an originality and a picturesqueness about his personality that could

not be obscured and that inevitably made him both a widely known and a popular figure.

Exactly when Straus began his outstanding career as a philanthropist he could not recall. Probably his first large gift was that of a building which he presented to the Trudeau Tuberculosis Sanitarium at Saranac in the Adirondacks. But he leapt into the heart of the public during the winter of 1892 to 1893. With a vision which saw the need long before others realized it, he built up a system of emergency relief by establishing a chain of depots for the distribution of food and coal to any of New York's poor who would apply and pay five cents for it. The next winter, 1893 to 1894, was again a panic winter of depression and unemployment. Then again, at his own expense, he opened and maintained four lodging houses which gave bed and breakfast for five cents to 64,409 cases of New York city's unemployed, hungry and homeless. In the hard winter of 1914 to 1915, which followed the outbreak of the first World War, he served in his milk stations in New York 1,135,731 one-cent meals, consisting of coffee or milk, and roll and butter or a cheese sandwich.

Straus's philanthropies include such varied undertakings as the donation of an ice plant for the soldiers suffering in Santiago, Cuba, in 1898 during the Spanish-American War; aid in building a Roman Catholic Church in Lakewood, N. J.; the gift of food, clothing and medical supplies for the victims of the Messina earthquake in 1909; a cottage presented to the Jewish Consumptive Sanitarium in Duarte, Cal. (1916); the gift to the government in 1918 of the use of land in Lakewood, N. J., for the erection of Red Cross and of army hospital buildings; a model dairy presented to the National Farm School in Doylestown, Pa.; and free distribution of pasteurized milk to soldiers and sailors in 1918. In 1892, after taking counsel with physicians, he launched his campaign for the pasteurization of milk as the best means of bringing within the reach of everyone, especially the children of the poor, milk which would be free of disease germs and which would have unimpaired palatability, digestibility and nutritive qualities. At his own cost, he established in New York city a laboratory for furnishing milk that had been properly modified and pasteurized for infant feeding. In 1894 the laboratory was enlarged, and the six distributing stations he had then established distributed at nominal cost over 2,500 bottles a day.

In 1897, when he was health commissioner of the city, he erected a pasteurization plant on Randall's Island. The death rate among the children on Randall's Island fell from 41.81 per hundred for the years 1895 to 1897 to an average of 21.75 for the next seven years. In 1891, before Straus began his work, out of every thousand babies born in New York city, more than 241 would die before they reached their first birthday. During four years, of 20,111 babies who had the benefit of pasteurized milk from his stations, only six died. In 1920 he had 297 milk stations distributed in thirty-six cities. In 1909 the Public Health Service of the United States Treasury Department issued an elaborate volume on milk, in which were recorded such facts as that in 1906 seventeen Straus milk stations served 3,142,252 bottles and 1,078,405 glasses of pasteurized milk. The Treasury Department's report recorded further that the general death rate of children under five had been halved largely as a result of the pasteurization of milk. Such bodies as the American Medical Association, in 1911, and the International Health Commission of the Rockefeller Foundation, in 1917, added their testimony, and finally, in 1914, after an epidemic of milk-borne typhoid fever, the year before, had taught its disastrous lesson, New York city officially introduced the compulsory pasteurization of all milk, other than that produced and handled under exceptional conditions. In 1920, when the battle was over, Straus presented his pasteurizing laboratory to the city.

Another pioneering undertaking in public health that grew out of his passionate interest in combatting

Nathan Straus

tuberculosis by cleansing the milk supply was his institution in 1909, of a tuberculosis preventorium for children. He housed his preventorium at first in "The Little White House," a cottage in Lakewood, N. J., which he had often placed at the disposal of President Grover Cleveland, and later at Farmingdale, N. J., on a piece of land presented by Arthur Brisbane. This pioneer preventorium became the model for similar institutions in many lands.

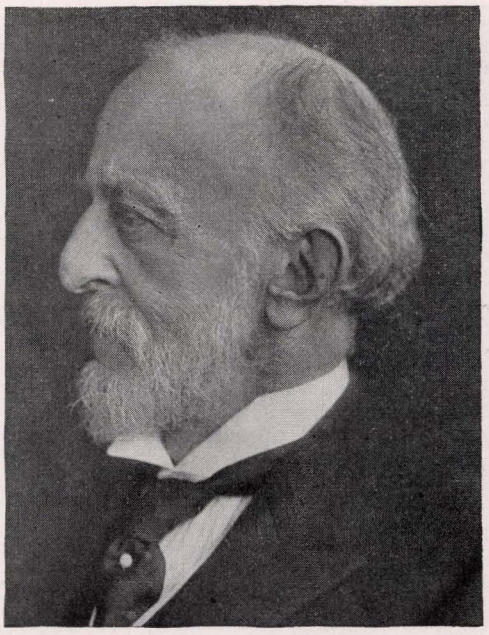
The colossal suffering caused by the first World War inspired him to heights of generosity which matched his magnificent campaign for pure milk. In 1917 he opened the Jewish War Relief Fund with a gift of $100,000, the largest single contribution of its kind given by an individual up to that time. In 1916 he sold his luxurious steam yacht to obtain funds which were used for the aid of war orphans in Palestine. The place which his campaign for pasteurized milk had taken in his life at the turn of the 19th cent. was filled in the last two decades of his life by his devotion to the cause of Palestine. It was in 1904, while on a Mediterranean tour, that Straus and his wife first visited Palestine. On their second visit (1912), together with Judah L. Magnes, Straus laid the foundation of that work for public health in Palestine with which his name is preeminently and lastingly associated there, by founding a health department to cope in some measure with the malaria, trachoma and other ills of insanitation which scourged the Holy Land.

In the meantime, the Hadassah, the Women's Zionist Organization of America, had been founded by Henrietta Szold. In January, 1913, he and Mrs. Straus made their third visit to Palestine, taking with them Hadassah's two nurses, settling them in Jerusalem, and thereby beginning Hadassah's pioneer work in the Holy Land. At that time, also, he established a Pasteur Institute in Palestine, which, together with his health department, played an important part in controlling epidemics during the War. Among his many other gifts to Palestine was half of the cargo of the $100,000 worth of provisions sent thither from America, in 1915, on the United States collier *Vulcan*. Mrs. Straus gave to Hadassah all the jewels which a lifetime of love had showered on her. Two magnificent institutions crowned

Straus's lifelong interest in Palestine: the Nathan Straus Hadassah's Child Health Welfare Stations, which he founded and equipped, and, in 1923 to 1924, on a fourth visit, the establishment of the monumental Nathan and Lina Straus Health Center in Jerusalem, and later a similar health center in Tel-Aviv. On these he expended $325,000. In 1927, when almost an octogenarian, he sailed again for Palestine, and laid the cornerstone of his Jerusalem Health Center. In the last two decades of his life he gave nearly two-thirds of his whole fortune to Palestine, his known gifts totaling more than $2,000,000.

On May 4, 1930, his life companion, Lina Gutherz Straus, died. In less than a year, on January 11, 1931, shortly before his eighty-third birthday, he followed her. His death called forth tributes from high and low, from far and near. His funeral, two days later, was attended literally by thousands of men and women, most of them from the humbler walks of life.

DAVID DE SOLA POOL.



Lit.: Pool, David de Sola, "Nathan Straus," *American Jewish Year Book*, vol. 33 (1931-32) 135-54.

OSCAR SOLOMON STRAUS, jurist, diplomat, merchant and philanthropist, b. Otterberg, 1850; d. New York city, 1926.

After having come to New York with his family, Straus entered Columbia Grammar School and in 1867 Columbia College, where he received the A.B. degree in 1871. Subsequently he received the LL.B. degree from Columbia Law School in 1873, and the M.A. degree in 1874. Thereafter he began the practice of law in the firm of Hudson and Straus. But in 1880, owing to poor health occasioned by the stress of law work, he was forced to abandon practice and, in 1881, joined his father and brothers in their ever increasingly successful mercantile ventures, as manufacturers and importers of pottery and glassware. This association lasted until 1907.

After he attracted general attention by his book *The Origin of the Republican Form of Government* (1885), and through the intercession of such men as Carl Schurz and Henry Ward Beecher, Straus was appointed Envoy Extraordinary and Minister Plenipotentiary to Turkey in 1887 by President Grover Cleveland. This choice was pleasing to Cleveland because Straus had been an earnest and effective advocate of his election to the presidency; the appointment was also a "silent but effective protest against such illiberal views as those expressed by Austria-Hungary," which had declined to accept A. M. Keiley of Virginia as Minister because Mrs. Keiley was of Jewish parentage. In this period, a very critical one for foreigners in the history of the Ottoman Empire, Straus had a highly successful career during three trying and troubled years. Thanks to his energy and diplomacy the Grand Vizier authorized the reopening of sixty American schools, closed by the Sultan six years before. Straus also persuaded the Sultan to give permission to American as well as British colporteurs to sell or to distribute Christian Bibles, tracts and other religious literature. He obtained for American university expeditions the right to excavate on the site of ancient Babylon. He thoroughly won over Sultan Abdul Hamid, and earned the plaudits of the Turkish government. Then Straus asked to be relieved of his post and returned to the United States, because he wanted to devote himself again to his business interests in New York. However, Cleveland's successor, President Benjamin Harrison, persuaded him to accept reappointment and he remained until 1890.

In 1897, when the Armenian massacres were stirring the world and American lives were being sacrificed, Straus, summoned to Washington by President William McKinley, was told that since he was "the only man in the United States who could save the situation," it was his patriotic duty to return to Constantinople. He acceded to the request, and within two years he had adjusted the difficulties resulting from damages to American honor and interests and returned to the United States.

Oscar Straus

During the course of this second mission to the Sublime Porte, Straus, at the time of the Spanish-American War, obtained the help of Abdul Hamid in getting the Mohammedan sultans of Mindanao to accept the protection of the United States rather than to join Aguinaldo, the leader of the insurrectionists. Straus was thus enabled to prevent an insurrection of the Moslems in the Philippine Islands, saving the United States the necessity of putting at least twenty thousand soldiers in the field. His successful intervention prevented the outbreak of a "Holy War" in America's newly acquired colonial possession, and the merciless slaughter which results from outbreaks of religious fanaticism.

In recognition of his distinguished services in Turkey, Washington and Lee University in 1897, and the University of Pennsylvania in 1898, conferred the degree of Doctor of Laws upon Straus.

Declining the offer of other foreign posts, Straus returned to his private affairs in 1900 and continued in business in New York until the summer of 1905, when President Theodore Roosevelt confided to him in advance that he was wanted for a Cabinet position. In conveying this information the President said to him: "I have a very high estimate of your judgment and your ability, and I want you for personal reasons. There is still a further reason: I want to show Russia and some other countries what we think of the Jews in this country." The next year Straus retired permanently from private business life, and became Secretary of the Department of Commerce and Labor, the first Jew to enter the Cabinet of an American President.

One of the subjects which particularly engaged his attention in his official capacity was that of immigration, and, since the Secretary had a large measure of personal responsibility in the final decision as to exclusion and deportation, he took this matter most seriously and reviewed each individual case before deciding on it.

The Secretaryship of the Department of Commerce and Labor was not the first position with which Presi-

dent Theodore Roosevelt had honored Straus. In 1902, seeking a man qualified to succeed ex-President Harrison as American member of the Permanent Court of Arbitration at The Hague, Roosevelt singled out Straus as a man versed in government affairs and diplomacy and possessing the proper quasi-judicial temperament. He was later reappointed thrice to the Hague Tribunal, once by Roosevelt in 1908 and again by Woodrow Wilson in 1912 and in 1920.

Although Straus had been assured by the Taft administration that he would remain in the Cabinet, he was "drafted" for a third period of duty in Turkey in April, 1909, when Taft had been in office little more than a month. The crisis in the Turkish Empire had become acute and the whole world was aghast at the atrocities in Asia Minor. Straus returned to Constantinople, this time with the rank of Ambassador, the Legation having been raised to the status of an Embassy. After brief but energetic efforts he further supplemented his earlier achievements by inducing the Turkish government to grant permission to all foreign religious, educational and benevolent organizations to hold landed property—a decision which affected more than three hundred American organizations. He thus performed inestimable services for his own and also, indirectly, for other countries. When the tension eased in 1910, he returned home after less than two years.

Straus had the probably unique experience of serving in offices of high rank under five successive presidents —Cleveland, Harrison, McKinley, Theodore Roosevelt, Taft—one a Democrat and four Republicans also of decidedly varying political leanings. This was attributable to the fact that his patriotism transcended mere party considerations.

In spite of his service under a Democratic president, Straus himself was a progressive Republican by conviction, and in 1912 he became the Progressive Party candidate for governor of New York, running against Job E. Hedges, Republican, and William Sulzer, Democrat. He was not elected, but he had the distinction of polling more than 393,000 votes, or 3,000 more than Theodore Roosevelt received as Progressive candidate for president on the same ticket.

During the first World War he served as a member of the advisory committee of Herbert Hoover's Commission for Belgian Relief. He again came into great prominence during the negotiation of the Treaty of Versailles, whose sessions he attended as Chairman of the Paris Committee of the League to Enforce Peace (1919).

Locally Straus made a substantial contribution to public welfare by his services first as member of the First Division of the New York State Public Service Commission, appointed in 1915 by Governor Charles S. Whitman, and later as chairman of this body, from which he resigned in 1918. Straus was a member of the Indian Commission, of the Commission to Investigate New York City Public Schools, and of the Commission to Investigate Pauper Insane Institutions. He was among the founders of the National Civic Federation and served as vice-president of the American Association of International Law and of the Columbia Alumni Association. He also rendered notable service as president of the New York Board of Trade and Transportation (1902-3), the National Primary League (1895), the American Social Science Association (1899-1903), and the National Conference on Capital and Labor (1901). He repeatedly acted as arbitrator in labor controversies, most importantly in 1912, when he was chosen chairman of a board to arbitrate the differences between fifty-two railroads east of the Mississippi and their locomotive engineers.

Throughout his life, Straus, elated over the fact that it was given to him to represent his coreligionists through the official recognition bestowed upon him, always reacted sensitively to any trials which beset Jews in countries of persecution and either alone or in association with others took steps to ameliorate their lot whenever possible. In 1891 he was a member of a delegation headed by Jesse Seligman and including Jacob H. Schiff and General Lewis Seasongood of Cincinnati, which submitted to President Harrison a description of the pitiable condition of the Jews in Russia. The President subsequently referred to this subject in his Annual Message to Congress. Another of the many manifestations, typical of his close attachment to his fellow Jews, occurred during the Roosevelt administration. Besides taking part in a conference with President Roosevelt at Oyster Bay, which resulted in the sending of the famous note from Secretary of State John S. Hay to St. Petersburg, Straus accepted the chairmanship of the committee to collect funds to alleviate the distress produced by the great pogrom in Kishinev, Bessarabia, in 1903. Straus was also active in the movement which culminated in the abrogation of the treaty of 1832 between Russia and the United States (1911), a measure of immeasurable importance to the Jews.

In 1899, Straus met the founder of modern political Zionism, Theodor Herzl, in Vienna and suggested to Herzl that he go in person to Constantinople to conduct negotiations instead of depending on unworthy intermediaries. He also emphasized to Herzl the importance of considering Mesopotamia as a possible area for Jewish settlement. Straus himself visited Palestine during the early part of his first mission to Turkey. He also crossed the Jordan and had a conference at Aman with Hussein, King of Arabia, with Damianos, the Greek Orthodox Patriarch in Jerusalem, the Armenian Patriarch and the Archbishop of Jordania. Another invitation was extended by the British High Commissioner, Sir Herbert Samuel, after the first World War. On Straus's second visit he represented the Federal Council of Churches, and attempted to restore harmony among the groups in Palestine.

Straus never felt at any time that his public career demanded severance from Jewish tradition. He was a loyal member of the synagogue and was actively engaged in the work of the administration of one of the largest Jewish charities of New York, the Hebrew Orphan Asylum. He was intensely interested in the American Jewish Historical Society, of which he was president from its foundation in 1892 to 1898, and devoted time and thought and active work to its development. He was a trustee and member of the Publication Committee of the Jewish Publication Society of America, a member of the Executive Committee of the American Jewish Committee, a governor of the Dropsie College for Hebrew and Cognate Learning, and one of the founders of the Young Men's Hebrew Association in New York city in 1874.

In spite of his preoccupation with official duties and many civic and communal activities, Straus continued his studies in historical research, in which his scholarly turn of mind found an outlet. His devotion to his country led him to make a special study of its institutions, and of the men who laid the foundations of the Republic. The result of these investigations found concrete expressions in two notable books: *The Origin of the Republican Form of Government in the United States* (1885), tracing with skill and scholarship the rise of democracy from the Hebrew Commonwealth as it was expounded in the Old Testament and interpreted by the early Puritans of New England, and *Roger Williams, the Pioneer of Religious Liberty in the United States* (1896), which earned for him the honorary L.H.D. degree from Brown University, Providence, R. I.

He was the author also of other studies, including *Reform in the Consular Service* (1897), *The United States Doc-*

Jesse Isidor Straus

Sarah Lavanburg (Mrs. Oscar S.) Straus

trine of Citizenship (1901), *Our Diplomacy with Reference to Our Foreign Service* (1902), and *The American Spirit* (1913), as well as of occasional contributions to the *North American Review* and other important periodicals. His autobiography, *Under Four Administrations,* appeared in 1922. Straus also delivered lectures at Yale and Harvard Universities and for a number of years lectured annually on international law before the United States Naval War College at Annapolis. EDWARD W. JELENKO.

SARAH LAVANBURG STRAUS (b. New York city, 1861), philanthropist and explorer, was the wife of Oscar S. Straus, whom she married in 1882. She founded the Hannah Lavanburg Home for Girls in memory of her mother, organized the Clara de Hirsch Home for Immigrant Girls, and was for many years president of the Clara de Hirsch Home for Working Girls. In 1929 she financed and accompanied an expedition of scientists sent to Africa by the American Museum of Natural History for zoological research, in the course of which she traveled over 15,000 miles and gathered thousands of specimens. In 1935 she made another trip through Persia and India.

JESSE ISIDOR STRAUS, United States Ambassador to France, b. New York city, 1872; d. New York city, 1936. He was the son of Isidor Straus. Straus received his A.B. degree from Harvard in 1893. That year he entered the merchandising field by taking a post with Abraham and Straus in Brooklyn, but in 1896 he became one of the executives in the R. H. Macy Store with which his father was already associated. Straus maintained his active connection with the store until 1933, when President Franklin D. Roosevelt appointed him Ambassador to France. From 1919 until that time he was president of the Macy firm, and under his direction it became known as the world's largest department store.

Straus had long been interested in civic affairs, and active in the Democratic Party. Roosevelt, as governor of New York State, first named him to the New York State Commission for Revision of Tax Laws. But in 1931, during the nadir of the depression, Straus was appointed chairman of the Temporary Relief Administration of New York State, to supervise the disbursement of a special $20,000,000 unemployment fund voted by the State Legislature at an extraordinary session. His responsibilities as Ambassador—a post he held until ill health forced his resignation shortly before his death—kept him in France during the years when the Italo-Ethiopian war and the German occupation of the Ruhr laid the forecast of the second World War. With Pierre Laval as foreign minister of France during much of the time, issues were confused; Straus could, however, straighten out certain trade difficulties between the United States and France, such as the double taxation of firms having foreign branches.

In addition to his presidency of the Macy store, Straus had numerous other commercial interests. He was a director of the New York Life Insurance Company, the Bowery Savings Bank and of several stores affiliated with the Straus holdings. He was made a member of the Board of Overseers of Harvard University in 1927, to which he and his brothers, Herbert Nathan Straus and Percy Selden Straus, gave Straus Hall in memory of their parents. He was also on the Council of New York University. Straus received an honorary LL.D. degree from the University of Georgia in 1931. In 1937 his wife, Irma Nathan Straus, established the Jesse Isidor Straus Child Health Station in New York city in memory of her husband.

HERBERT NATHAN STRAUS, b. New York city, 1881; d. New York city, 1933. He was a younger son of Isidor Straus and the brother of Jesse Isidor Straus. He was graduated from Harvard in 1903 and the same year entered the Macy store, of which he became secretary and treasurer in 1919 and vice-president in 1922. Straus was active politically in the Republican Party, and was treasurer of the New York State Republican Committee in 1928. During the first World War he served with the Food Administration and War Trade boards. He was a director of the Georgia Warm Springs Foundation and a member of the visiting committee of the Harvard Graduate School of Business Administration.

PERCY SELDEN STRAUS, b. New York city, 1876. He was also a son of Isidor Straus and the brother of Jesse

Percy Selden Straus

Nathan Straus, Jr.

Isidor Straus, whom he succeeded in the presidency of the R. H. Macy store in 1933. Straus received his A.B. degree from Harvard in 1897. He was associated with various educational and philanthropic enterprises; he was a member of the Council of New York University and a trustee of the New York Public Library. From 1922 to 1930 he was president of the Jewish Agricultural Society, and later served as chairman of the board of the Federation for the Support of Jewish Philanthropic Societies. In 1929 Straus and his wife, Edith Abraham Straus, the daughter of one of the founders of the Abraham and Straus store in Brooklyn, gave $1,000,000 to New York University. In 1935 Straus became director of the then newly-organized Refugee Economic Corporation. During the first World War he was chairman of the executive committee of Industrial Training for War Emergency.

Jack Isidor Straus, b. New York city, 1900. He was the elder son of Jesse Isidor Straus, and was associated with his father in the Macy firm. He graduated from Harvard in 1921, and in the same year entered the Macy employ. In 1926 he was made executive vice-president, in 1933 vice-president, in 1939 acting president and in 1940 president. He was also affiliated with the L. Bamberger store in Newark and was chairman of the board of WOR (Bamberger Broadcasting Service).

Straus became a member of the board of the Jewish Board of Guardians in 1935 and its secretary in 1939; he also held other executive posts in Jewish welfare organizations. He was a member of Mayor Fiorello H. LaGuardia's business advisory committee in 1940 to 1941, and of the New York city Council of Defense.

Robert K. Straus, b. New York city, 1905. He was the younger son of Jesse Isidor Straus and the brother of Jack Isidor Straus. He was graduated from Harvard in 1927 and after study in Europe returned to receive an M.B.A. degree at the Harvard School of Business Administration in 1931. Straus was for a time (1931-32) assistant to Harry L. Hopkins, executive director of the New York State Temporary Emergency Administration. Later (1933) he was assistant to Raymond Moley in the State Department in Washington, then he was affiliated with the National Recovery Administration and with the Resettlement Administration. In 1939 Straus was elected to the City Council of New York city.

Nathan Straus, Jr., American government official, b. New York city, 1889. He was the son of Nathan Straus (1848-1931). He studied at Heidelberg University, and graduated from Princeton University in 1909. Until his entry into political life, Straus divided his time between journalism and merchandising. He was affiliated with the R. H. Macy firm from 1910 to 1913, publisher of *Puck* from 1913 to 1917, and later (1919-20) assistant editor of the New York *Globe*.

In 1921 Straus was elected to the New York state senate, serving until 1926. His first experience with the housing problem was in 1935, when he was appointed special housing commissioner for the city of New York. Two years later President Franklin D. Roosevelt made him administrator of the United States Housing Authority; during the four years he held this post (he resigned early in 1942) Straus put through effective low-price housing projects in cities as well as suburban areas. On his retirement he returned to the direction of the crockery firm on which the family fortune had been founded.

He was a participant in numerous Jewish philanthropic enterprises, and was in 1943 a director of the Palestine Economic Corporation. During the first World War he was ensign in the United States Navy.

Hugh Grant Straus, b. New York city, 1890. He was the younger son of the first Nathan Straus and the brother of the second. He graduated from Princeton University in 1910 and entered the merchandising field, mainly through the Brooklyn firm of Abraham and Straus, of which he was director, vice-president and treasurer. He was especially active in welfare work, serving as a member of the Welfare Council of New York city and as chairman of the Brooklyn division of important national and municipal philanthropies. He was also president of the Brooklyn Federation of Jewish Charities, a director of the American Jewish Joint Distribution Committee, of the Jewish Education Committee and of the National Refugee Service. During the first World War he was a lieutenant in the Quartermaster Corps.

Roger Williams Straus, corporation executive, b. New York city, 1891. He was the son of Oscar S. Straus. After graduating from Princeton University in 1913, Straus became associated with various mining and smelting firms, with which he later held leading directive posts, including the presidency of the American Smelting and Refining Company (1941-). His affilia-

tions with Jewish and general philanthropic undertakings were comprehensive. Straus was the first president of the National Federation of Temple Brotherhoods, of which he was one of the organizers, and in 1943 was honorary president. He was also a member of the executive board of the Union of American Hebrew Congregations, a member of the board of governors of the Hebrew University and of the executive committee of the American Jewish Committee.

Straus was co-chairman of the National Conference of Christians and Jews. Through his mother, he was related to the Lavanburg family and president of the Fred L. Lavanburg Foundation. His wife was Gladys Guggenheim, and Straus was a trustee of both the John Simon Guggenheim Memorial Foundation and of the Daniel and Florence Guggenheim Foundation. He was also a trustee of the Roosevelt Memorial Association and the National Foundation for Infantile Paralysis. He was the co-editor of *The American Way* (1936) and author of *Religious Liberty and Democracy* (1939). Though an important figure in the Republican Party, and an advocate of political participation, Straus refused political office.

In 1936 Straus was awarded the *American Hebrew* medal for the promotion of better understanding between Christians and Jews, and in the same year was given the loving cup from the 1913 Princeton class for his work in fostering better inter-faith relationship. Bucknell University made him an honorary L.H.D. in 1936. During the first World War Straus was an intelligence officer with the Commanding General's staff in Siberia, with the rank of captain. Later he was a major in the Officers' Reserve Corps.

NATHAN RICARDO.

STRAUS, AARON, merchant and philanthropist, b. Baltimore, 1864. He first entered business in the furniture house established by his father. At the age of twenty-one he went to St. Louis, where he founded a firm of his own. Later he returned to Baltimore.

Throughout his long career in his native city Straus was one of the outstanding benefactors in the community. Among the contributions made by Straus and his wife, Lillie Straus, were $100,000 to the Young Men's and Young Women's Hebrew Association, $45,000 toward a building for the Associated Jewish Charities ($65,000 had been allocated from the estate of Max Straus, a brother), and $150,000 to the city of Baltimore for a new aquarium. There were also numerous substantial contributions to local and overseas philanthropies. The Aaron and Lillie Straus Foundation, established in 1929, conducts summer camps for more than 2,000 boys and girls.

STRAUS, ADOLPH DELISLE, journalist, merchant and diplomat, b. Kirchheim-Bolanden, Bavaria, Germany, 1839; d. New York city, 1925. Serving as a cabin boy on a sailing vessel, he came to the United States in 1849. He entered journalism at the age of sixteen, reporting the Lincoln-Douglas debates. During the Civil War he served as a captain of the Louisiana Volunteer Regiment, and was severely wounded. For a short time he served as general in the army of Nicaragua, but in 1867 he returned to newspaper work, going to Havana, Cuba, in that year as a representative of the New York *Times;* he was the only newspaperman present at the execution of Maximilian in Mexico.

He retired from newspaper work in 1876, founded the exporting firm of A. D. Straus and Company, and from 1889 to 1912 served as consul general of Nicaragua in New York city. Straus was awarded knighthood in the Royal American Order of Isabelle the Catholic from Spain for his services during the Columbian Exposition of 1893.

Roger W. Straus

STRAUS, DAVID C., physician, b. Chicago, 1882. He received the M.D. degree from Rush Medical College, Chicago (1907), and was made assistant clinical professor of surgery at his alma mater in 1920. During the first World War he served with the American Expeditionary Forces in France as a major in the Medical Corps and was awarded two battle clasps for duty in the Meuse-Argonne sector and in the defensive sector near Verdun. Straus contributed articles to *Collier's Loose Leaf Encyclopedia* (1933) and Christopher's *Surgery* (1936). He did research on fractures, goiter, gallbladder, and bone and joint surgery.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 662.

STRAUS, ISAAC LOBE, public official, b. Baltimore, 1871. He was educated in the Baltimore public schools and graduated from City College, and Johns Hopkins University in 1890. He was admitted to the bar in 1892 and was elected a member of the General Assembly of Maryland in 1902. He was elected attorney general of Maryland in the administration of Governor Crothers in 1908. During his term of office he proposed and supported many acts of public interest, such as the Public Service Law, Corrupt Practices Act, Motor Vehicle Law, Pure Food Act and the Direct Primary Election Law. In 1914 he was a candidate for the Democratic nomination for United States Senate. Straus served as counsel for the Lord's Day Alliance, the Maryland Society for the Prevention of Cruelty to Animals, and other organizations.

STRAUS, OSCAR, composer, b. Vienna, 1870. After studying in Vienna with Grädener and Prosnitz, and in Berlin with Max Bruch, he conducted the orchestras of a variety of German theatres. In 1901 he was the conductor at the Uberbrettl in Berlin, for which he composed the music for several farces. Soon after this he turned to the writing of operettas, producing his first triumph in 1907 with the *Waltz Dream* and, one year later, scoring a second sensation with *The Chocolate Soldier.* Straus composed the music for more than twenty-five operettas, which were produced in cities throughout the world. He composed also orchestra, choral and chamber-music works, but

it was in the light vein that he proved his greatest talent; some of his waltzes are among the finest to have been written in modern times.

He also perfected a satirical style, sometimes using the shimmy or ragtime to add spice to his idiom. In 1939 Straus became a French citizen, and one year later he settled permanently in the United States. He went to Hollywood several times to write music for the films.

Lit.: Bizet, R., *Une heure avec Oscar Straus* (1930).

STRAUS, RALPH, novelist and biographer, b. Manchester, England, 1882. He was educated at the Harrow School and Pembroke College, Cambridge (B.A.). Straus wrote several popular biographies, including *Robert Dodsley, Poet, Publisher and Playwright* (1910); *Dickens: a Portrait in Pencil* (1928); *Dickens, the Man and the Book* (1936) and *Lloyd's: a Historical Sketch* (1937). His novels include *Carriages and Coaches* (1912); *The Unseemly Adventure* (1924); *The Unspeakable Curll* (1927); *Five Men Go to Prison* (1935).

STRAUSS, ARTHUR, Member of Parliament, b. 1847; d. London, 1920. He was the son of A. Strauss of Mayence, Germany. Strauss was a tin merchant and engaged in politics. From 1895 to 1900 he represented the Camborne Division of Cornwall as a Liberal Unionist in the House of Commons, and from 1910 to 1918 North Paddington as a Unionist.

George Russell Strauss, a son of Arthur Strauss, represented North Lambeth in the London County Council (1925-31) and as a Laborite in the House of Commons (1929-31 and from 1934 on). From 1932 on he represented South East Southwark in the London County Council where he also served as chairman of the Highways Committee (1934-37) and Vice-Chairman of the Finance Committee (1937-39). A one-time parliamentary private secretary to the Minister of Transport, he was a member of the Home Counties Traffic Advisory Committee (1934-39).

STRAUSS, EDUARD, chemist, b. Kreuznach, Germany, 1876. He studied philosophy, chemistry and medicine at the Universities of Bonn, Munich and Berlin, graduating from the latter in 1899. Adolph von Baeyer and Emil Fischer were among his teachers. From 1899 to 1907 Strauss worked in Munich in the field of nutritional chemistry, and from then to 1938 he was in Frankfort at the Biological Institute and the Georg Speyer House, where Paul Ehrlich had previously labored. During this period he published many basic papers on the chemistry of the white of the egg, a study to which he later returned in New York city.

Strauss was active also in the field of popular education, and did much to foster Jewish education. From 1907 to the beginning of the first World War he was lecturer for the Frankfurter Bund für Volksbildung. He was president of the Hermann Cohen Lodge in Frankfort, member of the board of the Jewish community, of the Palestine Foundation Fund and of the Jewish Central Verein. Together with Franz Rosenzweig and Martin Buber, Strauss was a leader of the Freies Jüdisches Lehrhaus of Frankfort until he left Germany in 1939 to settle in New York. In 1943 he was working with Bruno Kisch at the Crown Heights Hospital in Brooklyn.

His writings appeared in many scientific and Jewish periodicals, and in manuals and anthologies. His paper, *Judentum und Zionismus* (1919), as well as religious and historical papers on Judaism are worthy of mention. His essays "Paulus, der Bekehrte" and "Augustinus, der Bekehrte" appeared in *Der Jude* (Berlin, 1923) and "Das Zeichen von Bolsena" (1930) and "Franziskus" (1926-27) in *Die Kreatur.* From 1900 to 1939 forty-five essays of his on chemistry were published in the *Berichte der deutschen chemischen Gesellschaft,* in the *Zeitschrift für physiologische Chemie* and in the *Biochemische Zeitschrift.*

STRAUSS, EDWARD ANTHONY, Member of Parliament, b. Highbury, England, 1862; d. London, 1939. The son of a merchant of Southwark, he succeeded to his father's business, then studied at King's College, London, and abroad. He traveled extensively on the continent of Europe and in Canada, British Columbia and the United States. Strauss was a Liberal (later National Liberal) Member of Parliament for the Northern or Abingdon Division of Berkshire (1906-10), West Southwark (1910-18) and North Southwark (1918-23, 1927-29 and 1931 until his death). He was a Freeman and Liveryman of the City of London.

STRAUSS, HENRY GEORGE, Member of Parliament, b. London, 1892. He studied at Oxford University (M.A.), served in the first World War and was invalided. Strauss was called to the bar in 1919, served in several government departments, and was elected to the House of Commons on a Conservative ticket (1935). In 1936 he became parliamentary private secretary to the atttorney general.

STRAUSS, HERMANN, physician, b. Heilbronn, Germany, 1868. He served at the university clinic of Giessen and the Augusta Hospital of Berlin, and in 1910 became head of the department of internal diseases at the Jewish community hospital. In 1902 he became associate professor at the University of Berlin.

Strauss visited the United States in 1910, lecturing at several leading universities and before medical societies. He was decorated with the Iron Cross for notable services to his country in the first World War. In 1942 he was deported by the Nazis to Poland.

He wrote important books on metabolism, kidney diseases and dietetics, including: *Diätbehandlung innerer Krankheiten* (4th ed., 1922); *Die Nephritiden* (4th ed., 1926); *Chlorentziehungskur* (3rd ed., 1924); *Erkrankungen des Rectum und Sigmoideum* (1922); *Die Prokto-Sigmoskopie* (2nd ed., 1930); *Innere Sekretion und praktische Medizin* (with Boehnheim; 2nd ed., 1927); *Insulinbehandlung des Diabetes* (with Simon; 2nd ed., 1924).

STRAUSS, JOSEPH, American rear admiral, b. Mount Morris, N. Y., 1861. After graduating from the United States Naval Academy in 1885, he took part in hydrographic surveys on the East and West coast of the United States and in Alaska (1887-90). From 1893 to 1896 he served in the Bureau of Ordnance of the Navy Department, and during the Spanish-American War he was engaged in the blockade of the Cuban coast. Subsequently he was in charge of the United States Naval Proving Ground (1903-9) and chief of the Bureau of Ordnance (1913-16). He resigned to take command of the battleship *Nevada,* and he commanded the expedition which laid the mine barrage across the North Sea and the English Channel, planting over 56,000 American mines; he also commanded the fleet that cleared the North Sea of mines after the first World War.

In 1918 Strauss was promoted to the rank of rear admiral, and in 1921 to 1922 he was commander-in-chief of the Asiatic fleet. Retired in 1925, he was recalled to active service as a member of the board on Safety and Salvage of Submarines (1928-29), and again in 1937 as a member of the board to pass upon the design for new battleships. In 1930 he was made an admiral on the retired list. Strauss was the inventor of

Rear Admiral Joseph Strauss

the superimposed turret system of mounting guns on battleships (1895), and author of various articles on ordnance and ballistics.

STRAUSS, JOSEPH BAERMAN, bridge engineer and inventor, b. Cincinnati, 1870; d. Los Angeles, 1938. He studied civil engineering at the University of Cincinnati, graduated in 1892, and began his career in bridge engineering as a draftsman for the New Jersey Steel and Iron Co. of Trenton, N. J. After having spent many years as an inspector, detailer and estimator in various bridge shops, he founded the Strauss Engineering Corporation, of which he was president and chief engineer. His most outstanding achievement in his field was the construction of the Golden Gate Bridge at San Francisco, considered one of the finest engineering structures ever achieved. Opened in May, 1937, it was the longest single-span suspension bridge in the world, constructed from plans first submitted by Strauss in 1919. The main span of the bridge is 4,200 feet long, and its total length is 5,200 feet. He was also co-designer of the $12,000,000 Montreal-South Shore Bridge, in Montreal, Canada; designer and engineer of the Arlington Memorial Bridge across the Potomac River, Washington, D. C.; consulting engineer to the Port of New York Authority on the George Washington Bridge across the Hudson River, and instrumental in the construction or design of almost 500 other bridges both in North America and in Europe. He sought to incorporate the beauty of the skyscraper in his designs, avoided the network of cables in order not to spoil the lines of his towers, and was content to let steel speak for itself as an architectural material.

Joseph B. Strauss

An inventor of note, Strauss was the originator of the Strauss trunnion bascule and direct lift bridge, designer and builder of the airoscope and portable searchlight outfits adopted by the San Francisco Exposition (1915) and by the United States and Russian governments, and inventor of the yielding barrier and other mechanical devices. In 1930 he was awarded the honorary D.Sc. degree by the University of Cincinnati.

Lit.: Engineering News-Record, May 19, 1938; Hart, Louis, "Bridging the Golden Gate," *American Hebrew,* Sept. 5, 1924.

STRAUSS, LEO, historian of philosophy, b. Kirchhain, Hesse, Germany, 1899. He received the Ph.D. degree from the University of Hamburg (1921), and served as research assistant at the Akademie für die Wissenschaft des Judentums in Berlin (1925-32). A Rockefeller fellow from 1932 to 1934, he emigrated to the United States in 1938. He was appointed lecturer (1938) and subsequently associate professor (1941) on political science at the New School for Social Research in New York city.

His writings include: *Die Religionskritik Spinozas* (Berlin, 1930); *Philosophie und Gesetz* (Berlin, 1935); *The Political Philosophy of Hobbes* (Oxford, 1936). Strauss was associate editor of the bicentennial edition (1929 et seq.) of Moses Mendelssohn's works. He was a member of the board of editors of the *Universal Jewish Encyclopedia.*

STRAUSS, LEWIS LICHTENSTEIN, banker and farmer, b. Charleston, W. Va., 1896. He was a secretary to Herbert Hoover from 1917 to 1919 when Hoover was food administrator during the first World War, and was decorated by six nations for his relief work in Belgium and other European countries. He was American delegate to the Final Armistice Convention when concluding armistice terms were signed at Brussels in 1919. He became associated with the banking firm of Kuhn, Loeb and Co. in 1919, and was admitted to partnership in 1929. Strauss was active for the Joint Distribution Committee, served for fifteen years as president of the Jewish Agricultural Society, and was a member of the executive committee of the American Jewish Committee. A commander in the Naval Reserve, he was called to active duty in 1941, and was still serving in 1943. He was president of Congregation Emanu-El of New York city (1939-).

STRAUSS, RAPHAEL, miniature painter, b. Bavaria, Germany, 1830; d. Cincinnati, 1901. He came to Cincinnati in 1854 and soon won recognition because of the originality of his methods and the excellence of detail in his paintings. He made portraits of many of the leading citizens of Cincinnati and vicinity, the best known being those of Governor Bushnell of Ohio and of Frederick H. Alms. Until a few months before his death Strauss was vice-president of the Cincinnati Art Club.

STRAUSS, SIEGMUND, inventor, b. Znaim, Czechoslovakia, 1875; d. New York city, 1942.

He was active during the greatest part of his life in Vienna, where he had his own laboratory. Together with Robert von Lieben and Eugen Reisz, he is credited with the invention of the radio amplifier tube, while he himself invented the feed-back; both inventions were fundamental in the development of the European radio industry. Later Strauss expanded his explorations into the field of medicine. Among the instruments developed by him are the so-called mecapion, an integrating measuring device for the medical application of X-rays, and the so-called cardiotron, which indicates the respiration, blood pressure and pulse frequency of a patient under operation.

When the Nazis marched into Austria Strauss went first to London, then came to New York during the fall of 1940. In the course of his brief activities in the United States he obtained a patent (together with Louis Weissglass) for a new X-ray apparatus to make photographic images of the movements in the human body (as of organs, such as the heart and lungs).

STRAUSZ, ADOLF, Hungarian diplomat, and political economist and ethnographer, b. Cece, Hungary, 1853. He studied at a military academy and at the University of Budapest, and for some time served with the general staff of the Austro-Hungarian Army. A specialist on events and conditions in the Near East, Strausz was repeatedly sent to the Balkans and to Asiatic Turkey as an exponent of the power politics of his government. While acquainting himself with most of the leaders in the Balkans and becoming a man of importance himself, he profited from his travels to delve into the languages, cultures and aspirations of the subjugated Balkan peoples and became a champion of their national independence. From 1880 to the end of the first World War Strausz was considered one of the major experts on Balkan affairs, and he rendered great services especially to Bulgaria. His stories received wide publicity in leading European newspapers.

From 1890 to 1923 he was professor of the commercial geography and ethnography of the Balkans at the Oriental Academy of Commerce and the University of Budapest. He founded and edited *Revue de l'Orient* (with A. Sasvári) and *Die Donauländer.* He edited also *Gazette de Hongrie.*

During the Russo-Japanese war he was appointed representative of the Japanese emperor from Vienna to Constantinople.

Strausz was among the earliest exponents of Zionism in Hungary. During the first World War he sensed the growing menace of anti-Semitism, and immediately after the War received permission from the government to organize Jewish self-defense in the prevention of pogroms. The Karlsbad Zionist Congress of 1921 delegated him to travel in Palestine; his descriptions of that journey were published by the international press.

While in several of his writings dealing with the Balkans he described also the Jews living there, from the 1920's on he devoted himself more exclusively to researches on the history of the Jews in Italy. In 1929 appeared his *Das römische Ghetto, die zweitausendjährige Geschichte der jüdischen Gemeinde zu Rom.*

Adolf Strausz

Strausz received many distinctions, including those from the king of Bulgaria and the Holy Dragon Order of Japan. In 1943 he was believed to be living in Budapest. He was honorary president of the Zionist Organization of Hungary.

His numerous published books include: *Bosnien, Land und Leute* (Hungarian, 1881; German, 1882); *Bulgarische Industrie* (1886); *Voyage au Monténégro* (1888); *Die Balkan-Halbinsel* (1888); *Bulgarische Grammatik; Bulgarische Volksdichtungen* (1894); *Romania* (1894); *Bulgária ipara* (Bulgarian Industry; 1901); *Szerbia* (1903); *Die asiatische Türkei* (1905); *Die neue Balkanhalbinsel und das türkische Reich* (1913); *Grossbulgarien* (1917); *Das osmanische Reich* (1917).

STREIT, SHALOM, Hebrew writer, b. Galicia, 1889. He came to Palestine in 1908 and was one of the founders of Kfar Melal. Streit, whose work appeared in Palestinian Hebrew periodicals, was best known as a literary critic. An early volume of his criticism was *Baaloth Hashahar* (Tel-Aviv, 1927) and a two-volume collection of his critical essays, *Al Penc Hasifruth,* appeared in 1939 to 1940 at Tel-Aviv. Streit is a romantic critic who writes in an intimate and lyrical tone on the creators of Hebrew literature.

This literature represents to him not the reflection of national rebirth, but the rebirth itself, "its driving force, its moving spirit." In the authors of the Haskalah period (Moses Hayim Luzzatto, Naphtali Herz Wessely, Isaac Erter, Abraham Mapu, M. J. Lebensohn, J. L. Gordon, Perez Smolenskin and others) he discerns the "breaking of the dawn." The great master builders of modern literature (Ahad Haam, Mendele Mocher Sforim, Peretz, Frischman, Bialik and Berdyczewski) he sees as the "morning light." And in modern authors, he sees the high-noon of Hebrew literature.

Streit's critical method is individualistic-impressionistic. He writes in an intimate vein.

STRELSIN, ALFRED A., industrialist, b. Anufrehifka, Ukraine, Russia, 1898. He was brought to the United States in 1906, and later studied advertising and economics at Wisconsin University. In 1916 Strelsin established an advertising agency, and late in 1917 joined some friends in an oil prospecting venture and made a large oil strike at Burk Burnett, Texas.

In 1921 Strelsin had established business relations with Germany, Russia and Japan, and for the next four

years he had practical control of the porcelain enamel, bristle and cobalt industry of those countries. Discontinuing foreign operations in 1925, he spent a year lecturing on world economics throughout America. Strelsin was responsible, in 1927, for the conversion of a swamp adjoining Milwaukee, Wis., into a model city, named Center City. Two years later Center City, a flourishing community of some four thousand population, was incorporated into Milwaukee.

Later Strelsin took over several defunct industries from banks that had inherited them in the depression. After reorganization, most of these industries were disposed of, with the exception of the General Scientific Corporation, of which Strelsin remained president and controlling factor. The laboratories of the firm participated in the invention or development of Q.R.S. Neon, photo cells, optical lenses such as the torpedo sight, the Air Corps telescope sight, the "magic eye" and fluorescent lighting.

At the outbreak of the second World War he was called to Washington as special consultant. Early in 1941 he was made civilian advisor to Donald M. Nelson, chairman of the War Production Board. In December, 1942, he was appointed special consultant to the Board of Economic Warfare. Strelsin was active in Zionist affairs and served (1941-) as executive chairman of the American Committee for a Jewish Army. In 1937 he contributed $100,000 to the production of *The Eternal Road*.

STRICH, FRITZ, historian of literature, b. Königsberg, East Prussia, 1882. He was appointed instructor at the University of Munich (1910), and served there as assistant professor from 1915 to 1929, when he was called to the University of Bern, Switzerland; here he was still serving as associate professor of the history of literature in 1943. Strich published numerous essays and books on the history of German literature, the most famous of which was *Deutsche Klassik und Romantik* (1922). He edited the works of Friedrich Schiller (13 vols., 1909-13), Frank Wedekind (*Ausgewählte Werke,* 5 vols., 1923) and Heinrich Heine (10 vols., 1925), the letters of Frank Wedekind and the lectures delivered by members of the German Academy of Science (*Deutsche Akademiereden*).

Together with Harry Maync and Samuel Singer he edited *Sprache und Dichtung,* a series of scholarly monographs on topics of German philology and the history of literature. He contributed the essay "Byrons Manfred in Schumanns Vertonung" to *Festgabe Samuel Singer überreicht* (1930). His brother, Walter Strich (b. Königsberg, East Prussia, 1885), was a psychologist and writer on civilization.

STRICKER, ROBERT, Zionist leader, b. Brünn, Moravia, 1879. As a student he founded, together with Berthold Feiwel and others, the Jewish national students' club, Veritas. He was one of the foremost Austrian Zionists, and was the leader of the Jewish movement in Austria which fought for recognition of Jewish minority rights under the old monarchy. Stricker published for years the *Jüdische Zeitung* in Vienna, and during the time of the revolution (1918) was president of the Jewish National Council of Austria. In 1919 and 1920 he was Jewish representative at the Austrian constitutional convention, vice-president of the Vienna Commission of the Joint Distribution Committee, member of the board of directors of the Jewish community of Vienna and vice-president of the Zionist Actions Committee.

This latter position he resigned because of his opposition to the policies of Chaim Weizmann, and he founded (1926) the faction of the radical Zionists (Judenstaats-Partei). Stricker founded the *Wiener Morgenzeitung,* the first Central European Jewish daily in the German language (1919-26), and later published the radical Zionist weekly *Neue Welt* (Vienna, 1928-38).

His Zionist essays and speeches were published under the title of *Wege der jüdischen Politik* (1929). Stricker was arrested by the Nazis after the annexation of Austria (1938) and held for a long time in the Dachau concentration camp. He was later released, but was not permitted to leave Nazi territory. In the fall of 1942 he was reported to have been transferred to Therezin, in the Czech protectorate, in order to organize there, together with Desider Friedmann, former president of the Vienna Jewish community, the everyday life of the Jews in the fortress.

Lit.: Wininger, S., *Grosse Jüdische National-Biographie,* vol. 6 (1932); *Neue Welt,* Sept., 1929.

STRICKER, SALOMON, physician, b. Waag-Neustadt, Hungary, 1834; d. Vienna, 1898. He became lecturer on embryology (1862) and professor of experimental pathology and director (1868) of the newly founded pathological institute in Vienna. He introduced the method of embedding and solidifying tissues to render them adaptable for microtomy. He presented microscopic demonstrations by means of the projection apparatus. Stricker was also discoverer of the vasomotor center of the abdominal viscera, of the origin of the accelerator cardiac nerves, of the extravasation of the blood, the contractility of the capillaries and the transformation of elementary substances into migratory cells. He discovered the subdivision of cells in living tissue, and explained the synthesis of the cornea and the usefulness of cocaine as an anesthetic. His works include: *Studien über das Bewusstsein* (1879); *Studien über die Sprachvorstellungen* (1880); *Behandlung der Nervenkrankheiten* (1891).

Lit.: Wininger, S., *Grosse Jüdische National-Biographie;* Haberling, *Biographisches Lexikon der hervorragenden Ärzte* (1934).

STRIPES, *see* CORPORAL PUNISHMENT.

STRNAD, OSCAR, architect and interior decorator, b. Vienna, 1879; d. Alt-Aussee, Austria, 1935. He studied at the Technische Hochschule in Vienna with Carl König, and after that he worked for three years in the atelier of Frederic Ohmann. He became professor at the Wiener Kunstgewerbeschule in 1909, where he first taught art theory, and then, with Joseph Hoffmann, was the head of the department of architecture from 1914 until his death.

Strnad was a modernistic architect, developing his buildings from the inner, three-dimensional space, although he had a classical training. His venture in reconstructing the Parthenon (1908) was a manifestation of an inner trend toward purity of form, line and proportion. However, his art served life directly and he had but minor interest in monumental tasks. He designed household furniture. A glass table set was executed by J. and J. Lobmayr in 1917.

Well-known examples of his work combining architecture with interior decoration were the Reception Room of the Werkbund Exhibition in Cologne (1914), the Austrian Room in the "Gewerbeschau" in Munich (1922) and the home of Jakob Wassermann (1914). The middle building of the Winarsky Hof in Vienna (1924-25) showed his modern ideas of large-size construction. He designed the sepulchral monument of Rabbi H. P. Chajes (1928) and several others in the Centralfriedhof in Vienna. After 1918 Strnad executed a large number of stage sets for Max Reinhardt, for the Wiener Burgtheater and for other theatres, from 1920 on for operas, and in 1934 and 1935 he made sets for the motion pictures *Maskerade* and *Episode.*

STROOCK, MOSES J., lawyer and educator, b. New York city, 1866; d. New York city, 1931. He was the brother of Solomon M. Stroock. After being admitted to the bar in 1888 he entered practice, and subsequently became a partner with his brother in the firm of Stroock and Stroock. Stroock was chairman of the board of trustees of the College of the City of New York, and was also chairman of the Board of Higher Education. In Jewish communal activities Stroock served in the directorates of the Jewish Board of Guardians, the *Menorah Journal* and the Training School for Jewish Social Work.

STROOCK, SOLOMON MARCUSE, lawyer, and civic and communal leader, b. New York city, 1874; d. White Sulphur Springs, W. Va., 1941. He graduated from the College of the City of New York (B.S., 1891), and received the M.A. degree from Columbia University's School of Political Science a year later. In 1894 he was graduated from the Law School of Columbia University.

Shortly after his admission to the Association of the Bar of the City of New York, Stroock began practice in the law office of Morris Goodhart, and in 1896 he went into partnership with M. Warley Platzek and his brother Moses J. Stroock. When Platzek became a justice of the New York Supreme Court in 1907, the two brothers formed the firm of Stroock and Stroock, specializing in corporation law. During the years honors came to him from his professional colleagues. For almost two decades he was a member of one or more of the committees of the New York Bar. He served as its vice-president at one period. In 1931 he was named chairman of the Committee on Character and Fitness, First Department, Appellate Division, Supreme Court, New York State. For many years he was chairman of the Committee on Legal Education of the Bar Association, and was also a member of the Legal Education Committee of the New York State Bar Association. Stroock served in several capacities in the New York County Lawyers Association, and was a member of the American Bar Association, as well as of several professional societies. His Alma Mater recognized him by making him a member of the Board of Visitors, Columbia University School of Law, and conferred upon him the Columbia Medal at commencement in 1931.

Deeply rooted in traditional Judaism, Stroock became secretary of Congregation B'nai Jeshurun in 1895, a post which he was to hold for more than a decade. He later became principal of the religious school of which he himself had been a graduate. In 1896 an association for Biblical study was created under his chairmanship.

From the immediate precincts of B'nai Jeshurun he went out to serve the community at large. In 1924 he was elected president of the Young Men's Hebrew Association, a post which he relinquished for the greater one of heading the Federation for the Support of Jewish Philanthropic Societies of New York City, from 1926 to 1929. During the same period he was also president of the Metropolitan League of Jewish Community Associations. He was long associated with the Judaeans, both as a board member and, in 1938, as a vice-president.

Stroock's interest in Jewish learning led him to close association with various educational institutions. But the Jewish Theological Seminary of America occupied his major interest in this field. He became president of the New York Branch Executive Committee of the

Solomon M. Stroock

Seminary in 1910, and in 1923 was chairman for New York city in the school's drive for one million dollars. In 1930 he was elected chairman of the board of directors of the Seminary, and a year later became president of its Library Corporation. He received the D.H.L. degree from the Jewish Institute of Religion (1931) and from the Seminary (1935).

Stroock became increasingly active in the fight for the protection of Jewish rights. He became a member of the American Jewish Committee in 1924, and ten years later was named chairman of its executive committee, succeeding Judge Horace Stern of Philadelphia. Following the death of Cyrus Adler, he was elevated to the presidency of this organization in 1941.

Together with Louis Marshall, Felix Warburg and Cyrus Adler, Stroock laid the foundation for the establishment of the enlarged Jewish Agency for Palestine, and was a member of its non-Zionist section.

Stroock was also an active member of the American Jewish Historical Society, and the author of the article "Switzerland and the American Jews" which appeared in its *Publications* (No. 11, 1903, pp. 7-52).

HARRY SCHNEIDERMAN.

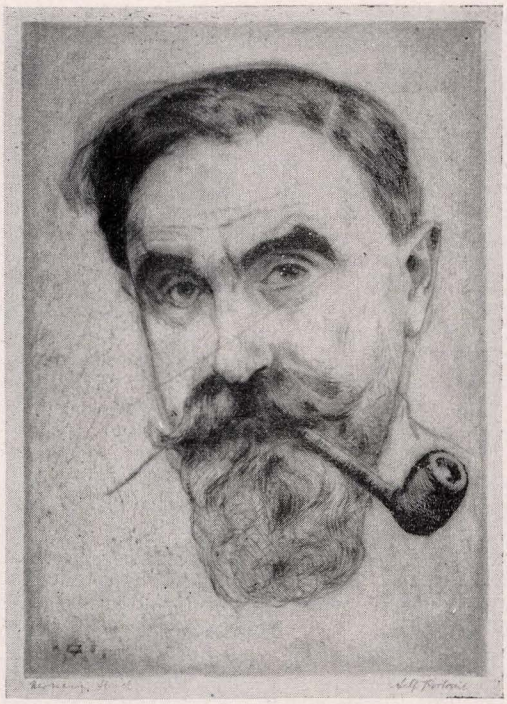
STROUSBERG, BETHEL HENRY (originally Baruch Hirsch Strausberg), financier and railroad builder, b. Neidenburg, East Prussia, 1823; d. Berlin, 1884. At the age of twelve, after the death of his father, he went to London to learn a profession; here he was baptized, and took the name Bethel Henry Strousberg. Returning to Berlin, Strousberg later (1861), representing a group of English capitalists, negotiated the concession for the building of the Tilsit-Insterburger Railroad. Soon after this he himself organized building and construction companies and un-

dertook the building and completion of several large railroads in the central and eastern parts of Germany and in Russia, Hungary and Roumania. The financial scheme in these great constructional undertakings consisted in issuing shares to the contractors and builders, who became part owners and were entitled to considerable profits. He soon became a man of great wealth and of high social position in Berlin. He was a member of the Conservative Party, and served for three years as deputy in the North German Reichstag.



The first reverses which led to his financial collapse grew out of his enterprise in 1870 in Roumania, which he was forced to liquidate after some friction with the Roumanian government. As a result of his excessive buying of land, factories and other property, he got into difficulties also with his German enterprises. The accusations brought against him by Eduard Lasker in the Prussian chamber of deputies at last disclosed the details of the "Strousberg Organization," and in 1875 his enterprises in Prussia, Austria, Roumania and Russia went into receivership. On a business trip to Moscow Strousberg was arrested, charged with fraudulent bankruptcy, and found guilty. He died in poverty and degradation. But in spite of his downfall Strousberg played an important part in the economic development of Germany in the 19th cent. In prison he wrote his autobiography, *Dr. Strousberg und sein Wirken* (1876). His other works include *Fragen der Zeit* (1877) and *Denkschrift über den Nordostseekanal* (1878).

Lit.: Hoppe, *Strousberg und Konsorten* (1877); Reitback, "Der Eisenbahnkönig Strousberg," *Jahrbuch des Vereins Deutscher Ingenieure* (1924).

STROUSE, MYER (Meyer Strauss), American Congressman, b. Oberstrau, Bavaria, 1825; d. Pottsville, Pa., 1878. He was brought to the United States in 1832. After studying law, he was admitted to the bar in 1848, in which year he also founded the *North American Farmer,* a periodical. For four years he edited the journal, then entered the practice of law. In 1862 Strouse was elected to the 38th Congress on the Democratic ticket. Reelected to the 39th, he served until 1867, when he returned to the practice of law.

STRUCK, HERMANN, artist and etcher, b. Berlin, 1876. Had not his artistic proclivities made themselves manifest in his youth he would have become a rabbi. After years of study at the Berlin Academy he wandered through many countries, drawing, etching, and painting landscapes. After lengthy sojourns in Palestine, where he became an ardent and active Zionist, he finally made his permanent home on Mt. Carmel in Haifa. His Orthodoxy, his immersion in the race life of the Jew, have affected his art more notably than in the case of any other famous etcher. His illustrations for Adolf Friedmann's *Reisebilder aus Palästina,* his hundreds of etchings and lithographs of Jewish scenes and characters, including many from New York's East Side and the Giudecca of Venice, frequently signed with his Hebrew name, Hayim Aaron ben David, or with a monogram wherein figure his initials and the Shield of David, are indicative of the notes of racial consciousness. Struck's portrait etchings of scientists, authors and philanthropists of three continents include such celebrated Jews as Heine, Herzl, Einstein, Freud, Schechter, Reinhardt, Schiff and Warburg, in addition to many Christian celebrities, such as Ibsen, Wilde, Hauptmann, Nietzsche and Haeckel.

An etching of a rabbi, bought by the Berlin Museum, first brought Struck's work to the attention of the public. A member of the London Royal Society of Painters, Etchers and Engravers, he is recognized as one of the greatest living etchers. His work is in numberless museums and private collections. His two books, *Die Kunst des Radierens* and

Hermann Struck, a self-portrait

Die Radierung im schönen Buche, are rich in technical instruction. His own art, never imitative, suggests the influence of Rembrandt and Goya, and indicates his admiration for such later artists as Whistler and Israels, Menzel and Liebermann.

Struck's range of subjects was very wide. As a contemporary historian he included in his 150 lithographic drawings of the first World War period—*Kriegsgefangene* and *An der Front vor Riga*—types of many lands and races. Yet whatever the range of his graphic art, or his devotion to it, his emotions, his thoughts are primarily with his race. One of his greatest ambitions is to have it proved that—as he believes—Rembrandt was a Jew. He ardently hopes to have this honor added to the record of his coreligionists.

GEORGE S. HELLMAN.

Lit.: Hellman, George S., "Artist and Jew," *Opinion,* May, 1936, pp. 22-24; *American Hebrew,* April 10, 1936, p. 579; March 9, 1928, p. 604.

STRUNSKY, SIMEON, author and editor, b. Vitebsk, Russia, 1879. He was brought to the United States in his childhood, and grew up in New York city, where he attended the Horace Mann School and Columbia College, from which he received the A.B. degree in 1900. He joined the staff of the *New International Encyclopedia,* and at intervals contributed to the New York newspapers.

In 1906 Strunsky became associated with the New York *Evening Post* as editorial writer. In addition to his regular work, he contributed for many years a weekly light essay. These were published from time to time in book form, and included *The Patient Observer* (1911); *Post-Impressions* (1914); and *Sinbad and His Friends* (1921).

In 1918 to 1919 he attended the Paris Peace Conference as one of the representatives of the New York *Evening Post.* In 1920 he became chief editor of the *Evening Post,* and held that position until 1924, when

the paper changed hands. He then joined the editorial staff of the New York *Times,* with which he was connected in 1943.

For a number of years Strunsky contributed to the Book Review of the Sunday edition of the *Times* an essay dealing in an informal fashion with books and questions of the day under the title of "About Books More or Less." For many years he was also a contributor to the leading magazines in the country, *The Century, Harpers, Scribners, The Forum* and *The Atlantic Monthly,* for which most of his work was done. It was in the columns of *The Atlantic Monthly* that he published the series of articles later appearing in book form under the title of *Belshazzar Court, or Village Life in New York* (1914). In 1931 there appeared in the *Atlantic* a series of four articles under the general title of *The Rediscovery of Jones,* later published in book form under the same name.

In his early volumes Strunsky quickly found a place in the front rank of American essayists. His work has so distinctive a flavor that comparisons with other essay writers might be misleading. There is an interesting parallel, however, with the essays of G. K. Chesterton. Like Chesterton, Strunsky is interested in discussing ideas rather than in reciting personal tastes and adventures. Like Chesterton, he is always finding unexpected paradoxes. But Strunsky's general tone is more quiet, more subdued: he does not strain after paradox as Chesterton did; and there is much less attention to merely verbal pyrotechnics in his work. While his prevailing note is humorous, he is never merely frivolous; there is nearly always a serious undercurrent in his writing.

Strunsky's most ambitious work is *The Living Tradition* (1939), a volume that runs to some 210,000 words. This is a study of the continuity and the changes in American life, pointing out that most Americans exaggerate the changes that have occurred in their country by concentrating attention on things that have changed and forgetting things that have remained the same. Strunsky's method is to annihilate a facile generalization with a neatly chosen set of statistics. But the volume is neither heavy nor solemn. The dominant mood is often humorous and sometimes playful. Strunsky has the rare combination of a sharp eye with a generous heart. He sees and describes American life without illusions, but he loves the life he satirizes.

In addition to the publications already mentioned, Strunsky wrote *Professor Latimer's Progress* (1918); *Little Journeys to Paris* (1918); and *King Akhnaton* (1928). He received the honorary Litt.D. degree from Brown University in 1941. HENRY HAZLITT.

STRUPP, KARL, jurist, and League of Nations expert, b. Gotha, Germany, 1886; d. France, 1940. He was the son of Privy Councillor Louis Strupp. He studied at the Universities of Heidelberg and Marburg, and taught at the Johann Wolfgang Goethe University at Frankfort, where he finally held the chair of international law as associate professor up to the time of the Nazis' rise to power. At the same time, he lectured at the Académie de Droit Internationale at The Hague. Strupp was known as the foremost expert for League of Nations law in Germany. In 1927 he became a member of the Institute for International Law, and in 1938 board member of the German Society for International Law. In 1933 he received a call to Istanbul, where he lectured to overflow audiences in French with the help of an interpreter. The outbreak of the second World War caught him in France, where he later died.

© Wide World Studio

Simeon Strunsky

His most famous work, published in five printings and translated into Greek, Italian and Turkish, is *Grundzüge der positiven Völkerkunde* (1921; 5th printing, 1938). His other works are: *Urkunden zur Geschichte des Völkerrechts* (2 vols., 1911); *Documents pour servir à l'histoire du droit de gens* (6 vols., 1922 et seq.); *Internationales Landkriegsrecht* (1914); *Internationale Schiedsgerichtsbarkeit* (1914); *La situation internationale de la Grèce* (1918); *Grundriss des Versailler Friedens* (1921); *Theorie und Praxis des Völkerrechts* (3 vols., 1925; 2nd ed., 1930); *Das Werk von Locarno* (1926); *Der Kellogg Pakt* (1928); *Die griechisch-türkischen Beziehungen 1820-1930* (1931); *Legal Machinery for Peaceful Change* (London, 1937). Strupp was also co-editor of the *Jahrbuch für Völkerrecht,* and completed Hatschek's *Wörterbuch des Völkerrechts* (3 vols., 1924-29).

While Strupp was little known in Jewish life, he gave his advice and the influence of his international connections to the cause of Judaism in numerous cases.

Lit.: C.-V.-Zeitung, Allgemeine Zeitung des Judentums, March 30, 1936.

STUCKENSCHMIDT, H. H., musicologist, b. Strasbourg, Alsace, 1901. He was a pupil of Arnold Schönberg. In 1928 he became music critic of the *Bohemia* (Prague), and in 1929 held a similar office for the Berlin *B. Z. am Mittag.* He was recognized as one of the most forceful and independent music critics in Germany. In 1934 he was compelled to resign his post, and went to Prague, where he became music critic for the *Prager Tageblatt.* He contributed extensively to leading music journals in Europe and the United States.

Stuckenschmidt lectured at the Berlin Lessing Hochschule and at the University of Heidelberg, and was author of *The History of Dissonance* (1938). He composed songs, piano pieces, and various works for the stage, but it is as writer and analyst of music, rather than as creator, that he achieved distinction.

STUDENTS, TYPES OF. The sages of the Talmud classified the various types of students from the viewpoint of conduct, assiduity, comprehension, discrimination and retention of lesson material. The simplest division was that into *hacham* ("wise man") and *golem* ("clod"). The wise man does not speak authoritatively before one greater in wisdom, does not interrupt his companion, is not hasty to answer, asks

to the point and answers according to the rule, discusses the first thing first and the last thing last, confesses his ignorance and admits the truth. The clod does just the opposite (*Aboth* 5:9). From the viewpoint of comprehension and retention a fourfold classification of students is given: one who is swift to learn and swift to forget, hard to learn and hard to forget, swift to learn and hard to forget ("this is a happy lot"), hard to learn and swift to forget (verse 15). From the standpoint of discrimination there is another fourfold sorting of disciples compared to four receptacles in the household: the sponge which absorbs and retains everything, the funnel which takes in all and loses all, the strainer which loses the good wine and retains the lowly lees, and the fan which lets out the chaff and retains the fine flour (verse 19).

The "four sons" of the Passover Haggadah, classified by Hiyya (*Yer. Pes.* 10:4; *Mechilta, Bo* 17), seem also to represent types of disciples from the viewpoint of their attentiveness and willingness to learn. They are: the *hacham* ("wise"), who wishes to know in detail; the *rasha* ("wicked"), who scoffs at learning; the *tam* ("simple"), or, as Hiyya called him, the *tippesh* ("simpleton"), who is inquisitive; and the *she'eno yode'a lish'ol* ("dull"), sluggish and not interested.

In the Yeshivas (Orthodox rabbinical seminaries) of Eastern Europe students of the Talmud and their masters were divided, according to their learning habits and their emotional and mental make-up, into four categories: 1. the *harif* ("sharp"); 2. the *baki* ("erudite"); 3. the *ba'al higgayon* ("logician"); 4. the *mathmid* ("assiduous"). A student excelling in any one of these characteristics to a phenomenal height was called *'illui* ("excellent"), and was a prodigy, a genius.

The *harif* was vivacious, alert, keen-edged, acute, quick to "attack" an opponent and quick to repel attacks. He was not inclined to ponder and hesitate, and had no need to do so, for his thinking process was like lightning and all the arguments and supportive deductions he needed were produced with the rapidity of a flash. The method of his reasoning is generally known as *pilpul* (akin to *pilpel,* "pepper"), because of its pungent "spiciness." The typical *harif* did not possess a vast store of Talmudic knowledge and did not quote extensively from the ancient tomes. He supported his contentions mostly by the mastery of a reasoning of his own that enabled him to split a hair lengthwise and "make the elephant pass through a needle's eye" (*B.M.* 38b). He was not always patient to hear his adversary to the end, and often was even disrespectful in the heat of the disputation. But as soon as the duel was over no hard feelings were kept aglow, and the *harif,* playful, jovial and always boyish, was again at peace with the world.

The *baki* was, above all, versed in the sources, familiar with a wide field of learning which he retained well in his memory and could quote at will. One was considered a *baki* if he could quote from memory at least the texts in three of the six *sedarim* ("orders," "divisions") of the Talmud, including the divisions Nashim and Nezikin. The typical *baki* was not very penetrating or profound, and sacrificed depth for surface. His ammunition was not so rapid and penetrating as that of the *harif,* but it was plentiful, reliable and authoritative. The most brilliant *harif* could often be paralyzed by a single quotation by the *baki.*

The *baki* was assiduous, peaceful, serene. He devoted all his time to the study of the texts. He sat at his study *Stander* (a tall, pulpit-like desk) as if glued to it, and in a low voice recited rhythmically and at a quick pace the wisdom of the Mishnah and the Gemara. When he encountered a difficult passage that did not yield to several efforts, he by-passed it; it did not halt his progress. The number of folios on the right side of his tome would increase rapidly and those on the left would diminish. Not all the Tosafoth ("supplements") would be covered by him, and few of the commentaries, glosses, or notes would be consulted by him. He had no time for details. He could not be sidetracked from his goal.

The *ba'al higgayon* was sedate and slow. He had to masticate every morsel of his spiritual food, trying to get every possible taste in it before he permitted it to go down and be digested and absorbed. He was after the *inner* meaning of every statement, after its core, its principle, its foundation, root and ramifications. He believed that he followed the strict logical pathway in arriving at his conclusions. A favorite method of the *ba'al higgayon* was to find a common principle or tendency (*shittah,* literally, "line") in all the opinions of a certain Tanna or Amora, even when the topics were unrelated; thus he would assume that his decision in matters of divorce, calendar, calculations and pathological lesions in the lungs followed a common tendency. The *ba'al higgayon* was clearheaded, and thought more than twice before he spoke. His speech was slow and in a cautious progression. He deliberated, and listened patiently to others before he expressed his own opinion.

The *mathmid* was studious to an extraordinary degree. The *baki* usually had to be a *mathmid,* but a *mathmid* was not necessarily a *baki,* for the term denotes constancy of study, through the day and many hours of the night. The earliest arrivals at the study hall found him there, and the last to leave left him there. He was pale and undernourished, and if he recited aloud his voice was harsh. His chant (for every Yeshiva boy sings while reciting) was monotonous but pleasant. He might be one of those who were slow to grasp or unable to retain, and therefore might not rate as high as those of the previous categories. He was usually lax in the observation of other religious acts that required time—such as prayer—for to him only one thing mattered—constancy at the texts. Several times a week he would sit out a *mishmar* ("night watch"), a whole night period between two full days of study. He appeared to be immune to fatigue or distraction. His fellow students spared him and did not annoy him with questions, or force him into arguments. He was allowed to continue his incessant monotonous chant through days and years. It formed the musical background and canvas for all the events that took place in the study hall.

In addition to the classifications based on temperament, there were others which indicated intellectual rank. A student who was better than ordinary might be known as *metzuyyan* ("distinguished"). The pride of the school is the *'illui,* the prodigy who is rare in any generation. Such a genius might be an *'illui harif,* able to vanquish even the head of the academy in hair-splitting discussion, or an *'illui baki,* one who was renowned for his stupendous memory and his ability to retain masses of material which he had seen only once. His memory was photographic, and it was a favorite feat of such an expert to pierce the pages of a volume with a pin and to announce which word would be found at any number of pages beneath the spot where the point entered.

While all the four principal types of Yeshiva students might be found in any Yeshiva, certain Yeshivas were classified because their heads and most of their students were of one type or another. Thus the Yeshiva of Telshi and the Keneseth Israel Yeshiva of Slobodka

were known for their *harif* students and Pilpulists. On the other hand, the Yeshiva of Volozhin, under the directorship of Elijah Vilna, Hirsch Loeb Berlin and Raphael Shapiro, favored the *baki* type. The Yeshivas of Mir, Lida and the Keneseth Beth Isaac of Slobodka favored the *ba'al higgayon*. Still another type of Yeshiva was called the Musar Yeshiva, because of the devotion to piety, ethical virtues and devout religiousness; the best known of these were the Keneseth Israel and Etz Hayim of Slobodka, and those at Radin and Novogrudok. Their form of study was emotional, hence they did not produce any distinct type of Jewish student.

HIRSCH LOEB GORDON.

STUDY. Judaism as a religion is based upon three points—the belief in One God, the special service of Israel as a people, and the concept of the Torah as the guide of life for every individual. The term Torah, which originally meant the word of God and then the written Law as embodied in the Five Books of Moses, was expanded to include the Oral Law of the rabbis, the other books of the Bible, and all the teachings of Judaism. The study of this Torah, as the inevitable duty of every Jewish male, became one of the basic principles of the Jewish way of life and the strongest support of Judaism during the centuries of its existence. The Torah was not the exclusive property of any class; it was the "inheritance of the congregation of Jacob" (*Deut.* 33:4). The commandments were addressed directly to the individual, and he had to know them in order to obey them. Thus it came about that in Judaism, to a degree unparalleled in any other religion, study for its own sake and for personal self-improvement of character was assiduously cultivated.

This ideal was not fully developed until the time of the Second Temple. In the early history of Israel it was the prophets who revealed the will of God to the people. But these prophets themselves realized the necessity of spreading their doctrine to the masses by means of disciples and of setting up codes of laws—simple in wording, direct in meaning. Each reformation in the history of the religion of Israel, those of Asa and Jehu in the 9th cent. B.C.E., that of Hezekiah in the 8th, and that of Josiah in the 7th, were accompanied by the issuance of more and more of a fixed Torah that was to guide every individual Israelite. In the religious transformation that accompanied the loss of national independence and sanctuary and the necessity of preserving their life on foreign soil this process was completed, and by the 5th cent. B.C.E. the entire Torah, or Five Books of Moses, was ready to be accepted by the people as a whole. A significant chapter in the Bible (*Neh.* 8) describes how Ezra read the law before the people, and the priests "caused the people to understand the Law . . . they read in the book, in the Law of God, distinctly; and they gave the sense, and caused them to understand the reading" (verses 7 and 8). At this point revelation through prophets is replaced by education on the basis of the study of the Law.

The priests remained the teachers of the Law to the people for three hundred years. But they were not selfish in their teaching, and they encouraged laymen as well to study the Law and to derive knowledge from it. This study of the Law was known as Midrash, meaning literally a "searching" of the Scriptures. In the time of the Hasmonean kings these lay teachers became so powerful as to challenge the authority of the priest teachers and to create their own system of study, the Mishnah. Education became still more widespread; not only were there schools for children in every village by the 1st cent. C.E., but hundreds of individuals, following various vocations, were devoting part of their time to study on their own account. It was then that the third and final term for study was coined—Talmud.

An examination of the sayings of the teachers of the period of the Mishnah (200 B.C.E. to 200 C.E.) reveals an amazing emphasis on the necessity of personal study. Among these are the following, drawn from *Aboth:*

"Let your house be a meeting-place for the wise; sit in the dust at their feet and drink in their words with thirst" (1:4).

"He who does not increase his knowledge decreases it; he who does not study deserves to die; he who makes a worldly use of the crown (of the Torah) shall waste away" (1:13).

"If thou hast learned much Torah, ascribe not any merit to thyself, for thereunto wast thou created" (2:9).

"Be watchful in the study of the Torah, and know what answer to give the unbeliever" (2:19).

"If three have eaten at a table and have spoken there words of Torah, it is as if they ate at the table of God" (3:4).

"Whoso receives the yoke of the Torah, from him the yoke of the kingdom and the yoke of worldly care are removed" (3:6).

"Whoever honors the Torah will himself be honored by mankind" (4:8).

"Turn it (the Torah) and turn it over again, for everything is in it; and wax old and gray over it, and stir not from it, for thou canst have no better rule than this" (5:25).

The sixth chapter of the tractate, known as the "Chapter of the Acquisition of the Torah" (Perek Kinyan Torah), is devoted entirely to the praise of study.

The sages who enunciated these teachings derived no profit from their study other than the respect of their fellow Jews. In fact, it was not until about the 14th cent. that regular salaries were paid to the sages and rabbis. They supported themselves as merchants, physicians, or even as day laborers, and devoted their spare time to study. The very poorest persons were encouraged to learn, even though it be only a verse a day. To make this possible, the daily prayers included three passages, one from the Bible, one from the Mishnah, and one from the Talmud, so that every individual might automatically fulfill the duty of study. The communities of Babylonia had the institution of the Kallah months, Adar in the spring and Elul in late summer, when the people would cease from their work and gather to receive instruction from the greatest rabbis of the country. The synagogues, too, gave opportunities for learning in the discourses that were given at the conclusion of the services.

The ideal of the Jews was carried with them in their wide dispersal through the world. The duty of "learning" (*leinen*) Torah became part of the very texture of Jewish life. Children began to learn at the age of five, and the Bar Mitzvah boy of thirteen was able to deliver a Talmudic lecture. Those who could afford to—and those who could not—sent their children to study at Yeshivas to acquire knowledge before they were so old that they had to earn a living for themselves. It was the usual custom for adults to read over each week the prescribed Torah portion, once in the Hebrew original and twice in its Aramaic translation. In every community there would be societies devoted to the study of the Mishnah and the Talmud, and when these had completed a definite section of their study, the happy occasion was marked with a banquet.

In modern times, the needs of a secular education have diminished the amount of study of the Torah

among the Jews, but have not entirely caused them to dispense with it. The Science of Judaism engages the work of many scholars. Special schools, forums and adult education classes still maintain the ideal of Jewish study—an ideal which, because it engrained the teachings of Judaism in the heart of the individual, undoubtedly played a very great part in the preservation of the Jewish people.

STUTTGART, capital of the former kingdom of Württemberg, with a total population (1933) of 414,794, including 4,408 Jews. Jews in Stuttgart were first mentioned in 1348 to 1349, when they were persecuted on the occasion of the Black Death. The dukes of Württemberg, however, like other German princes, tried to utilize Jewish money lenders to raise their revenues, and for that reason were ready to protect them, especially because their political rivals, the neighboring Swabian free imperial cities, were antagonistic to the Jews.

From 1393 on some Jews, such as Baruch Baseles, Moses Jaecklin, Solomon, and Lazarus, were granted privileges, but in 1492 the Jews were expelled from Stuttgart, in spite of the remonstrances of Johannes Reuchlin, their advocate. Not until 1593 were Jews allowed to reside again in Stuttgart, when there came to power Duke Frederick, who favored the Jewish artist Abraham Calorno and Maggino Gabrieli, consul general of a company of Jewish merchants. The duke forced the orthodox Lutheran court preacher Lucas Osiander to leave the city because the latter denounced the Jews from the pulpit. Jews continued to reside at Stuttgart, although many of them were expelled in 1629 "because there were too many of them," and in 1679 a greater number of Jews received the right to settle there.

In 1712 the Jews Solomon Frankel, Leon Wolff, Marx Nathan and Baer, who received privileges, were falsely accused by their own coreligionist, Model Loew, who subsequently was imprisoned in 1721, but was released in 1726 to carry his trial to the supreme court. The reign of Duke Carl Alexander ameliorated the situation of the Jews of Stuttgart despite the opposition of Lutheran orthodoxy, which was politically represented in the diet. Joseph Süss Oppenheimer, the duke's favorite, conferred upon Moses Drach the right of printing playing-cards, and Jacob Uhlmann enjoyed favors as an army contractor. Immediately after the sudden death of Carl Alexander, Oppenheimer was arrested and tried, and the adversaries of the Jews took the opportunity to urge the destruction of the Jewish community of Stuttgart and of all the Jews of the duchy. Nevertheless, Marx Nathan, Moses Drach and other Jews were permitted to remain, and were protected from the mob. In 1739 the Jews were banished, but were recalled soon after. In the 1740's the court bankers Seligmann and Ullmann played an important part in the economic life of the duchy.

Duke Carl Eugene (1744-93), a despot who was denounced by Schiller and other German writers, was well disposed toward the Jews. He granted monopolies to Mark and Elias Seligmann and to Sontheimer and Company, and in 1782 destroyed the gallows which had been erected for Joseph Süss Oppenheimer. The duke also decreed that no Jew should be deprived of his rights unless he was convicted of a crime.

Duke Frederick William (1797-1805) was not so well-disposed toward the Jews. But the Kaulla family, which established a banking house at Stuttgart in 1797, was favored as army contractors despite the opposition of its Christian competitors, and when Napoleon made the duke of Württemberg a king; the royal bank was founded in cooperation with the Kaulla banking house.

King Frederick I of Württemberg granted some members of the Kaulla family full citizenship in 1806. From 1819 on the struggle for the emancipation of the Jews was conducted by Nathan Wolf Kaulla, Karl Weil and Samuel Mayer. In 1832 the official Jewish community of Stuttgart was organized, and in 1835 Joseph Maier became chief rabbi of the district of Stuttgart. His successor, Moses Wassermann, received many honors from the king and the city council. In 1893 Theodor Kroner became chief rabbi. These three rabbis were also members of the consistory, and had the title of *Kirchenrat.* After Kroner's death, Paul Rieger (1870-1939) became chief rabbi and member of the consistory.

From 1830 to 1930 the relations between the Jews of Stuttgart and their non-Jewish fellow citizens were generally very friendly, because Württemberg was a democratic and religious country. After the establishment of the Nazi regime in 1933 Stuttgart was a kind of oasis until November, 1938. The anti-Jewish laws had to be followed, but the population, especially the orthodox Protestants and the Catholics, were opposed to any persecution of the Jews. During these years the importance of Stuttgart for the Jews of Western Germany increased because there was an American consul in the city. The pogrom of November 9, 1938, was also less violent in Stuttgart than in other German cities. Nazi bands burned the synagogue, and plundered Jewish shops, but they were prevented from molesting any Jews of Stuttgart in their homes. There is no information available as to the fate of the Jews of Stuttgart from the outbreak of the second World War in September, 1939, to 1943. HUGO BIEBER.

STYBEL, ABRAHAM JOSEPH, merchant and publisher, b. Zarki, Poland, 1885. After studying in the Yeshivas of various Polish cities, he entered the commercial field as a leather merchant. But the desire to see literature in modern Hebrew disseminated prompted him, as soon as it came within his means, to establish the publishing house bearing his name, the Stybel Publishing Company, which played a large part in the rebirth of modern Hebrew. It was founded in Moscow in 1918, and its first publication was *Hatekufah,* a quarterly. In the following year a branch office

was opened in Warsaw, and later in New York city. Stybel expended approximately two million dollars of his personal fortune in his purpose.

The aim of the Stybel Publishing Company was to publish new original work by Hebrew authors and also translations into Hebrew from the classics, and from modern works in other languages. Among the translations were those by Hayim Nachman Bialik of Anski's *Dybbuk* and Schiller's *Wilhelm Tell*. Other translations included Gilgamesh, Shakespeare, Dante, Goethe, Heine, Emerson, Tolstoi, Pushkin, Stendhal, Rolland, Sienkiewicz, Galsworthy, Jack London and Sinclair Lewis. The European debacle that began in 1933 forced the closing of the various European branches; in 1943 only the office in Tel-Aviv was still publishing. Stybel was living in the United States.

STYRIA (in German, **Steiermark**), province in the former republic of Austria, with one million inhabitants, of whom about 4,000 were Jews (1934). It is likely that Jews immigrated into the territory of the Austrian Alpine provinces together with the Romans. Proof thereof seems to be contained in the fact that the most important commercial spot of the province is first mentioned in 1080 as bearing the name "Judenburg." In the 12th cent. the names of such places as the Judendorf indicates the presence of Jews.

In the following century the Jews of Styria must have been numerous and important. The expression "debts by Jews or Christians" had then become a formula. Jews controlled the money trade and thereby an essential share in the import and circulation of monies in general. Owing to the scanty resources of the Styrian princes, the Jews formed one of the most profitable sources of money. Therefore the rulers sought to protect their Jewish subjects by means of charters, the first of which was enacted in 1244. While persecutions of Jews were frequent in neighboring countries, only one is attested for Styria (1310 or 1312). The Jews had their own independent courts for differences arising among themselves, while for differences with Christians they availed themselves of mixed Jewish tribunals. They possessed complete freedom of movement and the right to acquire real estate. The good relations prevailing between the Jews and their surroundings are evidenced by many proofs.

A considerable degree of prosperity gradually developed in this manner, and ultimately it led to the displeasure of the Christian population against the Jews. In the 15th cent. the estates repeatedly asked that the Jews be banished. Maximilian I, compelled by his difficult position, yielded to their demands. Thus, by the decree of March 18, 1496, the Jews were expelled from Styria, Wiener-Neustadt and Neunkirchen. In return for this permission, Maximilian I received the sum of 38,000 pfund pfennigs. (The pfund pfennig was equivalent to twenty schillings, each schilling being worth twelve pfennigs, each pfennig in those days having the purchasing power of about eleven cents [the value of a pound of bread] in modern American currency.) The Jews were granted a respite in which to liquidate their possessions. The expatriates turned to the border districts, to Lower Austria and Hungary, and then to the south (Gorizia, Gradisca and Trieste). In the following centuries they maintained from there an active commercial trade with Styria. Only in single cases and by special permission were temporary stays in the province possible. Individual Jews did not return until after the issuing of the Edict of Toleration by Emperor Joseph II of Austria (1782), and not until 1848 were greater numbers permanently settled in Styria. However, they had to wait until the adoption of the Austrian constitution of 1867 for the right of settlement to be legally assured to them. In 1869 there followed the founding of the Graz community, of which, during the existence of the Austro-Hungarian monarchy, the Jews of Styria, Carinthia and Carniola formed an adjunct. Jews resided in the few larger localities of the province; their number was always small. The largest community was Graz, with almost 3,000 Jews.

In 1938 most of the Jews were expelled by the Nazis from Styria, and no Jew was allowed to live in the province after August 1, 1939. ARTHUR ROSENBERG.

Lit.: Rosenberg, Arthur, *Beiträge zur Geschichte der Juden in Steiermark* (1914); Scherer, J. E., *Die Rechtsverhältnisse der Juden in den deutsch-österreichischen Ländern* (1901); Herzog, in *Monatsschrift für Geschichte und Wissenschaft des Judentums* (1931) 30-47.

SUARÈS, ANDRÉ (pseudonym of Félix André Yves Scontral), poet, novelist, essayist and political writer, b. Vallon, France, 1866. He studied at the École Normale Supérieure. Suarès' work, which places him among the foremost essayists and critics of his country and time, is great in scope and volume. "A solitary and pessimistic spirit, aristocratic and haughty, he is interested in all that, in life and art, expresses heroism and force. . . . His vehement and lyrical style is harmonious and musical" (*Grande Encyclopédie Larousse*).

Suarès' attitude toward Judaism is a complex one. In his introduction to the fourth volume of *Oeuvres complètes de Charles Péguy* (1916), he writes: "It is a misfortune to be a Jew if one really is one, but it is an infinitely greater misfortune to be regarded as a Jew when one is not one." But in his book, *Vues sur l'Europe* (Opinions on Europe; 1939), published shortly before the outbreak of the second World War, he is more precise. He reproaches the Jews for refusing to recognize the divinity of Jesus Christ, a descendant of the Jewish prophets. "Zion has forged social justice and the God who saved the world." He recommends their disappearance as a people, but praises them for their contribution to righteousness and reason. "Law inspired by feeling is Israel's work." At the same time he fulminates against anti-Semitic and Hitlerite doctrines: "In every anti-Semite you will find a friend of Hitler." "Regardless of the accusations against the Jew, considered as a people or as an individual, an anti-Semite is a brute, a beast, the most cowardly of all."

His best-known writings are: *La tragédie d'Électre et Oreste* (1908); *Occident* (1906); *Voici l'homme* (1905); *Sur la vie* (2 vols., 1908-12); *Cressida* (1913); *Péguy* (1915); *La Nation contre la race* (1916); *Cervantes* (1916); *Commentaires sur la grande guerre* (1915-18); *Remarques. 12 Pamphlets* (1917-18); *Idées et visions* (1925); *Trois hommes: Pascal, Dostoewsky, Ibsen* (1919); *Voyage de condottiere* (1924), *Les écrits nouveaux* (criticisms, 1919); *Goethe, le grand européen* (1932); *Marsiho* (1933); *Valeurs* (1936); *Musique et poésie* (1928); *Trois grands vivants: Cervantes, Tolstoi, Baudelaire* (1937); *Vues sur Napoléon* (1933); *Vues sur l'Europe* (1939).

The work of Suarès is the subject of many commentaries and studies by authors French and non-French, among them by Ernst Robert Curtius in his well-known book *Die literarischen Wegweiser des neuen Frankreich* (1920).

SUASSO DE LIMA, JOSEPH, lawyer and journalist, b. about 1791; d. Cape Town, South Africa, 1858. Probably of Portuguese descent, he came from Holland to the Cape of Good Hope in 1818, in which year he affiliated himself with the Dutch Reformed Church. He was a man of many parts, being at various times schoolmaster, historian, poet, lawyer, publisher, bookseller and translator.

In 1828 he edited and published a paper called the *Verzamelaar,* which existed for several years, suspended publication, and was revived in the 1840's. S. Mendelssohn, in his *Bibliography of South African Literature,* mentions several books in Dutch by De Lima, but they are not of specifically Jewish interest. De Lima wrote the first history of South Africa, published in Dutch in 1825. Lame and diminutive, this curious and eccentric individual was constantly the object of the satire and caricature of his contemporaries.

Lit.: Mendelssohn, S., in *The Jewish Historical Society of England, Transactions,* vol. 7 (1915) 187-88; *South African Jewish Year Book* (1929) 239-40, 249-51; Botha, in *South African Jewish Chronicle,* Sept., 1924, p. 14.

SUFFERING. The basically optimistic viewpoint of Judaism is revealed in its attitude toward the problem of suffering. Death, sickness, pain, need and worry are part of life; but they are not the determining part, only its darker background. They do not arise from the influence of an evil being, a devil, but are part of the plan and purpose of God in human life. Nevertheless, they raise the theological question as to the place and purpose of suffering. It is evident that much evil in life comes as the direct consequence of wrongdoing, but it is equally clear that in many cases the righteous suffer as much as or even more than the wicked.

This difficulty has been answered by Jewish thinkers in various ways. Simple piety contents itself with the belief that whatever God does is right. *Job* and Jeremiah come to the conclusion that suffering is the test of God to see whether the righteous man will serve Him out of love rather than fear of consequences. Deutero-Isaiah describes the suffering of the "servant of God" as by way of atonement for the sins of others, and to cause them to repent. In still other passages there is reference to children suffering for the sins of their fathers (though this is contradicted in others) and individuals suffering for the guilt of the community. Another explanation was connected with the Messianic hope—those who are purified by suffering, who have been stricken in this world, will receive compensation and recognition in the world to come. Finally, the idea is expressed that suffering serves as a spur to human conduct; it gives man a task to perform, that of removing pain, ills and injustice from the world. "Need and misery are in existence in order that the good may remedy them" (*B.K.* 10a).

See also: GOOD AND EVIL; THEODICY.

SUICIDE. Judaism has always regarded suicide as a crime against God, unless brought about by certain extenuating conditions. The five cases of suicide in the Bible are all regarded as condoned by the unusual circumstances in which they occurred.

1. Saul fell upon his own sword to prevent his being mocked and tortured by the Philistines (*I Sam.* 31:4-5). According to the early Haggadah, when Samuel in spirit form was invoked by the witch of En-dor, he informed Saul that he could save his life by fleeing before the battle, but if he fought he would lose his life but in compensation would enter Paradise (Josephus, *Antiquities,* book 6, chap. 14, section 2; *Midrash Lev.* 26:7). The Midrash (*Midrash Gen.* 34:13) condones a "suicide of Saul," which is usually interpreted as meaning a case where one commits suicide because of unbearable physical pain, fear of being forced to violate the Jewish law, or a leader's fear that if he were taken prisoner many soldiers would be killed in vain attempts to rescue him.

2. Samson's suicide was with the consent of God, Who endowed him with sufficient strength to break the pillars which supported the building, and thus to kill at the same time thousands of the Philistines (*Judges* 16:28-30).

3. Ahithophel hanged himself (*II Sam.* 17:23) as a result of David's curse (*Mak.* 11a).

4. Abimelech, after his skull had been fractured by a millstone cast down by a woman, had his armor-bearer kill him, lest people say that he had met death at the hands of a woman (*Judges* 9:53-54).

5. Zimri burnt his castle about him, either out of fear or in atonement for his sins (*I Kings* 16:18).

Accounts of the Maccabean period record the suicide of the mother of seven sons, who threw herself into the fire after having seen her seven sons killed by the tyrant (*IV Macc.* 17:1; but cf. *II Macc.* 7:41), and that of Razis, who killed himself lest he suffer outrages at the hands of his captors (*II Macc.* 14:42).

In general, a suicide is regarded as forfeiting his share in the world to come and is not accorded full burial honors (Josephus, *Jewish War,* book 3, chap. 8, section 5; *Midrash Ps.* 150). The Talmud decrees that a suicide is to receive no eulogy or public mourning, but modifies this law by defining a suicide as one who had previously announced the method by which he intended to kill himself, as well as by laying down the dictum that children can never be regarded as deliberate suicides (*Semahoth,* edit. Higger, 1:1-5). Suicides were usually buried apart in community cemeteries. Suicide must have been rare among the Jews, as no Hebrew term for it was coined until the Talmudic period.

Medieval Jewish authorities, citing Talmudic precedents (*Keth.* 130b; *A.Z.* 17a, 18a; *Taan.* 29a), declare that one who commits suicide under great mental or physical strain, or while not in full possession of his faculties, or in order to atone for his past sins (*Midrash Gen.* 65:22; Josephus, *Jewish War,* book 2, chap. 18, section 4), is not to be regarded as a sinner. A legend declares that when the First Temple was destroyed by fire, many priests leaped into the flames (*Taan.* 29a), and Josephus records that the entire population of Masada killed themselves rather than fall into the hands of the Romans (*Jewish War,* book 7, chap. 9). The Biblical principle of the "sanctification of the name of God" (*Lev.* 22:32) was interpreted to mean that Jews in time of religious persecution should undergo martyrdom rather than transgress the three cardinal laws (*Sanh.* 74a). From certain tales of Roman persecutions (*Git.* 57b; *Erub.* 21b), as well as from the story of Saul, the rabbis deduced the principle that in times of persecution one might commit suicide in order to escape torture (*Tosafoth A.Z.* 18a, under Veal; *B.B.* 3b). Hence many Jews, in the time of the Crusades and other persecutions, killed themselves and their families before arrival of the enemy.

The Talmud records suicides as caused by grief and embarrassment (*Hul.* 94a; *Ber.* 23a). Among those who considered committing suicide were Job (*Job* 7:15), the daughter of Raguel (*Tobit* 3:10) and Jonah (*Mechilta,* edit. Friedmann, 2a). One of the reasons for not permitting one to confess a crime involving the death penalty if there were no witnesses was the fear lest the person in question was actually not guilty but was mentally unbalanced and wished to die (Maimonides, *Hilchoth Sanhedrin* 18:6). A mourner was to be watched lest in the extremity of his grief he do injury to himself (*Ber.* 54b).

Although others were forbidden to hasten the death of one who was at death's door, since no one should despair of God's mercies, one might ease his own death agonies (*A.Z.* 18a; *Semahoth,* edit. Higger, 2:9). The rabbis told a woman who was suffering from the infirmities of extreme old age that she should refrain from doing a certain meritorious act which was prolonging her life and then she

The procession with the Lulabs on Sukkoth

The evening meal in the Sukkah

could die (*Yalkut, Prov.* 943). Since it was wrong to do physical harm to one's self (*B.K.* 91b), it was wrong to do so indirectly by resisting armed thugs (*Sefer Hasidim,* edit. Margulies, paragraph 677).

There were many Jewish suicides during the medieval persecutions, the expulsions from England, France, Spain and Germany, and the pogroms in Russia and Poland. The toll has been especially heavy since the outbreak of the second World War, particularly in concentration camps, where Jews or their relatives actually paid bribes to guards for the privilege of committing suicide to escape further harsh treatment.

Statistics of suicide rates of various groups of the population in Germany and other countries reveal that except in times of persecution the Orthodox Jews of Eastern Europe have the lowest suicide rate of all. So abhorrent is suicide to the Orthodox Jew that there are cities with more than 20,000 Jewish inhabitants among whom there has not been a suicide in ten years. In times of persecution, however, the number of Jewish suicides rises sharply because of acute distress. In New York city in 1925 the figures showed a rate of 10.5 per 100,000 for Jews, in contrast to 15.9 per 100,000 for the entire population. The suicide rate for both Jews and non-Jews is higher in large cities than in the rural areas.

SUKENIK, ELEAZAR LIPA, archeologist, b. Bialystok, Poland, 1889. He attended various Yeshivas in Poland, and in 1912 moved to Palestine, where he graduated from the Hebrew Teachers Seminary, Jerusalem, and attended the Dominican École Biblique, Jerusalem. In 1923 he attended the University of Berlin, then became a fellow of the American School of Oriental Research in Jerusalem (1925), and received the Ph.D. degree from Dropsie College, Philadelphia (1926). Sukenik was a secretary in the department of education of the Zionist Organization in Palestine (1919-21), was called as a field archeologist to The Hebrew University, Jerusalem (1930), and was appointed lecturer on Palestinian archeology in 1935 and professor at the Museum of Antiquities in 1938. In 1943 he was head of the department of Jewish archeology at The Hebrew University, and keeper of the Museum of Antiquities. He lectured at the British Academy in London in 1930.

Commissioned by the Jewish Palestine Exploration Society and The Hebrew University, he and Leo A. Mayer, professor of art and archeology of the Near East, worked from 1925 to 1927 on the excavation of the "Third Wall" of Jerusalem. He also conducted excavations in the ancient synagogue on the Greek island of Aegina, in the old synagogue at Beth Alpha, and at other places in Palestine, discovering many inscriptions and otherwise unknown antiquities.

Sukenik's writings include: *Artzenu* (a guide book to Jerusalem; 1920); *The Third Wall of Jerusalem* (1930); *The Ancient Synagogue of Beth Alpha* (1932); *Ancient Synagogues in Palestine and Greece* (1934); *The Ancient Synagogues of El-Hammeh* (1935).

SUKKAH ("booth," "tabernacle"). According to Biblical law (*Lev.* 23:42-43), a part of the observance of the harvest festival of Sukkoth consisted of the people's dwelling in booths. The reason given for this commandment is that God caused the Israelites to dwell in booths during the period from the Exodus from Egypt to their settlement in Canaan. However, Bible critics regard this as the latest phase of the festival, which was preceded by a period of development.

Another passage in the Bible, *Deut.* 16:13-15 (cf. 26:8-11), gives only one reason for the observance of the festival, that of rejoicing over the produce of the soil; hence it is not called Sukkoth, but *hag ha'asif,* "the feast of ingathering," in two passages (*Ex.* 23:16; 34:22) which are regarded as still earlier. During the time of the kings it is probable that the only observance of the festival was by means of sacrifices and other demonstrations; but as Sukkoth became more and more a pilgrimage festival to a single sanctuary, it became necessary to have some place in which the pilgrims could live during the festal week, and so the festival booth came into being. This procedure is first mentioned in *Neh.* 8:14-18; the people, even those who lived in the cities and in Jerusalem, went to the hills, brought back branches of wild olive trees, myrtles, palms and other thickly leaved trees, and used them to erect booths on the roofs, in the courts, and on the open places of the city. It is further recorded that

they celebrated the feast for seven days with joyousness, the first time since the days of Joshua.

In *II Macc.* 10:6-7 it is reported that the people who were freed from the Syrian oppression, remembering that only a short time before they had had to observe the Feast of Booths while they were hiding in mountains and caves, celebrated a feast of joy for eight days, with branches of palms and other foliage in their hands (Hanukah). It is therefore clearly apparent that the palm-branch, myrtle, and fruits of a goodly tree were originally thought of as material or adornment for the booth; it was only later, at all events during the time of the Second Temple and in Jerusalem, that the passage in *Leviticus* was construed to mean that they should be borne in the hands and waved.

Both this group of plants and the booth itself are minutely described in the tractate *Sukkah* of the Mishnah. The main concern was with the foliage of the roof which, in accordance with the root-meaning ("to shade") of the word *sukkah,* had to be thick enough to cast a shadow; less attention needed to be paid to the walls. Another requirement was that the structure had obviously to be a provisional one; thus a booth higher than twenty cubits (about thirty feet) was not permitted.

The law for the festival requires that the Jew must not only live in the booth during the seven or eight days of the festival, but must also sleep there at nights; the provision does not apply, however, to women, slaves, sick children and those who nurse them. The Sukkah is usually provided with a table, vessels for eating and drinking, and lights; in addition, it may have various ornaments according to the taste of the owner. As a rule, fruits, such as apples, oranges, nuts and peppers, are suspended from the roof.

In modern times, under the conditions of climate (with many Jews living in cities where the weather is too cold in September or October to permit dwelling in Sukkahs) and of life in the large cities (where many Jews live in large apartment houses, or scattered throughout the cities, and are no longer concentrated in special or large Jewish sections), the observance of the custom of building and dwelling in Sukkahs has diminished. Accordingly, individual Jews decorate a porch or a room of their homes with fruits, and congregations erect a Sukkah within the buildings of their synagogues. Sometimes Jewish families who live in one apartment house join together in the erection of a "communal" Sukkah in the rear courtyard.

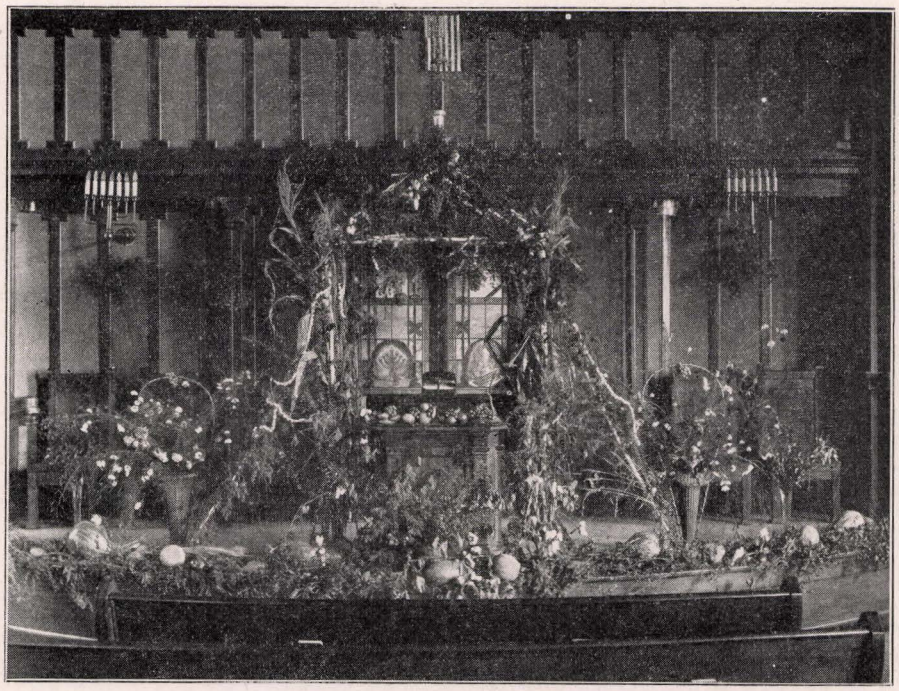
SUKKAH ("tabernacle"), sixth tractate of Moed, the second division of the Mishnah and Talmuds. It consists of five chapters and is devoted to the laws connected with the building of the Sukkah and the observance of the festival of Sukkoth. The contents of the Mishnah are as follows:

Chap. 1. The building of the Sukkah: its height, its locality, and the proper method of making a roof for it. The general point is that the Sukkah must be marked as a temporary structure, hence any form of covering that partakes of a permanent nature or gives the appearance of permanence makes it invalid for use during the festival. A Sukkah made like a cone-shaped hut or propped up against a wall is valid.

Chap. 2. The duty of sleeping in the Sukkah during the festival can be performed only by sleeping properly on a bed. A Sukkah may be built on top of a wagon, on a ship, or on top of a tree, and trees may be used to form part of its sides. There is no prescribed number of meals to be eaten in the Sukkah; but the meal for the first night of the festival must be eaten there. Women, slaves and tiny children are not bound to observe all the law of the Sukkah. If a man's head and greater part of his body are within the Sukkah, he has performed his duty, even though the table is outside.

Chap. 3. The Lulab, or palm-branch, with its customary adornments of myrtle and willow sprigs, and the accompanying ethrog, or citron. Detailed regulations are given as to what materials may or may not be used for the Lulab and what types of ethrogs are permitted. An ethrog must be at least as large as a walnut and not too large to be held in the hands. The ceremony of shaking the Lulab. Changes in the regulations introduced by Johanan ben Zakkai after the destruction of the Temple. Regulations in case the first day of the festival falls on the Sabbath.

Chap. 4. The first part of the chapter describes the manner in which the people would carry the Lulab and adorn the altar with willowbranches. It is noted that the citrons were eaten at the conclusion of the festival. Then comes the description of the ceremony of the water-drawing, which is continued in the subsequent chapter.



Chap. 5. It is described as a festival of illumination and dancing and as the most elaborate festival of the year. The rest of the chapter deals with the number of blasts of the Shofar in the Temple at various times of the year, the animal sacrifices on Sukkoth, and regulations as to the various divisions of priests.

The Tosefta to the tractate has four chapters and both it and the two Talmuds have numerous Haggadic passages. Among these are the story of the woman of the priestly division of Bilgah who became an apostate and assailed the altar as the waster of the property of Israel (*Tos. Suk.* 4:28), the story which explains Trajan's persecution of the Jews on the ground that it so happened that his son was born on a Jewish fast-day and died on a Jewish festival and he took the religious mourning and rejoicing of the Jews to be treasonable demonstrations (*Yer. Suk.* 55b), the account of the scholars of Hillel (*Suk.* 28a), and the tale of how Gamaliel II, Joshua, Eleazar ben Azariah and Akiba, while on their trip to Rome, successively used the same Lulab (*ibid.* 41b).

SUKKOTH ("booths"), the Feast of Tabernacles, which begins on the 15th of Tishri, the seventh Hebrew month (corresponding to the latter part of September and the first part of October), and lasts for nine days, including Shemini Atzereth (The Eighth Day of Conclusion). However, Shemini Atzereth is also regarded as a separate festival. The first and second and the eighth and ninth days of Sukkoth are full holidays; the five middle days of the festival, including the seventh day, called Hoshana Rabbah, which has an especial importance of its own, are half-holidays (Hol Hamoed). Reform congregations, however, generally observe only the first and eighth days of the festival as full holidays, and regard the middle six days as half-holidays, thus reducing the festival to eight days.

Sukkoth was originally the "feast of ingathering" (*Ex.* 34:22), a harvest and vintage festival, the concluding and therefore the most important and most joyful harvest festival of the year. Since it was the main festival of the year, its name was frequently shortened to "[the] festival" (*hag*). As a harvest festival it of course did not originate in Israel until after the Hebrews' immigration into Palestine, and appears to have been celebrated in accordance with the Canaanite pattern. Sukkoth originally was the only festival on which, in keeping with the ancient custom, a pilgrimage was made each year to Jerusalem, in order to offer there the first-fruits and the tithe (the Maaser), and to

The Sukkoth Decorations of Temple Beth El at Helena, Arkansas

hold dances and festival meals; at a later period, Passover and Shabuoth too came to be celebrated as pilgrimage festivals, since they marked the beginning and the end, respectively, of the grain harvest. At such Sukkoth pilgrimage festivals the people remained at the holy sanctuary during the entire week of the festival. At first the celebration did not have a fixed date, and was observed in the various sections of Palestine at different times, in accordance with the climatic conditions; thus Sukkoth originally appears to have been celebrated in the eighth month, Marheshvan, later in the seventh month, Tishri, and then it finally became fixed on the 15th of Tishri (*Ezek.* 45:25).

A typical Sukkah of oriental countries

A similar consequence of the centralization of worship under Josiah (621 B.C.E.) and of the heightened religious and historical consciousness was the increasing dissociation of the festival from its basis in nature and its association with Israel's dwelling in booths in the wilderness period, which, according to tradition, and in addition to the deliverance from Egypt, brought manifold proof of God's favor and protection (*Lev.* 23:42-43). Beginning with the Exile, when the consciousness of sinfulness and guilt became intensified, an eighth day was added to the festival on which a holy convocation took place, as on the first day (*Lev.* 23:36, 39); it seems clear that this eighth day of the festival was instituted in order to make up for the laxity and licentiousness which, since ancient times, were characteristic of this festival with its carefree, merry-making and unrestrained celebration, and in order to send the people off back to their homes imbued with more serious and solemn thoughts. At the same time a fixed sacrificial regulation was enacted for the entire people. Even though this very joyous popular and national festival thus came to assume greater seriousness, in keeping with the basic mood of the time, it did not lose or deny its original character, but continued to remain *zeman simhathenu,* "the time of our joy," and the festival ceremony of the water-drawing on the second evening of the festival (*simhath beth hasho'ebah,* "the joy of the house of the water-drawing") gave occasion for unusual popular rejoicing and religious celebration in the Temple forecourts.

The Sadducees rejected the offering of the water-drawing, since it is not ordained in the laws of the Torah (*Suk.* 55a); the people, however, with the approval and confirmation of the Pharisees, insisted on observing this offering, through which God's blessing was besought for the harvest of the coming year just before the beginning of the rainy season.

By Isidor Kaufmann

SUKKOTH

The Artist Named this: "A Descendant of the High Priests"

A reminiscence of the central position occupied in earlier times by the festival of Tabernacles among the festivals of the year may still be found in the late post-Exilic passage *Zech.* 14:16-19, where it is stated that in the Messianic time all nations will go up to Jerusalem in order to celebrate the feast of Tabernacles there.

The custom of dwelling in booths (tabernacles), which is ordained in the Torah and of which the details and observance are regulated according to the Jewish religious law, originated in the period when the festival of Sukkoth was solely a harvest thanksgiving festival and was celebrated in booths or huts. Later it came naturally to be associated with the reminiscence of the wilderness wanderings. The Lulab and Ethrog used on Sukkoth possibly go back to the harvest festival and to the dances or processions formerly associated with this festival. Even today, in the synagogue, such processions with the Ethrog and Lulab, and accompanied by the singing of a Hoshana song, are made from the first to the seventh day of Sukkoth, with the exception of the Sabbath; one procession is made every day, but on the seventh day, which for this reason is called Hoshana Rabbah (the great Hoshana), seven processions are made. The Sadducees and the Karaites were of the opinion that the Ethrog and the Lulab were not to be taken into the hand in the singing of the songs of praise (Hallel) or in the processions (Hakkafoth), but were to be employed solely in the building of the booth or hut.

As on all full holidays, work is forbidden on the first and second and on the eighth and last days of Sukkoth. As on the two other pilgrimage festivals, the Hallel is recited on Sukkoth in the synagogue, even on the middle or half holy days of the festival (Hol Hamoed). The book of *Ecclesiastes* is read on Hol Hamoed Shabbas (the Sabbath which falls during the intermediate days of Sukkoth) or on Shemini Atzereth, if this falls on a Sabbath. The Additional Service (Musaf) is recited on all the days of the festival, even on the half-holidays.

SUKOENIG, SIDNEY, pianist, b. New York city, 1907. He was the son of a well-known New York cantor. His music study took place at the Institute of Musical Art, from which he was graduated with honors and with several major prizes. His later music study was pursued with Ernest Hutcheson, and James Friskin at the Juilliard Graduate School, and with Isidor Philipp, Nadia Boulanger, Eugen d'Albert, Edwin Fischer, Gieseking, and Paul Hindemith in Europe. He made his debut in Berlin with the Berlin Symphony Orchestra (1930), and continued with concert appearances in many of the principal cities of Europe. In the fall of 1930 Sukoenig made his American debut and was acclaimed. Thereafter he appeared in recitals, as soloist with orchestras, and as guest artist with chamber music ensembles.

SULEIMAN IBN YAHYA, *see* IBN GABIROL, SOLOMON.

SULLAM, SARA COPIA, poetess, b. Venice, Italy, 1590 (or 1592); d. Venice, 1641. Her fame as a learned woman and poetess reached far beyond the walls of the Venetian ghetto. Leon da Modena showed his admiration for her in the preface of his translation of Solomon Usque's drama *Esther.* A Genoese monk, Ansaldo Ceba, having also published an epic poem, *Esther,* Sara Copia Sullam communicated by letter to Ceba her admiration and gratitude for his work. A lively correspondence between them ensued (1618-22), in which the monk endeavored to win her to Christianity while she refuted his arguments with wit and logic. Only a few sonnets and her *Manifesto* (Venice, 1621), in which she defended herself from the accusation made against her by the Venetian priest, Balthazar Bonifacio, that she had denied the dogma of the immortality of the soul, were published. In this work she showed, besides her customary irony and logic, a profound knowledge of religious philosophy.

Lit.: Levy, M. A., in *Jahrbuch für die Geschichte der Juden und des Judentums,* vol. 3, p. 65 et seq.; Kayserling, M., *Die jüdischen Frauen in der Geschichte der Literatur und Kunst* (1879) 159-70; Graetz, H., *History of the Jews,* vol. 5 (1927) 69-70; David, *Sara Copia Sullam, une héroïne juive au XVII. siècle* (1877).

SULTANSKY, MORDECAI BEN JOSEPH, Karaite scholar and writer, b. Lutzk, Lithuania, about 1772; d. 1862. He earned his living as a minister (Hazan) and teacher, first in his native Lutzk, and later in Chufut-Kale, Eupatoria (both in the Crimea), and Kherson. He was a widely read man, not only in Karaite literature, but also in rabbinic authors, such as Maimonides, Abraham ibn Ezra, Judah Halevi, Bahya ibn Pakuda and Levi ben Gershon.

Sultansky was a prolific writer, but most of his works were never published. Of those that appeared in print, the most important is his *Zecher Tzaddikim* (entitled also *Kitzur Aggadah*), containing a detailed chronicle of Karaism from the earliest times down to the author's own time. Its scientific value is slight, since it is devoid of a critical spirit or of a solid documentary basis, but it is highly interesting as a detailed specimen of modern official Karaite historiography and as the forerunner of Abraham Firkovitch's school of writing Karaite history by juggling, distorting and outright forging of facts in order to glorify Karaism and condemn rabbinism.

Sultansky published also (aside from minor pieces) a Hebrew grammar, entitled *Pethah Tikvah* (part 1, Eupatoria, 1857; part 2 was never published, and appears never to have been written), and a work entitled *Tetib Daath* (The Improvement of Knowledge; Eupatoria, 1858), containing a philosophical vindication of pure faith, with many quotations from old rabbinic and modern Hebrew authors, and polemics against rabbinism and Hasidism. LEON NEMOY.

Lit.: Poznanski, Samuel, edit., *Zecher Tzaddikim* (1920), introduction.

SULZBACH, small city in the Upper Palatinate near Amberg, Germany. It was the seat of a famous Hebrew printing establishment founded in 1669 by Isaac Kohen Jüdels, taken over in 1684 by Moses Bloch, and finally (1699-1851) operated by members of the Fränkel-Arnstein family. In this establishment were printed and distributed large editions of the Bible and the Talmud with commentaries, Siddurim, Mahzorim and other literary works of religious character, as well as Judeo-German books for women. In his work *Die hebräischen Druckereien in Sulzbach* Magnus Weinberg enumerated 602 titles of books printed mostly between 1669 and 1851 in Sulzbach. The success of the establishment did not begin until 1684, when a sensation was caused by Moses Bloch's printing of the *Zohar.*

In 1850 about seventy Jewish families lived in Sulzbach,

Arthur Hays Sulzberger

but owing to a strong emigration to the United States the congregation lost its importance.

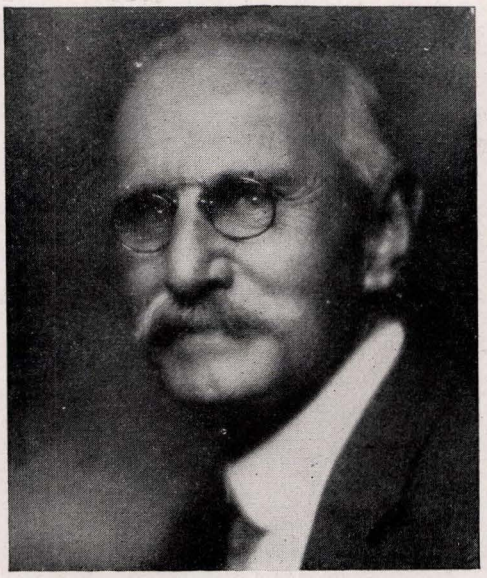
SULZBACH, ABRAHAM, historian, b. Hamburg, Germany, 1838; d. Frankfort, Germany, 1925. He taught at the Realschule of the Frankfort Jewish community from 1862 to his death. Sulzbach published the controversial treatise *Renan und der Judaismus* (1873). Others of his works were: *Dichterklänge aus Spaniens besseren Tagen* (1873), selections from the works of Spanish Jewish poets; *Die religiöse und weltliche Poesie der Juden vom 7.-16. Jahrhundert* (1893); *Targum scheni zum Buche Esther* (translation and commentary, 1920); *Bilder aus der jüdischen Vergangenheit* (1923), a source book for teaching and self-study.

SULZBACHER, LOUIS, judge, b. Rhenish Palatinate, Germany, 1842; d. New York city, 1915. He was educated in Germany and the United States, and was admitted to the bar in 1870. Sulzbacher practised law in New Mexico (1870-96), and was justice of the Supreme Court of Puerto Rico (1900-4) and United States judge of the Western District of Indian Territory (1904-7).

SULZBERGER, ARTHUR HAYS, publisher, b. New York city, 1891. His father, Cyrus L. Sulzberger, was long a leader in civic and philanthropic affairs; his mother, Rachel Peixotto (Hays) Sulzberger, was the descendant of Jewish families which had arrived in America about 1700 and had assisted in establishing the first synagogue at Newport, R. I., and Congregation Shearith Israel of New York city, of which Sulzberger was a member. He completed his education at Columbia University (B.Sc., 1913); in 1917 he married Iphigene B. Ochs, the daughter of Adolph S. Ochs. During the first World War Sulzberger served abroad as an officer in the United States Field Artillery.

He entered the newspaper business in 1919 and worked with Ochs on the New York *Times* and the other enterprises which were connected with it. He was at the helm of the newspaper during the days of the great depression, especially during the last two years of Ochs' life, when the latter was incapacitated by illness. He became the publisher of the *Times* in 1935 after the death of Ochs, who left the controlling interest of the newspaper that he had brought to such an eminence to three trustees, Iphigene Ochs Sulzberger, his only child, Brigadier General Julius Ochs Adler, his nephew, and Sulzberger, his son-in-law. Sulzberger was elected president and publisher one month later, and issued a statement in which he pledged himself to continue the policy of the *Times* as laid down by Ochs—that of giving news "without fear or favor, regardless of any party, sect, or interest involved." This statement appeared on the *Times* editorial page on May 8th. Since that time Sulzberger guided and directed the policy of the paper. He felt that the basic problem of his generation was for man to find a way of maintaining the peace. Like Adolph S. Ochs, he believed that this could be done only if the nations of the world, including the United States, mutually pledged their aid in an international system of collective security. In 1940 the *Times* took a stand favoring national military service and the full participation of the United States in world affairs.

Sulzberger took an active interest in Jewish religious affairs, serving as a director of the Jewish Theological Seminary, of New York city, a member of the executive committee of the Union of American Hebrew Congregations, and being a member of Congregation Emanu-el and Central Synagogue as well as of Shearith Israel. He was definitely opposed to Jewish nationalism and political aspects of Judaism, feeling that being a Jew mattered only in questions of religion and that in all other things he must think and act as an American. In 1942 he expressed himself as opposed to a Jewish army or the promise of a Jewish state because as an American he wanted nothing to be done at that time which might delay or hinder the winning of the war in which the United States was engaged.



He was a trustee of the Rockefeller Foundation, of the Baron de Hirsch Fund, of the New York Foundation and of the Grant Monument Association, a director of the British War Relief Society, an incorporator and member of the central committee of the American Red Cross, and a director of the New York chapter of the American Red Cross. He received honorary degrees from Rollins College (LL.D., 1939) and from the Hebrew Union College (1940).

ARTHUR T. ROBB.

Lit.: Current Biography, March, 1943, pp. 75-77.

SULZBERGER, CYRUS LEOPOLD, merchant, philanthropist and civic and communal leader, b. Philadelphia, 1858; d. New York city, 1932. He received his secular education in his native city and derived his Jewish training from the Philadelphia Hebrew Education Society. At the age of nineteen he settled in New York, where he joined the firm of N. Erlanger, Blumgart and Company, a large importing house, of which he became senior partner in 1891 and president eleven years later.

Sulzberger was a splendid example of the Jew as citizen and as humanitarian. A liberal in political and economic philosophy, he was Fusion candidate in 1903 for the office of president of the borough of Manhattan. Although unsuccessful, he was invited on several occasions by city and state officials to participate in the work of important commissions. Thus, he was appointed by Governor Charles E. Hughes member of the State Commission on Congestion of Population

Cyrus L. Sulzberger

(1910). In this capacity he helped to draw up reports that laid the basis for population studies made many years later. Thereafter he was named to membership on the board of managers of the Reformatory for Misdemeanants by Governor William Sulzer (1912), and was reappointed to this office by Governor Martin H. Glynn (1913). Mayor John Purroy Mitchel drafted him for service on the Committee on Unemployment.

In addition to the many civic offices which he held with distinction, Sulzberger, from his early youth, displayed a deep interest in the welfare of the Jews at home and abroad. Thus he joined in many activities and served on many boards concerned with the economic and educational problems of the Jewish community. He was vice-president of Temple Israel of Harlem for many years.

Sulzberger was prominently identified with the rehabilitation of immigrants. During the decade following the Russian pogroms of the early 1880's it was his initiative and direction which made possible the successful diversion of the immigrant stream from Eastern Europe to all parts of the country. In recognition of his outstanding activities in this field he was elected president of the Industrial Removal Office and treasurer of the Galveston Movement. As president of the Jewish Agricultural and Industrial Aid Society, Sulzberger devoted his efforts toward encouraging immigrants who wished to settle upon the land.

Leo Sulzberger

Sulzberger was closely associated with numerous endeavors in Jewish cultural life. He occupied the position of director of the Jewish Publication Society, and was chairman of the Bureau of Jewish Social Research. He was credited with being the mainspring of the movement that led to the raising of an adequate fund for the final completion of the *Jewish Encyclopedia.* He was among the first to sponsor a Young Men's Hebrew Association, and later assisted effectively in the coordination of its activities, particularly through the *American Hebrew,* of which he was one of the founders and its first president. Originally a vice-president of the Federation of American Zionists, he dissociated himself from the nationalist ideology. But he recognized the cultural value of the Zionist Movement, and after a visit to Palestine he threw himself actively into the campaign to raise funds for The Hebrew University, and was a member of the American advisory council.

In his long life, crowded with a variety of activities, Sulzberger participated actively in the preservation of Jewish rights and served charitable and welfare organizations as well. At one time he gave up his business and devoted his entire time to civic and philanthropic matters, going back to business only when necessity compelled him to do so. For several years he was president of the United Hebrew Charities, later known as the Jewish Social Service Association. He was a member of the executive committee of the American Jewish Committee and of the Joint Distribution Committee, trustee of the Federation for the Support of Jewish Philanthropic Societies, secretary of the American Jewish Relief Committee, and president of the New York City Conference of Charities and Correction.

MORRIS D. WALDMAN.

Lit.: Waldman, Morris D., "Cyrus L. Sulzberger," *American Jewish Year Book,* vol. 35 (1933-34) 145-56; *Publications of the American Jewish Historical Society,* No. 22 (1914) xvi, 225-27; No. 33 (1934) xxi; No. 35 (1939) 58-59; *American Hebrew,* July 13, 1928, p. 286; May 6, 1932, p. 638; *New York Times,* May 1, 2, 3, 10 and 14, 1932.

SULZBERGER, DAVID, educator and communal worker, b. Heidelsheim, Baden, Germany, 1838; d. Philadelphia, 1910. He was brought to the United States by his parents at an early age, and was educated in Philadelphia where, in 1867, he engaged in the manufacture of extracts, perfumes and essential oils. In 1876 he became secretary of the Hebrew Education Society of Philadelphia, in which capacity he served for thirty-four years. He was also a member of the Pennsylvania Prison Society, and a member and first secretary of Dropsie College. Sulzberger helped organize the board of trustees of Gratz College, was one of the original members of the American Jewish Historical Society, and was connected with many other educational and communal organizations.

Lit.: Rosenbach, A. S. W., in *Publications of the American Jewish Historical Society,* No. 20 (1911) 170-72; *American Hebrew,* March 18, 1910, p. 511.

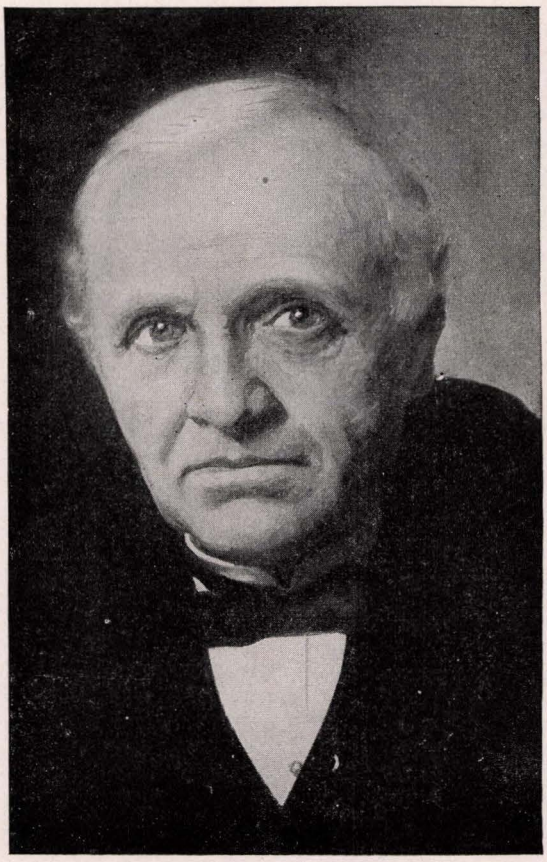
SULZBERGER, LEO, business executive and communal leader, b. New York city, 1885; d. New York city, 1926. He was the eldest son of Cyrus L. Sulzberger and Rachel (Peixotto) Hays Sulzberger. After his graduation from high school in New York, he en-

tered his father's business, the textile firm of N. Erlanger, Blumgart and Company. When, in 1919, facilities were first opened for fast-color vat dyeing of cotton, Sulzberger was among the first to envision the future possibilities of the process, and he became a pioneer in the development and merchandising of American fast-color cottons for a mass market. At his death he was secretary and director of N. Erlanger, Blumgart and Company, and vice-president of the firm of Morton-Sundour and Company.

Sulzberger participated in the Jewish communal life of New York's Lower East Side in his young manhood, working at the Educational Alliance and organizing the Jewish Boys Brigade. At a uniquely early age, before he was forty, he came to be a leader in Jewish social service in New York, where he was noted equally for his imaginative sympathies and for his dynamic organizational capacity. He was a director of the United Hebrew Charities and of Montefiore Hospital, and represented the hospital in the Federation for the Support of Jewish Philanthropic Societies of New York City. It was with the work of the latter that he was identified in the public eye.

He began his labors for the Federation in 1922, helping to organize the Business Men's Council, of whose Committee on Public Relations he was chairman. In the Federation's outstanding campaign of 1925 Sulzberger was particularly active, and he was credited with much of its success. Just after his death, at the election of officers of the Federation, one of the four posts of vice-president originally slated for him was left vacant in his honor. A memorial room in the new Federation building in New York city was dedicated to him when the building was opened in 1928.

Sulzberger, who enlisted in the United States Army in the first World War and served as a first lieutenant in the field artillery, was a member of the Sons of the American Revolution.



Sulzberger's daughter, Beatrice Sulzberger, married Dr. Leonard Trilling. His son, Cyrus L. Sulzberger, was, in 1943, a correspondent on the staff of the New York *Times*. Sulzberger's widow, Beatrice Josephi Sulzberger, married (1938) Ely Jacques Kahn.

Lit.: *American Hebrew*, Feb. 5, 1926, p. 400 et seq.

SULZBERGER, MARION B., physician, b. New York city, 1895. He attended Harvard University (1912-13), took aviational ground school training, and from 1917 to 1919 served as instructor in aviation attached to the United States Navy. Sulzberger studied medicine in Europe, received the degree of Baccalaureate in Medical Sciences from the École de Médecine, Sorbonne, Paris (1922), and the M.D. degree from the University of Zurich, Switzerland (1926). He was appointed instructor (1929) and subsequently assistant professor (1935) in clinical dermatology at the New York Post-Graduate Medical School and Hospital of Columbia University. In 1941 he was called to active service with the Medical Corps, United States Naval Reserve.

Sulzberger wrote *Dermatologic Allergy* (1940) and *Dermatologic Therapy in General Practice* (with Jack Wolf; 1942). From 1931 on, together with Fred Wise, he edited the *Year-Book of Dermatology and Syphilology*. In 1943 he was editor of the *Journal of Investigative Dermatology* and of the *Journal of Allergy* (department of dermatology and syphilology).

SULZBERGER, MAYER, jurist, Hebraist and communal leader, b. Heidelsheim, Baden, Germany, 1843; d. Philadelphia, 1923. He came of a learned and distinguished ancestry which had been resident for several centuries in Germany. His paternal grandfather

Mayer Sulzberger

was a rabbi and his father a teacher. His parents emigrated with their family to Philadelphia in 1849. There he was educated in the public schools and graduated from the Central High School. After a brief employment in a business establishment he became a student in the office of Moses A. Dropsie, Esq., a prominent lawyer who subsequently bequeathed his estate for the founding of a college (now known as Dropsie College) for the study of Hebrew and cognate learning. Sulzberger was admitted to the bar in 1865. It was not long before his great ability was recognized by the community. His profound knowledge of the law, vigor in advocacy, clarity of reasoning and brilliancy of exposition soon brought him to a position of leadership at the Philadelphia bar, and during his thirty years of practice he constantly advanced in eminence in his professional career.

In 1895 Sulzberger was elected judge of the Court of Common Pleas, the first Jew since the early days of the Republic to hold judicial office in Philadelphia. Subsequently he became president judge of the court, and served until 1915, when he declined reelection in order to devote his remaining years to academic pursuits, although as late as 1920 he participated in the work of a commission to revise the constitution of Pennsylvania. The great fame attained by him as a judge was the more remarkable because he sat only in a trial court and not in an appellate tribunal, and therefore did not have the power or the responsibility of making decisions or writing opinions which had the weight of final authority. But his quick comprehension of the issues involved in the litigation, his passionate desire to achieve an equitable result, his unswerving

integrity and his zeal in protecting the weak and the oppressed, all combined to make him an ideal judge. His discussions with counsel and his charges to juries were so interspersed with sage observations, philosophical reflections and trenchant wit that hosts of spectators sat daily in his courtroom to enjoy the scintillating expressions of his erudition and wisdom. He never allowed legalisms or technicalities to stand in the way of justice, but used the law as a means rather than an end, and moulded it so that it might aid rather than fetter men in the pursuit of happiness. In 1909 Sulzberger was offered by President William Howard Taft the post of Ambassador to Turkey, but declined the honor because he was unwilling to give up his judicial duties.

From his early childhood Sulzberger was devoted to Jewish learning. While still in his twenties he assisted Isaac Leeser in the publication of *The Occident and American Jewish Advocate,* and he continued that journal for a year following Leeser's death in 1868. Throughout his maturer years he lectured and wrote on various subjects of Jewish interest, and he collected one of the largest libraries of Hebrew books and incunabula in the United States, which he ultimately presented to the Jewish Theological Seminary of America. Some of the lectures which he delivered at the Jewish Theological Seminary and at Dropsie College constituted a series of studies in Jewish jurisprudence and institutes of government, and were published in book form. In 1909 there thus appeared *The Am Ha-Aretz, the Ancient Hebrew Parliament,* in which he attempted to establish that "Am Ha-Aretz" was in reality the name given to a representative council in the Jewish kingdom which had all the essential qualities of a modern parliamentary body. This was followed in 1912 by *The Polity of the Ancient Hebrews,* in which he sought to reconstruct the scheme of government of the Jewish city-states and the federal laws which bound them together; *The Ancient Hebrew Law of Homicide* (1915); and *The Status of Labor in Ancient Israel* (1923), in which his object was to show that a great movement for the protection and improvement of the laboring masses was initiated in Israel more than 3,000 years ago. While, perhaps, his theories, thus expounded, have not been generally accepted by Bible exegetes, these studies of the laws and government of ancient Israel amply attest his Hebrew scholarship as well as the originality of his intellect.

Sulzberger was one of the organizers and first president of the American Jewish Committee, one of the founders of the Jewish Publication Society of America and for many years chairman of its publication committee, a trustee of the Baron de Hirsch Fund, one of the reorganizers in 1901 of the Jewish Theological Seminary of America and a member of its board of directors, a governor of Dropsie College, one of the founders and first president of the Young Men's Hebrew Association of Philadelphia, vice-president of the Philadelphia Jewish Hospital, a director of the Hebrew Education Society, of Gratz College, and of Jefferson Medical College.

Sulzberger believed wholeheartedly in all measures for the economic and cultural upbuilding of Palestine as a place of refuge and home for Jews, but he was not a Zionist, and he was firmly opposed to any nationalistic conception of Jewish life and destiny. HORACE STERN.

SULZBERGER, MYRON, judge, b. New York city, 1878. He was the son of Solomon Sulzberger (b. Germany, 1839; d. New York city, 1918), president and treasurer of the B'nai B'rith and vice-president of the Union of American Hebrew Congregations. Sulzberger was graduated from the New York Law School, and admitted to the bar in 1900. In 1902 and 1903 he was a member of the New York State Legislature; in 1904 and 1905 he was special deputy attorney general for New York state. He was made a judge of the municipal court in 1927, and reelected in 1937. In 1941 he resigned to return to private practice. Sulzberger was active in the New York State Democratic party, and was associated with various local philanthropies.

SULZER, SALOMON, cantor, and the father of modern synagogal music, b. Hohenems, Vorarlberg, Austria, 1804; d. Vienna, 1890. His family, which hailed from Sulz, Württemberg, where a decree of expulsion against the Jews was promulgated, took the surname Sulzer in 1809. In 1811, at the time of a great flood in Hohenems, young Sulzer was carried away by the rushing stream. A young peasant, Karl Hugler, risking his own life, saved the boy from certain death.

His first musical training was with the cantor in Endingen, with whom he traveled through parts of France and Alsace-Lorraine. At the age of thirteen he returned home, where a vacancy for the position of cantor existed. Although the synagogue board found the extreme youth of the otherwise unblemished Sulzer a detriment to his selection for this office, his appointment was confirmed by Emperor Francis I and a three-year leave of absence was granted him. During this period he pursued his studies in Hohenems with Cantor Eichberg, who as a foreigner could not receive the permission of the government to settle there permanently, and with Lippman, a famous cantor of that age in Switzerland. At sixteen Sulzer occupied this position, and for five years served in his birthplace.

In January, 1826, Sulzer, on an eight-week vacation from his congregation, visited Vienna, where, after a successful trial, he was appointed chief cantor in Vienna, at the age of twenty-one. His Jewish townspeople regretfully but proudly agreed to his elevation. In Vienna, Sulzer continued his studies with Seyfried, and with the collaboration of such eminent musicians as Schubert, Fischhof, Wurfel, Volkert, Stegmeyer and Drechsler, composed a great deal for the synagogue service, utilizing the ancient traditional melodies and supplying them with harmonies in the European manner. In 1840 appeared the first volume of his monumental and pioneering *Schir Zion,* a well-arranged order of service for the modern traditional synagogue for cantor and four-part choir, supplied also with incidental organ accompaniment.

Liszt, Schubert, Lablache, Meyerbeer, Schumann and Weigel expressed deep admiration for the art of Sulzer. His beautiful service was used as the best argument against the extreme changes introduced by the Reform Movement. In particular, he distinguished himself in the rendition of the Schubert *Lieder.* The second volume of *Schir Zion,* with music for the festivals and high holy days, appeared in 1866. A small volume, *Dudaim,* containing responses and short compositions for school and home, was published in 1860. Additional selections were published posthumously by his son, Joseph Sulzer.

Congregations from all over Europe, in seeking to modernize their service, turned to Sulzer and his synagogue in the Seitenstettengasse for help and information. The cantors Josef Singer (Sulzer's successor), Josef Goldstein (Vienna), Moritz Rosenhaupt (Nuremberg), Moritz Friedman (Budapest), Samuel Naumbourg (Paris), Edward Birnbaum (Nuremberg) and M. Deutch (Breslau), as well as most of the cantors of that age, followed in his path. Countless civic honors were bestowed upon him. Thus he was honorary citizen of Vienna, Knight of the Order of Francis Joseph, recipient of medals from the rulers of Austria, Russia and Bavaria, professor in the Conservatory in Vienna, and honorary member in the Academy of St. Cecilia in Rome, and was cited by numerous institutions of learning. He was presented with a silver laurel wreath bearing the legend "to the artist Sulzer by the artists of Vienna," given the

title of Morenu by the local rabbinate, and honored by countless communities and numerous organizations. After fifty-five years of service Sulzer retired. In 1881 he founded the Österreich-Ungarischer Kantorenverein.

Rich in years, content in achievement, showered with honors and surrounded by love, Sulzer passed away in January, 1890. His influence will remain while the sound of music is heard in the synagogue, for his is the greatest name in Jewish music.

JULIUS SULZER (b. Vienna, 1834; d. Vienna, 1891), the son of Salomon Sulzer, was a conductor at the Burgtheater, in Vienna, and composer of operas and orchestral music. MAX WOHLBERG.

SUMERIANS, name of the early inhabitants of Babylonia. The name is derived from Sumer, southern Babylonia, where such great Sumerian cities as the Biblical Ur and Erech were situated. Knowledge of the Sumerians is derived partly from their own inscriptions in pictographic and semi-pictographic script, and partly from cuneiform copies and translations of Sumerian documents by later Accadians (Semitic Babylonians). Physically the Sumerians seem to have been already very mixed in blood, since their skulls include both long-headed and broad-headed examples. Their language, which was already very much broken down phonetically when it ceased to be spoken, about 2000 B.C.E., does not bear any known relation to any other ancient or modern linguistic stock.

Recent excavations in Babylonia have shown that Sumerian civilization was already well advanced by the middle of the fourth millennium B.C.E. For about a thousand years it flourished greatly, influencing all surrounding peoples, including the Egyptians. When the Semitic Accadians replaced the Sumerians as the dominant people of Western Asia, in the 25th cent. B.C.E. (new low chronology), they took over their language, literature and material culture as integral parts of their own civilization, which became thereafter Sumero-Accadian. The dynasty of Accad was followed by a brief Sumerian renaissance, after which Sumerian rapidly died out as a spoken language, becoming the sacred and learned tongue of Mesopotamia, which it remained until the extinction of cuneiform records, shortly after the Christian Era. Sumerian was still studied in the scribal schools of Babylonia in the Greek period.

The excavations of the latter half of the 19th and the first part of the 20th cent. have shown increasingly that the whole subsequent world was—and remains—profoundly indebted to the Sumerians. The extent of this influence is vividly shown by the thousands of Sumerian words which were borrowed by the Semites who succeeded them in Mesopotamia. Hundreds of these Sumerian words passed into Aramaic from Accadian, and scores of them appear in the Hebrew Bible. Every branch of ancient industry and learning drew heavily from Sumerian sources. In higher culture astrology, astronomy and other branches of science and divination were based on Sumerian foundations.

The best idea of Sumerian material culture may be gained from the monuments excavated at Telloh (ancient Lagash) in Babylonia, now in the Louvre, and from the finds in the Royal Tombs of Ur (easily accessible to Americans in the University Museum of Philadelphia and to the British in the British Museum). Our knowledge of Sumerian literature comes principally from the tablets excavated by the University of Pennsylvania at Nippur in Babylonia, now divided between Philadelphia and Ankara, Turkey. Thanks to the research of an able Jewish scholar, Samuel N. Kramer, the knowledge of Sumerian literature has been greatly extended. WILLIAM F. ALBRIGHT.

SUMMERFIELD, WOOLFE, jurist and author, b. Manchester, England, 1897. He studied literature and law, and became a barrister. He published: *The Law of Arbitration and Awards* (1929); *An Outline Study of Contract Law* (1930); *An Outline of English Law* (1931). Under the pen name of Ben Mowshay he published the novels *Fraudless Bear* (1928) and *The Seeker Finds* (1929). Summerfield in 1943 was a member of the Committee of Friends of The Hebrew University, Jerusalem.

SUMTER, a city of South Carolina which included approximately 160 Jewish inhabitants (1943) in its total population of 15,874 (census of 1940). Sumter was founded in 1800. The first known Jew to settle there was Mark Solomons, who moved in from Charleston some time between 1815 and 1820. Several years later Franklin J. Moses and his brother Montgomery Moses were practising law at Sumter. The families of Moise and Moses established themselves in Sumter after 1865 and eventually made up a large proportion of the Sumter Jewish population.

The first Jewish organization of Sumter was the Hebrew Cemetery Society, which purchased land for a burial ground in 1874. In 1881 the Society merged into the newly formed Hebrew Benevolent Society. The Society instituted a Sunday school, which in 1891 became firmly established when Miss Carrie Moses was elected superintendent. The Society also invited Rabbis E. S. Levy of Augusta, Ga., and David Levy of Charleston, S. C., for lectures. It was about 1890, under Rabbi David Levy's leadership, that a regular congregation was formed. About 1903 a lot was purchased on Hampton Avenue and a frame synagogue erected. Jacob Klein was the first resident rabbi.

Meanwhile, in 1895, the Hebrew Benevolent Society had merged into another organization, the Sumter Society of Israelites, and the newly created body continued to function under the charter and title of the latter. By 1907 Congregation Sinai of the Sumter Society of Israelites was well-established. Rabbi Jacob Klein (1904-8) was succeeded by David Sessler (1908-10), David Klein (1910-17), Ferdinand K. Hirsch (1919-28), Hirsch L. Freund (1928-30), and Samuel R. Shillman, who came in 1930 and was still the incumbent in 1943. In 1913 the congregation erected a new brick synagogue on the site of the old. The Barnett Memorial annex was built in 1932.

The Barnett Memorial Trust Fund, as well as another general trust fund, was created to administer gifts for various Jewish purposes in Sumter. The Jewish Wel-

fare Fund was organized in 1930. Sumter Jewry maintained also a lodge of the B'nai B'rith. In 1943 practically all the Jewish families were affiliated with Congregation Sinai (Reform). Of Sumter's 160 Jews, about seventy-eight were of Sephardic descent; residing in Sumter were another fifty to sixty individuals of Sephardic Jewish ancestry affiliated with non-Jewish congregations. The proportion of Sephardic Jews was thus uniquely high.

The roster of Sumter Jews in public life was, from the beginning of Jewish settlement, distinguished. Franklin J. Moses was chief justice of the Supreme Court of South Carolina (1868-77). Major Edwin Warren Moise, a hero of the War Between the States, was adjutant and inspector-general of South Carolina (1876-80). Major Marion Moise, his son, was intendant of Sumter and in the state senate (1886-90). Altamont Moses, a native of Sumter, was prominent in Democratic councils, and served in the city council and in the state legislature (1886-1905). Montgomery Moses was intendant of Sumterville (1852) and a circuit judge (1876-77). Isaac C. Strauss was made referee in bankruptcy (1898). Harry Ryttenberg was in the city council (1896-1900). Charles H. Moise was an auditor for Sumter County in the early 1900's. Davis De Leon Moise served as senator and representative in the state legislature (1915-24). Mitchell Levi was a member of the board of education (1916-26). Marion Moise was a magistrate (1930-32). Herbert A. Moses was in the city council (1938-42). Serving as officers in the second World War were Edward Alva Solomons, lieutenant commander of the United States Navy, and Emile Moses, brigadier general in the Marine Corps. In civil life, Wendell M. Levi was president of the American Pigeon Association (1933-34). Rabbi Samuel R. Shillman was vice-president of the National Society for Crippled Children (1936-42). George D. Levy was made a member of the national executive committee of the American Legion. SHERRY ABEL.

SUPERSTITION. Superstition may be defined as the irrational attribution, to certain objects and actions, of powers to affect human life, health and destiny. These powers are conceived as residing within the objects or inherent in the actions; they may operate either helpfully or harmfully, or they may forecast the future. Superstition arises from the efforts of the mind of man to grasp and to control the forces of nature which he does not completely understand; it borders on magic on the one hand and on religion on the other. Many superstitions are lingerings of a former idolatry, as exemplified in such common forms as those of the rabbit's foot, horseshoe or "knocking wood." In other cases, superstitions have found their way into religion and, after having been given a rationalistic interpretation, are admitted as rites.

The Jews through the centuries have had their share of superstitions, particularly at the times when they had the least security or when they lived among peoples which were addicted to superstition.

The Bible, being based on the idea of monotheism and the attribution of all phenomena to God directly, has little use for superstition, which was closely connected with idolatry and denounced as part of it. Yet the story of Jacob's outwitting Laban by the use of peeled rods (*Gen.* 30:25-43) is based on the superstition of the effect of objects beheld at the time of conception on the nature of the offspring. The numerous Astarte images found in excavations in Palestine bear witness to the superstitious attachment of the Israelites to these objects as good-luck charms to bring about fertility. The frequent denunciations of the prophets and the laws against witchcraft and of "cuttings" for the dead are evidence of the existence of superstitious practices, though these were regarded as idolatrous and contrary to the true religion of Israel.

The pages of the Talmud, however, contain many more references to popular superstitions than do those of the Bible. This may be either because superstitious acts were not so closely connected with idolatry as in earlier times, or because the Talmud gives a better picture of popular practices than does the Bible. There are frequent references to objects that were carried for protection: a locust's egg to prevent earache, a live jackal's tooth to cure sleepiness, a dead jackal's tooth to cure sleeplessness, or a nail from an execution cross against either festering wounds or tertian fever; they were permitted by Meir, but prohibited by the majority as savoring of idolatry. On the other hand, there seems to have been no objection to amulets, the only stipulation being that they should be written by an expert (perhaps to be sure that no names of heathen deities be mentioned in them); they might even be carried on the Sabbath (*Sab.* 6:2, 10; *ibid.* 61a-62a, 67ab).

Side by side with the hygienic regulations of the Talmud and sound prescriptions as to regimen there occur many statements of folk-medicine which are hardly more than superstition. Thus the placing of one's bed in a north-south direction is urged as a means of insuring that the children born of a marriage will be male. Great importance is laid upon a certain *'eben tekumah,* or "preserving stone," carried by women to prevent miscarriage (*Sab.* 66a and Rashi to the passage). The belief that one could learn one's destiny by opening the Bible or by asking a child to state the verse which he was learning appears again and again in Talmudic and Midrashic literature. Certain powers were assigned to numbers, such as two for bad luck and seven for good; many illnesses were ascribed to demons. Among the gestures to be used to avert evil two especially were recommended: the "fig" gesture, made by closing the fist and inserting the thumb between two fingers, and the gesture of the closing of the thumb within the fist (*Ber.* 62a; *Pes.* 112b). These are related to the protective force of sex, as they symbolize either the sexual act or pregnancy.

During the Middle Ages there was a considerable increase of superstitions among the Jews. Many of the Talmudic superstitions were replaced by others derived from the peoples among whom the Jews lived, while in other cases an increasing tendency towards mysticism led to the creation of protective measures involving new and complicated names of God and of angels. Jewish ritual objects were superstitiously used to effect cures or to avert danger, despite the protests of the rabbis. If a woman had a difficult childbirth, a Scroll of the Law (Sefer Torah) might be brought into the room; if a child was a sleepwalker, a set of phylacteries (Tefillin) would be placed underneath its bed. In course of time superstitious practices invaded the ritual, despite the objections or protests of the learned and even over the authority of Maimonides, who strongly denounced all superstition; for as Judah ben Samuel of Regensburg stated (*Sefer Hasidim,* Lemberg, 1863-67, p. 477), "One should not believe in superstitions, but still it is best to be heedful of them." Thus

George Wolf

the Kapparah, or slaughter of a chicken on the eve of Yom Kippur, was branded as a "silly custom" by Joseph Caro in the earlier editions of the *Shulhan Aruch,* but the condemnation was omitted from the later editions through the influence of Moses Isserles. This is a superstitious presentation of a scapegoat. A related custom is that of Tashlich, or the symbolic casting of sins into the water on the first day of Rosh Hashanah; it was originally in the form of bread and connected with the idea of propitiating the spirits who dwelt in streams. The breaking of a glass at weddings (originally the glass was thrown against the north wall of the synagogue) was actually a mode of scaring off the demons (who naturally envy and try to destroy the happiness of humans) by making a loud noise. Roman superstition regarded May as an unlucky month for marriages; medieval Jews followed this by prohibiting marriages between Passover and Shabuoth. The covering of the mirrors after a death originated after medieval times; it is a common superstition based on the fear that the reflection of the living person, a sort of soul projection, may be carried into the spirit world by the dead.

It is interesting to note that in course of time, as people became ashamed of the original ideas, a process of rationalization took place by which such superstitious customs were explained or purified. Thus the Kapparah had to be devoted to the poor, Tashlich was surrounded with Biblical verses and connected with repentance, the breaking of the glass was related to mourning for Jerusalem. The prohibition of weddings in the spring was traced to mourning for the loss of Akiba's pupils in a plague, while the covering of mirrors was explained as keeping from the mourners the sight of their own grief-stricken faces.

The following are some of the superstitions which have been current among Jews down to modern times:

Birth and Infancy. Psalms were recited against the spirits that might affect childbirth. The night before circumcision was regarded as especially dangerous; a company would assemble for the "watch-night" in the room where mother and child were, and a table was spread (probably with the idea of propitiating the demons by food). A chair was made ready for Elijah at circumcisions to invoke his protection. The Holle Kreish was a magic circle.

Marriage. The custom of making circuits around the couple, and of the bride's making them about the bridegroom, are also instances of magic circles. The veiling of the bride may be intended to prevent demons from harming her.

Sneezing. The utterance of a word to bring good-luck is a general custom.

Praise. Praise being considered dangerous, it was necessary to add an expression, "unbeschrieen," or the like to avoid calamity.

Sickness. If a person was dangerously ill, either the person himself or the grave of a pious person was measured and candles amounting to an equivalent length would be presented to the synagogue.

Death and Burial. A glass of water and a cloth were placed by the body after death; according to Jewish belief this was for the use of the Angel of Death in wiping his sword, but according to other views, for the purification of the soul. Sticks were buried in the hands of the dead. The custom of plucking grass on leaving the cemetery is probably based on the superstition that this is a permission for the soul to go to its heavenly abode, which it can not do until it has received permission from the community.

Tombstones. Reading an epitaph was regarded as unlucky, but could be averted by placing a small stone on the tombstone; hence the general custom of leaving such stones when visiting a cemetery.

Cutting One's Nails. One should always begin and end either with the thumb or the fourth finger. A piece of wood was burned together with the cut nails.

Memory. Sleeping on one's clothes as a pillow, touching a mouse or a cat, putting on two garments at one time, and various other actions, were regarded as causing loss of memory.

Dreams. There are numerous superstitions as to the meaning of dreams. Thus it is unlucky to dream of money, wine, losing a tooth or an eye, or seeing a king, but lucky to behold wheat, a vine, a bird or fish or to dream that one has been bitten by a snake.

Charms. There are numerous amulets, especially to secure a safe childbirth and to protect infants. Ornaments bearing the letter He for God, or a Shield of David (Magen David), or made in the form of a Mezuzah, are often worn.

In modern times, in proportion as the knowledge of the true causes of natural phenomena penetrates through the various levels of society, such superstitions are disappearing among Jews.

SUPINO, CAMILLO, economist, and authority on problems of navigation, b. Pisa, Italy, 1860; d. Milan, Italy, 1931. He began teaching political economy at the Istituto Tecnico in Genoa in 1887, and remained there for eight years. He taught subsequently at the Universities of Messina, Siena and Pavia. Considered one of Italy's leading specialists on problems of navigation, he was appointed (1919) chairman of the Royal Commission for the Settlement of Longshoremen's Disputes. Supino was also designated member of the Superior Council of the Italian Merchant Marine. One of his major scientific contributions was his *La navigazione dal punto di vista economico* (Rome, 1890; 3rd ed., Naples, 1913). He published numerous studies on currency and bank problems.

SUPINO, DAVIDE, authority on commercial law, and Italian senator, b. Pisa, Italy, 1850; d. Pisa, 1937. He began his teaching career as associate professor of commercial law at the University of Pisa in 1878, and became ordinary professor five years later. He taught at the same time also at the Royal Institute C. Alfieri in Florence. From 1898 to 1920 he held the position of rector of the University of Pisa. In 1919 he was nominated senator. He was also member of the Royal and Parliamentary Commission for the Reform of Italian Codes. Supino was managing editor of the *Archivio giuridico,* and, together with Filippo Serafini, founded in 1893 *Il diritto commerciale,* the foremost Italian review on commercial law. He published numerous works on commercial law. His *Istituzioni di diritto commerciale* went through seventeen editions and was considered one of the principal textbooks on commercial law in Italy. The sixth edition of his *Della cambiale e dell'assegno bancario* was published in 1935 at Turin. He was professor emeritus of the University of Pisa, and member of many Italian and foreign scientific institutions.

SURA, city in Babylonia, on the Sura canal near the Euphrates; its population was supported chiefly by agriculture and cattle raising. It was there that Abba Aricha (Rab) founded in 219 C.E. an academy which later became one of the two most important in Babylonia and was the place where the Babylonian Talmud was compiled. It received its support, as did its rival Pumbeditha, partly from voluntary contributions from Jews all over the world. As an academy Sura was said to favor Palestinian traditions more than Pum-

beditha. It was considered the chief academy, holding precedence over Pumbeditha; on the third Sabbath after Sukkoth the exilarchs would meet there to receive the homage of the people. The prestige of the school reached its highest point under the direction of Ashi (4th and 5th centuries). Beginning with the reign of Caliph Ali (656-61) the heads of the academies bore the title of Geonim. The most famous Gaon of Sura was Saadia (d. 942), who for a time revived its declining reputation. The academy was finally closed in the 13th cent.

SURE, BARNETT, biological chemist, b. Vilkomir, Russia, 1891. He came to the United States in 1908, and studied at the University of Wisconsin (Ph.D., 1920). In 1920 he became assistant professor of agricultural chemistry at the University of Arkansas, which made him full professor and head of the department in 1927. His writings include *Vitamins in Health and Disease* (1933) and *The Little Things in Life—Vitamins, Hormones, and Other Minute Essentials for Health* (1937). He edited *The Vitamins* (symposium; 1932). Sure was an independent discoverer of Vitamin E; he discovered also a new vitamin, "Bx," essential for lactation (1941).

SURENHUYS, WILHELM (Willem Surenhuysius or **Guglielmus van Surenhuysen),** Christian Hebraist, d. Amsterdam, Holland, 1698. He was a disciple of Jewish scholars in Amsterdam. By using already existing translations of tractates he translated the entire Mishnah, including the commentaries of Maimonides and Obadiah of Bertinoro, into Latin with genuine Dutch industry and thoroughness. A great admirer of rabbinical works, he urged all Christian students of theology to study the Jewish teachings. "He who desires to be a worthy disciple of Christ must first learn the language and culture of the Hebrews. He must become a disciple of Moses before he joins the Apostles, in order to be able, through the teachings of Moses and the Prophets, to convince men that Jesus is the Messiah." Surenhuys firmly believed that the Mishnah, the Oral Law, was in many ways as divine as the written word of the Bible.

SURETY (*'arebuth*). In Biblical law, surety is an assumption of responsibility, through which a debtor or a person in need is released forthwith. Although there is no description of the institution as such, the presence of the term *'erabon* ("pledge, security") is sufficient proof of its existence; it appears, for instance, in *Gen.* 38:17. This idea of using property as security for debt is expressed likewise in the later Talmudic formula: "The possessions of a man go bail for him" (*B.B.* 174a; *Bech.* 48b). Originally the surety did not warrant the payment of a debt, but rather pledged his person and his means to see that the obligation which the warranted party had incurred would be performed. The position of the surety as an accessory debtor was undoubtedly the last link in a chain of development, the beginning of which was that of using a hostage to guarantee the payment of a claim.

A distinct example of the early type of suretyship is furnished in *Gen.* 43:9, where Judah offers himself, and in *Gen.* 42:37, where Reuben offers his two sons, to Jacob as surety for the safe return of Benjamin from Egypt. Similar was Joseph's demand that his brothers, or at least one of them, remain as hostages (*Gen.* 42:16, 19-20) for the fulfillment of their promise. Hostages are mentioned when Jehoash of Israel conquered Amaziah of Judah (*II Kings* 14:14). In family law the institution of the Goel ("redeemer") seems to have fostered the idea of making one member of a family guarantor for the acts of the others. The increasing development of trade and commerce in the period of the kings gradually brought about a change in the nature of the guarantee; instead of being a person, it became a piece of real estate, and instead of detaining an individual, it was sufficient to declare his property subject to attachment. That this process had been completed by the time of the Second Temple is seen from the warnings in *Proverbs,* which point out how easy it is for a man to lose his property by rashly guaranteeing the obligations of others through the form of the "hand-clasp" (*Prov.* 6:1-5 and other passages; cf. *Job* 17:3). Later on, especially in the Apocrypha, the undertaking of suretyship is praised as a humane act (*Sirach* 29:14-19).

Talmudic law wrestled with the problem of finding a basis for suretyship in the Torah. It solved this by setting up the legal fiction that the confidence reposed in the surety could be regarded as a real and adequate consideration for the obligation that had been assumed. A further difficulty from the point of view of Talmudic jurisprudence was the fact that the surety's pledge was technically an Asmachta, a promise made under the expectation that its fulfillment would never be demanded. However, it was held that there was sufficient possibility of its fulfillment being required to assume that the surety did not regard it as an Asmachta pure and simple (*B.B.* 173b).

The following types of suretyship are recognized in Talmudic law:

1. The simple surety (*'areb*) who, as in modern law, is security for a debt only in an accessory manner. In this case a distinction is made as to whether the obligation was assumed at the time when the loan was made or at a later date.

Another form of such surety was that in which the debtor, at the instance of the surety, received back from the debtor his acknowledgment of the debt or his security. In all these cases the surety is regarded merely as an accessory; the creditor must seek payment first from the debtor, and only after the latter has failed to meet the claim can he make it upon the surety. If the surety has stipulated in advance that he will take upon himself the immediate discharge of the debt, the claim may be presented to him directly (*B.B.* 10:7; but cf. *B.B.* 173 et seq.).

2. The joint surety or debtor in one's own name (*ḳablan*). This surety induces the creditor to grant the loan, or declares his willingness at the very outset to become surety together with and before the main debtor. He then becomes liable at the same time as the main debtor and along with him.

3. The case of intercession—a special kind of joint surety found in Talmudic literature—is that in which the surety accepts a loan from the creditor and hands it over to the debtor. The creditor can then look exclusively to the surety for payment. If the surety is unable to pay he can demand the sum of the debtor, not as a debt, but on the ground of the hypothecary rule of Rabbi Nathan as to assignments (*Shulhan Aruch, Hoshen Mishpat* 129:19; Maimonides, *Hilchoth Malveh Veloveh* 26:2).

If several sureties act as warrantors, they are severally liable, and the creditor may choose which one of them will be the one from whom he will demand payment. The sureties, however, have mutual claims in compensation. The surety's obligation may begin at the moment when the debt is contracted, that is, as soon as the money passes from lender to borrower, or at a later date, such as the time when the creditor presses the debtor for payment. In the former case, the oral prom-

ise of the surety is sufficient; in the latter case, the obligation of the surety must be confirmed by a formal act of transfer, or by means of a document. If, however, the surety's obligation was drawn up as an additional clause in a written acknowledgment of the debt or the loan, the deciding factor as to the surety's liability is the position of the signatures of the witnesses. If they precede the clause in question, the general hypothecary responsibility of the surety is lacking. If they follow it, the surety has the same liability as the debtor, but only when the identification of the debtor with the surety follows from the text of the document. Otherwise the liability of the surety remains limited as in the case of the "oral debt" (*Hoshen Mishpat* 129:6-7).

An exception is made in Jewish law when one becomes surety for the fulfillment of the marital rights of a woman as stipulated in the Kethubah. This security has no value, even when it is established by a formal act of acquisition or a document, because it is assumed that the guarantee was made only for the sake of the meritorious act (Mitzvah) of promoting the marriage, and that it was not taken seriously by the surety; hence it is regarded as an Asmachta. The same is true of a security made in favor of the husband for the Nedunya (dowry). However, the security of a *ḳablan* is regarded as valid in these cases.

According to Jewish law, even women and slaves may become sureties; but women may not be held liable for payment until after the dissolution of their marriages, nor slaves until after they have been manumitted. A collateral security, as Maimonides emphasized for the first time, is just as legally effective as the principal security. Finally, it should be noted that the surety receives the same thirty-day period of grace in payment as does the actual debtor. MARCUS COHN.

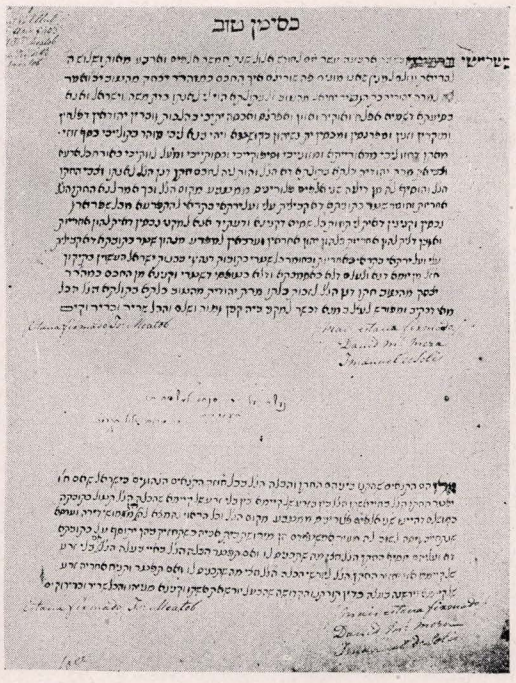
SURINAM (Dutch Guiana), the oldest permanent Jewish settlement in the Western Hemisphere. According to the archives of the Portuguese Jewish community of Paramaribo, Jews had settled in that territory as early as 1639. Their origin is not clear, but it is believed that they came from Holland and Italy. In 1643 they appear to have been sufficiently numerous to warrant the services of a rabbi, for there exists a marriage certificate (Kethubah) of Haham Ishak Meatob and Jehudith, daughter of Jechiel Meatob, under date of the 14th of Elul, 5403 (1643).

These early settlers lived in Thorarica, near a plantation called "Waterland." According to the map of 1671, Thorarica was situated near the Surinam river north of the Cassipura Creek, not far from the so-called Joden Savanne (Jewish Savannah) which plays so great a part in the later history of Surinam's Jews.

A second contingent of Jewish settlers came from England; they arrived in Surinam in 1652 with Lord Willoughby of Parham (the American Jewish historian Samuel Oppenheim believes that this date should be read as 1662; see *Publications of the American Jewish Historical Society,* No. 16, pp. 99 and 140-41), and a third influx took place in 1666, when a number of Jews, under the leadership of Joseph Nuñez de Fonseca, known also as David Nassi, came from Cayenne and British Guiana, whither they had moved after the French conquest of Cayenne.

Most of this third group were Jews who, during the 15th and 16th centuries, had been driven from Europe by the Spanish and Portuguese Inquisition and had gone to live in Brazil. When Brazil came under Dutch rule—and particularly under the wise government of Maurits van Nassau-Siegen (the Brazilian)—they reached a status of great wealth. However, after the decline of Dutch power in Brazil, the prosperity of the Jews began to wane, and in 1654, after the Portuguese reconquest, they were forbidden further stay on Portuguese soil.

The majority of the Brazilian Jews were excellent traders and first class agriculturists. They had considerable experience in tropical agriculture, particularly in growing sugar, and established many plantations. They settled at some distance from Thorarica, in the so-called Joden Savanne or Jewish Savannah. They soon attained a certain prosperity and formed a stable element in the Jewish community which has lasted till modern times.



The British governor well recognized the importance of encouraging these capable and thrifty settlers who swiftly became a great economic asset to the colony. Consequently they were given such privileges as at that period were granted nowhere else to Jewish groups by an English authority. The full text of this remarkable grant is printed in the *Publications of the American Jewish Historical Society* (No. 16, pp. 179-80). Under date of August 17, 1665, the English government, through its governor, council and assembly of Surinam, guaranteed the Jewish settlers full enjoyment and free exercise of their religious rites and usages.

To influence further Jewish settlement, it was decreed that all Jews coming to Surinam for the purpose of colonization would be considered British-born subjects. This last privilege proved to be of particular significance after February, 1667, when Surinam surrendered to the Dutch fleet, and the articles of surrender provided that English subjects wishing to leave the colony would be free to do so. Several months later this provision was restated in the Treaty of Breda. As a result, a number of colonists left Surinam, but not without opposition on the part of the Dutch authorities. In the Treaty of Westminster (1674) this clause was again introduced, and in the next year Charles II sent two commissioners with three ships to the West, so as to take off all English subjects who wished to leave Surinam.

However, the Dutch governor, who well realized the importance of the Jewish settlers, refused to let them go, expressing as his belief that "it would mean no less than destruction to the place." According to a list which has been preserved, ten Jews, with their families and 322 slaves, wanted to leave Surinam for Jamaica; but the governor detained them forcibly on the ground that they were neither English subjects nor free citizens.

Meanwhile the English commissioners had made elaborate preparations for the embarkation of the Jews who wished to emigrate to Jamaica, where they were to enjoy the greatest privileges. But the Dutch governor pretended that a frigate which had just entered port had brought him fresh orders from his home government not to permit the migration of the Jews. Finally, the English commissioners were compelled to leave without success. It was not until two years afterward that the Dutch authorities gave the Jews of Surinam a formal promise that they would be allowed the free exercise of their religion.

In an inventory of the district of Thorarica of the year 1668 many names are mentioned of wealthy planters and

The earliest Kethubah written at Surinam (1643) for Ishak and Jehudith Meatob

slave owners whose descendants have lived in Surinam to this very day. To quote only a few, the names of Alonzo de Fonseca, Da Costa, Da Silva, De Caseres, Mesa and Pereira are repeatedly mentioned. Other men of wealth were Raphael Aboab, Isaac Aries, Isaac Drago, David and Samuel Nassy, Jacob Nuñez and Isaac R. de Pardo.

Their qualities as planters and business men made them true pillars of the community. They were progressive, too; in 1663 a certain David Marcato invented a new way of building sugar mills. Repeatedly their great merits were recognized by the British as well as the Dutch, through their nomination to important posts. In 1668, for example, Joseph Nassy was appointed commander of the rivers Sinamery, Iran and Connamawe; in 1677 Isaac Mesa, Samuel Nassy and Jacob Pereira were made members of the Civil Defense Council. In the next year Samuel Nassy was instructed to "chase, catch and exterminate the rebellious runaway negro-slaves." In 1682 Abraham Nuñez Henriques obtained the post of surveyor of the Jewish district; four years later Samuel de la Parra was appointed commissary for the dredging of Cassawinica Creek.

As already mentioned, the Cayenne Jews founded a separate community on the so-called Joden Savanne, eight to ten miles from Paramaribo, left of the Surinam river.[1] On this Joden Savanne the second Surinam synagogue was erected in 1685. It was a building of no mean dimensions, measuring ninety feet in length and forty feet in width, and being supported by four huge wooden pillars. On one side of the Savanne was a military outpost and a provision store for the "Kordon," or defense power of the colony. Just opposite the synagogue the great Savanne began.

In 1682 Samuel Nassy transferred the right of possession of the Joden Savanne to the Jewish community; three years afterward he gave a further twenty-five acres of land surrounding the synagogue. This Nassy was the richest planter of Surinam; in 1691 he is mentioned with the title of "Capiteyn"; and in 1694 he left the colony to settle in Holland. In the latter year, ninety-two Portuguese Jewish families were living in Surinam, together with ten to twelve German Jewish families. In all, there were 570 Jewish persons, owning more than forty plantations with 9,000 slaves. In the next ten years the number of German Jews increased rapidly, so that by the end of 1704 they were half as many as their Portuguese coreligionists.

In that year a decree was published changing the marriage privileges of 1665. No longer could a marriage be contracted solely according to the Mosaic law; it had to be in conformity with the Dutch marriage laws of 1580.

This decree was a further attempt to destroy some of the privileges formerly bestowed upon the Jews of Surinam. In 1686, for instance, the Dutch government had announced that the Jews would not be obliged to consider Sunday a day of rest. Nonetheless, Dutch officials now repeatedly tried to force the Jews to abstain from working on Sundays, and it was due solely to the influence of a man like Samuel Nassy that these attempts had been temporarily stopped. However, on November 21, 1718, a placard was published proclaiming that the Jews would no longer be allowed to work on the Christian day of rest.

Throughout the 18th cent. anti-Semitism grew slowly but surely in the West Indies colony. It was readily overlooked that in the days of strife with foreign invaders and the marauding bands of Indians the Jews had bravely fought to protect the Dutch possession. In 1689, for example, the oft-mentioned Samuel Nassy, with a special Jewish division of eighty-four men, had successfully held the fortress of Zeelandia against the French, under Du Casse. In fact, the loyalty of the Surinam Jews to the Netherlands government is unparalleled in American history. In every emergency they were found ready to prove their allegiance to Holland. From 1689 to 1772 they waged constant and desperate warfare against the runaway negro slaves who had formed several settlements in the bush and constituted a grave menace to the peace of the colony. There was a Jewish militia known as the Jewish Citizens Company and captained by such men as David Nassy—who headed no less than thirty expeditions against the negroes or Maroons—Isaac Carvalho and Moses Naar. These warriors were of immense service to the colony in suppressing the continuous attacks of the dangerous bush negroes.

During the latter half of the 18th cent. this latent anti-Semitism changed into an unmistakably hostile attitude, so that in 1767 it was even proposed—although in vain—that a ghetto be instituted in Paramaribo. The Jews were prohibited from visiting the theatre, and subsequently established one of their own which prospered for many years. Simultaneously, slaves of Jews living outside of Paramaribo were forbidden entrance to the town.

By this time the wealth of the Portuguese Jews in Surinam had been badly impaired due to several causes, foremost among them the loans with the house of Deutz, of Amsterdam, and the fashionable gamble in bills of exchange. While, in 1730, they still owned 115 plantations out of a total of 400, in 1791 they possessed only forty-six out of a total of 600 plantations.

After some differences between the Portuguese and "Hoogduitsche" or German Jews, the latter, in 1734, formed a separate community under the name of Congregation Neve Shalom. They nevertheless adhered to the Portuguese ritual; according to Rabbi J. J. Roos of Paramaribo, no congregation in Surinam has ever adopted the Ashkenazic Minhag.

The history of the Jews in Surinam is uneventful throughout the 19th cent. In 1825 all special privileges granted to the Jews in former times were discarded; as Dutch citizens they enjoyed full equality of

[1] Joden Savanne—the Jewish Savannah. The name denotes the vast stretch of meadows around the settlement, which was generally known by the Spanish word Savannah.

rights and duties with all other subjects of the Netherlands crown. Three years afterward they were, furthermore, given the right to occupy public positions. Gradually the use of the Dutch language had become more and more widespread, and in 1837 it was officially stipulated that henceforth all official minutes of the Jewish community be composed in Dutch, not Portuguese.

A year previously the "Hoogduitsche" community had built another synagogue. This congregation now numbered 719 persons, and exceeded the Portuguese community by thirty-five members. In 1861 the Dutch government in The Hague resolved that the archives of the former Jewish Court of the Joden Savanne would be considered government property and placed in the Surinam Colonial Library. It was not until 1916 that all the archives of the Netherlands Portuguese-Israelite Community—the name which had been given to the Portuguese congregation in 1835—were transferred to the State Archives at The Hague, where they underwent a thorough reclassification.

At the beginning of the 20th cent. approximately 1,500 Jewish citizens were living in Surinam, occupying honorable positions and controlling the principal property of the colony. Yet their number gradually declined, and in 1923, according to Harry S. Linfield's *Statistics of the Jews* (1930), there were only 818 Jews left in Surinam. By then the Joden Savanne had been a ruin for nearly a century; it could not even be visited without a special pass from the head of the Portuguese Jewish community. Ever since the great fire of September 10, 1832, when the village on the Joden Savanne was destroyed, decay had set in, and notwithstanding all efforts to renovate the buildings the Jews had gradually moved away to the Kordonpad.

To the general decline of Surinam there had in no small way contributed the abolition of the slave trade from the Americas, in 1819. The emancipation of the Surinam negroes followed in 1863, whereupon large numbers of the escaped negro slaves gave up their guerrilla warfare from the bush and returned to the plains. When sugar ceased to be the important export article it had been for several generations, Surinam began to experience new difficulties. Its soil, covering a solid granite base, proved to possess only a small degree of fertility.

In 1906 J. J. Roos, rabbi of the community of Paramaribo, started upon the arduous task of putting the ruins of the synagogue and the burial places in some sort of order. At the exhumation of several tombs important documents were discovered relating to the first settlement early in the 17th cent. In 1926, moreover, Frederik Oudschans Dentz, of The Hague, formed a committee with the purpose of collecting funds to rehabilitate the ruins of the old synagogue and the burial places of the Joden Savanne.

With the Nazi occupation of The Netherlands in Europe (1940) and the fall of the Netherlands East Indies to the Japanese (1942), Surinam—together with the colony of Curaçao—became the only free Dutch soil under the rule of Queen Wilhelmina and her government in London. On November 23, 1941, a contingent of American troops moved into the colony to cooperate in the defense of the bauxite mines at Moengo which furnish upwards of 60 per cent of the requirements of the United States aluminum industry.

At the close of 1942 a comparatively small number of Jewish refugees from The Netherlands and elsewhere had found a temporary home in Surinam which, under the influence of the much increased volume of bauxite mining, was going through a period of renewed prosperity.

SUSANNA, *see* DANIEL, ADDITIONS TO.

SUSPICION (*hashad*). According to Talmudic law, a person who is suspected in any respect is incompetent to perform any legal transaction for which reliability is required. On the other hand, suspicion alone is not sufficient ground for penal procedure. Suspicion is based on past actions or present circumstances, and thus forms a sort of presumption for future judgment. Thus if one had already perjured himself, he is regarded as suspected of perjury in all future cases. An individual may be generally suspect, or suspect only in certain special cases, which are generally classified as suspicions in respect to money matters, theft, perjury, incest and criminality. The general principle holds that in suspicion a graver suspicion includes a lesser one, while a lesser suspicion excludes a graver one. Thus one who is suspected in money matters is not suspected of perjury; one suspected of perjury is not suspected of criminality.

If one is suspected in a case, he is not regarded as trustworthy in that case if he desires to obtain certain rights for himself. However, he can be regarded as a trustworthy witness or expert in a similar case which concerns another person. Suspicion is a ground for the rejection of persons as judges and witnesses, and a hindrance to their appointment as guardians.

SÜSSKIND VON TRIMBERG, Jewish troubadour or Minnesänger of the second half of the 13th cent., b. Trimberg, near Schweinfurt, Bavaria, about

1220. Of his life very little is known, nearly everything that has been written about him by others being purely legendary. In his six songs in Middle High German which are still extant there is revealed a world of thought differing from the ideas of contemporary Christian bards and showing instead intimate contact with the Bible, Talmud and Siddur (prayer-book). A manuscript page of a song book of the 14th cent. preserved in the Mannesse Manuscript in Heidelberg shows Süsskind in a long cloak and pointed hat, with a thick beard framing his face as he stands like a typical medieval Jew before clergymen. Due to the depth and sincerity revealed by his songs and the clarity of his expression, he was regarded as an equal of the greatest of the Christian bards of the Middle Ages, such as Walter von der Vogelweide. Toward the end of his life he became embittered over the penury of the feudal lords at whose castles he had been singing as a wandering minstrel, devoted entirely to his religion.

SUSSMANN, ELIEZER, 18th cent. synagogue artist, b. Brody, Poland. He was the son of Solomon Sussmann, the cantor of Brody. According to existing evidence, Sussmann was especially active in southern Germany.

According to inscriptions, Sussmann decorated the following synagogues (many of the painted wooden panels were eventually taken to German museums): in the Main region, between Bamberg and Würzburg, the synagogues of Bechhofen (1733), Horb (1735), Kirchheim (1739-40); also the synagogue in Hall-Unterlimpurg in Swabia (1738-39). Traces of a painting indubitably done by Sussmann were discovered under the whitewash of the synagogue in Colmberg. His surface decorations were strongly influenced by the Polish examples found in the wooden synagogues at Jablonow on the Pruth (1674) and in Chodorów and Zabludów (both 1642). Nevertheless, there are many deviations. Instead of the fantastic, crowded ornamentation found in Poland, Sussmann's work showed a delicate tracery, in which Biblical and animal representations were interwoven. There are also some Oriental embellishments, reminiscent of late Gothic pomegranate and rose patterns and of East European folk art.

SUSSMANN-HELLBORN, LOUIS, sculptor, b. Berlin, 1828; d. Berlin, 1908. He studied at the Berlin Academy, lived for a while in Rome, then returned to Berlin, where he was from 1882 to 1886 artistic director of the Berlin Royal Porcelain Works. In 1897 he was awarded the gold medal of the Berlin Academy.

Sussmann-Hellborn's work followed the style of historical representation. Especially popular, for a long time, was his marble group *Dornröschen,* in the Berlin National Gallery. His bronze *Trunkener Faun* was in the same gallery, and a reproduction of it in the English Gardens at Fontainebleau. His sandstone figures of Hans Holbein and Peter Vischer, the 16th cent. German masters, were in front of the Kunstgewerbemuseum in Berlin. He made marble figures of Frederick the Great and of Frederick William III for the Berlin City Hall, and duplicated them for the Breslau City Hall (1869). He also made a bronze memorial to Frederick the Great for the city of Brieg, in Silesia.

Adolph Sutro

Lit.: Kohut, Adolph, *Berühmte jüdische Männer und Frauen,* vol. 1 (1900-1) 321; catalogue of the Berliner Akademische Ausstellungen (1856-81).

SUSSYE OF ANAPOLI, Hasidic Maggid or itinerant preacher, who lived in the Ukraine in the 18th cent.; d. 1809. He was a disciple of Baer (Dob) of Meseritz, the noted Hasidic rabbi, and distinguished himself by his great humility and profound religious activity. He was known to have had curious habits; he was a mystic, and was considered "singular." Together with his brother, Elimelech of Lizianka, he wandered about the country "to preach the word of God and thus to bring back those who went astray." There floated about many tales of wonder and mystery regarding his life, characteristics generally distorted or grossly exaggerated by popular legend.

SUTRO, ADOLPH, engineer, businessman and mayor, b. Aix-la-Chapelle, Germany, 1830; d. San Francisco, 1898. He was educated in polytechnic schools in Germany. The cloth manufacturing concern of which he was left in charge following his father's death in 1847 was ruined by the revolution (1848-49), and in 1850 the family, including Adolph, his mother, brothers and sisters, emigrated to the United States and settled at Baltimore. In the same year, attracted by the gold rush, the twenty-year-old youth wandered on to the West coast, and for the next decade sold tobacco and cigarettes at San Francisco.

In 1859 he was lured across the Sierra Nevadas by the discovery of the Compton Lode in Mount Davidson. The difficulties encountered and the disasters met with by the miners employed in extracting the treasures of that mountain led Sutro to conceive the plan of a ventilating and draining tunnel. During the years

1861 to 1864, while he was successfully operating an ore-reduction mill at Dayton, Nev., he perfected his scheme. In 1864, having obtained from the territorial legislature of Nevada the right of way for a tunnel across Mount Davidson, he founded the Sutro Tunnel Company, with United States Senator William M. Stewart as president. While Sutro took trips to Washington, D. C., and Europe to consult experts on his great enterprise, a powerful opposition rose against him which made objections with the Federal Congress. With all his funds sunk in the enterprise, his credit stopped and his project ridiculed in the press, Sutro rose above his difficulties by a democratic coup. He called a meeting of miners at Virginia City, and by a spirited address won their support. The construction of the tunnel was started on October 19, 1869, at the village of Sutro, and was completed on July 8, 1879.

After the completion of the tunnel, Sutro sold out his interest in the company and returned to San Francisco in the period of the "sand-lot agitation." Undeterred by the then prevailing depression, he invested heavily in real estate and reaped tremendous wealth when the depression was overcome. One of the richest men of the Pacific coast, he owned about one-tenth of the area of San Francisco, including Sutro Heights, which he converted into a fine public park and which became a city property after his death. He also built the Sutro Baths as well as an aquarium, and gave the city several statues and fountains. In 1894 he was elected mayor of San Francisco.

Sutro owned a library of some 200,000 volumes which included 135 rare Hebrew manuscripts and early Americana. Among these were what he believed to be original Maimonides parchments, but which were proved to be forgeries. Copies of these pseudo-Maimonides manuscripts are in the Jewish Theological Seminary of America, in New York city.

SUTRO, ALFRED, author and playwright, b. England, 1863; d. 1933. He was educated at the City of London School and at Brussels. He first produced on the stage a joint adaptation with Arthur Bourchier, *The Chili Widow* (1896), but his first important success was *The Walls of Jericho* (1904), which established his reputation on the British stage so well that the public demanded and received its Sutro play in each successive theatrical season, with an intermission only during the first World War, until 1929.

Among these plays were: *The Perfect Lover* (1905); *Mollentrave on Women* (1905); *The Fascinating Mr. Vandervelt* (1906); *The Barrier* (1907); *The Builder of Bridges* (1908); *The Perplexed Husband* (1911); *The Clever Ones* (1914); *The Choice* (1919); *The Laughing Lady* (1922); *A Man with a Heart* (1925); *The Desperate Lovers* (1927); *Living Together* (1929).

Sutro also published several books: *Women in Love* (1902); *Five Little Plays* (1912); *Freedom* (a play; 1916); *About Women* (1931); *Celebrities and Simple Souls* (1933).

SUTRO, THEODORE, lawyer and communal leader, brother of Adolph, b. Aix-la-Chapelle, Germany, 1845; d. New York city, 1927. He was brought to the United States in 1850, and studied at Harvard University (A.B., 1871) and Columbia University (LL.B., 1874). He organized the Comstock Tunnel Company (1887), which took over the stock of the Sutro Tunnel Company of Nevada, saving the latter from complete ruin. Sutro served as commissioner of taxes in New York city from 1895 to 1898. He was a member of the committee established in celebration of the 300th anniversary of Henry Hudson's discovery of the Hudson River (1906), and instrumental in the purchase by the state of New York of the homestead and farm of General Nicholas Herkimer, hero of the Revolutionary War.

Sutro was honorary president of the German-American Alliance of the state of New York, and of the United German Societies of the city of New York; he was also editor of the *Deutsches Journal,* and president of the German Publication Society. A noted collector of paintings, he loaned the thirteen famous American historical marine paintings by Edward Moran to the Metropolitan Museum of Art and later to the Smithsonian Institute. He wrote *The Sutro Tunnel Co. and The Sutro Tunnel* (1887), and a great deal on taxation, corporation law, medical jurisprudence and mining.

SVERDLOV, IAKOV MIKHAILOVICH, one of the most influential founders of the Communist Party of the Soviet Union, and first president of the Soviets, b. Nizhnii Novgorod (now Gorky), Russia, 1885; d. 1919. Sverdlov was brought up in Nizhnii Novgorod. His father was an engraver. While still at school (the Nizhegorod Gymnasium) Sverdlov came into contact with the revolutionary intelligentsia. On completing his fifth year at the Gymnasium he went to work at a Kanavino (Novgorod suburb, now incorporated into the city of Gorky) pharmacy as an apprentice. Here, under the influence of his brother, Zinovy, the adopted son of the author Maxim Gorky, he immediately devoted himself to propagandistic work, establishing ties with Sormovo (another suburb of Novgorod, now incorporated into Gorky) and Nizhnii Novgorod. The work was greatly strengthened in 1901 by the organization in Nizhegorod of a Party Work Committee.

In 1902 Sverdlov was arrested and sentenced to six months in prison for participating in a May Day demonstration. When he was freed he went to Saratov, but soon returned to Nizhnii to do organizational work at the Sormovo Works.

In 1905 the Central Committee of the Party sent him to the Urals where, under the party name of Andrei, he conducted party work. He soon became very popular among the Ural workers. However, in June, 1906, he was imprisoned.

In September, 1909, after he had served his sentence, the Central Committee of the Party delegated him to Moscow to reestablish its smashed organizations there. But in a month he was back in prison, and in 1910 he was exiled to Narym in Siberia. In June of that year he escaped to St. Petersburg (Leningrad), where he helped in the work of the Duma fraction of the Party. In November he was again arrested and sent back to Narym. Here, for participating in a demonstration when some of the exiles were buried, he was exiled to Maksimkin Iar, to which boats came only twice a year and the post twice.

He tried to escape from Maksimkin Iar five times, unsuccessfully. Taken very sick, he was brought back to Narym, where he was allowed to remain. But in a month, in the fall of 1912, he again tried to escape—this time by boat. He was caught up in a storm, was almost drowned, but was saved by a ship, again arrested, and again sent into exile. Again, however, he managed to escape. He went to St. Petersburg, where he carried on organizational work and helped build the Party fraction in the Duma. Meanwhile that year the Prague Conference of the Party had elected him in absentia (he was in exile) to the Central Committee.

In February, 1913, Sverdlov was once more arrested and exiled to Turukhan, also in Siberia (Joseph Stalin also was serving a sentence there at the time), where he remained until the February Revolution. At this

time he was freed and returned to St. Petersburg. At the April conference of the Party in 1917 he was elected to membership in the Central Committee, and became one of the Party's main organizers.

After the October Revolution he was elected chairman of the All-Russian Central Executive Committee and of the Soviets, and secretary of the Central Committee of the Party. In addition, he spoke at workers' meetings, and interviewed hundreds of persons a day.

In March, 1919, on his way to a Congress of the Soviets in Kharkov, he fell sick with the grippe, and on March 16th he died. Lenin paid tribute to him in these words: "Through the illegal circles, through revolutionary underground work, through the illegal Party, Sverdlov achieved the post of first man in the first socialist republic, arrived at the post of first (most important) organizer of the broad working masses." Stalin described him as "an organizer to the 'bones of his brain,' an organizer by nature, by habit, by revolutionary upbringing, by scent, an organizer to the full of his intense being."

In 1924 the name of the town of Ekaterinburg, in the Urals, was changed to Sverdlovsk in memory of him.

SVEVO, ITALO (pen name of Ettore Schmitz), novelist, b. Trieste, 1861; d. Motta di Livenza, Italy, 1928. He was sent to Germany in 1873 to follow commercial studies and enter a business career. He came back to Trieste in 1880 and became a clerk in a bank and later administrator of an important industrial concern, which gave him the opportunity of frequent traveling in England, France, Germany and other European countries. His first novel, *Una vita* (Trieste, 1892), made no great impression. *Senilita,* which appeared six years later, was also soon forgotten. Only after twenty-five years, in 1923, did his novel *La coscienza di Zeno* attract wide attention; it was hailed as an original work in modern Italian literature.

Interest in Svevo was increased by a profound analysis of his talent and work written by E. Montale, critic and professor of English in Trieste. He established Svevo's reputation as the "Italian James Joyce" for his revealing observations of human life and the psychoanalytical approach to them. Svevo wrote several other novels which appeared mostly after his death. He died in an automobile accident. In September, 1939, his statue at Trieste was destroyed by vandals.

SWARZENSKI, GEORG, art historian and museum director, b. Dresden, Germany, 1876. After completing his studies in various German cities and in Vienna, he became an assistant in the administration of the Berlin Museums and of the Deutsches Kunsthistorisches Institut in Florence. He was also a lecturer at the University of Berlin. In 1906 Swarzenski was made director of the Staedelsches Institut, the famous museum in Frankfort, where he succeeded also in establishing the Staedtische Galerie. Swarzenski was in charge of both collections, from 1929 to 1933 as general director. After 1933 he retained the directorship of the Staedelsches Institut, remaining until 1937.

From 1915 on he was professor at the University of Frankfort. Among his many significant art studies were: *Die Regensburger Buchmalerei des 10. und 11. Jahrhunderts* (1901); *Die Salzburger Malerei bis zur Blütezeit des romanischen Stils* (1908 and 1910); *Denkmäler der süddeutschen Malerei des Mittelalters* (vol. 1, 1901; vol. 2, 1913). His subsequent publications included studies of drawings by German artists and of French masters, and the annual *Staedel-Jahrbuch* (1921-36). Swarzenski came to the United States in 1938, and was made a fellow of research in sculpture and decorative arts at the Museum of Fine Arts in Boston in 1939.

SWASTIKA, a symbol of frequent occurrence among many peoples in all parts of the world; it is known also as fylfot, gammadion and Hakenkreuz. It consists of four L's, placed at right angles to one another in such a way that their tips are all in the center; there are two forms, one in which the open space of the L is to the left, the other in which it is to the right. Of these, the former 卐 is the more original, while the latter 卍 is a derivation. The swastika is apparently a solar symbol, being a conventionalization of an original solar disk. It first appears in the Bronze Age (second millennium B.C.E.), and from that time on has appeared in practically every country of the globe as a token of good-luck. It is found in India as a cattle-mark, in China as a symbol for 10,000, for good luck, and as a soldier's talisman, in Japan on phalli, in the Aegean civilization of Troy on a female idol, in the Middle Ages in connection with the apostles on a church, in Scandinavia in company with the hammer of Thor, in Africa as an ornament and on the weights of the Ashanti, and as a symbol of friendship among the Pueblo Indians. It is a sacred symbol in Jainism and Buddhism, and it occurs on some Greek coins. A similar symbol, with three arms, is known as triskelion.

The swastika appears also on various articles excavated in Palestine, on ancient synagogues in Galilee and Syria, and on the Jewish catacombs at the Villa Torlonia in Rome. Thus the synagogue at Tel Hum (Capernaum) has swastikas as part of its decorations, and a synagogue excavated by Belgian archeologists at Apamea in 1938 has a number of swastikas in one corner of the floor design. Thus it is clear that Jews, as well as other peoples, used the swastika as a decoration. In modern times anti-Semites have given the swastika a baleful significance by adopting it as their symbol; their claim that it is of "Aryan" origin is just as absurd as the rest of their pseudo-science.

SWAYTHLING, FIRST BARON (Samuel Montagu), banker and philanthropist, b. Liverpool, England, 1832; d. London, 1911. As the youngest son of Louis Samuel, a watchmaker and silversmith who adhered to Orthodox Judaism, Montagu was educated at the Mechanic's Institute, Liverpool. In 1845 he went to London and entered a banking house. But, leaving his employment soon, he became a bullion broker on his own account. In 1853 he founded the banking house of Samuel and Montagu which he alone directed.

Montagu prospered, and helped make London the hub of the international money market. His knowledge of intricate exchange was remarkable even among the shrewdest specialists. Montagu's public influence grew rapidly. Demonetization of French copper coinage in England was largely due to his agitation. In 1885 he was elected a Member of Parliament, representing a division of Whitechapel. He belonged to the Liberal Party, but espoused only financial or Jewish questions in the House of Commons.

Retraining of Jewish refugees who found hospitality in Sweden during the Nazi persecutions

Montagu supported bimetallism and the decimal system. He was chief author of the Weights and Measure Act (1897), legalizing the use of metric weights and measures. In 1888 he published *A Plea for a British Dollar.*

Untiring in his efforts on behalf of the East London poor, Jewish and Christian, Montagu was an outstanding leader of British Jewry. He was member of the Board of Jewish Deputies, of the Board of Jewish Guardians, and of the Religious Education Board. Until 1909 he was president of the Shechita Board. He maintained a lively interest in Anglicizing foreign Jews who resided in England. At his instance the small synagogues in the East End of London were united (1887) into the Federation of Synagogues. Montagu improved the conditions of the small synagogues and the Hebrahs.

In 1875 Montagu visited Palestine and, together with Lord Rothschild, founded the first secular and industrial school in Jerusalem. In 1882 he organized relief for the persecuted Jews of Russia. Four years later he visited Russia, but was expelled by the Czarist government. Montagu was the principal representative of Conservative Judaism in England, and was strongly opposed to Zionism. In 1894 he was made a baronet, and in 1907 raised to the peerage as Lord Swaythling.

SWAYTHLING, SECOND BARON (Louis Samuel Montagu), banker and communal worker, b. London, 1869; d. London, 1927. He succeeded his father, the first Baron Swaythling, in the peerage and in the direction of the banking house of Samuel Montagu and Company, London. The second Baron Swaythling became notable for silence, but, almost unknown to the man in the street, he was admired by the financial experts of several countries as one of the coolest and most far-seeing bankers. Like his father, he was a pillar of Jewish Orthodoxy in England. He was hailed in Great Britain and France as the connecting link between the Jews of the East and those of the West. He took the immigrants in the East End of London under his special protection.

For a long time he was president of the Federation of Synagogues and of the Jewish Working Men's Club. He was also treasurer of the Initiation Society. During the first World War he was president of the Wounded Allied Relief Fund, and was decorated with Belgian, French, Roumanian, Serbian and Japanese Orders.

SWAYTHLING, THIRD BARON (Stuart Albert Montagu), banker and communal worker, b. London, 1898. He succeeded his father, the second Baron Swaythling, as a British peer and as a partner in the banking house of Samuel Montagu and Company, London. In 1917 he joined the Grenadier Guards and was promoted to lieutenant on the front in 1918. Later on he became a justice of the peace for the county of Southampton, England. He was paymaster of the Jewish Lads' Brigade and treasurer of the Home and Hospital for Jewish Incurables.

SWEDEN, a kingdom of northern Europe, with a total population of 6,249,489, including 6,653 Jews (1936). There seems to have been no Jewish settlement in Sweden during the pagan and Catholic eras. In Lutheran Sweden any attempt at Jewish settlement was frowned upon for a long time. In the 17th cent. any Jew settling in Sweden had to join the Lutheran church. Two Jews, Israel Mandel and Moses Jacob of Stockholm, were baptized in the German church of Stockholm together with their families. During the reign of Charles XII (1697-1718) there were Jewish paymasters in the army.

King Gustav III (1772-92) and his finance minister, Johan Lilienkrants, made it possible for Jews to settle in Sweden. In 1774 Aron Isak, an engraver and merchant, came from Bützow, Mecklenburg, to Stockholm, and received permission to settle there, to build a synagogue, and to gather around him enough co-religionists to hold divine services (Minyan). The first synagogue was on the Köpmantorget (Merchants Square), and Rabbi Lev Hirsch was invited from Alt-Strelitz, Mecklenburg, to come and act as rabbi for the new community. In 1779 the Riksdag (parliament) gave the Jews permission to settle in two other cities, Göteborg (Gothenburg) and Norrköping, with the right to hold services there. In 1782 the chamber of commerce issued a commercial grant for Jews which permitted them to settle anywhere in the country, subject, however, to certain restrictions. They were permitted to acquire real estate, but certain businesses were closed to them. Peddling was strictly forbidden, and they could not hold official positions, vote or be elected themselves. Marriage between Jews and Lutherans was forbidden. All matters concerning religion, poor relief, inheritance and marriage were regulated by the governing bodies of the members of the Jewish communities themselves. The Swedish government exempted wealthy Jews from many of these regulations.

Throughout the entire period during which these discriminatory laws existed the populace as a whole was bitterly opposed to the Jews, whereas a liberal bureaucracy which predominated in the country protected them. When the decree of June 30, 1838, abolished

A refugee camp in Switzerland at the height of anti-Semitism in Germany

these special anti-Jewish regulations, the government met with such opposition that in September of that same year the decree was annulled. In 1860 the Jews were given the right to acquire property in rural districts, and in 1863 the laws against intermarriage were repealed. They were granted the franchise in 1865, and in 1870 the right to be elected to parliament. Like all other non-Lutherans, they continued to be, and in 1943 still were, debarred from election to the council of state and to the ministry.

The largest Jewish settlement was in the capital, Stockholm, comprising 90 per cent of the Jewish population. Small congregations existed also at Göteborg, Karlskrona, Lund, Malmö, Norrköping and Upsala. In 1914 Marcus Ehrenpreis, a native of Galicia, was appointed chief rabbi of Sweden; he still held this position in 1943. In Stockholm two Jewish periodicals, *Israeliten* and *Judisk Tidskrift,* were published. Swedish Jewry as a whole was estranged from Judaism, at least up to the rise of Nazism (early 1920's), mostly due to the high rate of intermarriage. There were more mixed than purely Jewish marriages.

Jews played a considerable part in the intellectual, political and economic life of Sweden. Outstanding in the field of literature were Sophie Elkan (1853-1921), Ludwig Oscar Josephson (1832-99), Oscar Ivar Levertin (1862-1906), the literary critic Martin Lamm (b. 1880), the historians of literature Johan Henrik Emil Schück (b. 1855), and Karl Johan Warburg (1882-1918). The famous publishing house of Bonnier was founded and owned by Jews. Ragnar Josephson wrote on the history of art, Hugo Mauritz Valentin (b. 1888) wrote on Swedish history and on anti-Semitism, Rosa Warrens (1821-78) was the foremost authority on Swedish folk songs and mythology, and Otto Aron Salomon (1849-1907) was a noted pedagogue. Among the painters were Eva Bonnier (1857-1909), Isaac Hirsch Grünewald (b. 1889), Sigrid Hjerten Grünewald (b. 1885), Ernst Abraham Josephson (1851-1906), and Geskel Saloman (1821-1902). Jakob Axel Josephson (1818-80) was a renowned composer, and Henriette Nissen-Salomon (1821-79) was a famous singer. Among Jewish scientists were Robert Rubenson (1829-1919), well-known meteorologist, and the hygienist Elias Heyman (1829-89); Sven Hedin (b. 1865), the explorer, was descended from a Jewish family named Brody. Several Jews were active as deputies and diplomats; Herman Fredrik Lamm (1853-1928) was first vice-president of the Swedish Senate.

Despite the rise of Nazism in Germany, anti-Semitism made only little inroad in Sweden. In the election of 1936 the combined vote of the two fascist and anti-Semitic groups, the National Party and the National Socialists, was only about 1.6 per cent of the total. When, in 1938, Germany tried to exert pressure on Swedish firms to make them dismiss their Jewish employees, Foreign Minister Rickard J. Sandler retorted by declaring that Swedish law alone was applicable in Sweden and by calling anti-Semitism an evil that ought to be rooted out. In 1939 the courts in Boras and Göteborg handed down decisions in favor of Jewish firm owners who were exiled from Germany.

From 1933 on the situation of the Jewish citizens of Sweden was aggravated by the influx of refugees, first from Germany, subsequently from Finland, Denmark, Norway and Poland. An attack upon the Jews was made in parliament for the first time in its history in February, 1939, by a deputy of the Farmers' Union. The speaker, however, was rebuked by the leader of his own party, who rejected anti-Semitism as an "intellectual plague."

Reports as to the treatment of refugees varied. In general it seemed to be fair. The government granted large sums to assist in the retraining of Jewish refugees. Several hundred German Jewish youths were given agricultural training on Hachsharah (preparation) farms; many of them were prevented by the second World War from leaving for Palestine. In 1936 such a training farm was established at Svartingtorp, southern Sweden, with a fund of 50,000 kronen anonymously given. Five hundred refugee children were admitted to Sweden.

In 1940 a bequest of approximately $700,000 for Jewish causes was provided in the will of the widow of the Danish consul general, Simon Elias Warburg; the largest part of the sum was to be used for the establishment of homes for Jews in Palestine. At Passover, 1942, the Jewish community of Sweden was, for the first time since the first World War, compelled to bake its own Matzoths, which they had formerly imported from the United States and England. Seders held in Stockholm and other cities were attended by refugees from Norway. In June of that year, on the other hand, a resolution condemning racial and religious hatred was unanimously passed by the Swedish parliament. In the latter part of 1942 the press and church in Sweden severely criticized the wholesale expulsion of Jews in Norway by the Nazis. In early 1943 a bill outlawing anti-Semitic propaganda and every form of anti-Jewish agitation was introduced into the Swedish Riksdag by M. Brandt, Social Democratic deputy, who, together with other deputies and with the liberal press, opposed the distribution of the anti-Semitic newspaper *Hammaren.*

SWICK, MOSES, surgeon, b. New York city, 1900. After receiving the M.D. degree from the Columbia University College of Physicians and Surgeons, he visited Germany where he did postgraduate work under Professor Leopold Lichtwitz at the Altona hos-

pital, Altona on Elbe, and in the section for urological surgery at Hedwig Hospital, Berlin. In 1929 he published his invention of iopax, a substance administered intravenously to make the kidneys visible for X-ray photography. (The development of the same substance under the name of uroselectan was claimed by Alexander Lichtenberg.) In 1931 Swick modified his method, which came to be used generally in hospitals. He contributed the chapter on intravenous urography to the *Oxford Urologic Surgical Loose Leaf System* (1933), and in the same year was awarded a gold medal by the American Medical Association for his exhibit of intravenous urography at the convention held in Milwaukee, Wis. Another substance, sodium ortho-iodohippurate, was developed by Swick for oral administration in urography (X-ray photography of the kidneys) in 1933.

Swick was adjunct surgeon at Mount Sinai Hospital from 1932 on, and associate surgeon in genitourinary service at City Hospital, New York, from 1936 on. He was also attending urologist at Harlem Hospital, New York city.

SWIREN, DAVID BERNARD, rabbi, b. Smargon, Poland, 1889. He came to the United States in 1905. Swiren studied at several Yeshivas in Poland, at the Rabbi Isaac Elchanan Theological Seminary and at the College of the City of New York, and was ordained in 1911. He served as rabbi at Congregation Beth Israel, Waterbury, Conn. (1912-15); Montefiore, North Philadelphia (1916-17); Adas Kodesh, Wilmington, Del. (1918-20); and was elected rabbi of the West Philadelphia Jewish Orthodox Community in 1921; he still held this position in 1943.

Swiren was an executive member of the Union of Orthodox Rabbis, Agudas Harabbonim (from 1912 on), and the founder of the Waterbury Hebrew Institute (1914). He wrote *What's In Our Names?* (1920); *Our Life is Like That* (1931); *We Jews* (1936); *Debir David—Studies in Israel's Literature and Life* (Hebrew; 1942).

SWITZERLAND, a republic of Central Europe, with a population of about 4,200,000, including about 18,000 Jews (1943). Jews immigrated into Switzerland from Alsace, Southern Germany, Flanders, Champagne and Franche-Comté. They settled at Bern, St. Gallen, Zurich, Schaffhausen, Diessenhofen, Basel, Lucerne, Neuchâtel, Biel, Vevey and other places, especially in the Aargau and the Thurgau.

At first they lived under the protection of the emperor, but in the 14th cent. they came under the protection of the cities where they were living, to which they had to pay protection money which amounted to as high as eighty florins per annum. Excluded from commerce and handicrafts, they lived chiefly by money lending. They were forbidden, however, to accept real estate as pledges. Gradually they were replaced by Christian money lenders, the Lombards and Cahorsins, and were expelled from their domiciles (Lucerne, 1384; Bern, 1408; Zurich, 1436; Schaffhausen, 1475; the Thurgau, 1491; Geneva, 1490; St. Gallen and Solothurn, at the beginning of the 16th cent.). Those who remained in Switzerland were permitted only the occupation of physician; several cases of outstanding Jewish physicians in Switzerland are known, especially in Basel and Freiburg.

Unlike conditions prevailing in Germany, however, their status was not regulated by a separate law, and they had to take the oath in the manner in which it was prescribed by the *Schwabenspiegel*. Although they were not actually confined to a special quarter, they lived, in most cities, separated from the Christian population, and grouped around the synagogue. They were compelled to wear the Jews' hat. In 1348 to 1349, the time of the Black Death, Jews were burned at the stake in most cities in Switzerland; in 1401 they were burned at Schaffhausen, charged with ritual murder. They were definitely expelled from Bern in 1427, from Zurich in 1436, from Schaffhausen in 1472, and from Basel in 1543.

Among the Jewish scholars of Switzerland in the Middle Ages was a certain Moses, who lived in the 14th cent., author of supplements to the *Sefer Mitzvoth Katan*, the so-called Zurich *SeMaK*, referred to by Leopold Zunz (*Ritus*, p. 211).

At the beginning of the 17th cent. a new influx of Jews started; they came from Alsace, the Palatinate, Baden and even Poland (the family name of Bollag, frequent among Swiss Jews, is an indication of their Polish origin). Also a number of proselytes streamed to Zurich and Basel. But the new immigration was confined to the northeastern part of Switzerland, the Rhine valley, the Thurgau and the county of Baden; its number was increased as a consequence of the Thirty Years' War (1618-48). In 1774 it was decided that Jews should reside exclusively in the villages of Lengnau and Oberendigen, in the county of Baden. They lived there under the authority of the prefect (*Landvogt*), who had also jurisdiction over them. From 1696 on a letter of protection was granted them every sixteen years. In 1702 there lived in the two villages altogether thirty-five Jewish families; by 1810 their number had increased to 236 families (or about 1,000 persons). They were forbidden to acquire real estate or to engage in handicrafts, and were therefore confined to peddling and trading.

The establishment of the Helvetian Republic (1798) did not change the status of the Jews. On May 5, 1809, the Great Council of Aargau passed the so-called *Judengesetz* (Jews' Bill), which considerably restricted the field of their activities. In 1810 all Jewish families who had been living in the Aargau for the previous twenty years were registered as members of the two Jewish corporations. Even the Jews of French nationality did not enjoy the same treatment as did the French Christians in Switzerland, despite all efforts on the part of France to improve their status. The French government merely succeeded in securing for them the same treatment as was enjoyed by the Aargau Jews in the rest of the country. Up to the introduction of the Swiss civil code (1826-56) the Jews retained jurisdictional autonomy in questions of inheritance and marriage, with the rabbi acting as judge.

The corporation law of 1824 regulated the status of the two Jewish communities. The authorities could approve or disapprove of the election of any rabbi, teacher or other Jewish official, and they supervised the Jewish school and charity system. In 1835 the Hebrew schools were replaced by secular institutions; they were supported by the communities themselves, and from 1936 on also by the canton. In 1854 Julius Fürst of Mannheim and in 1861 Meyer Kayserling were appointed rabbi of the two communities.

The first important steps toward Jewish emancipation were taken in the 1850's, notably the abolition of the taxes which the Jews were compelled to pay in return for their unwanted exemption from military service and of the law of 1809 restricting their activities. Full emancipation, however, was not granted to them until 1877. The Jewish ritual slaughtering of animals (Shehitah) was declared illegal throughout Switzerland by a law of 1894.

According to the first Swiss census, taken in 1850, the Jews numbered 3,145 persons, or 0.13 per cent of the total population. AUGUSTE WELDLER-STEINBERG.

In the 20th Century. The census of 1920 showed 20,979 Jews (9,428 of Swiss nationality), which indi-

Jewish camp and children's home in Switzerland during the second World War

cated an increase of almost 3,000 since the census of 1910 and of 50 per cent since 1900. Against the influx of Jews, most of whom came from Eastern Europe, restrictive legislative measures were taken. In 1921 the city council of Zurich, where a third of Swiss Jewry was concentrated, decided to naturalize Eastern European Jews only after fifteen years of residence, while other foreigners would be naturalized after ten years.

Anti-Semitism, however, failed to become a powerful force. The largest Jewish communities were, besides Zurich, those of Basel, Geneva, Bern and St. Gallen; other communities existed at Baden, Biel, Bremgarten, Chaux de Fonds, Davos, Delsberg, Endingen, Freiburg, Lengnau, Liestal, Lugano, Lucerne, Montreux, Porrentruy, Solothurn, Vevey, Winterthur and Yverdon.

Despite their small number, Jews took an active part in the political, cultural and economic life of Switzerland. David Zevi Farbstein, of Zurich, and Jacques Dicker, of Geneva, were elected to the parliament for several terms on the Social Democratic ticket, and M. H. Jacques Kunstenaar was elected president of the Ninth Congress of the International World Federation of the League of Nations Unions at Geneva (September, 1932). Camill Guggenheim, a well-known lawyer, was elected judge of the highest Swiss court, the Bundesgericht (1929). Three outstanding professors of German literature, Jonas Fränkel, Samuel Singer and Fritz Strich, all of whom taught at the University of Bern, were Jewish; Jonas Fränkel was editor of the national edition of the complete works of Gottfried Keller (from 1921 on). Jews were active in Swiss industry and commerce, particularly in the field of textile, silk, clothes and embroideries production.

All Jewish communities were, in 1943, united in the Schweizer Israelitischer Gemeindebund, founded in 1904. The Swiss Toratreuer Zentralverein (founded in 1907 by Arthur Cohn, of Basel) was formed to promote Orthodox Judaism. Reconstruction work in Palestine was supported by the Schweizer Comite für Erez Jisroel (founded in 1909), to which belonged representatives of all communities. Besides, there existed at Basel in 1943 a Swiss Zionist Organization, a Mizrachi group and an Agudath Israel group, and an association of Jewish athletic clubs. Among outstanding Jewish charitable institutions were the Home for the Aged (Lengnau, founded in 1901), the Orphans' Home (Basel, founded in 1903), the Jewish Hospital (Basel, founded in 1904), and the Jewish Tuberculosis Sanatorium Etania at Davos. In 1927 a Yeshiva was founded by E. Botschko in Montreux. Most of the Zionist Congresses were held on Swiss territory (Basel, 1897, 1898, 1899, 1901, 1903, 1905, 1911, 1927 and 1931; Zurich, 1929 and 1937; Lucerne, 1935; Geneva, 1939). The outstanding organs of Swiss Jewry in 1943 were the *Israelitisches Wochenblatt für die Schweiz* (founded in 1901), the *Jüdische Presszentrale* (1921), and the *Revue juive de Genève* (1933).

The Swiss authorities showed their repudiation of anti-Semitism on numerous occasions, especially when, after 1930, several Swiss Nazi organizations were formed. In January, 1932, anti-Jewish boycott leaflets were distributed throughout Geneva, an action which was sharply condemned by the population. From October, 1934, to May, 1935, a lawsuit held the attention of the world. J. Dreyfus-Brodsky, president of the Swiss Federation of Jewish Communities, Marcus Cohen, president of the Zionist Federation of Switzerland, and Marcus Ehrenpreis, chief rabbi of Sweden, brought suit against the editor of the Swiss Nazi organ which had published a series of articles that accepted as true the hoax of the *Protocols of the Elders of Zion*. Despite the intervention of the Nazi German government, which sent its expert, Colonel Ulrich Fleischauer, to testify to the "genuineness" of the *Protocols,* the Swiss court declared it to be a forgery and fined the culprits. In March, 1935, an agent of the Gestapo, Hans Wesemann, succeeded in luring the exiled German Jewish journalist, Berthold Jacob, then at Basel, to Paris, where he was kidnapped by the Nazi secret police; but Wesemann was seized by the Swiss government, and upon protests made by it Germany was compelled to release Jacob and to send him back to Switzerland. In February, 1936, David Frankfurter, a twenty-six-year-old Yugoslav medical student, assassinated the Swiss Nazi leader, Wilhelm Gustloff, and was sentenced to eighteen years' imprisonment. The sentence of the Swiss court, however, contained the remark that the persecutions of the Jews by the Nazis had made "a painful impression on the Swiss who compare these results with their own conception of liberty of the individual and of conscience." On July 3, 1936, Stefan Lux, a Czech Jewish journalist, shot and killed himself at the last session of the League of Nations in a dramatic protest against Nazi persecution of the Jews.

After the Nazis' advent to power (1933), and particularly after their annexation of Austria (1938), large numbers of Jewish refugees poured into Switzerland; by 1943 they numbered 6,300. Prevented by the second World War from further emigration, most of them had to be supported by the Jewish communities and by the American Jewish Joint Distribution Committee. By 1943 the majority of them had been placed in labor camps by the Swiss government. In addition, thousands of Jews were among the French and Polish soldiers who entered Switzerland after the fall of France (June, 1940) and were interned by the Swiss authorities.

Although completely surrounded by countries whose governments were anti-Semitic, Switzerland in 1943 maintained its liberal attitude toward native Jews and toward Jewish refugees. It withstood Nazi pressure for the extradition of political refugees, and anti-Semitic propaganda was heavily punished by the Swiss courts. The Protestant church urged its members on various occasions to combat anti-Semitism.

By the end of 1942 more than 6,000 destitute Jewish refugees had fled to Switzerland in fear of deportation to Eastern Europe from Holland, Belgium and France. They were kept in internment camps and provided with work, and large sums were allotted for their support by the Joint Distribution Committee. ALFRED WERNER.

SWOPE, GERARD, electrical engineer, b. St. Louis, 1872. He graduated from the Massachusetts Institute of Technology (B.S., 1895), and worked himself up to a manager's position with the Western Electric Company in St. Louis (1899) and to general sales manager in New York city in 1908; he was subsequently made vice-president and director (1913). During the first World War he won the Distinguished Service Medal for the General Staff's Board of Purchase, Storage and Traffic. In 1919 he joined the General Electric Company, and was elected its president in 1922. This position he held until his retirement in 1940, when he became honorary president. In 1942 he was recalled to active service with the General Electric Company.

Swope attained prominence when, under the National Industrial Recovery Act, he was made a member of its Industrial Advisory Board (1933). In the following year he was a member of the President's Advisory Council on Economic Security, and in 1937 he became a member of the Advisory Council on Social Security. He served in 1938 as chairman of the Industrial Relations Commission to Great Britain and Sweden, and three years later was made an alternate member of the National Defense Mediation Board.

A chevalier of the Legion of Honor, Swope was also a recipient of the gold medal of the National Institute of Social Sciences and of the McGraw gold medal and purse for signal contributions to the electrical manufacturing industry, both awarded him on his sixtieth birthday (1932). He was the author of *Stabilization of Industry* (1931), often referred to as the "Swope Plan," and of other papers on economic subjects.

SWOPE, HERBERT BAYARD, publicist and editor, b. St. Louis, 1882. He was a brother of Gerard Swope. Swope's first connection with newspaper work was as reporter for the St. Louis *Post.* Later he was affiliated in the same capacity with the Chicago *Tribune,* the New York *Herald* and the New York *World.* At the outbreak of the first World War the *World* sent Swope to Europe, to serve as correspondent with the German armies; this post he held until 1916. In 1917 his reports won the Pulitzer award.

With the entry of the United States into the War Swope was made a lieutenant commander in the United States Navy, but was assigned as assistant to Bernard M. Baruch in the War Industries Board. Once more as correspondent for the *World,* he attended the Paris Peace Conference, and was the first to publish the secret League of Nations Covenant, as well as the reparations clauses.

Returning to New York, Swope became executive editor of the New York *World* in 1920. For nine years his direction of the editorial policies of the paper made it a lively but intellectual liberal organ, unhesitant in its championship of public rights. The paper's exposure of the Ku Klux Klan and its fight against peonage in Florida, both under Swope's direction, won Pulitzer medals for public service.

After his retirement from the *World* in 1929 Swope continued to participate in numerous civic and cultural enterprises, as well as in progressive political movements. President Franklin D. Roosevelt sent him to the Economic Conference in London in 1933.

Swope's prize-winning correspondence from Germany during the first two years of the first World War was issued in book form, *Inside the German Empire* (1917). Among his other published works was *Our Bill of Rights: What it Means to Me* (1941), which appeared at the time of the Bill of Rights Sesquicentennial.

SYDNEY, capital of New South Wales, a constituent state in the Commonwealth of Australia. A few years after the city was founded (1788) a number of Jews settled there. In 1817, when the first Jewish funeral took place in Sydney, there were some twenty persons of the Jewish faith. In 1827, when regular religious services were established, the Jewish population of Sydney was ninety-five; by the time the first congregation was formally founded (1831) it reached 345. In 1940 Sydney had about 11,000 Jews out of a total population of 1,267,350. Up to 1943 about 3,000 refugees had settled in the city, raising the total to about 14,000.

The beginnings of a Jewish community at Sydney centered about the cemetery which was acquired in 1820. Previously Jews had been buried in a separate corner of the general cemetery. A Hebrah Kaddisha was established (1817) on the occasion of the first Jewish burial. In the years 1827 to 1828 the economic condition of the Jews in New South Wales was considerably improved, and it was then regarded as advisable to hold regular prayer meetings. Philipp Joseph Cohen offered the use of his house for divine worship. A number of the Jews of Sydney accepted this offer, and Joseph Barrow Montefiore acted as chairman of this nucleus of a Jewish community which followed the ritual of the Great Synagogue of London. But there was rivalry, or separatism, among the Jews of Sydney. Shortly thereafter a service was held in a house owned by Vaiben Solomon; this was supported by Abraham Elias and James Simmons. Such was the state of religious affairs when Rabbi Aaron Levi, accredited by Solomon Herschell, chief rabbi of London, arrived in 1830. He succeeded in adjusting existing differences. A room in one of the oldest buildings of Sydney (situated in the main street of the city, and which served many purposes formerly and afterwards) was rented and adapted for divine service, and thus the George Street Synagogue was opened for public worship in 1831. Joseph Barrow Montefiore was president, Abraham Elias treasurer, and George Moss honorary secretary of the newly established Jewish congregation of Sydney for the year 5593 (1832-33). In 1835 M. E. Rose, accredited by the chief rabbi of London, was appointed reader, Mohel and Shohet. He was followed by Jacob Isaacs.

The foundation stone for a synagogue was laid by the Jews of Sydney in York Street, near Town Hall (1842). The building was formally opened in 1844. Two years later the state legislature voted the congregation £1,000 to pay off the debts on the synagogue, after the same authorities had granted (1845) plans and means for a school house for the Jews of Sydney which was opened in 1850.

For forty-one years (1862-1903) Rabbi Alexander B.

Davis guided the religious affairs of the Jews of Sydney. He healed the wounds caused by schism and helped create several charitable and cultural institutions in addition to the Hebrew Philanthropic Society, founded in 1833 and afterward merged (1882) with the Sir Moses Montefiore Home, and with the Dorcas Society, founded in 1840. He presided over the Australian branch of the Anglo-Jewish Association from its founding (1872), over the Jewish Education Board, founded in 1882, and over the Jewish Sabbath School, founded in 1863. In 1878 the Great Synagogue on Elizabeth Street, facing Hyde Park, was dedicated. Davis retired in 1903 and was succeeded by Rabbi Francis Lyon Cohen, an authority on Jewish music, who became also chaplain to the Australian military forces, remaining in office until his death in 1934. His successors were Rabbi E. M. Levy, who retired (1938) to become a barrister-at-law, Rabbi L. A. Falk (1938-40), formerly chaplain to the 38th and 40th battalions, Royal Fusiliers (1st Judeans), who later served as chaplain of the Australian Commonwealth forces and of the Australian Commonwealth forces and of the Australian prisons, and Dr. Israel Porush (1940).

Although the Great Synagogue enjoys a unique position and prestige, being the second largest in the British Empire, and having its rabbi the recognized deputy of the chief rabbi of Great Britain, Sydney had several other Jewish congregations in 1943. Among these were: Central Synagogue in the eastern suburbs, with Eliezer A. Levi as rabbi (in 1943 he was on service as army chaplain at General Douglas MacArthur's headquarters); Newtown Synagogue (A. Rabinowich, Hazan); Mizrachi Synagogue (Rabbi Kirzner, minister), for the extreme Orthodox. A Liberal congregation, Temple Emanuel, was organized in 1938 under the prompting of Rabbi Herman Saenger of Melbourne, and in the following year Rabbi Max Schenk, a graduate of the Jewish Institute of Religion, and the incumbent in 1943, was called to the pulpit. Under his influence the congregation grew rapidly, and a Temple was built in 1941. F. Brandman, a member of the congregation, gave his services gratis as cantor, and the Reverend Gunther Hirshberg was appointed assistant to the rabbi in 1942.

The Sydney Jewish community was organized (1943) in the New South Wales Jewish Advisory Board which deals with all problems affecting Jews. It supports the Moses Montefiore Home for the Aged and the Isabella Lazarus Home for Children. Among the organizations in the community are the Australian Jewish Welfare Society, to provide for refugees, the Australian Jewish Historical Society, branches of Zionist organizations, aid societies, the Federation of Polish Jews, and the Jewish Volkscenter. A weekly, *The Hebrew Standard,* was published from the 1880's on, and the Ivriah in 1943 published a monthly called by its name. The Liberal congregation was a member of the Jewish Religious Union of Australia, organized in Sydney in 1941. Cecil A. Luber, president of Temple Emanuel, was president also of the Union in 1943.

In the 1830's Australian colonization in general, particularly the progress of trade in New South Wales, was financed mainly by the brothers Jacob and Joseph Barrow Montefiore, sons of Eliezer and cousins of Sir Moses Montefiore. The Montefiore brothers were among the early pioneers of Australia. Jacob Montefiore, who had been connected with the colonial produce trade, returned to England to initiate the movement for financing Australian settlements, and was active as a member of the South Australian Colonization Association. He was appointed member of the first board of commissioners entrusted by the British government with the administration of the Australian colonies, and thus became highly esteemed alike by the Australian colonists and the British government. Upon visits to Australia, in 1843 and 1854, he was acclaimed by the local authorities as well as by the populace of Australia. He acted also as an agent for the Rothschilds, and held a partnership with his brother Joseph Barrow Montefiore of London and Sydney. The Sydney branch was directed for some decades by Joseph Barrow Montefiore, who founded also the Bank of Australasia and became instrumental in the organization of the Jewish congregation of Sydney.

Jacob Isaac Levi, a nephew of the brothers Montefiore, proceeded (1837) to Sydney, where he assumed the maiden name of his mother Esther Hannah, daughter of Eliezer Montefiore. He became one of the leading merchants of Sydney. For many years he was a director of the Bank of Australasia, and served as president of the chamber of commerce of Sydney. In 1857 he was nominated a member of the first Legislative Council of New South Wales. He left Australia for England in 1876, but continued his interest in the economic life of Sydney and New South Wales, acting as a director of several banking firms.

Samuel Cohen was the first Jew to be elected member of the parliament of New South Wales. His son George Judah Cohen (b. Sydney, 1842; d. Sydney, 1937) was for many years senior partner of David Cohen and Company, Sydney, and chairman of the Commercial Bank of Sydney, the Australian Gaslight Company, the Sydney Exchange Company and other important enterprises. He was also for many years president of the Great Synagogue of Sydney, and was generally regarded as the "doyen of Australian Jewry."

Another Samuel Cohen (b. London, 1830; d. Sydney, 1915), residing in Sydney from 1853 to 1855 and from 1890 until his death, was the first mayor of Ulmarra, then a member of the board of education and of the Great Synagogue of Sydney. Charles Collins was for many years the leading citizen of the district of Narrabri and its first mayor. His brother Albert Collins was alderman of Narrabri (1894-1901) and mayor of the district, which he represented in the parliament of New South Wales for several periods. John Jacob Cohen was speaker of the Legislative Assembly (1917), and Daniel Levy was speaker (1919-25 and 1927-37). The former filled also various offices in the Great Synagogue; the latter, a prominent jurist, was knighted in 1929.

Associated with Sir Daniel Levy in the Supreme Court of New South Wales was Henry Emanuel Cohen, and both were vitally active in the affairs of the Great Synagogue of Sydney. Sir Julian Salomons, chief justice of New South Wales for a short time and a member of several governments of the colony, was one of the renowned jurists of Australia. As agent general for New South Wales at London, which post he held during 1899 and 1900, he succeeded Sir (afterward Baronet) Saul Samuel, whose public career began in 1846 and who achieved ministership in several cabinets and the post of agent general from 1880 until his retirement in 1897. His oldest son, Louis Samuel (b. Sydney, 1861; d. Sydney, 1887), constructed the largest graving dock in the Southern Hemisphere at Cockatoo Island in Sydney Harbor and the famous Hawkesbury Bridge. He died on the eve of completion of these vast projects which he began at the age of twenty-two. His younger brother, Sir Edward Levien (afterward the second baronet Samuel), completed them. He was also interested in the woollen trade and manufacturing, and was a key factor in the Volunteer movement, serving for many years in the Honorable Artillery Company and in the New South Wales Lancers.

Several streets of Sydney perpetuate the memory of Jewish citizens. Thus were honored Montagu Levey, a benevolent communal worker who erected some of the most beautiful buildings of old Sydney, and J. G. Raphael, who represented West Sydney in the Legislative Assembly (1872-78).

Barnett Levey became popular as "the father of the theatre in Australia." An early pioneer of New South Wales, Levey constructed several edifices at Sydney,

which were known as Colchester Warehouse, Waverley House and the Royal Hotel. In 1828 he began to prepare the establishment of the first stage in Australia, and in 1832 he offered a silver medal to any Australian playwright who would provide him with a producible theatrical piece. Overcoming many difficulties, Levey finally opened the Theatre Royal at Sydney in the same year. Samuel Levey was one of many Jewish benefactors who fostered Sydney University, founded in 1850. George Moss founded (1841) the first Jewish paper, *The Voice of Israel.* Subsequently Sir Daniel Levy and Percy Joseph Marks edited the *Australian Hebrew* at Sydney. Marks, a solicitor and commissioner of the supreme courts of Victoria, Tasmania, Western Australia and New Zealand, published *Australasian Shakespeareana* (1915) and various papers on Australian historical and Jewish matters, and was instrumental in the founding of the Australian Jewish Historical Society (1938). Ernest Samuel Mark, who was elected lord mayor of Sydney (1930), promoted every kind of sport in Australia. Sir Samuel Sydney Cohen, president of the Great Synagogue of Sydney for many years between 1922 and 1938, promoted kindergartens and other charitable institutions. Commander Victor Cohen, a public servant and officer in the Naval Reserve, published several historical writings. Other Jewish authors of Sydney were Fanny Reading, H. J. Wolff and A. H. Baumberg.

The Sydney Jewish community played its part in the second World War. The Council of Jewish Women, headed by Dr. Fanny Reading, maintained a canteen, the proceeds of which were turned over to the Lord Mayor's Patriotic Fund. Brigadier General Joseph Steigrad was director of medical services in the Near East. Colonel Paul A. Cullen (treasurer of Temple Emanuel) was in active service from the outbreak of the War. Wing Commander Julius A. Cohen of Sydney won distinction in the Royal Australian Air Force and was awarded the Distinguished Flying Cross. In July, 1942, Rabbi Max Schenk became Australian director for the Jewish Welfare Board's work for American Jewish soldiers there, and in 1943 he toured the United States for the war effort. HUGO BIEBER.

SYKES, PHILIP LOUIS, judge, b. Lithuania, 1884. He was brought to the United States in 1889, and studied at the University of Maryland (LL.B., 1911) and at Johns Hopkins University (M.A., 1916). He was the first Jew to serve as a member of the Advisory Board of Parole of the State of Maryland (1920-23), and the first foreign-born Jew to serve on the Orphans' Court of Baltimore. He was appointed associate judge (1928), elected in 1930 and reelected in 1934 and 1938; he served as chief judge in 1934.

Sykes was president of the United Hebrew Charities of Baltimore (1917-18) and of the Board of Jewish Education of the city (1930-34). He wrote *Contest of Wills in Maryland* (1941) and *Probate Forms in Maryland* (1941).

SYLVESTER, JAMES JOSEPH, mathematician, b. London, 1814; d. London, 1897. He studied at St. John's College, Cambridge, the first professing Jew to enter the University of Cambridge. But his Jewish origin precluded Sylvester from receiving his degree until 1872. He became professor of mathematics at University College, London (1837), at the University of Virginia, Charlottesville (1841), at the Military

Both sides of a medal struck in honor of James Joseph Sylvester

Academy of Woolwich, England (1855), at Johns Hopkins University, Baltimore (1876), and at Oxford University (1883).

Together with his friend, the eminent non-Jewish mathematician Arthur Cayley, Sylvester evolved the theory of invariants which, according to P. A. MacMahon, "sprang into existence under the strong hand of Cayley, but that it emerged finally as a complete work of art, for the admiration of future generations of mathematicians, was largely owing to the flashes of inspiration with which Sylvester's intellect illuminated it" (Bell, E. T., *Men of Mathematics,* 378). To Sylvester is due most of the graphic terminology of the theory of invariants. The scope of Sylvester's work was described by Cayley as follows: "They (his researches) relate chiefly to finite analysis, and cover by their subjects a large part of it—algebra, determinants, elimination, the theory of equations, partitions, tactic, the theory of forms, matrices, reciprocants, the Hamiltonian numbers, etc.; analytical and pure geometry occupy a less prominent position; and mechanics, optics, and a diligent composer of verse."

Sylvester invented several geometrical instruments, such as the plagiograph. He published his *Collected Mathematical Papers* in four volumes. While a professor at Johns Hopkins University, he edited and contributed to the *American Journal of Mathematics* which had been founded by him. He was recipient of three honorary degrees awarded him by British universities, and of numerous medals. The Sylvester Medal established by the Royal Society commemorates his extraordinary services to science.

Lit.: Bell, E. T., *Men of Mathematics* (1937) 378-405.

SYMBOLS AND SYMBOLISM. A symbol is a visible token which serves to remind the beholder of a particular idea associated with it. Practically all religions have their individual symbols, and Judaism has been particularly rich in such symbols and symbolic interpretations. Thus the Bible declares that the rainbow was set in the sky as the token that God would never again send a completely destructive flood upon the earth (*Gen.* 9:12-16); Ezekiel makes similar use of the rainbow in his description of the glory of God, apparently as the symbol of mercy (*Ezek.* 1:28). The Sabbath was the symbol of the covenant between God and Israel (*Ex.* 31:16-17). Joshua is reported to have set up twelve stones as a symbolic memorial of the miraculous passage of the river Jordan (*Josh.* 4:4-9); while the eastern tribes built an altar, on which no sacrifices were to be offered, as a symbol that they would always be a part of the people of Israel (*Josh.* 22). The wearing of fringes upon one's garments is intended as a reminder of obedience to the commandments of God (*Num.* 15:38-40).

To the prophets, with their strong homiletic sense, almost every object or action might be construed in a symbolic sense. When Saul grasped the garment of

Samuel and rent it, the latter instantly interpreted it as the sign that God would rend away Saul's kingdom from him (*1 Sam.* 15:27-28). Similarly, Ahijah of Shiloh tore his cloak into twelve pieces and gave ten of them to Jeroboam as an indication that the latter would rule over ten of the tribes of Israel (*1 Kings* 11:30-31). They saw messages of symbolic import in any chance object which they encountered: a basket of fruit (*Amos* 8:1-3; *Jer.* 24), an almond branch (*Jer.* 1:11-12) or a seething pot (verses 13-15). Isaiah went for three years in the garb of a captive (*Isa.* 20) and Jeremiah wore a yoke upon his shoulders (*Jer.* 27:2; 28:10) in order that they might be living symbols of the future fate of their people. Later prophets turned from symbolic actions to symbolic visions, such as the valley of dry bones of Ezekiel (*Ezek.* 37) and the golden Menorah of Zechariah (*Zech.* 4).

During the latter part of the period of the Second Temple the custom arose of giving a symbolical interpretation to the various objects in the Jewish ritual. Thus the Temple became the symbol of mediation between man or God, or of humanity itself; the table of the showbread represented the gratitude of the people, the seven-branched candlestick the seven planets, the altar of incense was symbolic of prayer. The burnt-offering symbolized complete dedication, the peace-offering fellowship between God and Israel, the sin-offering complete atonement. The garments of the priests were explained as symbolizing such ideas as the various elements of the universe, or types of atonement for various sins. Numbers were assigned a symbolic significance: three was the number of holiness, four of the universe or revelation, and twelve of the people of Israel. The Lulab on Sukkoth was regarded as symbolical of the four types of Jews of which the people were composed.

The synagogue, as the heir of all the older forms of Jewish worship, is naturally adorned with many symbols that are reminders of the past. The Ark of the Torah is the symbol of the Ark of the Covenant and of the Holy of Holies in the Temple; the perpetual light of the perpetual flame upon the altar; the Menorahs, or seven-branched candlesticks, of similar candelabra in the Temple. The two tables of the Ten Commandments, conventionally represented with only the first two Hebrew words of each commandment, are almost universal in synagogues as the symbol of the Law. Frequent decorations are the lion, symbolic of the tribe of Judah, and the crown, symbolic of the preeminence of the Torah. Ceremonial objects, such as the Shofar, Ethrog and Lulab, are frequently portrayed as symbolic decorations in modern synagogues.

During the Middle Ages the custom arose of engraving upon tombstones symbolic engravings depicting the family or name of the deceased. Thus hands raised in the priestly blessing, with the fingers parted, indicate a member of a priestly family; a pitcher and ewer, used in assisting a priest in preparation for the blessing, denotes a Levite. Such animals as bears, roosters, foxes and the like indicate the name of the deceased. Sometimes tombstones bore a coat of arms or a sign of profession, such as a harp for a musician.

In former times both the Menorah and the Ten Commandments were used to represent Judaism on tombstones, in synagogues and on jewelry. In modern times they have been generally superseded by the six-pointed star, the Shield of David (Magen David) which, though it has no specific symbolic meaning, is generally recognized as indicating that which is Jewish. It appears frequently in synagogues, on mantles for the Torah and other sacred objects, on jewelry, in the emblems of various Jewish fraternal orders, and on the Zionist banner.

H., *Studies in Biblical and Semitic Symbolism* (1927).

SYMMACHUS, translator of the Hebrew Bible into Greek, who lived in the second half of the 2nd cent. He was probably an Ebionite Christian, as stated by Eusebius and Jerome, for he was familiar with Jewish exegesis and wrote a commentary on *Matthew.* Epiphanius' statement that he was a Samaritan who became a Jewish proselyte is less trustworthy, and Geiger's attempt to identify him with the Tanna Symmachos ben Joseph rests on little more than the similarity of names. Symmachus made use of the earlier translations, the Septuagint, Aquila and Theodotion, and produced a version which is written in a more idiomatic Greek than any of the others. He uses Aquila more than the others, and is particularly anxious to avoid anthropomorphisms. Thus in *Ps.* 43:24 he renders "Why sleepest Thou, O Lord?" as "Why art Thou like one who sleepest, O Lord?" Despite the high quality of the translation of Symmachus, it did not succeed in replacing either the Septuagint with the Christians or that of Aquila with the Jews; hence it has survived only in fragments of the *Hexapla* and in marginal readings in manuscripts. However, it influenced Jerome in his translation, the Vulgate. The fragments were collected in Field, *Origenis Hexaplorum quae supersunt,* and in the larger Cambridge *Old Testament in Greek.*

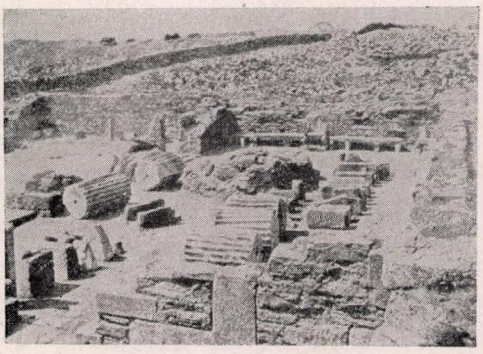
SYMMONS, ALEXANDER ISRAEL, judge, b. London, 1862; d. Kilburn, England, 1923. He studied law, and was called to the Bar, Middle Temple, in 1885. In 1911 he was appointed police magistrate at Greenwich. From 1912 until his death he served in the same capacity at Woolwich and Marylebone. Symmons was the first English Jew to become a metropolitan police magistrate.

SYNAGOGAL MUSIC, *see* Music, Synagogal.

SYNAGOGUE. 1. Name. In Hellenistic Greek, synagogue (*synagoge*) was the term for assembly, and also for community—corresponding to the Hebrew *keneseth.* Later it came to designate the place where the assembly gathered, the *beth hakeneseth.* Through the medium of Latin, the word synagogue passed over into German, French, Italian and English; in Judeo-Spanish it appears as *esnoga.*

Yet this is not the oldest or the only designation for Jewish houses of assembly and worship. Popular usage long retained the term "house of the people" (*Jer.* 39:8; what the expression means there is uncertain), although the learned forbade it. Greek-speaking Jews usually referred to their places of worship as *proseuche,* or *proseukterion,* meaning house of prayer (no doubt on the basis of *Isa.* 56:7). Occasionally Greek and Syrian sources speak of the "Sabbath house."



Jews of Balkan and Slavic lands adopted the Latin word Temple; in modern times, this usage has become common in Germany and in America. During the Middle Ages, German Jews began to use the word *Schule, Schul* ("school"). This was derived from the

A part of the architrave of the ancient synagogue at Jafia, in Galilee

Latin *schola,* by which term the Italian Jews (like other nationalities) designated their community. *Shul* is the regular Yiddish word for synagogue. Popular American usage sometimes distinguishes between a "Temple,"—that is, a Reform Jewish or advanced Conservative Jewish synagogue—and a "Shul"—meaning an Orthodox Jewish house of prayer.

2. Origin. It can not be determined exactly when synagogues first came into existence. They were unknown in the pre-Exilic period. During the Babylonian Exile, people used to assemble at the house of a prophet, or other leader. The synagogue must have developed during the early centuries of the post-Exilic period. *Ps.* 74:8, which probably described the Syrian persecution (168-165 B.C.E.), bewails the burning of "all the meeting-places of God in the land," a statement

Ruins of the synagogue on the Greek island of Delos

which implies that synagogues were then to be found throughout Palestine. The oldest dated evidence comes from Egypt, where the synagogue at Schedia was dedicated to King Ptolemy III (247-221) and Queen Berenice. Other inscriptions from Egypt yield about the same date. Evidently the country had numerous synagogues by about 250 B.C.E. The Jews must have begun to establish them shortly after their settlement at the end of the 4th cent. In the same way the synagogue has accompanied the Jews in their wanderings over the earth. To this day, wherever Jews settle in sufficient numbers, they erect a synagogue on their own initiative, without official compulsion.

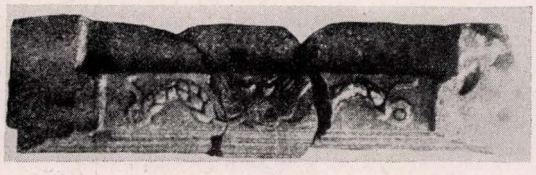
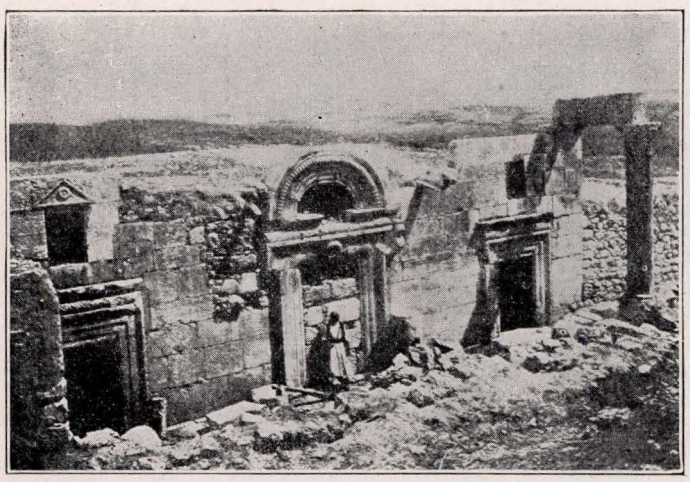
A section of the mosaic floor of the Gerasa synagogue in the region east of the Jordan

Although its origins are obscure, the synagogue represents a revolutionary departure from the character of all earlier places of worship. It was not a place that possessed inherent sanctity; it had no sacrificial or sacramental ritual; it did not require the intermediacy of a specially chosen priesthood. Essentially democratic, the synagogue is a fellowship of worshippers, seeking God directly, and eager to learn His law.



3. Location and Orientation. In Palestine, the synagogue became an essential part of the city, and was erected in a prominent and convenient location. In the Diaspora, synagogues were frequently built near a body of water, although there never was a legal requirement to this effect. They were often located outside the precincts of the city; for neither the ancient Romans nor the Persian fire-worshippers tolerated alien cults within the confines of their municipalities. In medieval Christendom and Islam, synagogues were located within the Jewish quarter. Frequently the synagogue, house of study, ritual bath, and other communal buildings were erected in the same courtyard. In some of the ghettos, several synagogues stood side by side; the most famous instance perhaps is that of Rome, where there are five synagogues next to one another.

The oldest sources have two prescriptions for a synagogue site: it should be the highest point of the city, and the entrance of the building should be on the east (*Tos. Meg.* 4:22-23). Both requirements remained theoretical; the Jews could not always freely choose the location for their synagogues. They contented themselves with building them higher than the surrounding structures. Ecclesiastical and governmental regulations interfered even with this modest rule; the custom survived of attaching to the synagogue roof a pole higher than the adjacent dwellings.



There appears to have been no ancient law as to the direction in which the worshippers should face; but ultimately the custom emerged of praying in the direction of Jerusalem, after the pattern of Daniel (*Dan.* 6:11). For the majority of Jews this meant facing eastward (*mizrah*). The church took over this custom, to which it gave the name of "orientation."

4. Architecture. a. In Palestine. Up to 1943 synagogues had been excavated in over forty different places in Palestine, including Galilee, Samaria, Judea and Transjordan. With the exception of the synagogue of Theodotus at Jerusalem (1st cent. C.E.), all these synagogues date from the 3rd to the 6th centuries. Nothing is known of the architecture of the synagogues in the centuries that preceded these. Probably they consisted of a single room, the place of worship, to which several antechambers were attached.

The synagogues of the 3rd cent. on are in the form

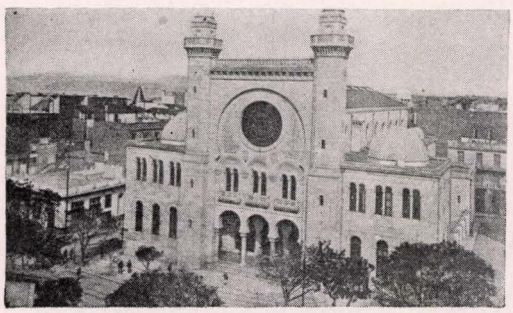
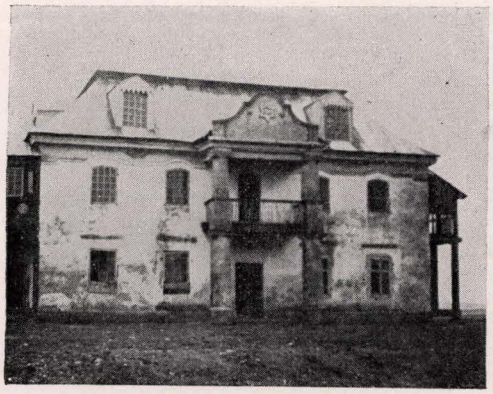
of a basilica with three sections. Usually there was a portico in front of the façade, a vestibule, and sometimes also side rooms. In some places the remains of a gallery, which certainly served as the women's section, are plainly visible. The rule that the synagogue should face toward Jerusalem determined the interior arrangement. Along the walls, except on the side nearest Jerusalem, were stone benches for the worshippers. In the oldest synagogues the façade is on the side nearest Jerusalem; on this there are usually three entrances (as in Capernaum, Keraze and Arbel). The Ark of the Law was originally a portable shrine, kept in the side room and brought into the main hall of prayer when needed. Later it was installed in the main hall, in front of the central entrance, by the wall nearest Jerusalem.

In the 5th and 6th centuries there is a change of style. The basilica form remains, but the façade and the three entrances are located, not on the side nearest Jerusalem, but on that opposite to it. A small structure, either semi-circular or rectangular, in which the Ark of the Law might be placed, is attached to the side nearest Jerusalem. A fixed Almemar (reading platform) appears at the end of the 6th cent.



The decoration in these synagogues includes various secular motifs, including pictures of plants and animals, and even representations of human beings. There are other motifs, such as the Shield of David (Magen David), the Seal of Solomon, the zodiac and the like, which are of magical or astral significance, while some are purely Jewish and religious—the Ark of the Law, the Menorah, the Shofar, the Lulab or the Ethrog. In the 5th cent. Jews began to decorate the synagogues with mosaics; at that time Biblical motifs, such as Daniel in the lions' den, the sacrifice of Isaac, or the Flood, appear. (However, the Dura-Europos synagogue of the 3rd cent. anticipated this with numerous Biblical murals.)

A study of the decorations at various periods reveals differences in Jewish attitudes toward what was permissible. At one period they objected to representations of men and animals. Later, apparently, the objection to such was limited to figures in relief, while in flat decorations such figures were calmly accepted. Later still, fresh attacks were made on the latter (as at Naaran).



A clear picture of synagogue decoration of the 6th cent. was obtained through the excavation of the old synagogue of Beth Alpha, conducted by the Hebrew University in 1929. The entire hall of worship, the bordering rooms, the vestibule and the court of the synagogue are paved with mosaics. Especially interesting is the ornamentation of the central nave. Over the chief entrance are two inscriptions, one in Greek, the other in Aramaic. The former gives the names of the two artisans, Marianus and his son Hanina, who executed the mosaic. The Aramaic inscription, largely destroyed, states that the work was done during the time of the "emperor Justinus," probably Justin I (517-28). Then followed the representation of the sacrifice of Isaac, and one of the signs of the zodiac with the chariot of the sun in the middle and figures of the four seasons on the sides. In the apse an Ark of the Law is pictured, on either side are represented seven-branched candlesticks, a Shofar or a Lulab.

b. In the Diaspora. There is no distinctive form of architecture for Jewish synagogues in the Diaspora. They tend to follow the prevailing mode of the country and century. Thus the synagogue at Alexandria was in the prevailing basilica form. Medieval European synagogues were built in Romanesque and Gothic styles; the erstwhile synagogues in Toledo reveal Moorish and Byzantine influences.

During the period when Jewish culture flourished in Poland, a significant epoch of synagogue design occurred—perhaps the first native Jewish style, derived from the synagogue cult and the prescriptions of the Talmud. The stone synagogues of this period (as at Lemberg and Zólkiew) have a central structure with four pillars, within which the Almemar stands. Those of Zólkiew and Luck are actual fortresses, with loopholes for firing guns. More numerous are the wooden

synagogues, among which those of Chodorów and Kurnik present the most mature examples; the former has magnificent frescoes. Typical of these wooden synagogues is the pagoda-like roof. Travelers from Poland brought the wooden synagogue, with its wall-paintings, and sometimes also the four-pillar style, to Germany and Bohemia.

Since the emancipation of the Jews in the 19th cent. there has been a great increase in the building of synagogues; they manifest the widest variety of architectural styles, both strict and eclectic. At first the Moorish style was the most popular, later the Romanesque; synagogues have been built also in classic, Renaissance, American Colonial, and ultra-modern styles.

A unique design was followed in the building of Temple Israel of Lawrence, L. I. (shown in the illustration on page 128), erected in 1930. The architect combined the prevailing colonial architecture of the village with a hexagonal form of building, so that the structure, as viewed from the air, represents the six-pointed star (Magen David, or Shield of David), the most frequently used symbol of Judaism.

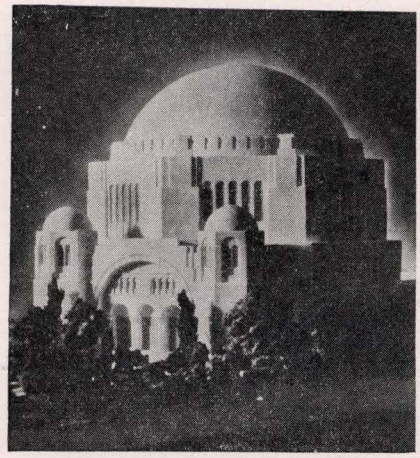
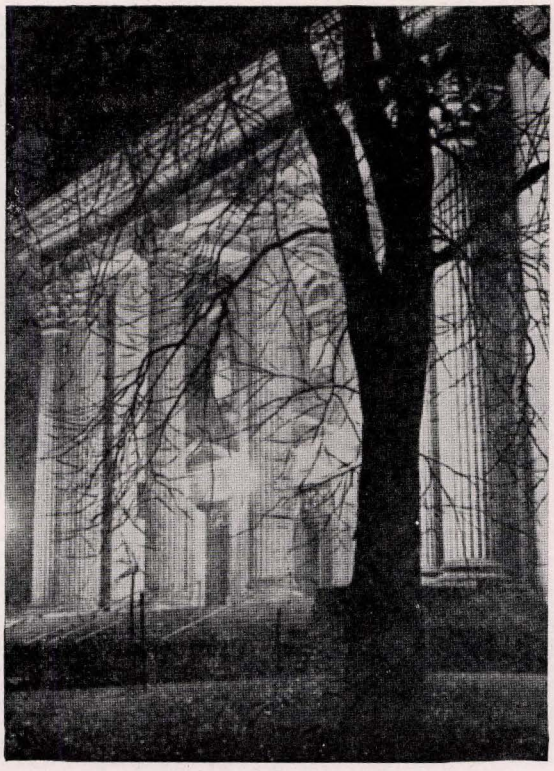
was sometimes one step below the vestibule (as in the old synagogue at Berlin), or the precentor's desk might be set a few steps lower (as in the Altneuschul at Prague). Where Hellenistic tastes in art prevailed, the floor might be inlaid with costly mosaics. In Babylonia the floor was of wood, often covered with straw.



In ancient times women did not come to the oriental synagogue in large numbers; those who came worshipped in the same room with the men. The Babylonian Amoraim introduced the practice of assigning separate rows of seats to men and women; but the Talmud does not know of a women's gallery. In the West, women came more generally to the synagogue, especially because of their interest in the sermon. Here, also, there was a single room for all worshippers; only later was a separate women's synagogue (Weiberschul or Frauenschul) added, separated from the men by gratings which became increasingly thicker, and regarded as possessing a lesser degree of holiness.

In the 19th cent. women began to protest against this segregation; the gratings became more open and, even in many synagogues of Conservative stamp, disappeared entirely. The Reformgemeinde of Berlin abolished the women's gallery, and seated women on the same floor with men, but apart from them. The American Reform Movement went still further; following the example of the family pew found in American churches, it abolished the separation of the sexes altogether. In Europe this extreme innovation has been followed only in the Reform synagogues of Paris and London; but in America it has been extended even to many Conservative congregations.



In ancient times, the only essential furnishing of the synagogue interior was a shrine for the holy writings, called *tebah* ("chest"; it is the Biblical word for Noah's ark)—a portable wooden box. It was called also *'aron haḳodesh* ("holy ark"), after the Biblical name for the Ark of the Covenant (*'aron haberith*). The old oriental synagogues had no built-in "sanctuary," like the apse of the churches; but the oldest Romanesque synagogues of Germany had a niche in the east wall, to provide a repository for the scrolls. This proved impracticable because the dampness caused the parchment to deteriorate; later synagogues returned to the wooden cabinet, now, however, set into the synagogue wall, and reached by several steps.

For the reading of the Torah, a raised platform was introduced at an early date, the Bema (Bimah) or Almemar. The Almemar was sometimes the place where the reader stood when he led the congregation in prayer, but later the precentor's desk (*'ammud,* "pillar") and Almemar were separated. In Germany and Poland it was usual for the precentor's desk to be at the eastern end in front of the Ark, the Almemar in the

center. Most modern synagogues have a platform only at the eastern end; but the Sephardic congregations retain the Almemar in the center of the auditorium.

In the ancient synagogues there was little provision for seating; the congregation sat on the floor, as they do to the present in the East. Gradually benches were introduced, as well as more elaborate chairs for distinguished persons, especially the rabbi. In the Dura synagogue the benches for men had footrests, not those for women. When prayer-books became common, lecterns were provided; but movable lecterns have been eliminated from the modern synagogue, and replaced by fixed pews.

Among the decorations of the synagogue that have become traditional are the representation of the Two Tables of the Law (generally above the Ark), the Ner Tamid or perpetual lamp, which burns before the Ark, and two candelabra, reminiscent of the candelabrum in the ancient Temple. In Orthodox Jewish synagogues, the number of branches of these candlesticks is always greater or less than seven, that they may not be too close a reproduction of the Temple candelabrum. Mural frescoes are occasionally found in synagogues, ancient and modern, despite the old objection to the graphic arts; stained glass windows, and an organ, or other musical instruments, are found only in synagogues under the influence of the Reform Movement.

6. Organization and Government. Synagogues were ordinarily established by communities through a special assessment on their members. Or a generous individual might contribute a building, or funds for the same, to "the holy cause." Synagogue, congregation and local Jewish community were frequently, though not always, identical. Persons from outside a community might belong to its synagogue; in larger communities several congregations might exist. Legend reports that in the year 70 Jerusalem had either 394 or 480 synagogues. Tiberias (by a more sober report) had thirteen at the beginning of the 4th cent.; inscriptions tell of no less than eleven synagogues in ancient Rome. Despite restrictions, similar conditions exist in large cities to the present. The different synagogues not only served persons living in different neighborhoods, but those of varied places of origin, and especially occupation. In the great synagogue of Alexandria each trade had its own section; in many other places the members of the various trades had their own synagogues. Later Jewish guilds, like their Christian counterparts, owned separate places of worship.

The synagogues were autonomous and had their own officers. Great prestige attached to the head of the synagogue (*rosh hakeneseth,* Archisynagogus). He was in general charge of the service, and had the responsibility of selecting those who should lead the prayers, read from the Torah, and preach. He was also responsible for the care of the synagogue building. The post was frequently hereditary; because of the demands it made upon the time and effort of the holder, he was exempted in Roman times from routine duties to state and community. Later this office ceased to exist, and the community leaders bore the responsibility of super-

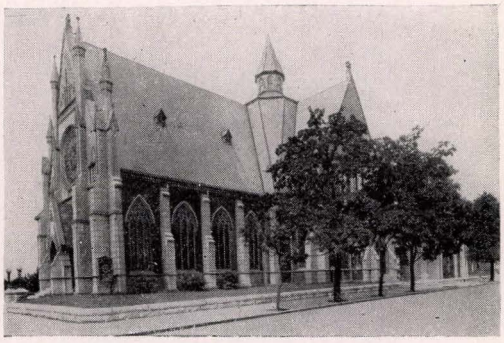
vising the synagogue or synagogues also. These officers, elected by vote of the community, bore the title of Parnas or Gabbai.

The orders issued by the officers were carried out by the Shammash (popularly, Shammas) or servant, whose functions might be extremely varied. More recent is the post of precentor, or Hazan. The rabbi became a functionary of the synagogue only in the 19th cent., and in Western lands. While he might on occasion preach in the synagogue, and was entitled to certain honors when he attended service, the rabbi was not directly connected with the synagogue in earlier centuries.

Indispensable for the synagogue is the congregation (*tzibbur*) or quorum (*minyan*). Since synagogue attendance was not equally good in all times and places, the expedient was adopted at an early time of paying persons to provide a Minyan. In modern times there has been a tendency to waive the traditional requirement, and also to permit women to be counted toward the quorum.



In America, and wherever the Jews are not organized in integrated communities, each synagogue is an independent institution, formed by a voluntary association of members. Usually they are incorporated as a religious body, and each synagogue has its own by-laws, its officers, elected by the membership, and its own procedures for raising funds (though these tend to follow more or less standardized patterns).

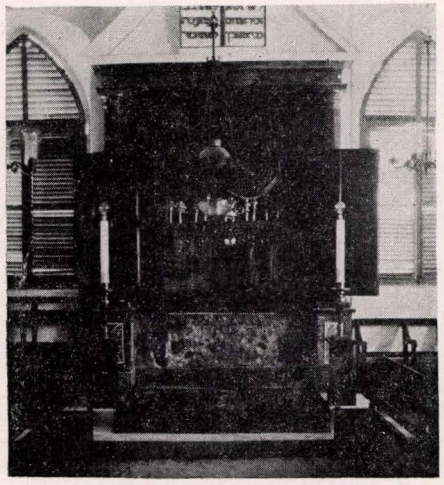
7. Functions and Spirit. The synagogue was regarded as the "little sanctuary" (*Ezek.* 11:16), hence it was not to be employed for other purposes than the sacred ones of worship and instruction. But this rule was rarely enforced with any stringency; especially the extra rooms attached to the synagogue were used for a variety of purposes. The synagogues were community houses, social centers in the broadest sense of the word. They served as a meeting place for community leaders, and for popular assemblies, for the publication of legal notices, for funerals. Travelers were lodged in the synagogue; in Alexandria they were even permitted to display their trades. Above all, the facilities of the synagogue were much used for education, especially education of children. (Adults generally gathered for study in the Beth Hamidrash; but this in turn was also used for worship.)

In the Middle Ages the synagogue became the center of the corporate life of the community. The secular government frequently required that important decrees be proclaimed there. One who believed himself the victim of an injustice which he had no means of rectifying had the power to interrupt the service and prevent its continuation until the authorities promised to reexamine his case. In Eastern Europe this procedure is still followed. Ever since the time of Gershom ben Judah (960-1040), severe punishment has been provided for abuse of the privilege. During the Middle Ages it became customary to perform wedding ceremonies in the courtyard of the synagogue.

The modern synagogue provides regular public worship, a program of education for children, youth and adults, and a variety of other activities—social, cultural and philanthropic. It frequently has affiliated organizations—sisterhoods, youth groups and the like, and it also provides a meeting-place for Jewish organizations not directly attached to the synagogue. In some instances it has adopted the "Center" program—although the tendency seems to be to make the "Center" a community affair, and to stress the specifically religious function of the synagogue.

Among the significant developments of synagogue life in America is the participation of the synagogue in interfaith

A synagogue of unusual architecture. Temple B'rith Sholom in Louisville, Kentucky, of which Solomon N. Bazell was rabbi from 1926



activity. Thanksgiving services, in which synagogue congregations join with those of various Christian churches, are a familiar feature of American life. Churches and synagogues have cooperated in a variety of religious and community projects. In America, for the first time, church congregations have worshipped in synagogues and vice versa. The New Synagogue of New York City (no longer in existence) conducted its services over a period of several years in the Broadway Congregational Church; many synagogues have put their facilities at the disposal of churches which were without their own buildings. An unusual case is that of Congregation Beth Emeth of Albany, N. Y., which in the course of ten years extended such hospitality to three Protestant congregations whose churches had been burned.

The synagogue has been for more than twenty centuries the spiritual home of the Jew, the place where he could be completely himself, and could pour out all the ardor of his heart. Its atmosphere has thus been characterized more by emotional warmth than by external decorum.

Interior of the synagogue at St. Thomas, Virgin Islands

SYNAGOGUE COUNCIL OF AMERICA. At the twenty-ninth council of the Union of American Hebrew Congregations, held in St. Louis in January, 1925, a resolution was presented to the convention signed by David Philipson of Cincinnati and Abram Simon of Washington which led to the formation of the Synagogue Council of America. The Philipson-Simon resolution empowered the executive board of the Union "to effect a conference of national Jewish Congregational bodies for the furtherance of these aims."

In June, 1925, a preliminary meeting of delegates representing these congregational organizations in the United States was held at the Harmonie Club in New York city. A permanent organization was finally formed in New York on November 9, 1926, with the following national rabbinical and congregational bodies constituting the Council: the Rabbinical Council of the Union of Orthodox Congregations of America and the Union of Orthodox Congregations of America (Orthodox); the Central Conference of American Rabbis and the Union of American Hebrew Congregations (Reform); the Rabbinical Assembly of the United Synagogue of America and the United Synagogue of America (Conservative).

In 1943 it was estimated that these organizations embraced more than one million Jews, and that the Synagogue Council therefore represented the majority of religiously affiliated American Jews.

The proceedings of the Council are conducted by the delegates from the constituent organizations, at regular bimonthly meetings. Each organization is entitled to fourteen delegates. Every decision of the Council requires the unanimous approval of the constituent organizations as expressed through a majority vote of the delegates of each organization.

The Synagogue Council arranged the Jewish exhibit at the sesquicentennial exhibition in Philadelphia (1926), and was awarded a medal. It fostered a similar exhibit at the Chicago World's Fair (1936) and at the New York World's Fair (1939-40). The Council participated in the erection and conduct of the Temple of Religion at the latter and maintained a rabbi there throughout the period of the Fair. The Council supported legislation looking to the establishment of a five-day week so that, in addition to its other social values, it would also help the observance of the Sabbath. Before the Foreign Relations Committee of the House of Representatives, in Washington, the Council joined with other groups against calendar revision on the ground that the proposed revision would destroy the fixity of the seventh-day Sabbath. It likewise opposed attempts in Europe and the United States to interfere with the traditional rights of Shehitah and Kashruth.

On occasions which called for such cooperation, the Synagogue Council joined with the Federal Council of Churches of Christ in America and the National Catholic Welfare Conference in giving expression to American religious opinion on current problems. It also fostered the betterment of relations between Christians and Jews by participating in conferences and consultations which led to the formulation of peace aims, patriotic affirmations, joint declarations on important national questions where religious opinion was pertinent, and the examination of Jewish religious textbooks with a view to the elimination of ill-considered passages, as a response to a similar examination of Christian textbooks by the Federal Council of Churches of Christ in America.

The Council promoted and popularized a better understanding of Judaism by means of radio broadcasts of high holy day and festival programs and the publication of religious messages in the general and Jewish press. It raised its voice when Jewish religious worship was interfered with on the Day of Atonement at the Wailing Wall in Jerusalem in 1929. In the early days of Nazi outrages in Germany it protested against interference with religious freedom. In November, 1938, following the pogroms and synagogue burnings in Germany, the Council organized a special nationwide service of prayer and intercession which was held in many churches as well as synagogues throughout the country. In connection with Tishah Beab of 1942, and again on December 2, 1942, in response to authenticated reports of Hitler's program of total extermination of Jews under his domain, it arranged special readings and prayers memorializing the Jewish victims of mass murders in Nazi-held Europe and received messages of sympathy from Protestant and Catholic clergymen.

The Council interceded with the War Production Board and the Navy Department in behalf of Jews in war industries who (in 1942) desired to observe the high holy days, where lost time could be made up later and where the workers' absence would not interfere with vitally essential tasks immediately indispensable to the nation's war effort. It cooperated on behalf of Jewish congregations with government wartime agencies, such as the Office of Civilian Defense, War Savings Staff and Office of War Information, and with salvage campaigns and war relief agencies. In January, 1943, it sponsored, in cooperation with the Office of Civilian Defense, a national conference held in New York for the purpose of promoting the effective cooperation of Jewish congregations with the government's civilian wartime program. The Council initiated and stimulated the observance of the 450th anniversary of the discovery of America, on October 12, 1942, among American Jewish groups. Under its auspices a religious service was held that day at the synagogue of the Spanish and Portuguese Congregation in New York, attended by national representatives of Jewish organizations.

In November, 1942, the Council joined in a United Church Canvass to stimulate increased religious attendance and support.

The following served as presidents of the Synagogue Council from its founding up to 1943, each for a term of two years: Rabbi Abram Simon, Rabbi Elias Solomon, Albert Wald, Rabbi Samuel Schulman, Rabbi Elias Margolis, Rabbi David de Sola Pool, Rabbi Edward L. Israel, Rabbi Israel Goldstein.

ISRAEL GOLDSTEIN.

Lit.: The Synagogue Council of America, Its Origin and Activities (1931); Pool, David de Sola, "The Synagogue Council of America," *Religious Digest,* Aug., 1940; Goldstein, Israel, *The Contribution of the Synagogue to the Nation at War* (1942); Baron, Salo W., *American and Jewish Destiny* (1942; address delivered at the Synagogue Council observance of the 450th anniversary of the discovery of America); Jung, Leo, "Foundations of Interfaith Amity," *Contemporary Jewish Record,* Feb., 1943.

THE STATISTICAL BUREAU, which was first organized by the American Jewish Committee as an American office for the collection of accurate data of Jews, later became affiliated with the Synagogue Council of America. This office compiled statistics of the number of American Jews and their distribution in 1917, in 1927, and in 1937. Cooperating with the United States Census Bureau, the Statistical Bureau also collected statistics of American Jewish congregations and their work. In 1936 the United States Department of Com-

merce, Bureau of Census, under the heading of "Religious Bodies," officially published the statistics pertaining to the Jews of America as one of the 256 American religious bodies (vol. 2, pp. 756-72).

The final results of the latest census of American Jews, conducted by the Statistical Bureau, were published in the *American Jewish Year Book*, vol. 42 (1940-41), pp. 215-66, under the title of "Jewish Communities in the United States"; and in vol. 43 (1941-42), pages 654-61, under the title of "Statistics of Jews. The Jews in the United States."

The principal publications of the Statistical Bureau, issued along three lines, i.e. current and authentic data of Jews, bibliographies, and statistical investigations, include: *Digest of Events of Jewish Interest* (151 issues); *Summary of Events of Jewish Interest* (5 vols.); *Hasid's Index to Periodicals and Booklist* (39 issues); *Communal Census of Jews —Methods Used in Recent Years; Communal Organization of the Jews; Jewish Migration 1920-1930; Jews of the United States—Their Number and Distribution; State Population Census by Faiths—Meaning, Reliability, and Value; Statistics of Jews* (of the United States and of all other countries); *Statistics of Jews and Jewish Organizations—Historical Review of Ten Censuses 1850-1937*. These publications were written by Harry S. Linfield, who was serving as director in 1943 (from 1921 on).

SYNAGOGUE, THE GREAT (keneseth hagedolah). According to the references thereto in the Talmud, the Great Synagogue was that legislative body which was brought into being by Nehemiah immediately after the return from the Babylonian Exile. It persisted during the first generation of the Second Temple. The members of the Great Synagogue, or the Great Assembly, were the spiritual heirs of the prophets, receiving from them the Torah ("Moses received the Torah at Sinai, and handed it down to Joshua; Joshua gave it to the elders, the elders to the prophets, and the prophets handed it down to the Men of the Great Synagogue," *Aboth* 1:1). Its existence, a matter of conjecture only, is predicated on the narrative in *Neh.* 8 to 9. The Great Synagogue is said to have been composed of the elders and prophets who came back from the Babylonian captivity and laid the foundation for the new polity under the Second Temple. Its membership numbered eighty-five (*Neh.* 10:2-28). Some Talmudic references to the Great Assembly speak of 120 elders and prophets. Ezra, Nehemiah, Haggai, Zechariah and Malachi are counted in its membership. The Nehemiah story (*Neh.* 9 to 10) tells of Nehemiah's convening the elders for the purpose of writing a document in which they pledged themselves and the people to give heave-offerings and tithes, to read the Torah, and to observe the Law regarding fasting, confessions of sin and prayer.

To the "Men of the Great Synagogue" (*'anshe keneseth hagedolah*) is ascribed the following saying: "Be cautious in pronouncing judgment, have many pupils and build a fence around the Torah" (*Aboth* 1:12). This aphorism epitomizes the work of the Great Synagogue, whose gigantic task it was to establish courts of justice, to educate the young in Jewish lore and to provide measures by which the laws of the Torah would be preserved intact ("fences" around the Law).

Nowhere in the Talmud is there allusion to the Great Assembly itself, but only to the "Men of the Great Assembly." Since Nehemiah convened his assembly for one day only (cf. *Neh.* 9 to 11), and since no mention of other meetings is to be found anywhere, it may be inferred that the Talmudic sages who spoke of the "Men of the Great Assembly" considered the elders and prophets who constituted the original assembly as united in spirit for the accomplishment of the task of preserving the Mosaic law and Judaism.

As the Great Assembly was the direct heir of the prophets to the Torah, so were the rabbis, the Amoraim and the Tannaim, the direct heirs of the Men of the Great Synagogue, for the Talmud has it that Simon the Just was a surviving member of the Great Assembly and that Antigonus of Socho received the Torah from Simon.

From the various sources which mention the Great Assembly the conclusion is arrived at that the members thereof fixed the ritual for the first two quarters of the day (*Neh.* 10:30 et seq.); included the books of *Ezekiel, Daniel, Esther* and the Twelve Minor Prophets in the Biblical canon; introduced the Feast of Purim (*Meg.* 2a); and fixed the Shemoneh Esreh (Eighteen Benedictions), the Kiddush, the benedictions and other prayers (Rabbi Johanan, *Ber.* 33a; Rabbi Jeremiah, *Yer. Ber.* 4d). To the Men of the Great Synagogue there is attributed also the provision for the making of Mezuzahs, Tefillin (phylacteries), and copies of the Bible.

SAMUEL J. LEVINSON.

Lit.: Graetz, H., *History of the Jews*, vol. 1 (1927) 381; vol. 2 (1927) 19; vol. 6 (1927) 31-37, 61-69; Krauss, Samuel, "The Great Synod," *Jewish Quarterly Review*, vol. 10, pp. 347-77; Kuenen, Abraham, "Über die Männer der Grossen Synagoge," *Gesammelte Abhandlungen*, 125-60.

SYNAGOGUES, BURNING AND DESECRATION OF. Early Diaspora synagogues were under the protection of the state. This explains why an Egyptian synagogue was dedicated to the king and queen, why one of the Roman synagogues was named for the emperor, and why the portrait of a Persian king appeared in the synagogue of Shefitib. In China a golden table stood in the synagogue, bearing in gold letters the emperor's name and a prayer for his long life.

But this legal protection was often disregarded by Persian and Christian priests. St. Ambrosius sharply denounced Emperor Theodosius I when he required the wreckers of a synagogue at Callinicum to rebuild it (about 388). But the spirit of the church triumphed in the Theodosian Code, and in that of Justinian, which permitted only one synagogue in any city, and forbade the Jews to build any new synagogues or even to renovate and beautify those in existence.

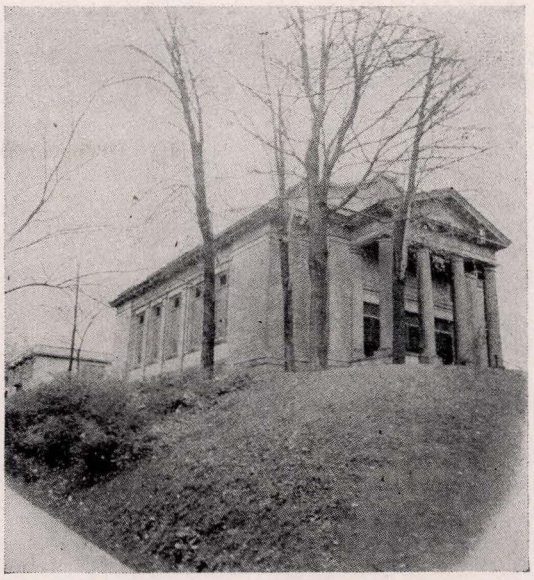
These prohibitions passed over into the laws of the European nations, and were often invoked by fanatical clergymen, or in times when popular resentment against the Jews was high. Popes Gregory IX and Nicholas III and the synods of Breslau and Vienna (both in 1267) sharply reaffirmed the restrictions. Despite all this, the erection of new synagogues was frequently permitted by popes, and with their approval by both spiritual and temporal rulers. In Poland the prohibitions were enforced as late as the 17th cent.; even in Protestant countries their influence was felt, so that until the 18th cent., as a rule, Jews were permitted to hold services only in private houses. All such restrictions disappeared in free countries during the 19th cent., although in 1925 a Hungarian bishop appealed to the government of Norway not to allow more than one synagogue in the country.

The opponents of Judaism, however, were not satisfied with the negative procedure of forbidding synagogues to be built, and frequently had recourse to the defacement or destruction of synagogues in existence. Some (not all) Christian leaders regarded it as a specially pious act to transform a synagogue into a church, even by force. The most famous instance is that of the

two magnificent synagogues of Toledo, Spain (15th cent.).

What is perhaps the only reference to the synagogue in the Bible laments the burning of "all the meeting-places of God" (*Ps.* 74:8), and in the course of Jewish history this tragedy has been many times repeated. When riots against the Jews burst forth, the synagogues often suffered destruction at the same time. The Crusaders under Geoffroy of Bouillon assembled all the Jews of Jerusalem in their synagogue, and burnt people and building together—a horror often repeated.

The Nazi movement took up this evil tradition with its usual ferocious efficiency. During the years of Hitler's rise to power, his followers frequently expressed their malice against the Jews by defacing the walls of synagogues, smashing windows, and committing other acts of vandalism. No less than fifty German synagogues were subjected to such attacks between 1923 and 1932. After the advent of Hitler to power, incidents of violence increased. The climax came on November 9 and 10, 1938, when almost every synagogue in Greater Germany was burned.



The reverberations of all this were felt faintly even in the United States. Swastikas were daubed on the walls of Temple Emanu-El, in New York city, and the West End Synagogue in the same city was actually set afire by its janitor, a man of German origin, who was, however, adjudged to be mentally deranged. A strange contrast to these occurrences is that which took place when the British captured Newport, R. I., during the American Revolution. They burned the city and destroyed all places of worship save the Anglican Church and the historic synagogue, the oldest Jewish place of worship on the continent. BERNARD J. BAMBERGER.

SYNCRETISM, the fusing of two or more religious or other creeds or doctrines on the basis of a common principle which transcends beliefs that are otherwise incompatible. Syncretism is a defensive process whereby the participating groups, in order to maintain themselves and their doctrines against destructive evolutionary forces, blend their most effective doctrines and eliminate their various sources of weakness, or whereby one group supports its structure by grafting upon itself a powerful support taken from the other.

The critical view of the development of the Biblical religion perceives numerous instances of this process of syncretism which took place among the ancient Israelites. The religion of the Israelites is conceived by some critics as a development from fetichism and animism to henotheism and monotheism, undergoing modifications and mutations as a result of its contacts with the religions and civilizations of Canaan, Egypt, Assyria, Babylonia and Persia. The Pentateuch and the Biblical books contained in the Biblical division known as the Prophets (Nebiim) are considered to be replete with records and reflections of the attempts to syncretize the customs and practices of the surrounding peoples with those of the Israelites. The extent to which post-Exilic Judaism resulted from these assumed adaptations, blendings or modifications forms a constant subject of dispute among Bible scholars.

SYNOPTIC GOSPELS, *see* GOSPELS.

SYRACUSE, a city of New York state, which including in its general population of 205,967 (census of 1940) approximately 14,000 Jews. As the principal seat of the salt industry of the country, Syracuse grew rapidly and attracted tradesmen seeking new opportunities. Early in the year 1839 a group of twelve Jewish itinerant peddlers settled at Syracuse. The source of supply for their pack merchandise was the notions warehouse of Bernheim and Block, and in the rear of this establishment the peddlers held Friday night religious services. In the fall of 1839 they founded Congregation Keneseth Sholom or Society of Concord, which subsequently held services in the home of Jacob Garson. The congregation was incorporated in 1842, and four years later a house in Madison Street was purchased and converted into a synagogue, which Rabbi Isaac Mayer Wise was called to dedicate.

Temple of the Society of Concord

This was the period of the general growing struggle between Reform and Orthodox Judaism, and the clash became sharply reflected in the congregation at Syracuse. The Orthodox members within the Society of Concord were strong enough to have the new Temple built on Harrison Street dedicated in 1851 by a leading champion of Orthodoxy, Rabbi Morris J. Raphall. Meanwhile, Syracuse Jewry had grown numerous enough to establish in 1854 a second congregation, the Orthodox Beth Israel, later called New Beth Israel.

The actual split in the membership of Society of Concord occurred in 1861, when the minority of Orthodox members refused any longer to countenance the increasing reforms. The dissident members incorporated the Orthodox Congregation Adath Yeshuron in 1864, known in deference to its leading member as the "Rosenbloom Shul." Sixty-one years later, in 1925, Adath Yeshuron rejoined the Society of Concord.

The first rabbi of the Society of Concord, Abraham Gunzenhauser (1841-46), was succeeded by Joseph Goodman and Jacob Levi. From 1861 to 1882 the rabbis Deutsch, Bernhard Illowy, Cohen, Herman Birkenthal and Burgheimer occupied the pulpit. In 1883 Rabbi Adolph Guttman was called from Austria to take the pulpit. Guttman became a leader of Syracuse Jewry, active in social service, and serving for thirty-five years as chaplain at Auburn prison. He founded the United Hebrew Charities. Also, he was professor of Semitics and Old Testament at Syracuse University. Guttman served until 1919, and was subsequently made rabbi emeritus. He was succeeded by Rabbi Benjamin Friedman, who, elected in 1919, was still serving in 1943. The Temple on Madison Street housing the congregants in 1943 was built and dedicated in 1911, largely through the efforts of Gates Thalheimer, long-time president of the congregation. An addition for a social hall and school was erected in 1929.

The "Neustadter Schul," or New Adath Yeshurun

Congregation, was organized in 1870 by a group of Jews from Neustadt, Germany. In course of time it became the Conservative Temple Adath Yeshurun. The first rabbi was Joseph H. Hertz, later chief rabbi of the United Hebrew Congregations of the British Empire. He was succeeded by Henry Morais, Abraham M. Hershman, Max Drob, Jacob Kohn, Adolph Coblentz and Jesse Bienenfeld. Irwin I. Hyman, who came to the pulpit in 1935, was the incumbent in 1943. The congregation was then worshipping in the synagogue erected in 1921 under the leadership of Isaac Markson and Israel Kaplan; it houses a daily Hebrew school and contains club rooms.

Orthodox congregations established by Syracuse Jewry were the above-mentioned New Beth Israel (1854); Adath Israel (1882); Poiley Tzedeck (1888), of which Rabbi Moses I. Jacobson was the spiritual head in 1943; Ahavath Achim (1896); Beth Hamedrash Hagodol; Anshe Sfard; Chevra Shas. In 1943 Samuel Yalow was the incumbent rabbi of Congregation Ahavath Achim, which was then housed in the new synagogue built in 1940. In 1935 six of the Orthodox congregations affiliated into the Vaad Hakhilos.

The daily Hebrew Free School of Syracuse was incorporated in 1899, and set up a curriculum of studies including Hebrew, Bible, Jewish history and the principles of Judaism. In 1935 the school was reorganized, and continued to give instruction to a large proportion of Syracuse Jewish children of grade school age. The Workmen's Circle School was organized in 1925 and the Jewish Folk School was established in 1924. The religious schools of the leading congregations also attracted a large number of children.

Numerous bodies for administering charity and social service were early established by the Jewish community. These included the Chevrah Kadisha (1862), Chevra Shel Emes, United Jewish Charities (1896), which in 1937 became the Jewish Social Service Bureau, Free Loan Association (1903), Hachnosath Orchim (1901), Jewish Ladies' Aid Society, and Young Men's and Ladies' Benevolent Association. The Jewish Home for the Aged of Central New York, well-supported by the Syracuse community, was organized in 1912. The Syracuse branch of the Jewish Orphan Asylum of Western New York was established in 1878. The Jewish Welfare Federation, affiliated with the city's Community Chest, was organized in 1918 and reorganized in 1935; it administered the Jewish Welfare Fund, organized for local and non-local causes in 1933. In 1943 Max Stein was its executive director.

Syracuse Jewry became supporters of the Zionist cause through a number of groups, including a Senior Hadassah (1912), a Junior Hadassah (1921), a Young Judaea, a branch of Masada, a Mizrachi organization, a branch of the Poale Zion, and a district of the Zionist Organization of America.

Other communal organizations included a section of the National Council of Jewish Women (1896) and a Council of Jewish Juniors, a lodge of the B'nai B'rith and an Aleph Zadik Aleph, a Workmen's Circle (1902), a Jewish National Workers Alliance, a post of the Jewish War Veterans, a unit of the American Jewish Congress (1938) and a Y.M.H.A. and a Y.W.H.A.

By the will of Jacob Marshall, father of Louis Marshall, the Marshall Memorial Home was donated in 1910 for the use of the Council of Jewish Women and the Y.M.H.A. This house, together with the building of the Social Institute (1914), became the Jewish Communal Home of Syracuse. The Jewish Communal Center was the subsequent development of the organization. In 1943 Aaron E. Rose, appointed in 1935, was still the executive director of the Jewish Communal Center.

A number of Jews became prominent in the Syracuse community and held public office. In the earlier days of the community Gates Thalheimer was trustee of the State Industrial School at Rochester, N. Y. H. L. Elsner, Nathan Jacobson and I. H. Levy were professors at the Medical College of Syracuse University. Joseph Bondy was member of the board of supervisors of Onondaga County (1885-89), in the state legislature (1896-98) and, prominent in military affairs, was organizer of Citizens' Military Training Camps for the 2nd Corps Area (1923-30). Nathan Abelson was appointed municipal court judge and reappointed (1930 and 1932). David D. Joselit was made assistant United States attorney for the northern Federal District of New York (1936). Max Rosenbloom was city alderman for eight years and president of the Onondaga General Hospital. Max L. Stolz was director of the Onondaga County Bar Association (1932-36) and member of the Board of Education. N. Wesley Markson was named city comptroller (1932). H. Hiram Weisberg was president of the chamber of commerce and Community Chest (1934). Joseph Stolusky was for many years a member of the Board of Supervisors. Jack Rosenberg served on the County Board of Supervisors and the city council from 1935 on. Mrs. Alexander became a member of the Board of Education in 1937. Men active in commercial life and in communal affairs as well included Isaac Markson, Benjamin G. Rudolph, Philip Roth, Abraham Rubenstein, Adolph Holstein, David Holstein, Leon Brounstein, Mark Gais, Bernard B. Given, and Moses Winkelstein. Dr. Aaron Burman was likewise prominent in Jewish affairs, as was Mrs. Rose Landsberg Stolz. Rabbi Irwin I. Hyman was adviser to Jewish students at Hendricks Chapel, Syracuse University, from 1935 on.

At Syracuse University Jewish faculty members included Victor Levine, professor of law (appointed 1927), and T. Aaron Levy, instructor and lecturer in jurisprudence (1905-36). Levy, one of Syracuse Jewry's most prominent representatives in public life, was president of the city's Housing Authority, president of the board of education (1925) and for many years president of the Onondaga County Health Association. In the medical faculty at Syracuse University were Drs. Asher H. Rubenstein (appointed 1924), Abraham C. Silverman (appointed 1933), Jacob J. Levy (1920), I. Harris Levy (1916), Joseph R. Wiseman (1919). Dr. Mark Heiman was elected vice-president of the Syracuse Academy of Medicine (1933). Jacob Kwalwasser was appointed professor of music education and head of the department of public school music at the university (1927). Samuel D. Sarason, consulting engineer for the city (1915-26), was made a member of the engineering faculty in 1925.

In 1943 the *Jewish Ledger* was being published at Syracuse by Joseph Biben. IRWIN I. HYMAN.

Lit.: One Hundredth Anniversary Book, Society of Concord: 1839-1939 (1939); annual yearbooks of Temple Adath Yeshurun.

SYRIA, a former province of Turkey, from 1920 on a mandated territory of France in the Near East, divided into four semi-independent republics, with a total population of 3,650,000, including 26,000 Jews. In 1941 it was occupied by British and Free (Fighting) French Forces. As a neighboring country to Palestine, Syria had great importance for the political and economic development of this country as well as for the history of the Jews in general.

1. Name. The Greeks designated as *Surioi* (Syrians) the tribes ruled by the Assyrian kings. The name Syria does not occur in the Bible, the country being generally designated as Aram. The Arabs called it Esh-Sham (left side), in opposition to El-Yemen (right side). The Turks called it Suristan or Arabistan. The Bible often mentions wars between the kings of Judea, Israel and various Syrian kings. In Talmudic literature, Mesopotamia, Aram and Aram-Zobah are meant by *Surya*. ISAAK MARKON.

2. History. In the third millennium B.C.E. the Amorites were masters of Syria. The country was,

however, repeatedly invaded by the Babylonian kings, who sought an outlet to the Mediterranean. In the second millennium B.C.E. the Hittites conquered Syria, and the northeastern part was ruled by the despots of the mighty Mitanni kingdom, and the Semitic populations of the country acquired thereby a strong Aryan strain. The Egyptian conquerors Thutmose II and Ramses II devastated Syria by many wars, and weakened the Hittites.

At the time of Palestine's conquest by the Israelites, many Aramean tribes settled in Syria and founded several states, among which the Aramean state of Hamath and that of Damascus were in political relations with Israel. The whole territory at that time was called Aram, up to the seacoast towns, which were populated by north Phoenicians and formed independent states (Sidon, Byblos, Aradus and others). The Aramean state of Damascus, nearest to Israel, was conquered by the Israelites under David (about 980 B.C.E.), but under Solomon (about 950 B.C.E.) it regained its independence and attained great prosperity and supremacy in southern Syria. It availed itself of the weakening of the Israelites following the partition of Solomon's kingdom, and harassed the Northern Kingdom, the so-called kingdom of the Ten Tribes, by severe wars of conquest which lasted for over a century (from about 900 to 790 B.C.E.). Under King Hazael of Damascus Gilead and Galilee were wrested from the Israelites and the rest of Israel had to pay tribute to the Arameans (about 840-800 B.C.E.). Not until the Assyrian king Adad-nirari captured Damascus were the Israelites freed from the Aramean yoke (732 B.C.E.).

In the 8th cent. B.C.E. the whole of Syria was conquered and annexed by the Assyrians and was thereafter called after them (Syria is a diminutive of Assyria). The downfall of the Assyrian kingdom brought a temporary invasion of the Egyptians in Syria (608), but they were defeated at Carchemish by the Chaldeans under Nebuchadrezzar (605). When the Babylonian kingdom collapsed (538) the Persians annexed Syria, and it was then a satrapy, mentioned in Hebrew writings as *'Eber Hanahar* (that is, Transeuphratia). During the Assyrian, Chaldean and Persian rules the Aramaic language prevailing in Syria became the national language of all western Asia, and altogether displaced the other Semitic dialects and finally also the ancient Babylonian language.

The Macedonians conquered Syria after the battle of Issus (333 B.C.E.), and at the final division of the kingdom of Alexander the Great (301) the country was assigned to Seleucus Nicator, although the southern part below the Lebanon was, together with Palestine and Coelesyria, assigned to the dominion of the Ptolemies, of Egypt. This brought about serious conflicts between the Seleucidae and the Ptolemies. Under Antiochus III (about 200 B.C.E.) south Syria and Palestine were conquered by the Seleucidae, who later became kings of Syria; beginning with the year 129 B.C.E. their dominion was actually limited to this country. The city of Antioch, on the Orontes river, built by Seleucus I, was the capital of the Seleucidae. In 83 B.C.E. Syria was conquered by the Armenian king Tigranes, and in 65 to 63 B.C.E. by the Romans under Pompey. The entire territory then became a province of Rome governed by a provincial governor of consular rank residing in Antioch.

In the 2nd cent. C.E. Christianity spread quickly in Syria, and during the 4th, 5th and 6th centuries Syria took an active part in the inner struggle of the church. In 611 Syria once more was conquered by the Persians, and in 635 to 638 it was captured by the Arabs and formed the kernel of the Omayyad dominion (660-750). Later it became a province under the Abbasids, and it did not regain its independence until the 11th cent., under the Seljuks. Parts of Syria were conquered in 1099 and later by the Crusaders. In the following centuries Syria was the bone of contention between various Turkish tribes, the Mongols and the Mamelukes, and not until the 15th cent. was it annexed to the Ottoman empire.

Jewish settlements existed in Syria from the earliest times, but only during the rule of the Seleucidae did they reach importance. There was a large Jewish community in Antioch, but Jews were numerous also in the rest of the country. Under the Seleucidae and later under the Romans the Jews enjoyed equal civic rights and therefore complete autonomy in their internal affairs. The Jewish religion was highly esteemed, and many pagans joined the Jews as proselytes and semi-proselytes. Jewish customs were especially in favor among women. The majority of the urban Hellenistic population was, however, as everywhere else, antagonistic to the Jews, and this resulted in furious Jewish persecutions in the year 66, when entire communities were slaughtered and annihilated in the most gruesome manner. Yet even after these persecutions the number of Jews in Syria was considerable. They resided there almost unmolested and possessing full civil rights until the victory of Christianity. Even around 380 many Antiochians, especially women, embraced Judaism, and the Greek church father John Chrysostom wrote six sermons against the Jews and severely censured the Christians who visited the synagogues of the Jews and observed their holy days.

However, the clericalization of Roman law which took place beginning with Theodosius II (408-50) led to a narrowing of the religious freedom of the Jews. Compulsory conversions and forcible transformations of synagogues into Christian churches occurred repeatedly, and the secular arm seldom attempted to avert these abuses. But the Jews, who were still numerous, did not take resignedly this deprivation of their rights, and often resisted actively, so that street fighting between them and Christians often occurred. The Christian heretics, who later formed the majority in Syria, were also inimical to the Jews. The constant persecution of the Jews, especially under the emperors Zeno (474-91) and Justinian (527-65), resulted in the yielding of the few elements among the Jews who had hitherto remained faithful to Judaism. These now embraced Christianity and the number of Jews in Syria was thus greatly reduced.

Only the Arab conquest of the country brought some alleviation to the Jews, who thereafter could exercise their religious rites undisturbed, but had to pay a head tax. Later the general decadence of Syria under the Abbasids resulted in a strong decrease of the Jewish population, many Jews migrating to other territories. Under Arab rule the largest Jewish communities were in Aleppo and Damascus; smaller ones existed in Ilion, Tripoli and other seaboard towns. In the 8th cent. great spiritual unrest seems to have occurred among the Jews of Syria, and a number of Karaite sects were formed.

In Aleppo, where, about 1200, Joseph ben Judah ibn Aknin, a famous disciple of Maimonides, lived, Benjamin of Tudela (1160-73) found 1,500 Jews under three noted rabbis. These Jews were mostly glass manufacturers. In Damascus he found 3,000 Jews, learned and wealthy.

In the Middle Ages and in later times the Jews of Aleppo had close relations with the Jews of India

(Cochin). Both Christians and Jews were persecuted under the Mamelukes. Jews had to wear a yellow turban, Christians a blue one, and Samaritans a red one. Noted Jewish scholars lived in Syria in the 16th and 18th centuries, among them Meir Anasikon, Solomon Hosortas, Abraham ben Asher of Safed, Samuel ben Joseph Hakohen, Samuel ben Abraham Lanado, Elisha Navi, Isaac Beraha and Moses Harari. The followers of Sabbatai Zevi were numerous in Syria. Isaac Abulafia was outstanding among the Syrian rabbis of the 19th cent. The Jewish community of Damascus gained great importance in Europe following the Damascus Affair (1840), in which a blood accusation was made against the Jews. During and after the Christian massacres of 1860 the Jews of Lebanon and Damascus suffered greatly, since the Greeks accused them of participating in the massacres of Christians.

JAKOB NAPHTALI SIMCHOWITSCH.

3. The 20th Century. Prior to the first World War the economic and spiritual level of Syrian Jewry was generally very low. Particularly dire were the circumstances of the Damascene Jews, who were engaged in textile work and the manufacture of cheap trinkets. Because of the prevalent sweatshop system, child labor and prostitution were common. Only a small number of Jews were prominent in trade, chiefly in Beyrouth and Aleppo.

Under Turkish rule Syria included also Palestine. The partition of Syrian territory had already been decided upon in the Sykes-Picot agreement concluded between Great Britain and France in 1916. Accordingly, after the armistice of 1918, Northern Syria (Syria proper) was occupied by French troops, whereas Southern Syria (Palestine) came under British rule. In 1920, at San Remo, the mandate for Syria was assigned to France. Under French control Jews enjoyed full personal and communal rights. They suffered heavily, however, during the insurrection of the Druses (1925), especially from the bombardment of Damascus, and aid had to be given them by the American Jewish Joint Distribution Committee.

Although relations between the Jews and Arabs of Syria were satisfactory, the country, from 1918 on, was the hotbed of Arab intrigue against Zionist aspirations in Palestine. From Syria flowed the supply of arms and rioters who fomented the anti-Jewish upheavals of 1921, 1929 and 1936.

Following installation of the Vichy regime in France (June, 1940), highly placed Jewish government and state officials were dismissed from their posts, and economic restrictions were imposed on Syrian Jewry. These measures, however, caused deep resentment among both the Moslems and Christians of the country. The Mufti of Beyrouth and the Maronite Patriarch of Lebanon submitted a memorandum of protest to the French authorities against the discharge of "nos collaborateurs juifs." A year later, when British and Free (Fighting) French forces occupied the country (1941), the rights of the Jews were restored. Alfred Naccache, president of the republic of Lebanon, upon his visit to the synagogue of Beyrouth (December, 1941), pledged that the Jews would be given a full share in the responsibilities of government. The crushing of the pro-Axis revolt in neighboring Iraq (June, 1941) and the Allied victories in North Africa in 1942 and 1943 removed the threat of Axis attacks on Syria.

The Jews in 1943 were mainly concentrated in the three large cities of the country, Aleppo, Damascus and Beyrouth; the rest were scattered in small groups in several parts of the country. The Jews of Damascus (about 7,000) were mainly craftsmen and laborers. In Beyrouth (about 3,500 Jews) there were noted Jewish goldsmiths and silversmiths; a daily paper, *El Alaz al Israeli* (the Jewish World), was published there in Arabic. The wealthiest Jewish community was in Aleppo (about 8,000 Jews), with a considerable number of Jewish merchants. The Aleppo Jews were strongly Orthodox in religious matters and, unlike the other Jews of Syria, lacked contact with modern life and French culture.

The immigration of Syrian Jews to the United States started in 1897. By 1943 the number of Syrian Jews in that country was about 10,000. The majority of them lived in New York city, where Magen David Congregation in Brooklyn boasted of the largest Syrian synagogue (built in 1920) and of the best organized community. Their leader was Rabbi Jacob S. Kassin, of Jerusalem. They had also a Talmud Torah of their own. Other Syrian congregations were at Washington, D. C., Chicago, Los Angeles and San Francisco.

ALFRED WERNER.

SYRKIN, NACHMAN, Poale Zionist leader and writer, b. Mohilev, Russia, 1867; d. New York city, 1924. After graduating from the Gymnasium in Minsk he went to Berlin (1887) to study at the university, and subsequently received the Ph.D. degree from the University of Zurich. While still in Russia he had become affiliated with the early Zionist groups, and this attachment was soon to be combined with an adoption of the Socialist ideal, producing in Syrkin the conviction that only through the establishment of a Jewish Socialist state could the sources of recurrent Jewish hardships be attacked. Liberalism alone did not suffice, in Syrkin's view, because it left room for the formation of those economic and social interests which eventually provoked discord.

While in Berlin he was the guiding spirit of a group of Russian Jewish émigrés whose study and discussions aided many Jewish leaders of the following decades to discover their convictions. Syrkin's line of belief was singular: he differed from other Jewish Socialists in his rejection of assimilationism; he differed from them again in his preference for Hebrew over Yiddish, although much of his own writing was done in Yiddish, and he was to differ from organized Zionism, for a time, by accepting Territorialism instead of insisting on Palestine. This deviation occurred between 1905, when he left Zionism to enter the Territorialist move-

Nachman Syrkin

ment, and 1909, when he returned to Zionism as the representative of the newly formed Poale Zionist (Socialist Labor Zionist) party.

With the publication of *Die Judenfrage und der sozialistische Judenstaat* (1898) Syrkin began his long publicistic career. In 1901 he wrote *Vozzvanie k evreiskoi molodezhi,* a program for the adherence of Jewish youth to Socialist Zionism. Between 1901 and 1908 he edited *Hamon,* a Yiddish periodical, and *Hashahar,* in Hebrew, both propagandizing his ideals. In 1907 he returned to Russia from Western Europe, and in that same year moved to the United States, where he was to be associated with the *Folk,* then the *Yiddisher Kemfer,* then the *Tzeit.* He was active in establishing the American Jewish Congress, and after the first World War he went to Europe as one of the American representatives to the Comité des Délégations Juives. He visited Palestine (1920) to work out his plans for a Socialist commonwealth; his suggestions provided the theoretical groundwork for much of the astonishing accomplishments of the labor organization in Palestine. Syrkin's practicality derived its strength from the profundity of his concepts. Both Zionism and Socialism were to him ethical values, and a Socialist Zionist Palestine was a part of his hope for a just world order. Selected studies by Syrkin, *Gekliebene Tzionistish-Sotzialistishe Shriften,* were published in two volumes (1925-26), and English excerpts, *Essays in Socialist Zionism,* in 1935. Syrkin translated several of Tolstoi's long essays into German.

MARIE SYRKIN (b. Bern, Switzerland, 1900), daughter of Nachman Syrkin, was a writer and translator. She was brought to the United States at the age of seven. She received the A.B. degree from Cornell University in 1920. First becoming known as a translator of Yiddish verse into English, with representations of her work in numerous general anthologies, she later developed also as a recognized spokesman for and critic of Jewish life on the American scene. She was associate editor of *The Reflex* in the 1920's and associate editor of *The Jewish Frontier* (1934-). To the symposium *The American Jew* (1942), Marie Syrkin contributed the study "The Jew in American Literature." She was on the educational committee of Hadassah. She married Charles Reznikoff. NATHAN RICARDO.

Lit.: Fineman, Haim, in *Encyclopaedia of the Social Sciences,* vol. 14 (1934) 500; Reisen, Z., *Lexikon fun der Yiddisher Literatur, Presse un Filologie,* vol. 2 (1930), cols. 637-47; Zar, Isaac, in preface to vol. 1 of *Gekliebene Tzionistish-Sotzialistishe Shriften* (1925).

SZABÓ, ERVIN, sociologist, b. Hungary, 1887; d. Budapest, 1918. After concluding his studies at the University of Budapest, he obtained a petty job in the municipal library of that city, but soon emerged from obscurity through his essays on the scope and tasks of public libraries. The progressive mayor of Budapest, Istvan Bárczy, took a bold step in making the youthful librarian, known for his socialist convictions, director of the municipal library. The reorganization of the library after the Anglo-American model to meet equally the requirements of the masses and of the scholar was the greatest contribution of Szabó's brief life.

Yet Szabó was one of the most prominent members of a generation of Hungarian social theorists who, in the interpretation of history and society, went beyond the Germans and were receptive to French, English and American thought. In this group of social theorists, who with the weight of their intellectualism gave meaning to a new and growing, if inarticulate, political opposition in Hungary, Szabó was one of the first to identify himself with the socialism of the laboring class. Going beyond this, he rejected the parliamentary form of government, demanded "direct action" and advocated syndicalism. The Russian Revolution occurred in the year preceding his death, and in the very year he died Szabó published in two volumes a Hungarian version of some of the main writings of Marx and Engels. He embraced Christianity.

Szabó's history of the emancipation of serfs in Hungary by the diet from 1847 to 1848, *A magyar jobbágyfelszabaditás országgyülési története, 1847-1848* (1918), offered evidence to refute the stock claim of the Hungarian nobility to have "of its own free will magnanimously brought the serf class within the ramparts of the constitution."

Szabó's other published books include: *A szocializmus* (Socialism; 1906); *Szindikalizmus és szociáldemokrácia* (Syndicalism and Social Democracy; 1908); *A városi múzeumok feladatai* (The Tasks of City Museums; 1913); *Gazdasági szervezet és háboru* (Economic Set-Up and the War; 1915); *A középeurópai vámszövetség angol megvilágitásban* (The Central European Free Trade Association as Seen by the English; 1916); *Munkásképzésés munkáltató érdek* (The Training of Workmen and Employers' Interests; 1917); *Freihandel und Imperialismus* (1918).

SZABÓ, IMRE, author, playwright and journalist, b. Nové Zámky (Érsekujvár), Hungary, 1883. In addition to receiving a secular education he studied at the Yeshiva of Pressburg. He wrote for several Budapest newspapers, chiefly the *Neues Politisches Volksblatt,* a daily newspaper published in German. Following the first World War he lived at Kolozsvár, Transylvania, where he contributed original plays and translations from the Yiddish to the Hungarian theatre.

His original plays include *Aranykorsó* (The Gold Cruse), on the life of the Judaizing Sabbatarians. Szabó was also author of several novels, such as *F. 25,* dealing with the Jewish heroes of the first World War; *Szent Eliz* was the story of a Jewish revolutionary girl; *Toledo* (1934) was a novel of political émigrés. *Az utolso máglya* (The Last Burning at the Stake) was a

historical novel. Among his published books were also *Zsidócskák* (Little Jews), genre sketches; *Zsidó komédiások* (Jewish Comedians); *Mózsi és Ildikó;* and *Uj Zsidók* (New Jews; 1936), composed of the biographies of Theodor Herzl, Moses Hess, Aaron David Gordon, Joseph Trumpeldor and Rachel Blowstein.

Szabó traveled in Turkey, the Balkans and Northern Roumania, and in his travel books also gave an account of the Jews living in those regions. His influence as a literary critic on Transylvanian Jewish literature was notable. Among his translations into Hungarian was Louis Golding's *Magnolia Street.*

SZABOLCSI, BENCE (BENEDICT), musicologist, b. Budapest, 1899. He was a son of Miksa Szabolcsi. He studied at the University of Leipzig, which bestowed upon him the Ph.D. degree. He also studied composition with Zoltán Kodály, a composer well-known all over the world. Years of study with one of Hungary's greatest men developed his inborn abilities toward consistency of method, sureness of judgment and meticulous accuracy in work.

One of his first works was a book on Mozart, a valuable contribution to Mozartian literature, and characteristic of Szabolcsi's artistic credo. As a conclusion, he avowed that he preferred the Mozartian solution of musical problems to all other solutions.

Another trend of his investigations led to his discovery and study of the musical culture, especially music as cultivated in various colleges, of Hungary in the 17th and 18th centuries. He unearthed much valuable material theretofore unknown which helped him arrive at important conclusions regarding this period.

He turned to a major field of research in investigating the origin of what are called the oldest strata in Hungarian folk music. He examined rare publications containing samples especially of the music of peoples living in the border regions of Europe and Asia, and showed the old music of several Turkish peoples to have close kinship with the oldest stock of Hungarian music. Szabolcsi's findings corroborated in a conclusive way the assertions previously made by others, and proved the earliest strata of Hungarian folk music to be more than 1,500 years old. An account of these findings was given by Szabolcsi in the *Journal of the Royal Asiatic Society of Great Britain and Ireland* (1935, pp. 483-98).

In the columns of the musical review *Zenei Szemle,* of which he was editor-in-chief, as well as of other periodicals to which he contributed, he revealed himself as a fervent adherent and propagator of the achievements in contemporary Hungarian art music.

Among his published books were: *A régi magyar zeneköltészet problémái* (Problems of Old Hungarian Music; published also in German); *A XVIII. század magyar kollégiumi zenéje* (18th Cent. Hungarian College Music; 1930); *A XVII. század magyar főuri zenéje* (17th Cent. Music of Hungarian Magnates; 1931); *A XVI. század magyar históriás zenéje* (16th Cent. Hungarian Minstrel Music; 1932); *A magyar zene története rövid összefoglalásban* (A Brief History of Hungarian Music; 1934).

In addition to music research, Szabolcsi was active also as a translator. He rendered into Hungarian the abridged version of Simon Dubnow's history of the Jews, *A zsidóság története* (2nd ed., 1935). He likewise translated into German the words of Hungarian and Slovak folk songs collected by Béla Bartók and Zoltán Kodály for their polyglot editions. He was co-editor of the dictionary of music, *Zenei lexikon* (2 vols.). In 1943 he was believed to be living at Budapest.

BÉLA BARTÓK.

SZABOLCSI, LAJOS, editor, author and poet, b. Budapest, 1890. He was a son of Miksa Szabolcsi. He received the Ph.D. degree from the University of Budapest. His first verse and essays were published in József Kiss' review *A Hét* (The Week). At the age of twenty-one he became assistant editor of his father's newspaper, *Egyenlőség,* and in 1915, upon his father's death, Lajos became owner and editor-in-chief.

Early in his career Szabolcsi began to collect and publish facts about the contribution of the Jews in Hungary to the war effort in the first World War. In 1918, when anti-Semitism began to raise its head, he published a pamphlet, *Mi az igazság?* (What Is the Truth?). Following the War and the political convulsions of the post-War period, Szabolcsi in the columns of his newspaper fought against the legal and occupational disabilities under which the Jews in Hungary were placed, and was partly successful in having them restored to their earlier rights. Some of the speeches of the Jewish deputy Pál Sándor, made in refutation of unfounded accusations against the Jews, were based upon facts supplied by Szabolcsi. By establishing the number of the Jewish war dead, which was acknowledged by a decision of the law courts, and by compiling a roster of Jews cited for bravery, he helped the Jews of Hungary win recognition for their war sacrifices. *Egyenlőség* during these years became the official exponent for the Jewish community of Hungary and enjoyed the moral and material support of its largest organized body, the Jewish community of Pest which, in the 1930's, acquired the publishing rights, with Szabolcsi remaining editor-in-chief. He retained that post from 1939 on when, under new restrictive regulations, *Egyenlőség* had to appear under the title of *Magyar Zsidók Lapja* (Journal of Hungarian Jews). Like his father, Lajos Szabolcsi conceived the Jewish problem solely in its aspect within Hungary, and stoutly opposed Zionism, thereby influencing the large number of his readers.

In 1931 the Jewish community of Pest elected him an honorary member of its assembly. He was also vice-president of the Hungarian-Jewish Free University, founded in 1932. Szabolcsi was partly responsible for the formation of a committee which aided Hungarian Jewish students forced by the numerus clausus law to study at universities in other countries.

Szabolcsi was a prolific author. In addition to several volumes of original verse, including *Szól a kakas már* (1930), he translated medieval and modern Hebrew poets into Hungarian. He also published a history of modern Hebrew poetry, *Az ujhéber költészet története* (1908); a volume of legends about the Zaddik of Nagykálló, *A leveleki menyegző* (1920); and a historical novel on Bar Kochba, *A csillag fia.* Among his dramas the most important are *Az áruló* (on Josephus; 1922) and *Középkor* (1930), which was translated into German by Jenő Mohácsi under the title of *Judengasse.* In 1941 Szabolcsi worked on *Két emberöltő, 1880-1940,* which was to embody his memoirs as well as facts on Jewish life in Hungary in the period from 1880 to 1940. In 1943 he was living in Hungary.

ANNA BETTELHEIM.

SZABOLCSI, MIKSA, author and editor, b. Tura, Szabolcs County, Hungary, 1857; d. Balatonfüred, Hungary, 1915. His original name was Weinstein, which he Magyarized to Szabolcsi. He was educated at Yeshivas, and attended also the national rabbinical seminary, but following his inclination he became a journalist in 1878. From 1881 on he collaborated on a daily newspaper published at Debrecen. In the Tiszaeszlár blood accusation (1882) he spent much time in successfully investigating the circumstances under which the alleged victim had disappeared, and wrote numerous articles for the *Pester Lloyd* and other newspapers denouncing machinations and illegal pressure

in the affair. As a result of this informative work, he was ordered by the county authorities to leave Nyiregyháza, the scene of the trial, and the anti-Semitic investigators made an attempt upon his life. Nevertheless, Szabolcsi's reports of the trial appeared in the *Pester Lloyd* and *Neue Freie Presse,* and were reprinted by a large part of the European press.

After editing the *Pester Jüdische Zeitung* for two years, Szabolcsi became editor of the Hungarian weekly newspaper *Egyenlőség* in 1886. In 1889, together with Vilmos Vázsonyi, he started a movement for the recognition of the Jewish faith by the Hungarian state; his agitation, which at the outset met with opposition by official Jewish leaders, resulted in the enactment of a law to that effect in 1895. This important achievement made *Egyenlőség* the dominant Jewish newspaper in Hungary. In its columns Szabolcsi successfully fought other attempts at blood accusation, and effected the dismissal from his post of Béla Makay, a biased official in charge of Jewish religious affairs in the ministry of education (1911).

Szabolcsi advocated religious Judaism and the recognition of its adherents as a constituent part of the Hungarian nation. When the first Zionist movement was started in Hungary, Szabolcsi violently denounced it, believing that it would jeopardize the position of the Jews in Hungary which had been consolidated shortly before. Szabolcsi was partly responsible for the founding of the Hungarian-Jewish Literary Society (IMIT) and of the Hungarian-Jewish Culture Association (OMIKE). He was constantly in search of Jewish journalistic talent, and his writings served as a model for the Hungarian Jewish press.

Among his published books were *Magyar Szanhedrin* (a Talmud translation; 1878); *Olasz zsidók között* (Among Italian Jews; 1903); *Német zsidók között* (Among German Jews; 1905); and an abridged Hungarian version of Heinrich Graetz' *History of the Jews* (2 vols., 1908-9). In 1938 his *Gyöngyszemek a Talmudból és Midrasból* (Pearls from the Talmud and Midrash) was published by Ella B. Szabolcsi.

ANNA BETTELHEIM.

SZALÁRDY, MÓR (DE RÁKOSFALVA), physician and child welfare worker, b. Budapest, 1851; d. Budapest, 1914. He studied at medical schools and clinics in Vienna, Paris and London. From 1881 on he was lecturer at the University of Budapest. He advocated the state care of illegitimate children, and was one of the founders of the White Cross, a national organization of foundling homes. This institution won recognition from the government in 1898. In 1902 Szalárdy became assistant director and physician-in-chief of the state shelter for children. He was ennobled and authorized to use the name "de Rákosfalva."

He wrote medical books in three languages, including: *Zur Prostitutionsfrage* (1878); *Behandlung der Syphilis congenita* (1898); *Sterblichkeit in Säuglingsspitälern* (1899); *Les enfants abandonnés* (1900).

SZALIT, RAHEL (née **Marcus),** painter and etcher, b. Ishgenty, Lithuania, 1896. She was primarily an artist depicting Eastern European Jewish life. After studying in Munich, Paris and London, she worked successfully in Berlin until 1933. In a style that is based on vigorous, nervous lines and modern freedom of expression she transmitted the character of the Jews in Lithuania and Poland effectively. She derived her types from the work of Yiddish writers as well as from her own memories, and gave them highly original representation, with all their poor modesty, their patience in suffering, their often moving disreputable appearance and—in contrast—the ecstatic mysticism of their Hasidic fantasies that border on the supernatural.

The best of Rahel Szalit's folios were the sixteen lithographs to Mendele's *Fishke der Krummer* (1921). She also illustrated the *Hebräische Melodien* of Heine (1922), Buber's *Geschichten des Rabbi Nachman* and *Kindergeschichten,* Israel Zangwill's *King of the Schnorrers* and Sholom Aleichem's *Menshen und Zenen,* as well as some of the works of Dickens, Dostoevsky and Tolstoy.

Lit.: *Cicerone,* vol. 14 (1922) 739, 843; *Kunstblatt,* vol. 6 (1922) 503; *Kunstwanderer,* 1922-23, p. 58; 1924-25, p. 396; 1928-29, p. 470; *American Hebrew,* Sept. 19, 1930, p. 472.

SZANA, SÁNDOR, physician and child welfare worker, b. Temesvár (Timisoara), Hungary, 1868; d. Hungary, 1926. Szana wrote several books to stem the abuse of placing unwelcome babies with mercenary foster-mothers, a practice which resulted in high child mortality and juvenile delinquency. He founded at Temesvár a lying-in hospital, a foundling home and a polyclinic. His agitation for the welfare of forsaken children, together with that of another Jewish physician, Mór Szalárdy, resulted in the founding by the Hungarian state of a children's shelter at Budapest, of which he became director. In addition to writing many memoranda for the international medical press, Szana edited at Temesvár a German journal, *Gesundheit.* He embraced the Christian faith.

SZÁNTÓ, GYÖRGY, author, b. Nové Mesto nad Váhom (Vágujhely), Hungary, 1893. He studied painting, and exhibited with success at the National Salon at Budapest. A combatant in the first World War, he lost his eyesight due to a brain injury. He then turned to writing, and became one of the most popular Hungarian novelists of his time. His novels combine an intensity of passion with a strong penchant for the colorful both in action and description.

Szántó's works include: *Bábel tornya* (The Tower of Babel); *Mata Hari; Az aranyágacska* (The Golden Twig; 1935); *Utolsó hajnal, első hajnal* (Last Dawn, First Dawn); *Meléte* (1938). His somewhat autobiographical *Stradivari* was made into a motion picture by the German UFA Company, and his play *A sátoros király* was performed by the Hungarian National Theatre (1936). He was author also of a volume of poetry, *Schumannal a Karneválban* (With Schumann at the Carnival). Szántó lived at Arad, a Hungarian city under Roumanian rule.

SZÁNTÓ, SIMON, educator, author and editor, b. Nagykanizsa, Hungary, 1819; d. Vienna, 1882. He was the son of a noted scholar, Meir Szántó. He was educated in Yeshivas, at the Gymnasium at Pressburg, and at the University of Prague. In the latter city he was a student under Solomon Judah Löb Rapoport. From 1845 on he lived at Vienna, where he founded and directed a Jewish school. Subsequently he taught also at the Theologische Lehranstalt in that city. From 1864 on he was interpreter of Hebrew in Vienna courts of law, and in 1869 he became supervisor of religious instruction in Vienna Jewish schools.

Szántó was co-editor of the weekly newspaper *Neuzeit,* and for some time edited Busch's *Jahrbuch für Israeliten* and J. von Wertheimer's *Jahrbuch für Israeliten,* to all of which he contributed essays and articles. He wrote: *Botzer Oleloth* (commentary on the Pentateuch; with Joseph Szántó); *Judentum und Romantik* (1847); *Schematismus der israelitischen Cultusgemeinden in der österreichischen Monarchie* (1869); *Ibn Karmi* (1871).

EMIL SZÁNTÓ (b. Vienna, 1857; d. Vienna, 1904), archeologist, was a son of Simon Szántó. He studied in Vienna, and at a young age became lecturer of Greek archeology and history at the university of that city, following which he became full professor of classical archeology. He was considered one of the most out-

standing Hellenists of his time, and a leading authority on Greek epigraphy and Greek law.

Among his published books are: *Anleihen griechischer Staaten* (1885); *Hypothek und Scheinkauf im griechischen Recht* (1887); *Reise in Karien* (1892). Szántó also reworked and edited Boyesen's *Handbuch der griechischen Antiquitäten*. He embraced the Christian faith.

SZANTO, THÉODORE, pianist and composer, b. Vienna, 1877; d. Budapest, 1934. He was the son of a rabbi. His musical education began in Vienna; subsequently he studied also at Budapest and Berlin. Early in the 20th cent. he began touring the Continent, winning wide recognition for his consummate technique and masterly interpretation. From 1921 on he lived at Paris, and was the first national of a country opposing France in the first World War to be made an officer of the French Legion of Honor.

Among Szanto's musical compositions are the opera *Taifun* (based on the play by M. Lengyel); the symphonies *Poème religieux* and *Land und Meer;* seventeen variations on a Hungarian folk song; *Contrastes;* and transcriptions for organ of the music of Bach and Chopin.

SZARVADY, FRIGYES, publicist, b. Novisad (Ujvidék), Hungary, 1822; d. Paris, 1882. In 1847 he opened a law office at Pressburg, and in addition to collaborating on newspapers in Hungary, he wrote a series of articles on that country's struggle for liberty for the *Constitutionnel* of Paris. His articles won for Hungary the support of French circles, but especially of the French socialists, in its armed revolt against Hapsburg oppression.

When the révolt was crushed Szarvady emigrated to Germany, where he published *Auf Deutschland!,* a political pamphlet (1850), and subsequently to Paris, where he was a correspondent for the *Kölnische Zeitung* and a leader of the Hungarian political émigrés. He also acted as a trusted man of Count László Teleki, leader of the Hungarian opposition at Budapest in 1861. Szarvady was author of *Paris, politische und unpolitische Studien und Bilder.*

SZÁSZY-SCHWARZ, GUSZTÁV (DE SZÁSZ), jurist, b. Budapest, 1858; d. Budapest, 1920. He studied law at universities in Budapest and Germany, and practised law in the former city. At the same time he lectured on Roman law at the University of Budapest, and was named full professor in 1901. He collaborated on the code of Hungarian common law whose redaction began in 1895. He was made an aulic councillor (*Hofrat*) and raised to the nobility. Szászy-Schwarz was the author of numerous works on Roman law, on common and parliamentary law, as well as on codification. He embraced Christianity.

SZATENSZTEJN (SHATTON), WLADYSLAUS JOSEPH, jurist and professor of law, b. Warsaw, Poland, 1893. He received the LL.D. degree from the University of Warsaw in 1915, and subsequently became assistant professor of law at the University of Vilna. In 1917 Szatensztejn served as an expert on various phases of fiscal law to the Russian ministry of finance; after the establishment of an independent Poland he fulfilled the same role in the Polish ministry of finance (1924-26).

He was the author of many monographs and longer studies on financial legislation, and was a contributor to Russian, German and Polish journals of finance. Szatensztejn left Poland in 1939 and emigrated to the United States, where he was living in 1943.

SZATMÁR, city in northeastern Hungary. From 1919 to 1940 it belonged to Roumania. The Jewish community of Szatmár was founded in 1849 by Jews whom the city council had previously admitted only to the fairs. In 1866 a Jewish public school was founded. In 1867, following the emancipation of the Jews in Hungary, two Jews, Abraham Freund and Abraham Steinberger, were made honorary members of the city council.

While the founders of the community were Ashkenazic Jews, later the Hasidic group became very influential. Rabbis of Szatmár were Farkas (Wolf) Mandelbaum, Judah Grünwald, I. David Grünwald; (from 1928 on) Joel Teitelbaum, who was venerated as a Zaddik, and Viktor Jordán. In 1930 Szatmár had 11,500 Jewish inhabitants in a total population of 51,000. Twenty-five houses of worship were maintained, in addition to the main synagogue. Among the many philanthropic institutions, including a hospital erected in 1927, the orphanage, vocational school and loan kassa maintained by the Joint Distribution Committee were outstanding. Some of the Jews of Szatmár were prominent in commerce, industry and farming, but the great masses made a precarious living. The banker Sándor Weisz played a leading role in the Hungarian minority movement. In 1940 Szatmár was returned to Hungary. According to a report of December, 1941, the Jewish quarter of Szatmár was demolished "for reasons of public security."

Lit.: Stern, Mór, *A szatmári zsidók útja; Magyar Zsidó Lexikon* (1929) 826; *Contemporary Jewish Record,* Dec., 1941, p. 662.

SZATMÁRI, MÓR, Hungarian deputy, editor and journalist, b. Józsefháza, Hungary, 1856; d. Budapest, 1931. He studied at the Academy of Law at Nagyvárad, and adopted a journalistic career. He was connected with various daily newspapers, including the one called *Budapest,* of which he was managing editor from 1904 to 1913. From 1901 to 1910 he was a deputy in the lower chamber of the Hungarian parliament. He was one of the founders and vice-president of the Hungarian Association of Journalists.

In the columns of *Egyenlőség* and in parliament he advocated political and cultural rights of the Jews in Hungary. Among his published books are one on civil marriage (1894) and one on stormy sessions in the Hungarian parliament (1928). Szatmári edited the parliamentary addresses of Ferenc Kossuth (1908).

SZEGED, city in Hungary. Jews who had lived at Szeged under Turkish rule in the 16th and 17th centuries were expelled from the city under Leopold I (about 1688). Not until a century later, in 1781, did a Jew, Michael Hayim Pollák, settle in the city. In 1784 and 1785 several more Jewish families obtained permission to take up residence in the city. In 1787 a Hebrah Kaddisha was founded, and the Jewish community of Szeged was constituted in 1791. In the following year thirty-eight Jewish families resided at Szeged; for the greater part they were merchants and peddlers, and only a few among them were craftsmen. From 1790 on Jews began to acquire houses in the city. Subsequently, in 1813, the city council defined the territory in which Jews were allowed to own houses, but the regulation was not observed strictly. In the 1820's Jews were admitted to the guilds, and Jewish artisans became leaders in the upholsterers' and goldsmiths' crafts. From the 1850's on they devoted themselves also to farming; they played a role in the industries, and such disabilities as had been imposed upon them in commerce gave way gradually. From the 1860's on the Jews of Szeged began to play an active part in banking, insurance and commercial enterprise, and subsequently in the liberal professions.

Interior of the famous synagogue at Szeged, Hungary

The statutes of the community, redrafted in 1818, provided for a Beth Din (Jewish law court) consisting of six members, and in 1831 a communal council of thirty-one members was provided for. Synagogues were erected in 1803, 1843 and 1903; the interior decorations and stained glass windows of the latter building were designed under the direction of Immanuel Löw. The first school, which provided instruction in Jewish subjects only, was established in 1820; it was followed by a Talmud Torah and by a public school; the latter was opened in 1844. The Jewish community of Szeged also maintained (1943) a hospital and an orphanage. Among the many philanthropic societies was the Women's Society, founded in 1832. Early rabbis of the community were Yechiel (1789-90), Hirsch Bak (1790-1843) and Daniel Pillitz (1843-47). In 1850 Lipót Löw was elected rabbi, and served until his death in 1875; his scholarly review, *Ben Chananja,* made the name of Szeged known all over the Jewish world. He was followed for a brief period by Wilhelm Bacher (1876-77) and by his son, Immanuel Löw, who still held office in 1943.

The Jewish community of Szeged accepted the statutes of the National Jewish Congress in 1869. Orthodox Jews never formed a dissident community.

The spiritual and lay leaders of the Jewish community of Szeged played an important role in all civic and national endeavors. Among the presidents of the community, Izsó Rósa de Vásárhely (1882-1918) was a deputy in the lower chamber. His successor, Samu Biedl (1918-36), was one of the three Jewish members of an anti-Bolshevik committee which was founded at Szeged in the summer of 1919 with a view to opposing the central communist government at Budapest. Thirty-three Jews of Szeged were members of an officers' battalion which ousted Red troops and took over military command in the city, and the Jewish community at large contributed the means for a counter-revolutionary government which was set up at Szeged. The minister of justice in that government was a Jew from Arad, Lajos Pálmai. The nationalist army, which subsequently was under the command of Nicholas Horthy, was first organized at Szeged, and a prominent Szeged Jew, Adolf Bokor, was head of the enlistment committee. Immanuel Löw was a representative of the congressional Jewish community in the upper house from 1927 to 1940, when the Jews were deprived of representation in that chamber.

In 1920 Szeged had 7,000 Jewish inhabitants in a total population of 119,000. By 1930 the number of Jews in an increased total population of 135,000 had declined to 5,560. The direct causes of the decline were emigration, removal to other parts of the country, mixed marriages and conversions, and a death rate higher than the birth rate. The causative factors behind these symptoms were oppression of the Jewish group and the annexation of the land south of Szeged to Yugoslavia; this paralyzed the economic life of the city. In 1942, under the Nuremberg-inspired anti-Jewish laws, fifteen Jewish members of the Szeged municipal council were removed. Immanuel Löw donated his library, consisting of more than 6,000 volumes, for the greater part rare ones, to the Jewish community of Szeged. ANNA BETTELHEIM.

Lit.: Löw, Immanuel, and Kulinyi, Zsigmond, *A szegedi zsidok, 1785-1885* (1885); *Magyar Zsidó Lexikon* (1929) 828-31; issues of *Egyenlőség* (1930-40).

SZEGŐ, GABRIEL, mathematician, b. Kunhegyes, Hungary, 1895. He studied at the Universities of Budapest, Berlin, Göttingen and Vienna, the latter bestowing upon him the Ph.D. degree in 1918.

Szegő was lecturer on mathematics at the University of Berlin from 1921 on; in 1925 he was named associate professor. From 1926 to 1934 he was full professor of mathematics at the University of Königsberg. In 1934 Washington University, in St. Louis, invited him to occupy its chair of mathematics, and from 1938 on he was professor at Stanford University.

In addition to numerous memoranda to the mathematical press, Szegő published a German version of A. G. Webster's *Partial Differential Equations (Partielle Differentialgleichungen der mathematischen Physik;* 1930) and *Aufgaben und Lehrsätze aus der Analysis* (with G. Pólya, 2 vols. 1925).

SZÉKELY, BÉLA, author, journalist and communal worker, b. Bethlen, Transylvania, 1892. He took part in the founding of the Zionist daily newspaper *Uj Kelet* at Kolozsvár, and later founded the daily newspaper *5 Órai Ujság* in that city. Székely was active in Zionist work; he organized Zionist activities in Hungary, and was partly responsible for the founding of the Pro Palestine League of Hungarian Jews (1926). He was active in the Jewish National Federation of Transylvania. An association of Zionist girls, *Aviva,* which he called into being and whose president he was, enlisted members from numerous countries.

Székely was author of several volumes of verse. In addition he published: *Vajudó ország* (The Birth of a Country), a social study of Palestine; *Mittelmann,* a story on discrimination; and *Máramaros,* a social study. He founded and served as secretary to the federation of minority journalists of Ardeal-Banat (Transylvania and Banat). He was Hungarian correspondent of the Jewish Telegraphic Agency.

SZÉKELY, FERENC, economist and communal leader, b. Alap, Hungary, 1858; d. Budapest, 1936. In 1892 he became director general, and subsequently president, of the City Savings Bank, in Budapest. He was also director general, and subsequently vice-president, of the Anglo-Hungarian Bank, and president of several other banks and industrial companies. He was vice-president of the Lloyd Association of Pest, an association of leading business men. Emperor Francis Joseph I bestowed upon him the title of aulic councillor (*Hofrat*).

In 1912 Székely assumed leadership of a movement to unify the Hungarian Jews, who were split into three different groups, but the outbreak of the first World War interfered with the maturing of the plan. In the revolutionary period following the end of the war Székely served as president of the Jewish community of Pest, which he guided with tact and skill.

He was also a member of the board of governors of Országos Rabbiképző Intézet (National Rabbinical Seminary), treasurer of the Hungarian-Jewish Literary Society (IMIT), first president of the Jewish Patronage Association and president of the Pro Palestine League of Hungarian Jews. Székely contributed to the humorous magazine *Borsszem Jankó,* and created some of its imaginary figures, such as "Salamon Seifensteiner," which served to express his political satire. A prominent writer on economy, he won the prize of the Hungarian Academy with his work on the regulation of currencies.

SZÉKESFEHÉRVÁR (in German, Stuhlweissenburg; in Latin, Alba Regia), city in Hungary. In the Middle Ages it was the residence of the kings of Hungary, and coronation ceremonies were held there until 1526. A Jewish community is known to have been in existence there in the 13th cent. During the 14th cent. it was Hungary's foremost Jewish community, whose leaders were spokesmen for the Jews throughout the country. Thus in 1503 they intervened successfully in behalf of the Jews of Pressburg with Queen Anna, to whom they had presented a valuable gift at her coronation.

In 1526 a diet held at Székesfehérvár ordered the expulsion of the Jews from the country. In 1544 the city was captured by the Turks; under their domination a Jewish community flourished there. It was increased by Jews fleeing from Buda, which was repeatedly besieged by the Austrians. Following the recapture of Székesfehérvár by the Austrian troops (about 1688), the Jews were expelled, and it was not until the reign of Joseph II (1780-90) that the first Jew was allowed to resettle in the city and establish an inn for his coreligionists visiting the markets.

In 1842 a Jewish community was founded with Daniel Pillitz as its first rabbi. He was succeeded by the scholar Mayer Zipser (1843-58), who organized the community, but whose attempts at Reform resulted in violent dissension. He was followed by Joseph Guggenheim, son-in-law of Samson Raphael Hirsch (1859-61). In 1861 the community was split in two, and Székesfehérvár thus became the first Jewish community in Hungary where government permission was obtained for the Orthodox to organize separately.

Rabbi Joseph Natonek (1861-67) was followed by Alexander Kohut (1867-74), who removed to Pécs in 1874. Subsequently Jakab Steinhercz (1888-1921), Ferenc Hevesi (1921-31) and Pál Hirschler were rabbis at Székesfehérvár.

The proclamation of rights of 1848 resulted in grave rioting against the Jews at Székesfehérvár, but the government soon restored order. The progressive community erected a synagogue in 1862, and the Orthodox followed its example in 1870.

The number of Jewish inhabitants in 1930 was 2,450 in a total of 40,000. Of these only 5 per cent belonged to the Orthodox community. The Jews of Székesfehérvár contributed a large quota to commercial and industrial enterprise, to farming, to the liberal professions and even to public office. From 1938 on, however, anti-Jewish restrictive laws gradually eliminated them from all these fields.

SZELL, GEORG, conductor, b. Budapest, 1897. He was a child prodigy of the piano, touring Europe with phenomenal success when he was ten years old. After an extended period of study he abandoned the piano for the baton. In 1917 he became conductor of the State Theatre in Strasbourg, and two years later he made his first appearance at the German Theatre in Prague. After numerous engagements in important opera houses in Germany he became first conductor at the Berlin State Opera (1924), retaining this post for five years. In 1929 he was appointed first conductor of the National Theatre in Prague. When he resigned from this post (1936) Szell succeeded John Barbirolli as conductor of the Glasgow Symphony Orchestra. He also appeared as guest conductor throughout Europe and Australia.

In 1940 Szell came to the United States, making his American debut at the Hollywood Bowl. In New York city he conducted the National Broadcasting Company Symphony Orchestra (1941) and the orchestra of the New Friends of Music (1941-42). In 1942 he was appointed guest conductor of the Metropolitan Opera House, New York. He was also a teacher at the Institute of Musical Art.

SZEMERE, SAMU, educator and philosophical writer, b. Hungary, 1881. In 1927 he was named by the Hungarian government director of the national Jewish teachers' training school. He was also a member of the board of directors of the Hungarian-Jewish

Ernő Szép. From a sketch by Zoltán Gehl

Literary Society (IMIT) and, from 1929 on, editor of its year book.

His book on Giordano Bruno was published by the Hungarian Academy of Science. Other books of his include *Pedagógia és filozófia* (Pedagogy and Philosophy; 1930); *Dewey neveléstana* (The Pedagogy of Dewey; 1933); and *A művészet mint valóságértelmezés* (Art as an Interpretation of Reality; 1936). He translated classical works of philosophy in addition to lecturing and writing on Jewish philosophers. His article on Albert Einstein appeared in *Living Age* (1935).

In 1937 Szemere was named chief councillor of education. In 1938 and 1939, in the period of anti-Jewish legislation, he was an adviser to the national rabbinical seminary in the organization of special courses in education and spiritual guidance. In 1943 he was living at Budapest.

SZENDE, PÁL, sociologist and economist, b. Nyirbátor, Hungary, 1879; d. Szinérváralja, 1930. He studied history at the University of Budapest under his uncle, Ignác Acsády, as well as law. He obtained the degree of doctor in the latter science and was also admitted to the bar in 1904. From 1908 to 1918 Szende served as secretary general of the Hungarian national association of commerce and advocated suffrage and land reform as a sound basis for commercial prosperity. He also led the movement of the white collar workers and lectured to laborers. During the first World War, he took part in active combat in Galicia.

In 1917 Szende joined the radical bourgeois party which was founded by Oscar Jászi and worked for an early peace. Upon the downfall of the war government (October, 1919) he became under secretary of finance and, in the following month, minister of finance in the government of Michael Károlyi. In March, 1919, when a Communist government was formed, he resigned together with Károlyi, and emigrated to Vienna. There he formed friendships with Rudolf Goldscheider, Karl Renner and others. Living alternately at Vienna and Paris, he lectured at the Vienna socialist school in German and at the Collège Libre des Sciences Sociales in French. He also contributed to the *Leipziger Volkszeitung,* and collaborated on the League of Human Rights. At Paris he was a frequent visitor to the Socialist salon of Madame Meunard-Dorian. After the February, 1934, Revolution at Vienna, he removed to Prague where he was welcomed by President Thomas G. Masaryk. Previously, in the 1920's, Masaryk had negotiated with Jászi and Szende about the intended return by Czechoslovakia of certain territory to Hungary.

As a social philosopher, Szende held that the laws of society are those of nature. As a convinced historical materialist, he discerned tendencies of mysticism, and the quest of the absolute, which he believed to have interfered with the "reasonable" course of history. His earlier works (written in Hungarian) were critical analyses of the social set-up of his country. He also wrote several works on taxation. As an economist, he was concerned with practical problems only, believing that laws of economy are made by those in power.

In his standard work, *Enthüllung und Verhüllung, Der Kampf der Ideologien in der Geschichte,* as well as in the essay, "Soziologische Gedanken zur Relativitätstheorie," and in *Soziologische Theorie der Abstraktion,* Szende investigated the philosophical trends underlying social movements and historical events. In *Zur Krise der mitteleuropäischen Revolution* he gave exhaustion by four years of war as the cause for the return of the Central European masses to authoritarian forms of government.

SZENES, FŰLŐP, painter, b. Törökszentmiklós, Hungary, 1863. He studied at Budapest, Munich and Paris and also at the plein air school of Nagybánya, Hungary. He painted Biblical scenes, such as *Samson and Delilah, Esther,* and *Judith,* and rural landscapes and genre pictures, such as *Blessed Sunshine* and *Knitting Lesson.*

Among his portraits of Hungarian-Jewish leaders are those of *Pál Sándor* and *Vilmos Vázsonyi.* Specimens of his art are in the Hungarian state gallery.

SZENKAR, EUGEN, conductor, b. Budapest, 1891. He was the son of an organist and composer. After studying at the Budapest Conservatory he was engaged by the Budapest Opera. In 1912 he became a conductor at the National Theatre in Prague, and in 1915 he was conductor of the Volksoper in the same city. After conducting opera and symphony at Altenburg and Frankfort he was appointed general music director of the Volksoper in Berlin, in succession to Otto Klemperer (1923). He held this post for only one year, after which he was called to the Cologne Opera to become first conductor. With the rise of the Nazi regime he was forced to leave Germany. He became conductor of symphony concerts in Budapest, and was invited to direct a few guest performances with the Palestine Symphony Orchestra. Szenkar composed several large works for orchestral and chamber groups.

SZÉP, ERNŐ, lyric poet, novelist, playwright and columnist, b. Huszt, Ruthenia, Hungary, 1884. All the melancholy poverty of neighboring Polish and Ruthenian Jewry had penetrated the boundaries and was at home at Ernő Szép's native town as elsewhere in Upper Hungary. The son of a humble Jewish teacher, he drew into himself the submissive masochism of all oppressed: the poor, the Jew, the intellectual, and, above all, the child. This masochism grew with him, and became for him a companion for life, retaining the unconscious charm of childhood and tinted with a touch of self-irony with which the adult pampers the child in him. In one of his finest poems he gave utterance to a long-nurtured grief: he never had toys to play with, no hobby-horse or picture-books like the children of the rich . . ., but he would go to the Milky Way and there wait for Him who was to pass by, the Lord God, and tell him, "Lord, I haven't

played yet!" and the Lord Almighty would hear him and give him that whereof he was deprived as a child, a hobby-horse and picture-books. . . . His irony, especially in his fiction, assumes the gently teasing undertones of one who has to look *up* to everybody else, superior though he knows himself to be.

A truly Dickensian gallery of petty tyrants could be assembled from his novelettes and sketches: bullying lads, petty noblemen, petty officials and petty bourgeois, all of whom have their victims. He also introduced into literature a world of originals and freakish individuals which went unnoticed before. In his enchantingly romantic novel, *Lila ákác* (Purple Acacia), he discovered the world of acrobats and vaudevillists and, drawing upon the idiomatic treasury of the Budapest cafe and upon the slang of globe-trotting acrobats, he created for his folk a varied, colorful and flexible language. He was emulated by a host of Hungarian Jewish authors in fashioning the Magyar tongue, rhetorical or anecdotal, and rustic, for all its folkloristic sap, into an idiom of the city-dweller and intellectual.

As a poet and chansonnier he said the last word in a series of Hungarian Jewish versifiers, Emil Makai, Jenő Heltai and Andor Gábor, who outdid their model, the English and French operetta chanson, in sprightly gracefulness. His city-mindedness and intellectualism at no time obstructed the capillary system which, in the soul of Ernő Szép, communicated with the child eternal, the people. In some of his plays, such as *Az egyszeri királyfi* (Once Upon a Time There Was a Prince), he struck the key of the folk tale with no uncertain intonation. He created a play for the stage from Heinrich Heine's poem *Asra,* in an enchanted folk-tale mood. One of the many Hungarian Jewish writers who could not tear themselves away from their country, he continued to live in Hungary during the second World War.

His published books include: Selected poems: *Elalvó hattyu* (Drowsing Swan). Fiction: *Irka-firka* (Scrawl; 1913); *Hetedikbe jártam* (I Was a High School Senior; 1922); *Bűneim* (My Sins; 1927); *Valentine* (Eng. trans. Emil Lengyel, *Marriage for One,* 1929); *Ádámcsutka* (Adam's Apple; 1936); *A negyedik nyulláb* (The Fourth Rabbit's Paw; 1941). Plays: *Május* (English version, *In May,* 1925); *Patika* (Pharmacy); *Aranyóra* (Gold Watch); *Szivdobogás* (Heartbeat; 1936).

IGNOTUS.

SZEPS, MORITZ, journalist, b. Busk, Galicia, 1834; d. Vienna, 1902. He founded the *Neues Wiener Tagblatt,* and was influential with the German Liberal Party which dominated Austrian political life until 1869. The party was then defeated, yielding to a clerical-Slav coalition control of the government of Austria, and Szeps became a leader of the opposition. He advocated a Francophile foreign policy, and was opposed to the Austro-German alliance.

Vainly struggling for more than ten years against the clerical government, Szeps won unexpected help when he was presented (1882) to Crown Prince Rudolph, who shared Szeps' opinions, both in internal and foreign policy. He became political mentor and confidant of Rudolph. For seven years (1882-89) they exchanged letters every week, and met frequently.

Their correspondence and interviews were meant to remain secret, but their adversaries got wind of them, and Szeps became the target of violent attack by Austrian reactionaries. Szeps apprised the crown prince of his talks with Gambetta, Ferry and Clemenceau, while Rudolph communicated to Szeps what he learned at the court of Vienna about confidential negotiations with Bismarck and the German emperor. The crown prince even contributed anonymously to Szeps' newspaper. He especially sympathized with Szeps when the latter came into violent conflict (1884) with Georg von Schönerer, leader of the anti-Semites. The government sided with von Schönerer, and repeatedly imposed petty annoyances upon Szeps' newspaper. Szeps left the *Neues Wiener Tagblatt* (1886) and founded the *Wiener Tagblatt.*

Szeps was considered slated to be the future chief of press of the Austrian government upon Rudolph's ultimate succession to his father's throne; but all these hopes (or fears) were suddenly shattered by the mysterious death of the Austrian crown prince in 1889. Because of this, a great opportunity for Szeps and for Austrian liberalism was missed.

During the ensuing years Szeps struggled courageously, but in vain, against the increasing power of the anti-Semitic party led by Lueger. Szeps was politically defeated, but his writings were read and even admired, for he was regarded by his adversaries as a master of journalistic style and skill. Szeps had two sons and two daughters. One of his daughters married the physician Emil Zuckerkandl, the other Paul Clemenceau, brother of Georges Clemenceau.

Lit.: Crown Prince Rudolph of Austria, *Politische Briefe an einen Freund* (edited by Julius Szeps, 1922); Zuckerkandl, Bertha, *Ich erlebte 50 Jahre Weltgeschichte* (1939).

SZERENCSÉS (FORTUNATUS), IMRE, financier, who lived in Hungary in the first part of the 16th cent., before the battle of Mohács. His original name was Zalman Shneur. The son of a wealthy Jew named Ephraim, he rendered services to the dignitaries of the country. A married man and the father of two sons, he was found guilty of relations with a Christian woman, a crime punishable by burning at the stake. He saved his life by embracing Christianity. The highest dignitary of the country, Palatin Imre Perényi, was his godfather; Perényi gave him his first name and suggested that he adopt the last name Szerencsés (Fortunate).

In the following period Szerencsés was introduced to the youthful King Lajos II and to Queen Maria of Hapsburg, and became their trusted adviser. His chief protector at that time was the treasurer and chancellor, Archbishop László Szalkay, whom he served as a sort of assistant treasurer. The services of the shrewd financier were greatly welcome to the court. A powerful Turkish army was threatening Hungary. The finances of the country, through the selfishness of its nobility, had been ruinous for several decades, and the magnates, headed by János Zápolya, were scheming to strengthen their own power by weakening the king.

In 1521 Belgrade, then a Hungarian fort, fell to the Turks; the magnates blamed Szerencsés for having been slow in providing funds and arms. Szerencsés then attempted by means of inflation to raise the necessary funds for the conduct of the war. At his suggestion, accepted by the diet at Buda, the king coined currency worth only half its face value; this necessitated an increase in taxes. The partisans of Zápolya profited by the bitter public feeling against Szerencsés, and in 1525 the king was pressed to remove Szerencsés from office and have him burned at the stake. Szerencsés was imprisoned, but his influence effected his release within a fortnight.

His triumphant friends tendered him a banquet in his own house, which was interrupted by armed assault. Szerencsés and his friends escaped, but his house was ransacked and 60,000 florins in unadulterated gold were stolen from him. Next the retinue of the nobility supporting Zápolya tried to invade the residences of the king's counsellors, but these were well guarded. The soldiers and the

Joseph Szigeti

mob then turned to the Buda ghetto. The Jews of Buda, too, had soldiers in their pay; they closed the gates and defended them for twenty-four hours, after which, overpowered, they sought refuge in a tower. The mob swarmed into the ghetto street. In describing the havoc wrought there, an Italian author, then at the court, likened it to the destruction of Troy. For three days the Jews were beleaguered in their tower, after which Zápolya, satisfied with having shown his power, finally dispersed the rioters.

Szerencsés then sought the favor of Zápolya himself and of his partisan, István Werbőczy. It was easy for these men to placate the hatred which they had stirred up: two months after Szerencsés' imprisonment the diet at Hatvan ordered the copper mines to be taken out of the hands of the powerful Fuggers and turned over for management to Szerencsés, who would thus improve the country's finances. He was made vice-treasurer and a member of the government council. Having obtained control of certain taxes, he lent the treasury 10,000 florins for a relief army to be sent to Pétervárad in 1526. His last public appearance was at the diet of Rákos in that year. Dissension was ripe throughout the country, which the enemy had already invaded. The nobility had become distrustful of Werbőczy, and Szerencsés was called upon to report on the finances of his stewardship of the land. In a dramatic session of the diet he gave an account of the royal revenues and denounced the treasonable scheming of the house of Fugger and several dignitaries. Shortly thereafter he died, a man advanced in years. According to several Jewish sources, he returned to Judaism before his death.

Shortly after Szerencsés' death, the battle of Mohács (which gave the Turks and Zápolya two-thirds of the country) took place (August, 1526). This national disaster was blamed upon the Jews at large, who were expelled from the cities and remained so for the next 300 years. The hatred for Szerencsés, fanned by the enemies of the king during his lifetime, may have been one of the psychological factors in this intrigue which benefited the debtors of the Jews. Szerencsés' two sons from his first marriage, who had remained Jews, were among those taken to Turkey as prisoners.

Szerencsés is the hero of a novel by Ákos Molnár, *A hitehagyott* (The Renegade). ANNA BETTELHEIM.

Lit.: Monumenta Hungariae Judaica, vol. 2 (1938) 552, 555; *Magyar Zsidó Lexikon* (1929) 150, 845-46.

SZERESZOWSKI, RAPHAEL, banker and communal worker, b. Warsaw, Poland, 1869. His role as one of the leading bankers in the country was ramified by his multiple participation in the economic and civic life of the community, as well as by his leadership in Jewish movements. Szereszowski was a senator in the Polish Parliament from 1922 to 1927. He was six times chosen councillor of the city of Warsaw, serving from 1916 until the collapse of Poland in 1939, although his term was designated to run until 1943. In addition, he was four times made a councillor of the Chamber of Industry and Commerce, holding the post from 1927 until the end of the republic, and he was a member of the national government council for social welfare from 1924 until the end.

Among other posts that touched on every phase of Jewish communal existence, Szereszowski held that of president of the council of the Union of Merchants in Poland (1916-39), president of the Union of Jewish Cooperatives in Poland (1932-39), president of the Polish Committee of the Jewish Colonization Association (1929-39), president of the Association for the Protection of Orphans and Children (Zentos), president of the Association for the Support of Agriculture and Handicraft and of the Association for Employment. He was also a member of the council of the American Joint Reconstruction Foundation. After his flight from Poland in 1939, Szereszowski came to the United States, where he arrived in 1941. In 1943 he was living in New York city.

SZIGETI, JOSEPH, violinist, b. Budapest, 1892. After a period of study with Hubay, he was discovered by Joachim, who gave him advice and encouragement. He performed as a child prodigy in Hungary, Germany and England, and was well received. For six years he concertized in England, achieving a great reputation. Then, touring Europe, he established himself as a major virtuoso of the violin. After numerous tours, he accepted the professorship of violin at the Geneva Conservatory, succeeding Henri Marteau in this post. He held this position from 1917 to 1924. Stokowski invited him to come to the United States, and in 1925 he made his American debut.

His art has been honored. He was awarded the Legion of Honor in France, then promoted to officer. In Belgium he was made Commander of the Order of Leopold, and in Hungary he received the Officers' Cross Ordre pour le mérite. Japan gave him the Jiji Shimpo Gold Medal.

There are two types of virtuosi, those who regard music as their servant and those who regard themselves as music's servant. The first type are usually the more successful, but not always; the second type are always ranked among the noblemen of the arts.

Szigeti regarded himself as music's servant. More than any single violin virtuoso of modern times he identified himself with the new, untried and progressive, and

gave unstintingly of himself so that a significant new voice in music might be heard. The list of his advocacies is long. It includes such works as Prokofieff's first violin concerto, the Bloch concerto, the same composer's first sonata, Bartók's *Contrasts,* Ysaÿe's first sonata, and countless other compositions. Whenever a new concerto by a challenging composer was projected, one could assume that Szigeti would be sought as the first interpreter.

Add an impeccable technique, a universal encyclopedic knowledge of the standard literature (and not only the standard literature for violin), a wise and lofty concept of the function of music and the artist, which combine to create the special atmosphere that clings about the name of Joseph Szigeti among those who have had the privilege of becoming acquainted with his work. Like his countryman, Franz Liszt, Szigeti seemed destined to go down in history as a great virtuoso to whom virtuosity is a creative act and art.

SZILÁGYI, GÉZA, poet, author and journalist, b. Budapest, 1875. In 1896 he published his first volume of poetry, *Tristia,* which made a stir because, like the poetry of Baudelaire, it glorified sensual love, and resulted in public prosecution of the poet by the attorney general. On the other hand, it deeply impressed the then youthful genius, Endre Ady, whose forerunner Szilágyi is considered to be. Several other volumes of verse followed, some inspired by Biblical motives.

From 1903 to 1919 Szilágyi was assistant editor of the daily newspaper *Az Ujság.* He also edited the short-lived literary reviews *Figyelő* (Observer) and *Szivárvány* (Rainbow). He was co-author, together with Henrik Lenkei, of *Májusi fagy* (May Frost), a play produced by the Hungarian national theatre.

Among his prose writings some were of a satirical trend, such as *Lepel nélkül* (Uncloaked); *Ez Pest* (This is Budapest; 1913); and *Menny, pokol, háboru* (Heaven, Hell, War). He translated parts of the books of *Ecclesiastes* and *Job.* In 1927 he published a volume of poetry, *Szó és könny* (Words and Tears), and in 1933 a biography of the poet János Vajda, *Vajda János pokla.* From 1928 to 1934 he was Budapest correspondent of the *Vossische Zeitung* and of the Ullstein Press bureau.

SZILASI, MÓRIC, philologist, b. Szilasbalhás, Hungary, 1854; d. Kolozsvár, Hungary, 1905. He taught philology at the Eötvös College at Budapest, and in 1902 was named professor of Hungarian at the University of Kolozsvár. Szilasi was the author of dictionaries of the Vogul and Cheremiss languages, as well as of many works on Finno-Ugric comparative linguistics. A member of the Hungarian Academy of Science, he was noted for his translations into Hungarian from the classical authors of antiquity.

SZILI, ADOLF (DE SZILSÁRKÁNY), ophthalmologist, b. Pest (Budapest), 1848; place and date of death unknown. He was lecturer (from 1874 on) and associate professor (from 1895) of ophthalmology at the University of Budapest, and oculist-in-chief at the Jewish hospital of that city. In 1902 he was knighted. He published important works on the morphology of the papilla nervi optici, the disjunction of the cornea epithelium, the morphography of the optic nerve, and other subjects.

AURÉL SZILI, ophthalmologist (b. Budapest, 1880), was a son of Adolf Szili. He was professor of ophthalmology at the University of Münster, Germany.

Géza Szilágyi. From a sketch by Imre Pérely

Among other numerous works, he published *Atlas der Augenheilkunde* (1918) and *Innere Sekretion und Auge* (1928).

SZKLOVER, *see* SCHIK, BARUCH

SZNEIDERMAN, S(HEMUEL) L(EIB; pen name, A. Lubliner), writer and journalist, b. Kazimierz, Poland, 1906. In his youth he published two volumes of poetry, *Gilderne Feigl* (Warsaw, 1927) and *Feiern in Shtodt* (Warsaw, 1932). From 1927 to 1931 he edited *Trybuna Akademicka,* the periodical of the Polish Jewish university students, published in Polish, Hebrew and Yiddish. He was for many years a staff member of the literary weekly, *Literarishe Bletter,* and a founder of the poetry magazine *Shprotzungen.* In 1931 he edited the Yiddish weekly, *Paris,* in the French capital. He was a correspondent for numerous Polish, Yiddish and Hebrew periodicals in Poland, the United States, Palestine and Argentina and traveled through Europe, Africa and the Near East, later covering the Spanish civil war (1936-39). From 1938 to 1939 he edited the Johannesburg *Jewish Daily Press.*

In 1940 Szneiderman came to the United States, where he was co-editor of a work on Pinsk (*A Toisend Yohr Pinsk,* 1941). In 1943 he was associated with several Yiddish periodicals and was director of the Yiddish public relations department of the United Jewish Appeal.

He was the author of *Tzvishen Nalevkes un Eiffelturm* (1935) and *Krieg in Shpanien* (1938). In 1943 he was preparing a new book of poetry, *Der Hudson Iz Mein Eidus.* Besides making translations into Yiddish, he edited: (in Polish) *Anthology of Hebrew and Yiddish Poetry and Short Stories* (Warsaw, 1931); Bruno Jasienski's *I Burned Paris;* the Polish poet Kazimierz Wierzynski's *The Olympic Laurel;* Max Brod's novel *Adventure in Japan;* Emil Ludwig's *Stalin;* and Henry Torrès' *Campaign of Treachery.*

Lit.: Roback, A. A., *History of Jewish Literature* (1942); Hafftka, Alexander, Shipper, I., and Tartakower, A., *Zydzi w Polsce Odrodzonej;* Mukdoini, A., in *Morgen Journal* (1938); Szymel, M., in *Haint* (1936).

SZOLD, BENJAMIN, rabbi, b. Nemiskert, Hungary, 1829; d. Berkeley Springs, W. Va., 1902. In 1859 he came to the United States, and from that time to his death was rabbi of Oheb Shalom Congregation, in Baltimore. His influence was on the side of conservatism in the ritual. For this purpose he prepared a prayer-book under the title *Abodath Yisroel* (Service of Israel; 1863); it was a modified Orthodox ritual,

retaining such features as the Lechah Dodi and the Musaf service, but provided with a German translation and additional German prayers. In 1865 it was published with an English translation by Marcus Jastrow, and in 1871 in conjunction with Jastrow and Henry Hochheimer. This prayer-book was in use in over thirty congregations in the next decades, until it was finally superseded by the *Union Prayer Book*. Szold was noted also for his endeavors to maintain the observance of the Sabbath and his work for the Russian refugees.

His chief scholarly work was a Hebrew commentary on *Job* (Baltimore, 1886), the product of ten years of scholarship. His other writings, including works on the Masorah and on liturgical poetry, have remained in manuscript.

Lit.: Rosenau, William, in *Central Conference of American Rabbis Year Book*, vol. 13 (1903) 357-63; Levin, L. H., in *Jewish Encyclopedia*, vol. 11, p. 652.

SZOLD, HENRIETTA, founder of Hadassah, b. Baltimore, 1860. She was the daughter of Rabbi Benjamin Szold, an outstanding liberal and scholar. In her childhood her home was associated with the movement for the liberation of the American Negro; with the influx of Jewish immigration it became a hospice for the newcomers. While a teacher by day in one of Baltimore's fashionable schools, Miss Szold conducted one of the first night schools for immigrants in the United States. Fifty years later Mayor Fiorello H. La Guardia, conferring upon her the freedom of the city of New York, said that it was Americanization work such as that in which she had pioneered that made possible his own ascent to the mayoralty; by such work America was saved from a new slavery.

In 1892, after several years of voluntary service for the Jewish Publication Society, she became the secretary of its Literary Committee, and served until 1916. She translated, edited, indexed and proof-read scores of volumes, many of which have retained an honored place in Jewish letters. Outstanding among her translations are Louis Ginzberg's *Legends of the Jews,* Moritz Lazarus's *Ethics of Judaism* and Nahum Slouschz's *Hebrew Renaissance.* Together with Cyrus Adler, she edited the *American Jewish Year Book*. She was the only woman at the Jewish Theological Seminary of America, a member of the board of the Young Women's Hebrew Association, and one of the original members of the National Council of Jewish Women.

It is for her Zionist work, however, that she will be best remembered by history. Her first visit to Palestine was in 1909. "If not Zionism, then nothing," Miss Szold wrote from Palestine. "I am more than ever convinced that our only salvation lies that way. The only thing I admit is that I now think Zionism an ideal more difficult of realization." The rest of her life was devoted to meeting the challenge of these difficulties.

But Miss Szold was a Zionist before she had heard of Theodor Herzl. Her first Zionist address was made in 1895 before the Baltimore section of the National Council of Jewish Women. There she stressed the importance of "Zionism" to Jewish immigration problems and to the cultural and spiritual development of Judaism. She advocated the study of Hebrew. Some fifteen years later she became the moving spirit in founding Hadassah and worked toward improving health conditions in the Holy Land.

From 1912 to 1926 the history of Hadassah and the biography of Miss Szold are inseparably intertwined. In 1913 she began her tours of the United States on behalf of Hadassah. In 1917 she was charged by Justice Louis D. Brandeis, then chairman of the Provisional

Henrietta Szold. From a painting by Joseph Margulies

Zionist Committee, with the organization of the American Zionist Medical Unit for Palestine. The group, consisting of forty-four doctors, dentists, nurses, sanitary engineers and administrators, with equipment for a fifty-bed hospital, left New York in June, 1918, and arrived in Palestine three months later. In 1919 the School of Nursing, now bearing the name of Henrietta Szold, was established. Miss Szold herself arrived in Palestine in 1919. From that date to the outbreak of the second World War she "commuted" between Palestine and the United States, and visited en route most of the European centers in the interest of Zionist work. In 1926 Miss Szold was elected honorary president of Hadassah; and after that, while filling numerous other offices, she remained close to Hadassah's work: in 1933 she laid the foundation stone for the Rothschild-Hadassah-University Hospital, the plans for which she had made early in Hadassah history; in 1940 she became a member of the Hadassah Emergency Committee, formed to deal with the problems engendered by the War; in 1941, as a member of that committee, she made a survey of the needs for vocational education for girls, on the basis of which Hadassah established the Alice Seligsberg Trade School for Girls in Jerusalem.

In 1927 Miss Szold was drafted into the Zionist Executive, the first woman to occupy such a post. It was to be an "efficiency" Executive, with Harry Sacher and Colonel Frederick Kisch sharing responsibility with her. Miss Szold was given the portfolios of education and health but, in the words of Sacher, "She carried the fullest responsibility. . . . For months at a time she was left in Jerusalem the solitary representative of the Executive. Upon her then fell the burden of all departments . . . directing the political work and conducting negotiations with the Palestine Government, and adjusting relations with the Yishuv. . . . And the

Robert Szold

Yishuv had to accustom itself to take guidance and instruction from a woman." At numerous congresses Miss Szold stood out as the protagonist for the cultural and social interests of Palestine.

In 1930 Miss Szold was elected a member of the Vaad Leumi (National Council of Jews in Palestine). To her old duties was added the portfolio of social welfare. Her election helped to seal the much-debated question of woman suffrage, which was opposed by the extreme Orthodox elements of Palestine. As head of social service of the Vaad Leumi, she trained social workers for the whole country, and initiated correctional work for young offenders or problem children on educational and pedagogic lines. She brought the whole to fruition on December 21, 1941, her eighty-first birthday, in the establishment of Lemaan Hayeled Vehanoar, a foundation forming the nucleus of a children's bureau for Palestine, adumbrated in her pamphlet *The Cry of the Children.*

In 1933, immediately upon the Nazis' accession to power, Miss Szold was charged with the German youth immigration to Palestine. She was the leader of the Youth Aliyah, and supervised directly the emigration, arrival, rehabilitation, education and settlement of upward of 8,000 boys and girls from Germany and other lands of persecution.

In 1935, at the Zionist Congress in Lucerne, Miss Szold was honored by the establishment of Kfar Szold, a colony in the south of Palestine named for her by German Halutzim and Youth Aliyah graduates. In 1936 *The Nation,* in its honor roll, included "Henrietta Szold, who at seventy-five years of age, after a crowded lifetime of work in behalf of the oppressed Jews of all countries, is head of the Youth Aliyah movement. . . ." In 1940, at the Women's Centennial Congress, Miss Szold was named one of the hundred outstanding women of the world in the last hundred years. She received the honorary D.H.L. degree from the Jewish Institute of Religion in 1930, and an honorary degree in nursing from the Henrietta Szold School in Jerusalem in 1936.

Throughout her Zionist history Miss Szold was deeply conscious of the problems and obligations involved in Arab-Jewish relations in Palestine. In the summer of 1942 she joined the praesidium of Ihud (Unity), an association devoted to the furtherance of good relations between Arabs and Jews and giving adherence to the establishment of a bi-national state.

With her eightieth birthday two years behind her, she was, in 1943, in full physical, spiritual and mental vigor, a keen participant in the constructive and creative activities of the Yishub of Palestine, while maintaining closest contact all over the country with the young charges in the Youth Aliyah, whose lives, uprooted by the devastating conditions of terror and war, she helped to reintegrate and adjust. Wendell L. Willkie, on his visit to Palestine (1942), singled out Miss Szold for an extended personal call.

SZOLD, ROBERT, Zionist leader, b. Streator, Ill., 1889. He studied at Knox College, where he received the B.S., M.S. and A.M. degrees, and received the LL.B. degree from Harvard Law School in 1912. Entering the government service, he was named assistant attorney general of Puerto Rico in 1915, and left that post to become assistant to United States Solicitor General John W. Davis, holding that position from 1915 to 1919. In 1917 he was commissioned a second lieutenant in the field artillery.

Szold was long interested in the Zionist Movement, and in 1919 went to Palestine as a member of a Zionist Commission, the predecessor of the Jewish Agency Executive. Associated with Louis D. Brandeis and Julian W. Mack in American Zionist leadership, he left active leadership with the other two following the Cleveland convention of the Zionist Organization of America in 1921. He became president of the Palestine Cooperative Company in 1922, and in 1925 vice-president of the Palestine Economic Corporation. He was treasurer of the Palestine Endowment Funds, Inc., from 1922 on, and served also as director of the Palestine Potash Company, director of the Central Bank for Cooperative Institutions in Palestine, and chairman of the American Economic Committee for Palestine.

In 1930 he accepted the position of chairman of the Zionist Organization of America, and in 1931 became vice-chairman of the Council of the Jewish Agency. Known as an outstanding exponent of "Brandeis Zionism," he constantly urged a clear political objective for Palestine leading to a Jewish Commonwealth, and development of the country on a sound economic basis.

His interests turned to other fields as well. Szold was director and vice-president of the National Consumers' League for many years, president of the Edward A. Filene Good Will Fund, Inc., and director of the Amalgamated Housing Corporation, from its organization as the first cooperative under the New York State Housing Law.

SZOLD, ZIP F. (née **Falk**), Zionist and communal worker, b. Savannah, Ga., 1888. She was the wife of Robert Szold. She spent her childhood in the south, in cities whose Jewish population was negligible. Both her grandfathers fought in the Civil War, and an ancestor on her father's side was a Revolutionary soldier.

After completing her course in the Meminger Normal School in Charleston, S. C., she attended Bryn Mawr College, and upon graduation undertook social work for the Associated Charities in Pittsburgh and the Woods Run Industrial House in that city, as well

Zip F. (Mrs. Robert) Szold

as for the non-sectarian League of Friendly Service in Bloomfield, N. J. In that town, under her direction and supervision, school nursing, social centers and settlement classes were established; later she became executive secretary of the District of Columbia's Consumers' League in Washington, D. C., and subsequently, as legislative agent for the National Consumers' League, the youthful welfare worker succeeded in obtaining an appropriation for a survey of the cost of living; this survey later became an invaluable basis for minimum wage legislation. Mrs. Szold still retained her interest in the Consumers' League in 1943.

While in Washington she became interested in "sweat shop" conditions, then under investigation. In the course of testimony which she gave in this connection she created a sensation by producing an apron which she had made for a manufacturer; she had received three and a half cents for as many hours' work.

She started her service for Hadassah, the Women's Zionist Organization of America, when she assisted in establishing its junior organization in 1920. This work accomplished, she was appointed chairman of the annual convention held in Pittsburgh the following year. Although almost unknown to the general Hadassah membership, she was elected national secretary, and reelected to the same post for six years following. In 1927 she became national vice-president, and in 1928 was elected president. She served in that capacity for two years, and was later again vice-president, and chairman of the Palestine Committee, which was responsible for the conduct of the entire Hadassah program in Palestine, including the building of the Rothschild-Hadassah-University Hospital and Medical School, the group's medical center on Mt. Scopus, in Jerusalem, completed on May 9, 1939.

From 1939 to 1940 she was editor of Hadassah's official monthly publication, *The Newsletter;* in that period the circulation showed an increase of 10,000, and the editorial scope of the magazine was broadened to include subjects of general Jewish and Zionist interest, contemporary literature and the other arts.

SZŐLLŐSI, ZSIGMOND, author, journalist and bookseller, b. Tiszaszőllős, Hungary, 1872. He collaborated on leading daily newspapers at Budapest, and became one of the most distinguished publicists. He was also editor of the magazine of political satire, *Kakas Márton* (Martin, the Cock). He owned and directed one of the most important bookstores in Budapest, and was a member of the Petőfi Society.

He was also president of the art patrons' section of OMIKE (Hungarian-Jewish Cultural Association). He published several volumes of short stories in Hungarian, some of them having Jewish themes, and was also a successful author of comedy.

SZOLNOK, city in Hungary. In modern times, Jews were first permitted to settle at Szolnok in 1830. Previously, they obtained permission to visit the markets of the town which they had to leave before nightfall. In 1850 a Jewish community consisting of about fifty families was organized. The community grew steadily and attained the peak of its development before the first World War, as revealed by the census of 1920, which gives the number of Jews as 2,500, out of a total population of 32,500.

At Szolnok the Orthodox did not form a separate community, but only a separate synagogue. The rabbi of Szolnok, Kornél Heves, who ministered to the community for several decades, was an ardent patriot, a violent anti-Zionist and a poet of distinction. Among the lay leaders of the community were the justices of the court of appeal Vilmos Lippe and Lajos Török and the ministerial councillor Arnold Komor.

Jewish education was provided by a school founded in 1857 and still in existence in the 1940's and by a Talmud Torah founded in 1925. Scholarships for students proficient in Hebrew and Talmud were available.

The first World War and the ensuing revolutions adversely affected the community, which lost thirty of its members in the War. Seven Jews of Szolnok were executed by Communists as counter-revolutionaries, and three were executed as Communists by the Whites. By 1930 the community counted only 2,100 members while the general population had increased to 38,800.

For some time following the War the community enjoyed a period of comparative peace and prosperity and a culture house was dedicated in 1935.

The majority of the Jews of Szolnok were merchants, white collar workers and craftsmen; several among them played a prominent part in banking, the timber and other industries, and fifty-one were public officials. Gyula Virág, a Jewish lawyer of Szolnok, was entrusted with the defense of the women of Tiszazug who had poisoned their husbands (1931). The anti-Jewish laws of 1938 to 1942 eliminated Jews from economic and professional life, and initiated a period of fear and want.

SZOMAHÁZY, ISTVÁN, journalist and novelist, b. Veszprém, Hungary, 1866; d. Budapest, 1927. He began his career as a journalist early in life, and had success especially with his sketches, feuilletons and novelettes which appeared in most Hungarian newspapers and magazines. He wrote several plays, of which *Leánynéző* (The Suitor) and *Hófúvás* (Snowdrift) were produced by the national theatre. As a novelist and author of short stories he was the most popular writer of his time. In 1909 alone he published fifteen volumes of fiction.

Among these novels *Mesék az irógépről* (Tales of the Typewriter; 1905) was his "classic." It was transformed into an operetta twenty-two years after first being published. There was nothing specifically Jewish in Szomaházy's outlook or treatment of subject; his writings appealed equally to the Jewish and non-Jewish reader. Szomaházy was vice-president of the Authors' and Journalists' Club at Budapest.

SZOMBATHELY, city in Hungary. Its first Jewish settlers came from the neighboring Rohonc (Rechnitz). In 1930 the number of the Jewish inhabitants of Szombathely was 3,482 in a total population of 35,750. The Jewish community of Szombathely was founded in 1830, the Hebrah Kaddisha having been in existence from 1828. In 1846 there was established a school which remained in existence until the 1940's. In addition, Hebrew classes were established for high school students. The first synagogue established at Szombathely was used by the Orthodox community, whereas the congressional community erected a new and impressive building in 1880.

The community maintained various charitable institutions. Among its rabbis was Béla Bernstein, a distinguished historian, author of a history of the Jews at Szombathely in Hungarian. The majority of them were merchants, salesmen and white collar workers; a large percentage earned their living as tradesmen, physicians and lawyers.

SZOMORY, DEZSŐ, author, essayist and playwright, b. Pest (Budapest), 1869. One of the most peculiar personalities and most original talents in modern Hungarian literature, he was educated in Budapest. At one time he studied piano with Franz Liszt.

As a young man he visited Paris. Failure to register with his consulate for military service in peace time branded him, according to the laws of Austria-Hungary, as a deserter and banned him from his country. Thus he spent twenty years mostly in Paris, and partly also in London, during which time he developed the cult of the word and the phrase to a degree unknown before in Hungarian literature. Melody, carried by a mood rather than as an inherent quality of the language, became to him, if anything, more important than the purport.

When the stigma of deserter was removed from Szomory, who by then was a noted poet (1910), and he was allowed to return home, he was attacked for not writing Magyar, whereupon one of his critics remarked that he might not write Magyar, but that he certainly wrote Szomory.

Much before Joyce and Proust, he employed their associative manner in which idea blossoms forth upon idea and observation evokes memory. His short stories and even his plays are more or less just an outlet for whatever had accumulated in him for some time. The most remarkable piece of his trilogy of Hapsburg dramas, on Joseph II, is practically a monologue in four acts, wherein the philosopher-emperor pours forth, with fascinating eloquence, for hours on end, the views and sentiments of Szomory, projected back into the 18th cent. His odd fantasies and creations at times charm the soul of the listener and reader with the demoniacal power of Offenbach's *Tales of Hoffmann.*

He is maximally himself in such unconstrained, rhapsodic writings as *Párizsi Regény* (Paris Romance) and *Levelek egy barátnőmhöz* (Letters to a Lady Friend) in which his autobiographical thoughts and memories roll on with the monotonous variety of ocean waves. A singular masterpiece, evidently a sprouting of his French and English memories, is his diary of the first World War. In the heart of the Central Powers, at Budapest, while the War was going on, he chose to look at it, with no little courage, through the eyes of a British war correspondent, *Harry Russel Dorsan harctéri levelei* (Harry Russel Dorsan's Letters from the Battlefront). With every heartbeat this book breathes the West of Europe beyond Germany. Yet the bond with his own nation was a strong one; he planned a drama cycle to portray the downfall of Hungarian independence caught between inward and outward fatality, but completed only one piece, that entitled *Lajos II.*

Among his plays dealing with contemporary middle class life, a very fine one has a Jewish subject, *Péntek este* (Friday Night). In a Europe dominated by Hitlerism, Szomory continued to live in Hungary, sharing the fate of Jewish intellectuals and of those hounded for their excellence.

IGNOTUS.

SZONDI, LIPÓT, neurologist and endocrinologist, b. Nyitra, Hungary, 1893. After graduating from the medical school of the University of Budapest, he worked for some time at Vienna under Julius Wagner-Jauregg. He was head of the Hungarian state laboratory for the investigation of mental and moral deficiencies in children, and a lecturer at the academy of medical pedagogy. Szondi was among the first medical men to investigate the influence of glandular secretion on mental processes. His works are quoted as sources in many studies on psychiatry.

He founded, and edited at Budapest in the German language, a serial publication entitled *Abhandlungen aus den Grenzgebieten der inneren Sekretion,* to which European psychiatrists contributed monographs. In 1943 he was living at Budapest. Among his published books were *Schwachsinn und innere Sekretion* (1923); *A fogyatékos értelem* (The Deficient Mind; 1925); *A növés zavarai és a belső secretió* (Disturbances of Growth and Inner Secretion; 1926).

SZTERÉNYI, JÓZSEF, economist, and Hungarian public official, b. Lengyeltóti, Hungary, 1861; d. Budapest, 1939. He was the son of a Reform rabbi, Albert Stern, editor of the Hebrew periodical *Hamehakker,* and a grandson of Rabbi Fassel B. Hirsch. Young Szterényi adopted the Christian faith early in life. In 1883 he founded and edited the daily newspaper *Brassó* in Transylvania. He founded also an industrial and commercial union of Transylvania, which he served as secretary.

In the 1880's it became evident that Hungary, consisting of large feudal estates, had to be industrialized if its peasantry and middle class was to subsist; but the customs union with the well-industrialized Austria seemed an insurmountable obstacle. The problem was a vital one, for already a stream of peasant emigration to North America was draining the country. Szterényi, the young provincial editor, had a solution of his own.

In many memoranda addressed to the progressive minister of commerce, Gábor Baross, he advocated industries to process agricultural products throughout the rural districts, as well as home industries. Baross then entrusted the young journalist with the organization of the industries in the capacity of industrial supervisor, and subsequently with the establishment of craft training classes in the capacity of director-in-chief. Having joined the ministry of commerce, Szterényi, in the ensuing period, studied and mastered every problem and province of Hungarian national economy, and was his country's official representative in every international economic deliberation.

In 1905 he became undersecretary of state in an anti-Austrian administration. In that post he succumbed to the chauvinism of the Hungarian governing class and irritated the autonomous Croats by imposing the use of the Magyar language in the state railroads crossing Croatia, thereby further weakening the jeopardized cause of Magyar supremacy. In 1906 the city of Brassó elected him a deputy to the lower chamber, and he introduced legislation concerning industry and the insurance of labor against accident and sickness. Before and during the first World War his political importance kept increasing. He was made the Baron de Brassó and a privy councillor. In 1918, when the ultimate crisis of the Austro-Hungarian monarchy was taking shape, he was made minister of commerce, and won the personal friendship of the last Hapsburg ruler. The Hungarian Soviet government of 1919 imprisoned him as a "hostage of the bourgeoisie."

He represented Hungary in the League of Nations for five years and was president of the Institut International des Classes Moyennes (1929 to 1933). From 1927 on he was a member of the Upper Chamber of the Hungarian Parliament.

Szterényi published numerous articles and volumes in Hungarian, German and French, mainly on craft training, home industries and manufactures in Hungary. In 1925 he published his memoirs in Hungarian.

IGNOTUS.

SZWARC, MAREK, painter and sculptor, b. Zgierz, Poland, 1892. He studied in Cracow with the sculptor Konstantin Laszczka, and from 1910 on in Paris at the École des Beaux Arts with Antonin Mercié. In 1913 he exhibited his statue, *Eve,* in the Salon d'Automne. During the first World War he lived in Poland and Russia, and returned to Paris in 1920. He worked chiefly as a painter until 1922, when he took up sculpture again, exhibiting his embossed copper plates in the Salon des Tuileries.

Szwarc's art is distinguished by fine feeling for the material which, perhaps, is due to the Jewish tradition of jewelry. In his ornamental work harmonious play of light and shade vivifies the surfaces, modeled in a rather flat relief. His technique is similar in his histories. Their subject matter is mostly taken from the Bible, preferably from the Old Testament. His compositions are of great simplicity of form and outline. His scene is reduced to symbols. His figures are highly stylized, not natural in the proportions, yet amazingly natural in their movements and expressions. Szwarc's work recalls the religious art of the Middle Ages.

Well-known works of Szwarc are *Moses; The Birth of Eve; Descent from the Cross; Two Musicians* (1922; in the Hebrew Union College, Cincinnati); and the portrait of André Spire (1925; in the National Library in Jerusalem). He wrote the monograph *Amedeo Modigliani* (in the *Yidn Kinstler* series).

ELISABETH GUTMAN.

Lit.: Woroniecky, E., in *Polonia* (1927) 293 et seq.; Harlaire, André, in *Le Cousin Pons,* May 7, 1927, pp. 34-35; Vauxelles, Louis, "Marek Szwarc," *Les Artistes juifs* (1933).

SZYK, ARTHUR, miniature painter, illustrator and book designer, b. Lodz, Poland, 1894. At the age of sixteen he entered the Académie Julian in Paris, and in 1914 he returned to Poland, studying for a short time at the Academy of Cracow. After a short stay in his native country, he toured Mesopotamia, Syria, Palestine and Anatolia, and went back to serve in the Russian army. Later he was with the Polish army. After 1921 he lived mostly in Paris.

From his youth on, Szyk had been especially interested in book decoration; the medieval renderings of Jewish manuscript illustrators were revived by him, interpreted in a modern spirit and elevated to a masterful level. Szyk's first major work in this field was a Megillah (1923) with many illustrations and full-page plates. In 1931 he traveled to Morocco, to execute a commission from the French government for a portrait of the Pasha of Marakesh. Later he went to Geneva, where he worked on the illustrations for a project volume on the League of Nations, which remained unfinished. Then he lived in Poland, and was sent to the United States in 1934 by the Polish government. During his stay exhibitions of his work were held in the Library of Congress, in museums, and in other American galleries. On his return to Poland, Szyk spent two years on a series of miniatures depicting the history of the American Revolution; these were sent as a gift by President Moscicki of Poland to President Franklin D. Roosevelt.

Arthur Szyk

NEW YORK
RABBI GEORGE WOLF

Szyk's second major work of Jewish interest was the volume on the Jewish statutes of Kalisz (1929-32). He also painted a large number of miniatures depicting the life of Jewish and non-Jewish Poles in the struggle for freedom after the partition of Poland by Russia, Germany and Austria. His finest achievement, however, was the Haggadah (1934-37). Here Szyk, like a medieval Sofer, wrote all the texts (Hebrew, Latin and French) by hand, strewing among them a host of embellishments done in incomparable miniature detail. No description can convey the finesse of the tiny figure groups, the precious presentation of Jewish types, the perfection with which the window views of city and landscape are filled in, and the artistic assurance of the ornamentation emerging out of the script in bright colors and shimmering gold.

The Haggadah subsequently appeared in a special edition (1941) in London, where Szyk lived from 1937 to 1940. Among his other works are his illustrations to Gustav Flaubert's *Tentations de St. Antoine,* Omar Khayyam's *Rubaiyat,* Pierre Benoit's *Jacob's Well,* and Ludwig Lewisohn's *The Last Days of Shylock.*

A different expression of his talent, utilizing the keen realism and precision of his miniatures with individual and grotesque effect, are his powerful caricatures. Szyk had already begun to work in this field during the Polish-Russian battles following the first World War. When he moved from London to the United States in 1940 he began a series of war satires which grew in force and wit, and which were incorporated in *The New Order* (1941). In 1943 he was a caricature contributor to the New York *Post* and a designer of covers for *Collier's Weekly.* Szyk won various awards in the United States, Poland and France. His works were exhibited in many leading cities in America (1943).

T

TAANACH, ancient city of the Canaanites which, after the conquest by the Israelites, lay in the territory of the tribe of Manasseh west of the Jordan. It was close to the scene of the victory of Deborah and Barak over Sisera (*Judges* 5:19) and near Megiddo, with which it is frequently associated. Solomon made the two cities the capital of one of his districts (*I Kings* 4:12), and they are mentioned in the lists of Thothmes III (15th cent. B.C.E.) and Sheshonk (10th cent. B.C.E.) of Egypt and in the Tell el-Amarna letters. Taanach was evidently a frontier fortress of some power. The site was excavated by Sellin in 1902 to 1904; he found the remains of four towers, one of which he ascribed to the time of Solomon. The discoveries included some letters of the Amarna period and an altar of incense (reproduced in vol. 1, p. 211) notable for the heads of animals depicted along its sides. Others hold that it is not an altar, but a brazier.

TAANITH ("fasting"), ninth tractate of Moed, the second division of the Mishnah and Talmud. It consists of four chapters, the first three of which deal with the regulations as to fasting, particularly the fasts that are decreed because of the failure of the rains. They discuss such topics as when such fasts are proclaimed, the public observance of such fasts and the prayers that are recited on these occasions, and the occasions on which the Shofar is sounded. The fourth chapter takes up a number of related topics, such as a description of the Maamadoth, or deputations of laymen, who are mentioned in 2:6, the feast of the woodbringing on the 15th of Ab, the events that happened on the 17th of Tammuz and the 9th of Ab, and the observance of mourning during the month of Ab. It closes with a description of the betrothal ceremonies on the 15th of Ab and Yom Kippur.

The Tosefta to the tractate has three chapters and serves to elaborate on and to explain the Mishnah. There are Gemaras to the tractate in both Talmuds; these contain much Haggadic material, including stories of saints who brought about rain by their prayers, the tale of Onias who slept seventy years, and accounts of Bar Kochba.

TABACHNIK, AVROHOM, Yiddish poet and essayist, b. Nizhne Olitchedayev, province of Podolia, Russia, 1903. He grew up in the village of Kanatkovetz, where his family made its home. He graduated from a commercial school in Mohilev-Podolski, and in 1921 emigrated to the United States.

His poems and critical essays were published in *Failn* (edited by M. Shtiker, A. Shtoltzenberg and Tabachnik himself), *Tzukunft, Freie Arbeter Shtimme, Massn, Brikn, Signal* and *Bodn. In Sheid,* his book of verse, was published in New York in 1936. His critical appraisal of Zisho Landau, entitled *Der Man fun Lied,* was published in 1941. Among his most important critical essays, which had not yet been published in book form up to 1943, were: "Vegn Lamed Shapiro" (in *Failn,* 1931); "Stil un Stilistn" (in *Signal,* 1935); "Vegn Yoisef Rolnikn" (*ibid.,* 1936); "Vegn Moishe Nadir" (in *Bodn,* 1938).

Tabachnik was one of the most significant representatives of neo-impressionism in American Yiddish literature. The shadowy, ethereal and precious impressionism, the escapism evidenced in the poetry of two generations ago, were transformed in his verse into substantial descriptions stressing the reality of illusions as evidenced in daily life.

Lit.: Rivkin, B., in *Tzukunft,* July, 1936; Niger, S., in *Der Tog,* Nov. 8, 1941; Minkoff, N. B., in *Yiddisher Kempfer,* Aug. 29, 1941.

TABARI, SAHL AL (Sahl of Tabaristan, on the Caspian Sea), 9th cent. astronomer, mathematician and physician. He translated the *Almagest* of Ptolemy into Arabic, and was the first to note the refraction of light. He is said to have been so popular among the students that he was forced to hold his lectures out-of-doors because the existing auditoriums were of inadequate size. His son Ali became a convert to Islam, was made private physician to the caliph, and was the teacher of two Arab medical authorities, Razi and Auzarbi.

Lit.: Graetz, H., *History of the Jews,* vol. 3 (1927) 146; Steinschneider, M., *Die arabische Literatur der Juden,* 23-24; Münz, I., *Die jüdischen Ärzte im Mittelalter* (1922) 8, 141.

TABERNACLE (*mishkan, 'ohel mo'ed*). According to the tradition preserved in the Torah, the Tabernacle was a portable sanctuary which could be taken apart and put together again and which served as the place of worship for the Israelites during their wandering through the wilderness. Moses received the directions for the building of the Tabernacle directly after the revelation from Sinai; the work was done by Bezalel, Oholiab and a number of assistants, who prepared the material for the Tabernacle and manufactured the numerous vessels and utensils which it required. The description of the shape and structure of the Tabernacle is found in *Ex.* 26, 27 and 35 to 38. It was a structure of boards, thirty cubits long, ten cubits broad and ten cubits high; it was provided with columns and curtains, and was surrounded by a court one hundred cubits long and fifty cubits wide.

The underlying boards of the Tabernacle were made of acacia wood and overlaid with gold; the inner walls were covered with veils, and the roof of the house consisted of veils, curtains and animal hides. The entrance, which was to the east, had a special curtain of its own. Inside there was a dividing wall, made of curtains which separated the Holy, an anteroom which was twenty cubits long, from the Holy of Holies, the inner shrine which was ten cubits long. In the anteroom there stood the table of the showbread, made of acacia wood, overlaid with gold; on this were placed the twelve cakes of the showbread. There were also the seven-branched golden candlestick (Menorah) and an altar for incense overlaid with gold. The only object in the inner shrine was the Ark of the Covenant. This shrine

was to be entered only once a year, by the high priest on Yom Kippur.

In the forecourt, before the door to the Tabernacle, stood the sacrificial altar, made of acacia wood overlaid with brass; on its four corners there were four horns. Between the altar and the Tabernacle there was a bronze laver for the ritual washings of the priests. The framework of the house and all its utensils were portable, and explicit directions were given as to the manner of their transportation.

The Tabernacle was completed in about six months, and was formally dedicated by Moses, who anointed all the vessels with an oil compounded from myrrh, cinnamon, calamus and cassia. Soon afterward "the cloud covered the tent of meeting, and the glory of the Lord filled the tabernacle" (*Ex.* 40:34), so that Moses was not able to enter the Tabernacle. From that time on the cloud always surrounded the Tabernacle as long as the Israelites were encamped; it was at the same time the visible evidence of the presence of God in the sanctuary and the guide for their journeys through the wilderness. "Whenever the cloud was taken up from over the Tabernacle, then after that the children of Israel journeyed onwards; when the cloud settled down, the children of Israel encamped. As long as the cloud rested on the Tabernacle, they remained encamped" (*Num.* 9:17-18). The Tabernacle is expressly mentioned only a few times after the completion of the wandering through the wilderness (*Josh.* 18:1; 19:51; *I Sam.* 3:2). The Ark, which is very closely connected with it in the description in *Exodus,* occurs as a completely separate shrine elsewhere. The Tabernacle is not heard of after the destruction of the sanctuary at Shiloh, and it is not even mentioned in the account of the dedication of the Temple of Solomon, which was expressly supposed to replace it.

This disappearance of the Tabernacle from the Biblical narrative as soon as it passes from the twilight of the early period to the full light of history has led many scholars to doubt the historicity of the Tabernacle in the form in which it is described in the Pentateuch and at the same time to cast doubt upon the credibility of the accounts of the worship conducted in the Tabernacle, and of its highly organized and numerous priesthood. To this argument others, based on practical considerations, are added. Was it possible, say the critics, for a structure as elaborate and made of such costly materials to have been assembled by the Israelites, in view of the simple living conditions of a nomadic people? This is all the more likely when one considers that the whole structure of the Tabernacle, together with its elaborate system of priests and Levites, disappears as soon as the people cross the Jordan into Palestine proper, and there is no trace of any such organization for centuries. These and similar considerations have led scholars to reject the Tabernacle story as such and to create a theory of their own, which has been best formulated by Wellhausen.

According to this theory, the description of the Tabernacle is connected with the latest stratum of the Pentateuch, the Priestly Code. It has nothing to do with the Temple of Solomon, but is a projection, upon the period of the wilderness, of the ideas about a centralized cult which developed during the period of the Babylonian Exile and afterwards. At this period the old ideas of local sanctuaries and a voluntary or appointed priesthood, chosen from all the people, had been replaced by the doctrine of a single sanctuary and of a separate priestly caste, supported by the services of the Levitical caste. To give this new doctrine an air of authenticity, it was made an old one by transferring it to the period of the wilderness and describing as historic all the institutions of the new period, such as the functions of the high priest, the division of priests, Levites and Israelites, and the sacred vessels. Thus the Tabernacle is the model, not of the Temple of Solomon, but of the Second Temple, although it was never intended to be an exact replica.

However, there still is a historical nucleus at the basis of the accounts of the Tabernacle. The oldest document of the Pentateuch, the Kenite Document (*K*), speaks of a tent in which Moses received revelations from God, and which was placed outside of the camp. Whenever there was any question which had to be referred to God, Moses would enter this tent to take counsel of Him. There God spoke to Moses face to face, while a pillar of cloud at the door of the tent prevented any one else from entering (*Ex.* 33:7-11). It is on the basis of this original narrative, which rings true to the conditions of a nomadic people and of the earliest representations of Moses, that the Priestly Code erected its elaborate narrative of a portable sanctuary adorned with all the trappings of the later Temple and, like it, made the center of the cult; it transferred a later ideal to the period of the wandering in the wilderness and to the time of Moses and Aaron.

TABERNACLES, FEAST OF, *see* SUKKOTH.

TABLE (*shulhan*). Tables were used in the Temple as places for the showbread (*Lev.* 24:6), for the sacrifices (*Ezek.* 40:39-43) and for the lights (*II Chron.* 4:8). There was also a table in the synagogue upon which the Torah was unrolled in preparation for its reading; it stood either in the Almemar or in the estrade in front of the Ark. It served as a place on which the lamps might be placed as well and where those might stand who recited the benedictions over the Torah. In some cases the cantor (Hazan) recited the prayers at the table. As a rule such tables were of wood and without adornment, since they were covered with a cloth. An exceptional table is that of the old Schul at Worms, which is elaborately carved. Stone tables came into use in some larger synagogues in modern times; the Cluny Museum has an example of this from Modena with elaborate carving of Gothic design. In modern synagogues pulpits are often provided with a wooden board on hinges which can be raised so as to convert it into a table for the reading of the Torah.

TABLES OF THE LAW,[1] called also "tablets of the Law" (in Hebrew, *luhoth haberith, luhoth ha-'eduth*), according to Biblical tradition the two stone tablets upon which were engraved the ten laws, the Decalogue, which God had spoken to Moses and Israel on Mount Sinai, and which constituted the basis of the covenant established there between the deity and the people. After the laws had first been pronounced orally by the deity, Moses ascended the mountain at God's command in order to receive the written and permanent record thereof. According to *Ex.* 32:15-16, these tables had been fashioned by God and God had likewise Himself inscribed the ten laws upon their two sides. But when Moses, after spending forty days upon the mountain in the presence of the deity, returned to the camp and found the people engaged in the worship of the golden calf, in his indignation he dashed the tables to the ground and shattered them. Later, however, after the people had been purged of their sin, Moses was commanded by the deity to ascend the mountain again, bringing with him a new set of tables, which he was to make himself, upon which the

[1] This article is written entirely from the viewpoint of Bible criticism.

deity would write once more the words which had been engraved upon the first tablets (*Ex.* 34:1-5). Moses, of course, obeyed and thus received a second set of tables, which he brought back to the camp and deposited in the Ark of the Covenant (*Deut.* 10:1-5). According to *I Kings* 8:9, these tables were the only things in the ark, and were there at the time of the dedication of the Temple. It was the presence within the ark of these tables of the covenant which gave to the ark its name, the Ark of the Covenant. This is practically all that the Bible tells about these tables.

Behind this tradition, as may well be presumed, lies a historical background of great importance. It should be noted in the first place that these Biblical references to the tables, few though they are, came from four different sources. The oldest account, that in *Ex.* 32:15-16 (Elohist writer), tells that the tables had themselves been fashioned by God and that the writing was also His. The Priestly tradition in *Ex.* 31:18 tells practically the same thing. According to the Jahvist tradition, however, in *Ex.* 34:1-5, Moses fashioned the tablets, while the deity merely inscribed the laws upon them. The Deuteronomic tradition (*Deut.* 10:1-5) repeats this tradition. But according to a second Jahvist tradition (*Ex.* 34:27-28), Moses not only fashioned the tablets, but actually inscribed the laws upon them, although at the command of the deity. There is likewise much uncertainty with regard to the laws which were actually inscribed upon the tablets. According to most of the traditions, it was the Decalogue in the form recorded in *Ex.* 20:2-14 and repeated, with minor variations, in *Deut.* 5:6-18. But according to *Ex.* 34:27-28, it seems to have been the little group of ritual laws recorded in verses 14 to 26 which were inscribed upon the tablets. Moreover, the oldest of these Biblical references to the two tables comes at the earliest from the 8th cent. B.C.E., and the youngest probably from the 5th or the 4th cent. B.C.E.

But while there are no older traditions and Biblical records of these tables, there are older and more illuminating records of the ark, in which, according to the tradition, the tablets were deposited. We know that the ark was originally the cult-object or fetich of the tribe of Ephraim, in the early days of primitive, nomadic Semitic religion, even before the time of Moses, and at the time when this tribe, along with other kindred tribes, forced its way out of the desert and established itself in Central Palestine. The ark was looked upon either as itself the tribal deity or, more likely, as containing the tribal deity. In all probability within the ark was a sacred stone, or perhaps two sacred stones, betyls (*beth 'el,* literally "house of God"; cf. *Gen.* 28:22), in which the tribal deity was thought to dwell. After the ark had been captured by the Philistines, and then later had been brought up to Jerusalem by David (*II Sam.* 6) and deposited in the national sanctuary which he had set up there, the original significance of the ark and its contents gradually yielded to the steadily growing influence of the developing national cult of Yahveh. In consequence the tradition of the ark and its contents underwent a far-reaching modification. The tradition persisted that there were two sacred stones within the ark, but sacred now, not because a tribal deity was thought to dwell in them, but because they were inscribed with the laws which Yahveh, the national God of Israel, had revealed to the people and which constituted the basis of the covenant between Him and them. This is the tradition found in the Biblical records. But even within the Biblical tradition the degree of sanctity of the tables seems to have been gradually reduced. The oldest Biblical tradition told that not only did God inscribe the laws upon them, but He had also actually made them Himself. A younger form of the tradition told that Moses made the tables at God's command, but that God inscribed the laws upon them. A still later form of the tradition told that Moses not only made the tables, but also himself inscribed the laws upon them, although at God's express command. In post-Exilic Biblical literature the name "tables of the testimony" superseded the older name "tables of the covenant," just as the name "ark of the testimony" superseded the name "ark of the covenant."

The Haggadah and Cabala, as was natural, make frequent reference to the tables of the covenant and elaborate the Biblical tradition in various ways. According to the Babylonian Talmud (*B.B.* 14b), not only were the second tables deposited in the ark, but also the fragments of the first tables. These last were regarded as the holier. JULIAN MORGENSTERN.

Lit.: *See* under ARK OF THE COVENANT.

TABOO (also **TABU**). The word "taboo" is derived from a Polynesian word meaning to prohibit, or that which is marked intensively with the implication of sacred, dangerous or unclean. The notion of taboo is widespread among primitive peoples. Underlying the rituals of avoidance are the elements of spiritism or animism with the fear of the "mana" or spirit that is believed to reside in sacred places, persons and things. As a result of this belief, there developed an elaborate system of prohibitions concerning foods, beverages, and the like, as well as precautionary regulations regarding sacrifices, sacred animals, firstlings and first-fruits, priests, kings and other objects and persons, rules of sex life, theological notions of divine punishment and the institution of sacred harlotry.

With the advance of social development, these taboos are conventionalized, rationalized and sublimated to meet the higher standards of progressive societies. The prestige of priest, prophet and king, the role played by witchcraft, the treatment of the stranger, the fear of the corpse, the mourning rites, marriage ceremonies, the sacredness of trees, rocks and other places where theophanies are supposed to have occurred—all the folkways of the prelogical and pre-scientific age are closely allied with the theory and practice of taboo. Survivals of these early conceptions are transformed by the growing logical, moral and esthetic faculties of mankind. Legal and moral codes, liturgical symbols and theological dogmas owe much or little to these early ideas of "danger-holiness."

There are but few primitive taboos in the Bible. That contact with "holy" things leads to physical disaster is found in the following: "And He smote of the men of Beth-shemesh, because they had gazed upon the ark of the Lord" (*I Sam.* 6:19-20). There is no moral turpitude involved in the precaution taken by Uzzah to keep the ark of God from falling. "And when they came to the threshing-floor of Nacon, Uzzah put forth his hand to the ark of God, and took hold of it; for the oxen stumbled. And the anger of the Lord was kindled against Uzzah; and God smote him there for his error" (*II Sam.* 6:6-7).

The Biblical taboos have come down to us under various guises of rationalization, but their primitive origins are unmistakable. Frazer has shown the beneficent role of superstition in the life of primitive society. It has often protected life and property and has safeguarded the interests of the family and the state. "It has done this by furnishing the ignorant, the weak and the foolish with a motive, bad though it be, for good conduct. It is a reed, a broken reed, which

has yet supported the steps of many a poor erring brother who but for it might have stumbled and fallen" (Frazer, *Psyche's Task*).

Needless to say, there is another side to superstition which is neither beautiful nor beneficent. With the growth of ethical religion in Israel under the influence of the prophets these taboos were given a new meaning and function. These changes are evident in the codes. "Ancient societies," says W. R. Smith, "imposed the death penalty on the impious, such as the violation of holy things, without waiting for the god to vindicate his own cause" (*Religion of the Semites,* 162). The penalty imposed upon Achan is a case in point (*Josh.* 7). On a higher moral level is the law to take the murderer "from Mine altar, that he may die" (*Ex.* 21:14).

A good example of rationalization appears in the exclusion of the Ammonite and the Moabite from "the assembly of the Lord even unto the tenth generation . . . because they met you not with bread and with water in the way, when ye came forth out of Egypt" (*Deut.* 23:4-5). If this exclusion is based upon an ancient grievance, then other enemies of Israel, such as Amalek and Midian, should have been included. In naming Ammon and Moab with sexual defectives who are likewise to be shunned, the Bible gives an example of a primitive sex taboo which is later justified on historico-political grounds. In *Gen.* 19 it is related that the progenitors of these two tribes were the offspring of incestuous relations between Lot and his two daughters. These earlier interdictions are explained on rational premises. When old reasons become obsolete, religious piety turns to supernatural authority to confirm folkways and beliefs. A good example of sublimation is given in the explanation of the primitive taboo of iron. "And if thou make Me an altar of stone, thou shalt not build it of hewn stones; for if thou lift up thy tool (*harbecha,* "sword") upon it, thou hast profaned it" (*Ex.* 20:22; Singer, Jacob, *Taboo in the Hebrew Scriptures,* 61-62).

To those who see the unity of the human spirit and grasp the meaning of man's quest for the Eternal, these pathetic errors and feeble gropings of primitive man are landmarks on the highway of progress. Israel's contribution lies in the sublimation of these early avoidances, based on fear, and their transformation into rules of conduct which serve moral and spiritual ends. The separation of Israel from the nations implied no racial superiority, but makes him serve as "witness" to the God of all the earth. Amos and Isaiah and other prophets ever stressed this ideal. The commandments were given "to purify mankind," as Maimonides phrased it. The legal system of the Pharisees and the later rabbinical codes enumerate prohibitions based upon the theological belief in revelation. The Written and the Oral Law afford proof to show that a similarity in practice between a "thou shalt not" and a taboo of primitive peoples is differentiated in theory, to the effect that the Jewish prohibition rests on a higher theological conception. "Religious sentiment under the guidance of enlightened thought has been constantly occupied with setting aside the irrational restrictions which were imposed upon men by earlier unenlightened thought" (Toy, *Introduction to the History of Religion*). To the historian the development of early fears and their transformation into ideas of reverence and moral scruples indicate the spiritual growth of man. Our progenitors groped and erred and stumbled, but in struggling with the riddle of the universe and in trying to resolve its origins they blazed the way for man's quest of the true, the good, the beautiful and the holy. JACOB SINGER.

Lit.: *Encyclopaedia Britannica,* article "Taboo"; Hastings, James, edit., *Encyclopaedia of Religion and Ethics,* vol. 12 (1922) 181-82; Frazer, J. R., *Kinship and Marriage in Early Arabia;* Webster, H., *Rest Days;* Singer, Jacob, *Taboo in the Hebrew Scriptures* (1928).

TABOR, a limestone mountain situated northeast of the Jezreel plain about five miles east of Nazareth; it rises to about 1,870 feet above sea level. It forms a striking landmark, and in ancient times, when it was completely wooded, it must have been especially beautiful. It is therefore mentioned by the Psalmist (*Ps.* 89:13) as the sign of God's might and in *Jer.* 46:18 as the sign of His magnificence. The reference to a net spread on Tabor in *Hosea* 5:1 is obscure. It was near Tabor that Deborah and Barak drew up their troops in preparation for the battle with Sisera (*Judges* 4:12-16). In a later period the mountain was used as a fortress, and was one of those which were conquered by the Romans in Galilee (67 C.E.). The Arab name of the mountain is Jebel el-Tur.

TÁBORI, KORŃEL, author and journalist, b. Szolnok, Hungary, 1879. He was a war correspondent in the Russo-Japanese War and the first World War. After the collapse of the Austrian Empire he published Kossuth's letters which had been guarded among the secret papers of the imperial archive.

Tábori wrote prolifically about detective and police work, and edited a detective review. The large number of his published volumes includes travel books and a series of monographs on police work and the world of crime. He also wrote several books for the information of foreigners visiting Hungary: *What Interests Englishmen in Budapest* (1926); *La Reine du Danube* (1927); *Prominent Foreigners about Hungary* (1932).

TABORI (pen name **TABOR**), **PAUL,** author and translator, b. Budapest, 1908. Tabori was the author of *Real Hungary* (2nd ed., 1941); *Nazi Myth; the Real Face of the Third Reich* (1939); *A Wreath for Europa* (1942; published in England under the title *Epitaph for Europe*); *Sneeze on a Monday* (1941); *Ragged Guard* (1942).

Tabori was also the translator of Zsolt Harsányi's *Star-Gazer* (1939) and *Lover of Life* (with Willa and Edwin Muir, 1942). He translated from Norwegian Edvard Welle-Strand's *Fledgling Gull* (1941). He translated into Hungarian works of Theodore Dreiser, J. B. Priestley and Aldous Huxley. In 1943 he was living in London, where he edited an anthology of free Hungarian authors.

TAFT, WILLIAM HOWARD, 27th President of the United States, b. Cincinnati, Ohio, 1857; d. Washington, D. C., 1930. He was admitted to the bar in Ohio in 1880. Before his election to the presidency of the United States for the 1909 to 1913 term, Taft had served as United States Circuit Judge, on the 6th circuit (1892-1900), as professor and dean of the law department of the University of Cincinnati (1896-1900), as the first civil governor of the Philippines (1901-4), and as secretary of war in President Theodore Roosevelt's cabinet (1904-8).

Taft's Cincinnati origin brought him personal familiarity with Jewish life. Isaac M. Wise was a friend of his father's, and of Taft's as well. The Taft family

William Howard Taft

attended a church across the street from Wise's Temple, and there was an occasional interchange of ministers for a sermon. In a letter to Isaac M. Markens, Taft once spoke of his family's friendship with Wise and of his acquaintanceship with other Jews from Cincinnati and elsewhere. Taft's nomination for the presidency on the Republican ticket in 1908 came at a time when the Czarist Russian government was handicapping Jews holding American passports. In his letter accepting the nomination, Taft insisted that the United States government take steps to prevent any prohibitions being imposed on any United States citizens anywhere, regardless of creed. Writing to Jacob H. Schiff in August, 1908, Taft reiterated his promise that action would be taken, and he voiced it again in several of his campaign speeches. His inaugural address (March, 1909) included a statement that the United States government "should make every effort to prevent humiliating and degrading prohibition against any of our citizens wishing temporarily to sojourn in foreign countries because of race or religion."

Conditions remained unchanged, however, and in February, 1910, the American Jewish Committee addressed a letter to the President pointing out that concessions in favor of their Jewish citizens had been obtained from Russia by certain European powers. The interpretation of these concessions was subsequently disputed by the State Department. Not long afterward Mayer Sulzberger and Jacob H. Schiff discussed the passport problem, among others, with Taft, and in May, 1910, a conference was held with Taft, Secretary of State Knox, W. W. Rockhill, Ambassador to Russia, Mayer Sulzberger, Jacob H. Schiff and Cyrus Adler. This was again followed by a memorandum signed by Sulzberger, Schiff and Adler. In February, 1911, resolutions were introduced in both the House of Representatives and the Senate calling for the abrogation of the treaty of 1832 with Russia, and in December of that year the treaty was finally abrogated.

One of Taft's first acts as President was to offer the Embassy post in Japan to Oscar S. Straus, who refused it but who later became American Ambassador to Turkey.

Toward the end of his term (January, 1913), Taft was the recipient of a memorandum from Louis Marshall, president of the American Jewish Committee, dealing with the London peace conference that followed the end of the Balkan War. Marshall cited a precedent of 1878 to show that the United States, though not a participant in the conference, would be justified in insisting that equal rights be guaranteed to the Ottoman Jews who had come under Greek, Bulgarian, Serbian or Montenegrin control as the result of the Turkish defeat. Oppression of the Jews, wrote Marshall, would swell the immigrant tide to the United States, and was therefore a concern of this country's. The discussion of Jewish disabilities in the Balkans was later carried on with Taft's successor, Woodrow Wilson.

Between his retirement from the presidency in 1913 and his appointment as Chief Justice of the United States Supreme Court in 1921, Taft on several occasions displayed his concern for Jewish rights in the United States and other countries. An article published in the *National Geographic Magazine* in July, 1919, "Progressive World Struggles of the Jews for Civil Equality," was provoked by the Russian and Roumanian impositions of disabilities of the time. Quoting Mirabeau's suggestion that Jews could be made full contributors to a state only by being granted full economic and cultural rights, Taft further offered proof of the patriotism and the military prowess of Jews as evidence of their justifiable claim to complete equality. In April, 1919, he addressed the 30th annual meeting of the Central Conference of American Rabbis at Cincinnati, speaking in advocacy of the League of Nations. In December, 1920, in a speech before the Chicago B'nai B'rith, Taft attacked the then extant anti-Semitic campaign of the *Dearborn Independent*. He exposed the falsity of the *Protocols of the Elders of Zion*, and deflated the charge that Jews were capitalists by pointing out that many of them lived in poverty. About conditions in the United States he said:

"There is not the slightest ground for anti-Semitism among us. It is a vicious plant. It is a noxious weed that should be cut out. It has no place in free America and the men who seek to introduce it should be condemned by public opinion."

TAGIN, *see* JOT AND TITTLE.

TAGLICHT, ISRAEL, rabbi, b. Brezova, Slovakia, 1862. He studied at the University of Berlin (Ph.D., 1887), was ordained in 1889, and for several years held the pulpit in a small community in Moravia. In 1893 he was called to Vienna, where he served as a rabbi for over four decades. After the death of David Feuchtwang (1936) he was appointed chief rabbi of Vienna. When the Nazis annexed Austria (March, 1938) he suffered many hardships; despite his age, he was compelled to picket Jewish stores with a placard warning passersby to make no purchases from them. Finally he managed to emigrate to England, where he was living in 1943.

Taglicht's writings include: *Die Kuthäer als Beobachter der Gesetze* (1888); *Die Pflichten des jüdischen Seelsorgers der Jetztzeit* (1893); *Ruth, ein Zeitbild* (1897); *Die vier Kelche* (1901); *Die Pflichten des Besitzes* (1901); *Die ältesten jüdischen Volksschulen* (1901); *Eltern und Kinder*

(1901); *Grab- und Gedenkreden* (1907); *Die angeblichen Wurzeln des Judenhasses* (1908); *Juden und Judentum in der Darstellung Werner Somharts* (1911); *Nachlässe der Wiener Juden im 17ten und 18ten Jahrhundert* (1917); *Die Dattelpalme in Palästina; Die geographischen Namen aus der Tschechoslowakei und dem Burgenlande in den jüdischen Quellen* (1925); *Die hebräische Publizistik in Wien* (with Bernhard Wachstein and Alexander Kristianpoller; 1930); *Nachträge zu den Nachlässen* (1937).

TAHANUN (plural, Tahanunim; called also Tehinnah), term employed originally to mean a supplication, and then extended to mean a supplicatory prayer, or petition for grace. Both the name Tahanun and the content of the Tahanun prayer are derived from the prayer of Daniel (*Dan.* 9:3-19); as in the case of the prayer of Daniel, most Tahanunim are concerned with a confession of one's own sins and sinfulness. In the Temple at Jerusalem, during the Priestly Blessing (the Birkath Kohanim), the people who were present at the sacrificial service prostrated themselves to the ground and prayed. This falling to the ground (prostration, hence the name *nefilath 'apayim,* "falling upon one's face" for prayer) was retained for a long time in the recitation of the Tahanun; at a later period the bowing of the head was regarded as sufficient.

Originally the Tahanun was a private prayer, and was, for this reason, entirely in the hands of the individual and had no fixed text. Naturally, therefore, many psalms or groups of Biblical verses arranged in the form of a litany were utilized for the Tahanun. In the course of time, the Tahanun became a component part of the congregational prayer for the Morning Service (Shaharith) and for the Afternoon Service (Minhah) daily, with the exception of the New Moon days (Rosh Hodesh), the month of Nisan, the days before the high holy days, Hanukah, Purim, and many other days possessing a festive character. In the case of all such days, the Tahanun is omitted from the Minhah service of the evening before. The text of the Tahanun, too, gradually came to be a fixed one, but still varies considerably in the various rituals in use today. In the German and Polish prayer-books *Ps.* 6 and the verse group Vaanahnu Lo Neda form the nucleus of the Tahanun.

On Monday and Thursday, which have been fast days from of old, the Tahanunim are increased in number, especially through the reciting of the Vehu Rahum, popularly called "the long Vehu Rahum," a simple yet fervent composition formed from Biblical phrases and containing complaints against persecutions and a prayer for the forgiving of sins. New plaintive prayers, whose authors are unknown, were added to the Tahanunim with the increase in the anti-Jewish persecutions. All the prayers which follow the Tahanunim, up to the conclusion of the Morning Service, are reckoned as belonging to this group, although they do not belong to the Tahanunim.

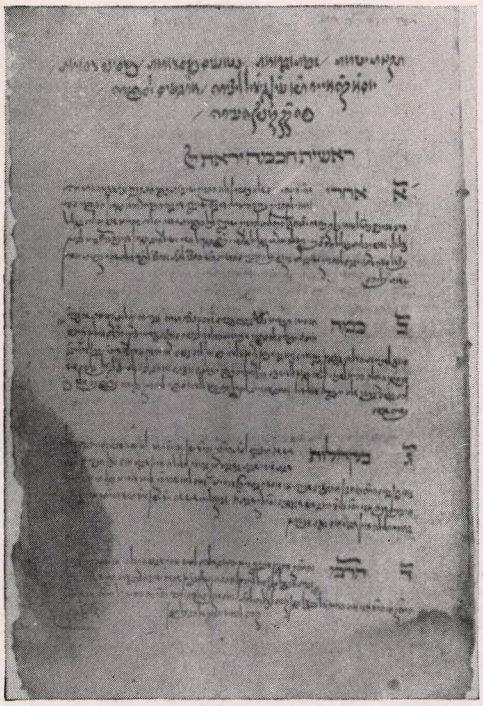
TAIROFF, ALEXANDER YAKOVLEVICH, theatrical director, b. 1885. His first stage appearance as an actor was in 1905, but a few years later he turned to directing. In 1914 he founded the Kamerny Theatre at Moscow, his first production being *Famira Kifared,* a poem by Anensky. In his first period, up to 1924, Tairoff devoted himself to formal art. He broke with the usual method of presentation, dividing his stage with architectural constructions; hence his method was called "constructivism." He believed that scenic representation had to be dramatic, filled with gestures, music, dance, light and color. He used this approach in presenting plays by Calderon, Goldoni, Scribe, Rostand and Oscar Wilde.

This "unsocial" approach was not suited for Soviet Russia, and Tairoff turned to plays which were closer to life and realism (1924). These included such pieces as Ostrovsky's *The Storm,* George Bernard Shaw's *St. Joan,* and Walter Hasenclever's *Antigone.* But a still more socialized point of view was demanded by the times, and in 1929 Tairoff began a new period with *Natalia Tarnova,* based on Soviet life. The latter staging was not a success, and it was only gradually that he was able to apply his staging methods to new Soviet plays. In 1933 his production of Vishnevsky's *Optimistic Tragedy,* based on an episode of the Russian Civil War, won enthusiastic approval.

In 1937, when the Realistic and Kamerny Theatres were merged, Tairoff was retained as director. Among his productions which won continued success both before and after this time were: Flaubert's *Madame Bovary;* Janek's *The Macropoulos Secret;* Eugene O'Neill's *Hairy Ape, Emperor Jones* and *Desire Under the Elms;* Filimnoff's *Gold;* Gorky's *Children of the Sun.* After the Nazi invasion of Russia in 1941 Tairoff put on productions in regions of the Soviet Union east of the Ural Mountains.



He was honored with the titles of People's Artist of the RSFSR and People's Artist of the USSR. He wrote *Notes of a Producer* (1924), explaining his plans for the theatre.

TAKKANOTH (singular, Takkanah, from the Hebrew root *tikken,* "to fix," "prepare," "remedy"), ordinances or statutes issued by Jewish communities, assemblies or outstanding leaders. The Takkanah was an effective instrument in adapting Jewish law and life to meet new and unprecedented situations arising out of the continually changing conditions of living. It provided Jewish law, as its etymology indicates, with a medium to remedy any inequitable or obsolete statutes or modify laws and procedures which were no longer tenable and were burdensome. The Takkanah supplemented and even revised the traditional law, which might be inadequate to meet new situations and problems arising out of changing social and economic standards. The Takkanah was usually enacted in the spirit and on the basis of the traditional law, but it sometimes became necessary, in view of existing conditions, to set the traditional law aside (*B.M.* 112b). Each successive generation enacted Takkanoth which were designed to meet the particular problems of its day. Thus the Takkanah becomes an important historical source for the study of the social and economic forces which created it.

The Talmud introduces many Takkanoth with the remark that they were enacted to help maintain cordial relations and peace among the people (*Git.* 59), protect women and children or promote the conduct of business (*B.K.* 114b). Many Takkanoth whose origins were obscure and unknown were ascribed to as early a person as Moses and to the early prophets. Among the better known and important Takkanoth are those of Simeon ben Shetah, who enacted the ordinance of compulsory attendance at school. Hillel enacted a Takkanah, the Prosbul, to prevent business from being handicapped by the law that the Sabbatical year automatically cancels current debts. Gamaliel I enacted Takkanoth

First page of Takkanoth in the minute-book of a congregation

relating to divorce. Johanan ben Zakkai also enacted many Takkanoth which deal mainly with problems of calendation and Temple ritual (*R.H.* 29b; 30; 31).

During the Hadrianic persecution (132-38), when the condition of the Jews was intolerable and it was almost impossible to observe Judaism, Akiba, Tarfon and Jose the Galilean ordained that one might violate Jewish laws and practices when his life was endangered except laws concerning chastity, murder and idolatry.

About the middle of the 2nd cent. the Sanhedrin moved to Usha, and there it enacted some Takkanoth which were of social and ethical import. They provided that a father must support minor children and should not be harsh with recalcitrant children under twelve years of age.

With the collapse of the Babylonian academies and the decentralization of authority which followed in its wake, the Takkanah assumed greater importance. The new western communities were confronted by new problems and varying conditions of living. The complexities of a developing communal life subjected to new and different environmental pressures again demanded a set of new statutes and a reapplication of the traditional law to meet these new situations.

The Takkanah throughout medieval and until modern times served to create these new ordinances. Synods consisting of delegates from many communities under the direction of some outstanding and recognized authority convened and discussed their common problems and created Takkanoth to meet the various situations. In addition, each community created its own Takkanoth for its specific use.

The medieval Jewish community was a community within a community, with autonomous government, and the Jews were dealt with as a corporate group rather than as individuals. As problems which were not anticipated in earlier laws presented themselves, Takkanoth were enacted to regulate each new situation. The Takkanoth of each community were similar in many respects, since they were promulgated on the basis of Talmudic law. They would, however, vary where the situation demanded specific regulations to meet a particular local condition, or where there was no Talmudic precedent for a required ordinance. The Takkanoth were enacted by the community council, which usually consisted of seven elders and a lay leader and the rabbi. Some Takkanoth were voted upon by the householders of the community in order to be confirmed and accepted. The Takkanoth were enforced by the threat of a lesser excommunication, fines, and denial of privileges. They were usually recorded in the community register as they were enacted from time to time, and sometimes would be assembled and compiled in one pamphlet or book.

The Takkanoth embraced every phase of life and gradually became a religious and civil code of practice and procedure. The affairs of the entire community were governed on the basis of the Takkanoth. Business practices, the apportioning of the taxes levied by the ruler, the social and religious behavior of the people, the philanthropic system, were all prescribed in detail by various Takkanoth. The Takkanoth regulated the external as well as internal affairs of the community. It was very important for the welfare of the community that the individual Jews conduct their affairs on a high standard in order to maintain their respect and peace with the non-Jewish community. Sumptuary laws regulating the expenditures of Jews for food and clothing were enacted in detail, in order to avoid the envy of the non-Jewish community and prevent social competition within the community. Thus the Takkanoth are a valuable historical source for the social, political and economic development of the Jewish community, for they reveal in detail the intimate facts of Jewish life.

During the 12th cent. and thereafter synods were held under the direction of the outstanding rabbis of the age and created Takkanoth for large sections of Jewry. The most widely known Takkanoth which gained widespread acceptance are those of Gershom ben Judah of Mayence, who was known as Rabbenu Gershom, the "Light of the Exile." Two of his most important Takkanoth proscribed the marrying of more than one wife and prohibited the compulsory divorcing of a woman against her wish. Rabbenu Tam (Jacob ben Meir) also convened synods which dealt with similar problems and particularly with the relations of Jews and the government. Another synod, consisting of the communities of Speyer, Worms and Mayence, enacted a number of Takkanoth and revised some of the earlier ones which were consequently known as Takkanoth SHUM (from the initials of the names of the three cities in Hebrew). Many synods were held throughout the 13th and 14th centuries and dealt with the problems confronting the Jewish communities. In Spain and Italy synods also produced Takkanoth for the guidance of their Jewries.

The Council of the Four Lands, which functioned from 1580 to 1764, enacted numerous Takkanoth affecting the life of Polish Jewry. These synods dealt with many problems, among them the apportioning of taxes levied on the Jewish communities, marriage and divorce, particularly the problems of Levirate marriage, the Agunah, and the relationship between Jew and non-Jew.

TAL, TOBIAS, Netherlands chief rabbi, b. Amsterdam, Holland, 1847; d. The Hague, Holland, 1898. He received his education at the rabbinical seminary of Chief Rabbi Joseph Hirsch Dünner (1862-74) and the University of Utrecht (D.D., 1874). After serving for a short time in Amsterdam he became chief rabbi of Gelderland, with his residence at Arnhem (1881-95); he was then called to The Hague as successor to Chief Rabbi Samuel Berisch Berenstein. He did much to further the religious life of the Jewish community, although his "modern" views led to clashes with several members of the synagogue board.

Tal wrote many theological and historical essays, the most noted of which was that on the bridges of The Hague, some of which had been built with Jewish capital. He used unpublished documents from the royal archives for his *Oranjebloesems uit de Gedenkbladen van Nederlands Israel,* issued on the occasion of the coronation of Queen Wilhelmina in 1898. During 1880 and 1881 he had a notable controversy with Professor Van Oort of the University of Utrecht concerning the ethical value of the Talmud.

JUSTUS TAL (b. 1879), son of Tobias Tal, was also a rabbi. In 1915 he was made chief rabbi of Utrecht, and was particularly active in fostering a better knowledge of Judaism among non-Jews and in work for prisoners. He contributed to many periodicals, and became known for his controversy with Professor Bolland of the University of Leyden on the ethical values of Judaism. He was in Utrecht at the time of the Nazi invasion in 1940, but his whereabouts were not known in March, 1943.

Worshipper wrapped in the Tallith at his private devotions. From a painting by Klodt

A latterday Tallith of simple design

TALISMAN, *see* AMULETS.

TALLITH, a sort of cloak with fringes worn by Orthodox Jewish men and boys above the age of thirteen when reciting the prayers. The word, which is perhaps derived from the Greek *stole,* is used in the Talmud and Midrash for a bed sheet or any sheet-like garment as well as for the prayer-shawl itself. The Tallith is of rectangular form, of varying sizes, but with the longer side about 1⅓ to 1½ times as long as the shorter side. Worshippers generally choose a Tallith which, when open, would reach a little below their knees. The two shorter sides of the Tallith are provided with fringes (*tzitzith*); the four at the corners are thicker than the others and provided with knots. Originally the fringes were dyed blue; but a dispute arose as to the exact shade, and it was decided that they should be white thereafter; however, there is frequently a blue or a black stripe in the white of the Tallith. The preferred material is wool, but silk is frequently used, especially in modern times. On the top part is a band, where the garment meets the neck; this is often embroidered in silver or gold thread.

The worshipper dons the Tallith before he begins his prayers, at the same time pronouncing the benediction: "Blessed art Thou. . . . Who hast commanded us to wrap ourselves in the Tallith." In ancient times and with many Jews still today, it was the custom literally to wrap one's self in the Tallith, even covering the head; in modern times, however, the Tallith is often folded and placed around the shoulders, with the fringed part hanging down in front. When not worn by the worshipper, it is usually kept in a special bag, often embroidered with designs.

It is a frequent custom to kiss the Tallith in token of reverence before putting it on. Worshippers often touch the Tallith to the Scroll of the Law as it is borne in procession or to the passage in the Law over

which they recite the benediction and then kiss it. as a gesture of reverence for the Law.

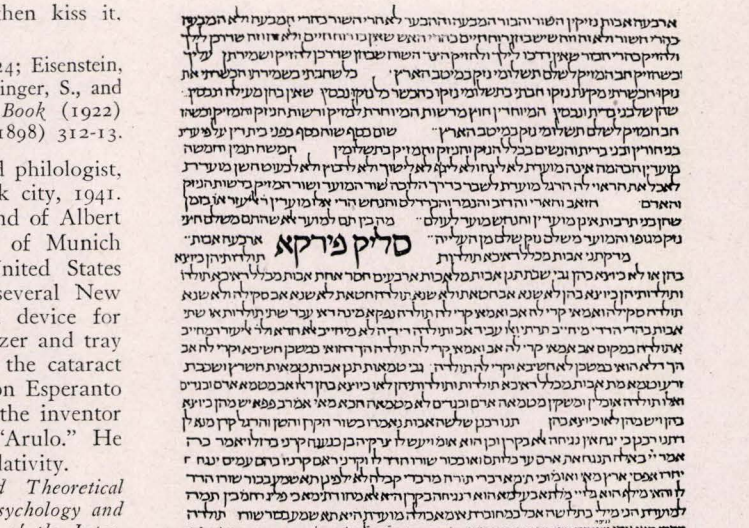
TALMEY, MAX, ophthalmologist and philologist, b. Tauroggen, Russia, 1869; d. New York city, 1941. As a youth he was an instructor and friend of Albert Einstein. He studied at the University of Munich (M.D., 1894), and emigrated to the United States (1895), where he was connected with several New York hospitals. In 1910 he invented a device for ophthalmic operations, consisting of sterilizer and tray and a special hook for the expression of the cataract from the eye. Talmey was an authority on Esperanto and other "international" languages, and the inventor of the "Gloro" language, formerly called "Arulo." He was also a popularizer of the theory of relativity.



Talmey's writings include: *Practical and Theoretical Esperanto* (1906); *Psyche, or a Treatise on Psychology and Psychiatry* (1910); *Ido, Exhaustive Textbook of the International Language of the Delegation* (1919); *Filogloglaia Temi Egardenda En Logikala Linguo* (1923); *Arulo or Gloro* (1925); *Lexikologio di Arulo, Sugestioni* (1927); *Relativity Theory Simplified and the Formative Period of its Inventor* (1932).

TALMUD. The Talmud consists of two distinct parts: the Mishnah and its commentary, the Gemara. The Mishnah, compiled and edited by Judah Hanasi about 200 C.E., was the first Jewish code of laws since the Torah. There are two Gemaras, known as the Babylonian and the Palestinian. The former, completed about 500 C.E., is the record of the discussions of the Babylonian scholars on the laws and teachings in the Mishnah; the latter, completed about 400 C.E., is a similar record of the discussions of the Palestinian scholars. The Mishnah plus the Babylonian Gemara is known as the Babylonian Talmud; the Mishnah plus the Palestinian Gemara is known as the Palestinian Talmud. The two Talmuds have always been printed separately, and never together. The teachers mentioned in the Mishnah from the time of the death of Hillel (10 C.E.) to its completion (about 200 C.E.) are called Tannaim; the teachers mentioned in the Gemara are known as Amoraim. A few later teachers who added comments to the Talmud (6th and 7th centuries) are known as Saboraim ("reasoners"). The rabbis who interpreted the Talmud are known variously as Geonim if they were heads of academies, and Posekim ("deciders").

1. The Mishnah. The Mishnah contains the essence of the Oral Law as it had been handed down from the time of the Bible. It is divided into six divisions known as *sedarim* ("orders") as follows:

1. Zeraim ("seeds"). Agricultural Laws. 11 tractates.
2. Moed ("appointed times"). Laws of Festivals and Fasts. 12 tractates.
3. Nashim ("women"). Laws on Marriage, Divorce, Vows and the Nazirite. 7 tractates.
4. Nezikin ("damages"). Civil and Criminal Law. 10 tractates.
5. Kodashim ("holy things"). Laws Pertaining to the Temple Service. 11 tractates.
6. Toharoth ("purity"). Laws of Purity and Impurity. 12 tractates.

There are altogether sixty-three tractates, each of which is divided into chapters and subdivided into paragraphs. An individual paragraph is called a Mishnah in the Babylonian Talmud and a Halachah in the Palestinian Talmud. The Talmud is often referred to as the "Shas," an abbreviation of the Hebrew *shishah sedarim* ("six orders").

Page of a Talmud manuscript (1184) from Gerona in the Hamburg City Library, showing the first page of the tractate Baba Kamma

Some of the tractates of the Mishnah, such as *Middoth, Tamid, Kinnim, Yoma* and *Shekalim,* which deal with details of the Temple service, were compiled probably at the end of the 1st cent. C.E.; those such as *Kelim* and *Uktzin,* which treat the laws of ritual purity and impurity, had been already set down substantially in their present form about seventy-five years later. The tractate *Eduyoth* was compiled in 70-90 C.E., and other sections were added at the beginning of the 2nd cent. The original framework and division of the Mishnah was made by Akiba; it was filled out and amplified by his pupil, Meir. After the time of Akiba, all the most important scholars compiled Mishnahs of their own. This process continued until Judah Hanasi decided to eliminate the confusion arising from conflicting sets of Mishnahs by compiling an authoritative Mishnah. He made use of all previous Mishnah collections, especially that of Meir.

There is a division of opinion among scholars as to whether the Mishnah was committed to writing by Judah Hanasi himself or by the Saboraim early in the 6th cent. It seems very probable that at least individual sections of the Mishnah were immediately written down, at least for private use. It is believed that Judah Hanasi in his later years issued a slightly revised edition of the Mishnah. A few minor additions were made after Judah Hanasi's death.

The statements in the Mishnah are either given anonymously, or as the opinion of the sages (*hachamim*) or of an individual teacher. An anonymous Mishnah is always regarded as authoritative, unless a different opinion of the sages is given, in which case the latter prevails. In many instances conflicting opinions of individual rabbis are cited without any preference being indicated by Judah. As a rule, each tradition is quoted in the exact words of its author.

The language of the Mishnah is Neo-Hebrew, a form of Hebrew developed in the period of the Second Temple. There are some Aramaic roots and grammatical forms. The vocabulary contains numerous loan words from Greek and

Latin, generally in referring to objects and utensils for which there were no Hebrew terms. A grammar of Mishnaic Hebrew was published by M. H. Segal.

The best edition of the Mishnah is that of Romm in Vilna. Manuscripts of the Mishnah containing important variants were published by W. H. Loewe (1883) and G. Beer (1930). There are also extant a few manuscript fragments of the Mishnah with the so-called Babylonian superlinear vocalization; some of these may date back to the Gaonic period. The Harry Fischel Institute in Jerusalem undertook to prepare a scientific edition of the Mishnah; by 1942 only the first page or two had been issued in a prospectus. H. J. Kassowsky compiled a concordance of the Mishnah (2 vols., Frankfort, 1927). Herbert Danby rendered the entire Mishnah into English, with notes (Oxford, 1933); certain tractates have been translated into Latin, German, Russian, French, Dutch, Italian and Yiddish. The principal commentaries are listed in TALMUD COMMENTARIES.

2. The Palestinian Talmud. Toward the middle of the 4th cent. C.E. the scholars of Caesarea in Palestine made a short digest of the civil law in the form of a Gemara to the first three tractates of the fourth division, Nezikin. This digest is distinguished by its brevity and its fidelity to the subject matter. Soon afterward (351) Ursicinus, in reprisal for local outbreaks, punished the cities of Tiberias, Sepphoris and Lydda, which were the seats of the most prominent Palestinian academies. At this time Christianity began to be dominant and it was soon evident that, between political and religious persecutions, the academies would be obliged to suspend their activities or at least to curtail them drastically. In great haste the scholars of Tiberias, the preeminent academy, with the assistance of scholars from other seats of learning, completed the redaction of the Palestinian Talmud toward the end of the 4th cent.

Medieval tradition credits Johanan bar Nappaha (d. about 280) with the authorship of the Palestinian Gemara. This tradition is partly true, for Johanan, the greatest scholar and teacher of his generation, started to gather the various Tannaitic traditions and trained his many pupils in systematic research, assigning to each a special field of activity. It was also in the Tiberias academy over which Johanan presided that the work of compilation was finally completed.

Since the Gaonic period the Palestinian Talmud has been known under the following titles: Talmud, or Gemara, of Eretz Yisrael; Talmud, or Gemara, of Bene Maaraba (the West); Talmud Yerushalmi (of Jerusalem). The latter is most frequently used for it, although strictly speaking it is a misnomer. The Gemara was not compiled in Jerusalem; Jerusalem is used here as a synecdoche for Palestine.

The Palestinian Gemara covers the first four divisions of the Mishnah, and the first three chapters and a few lines of the fourth in the ten chapters of *Niddah*. Although the last four chapters of *Sabbath* and the last chapter of *Makkoth* are no longer extant in present editions of the Palestinian Gemara, certain quotations in medieval authorities indicate that these five chapters, as well as the seven remaining chapters in *Niddah*, were once in existence, but have been lost in the course of time. It is agreed by all scholars that there never was any Palestinian Gemara to the sixth division, Toharoth, which deals with laws that were no longer in effect in the Diaspora. A number of medieval authorities, however, claimed that there was originally a Palestinian Gemara to the fifth division, Kodashim. This does not seem very likely in view of the fact that no fragments of such a Gemara have ever been found.

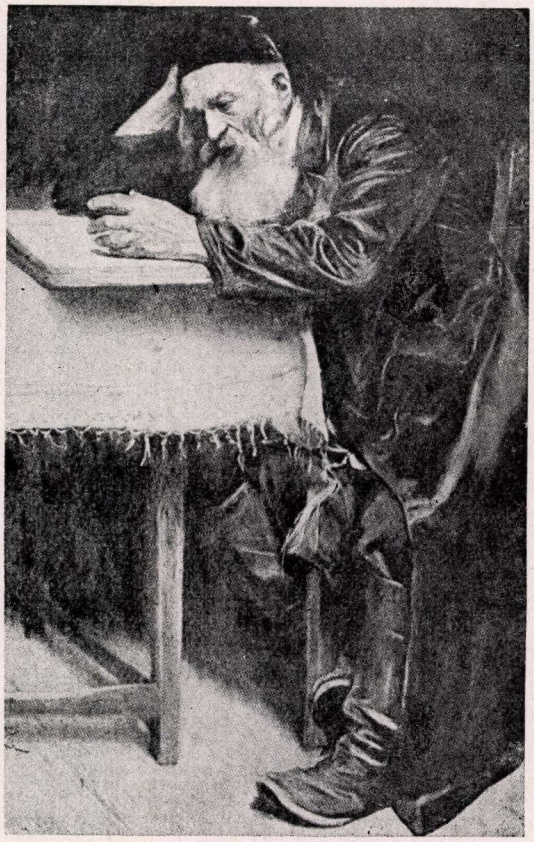
In 1907 to 1908 Solomon Friedlander published the tractates *Hullin, Bechoroth, Zebahim* and *Arachin* (of the fifth division) of a supposed Palestinian Gemara from a manuscript which he refused to submit to inspection and which was supposedly dated at 1212. Although this was accepted as genuine by some scholars, it was soon exposed as spurious and was shown to be merely a collection of statements from the Babylonian Talmud with relevant portions of the Palestinian Talmud and other rabbinic works, with the wording and spelling changed slightly to give the work an air of originality.

The Palestinian Talmud was first printed in its entirety at Venice in 1522 to 1523. The next edition (Cracow, 1610) was a reprint of the Venice edition with a short commentary in the margin. This Cracow edition was reprinted in Krotoschin in 1886. The next editions were at Zhitomir (1860-67), Piotrków (1899-1900), and the Romm edition at Vilna (1922), reprinted in 1926 together with a supplementary volume of commentaries (*Tashlum Yerushalmi;* Vilna, 1928). The Venice edition was reproduced in photo-offset in Leipzig (1925). The Horeb publishing company in Berlin issued octavo India paper reproductions of a late edition (1929), and the Jonas Verlag of Leipzig did the same for the Cracow-Krotoschin edition (1932). There have also been numerous editions of individual tractates or groups of tractates with various commentaries. The Jerusalem Talmud has been translated into French (by Moïse Schwab, 11 vols., 1871-90) and into Latin.

The only complete manuscript of the Palestinian Talmud is that found in Leyden, Holland; this was one of the four manuscripts used for the first edition. Louis Ginzberg published Genizah fragments and a Vatican manuscript covering most of the first order and *Sotah* in his *Yerushalmi-Fragments* and *Ginze Schechter*. The Vatican manuscript was further discussed by Saul Lieberman in his *Al Hayerushalmi*.

The Palestinian Talmud has had a very unfortunate fate. It was not used much during the Gaonic period, and the first scholar to use it extensively was Hananel ben Hushiel (d. 1050). Copies of it were very rare, especially in France and Germany, where the early Tosafists did not possess it in its entirety, but merely had selections or abridgments of it. Viktor Aptowitzer has shown that the Franco-German scholars of the 12th and 13th centuries had a special work, entitled *Kobetz Hayerushalmi* or *Sefer Hayerushalmi,* which contained either parts or all of the Palestinian Talmud, with supplements from the Babylonian Talmud, the Midrash collections, the Gaonic writings and other unidentified sources.

There are a number of passages which are quoted by medieval sources as derived from the Palestinian Talmud which are not found in the present editions. These quotations are usually from the *Kobetz Hayerushalmi* and similar works, or else from Midrash collections such as the Midrash Rabbah and the *Tanhuma* which, having been compiled in Palestine, were called "Yerushalmi." Some of these quotations can be traced to the incompleteness of our editions, to scribal omissions, or to deliberate falsifications. Michael Higger assembled all these passages in his *Otzar Habaraithoth* (vol. 2, New York, 1939, pp. 227-358).



The present text of the Palestinian Talmud is in a very corrupt condition. The scribes who copied it did not hesitate to emend it when its meaning was beyond their comprehension, and this was much too frequent because of the extremely succinct style and unfamiliar language of the text. This difficulty of the text led to an increase in such ordinary scribal errors as confusion between similar letters, omission of words, skipping of lines, and misunderstanding of abbreviations. B. Ratner (*Ahabath Tziyyon Viyerushalayim,* 1901-17) collected the quotations that had been made by medieval authorities from the Palestinian Talmud. As these authorities often quote from memory or in the form of a paraphrase and as Ratner did not always use the first editions of these medieval sources, his corrections must be used with extreme caution. In 1941 Louis Ginzberg issued the first part of a monumentally comprehensive commentary on the Palestinian Talmud. The first three volumes cover the first four chapters of *Berachoth*. Other scholars active in research on the Palestinian Talmud include Zacharias Frankel,

[6] Also known as Mashkin.
[7] Also known as Shehitath Kodashim.
[8], [9] The Palestinian Gemara to Shekalim and Horayoth is printed in most of the later editions of the Babylonian Talmud.
[10] The Talmud refers to 60 tractates of the Mishnah. The difference between this and the 63 of the present Mishnah is due to the fact that Baba Kamma, Baba Metzia and Baba Bathra originally formed one tractate, known as Nezikin, and Makkoth was the last section of Sanhedrin.
[11] Number of tractates.

An Old World figure engrossed in the study of the Talmud

Abraham M. Luncz, Israel Lewy, Israel Daiches and Saul Lieberman.

The Palestinian Talmud is written in Hebrew and Western Aramaic. Its style is very terse and concise, and two words are often telescoped into one. Of the approximately 750,000 words in this Talmud, about 15 per cent are in the field of Haggadah.

3. The Babylonian Talmud. After the death of Judah Hanasi certain scholars believed that his Mishnah should have included more material, and the Tosefta was one of the main works created to fill this need. It follows the division of the Mishnah into tractates, and is divided into chapters and paragraphs. It contains much supplementary material, especially in the field of Haggadah. The many Tannaitic statements which were not included in the Mishnah, Tosefta or the Halachic Midrashim were called Baraithoth ("extraneous") and were gathered and studied in their relation to the Mishnah by the Amoraim of such famous Babylonian academies as Sura, Nehardea and Pumbeditha.

The Amoraim devoted their main efforts to explaining and expounding the Mishnah. They endeavored to trace the origin of the laws back to the Bible, to reconcile apparent contradictions between the Mishnah, Tosefta and Baraithoth, and to interpret the laws to meet new conditions. These discussions of the Amoraim were usually not written down, and they soon grew to such an enormous bulk that certain scholars found it necessary to make partial compilations of this material for their own convenience. Tradition declares that Ashi (d. 427), with the able assistance of Rabina, was the first to sift, clarify and edit this accumulated material. His aim was a twofold one: from the legislative point of view he desired to create an authoritative legal code; from the educational standpoint he found it of great importance that the material be systematized and rendered easily accessible to the student. Although Ashi went through the material twice, he did not succeed in completing the work which he had set out to do, and it was left to other scholars, the chief of whom was Rabina bar Huna (d. 499), to fill in the gaps, add new material, and make certain changes in the arrangement. With Rabina's death the Talmud was closed except for the finishing touches by the Saboraim (6th and 7th centuries), who made certain minor additions, as well as frequently indicating the final decision in cases of conflicting opinions.

Julius Kaplan, however, is of the opinion that it was not Ashi but the Saboraim of the late 5th and 6th centuries who actually edited the Talmud. The latter made use of Ashi's notes, since these were the most comprehensive, well-reasoned and authoritative of all such compilations. This theory is lent color by B. M. Lewin's discussion of the many passages in the Talmud definitely Saboraic.

More recently Abraham Weiss attempted to prove that the Talmud in its present form represents the accumulation of a number of layers of Gemara, the earliest being near the beginning of the Amoraic period and the later ones being added by succeeding generations. He regards as the main authors of such layers: Judah ben Ezekiel (d. 299) in Pumbeditha; Rabbah, Joseph, Abaye and Raba; Papa (d. 375) and Huna bar Joshua of Nares; Ashi in Sura, and the last Amoraim, such as Rabina bar Huna (d. 499) and Assi.

Although there were a number of editions of single tractates of the Talmud from 1484 on, the first complete edition was published in Venice in 1520 to 1523. Some of the subsequent editions, such as the Basel edition of 1578 to 1581, were severely mutilated by the censor, while others, such as that of Amsterdam of 1644 to 1648, were relatively free from the censor's touch. The standard edition is that of Romm (Vilna, 1886 et seq., usually twenty or more folio volumes).

The pagination of the first edition of the Talmud, which contained the commentaries of Rashi and the Tosafoth, has been retained in all subsequent editions, facilitating references to the Talmud. A one-volume edition of the Talmud, containing over 2,000 pages of small print, was published in 1913. Other interesting editions of the Talmud include an edition of *Gittin* with a vocalized text (Vilna, 1906), a Hebrew translation of *Berachoth* by J. Frumenetz (1928), a punctuated edition of *Berachoth* by Borenstein (1932), and the two India paper octavo editions issued by the Horeb publishing company (Berlin, 1925) and by the Jonas Verlag (Leipzig, 1932). A goodly number of the passages deleted by the censor from the Babylonian Talmud and its commentaries have been gathered and printed at various times; the best such collection is the *Kebutzath Hashematoth*.

The only complete manuscript of the Talmud is that of Munich, written in the middle of the 14th cent. and published by Strack in facsimile in 1912. One of the main reasons why no other complete manuscript has survived is the bigotry of medieval Christendom, which often consigned entire cartloads of printed and manuscript Talmuds to the flames. One of the oldest manuscripts is a fragment of *Pesahim* published by W. H. Loewe in 1879; Loewe ascribes this to the 9th or 10th cent.

A collection of all the variants to the Talmud found in the various manuscripts was made by Raphael Rabbinovicz (*Dikduḳe Soferim,* 16 vols., Munich, 1868-86; Przemysl, 1897). This valuable work covers the entire Talmud except for the third division, Nashim, and part of the fifth, Kodashim. Scientific editions of individual tractates have been made by C. Taylor, M. Friedmann and W. Pereferkowitsch. The latest and most complete of these endeavors is the edition of *Taanith* by Henry Malter (New York, 1930).

The Soncino Press in London has undertaken the publication of a translation of the entire Babylonian Talmud. The divisions Nezikin, Nashim and Moed were published in sets of eight volumes each (1935, 1936 and 1938). In 1943 the remainder of the Talmud had been already translated, and the Soncino Press expected to publish it after the second World War. Abraham Cohen made a translation of *Berachoth* (1921). Lazarus Goldschmidt translated the entire Talmud into German. Individual tractates and selections from the Talmud have been translated into Latin, French, Russian, Italian, Yiddish and other languages.

With the exception of *Berachoth* in the division Zeraim, and that of *Niddah* in the division Toharoth, no Babylonian Gemara to these divisions was compiled, as they deal with regulations which did not apply to the Diaspora. There is a Gemara to all the other divisions of the Mishnah, with the exception of the tractates *Aboth, Eduyoth, Middoth* and *Kinnim,* which are without such. In all modern editions of the Talmud, a few smaller tractates are appended at the end of the fourth division, Nezikin. These are: *Aboth de Rabbi Nathan; Soferim; Semahoth; Kallah; Derech Eretz Rabbah* and *Derech Eretz Zuta;* and seven minor tractates: *Sefer Torah, Mezuzah, Tefillin, Tzitzith, Abadim, Kuthim* and *Gerim.* Most of these tractates were edited by Michael Higger (1929-36).

The Babylonian Talmud contains about 2,500,000 words, of which about 30 per cent are devoted to Haggadah. Haggadah includes everything that is not of a legal nature, and may be classified into the following main divisions: 1. historical, comprising descriptions of historical events and traditions and legends of Biblical and post-Biblical personalities; 2. religious and ethical, including anecdotes, proverbs and aphorisms which enunciate and illustrate certain moral duties, as well as a discussion of God's attributes and of reward and punishment; 3. exegetical, consisting of plain and allegorical interpretations of Bible verses; 4. scientific, dealing with medicine, mathematics, astronomy, psychology and other branches of science. The Haggadic passages are sometimes inserted for purposes of relaxation after involved discussions of legal matters. The Haggadah of the Babylonian Talmud was collected by Jacob ibn Habib under the title of *En Yaaḳob;* that of the Palestinian Talmud was gathered by Samuel Jaffe under the title of *Yefeh Mareh.*

The Talmud is undoubtedly one of the most remarkable literary productions of all times. It is an encyclopedia covering the whole scene of human life. It is almost impossible to convey to one who has not spent years in the study of this complex work an idea of its true nature, as even the most exact translations can not catch the inner spirit of the Talmud. Without the commentaries of Rashi and others, the Talmud, as has been noted by the rare non-Jewish Talmudist, would almost be a sealed book, even to Jewish scholars. As a repository of the Oral Law, the Talmud's authority is regarded as divine by Orthodox Jews, and hence it is held to be binding and immutable. Conservative and Reform Jews, however, do not recognize the absolute binding power of the Talmud, although they acknowledge the great part it has played in determining Jewish religious ideas and observances.

The difference between the Babylonian and the Palestinian Talmud is both quantitative and qualitative. Besides being less than one-third the size of the Babylonian, the Palestinian Talmud lacks the dialectic profundity and sweeping comprehensiveness of the Babylonian. These differences may be ascribed to the fact that while the Babylonian Talmud was skilfully compiled by scholars working assiduously and unhurriedly for over a century, the Palestinian Talmud was compiled in a great hurry under the pressure of hampering persecutions. Another difference is that of language. The Palestinian uses a Hebrew interspersed with passages in Western Aramaic, while the Babylonian is mainly in Eastern Aramaic, into which Hebrew passages are interwoven.

There are, however, many similarities between these two Talmuds because, since Babylonia and Palestine were at no great geographical distance, many scholars went from one country to the other exchanging views and opinions.

TALMUD, BURNING AND DESECRATION OF. During the Middle Ages the Talmud was frequently attacked, since it formed the main teaching of the Jewish religion and was regarded as the core of the Jewish resistance to conversion to Christianity. Since the Hebrew Bible was held in respect as the sacred book of Christianity as well as Judaism, it was the Talmud that received the full amount of attack on the part of church fanatics.

From the 13th cent. on popes and kings launched a campaign to suppress the study of the Talmud entirely by committing all copies of it to destruction. This was particularly the case in France in 1226 to 1270 in the reign of Louis the Pious, and in England in 1290 when the Jews were expelled from that country. In Paris, in 1242, twenty-four cartloads of Hebrew books were committed to the flames in a single day. This holocaust was witnessed by the famous Meir of Rothenburg, who wrote an elegy which is still recited in most synagogues on the Ninth of Ab.

In the later Middle Ages the Talmud was not burned, but was subjected to censorship, only copies with numerous deletions being allowed to circulate. As late as 1840 the council of state in Poland attacked the Talmud as a source of "Jewish contempt" for Christianity. A hundred years before, a bishop in Poland imposed a fine on all Talmudists, ordering all copies in Podolia to be burnt.

A feature of these burnings of the Talmud were public disputations, in which rabbis were compelled to defend and justify Talmudic teachings. These disputations were almost always instigated by apostate Jews, such as Nicholas Donin and Pablo Christiani; the latter in particular persuaded Pope Clement IV to issue a bull (1264) ordering the confiscation and burning of copies of the Talmud. Such disputations were staged ostensibly to give the Talmud a fair trial. Actually, with the church as judge and jury, the verdict of condemnation was a foregone conclusion. One of these disputations, ordered by Pope Benedict and staged at Tortosa, lasted for a year and nine months.

TALMUD COMMENTARIES. The language of the Talmud is characterized by extreme brevity and succinctness of style. The principal part of the Talmud consists of reports of discussions and debates on legal topics. The logic of the discussions is of extreme dialectic acumen, and they are couched in technical language which is full of elliptical expressions. Entire sentences are often indicated by a single word, and whole series of questions and answers follow each other without any marks of punctuation to indicate which is which. This entire lack of punctuation in the Talmud makes the text very perplexing to the beginner and sometimes even to the initiate. Were it not for the Talmud commentaries, especially Rashi's, the Talmud would almost have remained a sealed book.

Besides the pseudo-Hai Gaon commentary on the sixth division, Toharoth, the comments of the Geonim on the Talmud are available in their compilation by B. M. Lewin in his *Otzar Hageonim,* eleven volumes of which had appeared by the end of 1942. These cover *Berachoth* and the divisions Moed and Nashim. Rashi, basing himself on the earlier commentaries of Hananel ben Hushiel and Gershom ben Judah, and bringing to bear upon the subject all his own unparalleled genius for clear and lucid explanation, was the first to write a commentary on the entire Talmud. Next come the Tosafoth, a digest of the Talmudic discussions of the Franco-German academies of the 12th and 13th centuries. They are distinguished by extreme profundity and uncompromising logic, and are printed on the outside margin of the pages of the Talmud, with Rashi's commentary occupying the still more honorable place of the inner margin. Still later, epitomes of the legal portions of the Talmud were made by Isaac Alfasi, Asher ben Jehiel and Israel Meir Hakohen. In 1914 Aron Freimann published a complete list of all published and manuscript commentaries on the Talmud by various authors up to Bezalel Ashkenazi (early 16th cent.). The commentaries go under the general name of Hiddushim ("notes," "novellae").

Most Talmud commentaries of the 16th cent. and after are devoted to a discussion of the Tosafoth. Others, such as that of Ettlinger, are usually concerned with Maimonides' interpretation of the text, while many authors of "glosses" or short notes, such as Yellin, are interested in pointing out parallels to other parts of rabbinic literature.

Works other than commentaries which are helpful in the study of the Talmud fall under the following heads:

LEXICONS. The *Aruch* of Nathan ben Jehiel (11th cent.) was revised and enlarged by Alexander Kohut in his *Aruch Hashalem* (1878-1892), with a supplementary volume (Vienna, 1937). The best dictionaries of the Talmud are those of M. Jastrow in English and of J. Levy in German.

GRAMMARS AND CHRESTOMATHIES. Grammars of the language of the Babylonian Talmud were written by Max Margolis, Caspar Levias and M. Schlesinger; G. Dalman, W. B. Stevenson and J. T. Marshall wrote grammars of the language of the Palestinian Talmud. There are numerous Talmudic chrestomathies and introductory books, none of which is particularly outstanding.

METHODOLOGIES AND ENCYCLOPEDIAS. Important methodologies were written by Samson of Chinon (14th cent.); Jeshua Halevi, in his *Halichoth Olam* (15th cent.), commented on by Joseph Caro (16th cent.) and Solomon Algazi (17th cent.); by Malachi Cohen (18th cent.); and by H. Medina (19th cent.). The *Pahad Yitzhak* of Isaac Lampronti is an encyclopedia of the Talmud; Michael Guttmann published four volumes of his *Mafteah Hatalmud,* a comprehensive encyclopedia of the Talmud which in these volumes covers only the first letter of the Hebrew alphabet.

TALMUD TORAH, an expression used in the broadest sense for the study of the Torah, Jewish religious law and tradition, that is, the reading and interpretation of the Bible, Talmud, commentaries and codes. It was always given a high place in Judaism, being regarded as the equivalent of many other virtues (*Peah* 1:1). Since it was the duty of every male Israelite, the daily prayers contained insertions from the Bible, Mishnah and Talmud, together with a benediction for the study of the Law. Both Sabbaths and festivals were to be marked, among other things, by the study of the Torah and the Talmud, preferably the Haggadic portions of the latter (*Shulhan Aruch, Orah Hayim* 290:2).

In a narrower sense, the term Talmud Torah was applied to the school that gave instruction in Bible, liturgy and the simpler Talmudic passages in preparation for the Yeshiva. It later became used to indicate the community school in contrast to the Heder of the private teachers. In the 19th cent. and after various secular subjects were often introduced into the curriculum of the Talmud Torah, in accordance with the tendencies of the community. Tuition at the Talmud Torah was free, and so it was usually attended by poorer children; those able to pay would learn from private tutors.

One of the most famous Talmud Torahs was that of the Amsterdam community, founded in 1640. It had six classes, and gave courses extending from reading Hebrew to preparation for the Yeshiva. The most important Talmud Torahs in Italy were in Turin, Vercelli and Acqui. Sometimes the Talmud Torah developed into a regular school, as can be plainly seen in the evolution of the Talmud Torah at Hamburg. In modern times Talmud Torahs are usually either parochial schools which teach all subjects, or supplementary schools which give courses in Jewish subjects in hours after those of the public schools.

TALMUD TRACTATES, MINOR. In addition to the sixty-three regular tractates of the Mishnah and Talmud, there are also seven small tractates: *Sefer Torah,* on the writing of the scrolls of the Torah; *Mezuzah,* on the door-post amulet; *Tefillin,* on the phylacteries; *Tzitzith,* on the fringes; *Abadim,* about non-Jewish slaves; *Kuthim,* about Samaritans; *Gerim,* about proselytes.

These minor tractates probably arose after the completion of the Talmud and were compiled in order to have a ready source of information on topics about which there would be frequent consultation. Some of their material is found in the Talmud itself, scattered over various tractates. Hence these tractates are the beginnings of the work of codification which became greater and greater until it embraced all of Jewish law. Since the Palestinian Talmud was completed before the Babylonian, it is probable that they arose in Palestine; they are closer to the teachings of the Palestinians than to those of the Babylonians.

The time when these works were compiled is uncertain. They are not all contemporaneous. The brevity of *Mezuzah, Tefillin* and *Tzitzith* is similar to many places in the *Halachoth Gedoloth,* and argues for their greater age than that of the others. The relationship between *Abadim, Gerim* and *Kuthim* and other collections is obscure. They seem to be a combination of passages from the Mishnah, Baraithoth, Tosefta and Halachic Midrash collections. A critical edition

Tamar and Absalom

of the minor tractates of the Talmud, with English translation, was published by Michael Higger (1930).

See also the articles on the individual tractates.

Lit.: Kirchheim, R., *Septem libri Talmudici parvi Hierosolymitani* (1851).

TALMUDIC HERMENEUTICS, *see* HERMENEUTICS, TALMUDIC.

TAM, JACOB BEN MEIR, *see* RABBENU TAM.

TAMAR, 1. Canaanite woman who married in succession two sons of Judah, Er and Onan, both of whom died, leaving her childless. When, despite his promise, Judah delayed giving her his third son, Shelah, in marriage, Tamar tricked her father-in-law into becoming the father of her children (*Gen.* 38).

2. sister of Absalom, whose violation by her half-brother Amnon was avenged by Absalom's slaying of Amnon (*II Sam.* 13).

3. a daughter of Absalom (*II Sam.* 14:27); according to the Septuagint rendering of the passage, she became wife of Rehoboam, successor of Solomon.

4. city in the southeastern part of Palestine, southwest of the Dead Sea (*Ezek.* 47:19; 48:28); it is perhaps the same as the modern Kurnub.

TAMHUI ("plate"), a daily distribution of alms or food to the poor which was maintained in Talmudic and medieval times. It was collected by three individuals and distributed by three individuals (*B.B.* 8b), and was given to transient as well as native needy individuals. The Mishnah makes the regulation that one who has enough food for two meals should not seek for aid from the Tamhui (*Peah* 8:7), and that even one who is supported by the Tamhui must have four cups of wine for the Seder meal (*Pes.* 10:1). During the Middle Ages many communities kept up this form of distribution, but in course of time it was replaced by the work of special societies or by the provision for the poor as guests in the homes of individuals or communal hospices. By the time of the *Shulhan Aruch* (16th cent.) Tamhui had come to mean casual relief in general, in contrast to regular relief (Kuppah; *Yoreh Deah* 256:1). Many of the ethical wills or moral books of the Jews stress the importance of contributing regularly to such institutions as the Tamhui.

See also: PHILANTHROPY; SOCIAL SERVICE.

TAMID (abbreviation of Olath Tamid, "the daily burnt-offering"), ninth tractate of Kodashim, the fifth division of the Mishnah. It consists of seven chapters, and deals principally with the Temple service as performed in the 1st cent. C.E. (cf. *Ex.* 29:38-42; *Num.* 28:3-8). It describes the night watches observed by the priests, the manner in which the altar was cleansed in the morning, the kind of wood burned on the altar, the casting of lots for the various duties, the ritual for the daily sacrifice, the prayers recited in the Temple, the offering of the incense, the benedictions recited by the priests, and the manner in which the high priest officiated. It ends with the pious hope that the sacrifices will be once more restored, and with an enumeration of the psalms sung by the Levites for each day of the week.

Tamid is unusual in that it is almost purely descriptive. There are but one comment (3:8) and only two points on which there is even a slight difference of opinion (5:2; 7:2). This indicates that the details of the Temple service are described as they actually occurred, and also that the tractate assumed its final form at a very early period. Another indication of this is the fact that the tractate has no Tosefta.

There is no Palestinian Gemara to the tractate; there is a Babylonian Gemara to chaps. 1, 2 and 4, which contains some interesting ethical maxims and legends, including those about Alexander the Great.

TAMIRIS, HELEN, *see* DANCE.

TAMMUZ. In his vision of the idolatry practised in Jerusalem, Ezekiel depicts certain of the women of Jerusalem as weeping for Tammuz (*Ezek.* 8:14). This has reference to the cult of the Babylonian god of spring, Dumuzu, who was held to descend to the netherworld every year in the month of June or July and then, after lamentations and various offerings, to be restored to life through the intermediation of his wife or mother, Ishtar. This is a vegetation myth very similar to that of Adonis in Syria. The share of women in the rite was due to the fact that the myth was connected with the idea of fertility. The testimony of Ezekiel shows the extent to which foreign cults from Mesopotamia and Syria had penetrated into the kingdom of Judah under Manasseh and his successors. The fourth month of the Babylonian year (July-August) was named after Tammuz, and this has been taken over into the Jewish calendar.

TAMMUZ (a month in the Hebrew calendar), *see* CALENDAR; MONTHS.

TAMMUZ, SEVENTEENTH OF, *see* FASTING AND FAST DAYS.

TAMPA, a city in Florida, with approximately 2,000 Jewish inhabitants, in 1943, in its general population of 108,391 (census of 1940). Tampa was chartered as a city in 1886. By 1894 the Jewish community was numerous enough to incorporate Congregation Schaarai Zedek, which eventually adopted the Reform ritual and joined the Union of American Hebrew Congregations in 1903. A new synagogue was built in 1926; here the congregation was still worshipping in 1943. Rabbi L. Elliot Grafman was spiritual head of the congregation from 1923 to 1929; he was suc-

ceeded in 1930 by Rabbi David L. Zielonka, who continued to occupy the pulpit in 1943. The Temple Guild Sisterhood of Schaarai Zedek was affiliated with the National Federation of Temple Sisterhoods.

The Orthodox congregation Rodoph Sholom was formed in 1904, to answer the needs of the growing Orthodox community, augmented by the influx of Jews from Eastern Europe. Rabbi Adolph Burger was called to the pulpit in 1924, and served until his death in 1942. He was succeeded by Rabbi Benjamin Eisenberg, the incumbent in 1943. Another Orthodox congregation, the Congregation Hebrew Free School, was organized in 1917. Later the congregation changed its name to Keneseth Yisroel. It had no resident rabbi in 1943.

Tampa Jewry organized also a lodge of the B'nai B'rith (1926) and an Aleph Zadik Aleph, a section of the National Council of Jewish Women and a Junior Council, a Senior and Junior Hadassah, a district of the Zionist Organization, and a unit of the American Jewish Congress. The local Y.M.H.A. became a constituent of the city's Community Chest, as did the United Jewish Charities, organized in 1930. In 1942 the Tampa Welfare Organization was launched to coordinate work in charity and philanthropy.

From the early days of the community, a number of Jews were identified with the civic and political life of the city. Herman Gloglowski was mayor of Tampa from 1886 to 1894. Offim Falk was an early councilman. M. Henry Cohen was municipal judge (1906-8, 1912-16) and assistant attorney for the city of Tampa (1932-). Harry N. Sandler was an active member of the state legislature (1933-35), and was appointed a circuit judge of the 13th judicial circuit (1935).

Prominent merchants included David A. Falk, son of Offim Falk, president of the Florida Retail Merchants Association (elected 1931), and lieutenant colonel on the staff of Governor David Scholtz (1936); Morris G. Rosenberg, president of the Tampa Civic and Service club, and board member of the local section of the Red Cross; and Ernest Maas, treasurer of the University of Tampa (appointed 1931) and director of the State Board of Social Welfare. Maas was voted the outstanding citizen of Tampa for 1936.

Rabbi Adolph Burger was chairman of the Tampa Library Board. At the University of Tampa Rabbi David L. Zielonka was, in 1943, associate professor of sociology and religion (appointed 1930); Cornelius Steinberg was instructor in Latin and Greek.

DAVID L. ZIELONKA.

TANDLER, JULIUS, anatomist, welfare worker and Social Democratic leader, b. Iglava, Moravia, 1869; d. Moscow, Russia, 1936. He became instructor (1900), assistant professor (1902) and associate professor of anatomy (1910) at the University of Vienna, where he served as dean of the medical faculty from 1914 to 1917. An active member of the Social Democratic party, he was appointed under secretary of state of public health by the coalition government of the new Austrian republic, serving from May, 1919, to October, 1920. From 1920 to 1933 he served as commissioner of health, hospital, and public welfare in Vienna, effecting many thorough reforms. In the fall of 1933 he went to China, invited by the Chinese government to lecture on surgical matter and to inspect hospitals.

Upon his return to Vienna early in 1934, he was arrested by the Dollfuss government as a leader of the outlawed Social Democratic party, but was released following numerous protests. He then went to New York city, where he lectured at the New York University Medical School (he had been in the United States for the first time in 1929, and had lectured at the Columbia-Presbyterian Medical Center, Mount Sinai Hospital and Beth-El Hospital), and after that to China, where he helped organize the new medical school at Nanking, and finally to Moscow, where he had been invited to head the Russian Health Institute and to reorganize the sanitary system.

An edition of the Tanhuma, published at Mantua in the sixteenth century

Tandler was renowned as a teacher of anatomy. He edited the *Zeitschrift für Konstitutionslehre,* and wrote numerous textbooks and special treatises, including: *Über Mesenterialvariationen* (1897); *Zur Entwicklungsgeschichte der Uranaschisma* (1898); *Vergleichende Anatomie des Kopfes bei den Mammalia* (1898); *Topographie des weiblichen Uterus* (1901); *Anatomie und Aetiologie der Genitalprolapse beim Weibe* (with Joseph von Halban; 1907); *Zur Frage der Hepatoptose* (1908); *Über Eunuchoidismus; Die biologischen Grundlagen der Geschlechtesmerkmale; Anatomie des Herzens; Zur Psychologie der Fürsorge* (1927); *Gefahren der Minderwertigkeit* (1929). His main work was the textbook, *Lehrbuch der systematischen Anatomie* (21 vols., 1923-29).

Tandler renounced Judaism.

TANHUM BEN JOSEPH YERUSHALMI, grammarian and exegete who lived in Jerusalem in the 13th cent. Since he wrote in Arabic, he was unknown in Europe up to the 18th cent. His commentaries on various books of the Bible are provided with grammatical introductions. In his Biblical exegesis he favored a strict construction of the text, with a careful eye to difficult passages. He is not afraid to give an interpretation different from the Haggadic portions of the Talmud. He wrote a dictionary for Maimonides' *Mishneh Torah* (*Yad Hahazakah*), of which only the introduction has been preserved; this introduction presents valuable investigations on the language of Maimonides. It was edited by Wilhelm Bacher in 1903.

Lit.: Goldziher, I., *Studien über Tanchum Jeruschalmi* (1870); Broydé, I., in *Jewish Encyclopedia,* vol. 12, pp. 43-44.

TANHUMA, an exegetical Midrash to the Torah; this name seems to be derived from the name of the Amora Tanhuma bar Abba, since several of the homilies begin: "Thus Rabbi Tanhuma bar Abba

began his sermon." It is called also Yelammedenu, from the fact that the Halachic introductions to the homilies begin with the words *yelammedenu rabbanan,* "let our master teach us." The Midrash is arranged according to the weekly portions; each begins with a Halachic interpretation, then come interpretations based on verses from the Prophets and Hagiographa, followed by the interpretation of the first verse of the weekly portion (Parashah). The Midrash closes with Messianic speculations.

The Tanhuma exists in various recensions. One was published by Buber in 1885, on the basis of various manuscripts. A second form, first printed at Constantinople in 1522, and frequently reprinted, is apparently of much later origin. Both versions are cited both as Tanhuma and as Yelammedenu in various later collections, such as the *Yalkut Shimeoni* and the *Pesikta.*

Lit.: Encyclopaedia Judaica, vol. 1 (1928), cols. 1010-12; *Jewish Encyclopedia,* vol. 12, pp. 45-46.

TANHUMA BAR ABBA, Palestinian Amora of the fifth generation, a pupil of Huna. His importance lay in the field of Haggadah. None of his lectures has survived as such, but they form the principal foundation for such Midrashic collections as the Pesiktas and Tanhumas. Thus the *Pesikta Rabbathi* contains eighty introductions of which Tanhuma was the author. His humane disposition is expressed in the saying, "If you are merciful to one another, God will be merciful to you" (*Midrash Gen.* 33:3). He often had discussions on religious questions with non-Jews (*Midrash Gen.* 19:4), with whom he dealt tolerantly (*Yer. Ber.* 8:9).

TANNA DEBE ELIYAHU ("teaching of the school of Elijah"), a Midrashic work which consists of two parts: Seder Eliyahu Rabba ("the larger book of Elijah"), of thirty-one chapters; Seder Eliyahu Zuta ("the smaller book of Elijah"), of twenty-five chapters. The work is of an ethical and religious character, being essentially a series of homilies on moral virtues. The author gives his name as Elijah, by which he may mean the prophet Elijah who, according to rabbinical tradition, frequently visited the houses of study, or which may merely be a convenient pseudonym. He relates various anecdotes taken from his own life, pointing to a time when academies were flourishing but Jews were suffering from persecution. He is particularly concerned with the coming of the Messianic age, which he believes can be brought about by repentance and proper conduct on the part of the Jews. For this purpose he stresses the holiness and mutual interdependence of the Torah and Israel, and warns against overvaluation of the non-Jew. The virtues which are inculcated are those of repentance, almsgiving, moderation, devotion in prayer, punctilious observance of the Law, diligence in study, respect for the learned, chastity and modesty. These are illustrated by expositions from the Bible as well as by stories and parables; the Mishnah and Gemara are frequently quoted, the former by name, the latter always anonymously. The book is written in a pure Hebrew, free from Aramaisms. Similarities between the Seder Eliyahu Rabba and the first fourteen chapters of the Zuta indicate that these belong to the original writer, while the remaining chapters may come from other hands.

Scholars differ widely as to the place and date of origin of this "pearl of Haggadic literature." The Talmud (*Keth.* 106a) speaks of Elijah as having visited a teacher named Anan (beginning of the 4th cent.) and as having given him teachings arranged in definite books. The passage concludes "therefore one speaks of the Seder Eliyahu Rabba and the Seder Eliyahu Zuta"; but this last phrase may be a late gloss. The Talmud makes citations from a work under this name, as does the Midrash; but these do not come from our book. Many scholars argue for the 10th cent. on the basis of certain historical allusions, but differ as to the place of origin; Zunz favors Babylonia, Graetz and Güdemann argue for Italy. Jacob Mann, however, holds that the work was written in the late 5th cent., following persecutions by the Magians in Persia, and that it originated in Babylonia; he points to various indications of disputes as to the nature of God and the holiness of fire, as well as to evidences of the historical situation of the Jews at the time of the author.

The best editions of the book are those of Meir Friedmann: *Seder Elijahu Rabba und Seder Elijahu Suta* (Vienna, 1902); *Pseudo-Seder Elijahu Zuta* (Vienna, 1904).

Lit.: Mann, Jacob, in *Hebrew Union College Annual,* vol. 4 (1927) 250-51, 302-10; Kadushin, *Theology of Seder Eliahu* (1932); Aptowitzer, in *Jewish Studies in Honor of G. A. Kohut* (1935) 5-39; Ginzberg, Louis, *Genizah Studies,* vol. 1 (1928) xv, 188-91; Waxman, Meyer, *A History of Jewish Literature,* vol. 1 (1930) 147-49.

TANNAIM (singular Tanna, from the Aramaic *tane,* "to teach"), term applied to the scholars who lived in the period from the death of Hillel and Shammai (about 10 C.E.) to the death of Judah Hanasi (after 200 C.E.). They are the successors in authority and tradition to the Soferim (Ezra to Antigonus of Socho, 5th to 3rd centuries B.C.E.) and of the Zugoth (Jose ben Joezer to Hillel, 2nd and 1st centuries B.C.E.). The teachings of all three groups are found in the Mishnah, Tosefta, Baraithas and Midrash compilations. Over 200 Tannaim are mentioned in these works; most of them lived in Palestine and were called Rabbi ("teacher"), unless they were patriarchs, who were called Rabban ("our teacher").

The Tannaitic period is usually divided into six generations, the outstanding scholars of which are listed in the table below. This division into generations, however, is only approximate, as many of the scholars were active in two generations and the biographical details in rabbinic literature are too scanty to establish the exact life span of each scholar.

The scholars of the sixth generation—younger contemporaries and disciples of Judah Hanasi—are often called "semi-Tannaim," because their activities extended into the period of the Amoraim and their teachings are found in the Tosefta, Baraithas and Midrash compilations rather than in the Mishnah. There are separate biographical articles about most of the Tannaim in the table below.

First Generation, about 10 to 80

School of Hillel	Simeon ben Gamaliel
School of Shammai	Johanan ben Zakkai
Akabiah ben Mahalalel	Abba Saul ben Batnith
Gamaliel I	

Second Generation, about 80 to 120

Gamaliel II	Nahum Ish Gamzu
Eliezer ben Hyrcanus	Zadok
Joshua ben Hananiah	Judah ben Bathyra
Eleazar ben Azariah	Eliezer ben Jacob
Eleazar ben Arach	Nehunya ben Hakanah
Samuel Hakatan	Hanina ben Dosa

Third Generation, about 120 to 140

Tarfon	Simeon ben Nannos
Ishmael ben Elisha	Elisha ben Abuyah
Akiba	Judah ben Baba
Hananiah ben Teradion	Johanan ben Beroka
Johanan ben Nuri	Simeon ben Zoma
Jose the Galilean	Simeon ben Azzai

Fourth Generation, about 140 to 165

Meir	Johanan Hasandelar
Judah ben Ilai	Joshua ben Karhah
Jose ben Halafta	Simeon ben Gamaliel II
Simeon ben Yohai	Phinehas ben Jair
Eleazar ben Shammua	

Fifth Generation, about 165 to 200

Judah Hanasi	Simeon ben Menasiah
Symmachus	Eleazar ben Simeon
Nathan the Babylonian	Simeon ben Eleazar
Jose ben Judah	Bar Kappara

Sixth Generation, about 200 to 220

Plimo	Rab (Abba Aricha)
Ise ben Judah	Simeon ben Halafta
Eleazar ben Jose	Levi bar Sisi
Ishmael bar Jose	Gamaliel III
Hiyya bar Abba	Hoshaiah

HIRSCHEL REVEL.

Lit.: Bader, Gershom, *The Jewish Spiritual Heroes,* vol. I (1940); Hyman, Aaron, *Toledoth Tannaim Veamoraim* (1910).

TANNENBAUM, FRANK, economist, b. Austria, 1893. He came to the United States in 1905, and studied at Columbia University (B.A., 1921) and at the Brookings Graduate School in Economic and Political Science (Ph.D., 1927). Tannenbaum was in Mexico as newspaper correspondent (1922-24) and then as a member of the research staff of the Institute of Economics of Washington, D. C. (1925-27). He made economic and social surveys of Puerto Rico (1928-30) and of the rural population of Mexico (1931). Tannenbaum was made a lecturer (1935) and two years later associate professor of Latin American history at Columbia University.

He was a member of the Committee on Cultural Relations with South America. His writings include: *The Labor Movement* (1921); *Wall Shadows* (1922); *Darker Phases of the South* (1924); *The Mexican Agrarian Revolution* (1928); *Osborne of Sing Sing* (1933); *Peace by Revolution* (1933); *Report on Latin American Research Problems for the Social Science Research Council* (1933); *Whither Latin-America?* (1934); *Crime and the Community* (1937).

TANNENBAUM, SAMUEL AARON, physician and writer, b. Hungary, 1874. He was brought to the United States in 1886, and studied at Columbia University (M.D., 1898). Tannenbaum, who specialized in psychotherapy, translated into English two books by the Viennese psychologist Wilhelm Stekel (*The Depth of the Soul,* 1921; *Essays,* 1922). As a writer he was especially interested in Elizabethan literature.

Tannenbaum's works include: *Problems of Shakespeare's Penmanship* (1927); *The Booke of Sir Thomas Moore* (1927); *Assassination of Christopher Marlowe* (1928); *Shakespeare Forgeries in the Revels Account* (1928); *Shakespeare and Sir Thomas Moore* (1929); *The Handwriting of the Renaissance* (1930); *Shakespearean Scraps and Other Elizabethan Fragments* (1933); *Christopher Marlowe—A Concise Bibliography* (1937); *Anthony Mundy* (1943); several other books and brochures on Elizabethan poets.

TANSMAN, ALEXANDER, composer, b. Lodz, Poland, 1897. He received his first schooling in his native town, and at the same time that Podkaminer, Gavronski, Sándor Vas and Lütschg were teaching him piano and musical theory he attended the Lycée.

His composing talent revealed itself at an early age, and the pretty pieces he then wrote were in the styles of Grieg and Chopin. Tansman was twenty years old when the Lodz Symphony Orchestra played his *Symphonic Serenade.* This was his debut as a composer. Not long after this event, he went to Warsaw to continue his musical studies with Pierre Rytel, at the same time studying law and social science at the University of Warsaw.

When Poland made her Declaration of Independence, Tansman was one of the first to volunteer for service in the Polish army. In 1919, still in the service, he won the first and second Polish Grand Prizes in composition. After this success he transferred his scene of action to Paris. His first Paris concert took place on February 17, 1920. This was the beginning of Tansman's world celebrity: his works appealed to both the public and musicians, and it was not long before all the important orchestras, as well as many of the major soloists, performed his music throughout the world of music. He himself realized a number of international tours as composer-conductor, and as sóloist in his piano concertos. His works figured also on festival programs, as, for instance, the festival of the International Society for Contemporary Music, held at Zurich in 1926.

Tansman and his family were in France at the time of the Nazi occupation of that country in the second World War. Fortunately the composer and his family were able to escape to the United States. Here the Coolidge medal for Music Achievement was awarded him in 1941.

His works embrace virtually every field of musical composition and include numerous works for symphony orchestra, for chamber music ensembles, for piano, for voice, a ballet-bouffe (*Sextuor*), and a lyrical drama (*La nuit kurde*). There is not space for a description or analysis of the originality of Tansman's style and technique, his pure lyricism (in which he achieves a magnificent synthesis of Polish feeling and modern ways and means), his distinguished and varied rhythms, the perfection of his counterpoint, his sense of form, or his unique art in instrumentation. Tansman must be recorded as the Polish musician who, of all his generation, best expresses the heart and soul of Poland.

IRVING SCHWERKÉ.

Lit.: Schwerké, Irving, *Alexander Tansman, compositeur polonais* (1931).

TANYA, a work so called from its initial word and containing a group of ritual and religious decisions; it was first published at Mantua in 1514. No author is given for the work, but there are references to "I, Jehiel, the scribe," which have led to conjectures that the book may have been compiled by one or another contemporary scholar with that name. The book closely follows the *Shibbole Leket* of Zedekiah ben Abraham (d. after 1280); in fact, Schorr held that it was simply a copy, but written in such a way as to seem an original work.

The name Tanya is given also to the *Likkute Amarim* (Collection of Sayings) of Shneor Zalman ben Baruch of Ladi (1747-1812), head of the Habad branch of Hasidim.

Lit.: Schorr, in *Zion,* vol. I, pp. 147-48.

TANZER, HELEN H., archeologist, b. New York city, 1876. She studied at Columbia University (A.B., 1903) and at the American School of Classical Studies in Rome (1906-7), and received the Ph.D. degree from Johns Hopkins University (1929). She served as instructor and subsequently as associate professor of classics at Hunter College, New York, and was made associate professor in 1929 and full professor in 1936 at Brooklyn College, where she taught classics until her retirement in 1937. An honorary attachée of the Belgian embassy to the United States, she was the recipient of the Chevalier Order of King Leopold II of Belgium (1919).

Helen Tanzer's writings include *Juvenal on Education* (1922) and *The Villas of Pliny the Younger* (1924). She

RABBI GEORGE WOLF

was the originator of *Latin Visualized,* consisting of films illustrating Roman civilization, with descriptive manuals (1930). She translated *The Forum and the Palatinate* by Christian Huelsen (1928), wrote an introduction to the facsimile edition of Erasmus' *Praise of Folly* (with Holbein's marginal drawings; 1931), and edited *Selected Letters of Pliny the Younger* (with vocabulary; 1936).

TANZER, LAURENCE ARNOLD, lawyer, b. New York city, 1874. He studied at Harvard (A.B., 1894) and Columbia University (LL.B., 1897) and practised law in New York city. Tanzer drafted the New York personal income tax law (1919) and the home rule amendments to the New York state constitution (1923). He was a member of the executive committee of the Citizens Union, and served in several other public offices, including that of associate counsel on the New York City Charter Revision Commission (1935-36). He was a trustee of the Jewish Social Service Association.

TAPOLCA, town in Hungary. In 1703 a Jewish family by the name of Löb was admitted to Tapolca as tenants on the local domain. For the following eight decades no other Jews gained admission until, toward the end of the 18th cent., the Lessner family, originating from Düren, Rhineland, and the Dukes family from Beled, Hungary, were permitted to settle at Tapolca. One of the provisions of their contract demanded that they should not have much progeny. These settlers soon were joined by three more families. For many years the Jews at Tapolca had no religious institutions and spent their holy days at the neighboring Keszthely. In 1813 Judah Lessner built a synagogue in his own house, and in the same year the Jewish community was organized. The Hebrah Kaddisha was founded in 1840, when the town no longer had the right to keep Jews away, and many came to the town from the neighboring villages.

In 1845 a school was founded, and in 1863 a synagogue, well-known for its mural paintings, was erected. The steadily growing community consisted (census of 1920) of 770 persons, of whom 262 were taxpaying members, consisting for the major part of merchants, employes and craftsmen. In the counter-revolution of 1919 eleven Jews were murdered at Tapolca. In the same year the community founded a Talmud Torah, persecution resulting in a religious revival.

Communal life and mutual self-aid were also intensified by the new wave of discrimination during 1938 to 1942.

TARBUTH (literally, "increase," "brood"; mentioned only once in the Bible, in *Num.* 32:14. In modern usage it denotes culture, civilization), an organization for promoting Hebrew culture and education in the Diaspora and for the revival of Hebrew as a spoken language. The Tarbuth movement received great impetus in Russia after the revolution (1917). Nearly 300 educational institutions, evening courses for adults, a Hebrew press, theatre and the like were functioning under the direct influence of Tarbuth. Its existence, however, was very brief: at the instigation of the Jewish Communists, Tarbuth and its activities were banned by the Soviet authorities. Between the first and second World Wars Tarbuth functioned in almost all East European countries; at one time (1934-35) the number of pupils in Poland, Roumania, Latvia, Lithuania, Czechoslovakia, Austria and Bulgaria attending the Tarbuth elementary and higher schools, with Hebrew as the language of instruction in all subjects, was about 80,000.

Tarbuth developed its greatest activity in Poland, where a national "Tarbuth" was organized at the first convention (1922) with delegates from all parts of the country. In 1934 to 1935 Tarbuth maintained in Poland seventy-two kindergartens, 183 elementary schools, nine secondary schools, four teachers' seminaries, one agricultural school and four evening schools, with a total enrollment of 44,780 students, instructed by 1,350 teachers. In 1938, due to the anti-Semitic decrees of the Polish government, the number of pupils decreased to about 39,000. Tarbuth published at various times the periodicals *Tarbuth, Yedioth Tarbuth,* and *Afaḳim,* as well as curricula, textbooks and Hebrew reading material for children and adults. At the beginning (1922-23) Tarbuth received some financial assistance from the Joint Distribution Committee, but in the main its budget was derived from tuition fees and community support.

In Latvia, where the government left the care of education to the various nationalities, 75 per cent of the Jewish children attending elementary and secondary schools went to the Tarbuth schools. There was also a Tarbuth Association in England (1939), whose aim was to emphasize to the community and to the outside world the significance of the Hebrew language as a cultural force.

The organization for Hebrew culture in the United States, the Histadruth Ivrith, was publishing (1943) the only Hebrew weekly in the Diaspora (*Hadoar*), a Hebrew year book (*Sefer Hashanah*), and Hebrew books by American authors, and was assisting in the publication of a pedagogic monthly (*Shebile Hahinnuch*). *Bitzaron,* edited and published by Chaim Tchernowitz, was the only Hebrew monthly appearing in 1943 outside of Palestine.

In June, 1931, a world congress of Tarbuth assembled in Berlin, at which the Brith Ivrith Olamith was founded, a successor to the Merkaz Leinyene Tarbuth established in December, 1922, also in Berlin. From 1933 on the Brith Ivrith had its headquarters in London and Tel-Aviv. The harassing experiences through which European Jewry passed in the decade from 1932 to 1942 almost completely wiped out the Tarbuth movement there; in 1943 the United States was the only country, outside of Palestine, where a Hebrew culture movement could still be maintained.

Lit.: *Tarbuth* (monthly for education and Hebrew culture, published by the Central Committee of Tarbuth, Warsaw, 1921-24); *Yedioth Tarbuth* (bulletin of the Central Committee of Tarbuth, Warsaw, 1932-34); Levinson, Abraham, *Hatenuah Haibrith Bagolah* (1935; published by the Executive of the Brith Ivrith Olamith); Ruppin, Arthur, *The Jewish Fate and Future* (1940).

TARFON, Tanna of the third generation, who lived in the 1st and 2nd centuries C.E. He was of a priestly family, and must have been one of the oldest of his group, as he took part in the service of the Second Temple before its destruction in 70 C.E. He insisted on collecting tithes after the destruction of the Temple, although a man of wealth, in order that the people might not forget this duty; but he used the money for charitable purposes. On one occasion, when the land was smitten by famine, he is said to have formally married 300 women in order that they might participate in the tithes and not starve (*Yer. Yeb.* 4:2).

Tarfon is frequently mentioned in connection with Akiba, whom he acknowledged as his superior in learning; his chief pupil was Judah ben Ilai. He spent most of his life at Lydda. He is mentioned forty-nine times in the Mishnah, and in all six of the divisions, besides frequent references in the *Tosefta* and the Halachic Midrash collections. He was especially bitter against the Christians and wanted to burn their books (*Sab.* 116a). His characteristic sayings were:

"The day is short, the work is great, the workmen are lazy, the employer is urgent." "It is not incumbent upon you to finish the work, but you are not at liberty to refrain from it. If you have studied much Torah, you will receive a great reward; your employer is trustworthy and will pay you the reward of your labor; but know that the reward of the righteous is in the future life" (*Aboth* 2:20-21). "God did not let his Shekinah come to Israel until they had fulfilled a task." "Man dies when he stops working" (*Aboth de Rabbi Nathan* 11).

TÂRGU MUREŞ (in Hungarian **MAROSVÁSÁRHELY**), city in Transylvania. Until 1919 it belonged to Hungary, and having been awarded to Roumania as a result of the first World War, it was returned to Hungary by the Vienna award in 1940.

The Jewish community of Târgu Mures was founded, after the Hungarian struggle for independence of 1848 to 1849, by Jews from Marosszentkirály, a neighboring community. Two ancient plates bearing inscriptions in Latin, which had been salvaged from the Marosszentkirály synagogue, are preserved by the community at Târgu Mures. The first synagogue in the latter city, which subsequently was used by the Orthodox community, was erected in 1873; a decade later, during the Tiszaeszlár blood accusation, it was destroyed by the mob and armed troops had to protect the lives of the Jews. The synagogue was then rebuilt. The main community erected one of the largest synagogues in Transylvania in the year 1899.

Both communities maintained public schools and Talmud Torahs in addition to the usual charitable institutions. The communities included the Jews scattered about the villages of the neighboring districts. Together with these village members, the main community consisted of some 3,000 persons, whereas the Orthodox community numbered 1,200 at the end of the first World War. Under Roumanian rule, the association of the Jewish communities of Transylvania and Bánát established rabbinical and teachers' training courses at Târgu Mures with a view to training rabbis and teachers for the Hungarian Jewish population of Transylvania (1929).

After its return to Hungarian jurisdiction, the restrictive laws of Hungary were applied to the Jews.

TARGUM (plural, *targumim,* "translation"; from this is derived the word Turgeman or Meturgeman, "translator," used also in the further sense of "interpreter"). The word Targum may mean a translation into any language. However, beginning with the Talmudic period it meant usually the Aramaic translations of the Bible. Such translations arose at a very early period. As soon as Hebrew ceased to be understood generally, Targums were required in both school and synagogue. Perhaps the word *meforash* employed in *Neh.* 8:8 signifies a translation (cf. *Meg.* 3a). In the reading of the Torah in the synagogue first a private person, later an official or employee, but at any rate a person other than the precentor or reader, stood and gave a verse by verse (*Meg.* 4:4) translation into the Aramaic vernacular, without prepared text or model, improvised, not too literal and not too free (cf. the citations in Elbogen, Ismar, *Der jüdische Gottesdienst,* 187-88; *Shulhan Aruch, Orah Hayim* 145:1). At times the explanation and embellishment of the text of the Torah reading gained the upper hand, and there were times also when stress was laid upon the value of the literal translation.

When the Aramaic language was displaced as the vernacular of the Jews, the oral recitation of the Targum also came to an end. In the meantime, however, its written text had been definitely fixed, partly as a result of the desire for knowledge, and partly perhaps for the purpose of preventing excesses in its oral recital (*Sab.* 115a mentions a Targum to *Job* as early as the 1st cent. C.E.; cf. also *Yad.* 4:5). The following such Targumim have been preserved: 1. To the Torah: (a) Onkelos; (b) Pseudo-Jonathan; (c) Targum Yerushalmi. 2. To the Prophets: (a) Targum Jonathan; (b) additions to (a). III. To the Hagiographa (except to *Daniel, Ezra* and *Nehemiah*). All these Targumim contain early component parts dating from the pre-Christian centuries; however, they received their present form at the time of the Talmud and later, partly in Babylonia and partly in Palestine. The older portions are for the most part not literal translations of the Biblical text, but more or less paraphrases; this was the oldest kind of Targum. The investigation of the Targum is fraught with the greatest difficulties, and has not yet produced definite and assured results on all points. On the language of the Targumim and its especial difficulties, *see* ARAMAIC.

The best-known, and for many persons the only Targum known to them, is the Targum Onkelos. The name (perhaps found for the first time in *Meg.* 3a) is usually regarded as a distortion or by-form of Aquila, despite the divergent orthography (Aleph for Ayin). For Aquila composed a scrupulously exact and literal Greek translation of the Bible, and since the Targum Onkelos is almost as literal a translation, it was believed that the name Targum Onkelos was given to it: Targum in the manner of Aquila. In favor of this view there may be brought out the fact that a great deal of that which is told about Onkelos in Babylonian sources is attributed to Aquila in the Palestinian; the only difference is this, that Onkelos is regarded as the disciple of Eliezer and of Joshua, while Aquila is declared to be the disciple of Akiba. At any rate, both these names are often used interchangeably. It is probable that there never existed a person by the name of Onkelos: translations which are found in the Targum Onkelos are cited in the Babylonian Talmud with the notation: "We translate . . ."; no translated portion is cited under his name.

The Targum Onkelos is the only Targum which was subjected to a unified and scholastic redaction. It was edited in Babylonia, with the employment of early Palestinian traditions. The latter perhaps owe their origin to the school of Akiba, thus dating from the 2nd cent. C.E., whereas the redaction dates at the earliest from the 3rd cent. A text different from the traditional Hebrew Bible text is presupposed only in extremely rare cases (for example, in *Gen.* 4:1). The Targum Onkelos is a literal translation, but with the following exceptions: (1) by means of slight changes it often reads Talmudic Halachic regulations into the legal portions (for example, *Ex.* 21:16). (2) in the poetical portions there are Haggadic additions of moderate compass (for instance, *Gen.* 49). (3) Offensive or disagreeable material is paraphrased or given in circumlocution (for instance, *Gen.* 20:13; *Ex.* 24:11; *Lev.* 17:17). Especially given in circumlocution are anthropomorphic statements about God, partly by means of changing corporeal expressions into spiritual terms (for instance, *Gen.* 6:2; *Ex.* 9:15; 18:11; 19:20), partly through the insertion of an intermediary (*memra,* "word," equivalent to Logos, for example, *Gen.* 7:6; *yekara,* "glory," for example, *Ex.* 24:10; *shechinta,* "presence of God," for example *Deut.* 12:5), and partly also through the stringent separation of the divine from the human by means of the abstract formation, passive construction or the insertion of the word *kadam,* "before," "in the presence of" (for example, *Deut.* 12:4). Thus the changes are simple, products of popular philosophy, and often almost naive. Often the Targum translation finds nothing offensive or objectionable where we do (for instance, in *Ex.* 9:12; 18:12), and often vice versa. The changes result from a refined and reverent conception of God. There is no indication at all that as a result of these abstractions the living belief in God

has been deprived of all content (Bousset, *Religion des Judentums,* 364). The Targum Onkelos was so highly esteemed that in later times it became an obligation to read it every week, even in non-Aramaic lands, in addition to the weekly Sidra (*Ber.* 8ab; the individual regulations are given in *Shulhan Aruch, Orah Hayim* 285). In *Kid.* 49a it is called "our" (i.e. the Babylonian) Targum, later it was designated simply as "the" Targum. There is a Masorah to the Targum Onkelos, in part provided with accents.

The other Targums are more or less paraphrastic in nature, and the border line between translation, explanation and Midrashic collection is often an uncertain and shifting one in their case. They have not been redacted in uniform manner, or officially edited by one school, but they grew wild, as it were. The Targum to the Torah usually called after Jonathan ben Uziel has no right to this name. It is possible that it was known in abbreviated form by the Hebrew letters Tav Yod (which would represent Targum Yerushalmi), and that later this abbreviation was erroneously taken to mean Targum Jonathan. For this reason it was called, in later times, the Pseudo-Jonathan (or Yerushalmi I). It received its final, present form in the Arabian period of Jewish history; for in *Gen.* 21:21 it mentions Ayesha and Fatima, Mohammed's wives. It combines various legal and philosophical tendencies and trends of thought, which it merges into a strongly paraphrastic translation. The language of the Targum Pseudo-Jonathan is Western Aramaic, Palestinian; hence its name Yerushalmi.

In addition, there are extant other strongly paraphrastic fragments of Palestinian translations, called either Yerushalmi II or the Fragmentary Targum, which were formerly regarded as additions to the Targum Onkelos. Later investigators, however, consider them remnants of the oldest Palestinian Targum. It is probable that both the Targum Yerushalmi I and the Targum Yerushalmi II go back to an earlier Targum which has been lost.

There prevails confusion even as regards the Targum to the Prophets: the Talmud (*Meg.* 3a) attributes this to Jonathan, and in actuality there exists a Targum Jonathan to the Prophets. However, these two are not identical. The latter does contain a Western Aramaic basic portion, but in reality it was redacted in Babylonia, and, according to the view of many savants, by Rabbi Joseph in the 4th cent. Many double translations indicate clearly that this Targum contains additions. These, as well as occasional citations in the sayings of rabbis, also glosses, especially in the Codex Reuchlin (Lagarde ed.; cf. Bacher, Wilhelm, in *Zeitschrift der deutschen morgenländischen Gesellschaft* 28), show that there was in actual existence the Palestinian Targum mentioned in *Meg.* 3a. It was older than the present, more Babylonian Targum Jonathan. This would explain the remarkable fact that the Talmud portrays its Jonathan as a disciple of the prophets and relegates his life to a very ancient period, whereas it places Onkelos-Aquila at the end of the 2nd cent. C.E. Many explain the name Jonathan as a translation of Theodotion, who, like Aquila, composed a Greek translation which, they assert, served as the model for that of the alleged Jonathan.

Targums to the Hagiographa did not originate until a late period, and these were written at different times, by various authors, and possessed of various character and without official redaction. The three poetical books of the Hagiographa have a plain, chiefly Western Aramaic Targum. That to *Psalms* was composed, at any rate in many parts, before the year 476, since on *Ps.* 108:11 it still mentions the Western Roman Empire. That to *Proverbs* appears to be based on a Syrian translation. Whether the Targum to *Job* mentioned in *Sab.* 115a is the one extant today appears dubious. The Targum to the Five Scrolls (Megilloth) is very verbose; indeed, it is actually a Haggadic commentary. That to *Song of Songs* is a panegyric of Israel and contains strong anachronisms. To *Esther* there exist three different Targums; of these, the second, called *Targum Sheni* (the Second Targum), is the most interesting. It is probable that it was put together from twelve originally different and separate parts. It contains a wealth of legends which were either told on Purim or were intended for narration on that festival. It was not completed until about the year 1200. The Targum to *Chronicles* makes use of the Targum Yerushalmi I and II.

The Samaritans, too, have a Targum to their Pentateuch. This is written in their dialect, and dates from the 6th cent. The Samaritan Targum is of considerable importance for the understanding of their views.

The Syriac Christian *Peshitta* also is a kind of Targum. It was influenced by the Jewish Targum. Its chronicles were, in all probability, patterned directly on the model of a Targum.

The significance of the Targumim is a manifold one. They are all of great importance for the history of the Semitic languages, and especially of the Aramaic dialects. Targum Onkelos and Targum Jonathan to the Prophets are the sole literary testimony to the Eastern Aramaic dialect. The Targumim are of just as great importance for the explanation of the Bible text (for this reason they are often cited by later authors and works), as well as for the history of Bible exegesis. Furthermore, through careful consideration of all the circumstances an occasional better reading of a passage in the Biblical text may be achieved through them (cf. the notes in Kittel's *Biblia Hebraica*). Above all, however, they are of importance for the history of the Jewish religion, since they furnish insight into the changes which took place in the religious views and beliefs during the first centuries of the pre-Christian Era and also of the Common Era; this knowledge supplements information received from other sources.

The First Printed Editions of the Targum: Onkelos: Bologna, 1482; the Complutensian Polyglot Bible, 1514-17; the best printed edition, Sabbioneta, 1557. Targum Yerushalmi I: Venice, 1591. Targum Yerushalmi II: Lisbon, 1491. Targum to the Prophets: Leiria, 1494. The entire Targum (including the Targum to the Hagiographa): in the Venice edition (Bomberg; 1517) and in the polyglot Bibles of Antwerp, Paris and London. The Paris Polyglot contains also the Samaritan Targum.

Editions of the Targum: Abraham Berliner (Onkelos, 1884); J. Bernstein (Onkelos to *Genesis,* London, 1890); Paul de Lagarde (*Prophetae chaldaice,* 1872; *Hagiographa chaldaice,* 1873); M. Ginsburger (*Fragmenten-Targumim,* 1899); Petermann and Vollers, *Das samaritanische Targum*); F. TARNOPOL, city in former East Galicia, later Poland, capital of the voivodeship of the same name, with 36,000 inhabitants, including about 14,500 Jews (1931). A Jewish community and a synagogue existed there as early as the 17th cent. The residence privilege which was still in existence up to the outbreak of the second World War (1939) and which was never legally abolished was given to the Tarnopol Jews in 1740 by Joseph Potocki, governor of the city, and voivod of Kiyów. On the strength of this privilege they were accorded the same trading, manufacturing and residential rights as the Christians, and also tax exemption for their cemetery, synagogue, community house and the rabbi's home. Jewish artisans were compelled to join the Christian guilds, but were excused from attending Christian funerals and church services. The synagogue was from the beginning built outside of the city (Zagrobela) as a fort with a flat roof, pinnacles, embrasures and buttresses, and was defended during the Turkish wars by the Jews. To this end the family heads had to keep firearms and powder continually ready and propose a commander to the town council.

In 1772 Tarnopol came under Austrian control, and soon a German Jewish school was opened. From 1809 to 1815 Tarnopol belonged to Russia; during this period Joseph Perl established a Jewish public school with instruction in German, and a semi-modern Temple which was still in existence before the Nazi invasion. In 1837 he sent for Solomon Löb Rapoport (SHIR) to come to Tarnopol. The latter, however, was opposed by the Hasidim until he left the town and went to Prague. Samuel Leib Goldenberg, publisher of *Kerem Hemed,* lived in Tarnopol from 1807 to 1846. A son of Perl was the first Jew in Austria to open a pharmacy (1832).

During the second half of the 19th cent. the culture of the Tarnopol Jews improved visibly; before the first World War there existed there three state secondary schools in which in 1911 the Jewish students numbered more than 50 per cent (704 out of the total attendance of 1,379).

After the first World War Tarnopol first belonged to the Ukrainian state, and in 1923 it was assigned, together with the province of East Galicia, to Poland. At the partition of Poland by the Nazis and Soviet Russia, in the fall of 1939, Tarnopol fell to Russia, but was occupied by the German armies soon after the outbreak of the Russian-German war in June, 1941. In the winter of 1941 to 1942 all schools and public places were closed in the city because of the spread of the epidemic of typhus. According to a report of the Polish Government-in-Exile (July, 1942), 5,000 Jews were murdered by the Nazis in Tarnopol. Two months later all Jews living in Tarnopol were reported to have been deported by the Nazis.

Lit.: Balaban, M., in *Yevreiskaya Entziklopedia,* vol. 14, pp. 760-61; idem, *Dzieje zydow w Galicji i w rzeczypospolitej krakowskiej; New York Times,* July 2, 1942.

TARNOPOL, JOACHIM, reformer, b. Odessa, Russia, 1810; d. Odessa, 1900. With Josef Rabinowitz he founded the first Russian Jewish periodical, the *Rassvyet* (1860), which, however, existed for only one year. His principal work was *Notices historiques et caractéristiques sur les Israélites d'Odessa, précédées d'un aperçu général sur l'état du peuple Israélite en Russie* (Odessa, 1855), historical studies on the Jews of Odessa, with a general review of the condition of the Jewish people in Russia. Tarnopol published also essays on the subject of better understanding and in defense of the aspirations of the Russian Jews toward emancipation.

TARONJÍ Y CORTEZ, JOSÉ, celebrated Majorcan poet and ecclesiastic, b. Palma, Majorca, 1847; d. Palma, 1890. Of Jewish origin, he is said to have been a descendant of the Terongís who perished in the autos da fé of 1691. He entered the church in Majorca, but although his merit was recognized, his advancement was prevented by local ecclesiastical prejudice against the Chuetas, or Majorcans of Jewish descent. In 1878 he was appointed canon of the Sacro Monte in Granada, where he remained until 1884, when he returned to his native island. He died in 1890 at the early age of forty-three years.

Taronjí evinced a considerable talent for poetry at an early age, and when he was still a youth of twenty-three his reputation as a great Catalan poet was already established. In 1871 he was awarded prizes at the Juegos Florales in Barcelona for his poems "Sóller" and "A la Llotja de Palma"; he collaborated in all the literary publications of Catalonia, Valencia and Majorca. Apart from his poetical compositions, he wrote a book on the subject of the Bible considered as a poem (1887), and other volumes.

The local ecclesiastical antagonism against his origin, which he considered contrary to all principles of religion, embittered his life, and in 1877, before leaving the island for Granada, he published his book on the religious and social state of Majorca. This work, entitled *Algo sobre el estado religioso y social de la isla de mallorca. Polémica contra las preocupaciones de clase,* created a profound sensation, not only in Majorca, but throughout all Spain. The Catalan authors invited him to send a message of vindication and adherence, which called forth much comment. In this book he sets forth the history of the antagonism against the Chuetas and, consequently, against himself, and he openly accuses a high dignitary of the Majorcan church of encouraging the prejudice. The book is, further, a strong defense of the Chuetas and of their rights, religious, legal, social and moral; he assumes the role of their champion and defender.

The effect produced by the publication of the book was revolutionary. Immediately other liberal-minded intellectuals came forward with other publications in support of Taronjí, the principal of whom were Quadrado, historian and keeper of the municipal archives, and Joaquin Fiol. The ecclesiastical authorities and the higher social circles of the island who, influenced by the priests, clung with tenacious fanaticism to their inherent prejudice, were greatly perturbed by the clamorous indignation and agitation produced on the mainland of Spain. The reaction, however, was beneficial, for the lot of the descendants of the ancient Jews who were forcibly converted in the

year 1435 was somewhat mitigated. The effect produced by his book and its influence on public opinion in Spain may be best appreciated by the fact that, after Taronjí's return from Granada, he was permitted, on one single occasion, to preach in the cathedral, the only case on record of the granting of such permission to a Chueta.

Taronjí was buried in the cemetery of Palma; his grave is surmounted by a simple broken column with a palm leaf carved in the marble, without any name or inscription—an eloquent tribute to the admiration and respect paid to his memory.

RAPHAEL BENITO TERONGÍ and his sister CATALINA TERONGÍ, both condemned by the Inquisition as apostates and Judaizers, perished at the stake in the auto da fé of May 6, 1691. In that year four autos da fé were held, the result of an attempted flight from the island of an English ship, organized in 1688 by Raphael Valls, head of the community and its rabbi. All who had decided to leave without the necessary permit had secretly embarked, but a violent storm prevented the ship from sailing. In the meantime the plot became known to the Inquisitors, and all were captured by the officers of the Holy Office and thrown into the dungeons of the Inquisition. In the autos da fé of 1691 their sentences were pronounced, and Raphael Valls, Raphael Benito Terongí and Catalina Terongí were burned alive. They were the three great martyrs of Majorca. A. LIONEL ISAACS.

TARRASCH, SIEGBERT, chessmaster, b. Breslau, Germany, 1862; d. Munich, Germany, 1934. He studied medicine in Berlin and Halle, and practised neurology at Nuremberg, where he won first prize in the chess tournament of 1884. For more than a half-century he was an outstanding figure in chess, winning numerous prizes, but being defeated by Emanuel Lasker in 1908. Tarrasch developed and modernized the theories of William Steinitz, greatly enriched the theory of chess playing, and was prominently known as a brilliant analyst and author in chess literature.

His writings include: *Dreihundert Schachpartien* (1895; 3rd, revised ed., 1925); *Die moderne Schachpartie* (1912); *Das Schachspiel* (1931; English trans., *The Game of Chess,* 1935). Tarrasch adopted Christianity.

TARSHISH, a country mentioned several times in the Bible. It was so far away that it could be reached only by water, and large trading vessels were known as "ships of Tarshish," in about the same sense as the English term "Indiaman." The fact that Tarshish is called a son of Yavan (equals Greece) in the genealogical table in *Gen.* 10 would indicate that Tarshish may have been a Greek colony. Scholars have proposed various identifications for the country. Bochart identified Tarshish with Tartessus in southern Spain, which was called the country of the Turdetani; through it flowed the river Baetis (modern Guadalquivir) and near it was the Phoenician settlement of Gadir (modern Cadiz). A further support for this identification is the fact that the original connection with Tarshish came from Phoenicia and that Greeks had settled there in early times. Other identifications are Tarsus in Cilicia, Carthage, the land of the Etruscans, or even India. There is also a stone called *tarshish,* possibly named after the country; its traditional identification is with the topaz.

TARTAKOWER, ARIEH, Jewish historian and sociologist, b. Brody, Poland, 1897. He was educated in a Gymnasium, and proceeded to the University of Vienna, where he received (1920) the degree of doctor of jurisprudence. He next studied political sciences, and in 1922 received a second degree as doctor scientiarum politicarum. The greater part of his career was associated with the city of Warsaw, where he acquired high repute as a lecturer on sociology in the Institute of Jewish Sciences from 1929 to 1939 and as writer on Jewish history, sociology and emigration. During the same period he took an active part in Jewish communal life, fulfilling with distinction his duties as a leader of the Hithahduth, the Zionist labor wing of the Palestinian Hapoel Hatzair, and in practical emigration problems. He was one of the two secretaries of the world federation of the Hithahduth, and president of the Jewish Emigrant Aid Society in Poland.

Tartakower was a prolific contributor to various magazines in Poland, several of which he edited himself, in Polish, Hebrew and Yiddish, writing on scientific and on general Jewish topics. Of special significance is his contribution on Jewish emigration to the statistical publications issued by the Institute for National Statistics in Poland, a semi-official government institution. He wrote: *History of the Jewish Labor Movement* (Hebrew; Warsaw, 1928); *The Jewish People In Our Time* (Hebrew; Lodz, 1936); *Sociology of the Jews* (Polish; Lwów, 1938); *Jewish Emigration and Jewish Policy of Emigration* (Yiddish; Vilna, 1939); and compiled and edited, together with I. Shiper and A. Haftka, two volumes in Polish, *Jews in Modern Poland* (Warsaw, 1930-33).

Tartakower arrived in the United States in 1939, and immediately became active in various communal enterprises as well as a frequent contributor to the leading Yiddish and Hebrew publications. He became head of the Department of Immigration and Colonization in the American Jewish Congress, a member of the American Central Committee of the Poale Zion—Zeire Zion and the leading spirit among the organized groups of Polish Jewish refugees who came to the United States since the outbreak of the second World War in 1939. He was also (1943) one of the two editors of a bi-weekly magazine in the Polish language, *Nasza Tribuna,* for the interests of Polish Jewry.

TARTAKOWER, SEVELIJ, chessmaster, b. Rostov on Don, Russia, 1887. He made his chess debut at the age of eighteen in a local tournament in Russia, and achieved international fame by winning first prize in the International Chess Masters' Tournament held in Vienna in 1923, and in another tournament at Hastings, England, in 1924. Tartakower was victorious also in the subsequent tournaments at Hastings (1927), Paris (1929), Nice (France) and Liége, Belgium (both in 1930). In 1935 he won the championship of Poland in a tournament held at Warsaw.

A doctor of law, Tartakower was active also as a littérateur, translating into German modern Russian poetry (*Das russische Revolutionsgesicht,* 1923). He was an outstanding writer on chess and a frequent contributor to many chess periodicals, notably the *Wiener Schachzeitung.* His writings include: *Am Baum der Schacherkenntnis* (1921); *Die hypermoderne Schachpartie* (1924); *Schachmethodik* (1928); *Bréviaire des échecs* (1934). After the fall of France (1940) Tartakower left Paris, where he had lived for many years, to join the Free (Fighting) French forces. He changed his name to Cartier.

TARYAG MITZVOTH, *see* PRECEPTS, THE 613.

TAS, *see* TORAH, ORNAMENTATION OF.

The ceremony of Tashlich as performed by Orthodox Jews on Rosh Hashanah

TASHLICH (literally, "Thou wilt cast," i.e. the sins into the water). The Tashlich ceremony is practised by Orthodox Jews, especially women and girls, on the first day of Rosh Hashanah, or, if this falls on a Sabbath, on the second day of Rosh Hashanah. After the afternoon service (Minhah), the women and girls go to some running stream and cast bread crumbs into the waters, at the same time reciting three times the verse (*Micah* 7:19) "He will again have compassion upon us; He will subdue our iniquities; and Thou wilt cast all their sins into the depths of the sea," the evident symbolism of which was interpreted in a literal sense.

The Tashlich custom is mentioned for the first time in the writings of Jacob ben Moses Mölln (Maharil), who lived from 1355 to 1427. It is noteworthy that while in Cologne, Petrarch observed how the Germans used to go to the Rhine on St. John's Eve and, in the midst of songs or of softly murmured sentences, cast herbs into the river, in the belief that the river would bear off all the troubles and sorrows of the coming year, even as it was carrying away the herbs. The Jewish sources which mention the Tashlich ceremony generally connect the custom with the fishes in the river; just as the fishes are withdrawn from the sight of man by means of the water, so may man remain protected from the evil eye through the protection granted him by God; just as the fishes unsuspectingly are caught in the net, so human beings are often suddenly called away from this life. Mention is made also of the fertility of fishes.

Z., "Tashlik, A Study in Jewish Ceremonies," *Hebrew Union College Annual,* vol. 11 (1936).

TASMANIA, an island to the south of the Australian mainland, one of the Federated States of the Commonwealth. Its population in 1940 was about 220,000, of whom only about 100 were Jews. Yet there is known to have been a Jewish settlement in Hobart, the capital (population 40,000), as early as 1830. A synagogue was built in 1844. Most of the Jewish community later moved to Sydney, necessitating the closing of the synagogue. Some time before 1910, however, a congregation was again formed, and the community organization has since centered around it.

In Launceston (population 28,000) a synagogue was built in 1846, serving about 100 families. The depletion of the Jewish population here also forced the closing of the synagogue in 1871. Although renovation of the building was begun in 1925, it was not reopened until 1939, in which year high holy day services were held for the first time.

TATA, town in Hungary. A Jewish community existed at Tata in the 13th cent. In 1490 the Jews of Tata were expelled by order of their feudal lord, Regent Johannes Corvinus, who rewarded his castellan, Mihály Csicseri Orosz, by transferring to him the titles to the properties of a certain Moses and Abraham. The Jews began to return to Tata probably in 1504; there is documentary evidence of their presence there in 1518. Turkish troops passing the town for eight successive times laid it almost completely waste; the Jews were either killed or fled. According to the testimony of tombstones, Jews from Bohemia and Moravia settled at Tata after the peace of Szatmár (1711). They were tolerated by the Esterházy family; their synagogue stood on Esterházy ground. In 1770 Tata had 310 Jewish inhabitants; by 1848 their number had increased to 1,211 through migration. Later the community included also the Jews of Tóváros and of other villages, the total being 840 (1920).

The community maintained a school and several religious and philanthropic institutions. From 1912 on it was under the spiritual leadership of Izidor Goldberger, who did notable research on the history of the Jews in Hungary. Móric Fischer de Farkasház, an ancestor of Rabbi Stephen S. Wise, Rabbi Mark Handler, father of Simon Hevesi, and the violinist Edmund Singer were born in Tata.

TAUBENHAUS, JACOB JOSEPH, plant pathologist, b. Safed, Palestine, 1884; d. Bryan, Texas, 1937.

He attended the Mikveh Israel Agricultural School in Palestine, came to the United States as a youth and was graduated in 1904 from the National Farm School, at Doylestown, Pennsylvania. Taubenhaus then studied at Cornell University (M.S., 1909), conducting investigations of the diseases of the hollyhock, and in 1913 received the Ph.D. degree from the University of Pennsylvania. He was associate plant pathologist at the Delaware Experiment Station of Delaware University (1909-16), and from 1916 to his death chief of the Division of Plant Pathology and Physiology at the Texas Agricultural Experiment Station.

Taubenhaus was also professor of plant pathology and soil bacteriology at the Texas Agricultural and Mechanical College. As the state's chief plant pathologist and physiologist he did much to save it the cost of crop blights. One of his chief studies was that of the root rot of the cotton plant.

The published works of Taubenhaus include *Culture and Diseases of the Sweet Pea* (1917); *Diseases of Truck Crops* (1918); *Diseases of Greenhouse Crops* (1920); *Diseases of the Sweet Potato* (1923) and *Culture and Diseases of the Onion in America* (1924).

TAUBENSCHLAG, RAFAEL, professor of law and expert in Roman and Greek law, b. Przemysl, Poland, 1881. He was educated at the Gymnasium in his native town, and later studied at the University of Cracow, graduating in 1904 as a doctor of jurisprudence. From 1913 to 1939 he was professor of law at the same university. At the end of 1939 he went to France, and became professor of law at the University of Aix-en-Provence, where he lectured for one year. From France he came to the United States, and became professor in the New School for Social Research, in New York, and in October, 1942, was appointed professor at Columbia University.

Taubenschlag is best known for his contributions in interpreting Roman and Greek law as well as Hellenistic law, although he wrote numerous articles on medieval law and individual articles on Syrian as well as modern law. His literary, scientific contributions to various magazines in this field, printed in the most outstanding centers of world culture, made him famous. The Polish Academy of Science in Cracow therefore made him a member, and he was appointed also a foreign member of the Academy of Science in Bologna, Italy, as well as a member of the Royal Academy in Turin, Italy.

He was also dean of the faculty of laws in the University of Cracow from 1923 to 1930; the Polish government decorated him with the Polonia Restituta especially for his scientific works relating to the statutes of Casimir the Great (*Polish Procedure until the Statutes of Casimir the Great,* Lemberg, 1922, and *The Origin of the Statutes of Casimir the Great,* Cracow, 1928). His articles were printed in Polish, German, French, Italian and English magazines, and he was known mainly for his contributions on Roman and Greek law in addition to Polish, in Italy, where he was also co-editor of the *Archives du droit oriental.*

Taubenschlag dedicated his entire life to creative scientific work and to the enrichment of Polish culture. He was founder of the Polish Institute of Art and Sciences in Cracow, and one of its vice-directors.

Taubenschlag's only interest in Jewish life in Poland was his care for the Jewish students who studied in the University of Cracow. He was founder of the academical home Ognisko (center) for Jewish students, and its curator from 1918 to 1938.

TAUBER, RICHARD, tenor, b. Linz, Austria, 1892. He studied singing with Karl Beines, and in 1913 he made his debut at the State Theatre in Chemnitz, of which his father was the director. A contract followed for the Dresden Opera, where Tauber remained for ten years, scoring many successes. In 1915 he became also first tenor of the Berlin Opera, where he achieved world fame for his interpretations of German, Italian and French operas. He appeared as guest in most of the leading opera houses in Europe, and was decorated by the king of Sweden with the Cross of the Wasa Order, First Class. Together with his success in opera came triumphs in the field of the operetta, in which he was incomparable. Franz Lehar wrote for Tauber many of his successful operettas, including *Paganini, Frederika* and *The Land of Smiles.* Tauber appeared in the last-named operetta more than 700 times. In 1931 he visited the United States and sang successfully in the leading concert halls.

In 1933, banished from Nazi Germany, he settled in Austria. Following the annexation of Austria by Germany, Tauber went to England, where he applied for citizenship. Tauber appeared in several English-speaking films, including *Land Without Music, Heart's Desire* and *The Unfinished Symphony.* In 1936 Tauber was married to Diana Napier, British actress. In 1943 he appeared for the first time in the operetta *Old Chelsea,* at the Princess Theater, in London.

Lit.: Ewen, David, *Living Musicians.*

TÄUBLER, EUGEN, historian, b. Gostinin, Poland, 1879. He studied in Berlin under Mommsen, and also at the rabbinical seminary and Lehranstalt there. In 1906 he founded the Central Archives of the Jews of Germany, which he directed until 1919. From 1910 to 1918 he was professor of Jewish history and Hellenism at the Lehranstalt. He was made lecturer in ancient history at the University of Berlin in 1919, and later served as professor at the Universities of Zurich and Heidelberg.

In 1919 Täubler also became director of the Academy of Jewish Research in Berlin, the first institute of its kind. Among his published works were *Imperium Romanum* (1913), which disputed some of Mommsen's theories; *A History of the Treaties of the Roman Government; Tyche* (1926), a collection of essays on history; and *Terremare und Rom* (1932). He was editor from 1908 to 1915 of the *Mitteilungen des Gesamtarchivs der deutschen Juden.* In 1933 Täubler left the University of Heidelberg, with which he had until then been connected, and resigned also from the Heidelberg Academy of Sciences. For a time he taught at the Lehranstalt in Berlin and subsequently left Germany to come to the United States, where he joined the faculty of the Hebrew Union College in Cincinnati. His wife was Selma Stern.

Lit.: *Hebrew Union College Monthly,* Feb., 1942, pp. 12, 17.

TAUBMAN, HOWARD, music critic, b. New York city, 1907. He studied in the public schools in New York and at Cornell University. His music study took place with private teachers. In 1930 he was appointed music critic of the New York *Times,* a post which he still held in 1943. He is the author of *Opera Front and Back* and *Music As A Profession,* and of music articles in leading American periodicals.

TAUROG, NORMAN, motion picture director, b. Chicago, 1899. He started in 1912 as an actor on the legitimate stage, but in 1916 he turned to the motion picture industry, beginning as a property boy. In 1936 he became a director of the 20th Century-Fox Film Company. Taurog directed numerous films, including *The Adventures of Tom Sawyer, Mad About Music, Boys Town* and *Young Tom Edison.* In 1931 he received the award of merit from the Academy of Motion Picture Arts and Sciences for his direction of the Paramount motion picture *Skippy.*

TAUSIG, KARL, pianist, b. Warsaw, Poland, 1841; d. Leipzig, Germany, 1871. He was the son of a well-known pianist, Aloys Tausig (b. Prague, 1829; d. Warsaw, 1885). He studied first with his father, then with Franz Liszt. In 1858 he made his public debut at an orchestral concert in Berlin conducted by Hans von Bülow. He toured Europe and scored triumph after triumph because of his exceptional technique, which was said to be second only to that of Liszt, and the maturity and artistry of his interpretations. In 1862 Tausig featured a series of progressive orchestral programs, and in 1865 he settled in Berlin, where he became a leading teacher of piano. He wrote abundantly (for piano) charming, graceful pieces which have never achieved particular artistic importance. His book of piano exercises, *Tägliche Studien,* is excellent. Despite his premature death, he belongs in the gallery of the great pianists of all time.

Lit.: Weitzmann, H. F., *Der Letzte der Virtuosen* (1868).

TAUSSIG, CHARLES WILLIAM, manufacturer and author, b. New York city, 1896. One of the outstanding figures in the American molasses and sugar industries, he was appointed by President Franklin D. Roosevelt technical adviser during the Washington conference with foreign powers in 1933. He was one of the six original members of Roosevelt's "brain trust," technical adviser to the World Economic Conference (1933) and chairman of the national advisory committee of the National Youth Administration (1935). Taussig also served as a member of the president's Advisory Council for the Virgin Islands (1934) and as chairman of the United States Commission to Study the Social and Economic Conditions in the British West Indies. He was awarded the National Order Merit and the Carlos Manuel de Cespedes Order (Cuba).

Taussig's writings include *Book of Radio* (1922); *Book of Hobbies* (with T. A. Meyer; 1924); *Rum, Romance and Rebellion* (1928); *American Etchers—Philip Kappel* (vol. 4, 1929) and *Some Notes on Sugar and Molasses.*

Lit.: Levy, Henry W., "A Galaxy of Grey Matter," *American Hebrew,* May 19, 1933.

TAUSSIG, FRANK WILLIAM, economist, b. St. Louis, 1859; d. Cambridge, Mass., 1940. He received several degrees and honorary degrees from universities in the United States, England and Germany and was associate professor of economics at Harvard University from 1892 to 1901; he was professor from 1901 to 1935, when he became professor emeritus. He was president of the American Economic Association (1904-5) and chairman of the United States Tariff Commission (1917-19).

Taussig edited the *Quarterly Journal of Economics* (1896-1937). His writings include *Tariff History of the United States* (1888); *The Silver Situation in the United States* (1892); *Wages and Capital* (1896); *Principles of Economics* (1911; 4th ed., 1939); *Some Phases of the Tariff Question* (1915); *Inventors and Money-Makers* (1915); *Free Trade, the Tariff and Reciprocity* (1919); *International Trade* (1927) and *The Social Origins of American Business Leaders* (1932). He was a founder of the Harvard Graduate School of Business Administration.

Lit.: Explorations in Economics; Notes and Essays Contributed in Honor of F. W. Taussig (1936).

TAUSSIG, FREDERICK JOSEPH, gynecologist, b. Brooklyn, N. Y., 1872. He was educated at Harvard (A.B., 1893) and at Washington University, St. Louis (M.D., 1898), pursued post-graduate studies in Vienna, and started his practice in St. Louis in 1902. In 1911 he was appointed clinical professor of gynecology and professor of clinical obstetrics; he still held this position in 1943.

Taussig was president of the Central Association of Obstetricians and Gynecologists (1932-33) and director of the Society for the Control of Cancer (1938).

His writings include: *Diseases of the Vulva* (1923); *Abortion, Spontaneous and Induced, Medical and Social Aspects* (1935); and contributions to textbooks on obstetrics, gynecology, surgery, pediatrics and cancer.

TAUSSIG, THEODOR, RITTER VON, financier and banker to Emperor Francis Joseph I of Austria, b. Prague, 1848; d. Vienna, 1909. In 1873 he became director of the Wiener Wechselstuben Aktien-Gesellschaft, and managed to steer the banking-house safely through the great crash of that year. In the following year he became head of the Bodenkreditanstalt, one of Austria's most important banking houses, and induced the Rothschild bank to join his firm. Due to his efforts, the Austrian railways were taken over by the state. Similarly the mining industry and Danubian navigation underwent great improvement. Taussig, who headed numerous industrial enterprises, served for many years as government adviser.

His negotiations regarding a loan to the Russian government at the time of the pogroms (1904 and 1905) aroused a storm of indignation against him, and he had to resign his post as a director of the Jewish community of Vienna.

TAV, *see* ALPHABET.

TAX COLLECTORS. Jews were employed as farmers and collectors of taxes from very early times. As far back as the 2nd cent. B.C.E. there was a certain Joseph, son of Tobias, who figured as tax collector under King Ptolemy Euergetes in Egypt; among those who appeared before the Roman procurator with a petition on the eve of the Roman-Judean war was an imperial tax collector named Jonathan.

Later, after Christianity became dominant in Europe and the civic rights of Jews became more and more restricted with the result that numerous occupations were closed to them, the number of Jews engaged in the leasing and collection of taxes greatly increased. This was especially true during the Middle Ages and the first two centuries of the modern era. The farming of taxes, tolls and other state revenues became the occupation of Jews possessed of capital and financial ability. They were so recognized in medieval Europe. Especially was this the case in Poland, where at the time of the large Jewish immigration there were only two classes of people, the great landowners and the peasants—the former class being represented by royalty and the nobles. To secure needed revenue the Polish kings and the nobility resorted to Jews to manage sources of taxation, such as salt mines, spirits and customs duties. They would sell the estimated revenues to Jewish financiers for a lump sum, and give them the power to collect the various taxes.

Some of these tax farmers became very wealthy. Early in the 16th cent. one of these royal financiers was a certain Yosko, who farmed the customs and tolls in nearly half of Poland. By the beginning of the 15th cent. the Polish Jews, as a consequence, became a great economic and social factor in the state, in spite of the fact that church assemblies frequently decreed that no one not belonging to the church could hold a public office or become a farmer of taxes. Many of the Jewish tax collectors abused the power they acquired by bearing too heavily on the peasantry through excessive imposts. Rabbinical synods and lay represen-

tatives of the Jewish communities meeting in Lublin and other centers issued solemn warnings from time to time of future persecutions.

The unfavorable turn for Jews in Poland was not long in coming, due to the increasing influence of the Jesuits in the state. The Jesuits who tried to convert to Rome the Polish colonists on the Dnieper, later known as Cossacks, who were Greek Catholics, transferred to their Jewish business agents the lease of oppressive imposts. They even gave to these Jewish tax farmers the keys to the Greek churches. Then when popular outcry was at its highest, they laid all the blame on the Jews, and persecutions began.

Jews as tax collectors were numerous also in other European countries. In France, as early as the 6th cent., there were laws to prohibit Jews from becoming tax farmers. In Hungary, early in the 13th cent., the dominant Magyars were at first very tolerant toward the Jews. Not only did they have Jewish tax gatherers, but Jews had also the right of coinage. This favorable condition was soon reversed. In Spain, under Henry Trastamare, who rebelled against King Pedro, the cortes abrogated the law permitting Jews to become state functionaries and tax farmers. This abrogation was later confirmed in the reign of Queen Leonore. In Portugal, in the 15th cent., most of the tax farmers were Jews. In Russia, Peter the Great had many financial agents in his new capital, St. Petersburg. The best-known among them who served as imperial tax farmer was the "court Jew," Lipman Levy, from Courland.

In Egypt, in the 17th cent., Raphael Joseph Chelebi, of Aleppo, a man of great wealth and a friend of Sabbatai Zevi, was the tax farmer for the state.

CHARLES A. RUBENSTEIN.

Lit.: Graetz, H., *History of the Jews* (1927); Lazare, Bernard, *Antisemitism* (1903), chap. 5; Dubnow, S. M., *History of the Jews in Russia and Poland* (2 vols., 1918); Abrahams, Israel, *Jewish Life in the Middle Ages* (1917); Baron, Salo W., *The Jewish Community* (3 vols., 1942).

TAXATION. 1. In Ancient Times. There are almost no references to taxation in the early period of the history of the Israelites. Since government was local and on a voluntary basis, it was probably not until the time of the kings that the need for any regular revenue on the part of the rulers was felt. Taxation arose out of the necessity of maintaining a standing army and of pursuing building operations, as well as providing for a group of administrative officials. At first collections were but sporadic, and in accordance with immediate needs. Thus David's irregular troop in Judah supported itself by *baksheesh,* or contributions from the rich agriculturalists, as is evidenced by the story of Nabal (*I Sam.* 25). With the consolidation of the kingdom and the establishment of a fixed government, some form of taxation must have been inaugurated. Solomon, in particular, with his extensive building operations, seems to have imposed upon the people not only the obligation of the corvée, or fixed periods of labor (*mas; I Kings* 5:27), but also tax payments in kind. These additional burdens were so oppressive that they were one of the main reasons for the revolt of the ten tribes against Solomon's successor, Rehoboam (*I Kings* 12).

There are no further notices about taxation in the time of the kings, except the hint in *I Sam.* 8:15-17 (ascribed to the Deuteronomist writers of the end of the period of the kings or the time of the Babylonian Exile) that a king would normally take one-tenth of the products of the fields, and would draft some of the man- and woman-power of the country to become his servants. There were probably extra demands on the people in times of war or necessity; thus Menahem of Israel made a capital levy of fifty shekels apiece upon all the rich men of the kingdom to raise the tribute money for the king of Assyria (*II Kings* 15:20).

With the loss of national independence in 586 B.C.E., the Jews became subject to the taxation imposed upon the subjects of the ruling empires, first the Babylonians and then the Persians. Darius Hystaspes (521-485 B.C.E.) was the first Persian ruler to inaugurate a uniform system of taxation for all his subjects. The royal decree of Artaxerxes to Ezra explicitly exempts the priests and other religious functionaries from the payment of taxes (*Ezra* 7:24). These taxes weighed heavily upon the new settlers in Palestine, for in the time of Nehemiah they declared that they had to mortgage their farms to pay taxes (*Neh.* 5:4).

The Greek conquest in 331 B.C.E. did not materially change the conditions in respect to taxation. Alexander the Great is recorded as having remitted the taxes on the occasion of his first visit to Jerusalem, since the year was a Sabbatical one; he also extended this favor to the Jews of Babylonia as well as to those of Palestine. Under Alexander's successors, the Ptolemies and the Seleucidae, the burden of taxation was increased by the practise of letting out the collection of taxes to tax farmers, who employed every trick and artifice to wring larger sums from the unfortunate peasantry and traders. So evil was the name which the tax collectors ("publicans") made for themselves that they were regarded as unfit to act as witnesses or judges; deception of the tax collector was regarded as almost a venial offense. The taxes included a poll tax and a tax on products, as well as on certain specific objects and for such occasions as weddings. In the 3rd cent. C.E. the amount paid by the tax collectors to the king was reported as being 16,000 talents ($1,600,000); the amount actually collected from the people must have been much higher.

The rule of the Seleucidae (198-142 B.C.E.) was characterized by an initial lightening of the tax burdens, but a gradual increase afterward which must have pressed heavily on the country and fostered the movement for independence after the battle for religious freedom had removed one cause of revolt. Whether taxation was any lighter under the Hasmoneans or under Herod and his sons is doubtful; both dynasties met with complaints and revolts on the part of the people. After the Romans took over the country (6 C.E. on) the system of taxation seems to have been administered at first with considerable fairness, so that the acceptance of a foreign rule came as a relief. After 44 C.E., however, the increasing exactions of the Roman procurators eventually goaded the people to revolt, which broke out in 66. After the suppression of the revolt and the destruction of the Temple, the Romans imposed the first specifically Jewish tax by taking over the money which the Jews had voluntarily contributed to the support of the Temple, amounting to a shekel per head. This Fiscus Judaicus, as it was called, remained in force for three centuries, until it was abolished by Julian the Apostate. Otherwise, the Jews paid exactly the same taxes as the other subjects of the empire. Recent papyri finds indicate that the Jews of Egypt paid certain special taxes even before the destruction of the Second Temple; these imposts may have survived down to the time of the Moslem conquest (7th cent.).

2. Specific Jewish Taxes under Christian and Moslem Rule. The triumph of Christianity in the Roman Empire, while it brought upon the Jews many

disabilities, at first made no difference in the amount of the taxes which they paid to the government, except that again certain voluntary taxes (in this case for the support of the patriarchate) were diverted to the royal treasury. In the later centuries various countries began to impose heavier taxes upon the Jews than upon Christians, although the form of the tax was the same. Thus in 846 Charles the Bald of France taxed Jewish merchants at a rate of 11% of their gross sales, as against 10% in the case of Christians. In Mohammedan countries the idea of special taxes had begun even earlier; for by the decree of Omar (7th cent.) both Christians and Jews were tolerated in Mohammedan countries on the payment of special taxes, which persisted to the 19th cent.

It was as a result of the Crusades (1096 and after) that the separate position of the Jews in regard to taxation became a fixed part of their status in the countries of Europe. Due to the mob outbreaks which accompanied the Crusades the Jews were compelled to place themselves under the protection of the rulers, especially the German emperors. They became Kammerknechte, "serfs of the imperial chamber," and in return for this, they were compelled to make payments of a type and amount different from other subjects of the empire. These began with special taxes; according to Rösel, it was in 1187 that these were first imposed in Germany. Regular taxes were added later (1241). The compulsion of paying taxes was frequently lessened by the fact that, if the amount originally fixed proved to be impossible of collection, a lump sum would be arranged as a compromise between the government and the Jewish community or its representatives. Since the Jewish community was indispensable as an organ for the levying and collection of taxes, the taxation of the Jews helped bring about an autonomous Jewish organization. On the other hand, it served to emphasize the separate position of the Jews and their inferior status. While Jews were subject to special taxation in all countries, the amount and multiplicity of the Jewish taxes was the greater in those places where their legal position was less favorable. This was particularly the case where the rulers began to look upon Jewish taxes as a major source of revenue and as an indirect means of collecting taxes from the non-Jew. They permitted and urged the Jews to earn their living by lending out money at high rates of interest; of these amounts they left the Jews only the barest living expenses, while they themselves took over the bulk in the form of taxation. They thus derived the major gain from the peculiar position of the Jews, leaving to the latter the odium which they aroused among the people.

Scholars have argued as to whether the burden of taxation of the Jews was heavier than that of the rest of the population, especially that of the serf-like peasants. An insight into the question is given by the statement of Emperor Charles V in 1546: "Since the Jews in all the kingdom pay higher taxes, and are more highly obligated as to body, gift, and property than the Christians; and since, on the other hand, they have neither real estate nor offices nor handicrafts; accordingly we grant them permission to lay out their capital at a proportionately higher rate of interest than is granted to the Christians" (Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 6, p. 213). This statement contains the admission that the taxes imposed on the Jews were endurable only if they could be passed on. The fact that the Jews were not required to serve as soldiers was no real compensation, since they had to pay additional taxes in return for this exemption ("the third penny"). The burdens imposed upon the Jews by their overlords became all the more oppressive because of the arbitrary way in which they were made. The whims of the rulers affected the Jews in every direction, and the kind and amount of the financial obligations which they owed to the government frequently changed overnight. Just as in ancient times, it is particularly hard to distinguish between taxation, confiscation and extortion in general in regard to the contributions which the Jews made to the upkeep of the government.

In the England of the Middle Ages the taxation of the Jews was especially severe. Here there was a special official whose duty it was to assure the financial success of the taxation upon the Jews, which was called "the Jews' exchequer." During the period of absolutism, taxation became a public burden which weighed heavily and in increasing amounts upon the laboring classes (in contrast to the privileged classes) as a whole; but in the case of the Jews, this was extracted more ruthlessly and arbitrarily in all countries. There were always special imposts for every alleviation of the condition of the Jews. They had to pay ransom money against a threatened expulsion or give a sum for the right of residence in the country. In addition to the burdens of the regular taxes, there were "honorings" and "drink monies," which the Jews had to present on every occasion, and in a greater amount than the other vassals, since they were more dependent upon the good will of the officials.

It is hard to determine the exact amount of the revenues that accrued to the government from these Jewish taxes. The figures of the Jewish taxes under Frederick II of Germany in 1241 have been preserved; they amounted to 854 silver marks. For the time about 1400 it can be estimated that a fifth part of the imperial income from the cities of the Holy Roman Empire came from the Jewish taxes. In the 13th cent. the government of England is said to have obtained one-thirteenth of its income from the taxation of the Jews. The loss of this income resulting from the expulsion of the Jews (1290) was one of the reasons for the later financial embarrassments of the English kings, and this in turn compelled them to make large concessions to the barons. In the kingdom of Poland, the Jewish taxes made up a great part of the income of the state.

3. Individual Jewish Taxes. a. Poll Tax. The poll tax is the most widespread form of taxation for those groups of the population who are in an inferior status. It is found as a tax upon the Jews in almost all the countries of the Diaspora, beginning with the Fiscus Judaicus of the Roman emperors. It was introduced into Germany by the emperor Ludwig the Bavarian in 1342, under the name of the "golden offering penny"; it amounted to one golden gulden a year. Later the tax received the more humiliating name of "body tax" (*Leibzoll*). After the imperial system was replaced by the rule of the princes (16th cent. on), the latter was collected under the name of "Jews' protection money"; in Brandenburg and Prussia this amounted to eight Reichstalers a head. As a rule, the Jewish tax, which was often applied to a fixed quota of Jews allowed to live in the area, was collected from the Jewish community in a lump sum; the latter then assigned its own tax amounts to be paid by members of the community, either by heads or, more frequently, in proportion to means.

The poll tax was also the basis for all Jewish taxes in other countries. It was levied in Spain during the Middle Ages and later on in Turkey (*Charaj,* a tax intermediate between a poll and a property tax). In southern France (Narbonne) the introduction of a "hearth tax" (one cent of ten sous Tournois) constituted a step in advance, as it replaced the former multiplex and arbitrary taxes. In Poland a Jewish poll tax of one gulden a head was collected from the 16th cent. on. The Sejm would fix a definite amount; the representative assembly of the Kahals, who were re-

sponsible as a whole for its collection, would reapportion it among the individual communities. An internal community tax, the Korobka ("basket tax"), served the purpose of making up the deficit. After the abolition of the Jewish Diet (1765) and the taking of a census, the tax was significantly increased in order to take greater advantage of the Korobka. The income from such taxes in Poland and Lithuania eventually amounted to more than a million florins, or from one-eighth to one-fifth of the entire income of the state.

b. The Third Penny. The "third penny" tax was a special property tax, nominally one-third of the property, but often less, such as 10%, 20%, or a fixed amount. It was first levied in the 15th cent. as a "coronation tax," that is, it was the price paid by the Jews to the new emperor for a guarantee of protection. There were also special war taxes, such as those for the Hussite war, the Turkish wars, the Thirty Years' War (Tilly and Mansfeld), the wars of Austria and Brandenburg-Prussia (16,000 Reichstalers in 1690; 16,000 in 1701, of which the Berlin Jews contributed 5,000), and the wars of Poland. These war contributions, which were imposed upon others as well as upon the Jews, are often not distinguishable from the compulsory loans which were levied in the centuries from the later Middle Ages on, loans in which the Jews had to assist with considerable quotas (for instance, one-fourth at Munich in 1805).

c. Judengeleit ("safe conduct"). Since Jews were not permitted to bear arms, they often required some form of safe conduct as they went from place to place to gain a livelihood, a sort of security against robbery. For this they paid a tax known as Judengeleit. Originally a tax paid to the emperor (the time of its origin is uncertain) which held good for the entire empire and prevented the imposition of further tolls for passage, the Judengeleit became a local tax after the rule passed into the hands of the princes. It was collected from foreign Jews who traveled through a country, and it gave them the right to transact business within its territory; it was also collected from other Jews, when they left the place of their residence. It was often paid at the rate of so much a day and was collected daily at the place of their temporary residence. Thus Jews who had been expelled from a city could settle down in a nearby locality and, on the strength of their passports, continue to do business in the places from which they had been expelled (as at Nuremberg and Fürth after 1499).

The Judengeleit was especially humiliating as it was an express tax upon the Jewish population and bore the name of the Jew, thus stamping him as a distinct and inferior class. It remained in most European countries until the time of emancipation, and was retained in the case of Jewish merchants who traveled between Russian Poland and Russia proper even after the partition of Poland and as late as 1850. It was abolished in Austria by the Edict of Toleration in 1782, in Prussia in 1787 to 1788, thanks to the labors of David Friedländer, and in Russia in 1862.

d. Indirect Taxes (Excise and Sales Taxes). It is self-evident that the Jews had to pay the indirect taxes just as the rest of the population did. However, it must not be forgotten that since a tax on luxuries is the most difficult to pass on to the ultimate consumer, such measures must have imposed a heavy tax burden upon the Jewish merchants, who were the main dealers in luxuries. In Brandenburg the Jews had to pay double the usual excise (1680); in 1696 this amounted to 117,000 talers in Berlin alone. The Spanish *Alcabala* (known also as *ajuda, impocisio, cisa* and *eser*) must have been especially hard on the Jews with their many-sided credit and trading business. The same was the case with the Korobka in Poland, which was a combined excise and business tax, principally on meat, but also on other necessities of life, and on business agreements as well. While the Korobka in itself was a tax levied by the Jewish community, it indirectly aided the government to a certain degree, since it was used to meet the deficits in the poll tax. After the partition of Poland (1772-95), the Korobka continued to exist in Poland, principally as a tax on Kosher meat; after the abolition of the Kahal (1844) it became a public tax, extremely oppressive upon the poorest Jews.

In Galicia the state taxes were consistently based on ritual institutions. Here there was a tax on Kosher meat, and the eating of non-ritual meat was even forbidden to the Jews by the government—a remarkable expression of fiscality raised to the highest degree! There was also a tax on the Sabbath lights in place of the Jews' protection money (1787 on; whoever burned more than a certain number of Sabbath lights was permitted to vote in the Jewish community elections, even if he did not possess property), and finally a "Minyan tax" (permitting private services) of fifty florins a year. The latter tax was abolished in 1811.

The most shameful of these taxations was that of the Jews in the Papal States, where every synagogue under Julius III had to pay ten ducats for the support of the catechumenate with its compulsory sermons.

One may also count as taxes—although they were not called such—certain almost humorously devised monopolistic ideas of the mercantile bureaucracy. Thus in Prussia in 1769 the Jews had to buy wares to the amount of 300 talers from the royal porcelain factory on the occasion of the "establishment" (with the privilege of marrying) of a second or third child (Jews' Porcelain).

4. End of the Special Jewish Taxes. Even after the end of the Holy Roman Empire and the imposition of universal taxes, many special taxes on the Jews still remained. In many places they had to pay double taxes; but in Galicia, for instance, they were moderated and finally abolished. Jewish taxes disappeared in all countries and as a matter of principle with the complete emancipation of the Jews. They were "unjust in their design, oppressive in their imposition, and ruinous in their consequences" (the words of the Austrian minister of finance, Krauss, on the abolition of such taxes in 1848; Von Wellenhof, *Die Sonderbesteuerung der jüdischen Bevölkerung in Galizien bis 1848,* p. 447), but only a logical consequence of the dependence and insecure political position of the Jews, which in turn is to be traced back to their political impotence.

SIMON COHEN.

Lit.: There is no general work on the subject, but much scattered material in all the standard Jewish histories; for individual fields see: Rösel, in *Monatsschrift für Geschichte und Wissenschaft des Judentums,* vols. 53-54 (1909-10); Von Wellenhof, in *Vierteljahrschrift für Sozial- und Wirtschaftsgeschichte,* vol. 12 (1914); *Jewish Encyclopedia,* vol. 7, pp. 669-71; Stobbe, Otto, *Die Juden in Deutschland während des Mittelalters;* Brentano, *Englische Wirtschaftsgeschichte;* Marcus, Jacob R., *The Jew in the Medieval World* (1938); Abrahams, I., *Jewish Life in the Middle Ages;* Weinryb, B. TAYLOR, HENRY KELLER, physician, b. New York city, 1894. He received the M.D. degree from the New York University College of Medicine (1915), and specialized in radiology. After having served as

roentgenologist with several New York hospitals, he was made instructor in radiology at the New York University College of Medicine (1934-36), and was reappointed in 1941.

Taylor was consecutively treasurer, secretary, vice-president and president (1940-41) of the New York Roentgen Society; in 1941 to 1942 he was a member of its executive committee. In 1943 he was affiliated with the Welfare Hospital, New York city, as a roentgenologist. He published numerous papers on radiology, roentgenology and related subjects.

TCHERNIAKOW, ADAM (ABRAHAM), Jewish martyr in the days when the Nazis occupied Poland, b. Warsaw, Poland, 1881; d. in the Warsaw ghetto, 1942.

He received his higher education in the Warsaw Polytechnicum, with a degree in chemical engineering, and later studied technology in Stuttgart, Germany. He was well versed in his profession, and was known for his skill and ability in engineering circles in Poland.

Tcherniakow was brought up in a home where his mother tongue was Polish and his Jewish education was limited. For many years he was considered as belonging to those who favored assimilation, but when he came into contact with the Jewish masses he took a more and more intensive interest in Jewish national movements, and at one time was the spokesman of the Zionist faction among the organized artisans. In those Jewish and non-Jewish circles where he was known he was respected for his integrity.

Tcherniakow came to the fore in Jewish life in Poland when, after the first World War, he helped to organize the Jewish artisans. He was one of the founders of the Jewish artisans' organization in Poland, and for many years among their ardent leaders; he helped considerably to better the lot of the thousands of the small Jewish craftsmen.

When the Nazis marched into Warsaw in 1939 and many Jewish leaders fled Poland for fear of the invader, Tcherniakow refused to leave the city. He immediately became active in the Jewish community together with several other outstanding men, carefully reorganizing Jewish community life. His calmness in time of peril and his love for the common people brought him rapidly to the forefront, and when the Warsaw Kehillah was again in a condition to resume its duties Tcherniakow was elected its official leader with the title of chairman of the board. When the Nazis established the ghetto in Warsaw he was chosen by them as the mayor of the ghetto, thus being the responsible head of the Warsaw Jews toward the Nazi occupants. In the ghetto, where life was then like that in a prison, with starvation food rations, epidemic sicknesses and forced labor obtained by the Nazis, Tcherniakow demonstrated extraordinary ability in helping to make life in the ghetto slightly easier by organizing cultural institutions, establishing music halls and even a Jewish theatre on a small scale.

In the middle of 1942, however, a great change for the worse came to the ghetto. The Nazis demanded from the Kehillah more persons for forced labor at a time when many of these did not return to their homes, and when, in the month of July, 1942, the Nazis requested from the Jewish community the names of 100,000 persons in order to send them away to remote places for forced labor which meant torture and even death, the Warsaw Kehillah, under the chairmanship of Tcherniakow, held a special session and after careful consideration decided to refuse the Nazis' demand. When Tcherniakow brought this answer to the Nazis he was arrested and there tortured for three days, and was then sent back to the ghetto with a renewed request to carry out their decree. Tcherniakow then decided to cry out his protest to the world against this barbarian demand of the Nazis by committing suicide through poison, thus dying a martyr for his suffering people. Z. TYGEL.

Chaim Tchernowitz

TCHERNICHOWSKI, SAUL, *see* TSCHERNIKOWSKI, SAUL.

TCHERNOWITZ, CHAIM, Talmudist and author, b. Sebej, Lithuania, 1871. He was ordained rabbi in 1896 by Isaac Elchanan of Kovno, and became rabbi in Odessa the following year. Here he soon founded a rabbinical Yeshiva, which introduced a modern tone by providing for the study of secular subjects in Hebrew. From the beginning of his career Tchernowitz sought to coordinate the modern sciences with Talmudic knowledge; out of this ambition grew the choice of his pseudonym, Rav Tzair (the young rabbi), under which he became known as one of the most illuminating and progressive writers of his generation.

Tchernowitz remained head of the Odessa Yeshiva until 1912, when he started to study at various Western European universities, receiving the Ph.D. degree in 1914 from the University of Würzburg. In 1923 Tchernowitz came to the United States, to assume the professorship of Talmud at the Jewish Institute of Religion, in New York city. His research into the history of the Talmud and the Halachah produced, as his first major work, *Letholedoth Hashulhan Aruch* (1897-98), a study of the influences that preceded the Caro codification and of the interpretations that followed it. *Shiurim Bethalmud* (1913) is a comparative commentary on legal concepts and on certain aspects of the Mishnah. *Kitzur Hatalmud,* in three volumes (1919-23), is a compendium, and *Toledoth Hahalachah,* in three volumes (1934-43), is the beginning of a history of the Oral Law.

Tchernowitz also wrote for various scholarly journals in Europe and the United States. His interest in the creation of a living Hebrew literature made him, in 1939, the founder

of *Bitzaron,* a Hebrew monthly published in New York, of which he was the editor in 1943. He was also serving as professor of Talmud at the Jewish Institute of Religion.

A Palestinian colony was named Givath Chaim in his honor.

SAMUEL TCHERNOWITZ (b. 1880; d. 1929), his brother, was a journalist and publicist. He was one of the editors of *Hatzefirah, Hazeman* and *Hapoel Hatzair,* and a founder of the Vaad Leumi and the Hebrew monthly *Moznaim.* His writings include a monograph on the Bene Mosheh society (1914) and *In Shohar* (1927).

TEACHERS. A class of professional teachers among the Jewish people was in existence from very early times. There are a number of places in the Bible (*Ps.* 119:99; *Prov.* 5:13; *I Chron.* 15:22; 25:8; *II Chron.* 35:3) which mention teachers explicitly, while numerous others which speak of the art of reading and writing imply some form of education, and hence teachers. The schools of the prophets apparently trained young men who would go about the country and become educators of the people. Similarly, a class of teachers must have arisen out of the schools of the Soferim in the period of the Second Temple. The teaching profession became more widespread as the result of the regulation of Simeon ben Shetah (1st cent. B.C.E.) that schools should be opened for older children in the larger cities and towns, and of the high priest Joshua ben Gamla (63-65 C.E.) that schools for young children should be set up in every town and village. The Talmud, as well as Philo and Josephus, give evidence of the very active and fruitful work of teachers in their own times. The patriarch Judah Nesiah (3rd cent.), the Amora Rabina (5th cent.), and many others made it a duty for every Jewish settlement to set up at least one school of its own, with severe penalties for failure to comply.

The abundant sources of information in the Talmudic period as to education and schools depict the personality, character, capacities and social rank of the teacher. He must be a man who is not too young, he must be married, and he must possess high moral qualities. Faithful to his duties, and full of unselfish devotion to his profession, he must treat his pupils in a friendly and just manner. He should never be irascible or haughty or impatient, nor should he ever forget to act in a dignified manner in the presence of his pupils. He is required to be so well versed in the subjects which he teaches that he can at once answer any question that is put to him by his pupils. These were high requirements and they were equalled by the high respect in which a teacher was held among the Jews. At the time when the Romans and Greeks used slaves as their teachers and treated them as slaves, the great Jewish scholars were speaking in the highest terms of the merits of those who taught children well. Every act of disrespect toward a teacher was considered as great a sin as disrespect against God Himself.

As a rule a teacher was expected to conduct a class of up to twenty-five children. At first he received no regular pay, and received his maintenance in the form of presents from the members of the community. Elementary teachers, with certain limitations, were paid for their activities as early as the 2nd cent. They were, moreover, exempt from the community taxes. The teacher could resign his position at will, but he had to provide or train a successor before he could give up his position. He had security of tenure, and could be removed only in case it was shown that he did not possess sufficient knowledge or was giving incorrect instruction. At first teachers taught all subjects; but as early as the Talmudic period specialists arose, there being individual teachers for such subjects as Bible, Mishnah, Halachah and Haggadah.

The legal regulations as to teaching and curriculum continued in the Orient in the post-Talmudic period. Hai Gaon (about 1000) required that the teacher be well paid: "Whatever you give him, you are giving to your son." In the Spanish and Arabian period it is reported that Judah ibn Tibbon (1120-90) undertook difficult journeys to very distant lands to obtain suitable teachers for his son, and that he paid a teacher thirty golden denarii a year. Joseph ibn Aknin (1160-1226) enumerates the duties and the capabilities required of a teacher, as well as the numerous subjects of instruction, which include philosophy, mathematics, natural science, music and medicine. Like Maimonides, he requires that instruction be given without remuneration. However, shortly after this period it was everywhere the custom that teachers should be paid. A Castilian Jewish community statute of 1432 requires every community of forty or more families to appoint a teacher; the latter is to be paid out of the income from taxes on meat and wine and community funds.

It is reported of the teachers in Germany that they were required to pay attention to the individual needs of their pupils. Thus Judah Hehasid (1166-1224), in his *Sefer Hasidim,* reminds the instructors that they should be unselfish and be concerned only with the interests of their scholars. The average salary of the Jewish teacher in the Rhine area in the 13th cent. was from forty to fifty gulden a year. There is an elaborate statement of the mode of education in France which has been preserved from the 13th cent. It provides that the teacher should not give instruction in his home, but in a schoolhouse, that he take no more than ten children in one subject, and that he pursue no other profession while he is a teacher. There was to be a principal in charge of the teachers and he might direct as many as 100 children. He received from the community 100 litra of money, eighty of which went to ten teachers, and twenty to himself as support. The position of teachers in Poland and Italy was the same as in Germany, as can be seen from numerous community ordinances. Special care was taken in Poland that the teachers should be highly qualified; there are many complaints about those who were not. Teachers were exempt from community taxes.

The *Shulhan Aruch* of Joseph Caro (16th cent.) carefully regulates the legal status of teachers. In the following two centuries, however, as the Jewish school system became less and less efficient—due to the misfortunes that befell the Jews and various acts on the part of governments—the status of the Jewish teacher became a lower one. However, the teacher still retained his position in Jewish cultural life. The traditional forms were observed, but with more fidelity to the letter than to the spirit. It was only at the beginning of the 19th cent. that attempts were made to modernize the Jewish schools, in line with the educational thought of the times. This resulted in an improvement in the type of the Jewish teacher as well as a considerable improvement in the regularity and amount of his remuneration.

Since the middle of the 19th cent. Jews have entered all branches of the teaching profession in secular as well as Jewish schools, and have made notable contributions in the educational field. In accord with the general occupational distribution of Jews, their number in this field is proportionately large, especially in countries where they are allowed to compete freely.

The Bible has three general terms for teacher: *moreh,* which occurs especially in the prophetic writings (*Isa.* 30:20 and five other places); *melammed,* which is found only in the Hagiographa (*Ps.* 119:99; *Prov.* 5:13); *mebin,* which appears solely in priestly writings (*I Chron.* 15:22 and four other places). The word *melitz* (*Isa.* 43:27) is sometimes rendered as "teacher," but probably means "intercessor." The first two terms are repeated in rabbinical literature, while the expression *rab,* which originally meant "master," came to denote "teacher" as well. An elementary teacher was often called a *makre dardeke* or *pedagog* (from the Greek word). In course of time Moreh was restricted to a teacher of higher subjects, and the term Morenu was reserved for those of distinction in learning; while the name Melammed was limited to teachers in the Heder and Talmud Torah. The Melammed of the Heder, which was often an elementary school of the most primitive sort, often led a wretched and despised existence. Other terms for teacher which occur less frequently, usually in the Aramaic of the Talmud, are *safra, safra desidra, kara,* and *hazan* and *hazana.*

TEACHERS' TRAINING SCHOOLS. 1. Europe and Palestine. Institutions of learning for the education of pedagogically trained teachers for general instruction, especially for Jewish religious instruction, first came into existence after the various governments had demonstrated their interest in the instruction of Jewish youth. In Austria, where Joseph II, in the Edict of Toleration of January 2, 1782, Point Eight, permitted the Jews to erect schools "organized according to the standard, provided with teachers of their coreligionists," a court decree ruled that they should "send able persons of their faith to the principal Christian normal schools for their training as teachers and schoolmasters." Nevertheless the Jews do not seem to have made any use of this permission.

In the first schools founded in Germany in the generation after Moses Mendelssohn the teachers who taught there had acquired their general education through self-instruction. One of the first official acts of the Royal Westphalian Consistory of Israelites was the establishment in 1810 of a seminary, belonging to the Consistorial School in Cassel, intended for rabbis and the education of teachers. The members of the consistory (M. M. Steinhardt, J. Heinemann and M. Büdinger) acted as teachers, for the most part without remuneration. The subjects of study were, besides the branches of instruction of the Consistorial School, Talmud, Maimonides and music. In 1817 Heinemann founded in Berlin a private institution of learning, which, however, had just as brief an existence as the seminary for teachers and rabbis which he directed and which had arisen under the aegis of the Berlin chief rabbi, M. S. Weyl, in 1825, for the Berlin authorities were unfriendly to this from the very beginning and the school authorities closed it down in 1831. In Münster there was founded in 1827 a seminary, with the aid of the Marks-Haindorfsche Stiftung. In Amsterdam, where the highly organized Talmud Torah school took care also of the training of teachers, a seminary was founded in 1836 in the spirit of the time. In the Prussian capital arose one after the other the so-called Talmud Torah Seminars (1833), and in 1840 the Schullehrerseminar, of which Leopold Zunz was the "director." In 1859 the Jüdische Lehrer-Bildungsanstalt was founded in Berlin which, placed under the supervision of Michael Sachs, was shaped into a model institute by its directors Berthold Auerbach, Aron Horwitz, Michael Holzman and J. Gutmann. In 1864 the district rabbi Seligmann Baer Bamberger founded the Israelitische Lehrerbildungsanstalt in Würzburg; in the same year Dr. H. Plato's Bildungsanstalt für israelitische Lehrer, previously in Weinheim, moved to Karlsruhe, and later to Cologne. Similar institutions arose in Düsseldorf, Budapest and Hannover.

Outside of the Jewish teachers' training schools or before their establishment, many Jewish candidates for teaching positions were trained in the general seminaries; however, it was made a duty for the pupils to attend the classes in religious instruction of their respective local rabbis. Thus in 1821 the seminary in Esslingen, in 1824 the institutes in the grand duchy of Hesse, in 1825 the Protestant Schullehrer-Seminar in Karlsruhe, in 1836 that in Hildburghausen, and in 1836 the seminaries in Würzburg, Bamberg and Schwabach were accessible to Jewish students.

The program of the Jewish teachers' training schools naturally, and at the beginning predominantly, included the training of religious school teachers. However, when later, or in those places where there were no Jewish institutions, candidates for positions as public school teachers received their training in the general teachers' training institutes, specialized professional teachers' institutes arose for religious school teachers. At first such institutions were annexed to the rabbinical seminaries. Later this purpose was served by separate institutions. Thus the new Talmud Torah organized in Hamburg in 1821 by Chief Rabbi Hacham Isaac Bernays received a "Pepinière für künftige Religionslehrer" (seminary for future religious teachers); this purpose was served also by the school in Prague which arose from the Talmud Torah Institute, by the Proseminar in Brünn, by the Religionslehrer-Bildungsanstalt in Lemberg, by a similar institution in Warsaw, by the Bildungsanstalt für israelitische Religionslehrer an Volks- und Bürgerschulen in Vienna, which existed from 1905 to 1910, and by the Jüdisches Religionslehrerseminar (1920-28), founded by Chief Rabbi Zevi Perez Chajes in Vienna. The teaching curricula and programs of the individual seminaries were adapted to their special purposes and to the views of the religious groups which supported them.

Up to the advent of the Nazis to power (1933) the training of teachers in Germany was conducted on a new basis. The teachers' seminaries in Prussia, Saxony, Baden and Württemberg were the first to be followed by those in the rest of the German provinces, with the exception of Bavaria. Of the Jewish teachers' training schools, those in Berlin, Cassel, Hannover and Münster were likewise closed. By 1933 only the Jewish seminary in Würzburg was still in existence, which, in contrast with other seminaries, comprised a four- (instead of a three-) year course and required attendance at a preparatory school before admission. In Cologne the continuance of the school was sanctioned only until 1931. Jews were not permitted to study in the "academies" which took the place of the teachers' training schools, in which only the graduates of preparatory schools were accepted, because of their denominational

character. Only the secular academies of Dresden, Frankfort and Breslau were accessible to Jews, and then only up to the year 1933. In Berlin the Preussischer Landesverband Jüdischer Gemeinden, on the initiative of Rabbi Julius Galliner, created a so-called Vorbereitungsanstalt für Lehrerakademien (preparatory institution for students intending to attend the teachers' training schools), which functioned until 1938.

In Palestine, with the revival of the national Jewish school system as well as the Hebraization of instruction, the training of teachers also received a new program and new aims. The Hebrew secondary schools, products of and based on the modern spirit, with instruction given in Hebrew in all subjects of study, were founded in the 1920's and 1930's, in conformity with these aims. They provide for the training of elementary school teachers, Hebrew language teachers, and woman teachers for the kindergartens. Such institutions existed chiefly in Jerusalem before 1943. Before the advent of the Nazis to power in Germany in 1933, and in other countries before the outbreak of the second World War, with the consequent disruption of Jewish communal life in all these lands, schools of similar nature and with similar aims existed also in Berlin, in Lemberg and Cracow (Galicia), in Lodz and Warsaw (Poland), in Czernowitz (Bucovina), in Vilna (Lithuania), and in Vienna. MORITZ ROSENFELD.

2. United States. There were two major teachers' training schools in the United States in 1943, both located in New York city and both associated with rabbinical seminaries. The older of the two is the Teachers Institute of the Jewish Theological Seminary, which was established in 1909. The other is the Teachers Institute of the Rabbi Isaac Elchanan Theological Seminary, the Beth Midrash Lemorim.

The Teachers Institute of the Jewish Theological Seminary gives a five-year course to its students, and at the completion of that course awards a regular academic degree. It is an integral part of the Jewish Theological Seminary of America, and its teaching staff consists of recognized scholars and educators. The dean of the Teachers Institute (1943) was Mordecai M. Kaplan, and the registrar was Dr. S. Dinin.

The Beth Midrash Lemorim of the Rabbi Isaac Elchanan Theological Seminary was originally an independent institution founded by the Mizrachi Organization of America in 1917. After a brief existence under that sponsorship it was absorbed by the Rabbi Isaac Elchanan Theological Seminary. The course of study is six years; its program includes substantial Talmudic studies, and the language of instruction is Hebrew. At its head in 1943 was Dr. Pinkhos Churgin.

Located in New York city were two other teachers' training schools in 1943, both in lower Manhattan. One was the Herzliah Hebrew Academy and Teachers Training School, organized in 1923. The other was the Hebrew Teachers Training School for Girls, organized in 1928. Associated with Herzliah was also a secondary school that prepares students for admission into the Teachers Training Department. The principal in 1943 was Moses Feinstein. The Hebrew Teachers Training School for Girls was founded by the Union of Orthodox Jewish Congregations of America. In addition to the teachers' training course which lasts for five years, it conducted also a preparatory department and graduate classes. In recent years it began to specialize in the training of Hebrew kindergartners. The principal in 1943 was Dr. Sidney B. Hoenig. The Agudath Israel maintained a Beth Jacob teachers' seminary in Brooklyn.

The Yiddishists had (1943) their own teachers' training school, called The Jewish Teachers Seminary, located in East 70th Street, New York city. It is part of a Jewish People's University. It is under the sponsorship of the Jewish National Workers Alliance and the Poale Zion. Instruction is in Yiddish.

A number of teachers' training schools are to be found in some of the principal cities of the United States where large Jewish settlements exist. The oldest of these schools is the Gratz College in the city of Philadelphia, which was organized in 1895. Dr. Julius Greenstone was (1943) the principal of the school, and Dr. Solomon Grayzel its registrar. In Baltimore there is the Baltimore Hebrew College, which conducts a Teachers Training School under the principalship of Dr. Louis Kaplan. The Hebrew Teachers College of Boston was organized in 1920, and in 1943 was under the principalship of Louis Hurwich. Cleveland had its Jewish Teachers Institute under the local Bureau of Jewish Education, and Chicago had its College of Jewish Studies under Dr. Leo L. Honor. In Chicago, too, there was, in 1943, a Teachers Training Department associated with the Hebrew Theological College of that city. No formal teachers' training school existed in 1943 as part of the Hebrew Union College in Cincinnati, although special courses are available at that school for those who wish to pursue Hebrew teaching as a profession. The Hebrew Union College School for Teachers (1923-32) and the Jewish School for Teachers (1933-36) in New York city gave courses of instruction for religious school teachers.

The teachers' training schools outside of New York city are regrettably small. The courses of study are limited, as is the number of their students, and the graduates from those schools generally serve in the Hebrew and Sunday schools of the local communities in which they are situated. Those who wish to make Hebrew teaching their profession generally avail themselves of the greater advantages offered by the teachers' training schools in New York city.

TEBETH (a month in the Hebrew calendar), *see* CALENDAR; MONTHS.

TEBETH, TENTH OF (*'asarah betebeth;* according to the Ashkenazic pronunciation, Asoroh Beteves), a day of fasting and mourning in memory of the beginning of the siege of Jerusalem by Nebuchadrezzar, king of Babylonia, in 586 B.C.E. (*Jer.* 52:4; *II Kings* 25:1; *R.H.* 18b). When the Tenth of Tebeth falls on a Sabbath, the day of mourning is postponed to the following day. The Tenth of Tebeth fast day is generally observed by Orthodox congregations.

TEBIR, *see* CANTILLATION.

Tefillah, in the sense of prayer, as depicted by Joseph Margulies

TEBUL YOM, tenth tractate of Toharoth, the sixth division of the Mishnah. According to the law of the Torah, a person who has come into contact with certain unclean objects is required to take a ritual bath, and is unclean until the evening. In this state he is called *tebul yom*. The four chapters of the Mishnah deal primarily with the effect of the contact of a *tebul yom* with various objects which can become unclean, such as bread, vegetables, eggs, liquids and utensils. The last few verses deal with various matters of general legal interest. The Tosefta to the tractate consists of two chapters; there is no Gemara.

TEDESCHE, SIDNEY S., rabbi, b. Elmwood Place, Ohio, 1890. He received the A.B. degree from the University of Cincinnati in 1913, and in the same year was ordained at the Hebrew Union College. Later he received the Ph.D. degree from Yale (1928) and the LL.B. degree from St. John's Law School (1938). Tedesche became rabbi in Springfield, Ill., in 1913. In 1916 he was called to Providence, R. I., in 1920 to San Antonio, Texas, and in 1922 to New Haven, Conn. He assumed the pulpit at Union Temple, in Brooklyn, in 1929, and in 1943 still held this post. He was among the Brooklyn leaders who spoke out against the attempt made, in 1934, to organize in Brooklyn a group calling for proportional political representation of Jews.

Tedesche was a trustee of the Brooklyn Public Library and a director of the Jewish Publication Society of America. In addition to many studies on scientific and religious subjects, he was the author of a critical edition of *I Esdras,* in Greek (1928). He was a contributor to the *Universal Jewish Encyclopedia.*

Lit.: American Hebrew, March 23, 1934, p. 379.

TEFILLAH ("prayer," derived from the Hebrew verb *hithpallel,* the original meaning of which is "to appeal to God as the judge," a sense in which the word must frequently be translated in the Bible). In the Bible, the Tefillah is a term used for prayers of petition or prayers of thanksgiving. Today it can no longer be determined in what respects the word Tefillah differed from the similar Biblical designations for prayers of petition, prayers of thanksgiving, and the like. In the Mishnah, the Tefillah means only "prayer of petition," and is applied especially to the prayer called the Eighteen Benedictions (Shemoneh Esreh); in the Mishnah, therefore, the Hebrew verb *hithpallel* means to recite the Shemoneh Esreh benedictions.

In the Talmud this linguistic usage was continued, and in addition, the Aramaic terms *tzalli* ("to pray") and *tzelotha* ("prayer") are employed. Although this linguistic usage persisted for several centuries, it was later altogether forgotten. The word "Tefillah" was accepted without restrictions in the meaning of "prayer," and since that time it has been used in Jewish literature as a term for any prayer, without distinctions as to whether it is a prayer of obligation (one which has to be recited, according to the Jewish ritual law) or a private prayer. In popular Jewish speech the phrase "Tefille tun" means "to say a prayer," and in Southern Germany the Jews called the prayer-book "die Tefille."

TEFILLATH TAL (prayer for dew), *see* PRAYERS, SPECIAL.

TEFILLIN ("phylacteries"), one of the seven minor tractates of the Talmud. It contains one chapter, and gives the rules and regulations for writing the Biblical passages on the parchment in the phylacteries, the manner and time of wearing them, and those persons who are obligated to wear them.

Lit.: Higger, M., *Seven Minor Treatises* (1930).

TEFILLIN, *see* PHYLACTERIES.

TEHILLIM, *see* PSALMS.

TEHINNAH, *see* LITERATURE, DEVOTIONAL.

TEHIYATH HAMETHIM, *see* RESURRECTION.

TEHOM (*Gen.* 1:2), the subterranean fresh-water ocean, from which fountains and rivers were once believed to derive their water. Except in *Isa.* 63:13, the word *tehom* is always used in the Bible without the article; it is thus regarded as a proper name. In the North Canaanite literature of Ugarit (14th cent. B.C.E.) we find the word also in the dual, meaning "the two deeps." In Assyro-Babylonian the word appears as *tiamtu,* "sea," personified as the dragon Tiamat, who played an important role in mythology as the representative of primordial chaos, and who was slain after a great battle by Bel-Marduk (Hebrew Merodach).

WILLIAM F. ALBRIGHT.

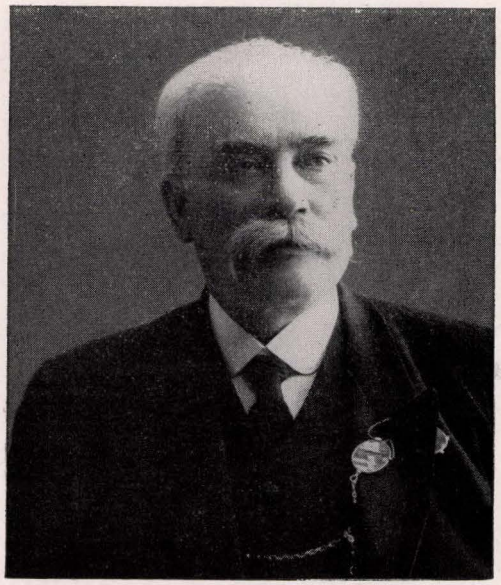
TEITEL, JACOB, attorney, judge, and Russian state councillor, b. Tchorny-Ostrow, province of Podolia, Russia, 1850; d. Paris, 1940. After studying law at the University of Moscow he became a magistrate. Thereafter, until 1912, he served as supreme court judge at Saratov, and was for forty years the only judge in Russia who was a Jew. In 1912, under pressure by the anti-Semitic minister of justice, Szheg-

lovitov, he was forced to resign from the bench; he was appointed a member of the state council, invested with the title of state excellency, and granted an increase in pension for his devoted service to the state. During his term of office as a judge, Teitel was greatly interested in social and charitable activities.

In 1912 he was a member of a delegation which, including a Jochelman and Israel Zangwill, was sent to Lisbon to negotiate with the Portuguese government regarding the colonization of Jews in Angola, Africa. His home in Saratov was a gathering-place of intellectual and progressive persons, and such men as Maxim Gorki and Vladimir Ilyich Lenin were among his visitors.

After the Bolshevist revolution Teitel went to Berlin (1921), where he became head of the Verband Russischer Juden in Deutschland, which he served with great zeal until 1930. He wrote memoirs covering the last forty years of his life (Russian, 1925); the work was translated into German (1929), with an introduction by Gorki and Simon Dubnow, under the title of *Aus meiner Lebenszeit.*

TEITELBAUM, AARON, rabbi, b. Jerusalem, 1890. He was educated at the Yeshiva Torath Chaim in Jerusalem, and ordained in 1911. In the following year he came to the United States, where he held various communal posts, particularly in connection with European and Near East war relief. He was one of the organizers of the Joint Distribution Committee (1914), as well as an organizer of the Central Relief Committee. With the latter organization Teitelbaum served also as executive secretary from 1916 to 1930, and was a member of the executive until 1936. In 1918 he was a member of the Joint Distribution Committee Near East Commission, and in 1926 he was sent by the Central Relief Committee to investigate educational conditions in Europe and Palestine.



Teitelbaum was one of the founders of the Loan Bank in Palestine; he also aided Mayor Meier Dizengoff in launching the Tel-Aviv loan in the United States (1933). From 1928 to 1930 he was a member of the praesidium of the World Mizrachi Organization. Teitelbaum returned to Palestine in 1933 and came to the United States about 1940.

TEITELBAUM, MOSES, Hasidic rabbi and author, b. Przemysl, Galicia, 1759; d. Sátoraljaujhely, Hungary, 1841. He claimed to be a descendant of Moses Isserles (ReMA). A pupil of Rabbis Joseph of Kolbuszowa and Jacob Isaac of Lublin, he was rabbi of Sinav from 1785 on and rabbi of Sátoraljaujhely, Hungary, from 1808 until his death. In Hungary he was one of the first Hasidic rabbis, and such were his authority and his following that his influence persisted through his descendants down to the middle of the 20th cent. Like his master, Jacob Isaac of Lublin, he was credited with the gift of clairvoyance. Legend has it that among the non-Jews who turned to him for aid and guidance was Louis Kossuth as a young boy, who heard the Zaddik foretell his future greatness.

Teitelbaum also directed a Yeshiva, and was the author of numerous works. They include: *Yismah Mosheh,* homilies on the Pentateuch, the Prophets and *Proverbs* (1849; 3rd ed., 1928); *Tefillah Lemosheh,* commentaries on *Psalms; Yashir Mosheh,* commentaries on *Song of Songs; Shuah Sefunim,* commentaries on the prayer-book; and responsa. His works were edited by Judah Yekuthiel Teitelbaum, his grandson and successor in the pulpit of Sátoraljaujhely.

JUDAH YEKUTHIEL TEITELBAUM (b. Drohobycz, Galicia, 1808; d. Safed, Palestine, 1891), Hasidic rabbi, was the grandson of Moses Teitelbaum. He was author of *Yitab Leb* and *Rab Tob,* commentaries on the Pentateuch, and of homilies and responsa.

ELEAZAR TEITELBAUM (b. 1788; d. Máramarossziget, Hungary, 1855), Hasidic rabbi, was the only son of Moses Teitelbaum. He served as rabbi at Máramarossziget. His successor, ZALMAN LEB TEITELBAUM, founded a Yeshiva there which continued to attract a host of students under Hayim Zebi Teitelbaum (1879-1926), author of *Atze Hayyim,* homiletical interpretations, and of a number of other works on Halachah, Haggadah and Cabala.

Jacob Teitel

He in turn was followed by a second Zalman Leb Teitelbaum. In this line of rabbis the title and functions of Zaddik were hereditary. Another member of the Teitelbaum family, Naphtali, was rabbi at Nyirbátor, Hungary (d. 1929), and an influential Orthodox leader in his country.

The Teitelbaum dynasty is the subject of a novel written by Dezsö Schon, *Istenkeresök a Kárpátok alatt* (Seekers of God in the Foothills of the Carpathians; 1936).

TEIXEIRA (also **Teixeyra** and **Texeira**), distinguished Portuguese Marrano family which derived its origin from the Sampayo family. It was known also by the name of Teixeira (or Texeira) de Mattos. Its members, who resided in Hamburg, Amsterdam, London, Vienna and Venice, were noted for their philanthropy as well as for their financial and diplomatic achievements.

Lit.: Roth, Cecil, *History of the Marranos* (1932) 300-3; Graetz, H., *History of the Jews,* vol. 4 (1927) 690-91.

TEIXEIRA, ANISIO SPINOLA, educator, b. Brazil. He studied at the Faculty of Law of the University of Rio de Janeiro and at Teachers' College, Columbia University (M.A.), New York city, and became director of public instruction in the state of Bahia (1924-29) and professor of history and of philosophy of education in the Bahia Normal School (1929-30). In 1931 Teixeira was appointed director of the department of education of the federal district of Rio de Janeiro, and in the following year professor of philosophy of education in the Teachers' School of the Institute of Education, Rio de Janeiro.

He wrote: *Aspectos americanos de educação* (1928); *A educação progressiva, Uma introdução a filosofia da educação* (1933); *O sistema escolar do Rio de Janairo* (1933); *Educação para a democracia* (1937).

TEIXEIRA, MANUEL (Isaac Hayim Senior Teixeira), diplomat, b. Lisbon, about 1625; d. Amsterdam, Holland, 1705. He and his father, Sampayo Diego Teixeira, embraced Judaism at the same time. Before his father died, Manuel Teixeira succeeded him as diplomatic representative and confidant of Queen Christina of Sweden. Despite the enmity of the clergy of Hamburg, the queen, on more than one occasion, stayed at his residence and placed the administration of her finances in his hand. Like his father, he interested himself in the welfare of his coreligionists, and supported the Yeshiva in which Jacob Sasportas taught. He was an ardent adherent of Sabbatai Zevi. When the Austrian Jews, especially those of Vienna, were to be banished by order of Leopold I in 1670, Teixeira persuaded Cardinal Azzolino of Rome to intercede on their behalf, while Queen Christina, on Teixeira's plea, appealed to the empress in Vienna and to the papal nuncio, but these efforts were of no avail. During the ninth decade of the 17th cent. Teixeira moved to Amsterdam, where he assumed the leadership of the Sephardic community.

Lit.: Roth, Cecil, *History of the Marranos* (1932) 302-3; Graetz, H., *History of The Jews,* vol. 5 (1927) 140, 171; Dubnow, S., *Weltgeschichte des jüdischen Volkes,* vol. 7 (1928) 61, 313-14; Grunwald, M., "Le procès de l'inquisition contre Diego et Manoel Teixeira," *Revue des études juives,* vol. 59 (1910) 239-47; Vogelstein, H., and Rieger, P., *Geschichte der Juden in Rom,* vol. 2 (1895) 223.

TEIXEIRA, PEDRO, traveler and author, b. Lisbon, Portugal; d. either in Antwerp, Belgium, or in Verona, Italy, about the middle of the 17th cent. He commenced his travels about 1586, journeying to China, the Philippines and America, and returning to Lisbon in 1601. In 1603 he continued his travels to India, Persia and other countries, and upon his return settled in Antwerp, some time between 1605 and 1609. Teixeira's recollections and experiences of his travels are described in his masterful work, *Relaciones de Pedro Teixeira* (Antwerp, 1610), which includes a history of the kings of Persia and Harmozia (Moghistan). In 1637 he made an expedition to and exploration of the Amazon River on behalf of King Philip IV of Portugal. Teixeira's work is regarded as one of the most important sources of the knowledge of the Orient at the beginning of the 17th cent., and scholars frequently quote his work as authoritative. His book was first translated into French by Cotolendi (1681).

The first English translation was published in London by John Stevens, Spanish scholar, in monthly installments from 1708 to 1710, appearing under the title of *A New Collection of Voyages and Travels.* A complete translation into English by W. Sinclair, edited by D. Ferguson, appeared under the title of *The Travels of Pedro Teixeira* (1902).

Lit.: Kayserling, M., *Sephardim* (1859) 188-89; Edmundson, L., "The Voyage of Pedro Teixeira," *Royal Historical Society Transactions,* vol. 3 (1920) 52-71.

TEIXEIRA, SAMPAYO DIEGO (Abraham Senior Teixeira), head of the Spanish and Portuguese community of Hamburg, b. Portugal, about 1580; d. Hamburg, Germany, 1666. He was the son of Dom Francisco de Sampayo, a member of the Portuguese royal household. In 1643 he left Portugal, and resided for a while in Antwerp, where he acted as consul for the Spanish government. Shortly thereafter he settled in Hamburg, where he amassed great wealth and associated with the nobility. In 1647, although close to seventy years of age, he was circumcised in order to adopt Judaism. Because of this act the Austrian government demanded his arrest and requested the senate to imprison him and confiscate his properties. The Senate of Hamburg, however, energetically and successfully intervened in his behalf.

Teixeira, who headed the Spanish and Portuguese community of Hamburg, lavished his wealth on the Jews of the city, on public institutions, and on the church. He founded a fund to furnish dowries to needy girls (Hachnasath Kallah), and another for the ransom of prisoners (Pidyon Shebuyim). In 1654, when Queen Christina of Sweden visited Hamburg, she resided in his palatial home. In 1655 she appointed Teixeira her financial agent and diplomatic representative in Hamburg, a position which he held until his death. Due to his intercession with King Frederick III, of Denmark, the Jews obtained many privileges.

Lit.: Roth, Cecil, *History of the Marranos* (1932) 301-2; Graetz, H., *History of The Jews,* vol. 4 (1927) 690-91; Grunwald, M., *Portugiesengräber auf deutscher Erde* (1902).

TEIXEIRA DE CARVALHO, MARIO, physician and writer, b. Porto Alegre, Brazil, 1906. He studied at the University of Porto Alegre (M.D., 1932), and held a leading position at the Hospital São Pedro of his native city (1932-37).

His writings include: *Nobiliario sul riograndense; O serviço de correios no Rio Grande do Sul; A familia Pinto Bandeira; Da nobreza; A bandeira de Rio Pardo; O nascimento de Gaspar Silveira Martins.* Teixeira was honorary member of the São Paulo Institute of Genealogical Studies.

TEKA, royal Hungarian chamberlain in the 13th cent. He was probably of Khazar origin. His father was a great landlord, having received from the king the huge domain of Besenyő (the Hungarian term for Petcheneg), which he left to Teka. The son owned several other domains and probably derived his name, Teka, from one of them. He was made custodian of the revenues of the royal chamber by King Endre II (1205-35), and in contemporary Latin documents is referred to as Comes (count). Apparently a financier of the first magnitude, Teka figures as signatory on several agreements and peace treaties between Leopold II of Austria (1194-1230) and Endre II; he also guaranteed the payment of 2,000 marks by the Austrian ruler to the king of Hungary. In 1222 the Hungarian Golden Bull barred Jews and Ishmaelites (merchants from the Near East) from fiscal offices and from the rank of nobility in Hungary, but the king, who had signed the law reluctantly, kept Teka in office.

In 1233 Pope Gregory IX made Endre take an oath that he would observe the provisions of the constitution concerning the Jews; thereupon Teka laid down his office and went to Austria, where his prestige was high. One of his domains was given by Endre's son, Béla IV (1235-70), to Simon, knight of Aragon. This ruler, upon whom the pope had prevailed to take an oath similar to that taken by his father, subsequently obtained release from it, his pressing need for funds in view of the Tatar invasion of Europe being recognized by the pope. Teka then returned to Hungary upon the invitation of Béla IV, from whom he received, probably in return for an important loan, the domain of Csenke, which the king took from Simon of Aragon. Teka appears to have perished during the Tatar invasion, for afterward his domain was again returned to Simon of Aragon and he was no longer mentioned in the documents.

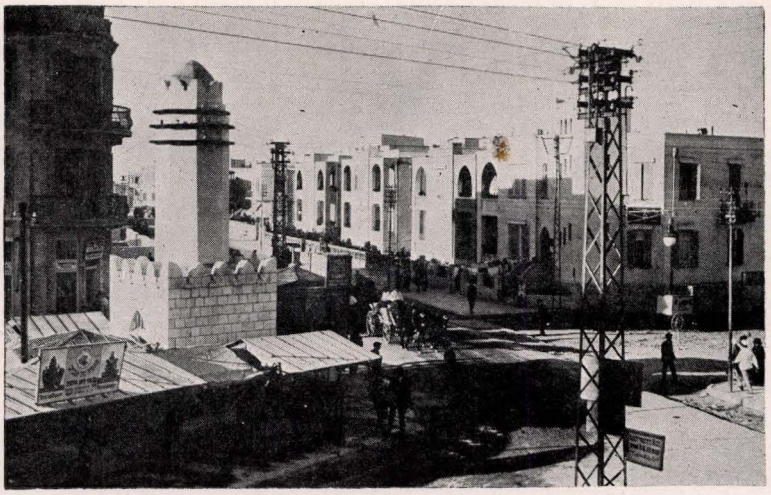
TEL-AVIV (Hill of Spring), the largest city in Palestine, with an all-Jewish population of about 200,000 in 1943. The city was founded in 1909 on the sandy shores north of Jaffa as a garden suburb by Jews residing in Jaffa. The colonizing group, Ahuzath Bait, with the aid of a Jewish National Fund loan, acquired 121 dunams of land and within a short period erected some sixty houses and the Hebrew high school, Herzliah, which was the first secondary school in the country. The city grew slowly at first, and was completely evacuated under Turkish orders during the first World War, because of the pro-Allied sympathies of its inhabitants. In 1919 there were 3,000 inhabitants; in 1922, 12,860; in 1931, 45,000; in 1936, 140,000; and in 1943 about 200,000, including the suburbs. In the latter year the city had 8,000 buildings and an area of over 10,000 dunams. In 1922 the municipal budget was £12,000; in 1943 it was almost £600,000.

Tel-Aviv was granted its own administration as a township on May 11, 1921, with the right to levy taxes and organize a police force and court, and in 1934 became a full municipal corporation. It is administered by an elected council of fifteen members, and by a mayor and vice-mayor chosen by the council from among its own members. Meier Dizengoff, who helped found Tel-Aviv, became its first head, and remained mayor until his death in 1936, except for a brief period of a few years. The mayor in 1943 was Israel Rokach. The name Tel-Aviv is derived from Nahum Sokolow's Hebrew rendition of the title of Theodor Herzl's book, *Altneuland*. The city's motto is *'ebneh venibneth* (I shall build thee, and thou shalt be built). An official monthly, the Tel-Aviv municipal bulletin, is published. Major streets are Herzl Street, Rothschild Boulevard, Allenby Road and Ben Yehudah Street. In the local cemetery are buried the remains of victims of Arab riots, and such celebrated leaders as Ahad Haam, Hayim Nahman Bialik and Max Nordau.

As a result of the 1936 riots and the Arab strike in neighboring Jaffa, Tel-Aviv established its own port at the mouth of the Yarkon River. Built by Nachshon, Ltd., with the aid of the Histadruth, the Jewish Agency, and all elements in Jewish Palestine, the port grew rapidly. In 1938 a net ship tonnage of 1,450,000 was registered, and over 1,000 workers were employed at the docks in various capacities. A year later the outbreak of the second World War put an end to Mediterranean shipping and brought to a halt the development of the Port of Tel-Aviv.

The city is the center of a large and diversified industry, most of which, in 1943, was devoted to the war effort. Food, chemical, building and miscellaneous manufacturing industries flourished. One of the most important was the textile industry, and as a result of fashion shows held in the city, even during war time, Tel-Aviv showed promise of becoming the fashion center of the Near and Middle East.

The city is also marked by intense cultural activity, and is to all purposes the cultural center of Jewish life in Palestine. Its Hebrew press included, in 1943, four daily papers, thirteen weeklies and eighteen monthly journals. There were in that year a municipal museum, founded by Dizengoff, a small zoo, more than a dozen theatres, music and art centers, the Maccabi athletic stadium and a modern, well-developed school system. There were a large municipal hospital and many private institutions. The Levant Fair, first opened on April 26, 1934, was one of the outstanding commercial and festive occasions in the life of the city. On Purim and other Jewish holidays the city is largely given over to public rejoicing and celebration in the streets. The Sabbath is universally observed as the day of rest. The city has wide avenues, lined with trees, and modern busses and



Procession in the Jewish Soldiers' Day parade at Tel-Aviv. Photos reproduced by courtesy of the United Palestine Appeal

A factory in Tel-Aviv (right) producing cotton and silk fabrics as well as raincoats to supply the garrisons in Palestine and elsewhere in the Middle East

taxicabs provide fleet transportation to any section. There is also a broad beach and promenade fronting on the Mediterranean. A municipal airport was established in 1938.

The population is cosmopolitan, coming from all corners of the globe, although Jews from Nazi-occupied lands lead numerically. The languages, customs and folk-ways brought by immigrants linger with the original arrivals, but disappear with the second generation.

One of the remarkable aspects of the city is an imponderable element, its youth, spirit, gaiety and remarkable progress which have transformed it within a generation from a sandy waste into a modern metropolis of almost a quarter of a million persons. It is well termed by visitors the "Miracle City" of the East.

Tel-Aviv was raided by Axis planes several times during the second World War, with many casualties and large property loss. In the attack in September, 1941, 121 persons were killed.

Heading the religious life of the city in 1943 were Rabbi Moshe Avigdor Amiel, chief rabbi of the Ashkenazic community, and Rabbi Jacob Toledano, Sephardic chief rabbi. In January, 1943, the municipal council ratified a $20,000,000 program for post-war building, including about $4,000,000 for a housing development, $1,500,000 for new schools and about $1,000,000 for parks and playgrounds.

CARL ALPERT.

TELCS, EDE, sculptor, b. Baja, Hungary, 1872. He studied at the Academy of Fine Arts, Vienna, and exhibited his first works at the Austrian capital. From 1900 on he lived in Hungary, where he won several prizes with his small sculptures as well as with his portrait busts, which included those of the poet József Kiss and of the philanthropist Johanna Bischitz. Telcs created the monument of the poet Vörösmarty with several secondary figures, and contributed the statues of Saint László and Károly III to the millennial monument at Budapest. He executed also the statue of Louis Kossuth at Kecskemét and that of Elizabeth of Austria-Hungary at Subotica (Szabadka). His *Moses* adorned the Home of the Hebrah Kaddisha of Pest. He did the tomb of the painter Michael Munkácsy.

Telcs was a distinguished medalist, and created many fine plaques. Among his medals and plaques are those of Adolf Sonnenstein, Judah Epstein, Miksa Falk, Henrik Marcali and Giacomo Puccini. From 1919 to 1921 Telcs lived in Holland, after which he again returned to Hungary. He won gold medals at Budapest, Antwerp and Turin, and a prize in Paris. Telcs embraced the Christian religion.

TELISHA GEDOLAH, TELISHA KETANNAH, *see* CANTILLATION.

TELL EL-AMARNA, *see* AMARNA LETTERS.

TELLER, BENJAMIN FRANKLIN, communal worker, b. Philadelphia, 1853; d. Frankfort, Germany, 1904. He was one of the most important realtors in Philadelphia. Teller was actively identified with nearly every Jewish charitable and institutional affair in the city, serving as president of Rodeph Shalom Congregation and of the Jewish Exponent Publishing Company, as secretary of the Jewish Foster Home and Orphan Asylum, and as treasurer of the Jewish Maternity Hospital Association. His brother, David Teller (d. 1905), and his son, Oscar Teller (d. 1919), were both well-known figures in Philadelphia.

TEMESVÁR, city in Bánát, a province formerly belonging to Hungary which, as a result of the first World War, was awarded to Roumania. The city was then called Timişoara.

Sephardic Jews migrated to Temesvár during the 164 years of Turkish occupation (1552-1716). The oldest extant tombstone in the Jewish cemetery of Temesvár is that of Azriel Assael, and dates from the year 1636. Some fifty Spanish and Turkish Jewish families of Temesvár fled to Belgrade and Zemun in 1716, when the fortress was besieged by Prince Eugene of Savoy who, after gaining fort and city, invited the Jews to return and become citizens of Austria. Only eight families chose to return, among them Jacob Amigo, scion of a noble Spanish Jewish family. Another member of this line, Judah Amigo (d. 1779), was surnamed "re chico" (little king). He founded a Jewish community in 1739, and Sephardic and Ashkenazic Jews convened within the gate of Fort Prince Eugene to worship. From 1760 on Sephardic Jews held services at the Judenhof for nearly a century; it was replaced in 1865 by the Reform synagogue.

Judah Amigo was *Judenrichter* (Jewish judge) of the Jewish community of Temesvár and Bánát, upon which the Austrian court imposed a set of harsh regulations, affording it, however, the security of protection. Judah Amigo had influence with the Sultan, and acted as ambassador of Diego d'Aguilar to him in the matter of the expulsion of the Bohemian and Moravian Jews decreed by Maria Theresa in 1745. At his request, the Sultan intervened with the Austrian empress on behalf of the Jews, and the edict was revoked. The rabbis of Temesvár included Jacob Morpes (from 1739 on), Levi Jerusahus (middle of the 18th cent.) and David Hirsch Oppenheim (1800-56).

The oldest institutions of the community were within the citadel; from 1840 on, however, the Jews were free to settle in the city, and it was the residents of the city that accepted Reform statutes in 1869, whereas an Orthodox community was constituted in the citadel in 1871 and a synagogue was built in 1899. The Sephardic element kept shrinking while the Ashkenazic element was expanding. In 1910 the Jews of Temesvár numbered 6,700 in a total population of 72,500. During the Austro-Hungarian monarchy (1867-1918) conditions for industrial, banking and commercial enterprises among the Jews were favorable, and the Jews of Temesvár attained importance in these fields; they had representatives also in public office. In 1918 a lyceum (high school for boys and girls and commercial school) was established, the two communities contributing jointly toward its maintenance.

Under Roumanian rule (from 1918 on) some leading Jews of Temesvár played an important part in Hungarian minority endeavor, and outdid non-Jewish Hungarians in the faith they kept with their former country. Adolf Ungar, Jewish vice-mayor of Temesvár, was also president of the Hungarian party of Bánát. Other Jews chose Zionism and Jewish nationalism as a way out of the new situation, and Jewish cultural endeavor proved an outlet especially for the energies of the new generation. In 1934 the Orthodox and Reform communities were united, and the two chief rabbis, Miksa Drechsler and Jakab Singer, the latter an eminent historian, continued to serve jointly. In 1942 the Jews of Temesvár were affected by the Roumanian ordinance which doomed for deportation to Transnistria (Ukraine) all Jews in territories acquired by Roumania as a result of the first World War.

ANNA BETTELHEIM.

TEMKIN, MORDECAI, poet, b. Siedlowice, Poland, 1891. He was a descendant of Perez Smolenskin and Abraham Eger of Lublin. He settled in Palestine in 1911 and wrote poems for periodicals, many of which were published in book form (1927 and 1932). Some of his poems were translated into Yiddish and Hebrew. He also translated German belles lettres into Hebrew. In 1943 he was living in Jerusalem.

TEMKIN (TIOMKIN), VLADIMIR, Zionist leader, b. Elisavetgrad (Kirovo), Russia, 1860; d. Paris, 1927. He joined the Chovevei Zion movement in 1888, and became one of the founders of the Bilu move-

ment. On behalf of the Odessa Committee, Temkin went to Jaffa, Palestine, in 1890. After his return (1892) he became crown rabbi in Elisavetgrad, and in this capacity aided Theodor Herzl in the founding of the Zionist Organization. He was a delegate to every Zionist Congress.

In 1917 Temkin was the leader of the Ukrainian Jews as minister of Jewish affairs and president of the Jewish National Council in the Ukraine. When the Bolshevists came into power in the latter part of that year he went to Paris, where he became active as a member of the Comité des Délégations Juives and participated in Jewish welfare work. He later joined the Zionist Revisionists, and was president of the Central Committee.

Lit.: *New Palestine,* Dec. 30, 1927, p. 566.

TEMPERANCE. Temperance, meaning habitual moderation in the indulgence of the natural appetites, has been developed as a virtue in the Jewish people through the rational conception of the nature of man in Biblical and rabbinic teaching. Lawgiver, prophet and sage, declaring man to be made in the very image of God, never forgot that he is also an earthly creature possessed of sensation, appetites and instincts. He is spiritually akin to the Creator, but he is also human, having the weaknesses to which the flesh is heir.

The unfailing recognition of this duality in man, the spiritual and the material, is the signal characteristic of the religion of Israel from the Mosaic legislation down to the latest responsa. The moral law was intended to give to each side its due share in the individual's development: to blend the spiritual and human elements into a consistent whole. The Bible, therefore, contains dietary and hygienic regulations, going often into minute personal details—all with the purpose of approximating some measure of human perfectibility. "Ye shall be holy; for I, the Lord your God am holy" (*Lev.* 19:2) is a command of hardly greater importance than the stern commands about things human that belong only to a human world.

Neither the Mosaic code, nor the warnings of the prophets, nor the rabbinic legislation attempted to turn Israel into a people of saints. They taught moderation, fully realizing the dual nature of man. Asceticism, as a mark of piety, was not only discouraged but repudiated. The Essenes constituted definitely a foreign element in the Second Hebrew Commonwealth. Both Philo and Josephus saw in their philosophy and practice a sharp deviation from the normal. Nor were the Hasidim of a later age true to the real spirit of the Jewish faith in converting Judaism into zealotry. They ignored that quality of moderation which is basic to all Jewish life and thought. An effective curb was placed even on the making of holy vows where they led to certain abstentions—not to discourage making pious resolutions but to check withdrawal in any form from the ordinary interests of mankind.

As among all ancient tribes, the Hebrew people in their early history showed little moderation in satisfying their human appetities. That the Bible reveals. Even under the leadership of Moses they clamored for the fleshpots of Egypt. But the stern rebukes of the prophets chastened them. Seldom in any literature is found such searing denunciation of gluttony, drunkenness, and the evils of unbridled luxury as came from the lips of the prophets of Israel. And what the prophets began their successors, the rabbis, continued through the centuries, with the result that sobriety has become ingrained in the Jewish people. Thus the drinking of wine, which can be so easily abused, was linked with the sanctification of the Sabbath and festivals and other ceremonials. As it is used for a holy purpose, Jews learned to set a discreet limit to appetite. In modern times there have been no temperance leagues among the Jewish people. In no other community is drunkenness so little in evidence as among Jews.

Likewise, under the guidance of the prophets and the rabbis, the sex instinct was disciplined into moderation. Early marriages were the established custom, and have so in general remained. Marriage was a religious duty. It largely accounts for the well-known chastity of the Jewish woman in the Middle Ages and in the early centuries of the modern era when looseness of morals was so notorious throughout Christian Europe. Prostitution among the Jewish people was practically unknown. In the treatment of the relations between husband and wife post-Biblical literature reveals the greatest refinement and is most eloquent on the subject of self-restraint.

Propriety and moderation in dress were always insisted upon by Jewish moralists; extremes in all cases were to be avoided. Even on Sabbaths, one rabbi writes, Jewish women should wear only simple dresses. Regulations were posted on the walls of synagogues setting forth the color and style for men and women; and, for the latter, the number of jewels to be worn whether real or "costume." There was a penalty for violating these regulations: the offending male would not be "called to the Law," and his offending wife would be denounced in the course of the service.

On the subject of amusement the rabbis inveighed strongly against all forms thereof that turned to gambling, mainly because it so easily got out of bounds. Dice were strictly forbidden. Chess was permitted but only in moderation.

According to Jewish teaching, excesses of all kinds are to be avoided. The Jew is to lead a normal life, a life of moderation and sobriety as a human being in a human world, but always under spiritualizing influences so that he may be in complete harmony with the divine will.

TEMPLE. 1. The Temple of Solomon. The history of the Temple of the Israelites is very closely connected with that of the kingdom. Up to the time of David the national god, Yahveh, was regarded as having "walked in a tent and in a tabernacle" (*II Sam.* 7:6; *I Chron.* 17:5 says, "from tent to tent") and as not having an abode of His own. It is true that the account in the Torah speaks of God as having an abode (*mishkan*)—the Tabernacle—while the Israelites were wandering in the wilderness; but Bible scholars regard this account as unhistorical and as being merely the projection of later conditions back into earlier times. The sanctuary at Shiloh, which can have been only a flimsily constructed shrine, was evidently destroyed by the Philistines. The report in *II Samuel* and *I Chronicles* which declares that David had in mind the construction of a Temple and had had the material for it prepared, on the other hand, appears creditable; such a marvellous shrine would have been quite appropriate for the city of Jerusalem after it had become the royal residence.

However, the Temple was first built by Solomon, in connection with his own palace. For this purpose he made use of his alliance with King Hiram of Tyre, who furnished him with Phoenician artists and builders, as well as cedars of Lebanon. Solomon sent a huge levy of his own vassals to work in the forests of the Lebanon and in the stone quarries; the Biblical sources (*I Kings* 5 to 7) admit that the Israelites accomplished only the heavy work, while the rest was done by for-

The Molten Sea, an important feature of the Solomonic Temple

eign artificers. The parallel passages in *II Chron.* 2 to 4 claim a larger share of the actual work of building for the Israelites; actually it was not until a later time, in the course of the repairs to the Temple, as recorded elsewhere in the Bible, that the Israelites accomplished this part of the work.

The site of the Temple was the threshing-floor of Araunah the Jebusite, which had been purchased by David (*II Sam.* 24:18-25). According to *II Chron.* 3:1, this was identical with Mount Moriah. In other places the term Mount Zion is used, while in *Micah* 3:12 occurs the term "mountain of the house" (*har ha-bayith*), which appears frequently in rabbinical literature. The Temple mount is about 2,470 feet high; it was thus about twenty-five feet higher than the palace which was adjacent to it (*Ezek.* 43:7). In order that the ground should be level it was necessary to provide certain foundations and embankments; however, the only express mention of these is in connection with the Second Temple. The Bible and the legends expressly declare that the stones for the building were not dressed with iron tools; legend explains this by saying that the wondrous Shamir worm was used.

The full Temple place was occupied to a large extent by courts and subsidiary buildings; the Temple itself was a splendid building, but not a large one. The chief (*II Chron.* 4:9) or outer (*Ezek.* 40:17) court was entered from the city, or south side, and served for the assembly of the people. Next one passed through a gate to the inner court, situated at a somewhat higher level (*Jer.* 36:10); at the entrance to this there was a raised place, a sort of tribune (*II Kings* 11:14; *II Chron.* 6:13 calls it a "scaffold"), from which the king would speak to the people. This was connected with the palace by a staircase (*I Kings* 10:5, emended text; *II Chron.* 9:4).

There were several gates to the Temple court; their exact locations can not be determined. There are references to the upper gate (probably the same as the Benjamin gate), the king's gate, the new gate, the council gate (*Neh.* 3:31), and the prison gate (*Neh.* 12:39; cf. *Jer.* 32:2). Next to the great court was the court of the priests (*II Chron.* 4:9); in this stood the great brazen altar of burnt-offering (*I Kings* 8:64; *II Chron.* 4:1), which was at some distance from the Temple itself. Near the altar stood the great molten sea (*I Kings* 7:23), which rested upon twelve brazen oxen; this may not have served so much for the ablutions of the priests as to provide a symbol.

Ascending the mountain, one came next to the portico of the Temple building itself. Here stood two columns, which were apparently apart from the building and did not serve as supports for the roof; they were called Jachin and Boaz, and represented motives common to Phoenician art. With their splendid capitals and other ornaments they were probably intended either to represent two altars crowned with fire, or were the development of the Asherahs of earlier more primitive temples. Passing through the portico, one reached a double door that led into the house of God itself, variously called *beth hamikdash* ("sanctuary") or *beth 'adonai* ("house of God"). The front part, known as *hechal* ("palace," "temple") or *kodesh* ("Holy"), was distinct from the inner shrine, the most holy place, which was called *debir.* The *hechal* was sixty cubits long, twenty wide and thirty high; in it there stood ten golden candelabra, five along each side, the vessels that belonged to them, and also the table of the showbread (*I Kings* 7:48; *II Chron.* 4:8 declares that there were ten tables). In the same place there was a golden altar. At the back of the *hechal* was a wall of cedarwood, which may have had a hanging before it (*II Chron.* 3:14); a door through this wall led to the *debir,* or Holy of Holies. This shrine contained the Ark of the Covenant, overshadowed by the wings of the golden cherubim, and set in such a way that the staves by which it was carried could be seen from the outside. According to the ritual provided in *Lev.* 16, this inner room was entered only once a year, on Yom Kippur, by the high priest, who came bearing the censer of incense; yet this ceremony was probably not carried out in the First Temple.

The Temple building proper was surrounded on three sides by additional buildings which were used to keep the offerings that had been dedicated and to serve as rooms for the various preparatory acts; in them there were numerous cells and rooms that served various purposes. Now and then various kings made additions to the Temple and its auxiliary buildings; among them was Jotham (*II Chron.* 27:3). *I Chron.* 26:18 speaks of a part of the Temple which was called *parbar,* which may have been either a hall or a chamber on the roof; since the word is Persian, this structure may have existed only in the Second Temple. When King Ahaz, on a visit to Damascus, saw an altar that pleased him very much, he had a copy of it made for the Temple and removed the old brazen altar to make room for it (*II Kings* 16:10-17); at the same time he made a number of other chambers. Enemies now and then plundered the Temple treasures; the kings of Judah drew from them to pay tribute to more powerful monarchs and replaced them by other objects of lesser value. Finally, the vessels of the Temple were carried away by Nebuchadrezzar (*II Kings* 24:13); soon after (586 B.C.E.) the entire Temple was destroyed or set on fire (*II Kings* 25:9-17), after it had been in existence for about 400 years.

2. The Second Temple. The first exiles to return from the Babylonian Exile were satisfied with building an altar on the Temple mount. It was not until the prophets Haggai and Zechariah began to press for the rebuilding of the Temple that the foundations were laid in the second year of Darius I of Persia (520 B.C.E.). It was completed in four years (in contrast to the seven of the Temple of Solomon), yet it was "as nothing" (*Hag.* 2:3) in comparison to the glory of the First Temple. There are but few references to this temple, called the Temple of Zerubbabel, from the name of the first governor. However, later authors, some of them writing in Greek, are mindful of it. The inner shrine, the Holy of Holies, was empty, since the Ark had disappeared (there are legends about it in *II Macc.* 2:4-7); only a high stone, the Eben Shetiah, rose from the rock, and it was on this that the high priest, on the Day of Atonement, placed the censer of incense (Josephus, *Jewish War,* book 5, chap. 5, section 5; *Yoma* 5:2). The other vessels, such as the candelabra, the table of the showbread and the altar of incense, were all at hand; these were either those sent by the king of Persia (*Ezra* 5:14-15) or else were made newly for the purpose (*I Macc.* 1:23; 4:49). There is a reference (*Mid.* 3:6) to lavers, although this may refer to the Temple of Herod; *Sirach* 50:3 speaks of a basin. According to *Sirach* 50, the high priest Simon the Great made many notable additions to the Temple

The building of Solomon's Temple. From a 17th cent. Italian painting

and its furnishings. Antiochus Epiphanes (2nd cent. B.C.E.) plundered the Temple and desecrated it by erecting an altar to Zeus there (*Dan.* 11:31; *I Macc.* 1:20-23); his successors are reported as having presented to the synagogue at Antioch the vessels that had been stolen from the Temple. Three years after its desecration (165 B.C.E.) the Temple was rededicated by the Maccabees and new vessels were prepared for it. After it had been stormed by Pompey and plundered by Crassus, this pitiable Temple was not considered beautiful enough for a splendor-loving king such as Herod the Great, and so he had it leveled in preparation for a new structure.

3. The Temple of Herod. Herod began the construction of his own Temple in the eighteenth year of his reign (20-19 B.C.E.). He carried it out with a splendor that aroused the enthusiasm of his contemporaries; descriptions of it brought sorrow to the later generations who felt the loss of its glories. He first expanded the building area to four stadia; then he built a ring of walls around the edge of the mountain, on which were placed splendid double halls (the stoa of the Greeks and the rabbis). There was room in these halls for a synagogue, for bazaars and sacrificial animals, and for the stalls of the money changers. The people liked to pass their time there because of the cooling shade that was thus provided. The New Testament speaks of a hall of Solomon. More important than this was the chamber of hewn stone (*lishkath hagazith*), which is repeatedly mentioned in rabbinical literature as the place where the Great Sanhedrin met. The area just within the walls was later known as the Court of the Gentiles, since the pagans were permitted to enter there; this name does not appear in the sources. From there the other courts arose in the form of terraces; there was a stone lattice work between them and the open place, and it bore notices warning the heathen not to proceed any farther; such a notice, in Greek, was discovered in 1871 (see vol. 1, p. 463). Next came a small terrace (the *hel* of the Mishnah, *Mid.* 2:3), which led to the main forecourt by nine gates, one of which was probably that known as the "beautiful gate" (*Acts* 3:2, 10). This inner forecourt was divided into two parts by a wall; the eastern part was the Court of Women, the western part was the Court of Israelites, that is, of men. It was probably later that the measure was taken (*Mid.* 2:5; cf. *Suk.* 5:2), in order to prevent any unseemly occurrence, of having the Court of Women shut off by a balcony (exostra), so that the women could see the Feast of the Waterdrawing on Sukkoth from above, while the men might observe it from below. The men's court was said to have been higher than that of the women and reached by fifteen steps; it was on these fifteen steps that the Levites stood and sang the fifteen Shir Hamaaloth (*Ps.* 120 to 134).

An area still further inside the Temple court was the Court of the Priests. Here stood the laver and the altar of burnt-offering; according to the description of the rabbis, the latter was of tremendous size. Twelve steps higher stood the Temple building itself; it was built of splendid white marble slabs (according to the rabbis, they were in variegated layers). There was again a portico in front of the principal building, and when the door of the *hechal* was purposely left open on the occasion of the festivals, the people could see the interior of the shrine. As in the case of the First Temple, the Temple proper was divided into a Holy and a Holy of Holies; in the former there were the candelabra, the table of the showbread and the altar of incense, while the latter was empty and dark. The Temple proper was 110 cubits long and 100 cubits high, making it considerably larger than either of the preceding Temples.

The Herodian Temple was never completed; work was proceeding on it to the very end. Even after it had been burned to the ground in 70 C.E., considerable ruins remained, which disappeared in the course of time, partly because of the building up of other structures in the area; the Western, or Wailing Wall, with its gigantic hewn stones, was not a part of the Temple itself, but of the wall that surrounded the Temple area.

The above description of the Temple of Herod is taken in the main from Josephus; rabbinical descriptions in *Middoth* and other places vary considerably from this. Descriptions of the sacrificial cult as practised in the Temple are given by Josephus, Philo, and rabbinical sources such as the

tractates *Tamid, Yoma, Sukkah* and *Menahoth;* the rabbinical sources are assembled by Maimonides in his *Mishneh Torah.* SAMUEL KRAUSS.

TEMPLE IN TALMUD AND MIDRASH. **1. Early History.** According to legend, God intended to build the Temple even before the world was created (*Pes.* 54a; *Midrash Gen.* 1:4). The site on which the Temple was to be built later was assigned to the tribe of Benjamin, which had not participated in the selling of Joseph by his brothers and which, at the command of Moses, was the first to enter the Red Sea (*Mechilta* to *Ex.* 14:22, p. 31a; *Sifre* to *Deut.* 33:12, p. 146a; *Midrash Gen.* 69). According to the view of others, however, this area was not distributed among the tribes, but, like the Temple itself, it belonged to the entire people (*Yoma* 12a). The Temple site is regarded as the most distinguished place in the entire world (*Mechilta* to *Ex.* 15:7, p. 43b).

2. The Name and Legend. Because of its atoning power, the Temple bears the additional name of Lebanon, "that which makes white," because it cleanses Israel from sins (*lebanon* is thus connected with the Hebrew *laban,* "white"), and also because it forms the heart (*leb*) of the people (*Midrash Lev.* 1, at the beginning). The Temple is the place toward which every person who has a petition or a prayer to make directs himself (*Yer. Ber.* 4:5, 8b; cf. Mizrah). According to the Midrash, Palestine is situated in the exact center of the world, Jerusalem in the exact center of that country, and the Temple in the exact center of Jerusalem, while the Hechal (the "holy" between the forecourt [vestibule] and the Holy of Holies) is situated in the center of the Temple, where the navel of the earth is located, with the Ark of the Covenant in the middle of the Hechal; before the Ark there is the Eben Shethiyyah (foundation stone), whence the world was created (*Tanhuma* to *Lev.* 19:23, p. 78). Furthermore, the Temple is located at the highest point in the world (*Sifre* to *Deut.* 11:10, p. 77a; *Yer. Sanh.* 11:4, 30a). In a symbolical parable the world is compared with the apple of the eye: the white part is the ocean, the black part (the iris) is the earth, the deep part within the black portion is Jerusalem, and the images which appear there are the sanctuary (*Derech Eretz Zuta* 9). A heavenly sanctuary in Jerusalem corresponds exactly to the site of the earthly sanctuary (*Yer. Ber.* 4:5, 8c; *Midrash Gen.* 55, p. 591 and other passages), the Ark corresponds to the throne of God (*Mechilta* to *Ex.* 15:17, p. 43b). The Temple too, like Israel, is called the possession of God (*Mechilta* to *Ex.* 15:16, p. 43b). God regarded the Temple, which came into being as the result of His act, as more valuable than the heavens, which arose by reason of His word; even as more valuable than the earth, which He created with one hand, whereas the founding of the Temple was performed with both hands (*Mechilta* to *Ex.* 15:17). There took place in the Temple ten miracles which had their origin in the supernatural power of His being (*Aboth* 5:5; *Yoma* 21ab).

3. History of the Temple. David was not permitted to build the Temple for the reason that he had shed much blood in the course of the many battles in which he had engaged during his lifetime. However, he wished to lay the foundation for the Temple, and while so engaged came upon the above-mentioned foundation stone (Eben Shethiyyah; *Yer. Sanh.* 10:2, 29a). Solomon was then approved as the one who was to build the Temple (*Men.* 53a; *Sab.* 30a and other passages). The story of the erection of this Temple is richly embroidered with legends. From the prohibition against employing iron in its building (*Ex.* 20:25; *I Kings* 6:7) there arose the legend of the Shamir, which splits rocks (*Git.* 68b). Legend has it that the stones used in the building of the Temple arranged themselves in their proper place of their own accord, without the use of human strength (*Pesikta Rabbathi,* edit. Friedmann, p. 25a); angels, spirits and demons also aided in its erection. Not a single one of the workers engaged in the erection of the Temple died during the whole time during which it was being built, or became sick; similarly, not one of the tools and instruments used in the work became damaged (*Pesikta Rabbathi* 6:7). The Talmudic tractate *Middoth* contains ample details with reference to the dimensions and appointments of the Temple. The Temple of Zerubbabel was in significant respects far inferior to that of Solomon, since the former lacked the Ark, the heavenly fire, the Urim and Thummim, and the holy anointing oil (*Yoma* 21b). About the year 20 B.C.E. Herod had a new Temple erected, and this work, too, was blessed by Heaven (*Taan.* 23a). This Temple was regarded as finer than even that of Solomon (*B.B.* 3a); one who had not seen it had never seen a magnificent structure in his whole life (*B.B.* 4a). The Temple of Solomon was in existence for 410 years, and the second Temple for 420 years, yet in the first only eighteen high priests functioned, whereas more than 300 high priests functioned in the second (*Yoma* 9a).

4. The Destruction of the Temple. At the destruction of the First Temple the young priests gathered together on the Temple roof and, crying "Lord of the World! Thou hast not found us worthy of being Thy faithful administrators, therefore take back these keys," hurled the keys to the Temple aloft. Thereupon there came forth a hand from heaven and took them. But the priests cast themselves down from the roof into the sea of fire which was already blazing about the Temple, and perished therein (*Taan.* 29a). Forty years before the destruction of the Second Temple the gates of the Hechal, which had been closed at eventide, were found open in the morning, until Johanan ben Zakkai cried out, in rebuke: "O Hechal, why dost thou frighten us? For we know that thou art devoted to destruction" (*Yer. Yoma* 43c; similarly in *Yoma* 39b). If the nations of the world had only known how useful the Temple was to them, they would have surrounded it, by way of protection, with magnificent structures. For the Temple was more useful to the nations than to Israel, for thus it is stated in the prayer of Solomon: ". . . do according to all that the stranger calleth to Thee for," whereas of Israel it says: ". . . and render unto every man according to all his ways, whose heart Thou knowest" (*I Kings* 8:39, 43), i.e. only according as he merits it (*Midrash Num.* 1:3). The Western Wall (the Kothel Maarabi) can never be destroyed (*ibid.* 11). The Shechinah (divine presence of God) has never yet left the Western Wall (*Midrash Ex.* 2:2). Even after the destruction of the Temple the Shechinah tarried and wailed over the ruins at the Wailing Wall (*Midrash Ps.* 11:4, p. 98, with sources; *Seder Eliyahu Rabbah* 28, p. 149). In remembrance of the destruction of the Temple, which was foreseen by Adam, Abraham, Jacob and Joseph (*Midrash Gen.* 21, 56, 69, 93), every Jew is to leave a small surface in his house unplastered or unpainted (*B.B.* 60b).

5. The Future of the Temple. The rebuilding of the Temple must always be awaited (*Sab.* 12b and other passages). God will erect the future Temple even before the kingdom of David has been reestablished and his descendants restored to office (*Yer. M. S.* 5:2, 56a). ALEXANDER KRISTIANPOLLER.

TEMPLE OF ONIAS, *see* ONIAS, TEMPLE OF.

TEMPLE, SAMARITAN, *see* GERIZIM; SAMARITANS.

TEMURAH ("exchange"), sixth tractate of Kodashim, the fifth division of the Mishnah and Talmud. It contains seven chapters, and deals with that provision of the Law (*Lev.* 27:10) which decrees that if one attempt to exchange a sacrificial animal for another, both shall be regarded as dedicated to God. The tractate, accordingly, is devoted mainly to a discussion of this regulation in its application to the various sacrifices; but it also discusses a number of related subjects, such as the differences between sacrifices made by an individual and those presented by the community, the meaning of certain terms in the Law (*Deut.* 23:19), the differences between objects consecrated to the altar and given to the Temple treasury, and what must be burned rather than buried, and vice versa.

The Tosefta to the tractate contains four chapters. There is a Babylonian Gemara, which discusses the subject matter of the Mishnah, and has various Haggadic sayings, of which the most important are those in reference to the oral law.

TENENBAUM, JOSEPH, physician, writer and communal leader, b. Sassow, Poland, 1887. He received the M.D. degree from the University of Lemberg (1914), was a captain of the medical corps in the Austro-Hungarian Army during the first World War, and came to the United States in 1920. Tenenbaum specialized in urology, was an instructor in urology at Columbia University (1922-24), and subsequently surgeon and urologist at several New York hospitals. He was a representative of the Jewish National Council of Poland on the Comité des Délégations Juives to the Peace Conference in Paris (1919), chairman of the executive committee of the American Jewish Congress (1929-36), member of the administrative committee of the World Jewish Congress (1936), and chairman of the Joint Boycott Council of the American Jewish Congress and the Jewish Labor Committee. He was vice-chairman of the Federation of Polish Jews from 1928 to 1936.

His writings include: *Unsere Friedensfrage* (1917); *Jewish Economic Problems in Galicia* (Polish; 1918); *Der Lemberger Judenpogrom* (1919); *La question juive en Pologne* (1919); *In Feier* (1926); *The Riddle of Sex* (1929; British ed., 1930); *Mad Heroes* (1931); *Races, Nations and Jews* (1935); *The Riddle of Woman* (1936); *The Third Reich in Figures* (1938); *The Economic Crisis of the Third Reich* (1939); *American Investments and Business Interests in Germany* (1940); *The Road to Pan-Americanism* (1941). Tenenbaum was chairman of the Committee for Inter-American Cooperation, and a fellow of the New York Academy of Medicine.

In 1942, at the session of the American Jewish Congress in Chicago, Tenenbaum introduced a resolution to organize the United Jewish War Effort, of which he later became executive chairman.

TENNESSEE, an east south central state of the United States, with a population of 2,915,841 (census of 1940), including, in 1943, an estimated 20,000 to 25,000 Jews. There is some record of Jewish traders settled along the Holston River in the northeastern part of the state (Hawkins county) as early as 1778. However, it was probably not until the 1830's and the 1840's that Jewish immigrants from Germany and the Austro-Hungarian Empire came into the state in appreciable numbers; and by the middle of the century Jewish communities were solid enough to organize their first congregations. In the United States census of religious bodies of 1850, Tennessee reported no Jewish congregation. That same year, however, the Hebrew Benevolent Society was organized at Memphis, where three years previously Joseph J. Andrews, one of the earliest Jewish settlers in the city, had already laid out a burial ground. In 1853 Congregation Children of Israel was organized, and in the next year it was incorporated by an act of the Tennessee General Assembly. The same act chartered the Orthodox Congregation Khal Kodesh Magen David at Nashville, where several Jewish families were settled in 1845, and where a Young Men's Hebrew Benevolent Society had been organized in 1853. The Reform Congregation B'nai Yeshurun was organized at Nashville in 1862, but the two groups merged in 1868 to form Congregation Khal Kodesh Ohavai Sholom (Vine Street Temple).

Organization of the Jewish community of Chattanooga, where Jews had settled in 1858, and of Knoxville, where they arrived several years later, took place in 1866. In that year the Jews of Chattanooga founded the Reform Hebrew Benevolent Association, later Mizpah Congregation; and the Jews of Knoxville constituted the Hebrew Benevolent Society, which, incorporated in 1868, became Temple Beth-El in 1877. In Brownsville, Congregation Adas Israel was organized about 1867. The splits and reconciliations in these early religious organizations reflected the general rise of and opposition to the Reform Movement in Judaism in the United States after 1850.

The mass migrations of Jews from Eastern Europe after 1880 brought new Orthodox members into the communities, which established their own Orthodox synagogues. In 1890 the United States census of religious bodies reported nine congregations in Tennessee: four Orthodox and five Reform, with 425 Orthodox and 1,335 Reform communicants. For the year 1900 the *American Jewish Year Book* (vol. 3, 1901-2) reported that Tennessee had in eight localities one or more Jewish institutions with a total of twelve organized congregations. Eight of these had a total membership of 615, and three were then affiliated with the Union of American Hebrew Congregations. Five congregational schools were instructing a total of 379 pupils. There were eight charitable societies.

In 1927 the South led the country in the number of congregations in proportion to the number of Jewish residents; but Tennessee was here at the extreme, with only one congregation for each 1,325 Jews. The 1936 government census of religious bodies reported

that 23,275 Tennessee Jews belonged to a total of eighteen congregations, all in the urban sections. 1,576 pupils were then enrolled in the schools of eleven of the congregations. Several enumerations of Jews by states reported for Tennessee that in 1877 there were 3,751 Jewish inhabitants; 15,000 in 1897; 10,000 in 1907; 14,034 in 1917; 22,632 in 1927; 25,811 in 1937. The population continued to be distributed mainly in the four leading communities of Memphis, Chattanooga, Nashville and Knoxville, all of which are separately treated in detail in this encyclopedia. A study of the Tennessee communities made for 1937 showed twenty-three additional localities with more than ten Jews each, and thirty-six localities where fewer than ten Jews resided.

In 1943 there were, in addition to the four leading communities, three other well-organized Jewish communities of Tennessee:

BROWNSVILLE in 1943 included about 100 Jewish inhabitants in its total population of 4,012 (census of 1940). Meyer Sternberger, one of the early Jewish settlers of Brownsville, brought with him a Sefer Torah from Germany about 1865, and in 1867 Congregation Adas Israel was organized. The members worshipped in a room on Wall Street over Rothschild's grocery store. In 1882 a Temple of brick veneer, with memorial windows in memory of past members, was dedicated by Rabbi Max Samfield of Memphis, and was still housing the communicants in 1943. Emil Tamm was the congregation's first lay reader, serving from 1878 to 1907. The congregation, which joined the Union of American Hebrew Congregations in 1922, continued to conduct its service without an ordained rabbi. In 1936 Morton Felsenthal was appointed lay reader. The charitable Ladies' Hebrew Relief Society was organized. Joseph Felsenthal served in the city council of Brownsville in 1909.

CLARKSVILLE, with a total population of 11,831 (census of 1940), included in 1943 approximately sixty-five Jews. The first five Jewish families to settle in Clarksville came in the 1890's from Lithuania. About the same time two families from South Germany established themselves there. A Congregation B'nai Abraham, organized by Simon Katz, Isadore Bacherig and J. Rosenfeld, had a brief existence from 1906 to 1908. Most of the Jews resident at Clarksville in 1943 had moved into the community between 1925 and 1930. The Reform Congregation Temple Beth El was organized and joined the Union of American Hebrew Congregations in 1931. The congregation continued to worship in a rented hall of the Masonic building. Alfred Vise, who came to the pulpit in 1939, was the incumbent in 1943. The religious school of the congregation attracted the children of the small surrounding communities as well as of Clarksville itself.

JACKSON included about 100 Jewish inhabitants in 1943, in the total population of 24,332 (census of 1940). The first settlers, arriving in the 1880's, included the families Friedlob, Tuckfeld, Baum, Woerner, Myers and Samuels. Congregation B'nai Israel was organized in 1885. It was not, however, until 1897 that the Cumberland Presbyterian Church on College Street was purchased and remodeled into a Temple. In 1941 a new Temple was occupied. Laymen conducted services until 1903, when Rabbi Louis Schneider came to the pulpit. He served until 1905, and was followed by Joseph Bogen (1905-17), Alex Klein (1933-34), Samson Levy (1934-39) and Maurice Feuer (1939-).

In addition to the congregation and its religious school, the Jews of Jackson organized a lodge of the B'nai B'rith, a United Jewish Appeal (1925) and a district of the Zionist Organization of America (1940). At Lambuth College, in Jackson, Fred Freedman was appointed to the faculty in the department of philosophy.

COLUMBIA. At Columbia Julius Abrahams organized the Columbia Reform congregation, which existed from 1921 to 1926, when it disbanded, with the removal of the Abrahams family to Nashville. Its members then affiliated with Khal Kodesh Ohavai Sholom of Nashville. Congregation B'nai Sholom was organized at BRISTOL in 1904 .

From the beginning of their settlement Jews of Tennessee took an active interest in the life of their communities, and a number of them held public office. In the War Between the States thirty-eight men from the then small Jewish community of Tennessee enlisted in the Confederate forces. Three were wounded, seven killed and two died in captivity.

Even before the permanent Jewish settlements were made in Tennessee, about 1830, a Mr. Isaacs is mentioned in a pamphlet on the Jews as a member of the United States Congress for the state. Later, in the state assembly, were Leo Jacobs (1890), Ralph Davis (1890-94; speaker, 1893), Abe Cohen (1911), Julian Straus (1913-15), Joseph Hanover (1918-19), William B. Rosenfield (1917-19), Fletcher Gans Cohn (1929-33). Clarence Friedman of Memphis was a state criminal judge (1919-23); Herman Zander of Nashville was judge in Davidson County (1935-40); Sam Taubenblatt of Memphis was acting Shelby County Court judge (1933-37); Jacob Levine of Nashville was a county court judge (1930-35). Fletcher Cohn was master of the federal court in Memphis (1935-38); William Gerber was attorney general of Shelby County (1942-). At Memphis, Ira J. Lichterman was a member of the Light, Gas and Water Commission (1943). Hyman T. Kern was appointed special judge of the Juvenile and Domestic Relations Court of Knox County in 1935. Charles Gilbert of Nashville was county court judge (1942-). Nathan Cohn of Nashville was a former special judge in Chancery Court. Sophie G. Friedman was vice-president of the Tennessee National Association of Women Lawyers.

In various capacities the well-known Ochs family participated importantly in the Jewish community, as well as in the public affairs of the state.

In Tennessee two Anglo-Jewish papers were being published in 1943. The *Hebrew Watchman* (originally established in 1925 as the *Memphis Hebrew* by Leo I. Goldberger) was being issued weekly at Memphis under the editorship of Milton W. Goldberger. The *Observer*, organized in 1934, was being published weekly at Nashville by Jacques Back. From 1885 to 1915 the *Jewish Spectator* was published by Rabbi Max Samfield of Memphis.

TENT OF MEETING, *see* TABERNACLE.

TENTH OF TEBETH, *see* TEBETH, TENTH OF.

TEOMIM (Hebrew for "twins"), a prominent family of rabbis, especially active in Central and Eastern Europe in the 17th, 18th and into the 19th centuries. The first rabbi of the Teomim family to be known was JONAS BEN ISAIAH TEOMIM (d. Metz, 1669). He was rabbi in Nikolsburg (until 1660) and in Metz.

JOSEPH BEN MEIR TEOMIM (b. Lemberg, Galicia, 1720; d. Frankfort on Oder, Germany, 1793) was

the best-known of the group. He was the son of Meir ben Samuel Teomim (d. 1773), rabbi and author. First a preacher, then director of the Yeshiva in Lemberg, Teomim was appointed rabbi in Frankfort on Oder in 1782. He was one of the most prolific rabbinical writers of his time. His *Peri Megadim* (1753) was a commentary on *Shulhan Aruch, Orah Hayim;* it not only examined and elucidated earlier commentaries, but added comments and explanations by Teomim himself.

Joseph Jonas Teomim was rabbi in Cracow and later, from 1754 until the 1790's, in Breslau. Meir Teomim Lemel, known also as Meier Posener (b. 1728; d. 1803), was rabbi in Meseritz (1763), Königsberg and finally Danzig (1783). He was one of the most noted Talmudists of his time. Baruch ben David Teomim-Fränkel was active into the middle of the 19th cent. He served as rabbi in Galicia and Moravia, and was the author of Talmudic dissertations and commentaries.

TEPPER, JOSEPH MEIR, painter, b. Meseritz, Russia, 1886. He first attended the Heder and the Yeshiva at Odessa, Russia, but later turned to artistry and studied at the School of Fine Arts, Odessa, and at the École des Beaux Arts and other art institutes in Paris. The first recognition of his talent came in 1910, when he was awarded a gold medal at the International Exhibition in London, and a silver medal by the Société des Amis des Arts de Seine et Oise, at Versailles, France. Before he emigrated to the United States (1926) Tepper had already held numerous exhibitions at Moscow, Jerusalem, Tel-Aviv, Haifa, Alexandria and Vienna.

In the United States he gained recognition through his exhibitions at New York (1927), Boston (1931) and Philadelphia (1933). Several of his paintings were acquired by museums in Moscow and in Dijon and Clermont-Ferrand, France, as well as by the Hadassah Medical Center at Jerusalem (portrait of Henrietta Szold), Syracuse University (Louis Marshall), Harvard Law School (Louis D. Brandeis), and the Court House at Salem, Mass. (the Honorable Harry C. Atwell). He also painted Mendele Mocher Sforim, Hayim Nachman Bialik, Menachem Mendel Ussishkin, Ahad Haam, Joseph Klausner, Sir Herbert Samuel, Sir Ronald Storrs, Meier Dizengoff and other outstanding contemporaries.

Renowned as a portrait painter, Tepper produced also fine landscapes both in oil and in water colors. While in Palestine he caught the inspiration of the country and the Jewish renaissance, proof of which are his numerous pictures of vistas of Jerusalem and other cities, and *Reading the Talmud,* the picture of an old rabbi.

Lit.: American Hebrew, May 20, 1927, p. 47; March 22, 1929, p. 713.

TERAH, father of Abraham, Nahor and Haran. According to *Gen.* 11, he migrated with his family from Ur of the Chaldees to Haran, where he spent the rest of his life. There is nothing in this passage to indicate that he was an idolator; but *Josh.* 24:2 states that he and all his family but Abraham worshipped "other gods." The Hellenistic literature and the Midrash go even further and make Terah a manufacturer of idols; this serves to color the stories about the youthful Abraham.

Lit.: The Biblical dictionaries; Ginzberg, Louis, *Legends of the Jews,* vol. 1 (1909) 183-217; vol. 5 (1925) 207-19; Albright, W. F., in *Bulletin of the American Schools of Oriental Research* (1938) 35-40.

TERAPHIM, images of uncertain character mentioned a number of times in the books of the Bible that describe the period from the patriarchs to the kings inclusive. The form of the word is plural, but in some passages it refers to a single image. Such images were sometimes large, as the one which Michal used to simulate David sleeping (*I Sam.* 19:13), while others were small, such as those which Rachel could easily conceal (*Gen.* 31:34-35). They appear in the worship of Laban the Aramean, in connection with the ephod in the shrine of Micah and the Danites (*Judges* 17 and 18), as a household object in the time of Saul (*I Sam.* 19) and as oracles consulted by idolators (*Ezek.* 21:26; *Zech.* 10:2). Hosea seems to regard them as part of the official cult of his time (*Hosea* 3:4). It was probably the Deuteronomic Reformation of 621 B.C.E., with its destruction of all images, that put them in the class of idols and eventually abolished them from the religion of Israel.

Various interpretations have been made of the Teraphim. They have been held to be images of ancestors, household gods, oracles, good-luck charms, or even snake images (equating the word with *seraphim*). The information furnished in the Bible is too scanty to warrant any definite conclusion other than that at the early period they were not regarded as inconsistent with the worship of the God of Israel, but that later they were considered idols and hence banned.

TERONGI, *see* Taronjí.

TERRE HAUTE, a city of Indiana with a population of 62,546 (census of 1940), including in 1943 approximately 900 Jewish inhabitants. Contemporary references indicate the presence of Jews in Terre Haute as far back as the early 1820's, and it is reasonable to suppose that a congregation was established some years later. Actual minutes of the proceedings of the Reform Congregation Temple Israel are found as early as 1854. One of the congregation's first buildings was located at Fourth and Swan streets. Samuel Goldman, father of the famous musician Edwin Franko Goldman of New York city, was a leader and teacher of the congregation in its early history. In 1890 Alexander Lyons was called to be the first ordained rabbi of Temple Israel, and was installed by Isaac Mayer Wise. A Temple was erected in 1911. Succeeding Rabbi Lyons were Rabbis Samuel Deinard, Emil W. Leipziger (1900-13), Jacob H. Kaplan, Isaac E. Marcuson and Joseph L. Fink. Rabbi J. Marshall Taxay came to the pulpit in 1934.

Other organizations formed early in the history of the Terre Haute community were a lodge of the B'nai B'rith, chartered in 1869, and the Hebrew Ladies' Benevolent Society, organized in 1872. The Phoenix Club was founded in 1886. In that year (1886) the Orthodox Temple B'nai Abraham was established with a membership of sixteen, including Abraham Levin, for whom the congregation was named. Its first quarters were a rented hall at Eleventh Street and Wabash Avenue. The first Temple was built at Twelfth and Mulberry streets, and in 1926 the new synagogue at Fifth and Poplar streets was erected (dedicated in 1927).

In 1935 Temple Israel and Temple B'nai Abraham were consolidated and the new name United Temple was adopted. Taxay, then spiritual leader of Temple

Israel, became rabbi of United Temple, and was still serving in 1943. The United Temple, characterized as the first federation of its kind in American Jewish communities, thus provided for all elements of Terre Haute Jewry—Orthodox, Conservative and Reform—and became the center, through its combined buildings, of all communal activities.

The Talmud Torah (weekday school), founded about 1920 by Congregation B'nai Abraham, continued to be held in the Temple. Women of the congregations maintained the Temple Sisterhood and the Temple Ladies' Auxiliary. Other organizations maintained by Terre Haute Jewry in 1943 included a section of the National Council of Jewish Women and of the Council of Jewish Juniors, a Zionist district and Hadassah, and a unit of the American Jewish Congress. In 1922 the Jewish Federation of Terre Haute was formed and encompassed the neighboring communities of Brazil, Clinton and Sullivan, Ind., and Marshall and Paris, Ill.

TERRITORIALISM, a movement which seeks to solve the so-called "Jewish problem" by establishing an autonomous settlement of Jews in any suitable and available part of the world. The movement is distinct from Zionism in that it does not insist on Palestine as the land of settlement nor is it geared to traditional aspirations for the national and religious renaissance of Israel on its ancestral soil. At the same time, it is also distinct from the usual type of colonization, since it envisages a distinctive and self-governing enclave. Nevertheless, it must be confessed that exponents of Territorialism and sponsors of territorialist projects have not always made it clear whether what they contemplate is (a) a central Jewish state, which is to determine the political standing of all Jews everywhere, or (b) simply the establishment of one or more independent settlements for such Jews as may happen to be suffering oppression. In other words, it tends to be left somewhat vague whether the movement is to be conceived in terms of nationalism or of colonization.

It has been claimed that Territorialism is as old as the settlement of the Hebrews in the territory of Goshen, while the independent Jewish principalities in pre-Islamic Arabia, Ethiopia and elsewhere have also been cited as prototypes of the movement. Such examples, however, are misleading. The inhabitants of Goshen were Hebrews, not Jews, while in the other cases we are concerned with local administrations, not with central colonies receiving Jewish refugees from all parts of the world. Historically speaking, Territorialism may be said to have arisen in the wake of the Inquisition, and to have been born primarily of a desire to find haven for Jews expelled from the Iberian peninsula. Thus, in 1652 a project was initiated by Joseph Nuñez da Fonseca to establish a Jewish colony in Curaçao, and in the following year he was delegated by the Council of Holland to transfer Jewish families to that territory, under the patronage of Jan de Illan. A little later, similar plans were devised for settling in Surinam Jews exiled from Brazil on its reconquest by the Portuguese, while in 1659 the French West India Company accorded rights to David Nasi to establish a Jewish settlement in Cayenne.

The persecution of Jews in Eastern Europe during the 18th cent. likewise inspired a number of territorialist projects. In 1790 a Polish writer named Abraham Hirszowicz proposed that Jews be settled in the Ukrainian province of Poland, although not upon an independent basis. In 1815 the Polish priest Xavier Szanowski suggested that the Congress of Vienna grant special territory to the Jews, while ten years later the Decembrist Pestel put forward a plan for a Jewish enclave in Asia Minor. Simultaneously, schemes were formulated in the United States for settlement of Jews in Mexico and in land between the Upper Mississippi and Tennessee rivers. The most ambitious and grandiose of the American projects was undoubtedly the founding of the colony Ararat by Mordecai Manuel Noah in the Niagara River near Buffalo in 1826, but this never went beyond the stage of formally laying the cornerstone.

Agitation for an autonomous Jewish settlement received fresh impetus from the Russian pogroms of the 1880's. In 1887 an anonymous Galician writer proposed the creation of a "New Judaea" between the Nebraska, Kansas and Arkansas rivers, while when Leo Pinsker published his famous *Auto-Emancipation* in 1881, his demand for a land for the Jews was conceived in territorialist rather than Zionist terms. Similarly, the project envisaged by Theodor Herzl in his *Der Judenstaat* was for the establishment of a Jewish state on *any* available territory. It was only later, when he acquired a following among Jews of a more traditional mold, that this project became political Zionism.

The most significant phase of Territorialism began in 1905, when the Seventh Zionist Congress rejected an offer by the British government to create an autonomous Jewish settlement in Kenya (the so-called "Uganda project"). Adherents of this plan subsequently convened at Bern, Switzerland, under the leadership of Israel Zangwill, and founded the Jewish Territorial Organization (ITO). The purpose of this body was "to procure a territory upon an autonomous basis for the Jews who cannot or will not remain in the lands in which they already live." In pursuance of this objective, the ITO investigated possibilities of settlement in Angola (1907), Cirenaica (1908), Mesopotamia (1909), Mexico, Canada, Australia, and even Siberia, but all such efforts proved abortive. It thereupon changed its direction and resolved itself into an organization for decentralizing Jewish immigrants to the United States, assisting them to move from New York and other large cities and to settle in the Southern and Western states, under what was known as the Galveston Movement. The issuance of the Balfour Declaration in November, 1917, brought an end to its activities, and in 1925 it was formally disbanded.

The plight of Jews after the first World War, and again after the rise of Nazism, led to a recrudescence of Territorialism. In 1931 a Jewish group in Berlin revived the ITO plan for colonizing Angola by initiating a project to take over nearly 1,000,000 acres belonging to the Società Pecoaria d'Angola. Three years later, however, as the result of press agitation, the government interdicted such mass settlement. In 1935 a Freeland League for Jewish Territorial Colonization was established in London. This group undertook a survey of Ecuador, and in 1936 published an encouraging report of the possibilities. The Jewish emigration bodies, however, discountenanced the project, and no further steps were taken.

An offer made at the Evian Conference of 1938 by Lord Winterton, British representative, to explore the possibilities of Jewish colonization in Kenya was rendered abortive by the opposition of local groups, and was finally whittled down by Prime Minister Neville Chamberlain to a plan for settling a few handpicked agricultural trainees. On November 21, 1938, the British premier informed the House of Commons that his government was prepared to open Tanganyika to Jewish colonization. It was pointed out, however, that the climate was scarcely satisfactory and that the settlement of Jews on territory which had long been under German influence and control would be imprudent. In point of fact, little advantage was taken of this offer. On the same date Cham-

At a meeting of the Jewish Territorial Organization. Israel Zangwill (standing) was its leader; among other leaders of the movement (seated at his right) Max Emanuel Mandelstamm

berlain mentioned also the possibility of the development by refugees of tracts of land in British Guiana (formerly offered to the dispossessed Assyrians). Reports on this project varied, but the majority of experts expressed the opinion that it was unsuitable for colonization by white people, a verdict which had previously been reached, in 1933, by a commission sent out on the Assyrian resettlement scheme.

Transcending in importance all these projects was that launched by the Soviet government, in 1928, for the establishment of a Jewish settlement in Birobidjan. On October 30, 1931, the territory was proclaimed a national Jewish administrative unit. The Birobidjan scheme was motivated primarily by a desire to give Soviet Jews a formal national status, such as is accorded only, under the Soviet Constitution, by minorities inhabiting a definite territory. The plan, however, failed of absolute success; for although notable progress was made, during the first six years, 58.4 per cent of the immigrants returned home. In 1937 it was reported that Jews constituted only 23.8 per cent of the total population.

Finally, a word should be said concerning the Dominican Republic Refugee Settlement project. This scheme was initiated after a declaration at the Inter-Governmental Refugee Committee meeting in London, in 1939, that the Dominican Republic was prepared to admit about 100,000 refugees of the professional, business and laboring classes. Following a report by an expert commission, the Dominican Republic Settlement Association was formed in 1940, with financial assistance from the Agro-Joint board. Subsequently, further tracts of land, near Sosua, were placed at the disposal of the Association by the former president of the republic, Rafael Trujillo, and immigration began. By the end of 1941 some 250 persons had been settled, but the original project of a Jewish settlement had been modified, and the territory was, in 1943, colonized on a non-denominational basis.

Other settlement schemes (for example, for the Kimberleys, Australia, Northern Rhodesia, Alaska and Kenya) were defeated by local opposition, or tacitly dropped for political and economic reasons. Projects for the Jewish colonization of Madagascar and Abyssinia need not here be discussed. These emanate from Fascist circles and belong in the realm of exile and concentration-camp rather than in that of Territorialism. THEODOR H. GASTER.

TERUAH, *see* SHOFAR.

TERUMOTH ("heave-offerings"), sixth tractate of Zeraim, the first division of the Mishnah. It contains eleven chapters, and deals with the heave-offering which, according to *Num.* 18:8-11, was to be given to the priests for their support. This is defined as being not more than one-fortieth or less than one-sixtieth of a number of types of produce. The tractate discusses in what cases the heave-offering must be given and by whom, and the manner in which it is made. The Levites must give a heave-offering out of the tithe which they collect from the people. There are also regulations as to how the heave-offering may become unclean, and what is to be done in case it has been used for another than its rightful purpose.

The Tosefta to the tractate has ten chapters; its most interesting part is the description of the boundaries of Palestine at the time it was written. The Palestinian Gemara is for the most part legal; there is no Babylonian Gemara.

TESCHNER, JACOB, physician, b. New York city, 1858; d. New York city, 1927. After receiving his degree from the College of Physicians and Surgeons (1880), he engaged in the practice of medicine, specializing after 1891 in orthopedic surgery, and becoming professor in that subject in the West Side School of Clinical Medicine in 1899. He was a pioneer in the field, especially in the cure of curvature, flat foot and paralytic conditions through muscular reeducation without the use of braces or apparatus. He showed how decompensated hearts could be benefited by exercise without the use of drugs, and his work in that

field led to the establishment of cardiac clinics and to different standards for acceptance of men with cardiac conditions in the army. Teschner was one of the first doctors in the United States to devote himself to endocrinology. His writings in his fields of interest appear in the medical journals of his day, notably "Treatment of Post Paralytic Conditions" (*Annals of Surgery,* 1899); "Treatment of Cardiac Insufficiency" (*Archives of Internal Medicine,* November, 1915).

TESORO, GEORGES A., economist and authority on public finance, b. Rome, 1904. He studied under Antonio de Viti de Marco and Alberto de Stefani at the University of Rome, began his teaching career as assistant professor at the Institute of Economic and Financial Studies of the University of Rome (1930-34), and in 1935 was appointed associate professor of public finance and taxation at the University of Bari, where he taught until his dismissal in October, 1938, which came as a result of the newly enacted anti-Semitic laws in Italy. Tesoro took an active part in Jewish social and cultural activities in Italy, acting as president of the Convegno Studi Ebraici in Rome and as secretary of the scholastic foundation Vittorio Polacco in that city.

He founded and edited *La rivista italiana di diritto finanziario.* His many publications include: *La penalità delle imposte dirette* (1930); *Lezioni di diritto finanziario* (1933); *Principi di diritto tributario* (1938).

After his arrival in the United States in 1940, Tesoro did research work, and taught at Lawrence College, Wisconsin. In 1943 he was on the faculty of the School of Social Science and Public Affairs of the American University, in Washington, D. C.

TESTAMENT OF ABRAHAM, *see* ABRAHAM, TESTAMENT OF.

TESTAMENT OF SOLOMON, *see* SOLOMON, TESTAMENT OF.

TESTAMENTS OF THE TWELVE PATRIARCHS, a book of the Pseudepigrapha, cast in the form of final statements on the part of each of the twelve sons of Jacob. It was written by a Pharisaic Jew who was a great admirer of John Hyrcanus, and must have been composed between 109 and 107 B.C.E. Its most notable element is the fine moral teaching put into the mouths of the patriarchs; in addition, there are apocalyptic ideas such as references to the Messianic kingdom, the salvation of the Gentiles, the overthrow of Beliar, the disappearance of sin and the resurrection of the righteous. As the text now stands, many Christian teachings have been interwoven into the work, but these can be easily detected, and they are pointed out in the critical editions of the work. Its original language was undoubtedly Hebrew; fragments of the Hebrew underlying the present Greek text have been discovered, one by Moses Gaster.

The Testaments, like the other pseudepigraphic literature, disappeared among the Jews in the early centuries of the Christian Era, with their absorption in the Bible and Talmud. It was retained by Christians and reworked from a Christian point of view; even among the Christians it is referred to only occasionally after the 1st cent. Four Greek manuscripts are extant, the earliest dating from the 10th and the latest from the 16th cent. In 1242 Robert Grosseteste, bishop of Lincoln, made a Latin version from the Greek. Versions in Armenian and Slavonic are extant. Interest in the work revived in the 16th cent., since which time it was studied by many scholars, and translations were made into almost every modern language, including one into Hebrew in Kahana's *Sefarim Hitzonim* (1936-37).

The importance of the Testaments lies in its high ethical level of teachings, one of the highest in religious literature. Its messages of righteousness, justice, love of man and God, and its emphasis on forgiveness have not been surpassed. These teachings are apportioned among the various testaments in such a way as to link them with the lives of each individual patriarch. As a whole they are intended to impress readers with the futility and danger of sin, and the beauty and rewards of righteousness and godly living. Almost every phase of individual and social life is touched upon: love of God and man; fornication and adultery; drunkenness, jealousy and pride; slander, lying, envy, love of money, anger, hatred and hypocrisy; truthfulness, righteousness and singleness of heart. These teachings are divided among the patriarchs as follows:

REUBEN relates of his act with Bilhah and admonishes his children against unchastity.

SIMEON tells how he plotted against Joseph and exhorts against jealousy, which destroys both him that is envied and him that envies.

LEVI describes how he was transported in a vision to heaven and was given the priesthood, and how his children were ordained to be priests, judges and scribes in Israel; he admonishes them to lead a life of simplicity of heart and fear of God.

JUDAH speaks about courage, avarice and fornication, and warns against pride, covetousness and licentiousness.

ISSACHAR advises a life of simplicity and contentment in agricultural pursuits.

ZEBULUN preaches compassion and mercy.

DAN warns against anger and falsehood.

NAPHTALI exhorts to goodness.

GAD warns against the spirit of hatred.

ASHER discourses on vice and virtue.

JOSEPH relates in detail his struggle against the wiles of the "shameless woman," his faith in God which delivered him from all trouble, his chastity and brotherly love.

BENJAMIN admonishes his children ever to direct their minds to the good and the pure.

The life-incidents related by the patriarchs are a blending of Biblical accounts with Haggadic elements and apocalypse. It is noteworthy that both Levi and Judah speak approvingly of the Maccabean dynasty.

It is the general opinion of modern Christian critics that Jesus was acquainted with the Testaments and used some of its material. Thus the collocation of the two main commandments, love of God and love of man (*Matt.* 22:37-39; *Mark* 12:30-31; *Luke* 10:27), occurs three times in almost the same words (*Dan* 5:3; *Issachar* 5:2, 6; *Benjamin* 3:3, where "fear" is substituted for "love"), and the thought appears several times. In other places the content of the work, as compared to the Gospels, indicates indisputably that Jesus knew the Testaments. G. GEORGE FOX.

TETH, *see* ALPHABET.

TETRAGRAMMATON, designation for the principal name for God, derived from the fact that the latter consists of the four consonants Yod, He, Vav and He. This name was accorded greater reverence than any other. It is noticeable that this name is composed of three consonants which were also used to indicate the vowels *a, i* and *o*. In the latter part of the period of the Second Temple the Tetragrammaton was spoken only by the high priest on Yom Kippur and in such a low tone that it could not be heard; others, when using or reading the name, substituted the word *'adonai,* and the pronunciation of the Tetragrammaton was considered connected with awesome mysteries. Many of the stories of the wonder-workers of the Middle Ages and after are based on the fact that they knew how to pronounce and use the Tetragrammaton; hence such a mystic was known as a Baal Shem, "master of the Name." It appears in shortened form in the Bible as Yah and Yahu, and in Egyptian papyri as Yeho.

See also: JEHOVAH; NAMES OF GOD; YAHVEH.

Lit.: Driver, S. R., in *Studia Biblica,* vol. 1 (1885) 1-20.

TETRARCH, title given to Jewish princes under Roman supremacy. It literally meant ruler over a section ("quarter") of a conquered country which had been partitioned by the conqueror to further his interests. Antipas and Philip, the two sons of Herod the Great, were tetrarchs.

TEWELES, HEINRICH, dramatist, poet and theatrical director, b. Prague, Bohemia, 1856; d. Semmering, Austria, 1927. From 1887 to 1900 he was dramaturgist of the Prague German Theatre. With great love and devotion he cultivated the German language. In 1900 he became chief editor of the *Prager Tageblatt,* which he headed for ten years. From 1910 to 1918 he directed the Prague German Theatre.

Teweles wrote a number of novels, short stories and little comedies, the most successful of the latter being *Der Ring des Polykrates,* which was set to music by Erich Wolfgang Korngold. Among his dramas were: *Die Schauspielerin* (1881); *Schule der Frauen* (1887); *Gesellschafterin* (1889); *Der Volksfreund* (1898). His prose works include *Die Armen* (1885); *Der hundertste Geburtstag* (1891); *Johann Strauss* (1894); *Der Roman Goethes* (1918); *Goethe und die Juden* (1925).

TEXAS, a state in the southwestern part of the United States, the largest state in the Union. It was admitted to the Union in 1845, seceded in 1861, and was readmitted in 1870. It was an independent republic from 1836 to 1845. In 1943, out of a total general population of 6,414,824 (census of 1940), it had 49,196 Jews (1937).

The records at the General Land Office at Austin, capital of the state, mention Samuel Isaacs, who came from the United States in 1821 (he was the first Jew to come to Texas) with Stephen F. Austin's first colony of 300 persons. Later he received a land grant in Fort Bend County from the Spanish government. In 1836 to 1837 Isaacs served in the Texas army, and for his services was given a bounty warrant of 320 acres of land in Polk County in 1853. A permanent settlement of Jews at Velasco, on the Gulf of Mexico, to the south of Galveston, followed Isaacs' arrival in the state. Abraham Cohen Labatt (1802-98), visiting Galveston in 1831, found Jacob Henry and Jacob Lyons engaged in mercantile pursuits in Velasco; Jacob Henry's will provided for building a hospital there.

Nacogdoches, in the eastern part of Texas, was the gathering-place of a number of Jews in the early decades of the 19th cent., among whom was Adolphus Sterne, who moved to Texas in 1824. He was a member of the First Grand Lodge of Freemasons of the Republic of Texas, a noted linguist, and a personal friend of General Sam Houston. Stern later became alcalde (mayor) of the city of Nacogdoches.

Other early pioneers in the community of Nacogdoches were: Joseph Hertz and his brother Hyman (b. Germany; they came to Texas shortly after their arrival in the United States in 1832), personal friends of General Houston; Albert Emanuel (b. Arolsen, Germany, 1808), also a personal friend of Houston, came to Nacogdoches in 1834, as a merchant. He fought in the Battle of San Jacinto as a member of Captain Kimbo's cavalry (*Nacogdoches Records; Baker's Scrap Book of Texas*); Simon M. Schloss, who was in the real estate business and afterward moved to New Orleans; Kohn (first name unknown), a member of the Texas Spy Company, who fought at San Jacinto; Sam Maas, who came to Texas from New Orleans in 1836. He married Isabella Offenbach, sister of the Jacques Offenbach of musical fame, while on a visit to Europe; Simon Weiss, of Weiss Bluff on the Neches River; Simon and Jacob Mussina, who moved to Texas in 1836, the former editing a paper and practising law, and who was subsequently a landowner; Edward J. Johnson, slain in Goliad (1836), who was with General Fannin in the Texan War of Independence; Benjamin H. Mordecai, M. K. Moses and Herman Ehrenberg, who also fought under Fannin at Goliad. Mordecai was killed by the Indians in 1840, Moses and Ehrenberg escaping; Captain Levi Charles Harby, a famed Texan (b. Georgetown, S. C., 1793), who joined the United States Navy, from which he resigned in 1836. He was commander of the *Neptune* during the Civil War, and died at Galveston in 1870; David S. Kauffman (Kaufman), who came to Nacogdoches in 1839, and served under General Douglas, suffering a wound in the battle of Neches. His name was given to Kauffman County, Texas, to do him honor. Kauffman was known as the framer of the so-called "Kauffman's Good-Faith Law," which provided for the payment of compensation to settlers for bona fide improvements on their land.

Eugene Joseph Chimene settled in Houston in 1835, and fought at San Jacinto. Henry Weiner, also of Houston, served in the Texan War of Independence against Mexico in 1836, and fought in the battle of Buena Vista. Moses Albert Levy was surgeon-general in Sam Houston's army throughout the Texas-Mexican War. Isaac Lyons of Charleston served as surgeon-general under General Tom Green in the war of 1836. D. I. Kokernot fought at Anahuac in the Texas Revolution. Michael De Young, a French Jew, settled in San Augustine and furnished the necessary equipment to volunteers during the war with Mexico. Many acres of land in Texas, now under cultivation, were originally allotted to David Moses and Michael De Young for services rendered to the Republic of Texas. A. Wolff died in the battle of the Alamo. His name is recorded on the monument erected to the heroes of the Alamo at the Capitol in Austin.

Henry Castro (b. France, 1786; d. Mexico, 1861) was a pioneer of that portion of Texas situated west of the city of San Antonio. A descendant of the Marrano family of De Castro, in 1842 Castro entered into a contract with Sam Houston, president of the Republic of Texas, to settle a colony west of the Medina, and Houston appointed him consul general to France for Texas. From 1843 to 1846 Castro sent to Texas, which was then unsettled, 5,000 emigrants from the Rhenish provinces of Germany, the first organized emigration to Texas from a foreign country. These emigrants settled in the towns of Castroville and Quihi (1845), Vandenburg (1846), and D'Hanis (1847). Castro County, in the northwestern part of Texas, was called after this daring and enterprising early Texas Jewish pioneer, who expended $150,000 of his personal fortune in carrying out the venture. Castro published pamphlets and maps in French and German to facilitate his immigrational scheme.

Joseph Osterman, a native of Amsterdam, Holland, who was mortally wounded in 1861, was the earliest and a most esteemed pioneer of Galveston. He came to the city from Baltimore in 1839. He and his wife Rosanna (she was a sister of Leon and Isidore Dyer, of Baltimore, and died in

1866) were noted for their unbounded charity and benevolence. The Osterman Building was named after her.

Other early Texas Jewish pioneers were: Moritz Kopperl (b. Trebitsch, Moravia, 1828; d. 1883), business promoter and philanthropist, who came to Texas in 1857, settling in Galveston. He was president of the National Bank of Texas in 1866, and in 1877 was president of the Gulf, Colorado and Santa Fe Railroad; Isidore Dyer (b. Dessau, Germany, 1813; d. 1888), a resident of Galveston from 1840 on. He served as past grand master of the Odd Fellows. It was in 1856, in the house of Isidore Dyer, that the first Jewish religious services in Galveston were held; Colonel Leon Dyer (b. Dessau, Germany, 1807), the brother of Isidore Dyer. He was acting mayor of Baltimore during the riots, joined the United States Army shortly thereafter, and was on General Scott's staff, ranking as major. He was quartermaster general of the state of Louisiana, and was gazetted major under General Thomas Jefferson Green. Leon Dyer came to Texas in 1836 to help in the struggle for independence, together with several hundred men from Louisiana. President Martin Van Buren appointed him special envoy to Germany; Jacob de Cordova (b. Spanish Town, Jamaica, British West Indies, 1808; d. Bosque County, Texas, 1868), who edited *The Daily Gleaner* in Kingston, Jamaica, and in 1837 settled in Galveston under the republic. He established De Cordova's Land Agency, and published two books, *J. De Cordova's New and Correct Map of the State of Texas* and *Texas, Her Resources and Public Men*. A prominent Odd Fellow, he introduced the Order into Texas, and was the First Deputy Grand Sire of the Republic of Texas. In 1849 he laid out the city of Waco. De Cordova was an authority on the Sephardic ritual. He and his brother, Phineas de Cordova (b. Philadelphia, 1819; d. 1903), published *The Texas Herald* for many years, also *The Southwestern American* (1849-52), the latter at the solicitation of Governor P. Hansborough Bell beginning with the former year. He represented Travis County in the Texas legislature; Michael Seeligson (d. 1868) came to Texas from Michigan in 1838. He was mayor (1853) and twice alderman (1840 and 1848) of the city of Galveston. He was an ardent champion of the annexation of the Texan Republic to the United States; his son Henry Seeligson (d. 1886), who came to Texas in 1839, was a hero of the Mexican War in the forces of General Zachary Taylor, and was highly complimented by him. He participated in the Mexican Revolution; the firm of L. and H. Blum pioneered in Texas business in Galveston for thirty years (1870-1900).

German immigration into Texas from the 1850's to the 1870's was followed by Russian immigration from the 1880's to the outbreak of the first World War (1914). The first Jewish cemetery in Texas was established in Houston (1844), and the Israelites of Houston built the first synagogue in Texas ten years later. Galveston established its cemetery in 1852, and organized a congregation in 1868. Jewish religious services were first held in Galveston in 1856 at the residence of Isidore Dyer. Other cities established cemeteries and congregations in the following order: San Antonio, cemetery, 1854, congregation, 1872. Religious services under the auspices of the Hebrew Benevolent Society had been held since 1856; Austin, cemetery, 1866, congregation, 1876; Waco, cemetery, 1869, congregation, 1881; Dallas, cemetery, 1872, congregation, 1876. Cemeteries, synagogues and active congregations existed in that period in the following towns also: Beaumont, synagogue (1895); Brenham (1895); Corsicana (1898); Fort Worth (Orthodox, 1892; Reform, 1904); Gainesville (1882); Hempstead (1897); Marshall (1886); Palestine (1900); Texarkana (1900); Tyler (1889); Victoria (1894); El Paso (1898).

During the Civil War 103 Texas Jews served in the contending armies (Wolf, Simon, *The American Jew as Patriot, Soldier and Citizen,* 424), and the defense of Galveston is connected with the name of Levi Charles Harby (*ibid.,* 72 et seq., 116).

The number of Jews who served from Texas in the Spanish-American War (1898) was: regular officers and enlisted men, sixty-seven (state volunteers); non-commissioned officers and privates, twenty-five. Benjamin Frenkel was surgeon on the *Hornet,* and subsequently served at the Naval Station at San Juan, Puerto Rico (Spanish-American War). Adjutant General L. M. Openheimer, of the Texas State militia, served as colonel of the 2nd Volunteer Infantry and as major general of the Texas Volunteer Guard (*American Jewish Year Book,* 1900-1, p. 535 et seq.). Openheimer was a member of the National Board for the Promotion of Rifle Practise, appointed by the Secretary of War in 1893.

Morris Lasker (b. Jarocin, Prussia; d. Galveston, 1916, at the age of seventy-six), pioneer Texas merchant and banker who later purchased the Texas Star Flour Mills, establishing branches in other cities, was a prominent factor in the upbuilding of Wichita Falls. He served as a state senator, and for many years as a member of the board of school trustees of Galveston, being deeply interested in educational problems. He donated $10,000 to the Home for Homeless Children, which was subsequently named for him, and additional sums for its maintenance. Among the institutions which benefited from his generosity were: Adoue Seaman's Bethel, Osterman Widows' and Orphans' Fund, Johanna Runge Free Kindergarten, Galveston Orphans' Home, Letitia Rosenberg Home for Women, the Galveston public schools and the New Orleans Orphans' Home (Jewish Children's Home). He was presented with an engraved resolution of esteem from commercial, charitable and educational institutions of Galveston on his seventy-fifth birthday in recognition of his benefactions. The Lasker Loan Fund was established by his widow (Nettie Davis Lasker, d. 1930) and children for the higher education of Jewish students, and the Lasker Playground for the children of Galveston. His wife and children erected the Domestic Science Hall at the National Farm School at Doylestown, Pa.

Other noted Texas Jews of the past were: Sol I. Berg (d. 1935), mayor of Ysleta; Ben Bloomingdale, mayor of Jefferson (1880); Charles Brachfield, judge of the district court at Austin (1918-22); Moses Bromberg (b. Syracuse, N. Y.), of Crockett, vice-president of the East Texas Chamber of Commerce and president of the Crockett Chamber of Commerce, who, in various city, county and state offices, refused remuneration for his services; Harry I. Cohen (son of Rabbi Henry Cohen), publisher and editor of *The Galveston Tribune* (1921-26), later a resident of Houston, who successfully fought the Ku Klux Klan in Galveston; Emil Corenbleth, of Dallas, member of the city council (1938-41); Henry J. Dannenbaum, of Houston, president of the Houston board of education (1912-14), and district court judge (1915-19); Louis B. Eppstein, of Denison, county prosecutor of Grayson County (1897-1900), and circuit court judge (1900-7); Jeanette Miriam Goldberg, of Jefferson, former director of the Jewish Chautauqua Society; I. L. Goldberg (d. 1923), mayor of Jefferson; Samuel L. Gross, United States marshal for Northern Texas (1924-28); Jules K. Hexter (1860-1936), Dallas banker and philanthropist; his brother, Victor Hexter, of Dallas (b. Baltimore, 1864), who was a member of the Dallas city school board for fourteen years and its president for four years; Benjamin M. Jacobs, mayor of Luling (1936-38); Alexander Joske (b. Posen, Germany, 1858; d. San Antonio, 1925), who gave two memorial buildings, one for boys and the other for girls, in San Antonio; Isaac H. Kempner (b. 1873), city treasurer (1899), finance commissioner of Galveston (1901-15), mayor (1917-19), president of the Galveston Cotton Exchange and Board of Trade (1917-19); Robert L. Kempner, of Galveston, city treasurer (1926-40); Moritz Kopperl, member of the Galveston board of aldermen (1869-72); Benjamin Kowalski, mayor of Brownsville (1910); Henry J. Labatt, member of the Galveston board of aldermen (1869-77); Leo N. Levi (b. Victoria, Texas, 1856; d. New York city, 1904), who participated in the preparation of the Kishinev Petition which was immediately adopted and subsequently presented to Russia through the services of President Theodore Roosevelt. A brilliant lawyer, Levi resided in Galveston for twenty-three years, taking an interest in all municipal affairs and pleading many a cause for the city

before the state legislature. A faithful exponent of honorable citizenship, he was requested by the city to travel some distance to meet President Benjamin Harrison, who was visiting the port at that time for a formal celebration, and also to be his constant companion during his stay; Adrian F. Levy, mayor of Galveston from 1935 to 1939; William Levy, mayor of Sherman (1902); Isidore Lovenberg (d. 1917), member of the school board of Galveston (1887) and president from 1904 until his death and honorary secretary of the Rosenberg Public Library; John Neethe (d. 1937), president of the Galveston board of education; Jesse D. Oppenheimer (b. San Antonio, 1870), a Jewish and general civic leader; Alexander Sanger (d. 1925, at the age of seventy-eight), Dallas merchant, philanthropist and city builder, who was a charter member of the Dallas Chamber of Commerce and served as its president, as well as president of the State Fair of Texas. An outstanding figure in all Jewish activities in the state, he organized the first weekly synagogue service in Dallas, was past president of Temple Emanuel, and served as a member of the board of regents of the University of Texas from 1911 to 1917; S. C. Schutz, mayor of El Paso; Michael Seeligson, member of the Galveston city council (1840-48), and mayor of Galveston (1853-55); Joseph Seinsheimer, of Galveston, a prominent figure in Masonry; Adolph Solomon, mayor of El Paso (1909-11); Nat M. Washer, of San Antonio (d. 1935), president of the state board of education, president of the Texas State Textbook Commission, and prominent in Masonic and civic matters; Reuben Williams, of Fort Worth, state insurance commissioner (1939-41), and chairman (1941).

Jews were prominent in both houses of the Texas legislature. Those who served in the Texas senate included: Charles Brachfield, of Henderson (1903); Harry Hertzberg, of San Antonio (1930-34); David S. Kauffman (Kaufman), of Nacogdoches, who served in the Texas assembly from 1839 to 1843, and in the Texas senate from 1843. When Texas was admitted to the Union in 1845, Kauffman was elected a Congressman at the first election, and served in this position until his death in 1851; J. E. Kauffman, of Galveston (1910); Morris Lasker, of Galveston (1911); Adolphus Sterne, who served also as a member of the Texas assembly.

Jews who served in the Texas assembly included: Jacob de Cordova, from Harris County (1847); Moritz Kopperl, of Galveston (1876); Henry J. Labatt, of Galveston (1881); Eugene Nordhaus, of San Antonio (1915-19); Adolphus Sterne.

Isaac Lovenberg (b. 1814) was assistant attorney general of the state. The Flag Song of Texas was written by Mrs. Leah Cohen Harby, authoress (b. Charleston, S. C., 1849).

A considerable number of local and national Jewish and non-sectarian institutions were the beneficiaries of Texas Jews. A memorial home in Houston for orphans and widows was built and endowed from funds bequeathed by Mrs. Pauline Sterne Wolff. The Faculty House of Rice Institute, at Houston, was a donation of George S. Cohen in celebration of the seventieth birthday anniversary of his parents, Robert I. Cohen (d. 1934) and Agnes Cohen. Kempner Park, at Galveston, was a benefaction of the Kempner family.

In 1930 there were in the state of Texas forty-eight Jewish congregations with thirty-five Reform or Orthodox rabbis. In that year the following Texas cities and towns had organized congregations, either Orthodox or Reform or both, with adjunct associations (the estimated approximate Jewish population is given in parentheses in each case): Austin (490), Beaumont (1,150), Breckenridge (83), Brenham (69), Bryan (60), Corsicana (330), Dallas (10,500), El Paso (2,400), Fort Worth (2,100), Galveston (1,100), Goose Creek (60), Houston (11,000), Marshall (170), Palestine (120), San Antonio (6,000), Texarkana (150), Tyler (500), Victoria (96), Waco (1,500), Wichita Falls (505). In addition, there were, in 1930, seventy towns in the state having from 12 to 200 Jews, and forty-six towns with ten Jews or less. In that same year Texas had a total Jewish population of about 50,000 Jews, out of a total general population of 5,821,272 (Harry S. Linfield, in his *The Jews in the United States,* 1927, gave the Jewish population of Texas in 1930 as 46,648).

In 1943, according to estimates and statistics made or gathered in the year 1937, the following cities in Texas had Jewish populations of 1,000 or more (in some cases it represents a decline from the estimated 1930 Jewish population or an indication that the latter was too high): Dallas (10,400), El Paso (2,250), Fort Worth (2,200), Galveston (1,200), Houston (13,500), San Antonio (6,900), Waco (1,150). Smaller Jewish communities of Texas, with over 100 Jews in 1943, and their approximate Jewish populations were (again in some cases there is a decline from the 1930 figure, possibly for the same reason as above): Amarillo (300), Austin (524), Beaumont (600), Corpus Christi (600), Corsicana (200), Goose Creek (100), Highland Park (125), Laredo (150), Marshall (130), Mercedes (310), Port Arthur (200), Tyler (600), Victoria (110), Wichita Falls (250). In addition, there were in 1943 a total of 106 communities in Texas with between eleven and 100 Jews, and several hundred with a Jewish population of ten or less.

Unique in American Jewry is the Kallah of the Texas Rabbinical Association, founded at Houston in March, 1928, by Rabbi Abraham I. Schechter for the discussion of religious and rabbinical questions. The Association took its name from the popular academic courses given in two months of each year in Babylonia.

In 1943 the following three Anglo-Jewish periodicals (all weeklies) were being published in Texas: *Jewish American,* at Dallas (founded in 1938; editor, Karl Sands); *Jewish Herald-Voice,* of Houston (founded in 1906; D. H. White, editor); *Texas Jewish Press,* of San Antonio (founded in 1934; editor, Samuel J. Riklin; it was founded in 1923 originally as the *Jewish Record*).

In addition to the Jewish communities of Dallas, El Paso, Fort Worth, Galveston, Houston, San Antonio, and Waco, all of which are separately treated, the following were the principal Jewish communities in Texas in 1943:

AUSTIN (Jewish population, 524). Early settlers in the city were Joe Koen, who came in 1880; B. Biberstein and B. Melaskey, who settled in Austin in 1860 and later saw service in the Confederate Army in the War between the States; and Henry Hirschfeld, who arrived in the city in 1865, shortly after finishing his service with the Confederate Army.

The first organized Jewish congregation in Austin worshipped in 1867 at the home of B. Melaskey. In 1874 it developed into Congregation Beth Israel (Reform), which in the following year erected the Temple in use in 1943, with B. Kopperl as its president. Beth Israel joined the Union of American Hebrew Congregations in 1907. The first minister to serve the congregation was Rabbi Gluck (1875-83). Subsequent rabbis of Congregation Beth Israel were: Tobias Schanfarber, David Rosenbaum (1911-25), Walter G. Peiser (1925-27), Jacob I. Meyer (1927-29), Jacob J. Weinstein (1929-30), Samuel H. Baron (1930-35), Abram V. Goodman (1935-40), and the incumbent in 1943, Newton J. Friedman, who came to the city in 1941. In 1943 Joe Koen was president of the congregation, having served for many years. The congregation had a religious school. The first Jewish cemetery in Austin was laid out in 1867 by B. Biberstein and B. Melaskey.

The Orthodox synagogue, Agudas Achim, was built in 1932; its cantor in 1943 was P. Zissman. The synagogue housed in its vestry rooms a center for Jewish service men under the direction of the Jewish Community Council.

The Austin Jewish community had (1943) the following organizations: the Austin Jewish Federation (founded 1938), for the collection and distribution of funds to be used for local and national philanthropies, and for overseas relief; the Hill City Lodge of the B'nai B'rith, founded in 1875 by Henry Hirschfeld; a section of the National Council of Jewish Women (founded 1919); a branch of Hadassah (1937); a Hillel Foundation at the University of Texas, in Austin (founded 1929; it was found expedient for the Austin rabbis to have charge of the local Hillel Foundation; Rabbi Newton J. Friedman became its director in 1941); a branch of the National Federation of Temple Sisterhoods (1940); a branch of the Zionist Organization of America (1937).

Austin Jews who held public office included: Henry Hirschfeld, a member of the board of the State Hospital (1880-90); Joe Koen, president of the State Deaf and Dumb School (1910-35); James Novy and Louis Goldberg, members of the Austin Community Chest board (1941- and 1939-41, respectively).

The University of Texas had (1943) a number of Jewish teachers: Hyman J. Ettlinger was professor of pure mathematics, and an ardent fosterer of the National Conference of Christians and Jews throughout the state; Harry Joshua Leon was professor of classical languages; Nathaniel Coburn was instructor in applied mathematics and astronomy; David B. Klein was professor of psychology; Aaron Schaffer was professor of Romance languages; Clarence Morris was professor of law; Abram Bergson was assistant professor of economics; Nathan Ginsburg was instructor in physics; Bernard Cahn was instructor on the naval R.O.T.C. staff; Max Fichtenbaum was assistant registrar.

Beaumont (Jewish population, 600). Early Jewish settlers in Beaumont were Solomon Feinberg, Isaac Gordon, Morris and Wolf Hecht, Samuel Lederer, Leon R. Levy, Moses J. Loeb, J. J. Nathan, Hyman A. Perlstein, Joseph Rosenthal, Louis Schwartz, and Henry Solinsky.

After a Minyan had existed for a number of years for religious services, Congregation Temple Emanuel (Reform) was formed in 1887, and erected its first Temple building in 1900. The synagogue which was in use in 1943 was built in 1923. Its first rabbi was Aaron Levy (1892-1900). Joseph Friedlander served as rabbi for several years in the first decade of the 20th cent., being succeeded by H. J. Elkins. The incumbent in 1943 was Samuel Rosinger, who came to the congregation in 1910. Gerson Scheps was president in 1943.

The Beaumont community had also a Ladies Benevolent Society (founded in 1898; it purchased the Jewish cemetery in Beaumont), a lodge of the B'nai B'rith (organized 1911), a section of the National Council of Jewish Women, and a district of the Zionist Organization.

Corpus Christi (Jewish population, 600). The first Jews to settle in Corpus Christi were Charles Weil, who came from Alsace in 1860, and M. Lichtenstein, who came from Germany ten years later. The first synagogue of Temple Beth El (Reform) was built in 1932. Its rabbi in 1943 was Sidney Wolf, who began his service with the congregation in 1930. The congregation's synagogue in use in 1943 was erected in 1937, replacing the structure built only five years previously. It had a Sunday school, and a sisterhood (organized 1932). Beginning with 1935, Temple Beth El and the Church of the Good Shepherd (Episcopalian) held joint services, alternating between the Temple and the church.

The Corpus Christi Jewish community had (1943) the following other institutions: a community center, a Jewish Welfare Fund, a branch of Hadassah (organized 1930), a branch of the Zionist Organization (1933), a lodge of the B'nai B'rith (1932), and the Pioneer Women (1940).

Noteworthy Jews of Corpus Christi included Joe Simon, who served for two years as city commissioner, and Joe Hirsch, chairman of the Texas Bankers Association. Simon Gugenheim donated a tract of land valued at $25,000 to the Corpus Christi Y.M.C.A.

Corsicana (Jewish population, 200). Early settlers in Corsicana were Jacob Dreben, E. Golden, William, Jacob and Samuel Goldman, Joel Jacobs, Louis Levine, B. Marks, H. Rothkopf, and Kalman Wolens. These early settlers came from Russia, Poland or Roumania.

Agudas Achim Congregation (Orthodox) was organized in 1893. Its first rabbi was A. Daw (1917-19), and the first synagogue was built in 1910; that in use in 1943 was purchased in 1935. Rabbis who followed Daw were A. Eskin and J. Liebson (1927-35). Agudas Achim Congregation conducted in 1943 a Hebrew and Sunday school, organized in 1910. Its brotherhood was organized in 1935 by Rabbi Harry (Hirsch) Shapiro, who, succeeding Liebson in that year, was still the incumbent in 1943.

Congregation Beth El (Reform) joined the Union of American Hebrew Congregations in 1908. In 1943 Albert Michel was rabbi, and Sydney Marks president.

In 1943 the Corsicana Jewish community had also the Corsicana Jewish Federation, organized in 1935 by Rabbi Shapiro.

Lubbock (Jewish population, fifty families). Congregation Shaareth Israel (Orthodox) was organized in 1936, and built its first synagogue in that year. In 1938 Isadore Garsek became its rabbi; he was still serving in 1943. In 1942 the new synagogue of Congregation Shaareth Israel was erected. In 1939 a lodge of the B'nai B'rith was organized in Lubbock, as well as a chapter of Hadassah.

Lubbock Jews who held municipal offices included A. Bender, Louis Feldman, Francis and George Finberg, Louis Freed, A. I. Glassman, A. Kessel, Sam Koretzky, Morris Levine, and Sam Rosenthal.

Marshall. In Marshall, in northeastern Texas, which was founded in 1841 and incorporated in 1844, there were 126 Jews in 1943, out of a total population of about 26,000. The larger part of the Jewish community consisted of persons whose parents or grandparents came from Germany; the remainder were of East European origin. Congregation Moses Montefiore (Reform), the only synagogue in the community, was founded on June 12, 1887. The Temple in use in 1943 was erected in 1900. Before that, worship was held in Norwood Hall. Nine Jewish families in Longview, Texas, where there was no Jewish congregation in 1943, and the four Jewish families living in Jefferson, Texas, belonged to Congregation Moses Montefiore. In 1943 Adolf Philippsborn was rabbi; his term of service began in 1942. The first rabbi of the congregation was H. Saft (1887-89). Succeeding rabbis were A. Meyer (1889-92), I. Kahn (1900-2), S. Shaumberg (1902-8), Joseph Zeisler (1917-19), Louis I. Goetz, Abraham I. Shinedling, David Wittenberg (1926-37), David Schor (1938-40).

In 1943 there were the following institutions within the Jewish community of Marshall: a Sunday school (founded in 1887), the Ladies' Aid Society (organized in 1891), the Temple Sisterhood, and Reuben Lodge No. 257 of the B'nai B'rith (organized in 1876). Congregation Moses Montefiore was preceded by the Jewish Benevolent Association, founded in 1881 by Joe Weisman. It purchased a burial ground that same year. Among its charter members were Z. M. Bergson, Dan and M. L. Doppelmayer, Joe Weisman, I. Brisker, Ike Exstein, Leo N. Kahn, Jake Weisman, M. Bernstein, J. Forgotson, and M. L. Weisman.

Early Jewish settlers in Marshall included: Dan Doppelmayer, who came to the city in 1849, and fought on the Confederate side in the Civil War; Emanuel and Leo N.

Kahn, brothers, of whom the former fought on the Confederate side in the Civil War; the merchant Jacob Levy; Moses Steinlein, who later moved to Jefferson, Texas; and Marcus Levy. Later settlers in Marshall included Morris Stein, and Joe, M. Sol and Jake Weisman.

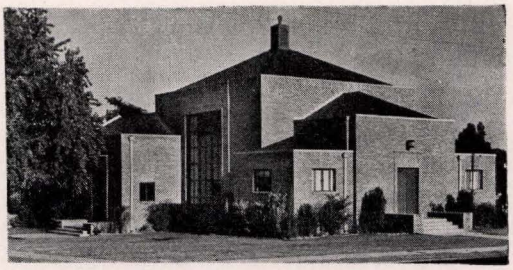
Marx Bath, J. L. Gross, Ike Hockwald, and Joe Hirsch served as members of the Marshall school board. Louis Kariel was serving (1943) his fifth consecutive term as mayor of Marshall. Lieutenant Colonel Stanley C. Shubart (who settled in Marshall in 1942) was, in 1943, commanding officer of the Longhorn Ordnance Works. The new general hospital in Marshall was named the Leo N. Kahn Memorial Hospital, after the early settler and merchant; the heirs to his estate contributed a sum sufficient to purchase the ground on which the hospital was built.

MERCEDES (Jewish population, 310). Congregation Beth Israel built a Temple in Mercedes in 1936 to serve this and about ten other small towns within a radius of about seventy-five miles in the Rio Grande Valley. The services were conducted in 1943 by a layman, Louis Herman, of McAllen; Sam Lack was president. There were also a religious school, a sisterhood and a B'nai B'rith lodge with about fifty members.

PORT ARTHUR (Jewish population, 200). Congregation Rodeph Shalom (Reform) was organized in 1935. Selwyn Ruslander served as its first rabbi (1935-38); in the latter year Alexander S. Kline was called to the pulpit, and was still serving in 1943. The synagogue in use in that year was purchased in 1930. Its religious school was organized in 1930, and the Port Arthur Jewish community was founded in that same year. The community had a B'nai B'rith lodge.

From 1931 until his death in 1941 Abraham Goldberg served as a member of the board of trustees of Port Arthur College.

TEXARKANA (Jewish population, 200). Early Jewish settlers in Texarkana, all of whom came in 1875 from other parts of Texas or from Louisiana, included Beno Berlinger, Sam Heilbron, Marks Kosminsky and Joseph Marks.



Congregation Mt. Sinai (Reform) was organized in 1885, A. Shriber serving as its first rabbi. The synagogue in use in 1943 was built in 1900, replacing the first synagogue erected in 1890. Shriber's successors in the pulpit of Congregation Mt. Sinai included Joseph Bogen (1900-6), Rudolph Farber (1915-22), David Alpert (1930-35), David M. Eichhorn (1935-40), and the incumbent in 1943, Camillus Angel, who began his service in 1941.

Other Jewish organizations in Texarkana in 1943 were the Mt. Sinai Sisterhood, B'nai B'rith Lodge No. 520, and the Texarkana Jewish Federation.

Mrs. Fannie Kruger, of Texarkana, occasionally contributed poems to the Jewish press.

TYLER (Jewish population, 600). The city of Tyler was founded in 1845, and although Jews were among the first settlers, there was no Jewish community in existence here until after the War between the States. Several Tyler Jews, recruited from Tyler and Smith County in 1861 to 1865, served in Major Douglas' battery. Following the Reconstruction Era several Jewish families moved to Tyler, principally from Jefferson and Longview, Texas. An organized Jewish community existed in Tyler from the early 1880's on. The early Jewish settlers included the following who were still living in 1943: L. Berman, A. Eisen, I. Friedlander, George Hyman, Joseph Meyer and B. Wadel.

Congregation Beth-El (Reform) was organized and incorporated in 1887, and at first was served by lay leaders, including Major Levy, who came from Sherman, Texas; J. Lipstate; a physician named Greenberg, who later moved to Beaumont; Isadore and Hyman Liebriech; and B. Wadel, who was for a long time an officer of the congregation and its president in 1943. Maurice Faber (b. Siroka, Hungary, 1854; d. 1934) was the first ordained rabbi of Congregation Beth-El. He came to the city from Keokuk, Iowa, in 1900, and served until his death. The new Temple was erected during the incumbency of his successor, David Alpert. Alpert served until 1940, and was succeeded by Harvey E. Wessel, the incumbent in 1943.

Temple Beth El of Tyler, Texas

Congregation Ahavath Achim (Orthodox) was founded in 1895. Many of its charter members were still alive in 1943.

These include Alexander Golenternek (who came to Tyler in that year from his native city of Vitebsk, Russia, at the age of thirty), Henry Heffler, Kay Marmar, Jacob Meyer, A. Eisen, M. Edelman, L. Flieshner, George Hyman, M. Katz and Joseph Meyer. In 1910, when the congregation's new synagogue was built, they were joined by later arrivals in Tyler, including B. Cohen, Sam Eisen, J. Fridkien, Sam Greenberg, M. A. Heffler, P. Kessler, B., G. and Meyer Klien, F. Levine, L. V. Marmar, Sam Roosth, Hyman Smith, and B. B. Taylor. The first rabbi was named Greenberg, and during the incumbency of his successor, S. Smolensky, the first synagogue was erected. His successors were Henry Horowitz, Carl Press, M. Paglin, and Aron Moskovits, the incumbent in 1943, who began his service in 1927. Sam Roosth was president of the congregation in 1943. Both Ahavath Achim and Beth-El had Hebrew schools and auxiliaries in that year.

Other organizations of the Tyler Jewish community in 1943 included Edward Lasker Lodge No. 347 of the B'nai B'rith (founded about 1900), a local Zionist district (organized in 1915 by L. A. Freed, of Houston, with the aid of Alexander Golenternek and of Henry Heffler, after whom it was renamed in 1922 following Heffler's death), a branch of Hadassah (organized 1920), sections of the National Council of Jewish Women and of the Junior Council, and a Young Judean Club. In 1929 Alexander Golenternek was state treasurer and Philip Golenternek state secretary of the Texas Zionist Organization.

WICHITA FALLS (Jewish population, about 250). Early settlers in the community included Joe Art (who came to Wichita Falls from Fort Worth in 1910), Abe and Morris Marcus (before 1909), Gene Liepold (who came in 1909 from Fort Gibson, in Indian Territory), and A. Zundelowitz (before 1909).

Temple Israel (Reform) was organized in 1918, with David Goldberg as its first rabbi. Its synagogue was built in 1921. Benjamin Kelson was rabbi from 1936 to 1940, when the incumbent in 1943, Leo Lichtenberg, was called to the pulpit. The congregation had a Sunday school, and a branch of the National Federation of Temple Sisterhoods.

Beth Jacob, the Orthodox congregation in Wichita Falls, had, in 1943, a Shohet who acted also as rabbi and reader.

In 1943 the community had also a lodge of the B'nai B'rith and a branch of Hadassah.

One of the two junior high schools of the city was called

the Zundelowitz Junior High School, in memory of A. Zundelowitz, who donated to the city the funds required to purchase the land upon which it was built.

THALBERG, IRVING, motion picture producer, b. Brooklyn, N. Y., 1899; d. Hollywood, Cal., 1936. He was educated in the public schools of New York city, and first became affiliated with the motion picture industry as secretary to Carl Laemmle. Although a young man, in his early twenties, he was left in charge of the California studios while Laemmle was on a trip to Europe. His talent for organization and direction became apparent so rapidly that in 1924, when Metro-Goldwyn combined with the Mayer pictures corporation, Thalberg was made vice-president and chief of production. His tendency was always to broaden the artistic scope of motion pictures, by choosing for production plays which were in themselves significant.

Some of the early pictures for which he was at least partly responsible were *Outside the Law, Merry-Go-Round, The Hunchback of Notre Dame, Ben Hur,* and *The Big Parade.* With the advent of the sound film, Thalberg's opportunities increased. Among his later important films were *Grand Hotel, Rip Tide* (1934), *The Barretts of Wimpole Street* (1935) and *Mutiny on the Bounty* (1935). In the year of his death he made *Romeo and Juliet* and *Camille.*

Thalberg was married to Norma Shearer, the actress, who adopted the Jewish religion at the time of their marriage (1927), but reembraced the Christian faith (1942) at a later marriage.

Lit.: *New York Times,* Sept. 15, 1936; *American Hebrew,* Sept. 25, 1936, p. 355.

THALMESSINGER, MEYER, merchant and banker, b. Württemberg, Germany, 1829; d. Kaaterskill, N. Y., 1906. As a result of his active participation in the revolution of 1848 in France, he had to flee to the United States, finally settling in New York city. He was among the first to found a lithographing business in the United States. In 1885 he was elected president of the Mechanics' and Traders' Bank.

He was a founder of the Maimonides Library and of the Home for the Aged and Infirm at Yonkers, and was prominent in the B'nai B'rith. Thalmessinger was on the board of the park commission of New York city.

THANK-OFFERING, *see* SACRIFICE.

THANKSGIVING, *see* GRATITUDE.

THAUSING, MORITZ, art historian, b. Tschischkowitz, Bohemia, 1838; d. Vienna, 1884. He studied at the University of Vienna with Rudolf von Eitelberger. In 1859 he became a member of the Institute of Historic Research at the same university, where he was made assistant professor in 1873, and head of the department of art history in 1879 as successor to his teacher, who was the first professor of this new discipline. His inauguration address was "Die Stellung der Kunstgeschichte als Wissenschaft," in which he discussed the necessity of art history as an autonomous science. In 1873 he was made president of the newly founded Istituto Austriaco di Studi Storici, at Rome, and in 1876 of the Albertina graphic collection in Vienna. Thausing was one of the founders of the so-called "School of Vienna" in the history of the fine arts, which initiated studies on the original objects in connection with the historic-philologic method, since then the basis of modern art history.

Morelli, whose method of identification of art objects is famous under his name, was his friend and "brother in Raphael." Thausing's activity in research work was that of a trailblazer. His *Dürers Briefe, Tagebücher und Reisen* (1872, in *Quellenschriften für Kunstgeschichte*) and *Albert Dürer* (1876) are standard works.

Early History. The fact that Jewish stage managers, actors and singers contributed greatly to the development of the modern theatre is generally acknowledged, even by historians and critics whose attitude toward Judaism and Jews is not a favorable one. Some of these critics are ready to admit that there were many Jewish actors of genius, but they are inclined to consider this kind of genius as one of secondary character, or they distinguish the art of acting as mere interpretation from the creative art of poets and composers.

They ignore the fundamental truth that the written text of a drama is by no means the full realization of dramatic art, and that the stage manager and actor do not only re-

produce or interpret the words of the dramatic author, but complete his work by means of speech and gesture. The art of an actor, although remaining obliged to interpret faithfully the words of the author, needs also creative imagination and productive spirit. From the beginning of the 19th cent. on there were many Jewish actors and stage managers who pioneered in dramatic art and educated the public of several nations to understand modern works of poetry. But this function of stagecraft is an entirely modern one. Jewish stagecraft, like that of non-Jewish stage managers and actors, had a long way to go before it developed into the modern performances.

Dramatic Presentations in Ancient Times

Jewish association with the theatre has a tradition very different from that of the Greek, Roman, Indian and Chinese peoples. Indeed, the elements of dramatic art existed also in ancient Israel. There was also, as in other civilizations, a union of dancing, singing and mimic expression, such as was probably the dance led by Miriam in celebrating the crossing of the Red Sea (*Ex.* 15). A certain tendency toward dramatic or mimic representation may be seen in the impersonations of kings and nations acted out by some of the prophets. Isaiah walked barefoot and naked to impersonate Egypt and Ethiopia, saying: "So shall the king of Assyria lead away the prisoners of Egypt and the exiles of Cush, young and old, naked and barefoot." Jeremiah put bands and yoke bars around his neck to predict the victory of Nebuchadrezzar, and the prophet Hananiah, Jeremiah's adversary, tried to refute Jeremiah's prophecy by taking the yoke bar off the neck of Jeremiah and breaking it. Ezekiel showed the people of Israel a symbolic representation of the siege of Jerusalem. There were, furthermore, various kinds of dialogue as forms of expression of feeling and thinking used in the literature of ancient Israel which show some resemblance to dramatic dialogue. Martin Luther was not the first to conceive of *Song of Songs* and *Job* as dramatic structures, and such modern historians, both Jewish and non-Jewish, as Joseph Halévy, Micah Joseph bin Gorion (Berdyczewski), Georg Heinrich Ewald and Ernest Renan tried repeatedly to discover dramatic characters in the Biblical books.

At a later period some authors of Piyutim wrote, in addition, poems in which several persons or personifications of ideas and objects are represented as speaking and replying. Eleazar Kalir composed several such dialogic poems. Solomon ibn Gabirol's *Shomron Kol Titten,* a dramatic elegy, was sung in the Polish, North German and English liturgies. Abraham ibn Ezra introduced the form of the poetic contest of primacy (*vikkuah, mahloketh, rib*), which was very popular in all the European non-Jewish literatures of the Middle Ages, and had to be recited by two or more persons. But all these dialogic forms were only the first steps toward dramatic poetry, and did not signify the creation of the drama.

The spiritual leaders of ancient Israel did not look favorably upon dramatic art, because it was issued from and remained closely connected with the pagan cults during the eras of ancient Greece and Rome. The prophet Ezekiel excoriated the women "weeping for Tammuz" at the entrance to the Temple of Jerusalem. His indignation referred to a dramatic play performed by women of the people of Israel in honor of the Phoenician god Adonis-Tammuz, a ritual which became a source of the Greek drama.

In the Hellenistic period the Jews came into close touch with Greek and Roman dramatic art. Especially under Roman domination this contact caused grave cultural and religious problems. At first the Hellenistic Jews tried to utilize the stage for propaganda on behalf of Judaism. This was one of the main purposes of the only Jewish dramatist of antiquity known by name, Ezekiel, who went probably from Samaria to Alexandria, Egypt, and flourished in the 2nd cent. B.C.E. He was called by his contemporaries "the poet of Jewish tragedies," and composed a number of pieces, dramatizing events of the history of Israel, which were performed in Alexandria and probably elsewhere in order to supersede pagan plays. The title and some 160 verses of only one of Ezekiel's tragedies are extant. It is a dramatization of the history of Moses, entitled *Exagoge,* and written in Greek. The author was no great poet, but showed cleverness in making a scenario. If there were no other Jewish dramatists among the Jews of Alexandria, there certainly were stage managers, and still more certainly actors. Jewish dramaturgists performed representations of the great Greek tragedies, interpolating into the texts of Aeschylus, Sophocles and Euripides verses which professed the worship of the one true God and praised Judaism.

It certainly was not any intention of strengthening propaganda for Judaism which led King Herod (37-4 B.C.E.) to erect a theatre and an amphitheatre at Jerusalem, and to promote the establishment of theatres and circuses in other places of his country. It was rather the simple imitation of non-Jewish examples. The succeeding Herodians also showed a predilection for the theatre. They all met with strong opposition on the part of Orthodox Judaism.

Under the Roman emperors the theatre became an official place of cult, devoted to the worship of the emperor. Jews who declined to attend it were accused of irreverence toward the authority of the Roman rulers. Caligula (37-41 C.E.) compelled the Jews to attend dramatic representations given in his honor. The succeeding emperors utilized the theatre rather to increase their financial resources, and a Midrash denounced the theatre as "one of the four ways in which the Roman empire eats up nations' wealth."

But it was mainly religious opposition which caused the rabbis and sages of the Talmud to anathematize the theatre. They were confirmed in their opposition when thousands of Jews were massacred in theatres and circuses, and when the mimes, authors and actors of comic and realistic plays attacked Jewish institutions on the stage. Indignation against pagan mimes satirizing the Sabbath was expressed by more than one sage cited in the Midrash. The patriarch Judah Hanasi, however, considered the theatre an "innocent amusement" which rather diverted the heathens from quarrels and from persecution of other peoples. The compiler of the tenth tractate of the division Moed of the Mishnah even expressed his hope that "the time will come when the theatres and circuses will become the home of the Torah." The Tanna Nathan the Babylonian endeavored to justify those who attended the theatre and circus.

In general, however, the sages of the Talmud and the rabbis of the Middle Ages looked upon all places of public amusement as "seats of the scornful." They were followed by the church fathers, who were equally opposed to the mimes—who ardently combatted Christianity and ridiculed the rite of Christian baptism on the stage. But neither the Jewish nor the Christian anathema against the theatre became entirely effective. When the later Midrashim explained the splendor of the reign of King Solomon, they also had much to say of a great circus which, according to them, had been built by Solomon. Their description of this circus, based on models taken from the circus of Constanti-

nople, proves that the predilection of the Jewish people for circus and stage could not be rooted out. The Jewisl community of Miletus, for instance, had a reserved section in the municipal theatre of the city.

There were, indeed, Jews who acted on the Roman stage. Alityrus, a Jewish actor, was a favorite of Emperor Nero and even more so of the empress Poppaea. It was Alityrus who presented the historian Josephus to the empress. Other Jewish actors were mentioned by the Roman poet Martial, and a Jewish actress, Faustina, a contemporary of Emperor Marcus Aurelius, became well-known in Rome.

It is quite probable that the number of Jewish actors in the ancient Roman Empire was considerable, although the sources of Roman and Jewish history do not preserve their names. In spite of the anti-Jewish attitude toward the mime, there certainly were also many Jewish mimes. Their origin goes back to the earliest periods of the history of Israel, probably even to pre-Israelite eras of Semitic civilization. As in all countries of the Orient, the Jewish mimes united in their persons the professions of story-tellers, singers, dancers, acrobats, musicians and extemporizing actors. Itinerant mimes probably were among the prophetic guilds, "having before them a psaltery, and a timbrel, and a pipe, and a harp," as they are described in *I Sam.* 10:5. During the Talmudic period such professional players and singers entertained wedding guests, and acted at the markets and fairs.

The mime, the burlesque farce uniting extemporizing stagecraft, clownery, recitals, songs, acrobatics, juggling and other kinds of public amusement, survived the ancient tragedy for many centuries. Modern dramatic art, proceeding from Shakespeare and Molière, originated from the mimic tradition, and not from the ancient tragedy or from the religious plays of the Christian Middle Ages. It owes to the mimes its vivacity and realism, although it reached a far higher cultural level due to its union with modern drama.

The Place of Acting in the Middle Ages

At the beginning of the Middle Ages there were several hundred thousands of mimes living and acting in the territories of the ancient Roman Empire. Certainly there were among them many Jews who amused both their coreligionists and the non-Jews. Their profession was a hereditary one, and while many of them died of starvation, their number always increased again, because men and women who were in revolt against the oppressive conditions of medieval life were constantly attracted by the outlawed world of the mimes, who maintained the tradition of secular art and pleasure during the Christian Middle Ages. All of them, Jewish and non-Jewish, were deprived of civil rights and banned by the church. Constantly despised and outlawed, they were driven from one country to another, but the people could not do without them, and the authorities had to yield to the popular predilection everywhere and at every time after years of persecution and banning. After wandering for a long time over the face of Europe, the international mimes adapted themselves, from the 7th cent. on, to the national character of the countries where they predominantly lived, without obtaining civil rights and a safe place in medieval society. They remained *Fahrende* (itinerants), and as such they were *unehrlich* (degraded) during the Middle Ages, and even in modern times great actors became the victims of social prejudices. It was a Jewish actor of the 19th cent., Adolf Sonnenthal, who did much for their social rehabilitation.

But even though they were outlawed, the mimes played an important part in the development of European art and literature. In Germany they were called *Spielmänner,* and in France and England "minstrels." They superseded the scop, the ancient Germanic singer. They often vulgarized the songs and tales which they recited, but some of them created great poems. The extant *Nibelungen-Lied* is the product of a *Spielmann.*

Some of the Jewish *Spielleute* joined their non-Jewish colleagues who did not ask for certificates of baptism, and together with them formed bands of strolling players which sometimes were not discernible from bands of beggars and gypsies, They had their vogue in private, at banquets and weddings, as well as in public. Especially during the persecutions of the Crusades, many Jews who fled from their native towns and could not find shelter in another Jewish community merged with the itinerant bands of *Spielleute* or minstrels with whom they were safe, although degraded like the others. Many of these Jewish *Spielleute,* jugglers and acrobats lost their Jewish consciousness, or their children intermarried inside the bands, but a great many remained faithful to Judaism, during centuries in which they lived under poor conditions, and at the beginning of the period of emancipation there were in all the countries of Europe many Jews among the artists of the circus and music halls, practising the same profession as many generations of their ancestors had done. Jewish actors, musicians, jugglers and lion-tamers enjoyed favor in the courts of some of the kings of Christian Spain, as well as in those of the Turkish sultans. They worked at the fairs of pre-revolutionary France, as is proved by documents; from the 17th cent. on, perhaps even before the Resettlement, Jewish clowns and acrobats, singers and strolling players, were popular in England.

Other Jewish *Spielleute* became the Jewish counterparts of their non-Jewish colleagues, by forming exclusively Jewish troupes of wandering reciters, singers, jesters or jugglers, and amusing only or predominantly Jewish audiences. They drew their songs and stories from the Bible, the Talmud, and from German or French romances. In that way they took the first step toward the later Yiddish literature and dramatic art. But they influenced also the non-Jewish *Spielleute.* Talmudic legends form the basis of the poem *Salman and Morolf,* composed by a German *Spielmann* of the 12th cent., and numerous Talmudic legends were embodied also in other German medieval epic poems, written by *Spielleute,* especially *König Rother.*

There are no traces of dramatic plays acted before a non-Jewish public by Jewish or non-Jewish *Spielleute,* although the fact is established by the imperial capitularia and other documents that vulgar farces were performed whose texts were never fixed in writing. But as early as the Gaonic period the dramatization of the story of Esther was a well-established custom among the Jews of the Orient. While in general dramatic performances were not favored by the teachers of the Talmud, they tolerated spectacles and buffooneries at Purim. From the 9th cent. on, Purim farces were acted also in Central and Western Europe. Especially in Southern France, in the Comtat Venaissin, such Purim farces were performed on a lavish scale, sometimes by amateurs, sometimes by professional players. The central figure of these plays was Haman, who was for the most part represented by a dummy which was burned, while the jesters aroused the laughter of the spectators. The oldest extant text of a Purim play was printed in 1708, but the characters and plot are rooted in medieval tradition. The comic man of the piece was named "Pickleherring," a well-known type of the non-Jewish farce.

The "fools," "clowns," and other types of merrymakers, such as "Hanswurst" in Germany or "Jeanpotage" in France, acting either alone or a part in a farce, were popular also among the Jews of the Middle Ages and of the centuries

preceding the emancipation. They were called *Badhan* (amuser, jester). But the fact that at Purim not only dramatizations of the story of Esther but also others, such as that of David and Goliath and the history of Joseph, were performed, may serve as proof that Jewish plays were acted also at times other than those which were officially tolerated by the rabbis. Illustrated Hebrew manuscripts of the 15th cent. portray Purim jesters, actors and marionettes. A Megillah in the keeping of the Bezalel Museum, Jerusalem, represents a dance of masked figures reminiscent of the actors of the Commedia dell'Arte. At least the Jews of Southern France and Italy were familiar with stagecraft during the earlier centuries, and practised it at Purim, when it was expressly tolerated, and on other occasions.

Edmund Kean issued from a milieu of jugglers. Humphrey Abraham Belasco, father of the famous actor David Belasco, was a professional harlequin. Carlo Delpini, a clown (d. 1828), became a successful stage manager. Jacob de Castro (who lived from 1758 until after 1815) began his career as a player of Purim farces, then became chief of a group of circus artists known as "Astley's Jews," excelled in burlesques, musical farces and pantomimes and, after great successes at Covent Garden and Haymarket Theatre, became manager of the Royalty Theatre. Maria Theresia Bland (née Romancini), who came from a family of Jewish acrobats and equestrians, made her debut at the age of four, and later became a famous singer and actress at Drury Lane. The greatest Danish actress, Johanne Louise Heiberg (née Paetgens), whose mother was a Jewess, began her career in her early childhood, dancing on a dirty billiard table while her father collected small coins from the spectators. Then an old Jewish mime, Michel Levin, acted together with her at the fairs. Her early life was compared with the romantic story of Goethe's Mignon, but she was happier, and became not only the most famous actress of the Danish National Theatre at Copenhagen, but also, as the wife of the influential professor Johan Ludvig Heiberg, a "power" in Denmark's intellectual life. She was important for the history of Scandinavian dramatic literature, because she encouraged and protected Björnstjerne Björnson and Henrik Ibsen when they were young and unknown. The father of the great French actress Rachel was also an itinerant mime, in all probability a descendant of many generations of strolling players.

Beginnings of the Modern Drama

It was a Jewish mime who developed the old pantomime into a modern art of grand style and poetic expression. In 1811 a little band of dancers and acrobats which had previously wandered through Poland, Bohemia and other East European countries went to Paris. Its chief, a Jew like the other members of the band, started a small show in a courtyard of a house in the Rue St. Maur, Paris. The son of this man assumed the name of Jean Gaspard Deburau, and took Paris by storm, miming in the little Théâtre des Funambules, which had been previously used as a circus of performing dogs. Deburau was enthusiastically admired by the greatest French actors and poets of his time. The novelist George Sand said: "I never saw an artist who was more serious, more conscientious, more religious in his art than Deburau was." Deburau created a new pantomimic type, the Pierrot, the tragicomic hero of numerous plays which he himself devised and acted, and thus inspired such poets as Baudelaire and Verlaine to express his gestes by means of words. His son Charles Deburau (1829-73) succeeded him, and was also generally respected, although he was not the equal of his father. Henry Sloman, the descendant of an Anglo-Jewish family named Solomon, was also a famous pantomimist and a favorite comedian, while his brother, Charles Sloman, was the leading English extemporary singer in the middle of the 19th cent. Up to the present the last great mime was the universal artist Grock, not only a clown of irresistible comical force, but also a great musician and an ingenious actor.

On the variety stage and in the music halls, where the mimic tradition was carried on, there were actors and singers, such as Sam Mayo and Charles Deane, who were comedians of high rank and often changed to the legitimate theatre, being quite as successful therein as were vaudeville singers acting in operas. Considered from an exclusively literary point of view, they often wasted their talents in vulgar amusements, but they enriched scenic life and displayed possibilities of natural expression, of a free and easy attitude, which were imitated later on by literary cultivated dramatic artists. Of this class was Charlotte (Lottie) Collins, who began her career at the age of five as a rope dancer, and then joined her sisters, Marie and Lizzie Collins, singing and dancing with them in various music halls until she won world-wide fame as an artist who inspired the most banal texts with dramatic life and displayed a charming comic spirit. Gottfried Keller, the greatest poet in the German language after Heine, and a severe literary critic, discovered in the farces acted in Berlin in the middle of the 19th cent. the elements of a dramatic art which he considered far superior to the literary drama of his time. The authors of these farces were almost entirely Jewish, such as David Kalisch, Oscar Justinus (Cohn), Benno Jacobson, and Louis Herrmann, and many of the popular actors who excelled in these farces were also Jews, such as Emil Thomas. It is an established fact that the German naturalistic dramatists, especially Gerhart Hauptmann, intensely studied the dialogues of these farces. In Paris, many of the little theatres which became the forerunners of the Théâtre Libre were in their beginning closely akin to the variety stage.

The mimic tradition in which Jews had a considerable part became very important for the development of modern dramatic art, because the itinerant comedians, both of the show-booth and the music hall, maintained pre-Christian sensualism on the stage and, from the 16th cent. on, counterpoised the classicism which, abstracting life of its realism, dominated in the literatures of the leading European nations and had a tendency toward depriving the stage of its proper life. Modern stage managers, such as Max Reinhardt, Granowski and Meyerhold, returned, many of them unconsciously, to the mimic tradition, and educated their actors to enrich their gestes by studying dancers and acrobats. To a certain degree they rehabilitated also the art of extemporizing, which had been banished by classicist dramaturgy. But before this was done, there was a lasting conflict between the demands of the poets and the needs of the stage. Similarly, Fritzi Massary acted for many years in revues of a lower level, but showed, as "Minna von Barnhelm," that she was a great actress. Later on she was highly successful in the comedies of her son-in-law, Bruno Frank.

The rise of classicism in the literatures of Europe and the development of a literary drama mainly dominated by the spirit of classicism led to the demand that the actor respect the written word of the dramatic poet, and that the theatre follow with the greatest obedience the intentions of the author. According to this doctrine, stagecraft had to be the faithful servant of dramatic poetry, and only classical or romantic

dramas had to be recognized as legitimate or "worthy" of theatrical representation. Against this conception there repeatedly arose rebellions on the part of realistic authors and critics and of the stagecraft itself. Nowhere was the classicist doctrine of the stage as energetically repelled as by the Yiddish theatre, which maintained the autonomy of the theatrical production. In all the other theatres there arose a schism between the styled drama and a production which had regard not only for the spectators wanting light amusement but also for the conditions of life of the theatre itself, which were not identical with the codes of styled poetry. The French stages established a strict division between classical or romantic drama and the "pièces du théâtre," and the latter were recognized as productions of an autonomous art in which a high level was reached and much devotion and seriousness displayed. The conflict between the needs of the stage and the demands of classicist theory was peculiarly severe in Germany.

However, if the classicist doctrine was one-sided, it was a sound one insofar as it tried to overcome the alienation between the world of the theatre and the world of literature and poetry. Stagecraft had to recognize the existence of a new dramatic production which displayed at the same time new poetic and educational values, and the actors became eager to realize the intentions of the dramatic poets, even if exaggerated demands that the autonomous laws of the theatre be sacrificed to the demands of the styled drama led to conflicts or compromises, and there were not in every period living poets to enlarge the repertoire by products which had both poetic value and theatrical effect.

The part played by Jewish poets in the evolution of the modern drama is not so large as their role in the history of the modern novel and of lyrical poetry. But Jewish actors and stage managers became, step by step, more important for the realization of both the styled drama and of realistic and entertaining plays. From the humble beginnings in the show-booth Jewish actors raised themselves to the very heights of artistic life which became at the same time the starting-point for the cultural education of the people.

The foundation of dramatic literature in Spain was laid by Rabbi Santob (Shem-Tob) de Carrion, a poet who lived in the reigns of Alfonso XI and of his son Pedro, and wrote *Danza general de la mourire,* representing all the then known types of men, including a Jewish rabbi. Other steps toward the drama were made by Rabbi Rodrigo Cota (Cota de Laguaque), who wrote *Dialogo entre el Amor y un viejo* (Dialogue between Amor [Cupid] and an Aged Man). He was said to be interested in dramatic literature, and was by some of his contemporaries credited with the first act of a story of intrigue and character, afterward the *Celestina* comedy. This comedy was translated into Hebrew by Joseph ben Samuel Sarfati in the earliest years of the 16th cent. After the expulsion of the Jews from Spain (1492) and Portugal (1497), some Marrano poets composed Biblical and other plays in Spanish or Portuguese, such as Miguel or Daniel Levi de Barrios, who wrote comedies in Spanish by 1660, and Antonio José da Silva, the Marrano martyr, who was a prolific author, called "the Portuguese Plautus." His comedies, performed in the 1730's, met with great applause. As the "Jewish Calderon" Antonio Enriquez Gomez gained great renown in the Spanish-speaking world. He wrote more than twenty historical and heroic comedies for the Spanish stage before he began to deal with Biblical themes. Other Jewish poets, refugees from the Iberian peninsula, founded Hebrew drama when they gained safety and freedom in Amsterdam in the 17th cent. Later on Hebrew drama flourished in Italy. Unlike the early Yiddish theatre, Hebrew drama maintained a tendency akin to European classicism, and laid more stress on allegorical form and moral aims than on theatrical effects.

In Italy, companies of Jewish actors became favorites during the 16th cent. The diarist Marino Sanuto reports that the Jews of the ghetto of Venice acted a charming (*graziosissima*) comedy on the night of March 4, 1531. Many Christians were eager to attend plays performed by Jewish actors. From 1546 to 1605 a Jewish company of actors was in vogue at Mantua. The duke of Gonzaga favored these Jewish actors, who deserved well of contemporary Italian dramatists. The Jew Leone de Sommi, founder of a synagogue, was the first impresario and author of the first theory on stagecraft, entitled *Dialoghi sull'arte representativa,* which, however, was not printed. He was entrusted by the Italian poet Manfredi with the staging of one or more of his dramas. Leon Judah da Modena, a rabbi and poet who exercised not less than twenty-six professions, was also a successful conductor and producer, having studied dancing, music and recital from his early youth. Besides other plays, he staged his pastorale, *Rachel and Jacob,* in which his brother-in-law, Mosé, acted a part. The Jews of the ghetto of Siena performed tragedies and comedies until the end of the 18th cent. An outstanding expert of the stage was Lorenzo da Ponte (Emanuel Conegliano), who not only wrote numerous librettos to the music of distinguished composers, above all Mozart (*The Marriage of Figaro, Cosi fan Tutte,* and *Don Giovanni*), but helped direct operas.

Italian Jews excelled as teachers and artists in singing and dancing from the 13th cent. on, and contributed greatly to the development of the bel canto, the soul of Italian opera. Giuditta Pasta (née Negri; 1798-1861) was one of the greatest opera singers in history. She conquered Europe not only by the power and beauty of her voice, which covered the registers of both soprano and alto, but even more so by her dramatic talents and artistic intelligence. Bellini composed for her his operas *Norma* and *La Somnambule,* and Donizetti wrote for her *Mary Stuart* and *Anna Boleyn.* Giuditta Grisi (1805-40) created the "Romeo" in Bellini's *Romeo and Juliet,* while her sister, Giulia Grisi (1811-69), was a masterly interpreter of Rossini, and her cousin, Carlotta Grisi (1819-99), was a mimic dancer who charmed the public of Italy and France and inspired the French poet Théophile Gautier to write verses and meditations. Gustavo Modena, the descendant of a family of Jewish itinerant players, was a respected actor, but became even more important by educating the greatest artists of the Italian stage (Adelaide Ristori, Ernesto Rossi, Tommaso Salvini).

Jewish Contributions to Modern Dramaturgy

Modern stagecraft in Italy was represented by Giovanni Emanuel, a concentrated, measured, autocritical actor, who excelled as Hamlet and Othello as well as in Balzac's *Mercadet* and Zola's *Assommoir,* and was a cultivated stage manager. Claudio Leigheb and Virginia Reiter, the latter a forerunner of Duse, but the very impersonation of Italian passion (*furore italiano*), led a company of actors who performed predominantly plays by contemporary Italian dramatists. Enrico Reinach made his appearance on the stage by 1900 as a comic actor, and afterward became a daring stage manager. Michael Costa, who went to England later on and was knighted there, composed, from 1820 on, operas and other musical works, and

was one of the earliest orchestral conductors who realized modern ideas in the performance of operas. His nephew, Pasquale Mario Costa, excelled as the author of modern pantomimes and comedies of marionettes. The legitimate theatre in Italy owed many successful plays to the Jewish authors Sabatino Lopez and Sem Benelli.

In France, many Jewish dramatic authors, such as Émile Abraham, Adolphe D'Ennery, Abraham Dreyfus, Albin Valabrègue, Gaston de Caillavet, Alfred Savoir and Fernand Nozière (Weyl), created entertaining plays which attracted the public and offered opportune tasks to the actors. They often became so closely connected with the stages which they regularly provided with plays that they in fact participated in the direction of the respective stages. An immense amount of theatrical experience was accumulated by these and other Jewish authors, enabling them and their successors to enhance the virtuosity of stagecraft and to develop a refined art of acting.

A higher ambition was displayed by Catulle Mendès and George de Porto-Riche, both of whom became leading figures in the literary movement of their epoch, and both of whom supported the efforts of Antoine's Théâtre Libre to reform the French stage. Jean Jacques Bernard, son of the famous author Tristan Bernard, who was himself a successful writer of comedies, was a daring reformer of modern French drama. Henry Bernstein, an intimate expert of the stage and an experienced stage manager, endeavored to develop his art from brutal effects to a concentrated vigor and from scenic tricks to animated simplicity, at the same time always having regard to the needs and opportunities of the stage.

The mutual influences exerted by the drama and the opera on each other were of lesser importance in France than in other countries until Camille Erlanger, Raynaldo Hahn and, above all, Darius Milhaud brought the opera into closer touch with the literary movement of the time. Richard Wagner, whose works became popular in France mainly through the efforts of the Jew Edouard Colonne, conductor at the Great Opera of Paris, influenced French lyricism to a higher degree than the French dramatists did. But it was the renaissance of the operetta, effected by Jacques Offenbach, which became partly a significant expression of powerful tendencies of the time and partly created a new intellectual atmosphere and inspired literary dramatists. Offenbach's most important librettist was Ludovic Halévy, son of the versatile dramatic author Léon Halévy and a nephew of Jacques François Fromental Halévy, the famous opera composer. Having grown up in the atmosphere of the stage, Ludovic Halévy took such a considerable part in the creation of Offenbach's operettas that it is almost impossible to decide which of the two collaborators inspired the other and which of them was inspired. Both of them, at any rate, knew not only their public, but also their actors and singers, who were devoted to the two authors and who, by performing their works, developed their own dramatic talents to a higher degree. The wit and humor of Offenbach and Halévy gave a potent impulse to the comic actors and writers of France. Halévy supplied also the texts to operas and operettas of Bizet, Delibes, Lecoq and others, and wrote, often jointly with other authors, plays of various character which became popular in France. In addition, he wrote some very successful plays on his own which manifested amiable humor and humanitarian feelings. Hector Crémieux, another of Offenbach's librettists, adapted the tragedies of Schiller to the French stage, and wrote dramas and sketches.

Contrary to other countries, the great educators of the French actors are not so much to be found among the directors of the theatres and the stage managers as among the actors themselves, apart from the fact that French actors learned most of their art by acting and attending performances. The first great teacher of stagecraft in France was probably a Jew, Joseph Isidore Samson (1793-1871), son of a druggist in a suburb of Paris. For nearly forty years he was a pillar of the Comédie Française, creating more than 250 parts. He was the teacher of many actors and actresses who later became world-famous, above all Rachel, whose family was related to Samson. According to the great actress Judith, "Samson was an admirable actor, but as a teacher he was a genius." Jules Clarétie, the reorganizer and for many years director of the Comédie Française, also paid much regard to the education of actors. The most important modern French teacher of stagecraft was Gustave-Hippolyte Worms, who made his appearance at the Comédie Française in 1859 and who, after playing from 1862 to 1875 in Russia, returned to the French stage in 1877. Worms was unequalled in acting parts of the French classical repertoire, being an especially brilliant Tartuffe, but he also encouraged the realistic tendencies of his contemporary dramatists and performed their products with great devotion. He was, besides, a conscientious and inspiring teacher of many of his future colleagues.

On the French stage Jewish actresses were more outstanding than Jewish actors. Rachel, the most famous, made her debut at the Comédie Française, and at once not only became the idol of the public, but her magnificent representation of parts of the classic repertoire effectively helped to decide the struggle as to the rehabilitation of French classicism in favor of the latter. Her soul was akin to the spirit of Racine, to whom she was devoted. Rachel never resorted to any stage trick or artifice to win the applause of the public. She remained, in her life and in her art, dignified and natural, in spite of the splendor of her name. Some years before Rachel another Jewish actress, Nathalie Martel, made her debut at the Théâtre Folies Dramatiques, and in the year of Rachel's first appearance Nathalie Martel acted in a ballet. From 1838 to 1845 she acted at the Théâtre Gymnase, and then she became a member of the Comédie Française, excelling in contemporary dramas, especially those of Émile Augier. Madame Judith (Julie Bernat; 1827-1912) resumed many parts which Rachel had acted, but she was also very successful in plays of Beaumarchais and Alfred de Musset, and of her contemporaries Augier and Ponsard. Judith, a very intelligent and witty personality, was favored by Napoleon III and by his adversaries, such as Guizot and Victor Hugo. Both Dumas, father and son, were also devoted to her. She was the first woman to act the part of Hamlet. Later on she played also at the theatres of London in English. Tom Taylor, the son-in-law of Charles Dickens, wrote for her the piece *Heart and Hands.*

For many years Suzanne Reichenberg was a favorite of the habitués of the Comédie Française. Marthe Brandès, who made her debut in 1884, excelled in Molière parts and even more in the portrayal of the modern "femme du monde," as this type was described by Alexandre Dumas fils, Paul Hervieu and Edouard Pailleron. All these authors were no less enthusiastically devoted to this actress than the public was.

The greatest representative of French stagecraft

in the second half of the 19th cent. and at the beginning of the 20th, Sarah Bernhardt, made her debut in 1862 without any success, and had to struggle for five years before she was recognized. The public, as well as the critics, who had been unresponsive to her intense emotional expression, became her slaves. "This woman plays with her heart and with her entrails," wrote one of the most rigorous critics of the time, and continued: "She dares gestes which would be laughed at, if any other made them, and it is by such gestes that she fascinates the whole house." Sarah Bernhardt animated her roles in Racine's tragedies with a new refinement, and impersonated woman characters of the contemporary drama with fashionableness and passion. Acting classical parts, she made them appear as of an unexpected modernity, and acting characters of Dumas, Sardou and Feuillet, she conferred on them a grand and noble style, without diminishing the effects intended by the authors or causing the modern color to fade. She also acted the part of Hamlet in addition to that of Napoleon's son in Rostand's *L'Aiglon*. Often she entered into grave conflicts with modern authors during the rehearsals, disputing their own interpretation of the characters created by them, and for the most part she triumphed. When Sarah Bernhardt assumed the direction of her own theatre she became a very objective stage manager.

Marguerite Moreno, a student of Worms, sometimes acted together with Sarah Bernhardt and the stars of the Comédie Française, such as Coquelin fils and Mounet-Sully, and was considered their equal partner. She excelled both in delicacy of feeling and in grotesque characters. At the Great Opera of Paris Rosine Bloch, gifted with a beautiful voice and dramatic passion, excited the enthusiasm of the public in the operas of Meyerbeer and Verdi.

Among French Jewish actors, Eugene Silvain (1851-1930), who acted for more than fifty years at the Comédie Française, was highly esteemed both by the public and critics and by his colleagues, predominantly because of his masterly diction. He triumphed in historic and romantic tragedies, as did Georges Berr, a renowned actor and successful playwright. Berr became famous as *Gringoire* (by Théodore de Banville) and in Rostand's *Romantiques,* and he acted also with the greatest success in the realistic plays of Octave Mirbeau and others. He was a prime force in the education of actors, as director of classic studies at the Comédie Française.

One of the greatest modern actors in France was Edouard Alexandre de Max, a Jew who, born in Jassy, Roumania, was weaned of his Roumânian accent by his teacher Worms. Max made his appearance as Nero in Racine's *Britannicus,* and was often a partner of Sarah Bernhardt. In 1900 he created the role of Petronius in the dramatization of Henryk Sienkiewicz' *Quo Vadis.* He acted also under the direction of Antoine at the Théâtre Odeon, and was very successful in the title roles of Shakespeare's *King Lear* and *Julius Caesar.* Then he became a pillar of the Comédie Française.

Antoine, the founder of the Théâtre Libre and the reformer of the French stage, was aided by many Jewish actors who were devoted to the new tendencies. The most important of them was Henry Mayer. Samson Fainsilber was a pioneer in acting parts created by the dramatists of the last generation before the second World War. The comic spirit was represented on the French stage by Jewish actors, such as Numa (1802-69), whose original name was Beschefer, and who became very popular as an irresistible comic, inciting laughter by his imperturbability in embarrassing situations, and Pierre Alfred Ravel (1815-85). Contemporary Jewish comic actors, such as Michel Simon, became mostly devoted to the motion pictures, as did Simone Simon, a successful comic actress of the youngest generation who, however, excelled also in modern tragedies, and emigrated to the United States after the collapse of France.

Playwrights of the Modern Period

The first Jew to write for the English stage was Moses Mendes (d. about 1758), whose ballad opera, *The Double Disappointment,* was produced with considerable success at Drury Lane in 1748. He was followed by a great number of Jewish playwrights, many of whom were at the same time actors and provided the English stage with successful plays of various character. Such actor-playwrights were Morris Barnett; Lewis Melville (Lewis S. Benjamin), a friend of Israel Zangwill; Leon L. Lion, an actor, author and producer of Napoleonic energy, who pioneered in performing the plays of contemporary English authors after the first World War; and Stuart Merrill, well-known also as a novelist.

During the 19th cent. the English drama and stage were in a continued state of experiment and adaptation, and Jewish dramatists became important for the progress of English stagecraft by helping to widen the realm of the stage in many regards, including the technical and literary. Leopold Davis Lewis, author of *The Wandering Jew* (1873), offered Sir Henry Irving the possibility of winning one of his greatest successes by his adaptation to the English stage of Erckmann-Chatrian's drama *Le juif polonais* under the title of *The Bells.* Sir Arthur Wing Pinero, a former actor, pioneered in creating a modern English drama which combines regard for theatrical effects and the demands of literary style. The movement for a renewal of the English drama was supported also by the Jewish dramatist Alfred Sutro, who dealt with very interesting problems in his plays. Israel Zangwill's dramatic works, whose successes, however, were not undisputed, widened the perspective of non-Jewish habitués of the theatre by numerous details. There are many Jews among the contemporary English dramatists who either attract the public or at least interest them by showing new ways of action. Among them are to be mentioned John van Druten, Benn Levy, Gladys B. Stern and Harold F. Rubinstein.

Producers, Directors and Managers

Outstanding figures among Jewish producers and stage managers in England were Benjamin Lumley, who revolutionized the entire system of opera production in England, and Sir Augustus Glossop Harris, who acted at Covent Garden and in 1879 assumed the direction of Drury Lane. Under his management the fame of this theatre reached its height, but Harris lost most of his fortune. In 1887 he revived grand opera in London, and in the following year, as manager of Covent Garden, he began to attract the greatest opera singers of the world to his stage. The success of Sir Herbert Beerbohm Tree (1853-1917), the famous stage manager, was not undisputed, but without doubt Tree, as the director of His Majesty's Theatre, displayed a vivid scenic imagination and realized possibilities of the stage which were unknown until then. In many regards he was a forerunner of Max Reinhardt, who certainly had studied Tree's manner of staging. Charles Collins, one of the finest stage managers of his time, showed a genius for crowd presenta-

tions. His brother Arthur Collins (1863-1932), after being apprenticed to Henry Emden, scenic artist at Drury Lane Theatre, collaborated with and succeeded Sir Augustus Harris in the management of this stage. Later on he became managing director of the National Theatre. He produced pantomimes, dramas and operas, uniting splendor and artistic sense.

On a smaller scale other Jewish producers pioneered in various directions. M. L. Mayer, who took over the management of the Princess' Theatre in 1875, performed French plays in the original text. His sons, Sylvain Mayer and Gaston Mayer, were daring managers who staged Zangwill's *Melting Pot* and other modern plays. Walter de Frece and José Levy also pioneered in modern stagecraft. George Bernard Shaw, in a speech on December 10, 1915, said: "When a drama of mine was taken up by a Jew for translation or production, I was sure of a success."

Outstanding Jewish Actors Abroad

The first Jewish actor to play on an English stage was a Mrs. Manuel, mentioned by Samuel Pepys in his *Diary,* under date of August 12, 1663. The fortunes of the newly-opened Covent Garden Theatre were favorably decided, in 1728, by the much admired performance of Hannah Norsa as Polly Peachum in Gay's *The Beggar's Opera,* which was an innovation in many respects and drove Italian opera from the English stage, at least for a certain time. Myer Lyon, called Mr. Leoni, acted, in 1775, a part in Sheridan's *Duenna,* produced in that year. In the same year Harriet Abrams (1760-1840) made her debut at Drury Lane. Lyon, famous as Artaxerxes in Handel's opera, later managed the opera house at Dublin, and at the end of his life became a cantor in Kingston, Jamaica.

Harriet Abrams became well-known as singer and composer. John Braham (1774-1856) began his career as a chorist at Duke's Place Synagogue, London, and made his appearance at Covent Garden in 1787. During forty years of professional life as a singer and composer he was very popular in England and Italy. He built the St. James Theatre. The Jewish origin of Edmund Kean, while disputed, can not seriously be doubted. An actor named Sherenbeck, described as a "Rochester-Israelite," acted (1817) Shylock in Yiddish. Robert Keeley (d. 1869) and his wife (d. 1899) were favorite Jewish actors. Keeley was highly esteemed because of his quiet, effortless art which enhanced his comic effects. Mrs. Stirling (née Hehl) was a versatile and accomplished actress, who made her debut at the age of sixteen in an East London theatre, excelled as Rosalind, Desdemona and Portia, and later on gained even more fame by impersonating old women, such as the nurse in *Romeo and Juliet* and Martha in *Faust.* David James (Belasco) made his appearance under the auspices of Charles Kean, and became very successful. From 1875 to 1879 he played Perkyn Middlewich in Byron's *Our Boys* more than 1,300 times. Harry Jackson (Jacobson; 1836-85) was the leading comedian at Drury Lane Theatre. Rebecca Isaacs, a soprano of great sweetness, the daughter of the actor John Isaacs, excelled as Leila in *Satanella.* Adah Isaacs Menken was admired by Dickens and Swinburne, and triumphed in France, Austria and Italy. Adelaide Neilson (1846-80) met with exceptional applause in Shakespeare's plays as Viola, Rosalind, Beatrice and Isabella. Austin Trevor (b. 1874) scored a great success as Shylock, and as Major Petkoff in Shaw's *Arms and the Man.* Maurice (Morris) Moscovitch (b. Odessa, 1871) made his appearance at the National Theatre of his native town in 1885, then played in Germany, England and the United States, and mastered five different languages on the stage.

The German Language Stage

In the German-speaking countries, Jews were devoted to the theatre from the period of Enlightenment on. Joseph von Sonnenfels was one of the first authors in Germany who endeavored to reform the theatre and to bring it in accord with the spirit of the age. Until the beginnings of the Third Reich (1933) Jewish critics acted an important part in the development of the theory of drama and theatre and in promoting new movements and encouraging young authors. As a dramatic critic Karl Ludwig Börne contributed to the renewal of the German stage, although he was opposed to Goethe and although often political points of view prevailed in his literary criticism. Heine, in his letters on the French stage, was also in this regard a pioneer who opened the way for insight into new dramatic possibilities. He was not a successful dramatist, but he wrote a scenario for a ballet, *Dr. Faust, ein Tanzpoem,* which anticipated tendencies realized long after his death. Paul Lindau was a witty critic of outmoded conventions, although he was opposed to the new realism heralded by Otto Brahm. Alfred Kerr, Arthur Eloesser and Monty Jacobs were outstanding dramatic critics from the beginning of the 20th cent. to the beginning of the Third Reich, appreciating, more or less cautiously, the new movements.

The first Jewish dramatist in the German language was Benedikt Arnstein, who in 1782 published the play *Eine jüdische Familienscene.* He was followed by Hermann Herzenskron (1789-1863), whose comedy, *Modetorheiten* (Follies of Fashion), was performed more than a hundred times in one year. While these earliest Jewish dramatists adopted the conventional manners of the contemporary drama, Ludwig Robert was a keen pioneer in dramatic art, being devoted partly to romanticism, partly to realism, and became a forerunner of the modern social drama when he wrote *Die Macht der Verhältnisse.* Michael Beer, brother of the great composer Giacomo Meyerbeer, published (1818) his tragedy *Klytemnestra,* which was performed at the Royal Theatre in Berlin. Beer received a great ovation on the part of the public when his tragedy *Paria* was performed there in 1823.

In the middle of the 19th cent. Salomon Mosenthal, later knighted, was successful, especially through his drama *Deborah,* which dominated the German stage for several decades, while Berthold Auerbach's efforts to win the stage were constantly defeated. After the founding of the German Empire, Paul Lindau became the leading dramatist of the time in Germany, but his reign did not last. Simultaneously with the rise of German naturalism Ludwig Fulda began to write his pleasing comedies, which were tolerated by rigorous naturalists; although Fulda did not make common cause with them, he was always ready to defend them from attacks by literary and political reactionaries.

At the end of the 19th cent. and during the early 20th cent. Arthur Schnitzler was one of the leading German dramatists, equalling all his competitors in scenic spirit and surpassing them in psychological refinement. The later development of German dramatic art deviated in two directions. The one, mainly directed toward a renewed romanticism, was represented by Richard Beer-Hofmann, Hugo von Hofmannsthal, Stefan Zweig and Karl Wolfskehl, while the other endeavored to unite ecstatic lyricism and devotion to political and social revolutionism. It was led by Ernst Toller and Franz Werfel, while Karl

Sternheim was a keen dramatic satirist. A new tendency to combine realism with philosophical and historical perspectives was expressed by the dramas of Arnold Zweig and Ferdinand Bruckner (Theodor Tagger).

Jewish stage managers in German countries partly followed and partly pioneered in this development of the drama, but they endeavored also to animate the classical dramatic literature with the spirit of their time, and there were others who limited their task to entertaining the public. Carl Friedrich Cerf introduced a new epoch in the history of the German theatre when he founded the first private theatre in Berlin, the stage having been monopolized by the royal theatres until then. Cerf, originally a horsedealer, then a military agent during the campaign of 1813 to 1815, by no means intended to reform dramatic art in Germany. He was rather eager to make money. But he succeeded in performing Italian operas and French comedies, and his theatre was starred in by the most famous actors and singers of foreign countries, so that King Frederick William III preferred to attend Cerf's theatre rather than his own. In similar manner Adolph L'Arronge, Chéri Maurice and Bernhard Pollini combined business with a daring artistic spirit.

German producers, limited rather than encouraged by the influence of Goethe's stage managership, made no visible progress until Meyerbeer's operas enlarged the ideas of scenic possibilities, and incited the imagination of producers of the drama. In addition to his musical qualities, the author of *The Huguenots* was an expert on theatrical effects, and the results of his careful studies on the stage were heeded and utilized by stage managers everywhere in Europe, not at least by Dingelstedt, a non-Jewish author and producer, who introduced "exemplary performances" into the Hofburgtheater at Vienna, and by Richard Wagner, who, incidentally, was greatly obligated to the Jewish producer Angelo Neumann for the realization of his ideas. Proceeding from similar experiences, the duke of Meiningen gave a new impulse to the development of German stagecraft in 1874 by the tours made by the actors of his ducal theatre through all the countries of Europe. The artistic leader of these famous "Meininger Gastspiele," however, was Ludwig Chronegk, the Jewish director of the theatre of the duke. From 1874 until the end of the tours in 1890 Chronegk staged 2,591 plays. His new principles, which became of decisive importance for the later development of German stagecraft, were: (1) strict discipline; (2) exactness of historical costumes and decorations; (3) natural gestures of the crowd. Often criticized and often imitated, the Meininger example, directed by Chronegk, who effaced himself behind the duke, initiated a new epoch of dramatic art. Stanislawski, famous founder of the Moscow Art Theatre, was deeply impressed by Chronegk, whose rehearsals he attended, and in his autobiography admitted the inspiration of Chronegk.

The next great progress in German stagecraft was made by Otto Brahm (Abrahamsohn), who managed the Deutsches Theater and then the Lessing-Theater in Berlin from 1894 until his death, after having taken the lead in the reformist movement by founding the Freie Bühne. Brahm was a rigorous educator of his actors, always ready to dismiss great talents who attracted spectators but did not follow his directions. He stressed the importance of the spoken word and of the nuances of speaking on the stage. His principal aim was to realize the very intention of the dramatic author, whose text was studied by him with scientific accuracy. Brahm opened the way for Henrik Ibsen and Gerhart Hauptmann. He also promoted Arthur Schnitzler and other contemporaneous authors who did not too greatly endanger the unity of the character of his stage. He was followed by Victor Barnowsky who, less rigorous in maintaining this unity, occasionally dared to surpass his most advanced competitors.

Max Reinhardt, for many years devoted to Brahm and a pillar of his theatre, became his adversary after discovering that the spoken word was not the only element of stagecraft and that the intention of the dramatic poet demanded a more autonomous completion on the part of the producer. The renascence of the theatre initiated by Reinhardt carried on the imaginative potentialities of design and led to the conviction that light and color were a vital part of stage pictures. In this regard Reinhardt was efficiently aided by the designer and painter Ernst Stern. Reinhardt effected a general enrichment of the resources of the stage, and animated acting by returning occasionally to the practice of the extemporizing commedia dell'arte. Beginning with *A Midsummer Night's Dream,* Reinhardt proceeded to the performance of *Jedermann* (Everyman) and the *Miracle* which made his name well-known in the whole world, and enhanced his fame by presenting Luigi Pirandello's *Six Characters in Search of an Author* with an unheard of psychic intensity. Berlin's largest circus was transformed by Reinhardt into a theatre in order to emancipate stagecraft from the limiting conditions of the traditional theatre buildings. On the other hand, Reinhardt founded the Kammerspiele for performing comedies of a more tender and intimate character, and initiated a new epoch by founding the festivals at Salzburg, Austria. A reaction to Reinhardt's luxuriant imagination arose in Germany after the first World War. This reaction tended toward abstraction and concentration, in conformity with the poetic tendencies of Ernst Toller and other revolutionary authors. Leopold Jessner, as director of the theatre of Königsberg and later on of the Schauspielhaus in Berlin, became one of the most outstanding producers devoted to these aims.

Jewish actors also played an important part in the evolution of modern stagecraft in Germany. The first Jewish actor known by name was Jacob Herzfeld (b. Dessau, 1769; d. Hamburg, 1826). He was significant of the transition from strolling mimes to modern dramatic artists. Herzfeld joined the troop of Friedrich Ludwig Schroeder, who finally settled at Hamburg and there founded an epoch-making stage. Herzfeld was not only a good actor, but was also highly valued by Schroeder as an intelligent assistant stage manager. Goethe and Schiller, who exchanged letters with Herzfeld, also esteemed him highly. His son Adolf Herzfeld (1800-74), his grandson Albrecht Herzfeld, and his great-grandson Leo Herzfeld (b. 1872) were also respected actors. In 1832 Eduard Jerrmann, a German Jew, caused a sensation in Paris, playing on the stage of the Comédie Française without any foreign accent. He aroused a similar sensation in Germany when, at a performance of Schiller's tragedy *Die Räuber,* he played both the part of the hero, Karl Moor, and of his criminal brother, Franz Moor.

The first Jewish actor in Germany who not only was a virtuoso but also became recognized as a great dramatic artist was Moritz Rott, who flourished during the two decades preceding the revolution of 1848. At first the public rather disapproved of Rott's manner of acting because, according to the critics, Rott's "fire was too hot." But soon Rott triumphed, impersonat-

ing Faust, Wallenstein, William Tell, Macbeth and Lear. He excelled also in light comedies. Rott and all the other contemporary actors were surpassed by Bogumil Dawison, a Jew from Poland, who combined an intensity of passion unheard of until then in Germany with artistic intelligence. He was especially admired when he impersonated demoniacal characters, such as Mephistopheles and Richard III. The third great actor of Jewish descent on the German stage was Ludwig Dessoir, who stressed the melancholy in the character of Othello and tended toward a noble simplicity, being always eager to study intensively not only his part but the whole play in which he had to act, and to realize faithfully the intention of the author.

For half a century Adolf Sonnenthal was the leading dramatic artist at the imperial Hofburgtheater at Vienna. Born in Budapest and later knighted, he not only aroused the enthusiasm of his audiences by his noble and discreet art, but he also taught them to respect the theatrical profession. No other actor of the 19th cent. enjoyed such a high personal reputation as did Sonnenthal. He excelled in both modern French comedies and classical tragedies, especially as Wallenstein, King Lear and Nathan the Wise, and he even created with great success the role of Fuhrmann Henschel in the play by Gerhart Hauptmann. Emerich Robert and Konrad Löwe were other outstanding Jewish actors who maintained the great renown of the Hofburgtheater, while that of the royal Schauspielhaus in Berlin was based mainly upon Maximilian Ludwig and Max Pohl.

As regards opera, Pauline Lucca and Lola Beeth, Julius Lieban, Hermann Jadlowker, Rudolph Berger, Josef Schwarz, Emanuel List and Alexander Kipnis, all of whom began their careers on German stages, became world-famous. The great success of the Meininger troupe was largely due to such great Jewish actors as Ludwig Barnay, who for many years was considered the greatest dramatic artist in Germany, and Leopold Teller, a Jew born in Hungary, as was Barnay. Poland, Lithuania, Bohemia, Hungary and Roumania provided the German stage with many talented dramatic actors. Almost all of them were Jews who, attracted by German poetry, went to the German stage and widened and enhanced the ideas which the German public conceived of its classical dramatic poets.

Siegwart Friedmann, another Jew born in Budapest (1842-1916), was significant of the rise of modern dramatic art, for he was the first German actor to base his art on psychological consideration of the character to be impersonated. Proceeding from a general idea, he conceived of the part to be acted by means of a serious study of the intentions of the author. Friedmann subordinated every word and geste to his general conception, and his art remained simple in spite of the abundance of his sudden conceits. This psychological consideration was developed by Emanuel Reicher, a Jew from Poland, who became the leading actor of the stage directed by Otto Brahm and the creator of the most important roles in the dramas of Henrik Ibsen and Gerhart Hauptmann. The roles of the woman characters of these poets were predominantly created by Else Lehmann, a convert to Judaism, and Rosa Bertens, whose art reached the level of Sarah Bernhardt, although she maintained her originality.

Max Reinhardt, for his part, relied mainly on Jewish actors, such as Victor Arnold, Oscar Beregi and Ernst Deutsch, and above all Max Pallenberg, the greatest comic actor of the 20th cent. in German-speaking countries, after Rudolph Schildkraut went to America, while Victor Barnowsky discovered the great talent of Elisabeth Bergner, who excelled in Strindberg's *Fröken Julie* and in Shakespeare's comedies, and later went to England and to the United States, becoming as successful on the English-speaking stage as she had been on the German stage. After the end of the first World War such Jewish actors as Fritz Kortner, Alexander Granach, Lupu Pick and Paul Graetz contributed to the success of the so-called expressionistic drama, as did Lucie Mannheim, Rosa Valetti and Grete Mosheim, most of whom emigrated to the United States to continue their career after learning English.

In Holland, Jewish actors were successful on the stage from at least the 18th cent. on. The greatest Dutch actor was Louis Bouwmeester, who was at the same time considered the greatest non-English interpreter of Shakespeare's plays. The greatest Dutch actress was Esther de Boer Van Rijk, who created the most important roles in the plays of her contemporary, the Jewish dramatist Hermann Heijermans.

In the Scandinavian countries some Jewish families of actors, such as the Wulff family in Copenhagen and the Spiers family in Norway, were considered as belonging to the leading dramatic artists. Leonard Labatt (1838-97) was one of the greatest Swedish dramatic tenors, and Henriette Nissen (née Salomon) went from Sweden to Paris and triumphed there, as well as in Russia and England.

Jewish Thespians in the Russian Theatre

In Russia, foreign Jewish actors of great renown starred on the imperial stages from the beginning of the 19th cent. on, but there were also Russian-born Jewish actors who became popular in almost all the larger cities of the empire of the czars. When Stanislawski founded the Moscow Art Theatre, which was epoch-making in the history of Russian dramatic art, he engaged also some Jewish actors, among them Alla Nazimova, who had previously acted at the Imperial Theatre in Moscow and had created important roles in the plays of Chekhov, Andreyev, Nemirovich-Danchenko, Ibsen, Hauptmann and other modern authors, and later went to the United States.

Vsevolod Meyerhold also was a member of the Moscow Art Theatre, and in this quality he founded and directed the Meyerhold Studio, studying the art of staging to be applied to the presentation of Maeterlinck's plays, and for years excluding the public in order to intensify his studies. After staging some plays at the Théâtre Montparnasse and at the Théâtre des Arts in Paris, Meyerhold returned to Russia, and after the establishment of the Soviet regime he was appointed director of the Moscow State Theatre, which was fashioned by Meyerhold into the most advanced stage in the world. Meyerhold said that he saw the problems of a play as closely akin to those of a boxing match, and he demanded of his actors that they show the same firmness of stance, the same alertness, the same continuous physical giving and taking. Japanese and Chinese theatres and the commedia dell'arte revealed to him the secret of stagecraft, but it was in fact the practice exercised during centuries by poor, modest, nameless itinerant Jews which was now renewed with splendor and with the refinement of modern technique.

Zinaida Reich (Mrs. Vsevolod Meyerhold) excelled at the Moscow State Theatre, as did also a number of other Jewish actresses and actors. Russian staging and modern productions were promoted by Leon Bakst, who was the first to render successfully for stage decoration a three-dimensional design in a two-dimensional surface, and to symbolize the subject of a play by means

A scene from Isaac Loeb Peretz's "Bei Nacht Oifen Alten Mark," produced by the erstwhile Jewish Academic Theatre of Moscow

A scene from the comedy entitled "200,000" by Sholom Aleichem, as staged by the Jewish Academic Theatre of Moscow

of decorations. Michael Galperin collaborated with Meyerhold as translator and adaptor of foreign plays to the Soviet stage. Isaak Rabinovich, Tyschler and Levin excelled as designers. Morris Gest, who took an important part in the development of modern stagecraft in Soviet Russia, later went to the United States. Meyerhold produced operas, plays, comedies of marionettes and pantomimes. The latter were cultivated also by Russian-born artists outside of Russia, as they were by Ida Rubinstein and David Lichine, the creator of the pantomime *Francesca da Rimini*. The famous dancer Anna Pavlowa, star of the imperial Russian ballet, had a Jewish father.

Thus Jewish poets, actors and producers contributed considerably to raising the level of the theatre and to making it an autonomous art. Jewish historians were also the first to study the history of the theatre with scientific accuracy and independently of the history of literature as an autonomous science; such were Alessandro d'Ancona in Italy, Gustave Cohen in France, and Max Herrmann in Germany.

Moulders of Cinema Art

The invention of motion pictures opened a new field to the artistic activity of Jewish authors, actors and producers. It was mainly due to some pioneering Jews, both constructive businessmen and creative artists, that the production of motion pictures became an art at all, after having been considered for a certain time as a means of low amusement. The development of the motion picture industry and art raised tremendous problems both of financing and of scenic imagination. The construction of motion picture theatres, the methods of stage managing, the manner of playing, of the silent pictures as well as, later on, of the sound pictures, had no examples to be followed, and it was by no means the matter of a simple "exploitation" of a technical invention. Every step onward entailed not only the risking of money, but also adaptation to conditions unknown till then.

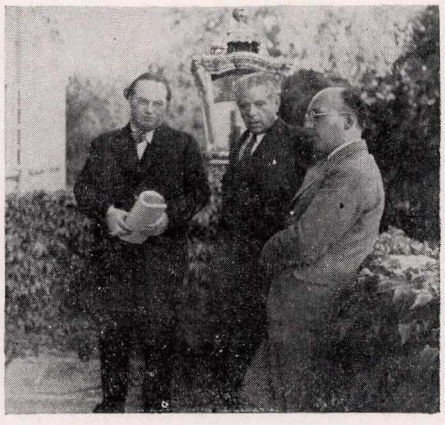
In Germany Paul Davidson became of the greatest importance for the financial and artistic development of motion pictures, and his ideas and performances influenced also commercial and artistic practice in other countries. Davidson was the first to erect in the cities of Germany theatres specially designed for motion pictures, beginning at Mannheim in 1905, and in the following year establishing the first great film theatre in Berlin. From 1905 on Davidson produced films. Among the more than 220 motion pictures produced by him, *Shylock of Cracow*, the *Pied Piper of Hameln* and the *Golem* were particularly successful. It was Davidson who put Ernst Lubitsch in his right place, and discovered the earliest film stars, such as Asta Nielsen, Pola Negri, Paul Wegner and Emil Jannings, who were either entirely unknown before, or had not thought of appearing on the screen when Davidson engaged them for motion pictures. Julius Pinschewer pioneered, from 1911 on, in the application of the screen to propaganda purposes, both commercial and educational. Arthur Lassally was one of the first and most serious producers to be devoted to scientific, technical and educational films. Karl Freund was one of the earliest artistic cameramen in Europe. He was responsible for the success of *Metropolis* and *Vaudeville*. Later on he went to America. Carl Mayer gave the first "camera movement" in the film *Dr. Caligari*. Erich Pommer, the most powerful promoter of the German motion picture industry and art, became director of the Berlin branch of Gaumont in 1906, and in 1923 founded the Ufa, the greatest film trust in Germany. Pommer produced *Dr. Caligari, Metropolis*, the *Nibelungen, Der Kongress tanzt* (produced in English as *Congress Dances*) and other great and successful films, and in 1933 he was forced by the Nazis to emigrate to the United States. Although his productions caused many disputes, he fascinated audiences and stimulated actors and writers of scenarios to enhanced performances.

Karl Wiesel, founder of the Bavarian film trust Emelka, was not only successful in the motion picture business but also a conscientious educator of the actors and stage managers whom he employed. Kurt Bernhardt was a good actor and, as a producer, keenly interested in the moral education of his audiences and in combatting German nationalism. Max Reinhardt experimented (1913) on the screen with the film *Venetianische Nacht* (A Night in Venice). Ludwig Berger and Berthold Viertel, who were successful assistant stage managers under Reinhardt's direction, later went to the United States.

The artistic level of German films was considerably raised by Lupu Pick, who produced his fine film, *Sylvester*, in 1924. Ernst Lubitsch, a student of Reinhardt, ushered in a new era in the history of motion pictures in Germany when he produced *Madame Du Barry* and other films. He worked successfully also in France before he went to the United States.

Among motion picture actors, Max Landa was one of the first to recognize the new artistic possibilities offered by motion pictures and to realize them with tact and fashionableness. He was followed by Julius Falkenstein, a very discreet comic actor. Later, Grete Mosheim, Oscar Karlweis, Curt Bois, Felix Bressart and Otto Wallburg became even more popular among motion picture audiences than they were among the public of the legitimate stage. Many of them went to the United States after the establishment of the Nazi regime in Germany. Elisabeth Bergner and Fritz Kortner, whose position on the screen was as prominent as on the stage, also went to the United States.

The level of British motion pictures was at first raised when Sir Arthur Wing Pinero's plays were adapted to the screen. Later on Louis Golding wrote valuable scenarios. But it was some Jews born in Hungary who decisively stimulated English motion picture production and attracted international attention to it. Vincent Korda, the painter, and Alexander Korda, actor, stage manager and producer, who had previously made important contributions to the Hungarian stage and excelled in Germany, staged performances and inspired actors and scenario writers to efforts which equalled or even surpassed those of the European continent. Maria Farkas, Alexander Korda's first wife, and Merle Oberon, his second wife, became renowned film stars. The British motion picture industry was considerably promoted by Oscar Deutsch, who owned one theatre in 1933 and more than 250 in 1937, and by Maurice Silverstone, director of the United Artists Corporation. (See also page 234, column 2.)



The decisive step which effected collaboration between the French motion picture industry and artists was taken by two Jewish bankers of Paris, Saul and Merzbach, who in 1908 supported the Société cinématographique d'auteurs et de gens de lettres, headed by the Jewish author Eugène Gugenheim, and supervised the concluding of the first contract with Charles Pathé, leading French film industrialist. Jewish businessmen and artists were also among the directors of Gaumont, the other great film-producing company in France. When, in 1935, the entire French motion picture pro-

Celebration (1939) of twenty years of the State Jewish Theatre in the Soviet Union. Representatives of writers, actors and artists pilgrimaged to Moscow from all parts of the country (including the Ukraine and White Russia) to participate. A number of members of the State Jewish Theatre are holders of the Order of the Soviet Union

duction became the victim of a financial catastrophe and there seemed to be no hope to continue any activity, it was André Bernheim, a Jew, who saved French film production from complete ruin by reorganizing and recreating it with keen commercial and administrative ability and an extraordinary artistic spirit. Instead of 120 films a year, Bernheim reduced French film production to fifteen a year, but these fifteen made the reputation of French films throughout the world.

Among the Jewish actors on the French screen, Sarah Bernhardt led the way by acting (1912) the part of Queen Elizabeth in the first feature-length production, directed by Adolph Zukor. Then she acted a number of parts through which she had gained her renown on the stage. Her rival, Marguerite Moreno, also excelled on the screen, as did Ferdinand Hart, who impersonated the Golem in the French version of that film. In the same version Harry Baur became famous as Emperor Rudolph II, and later on he became a pillar of the French films, impersonating Jean Valjean in *Les Misérables,* playing the role of Rasputin, and creating numerous other roles during the 1920's and 1930's. Unfortunately, Baur made an unsuccessful attempt to continue his activity under the Nazi regime, by concealing his Jewishness. Jean Worms, who impersonated Czar Nicholas II in *Rasputin,* Dalio, Lucien Rozenberg, Henri Krauss, Leon Bernard, Marcel Levesque, Michel Simon and Simone Simon were popular among the French public until the collapse of France.

The first efforts to heighten the artistic level of French films were made by Raymond Bernard, a son of Tristan Bernard, who wrote also some successful scenarios and some of whose plays were adapted for the screen. Raymond Bernard's productions, such as *Le petit café* (1919) and *Le secret de Rose Lambert* (1920), were epochmaking in the artistic development of French motion pictures, and his historical film, *Le miracle des loups,* was a further step toward progress. The second leader of the artistic movement in French motion picture production was Jean Epstein, who produced *Pasteur* in 1923 and, immediately thereafter, *L'auberge rouge* (The Red Inn) and *Le coeur fidèle* (The Faithful Heart). His film *La Belle Nivernaise* aroused the admiration of French audiences because in this film Epstein for the first time showed pictures of the various provinces of France, utilizing landscapes as scenic decorations. Abel Gance, producer of *La roue* (The Wheel) and *J'accuse,* became significant of a new progress in French films, and Jacques Feyder was the author and producer of a great number of amusing and witty motion pictures. Lazare Meerson, a Russian-born painter, collaborated with Jacques Feyder, Alexander Korda, Paul Czinner and René Clair, and it was mainly his inspiring ideas which enabled his collaborators to realize new progress in their art. Meerson's original conceptions were responsible for the success of Czinner's adaptation of *As You Like It* for the screen, of Feyder's satirical film *Les nouveaux messieurs,* and of Clair's famous films, *Un chapeau de paille italien* (An Italian Straw-Hat), *Sous les toits de Paris* (Under the Roofs of Paris), *Le quatorze juillet* (The Fourteenth of July), and *Le million.* Jean Benoit-Levy guided motion picture production to its very height by creating *La Maternelle,* a masterwork of psychology, human documentation and human feeling, free of trickery and affectation. This film was a victory for French art. It was equalled by Benoit-Levy's later productions, *Ballerina* and *Itto,* the latter a picture of the Berber tribes of the Atlas Mountains and of French civilizatory work in Africa.

Motion pictures offered Hungarian Jewish artists the opportunity to become known to the world. Hungarian Jewish dramatists, especially Ferenc Molnár, had conquered the theatre previously, and Jewish actors born in Hungary had excelled on the German stage, but the films opened to them a new way to appear on the international stage. Besides Molnár, other playwrights, such as Lajos Biró, Ladislaus Buš-Fekete, Ernest Vajda, and Melchior Lengyel, author of *Ninotchka,* were esteemed as writers of scenarios, and while Hungarian dramatists, almost all of them Jewish, were considered before that time minor competitors of French playwrights, their successes on the screen often surpassed those of their French colleagues. Such Hungarian-born Jewish actors and singers as Rose Bársony, Franciska Gaál, Gitta Alpár, Marthe Eggerth, S. Z. Sakall and Tibor Halmay, proceeding from the Hungarian stage, acquired renown in Germany, and later on became world-famous. Some of them went to the United States. The conductor Erno Rapee went the same way, as did Alexander Korda, after he had refashioned the Hungarian National Theatre at Kolozsvár into a first-class stage.

In Russia, the art of motion pictures had made considerable progress before the outbreak of the first World War, and Jewish producers had participated in the experiences which led to its development. International attention, however, was not secured until the Soviet regime favored film production and provided producers with large funds and other opportunities. The outstanding revolutionary film producer of Soviet Russia, Sergei M. Eisenstein, the creator of *Battleship Potemkin, Alexander Nevsky* and *Ten Days that Shook the World,* was of epochmaking importance, while he discovered unknown possibilities of "cutting" and giving interior movement to a film. He emancipated the cameraman from any fixed standpoint, and obtained effects unknown until then by approaching or distancing the camera to or from the actors. He excelled also in kaleidoscopic sequences and superimposures, and was equally able to utilize music and sounds for suggestive effects. According to Eisenstein, cutting is as important as writing, and "montage" is the mystery of dramatic art on the screen.

Eisenstein was followed by even more advanced producers, such as Esther Sjub, who adapted Anatole France's *Île des Pinguins* to the screen; Michael Kaufmann, creator of *The Cameraman;* and his brother, who assumed the name of Dziga Wertow. Other successful producers were J. Raisman, Juchkievich, Handelstein and Boris W. Barnet. Adolph Minkin and Herbert Rappaport adapted Friedrich Wolf's anti-Nazi drama, *Professor Mamlock,* to the screen. Lion Feuchtwanger's novel, *The Oppenheim Family,* became an equally effective film.

Role of Jews in European Radio

Jews took an equally important part in the development of the radio play. In Germany the Jewish banker Curt Sobernheim supported the establishment of radio stages, and in France Lazare Weiller was their main promoter. French ministers of Jewish origin, such as Maurice Bokanowski and Georges Mandel, and their collaborators, Gruenebaum-Ballin and Wormser, were interested in the social role of the radio in general and also of art diffused by the radio. Laskine founded (1927) the *Journal Parlé,* and Lucien Rozenberg and Pierre Paraf, the latter Max Nordau's son-in-law, were of great importance for the French radio play. Tristan Bernard excelled also in this domain, and his son, Jean Jacques Bernard, created noteworthy radio plays.

In Germany, Alfred Döblin, Lion Feuchtwanger, Friedrich Wolf, Hans Sahl and Arno Schirokauer became the favorite radio authors before the Nazis came to power. Joseph Schmidt, a Jewish singer gifted with a wonderful voice, but unable to appear on stage or screen because of his abnormal figure, won the admiration of all German radio hearers until they were prevented by the Nazis from enjoying the singing of their favorite. HUGO BIEBER.

Theatre and Allied Arts in the United States

Jews have played a notably important part in the leadership of the American theatre and its related industries, the motion pictures and the radio. Although Jews were not very prominently concerned with the earliest days of the American theatre, it is a fairly accurate generalization to say that they have been dominant in theatrical production for the past fifty or sixty years. In the realm of the motion pictures, it was Jewish initiative that gave birth to this thriving industry and, although this is very much less true in the radio, there have been many prominent Jewish participants both in the managerial, production and entertainment phases of this 20th cent. miracle.

For the purposes of this survey we shall attempt to make a distinction between the theatre, the cinema and the radio. In many cases it is an artificial distinction in that many personalities have been engaged in all three fields at almost one and the same time, and certainly all the leading entertainers since the 1920's have at one time or another devoted their talents to each of these three fields of entertainment.

Playwrights. The history of the American theatre goes back to the earliest colonial days, inasmuch as the colonists brought the theatre with them from England. A good number of the early theatrical productions were of English origin, but the native American theatre may be said to have had its birth pains in the last years of the 18th cent. and the beginning of the 19th cent. So far as is known, the first Jewish participation in the theatre came in the field of playwrights. And this is fitting, at least for those who agree with Shakespeare that "the play's the thing."

Isaac Harby (1788-1822) is the first known Jewish dramatist in America. He is remembered also as an author and dramatic critic with such papers as *The Quiver, The Investigator,* and *The Southern Patriot,* all published in Charleston, S.C., the city of his nativity. He is recognized as one of the finest literary critics of his day. He was the author of such plays as *Alexander Severus* (1805), *The Gordian Knot* (1807), and *Alberti* (1819). Three presidents, Thomas Jefferson, James Madison and James Monroe, were among his friends. Monroe attended the first night of *Alberti.*

Mordecai Manuel Noah (1785-1851), one of the most distinguished and versatile of early American Jews, was also a professional playwright, with six plays to his credit. Noah's particular forte was the American historical play. He was the author of *The Fortress of Sorento* (1808), *Paul and Alexis* (1812), *She Would Be a Soldier* (1819), *The Siege of Tripoli* (1820), *Marion, or The Hero of Lake George* (1822), and *The Grecian Captive* (1822). His first great success was *She Would Be a Soldier.* An earlier play, *Paul and Alexis,* was performed in London in 1814, the second American play to be given that honor.

Other early American Jewish playwrights were Samuel B. H. Judah (1799-1876) and Jonas Phillips (1805-69). The author of *Home Sweet Home,* John Howard Payne (1791-1852), who came from Jewish stock, is also known as a playwright and as the more or less anonymous collaborator on plays with Washington Irving.

The end of the 19th cent. witnessed the flowering of several Jewish playwrights of great talent: David Belasco (1859-1932), Charles Klein (1867-1915), and Martha Morton (1865-1925), the first Jewess to achieve recognition as a playwright. Among Martha Morton's plays were *The Refugee's Daughter* (1886), *Helene Buderoff* (1889), *A Bachelor's Romance* (1896), *The Diplomat* (1902), and *The Four Leaf Clover* (1903).

Charles Klein wrote one of the outstanding hits of early 20th cent. theatrical history when he wrote *The Music Master* (1904), which was produced by David Belasco and starred David Warfield. Klein's first play was written in 1890, and was called *A Mile a Minute.* A play which he wrote in 1905, *The Lion and the Mouse,* came back to life as one of the first talking motion pictures produced by the Warner Brothers.

David Belasco, who won fame as a producer and director, as well as a playwright, is probably the greatest name in the early days of the modern theatre. One of the most spectacular of producers, and a theatrical craftsman and technician of unsurpassed excellence, Belasco made a great contribution to so-called theatrical realism. Even in his late sixties he amazed critics by such realistic touches as an automobile and real fire escapes in the sets for his production of *Lulu Belle.* He is reputed to have written and produced, in coal bins and funeral parlors, fifteen plays before he was fourteen years of age. In that year, 1872, while nominally only the assistant stage manager of the Metropolitan Theatre in Cincinnati, he served his professional apprenticeship as a stage director. It was in those years that he conducted his experiments in stage lighting and brought to the theatre his ideal of exact reproduction of scenes from life. Following years on the west coast and touring the country, Belasco scored his first hit in New York city as director of Bronson Howard's *Young Mrs. Winthrop* (1882). With Edison having just invented the incandescent lamp, Belasco successfully applied it to the stage in this production.

Two years later Belasco joined forces with Daniel Frohman in the management of the Lyceum Theatre. One of the most successful producer-directors of his day, Belasco first introduced such famous stars as Mrs. Leslie Carter, Frances Starr, David Warfield, Lenore Ulric, Blanche Bates, Mary Pickford, Judith Anderson, Ina Claire and Willard Mack. Belasco produced 400 plays, including some 150 dramas of his own authorship.

In 1900 Belasco made his own stage adaptation of the novel by John Luther Long, *Madame Butterfly.* Puccini, the operatic composer, was inspired to compose his celebrated opera, *Madame Butterfly,* after seeing the Belasco production of the play. Another Belasco play, later turned into an opera by Puccini, was *The Girl of the Golden West,* produced as a play in 1905, and as an opera with Toscanini conducting and Caruso

singing in 1910. In 1922 Belasco produced *The Merchant of Venice*, with David Warfield as Shylock, for the longest run ever achieved by the play in the United States. Other important Belasco productions include *The Heart of Maryland* (1895), *Kiki* (1921), *Laugh, Clown, Laugh* (1923) and *The Auctioneer*.

More than one hundred Jewish playwrights have had their plays professionally produced on Broadway during the 20th cent. (up to 1943). Four plays of Jewish authorship won the Pulitzer Prize as the best American play of the year since that award was instituted in the season of 1917-18. Elmer Rice won in 1928-29 with *Street Scene*. George S. Kaufman and Morrie Ryskind (with music and lyrics by George and Ira Gershwin) won in 1931-32 with *Of Thee I Sing*. Sidney Kingsley took the Pulitzer Prize in 1933-34 with *Men in White*, and George S. Kaufman and Moss Hart achieved Pulitzer honors in 1936-37 with *You Can't Take It With You*. Lillian Hellman won the New York Drama Critics' Award in the 1940-41 season with *Watch on the Rhine*, an award that was instituted on an annual basis during the season of 1935-36. Sidney Kingsley's *The Patriots* won this award for the 1942-43 season.

Sixty-two plays of Jewish authorship were chosen (up to 1943) as among the ten best plays of their respective years by Burns Mantle, who annually compiled such lists beginning with the 1919-20 season, and who completed another such compilation to cover the years from 1909 to 1919. An indication of the Jewish contribution to the American theatre in the last decade (up to 1943) is shown by the fact that six out of the ten plays in 1940-41, five in 1931-32, and four each in 1934-35, 1935-36, and 1938-39 were of Jewish authorship.

George S. Kaufman, known as the greatest theatrical collaborator in the history of the American theatre, is represented on the Mantle list no less than sixteen times. His most successful collaborator, Moss Hart, is represented seven times, six times in collaboration with Kaufman. Not too far behind them are Elmer Rice and S. N. Behrman, each represented with five plays. Other repeaters on the Mantle list are Ferenc Molnár (3), Edna Ferber (4; collaborations with Kaufman), John Wexley (2), Rose Franken (2), Sidney Kingsley (3), Lillian Hellman (3), Samson Raphaelson (3), Clifford Odets (3), and the playwrighting duo, Jerome Chodorov and Joseph Fields (2).

A complete list of sixty-two plays of Jewish authorship listed by Mantle as among the ten plays of their respective years follows: (These lists, of course, represent only the views of one critic, and numerous exceptions to Mantle's choices were registered through the years. Nevertheless, the choices are a fair approximation of critical opinion.)

1909-1919: *On Trial*, by Elmer Rice (1914); *The Unchastened Woman*, by Louis K. Anspacher (1915)
1920-21: *Liliom*, by Ferenc Molnár
1921-22: *Dulcy*, by George S. Kaufman (with Marc Connelly); *Ambush*, by Arthur Richman
1922-23: *Merton of the Movies*, by George S. Kaufman (with Marc Connelly)
1923-24: *Beggar on Horseback*, by George S. Kaufman (with Marc Connelly); *The Swan*, by Ferenc Molnár
1924-25: *The Firebrand*, by Edwin Justus Mayer; *Dancing Mothers*, by Edgar Selwyn and Edmond Goulding; *Minick*, by George S. Kaufman and Edna Ferber
1925-26: *The Dybbuk*, by S. Ansky; *The Butter and Egg Man*, by George S. Kaufman
1926-27: *The Play's the Thing*, by Ferenc Molnár (with P. G. Wodehouse)
1927-28: *The Royal Family*, by George S. Kaufman and Edna Ferber
1928-29: *Street Scene*, by Elmer Rice; *The Front Page*, by Ben Hecht (with Charles MacArthur)
1929-30: *The Last Mile*, by John Wexley; *June Moon*, by George S. Kaufman (with Ring Lardner)
1930-31: *Once in a Lifetime*, by George S. Kaufman and Moss Hart; *Five Star Final*, by Louis Weitzenkorn; *Grand Hotel*, by Vicki Baum
1931-32: *Of Thee I Sing*, by George S. Kaufman and Morrie Ryskind, with music and lyrics by George and Ira Gershwin; *The Left Bank*, by Elmer Rice; *Another Language*, by Rose Franken; *Brief Moment*, by S. N. Behrman; *The Devil Passes*, by Benn W. Levy
1932-33: *Dinner at Eight*, by George S. Kaufman and Edna Ferber; *Biography*, by S. N. Behrman; *We the People*, by Elmer Rice
1933-34: *Men in White*, by Sidney Kingsley; *They Shall Not Die*, by John Wexley; *Wednesday's Child*, by Leopold Atlas
1934-35: *The Children's Hour*, by Lillian Hellman; *Accent on Youth*, by Samson Raphaelson; *Merrily We Roll Along*, by George S. Kaufman and Moss Hart; *Awake and Sing*, by Clifford Odets
1935-36: *End of Summer*, by S. N. Behrman; *First Lady*, by George S. Kaufman (with Katherine Dayton); *Boy Meets Girl*, by Bella and Samuel Spewack; *Dead End*, by Sidney Kingsley
1936-37: *You Can't Take It with You*, by George S. Kaufman and Moss Hart; *Stage Door*, by George S. Kaufman and Edna Ferber; *Excursion*, by Victor Wolfson
1937-38: *Amphitryon 38*, by S. N. Behrman; *Golden Boy*, by Clifford Odets
1938-39: *The Little Foxes*, by Lillian Hellman; *Rocket to the Moon*, by Clifford Odets; *The American Way*, by George S. Kaufman and Moss Hart; *No Time for Comedy*, by S. N. Behrman
1939-40: *The World We Make*, by Sidney Kingsley; *The Man Who Came to Dinner*, by George S. Kaufman and Moss Hart; *Skylark*, by Samson Raphaelson
1940-41: *Watch on the Rhine*, by Lillian Hellman; *Lady in the Dark*, by Moss Hart; *My Sister Eileen*, by Jerome Chodorov and Joseph Fields; *Flight to the West*, by Elmer Rice; *George Washington Slept Here*, by George S. Kaufman and Moss Hart; *Claudia*, by Rose Franken
1941-42: *Junior Miss*, by Jerome Chodorov and Joseph Fields; *Jason*, by Samson Raphaelson

George Sidney (left) in a scene from "We Americans"

The collaborator-director George S. Kaufman was deemed the most successful of this group of playwrights. Actively concerned with the American theatre for twenty-five years, Kaufman wrote his first play while serving as a dramatic editor of the New York *Times*. Of the thirty-odd plays in the authorship of which he had a hand, he wrote only one of them, *The Butter and Egg Man,* without a collaborator. Among his most regular and most successful collaborators were Marc Connelly, Edna Ferber and Moss Hart. Other collaborators were Morrie Ryskind, with whom he collaborated on the Pulitzer Prize play, *Of Thee I Sing,* Ring Lardner, Alexander Woollcott and Katharine Dayton. Because he is essentially a collaborator, Kaufman presents a most difficult problem in evaluation. That he is a magnificent theatrical technician, one of the best "play doctors" in the modern theatre, is unquestionable. His particular personal forte is generally conceded to be satire. Aside from his skill as a playwright, he is unquestionably one of the finest directors of satirical comedy, and a man in no small measure responsible for the brittle, staccato-like dialogue that was one of the outstanding developments in the American theatre from 1921 on.

One of the most distinguished of modern Jewish playwrights is Elmer Rice, who gave up the profession of law following his successful authorship of *On Trial* in 1914. This play was the first to utilize the flash-back technique of the cinema. Very likely, Elmer Rice's greatest play was *Street Scene,* produced in 1928-29. This epitomized the "slice of life" realism in the theatre that was so popular at the time. Although Burns Mantle did not choose it as one of the ten best plays of the 1931-32 season (Mantle preferring Elmer Rice's *The Left Bank*), many critics believe that *Counselor-at-Law,* produced that season, was one of Rice's finest plays. Certainly it is of particular interest to Jews because it tells the familiar success story of the Jewish boy from the East Side who attained fame as a successful lawyer. *The Adding Machine* (1923) is one of the best examples of the expressionistic theatre written by an American. Other well-known Rice plays are *For the Defense* (1919), *We the People* (1932-33), *Between Two Worlds* (1933-34), *Judgment Day* (1934-35), *The American Landscape* (1938), *Two on an Island* (1940), and *Flight to the West* (1940-41). Rice is one of the group of playwrights who organized the Playwrights' Company in 1938. He directed a number of plays thereafter. Of late years Rice concerned himself with topical subject matter that may or may not be called propagandistic. In any case, he failed to achieve the critical and popular acclaim of *Street Scene* and *Counselor-at-Law* with his later plays.

Sidney Kingsley, third of the Jewish Pulitzer Prize winning playwrights, achieved this honor with his first play, *Men in White* (1933-34), a realistic drama of hospital life. It did for a hospital something of the same thing that Elmer Rice did for a neighborhood in *Street Scene.* Kingsley thereafter wrote *Dead End* (1935-36), *Ten Million Ghosts* (1936), *The World We Make* (1939-40), and *The Patriots,* a play about Thomas Jefferson, which was produced in New York early in 1943. *Dead End* was in the same realistic "slice of life" pattern as *Men in White,* and was a huge success. This was a story of a group of juvenile gangsters. It was one of the finest plays of social significance written in the American theatre. *The Patriots,* finished while Kingsley was serving as a sergeant in the United States Army, told the story of the Jefferson-Alexander Hamilton feud in terms of the modern problem of democracy versus plutocracy. Kingsley became the first Jewish playwright to be honored by both the Pulitzer Prize Committee and the New York Drama Critics' Circle when *The Patriots* was chosen as the best play of the 1942-43 season by the New York Drama Critics' Circle. The latter play won also the medal of the Theatre Club and the Page One Award of the New York Newspaper Guild.

Moss Hart, who achieved Pulitzer distinction as the collaborator with George S. Kaufman of *You Can't Take It with You,* was for many years best known as a collaborator. However, he earned considerable acclaim as a soloist with the authorship of *Lady in the Dark* (1940-41), a play based upon the experiences of a woman undergoing psychoanalysis. Hart's first produced play was *Once in a Lifetime* (1930-31), the original script of which he took to Kaufman. A satire on the motion picture industry, it was a huge success. Other Kaufman and Hart collaborations include *Merrily We Roll Along* (1934-35), the Pulitzer Prize winner *You Can't Take It with You* (1936-37), *The American Way* (1938-39), *The Man Who Came to Dinner* (1939-40), and *George Washington Slept Here* (1940-41). Hart also collaborated with Irving Berlin on musicals. In 1943 he prepared a play about the air forces for the Army Emergency Relief Fund.

S. N. Behrman, who successfully made the jump from press agent to playwright, is generally recognized as the writer of the best dialogue in the modern American theatre. His plays are invariably long on dialogue and short on plot. He is the acknowledged master of the modern comedy of manners. His first play to achieve critical acclaim, and one of his best plays, was *The Second Man* (1927), a play which was written years earlier, but for which Behrman had trouble finding a producer. Previous to the presentation of *The Second Man,* Behrman was the collaborator on three plays, none of which was particularly successful. He followed *The Second Man* with *Serena Blandish* in collaboration with Ruth Gordon (1928), *Meteor* (1929), *Brief Moment* in collaboration with Alexander Woollcott (1931-32), *Biography* (1932-33), *Rain From Heaven* (1934), *The End of Summer* (1935-36), *Wine of Choice* (1937), *No Time for Comedy* (1938-39), *The Talley Method* (1940-41) and *The Pirate* (1942-43). His play *Rain From Heaven* was one of the most successful plays dealing with Nazi persecution of Jews. Behrman, who is also one of the organizers of the Playwrights' Company, did much writing also for motion pictures. His best screen plays include *Queen Christina* and the adaptation of *A Tale of Two Cities.*

Lillian Hellman, although not the most prolific playwright, is one of the most successful. Three of her four produced plays achieved critical and popular acclaim: *The Children's Hour* (1934-35), *The Little Foxes* (1938-39) and *Watch on the Rhine* (1940-41). Many well-known critics believed that any or all of these plays should have been Pulitzer winners, although none of them achieved this honor. *Watch on the Rhine,* however, was a 1940-41 choice of the New York Drama Critics' Circle for the best American play of the year. Miss Hellman, who was one-time play reader for the producer Herman Shumlin, did considerable writing also for the screen, among them *These Three,* an adaptation of *The Children's Hour, The Dark Angel,* and *Dead End.* She writes with a powerful acid pen on topics of extreme social significance. Her plays are well represented in all theatrical anthologies, and at the youthful age of thirty-eight (1943) she was one of the best American dramatists.

Clifford Odets is another serious young playwright who writes with passion on the serious social issues of the day. His one-act play, *Waiting for Lefty,* the story of a taxi strike in New York city, became overnight one

of the most discussed one-act plays of the 20th cent. when it was produced in 1934. Some months later he received wide acclaim also for his first full-length play, *Awake and Sing,* the story of a middle-class Bronx Jewish family and the pangs of its awakening to a social consciousness. Thereafter Odets wrote *Paradise Lost* (1935), *Golden Boy* (1937-38), *Rocket to the Moon* (1938-39), *Night Music* (1940-41), *Clash by Night* (1941), and the adaptation of a Soviet play, *The Russian People* (1942-43). The appearance of Odets on the American theatrical scene was hailed by the dramatic critics with a greater enthusiasm than that of any playwright since the emergence of Eugene O'Neil. His technique has been likened to that of Chekov, but, aside from *Golden Boy,* his later plays have not achieved the full promise that was heralded in *Waiting for Lefty* and *Awake and Sing.*

John Wexley is another young Jewish playwright who devoted his playwrighting to the espousal of the cause of the persecuted. His most successful play, *They Shall Not Die* (1933-34), was a dramatization of the Sacco-Vanzetti case. Previously produced Wexley plays were the highly successful *The Last Mile* (1929-30), a drama dealing with a prisoner's last few days in the death house, and *Steel,* an unsuccessful play dealing with labor unrest.

Jewish playwrights generally have been among the leaders in the drama of social doctrine. Aside from those already mentioned, there have been numerous others, including John Howard Lawson, Albert Bein, Albert Maltz, George Sklar, Arthur Arent, Em Jo Basshe, Irwin Shaw and Michael Gold.

John Howard Lawson wrote a play in 1925 that created great discussion, *Processional.* It was one of the earliest of the plays of social doctrine, and it was written in the expressionistic technique of the German post-war writers. At that time Lawson was the white-haired boy of the critics. He wrote some half-dozen plays thereafter: *International* (1928), *Success Story* (1932), *The Pure in Heart* (1934), *Gentle Woman* (1934) and *Marching Song* (1936). Most successful of these later plays was *Success Story,* the story of the rise and fall of a Jewish businessman. He did considerable writing also for the screen.

Irwin Shaw was credited with having written the most successful of the anti-war plays during the pacifist era in American history, *Bury the Dead.* This was a long one-act play in which the dead refused to stay dead and arose from their tombs to speak their piece against war. It was the talk of the year. Shaw wrote other plays thereafter—*Retreat to Pleasure, Siege,* and *The Gentle People*—and wrote also for the motion pictures, but nothing he wrote thereafter achieved the acclaim of *Bury the Dead.*

Albert Maltz and George Sklar wrote another of the anti-war plays of the same era, *Peace on Earth,* produced in 1933 by the Theatre Union, a group of young liberal playwrights. This play dealt with the difficulties of a young college professor who taught pacifism. Sklar and Maltz wrote also another play, *Merry Go Round* (1932), a story of New York's political corruption. In 1934 Sklar was co-author of *Stevedore,* and in 1935 Maltz wrote *Black Pit,* a story of the Pennsylvania coal miners. All these plays were produced by the Theatre Union. In 1934 a play by Leopold Atlas, *Wednesday's Child,* achieved the distinction of selection by Burns Mantle as one of the ten best plays of the year. It was one of the best presentations of the problem of a child of divorce. Albert Bein wrote *Little Ole Boy* (1933), a poignant story of life in a reformatory, and *Let Freedom Ring* (1935), the story of a textile strike, the best play about labor unions that has been written.

Although they may have been written with less passion than the group of plays just discussed, there was more craftsmanship in the plays of another group of Jewish authors, a group that includes Rose Franken, Bella and Samuel Spewack, Arthur Kober, Samson Raphaelson, Jerome Choderov and Joseph Fields, Edward Choderov, Ben Hecht and Edna Ferber.

Rose Franken wrote two plays, both of which have been very successful studies of family life, and both of which were selected as one of the ten best plays of their respective years. *Another Language* was produced in 1931-32, and *Claudia* in 1940-41.

Edna Ferber, although essentially a novelist, collected considerable theatrical royalties as a collaborator with George S. Kaufman. Among the most successful Kaufman-Ferber collaborations were *Minick* (1924-25), *The Royal Family* (1927-28), *Dinner at Eight* (1932-33), *Stage Door* (1936-37), and *The Land Is Bright* (1941-42).

Bella and Samuel Spewack, a husband and wife playwrighting team who had previously written *Clear All Wires* (1932), the experiences of a foreign correspondent in Moscow, and *Spring Song* (1934-35), a sentimental memoir of a New York East Side Jewish family, wrote *Boy Meets Girl* (1935-36), one of the most sensational comedy hits of the 1930's. The Spewacks did also considerable motion picture writing.

Three very successful one-play playwrights were Arthur Kober, with *Having a Wonderful Time* (1937), a comedy of a Jewish adult camp in the Catskills; Louis Weitzenkorn, a newspaper man who wrote an exposé of tabloid journalism, *Five Star Final* (1930); and Gertrude Tonkonogy, whose *Three Cornered Moon* was the story of an eccentric family.

Samson Raphaelson turned out successful plays after he first appeared on the scene with *The Jazz Singer,* a play which starred George Jessel on the stage, and gave Al Jolson his greatest role in the talking motion pictures. Other Raphaelson plays were *Young Love, Accent on Youth* (1934-35), *Skylark* (1939-40), and *Jason* (1941-42), the last three of which were chosen by Burns Mantle as one of the ten best plays of their respective years.

A new playwrighting combination emerged in the 1940-41 season when Jerome Chodorov and Joseph Fields wrote *My Sister Eileen,* a play based upon a series of sketches that originally appeared in the *New Yorker.* This play ran for several years, and while it was still current, another, *Junior Miss,* emerged in the 1941-42 season, also an adaptation from a series of sketches in the *New Yorker.* Early in 1943 Fields wrote a hit play of his own, *The Dough Girls.* Both Chodorov and Fields did considerable successful scenario writing in Hollywood. Chodorov's older brother, Edward Chodorov, who in 1943 was an associate producer and writer in Hollywood, also wrote plays, among them a fine mystery, *Nice Lady.* Other American 20th cent. playwrights who deserve particular mention are: Ben Hecht, who collaborated with Charles MacArthur on *The Front Page* (1928-29) and *Twentieth Century* (1932); an English playwright, Benn W. Levy, who was represented in America with such plays as *The Devil Passes* (1931-32) and *Mrs. Moonlight;* the Viennese, Ferenc Molnár, who gave America such hits as *Liliom* (1921), *The Swan* (1923-24) and *The Play's the Thing* (1926-27); Victor Wolfson, an actor who wrote a very fine play, *Excursion* (1936-37); Edwin Justus Mayer, who wrote the very successful plays *The Firebrand* (1924-25) and *The Children of Darkness,* the former a historical play of medieval Venice and the latter of medieval England; and Louis K. Anspacher, who wrote many plays in the early years of the 20th

cent., the most famous of which was *The Unchastened Woman* (1915).

Still other Jewish playwrights who had plays produced on Broadway are Annie Nathan Meyer, Beatrice Kaufman, Rita Weiman, Rita Wellman, Theresa Helburn, Leonardo Bercovici, Marc Blitzstein, Gladys Unger, S. L. Craft, Norman Krasna, Montague Glass, Lawrence Langer, Herman J. Mankiewicz, Dr. William I. Sirovich, Hyman Adler, Bertram Bloch, Allen Boretz, Lowell Brentano, Alter Brody, Arthur Caesar, Lester Cohen, Octavus Roy Cohen, Gustav Davidson, Irving K. Davis, Nat N. Dorfman, Julius J. Epstein, Philip Epstein, Chester Erskin, Michael Gold, I. J. Golden, Samuel R. Golding, Jules Eckert Goodman, Elmer Greensfelder, Milton Herbert Gropper, Aben Kandel, Isaac and Michael Louis Landman, Milton Lazarus, Melvin P. Levy, David Liebovitz, Clara Lipman, Richard Maibaum, Frank Mandel, Wallace A. Mannheimer, Max Marcin, Edwin J. Mayer, Philip Moeller, W. J. Perlman, Allen Rivkin, Daniel Rubin, Maurice V. Samuels, Bernard C. Schoenfeld, Harry Segall, Bernard Sobel and Victor Wolfson.

Song Writers. A talented group of Jewish writers, composers and lyricists were concerned with the creation of the modern musical comedy. Among the very top flight names were Irving Berlin, George and Ira Gershwin, Richard Rodgers and Lorenzo Hart, Sigmund Romberg, Oscar Hammerstein II and Otto Harbach, Howard Dietz, Arthur Schwartz, David Freedman, Moss Hart, Morrie Ryskind, Jerome Kern, Dave Stamper, Irving Caesar, Jean Schwartz, Sid Silver, Bert Kalmer and Harry Ruby.

Perhaps the single outstanding musical comedy in the 20th cent. was the Irving Berlin production *This Is The Army,* presented by no less a producer than "Uncle Sam." In the course of a coast to coast tour (1942-43) of less than a year, this successor to Berlin's *Yip, Yip Yaphank* of the first World War netted over two million dollars for Army Emergency Relief, the owners of the rights to the show. Berlin wrote the words and music also for the very successful *Music Box Revues, Jubilee,* and numerous other musicals. Among his collaborators was Moss Hart.

George Gershwin was the greatest musician to emerge from the field of popular music. Aside from his almost operatic *Porgy and Bess,* Gershwin wrote the music for several editions of *The Scandals, Lady Be Good, Oh Kay,* and others too numerous to mention. Working with George Gershwin as his lyricist was his brother, Ira. Following the death of George Gershwin, Ira teamed up with Kurt Weil to do the music and lyrics for Moss Hart's *Lady in the Dark.*

Also in the very upper rung of musical comedy composers is Jerome Kern. Starting with *Very Good Eddie* (1915), Kern wrote the musical scores for such successes as *Sally, Sonny, Show Boat, The Cat and the Fiddle, Music in the Air,* and *Roberta.*

Richard Rodgers and Lorenzo Hart, known as the 20th cent. Gilbert and Sullivan, turned out a succession of hit musicals almost without parallel. Starting with *The Garrick Gaieties,* they wrote the music and lyrics for such productions as *Dearest Enemy, A Connecticut Yankee in King Arthur's Court, Peggy Ann, Pal Joey, Jumbo, On Your Toes* and *The Boys From Syracuse.*

Sigmund Romberg, who composed the music for some seventy operettas, among them *May Wine, The Blue Paradise, Student Prince, The New Moon, Maytime, Desert Song* and *Louis XIV,* was outstanding in the field of operettas.

Herbert and Dorothy Fields wrote the books and lyrics for countless musicals. In many cases they teamed up with such composers as Rodgers and Hart and Cole Porter. Among their hits were *Let's Face It* and *DuBarry Was a Lady.*

Howard Dietz, a vice-president in charge of advertising for Metro-Goldwyn-Mayer Pictures, collaborated on many musicals and revues with the songwriter Arthur Schwartz. Among them were *At Home Abroad, Revenge with Music* and *The Little Shows.*

Dave Stamper and David Freedman wrote considerable material for the *Ziegfeld Follies* and for the Eddie Cantor shows. Oscar Hammerstein II, who generally worked with Otto Harbach, collaborated with Jerome Kern on *Showboat* and with Rudolf Friml (a non-Jew) in the writing of the operetta *Rose Marie.*

One of the earliest Jewish theatrical producers and managers was Aaron J. Phillips, of New York (1778-1846). In 1829 to 1830 Phillips managed the Arch Street Theatre in Philadelphia, where he presented a play by Mordecai Manuel Noah, *The Grecian Captive.* A nephew, Moses S. Phillips (1798-1854), also served as a director-manager in various American cities. Both Aaron J. Phillips and Moses S. Phillips were also actors.

Producers. The business organization of the American theatre along the general pattern that we know today was largely the work of a group of Jewish producers which included Abraham Erlanger, Marc Klaw, Charles Frohman, Daniel Frohman, David Belasco and Sam, Lee and J. J. Shubert. In 1896 the Frohman brothers, David Belasco, and Al Hayman joined the firm of Klaw and Erlanger in what came to be known as the "syndicate," an organization which at one time controlled as many as 500 American theatres, and which, until the advent of the Shuberts, held almost complete sway in the production and booking of theatrical enterprises.

The firm of Klaw and Erlanger, which was founded in 1888 and dissolved in 1919, started with the management of the Augustine Daly Company, starring John Drew. The firm later assumed the management of the German Opera Company under the direction of Walter Damrosch. Klaw and Erlanger were the producers of such great hits as *Ben Hur, Kismet, Humpty-Dumpty, Sleeping Beauty, Trail of the Lonesome Pine* and *The Christian.*

All the members of this early group, Klaw, Erlanger, the Frohmans, and David Belasco, were closely interrelated with each other. Klaw's first association with the theatre followed a legal contact with Gustav Frohman, brother of Charles Frohman. Daniel Frohman brought David Belasco to New York as his stage manager.

The greatest producer of them all was undoubtedly Charles Frohman, who made his first production in 1883, *Strangers of Paris,* an adaptation of a French melodrama by David Belasco. The first production was a failure, as was Frohman's next venture, the organization of road tours for the productions of Lester Wallack. In 1885 Frohman organized two firms, one to book plays throughout the country and the other to produce plays. Frohman was successful from the beginning as a booker, but he did not achieve production success until 1889 with a play by Bronson Howard, *Shenandoah.* The Frohman booking interests were merged in 1896 with Klaw and Erlanger to produce the "syndicate."

Frohman's successful production started in 1890 with the organization of the Charles Frohman Stock Company, with John Drew as the star. In 1893 Frohman acquired his own theatre, The Empire. In 1897 he leased the Duke of York's theatre in London, becoming the first American producer to achieve importance outside of the United States. By 1901 he had an interest in five English theatres. In all, Charles Frohman produced 125 plays in London and 400 plays in the United States

before he lost his life in 1915 when the *Titanic* hit an iceberg. A partner with Charles Frohman during his entire career was Al Hayman, who was a partner also in the Klaw and Erlanger "syndicate." The fifty-year old Empire theatre has probably the greatest theatrical history of any theatre in New York, and a good part of it stems from the production career of Charles Frohman. Among the famous actors appearing under the Frohman management were John Drew, William Gillette, William Faversham, Henry Miller, William Collier, Otis Skinner, Maude Adams, Ethel Barrymore, Mrs. Patrick Campbell and Ellen Terry. Among the plays which he produced were *Charlie's Aunt* (1893), Edmond Rostand's *L'Aiglon* (1900), John Galsworthy's *Justice* (London, 1910), James M. Barrie's *Peter Pan* (London, 1904; New York, 1905), William Gillette's *Secret Service* (1896), Gillette's adaptation of Conan Doyle's *Stories of Sherlock Holmes* (1899), Arthur Wing Pinero's *The Second Mrs. Tanqueray* (1902), and Clyde Fitch's *Captain Jinks of the Horse Marines* (1907). Frohman introduced John Galsworthy, Oscar Wilde and Somerset Maugham to the American public. Perhaps the name most intimately associated with the Frohman production career was that of Maude Adams. Besides her role in *Peter Pan,* Miss Adams played in Barrie's *The Little Minister* (1897), Rostand's *L'Aiglon* (1900) and Rostand's *Chanticleer* (1911).

Concurrent with Charles Frohman's career was that of his older brother, Daniel Frohman, whose career is associated with the management of the Lyceum Theatre, a theatre almost as famous in theatrical annals as the Empire. Among the stars who became famous under the management of Daniel Frohman were William Faversham, Henry Miller and E. H. Sothern. Other stars who played under his management were Maude Adams, William Gillette, James K. Hackett and Helena Modjeska. Daniel Frohman retired from active management in 1915 following the death of Charles Frohman. In 1933 he emerged from retirement to present unsuccessfully an English version of the Yiddish play *Yoshe Kalb.* In 1882 Daniel Frohman helped to establish the Actors' Fund of America, of which he was president from 1903 until his death in 1940. The Frohman brothers became associated with the Famous Players Film Company, which later merged with Paramount, and were thus motion picture pioneers. Among the early films with which the Frohmans had a connection were *Queen Elizabeth* (with Sarah Bernhardt), *The Prisoner of Zenda* (with James K. Hackett), and *A Good Little Devil* (with Mary Pickford).

A. L. Erlanger made his first success in the theatre as the manager for such stars as Joseph Jefferson, who became famous as Rip Van Winkle, and Effie Ellsler. Erlanger is reputed to have been the business genius who was responsible for the great success of the Klaw-Erlanger "syndicate." Following the dissolution of the Klaw and Erlanger firm in 1919, Klaw built a theatre which he named for himself, and produced such plays as *The Yellow Jacket* and *Hell Bent for Heaven.* For many years Klaw was president of the United Managers' Production Association of America, and Erlanger was president of the International Theatrical Association. Klaw and Erlanger may be said to have been the business management for such production greats as Florenz Ziegfeld, David Belasco and Charles Frohman. Another man of great importance in the Klaw and Erlanger setup was Marcus Heiman.

With the coming to New York of the Shuberts in 1900, the Klaw and Erlanger "syndicate" met its first real competition. The Shubert brothers first managed the Herald Square Theatre, and later took over such theatres as the Casino, the Princess, the Hippodrome and the Majestic. In 1931 they controlled thirty-one theatres in New York and sixty-three others throughout the country. In all, the Shuberts produced over 400 plays and had financial interests in many more. Except for big operettas and such musical revues as *The Passing Shows* and the Al Jolson musicals, the Shuberts were largely content to finance and manage theatrical productions rather than actually to make productions themselves.

The Theatre Guild, which was founded and directed for many years by a board of which five out of six members were Jewish—Theresa Helburn, Lawrence Langner, Maurice Wertheim, Lee Simonson and Philip Moeller—was the production organization which had the greatest influence on the American theatre during the past twenty-five years (1915-42). More recently the Guild direction was entirely in the hands of Miss Helburn and Langner. Producing six plays each year for over twenty-five years, the Theatre Guild brought the best of the European theatre to the United States, encouraged serious American playwrights, and unquestionably raised the level of American production. The Guild was the American producer for George Bernard Shaw, and introduced most of his plays to the American theatre. The Guild also secured a niche for itself in the annals of the American theatre as the producer for Eugene O'Neill. The Guild may be said to have brought to the American theatre the courage and innovations of the "little theatre" movement.

Also prominent as theatrical producers were the Selwyn Brothers—Edgar and Arch. In bringing *Charlot's Revue* to the United States, the Selwyns first introduced Gertrude Lawrence, Beatrice Lillie and Noel Coward to American audiences. The Selwyn Company, in which the two brothers were partners, was dissolved in 1924. As an independent producer, Edgar Selwyn thereafter presented such hit shows as *Gentlemen Prefer Blondes* (1925), *The Barker* (1927) and *Strike Up the Band* (1930). Author of more than thirty plays, he did considerable writing also for the motion pictures.

Sam H. Harris, who was for many years a partner with George M. Cohan, was another great theatrical producer. The firm of Cohan and Harris produced many plays, a large number of which were written by George M. Cohan. Among this group were *Little Johnny Jones, Forty-five Minutes from Broadway, Seven Keys to Baldpate* and *Get Rich Quick Wallingford.* Following the dissolution of the Cohan-Harris partnership, when the pair split up in 1919 over the Equity fight, Harris became an individual producer. With Irving Berlin he built the Music Box Theatre and produced the successful *Music Box Revues,* and other Irving Berlin productions. He also associated himself with the most successful of all Broadway playwright-directors, George S. Kaufman. Harris was the producer of three Pulitzer Prize plays, *Icebound* (1923), *Of Thee I Sing* (1932) and *You Can't Take It with You* (1937). He was also the producer of such hits as *Rain, Chicago, June Moon, Once in a Lifetime, The Man Who Came to Dinner* and *Lady in the Dark.*

Jed Harris, who in 1926 produced *Broadway,* achieved great fame as a producer. In quick succession Harris produced such other successes as *Coquette* (1927), *The Front Page* (1928) and *The Royal Family* (1928). In 1938 Harris produced the Pulitzer Prize winner, Thornton Wilder's *Our Town.* Other Harris hits were *Uncle Vanya* (1930), *The Green Bay Tree* (1933) and *The Doll's House* (1937).

Herman Shumlin was the most successful of the later day producer-directors. Two plays produced by him during the 1940-41 season, *Watch on the Rhine* and *The Corn Is Green,* won the acclaim of the New York Drama Critics' Circle as the best plays of American and foreign authorship produced during that year. Shumlin was the producer also of *Grand Hotel, The Last Mile, The Children's Hour* and *The Little Foxes.* He produced comparatively few plays, but generally ones of high artistic calibre.

Max Gordon was another successful and high class producer. Coming to the theatre from vaudeville, Gordon launched his career as an independent producer with the musical *Three's a Crowd* (1930). Among his other productions were Noel Coward's *Design for Living* (1932), *The Farmer Takes a Wife* (1934), *Pride and Prejudice* (1935), *Ethan Frome* (1936), *Dodsworth, The Bandwagon, The Land Is Bright, Spring Song, My Sister Eileen* (1940), *Junior Miss* (1941) and *The Dough Girls* and *Men in Shadow* (1942-43).

There were many other Jewish producers, among them Alex Aarons and Vinton Freedly, producers of many of the Gershwin musicals; Billy Rose, producer of *Jumbo* and other huge spectacles; Alex Yokel, who made a fortune with *Three Men on a Horse* (1934-35); Oscar Serlin, producer of one of the most successful plays in American history, *Life with Father* (1939-), and *The Moon Is Down* (1942); Harry Moses, producer of the Pulitzer Prize winner *The Old Maid* (1934-35); Schwab and Mandel, producers of musicals; Shepard Traube, producer of the highly successful *Angel Street* (1941); Arthur Hammerstein, producer of *Rose Marie* and other successful musicals; A. H. Woods, veteran producer of mysteries and bed-room farces; Horace Liveright, the book publisher, who produced such successes as *An American Tragedy* and *The Firebrand;* Sam Grisman, producer of the longest running play in history, *Tobacco Road;* Sam Forrest, who for many years was the production man with George M. Cohan; and Adolph Klauber, Bela Blau, Sidney Harman, Jacob Weiser, James Ullman, Alfred Bloomingdale and Oscar Serlin.

A number of producers made it a practice to direct their own productions, among them David Belasco, Charles Frohman, Daniel Frohman, Edgar Selwyn, and, more recently, Herman Shumlin. By and large, it is impossible to separate their production from their directorial careers. Sometimes they directed shows for other producers. In any case, the men in this group are among the finest of Jewish directors. Three of the Theatre Guild's board of directors served also as directors of individual plays: Philip Moeller, Theresa Helburn and Lawrence Langner. In the course of his many years of association with the Theatre Guild, Moeller directed most of the Eugene O'Neill plays.

George S. Kaufman, who directed almost all of his own thirty-odd collaborative efforts, as well as many others, was the most successful director of the first half of the 20th cent. Kaufman's particular forte was the direction of satirical comedy. One of his collaborators, Moss Hart, followed Kaufman's footsteps as a director. The two directors of the Group Theatre, Lee Strassberg and Harold Clurman, had a long record of successful direction for other producers, as well as for the Group Theatre. Strassberg directed the Pulitzer Prize winner, *Men in White.* Harold Clurman gave a true Chekov touch to Clifford Odets' *Awake and Sing.*

Max Reinhardt, known principally as a European stage director, and in the United States as a motion picture director, did some work also for the American stage. Another Russian who achieved considerable directorial acclaim in the United States was Leo Bulgakov. For a brief three or four year period, during which time he became managing director of the Charles Frohman Company, Chester Erskin startled Broadway with his realistic direction of such productions as *Subway Express* and *The Last Mile.* Playwright Elmer Rice did considerable direction of his own plays, as well as plays of other authors. Shepard Traube, after dabbling in the theatre for over a decade, became an overnight success as a director, with his handling of *Angel Street* (1941). Elia Kazan handled one of the most difficult assignments in the modern theatre in Thornton Wilder's play *Skin of Our Teeth,* and *The Patriots* (1943).

Actors. There were Jewish actors on the American stage from the beginning of the 19th cent. Aaron J. Phillips and his nephew, Moses S. Phillips, devoted themselves to the theatre as both actors and managers. Aaron J. Phillips enacted a role in Mordecai Manuel Noah's *The Grecian Captive* at the Arch Street Theatre in Philadelphia, where it was presented in 1829. Moses S. Phillips made his stage debut in New York in 1827 at the Park Street Theatre. Edmund Kean, one of the greatest of the English tragedians (whose Jewishness is problematical), made an American tour from 1820 to 1826. Kean is considered one of the great Shylocks in the history of the English theatre.

Adah Isaacs Menken, well-known as a poetess and one of the most romantic and colorful figures of the middle 19th cent., was a theatrical sensation of the day as Mazeppa in the adaptation of the Byron play when it was presented in the United States in 1861 and in England in 1864.

Sarah Bernhardt, one of the greatest actresses in the history of the theatre, made several American tours, the first of which was from 1880 to 1882. Shortly before her death in 1923, while in her seventies, Mlle. Bernhardt played *Hamlet* in the United States.

David Warfield was the first great Jewish star of purely American origin. Making his debut in San Francisco in 1889 and in New York in 1890, he was one of the real "greats" of the American stage until he retired in 1924. In the early years of his career he was a dialect comedian playing with Weber and Fields in their Music Hall. Beginning with 1900, when he played in the Belasco production of *The Auctioneer,* Warfield established himself as a star on the dramatic stage. Warfield followed *The Auctioneer* (1900-3) with perhaps his greatest success, *The Music Master,* in which he played from 1903 to 1907 and from 1917 to 1918. Another great success was *The Return of Peter Grimm* (1911). In 1922 Warfield played Shylock in *The Merchant of Venice* for the longest run ever achieved by that Shakespearean play in the history of the American stage.

The first of a long line of great Jewish comics was the team of Weber and Fields, Lew Fields and Joe Weber. This team made its first appearance on the stage in 1877, playing small variety theatres. Later they were the free entertainment at Duffy's Pavilion in Coney Island. By 1885 they formed their own company of musical comedy players, and in 1896 became the proprietors of the Broadway Music Hall, which became generally known as Weber and Fields' Music Hall. The Weber and Fields partnership was dissolved in 1904, but they reunited briefly in 1922, and again in 1941, when they appeared in a motion picture. Among their most famous successes were *The Geezer, Under the Red Globe,* and *Pousse Cafe.* Both Weber and Fields also appeared individually in many musicals.

Al Jolson, who for many years was end man with

Dockstader's minstrel show, was one of the first great blackface comedians in musical comedy. As Gus he played in a succession of hit musicals at New York's Winter Garden Theatre. These shows included *Robinson Crusoe, Jr., Sinbad, Bombi* and *Big Boy*. Shortly before Jolson decided to devote most of his time to the talking pictures, and later to the radio, the Shuberts built the Jolson Theatre in his honor. Other Jolson starring productions were *The Wonderbar* and *Hold on to Your Hats* (1940).

Another great singing comedian who started in the blackface manner of Jolson was Eddie Cantor. He made his New York debut in the *Ziegfeld Midnight Frolics* of 1917, and played in the annual *Follies* for a number of years thereafter. Two other Ziegfeld productions in which he starred, among his greatest successes, were *Kid Boots* and *Whoopee*. Cantor returned to the Broadway stage after a thirteen-year absence, during which time he devoted himself to the screen and radio, with the successful *Banjo Eyes* (1941).

Cantor and Jolson were the most successful of the Jewish musical comedy stars, but among their contemporaries there were also many others, among them Lou Holtz, George Jessel, Ed Wynn, Phil Baker, Willie and Eugene Howard, Bert Lahr, Milton Berle and Danny Kaye. The last two mentioned became stars in the 1940's, Danny Kaye with his performance in *Lady in the Dark* (1940) and *Let's Face It* (1941), and Milton Berle in *The Ziegfeld Follies* (1943).

During this same period Fannie Brice was an outstanding Jewish musical comedy comedienne. Making her debut in 1906, Miss Brice was the star of the *Ziegfeld Follies* from 1910 to 1924. In 1924 she starred in the *Music Box Revue*. Thereafter she appeared in *Fioretta* (1928), *Sweet and Low* (1931), and *Crazy Quilt* (1933). In 1926 Miss Brice appeared in the Belasco production of *Fannie,* in which she scored as a dramatic star. More recently she devoted herself almost completely to her radio career as "Baby Snooks."

After many years in vaudeville, the Marx Brothers—Groucho, Harpo and Chico—were musical comedy and moving picture favorites in the decade from 1932, when they made their Broadway debut in *Animal Crackers,* until 1942, when they dissolved partnership. Other Marx Brothers hits were *Monkey Business, Horse Feathers,* and *Duck Soup*.

Bertha Kalich, who originally came from the Yiddish stage, starred on Broadway from 1905 to 1931 in such productions as *Fedora, Monna Vanna, Kreutzer Sonata,* and *Jetta's Atonement*.

Louis Mann, who scored his first hit in 1891 with *Incog,* was a well-known German-dialect comedian. In many of these productions he teamed up with Sam Bernard. His starring production, *Friendly Enemies,* was seen in 1918 by President Woodrow Wilson. Mann co-starred with his wife, Clara Lipman Mann, in many plays, including *Telephone Girl* (1898) and *Julie Bon Bon* (1908). Mann played also in many of the Potash and Perlmutter comedies. Other famous German-dialect comedians of the same school were George Sidney, Barney Bernard and Sam Bernard.

Joseph Schildkraut had a long and distinguished career on the American stage and screen. His father, Rudolf Schildkraut (1862-1930), whose fame was largely on the Yiddish stage, was seen on the American stage in Sholom Asch's never-to-be-forgotten *God of Vengeance*. Highlights in the acting career of Joseph Schildkraut, who played with Max Reinhardt's company in Berlin from 1913 to 1917, were *Liliom, Peer Gynt, The Firebrand, Clash by Night,* and *Uncle Harry* (1942). For many years Schildkraut devoted himself principally to acting in motion picture productions.

Alla Nazimova, originally a Russian actress, who came to the United States in 1905, distinguished herself as one of the greatest American interpreters of Ibsen roles, among them Hedda Tesman in *A Doll's House,* Hilda Wangel in *The Master Builder,* Hedwig in *The Wild Duck,* and Mrs. Alving in *Ghosts*. Another play in which she starred was *The Mother*.

Three other European stars who were transplanted to the American stage were Luise Rainer, Greta Mosheim and Elisabeth Bergner. All three were stars on the German stage. Miss Bergner was seen in the United States in *Escape Me Never* (1935), a role in which she made her English debut in 1933. Miss Rainer, who devoted herself mainly to the motion pictures in the United States, was seen in 1942 in James M. Barrie's *A Kiss for Cinderella*. Miss Mosheim, who made her English debut in 1935, gave her first performance in the United States in *Letters to Lucerne* (1941).

Edward G. Robinson, before he became a motion picture and radio star, was known principally for his fine performance in many Theatre Guild productions, among them Fiodor Mikhailovich Dostoevsky's *The Brothers Karamazov* and Franz Werfel's *The Goat Song*. Just prior to his emergence as a motion picture star, Robinson became a prototype of the Chicago gangster, which role he was to enact so many times in the motion pictures, in the play *The Racket*. He also starred in the title role of *The Kibitzer*.

Sylvia Sidney, making her debut with Blanche Yurka in *The Squall,* had several successful theatrical engagements in between her motion picture productions. Among them were *Bad Girl, Crime,* and *Gentle People*.

Florence Reed, who made her debut as an actress in 1900, played in a number of productions. Her most famous role was Mother Goddam in *The Shanghai Gesture*. She played starring roles also in *Chu Chin Chow, The Wanderer, Lullaby, Macbeth, Romeo and Juliet,* and *Mourning Becomes Electra*.

Louis Wolheim, who starred in many productions on stage and screen, won lasting fame by his enactment of the role of Sergeant Quirt in *What Price Glory*.

Motion Pictures. The inventions and discoveries of Thomas Edison, George Eastman and others during the last decade of the 19th cent. were responsible for the emergence of the motion picture industry in the 20th cent. From the start, Jews were very prominent in this infant industry, unrecognized as an art and looked upon as a wild speculation from a business point of view. Mitchell H. Mark in Buffalo, Sigmund Lubin in Philadelphia, William N. Selig and Carl Laemmle in Chicago, David Grauman in Los Angeles, Harry Warner in Newcastle, Pa., Harry Cohen in Pittsburgh, and Adolph Zukor, Marcus Loew, Sol Brill, William Fox, and Gustavus and Saul Rogers in New York city, were among the earliest of Jews connected with the industry.

The Mark family of Buffalo was later to give New York its first de luxe motion picture theatre, the Mark Strand, which opened in 1914. Sigmund Lubin's chain of theatres later emerged as the Stanley Company (1913) under the management of Stanley and Jules Mastbaum. The Loew penny arcades and nickelodeons in New York grew into the great chain of Loew theatres which, in 1943, was also the owner of the largest single production company, Metro-Goldwyn-Mayer Pictures. For a number of years Fox Theatres were an important chain in New York city, a chain later merged with the Skouras interests.

The pattern of the motion picture industry became evident in these very early days: there was an ever-present need on the part of the exhibitors for productions

with commercial value. In the very earliest days of the nickelodeon the novelty of a moving picture was enough to draw a crowd; later it became necessary to show motion picture subjects of interest. Strangely enough, the very first pictures were not in dramatic form. They were more or less newsreels of single subjects, or what is now called short subjects or educational pictures.

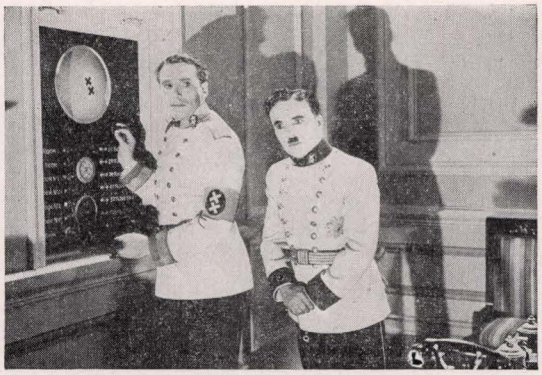
The first real feature picture was *The Great Train Robbery,* produced in 1903 by Edwin S. Porter. Shortly thereafter Sigmund Lubin produced a 600-foot feature, *The Bold Bank Robbery.* And so was born the first movie trend. One of the earliest of stars was Max Aronson, who as Max Anderson became Broncho Billy, the first great Western star. Another of the early pictures was one made by William N. Selig in Chicago, *Trapped by the Bloodhounds.*

The subsequent history of the motion picture industry is the history of daring, speculative individuals who pioneered in this new theatrical form. Adolph Zukor, who was to dominate the motion picture industry for many years as head of the Paramount-Famous Players-Lasky Corporation, first became interested in the motion picture industry in 1903, when he became associated with Marcus Loew in the management of penny arcades. By 1906 Zukor had a theatre of his own, The Comedy Theatre, on 14th Street, which was then the rialto of Broadway. Carl Laemmle, founder of Universal Pictures, went from Oshkosh, Wis., in 1905 to open a nickelodeon on Milwaukee Avenue, Chicago, in 1906. Within six months he organized a film exchange, The Laemmle Film Service, which supplied 300 theatres in Chicago. In New York, in that same year, Sol Brill and William Fox opened a nickelodeon that was to be the father of the Fox chain of theatres and of the Fox Film Corporation, later to become part of the Twentieth Century-Fox Films. In 1908 Gustavus and Saul Rogers, as attorneys for William Fox, were to make the first fight against censorship of motion pictures in New York.

By this time there were many motion picture theatres, too many, in fact, for the limited number of productions available. It became apparent to the owners of theatres and chains that their investments were at the mercy of the producers of films. As a result, exhibitors went into the business of production. In 1909 Carl Laemmle founded the Independent Motion Picture Company, known more generally by its initials as the IMP. As head of this company Laemmle fought the battle of the independents against what was already beginning to become a motion picture trust. The first Laemmle production was *Hiawatha,* a 900-foot feature, made at Minnehaha Falls, near Minneapolis. By 1912 Laemmle founded the Universal Film Manufacturing Company, of which he was to remain president until 1936, when he resigned in favor of his son, Carl Laemmle, Jr. The first feature production of Universal was *Traffic in Souls,* a film which cost the then unheard of sum of $5,000 to produce, and which netted a profit of $500,000. Later Laemmle was to spend millions of dollars on such productions as *The Hunchback of Notre Dame* and *All Quiet on the Western Front.* During the period of the IMP, Laemmle took away Florence Lawrence, "the Biograph Girl," from Biograph Studios. Terry Ramsaye, in his history of the motion pictures, *A Million and One Nights,* calls this "the beginning of the star system." Later, in 1911, Laemmle took Mary Pickford away from Biograph for a salary of $175 a week.

The year 1912 saw the beginnings of what was to emerge as the great Paramount Picture Company. It was in that year that Adolph Zukor, then treasurer of the Marcus Loew Enterprises, founded the Famous Players Film Company. The first feature of this new firm was a four-reel production, *Queen Elizabeth,* starring Sarah Bernhardt. The "divine Sarah" thus became the first stage star to lend her talents to the new motion picture industry. Zukor wisely foresaw the value of famous players in famous plays, and enlisted a leading theatrical producer, Daniel Frohman, as his associate in the Famous Players Film Company. Among other early productions under this banner were James O'Neill in *The Count of Monte Cristo* and James Hackett in *The Prisoner of Zenda.* Shortly thereafter Zukor offered D. W. Griffith a salary of $50,000 a year to join his company, an offer that Griffith rejected. Zukor's program called for the production of thirty pictures a year and marked the beginning of the grading of pictures as A, B and C pictures.

In 1913 Jesse L. Lasky, who had formerly been a vaudeville manager, went into the motion picture business in partnership with his brother-in-law, Samuel Goldfish, or, as he became known later, Samuel Goldwyn. With Cecil B. DeMille directing, the Lasky-Goldfish combination brought another stage star, Dustin Farnum, to the movies in *The Squaw Man.* It was about this time that Harry Reichenbach, who was to become Hollywood's greatest press agent, came into the industry. The Lasky-Zukor enterprises merged as Paramount Pictures in 1914.



William Fox, finding difficulty in getting pictures for his growing chain of theatres, went into the production end of the business in 1914 with a picture called *Life's Show Window.* The first and greatest of the early Fox stars was Theda Bara (born Theodoshia Goodman), who became an overnight star in the picture *A Fool There Was,* a screen version of Kipling's *The Vampire.* Theda Bara made forty feature pictures for Fox within the three-year-period 1915 to 1918. Fox also introduced another stage star to the screen, William Farnum, to whom he paid a salary of $10,000 a week.

The greatest star in the history of motion pictures, Charlie Chaplin, first was seen on the screen in 1913 in one-reel Keystone comedies. He made his first feature picture in 1914 when he co-starred with Marie Dressler in *Tillie's Punctured Romance.* Thirty years after his first screen appearance Chaplin still remained a top-ranking screen star, with such great pictures to his credit as *Shoulder Arms* (1918), *The Kid* (1921), *The Gold Rush* (1925), *The Circus* (1928), *City Lights* (1931), *Modern Times* (1935), and *The Great Dictator* (1940). In 1942 a remake of *The Gold Rush* was released with narration and musical score by Chaplin.

In 1915 Metro Pictures was organized with Richard Roland as president and Louis B. Mayer as secretary. Metro was later to merge into the Metro-Goldwyn-Mayer Pictures, the largest and most powerful of film producers, and Louis B. Mayer was to become the production head of this combine.

Goldwyn Pictures came into being in 1916, a partnership of Samuel Goldfish and Edgar Selwyn. The name Goldwyn came from the first syllable of Goldfish and the last syllable of Selwyn, a name later adopted by Goldfish himself. This firm brought additional stage stars to the screen, among them Maxine Elliot, Mary Garden and Madge Kennedy. The firm was, nevertheless, a failure. Later Goldwyn became one of the most successful producers of high-grade pictures.

The Loew interests, then one of the largest and most successful theatre chains in the country, went into the production end of the industry for the first time in 1919, when it bought Metro Pictures. Shortly thereafter, Metro, which had been in a bad way, produced *The Four Horsemen of the Apocalypse,* starring Rudolph Valentino, a film that made a profit of $4,000,000. Five years later, in 1924, Metro merged with the Louis B. Mayer Pictures Corporation, and then with Goldwyn Pictures, to become Metro-Goldwyn-Mayer. Under the direction of Louis B. Mayer, who first opened a motion picture theatre in a Haverhill, Mass., store in 1907, Metro-Goldwyn-Mayer went on to such big successful productions as *Ben Hur, The Student Prince* and *The Big Parade.* Playing a leading part in the development of M-G-M was its executive

vice-president from 1924 to 1936, the youthful Irving Thalberg who, until the time of his death at the age of thirty-seven, was considered one of the production geniuses of Hollywood.

Sound pictures, or "talkies," as they were first called, brought the Warner Brothers into prominence in the industry. Although this family had been in the motion picture business from 1903 on, when Harry M. Warner opened the ninety-nine-seat Cascade Theatre in Newcastle, Pa., with chairs borrowed from a neighboring undertaker, the Warner Brothers were not important figures in the industry until they took the leadership in the development of sound pictures. The first Vitaphone sound picture was presented in New York on August 6, 1926. Greatest of the early talking pictures, the picture that completely sold "sound" to the industry, was a Warner Brothers production of Al Jolson in *The Jazz Singer.* From then on a silent picture was a rarity. In the process of growth Warner Brothers absorbed First National Pictures, of which Hiram Abrams was at one time president. Under the production direction of Jack Warner and Hal B. Wallis, Warner Brothers became one of the "Big Four" of the motion picture industry.

Louis J. Selznick, who made the jump from jewelry store to general managership of Universal Pictures, was one of the "greats" of the industry in the 1920's, but he came off second best in his battles with Adolph Zukor, and Selznick was just a name in the history of the motion pictures until his son, David O. Selznick, emerged as a vice-president and producer for Metro-Goldwyn-Mayer in 1933. Myron Selznick, another son of Louis J. Selznick, became the most successful motion picture agent in Hollywood. David O. Selznick will go down in motion picture history as the producer in 1939 of *Gone With the Wind,* a picture which brought $32,000,000 to the nation's box-offices. Produced at a cost of $4,250,000, this most lavish picture in the history of the industry is reputed to have made a six-million-dollar profit for M-G-M, and a two-million-dollar personal profit for David O. Selznick. Selznick is the man who revolutionized motion picture thinking in the direction of careful transcriptions of literary classics. For ten successive years motion picture exhibitors voted him the number one producer of box-office successes. His *Gone With the Wind* won the Academy award for Selznick in 1939, as did *Rebecca* in 1940. From 1936 on he headed his own production companies.

There are many other Jews who at one time or another were leaders of the industry. Al Lichtman, who has since been president of United Artists Pictures and in 1943 was assistant to the president of Metro-Goldwyn-Mayer, is credited with originating the idea of "road showing" a picture, back in 1919. The Cohen brothers, Jack and Harry, along with the late Joe Brandt, developed Columbia Pictures from a struggling independent to an important major producer. Both brothers started with the Laemmles, Jack as far back as 1908 and Harry in 1913. In 1911 Jack Cohen issued the *Universal Weekly,* the first independent newsreel. Hiram Abrams went from a high executive position in Paramount to be president of First National, and later of United Artists Pictures. Nicholas Schenck was president of Loews, Inc., and of Metro-Goldwyn-Mayer Pictures from their very beginnings, the man in charge of the theatrical operations of this vast chain of theatres. His brother, Joseph M. Schenck, first known as personal manager for Norma Talmadge, was for a number of years executive head of the United Artists Corporation, the founder in 1933 of the Twentieth Century Pictures Corporation, and later the chairman of the board of the merged Twentieth Century-Fox Film Corporation. Max Fleischer, producer of the celebrated "Out of the Inkwell" cartoons, produced the first successful lifelike animated cartoon in 1915 in collaboration with J. R. Bray. Sol N. Wurtzel went to work for Fox Films in 1915, and rose to be one of the key executives of Twentieth Century-Fox. Emmanuel Cohen started with Pathé in 1914, was editor of the *Pathé Newsreel* for many years, went to Paramount in 1926 to start the *Paramount Newsreel* and head short subject production, and later became vice-president and director of Paramount Pictures. Albert Lewin, who started as a scenario writer, during which time he wrote *Bread,* one of the most famous silent pictures, rose to be an executive producer for Metro-Goldwyn-Mayer.

A number of Jews played an important part in the development of the film industry in England. Alexander Korda, after a number of years as a director in Hollywood, went to England to score his greatest successes. He became head of Korda Productions as well as being knighted. The three Ostrer brothers—Isidor, Maurice and Mark—were long influential in English film circles, as was Michael Balcon. Victor Saville, one of the best of the English directors, worked in Hollywood and England. (See also p. 220.)

Jews are among those who should be mentioned for their part in the development of a technique of motion picture exhibition. Moe Mark, brother of Mitchell H. Mark of Buffalo, was among the first theatre owners to visualize the modern motion picture theatre, as we know it today. His Mark Strand Theatre, opened in New York in 1914, gave the industry's most original showman, S. L. Rothafel (Roxy), his first great chance. From a small 100-seat theatre in Forest City in 1908, Rothafel went to the management of the Regent Theatre in New York in 1913, the Strand in 1914, and later the Rialto, the Rivoli, the Capitol and the Roxy. It was Rothafel who first espoused the huge stage shows in motion picture theatres, and it was he who first used the radio for popularizing a theatre. Roxy and his gang helped convert New York's giant Capitol Theatre from a failure into a huge success. Later he went on to his own theatre, the Roxy.

Hugo Riesenfeld, working with Roxy, was the first orchestra leader to provide elaborate musical accompaniments for feature pictures. He later managed the Rialto and Rivoli Theatres. In California Sid Grauman, son of David Grauman, originated the star-studded celebrity Hollywood type of première at his Egyptian Theatre in Hollywood. In 1943 Leon Leonidoff had been director of production at Radio City Music Hall for ten years. A number of musicians, originally given their chance by Roxy and Hugo Riesenfeld, went on to high places in the musical end of the motion picture industry, among them Erno Rapee, Nathaniel Finston and Borris Morros. Other Hollywood musical directors were Alfred Newman and Max Steiner.

There is an almost endless procession of Jews who participated in the production, directorial, writing and acting divisions of the motion picture industry. In the confines of this brief survey we can only mention some of them. Among the producers not previously mentioned were Walter Wanger, William Goetz, Leo Spitz, Harry Rapf, Albert Lewis, Sol Lesser, Charles Rogers, B. P. Schulberg, Jack H. Skirball, I. J. Schnitzer, Samuel Briskin and Josef Pasternak. Among the directors were Mervin LeRoy, Ernest Lubitsch, Michael Curtiz, Norman Krasna, Max Reinhardt, Irving Rapper, Sidney Lanfield, Irving Cummings, Gregory Ratoff, William Wellman, Marion Gering, Mitchell Leisen, Joseph von Sternberg, Mark Sandrich, Alfred Santell, Herman J. Mankiewicz, Norman Taurog, John N. Stahl, Garson Kanin, George Cukor and William Wyler. These men directed some of the finest motion pictures in the history of the industry. William Wyler, for his work with *Mrs. Miniver,* won the 1942 directorial award of the Motion Picture Academy of Arts and Sciences.

Among the most successful screen writers were Sidney Buchman, Richard Maibaum, Arthur Sheekman, Edmund Goulding, Jerome Kern, George Gershwin, Clifford Odets, Samuel Hoffenstein, S. N. Behrman, Samuel and Bella Spewack, John Wexley, John Howard Lawson, Norman Krasna, Arthur Kober, Morrie Ryskind, Irving Berlin, Rodgers and Hart, Irwin Shaw,

Lillian Hellman, Michael Kanin (a collaborator on *Woman of the Year,* the 1942 choice of the Motion Picture Academy of Arts and Sciences for the best original story), the Epstein brothers, Jerome Choderov, Allan Boretz, Louis Weitzenkorn, Rian James, Ben Hecht, Daniel Fuchs and Herman J. Mankiewicz, who wrote one of the most original scripts in the history of the motion pictures for the Orson Welles production, *Citizen Kane.* Among the Jewish actors and actresses were Luise Rainer (Academy Award winner), John Garfield, Sylvia Sydney, Paul Muni (Academy Award winner), Binnie Barnes, Paulette Goddard, Conrad Veidt, Peter Lorre, Sam Jaffe, Milton Berle, the Four Marx brothers, Al Jolson, Edward G. Robinson, Melvyn Douglas, Albert Basserman, Eddie Cantor, Martha Raye, Bert Lahr, Mary Ellis, Louise Henry, Ricardo Cortez (successor to Valentino), Sydney Fox, George Tobias, Joan Blondell, Lou Lehr, Jack Benny, Sally Eilers, Sid Silvers, Aline MacMahon, George Stone, Kitty Carlisle, Adolph Menjou, J. Edward Bromberg, Elisabeth Bergner, Louis Wolheim, Edward Arnold, Morris Carnovsky, Joseph Schildkraut, Sam Levine and Sue Carol.

Radio. Two of the most prominent executives in the field of radio are Jewish, namely William S. Paley, president of the Columbia Broadcasting System, and David Sarnoff, president of the Radio Corporation of America, parent organization of the National Broadcasting Company and the Blue Network.

Sarnoff was one of the real radio pioneers. Starting as a messenger boy for Commercial Cables in 1906, he was in turn a wireless operator on ships at sea, district manager, and commercial manager of Marconi Cables. When that organization was merged with the Radio Corporation of America in 1919, he became general manager of R.C.A., a post which he held until he assumed the presidency in 1930.

Paley entered the radio business in 1928, when he bought the stock of the then infant Columbia Broadcasting System from another Jew, Jerome H. Loucheim. Paley's interest in radio arose from a successful advertising campaign conducted by the cigar company of which he was vice-president and advertising manager. From nineteen stations in 1928 the Columbia Broadcasting System grew to 120 stations in 1943. Under Paley's direction, C.B.S. first started supplying member stations with free sustaining programs. He was a pioneer in the field of religious and educational broadcasting, and inaugurated the C.B.S. School of the Air and the C.B.S. Church of the Air. Paley was instrumental in bringing to radio also the New York Philharmonic Symphony Orchestra.

Practically every writer of repute was represented on the air at one time or another, and it is impossible to list them. But during the course of years a group of radio writers developed from within radio, and they evolved a particular technique of radio writing. Two of them should be singled out: Norman Corwin and Arch Oboler. These two, along with Orson Welles and one or two others, emerged to fame from the anonymity of radio writing.

They both published volumes of their radio plays in 1942, Corwin publishing *Thirteen by Corwin,* and Oboler *Fourteen Radio Plays.* Both men are strong anti-Fascists, and many of their most dramatic radio plays were in the cause of democracy. Following the entrance of the United States into the second World War, both of them did considerable work for the Office of War Information and for other government information agencies. Corwin went to England to do a series of programs from overseas. Most notable of the Corwin scripts was the one which he wrote for the 150th anniversary of the ratification of the American Bill of Rights, a program which was broadcast to the nation on all the networks. Among the finest of the other Corwin scripts were *My Client Curley, They Fly Through the Air with the Greatest of Ease,* and *The Plot to Overthrow Christmas.* While conducting the "Pursuit of Happiness" program, he introduced "The Ballad for Americans" to the air. He wrote and directed the scripts for the "Words without Music" series.

Among Oboler's most distinguished scripts were *The Rich Kid,* starring Freddie Bartholomew; *The Lonely Heart,* starring Alla Nazimova; *John Quinn, U.S.N.; Paul Reverski;* and *Memo to Berchtesgaden.* Oboler's first successful program was "Grand Hotel" in 1935, when he wrote the scripts for famous Hollywood stars. From 1938 on he wrote and produced a weekly half-hour series for the National Broadcasting Company. He was the first radio writer to use the James Joyce "stream of consciousness" technique on the air.

Practically all the stars of stage and screen appeared on the radio at one time or another. It is impossible to list all these radio performers. A few, however, developed principally as radio personalities, or made radio the major aspect of their careers. Certainly, among this group is Jack Benny, the foremost radio comedian of the air, a performer whose success on the air waves is far greater than that which he ever achieved on the vaudeville or musical comedy stage. In fact, as a result of becoming a radio star, Benny reversed the process and became a screen star. According to the Cooperative Analysis for Broadcasting for 1942 (the so-called Crossley Rating), the Jack Benny program was the second most popular on the air during the year of 1942, a popularity rating which he held for many years.

Listed as the seventh most popular program in 1942 was one starring Fannie Brice as "Baby Snooks." Like Benny, Miss Brice achieved greater success on the air than she ever did on the stage or screen. Ninth place on the 1942 Crossley Rating went to Walter Winchell, thus making him the top ranking commentator in popularity for that year.

Other news commentators of the Jewish faith in 1943 were Gabriel Heatter, Cecil Brown, Samuel Grafton, Alice Hughes, and Estelle M. Sternberger. Over a course of years Heatter rated with Lowell Thomas, Edwin C. Hill, Raymond Gram Swing, Boake Carter and others as one of the top flight reporters of the air. Cecil Brown, a returned war correspondent, was one of the many new names to achieve radio fame as the result of war reportage. Samuel Grafton, newspaper columnist, was also a new name among serious political commentators (1943). Alice Hughes, newspaper shopping columnist, was one of the leading commentators on the distaff side (1943).

Three sports commentators should also be included in this group: Sam Taub, one of the outstanding boxing reporters; Dick Fishel, best known for his football reporting; and Bill Stern, one of the outstanding general sports commentators.

Aside from Jack Benny and Fannie Brice, three other Jewish comics were, in 1943, long-time radio favorites: Eddie Cantor, Al Jolson and George Burns of Burns and Allen. Phil Baker, another vaudeville and stage comic, made a place for himself on the radio as conductor of a quiz program, "Take It or Leave It." Appearing less frequently on the air, but nevertheless radio favorites, were (1943) George Jessel, Bert Lahr, Lou Holtz, Willie Howard, Harry Hirshfield, Benny Rubin and Ed Wynn. To Ed Wynn belongs the distinction

of having been the star of the first complete show ever produced on the air, *The Perfect Fool*. Regulars on the highly successful "Information Please" program are largely Jewish: Clifton Fadiman, master of ceremonies, Franklin P. Adams (F.P.A.), and Oscar Levant. The originator and manager of this program was Dan Golenpaul. Edward G. Robinson, as managing editor of the newspaper in "Big Town," is one of the most successful of the stage and screen stars to adapt himself to radio.

Probably one of the oldest of the day-time serials was "The Goldbergs," which is written, directed and starred in by Gertrude Berg. Serving as foils for Eddie Cantor, Jack Benny and Fred Allen were (1943) such less known comedians as Charles Cantor (a regular with Fred Allen), Bert Gordon (the Mad Russian), Parkyakarkas (Harry Einstein), and the violinist-humorist Dave Rubinoff (one-time foils for Eddie Cantor). Ben Grauer is one of the best-known announcers.

There is no end to the listing of orchestra leaders heard on the air. Among the most popular in 1943 were Ben Bernie, Benny Goodman, Sammy Kaye, Mark Warnow, Phil Spitalny, Jacques Renard, Abe Lyman, Joe Rines, Leo Reisman, Eddie Duchin, and Meyer Davis. Practically all the leading concert stars and symphony orchestra leaders appeared on the air.

Rabbi Jonah B. Wise, of Central Synagogue, New York, as director of "The Message of Israel" program, conducted a weekly radio service featuring rabbis from all over the country. These programs were under the auspices of the United Jewish Laymen's Committee.

HENRY W. LEVY.

The Yiddish Theater. The Yiddish theatre dates back to the 13th cent. with the appearance of professional clowns (Leitzin) and troubadours as entertainers at weddings and other festivities. In the 15th cent. the then famous Dance of Death was frequently performed in the ghettos. The more complex and organized form of theatrical entertainment were the Purim plays, of which there are texts dating back to the 16th cent. The Purim players were usually either amateurs or semi-professionals, and, as a rule, consisted of local troupes engaged in house theatricals.

At the beginning of the 18th cent. a professional company of Purim players, under the direction of one Berman, toured Germany, Alsace, Poland and Lithuania, and performed before large audiences. This, and other companies of Purim players, enlarged upon the texts of their written playlets, which were of a religious or satirical nature, by employing the improvisational technique of the Commedia dell'Arte. Simultaneously with the Purim plays, dramatizations of the Biblical story of Joseph and his brethren were frequently enacted. The first known text of such a play belongs to the beginning of the 18th cent. (1708).

During the first half of the 19th cent. the Yiddish theatre made rapid strides toward the production of plays of consistent dramatic content. In 1820 a comedy, *The False Kashtan* (Kashtan was the name of a famous cantor), by Moritz Saphirs, was produced in Hungary. In 1830 Cracow had a Yiddish theatre which gave performances every night to large audiences. In the 1830's and 1840's productions of one-act satirical plays (by David Leib Biderman) were performed in Vienna.

In the early 1830's a play about Moses was given in Warsaw, and later in the same decade (1839) one David Turkus gave a series of eight performances in the same city. In 1854 a full-length play was produced in Berdichev, Russia; in 1863 the first well-integrated stage play written in Yiddish—*Serkele*, by Solomon Ettinger—was produced by the students of the rabbinical school in Zhitomir, Russia. That amateur performance is especially worth noting because one of its participants, Abraham Goldfaden, who at the age of twenty-three played the title role—that of a young woman—subsequently fathered the first modern professional Yiddish theatrical company.

The birth of the first professional Yiddish troupe took place in a "wine-cellar," a tavern catering to Jews in Jassy, Roumania, in 1876. There Abraham Goldfaden (originally Goldenfodim), a lyricist and aspiring playwright, met two entertainers, Israel Grodner and Sachar Goldstein. They turned the tavern's small platform into a stage, and hastily improvised comedies by Goldfaden were produced. From there the troupe moved on to Bucharest, where it was enlarged by several members. One of them—Sigmund Mogulescu, a trained singer and a member of a synagogue choir, was a true find and was destined for a brilliant career as a great comedian on the Yiddish stage.

By this time Goldfaden had written some full-fledged plays with songs (*Recruits; The Contractor; Shmendrik*), and the company was off to a successful start and to a split in its ranks. The artistic integrity and the will to succeed prompted Goldfaden to assign the leading role of Shmendrik to the youthful Mogulescu, and Grodner withdrew to form a rival troupe with Joseph Lateiner as playwright following in the footsteps of Goldfaden. As both companies thrived, a third was formed in Roumania, with M. Hourwitch as playwright.

In 1879 Goldfaden moved his company to Odessa. Its performances were well attended, but the Jewish intellectuals objected to the frivolous and unenlightened repertoire. Whereupon an enterprising journalist, I. I. Lerner, formed a company for the production of serious drama (*Uriel Acosta* by Karl Gutzkow, *Serkele* by Solomon Ettinger, and others). Out of a profound respect for the opinion of the intelligentsia, of which he was one, Goldfaden took to writing plays and librettos on historical and Biblical subjects (*Judah the Maccabee; Uriel Acosta; Bar Kochba; Sulamith*), and added prestige to his success.

In Odessa, Jacob P. Adler, a tall handsome youth of spontaneous popular appeal on the stage, joined his company. For a few years the Yiddish theatre in Russia seemed well on its way to a creatively productive future, when, in 1893, it was prohibited by the czarist regime. The official ban remained in force until 1905, and to the extent to which the Yiddish theatre functioned in Russia it was either clandestine, or disguised as German in its language. The more reputable companies crossed the border to Roumania, thence to London and to the United States.

Meanwhile the mass immigration to the United States, caused by the Russian pogroms of 1880, created a demand for a Yiddish theatre in such cities as New York, Boston, Philadelphia, Baltimore and Chicago. In 1882 Boris Thomashefsky, then a lad in his teens, a singer in a synagogue choir, like so many other future Yiddish actors, was instrumental in bringing from London to New York a group of players who had been members of Goldfaden's erstwhile troupe in Roumania. In the summer of 1882 the professional Yiddish theatre was launched in New York, on the stage of Turn Hall (East 4th Street, between Second and Third Avenues), with *Kolddunya*, a musical play by Goldfaden.

In the summer of 1882 Sigmund Mogulescu arrived in the United States with his company from Roumania (via London). His fame as a comedian of unusual gifts preceded him. Although his first appearance (in the Terrace Garden on 58th Street, New York) was ill-received because of the vehicle (*Bluebeard*, by Offenbach), which was not appreciated by the audience, he soon established himself as one of the most beloved Yiddish actors of all times.

Jacob P. Adler, who had played in London from 1883 on, came to the United States in 1887 as the head of a company, played a brief engagement in Chicago (Madison Street Theatre), returned to London and then, in 1890, returned to the United States, making New York his home for his lifetime.

Driven by discrimination and outright persecution from the countries of Eastern Europe, and attracted by the rising stars of the Yiddish stage in America, scores of other actors came to these shores, making the United States the major center of Yiddish theatrical activities for half a century.

David Kessler, one of the truly great dramatic actors of his time, Morris Moscowitch, who later also rose to stardom on the British stage, Sarah Adler, Kenny Lipzin, Leon Blank, Bertha Kalich, Malvina Lobel with Adler, Thomashefsky and Mogulescu, served as the mainstay for the theatrical companies that achieved true histrionic stature. As a matter of course, the dominant star of each company served also as the director. As a whole, their acting, occasionally lacking in restraint, and not always in the best of taste, was marked by a high sense of character portrayal and a moving sincerity.

With the ascendancy, in the last decade of the 19th cent., of Jacob Gordin as a playwright, the Yiddish theatre in America, as a whole, acquired a repertory of substantial dramatic works. Having written his first play (*Siberia*) for Jacob P. Adler, he later supplied dramatic vehicles in which others appeared with distinction (Kessler in *God, Man and the Devil;* Kenny Lipzin in *Mirele Efros;* Bertha Kalich in *Sapho*).

In scores of plays expounding basic ideas which he adapted from Shakespeare (*The Jewish King Lear*), Goethe (*God, Man and the Devil*) and others, he displayed astute stage craftsmanship and a canny ability to project a telling message in theatrical terms. His character delineation was crude and obvious, but the dramatic situations he evolved afforded the actors numerous opportunities to emerge with force and distinction. He reigned supreme for a score of years, during which time younger playwrights (Leon Kobrin, Z. Libin) contributed plays of merit, constantly improving the dramatic standards of the Yiddish stage.

At the same time the musical vehicles declined in quality. Such librettists and playwrights as Joseph Lateiner, "Professor" M. Horowitz, Isidor Zolotarefsky, and Boris Thomashefsky catered to the least cultivated of their growing audiences. Yiddish dramatic clubs sprang up in New York and in other large cities, attracting young people with stage aspirations and literary men and women who labored to raise the standards of the Yiddish stage. In response to such organized activities, and for the furtherance of their own careers, the stars of the professional companies produced adaptations from other languages: Shakespearean plays (notably Jacob P. Adler, as Shylock in *The Merchant of Venice*), Hermann Sudermann, Tolstoy and others. A German Jewish actor, Moritz Morison, under the initial sponsorship of Boris Thomashefsky, appeared in classical dramas (*The Robbers* by Schiller, *King Lear* and *Othello* by Shakespeare), speaking his own lines in German.

With a continuous stream of Yiddish-speaking immigrants, the Yiddish theatre grew and branched out into operetta houses, melodramatic and dramatic theatres. Popular composers (Joseph Rumshinsky, Joseph Brody, Herman Wohl) supplied the music for the operettas. Melodramatic writers, who mastered the rudiments of the craft—notably Isidor Zolotarefsky, Max Gabel (who was also a leading actor, director and entrepreneur), and William Siegel—composed "roof-raising" plays.

But the lingering influence of Jacob Gordin, the appearance on the Yiddish stage of Rudolph Schildkraut, the success of *The Eternal Wanderer* by Ossip Dymow, which brought to the fore a number of younger players, such as Celia Adler, Jacob Ben-Ami, Gershon Rubin, and Lazar Fried, the emergence into the limelight of Maurice Schwartz, then a youthful actor of unusual promise in serious drama, together with the constant urging of the Yiddish-speaking intelligentsia, prepared the ground for a sustained effort to create a dramatic theatre with a consistent artistic policy.

In 1918 the ambitious Maurice Schwartz organized a company of young actors (Maurice Schwartz's Irving Place Theatre), including Celia Adler, Ben-Ami, Bertha Gersten, Jechiel Goldsmith, Anna Appel and Ludwig Satz, who had just come into fame playing with Jacob P. Adler at the Grand Theatre in *World Aflame* and *Slaves of the People* by Ossip Dymow. The success of two plays by Perez Hirschbein (*The Forsaken Nook* and *The Blacksmith's Daughters*) during Maurice Schwartz's first season at the Irving Place Theatre proved that the time was ripe for an artistic theatre.

The Yiddish Art Theatre. The Yiddish Art Theatre was organized under this name in 1921 at the Garden Theatre, in New York city, although its actual existence as a theatrical company dates back to 1918, when its director, Maurice Schwartz, headed his first troupe at the Irving Plate Theatre. Though conducted as a private theatrical venture, it assumed the importance of a public institution because of its contribution to the advancement of the Jewish stage in America. Following a policy of presenting plays of artistic merit, the Yiddish Art Theatre enriched the Yiddish stage by a most diversified repertoire and, incidentally, trained and developed a whole generation of actors.

Of the original Jewish plays produced by the Yiddish Art Theatre, the most significant are: *A Forsaken Nook* and *The Blacksmith's Daughters,* by Perez Hirschbein; *The Golden Chain,* by I. L. Peretz; dramatizations (by J. D. Berkowitz) of stories and novels by Sholem Aleichem (*Tevye, The Dairyman; It's Hard To Be a Jew; The Sweepstakes; Sender Blank*); dramatizations (by Maurice Schwartz) of novels by Sholem Asch (*Uncle Moses; The Witch of Castille; Kiddush Hashem; Three Cities; Salvation*); *Thieves,* by Fischel Bimko; *The Dybbuk,* by S. Ansky; *Rags,* by H. Leivick; *Major Noah,* by Harry Sackler; *Moshke Hasir,* by Isaac Dob Berkowitz; *Riverside Drive,* by Leon Kobrin; *Bread* and *Human Dust,* by Ossip Dymow; *Rivals,* by Jonah Rosenfeld; *American Chassidim,* by Chone Gotesfeld; *The Treasure,* by David Pinski; and dramatizations of I. J. Singer's *Yoshe Kalb* and *The Brothers Ashkenazi.*

Its most important productions of translated and adapted plays were: *Mrs. Warren's Profession,* by George Bernard Shaw! *Professor Bernhardi,* by Arthur Schnitzler; *The Father,* by Johan August Strindberg; *Uncle Vanya,* by Anton Chekhav; *Lower Depths,* by Maxim Gorki; *Anathema* and *The Seven Who Were Hanged,* by Leonid Andreyev; *Sabbatai Zvi,* by J. Zhulavski; *Wolves,* by Romain Rolland; *The Chalk Circle,* by Klabund; *Power,* by Lion Feuchtwanger; *Mendel Spiwack,* by Semyon Youshkevitch; *The Merchant of Venice* and *Othello,* by William Shakespeare.

Among the actors who at different times were members of the Yiddish Art Theatre company were: Bina Abramowitch, Celia Adler, Julius Adler, Stella Adler, Anna Appel, B. Baratov, Jacob Ben-Ami, Helen Beverly, Judah Bleich, Joseph Bulov, Isidore Cashier, Yudel Dubinsky, Lazar Fried, Leo Fuchs, Lucy Gehrman, Misha Gehrman, Bertha Gersten, Samuel Goldenburg, Jechiel Goldsmith, Charlotte Goldstein, Luba Kadison, Kurt Katch, Leah Rosen, Michael Rosenberg, Ludwig Satz, Gustav Shacht, Zvi Scooler, Mark Schweid, Abraham Teitelbaum, Muni Weisenfreund (Paul Muni), and Anatole Winogradoff. Maurice Schwartz directed almost all the productions while playing leading parts in most of them.

Besides the Yiddish Art Theatre, the more serious attempts to further the artistic advancement of the Yiddish stage in America were: "Our Theatre," an

The Vilna Troupe aboard the vessel that brought them to the United States on a guest tour

experimental group (in the Bronx, N. Y.) which functioned for a brief season (1923); the Rudolph Schildkraut Theatre, Bronx, N. Y. (1925-26); occasional productions by Joseph Bulov, and by Jacob Ben-Ami (1926-27 at the Irving Place Theatre; 1939-40 at the National Theatre).

With the rise in the general standards of the Yiddish theatre in America, during the decades following the first World War, its musical productions took on a more modern character both in style and content. New musical comedy players (Aaron Lebedyev, Michael Michalesco, Itzik Feld, Lucy Levine, Menashe Skulnik, and the actor-producer Herman Yablokov) and the appearance of younger composers (Sholem Secunda, S. Olshanetzky, Abraham Ellstein) and the influence of Broadway musicals brought a measure of vitality and freshness to the Yiddish operettas without, however, heightening their artistic merits to an appreciable degree. Molly Picon, a musical comedy star, who rose to stage fame during this period under the sponsorship of her husband, Jacob Kalich, director, play adapter and occasional playwright, made the most noteworthy contribution to this phase of the Yiddish musicals, both by her acting and by the general quality of the productions in which she appeared.

The Artef Players. Upon the initiative of the Jewish section of the Young Workers' League, a leftist organization of Communist orientation, a Workers' Theatre Alliance was launched and an acting group was formed under the name of Artef, with an actor, Jacob Mestel, as its director. In 1927 the Artef players began performing propaganda pieces. It was not, however, until a few years later, when Benno Schneider, formerly of the Habima, joined the group as its director, that its productions took on the aspects of professional theatre. His direction elicited praise from the American critics, but after a decade of sporadic activity, the Artef virtually went out of existence for lack of audience support.

Pre-World War Russia. In the Russia of the period preceding the first World War, where the ban on the Yiddish theatre was lifted in 1905, only to be clamped on again in 1910, the Yiddish stage experienced a revival mainly with the aid of the American repertoire of plays by Gordin, Libin and others, and with a troupe headed by the dramatic actress Esther Rachel Kaminsky (1905-9) as its most successful exponent. In 1908 the playwright Perez Hirschbein organized a company of young actors, known as the "Hirschbein Troupe." It was a wandering theatre, with a literary repertoire that existed for only two years, but left its mark on the further development of the Yiddish stage.

Europe—First World War and Post-War Period. While the Yiddish theatre was completely prohibited in Russia during the first World War, it blossomed forth in Poland during the German occupation and in the post-War period. In 1916 a semi-professional group constituted itself into a theatrical organization out of which came the Vilna Troupe. It produced plays by Sholem Asch, David Pinski, Leon Kobrin and other noted dramatists. Moving to Warsaw, it acquired a trained and gifted director, David Herman, whose production of *The Dybbuk* by S. Ansky in 1920 made Jewish theatrical history.

Subsequently the Vilna Troupe split into several companies, one of which came to the United States in 1924 and dissolved after a few brief but notable seasons. Another outstanding Yiddish company in Poland was *Wikt* (Warsaw Yiddish Art Theatre), under the direction of Sigmund Turkow. It was organized in 1923, and with some

An early photograph of the Yiddish Art Theatre players, with their director, Maurice Schwartz (center, front). Paul Muni (then known as Muni Weisenfreund) is fourth from the right in the second row

interruptions produced plays up to the German invasion of 1939.

The following Yiddish writers contributed to the enrichment of Yiddish dramatic repertoire: Shalom Jacob Abramowitsch (Mendele Mocher Sforim), Sholem Aleichem, S. Ansky, Sholem Asch, Isaac Dob Berkowitz, Fischel Bimko, Chone Gotesfeld (comedies), Perez Hirschbein, Leon Kobrin, H. Leivick, Z. Libin, I. L. Peretz, David Pinski, Harry Sackler, and I. J. Singer.

Soviet Union. In the Soviet Union more than ten Yiddish theatrical companies were functioning prior to the German invasion of June, 1941, and most of them continued their activities during the War. The preparation for the establishment of a Soviet Yiddish Theatre began by the Jewish commissariat almost immediately following the October Revolution. In 1918 an acting group was formed in Petrograd (Leningrad). In 1919 Alexander Granovsky, an imaginative and resourceful stage director, was put in charge and the group was named the Yiddish Intimate Theatre. It was moved to Moscow in 1929 and produced *Masks* (based on stories by Sholem Aleichem), with sets by Marc Chagall and music by Joseph Achron. In 1925 it was renamed the Moscow Yiddish State Theatre. Its initial repertoire included plays based on Goldfaden's *Kolddunya; The Travels of Benjamin the Third,* by Shalom Jacob Abramowitsch; *200 Thousand* (The Sweepstakes), by Sholem Aleichem; *At Night on the Old Market Place,* by I. L. Peretz.

These productions were of a highly stylized nature, and the plays were given a proletarian interpretation. In 1928 to 1929, the company toured Western Europe, where Granovsky resigned and remained outside the Soviet borders to work as a film director. Subsequently the direction of the Moscow Yiddish State Theatre was entrusted to Solomon Mikhoels, who was also (1943) its leading character actor. Like most theatres in Russia, it later returned to the realistic school of acting.

In 1925 the Yiddish State Theatre of the Ukraine was established in Kharkov under the direction of E. Loiter, who was replaced by M. Norvid in 1929. After the German invasion it was moved to Samarkand.

In 1929 a third Yiddish State Theatre was established in White Russia, with M. Rafalsky as its director. It was removed in 1941 to Novosibirsk, Southern Siberia, a center of Jewish évacués from the invaded regions. Similarly, the Kiev State Theatre transferred its activities to Tashkent, another center of Jewish évacués. There was also, in 1943, a Yiddish State Theatre in the Jewish autonomous region of Birobidjan, with H. Helfand as director.

Besides the adaptations from the Yiddish classics, plays have been provided by David Bergelson, Peretz Markish, Yechezkiel Dobrushkin, S. Halkin and other Soviet writers.

The Yiddish Cinema. The Yiddish film industry made a modest beginning in the 1920's. The most notable among the first productions was *Yiscor* by Harry Sackler, produced by Sidney Goldin with Maurice Schwartz and other members of the New York Yiddish Art Theatre and filmed in Vienna (1924). In the 1930's it developed considerable activity, resulting in a score of film productions of varying merit. Outstanding among them are: *Tevye,* based on a series of stories by Sholem Aleichem, directed by Maurice Schwartz who also played the title role (U. S. A., 1939); *Yiddle Mit Dem Fiedel,* produced by Joseph Green, starring Molly Picon, score by Abraham Ellstein (Poland, 1935); *The Dybbuk* by S. Ansky, starring A. Morewski (Poland, 1937); *Green Fields* by Perez Hirschbein, starring Helen Beverly (U. S. A., 1936); *Mirele Efros* by Jacob Gordin, starring Bertha Gersten (U. S. A., 1938).

A scene from "Tevya the Milkman" produced at the Jewish State Theatre in Tashkent

Other Yiddish films are: *Mamele,* produced by Joseph Green, starring Molly Picon (Poland, 1937); *Purim Shpieler,* same producer, starring J. Turkow, Hyman Jacobson and Miriam Kressyn (Poland, 1936); *A Brievele der Mamen,* same producer, starring Misha and Lucy Gehrman (Poland, 1938); three films (U. S. A.) featuring Moyshe Oysher: *Yankel der Shmid* (1937), *Vilner Balabeisel* (1938), and *The Cantor's Son* (1935). A number of Yiddish films were also produced in the Soviet Union, the best known in the United States being *Motye Peise dem Chasan's,* based on stories by Sholem Aleichem with synchronized monologues narrated by Michael Rosenberg. In 1939 the second World War brought the activities of the Yiddish film industry to a virtual standstill by blotting out a considerable part of its market, which was in Poland.

The Yiddish Radio. Yiddish programs are a regular feature over local broadcasting stations in American cities with large Yiddish-speaking populations. WEVD, operating in the New York metropolitan area from 1932 (Henry Greenfield, managing director), was devoting in 1943 sixty per cent of its time on the air to Yiddish programs with dramatic and vocal talent drawn mainly from the stage, with regular Yiddish announcers (N. Stutchkoff, H. Levin, I. Gorin, Victor Packer) and news comments mainly by newspapermen (Harry Rogoff, Louis Hendin, Chaim Lieberman, Z. H. Rubinstein, Mordecai Danzis, and others).

Notable also among popular commercial broadcasts on this station were the daily programs of C. Israel Lutsky, known as the "Jewish Philosopher." The Forward Hour, a weekly Yiddish broadcast sponsored by the Jewish daily *Forward,* was maintained as a regular feature from 1932 on. Frequent Yiddish broadcasts were heard also over local stations in Brooklyn and the Bronx (New York city), as well as in Chicago, Philadelphia and Boston.

THEFT (*genebah*). The prohibition of theft is inherent in all of Jewish law from the very beginning. It is the eighth of the Ten Commandments, and is usually coupled with the laws against murder and adultery. Since Jewish law is based on the idea of private property, this prohibition serves as a means of protection. No one is to take possession of the property of others, except as regards a few cases explicitly enumerated and intended to further social interests, such as the right of the poor to the gleanings and the forgotten sheaf, the right of the laborer and wayfarer to satisfy their hunger, and the power of the court to seize property to satisfy a claim.

Seizure of the property of others may be regarded as theft or robbery, according as to whether it is done secretly or openly and by force. In Jewish law a severer punishment is exacted for theft, since one who robs runs greater risks and does not in any case take advantage of the trust or friendship of others. The codifiers often find difficulties in determining whether an act is to be regarded as theft or robbery. Thus, if one takes property from another through the use of weapons, Maimonides regards it as theft but Abraham ben David as robbery.

Theft was punished by requiring a double restitution; the stealing of animals by four- or fivefold restitution, according to Biblical law. This represents the demands of an agricultural economy. Rabbinical law modified this by limiting the cases of manifold restitution and by providing that if the thief confess his crime, he need only restore the object which he had taken. In general, Jewish law is more concerned with restoring the property to the rightful owner than in inflicting punishment on the thief. Capital punishment would have been too severe, and imprisonment for crime was never a part of Jewish legal procedure. Accordingly, a theft is put into the category of a debt; and if the thief had already disposed of the article and used the proceeds he might be compelled, like a debtor, to be in servitude until he had worked out his debt. Receiving of stolen goods was strictly forbidden.

Jewish teachers speak also of types of figurative theft which were regarded as morally wrong. "Theft of the heart" (*genebath lēb*) or "theft of the mind" (*genebath da'ath*) was defined as the use of flattering or complimentary words to influence the opinion of another, or to deceive him in any way. "Theft of words" (*genebath debarim*) was used to indicate plagiarism of the writings of another, or even the use of another's ideas without giving the latter the proper credit.

THEILHABER, FELIX AARON, physician and author, b. Bamberg, Germany, 1884. He was a son of Adolf Theilhaber. In 1911 he served as a physician with the Turkish Army in the War with Italy over Tripoli, and in 1913 he served in the Balkan war. From 1907 to 1910 he published the periodical *Palästina.* Theilhaber participated in the Zionist sports movement, and advocated the revision of sex laws. He edited the *Beiträge zum Sexualproblem,* and was a renowned statistician. In 1935 he emigrated to Palestine, where he was living in 1943.

His books include: *Der Untergang der deutschen Juden* (1911; 2nd ed., 1921); *Beim roten Halbmond vor Tripolis* (1911); *Das sterile Berlin, eine volkswirtschaftliche Studie* (1913); *Die Schädigung der Rasse durch soziales und wirtschaftliches Aufsteigen, bewiesen an den Berliner Juden* (1914); *Die Juden und der Weltkrieg* (1916); *Schlichte Kriegserlebnisse* (1918); *Jüdische Flieger im Weltkriege* (2nd ed., 1924); *Dein Reich komme!* (a chiliastic novel from the times of Spinoza and Rembrandt; 1924); *Shterkung fun Kerper* (Yiddish; 1925); *Die Beschneidung* (1927); *Goethe, Sexus und Eros* (1929). His *Schicksal und Leistung, Juden in der deutschen Forschung und Technik* (1931) is a profound evaluation of the accomplishments of German Jews in the realms of science and technique.

THEISM. The term theism probably gained currency during the 18th cent. to designate a philosophical conception of God. Originally it meant nothing more than the opposite of atheism, that is, it affirmed the existence of God. Later on its meaning was restricted to the belief in a personal God, the conscious Creator of the world. This definition, rather than distinguishing it from atheism, sets it off against deism, which limits God's sphere of influence to the initial act of creation, from which all subsequent occurrences in the world are derived. Thus in theism God remains immanent throughout history, whereas in deism He is connected with the present universe only indirectly, because He originated it in the beginning of time. For this reason Kant, in his *Critique of Pure Reason,* called the theistic God "living" and the God of the deists "impersonal." Another element in the definition of theism is the unity of God, monotheism. Thus theism is distinct from pantheism, which identifies God with all existence, as well as from scepticism and agnosticism, which refuse to answer any question regarding the ultimate ground of things.

Judaism throughout its long history may be included in the category of theistic religions, although Judaism as a philosophy was developed only in late Hellenistic times by Philo. Nevertheless, both the Bible and rabbinic literature abound in views of God's unity and His purposeful nature. In fact, all classic Jewish works were motivated to a very large extent by the purpose of proving God's continuous watchfulness over the universe and mankind; thus these works are stamped with a truly theistic character.

THEODORE WIENER.

THEOCRACY (Greek *theokratia,* "rule of God"), the direct rule of God over a community. It is distinguished from monarchy, which places the ultimate power over a nation in the hands of a human king, and from hierocracy, the rule of priests, which ascribes to a religious caste unique insight through the interpretation of oracles.

Although the word theocracy does not appear in literature until the time of Josephus, who probably coined this term in describing the polity of the Jewish commonwealth (*Against Apion,* II, 165), the idea itself goes back to the earliest period of Israel's history. In fact, all primitive and Semitic tribes, and even later some of the more advanced of them, can be characterized as theocracies. This phenomenon is explained on the one hand by the nomad's passionate desire for freedom from all human interference, and on the other hand by his yearning to be filled with God's spirit and to follow His dictates and those alone.

The Bible emphasized the fact that God may manifest His will in many ways. Whether He does so through great leaders like Moses, through judges like Deborah, through a Nazirite like Samson, or through a king like Saul, it is always God who is actually accomplishing their tasks for them, while they remain simply His agents. It is He, not Moses, who leads Israel out of Egypt (*Ex.* 12:51); it is He who is the real victor in the battle against Sisera (*Judges* 5:4-5), whereas the leaders are merely His instruments.

As a permanent monarchy is established in Israel, Saul and the Davidic kings, by reason of their anointment, become the new representatives of God on earth

(*I Sam.* 24:7). In addition to that, theocracy finds a new channel of expression in the prophets, who speak to the people in the name of God (*Isa.* 7:7; *Jer.* 1:1, 11 and other passages). It is significant that there are no stereotyped criteria by which a prophet may be recognized. The presence or absence of the indefinable spirit of God alone determines the difference between a true and a false prophet.

Another means by which theocracy brings its influence to bear on the Jewish people is the Law. All statutes and ordinances by which they are governed issue directly from God (*Ex.* 19:3-6). In course of time, the Law supersedes all other forms.

This variety of the media of theocracy shows in what manifold ways the spirit of God may reveal itself in human affairs. Yet there is one basic, immutable idea underlying all these theocratic conceptions: it is the Covenant, which binds Israel to God (*Ex.* 19 and 20). The Covenant implies mutuality rather than a one-sided relationship, which might be inferred from a conventional view of theocracy. Thus the rule of God, to be effective, requires the consent of the governed. Therefore, man must choose God of his own free will, before he can truly become His subject. "The acceptance of the yoke of the Kingdom of Heaven" (*kabbalath 'ol malchuth shamayim*) must precede "the acceptance of the yoke of the commandments" (*kabbalath 'ol mitzvoth*). Yet, the Covenant being eternal, Israel has no choice other than fulfilling God's wish.

While all these ideas develop spontaneously out of the life of the Jewish people, Ezekiel's plan to erect a theocratic structure in the restored Israel with his emphasis on the priesthood and on ceremonials connected with the Temple is a conscious effort to superimpose a new constitution on the returned exiles. Actually this project (*Ezek.* 40 to 48) tends more toward a hierocracy, intended to replace the Davidic dynasty.

In the development of Jewish eschatology the theocratic pattern of the Davidic kingdom served as the framework for the ideas about the coming of God's Kingdom. Through the restoration of this dynasty God was to bring about Israel's redemption. This event was to usher in an age of eternal peace and justice, supervised by God's messenger, the scion of David. In this way Jewish eschatology perpetuated this form of theocracy even after the Davidic kingdom had ended.

On the other hand, the legal aspect of theocracy was championed by the Pharisaic party, which, in its opposition to the hierocratic tendencies of the Sadducees, gradually excluded practically all other manifestations of the theocratic impulse. From now on, God's hand was to be seen in the Law alone.

Medieval government was based on theocracy by way of the anointment of kings. Both the divine right of kings, an idea prevalent up to the most recent times, and the religious sanction of the feudal relationship, in which the ultimate suzerain of a feudal state, the king or emperor, was believed to hold his fief directly from God, are derived from this type of theocracy.

The revival of Old Testament studies during the Reformation brought theocratic communities into being which were based on the Bible, such as Calvin's republic in Geneva and Cromwell's Commonwealth in England. Both pointed to the legal and prophetic expression of Jewish theocracy as the only true polity in combatting the Catholic hierocratic system.

THEODORE WIENER.

Lit.: Buber, M., *Königtum Gottes* (1932) 139-82; the commentaries on and introductions to the Bible.

THEODICY, a Greek term, meaning the justification of God because of the inadequacies existing in this world. The idea of theodicy presupposes God's goodness and justice, a moral bond which unites Him with His creatures.

In the religious thinking of Israel the feeling of God's omnipotence increased as time went on. Concurrent with this development and with the deepening of the faith in God's unity (monotheism), the belief in His goodness, justice, and wisdom also took root. At first the disharmony between such a God and the evils in the world was hardly noticed. Although the incompatibility of such a religious system with the existence and the success of the wicked was realized, this fact was simply negated by the repeated asseveration that God rewards the good and punishes the wicked. Examples are the fall of man, the fate of Sodom and Gomorrah, and Pharaoh's rise and fall.

This original popular piety was hardly unique with the Biblical religion. When the prophets began to emphasize the moral aspect of the covenant and placed Israel on a footing of equality with the other nations of the world in respect to God's impartial and righteous rule of the universe, world history was transformed into a continuous process of world judgment. This was the philosophy of history exemplified in *Judges* and *Chronicles,* which explained the changing fortunes of Israel as just reward for fidelity or as retribution for disobedience to God's command.

The rise of individual thinking put new stumbling blocks in the way of this perfect theodicy. The fact that righteousness and prosperity did not combine too often in the same person contradicted this dogmatic faith. Bitter thoughts already paralyzed the thinking of the prophet Jeremiah (*Jer.* 20:7-13), and the author of *Job* asks pointedly: "Why do the righteous suffer?" During the post-Exilic period, the cruel fate visited on the hapless people could find little justification in their conduct, as many a Psalm (*Ps.* 44; 59; 69; 74; and others) contrasts the righteousness of a defeated and oppressed Israel with the triumph of the wicked and godless nations. Still, there was one consolation in the hope for the Messiah, who would bring salvation to Israel before the whole world. But this did not answer the need of the individual for just reward of his piety. The sufferings of the righteous and the prosperity of the wicked could be reconciled with the justice of God only, when this world was viewed as a fragment of the existence in the hereafter, which would round out life into a harmonious whole. Both the Talmudic and the later rabbinic theology operated with these principles in establishing theodicy. Here it grew into a very complicated doctrine of retribution.

Jewish philosophy took up the problem of theodicy. Especially noteworthy is the position of Saadia and Maimonides. The former (*Emunoth Vedeoth,* book 5, chap. 86 et seq.) treats it following the sayings of the rabbis (*Yoma* 62a; *Kid.* 39b, 40b; *Yer. Peah* i; *Midrash Gen.* 33; *Midrash Ex.* 14; *Yalkut Ps.* 103), mainly in connection with the problem of retribution. Maimonides, on the other hand, who devotes the whole third part of his *Guide to the Perplexed* to it, grapples with the problem in all its implications. All the deficiencies in the world, not only evil, for which freedom of the will is responsible, apparent imperfections of nature, sickness, death, hunger and suffering, leave the perfection of God untouched, because they derive from the defective state of matter alone and are no positive evil at all, but are only the absence of perfection, as darkness is the want of light. Besides, the world should not be considered from the point of view of the purposes and desires of man, who complains so

much about its defects; for man is in no way the ultimate goal of the universe. Maimonides' ideas on theodicy were introduced into the Western world by the German philosopher Leibniz, who commended them very highly (*Die Theodicee,* German trans. R. Habs, vol. 2, p. 21 et seq.).

MAX WIENER.

THEODOR, JULIUS, rabbi, b. Schmalleningken, East Prussia, Germany, 1849; d. Berlin, 1923. He studied philosophy and orientalia in the rabbinical seminary at Breslau, and served as rabbi at Berent, West Prussia, and Bojanowo, Posen. In 1890 he visited the London, Oxford and Paris libraries for the purpose of studying the Midrashim manuscripts. Theodor wrote: *Der Unendlichkeitsbegriff bei Kant und Aristoteles* (1876); "Zur Komposition der agadischen Homilien" (in Graetz' *Monatsschrift,* 1879); "Die Midraschim zum Pentateuch und der dreijährige palästinensische Cyclus" (*ibid.,* 1885-87); "Der Midrasch Bereschit Rabba" (*ibid.,* 1893-95); *Bereschit Rabba mit kritischem Apparate und Kommentare* (1903-4, parts 1 and 2, Berlin). He was a contributor to the Jewish Encyclopedia.

THEODORA, czarina of Jewish descent, who lived in Bulgaria in the 14th cent. She was the third wife of Czar Ivan Alexander of Bulgaria, who reigned from 1331 to 1355. Her original name was Sarah, and she was born at Trnovo, then the capital of Bulgaria, as the daughter of a Byzantine Jewish couple. She was known as "the beautiful Jewess." Chosen to present a petition of the Trnovo Jews to the czar, she enchanted Ivan Alexander by her beauty, and he married her about 1335. She was converted to Christianity, and received the name of Theodora or "Newly Enlightened Czarina and Sole Support of all the Bulgarians and Greeks."

She is said to have possessed a remarkable intelligence and to have helped the czar in all affairs of state. Theodora was beloved by the clergy since, despite her Jewish origin, she was "of a pure faith," ordered the restoration of churches and even founded monasteries so that, after her death, "eternal memory" was sung for her in the churches.

Her high position also strengthened the power of the Bulgarian Jews, upon whom she was said to have bestowed favors without, however, being able to prevent the dispersal of the community of Trnovo. According to an anti-Jewish historian, the Bulgarian Jews then "began to become intolerable by ridiculing the Christian faith and by behaving like genuine Bulgarians," a charge not confirmed by any other source.

Theodora succeeded in securing the Bulgarian throne for one of her two sons, Ivan Shishman III, while her two stepsons were given the regency over certain provinces of the country. She is charged by Bulgarian historians with having weakened the country by the partition and thus sealed the doom of Bulgaria. She was even accused by some historians of having poisoned Michael, heir presumptive to the throne. But this claim is not confirmed.

Ivan Shishman III, the last czar of the independent Bulgarian kingdom, hospitably received the Jews who had been driven from Hungary and had settled at Nicopolis, Plevna and Vidin. Unable to defend his country against the powerful Turks, he agreed, in 1366, to become the vassal of Sultan Murad I and sent his sister Thamar (Mara) to the harem of the conqueror. This sacrifice of the czar's sister made such an impression upon the mind of the people that the memory of the half-Jewess Mara is still kept alive in Bulgarian folk songs.

There exists a contemporary picture showing Theodora with her husband and her sons, Ivan Shishman and Assen. The Jewish-born queen figures in the historical play *Kum Propast* (Toward the Precipice), by the modern Bulgarian writer, Ivan Vazov.

THEODOSIUS, *see* ROME.

THEODOTION, translator of the Bible into Greek about 185 C.E. Accounts of him vary; he is said to have been a native of Ephesus or Pontus, and a Jewish proselyte or an Ebionite Christian. His version seems to have been based on the Septuagint, with additions and changes to make it conform more closely to the Hebrew original. Thus in *Job* he gives a complete translation of the book, instead of the shortened form of the original Septuagint version. His version of *Daniel* was accepted into the canon of the official Greek Bible of the church in preference to that of the Septuagint, which survives in one manuscript only (Codex Chisianus 87); the reason for this preference is obscure.

A more interesting point is the presence of Greek quotations of the Bible in the New Testament which are practically the same as the renderings of Theodotion. Two solutions have been proposed for this phenomenon: 1. that Theodotion made use of an older, pre-New Testament version in his translation; 2. that Theodotion, wherever possible, followed the New Testament renderings. A number of Theodotion's renderings to other books of the Bible have been preserved in notes. They show the translator to have been a careful worker, overfond of transliterations of the Hebrew, but sober in his choice of words and with a well-balanced style.

Lit.: Swete, H. B., *Introduction to the Old Testament in Greek* (1914) 42-49, 499; Hastings, James, edit., *Dictionary of the Bible,* vol. 4 (1919) 866.

THEOLOGY. 1. Origin and Meaning. Theology (Greek *theos,* God, and *logos,* word, "doctrine concerning God" or "divine matters") as an intellectual discipline appeared late in the history of Judaism. As the term indicates, it was created by the Greeks, who applied it rather loosely to the poems of Hesiod and Homer, which sing of the gods and of their activities, and also to the speculations of the philosophers regarding the world's origins and its relation to the gods. While Plato may be regarded as the Greek theologian par excellence, it was Aristotle who invested the term with technical significance. From the world order he derived three theoretical sciences: mathematics, physics, and theology, identifying theology with metaphysics, which reaches its climax in speculation about God as the first cause. In this light the whole of Greek philosophy took on the character of a body of theology. The Stoics distinguished between three kinds of theology: *mythical,* dealing with the gods and their worship; *natural,* seeking a verifiable account of the divine; and *civil,* or the knowledge of the ceremonies connected with the religious practices of the civil communities.

The Stoic conceptions of theology were introduced into Roman thought by M. Terentius Varro, and were subsequently adopted by the church fathers Tertullian and Augustine. When it was put into the service of Christianity, *mythical* theology was replaced with *revealed* as contained

in Scripture. Strongly contested at first on account of its association with pagan culture and with the scepticism common to philosophy, theology gradually gained general acceptance in the church.

Aristotle's identification of theology with metaphysics was carried into Islam. Moslem thinkers considered metaphysics both as a "first philosophy" and as a "theology." The function of the latter consisted in harmonizing the teachings of the Koran and "the philosopher" (Aristotle). As in Christianity, so in Islam, a distinction was made between *natural theology,* the product of reason, and *revealed theology,* given in faith (Guillaume, Alfred, *The Legacy of Islam,* 239 et seq.).

2. Jewish Theology. The first attempts at creating a Jewish theology were made by the Hellenistic Jewish thinkers, who set themselves to the task of interpreting the teachings of the Torah in the light of Greek thought. Following the break up of Alexandrian Jewry (1st to 5th centuries) and the consequent interruption of philosophic activity in Judaism, all Jewish intellectual energy was absorbed in the cultivation of Halachah and Haggadah. Theology came to life again in Gaonic times (6th to 11th centuries) along with the awakening of the scientific study of Judaism, of Masorah, Hebrew grammar and exegesis.

The first systematic theology of Judaism appeared with the publication of Saadia's *Kitab al-Amanat wa'l Itikadat,* better known by its Hebrew title of *Sefer Haemunoth Vehadeoth* (Book of Beliefs and Opinions), in 933. Written in Arabic, this pioneer work reflects the influence of Islamic thought in the selection and arrangement of the material and in the treatment of its contents. It contains chapters on creation, divine unity, commands and prohibitions (revelation), obedience and rebellion (on freedom), merit and guilt, nature of the soul, resurrection, messianic redemption, retribution, and ethics. Saadia's contemporary, David ibn Merwan Al-Mukammas, included in theology the metaphysical principles preliminary to all sciences as well as the investigation of the unity of God, the primal light (Or Bahir), and all incorporeal beings. As the science of the Torah, theology also serves the practical end of supplying the means whereby religious persons secure God's favor (*Perush Sefer Yetzirah* by Judah ben Barzillai, edit. S. J. Halberstam, 65-66). For Bahya ibn Pakuda theology represents the crowning part of theoretical philosophy, which deals with God, Torah, and such intelligible forms as the soul, intellect, and angels (*Hoboth Halebaboth,* Introduction). Abraham ibn Ezra included in theology theosophic lore (such as Merkabah and *Shiur Komah*) as well as psychology and eschatology (*Yesod Mora,* Introduction).

Maimonides unreservedly follows Aristotle in identifying theology with metaphysics. Its function is twofold: it inquires into immaterial beings, such as God and the angels, and into the underlying causes of things belonging to other sciences, i.e. mathematics and physics (*Milloth Hahiggayon,* xiv). His theological writings cover the whole of Judaism. His *Perek Helek* formulates the articles of Jewish faith. His *Sefer Hamadda,* which serves as an introduction to his code, consists of a popular statement of all phases of Jewish belief. His *Moreh Nebuchim,* too, discusses virtually the whole of Judaism from the standpoint of his philosophy. Joseph Albo's *Sefer Haikkarim* (Book of Principles) evolves a complete systematic theology of Judaism around these four themes: (1) a critical analysis of the Jewish articles of faith; (2) the Jewish doctrine of God; (3) revelation; (4) retribution.

Believing that the truths of the Torah can not be contradicted by the truths of reason—which is God-given—the Jewish philosophers supplemented revealed with natural theology. The equivalents of the term in medieval Hebrew are: *'elohiyuth* ("divinity"), *limmud 'elohi* ("divine learning"), *hochmah 'elohith* ("divine wisdom"), *madda ha'elohi* ("divine knowledge") and *torath ha'elohuth* ("law of divinity"). Modern Hebrew often employs the Greek term itself. Rabbi A. E. Cook designated the theological section of his writings as *Hochmath Hakodesh* ("sacred wisdom") (see Wolfson, H., "The Classification of Sciences in Medieval Jewish Philosophy," *Hebrew Union College Jubilee Volume,* 263-315).

3. Theology and Religion. In consequence of the revolt against scholasticism in the 17th cent. and of the tendency toward differentiation in the sciences, theology has been marked off from metaphysics and limited to the study of religious phenomena, both doctrinal and practical. In modern thinking, theology takes its place as a branch of the general science of religion. As each religion presents a phase of the universal religious consciousness, theology grows more effective by drawing upon the religious experience of humanity in its elucidation of the particular religion with which it is concerned. However, its treatment of the data differs from that of the science of religion.

The science of religion, when true to itself, deals with its material in complete objectivity and detachment. By the impartiality with which the investigator records the passing events of a religion, he places himself outside of his subject, and produces the impression that he is dealing with archeology, with dead matter, with outworn beliefs and with forms of backward peoples or of bygone ages. The bizarre and sometimes revolting rites and survivals of primitive credulity loom larger on his canvas than the pure forces of faith, conviction and consecration that live in the hearts of religious men.

The theologian, on the other hand, places himself within the religious consciousness of his people, frankly identifying himself with the religion which he is analyzing and endeavoring to ascertain the practical value of his findings. He is interested not only in investigating but also in advancing his religion.

Furthermore, theology exhibits a strong affinity between itself and the subject of its study, so that the dividing line between the two often disappears and it is difficult to say where religion ends and theology begins. While religion is rooted in the emotions, it flowers forth into the intellectual realm. Beginning as a vague consciousness of the holy, religion grows into a rational comprehension of a bond between man and the Source of his being upon whom he believes himself to be dependent. Striving to understand the nature of the Determiner of his destiny and seeking to enter into communion with Him, man satisfies his emotional needs and stabilizes his life with faith and with standards of personal and social morality. Thus religion as an experience involves theology.

A deep interest in questions of a purely theological nature forms a characteristic feature of Judaism as a religion based on ethical monotheism. While the early phases of the religion of Israel consisted of acts, forms and rituals, the prophetic reformation was introspective and critical as well as deeply spiritual. The nature of God and His relation to the world, to Israel and to the individual became the all-absorbing subjects of Jewish thinking. The divine attributes of justice, mercy, holiness, and the like increasingly challenged the minds of prophets, psalmists and sages. Under the influence of Hellenism, theological interest rose above every other. In Palestine as in Alexandria men debated problems arising from the theistic view of the world. The religious parties of the 1st cent. C.E. were divided along doctrinal lines. Both the Halachah

George Wolf

and the Haggadah are built on carefully conceived principles of faith as well as of logic. These flowered forth into Jewish philosophy and theology. Thus, while stimulated by outside thought and method, Jewish theology was derived from Judaism as grammar was deduced from the Hebrew language and as the Masorah and exegesis were developed out of the Bible text.

Accordingly, the theologies of different religions differ from one another not so much in method as in the content of the beliefs and practices with which they deal. Christian theology of whatever sect or complexion derives from the experience and thought of Christendom and builds on the creeds of the churches which they represent. Christology forms the foundation of all the orthodox churches, and the personality and message of Jesus hold the center of the liberal churches. Islamic theology rests upon the teaching of the Koran and on the traditions of Mohammed and his followers. Jewish theology, in turn, is based on the historical religious experience of the Jewish people as expressed in its representative writings, the Bible, Talmud, Midrash, liturgy, and others, as preserved in living Jewish tradition and observance, and as embodied in Jewish institutions. Consequently, basic doctrines common to these kindred religions (such as God, revelation, Messiah, worship, or holy days) assume different forms in Jewish, Christian and Islamic theologies. However, inasmuch as the theologies of these religions summon reason to bear upon their creeds and ethical systems and as they derive from a common origin in the Torah and the Prophets, they exhibit much in common. Hence, as in medieval times, so today certain theological presentations of one of these monotheistic faiths often affect those of the other.

4. Scope and Divisions. The formulation of religious experience into a theology stems from the inner urge to take stock of the spiritual life and its presuppositions and from the desire to remove obstacles from religious belief and practice. The vagueness, incoherence and confusion which often appear in religious life and thought call for the examination and interpretation of the data. These efforts at systematization and revaluation of the phenomena of religion assume a theoretical and a practical character. Investigating and setting forth the data of religious experience, past and present, theology assumes the character of a descriptive science, like archeology, history or sociology. Presenting ideal standards of what should be believed and practised, theology figures as a normative science, like ethics or esthetics. Endeavoring to translate religion into life, theology serves also as an art.

Tracing the origin and growth of the beliefs, practices and institutions of a particular religion results in *historical theology*. The reduction of its teachings to succinct statements of fundamentals to serve as norms of faith and conduct produces *dogmatics*. The effort to vindicate the truths and values of religion results in *apologetics*. The refutation of conflicting views, whether of other religions or of systems of knowledge, assumes the character of *polemics*. *Systematic theology* draws its materials from history and exegesis, dogmatics, apologetics and polemics, as well as from psychology, sociology and philosophy. Its interests are scientific, seeking to coordinate the contents and forms of religion into a coherent and consistent whole. The analysis of the underlying principles of religion in the light of general theories of knowledge or the rethinking of its truths and reconstructing them into an ideal system represents *philosophy of religion*. Here the historical elements are subordinated to the speculative. *Practical theology* utilizes the results of the other branches of theological study in developing techniques and programs for religious living. Its province extends into ethics, liturgy, homiletics, religious education, social service and congregational management.

By examining the data of religion and probing their validity, theology purifies and strengthens the spiritual life of the community and of the individual. Its various branches serve the common purpose of paving the way for a proper understanding and balanced view of all phases of religion and for a constructive and efficient program of religious endeavor.

For general information on Jewish theology, see the articles on religious leaders, on movements and divisions in Judaism, and on literature, liturgy and ceremonials. Specific theological subjects are treated in the following articles: APOLOGISTS AND APOLOGETICS; ATONEMENT; AUTHORITY; BROTHERHOOD OF MAN; CABALA; CEREMONIAL LAW; CHOSEN PEOPLE; CREED; ESCHATOLOGY; ETHICS; FATHERHOOD OF GOD; FREE WILL; GOD; IMMORTALITY; INSPIRATION; KINGDOM OF HEAVEN; MESSIAH; MONOTHEISM; PHILOSOPHY, JEWISH; POLEMICS; PRAYER; PROVIDENCE; RELIGION; REPENTANCE; RETRIBUTION; REVELATION; SIN; SALVATION; SOUL; SYNAGOGUE.

THEOPHANY (Greek, *theophaneia: theos,* god, and *phainomai,* to appear), the outward and direct appearance of God to man. This excludes the indirect manifestations of the deity through miracles as well as the incarnations by which a god may be represented continuously, as in Christianity. A theophany is characterized rather by a brief, but intense experience, in which the deity is revealed to man. By its very nature the theophany is dominated by the mystical element.

The revelation of God to Abraham (*Gen.* 18:1), to Moses in the burning bush (*Ex.* 3), to Israel in the pillar of cloud at the Tabernacle (*Ex.* 33:7-11), and to Elijah at Horeb (*I Kings* 19:9-14) are outstanding examples of theophanies in the Bible. In all the inaugural prophetic visions (the "throne of God" in *Isa.* 1, the

Boris Thomashefsky

"divine chariot" in *Ezek.* 1 and 2) theophanies are likewise of great importance, as they furnish the mystic background for the concrete message of the prophet.

While theophanies are very common among primitives, they become less frequent in more advanced religions, although they are never completely eliminated. As the concept of God's invisibility and later on of His incorporeality takes root, His angels or His glory are substituted for His direct appearance. Theophanies practically disappear in Jewish literature after the Babylonian Exile.

THIEL, ERNST, bank director and art patron, b. Norrköping, Sweden, 1859. His home at Stockholm, housing his important collection of Nordic art, was converted into a state museum in 1924. Thiel translated the works of Friedrich Nietzsche into Swedish, and helped support the Nietzsche Archive at Weimar.

THIRTEEN, *see* NUMBERS IN MYSTICISM.

THIRTEEN ARTICLES OF FAITH, *see* CREED; DOGMAS; MAIMONIDES.

THIRTEEN ATTRIBUTES (*shelosh 'esreh middoth*). According to *Ex.* 34:6-7, when God made a revelation of His nature to Moses, He uttered before him the words: "The Lord, the Lord, God, merciful and gracious, long-suffering, and abundant in goodness and truth; keeping mercy unto the thousandth generation, forgiving iniquity and transgression and sin. . . ." The Talmud (*R.H.* 17b) speaks of this passage as containing thirteen attributes or qualities indicating the patience, long-suffering and mercy of God. No enumeration is made in the Talmud, and the medieval commentators differ as to the exact division. The most probable summation is:

1. Lord
2. God
3. merciful
4. gracious
5. long-suffering
6. abundant in goodness
7. abundant in truth
8. keeping mercy
9. keeping [faith] to the thousandth generation
10. forgiving iniquity
11. forgiving transgression
12. forgiving sin
13. acquitting (formed by separating the word *nakkeh* from the rest of the phrase *venakkeh lo yenakkeh,* "and that will by no means clear the guilty").

According to the same Talmudic passage, God promised Moses to pardon the sins of Israel if it turned to Him with these words. The thirteen attributes, accordingly, form the central part of all the penitential prayers (Selihoth). In the late Middle Ages the custom arose of reciting them on all festivals just before the Torah is taken out of the Ark.

The thirteen attributes are the subject of frequent discussions on the part of Jewish philosophers in connection with the attempts to define the nature and attributes of God. They are treated in especial detail by Maimonides, who discusses the entire context of the Biblical passages and finds in it his conception that man can never attain to a complete understanding of the nature of God and can know Him only through His actions. These latter are revealed in the thirteen attributes, which thus become the standard for man's conduct and the pattern of all moral action.

THOMASHEFSKY, BORIS (BARUCH) AARON, actor, producer, playwright, and pioneer of the Yiddish Theatre in America, b. Ositnyachko, Ukraine, 1866; d. New York city, 1939. His childhood years were spent in the town of Kamionka, where his grandfather and father were cantors.

At the age of eleven he went to the city of Berdichev to sing as a soprano in the choir of the famous Nisan Belzer. He arrived in the United States in 1881, went to work with his father in a cigarette factory, and sang in the choir of a synagogue on Henry Street, in New York's East Side. In the spring of 1882 he prevailed upon a saloonkeeper, Frank Wolf, who was a trustee of the synagogue and an admirer of his singing, to finance the voyage of a Yiddish theatrical company from London to New York. Upon that company's arrival, young Thomashefsky was assigned a leading singing part in its first performance in America. The play was *Koldunya* (The Witch), by Abraham Goldfaden, and it was produced in the summer of 1882 in Turnhall on East Fourth Street, between Second and Third avenues, New York city. Due to the scarcity of women in this and subsequent Yiddish companies, Thomashefsky often played feminine roles.

After an interlude of nearly four years, during which time his voice was changing, Thomashefsky learned to play the piano and wrote his first play. When he returned to the stage in 1886, he organized a stock company and played in New York, Philadelphia, Baltimore and Boston. Because of his vocal gifts, his tall handsome appearance and native histrionic bent, he gained the position of a star from the very beginning. In addition to some of the Goldfaden operettas, and such of his father's plays as *The Spanish Inquisition* and *The*

Life of Rothschild, the young actor wrote or adapted a considerable number of his own early vehicles. He appeared also in a Yiddish adaptation of *Hamlet* in 1893, in *Richard the Third* in 1895, and in a number of plays of Jacob Gordin. During the theatrical season of 1895 to 1896 Thomashefsky formed a company with two other stars, Jacob Adler and David Kessler, to eliminate competition and join their efforts for real dramatic accomplishment. They produced Jacob Gordin's *The Jewish Priest* and *The Brothers Lurie,* and attracted large audiences, but after several weeks the combination broke up because of rivalry.

From then on Thomashefsky was his own director, producer and often also the playwright. Alongside Biblical and romantic operettas, both gaudy and sentimental, in which he invariably appeared as the swashbuckling hero, he produced also plays of more substantial dramatic value. In 1904 he produced a Yiddish version of *The Children of the Ghetto* by Israel Zangwill, under the supervision of the author. In 1905 he produced *Hear Ye, Israel* by Ossip Dymow, in 1908 *The Devil* by Ferenc Molnár, and Jacob Gordin's last play, *Dementia Americana.* He also produced a number of plays by Leon Kobrin, Z. Libin, Abraham Shomer, Harry Kalmanowitch, S. Yushkewitch and others. In all these and other serious plays he revealed himself as a character actor of real merit and considerable sincerity despite his theatrical mannerisms.

At the zenith of his career he was admired by large audiences and deplored by the more exacting critics for the meretriciousness of so many of his vehicles. But he continued to alternate serious plays with gaudy sentimental operettas. He was, however, instrumental in bringing to the Yiddish stage in America a number of young European Jewish actors, such as Jacob Ben Ami, Samuel Goldenburg, Lazar Fried, a great Jewish actor from the German stage (Rudolph Schildkraut, in 1911), a Russian Jewish playwright (Ossip Dymow, in 1913), and the most outstanding European Yiddish company of its day (the Vilna troupe, in 1924), and a galaxy of Yiddish musical comedy stars. Although he authored and adapted the books for many successful operettas, such as *Dos Pintele Yid, Mazel Tov* and *Polish Wedding,* his real contribution to the Yiddish stage is to be measured by his enthusiasms and resourcefulness as an entrepreneur and his flare for showmanship. He went through many fortunes, and spent his last years playing scenes and singing to audiences in the East Side night clubs.

BESSIE THOMASHEFSKY (née Baumfield-Kaufman), actress (b. Tarastche, Ukraine, 1873), was the wife of Boris Thomashefsky. She was brought to the United States by her parents in 1883.

After her father tried his hand at farming in the state of Maryland for two years, the family settled in Baltimore. She attended a public school for some three years, then worked in a hosiery factory, sold fruit on the streets of Baltimore and was apprenticed to a seamstress at the age of fourteen. In 1888 Boris Thomashefsky and his company of Yiddish players visited Baltimore, and she was deeply impressed by their performances. At the home of her married sister she met Thomashefsky, who assigned to her a part in a play, *The Life of Rothschild,* which he produced with a local dramatic club. With her parents' permission, she left home for Boston and Philadelphia to appear with Thomashefsky's professional company. Upon her father's request that she return home, she married her mentor.

For some fifteen years she played soubrette roles in operettas, and subsequently developed into a comedienne and character actress of considerable importance. In 1912 she separated from her husband and became a stage star in her own right. She appeared in a Yiddish version of the *Salome* of Oscar Wilde (1908), in Abraham Shomer's *Ikele Mazik,* playing opposite Rudolph Schildkraut, and in plays of Jacob Gordin, Leon Kobrin, Ossip Dymow and others. She achieved her most outstanding success in a musical comedy, *Jennie Runs For Mayor* (by Z. Kornbluth), in 1920. In 1929 she retired from the stage.

PINCUS THOMASHEFSKY, playwright and actor (b. Talna, Ukraine, 1842; d. Fallsburg, N. Y., 1914), was the father of Boris Thomashefsky. In 1881 he immigrated to the United States as a member of the Am Olam group of young intellectuals who hoped to settle in farm cooperatives. Disillusioned by the failure of their plans, he went to work in a cigarette factory.

After his son, Boris, appeared with the first Yiddish troupe in New York in 1882, Pincus Thomashefsky organized a theatrical group of his own, including his son, and was co-author (with a Mr. Tanchuk) of its first play, *The Spanish Inquisition.* He subsequently wrote a number of other plays (*The Life of Rothschild, Hannah and Her Seven Sons, Yankele Yungatch, Captain Dreyfus, Exodus, The Night Queen*), and acted in some of them. His Yiddish adaptation of Theodor Herzl's *The New Ghetto* was produced in 1911 at the People's Theatre with his son Boris and Rudolph Schildkraut in the leading roles.

LEON CRYSTAL.

THON, ALBERT, lawyer and author, b. Lwów (Lemberg), Galicia, 1899. He was one of the founders of the Jewish youth movement of Galicia and Vienna. Due to his great success in organizing, he became, at the age of twenty, a delegate of the American Jewish Joint Distribution Committee for the economic reconstruction of the Polish Jews after the first World War. In this capacity he presented a plan for reconstruction and worked out a project of a Jewish Emigration Bank, which was converted into fact and was founded later on. Thon was one of the leading Zionists of Poland, especially in Lodz, where he lived from 1922 to 1939. He organized the Jewish intelligentsia in Poland, and this organization was one of the strongest advocates of the struggle for Jewish rights in Poland. Thon took a leading part in organizing the anti-Nazi boycott, especially in industry, and together with his younger brother, Julian Thon (b. Mielec, Galicia, 1908), defended many accused Jews in political trials. He published more than twenty works and treatises in the field of jurisprudence.

After the occupation of Lodz by the Nazis in 1939, Thon was arrested by the Gestapo for his political anti-Nazi activity. After some time he succeeded in escaping to Lwów, which was occupied by the Russians at that time (1941). In 1942 he was reported to be still living in Lwów.

THON, JACOB JOHANAN, Zionist leader, b. Lwów (Lemberg), Galicia, 1880. He was the son of Moses Thon and the younger brother of Osias Thon. His sisters, Henryka Thon-Huss and Anna Miriam Thon, were later leaders of the Jewish women's movement in Galicia.

Jacob Thon founded (1897), together with Leon Reich, the first Zionist student fellowship, Emunah, in Lwów. He founded and was the first publisher of the first Zionist monthly for youths in the Polish language, *Moriah.*

After he graduated from the University of Lwów and received the doctorate in law, he went to Berlin, where he published and edited, together with his close friend, Arthur Ruppin, the periodical *Zeitschrift für jüdische Demographie und Statistik.*

In 1907 Thon and Ruppin went to Palestine, where the former became the first manager of the Zionist

Palestine office in Jaffa. He established the principles of the Jewish land policies, and was founder of the Palestine Land Development Company, whose managing director he was from 1908 on; he was still serving in that post in 1943.

In 1908 Thon, together with Meier Dizengoff, Ruppin, Joshua Chankin and others, founded the first modern all-Jewish city, Tel-Aviv. During the first World War he was imprisoned by the Turks as one of the notables hostages for favoring the Allies' cause. After the War he was elected president of the Jewish National Council (Vaad Leumi), membership in which he still held in 1943.

Thon was a leader in the political and economic activities of the Palestine Yishub, on whose behalf he went nearly every year to Europe, several times to America. He was delegated to all the Zionist Congresses for thirty-five years, and in 1943 was still a member of the administrative committee of the Jewish Agency for Palestine. He was in that year one of the presidents of the Jewish community in Jerusalem, and one of the Jewish personages in Palestine most esteemed by Jews, Arabs and Englishmen. In 1943 he was living in Rehaviah, Jerusalem.

His first wife, Sarah Thon, was the founder of Jewish social work for the Yemenites and for the protection of the women and children of Palestine. His second wife, Helena Hannah Thon, was a well-known publicist and author.

THON, JOSEPH, chemist and writer, b. Zurawno, Poland, 1898. He was a grandson of Moses Thon and a nephew of Osias Thon.

He was assistant principal of the Jewish Technical College in Lwów from 1926 to 1934; from 1921 to 1934 he was foreign editor of the Lwów daily *Chwila.* From 1935 until the German invasion of Poland (1939) he was managing director of the Polish-Palestine Chamber of Commerce in Warsaw, and also (1935-39) director of the Polish-Palestine Bank. Thon was a member of the government committee for a trade and commerce treaty between Poland and Palestine and adviser to the official maritime and air service between Poland and the Middle East.

Among his numerous posts in Jewish life were the vice-presidency of the General Zionist Organization of Poland (1935-39), and his deputy membership on the administrative committee of the World Zionist Organization and of the World Jewish Congress. He was director of the Geneva Office for Refugees from 1939 to 1941, when he came to the United States, where he was co-chairman of the Association of Jewish Immigrants from Poland in America. Thon wrote widely in Polish, Hebrew and Yiddish, and was publisher and editor of the Library for Economic Problems in Palestine and the Near East.

THON, MOSES, rabbi, b. Lwów (Lemberg), Galicia, 1840; d. 1921. Although his father was one of the two Reform Jewish teachers in Lwów, licensed by the Austrian government, Moses Thon was educated in a strong Orthodox spirit, and was one of the most talented scholars of the Talmud Torah school and Yeshiva of Lwów. In his early years he became a member of the rabbinical Beth Din (court) in Lwów, to which he belonged for decades.

He was publisher of an important Judaic library of texts, which he interpreted with his commentaries. His edition of the *Pirke Aboth* was noteworthy. He was a famous arbitrator, and his decisions were asked for by persons from all parts of the country.

THON, OSIAS, Zionist and rabbi, and member of the Polish Sejm, b. Lwów (Lemberg), Galicia, Poland, 1870; d. Cracow, Poland, 1936. In his early youth he

Osias Thon

was known in the Yeshiva as an "Illui" (genius).

When he was sixteen he received Semichah (ordination) from the noted Rabbis Schmelkes, Ornstein and Braude. At the age of eighteen, under the influence of the Jewish national emancipation movement, he started to study secular subjects, and two years later graduated from the Gymnasium. In this same period, together with Rabbi Kobak, Dr. Bierer, Salomon Schiller, David Schreiber, Gerson Zipper and David Malz, he organized Mikra Kodesh, the first Zionist circle of Orthodox youths in Lwów. Thon edited the first Zionist anonymous leaflets, *Der Vecker* (1888), then studied philosophy at the University of Berlin, and received the Ph.D. degree, his thesis being *Die Grundprinzipien der Kant'schen Moralphilosophie.* As a Reform rabbi he studied also at the Hochschule für die Wissenschaft des Judentums, in Berlin, where he was co-founder of the Zionist organization Jung Israel.

Thon was one of the most important forerunners and one of the founders of political Zionism in Galicia, and later on, while studying in Berlin, was its advocate and propagator long before Theodor Herzl published his *Der Judenstaat.* After the appearance of this noteworthy work Thon got in touch with Herzl; there resulted between the two men a close friendship which lasted until Herzl's death in 1904.

Although Thon was offered a professorship in philosophy at one of the large universities in Germany, he preferred to remain a leader of the Jewish masses. In 1897 he became chief rabbi of Cracow, and retained this post for almost forty years, until his death. He became known as the spokesman not only for the Jews of Galicia, but also for the whole of Polish Jewry. He built up the Zionist Organization, and was a delegate to all the Zionist Congresses until the end of his life. Thon was one of the best speakers at these Congresses, especially in Hebrew, and was elected to the administrative committee of the Jewish Agency for Palestine. From 1931 to 1936, together with Menachem Mendel Ussishkin and five other Zionist veterans, he was an honorary member of the Zionist Actions Committee.

Thon was for many years president of the B'nai B'rith in Poland. In 1918, as representative of the Polish Jews, he was a member of the Comité des Délégations Juives in Paris, and in the following year he was elected vice-president of this committee. In this capacity he wrote *Treaty for Minorities,* which the

Allies presented for signature to the states of Eastern and Central Europe. In 1919 he was elected to the Sejm, being the first Zionist deputy from Cracow. He was reelected three times, serving as a member of the Sejm until his death, and being noted for his oratory. In 1919 he was elected the first president of the Jewish Club in the Sejm, and was reelected later; he was an intrepid champion of the national, political and cultural rights of the Jews in Poland. In 1924, together with Chaim Weizmann, he visited the United States on an important national mission.

Thon's favorite field of scholarship was Hebrew literature and Jewish historiosophy. Together with his friend, Hayim Nachman Bialik, Thon founded Tarbuth, the world organization for Hebrew culture, and was its president in Poland.

He published political and philosophical works in Hebrew, Yiddish, Polish and German. The most important were: *Theodor Herzl; Zur geschichtsphilosophischen Begründung des Zionismus;* and *Einiges zur Orientierung über die Weltlage des Judentums.* Of his *Gesammelte Werke,* three volumes in Hebrew and German had been published up to the German Nazi invasion of Poland in September, 1939. Thon was also a steady columnist for several Jewish newspapers in Poland. In 1918 he founded the first Zionist daily in the Polish language, *Nowy Dziennik.* In this newspaper, as well as in the Warsaw *Haint,* the Warsaw Hebrew daily *Hatzefirah* and in other Zionist newspapers in various countries, he published thousands of articles.

In 1938 a new settlement in Palestine, Kfar Yehoshua, was named after him. JOSEPH THON.

Lit.: Spiegelmann, William Z., "Dr. Thon, Philosopher and Political Realist," *New Palestine,* Nov. 20, 1942; *American Hebrew,* July 10, 1936, p. 56.

THOREK, MAX, surgeon, b. Budapest, 1880. He came to the United States in 1900, and received the M.D. degree from Rush Medical College, University of Chicago (1904). Thorek in 1943 was professor of clinical surgery at the Cook County Graduate School of Medicine, surgeon-in-chief at the American Hospital and consulting surgeon of the Municipal Tuberculosis Sanitarium in Chicago. He did pioneer work in the endocrinology of the testes. Thorek was decorated as a chevalier of the Legion of Honor of France, and received the Chevalier Order of the Crown of Italy. In 1942 he was awarded the Distinguished Citizens' Medal of the Veterans of Foreign Wars in Detroit.

His books include: *The Human Testis and Its Diseases* (1924); *Surgical Errors and Safeguards* (1931); *Modern Surgical Technic* (3 vols., 1941). He translated *Surgery of the Brain and Spinal Cord,* by Fedor Krause (1912), and was author of more than one hundred articles and papers in American and European medical periodicals.

Lit.: Kagan, Solomon R., *Jewish Contributions to Medicine in America* (1939) 236-38.

THORNBUSH. As thornbushes are very prevalent in Palestine, it is not surprising that there should be frequent allusions to them in the Bible. There are at least a score of words referring to thorns in general or to various species. Thorns are used symbolically to indicate protection, as they were used for hedges, and as indications of desolation, since they replace cultivated products in agricultural areas that have been devastated. The thornbush is used twice in Biblical parables: that of Jotham about the choice of a king (*Judges* 9), and that of Jehoash of Israel against Amaziah of Judah (*II Kings* 14). In both of these the thornbush is the symbol of arrogant worthlessness.

The outstanding story of the thornbush is that which connects it with the revelation to Moses on Horeb (*Ex.* 3). There Moses beholds a burning bush, and when he turns aside to see the reason for it, receives a message from God. Many attempts have been made to explain the story; thus it has been suggested that the thornbush in question was the dictamnus of Palestine, which contains a volatile oil and might easily have been enkindled on a hot day. However, a careful examination of the passage shows that the word *seneh,* used here, applies rather to the thicket as a whole than to an individual bush. In the primitive religion of Israel, the deity was thought of as dwelling literally on the holy mountain; accordingly, *Deut.* 33:16 describes Him as "that dwelt in the bush" (*shocheni seneh*). Fire being the attribute of the deity, the story in *Exodus* relates that God caused the entire surroundings of the mountain to glow, thus drawing Moses into the sacred precincts.

Lit.: The Biblical dictionaries and commentaries to the passages cited.

THREAT. A verbal threat is not regarded as a crime in Jewish law, which takes cognizance only of definite action. Even though the person threatened may suffer an injury as the result of the threat, this fact does not of itself constitute an actionable affair. It is assumed that the threatened person would not seriously believe a threat that presupposes an act contrary to Jewish law; if he does and acts accordingly, he must suffer his loss. On the other hand, transferral of property forced by a threat is regarded as duress and therefore invalid, and the rightful owner can sue for its return. If one person threatens to kill another, this is regarded as proof of intention, which is necessary to convict one who has committed a capital crime. Under certain circumstances a threat may be regarded as placing a man in an emergency or forcing him to act in self-defense; hence he is exempt from punishment.

TIBERIAS, city on the western shore of the Sea of Chinnereth (Sea of Galilee or Sea of Tiberias), founded by Herod Antipas (26 C.E.) and named after the Roman emperor Tiberius. There was an earlier settlement on the site, as graves are reported to have been discovered there at the time that the city was founded. According to the Talmudic sages of the 3rd cent., either Rakkath (*Josh.* 19:35) or Hammath occupied the site in earlier times.

The city was situated close to the edge of the lake and about 700 feet below sea level; hence it enjoyed a very warm climate (90 to 100 degrees in the summer). Some remains of the walls that surrounded the ancient city have been discovered. A number of important buildings, such as the seat of the government (*boule*), are mentioned in Talmudic sources. Thirteen synagogues are also mentioned; one of these was located not far from the present-day baths to the south of the city. Excavations conducted by Slouschz (1920-21) uncovered the remains of this synagogue, as well as various ritual objects, including a large seven-branched candlestick of limestone.

For some time after its foundation but few Jews lived in the city, since it was regarded as unclean be-

A view of Tiberias from the Lake

cause of the graves that had been found there. Simeon ben Yohai, however, declared the greater part of it suitable for residence, and from the 3rd cent. on Tiberias was a center of Jewish spiritual life, the residence of the patriarchs and numerous important leaders; it was there that the greater part of the Palestinian Talmud assumed its present form.

After the Arab conquest in the 7th cent. the majority of the inhabitants of Tiberias were still Jewish; it was the scene of important Masoretic activities during the Arabian period, and the so-called Tiberian system of vocalization of Hebrew arose there. During this period the city was the capital of the district of the Jordan.

In the 16th cent. Sultan Suleiman presented the city and its surrounding area to Joseph, Duke of Naxos, who wished to make it a sort of Jewish republic. His plans came to nothing, due to certain political circumstances which are as yet not clearly understood. In 1837 the city was rocked by a severe earthquake, and some four to five thousand persons, mostly Jews, lost their lives there and in Safed. A large section of the city was ruined by a flood in May, 1934. In 1943 the Jewish population was about 6,000 in a total population of about 9,000.

Tiberias was the first city in Palestine, besides the purely Jewish Tel-Aviv, to have a Jewish mayor (Zakki Hadef, 1927). It has a Jewish garden suburb, Kiryath Shemuel, named after Sir Herbert Samuel, and a hospital named after its founder, Peter Schweitzer. The famous warm springs of Tiberias are located near the city; in modern times there have been plans to utilize them for therapeutic purposes. Several graves, including those of Maimonides and Meir Baal Hanes, are pointed out near the city. SAMUEL KLEIN.

TIBERIUS, *see* ROME.

TIBERIUS JULIUS ALEXANDER, *see* ALEXANDER, TIBERIUS JULIUS; PROCURATORS.

TIETZ, LUDWIG, physician and communal leader, b. Berlin, 1897; d. Berlin, 1933. He was president of the Reichsausschuss der jüdischen Jugendverbände in Deutschland, co-founder and executive secretary of the Zentralausschuss für Hilfe und Aufbau, a member of the initiative committee in Germany for the Jewish Agency, and vice-president of the Central-Verein. After the rise of Hitler to power, he made several trips to England in behalf of the Jews of Germany. In 1936 the Ludwig Tietz Lehrwerkstätte was established at Yagur, Palestine, in his memory.

TIETZ, OSKAR, owner of department stores, b. Birnbaum, Posen, 1858; d. Berlin, 1923. He was active in Jewish philanthropies. Together with his uncle, Herrmann Tietz, who studied the American department store system, he opened a chain of department stores throughout Germany and Belgium, using American business methods. Leonhard Tietz (b. Birnbaum, Posen, 1849; d. Cologne, Germany, 1914), a brother of Herrmann Tietz, is considered the founder of the Tietz system. On the establishment of the Nazi regime in 1933, the original proprietors were compelled to relinquish control over their organization.

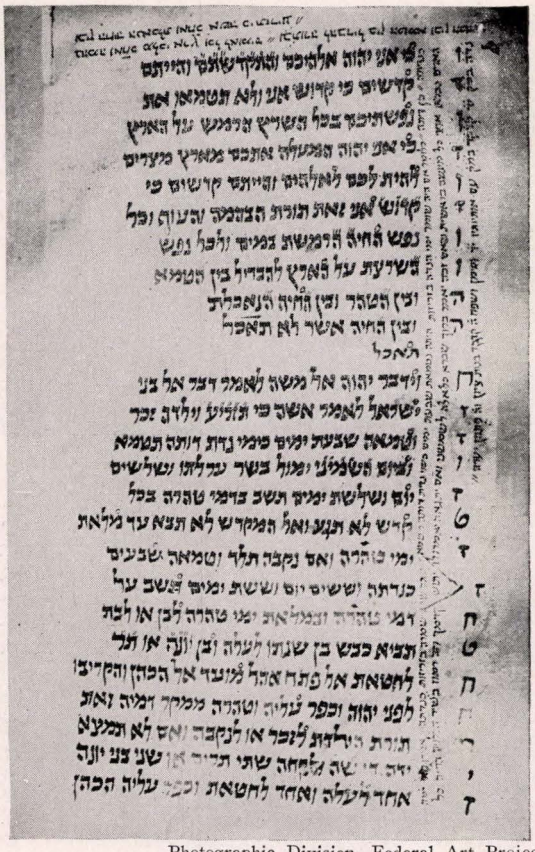
TIETZE, HANS, art historian, b. Praha, Austria, 1880. He was baptized as a child. He studied at the University of Vienna, where he became an assistant at the Institute of the History of Fine Arts in 1905. In the following year he was assigned to the Zentralkommission für Denkmalpflege. This connection gave impulse to his research in the topographic field. From 1919 to 1925 he was referent of the museums and art monuments in the ministry of instruction. In this capacity he reorganized the museums of Vienna, coordinating the possessions of the imperial family with the public collections. Made professor of art history in 1920, he remained in this post until the German occupation of Austria (1938), when he came to the United States. After being for one year visiting professor at the Museum in Toledo, Ohio, he came to New York city, where in 1943 he was affiliated with the Library of the Metropolitan Museum of Art.

Among Tietze's published work was a historical book, *Die Juden Wiens* (1934). His *Methode der Kunstgeschichte* is a basic work on the theory of art history. A few of his numerous publications in art historical research were in the series *Die Österreichische Kunsttopographie* (vols. 1 to 7, 9, 12, 13 and 16), mostly on Salzburg and Vienna. The standard work, *Geschichte und Beschreibung des St. Stephansdomes in Wien* (1931), forms part of the series (vol. 23). *Tizian, Leben und Werk* (1936) is an interpretation of a great personality in art as a human document, written for the wider public, whereas *Kritisches Verzeichnis der Werke Albrecht Dürers* is for scientific use. This work, consisting of two parts, *Der junge Dürer* (1928) and *Der reife Dürer* (1937-38), was written in collaboration with his wife, Erica Tietze-Conrat, who was also an art historian. After a visit made to the United States before settling there, Tietze published *Masterpieces of European Art in America* (1935); an English translation was published in the United States in 1939. ELISABETH GUTMAN.

Lit.: Degener, *Wer ist's* (1928); *Kürschners Deutscher Gelehrten-Kalender;* Jahn, *Die Kunstwissenschaft der Gegenwart in Selbstdarstellungen* (1924); *Die Juden Wiens* (1934).

TIGHINA (in Russian, **Bendery**), city in Bessarabia, with a total population of 32,000, including about 12,000 Jews (1939). The majority of the Jews of Tighina, which is an important railway center and is located on the navigable Dniester river, were engaged in commerce. The Jewish community had a modern hospital and a Talmud Torah school. Tighina changed hands several times since 1910; after the first World War the Roumanians occupied the Russian province of Bessarabia, which was reoccupied by the Russians in 1940; in the summer of 1941 the city was recaptured by the Germans and Roumanians.

TIGLATH-PILESER, name borne by several kings of Assyria, of whom the most significant for the history of Israel were the following:



Tiglath-pileser I (about 1100 B.C.E.), the first important king of Assyria. He conquered several districts of Armenia, defeated the Babylonian army and built the national temple at Asshur, a temple of Ishtar at Nineveh, and other important structures. He is the first king of Assyria about whom we have detailed reports, and he was the first to raise Assyria to the status of a great power. His exploits are recorded in an inscription on a prism, consisting of 800 lines (excavated at Asshur), and in an inscription on the cliffs of the Dog River in Syria, near a similar inscription of Ramses II of Egypt. His conquests did not survive the reigns of his weaker successors.

Tiglath-pileser III (745-727 B.C.E.), the founder of the Neo-Assyrian Empire; he is mentioned in the Bible both under his own name and as Pul. It is possible that he was a usurper. In the very first years he made a campaign against Babylon and captured it; thereafter he surnamed himself the king of Sumer and Accad. In 738 he received the tribute of various Syrian and Canaanite rulers, including Rezin (Rasunnu) of Damascus, Menahem (Minihimmi) of Samaria and Hiram (Hirammu) of Tyre. He was fighting in the east from 737 to 735, but in the following three years he was active in the west. This is evidently the same as the war described in *II Kings* 15 and 16 and *Isa.* 7. Pekah of Israel and Rezin of Damascus sought to throw off the Assyrian yoke; when Ahaz of Judah refused to join them, they began to attack him. Ahaz appealed to Tiglath-pileser for aid, sending him rich presents and acknowledging his overlordship. Tiglath-pileser overthrew Pekah and overran the entire territory east of the Jordan, and Pekah was replaced by Hoshea. According to Tiglath-pileser's own account, he captured Pekah and appointed Hoshea king; according to the Bible, Hoshea revolted against Pekah, slew him, and ascended the throne of Samaria by his own efforts. Thus the account of Tiglath-pileser, while differing in detail, essentially confirms that of the Bible. Toward the end of his reign he had to make another campaign against Babylon, which had revolted; this time he had himself crowned king of Babylon under the name of Pul (Pulu). Thus the reference to Tiglath-pileser as Pul in *II Kings* 15:19 is correct, although anachronistic. *I Chron.* 5:26 mistakenly regards Pul and Tiglath-pileser as two separate persons.

TIGRIS (Hebrew, *hiddekel;* Aramaic, *Diglath;* the modern Dijleh), one of the two rivers of Mesopotamia, forming the eastern boundary of that area. Since it was further from the center of Jewish interest, it is mentioned only twice in the Bible, once as one of the four rivers of Eden (*Gen.* 2:14) and once in the Daniel story (*Dan.* 10:4). The name probably means "arrow," and is derived from the swiftness of its flow; the Talmud similarly derives it from *had* and *kal,* "sharp" and "swift." During the Babylonian Exile and after, many Jews were settled along the Tigris, which then flowed through a well cultivated and thickly populated area. The Talmud regards the waters of the river as good for both body and mind (*Ber.* 59a).

TIKKUN ("improvement," "arrangement"), a word used in various significations in Cabalistic literature. In the *Zohar* it is used in the sense of "explanation," and so also in the *Tikkune Zohar,* the opening part of the work. Isaac Luria founded his ethical and Cabalistic system on the concept of the *'olam hatikkun,* the world of improved, divine arrangement, which will ensue as all the souls that have been created with Adam are freed of their sins by means of transmigration of souls.

A Tikkun for Torah scribes, giving directions as to the proper writing of the Scroll. Manuscript of the 16th century in the library of the Jewish Theological Seminary

Literature influenced by Cabala gave the name Tikkun to certain orders of prayer to be recited at various vigils. Among these are:

Tikkun Hatzoth, prayers to be recited at midnight.

Tikkune Shabbath, prayers to be recited before every one of the three Sabbath meals. They consist of eight chapters of the Mishnah tractate *Sabbath* and an Aramaic poem which is an acrostic to the name of Isaac Luria.

Tikkun Lel Shabuoth, a reading for the night of Shabuoth which, like that of Hoshana Rabbah, was regarded as especially propitious; if one studied Torah all that night, according to Jacob Caro, he was sure of a prosperous year. According to popular belief, on these nights the heavens opened, and if one caught the right moment, he could obtain any wish. The reading for the night of Shabuoth consists of the beginning and end of every Parashah (Sidra) of the Torah, the first and last verses of every book of the Prophets and Hagiographa, the book of *Ruth* and *Ps.* 1, 19, 68, 119 and 150, the beginning and end of every tractate of the Mishnah, corresponding portions from the *Zohar* and an enumeration of the 613 commandments.

Tikkun Lel Hoshana Rabbah, a reading for the night of Hoshana Rabbah, for the same purpose as that of Shabuoth. It consists of all of *Deuteronomy,* with Targum Onkelos

and the Haftarah to the last Parashah, the entire Psalter, sections from the *Zohar,* and prayers with Cabalistic coloring.

The term Tikkun is used also for a book of unvocalized Hebrew texts employed in practice for reading from the Scriptures in the synagogue. It contains the entire Torah, the Haftarahs for every Sabbath and festival, and the five Megilloth (*Song of Songs, Ruth, Lamentations, Ecclesiastes* and *Esther*).

Lit.: *Otzar Yisrael,* under Tikkun; Zunz, L., *Die Ritus des synagogalen Gottesdienstes* (1859).

TIKKUN SOFERIM, *see* SOFERIM.

TIKTIN, ABRAHAM BEN GEDALIAH, rabbi, b. Schwersenz, Posen, Germany, 1764; d. Breslau, Germany, 1820. He taught for twelve years, then became rabbi in Schwersenz and Lenczyce, and in 1811 in Glogau. In 1816 he was promoted by royal decree to the position of chief rabbi in Breslau, which he held until his death. He was the first rabbi able to preach and lecture in German. Of the twelve works which he wrote, *Pethah Habayith* (Dyhernfurth, 1820) is the most important.

TIKTIN, GEDALIAH, rabbi, b. Czestochowa, Poland, 1810; d. Breslau, Germany, 1886. He succeeded his father, Salomon Tiktin, in 1843 in his position as chief rabbi of the Breslau Jewish community and champion of Orthodox Judaism. The Reform party was successful in installing Abraham Geiger as rabbi, but Tiktin received from Frederick William IV (1854) the title of "royal chief rabbi of Silesia."

After Geiger's death an understanding was reached between Tiktin and the new rabbi of the liberal group, Manuel Jost, which led to the maintenance of peace in the community. Tiktin published *Beitrag zur Bearbeitung der von Seiten der Behörde gerichteten, den jüdischen Kultus betreffenden Fragen* (Breslau, 1843).

TIKTIN, HEINRICH, grammarian and philologist, b. Breslau, Germany, 1850; d. Berlin, 1936. He was an expert on the Roumanian language. As a student he went to Jassy, Roumania, to learn the language of the country, and in 1884 he received the Ph.D. degree from the University of Leipzig, his thesis being *Studien zur rumänischen Philologie.* Appointed professor of Latin and German at a high school at Jassy, he refused the position upon learning that he was expected to embrace Christianity. Later he became a teacher at another high school at Jassy, but despite his great merits in the field of philological research of the Roumanian language he never obtained the desired professorship at a university, although eventually he was baptized. Disappointed, he left Roumania after fifty years of work in behalf of Roumanian culture, establishing himself in Berlin. There his eightieth birthday (1930) was celebrated by his fellow scholars, and Tiktin himself, in an address, recalled the tribute paid him by the Roumanian kings, Carol I and Ferdinand I. He died in the utmost poverty at the age of eight-six, and Professor Nicolai Jorga, in a memorial speech made in the Roumanian senate (March 14, 1936), admitted that the Roumanians had been very ungrateful toward Tiktin.

Tiktin contributed to numerous German and Roumanian scholarly magazines, and was author of *Gramatica Romana* (2 vols., Jassy, 1893-94); *Dictionar Romano-German,* a monumental work in three volumes, for which he was awarded a prize of 100,000 lei (1895, and numerous reprints); *Ortografia Romana* (Jassy, 1889); *Rumänisches Elementarbuch* (Heidelberg, 1905); *Kritische Untersuchungen zu den Büchern Samuelis* (Göttingen, 1922). Tiktin was active in the Jewish school system of Roumania.

TIKTIN, SALOMON, rabbi, b. Schwersenz, Posen, Germany, 1791; d. Breslau, Germany, 1843. He

(left) Abraham ben Gedaliah Tiktin; (right) Salomon Tiktin

was the son of Abraham ben Gedaliah Tiktin. Salomon Tiktin was one of the most prominent champions of Orthodox Judaism, strictly against any reform and the bitterest opponent of Abraham Geiger. At first provisionally appointed rabbi for three years, he became chief rabbi of Breslau in 1824. In 1836 he prohibited the publication of Moses Brück's book, *Die Reform des Judentums.* His actual altercation with Geiger began when the latter applied for the position of second rabbi in Breslau. Geiger opposed the ceremony of Halitzah, whereupon Tiktin contested his rabbinical authority, explaining that whoever had attended a university could not become a rabbi. The Breslau chief rabbinate board, which dismissed Tiktin from office, thereupon gathered expert opinions as to the compatibility of the rabbi's office with free research. In 1842 Tiktin published two works regarding this dispute: *Darlegung des Sachverhaltes in einer hiesigen Rabbinatsangelegenheit* and *Entgegnung auf den Bericht des Obervorsteherkollegiums der hiesigen israelitischen Gemeinde an die Mitglieder.* During the dispute he suddenly died.

Lit.: Brann, M., "Geschichte des Landesrabbinats in Schlesien," *Graetz-Jubelschrift* (1887); Schreiber, E., *Abraham Geiger;* Geiger, Ludwig, *Abraham Geiger, Leben und Lebenswerk;* Tiktin, S., in *Allgemeine Zeitung des Judentums,* No. 39 (1920).

TIME, MEASURING OF. The Jews, like other peoples, divided their years into months, weeks, days and hours. They did not divide the hours into minutes, but rather into fractions of an hour, such as quarter hours, and into 1,080 *helakim* ("portions"). Each *helek* contained seventy-six *rega'im* ("moments"); thus each hour amounted to 82,800 *rega'im* (*Ber.* 7a; *Yalkut Gen.* 76). Two kinds of hours are mentioned: the absolute hour amounting to one twenty-fourth of a day; the relative hour, which varies in length as the length of the period of daylight is more or less. Thus if the period between sunrise and sunset were fifteen hours in absolute time, the relative hour would be one-twelfth of that amount, or one and a quarter hours. Whenever the regulations in rabbinical literature state that certain duties must be performed at certain hours, relative hours are meant.

The day was always reckoned from sunset to sunset (*Gen.* 1:5; *Ex.* 12:18), except in the case of sacrifices; since the latter were offered only during the daytime, the day for them was reckoned from daybreak (*Lev.* 7:15). In certain regulations involving a period of time, such as circumcision, mourning or annulment of vows, part of a day might be reckoned as an entire day. There are no separate Hebrew names for the

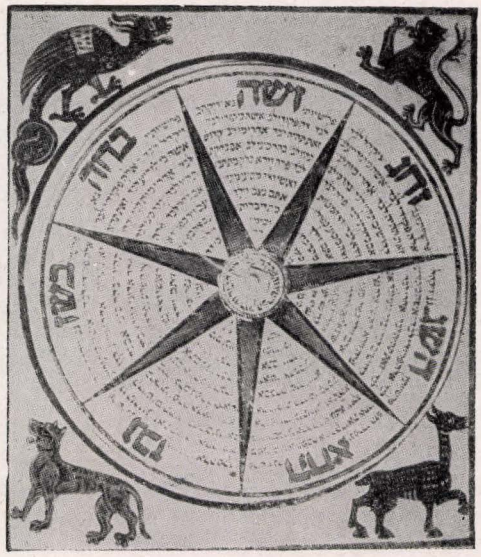

Diagram from a rabbinical calendar of the 14th century. Manuscript in the Bibliothèque Nationale at Paris

days of the week; instead, ordinal numbers are used, such as *yom shelishi* ("third day") for Tuesday. The night was divided into three or four watches (*Ber.* 3a).

Two periods of daybreak were noted: sunrise, when the sun appears at the horizon, and the preceding period in which the sky becomes lighter and rays of light first reach the earth. At the end of the day there is a period called *ben hashemashoth* ("twilight"), which lasts from the time that the sun disappears below the horizon until there is complete darkness. The determination of the exact duration of the twilight period was regarded as extremely important, especially as the twilight of the Sabbath and holidays partook of the sanctity of the day itself. Three degrees of twilight were recognized: 1. astronomical, when the center of the sun has sunk 18 degrees below the horizon and minor stars have appeared (*tz'eth hakochabim*); 2. civil, when the center of the sun has sunk 6½ degrees beneath the horizon; 3. early, when the center of the sun has sunk 3½ degrees beneath the horizon. There are differences of opinion in the Talmud as to which of these three degrees of twilight were meant; there are further differences of opinion between scholars as to the durations of these periods. A further complication is the fact that all these periods vary with the latitude. For practical purposes most Orthodox Jews of the temperate zones wait about forty minutes after sunset on Saturday to allow for twilight. A few add one-tenth of the duration of daylight.

The months of the Jewish year are lunar, the new moon being the first day of each month. As a lunar month consists of 29½ days, the months are either 29 or 30 days. In the early Biblical period the months are mentioned by ordinal numbers or by names; during the Babylonian Exile the names of the Babylonian months, with a few changes, were adopted. The year, except in certain special cases, was reckoned as beginning in the month of Tishri (*R.H.* 1:1). In certain laws involving periods of time, part of a year was considered an entire year. The equinoxes and solstices were carefully computed.

As the lunar year is eleven days less than the solar year, and as the Bible specifies that the holidays are to fall at the same time of the solar year, it was necessary to devise some means of reconciling the lunar and solar years. This was accomplished by adopting the Metonic cycle of 19 years in which an extra month is added to the 3rd, 6th, 8th, 11th, 14th, 17th and 19th years. Since the normal year could be a day less or more in order to prevent certain holidays from falling too close to the Sabbath, a year could consist of 353, 354 or 355 days, if normal, and of 383, 384 or 385 if a leap year. There was a larger solar cycle of 28 years in which the equinoxes fell on the same day of the week in the first year of each cycle. A special blessing is recited on the first Wednesday of Nisan in the first year of every solar cycle, in order to commemorate the creation of the sun. This blessing was recited on April 1, 1925, the beginning of the 204th solar cycle; for the next two cycles the dates are March 18, 1953, and April 8, 1981.

Every seventh year was a Sabbatical year, and after every seven Sabbatical years came the Jubilee year (*Lev.* 25). There is a difference of opinion as to whether the Jubilee was observed every 49th or every 50th year. The consensus of opinion is that in the time of the First Temple the Jubilee was the 50th year, while in the time of the Second Temple, when the Jubilee year could be observed only nominally, it was the 49th year. This and other factors have caused some confusion as to the actual time of the Sabbatical year, although according to the accepted ruling the Sabbatical year can be found by dividing the years since creation by seven. Thus 5698 (1937-38) was a Sabbatical year; the next would be 5705 (1944-45).

There remain two space-time problems in Jewish law which have never been definitely settled. The first of these concerns the beginning and ending of the Sabbath and holidays. This is determined by twilight, and in the regions near the poles where nights and days may be months long it is almost impossible to compute the time of twilight. The second problem is that of the arbitrarily drawn International Date Line, adopted in 1884 and never definitely accepted by Jewry. The discussions of the medieval rabbis on this latter problem are so abstruse that it is difficult to grasp their final opinion. H. S. Slonimsky (*Dibre Hachamim,* 35-41) and Jacob I. Greenberg, from him, have suggested that the meridian of Jerusalem be taken as the Jewish zero meridian, thus fixing a Jewish date line 180 degrees east or west of Jerusalem; this would fall at 145 degrees east of the meridian of Greenwich.

In dating legal papers Jews usually use the day, the month and the year since the creation of the world. In letters the day of the week is mentioned and the week is indicated by the section from the Torah (Parashah, Sidra) read on the Sabbath of that week. Until the Middle Ages Jews used the Seleucidean era; this began in 312 B.C.E., when Gaza was captured and when, according to popular belief, prophecy ceased. They have also used eras reckoned from such events as the Exodus, the reigns of the various kings, the building and destruction of the two Temples, the beginning of independence under the Hasmoneans (142 B.C.E.) or the Balfour Declaration (1917). In modern non-religious writings Jews do not use the abbreviations B.C. (Before Christ) or A.D. (Anno Domini, "year of our Lord"), but B.C.E. (Before the Common Era; Before the Christian Era) and C.E. (Common Era; Christian Era).

The Jews employed the various forms of sundials and timekeepers known to antiquity. During the Talmudic period they used the clepsydra, or water-clock, and they had some sort of alarm clock. The interrelationships of time, direction and eternity in Jewish philosophy have been discussed by Harry A. Wolfson.

TIRADO, JACOB, Marrano, place and date of birth unknown; d. Jerusalem, between 1620 and 1630. In 1593, from Portugal, he led a shipload of Marrano immigrants who were fleeing from fear of the Inquisition in that country. After many wanderings the ship reached the port of Emden, in East Frisia. Acting on the advice of the local rabbi, Moses Uri (Phoebus) Halevi, Tirado, together with the Marranos, continued his voyage to Amsterdam, Holland. Here, with the rest of the Marranos, he was accepted back into Judaism and underwent circumcision, through Moses Uri Halevi and his son Aaron, who had followed him to Amsterdam. Assisted by Samuel Pallache, the Moroccan consul in Amsterdam, and by the poet Jacob Israel Belmonte, Tirado founded the first Sephardic congregation of Amsterdam. He built the first synagogue there, which was named Beth Jacob after him, and was consecrated on the Day of Atonement of the year 1598. In his old age Tirado emigrated to Palestine. His story was depicted by Ludwig Philippson in his novel *Jacob Tirado* (1867).

TISCHLER, VICTOR, painter, b. Vienna, 1890. He studied at the Academy of Fine Arts in Vienna under Rudolf Bacher and Franz Rumpler, but, as he claims, his real teachers were the old masters of painting. He traveled a great deal, mainly in Italy, Holland, Spain, Germany and France, where he finally settled in 1930, choosing Paris for his residence. After the German invasion of 1940 Tischler came to the United States in 1941, settling in California.

His artistic development is full of changes. After a period of brilliantly vivid colorism, he turned to a soft tonality in grayish-green shades, and then he returned, in a mellower harmony, to colors again. From his beginnings as an ardent colorist, painting mostly figures and still lifes, he became, in the late 1920's, an almost cubistic landscapist, focussing his interest on strict disposition of masses in space. His romantic feeling made him realize the special atmosphere of historical landscapes, and in France he was greeted as a reviver of the great tradition initiated by Poussin. At the beginning of the 1940's he painted allegorical landscapes of a romantic mood. In spite of his constant changes and constant development, there is nothing unfinished or transitory in his work. All the large galleries throughout Europe own pictures by Tischler, but in the Third Reich his works were removed from museum walls. His *Max Reinhardt und seine Schauspieler* (1924), a portfolio of twenty lithographs, was awarded the Austrian state prize.

TISZAESZLÁR BLOOD ACCUSATION. Eszter Solymosi, the fourteen-year-old daughter of a widow, disappeared in the village of Tiszaeszlár, Hungary, on April 1, 1882. At that time three Jewish Shohets (ritual slaughterers of animals) were visiting in the village to apply for a vacancy in the Jewish community. In the imagination of the superstitious villagers, a connection was established between the two facts and the accusation against the Jews was taken up and spread throughout the country by the anti-Semitic deputies Ónody and Istóczy.

On May 4, 1882, the widow Solymosi raised an accusation of ritual murder against the Jewish ritual slaughterers and the synagogue sexton, József Scharf. Public attorney Bary obtained testimony from Scharf's five-year-old son Samuel, and when Scharf and his thirteen-year-old son Móric denied the charge, the latter was given over to the custody of a scribe of the gendarmerie, Péczely, who had served a twelve-year term for murder. Under threats and torture Móric declared that he had witnessed through the key-hole of the synagogue the murder of the girl, whose throat had been slit by the slaughterer Salamon Schwarz, with Móric's father assisting. The village physician and other persons recognized Eszter Solymosi in the corpse of a young girl drawn out of the Tisza river on June 18, 1882, but the mother emphatically denied the identity. The investigation was conducted in an illegal and brutal manner, in which the accused were subjected to torture. On September 29, 1882, outbreaks of the mob occurred in Pressburg (Pozsony), followed by rioting in other cities.

Louis Kossuth, then living in exile in Turin, Italy, protested against the ritual murder accusation, and in the lower chamber stirring debates took place. In June, 1883, in the court of Nyiregyháza, fifteen defendants, some as slayers and some as accomplices, were publicly accused of Eszter Solymosi's disappearance. Among others, Károly Eötvös and Bernát Friedmann defended the accused. After thirty-three sessions a verdict was reached, on August 3, 1883, according to which all the defendants were acquitted. The verdict emphasized as absolutely groundless the accusation of murder and stressed that there was no such thing in the Jewish religion as ritual murder. This was confirmed by the supreme court, which ended this controversial trial on April 4, 1884. The Tiszaeszlár affair is the subject of Arnold Zweig's drama, *Die Sendung Samaels* (1918).

TITHE (Maaser), a tax or contribution of a tenth part of one's income or of certain agricultural prod-

ucts. The Bible records that Abraham gave Melchizedek, "the priest of the Most High," a tenth part of all the spoil which he had taken from the enemy (*Gen.* 14:20); Jacob vowed at Beth-el to consecrate to God a tenth of all that He gave him (*Gen.* 28:22). The kings of the Israelites levied a tithe of the produce of the fields, the vineyards and the flocks, as a tax (*I Sam.* 8:15-17; cf. *I Kings* 4:7).

The laws of the Bible in reference to the tithe are not uniform. According to *Deut.* 14:22-27, every Israelite was required to separate a tithe of grain, new wine and oil; this was to be brought to the central sanctuary at Jerusalem and expended in feasts there in which his family and friends participated. If the fruits themselves, because of the distance to Jerusalem, could not be transported thither, they could be sold and the money thus obtained was to be used in buying new products for the festal meals in Jerusalem. There is also a reference to the first-born of animals that are to be eaten year by year at the sanctuary (*Deut.* 15:19-20). Every third year this tithe was to be given to the Levite, the stranger, the fatherless and the widow (*Deut.* 26:12).

In *Num.* 18:21-32, however, the tithe, in addition to the first-fruits, is to be given to the Levites "in return for their service which they serve, even the service of the tent of meeting." The Levite is to give a tenth out of this tithe to the priests. *Lev.* 27:32-33 speaks of a tithe of cattle that is to be given to the Lord, but whether to priest or Levite is not specified.

Bible scholars explain these contradictions by assigning them to the different codes. The earliest law was in *Deuteronomy,* and in accordance with its provisions the tithe was shared by priests and laymen, the only new feature being the duty of sharing with the poor every third year. The provision in *Numbers* represents a modification intended to provide a support for the Levites who, because of the fusion of the local shrines into a central sanctuary, had lost the shares of the sacrifices which in the time of the Second Temple fell to the priests. The tithe of animals in *Leviticus* seems to have been an extension of the tithe, made because the other forms did not afford sufficient support for the Temple and its officiating priests and Levites. Apparently this was the situation at and after the time of Ezra and Nehemiah (*Neh.* 10:36-39; 12:44; 13:5, 12; cf. *Mal.* 3:8-10).

The Talmudic rabbis, however, solved the contradiction in another fashion by supposing that there were two separate tithes to be given every year. The first (Maaser Rishon) was to be given to the Levites; the second tithe (Maaser Sheni) was to be expended in feasts at Jerusalem except in the third and sixth years of the Sabbatical cycle of seven years, when it was given to the poor (Maaser Ani). After the tithe had been given the landowners were to come before the Lord and solemnly announce that they had fulfilled the duty of giving the tithe. This was called "confession of the tithe" (*viddui hama'aser; Deut.* 26). Two tractates of the Mishnah and Palestinian Talmud, *Maasèroth* and *Maaser Sheni,* are devoted to tithes.

The obligations imposed by these two tithes—amounting to as much as 20 per cent for many individuals—made the collection of these contributions difficult to enforce, as is indicated in the passages in *Nehemiah* and *Malachi* cited above. Hence there arose the problem as to whether agricultural products on sale in the markets could be eaten by the pious, as it was uncertain whether they had been tithed or not; such produce was known as Demai ("doubtful"). The Pharisees (Haberim) were particularly scrupulous about the payment of the tithes, and the later Hasmonean kings, beginning with John Hyrcanus (135-104 B.C.E.), enforced their collection. After the destruction of the Temple (70 C.E.) many priests, deprived of their revenues, began to claim the tithes for themselves rather than for the Levites; there are hints in the Talmud as to disputes over this claim. For some time after the destruction of the Temple tithes continued to be paid in Palestine, Syria and Babylonia.

Pious Jews and Christians have often imposed upon themselves a voluntary tithe of their income, given either in support of religious institutions or to charity. The *Shulhan Aruch* (*Yoreh Deah* 249:1) regards the tenth of one's capital the first year and thereafter the tenth of one's income as obligatory, and holds that it should be given solely to the poor; Joel Sirkes, however (*Bayith Hadash* to the passage), regards it as a custom, and voluntary. JOSEPH MARCUS.

TITLES. Most of the titles recorded in the Bible refer to rulership or administration. Under the primitive clan system, the heads of the community were known as *zekenim,* "elders," and leading individuals bore such titles as *'alluf* ("chief"; *Gen.* 36), *nadib* ("noble"; *Num.* 21:18), *nasich* ("prince"; *Josh.* 13:21) or *katzin* ("commander"; *Josh.* 10:24). The individual leaders who arose after the conquest of Canaan to deliver the people in the time of foreign invasion or oppression took the title of *shofet* which, as is clear from the corresponding Carthaginian term *suffete,* meant "ruler" rather than its later meaning of "judge."

With the change from the clan and tribal system to that of the monarchy, the country was administered by a group of officials who bore more or less distinct titles. The king was generally termed *melech,* sometimes poetically *meshiah 'adonai* ("anointed of the Lord"); members of the royal family might bear the title *sar* ("prince"). A royal vizier would be known as *mishneh* ("second" [next to the king]; *II Chron.* 28:7). Officials bore such titles as *nagid* ("chief"), *pakid* ("overseer"), *rab hatabahim* ("chief of the bodyguard"), *sar missim* ("overseer of forced labor"), *mazkir* ("recorder"), *sofer* ("scribe," "chancellor") or *sar haratzim* ("chief of the messengers"). The head of a tribe was generally known as *nasi* ("prince"); the terms *natzib* ("prefect"; *I Kings* 4:19) and *pehah* ("governor"; *I Kings* 10:15, but usually of non-Israelite officials) also occur. The head of the army generally bore some such title as *sar hatzaba* ("prince of the host"), while military officers were called *shalish* (perhaps because of being the third man in a chariot). Eunuchs were so frequently palace officials in the latter part of the period of the kingdom that the term *saris* came to mean "official"; while seals and other objects excavated in Palestine seem to indicate that *'ebed* ("servant"), when joined to the name of the king, was a general term for royal official.

The head of the priesthood, especially in the time of the Second Temple, was called *hakohen hagadol* ("high priest"); the term *kohen harosh* also appears. The *kohen mishneh* was the deputy of the high priest. Priestly officials in charge of various parts of the Temple service bore the title of *segan* (from the Assyrian *shaknu,* "prefect"). Those who interpreted the Law to the people bore the title of *sofer* ("interpreters of the *sefer,* or Book of the Law").

The Hasmonean rulers at first assumed the title of high priest, and it was only later that they took that of king. When the Sanhedrin was constituted under their rule, its president and vice-president were called Nasi and Ab Beth Din (literally, "father of the court"), and these titles were retained in the assemblies of the sages that met to vote on matters of Jewish law. The Pharisaic teachers were at first known collectively as *hachamim* ("sages"; singular, *hacham*), but bore no titles; the title Rabbi came into use in the 1st cent. C.E. The patriarch, beginning with Johanan ben Zakkai, was called Rabban ("our teacher"), and for a time was the only one to confer the title of rabbi.

The Jews in countries outside of Palestine were frequently under the administration of their own rulers, who bore various titles which indicated their rank. Under the Ptolemies, the Jews of Egypt were ruled by their alabarch or ethnarch, a term which the Romans gave to the Jewish rulers under their control whom they were unwilling to honor by the title of king. The head of the Jews of Babylonia, generally the representative of the royal line of David, was known as the exilarch (*rosh hagolah*). Certain dignitaries in Babylonia, Egypt and Palestine bore the titles of *rosh haperek* or *resh pirka* ("head of the session"), with its Greek equivalent archipherecites. About the end of the 6th cent. the title Gaon for the heads of the academies in Sura and Pumbeditha came into vogue, and remained in use for a number of centuries. Haber, originally the designation assumed by members of Pharisaic societies in Second Temple days, was often employed in the sense of distinguished colleague; the terms Alluf and Resh Kalle, as well as others which are purely honorary, also appear, but the exact functions that went with these titles are not clear.

In Europe the title Parnas ("administrator") was given to the heads of synagogues, and frequently appears in epitaphs. The executive board of the community was often surnamed *shib'ah tobe ha'ir* ("the seven city nobles"). Rosh Hakeneseth sometimes appears as a synonym of Parnas. In countries of the Middle Ages, where Jews were granted a certain amount of autonomy, the head of the Jews might receive the title of Nasi or Nagid, or such Latin terms as Episcopus Judaeorum, Presbyter Judaeorum, Hochmeister, or Praefectus Judaeorum.

In the same period a number of titles were added to those already in use. The Morenu title was created in the 14th cent. to single out rabbis of especial learning, with the general meaning of "our instructor." Similarly, Joseph Caro was known as Maran in Palestine. The title of Gaon was revived for Elijah Vilna in the 18th cent. Renowned preachers were given the title of Darshan or Maggid. Keen students of the Talmud might be given the title of Harif ("sharp"), while an unusually precocious student would be known as Illui ("wonder"). One who was well versed in the Halachah would be known as Baki Beshas Ufosekim ("well versed in the Talmud and rabbinical literature"), often shortened to Baki. The term Haber was often given to distinguished laymen.

As a result of government supervision of Jewish religious affairs in various countries, various rabbis have been designated as chief rabbi (in Turkish, Hachambashi), district rabbi, crown rabbi or the like. In other cases the Jews themselves have elected chief rabbis of countries or communities. There are also a number of honorary titles which are often used in addressing Hebrew letters to various persons of dignity and position in a community. The title Hakadosh ("holy," "sainted") is given to martyrs, while Cabalists often employ such extravagant terms as *'elohi* ("divine") and *mal'ach* ("angel").

TITLES OF HEBREW BOOKS. In Hebrew literature it is not uncommon to find that the titles of books are better known to their readers than are the names of their authors. Citations from and references to standard Hebrew works are often made by scholars without any mention of their authors' names. In fact, instances are not lacking where the author, having become popular as an authority, is virtually always spoken of and referred to by the name of his best-known work. Isaiah Horovitz, author of the *Shene Luhoth Haberith* (The Two Tablets of the Covenant), is more often referred to as SheLoH; Joel Sirkes, author of the *Bayith Hadash,* is referred to as BaH. Similarly, Shabbethai ben Meir Hakohen is known as the ShaCH, an abbreviation of *Sifthe Kohen,* the title of his collection of responsa. The Hatham Sofer, by which name Moses Sofer Schreiber, the Hungarian rabbinical authority, is popularly known, acquired that designation as an abbreviation of his *Hiddushe Torath Mosheh.* Ezekiel Landau, known as the Noda Biyehudah, is spoken of also as the TZeLaH (an abbreviation of his *Tziyyun Lenefesh Hayyah*). There are cases where students refer to these last two designations as if they belonged to two different persons and the opinions of one are refuted by those of the other.

As to the titles of the books contained in the Bible, information is accessible in every critical introduction to the study of its text. Tradition has it that they were fixed in the days of Ezra by the Men of the Great Synagogue (*Hag.* 14a; *B.B.* 14a; cf. *Sotah* 36b). The Talmud as a work has no title at all; the word simply means "teaching" or "study." It is sometimes called ShaS, an abbreviation of *shishah sedarim,* the "six orders" (divisions) contained in the Mishnah. The separate tractates of the Talmud and most of the Midrashic works acquired titles indicating either the subject of which they treat or the general nature of their relation to the Torah. As long as a law was in force prohibiting the commitment to writing of the oral teachings, Hebrew books hardly existed. With the abrogation of this prohibitive law at about the beginning of the Middle Ages, titles begin to play a role in Hebrew booklore. While a few books of the Geonim bear simple titles, the greatest part of their literary activity consists of responsa containing their decisions on questions of ritual and law as well as their explanations of Biblical and Talmudical passages. The titles attached to various collections of such writings belong to a period later than that of the authors. The authors of responsa literature in general employ the common title of *Sheeloth Uteshuboth* (questions and answers). *Haggahoth* and *Hiddushim* are technical titles for notes (novellae) on rabbinic texts.

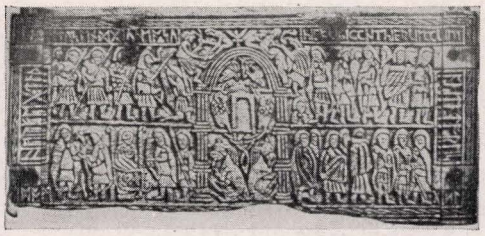
In addition to the few historical titles which are simple and to the point, there are those which were formed objectively and permit the recognition of the subject matter of the works which they denominate. But there are others which present considerable confusion. In order to give a general view of the character of the multitude of titles of Hebrew books, it is perhaps well to group them in the following classes:

1. Simple Titles.[1] These are the titles which obviously indicate the contents, character or purpose of the book, such as *Creeds and Opinions,* a work on theology by Saadia Gaon; *Book on Buying and Selling,*

[1] All the following titles of Hebrew books in this article are translated into English in order to make clearer the reasons for their selection.

a treatise on Jewish commercial law by Hai Gaon; *The Valley of Tears,* a Jewish martyrology by Joseph ben Joshua Hakohen; *The Path of the Righteous,* a work on ethics by Moses Hayim Luzzatto; *The Book of Legend,* a collection of Jewish legends culled from rabbinic sources by Hayim Nachman Bialik and J. H. Rabnitsky.

2. Titles Borrowed from the Bible. Most Hebrew book titles are catchwords or familiar Biblical phrases. The choice of a Biblical phrase or name for a book title is very popular among Hebrew authors, although the practice was virtually unknown in antiquity. They represent the largest number, and a good many of them also indicate the name of the author. Thus *The Seed of Abraham* (*Ps.* 105:6) is the title of about ten different books whose authors bear the name Abraham. This is true of other popular Biblical names. Family names of authors likewise are expressed through titles borrowed from the Bible. The collection of responsa by Raphael Cohen bears the title *And the Priest Shall Come Again* (*Lev.* 14:39), while the *Service of the Levite* (cf. *Ex.* 38:21) is the title attached to at least five works by authors who were Levites. Joseph ibn Caspi provides all his works with titles borrowed from Biblical phrases in which the word "silver" is employed. Hayim Joseph David Azulai, one of the most prolific Hebrew authors, almost invariably managed to incorporate one of his own names into the numerous titles of his books. Equally so, Hayim Palaggi in his many writings invariably manages to combine in some manner his name Hayim with the titles of his works.



The Tabernacle and its accessories, as well as the vestments of the priests, were also exploited for Hebrew book titles. Authors of such works, as a rule, claim to be members of either priestly or Levitical families. The ingredients for incense and other articles used in the service of the Tabernacle or of the Temple were also fancied by some authors. Thus there are several Hebrew books bearing such titles as *Meat Offerings Mingled or Dry; Flour of the Meat Offering; Pure Myrrh.* While all such titles hardly indicate the nature or content of the book, there are instances in which a title borrowed from a Biblical phrase is most appropriate to the book which it denominates. *The Lips of Those Who Sleep* is a suggestive title for a catalogue, especially in the light of the rabbinic explanation of *Song of Songs* 7:10, according to which the study of the writings of dead authors makes their lips to speak. Some Biblical phrases used as titles were probably intended to serve rather as mottoes than as designations of books. *Tzeenah Ureenah* (Go Forth and Gaze), from *Song of Songs* 3:11, forms the title of Jacob ben Isaac (Jacob ben Isaac Ashkenazi) of Yanow's Yiddish homiletical interpretation of the Pentateuch and the Scrolls so popular among Jewish women. *Glorify Ye the Lord in the Regions of Light* (*Isa.* 24:15) is the title of a work on Rashi's commentary on the Pentateuch. The Bible serves as an inexhaustible source for catchwords useful as titles of Hebrew books. It matters little whether or not the title chosen has any bearing on the nature of the book as long as it is appealing to the fancy of the author. This use of the Biblical text was severely criticized by Abraham Jacob Paperna (see his *Kankan Hadash Male Yashan,* 1867, p. 24).

3. Titles Derived from the Initial Words of a Work. The opening word or words of a book frequently became its title. Several books of the Hebrew Bible derive their names from their initial words, as is also the case with a number of Midrashim. To this category belong also those books that obtain their names from some characteristic phrase often repeated in the body of the work. It is not unlikely that they obtained their titles not from the hands of their authors or compilers, but rather from those who, in later days, had to quote them. They were named after the phrase or word which first caught the eye of the student, thus the *Midrash Yelammedenu* (He May Teach Us) or the *Vehizhir* (And He Commanded Us) or Profiat Duran's epistolary polemic against Christianity, entitled *Al Tehi Kaabothecha* (Be Ye Not As Your Fathers; cf. *Zech.* 1:4), so often referred to by non-Jews as *Alteca Boteca.*

4. Titles Suggested by Other Titles. The relation of a commentary to a text is often indicated by a similarity in titles. The *Mishneh Torah* by Moses Maimonides is one of the most important codes of Jewish law on which numerous scholars have written commentaries and explanatory notes, the titles of which bear some similarity to that of the code itself. Thus Caro calls his commentary *Kesef Mishneh,* De Boton's is called *Lehem Mishneh,* and Judah Rosanes' *Mishneh Lamelech.* The latter in turn suggested such titles as *Emek Hamelech* and *Shaar Hamelech.* Similarly, Joseph Caro's *Shulhan Aruch* (Prepared Table) is covered by Moses Isserles' *Mappah* (Table Cloth), while others provided it with the *Showbread* and with *New Fruit.* Caro himself annotated his *Beth Yosef* (House of Joseph) with his *Bedek Habayith* (The Breach in the House). The latter title was employed also by Aaron Halevi for his critical work on Solomon ibn Adret's *Torath Habayith* (The Law of the House). Ibn Adret's rejoinder is called *Mishmereth Habayith* (The Watch of the House). Caro's *Prepared Table* is arranged in the same order as Jacob ben Asher's *Arba Turim* (Four Rows), and David Halevi's commentary on it is entitled *Ture Zahab* (Golden Rows). Similarly, Maimonides' *Guide to the Perplexed* is provided with a commentary by Shemtob Falaquera entitled *Guide Through the Guide.*

5. Pompous and Euphemistic Titles. A large number of Apocryphal books and mystical writings bear titles whereby they are given a pretentious characterization. Euphemistic titles are mostly applied to memorial and eulogistic works. The "Book of Splendor" (*Zohar*) or "The Shining Book" (*Bahir*) are but two of the popular Cabalistic writings bearing such pseudo-epigraphical titles. Angels, patriarchs and martyrs were called upon to lend their names to such works. The *Josippon,* a work of the 9th or 10th cent., is so named because it professes to be written by Josephus. The *Book of Jashar,* a compilation of late Midrashim, is certainly not identical with the Book of Jashar quoted in *Josh.* 10:13. Among the euphemistic titles we find that the Talmudic tractate *Ebel Rabbathi* (Great Mourning), dealing with funeral ceremonies and related subjects, acquires the title *Semahoth* (Joys). The *Book of Life* is a popular manual for mourners. Other works of a similar nature bear such titles as *Ebel Kabed* (Grievous Mourning), *Misped Mar* (Bitter Wailing), and *Kol Nehi* (Voice of Lamentation).

6. Curious Titles. All sorts of curiosities might be traced among Hebrew book titles. Considerable ingenuity is employed by Hebrew authors in coining titles for their works. Such a title as Israel Nadjara's *Shohete Hayeladim* (The Slaughterers of the Children) is fairly good for a manual of the rules of ritual slaughtering (Shehitah) presented in simple rhyme and intended as a textbook for children. On the other hand, *Hilchoth Yom Tob,* a suitable and much used

A panel from an early English casket (about 700) depicting the siege of Jerusalem by Titus

title for works dealing with the proper observance of the festivals, is also the name of a book dealing with other laws. It derives its title from the author's name, Yom Tob Algazi. Equally so, Nathan Spira's *Matzath Shimmurim* is not concerned with the laws of Matzoth for Passover, but rather with those pertaining to the Mezuzah, Tzitzith and Tefillin (phylacteries); the first word of its name is formed from the initial letters of the subjects with which it deals. *Sefer Gerushim,* a proper title for a work on divorce, was adopted by Moses Cordovero for his collection of Cabalistic sermons delivered in various communities during the years of his wanderings. Mordecai Jaffe's *Lebushim* derives its respective names from the description of Mordecai's garments as contained in *Esther* 8:15. On the other hand, Samuel Jaffe employed his patronymic as the first word of the title of each of his five books. Isaac Abravanel's *Zebah Pesah* (The Sacrifice of the Passover) is an apt, though curious, title for a commentary on the Haggadah for Passover.

7. Symbolic Titles. The first to employ a symbolic title for a book was Eleazar ben Judah of Worms. In his *Rokeah* (Apothecary), an ethical work of considerable importance, he offers mystical prescriptions for the cure of ailments of the soul. Hence the name of the book, which symbolizes also the numerical value of the Hebrew letters of the author's name—308. Jacob ben Asher, in designating the four parts of his code, gave them names the numerical value of which corresponds to the number of paragraphs in each book. Similarly, Maimonides' code, the *Mishneh Torah,* because it is divided into fourteen books, acquired the name *Yad Hahazakah* (The Strong Hand), the numerical value of the first word being equal to the number of books constituting the work. It is interesting to observe that the numerical value of *Azharoth,* the technical title for liturgical poems treating of the 613 precepts, corresponds to that number. *Yad Veshem,* the Hebrew title of the Abraham Solomon Freidus memorial volume, at once suggests its nature: a handy reference work (*Yad*) as well as a memorial (*Veshem*); its English title is *Studies in Jewish Bibliography and Related Subjects.*

The use of Biblical names of persons or places as titles of books has always had a vogue with Hebrew authors, and some titles have become so popular as to be often repeated. It is the cause of considerable annoyance to bibliographers and professional librarians.

JOSHUA BLOCH.

Lit.: Schechter, Solomon, *Studies in Judaism,* vol. 1, pp. 270-81; Berliner, in *Jahrbuch der Jüdisch-Literarischen Gesellschaft,* vol. 2 (1904) 331-50; *Jewish Encyclopedia,* vol. 12, pp. 156-60.

TITUS FLAVIUS VESPASIANUS, Roman emperor from 79 to 81. He was the eldest son of the Roman general and later emperor Vespasian, fought in 67 as a military tribune under his father's command against the Jews in Galilee, and distinguished himself as a cavalry colonel, especially at the conquest of Tarichaea, later in the capture of Gamala and Giscala.

After his father had become the Roman emperor, Titus, with four Roman legions and relief troops, was sent to Judea to take Jerusalem and thus put an end to the Jewish war. Reaching Jerusalem in the spring of the year 70, he made an unsuccessful attempt peacefully to take possession of the city, and thereupon prepared to besiege it. The real siege lasted for about five months, during which time Titus vainly made repeated attempts to secure the surrender of the town. The Jews fought with great heroism and the utmost stubbornness, but famine and the exhaustion of the defenders forced them to abandon one by one the forts of the city. Yet the Romans had to besiege each wall in its turn, so that the heavy battles were prolonged. Only toward the end of the fourth month of siege did the Romans enter the Temple area. A council of war called by Titus decided to spare the Temple at all costs, but the Roman soldiers, embittered by the obstinacy shown by the Jews, did not heed the command and set fire to the Temple.

The real part played by Titus in the destruction of the Temple has not been clearly established. According to Josephus, he wanted to spare the Temple by all means, while according to later Roman chroniclers he wanted its destruction. The Talmudic legend alleges that, during the fire, Titus entered the Holy of Holies and there perpetrated many abominations, but was forced by the smoke to retire from the sanctuary. The soldiers proclaimed Titus emperor on the ruins of the Temple. The capture of Jerusalem was concluded a few weeks later by the occupation of the upper city. Titus took back to Rome with him thousands of prisoners, who met their death in the gladiatorial games or in battles with wild beasts. At the beginning of the year 71 he celebrated, together with his father, a double triumph over the Jews, and in commemoration of this the Arch of Titus was erected.

Roman historians praised Titus as "the delight of the human race." For the Jews, however, he remained an arrant rogue (*rasha*). Legend relates the divine punishment meted out to him: a gnat settled in his brain and for seven years gnawed at it.

The main source for the history of the relations between Titus and the Jews is Flavius Josephus' *Jewish War;* Josephus, as a protégé of Titus, must have stated the historical facts in his favor.

See also BERENICE.

Lit.: Graetz, H., *History of the Jews,* vol. 2 (1927); Schürer, E., *A History of the Jewish People in the Time of Jesus Christ,* vol. 1; Vogelstein, Hermann, *Rome* (1940) 43-44, 61, 66, 86-87, 153-54, 156; *Publications of the American Jewish Historical Society,* No. 28 (1922) 135 note, 165 note.

TITUS, ARCH OF. To celebrate the victory of the Roman general Titus over the Jews in the year 70, commemorative medals were coined, and several years later the Arch of Titus was erected in Rome, in the Circus Maximus, bearing the proud inscription: "The Senate and people of Rome to Emperor Titus . . . , the father of the country, its sovereign prince, because he followed his father's command, advice and with his approval vanquished the nation of the Jews and destroyed the city of Jerusalem till then vainly beleaguered by princes, kings and people or even totally unattacked."

However, the original triumphal arch is no longer in existence. The arch of Titus now in existence on the summit of the Via Sacra on the Forum was erected in the time of Emperor Domitian (81-96). The south

side frieze depicts the sacrificial procession with the image of the Jordan. Under the arcade the bas-relief to the right shows Titus in his victory chariot; while the goddess of victory crowns him, the goddess Roma holds the reins of the four horses drawing the chariot. The bas-relief to the left is considered the continuation of the triumphal procession. It shows the procession of Jewish captives wearing wreaths of flowers and carrying the spoils of the Temple, the golden table, the seven-branched candelabrum (Menorah), and the silver trumpets. The proud structure bears the simple inscription: "The Senate and people of Rome to the Divine Titus Vespasianus Augustus, the son of the Divine Vespasianus."

There is an old legend in Rome that in bygone days no Jews ever passed under the Arch of Titus in order not to be reminded of their unhappy fate. It is said that the Jews of the Roman ghetto opened up another way which enabled them to go from the Coliseum to the capitol and which led from the Arch to the Palatine Hill in the ancient city.

TOBENKIN, ELIAS, journalist, b. Slutsk, Russia, 1882. He came to the United States in 1899, and received the M.A. degree from the University of Wisconsin in 1906. That same year he joined the staff of the Milwaukee *Free Press* as a reporter, and within a short time was invited to join the Sunday staff of the Chicago *Tribune.* Social reform was astir; additional waves of immigrants were giving the large cities a colorful and unfamiliar base to the population pyramid. Objective interest and prejudiced distrust were leveled at the unknown groups, and Tobenkin became one of the journalists whose writing best satisfied the friendly interest and spiked the rumors of anarchy and subversiveness which bred the distrust. His work was published also in various New York newspapers and in periodicals. He was in New York from 1909 to 1912. From 1912 to 1914 he was an editorial writer for the Chicago *Tribune.*

In 1915 Tobenkin returned to New York, where he was first on the staff of the New York *Herald,* then with the *Metropolitan Magazine.* His first novel, *Witte Arrives* (1916), was built around a Jewish immigrant family in the Middle West and the Americanization of its younger members. It depicted with full inference the integrity of Jewish family life. After a period of service, during the first World War, as Russian expert with the United States Committee on Public Information, Tobenkin was sent to Europe by the New York *Tribune* three days after the armistice of November, 1918. He was correspondent in Germany and Poland. One of his most notable exposés was that relating to the murder of thirty-seven Jews in Pinsk (1919), by the Poles, on the assumption that the Jews were Communists, when in reality they had gathered to arrange for the distribution of Passover supplies.

Tobenkin traveled a great deal subsequently and covered foreign as well as national affairs for the American press. Although he had been one of the earliest advocates of fair treatment of, and of no intervention in, Soviet Russia, he was equally forthright, following a trip in 1937, in pointing out that the Jewish colonization of Birobidjan did not contain a promise of a general resettlement panacea for the Jews, but was intended only for the Jews within the Soviet Union.

Among Tobenkin's other books were: *The House of Conrad,* a novel (1918); *The Road,* a novel (1922); *God of Might,* a novel dealing with intermarriage (1929); *In the Dark,* a novel (1931); *Stalin's Ladder* (1933); *City of Friends,* a novel on marriage in the Soviet Union (1934); *The Peoples Want Peace* (1938). Tobenkin is said to have originated the phrase "hyphenated Americans" during his work as an editorial writer for the Chicago *Tribune* (1912-14).

NATHAN RICARDO.

TOBIADS, a powerful family of tax collectors under the Ptolemies and Seleucidae, in the 3rd and 2nd centuries B.C.E. According to a papyrus that has been discovered, Tobias, the ancestor of the family, was commander of a troop under Ptolemy II and resided in Birta, in Transjordan, from about 258 to 254 B.C.E. The account of the family given by Josephus (*Antiquities,* book 12, chap. 4, sections 3-11) seems to have been somewhat elaborated by legends, but runs substantially as follows: Joseph the son of Tobias undertook the collection of taxes in Palestine after Onias the high priest had failed to forward the necessary sum. He won the favor of the king and through this was enabled to use forceful measures to collect the taxes and to amass a fortune. He had a number of sons; the youngest, Hyrcanus, inherited his father's genius in winning royal favor, and became his successor. This aroused the enmity of his brothers, who won over the people to their side, so that Hyrcanus was forced to carve out a realm of his own in the Transjordan. The family lost its power after Palestine fell to Syria and Antiochus Epiphanes began to plunder the country; Hyrcanus committed suicide to escape the clutches of the tyrant. Scholars are divided on the degree of accuracy of this account, but maintain its general historicity.

Lit.: Büchler, *Die Tobiaden und die Oniaden* (1899).

TOBIAH BEN MOSES, the earliest author of outstanding eminence among the Karaites of the Byzantine Empire; he flourished at Constantinople in the second half of the 11th cent. and in the opening years of the 12th. He is said to have studied under Jeshua ben Judah at Jerusalem.

Tobiah's enduring contribution to Karaite literature is his pioneering activity in translating many literary productions of the Karaite golden age (9th to 11th centuries) from their original Arabic into Hebrew, thus making them accessible to the Byzantine (and, later, the Crimean and Polish) Karaites, who had no command of the Arabic language, and contributing indirectly to the development of their own literary output. Hence his well deserved honorary sobriquet *hama'tik,* "the translator." His chief translations are those of a number of works by Jeshua ben Judah and Joseph Haroeh (Albasir). His style, while vastly inferior to that of the rabbinic translators of the classic period, such as the Ibn Tibbons, reads nevertheless fairly fluently, once the reader becomes accustomed to his often weird neologisms, and his grasp of the subject matter is thorough, evidencing his substantial knowledge of theology, philosophy, and rabbinic literature.

Tobiah wrote also several original works, or rather compilations, for example *Yehi Meoroth,* or *Sefer Hamitzvoth,* on the precepts; *Otzar Nehmad,* a commentary, probably on the whole Pentateuch, of which only the part on *Leviticus* has been preserved; *Meshibath Nefesh,* a philosophical treatise. His authorship, however, is not free from uncertainty. Some hymns of his composition have been incorporated into the Karaite prayer-book.

Tobiah's translations contain a great many Greek words, and are thus important also for the study of the Greek dialect spoken by the Byzantine Karaites of his time.

LEON NEMOY.

Lit.: Jewish Quarterly Review, vol. 19 (1907) 78-82; Poznanski, S., in *Otzar Yisrael,* vol. 5, pp. 12-14.

TOBIAS, LILY (née Shepherd), novelist, b. Swansea, England. She published a volume of short stories, *The Nationalists* (1921), and the novels *My Mother's House* (1931); *Eunice Fleet* (1933); *Tube* (1935); and *The Samaritan* (1939). Her dramatization of George Eliot's novel, *Daniel Deronda,* was produced in London in 1927 and 1929. She attracted wide attention through *My Mother's House,* the story of a number of Anglo-Jewish families, and through *The Samaritan,* which gives a vivid picture of the events in Palestine during the years 1920 to 1936.

Mrs. Tobias was a member of the executive council of the Federation of Women Zionists of Great Britain. During her long stay in Palestine she was an active member of the Women's International Zionist Organization. In 1943 she was living in South Africa, where she served on the South African Women Zionists' Council and in various other Jewish organizations.

TOBIAS, WILLIAM VERNER, Canadian soldier, and lawyer, b. Morden, Canada, 1892; d. Winnipeg, Canada, 1941. He was the son of David Tobias, a pioneer Western Canadian settler. He received his education in the high schools of Winnipeg and the University of Manitoba, graduating in 1916. Immediately thereafter he joined the 196th University Battalion as a private, later becoming a lieutenant in the 52nd Kootenay Regiment, and went overseas with the Canadian Expeditionary Force. In September, 1918, at Paschendaele, he was wounded during the battle and was awarded the Military Cross for bravery, and promoted to captain.

Upon his return from overseas, Tobias entered the Manitoba Law School, from which he graduated in 1923, and practised law in Winnipeg until his death in 1941. In 1927 he was elected a member of the Manitoba legislative assembly, representing the constituency of North Winnipeg until 1932. He was deeply interested in the welfare of the returned soldiers, and was among the founders of the General Monash Branch of the Canadian Legion in 1932. He was its president until 1940, when recurrent illness forced him to resign.

TOBIT, one of the more important books of the Apocrypha, consisting of fourteen chapters. Its original language was probably Aramaic, and the date of its composition is set by scholars as some time between the end of the 3rd cent. and 50 B.C.E. Versions exist in Greek, Latin, Aramaic and Syriac. There are two late Hebrew translations. The Greek versions appear to be the most authentic as well as the earliest, although the Aramaic is of importance. It is not yet determined whether this Aramaic version goes back to another or perhaps to a Hebrew original. The most important of the texts is the Greek version preserved by the Codex Sinaiticus, which presents the longest and clearest text, and the one which "is the nearest approach which can be made to the original text whether the latter first appeared in Greek or in a Semitic language" (Simpson, in Charles, R. H., *The Apocrypha and Pseudepigrapha of the Old Testament,* 175).

The book is a fine example of the short story of ancient times. It is told in the first person by Tobit, a pious Jew of the tribe of Naphtali, who was among those led away captive by the Assyrians. He prospers in his new country, and devotes himself to the duty of burying the dead Jews that have been slain. This brings misfortune upon him, but he recovers, but in another righteous act of the same sort he loses his sight. He prays to God for help; at the very same hour Sarah, the daughter of Raguel in Ecbatana, is praying to God to help her because the demon Asmodeus has

The young Tobias journeying with the angel Raphael. From the painting by Verrocchio

successively killed seven of her husbands upon the wedding night of each. Both prayers are heard, and God sends the angel Raphael to aid them. (The narrative now switches to the third person.)

Tobit, hoping for death and desiring to conclude his affairs, sends his son, Tobias, to Rages in Media, to collect a large sum of money which he had deposited with his coreligionist Gabael. On the way Tobias meets with Raphael in human form; the latter becomes his companion, helps him catch a wondrous fish, and later, by means of the parts of this fish, succeeds not only in having Tobias marry Sarah and drive away Asmodeus, but also in curing Tobit of his blindness. Tobit gives a prayer of thanksgiving, and all live long and happily.

The book is interspersed with numbers of prayers, as well as words of counsel, including an early form of the Golden Rule, stated as: "What thou thyself hateth, do to no man" (4:15). The style of the book and its conceptions are basically conditioned by the Pentateuchal narrative. For its sources the author draws upon current religious and magical speculations, mythology, proverbs, demonology and folklore, all of which are skilfully woven together to form one of the most enchanting stories of religious literature. Among the duties stressed are those of paying tithes and other religious dues, burial of the dead, prayer, charity, and ethical conduct. The Ahikar element in the story is both interesting and perplexing, but its origin is not known. The lesson of the book was regarded as so impressive that it became a part of the Catholic Bible canon with the rest of the Apocrypha. G. GEORGE FOX.

TOCH, ERNST, composer, b. Vienna, 1887. At first he studied medicine and philosophy. Although entirely self-taught in music, he was awarded the Mozart scholarship in 1909 and the Mendelssohn scholarship in 1910. After a short period in Frankfort, Toch taught in Mannheim from 1918 to 1929, then settled in Berlin, where he remained until the Nazi regime forced his departure for the United States (1934).

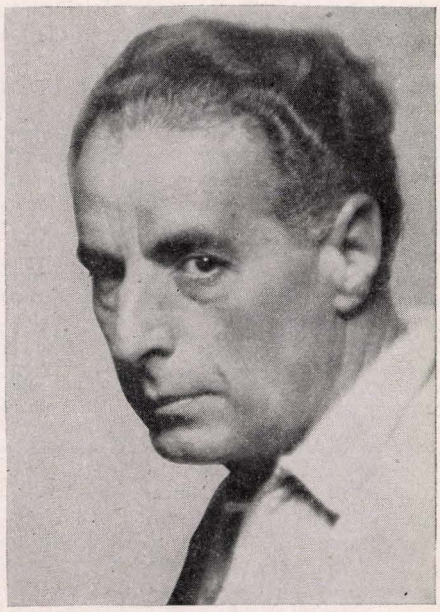
The distinguished position which Toch attained among modern composers has two bases: in form and structural refinement his music fulfils all demands, and to his craftsmanship he adds intensity and poetry of musical content. Both art-form and art-character are fused into an indissoluble unity. There is hardly a field of music in which Toch has not composed in his individual, highly personal style: chamber music, piano,

orchestral, vocal and dramatic compositions. Most significant among his chamber music pieces are the string quartets. In addition to some youthful compositions of this character, there are four important quartets, rich in contrapuntal ingenuity and in color, and revealing masterful treatment of the thematic material. A string trio, serenade, two *divertimenti* and sonatas for violin and 'cello are also included among Toch's chamber music. He likes to write for chamber orchestra and smaller groups of instruments, and contributed a number of such compositions.

Toch attempts to detach himself from sentimental superindividualism. This is particularly noticeable in the piano compositions. One of his early burlesques, called *The Juggler,* is among the most frequently played pieces in modern piano literature. Five series of *études,* each containing ten studies, are more complicated; here he made a comprehensive attempt to clarify the tonal and structural idiom of modern music for the student. Toch reached a symphonic level in piano literature in his *Piano Concerto* and in his *Symphony for Piano and Orchestra.* Both compositions are very elaborate and difficult to perform, yet evoke strong emotional reaction.

These works form the link to Toch's orchestral compositions. Two of these, written in the United States and familiar to the American public, are *Big Ben,* variations on the Westminster chimes, and *Pinocchio,* which, although it antedates the Walt Disney film, is composed in the Disney spirit.

Although many of Toch's vocal settings are for German words, English translations are available, and in the United States there have been excellent performances of his *lieder* cantatas and orchestral songs. In his later work, the composer's impressive cantata, *Job,* revealed a deep religious spirit. Toch also turned to synagogal service music.



In addition, he created not only a full-length opera and two smaller stage works, but also numerous film scores, and was, in 1943, one of the outstanding composers of screen music. He made his home in California, and in 1940 was appointed professor of composition at the University of Southern California. PAUL A. PISK.

Lit.: *American Hebrew,* July 3, 1936, p. 44.

TOCH, HERMANN VON, chemist, b. Langendorf, Bohemia, 1829; d. Vienna, 1861. He studied at the University of Prague, and was knighted by Emperor Francis Joseph for his discovery of kerosene oil. In *Das Erdöl* (Mineral Oil), by Engler-Höfer, there is a description of the fractionation of Galician crude oil by Hermann Toch; Toch succeeded in producing this oil in greater quantities and of superior quality. The description states that Toch is the originator of the fractional distillation of this crude oil, and produced therefrom an illuminating oil, and in 1859 the Nordbahn and the Südbahn, as well as private firms in the Wiener Platz, used this oil for illumination.

Lit.: Engler-Höfer, *Das Erdöl* (1911) 44.

TOCH, MAXIMILIAN, chemist, b. New York city, 1864. He studied at New York University and Columbia University, and was lecturer on organic chemistry at Columbia University (1905-6), municipal lecturer on paint at the College of the City of New York (1909), and assistant professor of industrial chemistry at Cooper Union (1919-24). Toch served as honorary professor of chemical engineering and industrial chemistry at the University of Peking and at the National Institute of Technology, China, and was awarded the D.Sc. degree by the University of Peking (1924). In the same year he was appointed professor of the chemistry of artistic painting at the National Academy of Design, New York; he was still serving in 1943.

Ernst Toch

In the first World War Toch was in charge of camouflage, and was the originator of a special system of camouflage, named for him. His writings include: *Materials for Permanent Painting* (1911); *How to Paint Permanent Pictures* (1921); *Chemistry and Technology of Paints* (3rd ed., 1925); *Protection and Decoration of Concrete* (1930); *Paint, Painting and Restoration* (1931).

Lit.: *American Hebrew,* June 6, 1924, p. 134.

TOHAROTH ("purifications"), 1. sixth and last division of the Mishnah. It comprises the following twelve tractates: *Kelim, Ohaloth, Negaim, Parah, Toharoth, Mikvaoth, Niddah, Machshirin, Zabim, Tebul Yom, Yadayim* and *Uḳtzin,* all of which deal with the laws of impurity.

2. fifth tractate of the division of the same name. It contains ten chapters, and discusses a number of cases of ritual uncleanliness, such as the uncleanliness caused by the carcass of a bird, by various foods and by liquids. There is a discussion of doubtful cases of impurity, and a distinction is made between the acts of the Am Haaretz, or ignorant person, and those of the Haber, or Pharisee who observes special rules as to ritual cleanliness. The final section deals with uncleanliness in connection with olive- and wine-presses.

The Tosefta to the tractate has eleven chapters and deals with the same material as the Mishnah. There is no Gemara in either Talmud.

Lit.: Danby, Herbert, *The Mishnah* (1933) 714-32; Lauterbach, J. Z., in *Jewish Encyclopedia,* vol. 12, pp. 174-75.

TOKATYAN, ARMAND, tenor, b. Plovdin, Bulgaria, 1898. As a boy he sang in the cafés of Egypt and Paris. In 1914 he returned to Egypt, where he entered the field of operetta and scored great success. Deciding to undertake opera, he went to Milan to study with Cairone. In 1921 his opera debut took place in Dal Varme in *Manon Lescaut.* Soon after this he came to the United States and made his American debut with the Scotti Opera Company, which was so successful that he was engaged by the Metropolitan Opera House.

From 1923 to 1943, except for a brief period following 1933, Tokatyan was leading tenor of the Metropolitan Opera, achieving distinction in the Italian repertory.

TOLEDO, city in New Castile, Spain, situated on the Tagus River. It was the capital of the kingdom of the Visigoths (5th to 8th centuries). The city may already at that time have had a large Jewish population, for there are still in existence formulas of that time whereby forcibly converted Jews of Toledo solemnly renounced the Jewish faith and the observance of Jewish rites. During the 8th cent. the Arabs freed the Jews from the yoke imposed upon them by the Christian rulers. Anti-Jewish 13th cent. chronicles charged that the Jews handed the city over to the Arab conquerors.

Further evidence of the existence of a Jewish community in Toledo dates from the time of the reconquest of the city by the Christians in 1085. The conqueror Alfonso VI and his grandson Alfonso VII fostered Jewish settlement in Toledo. Jewish financiers and scholars served these two sovereigns, and the most brilliant period in the history of the Jewish community of Toledo was that of the philosophers Judah Halevi and Abraham ibn Daud, the poet Judah al-Harizi, the Bible commentator Abraham ibn Ezra, and a host of other Jewish scholars, poets, philosophers, physicians, astronomers and statesmen residing at Toledo.

Under Christian sovereignty the second flowering of Arabian-Jewish culture took place, but this gradually vanished during the 13th cent. with the disappearance of the Arabic language. The Jews of Toledo were frequently plagued by great calamities, such as the large-scale massacres of 1108 to 1109. In 1148 Toledo became a place of refuge for many Jews from the Arab-held parts of Spain who were escaping from the persecutions of the Almohades. Judah ibn Ezra, a high Jewish official under Alfonso VII, successfully used his influence on behalf of his expelled coreligionists.

The Jewish quarter of Toledo was situated outside of the city proper, to the southwest, on the bank of the Tagus. It was fortified with walls and with a castle dating from the rule of the Arabs. A second, smaller, Jewish quarter, situated on ground belonging to the archbishop north of the cathedral, was built probably under the Christian regime. Here, in the business center of the city, were located the stores of the Jewish merchants. At the end of the 12th cent. Toledo had the largest Jewish community in Spain. According to the report of a Jewish contemporary, the reliability of which, however, is doubtful, the Jewish community of the city amounted to 12,000 persons at that time.

During the subsequent centuries there lived on the property of the archbishop of Castile many Castilian Jews who were outstanding in the field of finance. In Toledo there resided the leading Jewish tax farmers of Castile, such as Don Meir, Don Çag, Abulafia and Ibn Shoshan.

Interior of the El Transito church at Toledo, formerly a synagogue

The home of Samuel Abulafia in Toledo. It was built in the 14th century in fortress style, with almost no windows

In 1212 a crusade, which purported to be directed against the Saracens, led to another massacre of Jews. Toward the middle of the 13th cent. quarrels between the partisans and the opponents of Maimonides resulted in a schism within Spanish Jewry; the majority of the members of the Jewish community of Toledo adhered to the Maimunists. Of its leading personages, only two, the physician Judah ibn Alfakar and Meir ben Todros Halevi Abulafia, rabbi of the community, were opposed to Maimonides.

At the beginning of the 14th cent. the Jews of Toledo elected as their spiritual leader the most outstanding Halachist of the time, the German scholar Asher ben Jehiel (ROSH). He and his sons opposed the philosophical and rationalistic trend within Spanish Jewry which, together with the increasing hostility of the Castilian legislators toward Jews, drove many of them into the Christian fold.

During the civil wars of the 14th cent. the Toledo community suffered severely. In 1355 the troops of Enriques of Trastamara invaded the smaller Jewish quarter and killed 1,200 Jews. When Enriques became king he frequently plundered and sacked the Jews of Toledo. While he was besieging the city in 1368 to 1369, according to reports, 8,000 Jews died of starvation; however, this figure is undoubtedly exaggerated. In 1391 the Jewish community of Toledo was again subjected to persecution.

At the beginning of the 15th cent. the Toledo Jews were deprived of the right to hold public office. A decree of 1480 ordered the residence of the Jews limited to certain parts of the city. The return to Judaism of forcibly converted Jews was the obvious reason for the establishment of the Inquisition. At the end of 1485 the tribunal of the Inquisition was transferred to Toledo, where the largest number of autos da fé took place. From 1650 to 1700 a total of 855 dubious New Christians were brought to trial by the Inquisition. The last trial of this kind in Toledo took place in 1756.

The house of Don Samuel ben Meir Abulafia Halevi, treasurer of Don Pedro, who was executed in 1360, and the magnificent synagogues dating from that period were still in existence before the Spanish Civil

War (1936). One of them, built by Abulafia in 1357, was converted into the church El Tránsito; the other, dating probably from the same time, was converted into the church Santa Maria la Blanca by Vicente Ferrer in 1411. After the expulsion of the Jews from Spain in 1492 the latter building was given to the Calatrava Order and named San Benito. In 1550 it became an asylum for penitents, and in 1798 it was converted into a military barracks. At the end of the 19th cent. these buildings were restored by the Spanish government and dedicated as national monuments. A tablet in the El Tránsito church still bears a Hebrew inscription, taken from *Ps.* 99:8. Seventy-six epitaphs from the Jewish cemeteries of Toledo were published at Prague in 1841 by Samuel David Luzzatto under the title of *Abne Zikḳaron.*

In 1930 there were a few Jewish families living in Toledo, without any communal or religious organization. The number of Jews living in Toledo in 1943 under the regime of Francisco Franco, and any data about them, were unknown. MORITZ FREIER.

A., *Jews in Spain* (1942).

TOLEDO, a city of Ohio, with a population of 282,349 (census of 1940), which, in 1943, included an estimated 10,000 to 12,000 Jews, comprising the third largest Jewish community of the state. Jews were living in Toledo in small numbers when, in 1837, the city received its charter. Jewish pioneers, and men of prominence in the early Toledo community, included Solomon Van Noorden, William Kraus, Alexander Black, Abraham Goldberg, Jacob Freedman, Lehman Krauss, Sam Stettner, Henry Stettner and Guido Marx.

By 1860 the community was numerous enough to make a first though unsuccessful attempt at organization. It was not until the high holy days of 1863 that the first public religious services were held, in Gitskey Hall. In 1866 a congregation was organized and incorporated under the name of B'nai Israel. Solomon Van Noorden, the clothing merchant, conducted services. In 1872 a house of worship was built on East Woodruff and Twelfth streets (then Union Street), which in 1913 was replaced by a new edifice on Bancroft Street, still housing the communicants in 1943. A social and educational center was added in 1924. Among the early spiritual heads of the congregation were the rabbis Halper, Glazer, Hershowitz and Epstein. Michael Lichtenstein was called to the pulpit in 1921, and served until his death in 1936. He was succeeded in 1937 by Morton Goldberg, who was the incumbent in 1943. In course of time Congregation B'nai Israel adopted the Conservative ritual.

The Reform Congregation Shomer Emunim, known also as the Collingwood Avenue Temple, was founded in 1870 and reorganized in 1884. Rabbis who served included Tobias Schanfarber, Julius Meier, Charles J. Freund, David Alexander, Rudolph I. Coffee, Samuel J. Harris, and Joseph S. Kornfeld. Leon I. Feuer, the incumbent in 1943, was called to the pulpit in 1935. The Temple, a Spanish-type structure, housing the worshippers in 1943 was dedicated in 1916.

The Collingwood Avenue Temple (Reform) at Toledo, Ohio

The Orthodox Congregation B'nai Jacob was organized about 1890, and was first served by Rabbi Isador Shapiro. The congregants worshipped in rented halls until a synagogue was built in 1902. In 1907 Congregation Sharai Zedeck was founded, and in 1908 Congregation Anshei Sfard, both following the Sephardic ritual. Sharai Zedeck built a synagogue in 1908, which was replaced by a new one in 1925. Anshei Sfard erected its synagogue in 1913. All three Orthodox congregations were ministered to by Rabbi Isaac Moses Silverman for a period of twenty-eight years. In 1935 Rabbi Nehemiah Katz assumed spiritual leadership of the congregations; he was still the incumbent in 1943. Katz was also elected head of the Jewish Orthodox Association of Toledo, established in 1922 to deal with all Orthodox concerns of the community.

The earliest of Toledo Jewry's charitable organizations was the Beni Israel (B'nai Israel) Chevra Kadusha, founded about 1867. A number of other groups became constituent societies of the Federation of Jewish Charities, established in 1907, which in turn was reorganized in 1913 as the Jewish Federation of Toledo, affiliated with the city's Community Chest. The Jewish Community Council was formed in 1936, administering the United Jewish Fund. Toledo Jewry organized a lodge of the B'nai B'rith as early as 1872. The Toledo Hebrew School was opened in 1892. The general community center of the city's Jewry, the Jewish Educational League, was founded in 1911, and housed the activities of a number of groups, including the Y.M.H.A. (reorganized in 1919) and Y.W.H.A. Toledo Jewry maintained also a section of the National Council of Jewish Women, a Senior and Junior Hadassah, a district of the Zionist Organization of America, and a unit of the American Jewish Congress. In 1943 the bi-monthly *Jewish Times,* established in 1920, was being published at Toledo by Nathan B. Charnas.

Notable representatives of the Jewish community in the public life of Toledo were three mayors of the city: William Kraus, who held office in 1869 to 1870; Guido Marx, who served in 1875 to 1876; and Cornell Schreiber, who was in office from 1904 to 1906 and from 1916 to 1918. Aaron B. Cohen was judge of the municipal court (1916-21). Charles K. Friedman was assistant city solicitor (1896-1905). Isadore Topper was assistant attorney general (1931, 1933-35, 1935-37). Ira Bame was elected to the city council in 1936. Joseph Nathanson was city finance director. Eva Epstein Shaw was made a member of the Ohio State Board of Bar Examiners. Rabbi Joseph S. Kornfeld, who served for a decade at the Collingwood Avenue Temple, was Envoy Extraordinary and Minister Plenipotentiary to Persia (1921-24). Rabbi Leon I. Feuer was appointed director of the Toledo Industrial Peace Board in 1935, and of the city's Consumers League in 1937. Prominent physicians included Isadore R. Cohn and Samuel R. Salzman, chairman of the

medical section of the Lucas County Medical Association (1930) and trustee of Toledo University (1928-34). Others active in communal life included Sigmund Sanger, noted attorney, chairman of the city's library board, and chairman, in 1943, of the budget committee of the Toledo Community Chest (Toledo War Chest); Pearl Cohn Trost, president of the Toledo Society for Crippled Children; Julius N. Zeckhauser; Etta Zimmerman Fine; Sam Davis, onetime director of the Public Health Association; Mrs. Joseph M. Feerer, chairman of the committee for juvenile court work (1922-37). The painter Israel Abramofsky was represented at the Toledo Museum of Art. MORTON GOLDBERG.

TOLLER, ERNST, Socialist leader, poet and playwright, b. Samotschin, province of Posen, Germany, 1893; d. New York city, 1939. He was a descendant of a poor Jewish family, which was the first of its faith to have settled there. As a child he was so frail that he had to walk on crutches. But with an energy so characteristic of him, he trained himself to be superficially, at least, a strong and athletic man. Yet all his life he had to cope with relapses which grew more serious as a consequence of his years of imprisonment. Those relapses may well have accounted for his spiritual torment. Sometimes he would become inspired with flaming enthusiasms, but soon they would give way to a state of darkest melancholy. Sometimes he felt the urge to preach the gospel of freedom to the masses, but often he was taken with spells of misanthropism. His soul vacillated between unsatisfied vanity and deepest doubts in regard to himself, his art and his ideas.

In 1912, after he had graduated from the Gymnasium in Bromberg, Posen, he came with a letter of introduction to the writer Sigmar Mehring, in Berlin, who was the first to recognize his talent and printed his early poetry in the *Berliner Tageblatt.* In 1930 Toller started to study law at the University of Grenoble, France. But the chauvinistic atmosphere at the beginning of the first World War forced him to flee back to Germany, where he enlisted with the army and served with the artillery.

In the front lines Toller's attitude toward life changed. He became a Socialist. In the trenches he sketched out his play which he later titled *Die Wandlung* (The Change). He would have been arrested as an agitator right then had he not fallen ill in 1917 with a serious breakdown of his nervous system and been taken to a hospital. After he was discharged from the army as physically unfit for active service, he continued his studies at the University of Heidelberg, where he joined the Socialistic Youth Movement. When the police issued a warrant against him, he hid out in Berlin. There he met, shortly before the collapse of Germany, the writer Kurt Eisler, who later became president of the Bavarian Republic. He followed him to Munich, where he was his secretary until Eisler's assassination. He made propaganda for Eisler's plan for a federalistic union of socialistic republics at meetings in Berlin and Kiel. As a consequence of his intervention during the mutiny of the sailors in Kiel, which he later described in his play, *Feuer in den Kesseln,* he was arrested, brought to Munich and expelled from Bavaria.

In Berlin (1919) he became one of the leaders of the

Ernst Toller

newly organized Independent Social Democratic Party (U S P D), and after he had returned secretly to Munich he became president of the Soldiers and Workers Central Council of the Bavarian Soviet Government. During the bloody battles in Munich's streets he fought against the Black Reichswehr, the nucleus of the latter day Storm Troopers of Adolf Hitler. After Munich had been taken he was arrested in the apartment of a well-known physician where he was hiding out, and was brought to trial before a special court. In May, 1919, he was sentenced for treason to five years' imprisonment, together with Erich Mühsam and other friends.

While Hitler, who had been sentenced at that time for the same reasons—treason and an attempted Putsch—organized political meetings in the prison of Landsberg and was allowed to walk around freely, Toller was chained and often put into dark solitary cells at the prison of Niederschönenfeld. There he wrote his plays *Die Wandlung* (1919), *Man and The Masses* (1920), *Die Maschinen Stürmer* (1922), *Hinkemann* (1921-22), and a volume of poetry called *Das Schwalbenbuch.* These poems were dedicated to a pair of swallows nesting in his cell, which were removed by the authorities to sharpen Toller's punishment. The scripts of his plays were smuggled out of prison. The great success of such productions as *Die Wandlung* (The Tribune in Berlin), *Man and the Masses* (The Theatre Guild, New York, 1921), *Hinkemann* (produced by Maurice Schwartz as *Red Laughter* in New York and by the People's Stage in Berlin) shamed the German government into offering Toller a pardon. He refused to leave prison without his friends, which only brought more severe restrictions upon him. In 1924, after his term was over, he was expelled from Bavaria for the rest of his life, and became one of the most active members of the League for Human Rights. He traveled in various countries of Europe and in Palestine, where he spoke and wrote in behalf of the victims of political injustice.

In 1928 Erwin Piscator opened his theatre in Berlin with Toller's play, *Hoppla Wir Leben.* Productions of *Feuer in den Kesseln* (Berlin, 1930) and of the less successful comedy, *The Blind Goddess,* followed. In 1929 he accepted the invitation of the Theatre Guild and the International Labor Alliance, and came to the

United States, where he made studies for his play *Mary Baker Eddy.*

At a very early date, for instance in an article "Hitler at the Doors of Berlin" (1930), he predicted the fall of the Weimer Republic and the ascent to power of Fascism. He left Germany in the year before the catastrophe, thus escaping certain imprisonment. The following years he spent in Paris, in Switzerland, on the French Riviera and in London.

In London one of his secretaries died under mysterious circumstances. He had reason to believe that it was an attentat of German origin.

In 1935 Toller married the German actress Christiane Grautoff, who, like her father, the writer Ernst Grautoff, had left Germany as a protest against the Hitler regime.

In 1937 to 1938 his idealism surged up once more and he went to civil war-torn Spain. He came back raving about the heroic deeds of the people, but deeply pessimistic about the success of the Loyalists.

During a short stay in Paris he tried, in spite of heavy attacks of melancholy, to use all his connections with the Quai d'Orsay in order to better the horrible situation of the Spanish Loyalists in the French concentration camps and to free some of them from prison. Suddenly he decided to travel via London to the United States to raise funds for the Spanish Popular Front campaign. Through lecture tours and meetings throughout America he had personally over $3,000,000 when the fall of the Spanish Republic put an end to his efforts. His grief over this tragedy and over personal frustrations in negotiations concerning his latest play, *Pastor Hall,* a play based on Niemoeller which he had finished in Europe, precipitated his suicide in a hotel room in New York in 1939.

TOLNAI, SIMON, publisher, b. Nagyvárad (Grosswardein), Hungary, 1867. He became self-supporting at the age of eight years. His first enterprise consisted in buying up from the coffeehouses old newspapers and magazines, which he resold. Later he published *Tolnai Világlapja* (Tolnai's World Magazine), which imparted news and information in a popular form to wide circles of readers. This magazine proved a great financial success, and enabled Tolnai to start a printing press of his own.

In addition to several other magazines, concerned with the world of theatre and fashion, he published an encyclopedia in several volumes, *Tolnai Világlexikona; Műveltség útja* (a dictionary of knowledge; 15 vols.); and *A világháború története* (History of the [first] World War; 12 vols.).

TOLSTOY, COUNT LEO (LYOV) NIKOLAIEVITCH, non-Jewish novelist and social philosopher, b. Yasnaya Polyana, near Toula, Russia, 1828; d. Astapovo, Russia, 1910. He considered Judaism a seclusive national creed, comparable, in a way, to the patriarchal religions of the Romans, Chinese and Japanese, assuming that Christianity was far superior to Judaism. Nonetheless his strong sense of justice made him a valiant defender of the human rights of the Jews, and his lack of national prejudice enabled him to have most friendly relations with several Jews. In order to read the Bible and the Talmud in the original, he studied Hebrew with the Moscow rabbi Minor, grasping it, according to Minor, "with unusual rapidity." Inspired by Jewish folklore, he wrote a number of Jewish legends which were edited by his Jewish friend, J. Teneromo. Among his other Jewish friends were the pianist A. B. Goldenweiser, I. Ginzburg, who modelled his bust, and Leonid Osipovich Pasternak, who illustrated his novel *Resurrection* and whose painting, *Tolstoy in the Family Circle* (1900), was placed in the Leningrad Museum.

Altogether, however, the psychology of Jewry remained foreign to the renegade aristocrat and ideologist of Russian peasantry who only rarely mentioned Jews or the Jewish problem in his books. (There is, however, a most sympathetically drawn portrait of the Jew Simonson in *Resurrection.*) Yet though in 1882, when the first series of pogroms took place, he kept silent, unlike his colleague, Shchedrin-Saltykov, in 1890 the philosopher Vladimir Solovyev collected for his open protest against the anti-Semitic movement the signature of Tolstoy.

In the following year Tolstoy published a short essay, *What is a Jew?,* in which he defended the Jew against those of his countrymen who regarded him merely as "a leech that sucks out the blood and marrow of the country and its inhabitants," calling the Jew "that sacred being who has brought down from heaven the everlasting fire, and has illuminated with it the entire world. . . . Had it not been for the Jew all the other nations would have remained idol worshippers to this day." His essay culminated in a praise of the Jewish people as follows:

"The Jew is the emblem of eternity. He whom neither slaughter nor torture of thousands of years could destroy, he whom neither fire nor sword was able to wipe off from the face of the earth, he who was the first to produce the oracles of God, he who has been so long the guardian of prophecy and who transmitted it to the rest of the world—such a national can not be destroyed. . . . The Jew has been and always will be the constant follower and confessor of liberty, equality, civilization and perfect religious toleration."

After the pogroms of Kishinev and Gomel (1903) he protested against the atrocities in a letter which, however, could not be published on account of the censorship. There he expressed his abhorrence of the crimes, denouncing the czarist government "as the real culprit . . . which stupefies our people and makes fanatics of them." In the period from 1905 to 1907, when the czarist hordes, called the Black Hundred, were unloosed, particularly upon Jewish communities, and when countless opponents of the czarist regime, among them a great number of Jews, were executed, Tolstoy indignantly protested against this rule of terror, uttering his cry of despair: "I can not keep silent."

As an opponent of the idea of the state and of any form of nationalism, Tolstoy was not favorably disposed toward Zionism.

Tolstoy's *Complete Works,* edited and translated into English by Leo Wiener, appeared in 24 vols. (1904-5). Another Jew, Raphael Löwenfeld, became noted as the champion in Germany of Tolstoy. He translated and edited Tolstoy's works, first in eight volumes (1891-93), later (1910-11) in thirty-three volumes. In 1892 he published *Gespräche über und mit Tolstoi.*

TOMB OF ABSALOM, *see* ABSALOM'S TOMB.

TOMB OF RACHEL, *see* RACHEL, TOMB OF.

TOMBS OF THE KINGS, name applied erroneously in modern times to the Tomb of Queen Helena of Adiabene and her family, situated north of the Third Wall of Jerusalem and a little east of the road from Jerusalem to Nablus (Shechem). This structure was hewn out of solid rock to serve as a mausoleum for the Parthian queen and her family, who had embraced Judaism and had migrated to Jerusalem shortly before the destruction of the Second Temple, as we are told by Josephus. It was considered one of the most splendid monuments of the later Roman world, but was filled in and forgotten until excavated by F. de Saulcy in 1851 and 1863. It was purchased by the wealthy French Jew, Isaac Péreire, and was presented by his heirs to the French government in 1886. The sarcophagus of the queen herself, identified by a bilingual Hebrew and Syriac inscription (which gives her Parthian name Tsaddan or Tsaran), is now preserved in the Louvre, along with fragments of her skeleton and dress. The underground part of the monument (formerly crowned by a pyramid) consists of a broad rock-hewn stairway, twenty-six feet wide and with twenty-four steps, which leads to a large court, ninety by eighty feet and twenty-six feet deep, on one side of which is the impressive portico of the tomb proper. The tomb consists of several halls from which radiate a complex series of burial chambers in two stories.

TOMBSTONES. The earliest Biblical reference to a monument on a grave is in *Gen.* 35:20, where Jacob is said to have erected a pillar to mark the tomb of Rachel. *II Kings* 23:17 speaks of a monument (*tziyyun*) which marked the grave of a prophet; this probably refers to two stone markers, coated with lime, that were used to indicate a grave in an open field. In the valley of Kidron, near Jerusalem, there are large tombstones, resembling the Egyptian mastabas; examples of these are the so-called tombs of Zechariah and Absalom (see vol. 1, pp. 56-57), made in Hellenistic style with an Egyptian influence. There are Hellenistic decorations on the entrances to the mausoleums in ancient Palestine, known as the Tombs of the Judges and the Tombs of the Kings. The ancient Roman colonies contain Jewish tombstones of the Roman period; columns ornamented with figures and

the Menorah are found in the territory that was Pannonia in ancient times (Central Europe). Similar tombstones have been found in the Crimea, in Tortosa, Spain (6th cent.), in northern Africa, in Benevento, Italy (9th cent.), and in Arles and Narbonne, France (7th cent.).

The oldest known tombstone in the Rhine district is one of Mayence, dated 1064; tombstones of the 11th and 12th centuries have been found at Worms, Cologne, Speyer and Erfurt. Tombstones at Breslau are dated 1203, 1223 and 1246. There is a tombstone at Ulm which is of the 13th cent., and several in France of the 14th. Some Prague tombstones are dated in the 10th and 11th centuries, but may be of a later period. There are a large number of tombstones of the 17th and 18th centuries. The third quarter of the 19th cent. marks the end of the period when Jews paid close attention to tombstones and achieved many artistic creations in this field.

The form of the tombstone, as a rule, follows that of the traditional Sumerian stele. It is an upright, rectangular block with an arched top. There are also rectangular blocks with straight tops, and sometimes these are laid flat on the ground. Tombstones from the Roman period have Latin, Greek, and later Hebrew inscriptions, as in the catacombs. They give the name of the deceased, the date of his birth and death, and a short saying or prayer. At all times the most effective ornamentation, and generally the only ornamentation, was the Hebrew "square" characters, which were given a standard style in the baroque period, when some of the letters, especially the Lamed, were supplied with artistic flourishes. There are also traces of Romanesque style in the tombstones at Worms, and of Gothic style at Ulm and Prague, but the baroque and rococo styles are predominant. The former generally employed a lateral border of round or twisted columns with rounded cornices and one to three ball-shaped head-pieces.

The central part of the tombstone contained the inscription, which was often let into the stone after the manner of a cartouche. In many cases family coats of

Modern tombstone in the form of an obelisk

arms are carved on the stones. There are a number of animal figures, symbolic of the name of the deceased; the most frequent are those of the lion, the stag, the bear, the eagle, the cock and the dove. It is but seldom that there are human figures. Tombstones of the Aaronides are often marked by a carving of the hands as extended in the priestly blessing, while those of Levites bear a ewer as symbol of their office in the Temple, that of serving the priests. These are often combined with branches, wreaths, bunches of grapes, rosettes or other similar ornaments. The rococo style retained the plan of the baroque, but with an intentional asymmetry of decoration; during the Empire and Biedermeier periods (19th cent.) this took on the sober, rigid forms of the age. Many tombstones are horizontal slabs, especially among the Sephardim, who, in contrast to the Ashkenazim, decorated them in rich relief, with putti, skulls, hour-glasses, angels, wings and plumes. Examples of such, from the Late Renaissance and baroque periods, are at Altona, Cassel and Ouderkerk.

There are several sarcophagi of the 17th and 18th centuries in the old Jewish cemeteries at Prague and Vienna; a few are found elsewhere, including Eisenstadt, Rawitsch and the ReMO cemetery at Cracow. This tent or "little house" form, varying somewhat from the ancient Palestinian sarcophagi and still widespread today in Eastern Europe, is a building with a roof hanging down on both sides and high narrow sides which bear the inscription. One of the most valuable tombstones from the point of view of the history of culture is in Krotoschin (Posen); it is dated 1702 and reveals a definite Romanesque style, a proof of the infiltration of this style, which the medieval Polish immigrants had brought from Germany to the ghetto.

The materials used for tombstones were generally stone or wood; sandstone, marble and granite were employed. After the beginning of the 19th cent., tombstones were made also of cast iron. Wood was used principally in Poland, as at Czieszowa and Kurnik, but stone was always preferred. When this was hard to obtain, boulders were used, as in Posen, and even half or smaller fragments of millstones are found in Poland. Even the backs of pieces removed from medieval monumental buildings were used; from this Grötte drew important archeological conclusions on Posen.

According to the old regulations, all tombstones must be of equal height, symbolizing the equality of all in death, and lending to the old cemeteries an endless artistic charm and atmosphere. This was forgotten in the 19th cent., and modern cemeteries are as a rule less artistic in appearance. The industrialization of cemetery art has put an end to the highly developed Jewish art of hand masonry in stone.

The tombstones of the Sephardim have been studied but little as yet. They occur in a great number of forms, and tend to follow the types prevalent in the countries in which the Jews live, especially if the latter are Islamic.

Tombstones are usually erected eleven months after the funeral. The unveiling is accompanied by special prayers, and sometimes a collation is served.

TOMBSTONES, INSCRIPTIONS ON, *see* EPITAPHS.

TORAH 1. The Torah and Judaism. Torah, together with Israel and God, forms the triad on which Judaism rests. As the most comprehensive name for divine revelation, the Torah represents both "the heritage of the congregation of Jacob" (*Deut.* 33:4) and the vitalizing and regulative principle and standard of Judaism. Of the three pillars, which, according to the rabbis, uphold the Jewish world, the Torah ranks first (*Aboth* 1:2). The other two, worship and benevolence, derive their power from it. Identified with divine wisdom (*Sirach* 24:8, 23), the Torah was considered older than the material world, and was assigned a cosmic role as the instrument wherewith God created the universe. It served the Divine Architect as the blueprint of creation (*Prov.* 8:22-31; *Sifre, Deut.* 37; *Aboth* 3:4; *Midrash Gen.* 1:1). "Were it not for the Torah, the heaven and the earth could not endure" (*Pes.* 86b). "The Holy One blessed be He made a condition with the works of creation, saying: 'If Israel will accept the Torah you will endure, but if not you will revert to chaos' " (*Sab.* 88a). The Torah was intended for all humanity, but when the other nations rejected it, God presented it to Israel. Nonetheless, He proclaimed it in all the seventy tongues of man to enable all people to understand and to heed its commands (*Sifre, Deut.* 343; *Mechilta, Yithro* 5; *Midrash Num.* 14:10). It was entrusted to Israel not only as a last resort, but also as a mark of God's love (*Aboth* 3:18). It is the crowning glory of Israel, greater than royalty and than priesthood, endowing its followers with life in this world and in the hereafter (*Aboth* 6:7).

2. The Meaning of Torah. As Israel's heritage and spiritual legacy, the Torah can not be narrowed down to mere *Law,* as Paul and his followers have done, partly on the basis of its rendition by *nomos* in the Septuagint, Philo and Josephus, and partly as the result of bias. Besides *Law,* Torah has the wider meaning of *religious instruction and guidance* (for example, *Isa.* 2:3; *Jer.* 8:8; *Ex.* 13:9; *Prov.* 1:8; *Ezek.* 43:11; *Job* 22:22). It is derived from the Hebrew root *yarah,* "to cast" (the lot for oracular purposes), "to direct" or "to teach." The priests who were in charge of the oracle were consulted regarding ritual matters, such as proper forms of sacrificial worship, clean and unclean, sacred and common, as well as concerning civil and moral issues (*Deut.* 17:8-11; 33:10; *Haggai* 2:11-13; *Mal.* 2:7; cf. *II Kings* 17:27). A decision or judgment thus issued was designated a *torah* (*Ex.* 18:20). The term was applied also to a whole body of such decisions or judgments (*Lev.* 7:37; *Ex.* 24:12).

To prophets, too, individuals—including priests—turned for spiritual guidance (*Zech.* 7:3-7). Their inspired teaching similarly represented *torah* (*Amos* 2:4; *Hosea* 4:6; 8:1,12; *Isa.* 1:10; 5:24; 8:16,20; 30:9). As champions of the divine order of holiness and of righteousness, the prophets deepened and broadened the idea of the law of God. They spiritualized the conception of ritual, the Sabbath and other holy days, and stressed the moral obligations which religion places upon the people. Jeremiah looked to the day when God's law would be inscribed upon the very hearts of the people (*Jer.* 31:30-33; cf. *Isa.* 51:7; *Ps.* 37:31; 40:9). The *torah* of the prophets was expressed in the form of sermons, poems, parables and narratives.

In addition there was the *torah of the sages,* i.e., instruction based on worldly wisdom, ordinary observation and experience (*Prov.* 13:14). Phrased in the form of parables and proverbs, it served as a powerful medium of popular religious teaching.

3. The Written Torah. Torah thus denotes divine teaching, revealed through priests and prophets or discovered by sages. Specifically, it signifies the written record of revelation associated with the name of Moses who, as founder of the religion of Israel, was believed to have received at Sinai a complete body of

law and instruction for his people (*Deut.* 33:4). Tradition identifies the Torah of Moses with the five books of *Genesis, Exodus, Leviticus, Numbers* and *Deuteronomy,* generally known as the *Pentateuch* (Greek *penta,* five, and *teuchos,* book), or as the *Humash* (a shortened term for *hamishah humshe torah,* "the five fifths" or five-fold division of the Law). In consequence of the Deuteronomic (7th cent. B.C.E.) and the Ezra-Nehemiah (5th cent. B.C.E.) reformations, the Torah became the foundation and center of Judaism, the supreme authority of Jewish life (see *Deut.* 1:5; 4:44; 31:9,24-26; *Josh.* 1:8; 8:31; 23:6; *I Kings* 2:3; *II Kings* 14:6; *Ezra* 3:2; *Neh.* 8:1, 5, 13-18; 13:1-3; *Mal.* 3:22). Because of its sanctity, its reading has been made part of the service of the synagogue on Sabbaths, holy days, festivals and fasts, as well as on Mondays and Thursdays.

Whereas the Samaritans limited their canon of Torah to the Pentateuch, the Pharisees and Sadducees included in it also the *Nebiim* (Prophets) and *Kethubim* (Writings; *Tanhuma, Reeh* 1; *Midrash Ps.* 78:1). The Prophets and Writings were considered subsidiary to the Torah, and are classed as "words of tradition" (*dibre kabbalah; R.H.* 7a). Selections from the *Nebiim* (Haftarahs) supplement the lessons from the Torah on Sabbaths and holy days.

The late books of the Bible, like *Ezra-Nehemiah, Daniel* and *Chronicles,* regard the Torah as the source of Divine knowledge. The authors of *Ps.* 19 and 119 rhapsodize about it as the unfailing fountain spring of inspiration. The Midrash interprets the occurrence of the word "light" five times in *Gen.* 1:3-5 as corresponding to the five books of the Torah (*Midrash Gen.* 3:5). Another Midrash compares the five books to the five fingers of the hand of God (*Midrash Num.* 4:10). Its divine character became a cardinal principle of rabbinic Judaism. Any one who denied this doctrine was excluded from future bliss. Furthermore, any one who said that the entire Torah came from God, with the exception of one verse, which was written by Moses himself, or except a single point of interpretation, inference or analogy, has "despised the word of the Lord" (*Num.* 15:31). It is like an arch of stones; as soon as one is loosened, all fall apart (*Yer. Sanh.* 10:1; 99a).

4. The Oral Torah. The Sadducees, while venerating the text of the Torah and faithfully guarding its literal meaning, considered it a closed book. Where its provisions did not cover new exigencies, they resorted to special enactments. In consequence the Torah was steadily pushed into the background as unrelated to the new needs and actualities of the times. The Pharisees, on the other hand, persisted in keeping the Torah in the foreground as the unfailing guide of all conduct. As the revelation of God's will, it must be adequate for all eventualities. All that is required is to draw out what is implicit in the ancient text to secure light for the new conditions. Evolving a somewhat artificial system of exegesis, they steadily deepened the meaning of the written word and rendered it applicable to all times and circumstances. Their attitude was expressed in the words: "Turn it and turn it again, for everything is within it" (*Aboth* 5:22).

This dynamic view of the Torah was developed by the Pharisees through the vehicle of tradition. In the words of Josephus: "The Pharisees have delivered to the people a great many observances by succession from their fathers, which are not written in the laws of Moses; and for that reason it is that the Sadducees reject them, and say, that we are to esteem those observances to be obligatory which are in the written word, but are not to observe what are derived from the tradition of our fathers" (*Antiquities,* book 13, chap. 10, section 6). In the opinion of the Pharisees, the tradition regarding the meaning of the words of the Torah and the manner of their application was inseparable from the Torah and derived from the same Divine source. This tradition included ancient customs, details of laws which the written law stated in very general terms, rules of interpretation of the text of the Torah, and the like.

In contrast to Sadducean and subsequent Karaitic teaching, Pharisaic or rabbinic Judaism emphasizes the doctrine of a dual revelation or Torah, one Written and the other Oral (*Sifre, Deut.* 351; *Sab.* 31a; *Yoma* 28b). "What is meant by the words: 'And I will give thee the tables of stone, and the law and the commandment, which I have written, that thou mayest teach them' (*Ex.* 24:12)? 'Tables of stone' refers to the Decalogue; 'law' to the Pentateuch; 'the commandment' to the Mishnah; 'which I have written' to the Prophets and Hagiographa; 'that thou mayest teach them' to the Gemara. The verse teaches that all of them were delivered to Moses at Sinai" (*Ber.* 5a). There God gave him, in order, Scripture, Mishnah, Talmud and Haggadah (*Midrash Ex.* 47:1). To overcome the claims of the sectarians, the rabbis taught further that God formed a covenant with Israel only on account of the Oral Torah, for it is said: *'al pi hadebarim ha'eleh,* "after the tenor of these words I have made a covenant with thee and with Israel" (*Ex.* 34:27; *Git.* 60b). It is by means of the Oral Torah that Israel is distinguished from the other peoples. Had it been delivered in written form, other nations would have been enabled to get hold of it, as they did with the Written Torah, and to claim that they are the true Israel (*Midrash Num.* 14:10). "The Holy One was pleased to endow Israel with merit; therefore He multiplied for them Torah and commandments" (*Mak.* 3:16).

The Written Torah, interpreted and supplemented by the Oral Torah or Tradition, and reduced to concrete rules of conduct, represents Halachah. The realm of the Halachah is co-extensive with life. Embodied in the six divisions of the Mishnah, discussed and amplified in the Palestinian and Babylonian Gemaras, and subsequently recast into the codes of Alfasi, Maimonides, Jacob ben Asher, Joseph Caro, and others, the Halachah aims to direct and to guide all phases of Jewish behavior—ritual, moral, and civil. The word of the Torah, expounded with the view to deducing from it the lessons and the wisdom of life, theological, ethical, psychological, or folkloristic, represents Haggadah. It is collected in the Tannaitic Midrashim—the *Mechilta, Sifra,* and *Sifre* —in the Haggadic portions of the Talmud, and in the Midrash Rabbah, *Tanhuma,* Midrash to *Psalms, Proverbs, Samuel,* and other books, and in the *Yalkut Shimeoni,* and the like. Whereas the Halachah is authoritative and binding upon the Jewish people, the Haggadah is not. Within the general context of Jewish belief, it represents the free play of the minds of the rabbis without exercising coercive power over the believers. Its purpose is to edify and inspire.

5. Perpetuity of the Torah. With the destruction of the Temple and the loss of national independence, the Jews wandered forth among the nations with the Torah as their portable fatherland and sanctuary. Guarding against the Christian claim that a new dispensation had superseded the Old Covenant (*Rom.* 8:3-4; *Gal.* 5:2-6; *Heb.* 8), rabbinic Judaism stressed the eternity of the Torah. The words of *Deut.* 33:4, "Moses commanded unto us the Torah, an inheritance of the congregation of Jacob," are explained by the Midrash as "a heritage for ever." The word *morashah* (heritage) is taken as *meorasah,* "betrothed," suggesting the thought that the Torah is united to Israel for ever (*Sifre, Deut.* 345; *Midrash Ex.* 33:7). Berechiah says: "The whole world is not equal to a single word of the Torah" (*Yer. Peah* 1:1, 15d). Alexandri teaches

that "if all the nations were to assemble to uproot a single word of the Torah, they would not succeed" (*Midrash Lev.* 19:1-2. See Strack, H. L., and Billerbeck, P., *Kommentar zum Neuen Testament,* on *Matt.* 5:17-19). Johanan is of the opinion that "the Prophets and the Hagiographa will be annulled in Messianic times, but the Pentateuch will not be annulled" (*Yer. Meg.* 5; cf. *Ned.* 22b). Countering the claims of Jewish sectarians that the Torah has been abolished, the belief is expressed that even after the Messiah has come the Torah will retain its authority (Schechter, Solomon, *Some Aspects of Rabbinic Theology,* p. 124, note). As for its replacement with another Torah, the Midrash states (with reference to *Deut.* 30:12): "'It is not in heaven,' that thou shouldst say that another Moses will arise and bring us another Torah from heaven. I have already declared to you that there is nothing left of it in heaven" (*Midrash Deut.* 8:6).

Against the Christian and Mohammedan claims that the Torah has been abrogated, Saadia argues: "Our nation is a nation only by reason of its Torahs (the Written and Oral Laws). And since God promised that the nation will abide as long as the heavens and the earth, its Torah must endure as long as the heavens and the earth (*Jer.* 31:34-36). The end of all prophecy is followed by the admonition to keep the Law of Moses to the Day of Judgment and the prior appearance of Elijah" (*Mal.* 3:22-23; *Emunoth Vedeoth* III, 7). Maimonides includes the permanence of the Torah among the articles of Jewish belief. "I believe with perfect faith that this Torah will not be changed, and that there will be no other Torah from the Creator, blessed be His name" (see *Iggereth Teman; Yesode Hatorah* 9).

The belief in the immutability of the Torah preserves the continuity of Judaism, without sacrificing its steady development.

The Pharisaic principle of interpretation has been persistently applied to the doctrinal and spiritual as well as to the legal side of the Torah. Reflecting the Divine mind, it was believed to be in accord with all truth. Accordingly the philosophers sought to harmonize it with the wisdom of Plato, Aristotle, and other philosophers, and to reformulate it into a body of rationalistic doctrine. The mystics similarly recast it into Cabala. Modern historical criticism has reversed the process. Instead of reading present day ideas of philosophy and science into the ancient text, it seeks to disengage the meaning of the original documents and to trace the steady growth of the religious and ethical ideas of Judaism.

Historical analysis, while showing the human origin of the Torah and its development in response to ever changing needs, thereby undermining its claim to absoluteness, also demonstrates its abiding character in Judaism. Indeed, Judaism is the religion of Torah, not alone of the Written Law nor even of the Oral Law, but of the progressive growth of the Jewish people in religious knowledge and culture. It is "our wisdom and our understanding in the eyes of the nations," and the source of the life of Israel as a religious people.

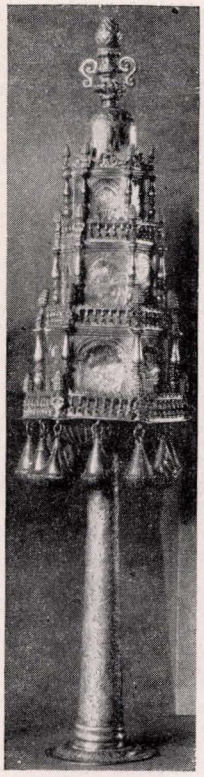
TORAH, BURNING AND DESECRATION OF. The Torah, as the most sacred book of the Jews, was the object of attack on the part of heathens who wished to assail the Jewish religion. The first instance of its burning and desecration was during the persecution inaugurated by Antiochus Epiphanes (168 B.C.E.), when the copy of the Torah in the Temple was bespattered and burned, and other copies were so hunted out for destruction that the faithful had to hide them wherever possible (*I Macc.* 1:56). In 50 C.E. a Roman soldier desecrated a scroll of the Law, but the popular outcry about it was so great that the governor had him beheaded (Josephus, *Jewish War,* book 2, chap. 12, section 2). The report in the Mishnah (*Taan.* 4:6) about Apostomus may refer to either of these events, or to another about which no details have survived. Titus is reported to have desecrated a Torah when he destroyed the Temple in 70 C.E. (*Git.* 56b).

The severest campaign against the Torah was during the persecution instituted by Hadrian (about 135 C.E.). Hanina ben Teradion was wrapped in a scroll of the Law and burned at the stake. Scrolls of the Law were made into sacks and filled with sand, and the Jews were forced to carry these burdens. These persecutions came to an end a few years later, with the accession of Antoninus Pius.



When Christianity became the dominant religion of the Roman empire, there were no direct attacks on the Torah, because the latter was as sacred to Christians as to Jews. When the next attack on Jewish sacred books came, it was the Talmud that bore the brunt of it. Desecrations and burnings of the Torah continued to occur down to modern times as incidents in the burning and desecration of synagogues, as in the time of the Crusades, the Black Death, the assaults on the Spanish Jews in 1391, the Chmielnicki outbreak of 1648, the pogroms in Russia from 1903 to 1922, and the Nazi outrages in the 1930's and 1940's.

TORAH, ORNAMENTATION OF. The ornaments of the Sefer Torah are called *kele kodesh* ("holy utensils"). The ornamentation of the Torah is performed not only as an end in itself, but often as a necessary means of protecting the valuable and precious Scrolls of the Law, and in addition it serves practical purposes. In the most ancient period it would appear that methods or means of protecting the scrolls were unknown, and as a result they were used without any protective coverings at all (cf. the representations on the gold glasses from the Jewish catacombs). Later it became customary to roll up the parchments on a stick or rod, and still later on two turned rods, or rollers, called *'etz hayim* ("tree of life"). These were either plain or ornamented, and the upper ends were also covered with some precious metal. The scrolls are bound together with a sash-like band or ribbon, which is called also the *Wimpel.* In Italy two bands were customarily used, the one, made of plain silk, to cover over the parchment scroll completely, and the other, a narrower one, richly embroidered.

A further protection against dust is furnished by the Torah cover and the so-called *rimmonim* (literally, "pomegranates"), known also as adornments or capitals, which are placed over the ends of the Scrolls of the Law, to cover the rollers. Often, too, a crown is used for this purpose. Whereas the Torah shield or breastplate serves a purely decorative purpose, the *Yad* (literally, "hand," i.e. pointer) is provided for the

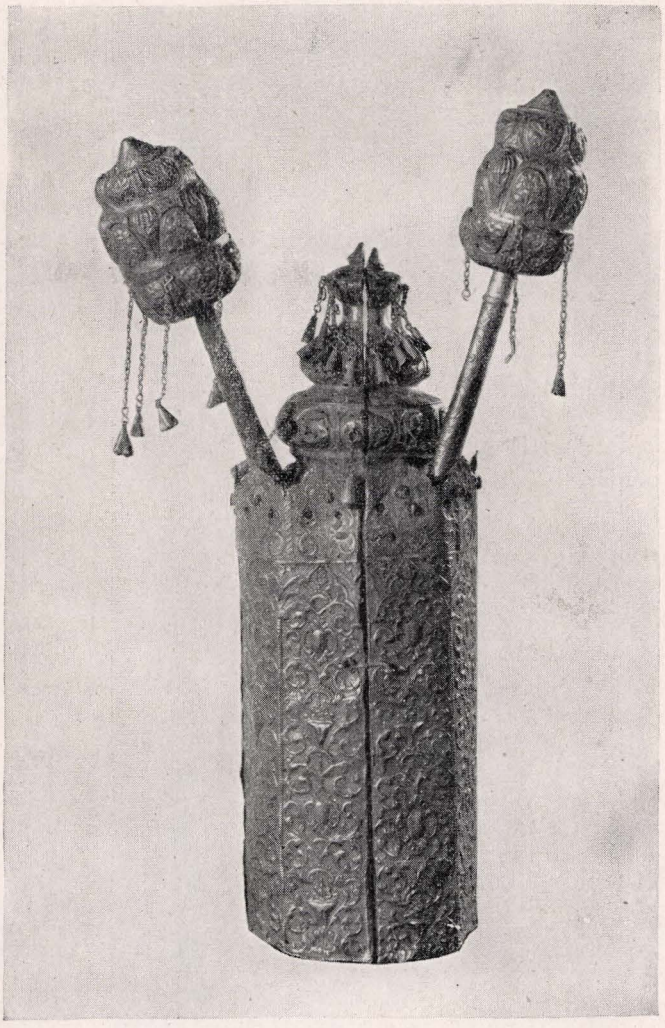
purpose of protecting the parchment and the text against being touched by the fingers.

The following constitute the ornamentation of the Torah:

1. The ornaments or capitals placed on top of the Torah, called *rimmonim*. These Rimmonim were employed as early as the Biblical period as an ornamental motif in the Tabernacle and in the adornment of the Temple (cf. *Ex.* 28:33; *I Kings* 7:18). They are placed on top of the ends of the wooden rollers or rods about which the parchment of the Scroll of the Torah is wrapped. While Maimonides (12th cent.), mentions them, no old pieces are known. They are manufactured in the form of silver hollow pieces, and form the most effective ornamentation of the Torah. In form they are extraordinarily diverse, some of considerable artistic value, especially from Italy, being still extant. In the period of Polish florescence the model of the Jesuit turret helmets, which were used also in pairs, appears to have fecundated the imagination of the ghetto artists. On this ground there may be explained the dwarf-galleries, niches and other motifs employed with such predilection on the Rimmonim. Frequently, too, silver bells are employed. Further ornaments of this type are filigree or enamel work, gilding or gold plating, and precious stones.

2. The Crown of the Torah (*kether torah*). In all large synagogues a silver crown, often several such silver crowns, forms part of the ornamentation of the Torah. In keeping with the custom prevailing in the individual congregation—there are no fixed rules therefor—this Torah crown is employed on definite holidays in place of the Rimmonim as a decoration for the Sefer Torah, and is supposed to symbolize the regal significance of the "doctrine" or "teaching" of the Torah. This symbolism is often explained also on the ground of the inscription *kether torah* (often abbreviated to the two Hebrew letters Kaf and Tav) which is frequently placed on the Ark (*'aron hakodesh*) in which the Scroll of the Law is kept. When the considerable weight of the Torah crown renders it impossible or awkward to place it on the Torah rollers and to carry the Torah about, the congregation merely exhibits the crown near the Ark.



In Italy the crown of the Torah (generally open at the top) is placed on the Torah scroll together with the Rimmonim. Frauberger published a form of the Rimmonim coming from Casale Monferrato consisting of three interlaced crowns. In Poland and Germany a favorite form of the Torah crown is the imperial and royal crown. The crowns display considerable skill on the part of the goldsmith as regards their rich ornamentation, which is suited to the style in mode. Often there are on the Torah crowns inscriptions with the year and with the name of the donor.

3. The Torah Cover or Mantle (often called *mappah*, "cloth"), used to cover the Scroll of the Law. This consists of a head-piece with two apertures through which the rollers of the Sefer Torah are inserted, and of the mantle or covering piece itself. The material of which this Torah cover is made often is the same as that of the Parocheth (curtain covering the Ark of the Law), and often has also the same color and ornamentation. When the Torah cover is made of brocade, it is most frequently unembroidered; when made of velvet or of smooth silk, occasionally it is almost entirely provided with a trimming or border of gold and silver thread. Crowns, lions and representations of the Ten Commandments form favorite ornamental motifs, and less frequently script. Often, too, gems are sewed into the

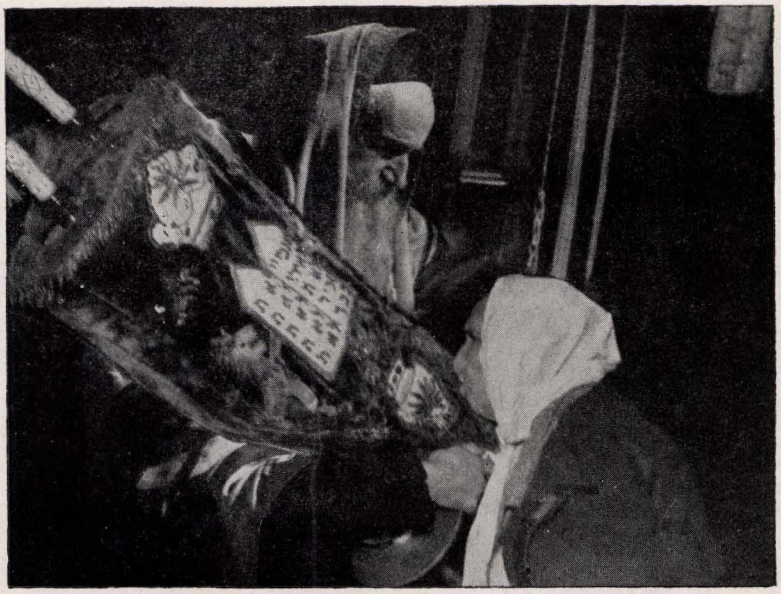
ornaments. The oldest known Torah covers from the 16th cent. are frequently masterpieces of sacred art, in particular those of Padua.



4. The Torah shield or breastplate (called *tas,* literally, "plate"), a purely decorative shield which is suspended on the turned staves or rollers of the Scroll of the Law by silver chains and partly covers the Torah mantle. Often the Torah shield has little hooks whereon the pointer (Yad) is hung. Examples of the Torah shield, always wrought of some precious metal, for the most part silver, represent the products of the golden age of the Jewish goldsmith's art.

The Torah shield often is rectangular in form (in the baroque period also that of a cartouche), and in its lower part has a contrivance for the insertion of changeable rectangular little tablets or plaques made of silver on which the name of the current festival is indicated. The rich adornment of the shield has historic and ritual motives (reminiscences of pieces used in the Temple service, the Tables of the Law, symbols of the individual festivals, the two pillars known as Jachin and Boaz of the Solomonic Temple, and the like), and often bear representations of lions and the crown. A unique position is occupied by those Torah shields in the adornment of which the entire human figure is employed and to which Alfred Grotte first and then repeatedly pointed: Aaron and Moses, Judith, and mounted figures are represented (such shields were to be found in synagogues at Breslau, Prague, Lemberg, Schweinfurt, Stuttgart and Gross-Strehlitz). Furthermore, angels' heads are also a favorite motif. Bells are often utilized as an adornment of the Torah shield, as is the case with the Torah Rimmonim.

5. The Torah Wimpel (sash-like band or cloth), a form of the Torah wrapping frequently used in southern and western Germany and consisting of four sewed together or sewed on to one another strips made from the swaddling clothes used at circumcisions.

These strips are cut off of the swaddling clothes, and the boy for whose circumcision they were used brings them, in the form of a Torah Wimpel, as a present on the occasion of his first visit to the synagogue (most frequently on his first birthday). The Torah Wimpel bears the names of the boy and of his father, as well as the continually recurring inscription: *yikkanes latorah ulehuppah ulema'asim tobim* ("May he enter into the Torah, marriage and good deeds"). The Torah and the Huppah are often portrayed on the Wimpel, as are the symbols of the tribe of the priests or of the Levites, if the boy is a descendant of such tribe. The above-described Torah band is always made carefully in one or several colors, and embroidered, at times painted. Torah Wimpels were especially used in the 18th cent.

6. The Torah Pointer, called *Yad* (literally, "hand"), used to show the place where the Torah reading begins, or to follow the reading of the Torah. Most often it is held by the one who is reading from the Scroll of the Law (Baal Kore), but often it is held by a member of the congregation who stands at his side, as an aid for his reading from the Scroll. The Torah pointer is somewhat widened at the upper end, often by a ball made of semi-precious gems, which serve as a means of attaching a chain or hooks by which the Yad is hung onto the wooden rollers or onto the Torah shield. The lower end is almost invariably a representation of a small hand with an outstretched index finger in the act of pointing; often this index finger

The procession before reading the Torah; a devout worshipper kissing the Scroll

From a photograph by Arnold Eagle, reproduced by the courtesy of the Y. M. and Y. W. H. A. of Washington Heights, New York city.

is adorned with a miniature ring made of gems; corals in the form of a finger are of frequent occurrence.

The material used in the making of the Torah pointer is almost always silver; it is massive, hollow or wrought in filigree, in form round or angular or spiral. Wood beautifully carved is also a frequently employed material. Such Torah pointers from the Middle Ages are known. Often, inscriptions bearing the name of the donor and the number of the year are on the pointer. The form of the Yad is extraordinarily variegated; the Torah pointer is one of the most outstanding products of the art of the Jewish goldsmith. ALFRED GROTTE.

TORAH, READING OF (in Hebrew, *keri'ath hatorah;* popularly called "Torah leinen" or "leinen," from Middle High German *leienen,* Latin *legere,* "to read"), the institution of reading from the Torah, or Scroll of the Law, in the synagogue at stated times and on stated occasions. Such reading of the Torah takes place four times a week, i.e. in the Morning (Shaharith) and Afternoon (Minhah) Service on the Sabbath, and on Monday and Thursday morning. In addition, the Torah is read on the morning of the holidays and of the middle days of the festivals (Hol Hamoed), on the morning of New Moon days and fast days, of Hanukah and Purim, as well as on the afternoon of the fast days, including Yom Kippur.

1. History. The institution of reading the Torah is very old, and according to Jewish tradition it was established either by Moses or by Ezra. The first definite reference to public reading of the Torah is *Neh.* 8, which relates how Ezra read from the Torah at the famous assembly of the people on the 1st of Tishri in the year 444 B.C.E. and how the congregation thereupon obligated itself to the observance of the Torah; subsequently Ezra read from the Torah before the people every day of the Sukkoth festival (*Neh.* 8:2-8, 13-18). It may be assumed that the institution of the reading of the Torah developed gradually, that such reading from the Torah at first took place only on the festivals and on several special Sabbaths, and that it arose out of the desire to instruct the people regarding the significance or the regulations of the day in question. In the course of time, however, the Torah came to be read on every Sabbath, without exception, and finally also on the two market-days Monday and Thursday, when the rural population came to the cities, and on the afternoon of the Sabbath, which was almost entirely given over to public instruction. Finally, the reading of the Torah was appointed also for the above-mentioned weekdays of a special religious character.

Originally, during the period when the reading of the Torah took place only at infrequent intervals, the portions read from the Torah were especially selected for the individual day. Later, however, the whole Torah was read, portion by portion, in definite order. This development must have taken place at a very early time, and certainly must have been finally established before the Prophets had been collected into an acknowledged part of the Bible canon.

In contrast to the Prophets, from which selections are made, the Torah may be read only in consecutive order. The reading is always from a Torah scroll made exactly in accordance with the ancient regulations regarding books, namely, written by hand, without vocalization, according to the prescribed arrangement of lines and sections and by means of the prescribed dependable materials. The Torah scroll is the only example of the ancient book form and structure which has persisted until the present day (with the possible exception of the much smaller Megillah, which is read on Purim).

2. Cycles. Although the reading of the entire Torah by consecutive sections is ancient, this does not mean that it was divided into the same sections which are prescribed today. Originally those sections which were read on each occasion were brief; the main feature of the reading of the Torah was its translation into the vernacular (Targum) and its interpretation (Midrash); there was no regulation or rule as to the time limits within which the reading of the entire Torah had to be ended. In the course of time, however, a fixed cycle for the Torah reading came to be established.

It has been shown that there was in Palestine and in the adjacent countries a three-year cycle within which the Torah had to be read from beginning to end. Through recent discoveries it has been determined that

those sections which were called Sedarim by the Masoretes are identical with the portions of the three-year cycle. This term Sidra (popularly, Sedre or Sedra) as preserved in popular speech is applied to the one-year cycle which was customary in Babylonia and thence gained almost general acceptance. In the Masorah, however, the weekly portions of the one-year cycle are called Parashah (popularly, Parshah). These weekly Parashahs of the Torah reading had already been so firmly fixed by the year 750 C.E. that even the Karaites adopted them.

Opposition was made to such one-year division of the Torah only in the 19th cent., when certain Reform congregations in Germany and in the United States reintroduced the three-year cycle or even a longer cycle of the Torah reading. The various congregations, however, arrange the reading of the Torah in various ways. In many, the deeply rooted regard of the members for the old designations and names of the weekly portions induced them to follow tradition; in the overwhelming majority of American Reform congregations only a short section of the weekly Parashah is read each Sabbath, but the one-year cycle is retained.

As is still the custom today, the cycle began in the autumn of the first Sabbath after the holidays occurring in the month of Tishri. For the reading, the Torah is divided into fifty-four Parashahs, of which *Genesis* has twelve, *Exodus* and *Deuteronomy* eleven each, and *Leviticus* and *Numbers* ten each.

For the cycle order, only the Torah reading occurring on the morning of the Sabbaths is counted; on Sabbath afternoons the first part of the next Parashah is read, on Mondays and Thursdays this is repeated, and on the following Sabbath the Torah reading begins once more with the portion already read on the Sabbath afternoon and the Monday and Thursday preceding. The regular Torah readings are interrupted by the festivals, the half-holidays of the festivals (Hol Hamoed) and the Day of Atonement. These special occasions entirely displace the weekly (Monday and Thursday) Torah readings. In such cases there is read on the weekdays only the portion set aside for reading on the special day in question, i.e. during the week of Hanukah only a portion from *Num.* 7, and on fast days *Ex.* 32:11-14 and 34:1-10. Each of the festivals has its own special Torah portion which is read even when the festival falls on a day for which there is a regularly fixed Torah reading. The sections from the Torah to be read on these special days are mentioned in the Mishnah (*Meg.* 3:7-8); since the Mishnah knows and provides only for one holy day in each case, the Babylonian Talmud fixes the portions for the second days of the holidays.

On the holidays, in addition to the main reading, there is read a special Torah portion taken from *Num.* 28 and 29 and containing the regulations for the additional (Musaf) offering of the particular day. The reading of this Musaf portion is prescribed even when New Moon or Hanukah falls on the Sabbath; in such cases the current Parashah is still read, but is amplified by the above-mentioned additional section.

There are, further, four special Sabbaths (called Arba Parshiyyoth or Arbaah Arachim) on which such an additional portion is customarily read in addition to the current weekly section; these Sabbaths are the ones occurring between the last Sabbath before the month of Adar and the first Sabbath in Nisan.

The Torah cycle is concluded on the last holiday in the month of Tishri, that is, the second day of Shemini Atzereth, which later, perhaps about the year 1000 C.E., was given the name of Simhath Torah (Rejoicing in the Law). On this day the reading of the Torah proceeds with special solemnity; there are read thereon not only the prescribed section *Deut.* 33 and 34 but also *Gen.* 1:1 to 2:3, in order to join the end and the beginning of the Torah together, and the usual Musaf portion is added. In the Middle Ages the custom arose of designating the person, who reads or is called up for the reading of the concluding portion of the Torah on this day, Hathan Torah (Bridegroom of the Law), while he who reads or is called up for the reading of *Gen.* 1 beginning the new cycle is given the name of Hathan Bereshith (Bridegroom of Genesis); beginning with at least the Gaonic period the Hathan Torah and the Hathan Bereshith even during the Torah reading have been solemnly feted and greeted through special songs and celebrated in the congregation in other ways also. As a rule, only the most respected and learned men of the congregation were granted this honor.

Ever since the establishment of a fixed cycle, the rule has prevailed that on weekdays at least ten verses from the Torah are read, and on Sabbaths at least seven times three verses. The portions prescribed for the individual special days before the fixing of this rule did not always conform to this rule, for which reason exceptions were made, certain portions had to be lengthened, or certain verses had to be read twice, as, for example, on the day of the New Moon.

3. Mode of Reading. The reading of the Torah is performed in the following manner: first, the Ark (Aron Hakodesh) is opened; this ceremony is called *pethihah* ("opening"). Then follows the taking or lifting of the Torah scroll out of the Ark, called *hotza'ah* (popularly, "Ausheben"), on which occasion a number of Biblical verses, including *Num.* 10:35 (describing the journeys of the Ark of the Covenant) at the beginning, are either read or, more usually, solemnly sung. Furthermore, the verse Shema Yisrael (*Deut.* 6:4), containing the Jewish belief in monotheism, is recited. In the course of time, especially under the influence of the Lurian Cabala, a number of petitions or hymns were inserted at this point, and on the three pilgrimage festivals (Passover, Shabuoth, and Sukkoth) the thirteen attributes of God (the Shelosh Esreh Middoth); in more recent times, also prayers in the vernacular. The Sephardim begin on Sabbath and festivals with Attah Horetha (*Deut.* 4:35) and other verses; the Ashkenazim say them only on Simhath Torah.

After the Torah has been removed from the Ark, it is carried in a sort of brief procession to the lectern or pulpit (Almemar); for over a thousand years there has prevailed the custom of having those on the pulpit or near the procession greet the Torah by kissing either its mantle or their own Talliths after the latter are touched to the mantle. The taking of the Torah from the Ark on Simhath Torah has an especially solemn character, for on this day there is a series of processions not only with the Torah which is to be read from on this day but with all the Scrolls of the Torah which the congregation possesses; at these processions festive hymns are sung in march tempo.

There are taken out of the Ark only as many Scrolls of the Torah as are necessary for the reading on each occasion, that is: usually only one; on Sabbaths and holidays with only one Musaf (additional) section, two; on Simhath Torah, or when the 1st of Tebeth, the 1st of Adar and the 1st of Nisan fall on the Sabbath, three. During the Middle Ages, in times of persecution, the Jewish communities did not always have as many scrolls of the Torah as were required for the reading; on such occasions deviations from the fixed rule were permitted. As soon as the Torah has been placed on the lectern or pulpit, its often quite costly wrappings and adornments are removed, then, in Sephardic congregations, it is lifted up and shown to the congregation, who pronounce the verse *Deut.* 4:44 ("This is the law which Moses set before the

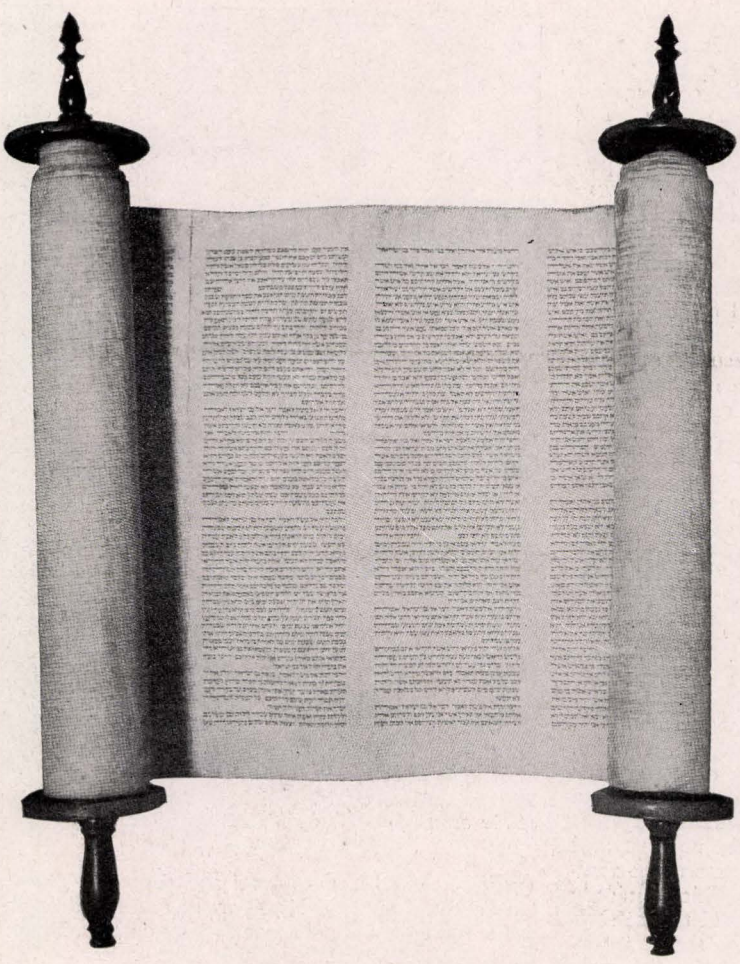
children of Israel"), avowing their belief in the Torah which was given to Israel by Moses. In Ashkenazic congregations, it was, and still is, the custom to lift the Torah aloft and show it to the congregation (*hagbahah;* popularly, Hagbe) after the completion of the Torah reading.

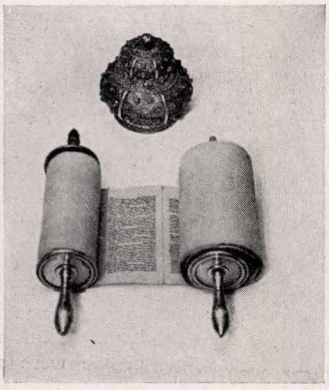
In earlier times the reading of the Torah was performed by members of the congregation who were called up for the reading by the congregational servant (Shammash) in a definite order at the direction of the conductor of the services. Only the exilarch in Babylonia was accorded the honor of having the Torah brought to him when he was to read from it. Since the Torah was usually read from an elevated platform of the synagogue, people were spoken of as being "called up" or as "going up" for the reading of the Torah; such "going up" was called an Aliyah.

The Hebrew word with which men were called up for the Torah reading is *ya'amod* ("let there arise"); on special or extraordinary occasions, such as when a title of honor, such as Haber or Morenu, is given, or for a Bar Mitzvah, or for the calling up of a bridegroom, the Yaamod is called out or sung more loudly and more festively than usual. Coupled with the word Yaamod are the Hebrew name of the person called up, and an indication of his rank (Kohen, Levi) and the order of his being called (Shelishi, "third"; Rebii, "fourth"; Hamishi, "fifth," and so on). The one who is called to the Torah is shown the beginning of the passage to be read by a leader of the congregation (Segan) who is standing nearby on the platform. Even in ancient times, especially in the Hellenistic Jewish congregations, it frequently happened that a sufficient number of congregational members were not able to read without assistance from the unpunctuated and unvocalized Torah scroll. Furthermore, the reading had to be done according to the traditional melody (Tropp). The greater the value attached to fine singing in the reading from the Torah, the less congregational members were in a position to satisfy such demands. Hence, in the course of time, it became the custom for an officially appointed reader to assist the congregational members, and later for him to do the actual reading all by himself, with men who were called up for the reading listening to him in silence, and pronouncing only the blessings before and after the reading from the Torah. Only Bar Mitzvah boys were permitted to read unassisted from the Torah. Through a mistaken interpretation of the old Hebrew term *ḳara* ("to read") this word now came to be understood in its other meaning of "to call," and people were spoken of as being "called up" (popularly called "Aufrufen") for the reading of the Torah.

In ancient times only one blessing was recited before the beginning and one after the conclusion of the entire reading of the Torah; later, however, the custom was introduced of having each person who read from or was called up to the reading of the Torah pronounce the benediction before and after the reading of his section. There was introduced also the custom that the reader or precentor pronounced a blessing (Mi Sheberach) over every one thus called up, to a certain extent in the name of the congregation, and that the one called up had the privilege of having such a blessing recited for others or a prayer for departed relatives (Hashkabah). In connection with such prayers it was the custom to make a pious donation or gift to the congregation ("Menadder Sein"); in popular speech the Hebrew words for such a donation, *ba'abur shenadar* ("because he has vowed [to give]"), were corrupted into the formula "Shenodar," from which arose the Yiddish term *shnoddern.*

After the reading from the Torah has been completed, the Scroll of the Torah is rolled together again





The procession before the reading of the Torah: the bearer of the Scroll, followed by the officers of the congregation, steps down from the platform

(*gelilah*), and its adornments and cover are put on. On Sabbaths and festivals, as well as on fast days and at the morning and afternoon services on Yom Kippur, the reading of the Haftarah then follows directly. The reading of the Torah is usually followed by several prayers for the community of Israel, for the government, or for the announcement of the coming New Moon, and the like. On Simhath Torah there have been provided for this occasion a number of hymns which are sung to gay melodies. Finally the Torah is put back into the Ark (*hachnasah;* popularly called "Einheben"), accompanied by solemn prayers and songs.

The taking out and putting back of the Torah, being called up to the Torah, and all the functions connected with the reading of the Torah are regarded as privileges and honors by all members of the congregation, who seek them at the price of special gifts pledged for the maintenance of the congregation or for charitable purposes. Often such privileges were auctioned off in the synagogue to the highest bidder. Due to frequent abuse of this system and resulting criticism, it has in recent times been abolished in many synagogues, especially in Conservative and Reform houses of worship in Germany, England, France and the United States.

Reform congregations have considerably modified the mode of reading from the Torah. Members of the congregation are not called up to recite the blessings, a single selection of verses from the Sidra is read, and the procession and Hagbahah are omitted. The liturgy of the reading is also altered, so as to omit references to the Ark of the Covenant and to dwell more on the idea of revelation and the Law. Thus the *Union Prayer Book* generally begins with the recitation and chanting

(left) The open Scroll of the Torah, showing the division of the writing into columns; (above) a miniature Torah owned by the Jewish Theological Seminary

of *Ps.* 24, which speaks of opening the gate of the Lord; it includes the phrases "The law which Moses commanded us" (*Deut.* 33:4) and "let us walk in the light of the Lord" (*Isa.* 2:5). The return of the scroll to the Ark ends with the praise of the Law (*Ps.* 19) and the praise of wisdom (*Prov.* 3:17-18).

The Torah reading is one of the most important institutions of Jewish worship. The regular reading and interpretation of the Scriptures have made them the common possession, the true "inheritance of the congregation of Jacob," and they have proved to be a prime cultural factor for the Jews. The institution of the regular reading of the Scriptures was taken over from Judaism into Christianity and Islam, and thus became one of mankind's most important and enduring educational instruments.

TORAH, SCROLL OF (in Biblical Hebrew, *sefer torah;* its original meaning is "book of teaching" or "book of the Law," according to *Deut.* 28:61; *II Kings* 14:6; *II Kings* 22:8; *Neh.* 8:1, 3), designation for the parchment scroll containing the written text of the Torah, the so-called Five Books of Moses, from which a section is read each week in the services in the synagogue. Just as the Torah, according to Jewish tradition, has a holy character as the revelation of God, so too its corporeal form, the Scroll of the Torah, is regarded as holy. Hence, in accordance with the Talmudic regulations, not only is the Scroll of the Law highly respected, rejoiced over (at the festival of Simhath Torah), mourned for, and, when it has become no longer usable, buried with solemn ceremony, but it has also become the object of many special and detailed regulations and rules which are today, as 2,000 years ago, still scrupulously observed.

Not only from the religious, ritual, and folk-psychological point of view, but also as regards the bibliotechnic and bibliohistoric point of view, the Torah occupies a unique position. Whenever a Scroll of the Law is written, whether by a private individual or by a professional scribe (*sofer,* one who copies or writes down the Torah), such writing must be made in devotion and requires special consecrational acts. Whereas, in Greek and Roman classical antiquity, the writing of books was a duty incumbent upon educated slaves, a Scroll of the Law among the Jews could be written only by honored pious persons. The last (613th) com-

mandment of the Torah stated that every Jew had to make a copy of the Torah himself, or at least to own one Scroll of the Law.

The materials which could be used in the making of a Scroll of the Torah were only parchment (only the skin of ritually clean animals, chiefly calfskin) and ink (only black, and free from all admixtures of metals); the writing-utensil was the calamus, later also the goose-quill. Every other detail of the writing of the Scroll of the Torah is laid down to its most minute detail: the lineation, division into columns and text, margins and borders, the binding up of the individual parchment sheets into scrolls by means of thongs (*Isa.* 34:4), never into book-form or codex form, as well as the form, division and adornments (Tagin) of the letters. The Scroll of the Law itself had to be plain and simple; in contrast to the Scroll of Esther (Megillath Esther), pictorial adornments of the Torah scroll were rigidly forbidden. However, in the course of time the utensil in which the Torah scroll was kept experienced a considerable development. Thus the most beautiful and costly coverings for the Torah, cloths to tie the two rollers together, the crowns, adornments and pointers, silver-plates and equipment of the Ark in which the Torah was kept, were evolved, and many of these are in use in almost all Jewish congregations today. Maimonides compiled a list of the prerequisites for the holiness of a Scroll of the Torah in twenty paragraphs.

TORBERG, FRIEDRICH (originally Kantor), novelist, b. Vienna, 1908. He studied at the Universities of Vienna and Prague, published a volume of poetry, *Der ewige Refrain* (1929), and at the age of twenty-two achieved much, though only temporary, success with a novel of high school boys and girls, *Der Schüler Gerber hat absolviert* (1930), which was translated into English as *The Examination.* His subsequent novels, *Und glauben es wäre die Liebe,* dealing with the love of adolescents (1932), and *Die Mannschaft* (1935), the story of a football team, did not measure up to the expectations aroused by his first novel. *Abschied* (1937), a romantic novel, showed the author searching for deeper emotions and psychological problems than he had touched in his earlier, louder and more sensational books.

At the outbreak of the second World War, Torberg volunteered with the Czech Legion in France until its dissolution by the armistice in June, 1940. He arrived in the United States in 1940, and was living at Hollywood in 1943.

TORCZYNER, HARRY (NAPHTALI HIRSCH), Bible scholar and orientalist, b. Lemberg, Poland, 1886. He was reared in Vienna, where his father was a member of an enthusiastic group of early Zionists. As a result of this influence, Torczyner, as early as the year 1910, sought and secured his first

Harry Torczyner

position in Palestine, cooperating in the organizing of the Hebrew High School in Jerusalem, and serving as teacher there until 1912. One of his first publications was a German translation of Ahad Haam's *Selected Essays* (Berlin, 1916).

Torczyner studied Semitic languages and linguistics at the Israelitisch-Theologische Lehranstalt in Vienna and at the Universities of Vienna and Berlin. After receiving the Ph.D. degree from the former, he became lecturer there in 1913. After the first World War he became dean of the Hebrew Pädagogium, but in 1919 he accepted a call as professor of Bible and Hebrew at the Hochschule für die Wissenschaft des Judentums in Berlin, in which city he was active also in outstanding scientific organizations. In 1929 he was guest lecturer at the Jewish Institute of Religion, in New York city. In 1933 he was appointed Bialik Professor of Hebrew at The Hebrew University, Jerusalem, and still held this position in 1943. He devoted much time to a variety of social and scientific activities, became vice-president of the Vaad Halashon and, after David Yellin's death, its president, and in 1943 was still serving as editor of *Leshonenu.*

Torczyner was a versatile and learned scholar possessed of original ideas which did not, however, always meet with the approval of other scholars. His endeavors to place Hebrew linguistics on a new basis (*Entstehung des semitischen Sprachtypus, ein Beitrag zum Problem der Sprachentstehung,* Vienna, 1916 et seq.) and to find new bases for the evolution of the religion of Israel and the Biblical Scriptures (*Die Bundeslade und die Anfänge der Religion Israels,* Berlin, 1922; 2nd ed., 1930; *Das Buch Hiob,* Vienna, 1920; revised Hebrew ed., 2 vols., Jerusalem, 1941; *Das literarische Problem der Bibel,* 1931) provoked some criticism. His publication and explanation of the inscriptions excavated by J. L. Starkey at Tell el Duweir (*The Lachish Letters,* Wellcome Archaeological Research Expedition, Oxford, 1937; Hebrew ed., *Iggeroth Lachish,* Jerusalem, 1940) attracted much attention. Torczyner was author of the *Deutsch-hebräisches Wörterbuch* (in collaboration with S. M. Laser; Berlin, 1927) and co-author, with Abraham Z. Idelsohn, of *Shire Teman* (Cincinnati, 1930).

Torczyner was a member of the committee which prepared a German translation of the Bible for the Jewish Community of Berlin; when the work of the committee was finished, Torczyner reedited the entire manuscript, and the translation was renamed the "Torczyner Bibel" (4 vols.,

Frankfort, 1934 et seq.). Torczyner published numerous articles in scholarly periodicals, as well as in the *Encyclopaedia Judaica,* of which he was a departmental editor.

JEHUDAH ROSENTHAL.

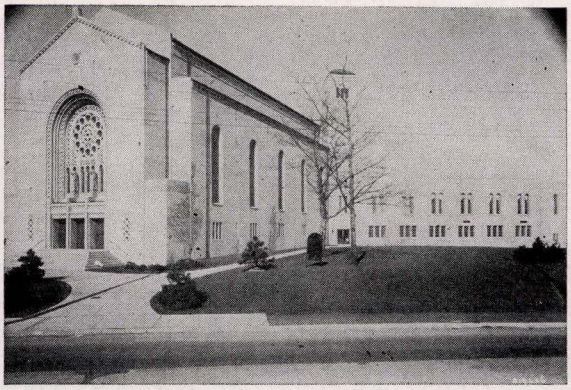
TORNAI, GYULA (JULIUS), painter, b. Görgő, Hungary, 1861; d. Hungary, 1928. He studied at the academies of Vienna and Munich, and subsequently at Budapest under Gyula Benczur. He traveled in the Near and Far East. In Japan he executed a portrait of Prime Minister Okuma for the University of Tokio; in India the Maharajah of Burdwan posed for him. The collection of his Oriental paintings was shown throughout Europe, and a canvas called *Geishas* was purchased by Edward VII of England. Specimens of his art are also in the Budapest Museum of Fine Arts.

TÖRÖK, LAJOS, dermatologist, b. Budapest, 1863. He graduated from the medical school of the University of Budapest, and did postgraduate work in Vienna, London, Paris and Hamburg. In 1894 he became lecturer and in 1908 assistant professor of dermatology at the University of Budapest. From 1898 on he was also head of the dermatological department of the Budapest Polyclinic.

Török contributed numerous memoranda to the journals of dermatology of Germany, Austria, France, Italy and Hungary. He collaborated on Riecker's *Dermatologie.* Among his many handbooks on the diseases of the skin are: *Allgemeine Diagnostik der Hautkrankheiten begründet auf pathologische Anatomie* (1895); *A bőrkórtan kézikönyve I. Általános rész* (Handbook of Dermatology; part 1, 1898); *Spezielle Diagnostik der Hautkrankheiten* (1906); *Störungen der Blut- und Lymphströmung der Haut* (1927); *Soins de la peau* (1928).

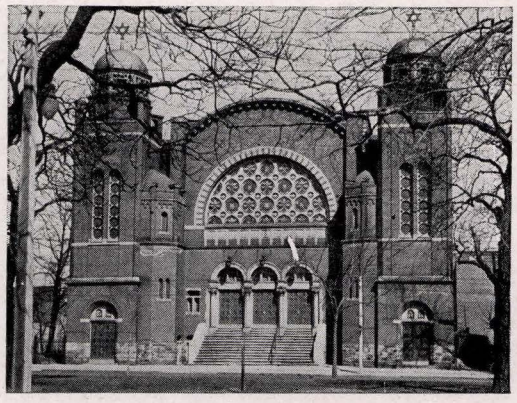
TORONTO, second largest city of the Dominion of Canada and capital of the province of Ontario, with a population of about 700,000 in 1943, which included more than 45,000 Jewish inhabitants, constituting the second largest Jewish community of Canada.

In the city itself, Jews formed a definite group second in size to the British. In the 1920's Jews began to disperse from the more thickly settled districts of Toronto proper into the outlying wards and suburbs. In 1931, 3.1 per cent of the Jewish population of Greater Toronto, constituted by Toronto together with its suburban townships, towns and villages, were residing in these suburbs. In the village of Forest Hill, as in Toronto itself, the Jewish population made up the second largest group. Toronto naturally came to serve as a cultural and communal center for the many smaller Jewish communities of Central and Western Ontario, most important of which were Hamilton and Windsor.



Originally called York, the city received its charter in 1834 under the name of Toronto. The earliest, although indirect, reference to a Jewish settlement goes as far back as 1817, when the Attorney General of the Dominion communicated to the Government Secretary that marriage of Jews had to be made in accordance with English law. City directories began to be published in 1833, and from that date to 1840 appeared the names Arthur Wellington Hart, in the insurance business; L. Joseph, proprietor of a general store; Goodman and Samuel Benjamin, in the dry goods business; Henry A. Joseph, furrier; Judah G. Joseph, optician and jeweler; and Joseph Benjamin. Gershom Joseph is listed as a student at the University of Toronto in 1838. In 1851 the city census recorded fifty-seven Jews resident in Toronto; the majority were of English, and some few of German, origin.

Some attempt at formal organization of the Jewish community may have been made prior to 1849; on September 1st of that year a deed is entered in the city's records conveying lands in Centre Road for a burial ground to Judah G. Joseph and Abraham Nordheimer, as trustees of the Hebrew Congregation of Toronto. In this burial ground the first graves marked were those of Simeon Alfred Joseph (d. 1850), Lewis Lyons (d. 1851) and Charlotte Nordheimer (d. 1855). On September 7, 1856, a group of Jews met in A. G. Asher's "Rooms" to form a congregation. Among the thirty-one original subscribers to the congregation were Joseph Lyons, A. Aarons, S. Behrends, Lewis Samuel, Isaac Davis, Joseph Koplick, A. Bellem, S. Shengoot, I. Fisher, R. Abrahams; and Levine, Anthony, Moscoe, Altman, Rosenberg and Coan. They pledged a total of over £104 for the year. The name chosen was Sons of Israel, although simply "Congregation" was habitually used. The small Orthodox Sons of Israel was in course of time to become Canada's leading Reform Holy Blossom Congregation, first designated by that name in 1862.



A room over a drugstore at the corner of Richmond and Yonge streets served the congregation as a meeting place for a score of years. Here the first high holy day services in the city were conducted in the fall of the year 1856. A Mr. Goldberg, previously of Buffalo, served as the first reader of the Toronto congregation. An interesting record of this early period relates to the fines levied against members for non-attendance at services, and absence at general meetings. In 1858 the congregation as such became owner of the Centre Road cemetery.

In the first more than twenty years of the congregation's existence, beset by financial difficulties and a fluctuating membership, numerous "reverends" performed the functions of Hazan, reader and teacher, as well as Shammas, Shohet and Mohel. By 1875, however, the congregation was prosperous enough to build its first synagogue, known as the Richmond Street Synagogue and erected on the site later occupied by the Victoria Theatre. The trained cantor Joseph Gluck was elected to serve the congregation (1879-82). He was succeeded by Herman Phillips (1883-90). In 1890, the year the congregation was incorporated as the Society of Holy Blossom, Barnett A. Elzas, the first of its ordained ministers, was called to the pulpit. Not without a struggle, reforms had already been introduced in the service.

In 1880 Rebecca Lyon Morris formed a women's choir, and somewhat later instrumental music was made part of the service. The further reforms established during Elzas' ministry aroused here, as in many another American congregation at this time, sharp friction among the membership. Elzas was succeeded by Abraham Lazarus (1893-98), David H. Wittenberg (1899-1900) and Isaac Landman (1900-1). In 1901 the British-born Solomon Jacobs was elected to Holy Blossom, and served until his death in 1920; he had been a religious and civic leader of the Toronto community. Rabbi Barnett R. Brickner, of the United States, was called to succeed Jacobs, and during his incumbency, in 1925, the congregation finally sealed its Reform character by joining the Union of American Hebrew Congregations. Brickner was succeeded by Ferdinand M. Isserman, also of the United States (1925-29), and he in turn was replaced by Maurice N. Eisendrath (1929-), who, through a series of projects emphasizing inter-faith goodwill, solidified further the position of the congregation in the larger Canada community. A movement for a new house of worship to replace the second one, known as the Bond Street Synagogue, resulted in the erection of the Holy Blossom Temple on Bathhurst Street and Ava Road, a splendid Romanesque structure, noted among American Temples, and dedicated in 1938 in the presence of Lord

The Holy Blossom Temple in Toronto, Canada

Goel Tzedek Synagogue, Toronto

Tweedsmuir, then Governor General of Canada. In 1943 this Temple housed the largest Reform congregation in the Dominion of Canada, with its numerous auxiliary groups and its religious school.

The original compact Toronto Jewish community was many times and rapidly multiplied by the influx of masses of Jews fleeing the pogrom-ridden regions of Eastern Europe in the 1880's and the decades following. In 1891 the Jewish population of Greater Toronto was estimated to be 1,425; in 1901, 3,090; in 1911, 18,300; in 1921, 34,770; and in 1931, 46,751. These figures represented, too, an increasing proportion of the Jewish population to the total population. The community of Jews of English and German origin, tending readily to Reform in their religion, lost its early homogeneous character. The new Eastern European Jews were strictly Orthodox, and the vast number of communal organizations which they began to build firmly reflected the Orthodox tradition.

The first Orthodox congregation of the city, which dissident members of Holy Blossom Congregation joined, was Goel Tzedek, formed in 1880; it built a synagogue on Elm Street. Leaders among Austrian immigrants constituted themselves into the Shomerei Shabbas in 1891, and worshipped in quarters on Chestnut Street. The Chevra Tillim Congregation was organized in 1895, and first worshipped at Richmond and York streets. Later, after moving into its new house of worship on McCaul Street, it became known as the McCaul Street Synagogue. Numerous additional Orthodox congregations sprang up. A listing of congregations in the *Canadian Jewish Year Book* of 1941 to 1942 indicates about thirty Orthodox synagogues, loosely and indirectly associated through the Kehilla.

Names of these congregations indicate that they serve homogeneous groups from some special locality of their countries of origin. Largest of the Orthodox congregations in 1943 were Goel Tzedek on University Avenue, whose rabbi was then Samuel Sachs, and the McCaul Street Synagogue, which in 1943 had no resident rabbi.

Other principal Orthodox congregations were Anshe England on Spadina Avenue, Beth Jacob on Henry Street, and the Ostrovtzer on Cecil Street. In 1904 Rabbi Jacob Gordon came to Toronto to minister to several local Orthodox congregations. Until his death in 1934 he was one of Ontario's outstanding Orthodox leaders, and founder of the Canadian Mizrachi. Toronto continued to have an unusually large proportion of new immigrants, and general communal life was influenced by the fact that the majority of these were Jews from Poland. The proportion of Yiddish-speaking and Orthodox Jews, characteristically organized into "Landsmanschaft" societies, remained uniquely high, until the cessation of immigration, in the 1930's, began in its turn to have a counter effect on these tendencies.

For its youth Toronto Jewry organized, besides the customary congregational religious schools, a number of flourishing educational institutions. In 1943 the largest, with an enrollment of about 600 pupils, was the Orthodox Brunswick Avenue Talmud Torah, or Toronto Hebrew Free School, established in 1924 under the leadership of Rabbi Jacob Gordon to offer a modern type of Hebrew education in the medium of the Hebrew language. The building served to house numerous youth groups, including the Y.M.H.A., with its membership of several thousand, the Young Israel congregation, and the Young Judaea. Other schools were the D'Arcy Street Talmud Torah and the Euclid Avenue Talmud Torah, likewise Orthodox; the Borochov School of the Left Poalei Zion; the Jewish People's School of the Poalei Zion; the Peretz Schools of the Arbeiter Ring; and the Labour League School. Unique among the private or semi-private academies of the city of Toronto was the Hillcrest Progressive School, combining with a standard type of progressive general education a traditional Orthodox training in Jewish subjects. It was estimated that in 1937, 2,286 boys and 1,222 girls, constituting 40 per cent of the children of school age, were receiving a Jewish education in Toronto. A total of 78.3 per cent of these children received instruction in Hebrew, the rest in Yiddish.

An interesting development of the second World War was the emergence into prominence of the older and larger of Toronto's two Talmudical seminaries, the Yeshivath Torath Chaim, founded by Moses Oelbaum (d. 1941). A large number of refugee European Yeshiva students were able to secure the sponsorship of Toronto Jewry in continuation of their studies at the seminary, which under an agreement with the government and by the intervention of Chief Rabbi Joseph H. Hertz of England, received recognition as a university. In 1943 Rabbi Aaron A. Price was dean of this ultra-Orthodox school, whose enrollment included sixty-five regular day students as well as fifty evening students, and whose graduates were serving as rabbis in Canadian Orthodox congregations.

In 1928 Holy Blossom Congregation was the recipient of a trust fund, the gift of N. L. Nathanson, to provide twelve yearly scholarships of $600 each for Jewish students in attendance at the University of Toronto.

The active B'nai B'rith of Toronto, organized in 1919,

made a notable contribution to the welfare of Toronto youth in its camp for boys on the shore of Lake Couchiching. The Toronto section of the National Council of Jewish Women instituted a camp for girls at Camperdown. Numerous other youth groups, engaged in programs of education and general culture, were part of Toronto's active community life in 1943.

The Zionist movement in Toronto was early fostered by the four societies, Agudath Zion, the Toronto Daughters of Zion, the B'nai Zion Association and the Ahavath Zion Society. In 1943 Toronto had local groups of the Zionist Organization of Canada; Hadassah and Junior Hadassah; Young Judaea; Poalei Zion; Left Poalei Zion; Hashomer Hadati; Hashomer Hatzair; Mizrachi; Zionist Council (organized in 1907). Prominent figures in Toronto Zionism included Moses Gelber (d. 1940); David Dunkelman and his wife, Rose Miller Dunkelman.

The Central Division of the Canadian Jewish Congress, with its headquarters in Toronto, served as a coordinating agency of Jewish communal life. It took a leading role in public relations work (through its committee headed in 1943 by Rabbi Maurice N. Eisendrath), and in the war efforts of the second World War. In 1943 Martin Cohen was executive secretary and A. B. Bennett president of the Central Division.

For the administration of all manner of social service Toronto Jews formed a number of various groups. The first effort to coordinate activities of these groups, and thus render them more effective, was made in 1917 with the formation of the Federation of Jewish Philanthropies. Further unity in fund-raising and fund-distribution was achieved in 1937 with the organization of the United Jewish Welfare Fund, which was initiated with twenty-three beneficiary member agencies, a number which had increased to thirty-seven by 1940. In 1943 most of the important Toronto Jewish organizations serving either the local community or contributing to non-local and overseas causes were member agencies of the Fund, with the two main exceptions of the United Palestine Appeal and the Gewerkshaften Campaign, both affiliated with the Fund during the first years only. The Service Council, the fund-raising body of the Fund, was composed of 1,000 members of the Jewish community drawn from every walk of life. The Fund brought an increasing degree of harmony into the Jewish community, and cooperation among its projects.

The Toronto Welfare Fund set the example for the formation of other Canadian Jewish Welfare Funds. One of the outstanding constituent organizations of the Fund, the Mount Sinai Hospital of Toronto, was founded in 1923 by a group of charitable women, and in 1943 was supported by five women's affiliated auxiliaries. The Hospital assumed a non-sectarian character and came to be supported by non-Jews as well as Jews.

The interests of Jewish labor in Toronto came to be represented by strong locals of the Jewish National Workers Alliance, the Arbeiter Ring and the Labour League. In 1942 the Toronto branches of the Jewish National Workers Alliance donated a fully-equipped field ambulance to the Canadian Red Cross. Toronto also became Canadian headquarters for two labor internationals with a large Jewish membership: the International Ladies' Garment Workers' Union and the Amalgamated Clothing Workers of America. These represented the ready-made clothing industry, originally introduced into Canada by Jews.

A detailed study made of the Canada Jewish community for the year 1931 reported that 40.93% of Toronto Jews were then engaged in manufacturing, as compared with 19.96% of the total population so engaged. 27.42% were in the manufacture of textile goods and clothing, and 3.89% were in furs and fur goods. The field of merchandising claimed 25.93% of the Jewish working population, as compared with 15.52% of the working population of all origins. Of this number among Jews 10.53% were owners and managers in retail merchandising while 1.36% were owners in wholesale merchandising. The third highest occupational group of the Toronto Jews was the clerical, comprising 9.59% of all Jews gainfully occupied. The professional group ranked fourth among Jews gainfully employed, whereas it ranked sixth among the gainfully employed total population in Toronto.

The roster of Toronto Jews in public office included the names of Sam Factor, member of the Canadian House of Commons (1930-35, 1935-), and John J. Glass, member of the provincial parliament (1934-).

In the early 1880's N. Steiner was a member of the Toronto city council. Later a number of Jews were aldermen: Louis Singer (1914-18); Joseph Singer (1920-22, 1925); Nathan Phillips (1924-); Joseph Gordon (1928); John J. Glass (1931-34). Joseph Singer was controller in 1923. Gordon was a school trustee (1925-27), as was John Glass for a period of three years. Jacob Cohen (d. 1930) was a police magistrate for twenty years until his retirement in 1930. Moses Gelber (d. 1940), merchant and communal worker, was on the Toronto Board of Trade. Edmund Scheuer, designated the father of Reform Judaism in Canada, became a member of Toronto's Board of Trade in 1888, and from 1903 on held the office of justice of the peace. James Levey, violinist, and Milton Blackstone, violist, became distinguished in Toronto musical circles. Isadore Markus was editor of the *Journal of the Royal Architectural Institute of Canada* (1934-37) and member of the Toronto Board of Education (1935). Dr. Abram I. Willinsky was appointed chief of one of the departments of the Toronto Western Hospital in 1922. Prominent in Jewish education and literature were Simon Nepom and Isaiah Rabinovitch.

At the University of Toronto, in 1943, were: Jacob Finkelman, assistant professor of law; Bruno Mendel, assistant professor in the department of medical research; Leopold Infeld, I. Kaplansky and Cypra C. Krieger, in the department of mathematics; M. Adelman, demonstrator in chemical engineering; and Miss M. Brookston, demonstrator in geography. Richard Brawer was appointed assistant professor of mathematics in 1935.

At Toronto, in 1943, was published one of the two daily Yiddish papers of Canada, the *Daily Hebrew Journal*, founded in 1911, with S. M. Shapiro as editor-in-chief. The *Jewish Standard* was appearing in 1943 as a monthly periodical.

TORQUEMADA, THOMAS DE, Grand Inquisitor of Spain, b. Valladolid, 1420; d. Avila, 1498. A fanatical friar, he was largely responsible for the revival of the Inquisition in Spain in 1481 and its application to Jewish heretics. In 1483 he was appointed Grand Inquisitor. In 1490 he trumped up a charge of ritual murder against the Jews at La Guardia, although the supposed victim never existed, and used this as a lever to persuade the sovereigns to expel the Jews in 1492; he is reported to have silenced their hesitation by brandishing a crucifix and asking them if they were selling Jesus over again.

It is interesting to note that certain Jewish families bore the name of Torquemada, although they were not related to the Inquisitor. After 1483 they hastened to adopt less ominous surnames.

TORRE, LELIO DELLA, rabbi and educator, b. Cuneo, Italy, 1805; d. Padua, Italy, 1871. Raised and

Henry Torrès

tutored by his uncle, Chief Rabbi Michael Vita Treves of Casal Monferrato, he soon became a teacher at the Colonna e Finzi college in Turin (1823-29) and from then until his death he was professor of Talmudic lore and theology at the rabbinical institute of Padua. He occupied for only a short time in 1869 the office of rabbi in Padua.

Torre published Italian translations of *Psalms* (Vienna, 1845) and the Ashkenazic prayers (Vienna, 1846; Livorno, 1905); a commentary on the Pentateuch (Padua, 1872); and the Hebrew poems *Tal Yalduth* and *Egle Tal* (Padua, 1868). He also issued *Scritti Sparsi* (Scattered Writings; Padua, 1908), containing all his other works on religion, literature, history and criticism.

Lit.: Torre, Lelio Della, *Scritti Sparsi* (1908); Kayserling, M., *Die jüdische Litteratur* (1896) 103, 105, 176.

TORRÈS, HENRY, lawyer, French deputy, and political writer, b. Les Andelys, department of Eure, France, 1891. He was a grandson of Isaïe Levaillant, who during the Dreyfus case founded the Ligue pour la Défense des Droits de l'Homme et du Citoyen. Having studied law at the Universities of Bordeaux and Paris, he obtained the degree of doctor of law. During the first World War Torrès served in the French Army as a sergeant of infantry, and earned for himself the Médaille Militaire and the Croix de Guerre in addition to several citations. A brilliant orator and skilled jurist, he became known after the War as one of the greatest criminal lawyers in France. His reputation, always great, grew after his defense in 1928 of Samuel Schwartzbard, the assassin of Simon Petliura. Due to Torrès' valiant pleading and to his exposure of the barbarous cruelties committed by Petliura in the Ukraine against the Jews, Schwartzbard was acquitted by a French jury.

At all times Torrès stood up courageously in defense of Jews persecuted as a group or as individuals. Soon after the first World War, following a visit to Roumania, he initiated a campaign at Paris denouncing the hostile treatment of the Jews in Bessarabia. He was also counsel to Herschel Grynzspan, who assassinated the Nazi assistant legation secretary Ernst vom Rath in Paris in November, 1939. In this case Torrès could not save the life of his client, who was delivered to the German secret police by the Vichy government, while Torrès himself had to flee from France.

From 1932 to 1936 Torrès served as a deputy to the French Chamber, where he dedicated himself to problems of foreign affairs. In his capacity of vice-president of the Chamber foreign affairs committee he presented favorably to the Chamber the Franco-Russian pact.

Torrès held the offices of vice-president of the ORT and OSE organizations in Paris.

In March, 1941, he came to the United States where he became one of the leaders of the French political refugees. He headed, in New York city, the fight against the Vichy government and what it stood for, French collaboration with Germany. From October, 1942, to February, 1943, he was editor-in-chief of *La voix de France,* a journal published by anti-Vichy Frenchmen in the French language at New York city.

Torrès' published books include: *Le procès du Bonnet-Rouge* (1927); *Les procès des pogromes* (1928); *France, terre de liberté* (1940); *Pierre Laval* (New York, 1941); *Campaign of Treachery* (*Machine infernale;* New York, 1942). He adapted for the French stage *The Trial of Mary Dugan,* and was the author of a moving picture, *Nous, les mères.*

SANIEL LABIN.

TORRES, LUIS DE, interpreter on Christopher Columbus' first voyage of discovery (1492). Because of his knowledge of Hebrew, Chaldean and Arabic, he was engaged as interpreter of the expedition. Before embarking with Columbus, Luis de Torres had held a position, presumably as interpreter, under the governor of Murcia, in southern Spain. He was baptized in the Catholic faith shortly before enlisting with Columbus. After the navigator had taken possession of the newly discovered land in behalf of the Spanish crown, he despatched Luis de Torres, in company with another envoy, into the interior of Cuba on a mission of exploration and conciliation with the natives. The envoys returned, after four days, with a glowing account of a tribe of Indians by whom they had been entertained. Among other things, Luis de Torres reported to Columbus that he had seen men and women lighting the end of a small roll, composed of dry leaves called tobacco, and blowing forth clouds of smoke through the mouth and nose. Luis de Torres was thus one of the first two Europeans, and probably the first, to discover the use of tobacco.

He was also the first person of Jewish birth to settle in the new land, and subsequently met his death in Cuba. By winning the favor of the Indian ruler, Luis de Torres received substantial gifts of land and human chattels or slaves; and he was also granted the yearly allowance of 8,645 maravedis by the Spanish sovereigns.

TORT (*nezek,* plural *nezikin*). Jewish law comprises under torts all injuries which require compensation on the part of the injuring party to the injured one, since they have proceeded from actions regarded as unlawful. This responsibility, in case no contract is involved, is determined by the law. It is therefore above and in addition to obligations that arise out of a definite contract. If the parties concerned have a contract, responsibility and compensation are determined by the letter of the contract, and depend to some extent on the benefit to the injuring party from the contract.

Injuries for which compensation must be made can

be caused by both men and animals; the Biblical sources specifically refer to damages arising out of injuries in combat inflicted by men or animals (*Ex.* 21:18-19, 22-25; 22:4-5; *Lev.* 24:17-21). All the responsibility for making good any injury to another is based on the idea that everyone is obligated to guard his property. Hence a man—like the goring ox—is regarded as "warned," that is, fully cognizant of the nature of his act (*B.K.* 1:2; 2:6). Accordingly, the degree of responsibility depends on the amount of negligence.

The actions which lead to claims for damages are divided into injuries to persons (*habaloth*) and to objects (*nezikin; Sanh.* 1:1); the latter are further subdivided according as the injury is due to human or other agency. Maimonides divides them into injuries caused by man (*Hilchoth Hobel Umazzik*) and those caused by objects (*Hilchoth Nizke Mamon*).

A man is regarded as responsible for an injury in Jewish law if it can be definitely traced to his direct or indirect action. Thus an incorrect decision on the part of a judge can be regarded as a cause for legal action and the payment of a compensation. Similarly, the burning of a bill of exchange can be regarded as requiring damages, not for the value of the paper, but because of the financial loss that may accrue to the injured person because he lacks that document to press his claim. But if the injury can not be regarded as due to a failure to act properly on the part of the injuring party, then it is an act of God (in Jewish law, "a divine judgment"), and no further claim can be made.

The general types of damages for which compensation may be required include murder, bodily injury and insult. Jewish law recognizes five types of claims in such cases: 1. compensation for the loss (*nezek*); 2. compensation for the pain (*tza'ar*); 3. costs of being cured (*rippui*); 4. loss of working time (*shebeth*); 5. compensation for injured feelings (*bosheth*). Each of these is estimated according to the circumstances and the social status of the parties involved.

The basic law for compensation is that in *Lev.* 24:19, that whatever damage there is must be exactly compensated for. Among the injuries of this type that are caused by man are those resulting from damaging of objects, theft, robbery and even denunciation to the non-Jewish authorities.

The laws dealing with compensation for injuries caused by the property of the injurer are based on the Biblical laws (*Ex.* 21:28 to 22:14) which are couched in a language characteristic of a civilization based on cattle-raising. The Mishnah (*B.K.* 1:1) and the Talmud follow the same terminology in classifying such injuries into the following main categories (*'aboth*):

1. Ox (*shor*) or horn (*keren*). This includes all injuries done directly by the animal itself, such as by biting, striking or trampling.

2. Pit (*bor*). This comprises obstacles put into the way of public traffic, and all injuries caused by objects thrown into the street.

3. Grazing (*mab'eh*). Under this are comprised those injuries in which the animal itself gains some advantage, especially through eating products belonging to another person than its owner.

4. Fire (*hab'er*). This includes not only the damages done by carelessness in handling fire, but damages caused by stones, knives or objects carried by the wind.

The Bible makes a distinction between the ox that has never gored before (*shor tam*) and that which has already gored and is therefore considered to be "warned" (*mu'ad*). This is defined in Jewish law as a case where the animal has gored three times. In the case of a "warned" ox, the owner is expected to know his duty to guard it, and therefore is responsible for all the damage which it causes. If, however, he has no reason to anticipate that the ox will gore, and the damage happens in such a way that he could hardly guard against it, he is free from having to pay a full compensation. However, he must pay half the loss, which is regarded not as compensation but as a fine (*kenas*) intended to remind him to be more careful in the future (*B.K.* 1:3). The basis for this ruling is the feeling that it is hardly fair to ask the injured person to suffer the full loss. This principle is the basis of much detailed legislation on such cases of damage; the compensation in this case is called "half damages" (*hatzi nezek*). The responsibility of the owner of the object that causes the injury is further reduced in cases where the person or object injured oversteps his rights or should have exercised care. Thus one who trespasses on the property of another can not always claim compensation for damages caused to him by the animals of the latter.

TOSAFOTH ("additions"), general name for a number of notes to the Talmud which were made by the teachers from the 12th cent. on. They differ from the commentary of Rashi in that they are not continuous, but deal with separate passages; they are usually printed in the editions of the Talmud, in columns on the outer side of the pages. The writers of the Tosafoth are known as Tosafists (*ba'ale hatosafoth*). In many cases the identity of the Tosafists is not known; those who are known are mostly French rabbis, with a sprinkling of teachers from Germany and Italy. The work of the Tosafists lasted for about two centuries. The most important Tosafist was Rashi's grandson, Jacob ben Meir Tam (Rabbenu Tam); among the others were Isaac ben Asher Halevi, Isaac ben Samuel Hazaken, Samson ben Abraham of Sens, Judah ben Isaac of Paris, Moses of Evreux, Baruch ben Isaac, Meir of Rothenburg, and Asher ben Jehiel. A number of authorities made collections of Tosafoth, printed in the Talmud or extant only in manuscript.

TOSAFOTH YOMTOB, *see* HELLER, YOMTOB LIPMANN.

TOSCANINI, ARTURO, non-Jewish conductor, b. Parma, Italy, 1867. He was considered the greatest conductor of his time. He protested against Nazi discrimination between artist and artist by refusing to conduct at the annual Bayreuth music festivals. In 1936 he protested against the broadcasting to Germany of the concerts directed by him at the Salzburg festival in Austria. As a further expression of his sympathies with artists discriminated against for motives outside of the realm of art, Toscanini conducted the first performances of the Palestine Symphony Orchestra, which was formed mainly by refugee musicians from Germany in 1937. In his own words, "It is a duty of everyone to fight and help in this sort of cause according to his own means."

Previously Toscanini had berated the fascism of his native Italy as a doctrine thwarting man in his struggle for freedom. He made the United States his home, and was living there in 1943. (For illustration see vol. 7, p. 491).

Lit.: Nicotia, Tobia, *Arturo Toscanini* (English version, 1929); Stefan, Paul, *Arturo Toscanini,* with an introduction by Stefan Zweig (English version, 1936).

TOSEFTA ("addition," "supplement"), the name of a collection of teachings and traditions of the Tannaim, closely related to the Mishnah. There are many opinions as to the relation of the Tosefta to the canonized Mishnah. The view of Moses Samuel Zuckermandel that the actual Mishnah of Judah Hanasi may be perceived in the more complete version of the Tosefta, whereas the present Mishnah was subjected to a new revision in Babylonia, has justly been rejected by almost all investigators, despite a number of correct individual observations upon which his view is based (cf. especially Schwarz, *Die Tosefta Baba Kamma,* 11 et seq.).

The following may be regarded as probable as regards the Tosefta on the basis of its name, of a comparison with the Mishnah in objective and redactorial respect, of the opinion of the medieval authorities, which is certainly based on ancient tradition, and of what has been written on the subject of the Tosefta in the modern period: The Tosefta was not intended to be an independent work, but, as its name indicates, purported to be merely a supplemental work to the Mishnah, in connection with which one need not be surprised that the Tosefta surpasses the Mishnah in size and contents. When Akiba composed his Mishnah, he sedulously endeavored to achieve the greatest possible brevity in order to facilitate the learning of the traditional material to the greatest possible extent. He omitted from the individual Halachoth (laws) whatever he did not regard as absolutely necessary. Even the material furnished by way of illustration and example was reduced by Akiba to the absolutely necessary minimum. However, he regarded the omitted material as sufficiently valuable to have it collected in the form of a supplementary work perhaps for the use of the lecturer in the academy. He entrusted his disciple Nehemiah (*Sanh.* 86a) with this task.

Nehemiah fulfilled his appointed task by writing down the omitted material on the basis of the Mishnah, following the latter paragraph by paragraph and in the selfsame order, to some extent adding the omitted words without any indication of the words of the Mishnah which they were supposed to continue, and partly prefacing the additions with several Mishnaic words in order to permit the reader to know what the subject matter concerned, or, finally, prefacing the addition by the text of the entire preceding Mishnah passage. The latter was undoubtedly the case whenever several additions were made to the same Mishnah and it was simpler to cite the Mishnah together with the additions. In places where the redactor of the Mishnah had not merely omitted words but had made considerable stylistic changes the citation of the entire original text was, of course, necessary. Similarly, the illustrations and examples which had been left out were given as additions in their original text and order. There can hardly be any question of marginal notes or scholiae in connection with the additions of the Tosefta. For in such case one usually has in mind new material which was unknown to the author of the original work or which had been overlooked by him, whereas in the case of the additions of the Tosefta, for the most part, it was a question of proofs and explanations with which the redactor of the Mishnah was perfectly familiar and the citing of which in his main work he regarded as unnecessary.

It may very well be, of course, that the author of the Tosefta cited from his own material or of his own accord an addition which may be designated as an actual marginal note or as a scholia. In passages where the redactor of the Mishnah consciously set himself in opposition to his source there naturally developed contradictions between the text contained in the supplemental work and the main work whenever the original text was cited. In all probability, many contradictions between the Mishnah and the Tosefta are to be explained in this wise.

This work done by Nehemiah with reference to the Mishnah of Akiba was then repeated by one of the disciples of Judah Hanasi—according to the opinion of Sherira Gaon, and of other medieval and modern authorities, this was Hiyya—in connection with the recognized and accepted Mishnah, in which process, as is self-understood, the additions and amplifications made by Nehemiah were taken over insofar as they were applicable to and had reference to the new Mishnah. The new editor of the additions was, naturally, at times of a different opinion from that of Nehemiah or had other traditions, and in such cases he undoubtedly added his own opinion and tradition or that of Nehemiah as a marginal gloss. In addition, such marginal glosses to the additions were probably made by other persons too, and were then taken over into the actual text, which may explain the contradictions existing in the body of the Tosefta itself. It may also be pointed out that many sentences of the Tosefta were taken over into it at a very early period, perhaps even before the final redaction of the Mishnah. This is perhaps the case in such passages where the Mishnah and Tosefta are in complete agreement and where, apparently, there can be no question of any amplification. In such cases the original additions were taken over into the actual Mishnah text.

As regards the relationship of the Tosefta to the Baraithoth of the two Talmuds, only the following may be asserted with certainty: the Tosefta is closer to the Palestinian Talmud than to the Babylonian, and yet not infrequently the Tosefta and the Babylonian Talmud are in complete agreement with each other, and in disagreement with the Palestinian Talmud.

Like the Mishnah, the Tosefta is divided into six orders or divisions, whose names are identical with those of the Mishnah divisions. This agreement in names applies also, with few exceptions, to the names of the individual tractates. Four tractates of the Mishnah are not represented in the Tosefta: *Aboth, Kinnim, Middoth* and *Tamid.* Each tractate is divided into chapters and paragraphs. Only in a small number of cases does the division by chapters agree with that prevailing in the Mishnah. In the case of most of the tractates the number of the chapters is smaller than that in the Mishnah, but larger in ten cases. This is not surprising in connection with a supplemental work, inasmuch as the additions made to one chapter may be, quantitatively, rather small and to another chapter quite considerable in bulk, especially where examples or illustrative material are cited or where Haggadic (narrative and homiletical) material is employed by way of supplement. At any rate, as regards the division of the Tosefta into chapters, the author of this arrangement allowed himself to be guided more by external considerations than by internal. The division into chapters does not appear to have originated with the composer of the Tosefta. For he would most certainly have followed that of the Mishnah strictly. It is, at any rate, questionable whether, at the time when the Tosefta was transferred to book form, the Mishnah already had its present division into chapters, even though this is undoubtedly rather old. Furthermore, the division of the Tosefta into chapters is not always uniform in the various recensions of the work. In addition, the number of the chapters is not the same in all recensions; the Vienna Manuscript and the oldest

editions have 421 chapters, the Erfurt Manuscript 428.

The Tosefta was printed for the first time as an appendix to the *Halachoth* of Isaac Alfasi at Venice in 1521, and subsequently in all the later editions of this work; in the edition of Vienna, 1870, with the variants of the Vienna Manuscript; also in the Vilna edition, together with the commentaries *Tanna Tosefaa* (consisting of the actual commentary *Minhath Bikkurim* and a list of parallel passages in Talmud and Mishnah known as *Mitzpeh Shemuel*) of Samuel Avigdor ben Abraham; *Hasde David* of David Pardo; *Or Hagra* to the division Toharoth by Elijah Vilna (also corrections to the tractate *Zebahim*); *Magen Abraham* to the fourth division by Abraham Abele Halevi of Kalisch; *Mareh Kohen* to the division Kodashim of Bezalel Hakohen; *Mareh Demathnitha* to *Erubin* of Jacob Kahane; and a commentary on *Pesahim* by Jonah ben Gershom. Zuckermandel performed a great service through his edition of the Tosefta (Pasewalk, 1880) in which, beneath the text of the Erfurt Manuscript the variant readings of the Vienna Manuscript and of the first printings are given, and as an appendix the supplement printed at Trèves in 1882, containing a summary, index and glossary.

Other editions and commentaries of the Tosefta are: L. Friedländer, *La Tosephta . . .* (Pressburg, 1889 and 1890); Zeraim and Nashim with the commentaries *Heshek Shelomoh* and *Kesher Bogedim;* Adolf Schwarz, *Die Tosefta Eruwin* (Karlsruhe, 1882); *Tosefta juxtà Mischnarum ordinem recomposita, Seraim* (Vilna, 1890); *Die Tosefta Chullin* (Frankfort, 1901); *Die Tosefta Baba Kamma mit deutscher Einleitung* (Frankfort, 1912); Meir Friedmann, *Techeleth Mordecai, Kommentar zu einem grossen Teile der Ordnung Moed* (Paks, 1898 and 1900). Biagio Ugolini, in his *Thesaurus antiquitatum sacrarum,* gives thirty-one tractates of the Tosefta with Latin translation (in vols. 17 to 20). Other editions or translations are: H. Laible, *Der Traktat Berachot . . . übersetzt* (Rothenburg on Tauber, 1902); Herbert Danby, *The Tractate Sanhedrin, Mishnah and Tosefta Translated* (London, 1919). JOHANN KRENGEL.

TÖTBRIEF, *see* REPUDIATION OF DEBTS.

TOTEMISM, a system of clan organization common in primitive peoples, in which the members of a group related on the maternal side are regarded as the descendants of an animal or other natural object which they worship as a deity. This ancestor and guardian spirit is known as totem; those who have the same totem are regarded as its natural representatives and as brothers. The term (in the form *totam,* from the Ojibwa word *ototeman*) was first used by J. Long in 1791 (*Voyages and Travels of an Indian Interpreter and Trader*). Students of primitive society have laid great stress on the function of totemism in the development of thought, and have used it to explain dietary laws (the sacred animal may not be eaten) as well as laws of marriage. There has been less tendency to use totemism for such sweeping explanations since Franz Boas made investigations in British Columbia and found tribes in which every individual had a totem of his own, without any reference to a common descent.

W. Robertson Smith showed that there were traces of totemism in the early Semitic religions; thus the snake was an object of fear. In Judaism, however, its thoroughgoing monotheism had suppressed all memories of totemism, and only vestigial remains of it had survived. Smith cites the divine name *'elohim* (plural for indistinguishable equal beings ruling at individual places) and particularly the expression *bene 'elohim* (*Gen.* 6:2-4), as well as such personal names as Rachel ("ewe"), Caleb ("dog"), Tola ("worm"), Nahash ("serpent") and Huldah ("weasel"), which may be clan names. However, it is equally possible to explain such terms on a different basis. Animal names, for instance, are common among many peoples as an expression of character without any thought of totemism.

Sigmund Freud made a new approach to the question of totems from the standpoint of psychoanalysis, declaring that they arose out of the original experience of the human Oedipus complex, the memory of the murdered father being replaced by an idealization. His pupil Reik made use of this method to psychoanalyze Judaism; thus he explains the Shofar as being used because it is a part of the totem animal.

TOUR, REUBEN SIMKIN, chemical engineer, b. Troy, N. Y., 1889. He studied at the University of Michigan, became assistant superintendent of the Consolidated Gas Company, New York city (1911-13), assistant professor of gas engineering at the University of California (1913-17), and captain in the Ordnance Department of the United States Army in the capacity of chief of the technical department of Nitrate Plant No. 1, Muscle Shoals, Ala. (1917-19). In 1921 Tour was appointed professor of chemical engineering and head of the department of chemistry at the University of Cincinnati; he still held this position in 1943. He published articles on nitrogen fixation.

TOURO, ISAAC, rabbi, b. Holland, about 1737; d. Kingston, Jamaica, British West Indies, 1784. He studied at the rabbinical seminary in Amsterdam, and arrived in America in 1760. For a time he lived in New York, then in Boston. When the Sephardic synagogue in Newport, R. I., was opened in 1763, Touro officiated and was made minister and reader of the congregation. He seems never to have preached, but to have engaged only in teaching in conjunction with his liturgical responsibilities. Ezra Stiles, president of Yale, was a friend of Touro, and in his diaries left data about Touro's life. Touro was married (1773) to Reyna Hays, sister of Moses Michael Hays of Boston.

When the Revolution forced the closing of the Newport synagogue (1780), Touro took his family to New York, where for a time he led the remnants of the Shearith Israel Congregation. (Gershom Mendez Seixas, the rabbi, had gone to Philadelphia.) Later he went to Kingston, Jamaica, where he died. His widow and sons, Judah and Abraham, returned to Boston.

Judah Touro

ABRAHAM TOURO (b. Newport, R. I., 1777; d. Boston, 1822) was the younger son of Isaac Touro. Trained in commerce by his uncle, Moses Michael Hays, he remained in the east, although his older brother went south. The Touro tradition in Newport prompted him to leave a large part of his fortune for the upkeep of sites of Jewish interest in that city. Of a total of $50,000 left to philanthropic causes, Touro designated $10,000 to the state of Rhode Island for the upkeep of the synagogue where his father had officiated, and $5,000 to the municipality of Newport for the reconstruction of the street leading from the synagogue to the cemetery. In 1822, shortly before his death, he arranged for a protective wall around the cemetery.

Lit.: Gutstein, Morris A., *The Story of the Jews of Newport* (1936); *Publications of the American Jewish Historical Society,* No. 27 (1920) 417-20; London, Hannah, *Portraits of Jews* (1927) 48-49, 69.

TOURO, JUDAH, merchant and philanthropist, b. Newport, R. I., 1775; d. New Orleans, La., 1854. Touro was the son of Rabbi Isaac and Reyna Hays Touro. The War for Independence destroyed Newport's commercial supremacy, and Isaac Touro removed with his family to New York, but was unable to secure a permanent position. Ill, he sailed with his family for Kingston, Jamaica, in 1783, and there died. Reyna Touro's wealthy and socially prominent brother, Moses Michael Hays, brought the widow and her three children to Boston. Judah Touro was educated by Hays and equipped for a business career. When Touro was only twenty-two, Hays placed him in charge of a valuable cargo, which he was sending by one of his ships through the Mediterranean. Upon his return, Touro decided to engage in business independently, and in October, 1801, sailed from Boston for New Orleans, selecting this city as offering the greatest opportunity for a business career. There he opened a general merchandise store which prospered.

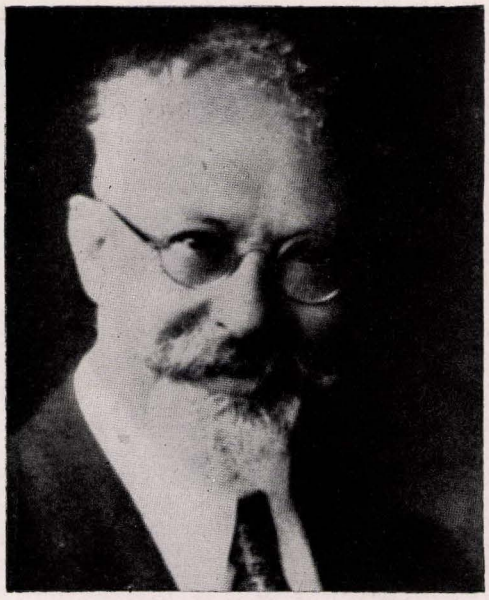
There were virtually no Jews in New Orleans at this time. Bienville's Black Code (issued in March, 1724), which had decreed the expulsion of Jews from the colony, was theoretically still in force.

Shortly after his arrival, Touro became acquainted with two young Virginians, James H. and Rezin Davis Shepherd, who, like himself, had selected this city as favorable for mercantile enterprise. This acquaintance soon ripened into the closest friendship which lasted throughout their lives.

At the time of the defense of New Orleans by Andrew Jackson (1814-15), Touro, together with Rezin Shepherd, volunteered in the army. In the engagement Touro was one of the thirteen Americans wounded. His life was saved and he was nursed during convalescence by Shepherd.

During the long period of recuperation, Touro decided to begin his benefactions. His business had greatly prospered and he had become the owner of a number of ships and much real estate. His philanthropies on a large scale appear to have started with his acquaintance with Theodore Clapp, pastor of the Universalist Church (later the Unitarian) in New Orleans. Clapp's church was so deeply in debt that the property had to be sold. Touro purchased the land and the building and then returned them to the church. When a fire in 1852 destroyed the building, Touro supplied the church with another house of worship.

During his lifetime Touro made many bequests to communal institutions of Newport, both Jewish and general. In 1830 he founded the Touro Free Library in New Orleans, probably the first free library in the world. He made a large number of private benefactions, of which most are unrecorded.



Living in a slave-owning community, Touro early evinced anti-slavery sentiments. The negroes who waited in the house of the Shepherds, with whom he lived for forty years, were all emancipated by his aid and supplied with the means of establishing themselves. Touro never owned but one slave himself, and after training him for business, he gave him his freedom and a substantial sum of money.

His donation of $10,000 for the completion of the Bunker Hill monument received great publicity and acclaim. A banquet was held in historic Faneuil Hall in Boston, on June 17, 1843, to eulogize him, and also Amos Lawrence, who had likewise made a gift of $10,000. Daniel Webster was the orator, and President John Tyler attended. Governor Morton, who was unable to be present, wrote a poem for the occasion.

In 1850 Touro, unsolicited, presented to the Portuguese Congregation in New Orleans a church on the corner of Canal and Bourbon, which had belonged to the Episcopalians and which had been completely renovated at his expense. Touro himself dedicated the synagogue, which was known as "Congregation of the Dispersed of Judah." Rabbis present at the ceremony were Isaac Leeser of Philadelphia, the newly appointed minister, M. N. Nathan, whose salary was provided by Touro, and James K. Gutheim, minister of the other New Orleans congregation. The Portuguese Congregation seven years later sold the property and transferred to a new location, on Carondelet near Julia, and on April 7, 1857, dedicated a synagogue which is claimed to have been an exact counterpart of the original, and was pronounced by Isaac Leeser as "probably the most costly Jewish place of worship in the country."

An epochal date in the history of New Orleans communal work is 1852, when Touro bought the Paulding Estate to be converted into a hospital. In his will he gave the infirmary to the city.

New Orleans seems to have been the only community, under Touro's inspiration and philanthropy, which went to the length of founding, in 1853, a Hebrew Foreign Mission Society to help Jews in foreign lands. Among the large gifts given during the last

Nisson Touroff

years of his life was the contribution of $20,000 to the Mt. Sinai Hospital of New York. Touro was one of the first Americans who contributed to the colonization of Palestine through Warder Cresson, of Philadelphia, who established a Jewish agricultural colony near Jerusalem about 1850.

Touro consulted Isaac Leeser about many of his benefactions during his lifetime and those provided for in his will. When Touro passed away and his will was published, the entire country was stirred by his unprecedented benevolences. The will devoted $205,000 to Jewish purposes, and $148,000 to Christian and nonsectarian purposes. In addition, Rezin Shepherd, who was the residuary legatee, devoted his legacy, some two or three hundred thousand dollars, to charitable purposes. To sum up the various provisions of the will, Touro bequeathed: to individuals other than Shepherd $75,000; to Catholic, Protestant and nonsectarian causes (including $80,000 for an almshouse) $115,000; to nonsectarian institutions in New England $20,000; to the city of Newport, for park and library, $13,000.

To Jewish congregations (New Orleans, Boston, Hartford, New Haven, New York, Baltimore, Richmond, Charleston, Mobile, Savannah, Buffalo, Montgomery, Memphis, Louisville, Cincinnati, Cleveland, St. Louis, Albany, Newport), to the last also for minister and cemetery, $75,000.

To Jewish benevolent societies (New Orleans, New York and Philadelphia) $41,000; for Jewish education (New Orleans, Cincinnati and Philadelphia) $24,000; to the "Hebrew Foreign Mission Society" $5,000; for various causes in Palestine $60,000.

Touro was modest and self-effacing. As Clapp says in his autobiography: "The most delicate, deserved and timely expressions of esteem from particular, intimate friends and acquaintances, seemed to give him pain instead of pleasure. Mr. Touro once said, in my hearing, that he would have revoked the donations given for completing the Bunker Hill Monument, on account of their publishing his name in the newspapers, contrary to his wishes, had it not been for the apprehension that his real motives would have been misunderstood and misrepresented." DAVID S. JACOBSON.

TOUROFF, NISSON, Hebrew writer and educator, b. Nieswige, Russia, 1877. Educated at the Hebrew Teachers' Institute of Vilna and at the Universities of Berlin, Leipzig and Lausanne (Lit.D. 1906), he was superintendent of the schools of the Society for the Propagation of Culture among the Jews of Russia (1906-7), principal of the Teachers' Training School of the Friends of Zion in Jaffa, Palestine (1914-19), and organizer and dean of the Hebrew Teachers' College of Boston, Mass. (1921-26). From 1926 to 1933 he was professor of Hebrew language and Modern Hebrew literature at the Jewish Institute of Religion, in New York city, and in 1933 he went to Palestine to serve as professor of philosophy of education at the Hebrew University. He returned to the United States when the second World War spread.

Touroff published *Jean Paul als Pädagoge* (Lausanne, 1906) and *Hapesichologiah Beyamenu* (Contemporary Psychology; 2 vols., published by the Bialik Foundation, Tel-Aviv, 1939-40). He translated into Hebrew William James' *Talks to Teachers,* T. Ribot's *Imagination Créatrice* and Knut Hamsun's *Markens Grode* (*Growth of the Soil*). For some time he was editor of the Palestine daily *Haaretz;* later he edited the pedagogical magazines *Hahinnuch* (Education; Palestine, 1910-14) and *Shebile Hahinnuch* (Paths of Education; New York, 1925-27). He contributed articles and essays on literature, art, psychology and education to various Hebrew periodicals in Russia, Palestine and the United States. He was editor of the Stybel Hebrew Publishing House, New York (1920-21), and organized the Hebrew P.E.N. Club of America, of which he was president in 1939 and 1940.

TRACHTENBERG, JOSHUA, rabbi and author, b. London, 1904. He was brought to the United States in 1907. After graduating from the College of the City of New York in 1926, he entered the Hebrew Union College, where he was ordained in 1930. That same year Trachtenberg became rabbi of the Temple Covenant of Peace in Easton, Pa., which post he held in 1943. Trachtenberg was a contributor to the symposium *How to Combat Anti-Semitism* (1937). His book, *Jewish Magic and Superstition* (1937), was a highly-praised study of the various beliefs in supernatural manifestations which have become absorbed in Jewish life and have subsequently acquired, in some instances, peculiar Jewish interpretations.

In 1937 Trachtenberg was awarded also a second prize of $600 by the New History Society for his essay "How Can the People of the World Achieve Universal Disarmament?" He was early an advocate of Zionism, organizing the Cincinnati Young Judea and serving as its director from 1926 to 1930. Later he was chairman of the Manhattan Chapter of the League for Labor Palestine, and in 1943 was a member of its administrative committee.

TRADE UNIONS. 1. Introduction. The trade union movement among Jews is much younger than the general trade union movement, and is very young even when compared with the development of a Jewish class

of industrial labor, which grew to considerable proportions in the second half of the 19th cent. The reason for this fact is not that of failure to organize; on the contrary, the political organization of Jewish workers as a group began early in the 1870's and maintained a strong influence from that time on. The development of the Jewish groups was precisely the reverse of other labor groups. Among the latter the order was organization into unions, then into political parties and sometimes into cooperatives.

The Jewish laborers, however, first joined to form political groups (at first Socialist, in a few cases anarchist, and finally Communist) and only later created trade unions. The effect of this course of development still could be seen in trade unions with which the Jews were affiliated in the 20th cent. Though the number of Jewish members of trade unions, especially in the United States, Palestine, and Poland before the second World War, was much larger than the number of Jews who belonged to political parties, the moral strength of the parties and their influence on the life of the Jewish worker is more profound than that of the unions. Most of the Jewish trade unions were created under the influence of political ideas and remained affiliated with political parties for a period of time. Thus in contrast to the politically neutral union which is generally prevalent among other groups, the typical Jewish trade union, though no longer directly affiliated with political parties, is politically minded.

This unusual development seems to have been due to three reasons. The first was the higher cultural level of the Jewish worker, which was still more marked in former decades and which directed his interests to a greater degree to political problems. The second was the conviction of the Jewish worker that his difficulties were as much due to anti-Jewish discrimination as to the general social oppression. The third and probably most important reason was that in former decades only a limited number of the Jewish workers believed that they would continue to follow their present occupations for the rest of their lives and were willing to sacrifice a considerable part of their time and income to improving their current positions. It was only after there was a certain stabilization in the positions of Jewish labor that trade unions could flourish among them; this became evident first in the United States and then in Palestine.

There is no contradiction between this feeble development of the Jewish trade unions in former decades and the strike movement which, starting with the first years of the 20th cent., assumed considerable proportions among Jewish workers in all countries, especially Russia and the United States. These strikes were the result not only of the actual needs and claims of the Jewish workers, but also of their political convictions; they were more willing to fight, even at the price of great personal sacrifice, than to continue the daily work of trade-unionism. Therefore these strikes, despite their frequent size and their passionate character, were generally poorly prepared, and their frequent victories were due more to the weakness of the employers than to the force of the trade unions.

2. Early Types of Jewish Trade-Unionism. Jewish trade unions first developed in Russia at the end of the 19th cent. They may best be divided into three fundamental types, the first represented mainly by the unions in Poland, the second by those in the United States, and the third by those in Palestine.

The Polish type of the Jewish trade union is historically older than the Jewish trade unions in the free Polish republic. Before the first World War, Polish Jewish trade unions included the Jewish trade unions of czarist Russia and of the Austrian monarchy (especially in the province of Galicia). These unions were created by and remained attached to the Jewish Socialist parties, in Russia the "Bund" and the various Zionist Socialist groups, in Austria the Jewish Socialist Party and the Poale Zion. In Russia trade unions were illegal, like the socialist movement. Their activities consisted largely in organizing frequent strikes, which were usually successful, but did not contribute a great deal to real improvement of the workers' conditions, since the Jewish artisans and small industrialists, in whose shops the workers were employed, were not able to carry the burden imposed on them by the victorious unions. The theoretical achievements of the strikes were almost regularly lost during the periods of crisis and especially in the great crisis of 1908 to 1912, when the Jewish trade unions in Russia, after having suffered many grave defeats, almost disappeared.

The first World War, with the subsequent German occupation of the territory containing the Jewish Pale of Settlement in Russia, brought (beginning with 1916) the legalization of the trade unions, whose activities during the war period were mostly devoted to different forms of relief. After the War the Jewish trade unions resumed normal activities in Poland. Almost all the unions were under the strong influence of the Socialist parties, mainly the "Bund," to some degree the Poale Zion Left, and in the last years before the second World War also the Poale Zion Right. From the formal point of view, however, the Jewish trade unions were now independent; in 1921 they were even united with the Polish class trade unions, where they formed a special section under the direction of the so-called National Council of Jewish Trade Unions. There were in 1921 eleven Jewish national trade unions, with 55,100 members. The process of fusion with the Polish unions included all except two (metal workers and printers), but its real effect in the establishment of closer cooperation between Polish and Jewish workers was very limited; the Jewish trade unions remained actually as segregated from the Polish workers as they had been. Most of the trade unions of the Poale Zion Right, which were concentrated around the Central Trade Council of Jewish Trade Unions in Poland, did not join this united organization.

Prior to the outbreak of the second World War, membership of the trade unions of the National Council was 98,810 (January 1, 1939) and of the Central Trade Council 22,925 (July 1, 1939). Altogether, therefore, some 120,000 Jewish workers in Poland were organized in trade unions, not much more than one-third the Jewish workers in the country, especially in view of the fact that the unions of the National Council comprised not only workers, but also small artisans working for manufacturers and merchants. Of the unions of the National Council, the largest were the union of clothing workers (16,960 members), of commercial employees (12,514), of textile workers (12,500) and of the Socialist artisans (11,550); of the unions of the Central Trade Council the strongest were the unions of commercial employees (7,920 members), transport workers (3,430) and leather workers (2,005).

Although officially neutral, the Jewish trade unions in Poland preserved their Socialist character. The class struggle and especially the strike movement continued to form a considerable part of their activities. In Warsaw (where the membership of the unions of the National Council in 1939 was 36,567) 567 strikes were organized in 1938 with 14,527 workers participating, that is, almost 40% of the entire membership.

Even more significant were the figures in the largest union of clothing workers, of whom 10,747, or two-thirds of the membership, went on strike in 1937.

Several attempts were made to introduce new methods of self-help, especially in the fields of medical care, legal advice and of vocational retraining. Efforts were also renewed to create producer-cooperatives among Jewish workers. Several cooperatives were established in the late 1920's in Warsaw, Vilna and Meseritz, but ended in failure. In the last year before the second World War the Central Trade Council had established eleven new cooperatives with over 400 members. A branch of activity, which developed before the War as a result of increasing anti-Jewish discrimination, was the "fight for the right to work," which consisted mainly in trying to place Jewish workers in large factories and in municipal service. The results of those efforts were not very encouraging.

These were, in general, the characteristics of the Jewish trade union movement of the Polish type: close connection with the Socialist parties, outspoken class character, emphasis on strikes as a method of struggle, limited organizational and material strength and frequent fluctuation in membership. Almost all Jewish trade unions in Europe before the second World War had more or less the same character. Most important were the unions in Great Britain, which have a history of several decades, and those in France, where they were formed largely from among the tens of thousands of Jewish immigrants from Eastern Europe, many of whom tried to earn a living as workers in small industry, particularly the clothing industry. In many immigration countries, especially throughout Latin America, the Jewish trade unions have much in common with the movement in the European countries.

Unique both in its character and in its importance was the Jewish trade union movement in Palestine. It can scarcely be compared with the Jewish trade unions in other countries, or even with the unions of other nations, possessing at least three fundamental differences. The movement in Palestine incorporates not only persons working for salary, but also members of free cooperatives in agriculture and industry. Second, its aim is not only to protect the professional interests of the workers, but to secure their cooperation in the work of upbuilding Palestine as the Jewish national home. Third, the Jewish trade unions in Palestine form an integral part of the great Jewish labor confederation, which, apart from trade unions, includes hundreds of settlements and other cooperatives in towns and villages, a network of self-help and medical institutions and financial and other enterprises, which together form a unique commonwealth of working people, decisively influencing Jewish life in the country.

This progress is mostly a result of accomplishments during the period between the two world wars. The first Jewish trade unions in Palestine originated before the first World War, but they were closely bound up with existing political parties and their membership as well as their scope of activities were rather limited. Only after the War, when (1920) the General Confederation of Jewish Labor in Palestine (Histadruth Kelalith Shel Haobedim Haibrim Beeretz Yisrael, abbreviated to Histadruth) was established, did the situation change markedly. Both the membership and the scope of activities of this organization grew by leaps and bounds.

Whereas, in 1920, there were only 4,000 members in the Histadruth, 1941 showed a roster of 119,154, or 73% of all Jewish workers in Palestine. Of these 71,309 were in cities, 26,097 were on farms as laborers, and 21,748 were members of cooperative settlements. The number of the agricultural settlements in the Histadruth is 134, with 34,070 inhabitants. The cooperative wholesale organization of the Histadruth, Hamashbir, had in 1940 a turnover of £P595,510; the farm-products cooperative, Tenubah, had a turnover of £P695,931, and the agricultural contracting agency, Yahin, a turnover of £P124,907. The industrial contracting agency of the Histadruth, Solel Boneh, employed 3,500 members (1940) and had a turnover of £P175,000. There were also 71 industrial cooperatives with 3,073 workers, who received salaries totalling £P449,424. The Workers Bank had a capital of £P209,940, its deposits totalled £P393,210, and loans were granted to the amount of £P498,253. Including the turnover of other economic institutions of the Histadruth—the agricultural loan corporation Nir, the water supply corporation Mekoroth, the housing corporation Shichun, consumer cooperatives, and loan and saving cooperatives, the total turnover of the Histadruth in 1939-1940 was between 6 and 6½ million pounds. There are also other auxiliary institutions of the Histadruth, among them the Sick-Fund, Kupat Holim, a number of educational institutions for children and adults, a daily newspaper, *Davar,* and several periodicals, and a theatre, Ohel.

Although from the formal point of view an unpolitical body, the Histadruth is in reality the leading spirit in the Jewish social life in Palestine. Its constructive activities in agriculture, industry and public works are more important than its trade unions. But there is scarcely any other country in the world where the labor movement has succeeded in concentrating economic life around it as thoroughly as in Palestine.

The idea of international cooperation among Jewish trade unions was raised several times both in Jewish socialist and trade union literature. Few steps, however, were taken in this direction. The trade unions in Poland belonging to the Central Trade Council tried, just before the second World War, to establish contact with the Labor Confederation in Palestine. More significant is the achievement in this field by the trade unions in the United States. Large sums of money are transmitted annually to Palestine by the National Labor Committee for Palestine, to which almost all national trade unions and a considerable number of their locals belong, among them the Amalgamated Clothing Workers of America, the International Ladies' Garment Workers' Union, the United Hebrew Trades and several others. During the fiscal year September, 1941, to September, 1942, a total of $430,000 was transmitted to Palestine and a quota of one million dollars was set as a goal for the next year's campaign. No less important than these financial results were the allied educational and propaganda activities, which contributed greatly towards strengthening the contact between the Jewish workers in Palestine and in the United States.

3. In the United States. Jews came to the United States in three streams. The first and smallest one dates back to Colonial days, when the Sephardim, the Spanish-Portuguese Jews, came to seek religious freedom. In the middle of the 19th cent. the German Jews arrived in larger numbers as they fled from reaction in Germany. The great wave of Jewish immigration, beginning in the 1880's, rushed in from Eastern Europe, chiefly from czarist Russia, the country of pogroms and general persecution.

The East European immigration brought great numbers of workers. Most of them sought a livelihood in the wearing apparel industries and populated the sweatshops. Although coming from countries which were industrially undeveloped and without labor movements, the new arrivals soon displayed a lively interest in labor organization. The labor message was carried to them, in Yiddish, by Russian Jewish intellectuals who were not themselves wage workers, except for a short time after their arrival and before entering professions.

The first crusader among the clothing workers was Israel Barsky, who was known also under the pseudonym of Israel Am Olam. It is assumed that he was identified with the Am Olam movement. He came to the United States at about the same time as the Am Olam group. The Am Olamites left Russia for the United States when the Biluim left for Palestine in the 1880's and after, for the purpose of Jewish colonization.

As Barsky organized local unions of garment makers he advocated the formation of an inclusive industrial organization national in scope. There was such in the Knights of Labor. But because of the vagueness of labor unionism at that time, the vast body of garment workers remained outside. When Barsky's ambition was realized and the United Garment Workers of America (U.G.W.) was formed in 1891, that was also the end of his career. It was the impression of his contemporaries that Barsky withdrew because the new body did not conform to his ideal.

In 1900 the ladies' garment workers parted company with the United Garment Workers and received a charter from the American Federation of Labor as the International Ladies' Garment Workers' Union. Fourteen years later the bulk of the men's clothing workers were out of the U.G.W. and formed the Amalgamated Clothing Workers of America. They received no charter from the American Federation of Labor (A.F. of L.), until 1933.

In 1935 the International and the Amalgamated participated in launching the Congress of Industrial Organizations (CIO); the former subsequently returned to the A.F. of L., and the latter remained with the CIO. Practically all Jewish workers in the garment-making industries, as well as nearly all other workers, were, in 1943, members of the International and of the Amalgamated.

The period 1888 to 1890 marked the effective beginning of the Yiddish-speaking labor movement.

In 1888 several isolated Jewish labor organizations formed the United Hebrew Trades as their central body. In 1943 the United Hebrew Trades celebrated the fifty-fifth year of continuous labor movement activities. In 1890 the *Arbeiter Zeitung* was launched as the official journal of the United Hebrew Trades. Yiddish labor publications preceded the *Zeitung* for brief periods. The *Arbeiter Zeitung* was the first publication of a regularly constituted labor movement; Philip Krantz was its editor, and Abraham Cahan, Morris Hillquit (then known as Hillkowitz), Louis Miller and M. Zametkin were permanent contributors. With the exception of Krantz, they were also the leading Yiddish speakers in the labor movement.

The Hebrew Labor Federation was formed, with M. Zametkin as organizer, to serve on a national scale just as the United Hebrew Trades served locally. But the Federation was shortlived.

In 1892 the *Zukunft* was published as the scientific magazine of the Jewish labor movement.

In 1894 the *Abend Blatt* was established as the first Yiddish labor daily in the world, with Philip Krantz as editor. Abraham Cahan assumed the editorship of the weekly *Arbeiter Zeitung*.

The *Jewish Daily Forward* was launched in 1897 with Abraham Cahan as editor, as a result of a split in the Jewish Socialist movement. The *Abend Blatt* and the *Arbeiter Zeitung* were discontinued in 1902. In 1904 the weekly *Arbeiter* began to be published, and continued until 1911.

As the organized Jewish workers came closer to the general labor movement, the Jewish labor movement became integrated with it. There was, in 1943, no Jewish labor movement in the United States as distinct and apart from the American labor movement. There were Yiddish-speaking local unions of craft and industrial organizations as there were other language locals. In the wearing apparel industries, where more than a score of different nationalities are represented in the labor ranks, the Jewish workers had long ceased to be a majority; however, they constituted in 1943 the largest single group.

While originally the needle trade unions were located almost entirely east of Chicago, they were to be found in 1943 in nearly every state of the Union and throughout Canada. Everywhere the local unions were integral parts of both their own parent bodies in their respective industries and of the American Federation of Labor or the Congress of Industrial Organizations. There were vast numbers of Jewish workers throughout the affiliates of the A.F. of L. and of the CIO. Everywhere they cooperated loyally with the general membership.

The labor organizations in which Jewish workers are concentrated in large numbers made great contributions to American civilization. First and foremost was the abolition of the sweatshop. The organized immigrant workers wiped that blot off the American escutcheon. In the sweatshop the working hours were without any regulation. After bitter struggles and great sacrifice the unions inaugurated hour standards. Beginning with the fifty-four-hour week the work-week was reduced, in succession, to fifty-two hours, fifty, forty-eight and forty-four (in 1919). In the N.R.A. period the work week was further reduced to forty hours in some garment industries, and to thirty-six and thirty-five hours in others. When the Supreme Court invalidated the National Industrial Recovery Act, the needle trade unions were strong enough to maintain by their own power the N.R.A. work-week standards.

In pre-union times wage payment by the contractor was most uncertain. The contractor was the middle man between the manufacturer and the workers. When he disappeared with the payroll the workers had no redress. They were compelled to turn to charity institutions for alms. The unions established full responsibility and security with respect to workers' wages.

After many years of much hardship, because of mutual distrust, the labor unions and the employer organizations in the needle trades developed the most successfully functioning collective bargaining agreements. These were taken as models by other industries.

For years before the passage of social security legislation the needle trades unions had maintained systems of unemployment compensation. When the legislation was enacted the unions discontinued their own unemployment funds and inaugurated, or expanded, health and life insurance, with the cooperation of the employers. The labor unions elevated the former sweatshop workers to the high position of useful citizenship in the community and in the nation. The Jewish workers played a most prominent part in this great achievement.

The best-known American unions in which the Jewish workers took a leading part are the International Ladies' Garment Workers' Union (A.F. of L.) and the Amalgamated Clothing Workers of America (CIO). The membership of each exceeded a quarter of a million (1943). There are a large number of smaller unions, with substantial proportions of Jewish workers, in various industries, such as the United Hatters Cap and Millinery Workers International union and numerous others. After the first World War the participation of Jewish organized labor in Jewish causes, as well as non-Jewish, steadily increased.

A distinct Jewish labor movement in 1943 comprised chiefly the United Hebrew Trades of New York, and similar bodies in other cities, a large number of Jewish locals of general labor organizations, and fraternal organizations, the Workmen's Circle and the Jewish National Workers' Alliance. These Jewish labor organizations were cooperating with non-labor Jewish organizations on behalf of the Jews in various countries.

JOSEPH SCHLOSSBERG.

TRADITION, the name applied to any knowledge, technique, cultural value or attitude which is transmitted directly from person to person and from generation to generation; also, the process of transmission. It is to be distinguished in general from transmission of knowledge through written records, although frequently book and living tradition exist side by side and complement one another. Language, the fundamental techniques of living, moral and social standards, religious faith are kept alive and functioning chiefly through tradition. Even today, with the vast expansion of facilities for preserving information through writing, photography, gramophone records, and the like, a large part of our cultural heritage is still transmitted in personal contacts. Still more important are the basic attitudes acquired from the family and the social group, which the individual then passes on to others. Tradition is in short the great conservative force in human culture; it keeps alive and accessible the work of creative geniuses. But since tradition is in large measure a manifestation of the force of inertia, it must be revitalized from time to time by the impact of fresh (and sometimes even revolutionary) creation.

All this applies with special force to religion, and in particular to Judaism, which has consciously stressed the importance of tradition. Rabbinic Judaism operates with the concept of a double Torah, that which is written down in the Five Books of Moses, and that which was given by God to Moses by word of mouth, and which was handed down orally through the generations. The oral Torah interprets and explains, and also supplements the written law. Even after the oral Torah was itself reduced to writing in the Talmudic literature, the element of living tradition was not eliminated. In each generation it has been necessary for teachers to instruct their pupils in the proper method of reading and interpreting the Babylonian Talmud, a procedure which even the publication of excellent commentaries did not make superfluous. On the other hand, the Palestinian Talmud has remained an enigma even to great scholars, because it had no such living chain of interpreters.

A critical rereading of the history of the Torah may assign post-Mosaic dates for the written and oral law in their present form; but the critical investigator also recognizes that wherever an authoritative written document exists, traditions of interpretation must grow up around it. Indeed, modern Bible scholars attach new importance to tradition, holding that the oldest materials of the Bible were preserved orally for a long time before they were written down. The reliability of these historic memories is being credited more and more both through the discovery of archeological material that confirms them, and through the study of current Arab traditions which are often remarkably accurate.

Another aspect of Jewish life in which tradition plays a great part is that of custom, largely but not exclusively religious. Jewish law distinguishes clearly between ceremonies commanded by the Torah and those which have only the force of custom (*minhag*). The authorities have held that customs which are generally observed, and which are not in themselves objectionable, should be followed with the same fidelity which is accorded the prescriptions of the Torah. They also recognize that many such traditional customs have only local currency, and are binding only in the particular neighborhood where they prevail.

Jewish music is another area in which tradition has played a notable part. The most important melodies of the synagogue, and even many secular Jewish songs, are derived ultimately from the Biblical chants. These in turn antedate the Dispersion, since (with many variations) they are substantially the same in all Jewish communities throughout the world. Although the Masoretic accents serve as a general guide for the cantillation of the Torah and Haftarah, no method of accurate notation was used for recording Jewish tunes until modern times. Previously they were handed on entirely by tradition.

The Jewish people has a vast body of folklore including superstitions, folktales, traditional methods of cookery, forms of humor, legendary characters, and the like. While much of this material has been recorded in written form (some of it is even of known authorship) it still retains its living character in the memories at least of older Jews. It should be added that many ideals of Judaism, though expressed in its classic writings and emphasized by its teachers in every generation, derive much of their strength from their presence in the living consciousness of the people. Such are the emphasis on family devotion, learning and charity.

From time to time, Judaism has witnessed movements of reaction against tradition. Such, to a greater or less degree, were the movements of the prophets, the Karaites, the mystical revolutions of Cabala and Hasidism (which, however, claimed traditions of their own), and the modern trends of Reform, Haskalah, and Zionism. Of these, only Karaism attempted to overthrow tradition and eradicate its influence altogether—an attempt which proved unsuccessful and futile at once. The case of the Pharisees and Sadducees is unique—for the Pharisees were in many ways the party of progress and innovation, yet they upheld the claims of the traditional Oral Law against the Sadducees, who denied its binding character.

The following terms are used for tradition:

1. *Masoreth* (actually from *'asar,* "to bind," *Ezek.* 20:37, but in Jewish usage connected with *masar,* "to transmit"; in

later works the form is usually *Masorah*), in Talmudic writings used of Haggadic traditions; later on it comes to mean the body of tradition regarding the written text of the Bible, its correct vocalization and punctuation.

2. Legal traditions are called *Shemu'ah* or *Shema'tha* (from *shama,* "to hear"), *Gemara* (teaching), often simply *Halachah.* Ancient laws whose source was not otherwise known were called *Halachah lemosheh misinai* (law revealed to Moses at Sinai). Similarly, certain ancient liturgical melodies are known as *Misinai* tunes.

3. Traditional customs are denominated *minhag.*

4. *Cabala* (that which is received) is a term used in the Talmud for citations from the prophets and Hagiographa. In the Middle Ages, it is applied to the body of mystical tradition. It is now clear that the medieval Cabalists were largely justified in the claim that their lore was ancient and traditional; it goes back to the speculations of the Gnostics, the esoteric doctrines of the Tannaim, and the mysticism of the Gaonic period.

Orthodox Judaism affirms the binding character of tradition. Reform, Conservative, Reconstructionist and Nationalist groups agree in recognizing the value of tradition, but insist that it must be vital and flexible, in order to make further growth and creation possible. They differ among themselves as to the extent to which departures from tradition are desirable.

TRAJAN (Marcus Ulpius Trajanus), Roman emperor from 98 to 117. He treated the Jews with great severity, imposed upon them the poll-tax (Fiscus Judaicus), and allegedly reintroduced the decree which ordered the extermination of the descendants of David. His policies led, in 115, to a widespread Jewish insurrection in Cyrene, in Egypt, and on the island of Cyprus, in the course of which the Jews are said to have massacred hundreds of thousands of Hellenes and Romans. Trajan ordered the general Turbo to proceed against the Jews, and after several engagements crushed the rebellion and literally exterminated all the Jews of North Africa. A contemporary historian characterized Trajan as "the exterminator of the Jewish people in Egypt." During the war with the Parthians another insurrection occurred in Mesopotamia in which the Jews were involved. Trajan sent the general Lucius Quietus, who crushed the rebellion with shocking brutality and in addition destroyed the Jewish settlements in North Mesopotamia. The Jews of Syria and Judea were also persecuted, and the Talmud speaks of Trajan as "Rasha" (the wicked). Papyrus discoveries, however, show Trajan in a more friendly light, revealing that in a conflict between Alexandrians and Jews he favored the latter.

TRAJAN'S DAY, *see* PAPPUS AND JULIANUS.

TRANI, city in Southern Italy. The earliest historical evidence of Jews in Trani traces back to the 11th cent. They lived in a suburb, the "Giudecca," on the seashore. According to the 12th cent. Jewish traveler Benjamin of Tudela, there lived in Trani in that century 200 Jewish families, occupied mostly with commerce and industry; the dyer's trade was almost entirely monopolized by Jews. One Jew of Trani had the sole privilege granted by King Frederick II for the selling of silks in Apulia and Calabria.

The condition of the Jews, however, grew worse toward the end of the 13th cent. under the reign of the house of Anjou. In 1270 Charles I ordered the seizing and destruction of the Talmud and other Hebrew books, as the result of slander by a Jewish renegade, Manuforte of Trani. In 1290 Charles II forced all the Jews of his kingdom to submit to conversion, whereupon some of the Jews emigrated, but the others preferred torture to baptism or merely pretended to have assumed the Christian faith. Thus vanished the Jewish community of Trani; its synagogues were turned into churches, and the cemetery was given away to the Dominicans by the king.

A new Jewish settlement in Trani started to develop slowly. The baptized families secretly retained their Judaism, and contracted marriages in their own midst. These secret Jews, called neophytes, represented the majority of the merchants of Trani, to the extent that "neophyte" became the synonym for merchant; even the municipal constitution of Trani ordained (1413) that the town council should consist of eight noblemen, six citizens and two neophytes. The expedition of the French King Charles VIII to Italy (1494-95) and the subsequent political entanglements brought about severe afflictions for Jews as well as for neophytes; the former were attacked and their homes ransacked by the mob, and the latter were expelled, but later were permitted to return. The Spanish government favored the return of the neophytes. But in 1509 Jews and neophytes were plundered again in Trani by the mob, and in 1510 the king of Spain ordered the expulsion of the Jews from the kingdom of Naples, to which Trani also belonged; in 1514 to 1515 a similar decree ensued against the neophytes. The Jewish community was never reestablished. During the 12th and 13th centuries Jewish learning flourished in Trani; the most outstanding scholar was Isaiah ben Mali di Trani.

UMBERTO CASSUTO.

Festschrift Hermann Cohen* (1912) 389-404; Fevorelli, *Gli ebrei nell'Italia meridionale* (1915); Vitale, *Un particolare ignorato di storia pugliese: neofiti e mercanti* (1926); Luzzatto, Frederico, "Una visita alle memorie ebraiche in Trani," *Israel,* vol. 10 (1936) 258-84; Munkácsi, Ernst, *Der Jude von Neapel* (1939).

TRANI, DI, a family of Jewish scholars. There are two divisions of the family, living several centuries apart; without the lineage being exactly traced, their relationship is generally assumed. The earliest di Trani known was ISAIAH BEN MALI DI TRANI (b. Trani, Italy, about 1180; d. probably Venice, Italy, about 1250). He was a Talmudic exegete, liberal in his interpretations and direct in his expressions. The entire Talmud came under his expository scrutiny, and his commentaries, besides having been retained intact in separate published versions, were also partly incorporated into the work of later authors. For Jewish scholarship in his native Italy, di Trani was as significant a figure as Maimonides was to the Arabic world and Jacob Tam to Central Europe.

ISAIAH BEN ELIJAH DI TRANI (b. in the 13th cent.) was the son of the elder di Trani's daughter. Like his grandfather, he remained in Italy. Although his many interpretations of the Talmud were rationalized, he rejected all Hellenist teachings.

Of the younger generations of the di Trani family, one of the first known was AARON DI TRANI (b. Castile, Spain, in the 15th cent.). Subsequently (about 1502) he went to Adrianople, after a stay in Italy. His own teachings, transmitted through his nephew, Moses ben Joseph, were greatly responsible for the introduction of Pilpul into Palestine.

JOSEPH DI TRANI, THE ELDER, a Talmudist of the 16th cent., lived mostly in Salonika, Greece (then Turkey). He was the brother of Aaron di Trani, but was better known than his brother; many of his commentaries and responsa saw eventual publication. His son, MOSES BEN JOSEPH DI TRANI, THE ELDER (b. Salonika, 1505; d. Jerusalem, 1585), was a rabbi and author. He studied with his uncle Aaron in Adrianople, and was made rabbi of Safed in 1525. Ten years later he went to Jerusalem. In addition to *Beth Elohim* (1576), a moral treatise, Moses ben Joseph di Trani was author of numerous commentaries and responsa.

JOSEPH BEN MOSES BEN JOSEPH DI TRANI, THE YOUNGER (b. Safed, Palestine, 1573; d. Constantinople, 1644) was the son of Moses ben Joseph di Trani. He studied in Egypt with his father's brother Solomon di Trani (d. 1587), then in Safed. In 1609 he became rabbi in Constantinople. He wrote a collection of sermons.

TRANSJORDAN (Hebrew *Eber Hayarden*), that part of Palestine which lies east of the river Jordan; it is bounded on the north by Syria, on the east by the desert, and on the south by the Arab district of Nejd. In Biblical times it was occupied by the tribes of Reuben, Gad and half of Manasseh. During the Hellenistic period the district was known as Perea, and was occupied by both Greek and Jewish settlers; it was part of the kingdom of the Maccabees and of Herod and his descendants. During the Roman period and after the Arab conquest (7th cent.) Arab immigrants entered Transjordan, and by the 20th cent. the population was almost purely Arab.

The question of the Transjordan has been a burning issue in Jewish affairs ever since Palestine was awarded to England as a mandate at the end of the first World War. It is the claim of the Jews that Transjordan, as an integral part of Palestine, must be regarded as part of any Jewish homeland to be erected in that country. The British government, on the other hand, has favored the claims of the Arabs, who constitute almost all of the 300,000 population of the district. In 1919 and 1920 Transjordan was part of the Syrian Arab kingdom established by Feisul in Damascus. In 1923 Emir Abdullah, brother of Feisul, was recognized as native sovereign of Transjordan under the Mandate; as a result of this, Jewish settlement in Transjordan has been practically prohibited. Zionists feel that this constitutes a serious limitation on the possibilities of Palestine's absorbing the numerous Jewish refugees from the afflicted countries of Europe, and have protested against the ruling of the British government as contrary to the spirit of the Balfour Declaration. They further hold that Jewish immigration and cultivation could develop this comparatively barren region to the same productivity as that which it had in ancient times.

TRANSLATIONS. 1. Introduction. The story of Jewish translations has for its stage the many lands in which the Jews lived; the time is the duration of their history from antiquity to the present; the characters are the leaders of thought and science. The central theme is human progress through the expansion of literature and science, and the course of the action is the infiltration of the world's thoughts into the Jewish mind and, conversely, the dissemination of Hebrew wisdom among other peoples. Behind each language stood a different civilization. Hence the translations mirror the impact of new types of individuals and new ideologies upon the Jews. Whether the translations were from Hebrew into other languages or the reverse, they definitely were indicative of a rationalistic and universalizing trend in Israel and in history. This process offers one more proof of the cultural unity of Jews and non-Jews. It involved the exchange of intellectual values which did credit to both groups and were to their benefit. On the part of the Jew it bespoke an eager and alert mentality and an earnest desire to work in harmony intellectually with other peoples. It showed the ability of the Jew to acclimatize himself to new eras and countries. Had the Jew been satisfied to sever himself completely as a social group from the outside world, as his Law required, or as a political group, as the laws of the state demanded, it is doubtful whether he would have survived. Yet despite his religious isolation and inferior civic position, the Jew possessed a scientific and literary tie between himself and the larger community and this made him important. Functionally, then, translations enhanced the value of the Jew and aided his survival by giving him an opportunity to meet non-Jews on common ground.

The gain was not all on one side. Translations from Hebrew had been made for the instruction and enjoyment of Christian rulers, theologians and scientists who, searching for truth, for support of their doctrines and hypotheses, were fascinated by the originality and elegance of Hebrew writings and sought to bring Hebrew wisdom to the attention of the larger world. Whether the motive was purely academic, scientific or theological, the strengthening of the Church by deriving "evidences" from Jewish sources, the result was that Hebrew culture did percolate into the world's thought. Often such translations were destined to be intermediary steps in the transmission of Greek-Arabic knowledge to the Western and modern world.

The most obvious reason for translating was the desire or need to popularize the original, to make its contents intelligible and available to the widest possible reading public. The migration of peoples—as witness the case of the Jews—forces a change of language; hence the need of rendering the former literature into new tongues. A language, too, undergoes change. It may become archaic or classical, losing its elasticity and hence its comprehensibility. It will accordingly be used by a limited group. Yet its literature may contain facts and ideas of permanent and universal value.

2. The Earliest Translations. The earliest cluster of translations centered around the Hebrew Bible. Translations were made into several Aramaic versions, of which the best known is the Targum Onkelos, and into various Greek versions, notably the Septuagint. In both groups the translations answered the spontaneous need of those who did not speak Hebrew for the knowledge of the sacred books. The Jews of Palestine and the neighboring countries spoke Aramaic, not Hebrew, in the time of the Second Commonwealth (5th cent. B.C.E. to 1st cent. C.E.), while others in Egypt and Greek lands spoke Greek. Under such conditions, sheer educational necessity demanded the making of translations into the vernacular. Furthermore, since Greek civilization had a brilliant record of philosophers, historians and poets, the natural defensive

impulse was stirred to present the inspired literature of Israel's genius to non-Jews, and this could best be achieved by reproducing the Torah in Greek.

A strange situation is connected with the translation of a type of quasi-sacred books, called Apocrypha and Apocalypse, written between the Old and the New Testament. These books stem from Jewish life and thought and are an outgrowth of the Hebrew Bible; most of them appear to have been written in Hebrew or Aramaic, but they are preserved for us today in Greek, Latin and still other versions, proof that the original books had been withdrawn from circulation because their ideas were unpopular or unacceptable to the synagogue authorities, or that the original languages had lost their vitality and had to be superseded by languages that were in wider use, or in vogue in certain circles.

3. Translations from Arabic into Hebrew. In the Talmudic and early Gaonic periods Jewish culture was one-sided and self-sufficient, concerned mainly with its own Law and its elaborations. So-called alien science did not intrude and translations were therefore lacking. The change came when the Arabs in the Orient and in Spain emerged as a tremendous intellectual force. And this emergence coincided with the growth of large Jewish communities in the Arabian as well as in the Christian countries of Europe. By association Jews were stimulated to pursue a program of liberal studies. An exchange of spiritual and intellectual riches between the Jews and their neighbors occurred and this exchange created the most fertile period in Jewish translations. For science and philosophy, like the air, are universal. The national and religious groups shared the same knowledge. Each was unselfish. Living among the Arabs in Western Asia and Western Europe, speaking their language and using their books, the Jews wrote readily in Arabic on medicine, philosophy, mathematics and Bible.

This rich and varied literature, whether written by Jews or Moors, was sooner or later done into Hebrew by Jewish savants. The ancient and holy Hebrew language could fittingly embody such useful universal knowledge as was current. Although Hebrew had ceased as a spoken language, it was still familiar to most Jews as the medium of the prayer-book, the Bible, rabbinical writings and poetry. Scholars could employ it skillfully for literary and learned purposes. Much of this alien knowledge deserved to become a part of Jewish intellectualism and it could definitely be part of the literature if clothed in Hebrew garb. It should be remembered, too, that large communities, to which Arabic was not known, were flourishing in Germany and France. Only through Hebrew versions could this valuable knowledge be transmitted to them. The foresight of Jewish scholars, also, accounts for the vigorous translation activity. The power and prestige of the Arabs began to wane. Christianity was displacing Islam in Europe, and it was inevitable that Jews in Europe would cease to speak and write Arabic. Fearing that the immense treasures of Arabic-Jewish thought might be lost to posterity, they wisely preserved them in Hebrew translations.

In the 13th cent. Arab civilization had lost its lustre and was soon to vanish completely from Europe. The Catholic Church meanwhile had developed a culture called scholasticism, using Latin as its language. In addition to treatises on Christian theology, the scholastics wrote on all the sciences. As the Romance languages came into general use, Latin was more and more confined to the lecture-hall and the church. The Jewish motto, democratic and educational, derived from *Psalms,* was: "From all my teachers have I gotten wisdom." Israel's savants eagerly perused the new writings, desiring to assimilate them to the earlier intellectual treasures, to give scholasticism's scientific method currency among learned Jews; this they did by translating Latin texts into Hebrew.

Alongside of their rabbinical studies, versatile Jews devoted themselves to the sciences, especially medicine, astronomy and philosophy. Some were scientists exclusively. A great many became physicians of note. They attended the academies and universities, or received private instruction. Rashdall, the historian of medieval universities, maintains that Jews in 12th cent. France had their own medical college. To establish the proper medical and scientific training for ambitious Jews it was educationally desirable to translate the standard books into Hebrew.

4. Scope of the Work. The centers of this activity were the Spanish cities of Toledo and Barcelona, the Provençal cities of Narbonne, Lunel, Montpellier and Béziers, and Naples in Italy. These workers translated all the Arabic writings of Jews as well as those of Averroes, Alghazali, Avicenna, Alfarabi, Alrazi, Honain ibn Ishak and numerous others. Included in the writings of these Arabs were their reproductions into Arabic of Aristotle, Galen, Hippocrates and other Greek writers. In greatest demand was medicine, then came logic and rhetoric, creation and creator, mathematics, astronomy, reason versus revelation. This extensive work of translation into Hebrew reflects the attraction of foreign civilization for the Jewish spirit. There was also a notable reverse process, though not equal in vigor to the former, of rendering Hebrew writings into Arabic and Latin. This reached its highest point toward the close of the Middle Ages and among the Humanists, the Church leaders and university professors of the 15th to 16th centuries. Hebrew then assumed the importance of a classical language, as valuable as Greek or Latin. In the intellectual revolutions of those centuries leaders of thought delved into classic lore, into antiquities, to select that which was of permanent merit. Hence many of the cherished and popular writings of Hebrew scholars, based on the Bible, were done into Latin to serve as examples of the distinctive wisdom of Israel and for the enlightenment of Christian teachers and students. It must be admitted that in some cases the motive behind the translation was anti-Semitic.

A few examples will illustrate these multiple translations. Ptolemy's *Almagest,* written in Greek in the 2nd cent., was the accepted textbook of astronomy until Copernicus. It was turned into Arabic by a Jew, Sahl al-Tabari, about 800; in 1230 Jacob Anatoli translated it from Arabic into Hebrew. A direct Latin translation from the Greek was made in 1117 by Gerard of Cremona. A similar course befell the works of the three foremost Jewish philosophers. The *Emunoth Vedeoth* of Saadia was written in Arabic at Baghdad in 933, translated into Hebrew by Judah ibn Tibbon (Lunel, 1186) and thence into Latin by Gagnier (Oxford, 1717). The *Kuzari* of Judah Halevi was written in Arabic in the 11th cent. and translated into Hebrew by Judah ibn Tibbon (Lunel, 1167); another Hebrew version was made by Judah ibn Cardinal (about 1211). Johannes Buxtorf translated the Hebrew into Latin (Basel, 1660). The *Guide to the Perplexed* (*Moreh Nebuchim*) of Maimonides appeared in Arabic in 1190, and was rendered into Hebrew by Samuel ibn Tibbon (Arles, 1204) and, a few years later, by Judah Alharizi. The latter was translated the same century into Latin and was used by the scholastics. Johannes Buxtorf made another Latin version (Basel, 1629).

An odd development is connected with Solomon ibn

Gabirol, Spanish Jewish poet and thinker of the 11th cent. He wrote a philosophic book in Arabic which was translated into Latin in 1150. A Hebrew epitome was made by Shemtob ibn Falaquera. Strangely enough, the Arabic original and the Hebrew version fell out of sight. In its Latin form, *Fons Vitae,* it was hailed by the Church as a valuable scholastic treatise, and its author, Avicebron, was assumed to have been a Christian scholastic. It was not until the 19th cent. that certain manuscripts were discovered which led to the identification of Avicebron with Solomon ibn Gabirol.

Certain kings commissioned Jews to prepare translations, as did Frederick II of Sicily in the case of Jacob Anatoli, who was the first to translate Averroes' commentaries on the vast Aristotelian system. Charles of Anjou engaged Moses Farachi (Faragut) in 1279 to translate the largest encyclopedia of Greco-Arabic medicine, by Alrazi, from Arabic into Latin. In the same century King Alfonso X of Castile and Leon had a group of Jewish translators who turned Arab scientific works, especially those on astronomy and medicine, into Spanish, from which translations into Latin and Italian were then made.

Obviously this translation activity had a professional and official character, and this explains the imposing amount of work done by Kalonymus ben Kalonymus, the Ibn Tibbon family, Leone Romano and others.

5. The Italian Jewish Humanists. When, due to persecution and expulsion, this type of learning declined among the Jews of France, Provence and Spain, the philosophic torch was carried forward by such enlightened and scientific-minded Jews of Italy as Elijah Delmedigo, Jacob Mantino, Azariah Dei Rossi and Joseph Delmedigo, the first two translating from Hebrew into Latin, and the other two from Latin into Hebrew. These scholars were encouraged by the Italian humanists. In Germany, Netherlands and England from the 16th to the 18th centuries, Christian Hebraists set themselves the serious task of translating ancient and medieval Hebrew texts into Latin.

6. Nineteenth Century Enlightenment. The 19th cent. was a turning point in Jewish civilization. In Germany, Russia and Palestine a fresh opportunity had come for the development of the Jewish spirit. Germany's great philosophers and littérateurs had inspired the Jews. Germany became the home of the modern Science of Judaism. Scholars examined minutely the history of Israel and evaluated the character of the entire Jewish intellectual heritage. Talented, imaginative writers described the dark and bright sides of Jewish social life. The bulk of this literature was translated into Hebrew to serve as a part of the cultural and scientific renaissance of the Jewish people in Palestine. Hebrew was revived as a spoken, as well as a literary language among the colonists. In the establishment of a new economic and spiritual life it was desirable to utilize Hebrew. In the way of knowledge, nothing less than the most advanced European thought and science could be introduced into Palestine, and the best of European literature and the one which had the largest amount of Jewish content in it was the German. This called for the translation of German writings into Hebrew. Not only the writings of Jews but also those of such Christians as Goethe, Lessing, Schiller, Kant and Leibniz, were translated.

With the opening of the Hebrew University on Mt. Scopus near Jerusalem a new emphasis was placed on science and the humanities and a new cycle began of translation of ancient and modern classics.

The rationalistic and civilizing force thus far described explains also the vigorous translation of English literature into Hebrew. In this the enlightenment (Haskalah) in Russia in the 19th cent., as well as the Palestinian Renaissance, had a share. Intellectual Jewry in Russia became enamored of philosophy, history and science, but cultivated belles-lettres. Indeed the first Hebrew novels were written in Russia and Hebrew poetry flourished there. The widened horizon of these freedom-loving and intelligent persons included also space for Matthew Arnold, Thomas Carlyle, Charles Dickens, Conan Doyle, Rudyard Kipling, John Milton, William Shakespeare, Alfred Lord Tennyson, Oscar Wilde, Mark Twain, James Fenimore Cooper and Ralph Waldo Emerson, hence the translations of the works of these and other writers.

In the 20th cent. translation was still being actively pursued by Jews, with the United States and Palestine as the centers. The spread of Yiddish as a scientific and literary vehicle has stimulated translations of the world's best literature, especially English and French, into it. Leading Yiddish writers suggest that translations from foreign languages hold greater promise than original productions. Likewise, one should not underestimate the literary and educational effect upon English-speaking persons of the English versions of Yiddish novels, as, for example, Sholom Asch's *The Three Cities* and *The Nazarene,* and I. J. Singer's *The Brothers Ashkenazi.*

The following is a list of the chief Jewish translators, arranged according to the particular field of their work:

ARABIC INTO HEBREW

Abraham ben Samuel Hasdai.
Abraham ibn Ezra.
Estori Farhi.
Ibn Vives al-Lorqui.
Isaac Albalag.
Isaac ben Joseph ibn Pulgar.
Isaac ben Nathan of Cordova.
Isaac ben Reuben Albargeloni.
Jacob Anatoli(o).
Jacob ben Eleazar.
Jacob ben Machir ibn Tibbon.
Jacob ibn Abbasi.
Joseph Kimhi.
Judah Alharizi.
Judah ibn Tibbon.
Kalonymus ben Kalonymus.
Moses ben Samuel Hakohen ibn Gikatilla.
Moses ben Joseph of Lucena.
Moses de Beaucaire.
Moses Galina.
Moses ibn Tibbon.
Nahum Maarabi.
Nathan Hameati.
Samuel ben Judah Males.
Samuel ibn Tibbon.
Samuel Motot.
Shemtob ben Isaac.
Shemtob ibn Falaquera.
Solomon Dapiera.
Solomon ibn Ayyub.
Solomon ibn Patir.
Todros Todrosi.
Zerahiah ben Isaac ben Shealtiel Gracian (Hen).

LATIN INTO HEBREW

Abraham Abigdor ben Meshullam.
Abraham Solomon Catalan.
Abu al-Khair.
Azariah ben Joseph ben Abba Mari.
Baruch ben Isaac ibn Yaush.
Berechiah ben Natronai Krespia.
David ibn Bilia.
Elijah ben Joseph Habillo.
Elijah Delmedigo.
Estori Farhi.
Hezekiah ben Halafta.
Hillel ben Samuel.
Israel Caslari.
Joseph Zahalon.
Judah Leon Brieli.
Judah Nathan En Bongodas.
Judah Shalom ben Samuel.
Leon de Modena.
Leon Joseph of Carcassonne.
Leone Romano.
Meir Alguadez.
Mordecai Finzi.
Moses ben Abraham of Nîmes.
Moses ben Mazliah.
Moses ibn Habib.
Phinehas ben Zebi ben Nathaneel.
Salomon Rubin.
Samuel ben Jacob of Capua.
Samuel Benveniste.
Solomon ben Abraham Abigdor.
Solomon ben Moses Melgueri.
Todros ben Moses Yomtob.

HEBREW INTO LATIN (including non-Jews)

Abraham Cohen de Herrera.
Abraham de Balmes.
Aegidius de Viterbo
Giulio Bartolocci.
H. J. Bashuysen.
Elijah Delmedigo.
Flavius Mithridates.
Jacob Mantino.
Johannes Buxtorf I and II.
Johann C. Wagenseil.
John of Capua.
Kalonymus ben Judah.
Ludwig Compiegne de Weil.
Moses Alatino.
Paul Fagius.

Pico della Mirandola.
Johann Reuchlin.
Robertus Claverius.
Sebastian Münster.
Thomas Hyde.
Johann C. Wolf.

FROM HEBREW INTO MODERN LANGUAGES AND VICE VERSA

Jacob Abendana.
Eliakim Carmoly.
David Frischman.
Abraham Shalom Friedberg.
Michael Friedländer.

TRANSYLVANIA (in German, **Siebenbürgen;** in Hungarian, **Erdély;** in Roumanian, **Ardeal**), for many centuries the easternmost province of Hungary. From 1526 to 1691 it was an independent principality; subsequently it was governed by Austria, and in 1868 it was reincorporated into Hungary. The Trianon peace treaty (June 4, 1920) awarded it to Roumania together with other districts of Hungary. By the award of Vienna (August 31, 1940), the northern half of Transylvania was returned to Hungary.

Jews from the Balkans early found their way to Transylvania, although there is no documentary evidence to bear out traditions of their arrival there after the battle of Salamis or after the victory of the Dacians over the Romans. The villages of Kozárd and Kozárvár are held to have been founded by Khazars, but it is uncertain whether there were any of the Jewish faith among them.

In modern times the first large group of Jewish immigrants is assumed to have arrived in Transylvania at the end of the 15th cent. and to have consisted of Spanish refugees from Turkey. According to Ernő Marton (*A zsidó nemzet Erdélyben,* 1922), a Beth Din functioned in Károlyfehérvár (later Gyulafehérvár; under Roumania, Alba Julia) in 1519.

Under the reign of Kristóf Báthory, the delegates to the national convention in Kolozsvár in 1578 complained of the many Greek merchants and of "even a kind of Jewish merchants who continue to flood the markets despite previous ordinances." These merchants, bringing goods from Turkey and purchasing the products of the country, were permitted to visit certain markets only, chiefly that of Károlyfehérvár, and led a very precarious life, being exposed to the loss of their merchandise, money and even lives at the hands of marauders.

The liberal prince, Gábor Bethlen, in 1623 permitted Jews from Turkey to settle also in cities outside of Károlyfehérvár, giving them freedom of religion and exempting them from wearing distinctive clothing. Under the rule of György Rákóczi II (1648-57) the privileges, specifically the right of residence, granted by Bethlen were revoked, yet in spite of the jealousies of the city councillors and Saxon merchants, the Jews settled in several parts of the land, their status being one of toleration down to 1845. Aside from occasional local outbursts, such as the blood accusation of Szilágypér-Tasnád in 1791, the Jews lived peacefully until 1867, when their history merged in that of Hungary.

The Jews of Transylvania at first were taxable only by their protector, the prince, but they were also asked to contribute their share to the national budget for special purposes. In 1662 the national convention decreed that resident Jews should pay one-tenth and visiting Jews one-hundredth of their wealth into the national treasury. Their spiritual life was at first under the guidance of the Sephardic rabbis of Belgrade. Jewish scholarship was non-existent, and religious life was at a low mark. The first rabbis of the Jewish community of Transylvania, with Gyulafehérvár as their residence, were called from Belgrade. Gradually the Sephardic element was replaced by immigrants from Poland and Moldavia; David ben Benjamin, Parnas of Gyulafehérvár, was born (about 1710) of Polish parents, and in 1761 Rabbi Benjamin Zeev Wolf was called from Cracow. At this time Gyulafehérvár had two synagogues, one Sephardic and one Ashkenazic. The office of chief rabbi existed until 1869.

Under Roumanian Rule. Although the rights of minorities were established by the Treaty of Paris (December 9, 1919), Roumania did not recognize the right of the Jews of Transylvania to educate their children in the Hungarian tongue. Furthermore, by the law of February 23, 1924, many Jews in Transylvania were deprived of the Roumanian citizenship which they had acquired under the peace treaty, and loss of citizenship meant loss of the right to work. This pro-Magyar attitude of the Jews was answered by pogroms instigated by the anti-Semitic Roumanian students (Nagyvárad, 1929). On July 4, 1930, 132 Jewish-owned dwellings were set on fire in the village of Borsa. In 1931 a prominent Jew of Kolozsvár, Béla Hexner, was sentenced to a prison term of six months for an article encouraging the Jews to declare their Hungarian nationality in the census of 1930. In this census 111,000 Jews out of the total of 193,000 gave their nationality as Jewish, between 70,000 and 75,000 as Hungarian (no exact figures are available in this respect), and only the rest as Roumanian or other (*Magyar Zsidók Lapja,* April 17, 1941, p. 7).

Zionism found strong support in many communities, notably in Kolozsvár, where Zionist papers were published and various activities of nationalistic character were launched.

The Orthodox communities of Transylvania and Banat, numbering eighty, and the neologue (progressive) and status quo communities, numbering thirty-one, established two distinct provincial federations, the central bureau of the Orthodox (founded in 1921) being at Beszterce and the central office of the status quo and neologue (founded in 1922) being at Kolozsvár. In 1929 these types of communities were recognized by the state for the entire kingdom of Roumania, in addition to a third one, the community of Sephardic rite. Orthodox Jewry in Transylvania maintained a number of Yeshivas. The progressive communities refused to induct rabbis or functionaries trained at Bucharest, since they wished to avoid their own Roumanization, and preferred to establish courses for Shohets, cantors and teachers at Targu Mureș.

Transylvanian Jews in the Roumanian Parliament were: Senator Theodore Fischer, president of the National Jewish Party of Transylvania; and the deputies Josef Fischer, Ernő Marton and Nándor Hegedűs (Hungarian Minority Party).

Under Nazi Rule. All civil and political rights were lost by the Jews of Transylvania after the advent of Nazi governments in Roumania, beginning in June, 1940. The Vienna award (August 31, 1940) gave the northern half of Transylvania to Hungary, while the southern part remained under Roumanian sovereignty. The Jews living in the latter territory were destined for deportation to Transnistria (Ukraine) in 1942.

TRATTNER, ERNEST ROBERT, rabbi, author and lecturer, b. Denver, Col., 1898. He received the M.A. degree from Teachers College, Columbia University, in 1932. Trattner served as rabbi at Temple Beth Israel, San Diego, Cal. (1920-21), Temple Emanuel, Los Angeles (1921-30), Temple Mt. Neboh, New York city (1930-36), and in 1937 was reappointed rabbi of Temple Emanuel, Los Angeles.

Trattner's writings include: *Unraveling the Book of Books* (1929), which was regarded by Christian clergymen as the most authoritative volume on how the Bible was written; *The Autobiography of God* (1930); *As a Jew Sees Jesus* (1931); *Architects of Ideas* (1938; reissued under the title of *Story of the World's Great Thinkers,* 1942); *Biography of Omar Khayyam* (1940). Trattner founded the *Jewish Community News,* of San Diego, and the *California Jewish Review,* of Los Angeles. His brother, Harry Robert Trattner (b. Denver, 1896), was a noted surgeon.

TRAUBE, LUDWIG, physician, b. Ratibor, Silesia, Germany, 1816; d. Berlin, 1876. He became lecturer in Berlin (1848). In spite of being a Jew he was the first civilian professor at the Charité Hospital, Berlin (at that time a training school mostly for army physicians). In 1853 he became director of the second medical clinic of the Charité, and in 1857 was made assistant professor of internal medicine. He was also head physician of the indoor patient division of the Berlin Jewish community hospital.

Traube was the founder of experimental pathology. He started the exact taking of temperature in attending the sick. The science of therapeutics owes much to him because of his first exact research on the practical use of digitalis in heart disease. The theory of fever was made an exact science for the first time by him, and there is hardly any phase of internal medicine in which he did no research; however, most of his work lies in the field of lungs, kidneys and heart.

Traube's published writings include: *Über den Zusammenhang von Herz- und Nierenkrankheiten* (1856); *Die Symptome der Krankheiten des Respirations- und Circulationsapparates* (1867); *Gesammelte Beiträge zur Pathologie und Physiologie* (3 vols., 1871-78). In collaboration with Virchow and Reinhardt, he published *Beiträge zur experimentellen Pathologie* (1846-47).

Lit.: Pagel, *Biographisches Lexikon hervorragender Ärzte des neunzehnten Jahrhunderts;* Leyden, *Gedächtnisrede auf Ludwig Traube* (1876); Freund, *Gedächtnisrede auf Ludwig Traube* (1876); Kagan, Solomon R., *Leaders of Medicine* (1941) 83, 87.

TRAUBE, LUDWIG, philologist, b. Berlin, 1861; d. Munich, Germany, 1907. He was a son of the physician Ludwig Traube. In 1888 he started his career at the University of Munich as instructor of classical and medieval philology; he was made associate professor in 1904 after long disputes because of his Jewish faith. Traube was an outstanding scholar of the Latin literature of the Middle Ages, and it was through him that paleography was first recognized as of essential use in the study of history and the history of civilization.

His most notable writings were *Poetae latini aevi Carolini* (in *Monumenta Germaniae,* 2 vols., 1886 and 1896) and *Nomina Sacra, Versuch einer Geschichte der christlichen Kürzung* (in *Quellen und Untersuchungen zur lateinischen Philologie des Mittelalters,* vol. 2, 1907). After his death his lectures and articles were published by Franz Boll and P. Lehmann (vols. 1 and 2, 1911; vol. 3, 1920).

Lit.: Gudeman, *Grundriss der Geschichte der klassischen Philologie* (1909) 262-63.

TRAUBEL, HORACE L., writer; biographer of Walt Whitman, b. Camden, N. J., 1858; d. Bon Echo, Ontario, Canada, 1919. His father, Maurice Henry Traubel, a printer, engraver and lithographer, was a Jewish immigrant from Germany; his mother was a non-Jewish German. Traubel called himself a "half-breed."

Traubel was in turn a newsboy, newspaperman, printer's devil, compositor, factory paymaster and bank clerk until, in 1890, he founded at Philadelphia a political-literary monthly, *The Conservator,* which he edited until his death (1919). He was also one of the editors of *The Artsman* (1903-7). All his life he endured poverty heroically that he might be able to express his opinions dependent on no one. Although he never took an active part in politics, he was a Marxian Socialist, an ardent supporter of Eugene V. Debs, and he sympathized with the Bolshevist revolution of 1917. Nevertheless he believed the United States government to be the best government in the world, because it "gives the majority freedom to express itself. . . ."

His main accomplishment was his Boswellian record of the poet Walt Whitman. When Whitman settled in Camden (1873), the home of Maurice Henry Traubel was a sort of haven for him. Horace L. Traubel became a close friend of Whitman, whom he visited every day, especially in the poet's last years, helping him in many ways, saving many precious documents and manuscripts and recording his conversations with the aged poet. Anticipating that Traubel would write about him, Whitman admonished him: "You will be speaking of me many a time after I am dead; do not be afraid to tell the truth, good or bad, for or against, only be afraid not to tell the truth." "I promise not to send you down in history wearing another man's clothes," was Traubel's reply. Whitman: "That's all I could ask, Horace."

Traubel edited several works by and on his friend, but his main work was *With Walt Whitman in Camden* (vol. 1, 1905; vol. 2, 1908; vol. 3, 1914), a diary of his visits to Whitman, beginning March 28, 1888. (The greater part of his complete diary, however, remained unpublished.) Together with Thomas B. Harned, Traubel was the literary executor of Whitman; he was also secretary of the Walt Whitman Fellowship.

Traubel published *Chants Communal* (1904), radical prose pieces, and *Optimos* (1910), poems in which, as in all his writings, he proved himself to be "the spiritual son" of Whitman. Traubel's poem, "O my dear Comrade," is a moving tribute to the "good gray poet."

TRAVELERS AND TRAVEL LITERATURE. The urge to wander (Wanderlust) and a thirst for knowledge, not less than mercantile interests and political reasons, drove many Jews to undertake great journeys as early as in the Persian period (4th cent. B.C.E.). An illustration of this fact is furnished by the travels made by Akiba and his colleagues. The dispersion of the Jews over practically the whole of the then inhabited world favored and facilitated the making of such travels, which in the Middle Ages, besides the infrequent letters and the epistles of the scholars which were written or exchanged, formed the sole opportunity for exchanges of thought among Jews.

At the time of Charlemagne Jewish merchants, called Radanites, regularly undertook long journeys from Europe to the Orient, from the land of the Franks to China. The emperor himself sent a deputation to Caliph Harun al-Rashid, in which he had a Jew named Isaac participate; Isaac was the only member of this deputation to return from the journey and to bring back a report to Charlemagne. In the 9th cent. Eldad Hadani recounts the adventures and experiences he had in the course of his wanderings, which are supposed to have taken him to the Far East. However, the historical value of his reports is disputed.

About the year 970 the caliph of Cordova sent to Germany a deputation in which a Jew named Ibrahim ibn Yakub took part. The latter wrote an extremely interesting report of this journey, which was translated into German by Georg Jakob in 1911. During the period from about 1165 to 1173 Benjamin of Tudela, proceeding from Spain, traveled through Italy, Greece, Syria, Palestine, Mesopotamia, and Persia; his journey was, in all probability, devoted not merely to study, but perhaps also had a commercial purpose. His travel descriptions, embraced in a volume called *Massaoth shel Rabbi Binyamin* (translated into German from the original Hebrew by Grünhut), are of considerable importance for the knowledge of the Jewish communities existing at that time.

Several years later (about 1178-85), perhaps motivated by the desire to bring to the Jews persecuted during the Crusades information regarding a region suitable for Jewish settlement, Pethahiah of Regensburg, a German Jew, undertook a journey through Poland, Russia, the Crimea, the kingdom of the Khazars, Armenia, Media, Babylonia, Mesopotamia, Syria and Palestine.

The number of Jewish travelers increased greatly under the pressure of events and circumstances. The heightened longing for Palestine provided a constant incentive toward long journeys. A considerable portion of the travel literature contains accounts of the famous tombs and of other sites and places which were regarded as holy. Many travelers sought for the Lost Ten Tribes of Israel, about whom the most adventuresome and romantic tales were told. Many others among their ranks were animated merely by the desire to see new sights and scenes and to experience adventures. Of especial interest are the travels of Abraham ibn Ezra, who utilized in his writings many of the experiences which he had on these travels; Judah al-Harizi; and Estori Hafarhi, who traveled through Palestine for a period of seven years and on the basis of his experiences wrote his valuable work on the topography of Palestine, *Kaftor Vaferah*.

In the 15th and 16th centuries, the age of discovery, a number of Jews played an important role as sailors and navigators in connection with the voyages of discovery of the Portuguese and of the English. Jaime IV, the last king of Mallorca, testified, in 1334, that the Jew Yusuf Faquin of Barcelona had sailed over the entire then known world. Vasco da Gama, on the coast of India, was greeted by the Jewish pilot Gaspard da Gama, who had been made a knight by King Manuel of Portugal; Gaspard da Gama had done a considerable amount of sailing before this time, and was at that time rendering important services as pilot to the Portuguese fleets following Vasco da Gama. There were several Jews in the fleet of Columbus, whose voyage was perhaps financed by Marranos.

Travelers of the modern period were the world travelers Tobiah ben Moses Cohen, who wrote down the observations made in the course of his journeys in the medical-philosophical book *Maaseh Tobiah;* Samuel Aaron Romanelli; and Phinehas Elijah ben Meir of Vilna, who published his travel descriptions in his encyclopedic work *Sefer Haberith*. Further journeys to the Orient, Palestine and Africa were undertaken by Simon Geldern (1720-74), a granduncle of Heinrich Heine, whose interesting memoirs were published in David Kaufmann's *Aus Heinrich Heines Ahnensaal*. Israel Joseph (or Israel ben Joseph; 1818-64), of Falticeni, Moldavia (Roumania), known as Benjamin II (Benjamin of Tudela was the "first" Benjamin), gained the favor of Alexander von Humboldt and of the geographer Ritter, and attained to fame during the 19th cent.

Other travelers deserving of mention are the Asiatic traveler Tchorny or Czorny (the spelling Chorny is incorrect) and Joseph Judah of Russia (1837-80), whose travel reports were published by Harkavy. In addition, countless Jewish investigators and researchers made journeys in the 19th cent. to the Near East, Africa, Central Asia, and the Arctic, among them Hermann Burchardt, Eduard Glaser, Emin Pasha (Eduard Schnitzer), Isaac Israel Hayes and Poliakov. The names of many of these will be found in the articles EXPLORATION AND EXPLORERS and MEMOIRS.

TRAVELERS, PRAYER OF, *see* PRAYERS, SPECIAL.

TRAVELING, PROHIBITION OF ON SABBATH, *see* WORK PROHIBITED ON SABBATH.

TREBITSCH (TREBITSCH-LINCOLN), IGNATZ, adventurer, one of the most notorious characters of the 20th cent., b. Budapest, 1879. The son of a Jewish grain merchant, he received a good religious and secular education. In 1898 he was converted to Christianity in Hamburg, Germany, by a Presbyterian missionary and placed in a seminary to prepare for the ministry; but, charged with immorality, he was expelled in 1900.

He was then sent to Montreal, Canada, where he acted as assistant to the Presbyterian missionary to the Jews of that city. In 1902 Trebitsch entered the employ of the Montreal branch of the London Jews Society, an Anglican organization, was ordained a minister in the Anglican Cathedral by

the Anglican archbishop of Montreal and dubbed Ignatius Timothy Trebitsch-Lincoln. In 1903 ill-health forced Trebitsch-Lincoln to accept a small parish in rural England. Several years later the Archbishop of Canterbury removed him from the ministry for appropriating parish funds.

Trebitsch-Lincoln next secured a position as secretary to B. Seebohm Rountree, English cocoa magnate. Influenced by Rountree, Trebitsch-Lincoln became a Quaker. With the help of his employer, he was elected, in 1910, to the House of Commons as an M.P. from Darlington. At this time he assumed the name of Ignatius T. Lincoln.

When the first World War broke out Lincoln was given a position in the post office as censor of foreign mail. Soon after beginning this task, he was accused of forgery and fled to the United States. He supported himself in that country by giving public lectures on his activities on the Continent and in England as a German spy, lurid, blood-curdling tales that were entirely fictitious. In 1916, at the request of the British government, he was returned to England, convicted of forgery, and sentenced to three years in jail. After completing this sentence he was deported to Hungary.

In Hungary he became involved in political intrigue. He attempted to organize a Rightist revolt against the Allied Powers, but the Hungarian extremists mistrusted him because of his Jewish parentage. Failing in Hungary, he went to Germany and associated himself with the militarist group of Wolfgang Kapp, who, in March, 1920, staged a dramatic putsch that gained control of the German government for a few days. During this farcical rebellion Trebitsch-Lincoln served as press chief for the rebels.

After the collapse of the Kapp revolt, Trebitsch-Lincoln again fled to the United States. During the next two years he was in and out of the hands of American customs officials so often that he has become almost a legendary character in the annals of Ellis Island.

In 1922 he went to China and succeeded in becoming one of the advisors of Marshal Wu Pei-Fu, anti-Japanese war lord. In 1925 the British gave him permission to return to England long enough to bid farewell to his son, John Lincoln, sentenced to hang for murdering a bartender. The return journey took too long. Upon arriving in Marseille, Trebitsch-Lincoln learned that his son had been hanged the day before. Overcome with grief, the father returned to China and entered a Buddhist monastery.

In 1927 Trebitsch-Lincoln went to the United States once more. He now announced himself as Chao Kung (a Chinese name meaning "light of the universe"), abbot of a Tibetan Buddhist monastery. It was his intention to convert the Western world to Buddhism. Unimpressed, American immigration officers ordered him to leave the country. For the next seven or eight years Chao Kung traveled about Europe on his evangelistic mission. Wherever he went, he left behind him unpaid hotel bills, disillusioned white "Buddhists" and irate police.

Returning to the Orient about 1935, he became ardently pro-Japanese and he was used by the Japanese as a propagandist among the Chinese. At the end of 1939 he again came to public notice by advocating a fantastic peace plan which called for the immediate resignation of the warring British, French, Italian and German governments. In 1943 the location and occupation of Abbot Chao Kung were unknown. Lajos Tarcai (of Cleveland), an erstwhile Socialist leader in Hungary, was a brother of Trebitsch.

The Tree of Life sustaining the souls of the righteous. From an Egyptian wall painting

TREBITSCH, SIEGFRIED, writer, b. Vienna, 1869. He wrote numerous psychological novels, some of which were greatly influenced by the teachings of Sigmund Freud. They include *Genesung* (1902); *Das Haus am Abhang* (1905); *Die Frau ohne Dienstag* (1918); *Renate Aldringen* (1929); and *Mord im Nebel* (1931). Trebitsch published also plays (*Frau Gittas Sühne,* 1920; *Der Geliebte,* 1922) and poetry (*Gedichte,* 1889). In 1936 he wrote *Heimkehr zum Ich,* a novel, and in 1934 a collection of his short stories appeared under the title of *Die Rache ist mein.*

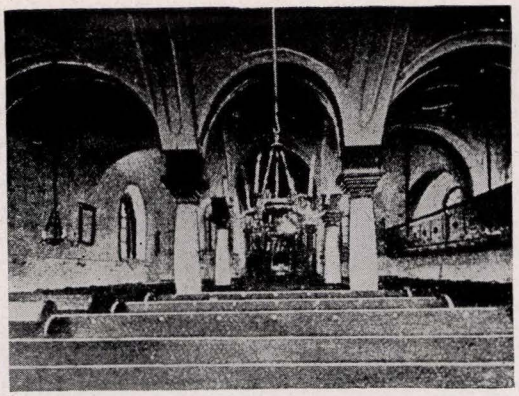
He achieved recognition primarily as the German translator of George Bernard Shaw; he translated also the French playwright, Georges Courteline. Like his stepbrother, Arthur Trebitsch, he was baptized. After the annexation of Austria by the Nazis he emigrated to Switzerland, where he was living in 1943.

TREE OF LIFE (*'etz hahayyim*). According to the story in *Gen.* 2 and 3, there were two special trees in the Garden of Eden in which God placed the first man and woman: the tree of life, and the tree of knowledge of good and evil. The fruit of the latter tree was expressly forbidden to the human pair, death being the penalty for disobedience; nothing is said about any prohibition of the fruit of the tree of life. However, when the man and woman did disobey, and ate of the fruit of the tree of knowledge, God banished them from the garden lest they eat of the fruit of the tree of life and thus avoid the consequences of their punishment. The story implies that the tree of life was comparatively inaccessible, but that the extra knowledge coming from the eating of the fruit of knowledge would have enabled man to find it. It is also possible that in the original story the serpent was represented as gaining immortality by eating of the tree of life; it was for this purpose that he had tricked the humans into eating the fatal fruit of the tree of knowledge.

The concept of the tree of life is found among many ancient peoples. The Babylonians called their capital Tintir, "wood of life"; in the holy grove of Eridu there was a tree of life and a tree of truth. The tree of life appears as a palm-tree on Babylonian and Assyrian monuments, and in the Gilgamesh epic as a cedar. In the Zoroastrian religion of the Persians the sacred tree was the homa, which grew in a garden from which all the waters of the earth flowed (cf. *Gen.* 2:10). It is represented as a vine; its fruit confers the gift of immortality and will bring about the resurrec-

tion of the dead. With the Hindus, the Kalpavriksha plant had the gift of immortality and eternal youth, as did the soma plant. The golden apples of the Hesperides, mentioned in Greek legends, were the food of the gods and bestowed immortality; the same conception appears in Norse mythology in the account of the youth- and life-bringing apples of Iduna and of the world ash-tree Yggdrasil.

The idea of the tree of life remained in Biblical poetry as a figure of speech, in the sense of revivification, joy and inspiration. Thus a wholesome tongue, desire fulfilled and the rewards of righteousness are all described as being a tree of life (*Prov.* 11:30; 13:12; 15:4). The best-known passage is that which describes wisdom as a tree of life (*Prov.* 3:18). Later, when wisdom was identified with Torah, the passage was incorporated into the liturgy of the reading from the Torah on Sabbaths and festivals, and the term *'etz hayyim* was given to the wooden rollers on which the Torah is wound.



Lit.: The Biblical commentaries to the passages cited; Crawley, Ernest, *The Tree of Life* (1905); Ameisenowa, Zofia, "The Tree of Life in Jewish Iconography," *Journal of the Warburg Institute,* vol. 2 (1939) 326-45.

TREE WORSHIP. Primitive peoples in various parts of the world have held that trees are inhabited by spirits who exert good or evil influences and must therefore be revered. There are many indications that such a belief existed among the ancient Canaanites and that it was adopted by the invading Israelites along with other elements of their religion and culture.

Several trees receive particular mention in the Bible, notably the terebinths of Mamre, near Hebron, where God appeared to Abraham (*Gen.* 12:6-7; 13:18; 18:1), the one in Ophrah where an angel appeared to Gideon (*Judges* 6:11, 19), and that under which Jacob buried idols (*Gen.* 35:4). Also there were the tamarisk-tree which Abraham planted at Beer-sheba (*Gen.* 21:33), the oak under which Joshua set up a Matzebah (*Josh.* 24:26), the palm-tree near Beth-el beneath which Deborah sat to give judgment (*Judges* 4:5), and the pomegranate-tree under which Saul tarried (*I Sam.* 14:2). The mythical trees of life and of the knowledge of good and evil in the Garden of Eden story (*Gen.* 2 and 3) should likewise be mentioned.

It seems to be no mere accident that revelations are so often associated with trees. Trees may have been thought of as the source of oracles by the Israelites, as they were by the Greeks; perhaps the names Elon Moreh, "the terebinth of the one who gives instruction" (*Gen.* 12:6), and Elon-meonenim, "the terebinth of those who practice soothsaying" (*Judges* 9:37), the incident of the mulberry-trees which warned David (*II Sam.* 5:24), and perhaps also the reference to the palm-tree of the judge Deborah and to the pomegranate-tree of King Saul beneath which possibly these two sat to give judgment also indicate that such was the case. The tree-oracle of Dodona, in Greece, is the classical example of this practice.

Most of these references indicate likewise the sacred character of these trees. This corresponds to what we know of the Asherah, the wooden post or tree trunk which was a seemingly indispensable part of the ancient Canaanite sanctuary, and to what the prophets tell us of the worship "upon every high hill and under every leafy tree" (*Jer.* 2:20). The Deuteronomic law prohibited the Asherah (*Deut.* 16:21) and ordered the destruction of those already in existence (*Deut.* 12:3). But tree-worship was a custom difficult to eradicate, and it has survived in many parts of the world down to the present day, although it disappeared among the Israelites after the Babylonian Exile.

Interior of the old synagogue in Trenčin

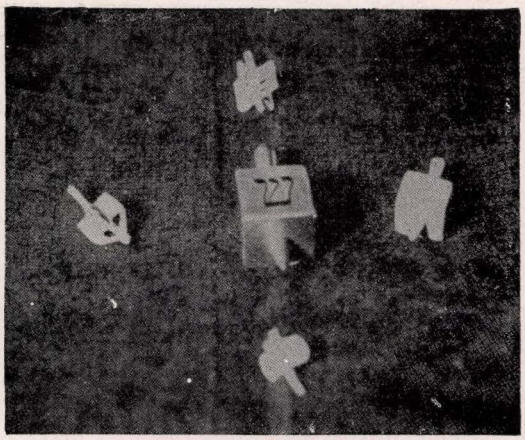
TREES, NEW YEAR FOR, *see* NEW YEAR FOR TREES.

TREFE, TREIFE (popular term for Terefah), *see* DIETARY LAWS.



TRENČIN (in Hungarian, Trencsén), city formerly in northwestern Hungary; from 1918 on it belonged to Czechoslovakia. It is believed that Jews of Bohemia, fleeing from the Crusaders, settled at Trenčin. About the year 1300 a Jew called Daniel acquired some land and a garden there with the approval of the city government. In 1663 Jews from Ungarisch-Brod, in Moravia, a city which was devastated by Hungarian rebels, made Trenčin one of their places of refuge, continuing, however, to pay taxes to their mother community, Ungarisch-Brod, until 1736, and remaining under the spiritual guidance of its rabbi until 1760. In that year they elected their first rabbi, David Kohn Hasid. One of his successors, Israel Hayim Leipnicker, approved of the Vienna edition of the Talmud of 1791. Ezekiel Löwy, who ministered to the community from 1827 to 1839, was the author of *Torath Yehezkeel.*

The first synagogue at Trenčin was built about the middle of the 18th cent.; other edifices were erected in 1790 and 1913.

The cultural standard of the community was high from the beginning. Jewish students are listed among the attendants of the local Gymnasium as early as the 17th cent. The census of the Jews in 1736 lists three teachers. A public school was erected by the community in 1857; previously many private schools, some of them offering instruction in secular subjects in addition to Jewish learning, had functioned there.

A tax roster of the Jews in the city and county of Trenčin in 1787 (in the Jewish Museum at Óbuda) lists eighty-two heads of families at Trenčin. In addition, 660 more Jewish families resided in that year in thirteen other communities of the county of Trenčin. The total fortune of these Jews was assessed at 98,890 gulden and, accordingly, their toleration tax for the year was 4,686 gulden.

Among the Jews in Trenčin county, several agricultural laborers, whose status was that of serfs, were listed in the rosters of Jews of 1831 to 1832 and of 1848.

Trendels, showing the shape and lettering

In the 19th and 20th centuries the community retained its Orthodox traditions. Among its rabbis at that time were Benjamin Fischer, subsequently rabbi at Pest, and Pinchas Keller. From 1918 to 1939 Trenčin belonged to the Czechoslovak Republic. The number of Jews living at Trenčin during that period averaged 1,500. From 1939 on Trenčin was under the sovereignty of Slovakia, a state dependent upon Nazi Germany, which during the ensuing years carried out a policy of spiritual and physical destruction toward the Jewish communities.

Lit.: Stein, Mayer, "Aus der Vergangenheit der Trenčiner Judengemeinde," *Judaica,* Nos. 23-24 (July-Aug., 1937) 11-13; Gálosi, Soma, "Die Judenschaft im Trentschiner Comitate im Jahre 1787," *ibid.;* Kemény, Aladár, "Magyar jobbágy zsidók," *A Magyar Zsidók Lapja,* Jan. 9, 1941, p. 4.

TRENDEL (also **Dredl**), a top used to play a game on such holidays as Hanukah and Purim. It is flattened on four sides, tapers to a point at the bottom, and has a spindle at the top which permits it to be twirled by the hand. The sides bear the four Hebrew letters: Nun, Gimel, He and Shin, popularly interpreted as *Nes gadol hayah sham* ("a great miracle happened there," referring to the festive occasion). The significance of these letters is as follows:

Nun: Nimm, "take" one object from the pile.
Shin: Shtell, "put" one object on the pile.
He: Halb, take "half" the pile.
Gimel: Ganz, take "all" the pile.

The objects used in playing the game are nuts, or similar trifles.

It has been suggested that the Trendel is a Jewish adaptation of ancient Roman dice-playing, cast into a form that was not regarded as objectionable. Roman dice throws were named after gods, the highest being Venus (Hebrew, Nogah) and the lowest Saturn (Hebrew, Shabbethai). This may be the reason why Nun is a winning, and Shin a losing spin of the Trendel.

TRENT AFFAIR, *see* SIMON OF TRENT.

TRENTON, county seat of Mercer County, New Jersey, and the capital of the state, with a total population of 124,697 (census of 1940), including 7,708 Jews (special census of 1942; a census taken in 1937 showed 7,191 Jews).

There were Jews temporarily resident in Trenton probably as early as the period from 1793 to late in 1799, when the scourge of yellow fever prevailed in Philadelphia, then the capital of the nation. These were mostly merchants who fled because of the epidemic. When the epidemic subsided, they returned to their homes. Jews were also temporary residents in the town from the advent of the 19th cent. up to the time of the founding of a permanent Jewish community.

Late in 1839, at a time when the *Emporium and True American* launched a daily issue, in addition to its established weekly issue, the noted physician, Daniel Levy Maduro Peixotto, came to Trenton as co-editor of the two publications. After three months the daily ceased publication for want of patronage. Peixotto then left Trenton for his home in New York city. During his short stay in the town he lived in the Government House (now Hotel Sterling), where he had an office and practiced medicine in conjunction with his newspaper duties.

In the late 1840's the weekly *Emporium and True American* was merged with *The Trenton Daily News.* Out of this merger came the revived *True American* which in 1853 came into the possession of Judge David Naar, a leader in the Jewish community.

The outbreak of the Civil War brought trying days to the *True American.* The conflict had its political side, of course, and the brilliant and fearless pen of Judge Naar, who was known as a "radical" Democrat or "Copperhead," did not hesitate to criticize the policy of the North towards the South. This aroused the ire of local citizens, especially the Republicans. Finding itself slowly losing its former popularity, especially during the critical time of war, the paper voluntarily suspended publication of its daily issue from August 24 to October 7, 1861. Judge Naar was actively connected with the paper until 1869.

The first noteworthy Jewish settler in Trenton was Simon Kahnweiler, manufacturer and merchant. His brothers, Emanuel and Leon Kahnweiler, who also settled in the city, were likewise engaged as manufacturers and merchants. Samuel Kahnweiler, who lived in the town from time to time, was a well-known pilot on the Delaware and Raritan Rivers. He was the son of Leon Kahnweiler. Simon Kahnweiler was one of the leaders who called the protest meeting held in the Trenton City Hall on April 17, 1848, by the Germans of the city to voice their objections to the anti-democratic and autocratic government which held sway in their native land. He organized one of the local military companies, and was captain of another similar organization.

In 1850, or probably earlier, there settled in the town Gustavus Cane, Moses Gold and members of the Lazarus Goldheim and Manuel Schloss families. They were closely followed in the 1850's by Ignatz Frankenstein, Simon Doneau, Morris Sanger, Marcus Marx, Isaac Wyman, Ephraim Kaufman, Marcus Aaron and the heads of the Rice, Lindheim, Rosenbaum, Rosenthal, Eisman, Naar and Peixotto families.

In the late 1850's and early 1860's came M. Dannenberg, Jacob Kahn, Henry Schoninger, Isaac Frank, the Mankos (David and Joseph) and other members of the Kahnweiler and Naar families. In the remaining years of the 1860's came Lanza Goldberg, Abram Rosenblatt, Simon Samler, Simon Weinberg, Abraham Solomon, Abraham Lowenstein, M. Bohm and others. It is of interest that the only Sephardic (Spanish Jewish) families living in Trenton at this early period were the Naars and the Peixottos, who were related; the rest were Ashkenazim (German Jews), who were also, in many cases, intermarried. In the 1880's and again in the 1900's there was a considerable immigration into Trenton of Jews from Russia, Poland and other parts of Europe.

Among the new settlers in the 1880's (including a few who came in the 1870's), were Bernard and Joseph Tobish, Sigmund Kahn, Samuel and Daniel Block, Meyer Cohen, Moses Swatzenburg, Solomon N. Sherphos, Arthur Schwartz,

Morris May, Dr. Meyer Schwab, Philip Cooper, Jacob and Samuel Grumbacher, J. L. Herold, Isaac Straus, Solomon and Philip Papier, Samuel Schwartz, Samuel Levy, Solomon Reinman and Hyman Levy.

Although the beginnings of the permanent Jewish community of Trenton can thus be traced to the decade of the 1840's, there was no organization representative of that community in existence until the late 1850's. In 1856 the *Trenton State Gazette* reported that the Jewish families of Trenton were observing Passover, but the nearest synagogue, which many of the community's members undoubtedly attended, was declared to be in Philadelphia (about thirty-two miles to the southwest). The first Jewish New Year's service in Trenton was held on September 9, 1858, about a year after the Har Sinai Cemetery Association was formed.

In the first year of the next decade the first religious organization, known as the Har Sinai Hebrew Congregation, was established. Services were held in rented rooms until about the middle of the decade when a small Lutheran church on North Montgomery Street was purchased and became the first Jewish house of worship.

In 1876 to 1877 the Chevra Bikur Cholim was founded, with Herman Rosenbaum as president. This was the forerunner of Trenton's Jewish charitable organizations.

The oldest congregation in Trenton, Har Sinai (Reform), was incorporated in July, 1860, and its first synagogue was dedicated in March, 1866. (In 1943 this building was being used as headquarters for the Grand Army of the Republic.) Its second Temple was dedicated in 1904. The Temple which was in use in 1943 was erected in 1929, and dedicated in the following year. The rabbi of Har Sinai Congregation in 1943 was Abraham Holtzberg. Some of the others who served in that capacity are: M. Lessler, Simon Rosenberg, Israel Goldvogel, Morris Ungerleider, and Rabbis Wagenheim, Schomberg, Kahn, and Bloch, whose first names the records do not reveal; also Rabbis L. Weiss, Nathan Rosenau, Louis B. Michelson, Nathan Stern, Harry K. Jacobs, Joel Blau and Jacob Goodstein.

The first Orthodox Jewish congregation of Trenton, Brothers of Israel, was incorporated in 1883, but the group was not fully established until 1886. In 1887, the Union Street Methodist Church was purchased and converted into a synagogue which was dedicated on September 11th of that year. In 1900 the building was demolished and a new one was erected upon the site, which was still in use in 1943. Members of the congregation who settled in Trenton before 1887 included Abraham, Isaac and Solomon Goodstein, Max Fiestal, Max Fromkin, William Feinberg, Abraham and Joseph Bernstein, Max and Simon Siegel, Israel Silverstein, Israel and Aaron H. Berman, Isaac Grumbacher and Zigmund Kahn.

Synagogue of Brothers of Israel Congregation, Trenton

Temple Har Sinai, Trenton, New Jersey

The first rabbi of the congregation was named Silverman (or Zilberman). His successors included Rabbis Haskel and Bachrach, Pinchos Turman, Eliezer Preil, Joseph Konvitz and Isaac Bunin. In 1943 the rabbi was Issachar Levin, who was also the rabbi of the Congregations People of Truth and Ahavath Israel. He came to Trenton in 1927.

In 1885 the group laid out a burial ground on Vroom Street, adjoining Har Sinai Cemetery. In 1907 it was enlarged by purchase of an additional plot. In 1913 an auxiliary cemetery was established near Cedar Lane, Hamilton Township.

Congregation of the People of Truth (Orthodox) had its beginning in the late 1880's or early 1890's. The group filed papers for incorporation in December of 1891, but it was two or three years later before an effective organization came into existence.

In 1902 the Second Presbyterian Church, Union Street, was purchased by the congregation and refitted as a synagogue. The edifice was dedicated on March 15, 1903. In 1893 the congregation established a cemetery near Cedar Lane, Hamilton Township.

Congregation Ahavath Israel (Orthodox) was incorporated in December, 1909. In May of the following year the congregation purchased the Wesley Methodist Church, Centre Street, which was remodeled and dedicated to Jewish worship. Nearly all the found-

Congregation Poale Emeth (Orthodox) filed incorporation papers in 1919; its first rabbi was named Meyerowitz, and he served from 1920 to 1925. He was succeeded by Rabbi Movshowitz (1925-28). A few years after the group organized two dwellings were purchased on Union Street, near Market Street, and refitted as a house of worship. Jacob Kantorowitz was the rabbi in 1943.

and refitted as a house of worship. Jacob Kantorowitz was the rabbi in 1943.

Adath Israel Congregation (Conservative) was organized at a meeting held in September, 1923. In the following month the group was incorporated. First services were held in the Y.M.H.A. Community Home, South Stockton Street. A Temple was built on Bellevue Avenue and was formally opened on July 23, 1926. It was dedicated in October of that year. Its first rabbi was Samuel Rosenblatt (1926-27). He was succeeded by Leon J. Liebreich, the incumbent in 1943.

Other institutions supported by the Jewish community include The Hebrew Shelter Home, Dr. Herzl Zion Hebrew School (Talmud Torah), Home for the Aged, the Jewish Federation of Trenton, and the Y.M.-Y.W.H.A.

The present Y.M.-Y.W.H.A., a combined organization with a community home, is the outgrowth of a number of social clubs and cultural societies that consolidated in 1916. Included in this merger was the Young Men's Hebrew Association, founded in 1909, and the Young Women's Hebrew Association, founded in 1912. The home occupied in 1943, the remodeled Interstate Telephone Building, South Stockton Street, was dedicated on December 9, 1917. It was the first organization of its kind in New Jersey to establish a home and also to have a paid executive secretary. In 1943 the president of the organization was Samuel Eisenstat, successor to Joseph Fishberg, who entered the Naval Service.

The Jewish Federation of Trenton was the result of a series of community conferences which showed the necessity for a single organization to raise funds for local, national, and overseas Jewish needs, as well as to integrate the activities of the Trenton Jewish community. Among the projects carried out by it were the Home for the Aged study of 1937, the Jewish census of the same year and in 1941, and the special census of men in the armed service, completed at the close of 1942.

The presidents of the Jewish Federation were: David Holzner (1930-33), Louis Rudner (1933-35), Israel Citron (1935-36), Sidney Goldmann (1936-40), Louis Shipper (1940-42) and Bernard Alexander (1942-).

The Yiddish press was represented in the city of Trenton by two newspapers: *The Trenton Jewish World* and *The Trenton Jewish Weekly*. *The World* was founded in 1909 by Alexander Budson, Henry Millner and Philip O. Firestein, but discontinued publication after a short time. *The Weekly* was founded in 1916 by H. Wexler. The first number was issued on March 31, 1916. The paper survived for about a year.

The Community Messenger, a monthly in magazine form, was published under the auspices of the Y.M.-Y.W.H.A. It originally appeared in 1919 and continued for about a year. It then resumed publication in 1924. Sidney Goldmann was the editor-in-chief from 1927 to 1932 when publication was discontinued.

The Jewish Ledger, an Anglo-Jewish weekly newspaper, was published in Trenton for a short time during 1938.

Jews of Trenton who held public office included:

David Naar, appointed one of the lay judges of the Court of Common Pleas of Essex County in 1843 (then a resident of that county). In the following year he served as delegate from that county to the New Jersey Constitutional Convention, which convened at Trenton for the purpose of drafting a new constitution. He was a member of the Bill of Rights Committee by which religious liberty was given to all citizens. Appointed United States consul to St. Thomas by President James K. Polk in 1845, he resigned in 1848 and returned to his adopted state. He was president of the Trenton School Board (1854-1855, 1861-1862, 1866-1878), and a member of the Common Council of Trenton (1869-1871). A strong advocate of the present public school system, he was identified with the establishment of the State Normal School, now New Jersey State Teachers' College. He was onetime clerk in the House of Assembly, and served as State Treasurer (1865-1866).

Joseph L. Naar, one of the secretaries to the New Jersey Constitutional Convention of 1873 and sole secretary to the State Constitutional Convention of 1894. He was one of the original members of the Free Public Library Board of Trenton.

Samuel Grey Naar, local police justice, assistant prosecutor under the late Mercer Beasely, Jr., and one of the commissioners under the Martin Act (appointed by the late Judge Leon Abbott of the Supreme Court).

Moses D. Naar, for a short time solicitor for the Trenton School Board; Benjamin Naar, Jr., city clerk (1865-1866); Daniel Peixotto, member of the Common Council of Trenton (1857-1858); Simon Kahnweiler, member of the Common Council (1869-1871); Joseph Rice, member of the old City Water Board for fifteen years and a member of the old Board of Fire Commissioners for six years. He served for a number of years as a member of the Board of Managers of the New Jersey State Hospital for the Insane; Jonas A. Fuld, who served on the Board of New Jersey Department of Institutions and Agencies.

Phillip Forman, United States District Attorney for the Southern District of New Jersey (1928-32); in 1943 United States District Court Judge, appointed by President Herbert Hoover in 1932.

Sidney Goldmann, City Attorney of Trenton (1935-39); executive assistant to Governor Charles Edison (1942-43); assistant to the Governor's Examiner, New Jersey State Highway Investigation (1941-42) and author of *The Organization and Administration of the New Jersey State Highway Department;* secretary of the Trenton Historical Society; executive committee member of the Trenton Symphony Association; president of the Jewish Federation of Trenton (1936-40); president, New Jersey Emigre Service Bureau (1942-43).

Rabbi Abraham Holtzberg, member of the New Jersey State Good Will Commission from 1941 on, and Jewish chaplain (from 1924 on) at the New Jersey State Prison, in Trenton. Holtzberg served from 1937 to 1943 as a vice-president of the National Council of Jewish Chaplains in Penal Institutions, of which he was a charter member, and in the latter year he was elected its president; I. Herbert Levy, a member of the Trenton Board of Education from 1935 on and president of the Board (1941-42); Louis Shipper, member of the City Council of Trenton (1935-39) and president, Jewish Federation of Trenton (1940-1942); Solomon E. Kaufman, member of the New Jersey Interstate Bridge Commission and the executive board of the Boy Scouts of America; Louis Josephson, City Attorney of Trenton from 1939 on; Benjamin Kaufman, holder of a Congressional Medal of Honor in the first World War and National Commander, Jewish War Veterans (1941-1943).

In 1937, the Jewish Federation of Trenton instituted a census study of the city's Jewish population. According to the data collected (Sophia M. Robison, "The Jewish Population of Trenton, 1937," published in *Jewish Population Studies,* 1942, by the Conference on Jewish Relations, Inc.), there were in Trenton, in 1937, six Jewish congregations and thirty-two Jewish organizations. The Jewish population of the city in that year was 7,191, of whom 2,461 (34.2%) were foreign-born and the rest native-born. The Jews numbered about 6% of the total city population of 123,356 in that year (census of 1930). By 1937 about 15% of the foreign-born Jews in the city had been living there for thirty-five years or longer. More than half of the foreign-born Jews settled in the city in the 1900's (especially from 1906 on), and only 5% came to the city from 1922 on.

In 1937, of the gainfully occupied male Jews of Trenton

above the age of fifteen, 59% were in trade, or more than three and one-half times the average for the total city population, and 13.3% earned their livelihood in the mechanical and manufacturing industries (with the average for the city in general far higher). Of employed Jewish males and females from fifteen years of age and up in Trenton in 1937, a total of 53.7% (1,644 persons) were engaged in trade, 11.7% (354 persons) in the mechanical and manufacturing industries, 12.3% (377 persons) in the professions, 12.4% (381 persons) in clerical occupations, 2.9% (90 persons) in transportation and communication, 5.3% (162 persons) in domestic and personal service, 0.9% (28 persons) in the public service. An extremely small number of Jews were engaged in the wholesale trade, in the utilities, in the heavy industries, and as bankers and brokers. For the most part, the survey showed, adult male Jews in Trenton were engaged in small business, with 41% of them self-employed. However, in that year there was noticeable a definite trend among the Jews of Trenton away from trade and from the manufacturing and mechanical industries toward the professional and clerical occupations.

TREU, MARQUARD, painter, b. Bamberg, Germany, 1712; d. 1796. His original name was Joel Nathan, and he was the son of Wolf Nathan, court agent of the archbishop of Bamberg. He was sent to study at Prague and Metz, and at an early period in his life came into contact with Catholic circles, especially with the Jesuit Marquard von Rothenhan; it was from him that Joel Nathan, upon his conversion to Christianity in 1733, received his new given name. As Marquard Treu he first became a merchant, proprietor of a specialty shop, and then an artist.

Treu's pictures, once highly esteemed, included portraits, group pictures, still lifes, especially *Küchenstücke* (kitchen utensils), as they were called at the time, and miniatures. Many of them are still preserved in Bamberg, in the former art collection of the residence of the prince bishop and in the municipal portrait gallery. Two of the most interesting of these are his *Astronomers* and *Chemists,* a blending of Italian with Netherlands and German motives. From 1766 to 1780 Treu was inspector of the art gallery at Schloss Pommersfelden, in Upper Franconia, Germany; he was the first Jew to serve as museum director. He was one of the principal representatives of a class of painters very frequent at that time, i.e. painters of Jewish origin who accepted baptism, became court painters at the court of one or another of the numerous German princes, and became the head of an entire dynasty of painters.

Five of Treu's children, Johann Nicolaus (1734-86), Katharina (1742-1811), Maria Anna (1736-86), Agnes (1741-1812) and Johann Joseph Cristoph (1739-98), as well as a daughter of Johann Nicolaus, Rosalie, won fame as painters.

Jahrhunderts," *Almanach des Kulturbundes Deutscher Juden in Berlin* (1934-35) 82-88; Landsberger, Franz, "Jewish Artists before the Period of Emancipation," *Hebrew Union College Annual,* vol. 16 (1941) 397; Thieme, U., and Becker, F., *Allgemeines Lexikon der bildenden Künstler.*

TREVES (German Trier; in Roman times, Augusta Trevirorum), city in southwestern Germany, with a total population of 58,000, including 800 Jews (1933). It contained one of the oldest and most important Jewish communities in Germany, which can be traced back to the year 1066. In that year Archbishop Eberhard intended to expel all the Jews from Treves; he died suddenly, however, while officiating at the church. The epitaph on his tombstone charges that the Jews killed him by magic, burning his effigy.

The First Crusade in 1096 took numerous Jewish victims also in Treves. Many Jews killed their wives and children to prevent their being slaughtered by the Crusaders; others fled to the palace of Archbishop Egilbert, who protected them because they agreed to conversion. After a year, however, the converts resumed the Jewish faith by permission of Henry IV, with the sole exception of Rabbi Micah.

In the 12th cent. there lived in Treves the Jew Joshua, who was an esteemed physician, mathematician and astronomer, as well as a Hebrew scholar; he assumed the Christian faith. After the expulsion of the Jews of Treves in 1262, Lombards were invited instead of the Jews; they practised usury to a much greater extent, however, than the Jews had done before them. However, the elector of Treves, Baldwin, had in his employ Jews who served as his financial agents. One was Muskin, who was active from 1323 to 1326. Another was Jacob Daniel, a banker, who served until 1341 and bore the title "Judaeorum dominus" (master [lord] of the Jews). His son-in-law, Michael, was Baldwin's financial agent until 1349.

In 1339 the Jews suffered persecution by the bands of the Armleder, in 1349 the Black Death was blamed on them, and in 1418 they were expelled by Archbishop Otto von Ziegenheim. In 1500 the Jews returned to Treves, and in 1555 Archbishop John granted them privileges in return for new high taxes; these taxes were renewed in 1679, but the Jews were not given protection against frequent ransacking and persecution. The French occupation of the city in 1794 brought final relief for the Jews after frequent oppressions, chicanery and sufferings throughout the 17th and 18th centuries, wherein also Catholic students participated.

Treves had a large Jewish quarter, called in the Middle Ages *vicus Judaeorum,* and in modern times the Judenplatz. At the Jewish Mauergasse, near the cemetery, was the synagogue and the community center for recreation. Treves had a *Judenbischof* (Jews' bishop) of the same rank as the *Judenmeister* (Jews' master) in other cities. The new synagogue was erected in 1859. One of the famous rabbis active in Treves in more recent times was the Talmudist Moses Samuel Zuckermandel (1836-1917). Karl Marx was born in Treves in 1818.

After the Nazis' assumption of power (1933) the small Jewish community of Treves was subjected to the same anti-Jewish legislation as all the other Jews of Germany. In 1943 no Jews were living in Treves.

TREVES (also **Trefus, Dreyfus, Trevis, Trivash, Tribas**), a family of Jewish scholars which seems to have originated in the French city of Trèves, and representatives of which were prominent in various countries from the 14th cent. into the 20th. The first known member of the family was Joseph ben Johanan Treves, who was rabbi either in Paris or Marseille in the middle of the 14th cent.

Mattithiah ben Joseph Treves (b. Paris, about 1325; d. 1387) was the son of Joseph ben Johanan Treves, and was appointed chief rabbi of Paris by Charles V (1363). Earlier, he had lived in Spain and returned to Paris to establish a seminary. He was the author of several studies on the Talmud and of liturgical poems.

Johanan ben Mattithiah Treves (d. Italy, 1439), the son of Mattithiah ben Joseph Treves, succeeded his father to the chief rabbinate of Paris. He was the object of dialectical attacks by Isaiah ben Abba Mari. After the expulsion of the Jews from France (1394), Treves went to Italy. His responsa indicated that he was recognized as one of the leading exegetes of his period. His brother, Joseph ben Mattithiah Treves (d. Italy, 1429), was a liturgical poet. Another of the earlier Treves in Italy was Abraham ben Solomon Treves, 16th cent. rabbi, who migrated to Turkey.

Among the later members of the family was Giacobbe Treves (b. Milan, Italy, 1843), novelist, Jewish historian and editor of the first half of the *Dictionnaire des écrivains.* Claudio Treves (b. Turin, Italy, 1869) was an Italian Socialist leader and a member of the Italian Senate, as well as editor of *Tempo.* Giuseppe Treves (b. Venice, Italy, 1759) was made a baron by Napoleon. His sons, Jacob (b. 1788; d. 1885) and Isaac Treves, were well-known philanthropists in Venice, and were both ennobled by the Austrian emperor in 1835. Albert Baron Treves (b. 1855; d. 1921), grandson of Jacob Treves, was an Italian senator.

Among the German and French representatives of the family were Eliezer ben Naphtali Hirz Treves (b. 1495; d. 1565), rabbi in Frankfort; Levi ben Jacob Treves, 16th cent. French rabbinical scholar; and Naphtali Hirz ben Eliezer Treves, 16th cent. Hazan in Frankfort. Further east there were Dob Bär ben Judah Treves (d. 1803), rabbi in Hungary, then rabbinical judge in Vilna; Jacob Treves, 17th cent. Russian scholar; Jehiel ben Simeon Sofer Treves, 18th cent. Russian rabbi and author; Aryeh Löb ben Naphtali Treves (b. 1848; d. 1873), contributor to the *Hamaggid* in Russia; and Hillel David Trivash, rabbi and author (b. Vilna, Lithuania, 1841; d. Wilky, 1901.

TREVES, EUGENIO, authority on Italian literature, and author, b. Milan, Italy, 1888. He taught Italian literature at the University of Grenoble, France, from 1911 to 1913, when he was invited to teach at the Technical Institute in Vercelli, Italy. There he founded the review *Vercelli Nobilissima,* and contributed articles and studies on Italian literature to the leading periodicals and magazines of the country. Among the literary studies of Treves which are of particular interest are *Le lettere di M. Buonarroti* (Florence, 1924) and *Leggende Piemontesi* (Milan, 1931).

TRIBES, TEN LOST. It is not known at what period Jewish tradition began to speculate on the fate of those of the Ten Tribes of the Kingdom of Israel whom "the king of Assyria . . . carried away unto Assyria, and placed them in Halah, and in Habor, on the river of Gozan, and in the cities of the Medes" (*II Kings* 17:6). The Biblical accounts omit all details, but popular fancy and learned speculation found that sufficient for the weaving of legends.

In some of the books of the Apocrypha the story of the "Lost Ten Tribes" is already substantially the same as was familiar throughout the Middle Ages. *II Esdras* (*IV Ezra*) 13:39-47 speaks of the "ten tribes . . . carried . . . beyond the river into another land" and from here they "would leave the multitude of the heathen and go forth into a further country, where never mankind dwelt, and they entered by the narrow passages of the river Euphrates." God wrought wonders and stayed the springs of the river until they were passed over. The land which they finally reached was called Arzareth, a corruption of the Hebrew *'eretz 'ahereth,* "another land" (cf. *Deut.* 29:27). They were to stay there until the time when they were to return with the Messiah to a renewed Zion.

A political coloring may be detected in the account of Josephus (*Antiquities,* book 11, chap. 5, section 2) that "there are two tribes in Asia and Europe subject to the Romans while until now there have been ten tribes beyond the Euphrates, countless myriads whose numbers cannot be ascertained." Elsewhere he speaks of a river which dries up for six days and runs on the seventh, whence it is called the Sabbatic river. This river (Sambation), however, is as yet unconnected with the Ten Tribes.

The hope and belief that the Ten Tribes will share in the Messianic struggle was put to the test during the Bar Kochba rebellion (132-35 C.E.). Akiba, the active propagandist for Bar Kochba's Messianic claims, no doubt was motivated by realistic patriotic reasons when he maintained that "the ten tribes shall not return again, as it is written: 'And he cast them into another land like this day.' Like as this day goes and returns not, so do they go and return not" (*Sanh.* 10:3; cf. Ginzberg, Louis, *Legends of the Jews,* vol. 6, p. 407 et seq.). Eliezer, on the other hand, seemed to express the prevailing opinion that "Like as days grow dark and then grow light, so also after darkness is fallen upon the Ten Tribes, shall light hereafter shine upon them." Later Tannaim rebuke Akiba for his stand, and incline to the view of Eliezer (*Sanh.* 110b).

The earliest literary records of the familiar medieval legends is found recorded by Eldad Hadani, a traveler who suddenly appeared in Kairwan with the claim that he was a representative of the fighting kingdom of the Ten Tribes somewhere in East Africa. He gives a detailed account of his own clan, the tribe of Dan, but he also brings news of other tribes, Simeon and Manasseh, who live near the land of the Khazars, six months' travel from Jerusalem, and who receive tribute from a number of heathen and Islamic nations. Whether Eldad was an impostor, a Karaite missionary or really a member of some semi-independent Jewish group in Africa, has not been definitely determined. His account created a great stir in the schools and bazaars of North Africa; preserved in a number of versions, it has become the pattern of practically all later stories. The Christian legend of Prester John's making the Jewish tribes and the Bene Mosheh subject to a Christian ruler no doubt is a reaction to the Jewish claim that somewhere the Jewish kingdom is a reality. Benjamin of Tudela and Pethahiah of Regensburg, the famous Jewish travelers, also repeat stories heard from Jews living near the Caucasian mountains about warlike Jewish tribes.

The great Messianic upheaval which gripped the shrunken Byzantine Empire during the First Crusade (1096) also was accompanied by rumors of the Ten Tribes behind the dark mountains starting their trek

through the "wilderness of nations," there to be joined by other straggling groups from Khazaria and other remote regions.

The Christian legend took a new turn sometime during the 12th cent. (in the work of Petrus Comestor) when the Ten Tribes, lost in a far away land, were associated or even identified with the hordes of Gog and Magog who were said to have been shut up behind the Caspian mountains until the end of days, when they were to break out to fight for Antichrist in his last desperate struggle. It was the logical step for the anti-Jewish bias of the Christian legend. When the Tatars invaded Central Europe in the 13th cent., the West became alarmed. Rumors were current that the wild horsemen were really the "hidden" Ten Tribes and that the Jews were in league with them, secretly supplying them with weapons and advice. It was also then that the legend of the Red Jews beyond the River Sambation arose which was also popular among the Jews.

In the 15th and early 16th centuries, with renewed Jewish pilgrimages to the Holy Land, legends of the Ten Tribes were revived, fostered now by semi-professional news gatherers. The struggles of the Falashas, an African clan professing Judaism, against the Christian kingdom of Ethiopia, identified as the kingdom of Prester John, reechoed in Egypt and Palestine and took on the typical coloring of the Ten Tribes legend. Abraham ben Eliezer Halevi, a fiery Messianic propagandist, saw in their struggles the harbinger of deliverance or at least a portent. Abraham of Perugia, in Italy, entertained a clearing house for stories of the rise of the Ten Tribes in various parts of the globe. Some of these legends rise to a fantastic height, showing an army of these "hidden" tribesmen ready to march on Rome, deploying near Ancona, the very port from which Pope Pius II hoped to start his crusade against the Turks.

These stories eventually reached the stage of political action with David Reubeni, who claimed to be the brother of Joseph, king of 300,000 men in the desert of Habor, comprising the tribes of Gad, Reuben and half of Manasseh. Reubeni proposed an alliance with the pope and the Christian nations against the Turks, the European nations supplying the ammunition and his brother the manpower, to strike the Turks from the south. The tragic outcome of this political Messianism is well-known. But legends continued to grow among both Jews and non-Jews. Throughout the 16th cent. there were German "newspapers" (some of them printed) about the breaking out of the Ten Tribes, their presenting an ultimatum to the sultan, and the like. The Sabbatian movement in its early stages was also accompanied by similar "portents." However, by that time their active nature was already weakened.

There is an account in Yiddish (*Geliloth Eretz Yisrael,* Lublin, 1634) by Gerson ben Eliezer Yiddels of Prague, who claimed to have started out from Salonika with a caravan for the purpose of selling iron to the Ten Tribes. While many scholars consider the story pure fiction, it merited the investigation of Paul Borchardt, who claims to find in it an account of Falashas of the time (*Anthropos,* 1923-24, pp. 264-66).

During the 18th and 19th centuries expeditions from Jerusalem to "discover the Ten Tribes" were attempted. Significantly enough, these stories emanated from circles in Palestine interested in maintaining a Jewish community of scholars who prayed for the restoration of Zion. Appeals to the European communities to finance these expeditions to learn about the Ten Tribes and perhaps to teach them Orthodox Judaism were coupled with the urgent request that the wealthier West remember needy scholars in the Holy Land.

It is interesting to note that the famous Judah Löwe ben Bezalel of Prague, while not denying the existence of the river Sambation and a Jewish country in a far away land, maintained that members of all Jewish tribes were to be found in the present Jewish Diaspora.

With the rise of geographical knowledge, Christian legends about the Ten Tribes turn from eschatological speculation to "scientific" ones. Christopher Columbus duly saw "Arzareth," the abode of the Lost Ten Tribes, in his newly discovered Indies (Box, *Ezra Apocalypse,* p. 298). Early ethnologists, discovering peoples whose customs seemed to them to resemble Biblical traditions, immediately attempted to identify these peoples with the Lost Ten Tribes. No part of the globe was free from these "discoveries" from the Bushmen to the Tatars and from the Patagonians to the Eskimos.

Maps of the 15th cent. relegate the Ten Tribes to the far northeast, next to Gog and Magog and the Amazons. The most persistent account, and one which is of peculiar interest to Americans, is the thesis of Thomas Thorowgood, who maintained in 1650 that the "Indians are Judaical." In his work *Iewes in America* (London, 1650) he incorporated also the account of a certain Antonio Montesino, a Marrano traveler, who claimed that while journeying through Quito, Ecuador, he saw natives of the tribe of Reuben who practised some kind of Judaism. Thorowgood heard this story from Manasseh ben Israel (cf. Wolf, *Manasseh ben Israel*).

A special and rather noteworthy place is occupied by the Anglo-Israelite theory which claims the identity of the Anglo-Saxons (and kindred peoples) with the Lost Ten Tribes, with the important corollary that the prophecies of Isaiah and others apply to them.

American and British scholars, perhaps due to their interest in and love for the Bible, and perhaps also to their colonial zest, have concerned themselves vitally with the enigma of the Lost Ten Tribes. To this day new "discoveries" are frequently made and as often refuted; a noteworthy example is A. Grant's *Nestorians* (New York, 1841), which claims that these ancient Syrians are identical with the Ten Tribes.

As late as 1928 the problem interested the British public to the extent of examining the question whether the Afghans were the Lost Ten Tribes. On the occasion of the visit of the king and queen of Afghanistan in England, London newspapers mentioned the claim of the leading clan of the Afghans, the Durani, to be the descendants of Israel, and who therefore call themselves Beni Israel. Such and like traditions, especially those connected with tribes inhabiting the regions of the Caucasus, are not far fetched and may perhaps represent a kernel of historical reality (cf. Holdich, Sir Thomas Hungerford, in *Nineteenth Century,* July, 1919, pp. 111-15).

TRIBES, THE TWELVE, *see* TWELVE TRIBES.

TRIBUNALS. The dispersion of the Jews among the nations raised many questions in regard to civil and criminal cases involving Jews. As a rule the Jews were granted a considerable degree of autonomy in civil matters when both parties in the case were Jews;

they had their own courts, the decisions of which were regarded as valid by the ruling powers. On the other hand, where the civil cases involved non-Jews as well as Jews, tribunals of a special nature were frequently created for that special purpose. In criminal cases Jews were often subject to special tribunals, separate from their own courts or from the courts in which non-Jews were tried. These conditions prevailed up to the time of the emancipation of the Jews.

1. Ancient Times. Jewish courts in Palestine handled all legal cases that occurred in the country up to the time of Roman rule. With the coming of the Roman procurators (6 C.E.) their jurisdiction was limited; and it is reported that about 30 C.E. the right of capital punishment was taken away from them. However, when Christianity became the dominant religion of the Roman Empire in the 4th cent., the state began to limit the right of the Jews to hold their own courts. In 398 the emperors Arcadius and Honorius decreed that the Jewish courts were to be regarded as courts of arbitration only, but their decision was binding if both parties agreed to accept it. In 415 Theodosius II issued a law that all suits involving Jews, even if both parties were Jewish, had to be decided before a Christian judge; the only exception were disputes between Jews over religious matters.

In the Parthian and Persian empires the Jews had a greater measure of autonomy; if one of the parties was Jewish and the other non-Jewish, they could determine by agreement whether they would bring the case before the Jewish or the government court, and in either case the decision was final.

2. Middle Ages. In Germany the Carolingian emperors reserved to the king the right of jurisdiction over the Jews, who were regarded as being under his protection. However, the status of the Jews in regard to tribunals or courts was not uniform. The cities as a rule tried to force the Jews to submit to their own tribunals. The most intolerant of these was Zurich, which demanded that the Jews bring all their disputes to the municipal courts. On the other hand, the Jews were practically autonomous in Cologne, Speyer, Worms and Würzburg, in civil matters. In two places, Nördlingen and Schweidnitz, they had received privileges from Ludwig the Bavarian (1331) permitting corporal punishment to be inflicted by order of Jewish courts. In Augsburg, on the other hand, the imperial administrator pronounced judgment in cases involving the killing or injuring of Jews. According to Thuringian law, brawls and manslaughter in which both parties were Jews were brought before a Christian judge, who rendered his verdict; after this Jewish courts might impose an additional penalty based on Jewish law.

Up to 1380 the Jews of Spain had full civil and criminal jurisdiction over cases involving Jews; then the right of imposing and executing the death penalty was taken away from them. After 1412 they had to submit their civil disputes to the regular courts; later, the Christian clergy frequently claimed jurisdiction over Jews. Mixed courts of varying composition existed in both Arabic and Christian Spain for disputes between Jews and non-Jews. However, such lawsuits could come before a Jewish court if the parties agreed to it or the judge recommended it. In Portugal Jewish courts could function in cases of disputes between Jews and non-Jews, but the royal judge decided all criminal cases in which Jews were the defendants.

In France Jews had jurisdiction over their own civil cases, and in 1360 this was extended to criminal cases. Up to 1359 disputes between Jews and Christians were decided by the regular courts; from then until 1388 the Jews were placed under a special "guardian." In England Jews took care of their own civil cases. Up to 1204 a civil case between a Jew and a non-Jew was decided by a Jewish court if the defendant was a Jew; after that time the royal courts decided the case.

In many cases where a Christian brought a suit against a Jew, the place of trial was the synagogue, since, according to medieval law, it had to be near the residence of the defendant. In many cases, particularly in southern Germany, the judges included both Jews and Christians. Thus the Augsburg municipal law, which remained in force until 1436, provided that in all cases of charges against the Jews, the bailiff was to fix the date for the trial in the synagogue. He brought several Christians to act as judges, while the Judenmeister brought several Jews. The bailiff put the questions to the Christian witnesses or parties, and the Judenmeister to the Jews. Decision was by a majority vote. There is a similar provision in the regulations for the Jews of Hof issued by Burgrave Frederick of Nuremberg (1373). Frederick II of Austria in 1244 issued the regulation that disputes between Jews were to be decided by the chief chamberlain or the duke. A usual rule was that the ruler to whom the Jews were directly subject was to act as judge in cases in which they were involved; in the later Middle Ages, when various rulers, such as the emperor, the duke or the city authorities all claimed the right to rule the Jews, there was a similar dispute as to jurisdiction.

3. Modern Times. In 1524 Pope Clement VII decreed that disputes between Jews and non-Jews should be decided by a special court which was under the direction of the vicar-cardinal. In Venice (1535) and in Germany (1519) the government endeavored to prevent Jews from resorting to rabbinical courts in every case, if one of the parties preferred a decision from the regular courts.

In Poland and Lithuania civil cases involving a Jew and a Christian were decided by the voyevode or by a Christian judge especially appointed for that purpose, with the title Judex Judaeorum ("Jews' judge"). In every case, the king himself was the highest court of appeal. On private estates the court of the landowner was also the highest judicial body for the Jews. After 1557 ritual murder cases could be tried only before the Sejm in the presence of the king and the highest dignitaries. In 1776 Austria made a law regulating the courts to which Jews had to go in all legal disputes. Those between Jews were decided by Jewish courts; those between Jews and Christians, as well as criminal cases, were settled by the general courts.

With the emancipation of the Jews, the Jewish courts were no longer given a separate jurisdiction, separate tribunals ceased to be formed, and all cases were decided by the general courts.

TRIEBER, JACOB, jurist, b. Raschkow, near Breslau, Germany; d. Little Rock, Ark., 1927. When fourteen years old he was brought to America by his parents who were emigrating to the United States.

During the following two years he attended high school at St. Louis. After school hours he was a newsboy and a theatre usher. Becoming an American citizen by virtue of the naturalization of his father, and admitted to the bar at Helena, Ark., shortly after becoming of age, he entered into law partnership with the attorney in whose office he had read law by day while supporting himself by doing recording and other work at the county court house at night.

A delegate to several Republican national conventions, a candidate for election to Congress, state super-

visor of the federal census of Arkansas, he was always a Republican politically. From 1897 to 1900 he was United States Attorney of the Eastern District of Arkansas. Appointed in 1900 to the office of United States judge for the same district, he thus became the first Jew ever to have been made a United States federal judge. While under consideration for this post he insisted in the most positive terms that President William McKinley, before nominating him for confirmation, be told that no Jew previously had held a United States federal judgeship. He served continuously as district federal judge during the twenty-seven years from the date of his appointment until his death.

Trieber was grand master of the Masonic Grand Lodge of Arkansas in 1906, and president of the Arkansas Bar Association in 1914. He drafted many of the laws written into the Arkansas statute books, including the Banking Law, and was the author of papers printed in Bar Association journals and other law publications. He warmly supported total abstinence from intoxicating drink, and the enactment and enforcement of stringent laws regulating the alcoholic beverage traffic seemed to him to be morally and economically expedient. HARRY H. MAYER.

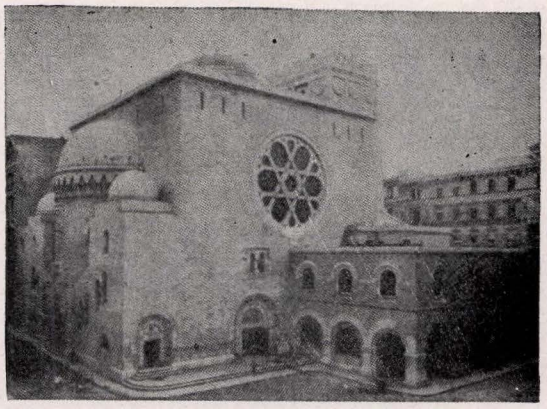
TRIENNIAL CYCLE, *see* PARASHAH.



TRIER, HERMAN MARTIN, pedagogue and Danish statesman, b. Copenhagen, Denmark, 1845; d. 1925. He was active in introducing manual training into Denmark's schools. In 1882 he founded the Danish movement for the education of workmen, and from 1883 to 1893 acted as its head. From 1884 to 1889 he was president of the Danish liberal students' association. Trier was active also in the field of prohibition. In 1884 he was elected member of the Danish chamber of deputies, and with interruptions kept his seat until 1909. In 1895 he became vice-president and in 1901 president of this body. In 1910 he was appointed to membership in the Danish upper house. From 1893 to 1917 he was a member of Copenhagen's municipal council, and from 1898 to 1907 its chairman.

Trier wrote prolifically on pedagogical subjects. His various writings in this field are collected in the work *Pædagogiske Tids- og Stridsspörgmaal* (3 vols., 1892-93). A collection of essays appeared under the title *Af Dagen og Vejen* (1876-83), while his work *Kulturhistoriske Personligheder,* comprising a number of biographies, was published during the years 1876 to 1883.

Lit.: Salmonsens Konversations Leksikon, vol. 23 (1927) 751.

TRIER, WALTER, painter, draughtsman, and caricaturist, b. Prague, Bohemia, 1890. He studied first at the Academy of Prague, and then proceeded to Munich, where he became a pupil of Franz von Stuck at the Munich Academy. As a youth of nineteen, he was already a collaborator on some of Germany's foremost artistic and, especially, caricaturistic magazines, such as *Jugend, Simplizissimus* and *Lustige Blätter.* The editor of the latter periodical invited him to Berlin, where he settled in 1910.

Trier's natural gift for humorous and unsatirical caricature made him popular. His witty brush made him, in particular, a successful illustrator of books concerning folklore, and books for children, such as *1000 Bauernwitze. Kluge Derbheiten aus Bauernmund* (1917) and Oscar Seyffert's *Spielzeug* (1922). He was the illustrator of the "Fridolin-books," *Fridolins Siebenmeilenpferd, Fridolins Harlekinade,* and *Fridolins Zauberland,* all of which appeared in 1926.

The principal synagogue at Trieste

In 1928 he collaborated as an illustrator on Fred A. Coleman's *Artisten,* and in 1930 on Gabrielli and H. Striem's *Das Wunderauto.* In the following year he worked with the poet Erich Kaestner on *Arthur mit dem langen Arm* (*Ein Bilderbuch*) and *Das verhexte Telephon.* He painted for many art magazines.

Occasionally Trier exhibited paintings. His pictures are of an oddly dualistic quality depicted in a setting of impressionistic and rather natural landscapes, contrasted with groups of people of coarse character, outline and coloring. Yet his naïve humor and sensitive artistry never fail of their charming effect.

After the Nazis' rise to power Trier left Germany, and immigrated to England, where in 1943 he still continued his work in affiliation with the periodical *Liliput.* ELISABETH GUTMAN.

TRIESTE, formerly an Austrian, since 1918 an Italian seaport on the Adriatic Sea, with a total of 250,000 inhabitants, including 4,500 Jews (1938). The first Jew mentioned in Trieste was Daniel David of Garcia, a dyer, who lived there in 949; the oldest Jewish tombstone dates from 1325. A document of the year 1383 tells about a Jewish money lender by the name of Lamelino (Lämmlein). From the 14th cent. through the 16th (perhaps with interruptions) the money trade in Trieste was in the hands of Jews, according to a document of 1588.

The first Ashkenazic synagogue in Trieste was built in 1748. After it had been destroyed by fire a new one was erected in 1787. Several years later another synagogue was built by the Sephardim on the site of an ancient cemetery, in the Via del Monte, near the Talmud Torah, annexed to which were a Jewish public school and a Jewish hospital. There were 223 Jewish families living in Trieste in 1788, comprising 670 persons. They were engaged in commerce and industry, but particularly in the leather trade and the production of playing cards. A new Jewish cemetery was built about 1860 on land allotted by the city government.

There are many Jewish charitable institutions in Trieste, including an orphan asylum and a convalescent home for aged invalids. Trieste had many famous Jewish families, among which the most noted are the Parentes, Morpurgos, Hirschels, Salems and Minerbis. The rabbinate had such famous names as Formiggini, Levi, Treves, Marco Tedeschi and Vittorio Castiglioni; the latter left Trieste to become chief rabbi of Rome, serving from 1903 until his death in 1911. A native of Trieste, he did much research work on the history of the city's Jews. Trieste was also the birthplace of many prominent Jews such as Samuel David Luzzatto

(1800-65), the great Italian philologist, poet and Biblical exegete; his cousin, the poetess, Rahel Morpurgo (1790-1871); and Giuseppe Lazzaro Morpurgo (1762-1835), economist and founder of the first Austrian life insurance company in Trieste, who also wrote poetry. Saul Formiggini (1807-73), physician and writer, undertook for the first time to translate Dante's *Divine Comedy* into Hebrew; only the *Inferno* was published, the remainder being discovered later in manuscript by Sabbatini.

From 1912 to 1918 the great scholar, Zebi Peretz Chajes, acted as chief rabbi in Trieste. An outstanding communal leader was Enrico Salem, who was named podestà (mayor) of Trieste for four years by Premier Benito Mussolini (1937), but who, after Italy's adoption of racialism (1938), was forced to resign. Theodore Mayer, one of the staunchest supporters of the "irredenta" movement in Trieste, was, for the same reason, compelled to surrender control of his influential newspaper, *Il Piccolo di Trieste*.

In a speech made in Trieste in September, 1938, Mussolini warned that Italy's conduct toward its Jews would depend on the conduct of the enemies of Fascism abroad. In May, 1940, anti-Jewish demonstrations lasting two days occurred in the city, windows of Jewish schools and synagogues were broken, and several Jewish-owned stores were wrecked and ransacked. In May, 1941, the offices of the Jewish community were raided by the police and a number of Jewish communal leaders arrested on the charge that Jews were spreading anti-Fascist propaganda among the Italian population. In the winter of 1941 to 1942, due to the shortage of coal in Italy, no coal rations were allotted to the Jews in Trieste as well as in other cities.

TRIETSCH, DAVIS, Zionist writer, b. Dresden, Germany, 1870; d. Tel-Aviv, Palestine, 1935. From 1893 to 1899 he lived in New York city, where he made a study of the Jewish immigration problem, which he thought would be solved by Jewish colonization in the Near East, on the island of Cyprus. He joined the Zionist Movement, and took part in the First Zionist Congress (1897). However, he opposed the political platform of Theodor Herzl, and offered his own, which was in favor of immediate colonization in Palestine and of a "Greater Palestine" which would embrace the British-owned Cyprus and El Arish. To further this program Trietsch carried on propaganda in his writings and speeches. He maintained that a quick Jewish colonization in Palestine would be possible only on an industrial basis in connection with the establishment of numerous small garden cities. He offered this solution as the final aim of Zionism in his periodical, *Volk und Land.* Trietsch was one of the founders of the Jüdischer Verlag, and of the periodicals *Ost und West* and *Palästina.*

His writings include: *Palästina-Handbuch* (1907; 5th ed., 1922); *Levante Handbuch* (3rd ed., 1914); *Bilder aus Palästina* (1912); *Jüdische Emigration und Kolonisation* (2nd ed., 1923); *Palästina und die Juden, Tatsachen und Ziffern* (1919); *Atlas der jüdischen Welt* (1926); *Palästina-Wirtschaftsatlas* (2nd ed., 1926); *Der Wiedereintritt der Juden in die Weltgeschichte* (1926); *Die Fassungskraft Palästinas* (1930). Besides these, Trietsch published a number of studies, including statistics, on the development of Jewish life in all parts of the world.

Lit.: *Jüdische Rundschau,* 1920, p. 2; 1930, p. 21; Zitron, S. L., *Lexikon Zioni* (1924), col. 2; *New Palestine,* Feb. 1, 1935.

TRINIDAD, an island of the West Indies, lying off the coast of Venezuela, in the northern part of South America. It was ceded by Spain to England in 1802. Geographically and economically belonging to the British West Indies, it is at present administered as a British crown colony.

Trinidad was discovered in 1498 by Christopher Columbus, who was probably a Jew (see vol. 3, pp. 306-10). But since the island was included in the bishopric of Cuba in the early 16th cent., it was ruled by the Inquisition, and therefore no Jew could live there until 1783, when the Inquisition terminated its rule in Cuba and its dependencies. Jewish settlements at Trinidad thus go back to the end of the 18th cent., but organized Jewish life did not begin until 1938, when a greater number of refugees from Central Europe began to settle on the island. In 1900 there were thirty-one Jews living on the island. As to the number of Jews living in Trinidad in 1943, no reliable estimates are available. In 1893 Sir Nathaniel Nathan was appointed senior puisne judge of Trinidad. In 1898 he became attorney general, and from 1901 to 1903 he acted as chief justice of Trinidad.

In January, 1941, four air and naval bases on the west coast of Trinidad, special anchorage rights in the Gulf of Paria and wharfage facilities at Port of Spain, the capital of Trinidad, were granted to the United States. Subsequently a number of American Jewish soldiers and officials went to Trinidad, which became the greatest single center and base. The economic effects of the American construction work were soon felt, and led to the relaxing of the immigration restrictions.

Passover services were conducted in 1942 by the Jewish Welfare Board for Jewish soldiers in the United States forces at Trinidad.

TRINITY. According to the Christian doctrine of the Trinity, the godhead consists of three persons: God, Jesus, and the Holy Ghost. While these three were still separate in the early church, they gradually amalgamated into a unity. The relation of God to Jesus was conceived as that of father to son. Philo's idea of the Logos as the first-born son of God, a purely spiritual concept, was interpreted literally to fit in with the belief in the fatherhood or motherhood of the deity. Thus, Mary became the "Mother of God."

The raising of Jesus to the position of divinity proceeded step by step and not without struggle. While at first he was considered a man miraculously born of the power of the spirit of God, elevated by God after his death and resurrection as His son to Divine dignity, the church father Tertullian (about 200) distinguished three persons combined into one substance. The difference between person and substance already at that time was difficult to comprehend. Arius (4th cent.) realized the danger of such forms of speech to the belief in God's unity and therefore denied Jesus' equality with God, since he was a creature. He argued that Jesus had not originally been a god, but had finally become God through God's appointment and his own endeavors. But this view was rejected as heresy.

The designation of the third person of the Trinity, the Holy Ghost, stems from a Hebrew figure of speech, the *ruah hakodesh* ("holy spirit"). In Jewish usage, however, this concept was never identified with a separate person, but with a Divine power which could fill men, as, for instance, the prophets.

In the defense of the Trinity, reference to the Cabala and its teachings played an important role. Falsely, without any ground, Christian scholars believed that they could find support for this doctrine in Caba-

A school supported by the Jewish community of Tripoli

listic doctrine. The obscure language of the *Zohar* and of other Cabalistic writings made it possible to read all kinds of foreign ideas into it. Following the peculiar manipulation of Hebrew letters in the Cabala, some Christian scholars tried to find support for the Trinity in the Bible. Johann Reuchlin, for instance, took the second word in the Bible, *bara,* and made the three consonants in this word refer to the three persons of the Trinity: the Beth for *ben,* son; the Resh for *ruah,* spirit; and the Aleph for *'ab,* father. Furthermore, the angelology of the Cabala and the personification of God's attributes marred His unity. Lurian Cabala even speaks of an emanation from God which is divided into the male and female principles. This doctrine, however, is not identical with the Trinity.

Medieval Jewish philosophy always attacked the Trinity by pointing to the impossibility of equating three with one. It also denied that God could become man because this would contradict the doctrine of His incorporeality and spirituality. Finally, it refuted the false interpretation of Biblical passages to prove the Trinity.

TRIPOLI, capital of the Italian colony of Tripolitania, in North Africa, with a population of 50,000, including about 15,000 Jews (1943). A Jewish settlement may have existed there already in ancient times, but the first historically authenticated Jewish community dates from the era of the Fatimid domination (969-1171), when the community consisted of about 800 persons, immigrants from neighboring African territory. According to a report by Simon Labi, who had settled in the city as a rabbi, there were, in 1549, only a few Jews living there, but when, two years later, Tripolitania was conquered by Sultan Suleiman the Magnificent, the influx of Jews increased considerably. In 1667 a disciple of Sabbatai Zebi tried to establish a Sabbatian sect in the city, but was expelled by the Jews themselves. The community was twice in danger of being annihilated, the first time in 1705 by the Bey of Tunis, the second time in 1792 by the corsair Borghel; in memory of these events the rabbis of Tripoli instituted a Purim Sherif and a Purim Borghel, to be celebrated annually on the 24th and 29th of Tebeth respectively.

When the traveler Benjamin II (Israel Joseph Benjamin) visited Tripoli (1850), the city had 1,000 Jewish families, eight synagogues, several Talmud Torah schools and four rabbis. In the 20th cent. Tripoli had eighteen synagogues, eleven Yeshivas, two schools established by the Alliance Israélite Universelle of Paris, and several charitable institutions; it had a periodical, *Degel Zion* (Flag of Zion).

The relations between the Italian conquerors of Tripolitania—the country was wrested from the Turkish Empire in 1912—and the Jews were satisfactory at first, even after the establishment of the Fascist rule. In 1928 King Victor Emmanuel III, during his first official visit to Libya, attended the inauguration of a new synagogue, situated in the Al Hera quarter of Tripoli. In the late 1930's, however, the Fascist regime favored the Mohammedan population at the expense of the Jews, and the anti-Semitic trend of the Fascist regime after the establishment of the Berlin-Rome Axis

Title-page of a ritual employed by the Jewish community of Tripoli, printed at Venice in 1680. From the Sulzberger collection at the Jewish Theological Seminary of America

led to the decree issued by Italo Balbo, governor of Libya, that the Jewish-owned shops situated in the European quarters of Tripoli were to be kept open on Saturdays and Jewish holidays (1937), the flogging of five Jewish merchants who had disobeyed the decree in a public square of Tripoli, the exclusion of the Maccabi athletic organization of Tripoli from the Libyan Sports Federation, the closing of the Ben Yehouda cultural organization, and similar measures. Moreover, thousands of young Jews were forced into labor battalions building fortifications and defense posts at the frontiers of Libya.

In the second World War, when American, British and Fighting French forces invaded Tunisia and the British army routed the forces of General Erwin Rommel in Libya (winter, 1942-43), all Jewish men in Tripoli between seventeen and forty-two years of age were, "as a matter of precaution," hurried from the city to a concentration camp in the desert. The Jewish women and children in Tripoli were subjected to a special curfew. The Fascist press charged the Jews of Tripoli with "pro-British sentiments." It was reported that several leading Jews were shot by the Nazis before Tripoli was abandoned by the Axis forces in January, 1943.

TRITO-ISAIAH, *see* ISAIAH.

TRIVALE, ION (originally Josef Netzler), literary critic and essayist, b. Piteshti, Roumania, 1889; killed at the front in the first World War, 1917. He studied at the Universities of Bucharest and Berlin, and was a teacher at the Jewish high schools Gimnaziul Evreesc and Cultura in Bucharest. His first pen name was Peter Streinul (Peter the Foreigner); later he adopted the name of Ion Trivale, under which he became famous. His volume *Critici Literare* (Literary Criticisms; Bucharest, 1915) was considered so important by Alexandru Philippide, noted Roumanian professor of literature, that he dealt with it in a thirty-four page report and recommended it to the Roumanian Academy.

Vina Rezboiului (War Guilt) was also published in 1915. Trivale translated several stories by Mark Twain under the title of *Schite Umoristice*. Serving at the front as a second lieutenant in the Roumanian Army during the first World War, he was killed at the age of twenty-seven.

TRNAVA (in German, **Tyrnau;** in Hungarian, **Nagyszombat),** city in Slovakia. Until 1919 it belonged to Hungary. The oldest Jewish tombstone found at Trnava dates from the year 1340 and is that of Israel ben Hayim, who fell a victim of murderers during his night's rest. Another tombstone refers to the year 1391 as a year of lament. At that time the Jews of Trnava appear to have practised extensive money lending; a Viennese document of 1389 deals with a financial transaction between Rosel, a Jewish woman of Trnava, and the Viennese citizen Andreas Müller.

Isaac Tyrnau, author of *Minhagim Lechol Hashanah* (manuscript, 1400), was rabbi of Trnava in the early 15th cent. His work, a record of the rites and the order of services obtaining among the Jews of Styria, Hungary and Moldavia, was printed both in Hebrew and in Judeo-German several times. He is also the hero of a legendary tale which links his name to an event that happened several decades after his death, the auto da fé of Trnava in 1494, when twelve Jewish men and two women were burned at the stake for the alleged murder of a child. A lament on this event, of which only the first part is extant in a Cracow synagogue codex, is the work of one Joshua ben Hayim.

The motif of infanticide arose again in 1539, when the city obtained permission from King Ferdinand I to expel the Jews, and for the next two centuries it was among the most prized privileges of the city that it did not allow Jews to enter its gates. Only the few Jewish students of the local Catholic university, enjoying the right of extraterritoriality, were an exception to this rule. Among the publications of the Catholic university press are several elaborate Hebraica.

In 1717 Simon Michel, prefect of the Jews of Cisdanubia, concluded a pact with Trnava to allow passage through the territories under the city's jurisdiction to the Jews who, in many cases, were purchasing agents of the Imperial Quartermaster Corps. The pact was abrogated under Empress Maria Theresa (1756), and Jews were again imprisoned and their homes ransacked by the Trnava city council, until Emperor Joseph II opened the gates of Trnava to the Jews. In 1780 Jews of Sasvár, and in the following year those of Ciffer, moved to the city, but only after two decades of litigation did the city agree to give them a burial ground, at which time (1799) the Hebrah Kaddisha was founded, a Zedakah (charity) association having functioned from 1790 on. The community from that time on grew steadily, and in 1855 Simon Szidon, rabbi of Ciffer, removed to Trnava.

Synagogues were erected at Trnava in 1892 and 1915; a school was founded in 1850, with Adolf Munk as its first principal. The Yeshiva of Trnava, directed by Rabbi Max Meir Stein, had an excellent reputation. Zionism had an early following in the community, which was one of the first in the world to have a Zion Association and a Maccabean Sports and Cultural Club (1898). The members of the community made notable contributions to economic life. Under Czechoslovak rule (1918-39) the Jewish community, including the surrounding villages, averaged 2,200 persons.

In March, 1939, Czechoslovakia was dismembered by the German Nazis, and Trnava became a part of Slovakia. Several weeks after this event one hundred Jews of Trnava were cruelly tortured by terrorists. Beginning with the second half of 1941, the Slovak government expelled the Jews, deporting them to various concentration camps, and Jewish life, intellectual, religious and physical, was destroyed to an extent never before witnessed in the tragic history of the Jews of Trnava.

ANNA BETTELHEIM.

TROKENHEIM, JACOB, communal leader and Polish senator, b. Warsaw, Poland, 1879. He received an excellent religious education in the home of his father, Aaron Feivel, who for a generation was one of the most powerful religious leaders in the city of Warsaw, spreading religious education in his native city among thousands of its youth. He also gave to his son Jacob a secular education by sending him to a Warsaw Gymnasium, where he studied for several years. Trokenheim's chief interest was the Agudath Israel of Poland, the ultra-Orthodox-political organization. He helped to develop the organization in Poland until it became a powerful instrument in the world organization. A man thoroughly religious at heart and in mind, and with a fine understanding of world affairs, he represented the Agudath Israel in Jewish communal life in Poland as well as in Polish government bodies.

Trokenheim became a member of the city council in Warsaw when Poland became an independent nation, and remained at this post until the Nazis occupied Poland. From 1931 to 1937 he was a member of the Polish Sejm (Parliament), and in 1937 he was appointed by the president of Poland as a member of the

senate. In all these bodies he served with distinction on various committees. At the same time he took an active part in the Jewish life of Poland. He was a vice-president of the Warsaw Kehillah, a member of the Joint Distribution Committee in Poland, and served as an officer in a number of religious and philanthropic organizations. In his private life he was a successful businessman, known for his charitable endeavors. When the Nazis invaded Poland, he left Warsaw and lived for a short time in the city of Bialystok, but soon returned to his native town and was subjected to all the horrors of the Warsaw ghetto together with his suffering and persecuted coreligionists. Z. TYGEL.

TROKI, surname assumed by several Karaite scholars and writers who lived in the city of that name (situated in the province of Vilna, Russia [Lithuania]); some of them served as high officials of the local Karaite community. The most eminent of them are:

ABRAHAM BEN AARON HAZZAN TROKI, Karaite poet, who lived in Troki in the 17th cent. Many Karaite liturgical hymns with the acrostic "Abraham" are ascribed to him, but his authorship is often uncertain. He must not be confused with a younger namesake, Abraham ben Aaron Hazzan of Nowomiasto, also a composer of hymns.

ABRAHAM BEN JOSIAH TROKI, physician and writer (b. Troki, 1636; d. 1687 or 1688). According to Abraham Firkovitch, he was court physician to King Jan III Sobieski. Of his works, only a hymn appeared in print as a component of the official Karaite prayer-book. Among his unpublished works are *Beth Haotzar* and *Sefer Harefuah,* both medical treatises; *Beth Abraham,* a mystical work; and *Massa Haam,* various essays.

ISAAC BEN ABRAHAM TROKI, polemical writer (b. Troki, 1533; d. Troki, 1594 [or eight years earlier, in both cases, according to Jacob Mann's hypothesis]). His knowledge of the Latin and Polish languages and of Christian dogmatics enabled him to engage in amicable conversations on religious subjects not only with Roman Catholic, Protestant, and Greek Orthodox clergymen, but also with Socinian and other sectarian elders. The fruit of these personal contacts, and of Isaac Troki's concurrent extensive reading in the New Testament and the Christian theological and anti-Jewish literature, was his famous apology of Judaism entitled *Hizzuḳ Emunah* (Fortification of Faith). He himself did not live to complete it, but his pupil, Joseph Malinovski Troki, supplied the preface and index from the author's own written notes and oral remarks.

The work at once won extensive popularity both because of its powerful defense of the Jewish faith and because of its calm and reasonable emphasis of the vulnerable points in Christian tradition and dogmatics. It was studiously copied by interested Jewish readers, some of whom inevitably felt called upon to modify the work in the light of their own views and beliefs. A suggestion, made about 1629 by Zerah ben Nathan Troki to Manasseh ben Israel at Amsterdam, to print the work was, as was to be expected, rejected by that eminently wise Jewish leader. But one manuscript copy, modified and amplified by a Rabbinite copyist, came into the hands of the anti-Jewish Hebraist Johann Christoph Wagenseil, who published it, with a Latin translation and an extensive refutation, under the sensational title of *Tela ignea Satanae* (The Fiery Darts of Satan; Altorf, 1681). Far from squelching Isaac's work, Wagenseil's violent refutation of it merely publicized it and gave rise to numerous debates and controversies in Christian circles, while Isaac's anti-Christian arguments were eventually taken over by the non-Jewish anti-clerical and liberal writers and philosophers of the 18th cent. No less an expert in polemics than Monsieur de Voltaire characterized the *Hizzuḳ Emunah* as a masterpiece in the treatment of its subject. It seems fairly certain, however, that Isaac himself had intended his work to serve for private perusal by competent Jewish scholars only, and would have strenuously objected to its propagation elsewhere.

Wagenseil's text of the *Hizzuḳ Emunah* was reprinted for Jewish use at Amsterdam in 1705; a Yiddish translation appeared in the same place in 1717; an English translation by Moses Mocatta was printed for private circulation at London in 1851; a German translation, accompanied by a revised Hebrew text, was published by David Deutsch (2nd ed., Sohrau, 1873).

Two hymns by Isaac Troki are incorporated in the Karaite liturgy; he is also said to have composed works on Karaite ritual law.

JOSEPH BEN MORDECAI MALINOVSKI TROKI, pupil of Isaac ben Abraham Troki, whose *Hizzuḳ Emunah* he completed and over whose mortal remains he pronounced the funeral oration; d. Lutzk, some years after 1624. He was a man of mild and modest character, and was possessed of considerable learning in both Karaitics and rabbinics. Several hymns and an outline of ritual customs (*minhagim*) from his pen have been included in the Karaite prayer-book. *Haelef Lecha,* a prayer composed by him, was printed at the press of Manasseh ben Israel at Amsterdam in 1643. His *Kitzur Inyan Shehitah,* on the ritual slaughtering of animals, was printed with Mordecai ben Nissan's *Dod Mordecai* (Vienna, 1830).

SOLOMON BEN AARON TROKI, scholar and writer, a native of Pozwol, Lithuania, settled in Troki in 1719, and died there at a very advanced age in 1745. When two Swedish scholars from Riga visited Pozwol in 1696 to 1697, Solomon's knowledge of the Latin language brought him to their attention and he was invited to come to Riga and give lectures on the essence of Karaism. The result of this experience was his treatise *Apiryon* (The Canopy) in defense of Karaism and in condemnation of Rabbinism; only extracts from it have thus far (up to 1943) been published (by Neubauer in his *Aus der Petersburger Bibliothek,* Leipzig, 1866). Of Solomon's other works, *Migdal Oz* is a polemical tract against Christianity; *Lehem Seorim* is a polemic against Rabbinism; *Hanoch Lenaar* and *Rach Vetob* are Hebrew primers for children. Solomon Troki was also a prolific writer of both liturgical hymns and secular poetry, especially occasional pieces for weddings, graduations of his pupils, and the like.

ZERAH BEN NATHAN TROKI, encyclopedic scholar, friend and correspondent of Joseph Solomon Delmedigo (b. Troki, about 1578). In reply to Zerah's inquiries on problems in mathematics, astronomy, physics, medicine, and similar subjects, Delmedigo composed his *Sefer Elim* (Amsterdam, 1628-29). Zerah Troki maintained also an extensive correspondence with other scholars, including Manasseh ben Israel. Two hymns by Zerah are incorporated in the Karaite prayer-book; other hymns by him were written in both Hebrew and Judeo-Tatar. LEON NEMOY.

Lit.: Mann, Jacob, *Texts and Studies,* vol. 2 (where earlier literature is indicated).

TROPER, MORRIS CARLTON, United States Army officer, overseas relief executive, and accountant, b. Brooklyn, N. Y., 1892. He received his education at the College of the City of New York (A.B., 1914) and at New York University (B.C.S., 1917; M.C.L., 1918; J.D., 1925).

In 1925 he was admitted to the bar. Between 1914 and 1918 he taught in public schools in New York, and was an accountancy instructor at the College of the City of New York in 1920. In 1919 Troper became a member of the firm of Loeb and Troper, certified public accountants. In 1936 he was elected director of the New York State Society of Certified Public Accountants, and served as its president until he went abroad late in 1938 on a mission for the American Jewish Joint Distribution Committee (J.D.C.).

Troper was national comptroller of the Allied Jewish Campaign in 1930, of the United Jewish Appeal in 1934 to 1935, and was executive vice-chairman of the Greater New York Campaign of the American Jewish Joint Distribution Committee in 1936. In 1938 he was appointed chairman of the European Executive Council of the J.D.C., and proceeded to Europe to reorganize the J.D.C.'s European activities.

In this post Troper distinguished himself at a time when distress was mounting rapidly among the Jews in Europe. In the course of his duties he visited nearly every important European capital. He was in Berlin on November 10, 1938, when anti-Jewish pogroms raged throughout Germany. He was in Rome the day before Italy entered the second World War. He remained in Paris, where the European headquarters of the J.D.C. were located, until the day before the German troops entered the city. He made his way to Southern France and then to Lisbon, where he opened new headquarters. In recognition of services rendered to refugees who fled to France, he received the decoration of the French Legion of Honor in 1940.

During the three and a half years of Troper's service as the J.D.C.'s European chairman he supervised the administration of over $20,000,000 in J.D.C. funds expended abroad. He conferred with Jewish leaders of practically every community, was instrumental in consolidating and strengthening local communal organizations, and maintained contact with officials of foreign governments and intergovernmental agencies.

From time to time during his stewardship of the J.D.C.'s European program, he returned to the United States for consultation with J.D.C. officers. On each occasion he made rapid coast-to-coast tours of the United States, addressing communities in behalf of the nation-wide campaigns of the United Jewish Appeal, and bringing to his hearers vivid, first-hand accounts of the European tragedy.

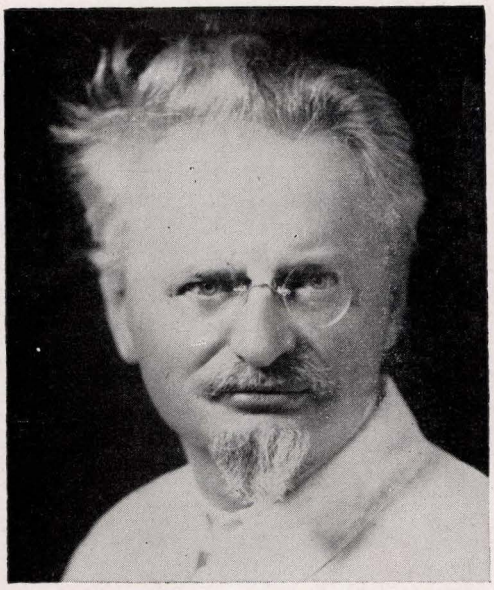
In April, 1942, Troper resigned his chairmanship of the J.D.C. European executive council to accept the commission of lieutenant colonel in the Fiscal Division of Services of Supply in the Army of the United States, serving as chief of the Cost Analysis Division. FANNY R. ADLERSTEIN.

TROPP, *see* CANTILLATION.

TROTSKY, LEON DAVIDOVICH (originally Lev Bronstein), communist and revolutionary leader, b. Yanovka, province of Kherson, Russia, 1879; assassinated at Coyoacan, near Mexico City, Mexico, 1940.

Trotsky's father, a well-to-do farmer (there were forty Jewish farming colonies with a total population of 25,000 in the provinces of Kherson and Ekaterinoslav at that time), sent him to study at Odessa and at Nikolaev. However, he did not complete his studies because, given to revolutionary activities from his youngest years, he was arrested in 1898 and deported to Siberia. In his autobiography, *My Life* (1930), Trotsky says:

"Until I was nine years old I lived in a remote little village. For eight years I studied at school. I was arrested for the first time a year after I left school. For universities, like many others, I had prison, Siberia and foreign exile. In the czar's prisons I served four years in two periods. In czarist exile I spent about two years the first time, a few weeks the second. I escaped from Siberia twice."



He assumed the name of Trotsky (which was that of one of his jailers) when he escaped from Siberia the first time. He then went to London (1902), where he worked with Vladimir Ilyich Lenin on the *Iskra* (Spark). In 1903, the year of the split of the Russian Socialist Party into Mensheviks and Bolsheviks, Trotsky sided with the Mensheviks without, as he later asserted, formally adhering to them. Returning to Russia when he heard about the outbreak of the first revolution (1905), he became chairman of the Petersburg Soviet of workers' deputies and, arrested together with all his associates, was sent for the second time to Siberia. But after a few weeks he fled to Europe, spending most of his time in Vienna writing books and articles, all devoted to revolutionary theories and propaganda. In 1913 Trotsky made a trip through the Balkan countries and, going to Roumania, studied the agrarian and Jewish problems there.

During the first World War Trotsky edited (at Paris) the *Nashe Slovo* (Our Word), and when he was exiled from France (1916) went to New York city. There (from January to March, 1917) he contributed to the Socialist daily paper *Novy Mir,* and when the February revolution broke out in Russia he tried to go home. "On my way home from New York," Trotsky writes in *My Life,* "I was arrested by the British in March, 1917, and detained for a month, in a concentration camp in Canada." Released, he returned to Russia and joined the Bolshevik Party.

Arrested by Kerensky, he was later discharged and, under Lenin's direction, continued to organize the insurrection. Appointed people's commissar for foreign affairs, after the Bolsheviks' seizure of power (October, 1917), he launched his famous appeals, "To All," addressed to the workers and soldiers of Europe in war and asking for immediate peace. He headed the Bolshevik delegation at the peace conference at Brest Litovsk, where his position, opposed to that of Lenin who wanted peace at any price, was "neither war nor peace." Despite his opposition, peace was concluded, and he became people's commissar of defense (February, 1918). In this capacity Trotsky organized the Red Army and, as commander-in-chief, led the fighting in the many civil wars which followed in 1918 and thereafter. The New York *Herald Tribune,* in the article devoted to his memory after his death (August 22, 1940), wrote that his role as commander in the civil wars made him "one of the greatest Jewish generals of history." In 1920 to 1921 he was also people's commissar of transportation. From 1917 to 1927 Trotsky's name was intimately associated with that of Lenin as the prime leaders of the Russian Communist Revolution of October (Old Style), 1917.

His position, as second only to Lenin and as head of the Red Army, was very solid; but when, upon Lenin's death (1924), the struggle for succession began between him and Joseph Stalin, Trotsky was defeated, expelled from the Communist Party (December, 1927), exiled to Alma-Ata, a place on the Turkestan-Chinese frontier, and expelled from Soviet Russia (1929). Only Turkey agreed to receive him, and fixed his residence at Prinkipo, a suburb of Constantinople, where he lived for almost three years, writing books and pamphlets against the regime in Russia. In 1932 the government of Denmark allowed him to lecture at the University of Copenhagen, and, after returning to Prinkipo, he received word that the French government had granted him a visa.

He established himself at Barbizon, Fontainebleau, near Paris (July, 1933), but in 1935, after a violent campaign against him by the French Rightist papers, he was expelled and went to Norway. He lived near Oslo, but very soon, following the first Moscow trials (1936), at which the defendants confessed to participation in plots instigated by him, as chief of the opposition against Stalin, Trotsky was compelled to leave

"New Leader"

Leon D. Trotsky

Norway. Transported with his wife (in a tanker), he went to Mexico (January, 1937), where his friends succeeded in securing a visa for him; he lived there until the day of his assassination.

His slayer, Jacques Mornard, was sentenced (April 16, 1943) to twenty years' imprisonment. But the prosecution failed to prove that the killer was a Soviet secret service agent.

Remarkably gifted, a brilliant writer and orator, a formidable polemist, and a convinced Marxian, Trotsky fought all his life to bring about the world revolution. Besides the incompatibility between him and Stalin as personalities, they were also diametrically apart in their ideas. While Stalin professed that Socialism could be built up in a country like Russia, Trotsky opposed this theory, arguing that Socialism could not be achieved in a single country, even in one of the size of Russia, but had to be completed by a social revolution on a world scale or by revolutions in the most advanced industrial countries. Trotsky was a strong believer in the theory he called the Permanent Revolution, which was opposed by the Russian Communist Party and by Stalin. In 1938 Trotsky's followers, assembled in Lausanne, Switzerland, founded (under his initiative) the Fourth International, in opposition to the Third (Communist) International.

Accused by the Soviet government and by many defendants in the Moscow trials (1936, 1937 and 1938) of a plot, in agreement and at the behest of the German and Japanese governments, to overthrow the Stalin regime, Trotsky sought vindication by an unofficial Commission of Inquiry (in New York) headed by John Dewey (1939), which declared him not guilty. This Commission was composed of liberals and socialists at odds with the communists.

The whole truth about Trotsky's role in the years of his struggle against Stalin and about the accusations launched against him during the trials may not become public until after the secret archives of Soviet Russia, as well as of many other European countries and of Japan (spanning the epoch between 1934 and up to the outbreak of the second World War), are made accessible to future historians. Revealing, too, may be Trotsky's own private archives, posthumously sold by his widow to Yale University with the stipulation that they be used only with her consent and that of the university's board of trustees.

In the crucial war years of 1942-43, with Russian military might and civilian morale acknowledged as the most potent barrier to Nazi aggression, public opinion came to look upon those "purge" trials in a new light. Objective historians and observers, in and out of the Soviet Union, speculated with grave concern upon the perils to the anti-Fascist cause that might have resulted from the possible success of those on trial (before the Military Collegium of the Supreme Court of the U.S.S.R.) whose confessions (recorded in three bulky tomes) ascribed much of the motive power of their own counter-revolutionary activities to the influence of Leon Trotsky. The film *Mission to Moscow,* produced in Hollywood (1943), includes an acceptance of Trotsky's culpability.

Concerning Nazism Trotsky, in his pamphlet *What Hitler Wants* (New York, 1933), took a position against those who believed in the pacifist speeches then being made in Berlin. He explained that all that Hitler wanted at that moment was to arm Germany. "Hitler's pacifism," he said, "is not a fortuitous diplomatic improvisation, but a vital part of a grand manoeuvre which is to change radically the relationship of forces in favor of Germany and to lay the basis for the European and the world offensive of German imperialism." About Hitler's platform he observed: "Taken as a whole, the Hitler programme for the reconstruction of Europe is a reactionary utopian medley of racial mysticism and national cannibalism."

As regards the Jewish situation, while recognizing (in an interview with the Jewish Telegraphic Agency in 1937) the existence of a Jewish problem and the need of "a common homeland," he stated nevertheless that "the everyday facts do not demonstrate that Zionism is capable of solving the Jewish problem." Fundamentally he remained faithful to the idea shared by almost all Jewish socialists, that "the final solution of the Jewish question would come only through the emancipation of all humanity by international socialism" (Jewish Telegraphic Agency, August 23, 1940).

Trotsky's published output was vast. According to *My Life,* the State Publishing House in Moscow had printed (from 1923 to 1937) thirteen volumes of his works, in addition to five volumes devoted to military affairs. Among his very numerous works published in the last years in foreign languages the best-known are: *Lenin; My Life* (1930); *The Permanent Revolution; The History of the Russian Revolution* (1932); *Whither France?; Whither England?* He edited *The Living Thoughts of Karl Marx* (1939).

Lit.: *Current Biography* (1940) 814; *Opinion,* March, 1933, pp. 31-32; Sept., 1940, p. 4; *American Hebrew,* Aug. 14, 1936, p. 189; Lubinski, Kurt, "He Lived in Fear," *ibid.,* Aug. 30, 1940, p. 7; Catlin, G. E. G., *Story of the Political Philosophers* (1939) 602-48; Jackson, J. H., "Leon Trotsky," in *Twelve Jews,* edit. Hector Bolitho (1934) 249-69; Marcosson, Isaac F., *Turbulent Years* (1938) 396-428; Namier, L. B., *Skyscrapers* (1934) 81-94; Bernstein, Herman, *Celebrities of Our Time* (1924) 205-12; Campbell, J. R., *Soviet Policy and Its Critics* (1939); Churchill, W. L. S., *Great Contemporaries* (1937) 167-74; Reports of Court Proceedings: *The Case of the Trotskyite-Zinovievite Terrorist Center* (1936); *The Case of the Anti-Soviet Trotskyite Center* (1937); *The Case of the Anti-Soviet "Bloc of Rights and Trotskyites"* (1938), all published by the People's Commissariat of Justice of the U.S.S.R., Moscow; Davies, Joseph E., *Mission to Moscow* (1942).

TROUBADOURS. In Spain, Provence and Italy, from the 12th to the end of the 15th centuries, many Marranos were troubadours. In Spain the neophyte Don Santo Judio de Carrion (1360) was one of the

George Wolf

most famous of his time. Many chroniclers identify him with Rabbi Don Santob (Shemtob) de Carrion. Juan Alfonso de Baena, Diego da Valencia, Pero Ferrus and Juan de Valladolid were well known in the 15th cent. Juan de España (El Viejo) was a sound Talmudist besides being a noted troubadour. With Anton de Montoro (El Ropero) these poets ceased to exist.

In Provence, at the court of King Artus (1279), many troubadours of Jewish descent were to be found. At that time Valentin Barruchius (Baruch) wrote poems in Ladino. A number of Marrano poets drifted into Italy after the Spanish persecutions, and brought with them the art of the troubadours.

Noteworthy among the few German Jewish Minnesingers was Süsskind of Trimberg (2nd half of the 13th cent.). Mention may be made also of the wandering Hebrew poet of the Golden Age of Spanish Jewish poetry, Judah ben Solomon al-Harizi who, in the early decades of the 12th cent., especially from 1216 on, wandered in the "three parts of the world" and "led the life of a troubadour." The traveler Pethahiah of Regensburg, in the 12th cent., reports that at Baghdad he heard traditional psalmodies, accompanied by musical instruments, an indication that Jewish minstrels or troubadours flourished at that time.

TROY, a city of New York state, with a population of 70,304 (census of 1940), including, in 1943, approximately 3,000 Jewish inhabitants. Troy was chartered as a city in 1816. Isaac Cohen settled in Troy in 1849, and was shortly followed by Emanuel Marks, who had established himself across the river at Watervliet (West Troy) in 1843. By 1860 the community had become fairly numerous. Jewish pioneers included Louis Gross, Herman Levy, Isaac Heilbrun, Michael Bruck, Samuel Mount, Jacob Sinsheimer, Max Sinsheimer, Aaron Ksensky, Benjamin Lichtenstein, Jacob Cohen, Emanuel Gratz, Simon Jacobs, Levi Laub, Michael Goldstone, Joseph Ksensky, Jacob Berg, and Frank Hartsfeld. In 1853 the group organized its first congregation, Anshe Chased. Shortly thereafter differences split the membership, which was then reunited in 1857 under the new name of Congregation B'rith Sholom, incorporated in 1866. A synagogue was built in 1870, and B. Eberson called to the pulpit. He served until 1877, and was succeeded by A. N. Coleman (1879-90), Meyer Noot (1896-1907), Jacob S. Raisin, Morris Lichtenstein, Myron Jacobs (1925-30), Jacob K. Shankman (1930-37) and Alan S. Green, who was the incumbent in 1943. The congregants were then still housed in their first Temple. Temple B'rith Sholom, known also as the Third Street Temple, joined the Union of American Hebrew Congregations (Reform) in 1920.

Dissident members of Congregation B'rith Sholom withdrew in 1870 to found their own Orthodox group, Congregation Beth Israel Bickur Cholim. Another Orthodox congregation, Sharah Tephilah, was established in 1880. Rabbi Isaac J. Teicher, called to be spiritual leader of both congregations in 1939, was still serving in 1943. In 1939 he organized the Jewish Orthodox Brotherhood for the men of both synagogues.

The Conservative Temple Beth El was established at Troy in 1928, and at that time called to its pulpit Joel S. Geffen, who was the incumbent in 1943. A synagogue was purchased in 1931. In 1934 the brotherhood of the Temple instituted an annual award of a plaque to the outstanding citizen of Troy. The Temple, in addition to its Hebrew and religious schools, established an adult extension department (1931), and an institute of adult Jewish studies (1940).

The Jewish Community Center of Troy was founded in 1913, and purchased its building on First Street in 1923. Sole Jewish member agency of the Troy Community Chest, the Center served as headquarters of all Jewish communal organizations; from 1935 on an annual Forum-Concert Series was made part of its program. The Center was also headquarters of United Service Organizations work. In 1943 its director was Fred A. Glass.

The Ladies' Hebrew Benevolent Society, founded in 1875, continued to provide local philanthropic assistance. The United Hebrew Charities of Troy, including the neighboring communities of Green Island, Mechanicville, Waterford and Watervliet, was organized in 1923, and was widened to include national and overseas needs in 1928. David Lipsky was president in 1943, and had been serving as such for nine years.

Branches of national organizations at Troy included, in 1943: Hadassah, Zionist Organization of America, Jewish War Veterans, National Council of Jewish Women (1941), B'nai B'rith (chartered in 1942), as well as the sisterhoods and brotherhoods of Temple B'rith Sholom and of Temple Beth El, and the Sisterhood of Congregation Beth Israel Bickur Cholim, affiliated with their respective national organizations. In 1935 the Jewish Community Council of Troy was established.

Numerous members of the Troy Jewish community participated in civic activities and held public office. Henry Gross was a member of the board of education (1898-1901). His son, Louis H. Gross, president of the Union National Bank, was president of the Board of Education (1935-). He was also made a member of the board of trustees at Russell Sage College, and treasurer (1942-). Maurice Isenbergh was first assistant corporation counsel for the city (1923-25) and executive secretary of the Rensselaer County Civil Service Commission (1941-). Abraham C. Goldstein was president of the Rensselaer County Bar Association (1938-40). Joseph Goodman, a former vice-president of the Chamber of Commerce, was elected treasurer of the Troy Community Chest (1938-). Charles S. Ehrlich (d. 1940) was for ten years treasurer of the New York State Automobile Club. Joseph Hormats was appointed chairman of the Recreation Commission of Troy (1931-). Samuel Cooper was Commissioner of Supplies for the city in 1943. Benjamin Chuckrow was a member (1920-40) and chairman (1928-38) of the Rensselaer County Board of Supervisors. Isadore L. Kaufman, a director of the Manufacturers National Bank, was (1943) ex-officio chairman of the Rensselaer County Chapter of the Red Cross. Robert Block, Joseph Rosenberg and Lester Rosengart each served at one time as chairman of the Retail Merchants Bureau; Benjamin Weinberg was president of the Kiwanis.

Others active in the community in 1943 included J. Julius Goodman, Morris Simon and Albert Snyder. Mrs. Herbert G. August organized and became director of the United Service Organizations Lounge in Troy (1942-). Mrs. Alan S. Green was made secretary of the Council of Social Agencies (1942-). Rabbi Joel S. Geffen was president of the Council of Social Agencies (1941-42) and a member of the Troy War Council (1942-). Rabbi Alan S. Green, contributor to the national Jewish press, was chaplain of the police department (1937-), and vice-president of the Troy Professional Men's Club (1943).

At the Rensselaer Polytechnic Institute there were, in 1943, Joseph L. Rosenholtz, head of the department of geology and mineralogy; Samuel Rezneck, professor of history and social science; and Harold M. Faigenbaum, professor of chemistry. At Russell Sage College Naomi T. Lubell was assistant professor of physical education.

Joseph Trumpeldor

TROYES, city in northeastern France, on the Seine River, with a total general population of 60,000 (1940). It was the former capital of the province of Champagne, and later of the department of Aube. A Jewish community existed there as early as the 10th cent., as is attested by responsa addressed to it by Judah ben Meir (Sire Léontin) and Eliezer ben Judah. Its members furnished considerable revenue to the counts of Champagne, and were property owners. Jews who took refuge in this province in 1182, after their expulsion from the kingdom of Philipp August, traded at the annual fairs of Troyes. The aforesaid king and Count Theobald of Champagne entered into an agreement in 1198 by which they assumed the obligation to surrender to each other Jews fleeing from their domains. Agreements of this nature are common for that period; thus in 1204 Countess Blanche of Troyes succeeded Seigneur d'Ervy in his rights to the Jews settled on his territory. The Abbey of Saint Loup in Troyes figures in various documents of the 11th cent. as having had numerous financial transactions with the financially powerful Jews of the city, and at the end of this same century Vivant of Troyes, a Jew, was subsidized by the treasury as an administrator for the Jews of France.

A severe blow was suffered by this flourishing community in 1288, when its members were accused of a ritual murder and thirteen of its most prominent men died at the stake by order of the Inquisition. The victims of this auto-da-fé were: Isaac Châtelain, his pregnant wife, two sons and daughter-in-law; Samson Kadmon; Salomon ben Vivant, treasurer of the community; Baruch Tob Elem or Bien-Dit Bonfils d'Avirey; Simon de Châtillon, cantor; Jonah or le Beau Colon; Haim, the surgeon, maître de Brinon; Haim or Hagin de Chaource; Isaac Cohen.

The Jews were banished from Troyes also in 1306, but they returned in 1315. Among those who settled there between 1321 and 1323 were: Maistre Deuaye, Bonjuyf, son of Bonjuyf, Bonne Vie and his son Domim, and Haquinet and Terine. Isaac Lyon of Troyes and his family received permission to reside in Burgundy as a favor in 1379. In 1794 the decree of the convention concerning work on Saturdays was extended to this city by its mayor; consequently the Jewish merchants were compelled to display their wares for sale on the Sabbath. This community, which became famous in Jewish history by reason of its Jewish synod of 1180, its Hebrew school and its Jewish scholars, martyrs and others who lived there from the 12th to the end of the 14th centuries, lost its former importance. In 1930 there were only eighty Jewish families living in Troyes.

Among the well-known Jewish scholars and others who lived there were: Rashi (Rabbi Solomon ben Isaac, 1040-1105); Simhah de Vitry; Judah ben Nathan; Joseph ben Simeon Kara; Shemaiah and Judah ben Abraham; Samuel ben Meir (Rashbam); Jacob ben Meir Tam; Joseph ben Moses; Isaac ben Hoshaiah Halevi and Simon the Tosafist, in the 11th and 12th centuries; Joseph Hazzan ben Judah; Menahem and Judah ben Eliezer in the 13th cent.; Abraham of Trèves, son of Mattithiah, and Johanan of Trèves in the 14th cent. A ritual of Troyes (*Seder Troyes*) was edited by Moses Weiss and published in Budapest in 1905.

Lit.: Revue des études juives, index (1910) 362; Boutiot, *Histoire de la ville de Troyes* (1870-80); Carré, *Histoire populaire de Troyes, et du département de l'Aube* (1881) 90; Gross, H., *Gallia Judaica* (1897) 223-43.

TRUMPELDOR, JOSEPH, Socialist Zionist leader and Palestinian hero, b. Pyatigorsk, Caucasia, Russia, 1880; d. Tel Hai, Palestine, 1920. He inherited his soldierly spirit from his father, Zev Trumpeldor, who, as a so-called Cantonist, had served in the Russian army for many years. While their home life was predominantly Russian, the father remained loyal to Judaism and once exhorted his son as follows: "On the battlefield also you will not shame my name, nor that of the Jewish nation, nor that of the Russian army." Trumpeldor, after having passed examinations in dentistry, was inducted into the Russian Army in 1902, and at the outbreak of the Russo-Japanese war (1904), at his own request, was sent to Eastern Siberia with the 27th regiment of infantry. During the siege of Port Arthur he was wounded (August 7, 1904), and his left arm was amputated. He insisted, however, on remaining "shoulder to shoulder with the other comrades," and was captured when the fortress capitulated to the Japanese. During his one-year captivity he organized his 500 Jewish fellow prisoners and opened a school for them; as a prisoner he formed his plan of establishing, with a few friends, a communal settlement in Palestine. After his return to Russia he was received by the Russian empress, a gift of an artificial arm was bestowed upon him, and he was promoted to the rank of officer in the reserve corps, the first Jewish officer in the old Russian army.

He had, however, no desire to make a career in the Russian army. Profoundly interested in the Zionist and Socialist ideologies, he organized (1911) at Romny, Ukraine, a group of friends with the intention of creating a "settlement" in Palestine, based on Socialist principles and bound to produce the nucleus of a sound national organism in the country. In the following year he emigrated to Palestine with a few followers, but their commune established at Migdal was of short duration. Trumpeldor then went to Dagania, in Galilee, as a farm worker, attended the Eleventh Zionist Congress in Vienna (1913), but returned to Dagania shortly before the first World War.

Trumpeldor, the Russian officer, left Turkish territory and proceeded to Alexandria, where in 1915, together with Vladimir Jabotinsky, he organized several hundred Jews, mostly Russians expelled from Palestine, into a military unit which was sent by the British High Command to Gallipoli as an auxiliary troop. Although

a cripple, Trumpeldor distinguished himself through his valor and was praised by the commander of the Zion Mule Corps, Colonel John Henry Patterson, as "the bravest man I have ever seen in my life" (*With the Zionists at Gallipoli*).

The Zion Mule Corps was disbanded, and Trumpeldor went to London (1916) to help Jabotinsky organize the Jewish Legion, but, as a foreigner, he could not serve in the British Army as officer nor could he, as a cripple, enlist in the Legion as a private. When the March revolution of 1917 swept away the czarist government, Trumpeldor went to Russia in order to organize there an army of a hundred thousand Jews which he planned to lead through Caucasia, Armenia and Mesopotamia to the conquest of Palestine. The Bolshevist revolution of October, 1917, frustrated his plans, but he succeeded at least in getting a number of Russian Halutzim (pioneers) over to Constantinople; the Palestinian authorities, however, refused them entry. Trumpeldor then went to Palestine in order to study personally post-war conditions, and suggested the organization of the Jewish laborers; however, this did not take place until the end of 1920, nine months after Trumpeldor's death.

When the French forces withdrew from the Metulla district in Upper Galilee and no British forces came to replace them, the Jewish colonies of Metulla, Kfar Giladi, Tel Hai and the workers' group, Hamara, were in grave danger of being exterminated by Arab rebel bands. Although the Zionist leaders, including Jabotinsky, demanded the evacuation of that dangerous zone, Trumpeldor organized there a defense corps of about fifty men (including some of the American Jewish Legion), claiming that the resolute collective will of the Jewish people to live and work in Palestine should not yield to brutal aggression. The small band held out for two months, but on March 1, 1920, Trumpeldor fell with five of his helpers, after the Arabs had launched a treacherous attack on Tel Hai, and the settlement had to be abandoned. Trumpeldor's last words were *'En dabar. Tob lamuth be'ad 'artzenu* (No matter! It is good to die for our country).

After Trumpeldor's death legend grew around him, and he became the hero of two rival groups in Zionism, the Labor Zionists and the Revisionists. It is, however, safe to say that Trumpeldor, a disciple of Aaron David Gordon, and father of the Kvutzah idea, was, despite his soldierly qualities, an apostle of pacifism and "communism as a way of life" and opposed to any kind of aggressive nationalism.

The youth organization of the Zionist Revisionists, Brith Trumpeldor, was named for him. Trumpeldor's grave at Tel Hai became the goal of pilgrimages by many young Palestinians. In 1940, on the twentieth anniversary of his death, there was a festive celebration at Tel Hai, which had become a flourishing agricultural settlement where Jewish youths were being trained in farming.

TRUMPET, *see* HORN; SHOFAR.

TRUNK, J. J., Yiddish writer, b. Osmolsk, Poland, 1887. In his early adult years he went to Warsaw, where he entered Yiddish literary circles. Subsequently he became known as one of the best Yiddish novelists and publicists of the time. For several years prior to the outbreak of the second World War Trunk was president of the Jewish Pen Club of Poland.

Among Trunk's published works were: *Fun der Natur,* short stories; *Feigenbeimer un andere Ertzailungen; Idealismus un Naturalismus in der Yiddisher Literatur; Josephus fun Yerusholayim; Yiddishe Kultur Fragen un der Sotzialismus;* a study of Sholom Aleichem; *Sotzialistishe Impressies.* In 1941 Trunk arrived in the United States, where he was living in 1943.

TRUSKER, ADOLF, Polish senator and communal leader, b. Warsaw, Poland, 1871. He received his early education in the Heder, then attended a private Gymnasium and Kronenberg's higher commercial school. His reputation as a communal leader started when he was still a young man. From 1906 on he took an active part in a number of philanthropic and cultural enterprises, and was especially active as an executive member in the Polish Jewish Federation of Commerce, where he later served for more than two decades as its president. At the outbreak of the first World War he helped to organize the Society to Support War Sufferers, and by his energy and endeavors ameliorated the condition of many Jewish and non-Jewish war sufferers. In 1916 he was elected a member of the Warsaw city council, where he served with distinction and was considered an authority on questions of commerce. In 1922 he was elected a member of the Polish Senate, and served on a number of important committees. For many years he served as commercial judge.

Trusker was known as a forceful orator. As a member of the city council as well as of the Polish Senate he often criticized the Polish anti-Semites and publicly denounced his right-wing Senate colleagues for their preaching of anti-Semitism. He frequently condemned anti-Jewish discrimination in the Polish Senate, and fought ardently for the rights of the Jews.

Trusker was recognized as a responsible leader in Jewish circles in Poland as well as in Polish government circles. He was a member of the economics department of the government as well as a member of the industrial commercial department in the ministry of commerce and industry. He was vice-president of the Cooperative Bank in Poland, and a member of the executive of the School for Jewish Craftsmen.

Z. TYGEL.

TRUSTS AND TRUSTEES. There is no such thing as a trustee in Jewish law in the sense of one who receives a sum in trust from another person; instead, the laws of bailment apply. The term is used rather in cases of disputes between two persons, in which case the property in question is placed in the hands of a third person (hence the Hebrew term for trustee, *shalish*) who is to hold it and not to surrender it until certain conditions are met. As a rule this occurs when a trial is in process and it is necessary that the property in question be guarded to insure its remaining intact, or when it is necessary to insure the marriage outfit of a daughter (*Keth.* 6:7). A trustee was also appointed on occasion to hold funds for the support of a wife during the period when her husband was absent on a long trip (*Keth.* 5:8).

Since the trustee is regarded as a person of outstanding character by virtue of his appointment, his declaration is given the force of that of two witnesses (*Git.* 64a). He is strictly bound to carry out the letter of his instructions in regard to the property entrusted to him. Since trusteeship is largely a relationship of confidence and the trustee receives no compensation for his trouble, he is regarded as being in about the same status as the unpaid bailee, and is responsible
